Rate of Interest on Money.—By an Act passed March 13, 1850, the rate of interest on money was fixed at 10 per cent. where there was no special contract, but parties may agree in writing for the payment of any rate of interest whatever on money due, or to become due on any contract. Any judgment rendered on such contract shall conform thereto, and shall bear the interest agreed upon.

We are much indebted in the compilation of this article to the Reports of Mr. Consul Booker. SAPAN WOOD is obtained from a species of the same tree that yields the Brazil wood (Cesalpinia Sapan, Linn.). It is a middle-sized forest tree, indigenous to Siam, Pegu, the Philip-

to be added the large sums, of taken, carried by miners and francisco for other parts of the tico, Chili, China, and elsewhere variously estimated; but taking it at 15 per cent. we are within the mark: on this exports in 1867 will have been estimated by well-informed shipments in the course of less than from 70 to 80

co, other than Treasure, in the

Money.—By an Act passed the rate of interest on money was fixed, where there was no special stipulations may agree in writing; for any rate of interest whatever on become due on any contract, entered on such contract shall and shall bear the interest agreed

indented in the compilation of Reports of Mr. Consul Hooker. It is obtained from a species that yields the Brazil wood (Linn.). It is a middle-sized tree to Siam, Pego, the Philip-

pine Islands &c. It has been employed for dyeing in the greater part of Asia for many centuries. It found its way into Europe some time before the discovery of America; and the imports are now very considerable. Its colouring matter differs little from that of Brazil wood, but the best sapan wood does not yield more than half the quantity that may be obtained from an equal weight of Brazil wood, and the colour is not quite so bright. (Hancock *On Colours*, vol. ii. p. 329.) In 1867 the imports of sapan wood amounted to 1,180 tons, valued at 14,843*l*.

SAPPHIRE (Ger. saphir; Dutch, saffiersteen; Fr. saphire; Ital. zaffiro; Span. zafiro, zafir; Russ. iachant; Lat. sapphirus). A precious stone, in very high estimation. It is identically the same stone as the ruby. It differs in name from the latter on account of its colour, which varies from white to the deepest blue or black. (Emanuel *On Diamonds* &c.) It occurs in blunt-edged pieces, in roundish pebbles, and crystallised. Varies from transparent to translucent. Refracts double. After diamond, it is the hardest substance in nature. Brittle; specific gravity 4 to 4.2.

It is found principally in Ceylon, and also in Bohemia, Saxony, France &c.; but the red sapphire, or Oriental ruby, is not found in any considerable quantity anywhere except in Ava. Next to diamond, sapphire is the most valuable of the gems. The white and pale blue varieties, by exposure to heat, become snow white, and, when cut, exhibit so high a degree of lustre, that they are used in place of diamonds. The most highly prized varieties are the crimson and carmine red; these are the Oriental ruby of the jeweller; the next is sapphire; and last, the yellow or Oriental topaz. The asteris, or star-stone, is a very beautiful variety, in which the colour is generally of a reddish violet, and the form of a rhomboid, with truncated apices, which exhibit an opalescent lustre. Professor Jameson says, in his *Mineralogy*, that some peculiarly beautiful sapphires are found in the Caplan mountains, in Pegu. But we are not aware that there are any such mountains in any part of the world; and, in point of fact, there are no mountains in Pegu, nor have any precious stones been ever found in it. [Ruvy.]

The Russian treasury possesses some sapphires of enormous size.

Mr. Crawford gives the following details with respect to the sapphire and ruby mines of Ava: 'The precious stones ascertained to exist in the Burmese territory are chiefly those of the sapphire family and the spinelle ruby. They are found at two places, not very distant from each other, called Mogant and Kyatpéan, about five days' journey from the capital, in an E.S.E. direction. From what I could learn, the gems are not obtained by any regular mining operations, but by digging and washing the gravel in the beds of rivulets or small brooks. All the varieties of the sapphire, as well as the spinelle, are found together, and along with them large quantities of corundum. The varieties ascertained to exist are the Oriental sapphire; the Oriental ruby, or red stone; the opalescent ruby, or cat's eye ruby; the star ruby; the green; the yellow and the white sapphires; and the Oriental amethyst. The common sapphire is by far the most frequent, but, in comparison with the ruby, is very little prized by the Burmese, in which they agree with other nations. I brought home with me several of great size, the largest weighing no less than 3,630 grains, or above 907 carats. The spinelle ruby (zebu-gaong) is not unrequited in Ava, but is not much valued by the natives. I brought with me to England a perfect specimen, both as to colour and freedom

from flaws, weighing 22 carats. The sapphire and ruby mines are considered the property of the king; at least he lays claim to all stones that exceed in value a viss of silver, or 100 ticals. The miners, it appears, endeavour to evade this law by breaking the large stones into fragments. In the royal treasury there are, notwithstanding, many fine stones of both descriptions. The year before our visit, the king received from the mines a ruby weighing 121 grains; and the year preceding that, 8 good ones, but of smaller size. No stranger is permitted to visit the mines; even the Chinese and Mohammedans residing at Ava are carefully excluded. (*Journal of an Embassy to the Court of Ava*, p. 442.)

SARCOCOLLA. A subviscid, sweetish, and somewhat nauseous gum resin. It is brought from Arabia and Persia in small grains of a pale yellow colour; the whitest, as being the freshest, is preferred. It is but seldom imported. (Millburn's *Orient. Com.*)

SARDINES or SARDINIANS (Ger. sardellen; Fr. sardines; Ital. sardelle; Span. sardinas). A species of fish of the herring tribe, but smaller. They are taken in considerable quantities on our coasts, and are exceedingly plentiful on the coasts of Algarve in Portugal, Andalusia and Grauda in Spain, and along the shores of Italy. The small sardines, caught on the coast of Provence, in France, are esteemed the best. From 1,000 to 1,200 fishing smacks are engaged in catching these fish on the coast of Brittany, from June to the middle of October. The French frequently cure them in red brine; and when thus prepared, designate them *anchovies*, or *anchoriol sardines*. These are packed in vessels previously employed for holding wine, and exported to the Levant. When perfectly fresh, sardines are accounted excellent fish; but if kept for any time, they entirely lose their flavour and become quite insipid.

SARDONYX. A precious stone, of reddish-brown colour, consisting of alternate layers of chalcedony and carnelian. Its name is derived from the union of the sard and the onyx. (Emanuel *On Diamonds* &c.)

The ancients selected this substance to engrave upon, no doubt, from its possessing two peculiar and necessary qualities, viz. hardness and tenacity, by which it is capable of receiving the finest touch or stroke of the tool without chipping, and showing the art of the engraver to the highest perfection. (Mawe *On Diamonds*, 2nd ed. p. 121.)

They are much used for signet rings, and for cups, vases, knife handles, beads &c. (Emanuel *On Diamonds* &c.)

SARSAPARILLA (Ger. sasaparille; Fr. sarsapareille; Ital. salsapariglia; Span. zarzaparrilla). The root of the *Smilax Sarsaparilla*, a plant growing in Central and South America, and the West Indies, Ceylon &c. It is imported in bales. It is known in the London market by the names of Lisbon, Honduras, and Vera Cruz, but it is also brought from Jamaica. The Lisbon root, which is the produce of Brazil, has a reddish or dark brown cuticle, is internally farinaceous, and more free from fibre than the other kinds: the Honduras has a dirty brown, and sometimes whitish, cuticle; it is more fibrous, and has more ligneous matter, than the Lisbon and Vera Cruz. It has long slender roots, covered with a wrinkled brown cuticle, and has a small woody heart. The Jamaica differs from the others, in having a deep red cuticle of a close texture; and the red colour partially diffused through the ligneous part. The root is scentless, and has a mucilaginous, very slightly bitter taste: the bark is the only useful part of the plant; the ligneous part being taste-

less, inert, woolly fibre. (*British Pharmacopœia Thomson's Dispensatory.*) A duty of 6*l.* per lb. on its importation, after being reduced in 1842 to 1*l.*, was repealed in 1845. The imports and exports in 1867 were respectively 315,643 lb., valued at 14,927*l.* and 210,765 lb.

**SASSAFRAS** (Ger. and Fr. *sassafras*; Ital. *sassafrasso*; Span. *salsufras*). A species of laurel (*Laurus Sassafras*, Linn.), a native of the southern parts of North America, Cochín-China, and several of the Indian Islands. Sassafras wood, root, and bark have a fragrant odour, and a sweetish aromatic taste. The wood is of a brownish-white colour; and the bark ferruginous within, spongy, and divisible into layers. Their sensible qualities and virtues depend on an essential oil, which may be obtained separate by distilling the chips or the bark with water. It is very fragrant, hot, and penetrating to the taste, of a pale yellow colour, and heavier than water. It is used only in the materia medica. (*Thomson's Dispensatory.*) Imports and exports in '866, respectively, 823 and 74 cwt.

**SAUNDERS (RED)**, (Arab. *sundal-ahmer*; Hin. *nakut-chundum*). The wood of a lofty tree (*Pterocarpus santalinus*), indigenous to various parts of India, Ceylon, Timor &c. The wood is brought to Europe in billets, which are very heavy, and sink in water. It is extremely hard, of a fine grain, and a bright garnet red colour, which brightens on exposure to the air. It is employed to dye lasting reddish-brown colours on wool. It yields its colouring matter to ether and alcohol, but not to water. (*Thomson's Dispensatory*; Bancroft *On Colours*, vol. ii. p. 236.) The quantity imported is inconsiderable.

**SAVINGS BANKS.** [BANKS.]

**SCAMMONY** (Ger. *skammonium*; Fr. *scammonée*; Ital. *scammonia*; Span. *escamonea*). A gum resin, the produce of a species of convolvulus, or creeper plant, which grows abundantly in Syria. When an incision is made into the living roots, they yield a milky juice, which being kept, grows hard, and is the scammony of the shops. It is imported from Aleppo in what are called drums, weighing from 75 to 125 lb. each; and from Smyrna in cakes like wax, packed in chests. The former is light and friable, and is considered the best; that from Smyrna is more compact and ponderous, less friable, and fuller of impurities. It has a peculiar heavy odour, not unlike that of old cheese; and a bitterish, slightly acrid taste. The colour is blackish when dry, changing to dirty white, or lathering when the surface is rubbed with a wet finger. Its specific gravity is 1.235. It is very liable to be adulterated; and when of a dark colour, heavy, and splintery, it ought to be rejected. It is used only in medicine. (*British Pharmacopœia*, 1867; *Thomson's Dispensatory.*) The duty on scammony, after being reduced in 1832 and 1843, was abolished in 1845. Imports, in 1867, 53,421 lb., valued at 80,901*l.*; and exports 816 lb.

**SCULPTURES.** Figures cut in stone, metal, or other solid substance, representing or describing some real or imaginary object. The art of the sculptor, or statuery, was carried to the highest pitch of excellence in ancient Greece. Fortunately, several of the works of the Grecian sculptors have been preserved, and serve at once to stimulate and direct the genius of modern artists.

*Models* are casts or representations of sculptures.

The Act 54 Geo. III. c. 56 vests the property of sculptures, models, copies, and casts in the proprietor for 14 years; provided he cause his name,

with the date, to be put on them before they are published; with the same term in addition, if he should be living at the end of the first period. In actions for piracy, double costs to be given. The Act was amended and extended by 13 & 14 Vict. c. 104, which provided also for the Registration of Sculpture Models &c.

**SEAL** (Lat. *sigillum*). A stone, piece of metal, or other solid substance, generally round or elliptical, on which is engraved the arms, crest, name, device &c. of some state, prince, public body, or private individual. It is employed as a stamp to make an impression on sealing-wax, thereby authenticating public acts, deeds &c., or to close letters or packets. Seals were very early invented, and much learning has been employed in tracing their history, and explaining the figures upon them. (See particularly the work of Hopkinson, *De Sigillorum Præso et Novo Jure*, 4to. 1612.) They are now very generally used.

The best are usually formed of precious stones, on which the crest or arms, or the initials of the person's name, are engraved, set in gold. But immense numbers are formed of stained glass, and set in gilt copper. They are manufactured at London, Birmingham &c., and are extensively exported.

**SEAL FISHERY.** The seal (Lat. *phoca*; Fr. *veau marin*), an amphibious animal, of which there are many varieties, is found in vast numbers in the seas round Spitzbergen, and on the coasts of Labrador and Newfoundland. As it frequents the British shores, it is well known, and has been repeatedly described. Seals are principally hunted for their oil and skins. When taken in the spring of the year, at which time they are fattest, a full-grown seal will yield from 8 to 12 gallons of oil, and a small one from 4 to 5 gallons. The oil, if extracted before putrefaction has commenced, is beautifully transparent, free from smell, and not unpleasant in its taste. The skin, when tanned, is extensively employed in the making of shoes; and when dressed with the hair on, serves for the covering of trunks &c. For an account of the imports of seal-skins see *SKINS*.

To the Esquimaux the seal is of as much importance as bread to a European. Its flesh forms their most usual food; the fat is partly dressed for eating, and partly consumed in their lamps; the liver, when fried, is esteemed, even among sailors, as an agreeable dish. The skin, which the Esquimaux dress by processes peculiar to themselves, is made waterproof. With the hair off, it is used as coverings, instead of planks, for their boats, and as outer garments for themselves; shielded with which, they can invert themselves and canoes in the water, without getting their bodies wet. It serves also for coverings for their tents, and for various other purposes. The jackets and trousers made of seal-skin by the Esquimaux are in great request among the whale fishers for preserving them from oil and wet. (*Scoresby's Arctic Regions*, vol. I. p. 510.)

Seals in fine weather prefer the ice to the water, and vast herds of them are frequently found lying on the field ice; the places where they are met with being thence called 'seal meadows.' The seal hunters endeavour to surprise them while sleeping, and to intercept their retreat to the water. They attack them with muskets and bludgeons, but principally the latter, they being easily despatched by a blow on the nose.

The seal fishery has long been prosecuted to a considerable extent in the northern seas by ships from the Elbe and the Weser; but very few ships have been sent out from England for sealing only.

put on them before they are made term in addition, if there is no end of the first period. The public costs to be given. The Act extended by 13 & 11 Viet. c. 1 also for the Registration of

(3). A stone, piece of metal, generally round or ellipso-graved the arms, crest, name, state, prince, public body, or It is employed as a stamp to on sealing-wax, thereby acts, deeds &c., or to close Seals were very early invented, and have been employed in tracing explaining the figures upon particularly the work of Hopkirk, *see et Novo Jure*, 4to. 1612, generally used.

rather prefer the ice to the water, of them are frequently found ice; the places where they are thence called 'seal meadows.' Its endeavour to surprise them and to intercept their retreat to attack them with muskets and principally the latter, they being by a blow on the nose.

has long been prosecuted to a great extent in the northern seas by ships of the Weser; but very few ships come from England for sealing only,

though occasionally some of the whale ships have taken large quantities of seals. Latterly, however, the seal fishery has been prosecuted on a large scale, and with extraordinary success, by vessels of from 60 to 120 tons each, having crews of from 16 to 30 men, fitted out from the ports of Newfoundland, Nova Scotia &c. The business is attended with a good deal of risk, and instances frequently occur of the vessels being crushed to pieces by the collision of the fields of ice. We borrow the following details from Mr. Bliss's tract on the *Trade, Statistics &c. of Canada and our North American Possessions*.

There is another department of the colonial fishery which has originated within no distant period, and is now of great extent and importance. The large fields of ice which, in the months of March and April, drift southward from the Polar seas, are accompanied by many herds of seals; these are found sleeping in what are called the seal meadows of the ice, and are there attacked and slaughtered in vast numbers. For this purpose the fishers of Newfoundland, from which island these voyages are principally made, without waiting till the return of spring shall have opened their harbours, saw channels through the ice for their vessels, and set sail in quest of those drifting fields, through the openings of which they work a passage, attended with great difficulties and dangers, till they encounter their prey on the seal meadows. This bold and hazardous enterprise seems well compensated by its success. The number of seals thus taken is almost incredible, and is greatly on the increase (p. 70). There were captured by the Newfoundland fishermen, in 1838, 375,361 seals; in 1839, 437,501. Large quantities are also taken by the Nova Scotia and Labrador fishermen.

See also McGregor's *British America*, 2nd edit. vol. i. p. 197 &c. There is a good account of the seal in Laing's *Voyage to Spitzbergen*. For the price of seal oil, see OIL.

SEALING WAX (Ger. siegellack; Fr. cire d'Espagne, cire à cacheter; Ital. cera lacca, cera di Spagna; Span. lacre; Russ. sargutsch). The wax used for sealing letters, legal instruments &c. It is a composition of gum lac, melted and incorporated with resin, and afterwards coloured with some pigment, as vermilion, verditer, ivory black &c. [Lac.]

SEAMEN. The individuals engaged in navigating ships, barges &c. upon the high seas. Those employed for this purpose upon rivers, lakes, or canals, are denominated watermen.

Formerly a *British seaman* was a natural born subject of her Majesty; or was naturalised by Act of Parliament; or made a denizen by letters of denization; or had become a British subject by the conquest or cession of some newly acquired territory; or (being a foreigner) had served on board her Majesty's ships of war, in time of war, for the space of 2 or 3 years. But these distinctions were entirely done away in 1855. It is no longer necessary that British ships should be either wholly or in part manned by British subjects. In this respect the greatest possible license has been given to our shipowners, who are at full liberty to employ all descriptions of hands, whether native or foreign, in navigating their ships. Hence the term 'seamen' now includes all persons (except masters, pilots, and apprentices duly indentured and registered), without regard to their origin, 'employed or engaged in any capacity on board of any ship.' (17 & 18 Viet. c. 104, Introd.)

Various regulations have been enacted with respect to the hiring of seamen, their conduct

while on board, and the payment of their wages. These regulations differ in different countries; but in all, they have been intended to obviate the disputes that might otherwise arise between masters and seamen in regard to the terms of the contract between them, to secure due obedience to the orders of the former, and to interest the latter in the completion of the voyage.

The more important particulars in the law of England in regard to seamen are embodied in the 17 & 18 Viet. c. 101, and will be found in the following article, with some occasional remarks and notices of alterations in the law effected by subsequent statutes, the Merchant Shipping Act and Amendment, 25 & 26 Viet. c. 63 &c. In the first place it is necessary to enquire by whom they may be hired.

1. *Who may hire Seamen.*—Seamen have long been subjected to imposition from the fraudulent practices of persons offering to find them employment, by falsely representing themselves as agents for, or as having an interest in certain ships, and engaging or pretending to engage seamen to serve therein. In the view of obviating such practices in future, it is laid down in the Merchant Shipping Act, the 17 & 18 Viet. c. 101, that the Board of Trade may grant licenses to such individuals as it thinks fit, empowering them to engage or supply seamen or apprentices to merchant ships. But, with the exception, 1st, of the parties so licensed; 2nd, of the owner, master, or mate, or persons in the bonâ fide and constant employment of the owner of a ship requiring men or apprentices; and 3rd, of a regularly appointed shipping master, all other parties are prohibited, under a penalty of 20*l.*, from engaging or supplying seamen. The following are the clauses having reference to this subject.

*Board of Trade may license Persons to procure Seamen.*—The Board of Trade may grant to such persons as it thinks fit licenses to engage or supply seamen or apprentices for merchant ships in the United Kingdom, to continue for such periods, to be upon such terms, and to be revocable upon such conditions, as such Board thinks proper. (17 & 18 Viet. c. 101 s. 146.)

*Penalties for supplying Seamen without License &c.*—The following offences shall be punishable as herein mentioned; viz.:

(1) If any person not licensed as aforesaid, other than the owner or master or a mate of the ship, or some person who is bonâ fide the servant and in the constant employ of the owner, or a shipping master duly appointed as aforesaid, engages or supplies any seaman or apprentice to be entered on board any ship in the United Kingdom, he shall, for each seaman or apprentice so engaged or supplied, incur a penalty not exceeding 20*l.*:

(2) If any person employ any unlicensed person, other than persons excepted as above, for the purpose of engaging or supplying any seaman or apprentice to be entered on board any ship in the United Kingdom, he shall, for each seaman or apprentice so engaged or supplied, incur a penalty not exceeding 20*l.*, and if licensed, shall in addition forfeit his license:

(3) If any person knowingly receives or accepts to be entered on board any ship any seaman or apprentice who has been engaged or supplied contrary to the provisions of this Act, he shall, for every seaman or apprentice so engaged or supplied, incur a penalty not exceeding 20*l.* (Sec. 147.)

*Penalty for receiving Remuneration from Seamen.*—If any person demands or receives, either directly or indirectly, from any seaman or apprentice, or from any person seeking employment as a seaman or apprentice, or from any person on his

behalf, any remuneration whatever, other than the fees hereby authorised for providing him with employment, he shall, for every such offence, incur a penalty not exceeding 5*l.* (Sec. 148.)

2. *Conditions under which Seamen are to be engaged.*—In 1835 an Act was passed (5 & 6 Wm. IV. c. 19) of much importance to seamen, and to persons connected with navigation. It laid down the various forms and regulations to be observed in hiring, paying, and discharging seamen; established an office for their registry; and prescribed the mode in which lists of crews were to be transmitted to the registrar. It also regulated the conditions under which seamen might, in certain cases, be left in foreign parts, with a variety of other particulars; at the same time that it repealed sundry statutes, the provisions of which had become obsolete.

Further modifications were made in this system in 1844, by the 7 & 8 Vict. c. 112, and again by the Mercantile Marine Act of 1850, 13 & 14 Vict. c. 93. The existing law regulating the conditions in the agreements to be made with seamen, is embodied in the Merchant Shipping Act, 17 & 18 Vict. c. 104, and the Merchant Shipping Amendment Act, 25 & 26 Vict. c. 63 and 30 & 31 Vict. c. 124, and is as follows, viz.:—

*Agreements to be made with Seamen.*—The master of every ship, except ships of less than 80 tons registered tonnage, exclusively employed in trading between different ports on the coasts of the United Kingdom, shall enter into an agreement with every seaman whom he carries to sea from any port in the United Kingdom as one of his crew in the manner aftermentioned; and every such agreement shall be in a form sanctioned by the Board of Trade, and shall be dated at the time of the first signature thereof, and shall be signed by the master before any seamen signs the same, and shall contain the following particulars as terms thereof, viz.:—

(1) The nature, and, as far as practicable, the duration of the intended voyage or engagement:

(2) The number and description of the crew, specifying how many are engaged as sailors:

(3) The time at which each seaman is to be on board, or begin to work:

(4) The capacity in which each seaman is to serve:

(5) The amount of wages which each seaman is to receive:

(6) A scale of the provisions which are to be furnished to each seaman:

(7) Any regulations as to conduct on board, and as to fines, short allowance of provisions, or other lawful punishments for misconduct, which have been sanctioned by the Board of Trade, as regulations proper to be adopted, and which the parties agree to adopt:

And every such agreement shall be so framed as to admit of stipulations, to be adopted at the will of the master and seaman in each case, as to advance and allotment of wages, and may contain any other stipulations which are not contrary to law; provided that if the master of any ship belonging to any British possession has an agreement with his crew made in due form according to the law of the possession to which such ship belongs or in which her crew were engaged, and engages single seamen in the United Kingdom, such seamen may sign the agreement so made, and it shall not be necessary for them to sign an agreement in the form sanctioned by the Board of Trade. (Sec. 149.)

*Agreements for Foreign-going Ships to be made before and attested by a Shipping Master.*—In the case of all foreign-going ships, in whatever part

of her Majesty's dominions the same are registered the following rules shall be observed with respect to agreements, viz.:—

(1) Every agreement made in the United Kingdom (except in the cases of agreements with substitutes hereinafter provided for) shall be signed by each seaman in the presence of a shipping master:

(2) Such shipping master shall cause the agreement to be read over and explained to each seaman, or otherwise ascertain that each seaman understands the same before he signs it, and shall attest each signature:

(3) When the crew is first engaged the agreement shall be signed in duplicate, and one part shall be retained by the shipping master, and the other part shall contain a special place or form for the descriptions and signatures of substitutes or persons engaged subsequently to the first departure of the ship, and shall be delivered to the master:

(4) In the case of substitutes engaged in the place of seamen who have duly signed the agreement, and whose services are lost within 24 hours of the ship's putting to sea, by death, desertion, or other unforeseen cause, the engagement shall, when practicable, be made before some shipping master duly appointed in the manner hereinafter specified; and whenever such last-mentioned engagement cannot be so made, the master shall, before the ship puts to sea, if practicable, and if not, as soon afterwards as possible, cause the agreement to be read over and explained to the seamen; and the seamen shall thereupon sign the same in the presence of a witness, who shall attest their signatures. (Sec. 150.)

*Foreign-going Ships making short Voyages may have running Agreements.*—In the case of foreign-going ships making voyages averaging less than 6 months' duration, running agreements with the crew may be made to extend over two or more voyages, so that no such agreement shall extend beyond the next following 30th of June, or 31st day of December, or the first arrival of the ship at her port of destination in the United Kingdom after such date, or the discharge of cargo consequent upon such arrival; and every person entering into such agreement, whether engaged upon the first commencement thereof or otherwise, shall enter into and sign the same in the manner hereby required for other foreign-going ships; and every person engaged thereunder, if discharged in the United Kingdom, shall be discharged in the manner hereby required for the discharge of seamen belonging to other foreign-going ships. (Sec. 151.)

*Engagement and Discharge of Seamen in the meantime.*—The master of every foreign-going ship for which such a running agreement as aforesaid is made shall, upon every return to any port in the United Kingdom before the final termination of the agreement, discharge or engage before the shipping master at such port any seaman whom he is required by law so to discharge or engage, and shall upon every such return indorse on the agreement a statement (as the case may be) either that no such discharges or engagements have been made, or are intended to be made, before the ship again leaves port, or that all such discharges or engagements have been duly made as heretofore required, and shall deliver the agreement so indorsed to the shipping master; and any master who wilfully makes a false statement in such indorsement shall incur a penalty not exceeding 20*l.*; and the shipping master shall also sign an indorsement on the agreement, to the effect that the provisions of this Act relating to such agreement have been complied with, and shall re-

deliver the agreement so indorsed to the master. (Sec. 152.)

*Duplicates of running Agreements.*—In cases in which such running agreements are made, the duplicate agreement retained by the shipping master upon the first engagement of the crew shall either be transmitted to the registrar-general of seamen immediately, or be kept by the shipping master until the expiration of the agreement, as the Board of Trade directs. (Sec. 153.)

*Fees to be paid on such running Agreements.*—For the purpose of determining the fees to be paid upon the engagement and discharge of seamen belonging to foreign-going ships which have running agreements as aforesaid, the crew shall be considered to be engaged when the agreement is first signed, and to be discharged when the agreement finally terminates, and all intermediate engagement and discharges shall be considered to be engagements and discharges of single seamen. (Sec. 154.)

*In Home Trade Ships Agreement to be entered into before a Shipping Master &c.*—In the case of home trade ships, crews or single seamen may, if the master thinks fit, be engaged before a shipping master in the manner hereinbefore directed with respect to foreign-going ships; and in every case in which the engagement is not so made, the master shall, before the ships put to sea, if practicable, and if not, as soon afterwards as possible, cause the agreement to be read over and explained to each seaman, and the seaman shall thereupon sign the same in the presence of a witness, who shall attest his signature. (Sec. 155.)

*Special Agreements for Home Trade Ships belonging to same Owners.*—In cases where several home trade ships belong to the same owner, the agreement with the seamen may, notwithstanding anything herein contained, be made by the owner instead of by the master, and the seamen may be engaged to serve in any two or more of such ships, provided that the names of the ships and the nature of the service are specified in the agreement; but with the foregoing exception, all provisions herein contained which relate to ordinary agreements for home trade ships shall be applicable to agreements made in pursuance of this section. (Sec. 156.)

*Penalty for Shipping Seamen without Agreement duly executed.*—If in any case a master carries any seaman to sea without entering into an agreement with him in the form and manner, and at the place and time hereby in such case required, the master in the case of a foreign-going ship, and the master or owner in the case of a home trade ship, shall for each such offence incur a penalty not exceeding 5*l.* (Sec. 157.)

*Changes in Crew to be reported.*—The master of every foreign-going ship of which the crew has been engaged before a shipping master, shall before finally leaving the United Kingdom sign and send to the nearest shipping master a full and accurate statement, in a form sanctioned by the Board of Trade, of every change which takes place in his crew before finally leaving the United Kingdom, and in default shall for each offence incur a penalty not exceeding 5*l.*; and such statement shall be admissible in evidence, subject to all just exceptions. (Sec. 158.)

*Seamen engaged in the Colonies to be shipped before some Shipping Master &c.*—Every master of a ship who, if such ship is registered in the United Kingdom, engages any seaman in any British possession, or if such ship belongs to any British possession, engages any seaman in any British possession other than that to which the ship belongs, shall, if there is at the place where such

seaman is engaged any official shipping master or other officer duly appointed for the purpose of shipping seamen, engage such seaman before such shipping master, and if there is no such shipping master or officer, then before some officer of customs; and the same rules, qualifications, and penalties as are hereinbefore specified with respect to the engagement of seamen before shipping masters in the United Kingdom, shall apply to such engagements in a British possession; and upon every such engagement such shipping master or officer as aforesaid shall indorse upon the agreement an attestation to the effect that the same has been signed in his presence, and otherwise made as hereby required; and if in any case such attestation is not made, the burden of proving that the seaman was duly engaged as hereby required shall lie upon the master. (Sec. 159.)

*Seamen engaged in Foreign Ports to be shipped with the Sanction and in the Presence of the Consul.*—Every master of a British ship who engages any seaman at any place out of her Majesty's dominions in which there is a British consular officer shall, before carrying such seaman to sea, procure the sanction of such officer, and shall engage such seaman before such officer; and the same rules as are hereinbefore contained with respect to the engagement of seamen before shipping masters in the United Kingdom, shall apply to such engagements made before consular officers; and upon every such engagement the consular officer shall indorse upon the agreement his sanction thereof, and an attestation to the effect that the same has been signed in his presence, and otherwise made as hereby required; and every master who engages any seaman in any place in which there is a consular officer, otherwise than as hereinbefore required, shall incur a penalty not exceeding 20*l.*; and if in any case the indorsement and attestation hereby required is not made upon the agreement, the burden of proving the engagement to have been made as hereinbefore required shall lie upon the master. (Sec. 160.)

*Rules as to Production of Agreements and Certificates.*—The following rules shall be observed with respect to the production of agreements and certificates of competency or service for foreign-going ships, viz.:

(1) The master of every foreign-going ship shall, on signing the agreement with his crew, produce to the shipping master before whom the same is signed the certificates of competency or service which the said master and his first and second mate or only mate, as the case may be, are required to possess; and upon such production being duly made, and the agreement being duly executed as hereby required, the shipping master shall sign and give to the master a certificate to that effect.

(2) In the case of running agreements for foreign-going ships, the shipping master shall, before the second and every subsequent voyage made after the first commencement of the agreement, sign, and give to the master, on his complying with the provisions herein contained with respect to such agreements, and producing to the shipping master the certificate of competency or service of any first, second, or only mate then first engaged by him, a certificate to that effect.

(3) The master of every foreign-going ship shall, before proceeding to sea, produce the certificate so to be given to him by the shipping master as aforesaid, to the collector or comptroller of customs; and no officer of customs shall clear any such ship outwards without such production; and if any such ship attempts to go to sea without a clearance, any such officer may detain her until such certificate as aforesaid is produced.

(4) The master of every foreign going ship shall, within 48 hours after the ship's arrival at her final port of destination in the United Kingdom, or upon the discharge of the crew, whichever first happens, deliver such agreement to a shipping master at the place; and such shipping master shall thereupon give to the master a certificate of such delivery; and no officer of customs shall clear any foreign going ship inwards without the production of such certificate.

And if the master of any foreign-going ship fails to deliver the agreement to a shipping master at the time and in the manner hereby directed, he shall for every default incur a penalty not exceeding 5*l.* (Sec. 161.)

*Rules as to Production of Agreements and Certificates for Home Trade Ships.*—The following rules shall be observed with respect to the production of agreements and certificates of competency or service for home trade ships, viz.:—

(1) In the case of home trade ships of more than 80 tons burden, no agreement shall extend beyond the next following 30th of June or 31st of December, or the first arrival of the ship at her final destination in the United Kingdom after such date, or the discharge of cargo consequent upon such arrival.

(2) The master or owner of every such ship shall, within 21 days after the 30th of June and the 31st of December in every year, transmit or deliver to some shipping master in the United Kingdom every agreement made within 6 calendar months next preceding such days respectively, and shall also, in the case of home trade passenger ships, produce to the shipping master the certificates of competency or service which the said master and his first or only mate, as the case may be, are hereby required to possess.

(3) The shipping master shall thereupon give to the master or owner a certificate of such delivery and production; and no officer of customs shall grant a clearance or transire for any ship as last aforesaid without the production of such certificate; and if any such ship attempts to ply or go to sea without such clearance or transire any such officer may detain her until the said certificate is produced.

And if the agreement for any home trade ship is not delivered or transmitted by the master or owner to a shipping master at the time and in the manner hereby directed, such master or owner shall for every default incur a penalty not exceeding 5*l.* (Sec. 162.)

*Alterations to be void unless attested to have been made with the Consent of all Parties.*—Every erasure, interlineation, or alteration in any such agreement with seamen as is required by the third part of this Act (except additions so made as hereinbefore directed for shipping substitutes or persons engaged subsequently to the first departure of the ship) shall be wholly inoperative, unless proved to have been made with the consent of all the persons interested in such erasure, interlineation, or alteration by the written attestation (if made in her Majesty's dominions) of some shipping master, justice, officer of customs, or other public functionary or (if made out of her Majesty's dominions) of a British consular officer, or, where there is no such officer, of two respectable British merchants. (Sec. 163.)

*Penalty for falsifying Agreement.*—Every person who fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, or makes, or assists in making, or procures to be made, any false entry in, or delivers, assists in delivering, or procures to be delivered, a false copy of any

agreement, shall for each such offence be deemed guilty of a misdemeanour. (Sec. 164.)

*Seamen not to be bound to produce Agreement.*—Any seaman may bring forward evidence to prove the contents of any agreement or otherwise to support his case, without producing or giving notice to produce the agreement, or any copy thereof. (Sec. 165.)

*Copy of Agreement to be made accessible to Crew.*—The master shall at the commencement of every voyage or engagement cause a legible copy of the agreement, (omitting the signatures) to be placed or posted up in such part of the ship as shall be accessible to the crew, and in default shall for each offence incur a penalty not exceeding 5*l.* (Sec. 166.)

*Seamen discharged before Voyage to have Compensation.*—Any seaman who has signed an agreement, and is afterwards discharged before the commencement of the voyage, or before one month's wages are earned, without fault on his part justifying such discharge and without his consent, shall be entitled to receive from the master or owner, in addition to any wages he may have earned, due compensation for the damage thereby caused to him, not exceeding one month's wages, and may, on adducing such evidence as the court hearing the case deems satisfactory of his having been so improperly discharged as aforesaid, recover such compensation as if it were wages duly earned. (Sec. 167.)

The statute does not render a verbal agreement for wages absolutely void; but it imposes a penalty on the master if a written agreement be not made. And no written agreement contrary to the Act, by which a seaman should renounce any just right, such as his claim to wages in the case of the loss of the ship, to salvage &c., would be valid. When a written agreement is made conformably to the Act, it becomes the only evidence of the contract between the parties; and a seaman cannot recover anything agreed to be given in reward for his services, which is not specified in the articles.

A seaman who has engaged to serve on board a ship, is bound to exert himself to the utmost in the service of such ship; and, therefore, a promise made by the master of a ship in distress, to pay an extra sum to a seaman, as an inducement to extraordinary exertion on his part, is wholly void.

*3. Conduct of Seamen.*—It is essential to the business of navigation that the most prompt and ready obedience should be paid to the lawful commands of the master. To this effect it is contained in the articles of agreement previously referred to, that 'the crew engage to conduct themselves in an orderly, faithful, honest, careful, and sober manner; and to be at all times diligent in their respective duties and stations, and to be obedient to the lawful commands of the master in everything relating to the said ship, and the materials, stores, and cargo thereof, whether on board such ship, in boats, or on shore.'

In case of disobedience or disorderly conduct on the part of the seamen, the master may correct them in a reasonable manner. Such authority is absolutely necessary for the safety of the ship and of those on board. It, however, behoves the master to employ it with great deliberation, and not to pervert the powers with which he is intrusted for the good of the whole, to cruel or vindictive purposes. Masters abusing their authority must answer at law for the consequences; and, except under very grave and urgent circumstances, the infliction of chastisement without previous enquiry should be carefully avoided. But in cases of

such offence be deemed  
r. (Sec. 164.)

and to produce Agreement.—  
g forward evidence to prove  
ment or otherwise:—  
producing or giving notice  
ment, or any copy thereof.

to be made accessible to  
all at the commencement of  
ment cause a legible copy  
(with the signatures) to be  
such part of the ship as to  
rew, and in default shall for  
penalty not exceeding 5l.

before Voyage to have Com-  
man who has signed an agree-  
wards discharged before the  
the voyage, or before an-  
earned, without fault on his  
discharge and without his  
(itled to receive from the mas-  
addition to any wages he may  
compensation for the damage  
sustained, not exceeding one month's  
wages, and producing such evidence as  
the case deems satisfactory of his  
properly discharged as aforesaid,  
consent as if it were wages duly  
paid.)

is not tender a verbal agreement  
written agreement be not made,  
agreement contrary to the Act, he  
should renounce any just right,  
to wages in the case of the loss  
of wages, &c., would be valid. When  
ent is made conformably to the  
the only evidence of the contract  
terms; and a seaman cannot re-  
agreed to be given in reward  
of wages, which is not specified in the

o has engaged to serve on board a  
to exert himself to the utmost in  
such ship; and, therefore, a pen-  
the master of a ship in distress,  
sum to a seaman, as an indis-  
criminate exertion on his part, is

f Seamen.—It is essential to the  
safety that the most prompt and  
effective should be paid to the lawful com-  
mander. To this effect it is con-  
tained in articles of agreement previous  
to the crew engage to conduct  
an orderly, faithful, honest, careful,  
and to be at all times diligent  
in their duties and stations, and to be  
obedient to the lawful commands of the master  
relating to the said ship, and the  
stores, and cargo thereof, whether on  
board, in boats, or on shore.  
In case of disobedience or disorderly conduct,  
the master may correct the  
seamen, the master may correct  
in a reasonable manner. Such authority is  
necessary for the safety of the ship and  
cargo. It, however, behoves the mas-  
ter to use it with great deliberation, and not  
to exercise it with powers which he is intrusted  
with of the whole, to cruel or vindictive  
masters abusing their authority must  
be avoided for the consequences; and, except  
in grave and urgent circumstances, the  
exercise of such powers should be  
carefully avoided. But in cases of

actual or open mutiny, or of gross misconduct by  
the crew or any part of them, it may be incumbent  
on the master to act at once with all the  
energy and decision of which he is capable. In  
such unfortunate cases his resistance becomes an  
act of self defence, and is to be considered in all  
its consequences in that point of view. The Ordi-  
nances of Oleron and Wisby declare that a mari-  
ner who strikes the master shall either pay a fine  
or lose his right hand, a singular as well as  
barbarous alternative, unknown in modern juris-  
prudence.

But although the master may by force restrain  
the commission of crimes, he has no judicial au-  
thority over or right to punish the criminal, but  
is bound to secure his person and bring him be-  
fore a proper tribunal. And all justices of the  
peace are empowered to receive informations  
touching any murder, piracy, felony, or rob-  
bery upon the sea, and to commit the offenders  
for trial.

Offences of Seamen and Apprentices and their  
Punishment.—Whenever any seaman who has  
been lawfully engaged or any apprentice to the  
sea-service commits any of the following offences  
he shall be liable to be punished summarily as  
follows, viz.:—

(1) For desertion he shall be liable to imprison-  
ment for any period not exceeding 12 weeks, with  
or without hard labour, and also to forfeit all or  
any part of the clothes and effects he leaves on  
board, and all or any part of the wages or emolu-  
ments which he has then earned, and also, if  
such desertion takes place abroad, at the discre-  
tion of the court, to forfeit all or any part of  
the wages or emoluments he may earn in any other  
ship in which he may be employed until his next  
return to the United Kingdom, and to satisfy  
any excess of wages paid by the master or  
owner of the ship from which he deserts to any  
substitute engaged in his place at a higher rate of  
wages than the rate stipulated to be paid to him.

(2) For neglecting or refusing, without reason-  
able cause, to join his ship, or to proceed to sea in  
his ship, or for absence without leave at any time  
within 24 hours of the ship's sailing from any  
port either at the commencement or during the  
progress of any voyage, or for absence at any  
time without leave and without sufficient reason  
from his ship or from his duty not amounting to  
desertion or not treated as such by the master, he  
shall be liable to imprisonment for any period not  
exceeding 10 weeks, with or without hard labour,  
and also, at the discretion of the court, to forfeit  
out of his wages a sum not exceeding the amount  
of 2 days' pay, and in addition, for every 24 hours  
of absence, either a sum not exceeding 6 days'  
pay, or any expenses which have been properly  
incurred in hiring a substitute.

(3) For quitting the ship without leave after  
her arrival at her port of delivery and before she  
is placed in security, he shall be liable to forfeit  
out of his wages a sum not exceeding 1 month's  
pay.

(4) For wilful disobedience to any lawful com-  
mand he shall be liable to imprisonment for any  
period not exceeding 4 weeks, with or without  
hard labour, and also, at the discretion of the  
court, to forfeit out of his wages a sum not ex-  
ceeding 2 days' pay.

(5) For continued wilful disobedience to lawful  
commands, or continued wilful neglect of duty,  
he shall be liable to imprisonment for any period  
not exceeding 12 weeks, with or without hard  
labour, and also, at the discretion of the court, to  
forfeit, for every 24 hours' continuance of such  
disobedience or neglect, either a sum not exceeding

6 days' pay or any expenses which have been prop-  
erly incurred in hiring a substitute.

(6) For assaulting any master or mate he shall  
be liable to imprisonment for any period not ex-  
ceeding 12 weeks, with or without hard labour.

(7) For combining with any other or others of  
the crew to disobey lawful commands, or to neglect  
duty, or to impede the navigation of the ship or  
the progress of the voyage, he shall be liable to  
imprisonment for any period not exceeding 12  
weeks, with or without hard labour.

(8) For wilfully damaging the ship, or em-  
bezzling or wilfully damaging any of her stores  
or cargo, he shall be liable to forfeit out of his  
wages a sum equal in amount to the loss thereby  
sustained, and also, at the discretion of the court,  
to imprisonment for any period not exceeding 12  
weeks, with or without hard labour.

(9) For any act of smuggling of which he is  
convicted, and whereby loss or damage is occa-  
sioned to the master or owner, he shall be liable  
to pay to such master or owner such a sum as is  
sufficient to reimburse the master or owner for  
such loss or damage; and the whole or a propor-  
tionate part of his wages may be retained in satis-  
faction or on account of such liability without  
prejudice to any further remedy. (Sec. 213.)

Entry of Offences to be made in Official Log.—  
Upon the commission of any of the offences enu-  
merated in the last preceding section an entry  
thereof shall be made in the official log book  
[LOG, OFFICIAL,] and shall be signed by the  
master and also by the mate or one of the crew;  
and the offender, if still in the ship, shall, before  
the next arrival of the ship at any port, or if she  
is at the time in port, before her departure, either  
be furnished with a copy of such entry or have  
the same read over distinctly and audibly to him,  
and may thereupon make such reply thereto as he  
thinks fit; and a statement that a copy of the  
said entry has been so furnished, or that the same  
has been so read over as aforesaid, and the reply  
(if any) made by the offender, shall likewise be  
entered and signed in manner aforesaid; and in  
any subsequent legal proceedings the entries here-  
inbefore required shall, if practicable, be produced  
or proved, and in default of such production or  
proof the court hearing the case may, at its dis-  
cretion, refuse to receive evidence of the offence.  
(Sec. 214.)

Seamen &c. whom Masters of Ships are com-  
pelled to convey, to be subject to Penalties for  
Breach of Discipline.—Every seafaring person  
whom the master of any ship is, under the autho-  
rity of this Act or of any other Act of Parliament,  
compelled to take on board and convey, and every  
person who goes to sea in any ship without the  
consent of the master or owner or other person  
entitled to give such consent, shall, so long as he  
remains in such ship, be subject to the same laws  
and regulations for preserving discipline, and to  
the same penalties and punishments for offences  
constituting or tending to a breach of disci-  
pline, to which he would be subject if he were a  
member of the crew and had signed the agreement.  
(Sec. 215.)

Master or Owner may apprehend Deserters,  
without Warrant.—Whenever, either at the com-  
mencement or during the progress of any voyage,  
any seaman or apprentice neglects or refuses to  
join or deserts from or refuses to proceed to sea  
in any ship in which he is duly engaged to serve,  
or is found otherwise absenting himself therefrom  
without leave, the master or any mate, or the  
owner, ship's husband, or consignee, may, in any  
place in her Majesty's dominions, with or without  
the assistance of the local police officers or con-

stable, who are hereby directed to give the same, if required, and also at any place out of her Majesty's dominions, if and so far as the laws in force at such place will permit, apprehend him without first procuring a warrant; and may thereupon in any case, and shall in case he so requires and it is practicable, convey him before some court capable of taking cognisance of the matter, to be dealt with according to law; and may, for the purpose of conveying him before such court, detain him in custody for a period not exceeding 24 hours, or such shorter time as may be necessary, or may, if he does not so require, or if there is no such court at or near the place, at once convey him on board; and if any such apprehension appears to the court before which the case is brought to have been made on improper or on insufficient grounds, the master, mate, owner, ship's husband, or consignee who makes the same or causes the same to be made, shall incur a penalty not exceeding 20*l.*; but such penalty, if inflicted, shall be a bar to any action for false imprisonment in respect of such apprehension. (Sec. 246.)

*Deserters may be sent on board in lieu of being imprisoned.*—Whenever any seaman or apprentice is brought before any court on the ground of his having neglected or refused to join or to proceed to sea in any ship in which he is engaged to serve, or of having deserted or otherwise absented himself therefrom without leave, such court may, if the master or the owner or his agent so requires, instead of committing the offender to prison, cause him to be conveyed on board for the purpose of proceeding on the voyage, or deliver him to the master or any mate of the ship, or the owner or his agent, to be by them so conveyed, and may in such case order any costs and expenses properly incurred by or on behalf of the master or owner by reason of the offence to be paid by the offender, and, if necessary, to be deducted from any wages which he has then earned, or which, by virtue of his then existing engagement, he may afterwards earn. (Sec. 247.)

*Seamen imprisoned for Desertion or Breach of Discipline may be sent on board before Termination of Sentence.*—If any seaman or apprentice is imprisoned on the ground of his having neglected or refused to join or to proceed to sea in any ship in which he is engaged to serve, or of having deserted or otherwise absented himself therefrom without leave, or of his having committed any other breach of discipline, and if during such imprisonment and before his engagement is at an end his services are required on board his ship, any justice may, at the request of the master or of the owner or his agent, cause such seaman or apprentice to be conveyed on board his said ship for the purpose of proceeding on the voyage, or to be delivered to the master or any mate of the ship or to the owner or his agent, to be by them so conveyed, notwithstanding that the termination of the period for which he was sentenced to imprisonment has not arrived. (Sec. 248.)

*Entries and Certificates of Desertion abroad to be copied, sent home, and admitted in Evidence.*—In all cases of desertion from any ship in any place abroad the master shall produce the entry of such desertion in the official log book to the person or persons hereby required to indorse on the agreement a certificate of such desertion; and such person or persons shall thereupon make and certify a copy of such entry and also a copy of the said certificate of desertion; and if such person is a public functionary he shall, and in other cases the said master shall, forthwith transmit such copies to the registrar-general of seamen in

England; and the said registrar shall, if required, cause the same to be produced in any legal proceeding; and such copies, if purporting to be made and certified as aforesaid, and certified to have come from the custody of the said registrar, shall in any legal proceeding relating to such desertion be received as evidence of the entries therein appearing. (Sec. 249.)

*Facilities for proving Desertion, so far as concerns Forfeiture of Wages.*—Whenever a question arises whether the wages of any seaman or apprentice are forfeited for desertion, it shall be sufficient for the party insisting on the forfeiture to show that such seaman or apprentice was duly engaged in or that he belonged to the ship from which he is alleged to have deserted, and that he quitted such ship before the completion of the voyage or engagement, or if such voyage was terminated in the United Kingdom and the ship has not returned, that he is absent from her, and that an entry of the desertion has been duly made in the official log book; and thereupon the desertion shall, so far as relates to any forfeiture of wages or emoluments under the provisions hereinbefore contained, be deemed to be proved, unless the seaman or apprentice can produce a proper certificate of discharge, or can otherwise show to the satisfaction of the court that he had sufficient reason for leaving his ship. (Sec. 250.)

*Costs of procuring Imprisonment may to the extent of 3*l.* be deducted from Wages.*—Whenever in any proceeding relating to seamen's wages it is shown that any seaman or apprentice has in the course of the voyage been convicted of an offence by any competent tribunal and rightfully punished therefor by imprisonment or otherwise, the court hearing the case may direct a part of the wages due to such seaman, not exceeding 3*l.*, to be applied in reimbursing any costs properly incurred by the master in procuring such conviction and punishment. (Sec. 251.)

*Amount of Forfeiture how to be ascertained when Seamen contract for the Voyage.*—Whenever any seaman contracts for wages by the voyage or by the run or by the ship, and not by the month or other stated period of time, the amount of forfeiture to be incurred under this Act shall be taken to be an amount bearing the same proportion to the whole wages or share as a calendar month or other period (as the case may be) bears to the whole time spent in the voyage; and if the whole time spent in the voyage does not exceed the period for which the pay is to be forfeited, the forfeiture shall extend to the whole wages or share. (Sec. 252.)

*Application of Forfeitures.*—All clothes, effects, wages, and emoluments which under the provisions hereinbefore contained are forfeited for desertion shall be applied in the first instance in or towards the reimbursement of the expenses occasioned by such desertion to the master or owner of the ship from which the desertion has taken place; and may, if earned subsequently to the desertion, be recovered by such master, or by the owner or his agent, in the same manner as the deserter might have recovered the same if they had not been forfeited; and in any legal proceeding relating to such wages the court may order the same to be made accordingly; and, subject to such reimbursement, the same shall be paid into the receipt of her Majesty's exchequer in such manner as the Treasury may direct, and shall be carried to and form part of the consolidated fund of the United Kingdom; and in all other cases of forfeiture of wages under the provisions hereinbefore contained the forfeiture shall, in the absence of any specific directions to the contrary, be

for the benefit of the master or owner by whom the wages are payable. (Sec. 253.)

*Questions of Forfeitures may be decided in Suits for Wages.*—Any question concerning the forfeiture of or deductions from the wages of any seaman or apprentice may be determined in any proceeding lawfully instituted with respect to such wages, notwithstanding that the offence in respect of which such question arises, though heretofore made punishable by imprisonment as well as forfeiture, has not been made the subject of any criminal proceeding. (Sec. 254.)

*Penalty for false Statements as to last Ship or Voyage.*—If any seaman on or before being engaged willfully and fraudulently makes a false statement of the name of his last ship or last alleged ship, or willfully and fraudulently makes a false statement of his own name, he shall incur a penalty not exceeding 5*l.*: and such penalty may be deducted from any wages he may earn by virtue of such engagement as aforesaid, and shall, subject to reimbursement of the loss and expenses (if any) occasioned by any previous desertion, be paid and applied in the same manner as other penalties payable under this Act. (Sec. 255.)

*Fines to be deducted from Wages, and paid to Shipping Master.*—Whenever any seaman commits an act of misconduct for which his agreement imposes a fine, and which it is intended to punish by enforcing such fine, an entry thereof shall be made in the official log book, and a copy of such entry shall be furnished or the same shall be read over to the offender, and an entry of such reading over, and of the reply (if any) made by the offender, shall be made, in the manner and subject to the conditions hereinbefore specified with respect to the offences against discipline specified in and punishable under this Act; and such fine shall be deducted and paid over as follows: viz. if the offender is discharged in the United Kingdom and the offence and such entries in respect thereof as aforesaid are proved, in the case of a foreign-going ship to the satisfaction of the shipping master before whom the offender is discharged, and in the case of a home trade ship to the satisfaction of the shipping master at or nearest to the place at which the crew is discharged, the master or owner shall deduct such fine from the wages of the offender, and pay the same over to such shipping master; and if before the final discharge of the crew in the United Kingdom any such offender as aforesaid enters into any of her Majesty's ships, or is discharged abroad, and the offence and such entries as aforesaid are proved to the satisfaction of the officer in command of the ship into which he so enters, or of the consular officer, officer of customs, or other person by whose sanction he is so discharged, the fine shall thereupon be deducted, and the entry of such deduction shall then be made in the official log book (if any) and signed by such officer or other person; and on the return of the ship to the United Kingdom, the master or owner shall pay over such fine, in the case of foreign-going ships, to the shipping master before whom the crew is discharged, and in the case of home trade ships to the shipping master at or nearest to the place at which the crew is discharged; and if any master or owner neglects or refuses to pay over any such fine in manner aforesaid, he shall for each such offence incur a penalty not exceeding 3 times the amount of the fine retained by him: provided that no act of misconduct for which any such fine as aforesaid has been inflicted and paid shall be otherwise punished under the provisions of this Act. (See

*Penalty for enticing to desert, and harbouring Deserters.*—Every person who by any means whatever persuades or attempts to persuade any seaman or apprentice to neglect or refuse to join or to proceed to sea in, or to desert from his ship, or otherwise to absent himself from his duty, shall for each such offence, in respect of each such seaman or apprentice, incur a penalty not exceeding 10*l.*; and every person who willfully harbours or secretes any seaman or apprentice who has deserted from his ship, or who has willfully neglected or refused to join or has deserted from his ship, knowing or having reason to believe such seaman or apprentice to have so done, shall, for every such seaman or apprentice so harboured or secreted, incur a penalty not exceeding 20*l.* (Sec. 257.)

*Penalty for obtaining Passage surreptitiously.*—Any person who secretes himself and goes to sea in any ship without the consent of either the owner, consignee, or master, or of a mate, or of any person in charge of such ship, or of any other person entitled to give such consent, shall incur a penalty not exceeding 20*l.*, or be liable to imprisonment with or without hard labour for any period not exceeding 4 weeks. (Sec. 258.)

*On Change of Masters, Documents hereby required to be handed over to Successor.*—If during the progress of a voyage the master is superseded or for any other reason quits the ship and is succeeded in the command by some other person, he shall deliver to his successor the various documents relating to the navigation of the ship and to the crew thereof which are in his custody, and shall in default incur a penalty not exceeding 100*l.*; and such successor shall immediately on assuming the command of the ship enter in the official log a list of the documents so delivered to him. (Sec. 259.)

Desertion has long been, and continues to be, very prevalent, and is, in truth, by far the greatest drawback on the shipping interest. Mr. Lindsay, whose knowledge of the subject is alike extensive and minute, remarks upon it as follows:—“Desertion is now so great an evil, and so detrimental to the best interests of our maritime commerce, that vigorous measures should be adopted to suppress it. It is a crime which is rarely committed alone, and is too frequently the first step towards others of a much worse nature. Even the seamen almost invariably repent of it when too late. They feel that they have broken faith, lost that self-respect which is essential to the maintenance of order, drawn their feelings in intoxication, and thus become demoralised and worthless. The country loses in various ways. In our trade with Australia particularly, by paying materially enhanced rates of freight and passage, for the desertion of the crew was the only fear which the ship-owners at one time had of sending their vessels to that colony. The moral standard of a class of men, alike valuable during periods of peace and war, is materially lowered, and we have to maintain, from our parish resources, the pauperised wives and children of deserters.

“This subject was much considered by Government when framing the Mercantile Marine Act, and various clauses were introduced into that statute having reference to it. The one which comes most to the point is the 71st clause (ante, sec. 216), which enacts, “that whenever a seaman or apprentice neglects or refuses to join, or absents himself without leave, or deserts from any ship in which he is engaged to serve, the master or mate, or the owner, ship's husband, or consignee, may, for the purpose of carrying him before a justice,

apprehend or require any police officer or constable to apprehend him without first procuring a warrant." Masters may, also, without warrant, seize deserters and carry them either before a magistrate or on board their ships. But when seamen desert, they generally get out of the way of seizure till the vessels which they have deserted have left the port. They know full well that the extent of their punishment, even if they be taken, cannot exceed 3 months in what to them are comfortable quarters, and that very likely, judging by precedent, it may not exceed 1 month—a trifling penalty for so serious an offence. Besides imprisonment, the deserter is also liable to forfeit such clothes or effects as he may have on board, and such wages or emoluments as he may have earned. If the desertion take place abroad, he forfeits whatever wages and emoluments he may earn in any other ship in which he may return to the United Kingdom, and he further becomes liable to satisfy any excess of wages paid by the master or owners of the ship from which he deserts to any substitute engaged in his place. Such is the full extent of the punishment. We should, however, have less to say against its insufficiency, were the means of convicting offenders less complex. While they remain in their present state, seamen will continue, as hitherto, to desert when it suits their purposes. No more convincing proof need be given of the inefficacy of the laws bearing upon desertion, than the fact that one firm only, Messrs. Pollock, Gilmour, and Co., of Glasgow, engaged in the North American timber trade, have had, during 1 year, upwards of 400 seamen deserters abroad from their ships; that the consequent loss entailed on the firm exceeded 3,000*l.*, merely in the higher wages they were compelled to pay to seamen to supply the place of the deserters; and that they only succeeded in arresting 11 out of the 400 deserters.' (*On Our Navigation Laws and Mercantile Marine*, 2nd ed. p. 85 &c.)

This is a very striking statement. But in truth and reality, desertion is an evil with which it is very difficult, if not impossible, to deal. It may be palliated; but more need hardly be expected; and we incline to think that the clauses previously quoted go quite as far as it is advisable to go in attempting its suppression by penal enactments. When seamen arrive in a port where their services are in great request, and wages double, perhaps, what they are serving for, how can it be supposed that they should be generally proof against such overpowering temptations? But as commerce becomes more extended, the difference of wages in different seaports will decline; and the more they approach to equality, the less temptation will there be to desert. Mr. Lindsay suggests as one mode of dealing with this difficult subject, that all seamen returning to this country previously to the arrival of the ships in which they had sailed, who cannot produce certificates of their discharge, or otherwise account satisfactorily for their return, should be held to be guilty of desertion and punished accordingly.

A regulation of this sort would, probably, be some check on desertion, though we doubt whether it would amount to much. But we believe that nothing short of that equalisation of wages to which we have referred would do so much to lessen its frequency and to make it more an object of public reprobation, as an improvement in the character of the masters. The drunkenness and brutality that have been so often manifested by the latter, though happily on the decrease, create a presumption that seamen guilty of desertion have been driven to it by ill-usage, and indisposes

the public to increase the penalties on the offence. And hence it may, perhaps, be questioned whether anything will be more likely to render it, as it ought to be, a serious matter in the public estimation, than the measures that have been taken, and with good effect, to raise the qualifications of the masters, and to make their conduct more in accordance with their position.

It is admitted, indeed, by all legislators and jurists that gross misconduct, or systematic and extreme ill-treatment on the part of the master, will justify the seamen in resisting his authority or deserting the ship. The duties and obligations of master and men are reciprocal: the latter are bound to give due obedience and respect to all the reasonable commands of the master, and even to those that may appear to be unreasonable; but they are not bound to obey orders that would obviously compromise their own security or that of the ship. 'Desertion,' said Lord Kenyon, 'is a forfeiture of wages; but if the captain conduct himself in such a way as puts the sailor into that situation that he cannot without damage to his personal safety continue in his service, (human nature speaks the language,) a servant is justified in providing for that safety.' The necessity of securing on all ordinary occasions the most prompt compliance with the orders of the master is, however, so very urgent, that no proceeding on the part of the latter, unless it be of the most unwarrantable description, will justify the seamen in deserting or resisting his commands. Disobedience to the latter is uniformly presumed to be an offence of the gravest kind; and nothing but the most overwhelming necessity will vindicate the seamen by whom it may be committed. 'The court,' to use the words of Lord Stowell, 'will be particularly attentive to preserve that subordination and discipline on board ship which is so indispensably necessary for the preservation of the whole service, and of every person concerned in it. A peremptory or harsh tone or an overcharged manner, in the exercise of authority, will never be held by this court to justify resistance. It will not be sufficient that there has been a want of that personal attention and civility which usually takes place on other occasions, and might be wished generally to attend the exercise of authority. The nature of the service requires that those persons that engage in it should accommodate themselves to the circumstances attending it, and those circumstances are not unfrequently urgent, and create strong sensations which naturally find their way in strong expressions and violent demeanour. The persons subject to this species of authority are not to be captious, or to take exception to a neglect of formal or ceremonious observances.' (*Dodson's Admiralty Reports*, ii. 261.)

If the cargo be embezzled or injured by the fraud or negligence of the seamen, so that the merchant has a right to claim satisfaction from the master and owners, they may, by the custom of merchants, deduct the value thereof from the wages of the seamen by whose misconduct the injury has taken place. And a clause to this effect is inserted in the form of agreement issued by the Board of Trade, as follows: 'It is hereby agreed that any embezzlement, or wilful or negligent destruction of any part of the ship's cargo or stores, shall be made good to the owner out of the wages of the person guilty of the same.' Seamen are, therefore, responsible for themselves only. Nor can any innocent party be called upon to contribute a portion of his wages to make good the loss occasioned by the misconduct of others.

The offences of running away with the ship, or

the penalties on the offence, perhaps, be questioned whether it is likely to render it, as it is a matter in the public estimates that have been taken, to raise the qualifications of a seaman (their conduct more in position.

acted, by all legislators and seconded, or systematic and t on the part of the master, in resisting his authority.

The duties and obligations are reciprocal: the latter are obedience and respect to all the orders of the master, and even to those that would be deemed to be unreasonable; but to obey orders that would be deemed to be unreasonable or that would be deemed to be unjust, said Lord Kenyon, is a duty, but if the captain conduct himself as puts the sailor into that cannot without damage to his service, (human language,) a servant is justified in refusing to obey. The necessity of many occasions the most prompt orders of the master is, urgent, that no proceeding be taken, unless it be of the most pressing nature, will justify the seamen in disobeying his commands. Disobedience is uniformly presumed to be the gravest kind: and nothing is so necessary as to be vigilant by whom it may be committed.

As the words of Lord Stowell, are very attentive to preserve that discipline on board ship which is necessary for the preservation of the ship, and of every person on board, and of every person on board, in the exercise of authority, it is by this court to justify resistance to be sufficient that there has been personal attention and that the discipline is generally to attend authority. The nature of the duties of those persons that engage in it relate themselves to the circumstances, and those circumstances are urgent, and create strong reasons generally find their way in strong and violent demeanour. The persons on board of authority are not to be taken exception to a neglect of their duties, or a neglect of their duties, or a neglect of their duties.

embellished or injured by the negligence of the seamen, so that the right to claim satisfaction from the owners, they may, by the custom, value the value thereof from the seamen by whose misconduct it is placed. And a clause to this effect in the form of agreement issued in the Trade, as follows: 'It is hereby agreed, that the seamen shall be liable for any loss or damage to the cargo or any part of the ship's cargo or made good to the owner out of the person guilty of the same. Therefore, responsible for themselves any innocent party be called upon for a portion of his wages to make good by the misconduct of others, of running away with the ship, or

voluntarily yielding her up to an enemy, or making a revolt, have in all cases been visited with the severest punishment. The statute 11 & 12 Wm. III. c. 7 enacted—

'That if any commander or master of any ship, or any seaman or mariner, shall in any place where the admiral hath jurisdiction, betray his trust and turn pirate, enemy, or rebel, and practically and feloniously run away with his or their ship or ships, or any barge, boat, ordnance, ammunition, goods, or merchandises, or yield them up voluntarily to any pirate, or shall bring any seducing messages from any pirate, enemy, or rebel, or consult, combine, or confederate with, or attempt or endeavour to corrupt any commander, master, officer, or mariner, to yield up or run away with any ship, goods, or merchandises, or turn pirate, or go over to pirates: or if any person shall lay violent hands on his commander, whereby to hinder him from fighting in defence of his ship and goods committed to his trust, or shall confine his master, or make or endeavour to make a revolt in the ship; shall be adjudged and deemed and taken to be a pirate, felon, and robber, and being convicted thereof according to the directions of this Act, shall have and suffer pain of death, loss of lands, goods, and chattels, as pirates, felons, and robbers, upon the seas ought to have and suffer.'

But by the 7 Wm. IV. & 1 Vict. c. 88, the penalty for this offence has been changed to transportation beyond seas for life, or for not less than 15 years, or to imprisonment for any term not exceeding 3 years. The Acts 12 & 13 Vict. c. 96, and 23 & 24 Vict. c. 88, provide for the trial and punishment in the colonies of India of such offence.

The wilful destruction or loss of the ship has, in all countries, been punished by death. But doubts having been entertained whether the destruction of a ship that had been insured came within the scope of the previously existing statutes, they were repealed by the 43 Geo. III. c. 113, and the following provision substituted in their stead:—

'That if any person or persons shall, from and after July 16, 1803, wilfully cast away, burn or otherwise destroy any ship or vessel, or in anywise counsel, direct, or procure the same to be done, and the same be accordingly done, with intent or design thereby wilfully and maliciously to prejudice any owner or owners of such ship or vessel or any owner or owners of any goods laden on board the same, or any person or persons, body politic or corporate, that hath or have underwritten or shall underwrite any policy or policies of insurance upon such ship or vessel, or on the freight thereof, or upon any goods laden on board the same, the person or persons offending therein, being thereof lawfully convicted, shall be deemed and adjudged a principal felon or felons, and shall suffer death, as in cases of felony, without benefit of clergy.'

After various subsequent changes of the law, the penalty for this offence is now, 1869, transportation for life, or not less than 3 years, or imprisonment for a term not exceeding 2 years, with or without hard labour and with or without solitary confinement, and if committed by a male under 16 years, with or without whipping. (24 & 25 Vict. c. 97 ss. 42 & 43.)

4. *Payment of Seamen's Wages &c.*—In order to stimulate the zeal and enterprise of seamen, most maritime states have made the payment of their wages depend on the successful termination of the voyage; and for this reason, the insurance of their wages has been uniformly prohibited (Arnould *On Insurance*, i. 208). Hence the maxim

that *freight is the only mother of wages*. 'If freight go,' said Lord Stowell, 'everything goes. The mariner has no step further, if I may say so, in the character of insurer, to supply the loss.' (2 *Dodson's Admiralty Reports*, 510.) And, therefore, it used to be laid down in general terms, that when by any disaster happening in the course of a voyage, such as the loss or capture of the ship, the owners lost their freight, the seamen also lost their wages.

But this general rule was subject to numerous qualifications. Thus, if a voyage miscarried, and the freight were lost, through the incompetency or fault of the master; or if, after being entered upon, and in part completed, the voyage were abandoned by the owners; or if a vessel were sent from one port to another, to be freighted, where no freight was to be found: in these and other cases of the same sort, the claim of seamen to payment of their wages was too obviously reasonable not to be generally admitted. Inasmuch, too, as owners may protect themselves, by insurance, against loss by shipwreck and other casualties, it would appear to be hardly fair or equitable that the wages of seamen, who cannot avail themselves of this resource, should be wholly sacrificed in the event of such catastrophes occurring. And this hardship appears the greater from the circumstance of the lives of the seamen being most commonly involved in the safety of the ship. It is, no doubt, contended by Valin, who has argued in favour of the old rule, that if seamen ceased 'd'avoir intérêt à la conservation du navire et de ses marchandises, au moindre péril dont ils seroient menacés, ils ne songeroient qu'à sauver leur vie, sans se mettre en peine du reste; il étoit donc juste, et du bien public, d'attacher leur fortune à celle du vaisseau.' (*Commentaire sur l'Ordonnance de 1681*, liv. iii. tit. iv.) But it may be safely affirmed that the desertion contemplated by Valin is not practicable in one case out of twenty. In storms and collisions at sea escape is very rarely possible; and it is not often possible even in cases of wreck by vessels being driven on shore. Hence, in the vast majority of cases, it may be fairly presumed that a regard to their own personal security, independent altogether of any consideration in relation to wages, will make seamen exert themselves to the utmost.

And none, it must be borne in mind, has ever proposed, as Valin would seem to assume, that the payment of wages in cases of loss should be irrespective of the conduct of the seamen. They are bound in all cases, and especially in cases of danger, to make every possible effort for the safety of the ship and cargo. If they fail in this most essential part of their duty, they plainly forfeit all claim to wages, whether freight be earned or not. But, in the event of their doing their duty, and making every possible exertion to save the ship and cargo, it does not appear that the loss of the latter should exempt the owners from the claim of the seamen for wages. On the contrary, it would seem that in such cases the payment of wages is consistent alike with the interests of navigation and of the public.

But, however brought about, the old doctrine of the absolute dependence of wages on freight has been gradually losing its authority. After various modifications, it was enacted by the 7 & 8 Vict. c. 112 that in cases of shipwreck or loss of the ship, whether freight had or had not been previously earned, seamen should be entitled to their wages down to the occurrence of the casualty, on their producing a certificate from the principal surviving officer of the ship, that they had exerted

themselves to the best of their ability to save the ship and cargo. But a condition of this sort having led to much difficulty and abuse, it has been laid down in the 17 & 18 Vict. c. 104 s. 183, that the right of seamen to their wages shall not depend on the fact of freight being earned; and that in cases of wreck, and loss of the ship, they shall be entitled to their wages, unless proof be brought to show that they did not exert themselves to the utmost to save the ship and cargo. At present, therefore, it may be concluded, that nothing save their own misconduct can defeat the claim of seamen to the full payment of the wages stipulated in their agreements.

A seaman impressed from a merchant ship into the royal service, is entitled to receive the portion of his wages due to him at the time of impressment, provided the merchant ship arrive in safety at the port of her discharge.

The following clauses in the Mercantile Shipping Act relate to the allotment, payment, remittance &c. of seamen's wages.

*Regulations as to Allotment Notes.*—All stipulations for the allotment of any part of the wages of a seaman during his absence which are made at the commencement of the voyage shall be inserted in the agreement, and shall state the amounts and times of the payments to be made; and all *Allotment Notes* shall be in forms sanctioned by the Board of Trade. (Sec. 168.)

*Allotment Notes may be sued on summarily.*—The wife, or the father or mother, or the grandfather or grandmother, or any child or grandchild, or any brother or sister of any seaman in whose favour an allotment note of part of the wages of such seaman is made, may, unless the seaman is shown in manner aftermentioned to have forfeited or ceased to be entitled to the wages out of which the allotment is to be paid, and subject, as to the wife, to the provision after contained, sue for and recover the sums allotted by the note when and as the same are made payable, with costs, from the owner or any agent who has authorised the drawing of note, either in the County Court or in the summary manner in which seamen are enabled to sue for and recover wages not exceeding 50*l.*; and in any such proceeding it shall be sufficient for the claimant to prove that he or she is the person mentioned in the note, and that the note was given by the owner or by the master or some other authorised agent; and the seaman shall be presumed to be duly earning his wages, unless the contrary is shown to the satisfaction of the court, either by the official statement of the change in the crew caused by his absence made and signed by the master, as by this Act is required, or by a duly certified copy of some entry in the official log book to the effect that he has left the ship, or by a credible letter from the master of the ship to the same effect, or by such other evidence, of whatever description, as the court in its absolute discretion considers sufficient to show satisfactorily that the seaman has ceased to be entitled to the wages out of which the allotment is to be paid: provided that the wife of any seaman who deserts her children, or so misconducts herself as to be undeserving of support from her husband, shall thereupon forfeit all right to further payments of any allotment of his wages which has been made in her favour. (Sec. 169.)

*Discharge from Foreign-going Ships to be made before Shipping Master.*—In the case of all British foreign-going ships, in whatever part of her Majesty's dominions the same are registered, all seamen discharged in the United Kingdom shall be discharged and receive their wages in the presence of a shipping master duly appointed

under this Act, except in cases where some competent court otherwise directs; and any master or owner of any such ship who discharges any seaman belonging thereto, or, except as aforesaid, pays his wages within the United Kingdom in any other manner, shall incur a penalty not exceeding 10*l.*; and in the case of home trade ships seamen may, if the owner or master so desires, be discharged and receive their wages in like manner. (Sec. 170.)

*Master to deliver Account of Wages.*—Every master shall, not less than 24 hours before paying off or discharging any seaman, deliver to him, or, if he is to be discharged before a shipping master, to such shipping master, a full and true account in a form sanctioned by the Board of Trade of his wages and of all deductions to be made therefrom, on any account whatever, and in default shall for each offence incur a penalty not exceeding 5*l.*; and no deduction from the wages of any seaman (except in respect of any matter happening after such delivery) shall be allowed unless it is included in the account so delivered; and the master shall during the voyage enter the various matters in respect of which such deductions are made, with the amounts of the respective deductions, as they occur, in a book to be kept for that purpose, and shall, if required, produce such book at the time of the payment of wages, and also upon the hearing before any competent authority of any complaint or question relating to such payments. (Sec. 171.)

*On Discharge, Masters to give Seamen Certificates of Discharge &c.*—Upon the discharge of any seaman, or upon payment of his wages, the master shall sign and give him a certificate of his discharge, in a form sanctioned by the Board of Trade, specifying the period of his service and the time and place of his discharge; and if any master fail to sign and give to any such seaman such certificate of discharge he shall for each such offence incur a penalty not exceeding 10*l.*; and the master shall also, upon the discharge of every certificated mate whose certificate of competency or service has been delivered to and retained by him, return such certificate, and shall in default incur a penalty not exceeding 20*l.* (Sec. 172.)

*Shipping Master may decide Questions which Parties refer to him.*—Every shipping master shall hear and decide any question whatever between a master or owner and any of his crew which both parties agree in writing to submit to him; and every award so made by him shall be binding on both parties, and shall, in any legal proceeding, which may be taken in the matter before any court of justice, be deemed to be conclusive as to the rights of the parties; and no such submission or award shall require a stamp; and any document purporting to be such submission or award shall be prima facie evidence thereof. (Sec. 173.)

*Masters and others to produce Ship's Papers to Shipping Masters, and give Evidence.*—In any proceeding relating to the wages, claims, or discharge of any seaman carried on before any shipping master under the provisions of this Act, such shipping master may call upon the owner or his agent, or upon the master or any mate or other member of the crew, to produce any log books, papers, or other documents in their respective possession or power relating to any matter in question in such proceeding, and may call before him and examine any of such persons being then at or near the place on any such matter; and every owner, agent, master, mate, or other member of the crew, who, when called upon by the shipping master, does not produce any such paper or document as aforesaid, if in his possession or power, or does

not appear and give evidence, shall, unless he shows some reasonable excuse for such default, for each such offence incur a penalty not exceeding 5*l.* (Sec. 174.)

*Settlement of Wages.*—The following rules shall be observed with respect to the settlement of wages (that is to say):—

(1) Upon the completion before any shipping master of any discharge and settlement, the master or owner and each seaman shall respectively in the presence of the shipping master, sign in a form sanctioned by the Board of Trade a mutual release of all claims in respect of the past voyage or engagement, and the shipping master shall also sign and attest it, and shall retain and transmit it as herein directed:

(2) Such release so signed and attested shall operate as a mutual discharge and settlement of all demands between the parties thereto in respect of the past voyage or engagement:

(3) A copy of such release certified under the hand of such shipping master to be a true copy shall be given by him to any party thereto requiring the same; and such copy shall be receivable in evidence upon any future question touching such claims as aforesaid, and shall have all the effect of the original of which it purports to be a copy:

(4) In cases in which discharge and settlement before a shipping master are hereby required, no payment, receipt, settlement, or discharge otherwise made shall operate or be admitted as evidence of the release or satisfaction of any claim:

(5) Upon any payment being made by a master before a shipping master, the shipping master shall, if required, sign and give to such master a statement of the whole amount so paid; and such statement shall as between the master and his employer be received as evidence that he has made the payments therein mentioned. (Sec. 175.)

*Master to make Reports of Character.*—Upon every discharge effected before a shipping master the master shall make and sign, in a form sanctioned by the Board of Trade, a report of the conduct, character, and qualifications of the persons discharged, or may state in a column to be left for that purpose in the said form, that he declines to give any opinion upon such particulars, or upon any of them; and the shipping master shall transmit the same to the registrar-general of seamen, or to such other person as the Board of Trade directs, to be recorded, and shall, if desired so to do by any seaman, give to him or indorse on his certificate of discharge a copy of so much of such report as concerns him: and every person who makes, assists in making, or procures to be made any false certificate or report of the service, qualifications, conduct, or character of any seaman, knowing the same to be false, or who forges, assists in forging, or procures to be forged, or fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any such certificate or report, or who fraudulently makes use of any certificate or report, or of any copy of any certificate or report, which is forged or altered or does not belong to him, shall for each such offence be deemed guilty of a misdemeanor. (Sec. 176.)

#### *Remittance of Wages and Savings Banks for Seamen.*

*Facilities may be given for remitting Seamen's Wages.*—Facilities shall, if the Board of Trade so directs, be given for remitting the wages and other moneys of seamen and apprentices to their

relatives or other persons by means of money orders issued by shipping masters; and the Board of Trade may make regulations concerning such orders, and the persons by or to whom, and the mode and time in and at which the same are to be paid, and may from time to time repeal or alter any such regulations; and all such regulations, so long as they are in force, shall be binding upon all persons interested or claiming to be interested in such orders, as well as upon the officers employed in issuing or paying the same; and no legal proceeding shall be instituted against the Board of Trade, or against any shipping master or other public officer employed about such orders, on account of any such regulations, or on account of any act done or left undone in pursuance thereof, or on account of any refusal, neglect, or omission to pay any such money order, unless such refusal, neglect, or omission arise from fraud or wilful misbehaviour on the part of the person against whom proceedings are instituted. (Sec. 177.)

*Power to Pay when Order is lost.*—The Board of Trade may, in any case in which it thinks fit so to do, cause the amount of any such money order as aforesaid to be paid to the person to whom or in whose favour the same may have been granted, or to his personal representatives, legatees, or next of kin, notwithstanding that such order may not be in his or their possession; and in all such cases from and after such payment the Board of Trade and every shipping master or other officer of the Board of Trade shall be freed from all liability in respect of such order. (Sec. 178.)

*Penalty for issuing Money.*—Every shipping master or other public officer who grants or issues any money order with a fraudulent intent shall in England or Ireland be deemed guilty of felony, and in Scotland of a high crime and offence, and shall be liable to be kept in penal servitude for a term not exceeding 4 years. (Sec. 179.)

*Savings Banks for Seamen may be established.*—The Commissioners for the reduction of the National Debt, or the comptroller-general acting under them, may on the application and recommendation of the Board of Trade, establish savings banks at such ports and places within the United Kingdom, either in the shipping offices established in such ports or elsewhere, as may appear to be expedient, and may appoint treasurers to receive from or on account of seamen, or the wives and families of seamen, desirous to become depositors in such savings banks, deposits to an amount not exceeding 150*l.* in the whole in respect of any one account, under such regulations as may be prescribed by the said commissioners or comptroller-general; and such regulations shall be binding on all such treasurers and depositors; and the said commissioners may remove such treasurers, and appoint others in their place; and all the provisions of the Acts now in force relating to savings banks, except so far as relates to the annual amount of deposit, shall apply to all savings banks which may be established under the authority of this Act, and to such treasurers and depositors as aforesaid. (Sec. 180.)

By the 19 & 20 Vict. c. 41 the immediate management of the savings banks for seamen is placed in the Board of Trade, which has power to establish central and branch savings banks and to make regulations for their conduct.

In March 1865, the Board of Trade issued instructions to our consuls at certain ports, to enable seamen, when paid abroad, to remit their wages home by money orders.

*Legal Right to Wages.*

*Right to Wages and Provisions, when to begin.*—A seaman's right to wages and provisions shall be taken to commence either at the time at which he commences work or at the time specified in the agreement for his commencement of work or presence on board, whichever first happens. (Sec. 181.)

*Seamen not to give up certain Rights.*—No seaman shall by any agreement forfeit his lien upon the ship, or be deprived of any remedy for the recovery of his wages to which he would otherwise have been entitled; and every stipulation in any agreement inconsistent with any provision of this Act, and every stipulation by which any seaman consents to abandon his right to wages in the case of the loss of the ship, or to abandon any right which he may have or obtain in the nature of salvage, shall be wholly inoperative. (Sec. 182.)

*Wages not to be dependent on the earning of Freight.*—No right to wages shall be dependent on the earning of freight; and every seaman and apprentice who would be entitled to demand and recover any wages if the ship in which he has served had earned freight, shall, subject to all other rules of law and conditions applicable to the case, be entitled to claim and recover the same, notwithstanding that freight has not been earned; but in all cases of wreck or loss of the ship, proof that he has not exerted himself to the utmost to save the ship, cargo, and stores shall bar his claim. (Sec. 183.)

*In case of Death, Wages to be paid.*—If any seaman or apprentice to whom wages are due under the last preceding enactment dies before the same are paid, they shall be paid and applied in the manner after specified with regard to the wages of seamen who die during a voyage. (Sec. 184.)

*Rights to Wages in case of Termination of Service by Wreck or Illness.*—In cases where the service of any seaman terminates before the period contemplated in the agreement by reason of the wreck or loss of the ship, and also in cases where such service terminates before such period as aforesaid by reason of his being left on shore at any place abroad under a certificate of his unfitness or inability to proceed on the voyage granted as after mentioned, such seaman shall be entitled to wages for the time of service prior to such termination as aforesaid, but not for any further period. (Sec. 185.)

*Wages not to accrue during Refusal to Work or Imprisonment.*—No seaman or apprentice shall be entitled to wages for any period during which he unlawfully refuses or neglects to work when required, whether before or after the time fixed by the agreement for his beginning work, nor unless the court hearing the case otherwise directs, for any period during which he is lawfully imprisoned for any offence committed by him. (Sec. 186.)

*Period within which Wages are to be paid.*—The master or owner of every ship shall pay to every seaman his wages within the respective periods following (that is to say); in the case of a home trade ship, within 2 days after the termination of the agreement or at the time when such seaman is discharged, whichever first happens; and in the case of all other ships (except ships employed in the southern whale fishery or on other voyages for which seamen by the terms of their agreement are wholly compensated by shares in the profits of the adventure), within 3 days after the cargo has been delivered, or within 5 days after the seaman's discharge, whichever first happens; and in all cases the seaman shall at

the time of his discharge be entitled to be paid on account a sum equal to one-fourth part of the balance due to him; and every master or owner who neglects or refuses to make payment in manner aforesaid, without sufficient cause, shall pay to the seaman a sum not exceeding the amount of 2 days' pay for each of the days, not exceeding 10 days, during which payment is delayed beyond the respective periods aforesaid, and such sum shall be recoverable as wages. (Sec. 187.)

*Mode of Recovering Wages.*

*Seamen may sue for Wages in a summary manner.*—Any seaman or apprentice, or any person duly authorised on his behalf, may sue in a summary manner before any two justices of the peace acting in or near to the place at which the service has terminated, or at which the seaman or apprentice has been discharged, or at which any person upon whom the claim is made is or resides, or in Scotland either before any such justices or before the sheriff of the county within which any such place is situated, for any amount of wages due to such seaman or apprentice not exceeding 50*l.* over and above the costs of any proceeding for the recovery thereof, so soon as the same becomes payable; and every order made by such justices or sheriff in the matter shall be final. (Sec. 188.)

*Restrictions on Suits for Wages in Superior Courts.*—No suit or proceeding for the recovery of wages under the sum of 50*l.* shall be instituted by or on behalf of any seaman or apprentice in any Court of Admiralty or Vice-Admiralty, or in the Court of Session in Scotland, or in any superior Court of Record in her Majesty's dominions, unless the owner of the ship is adjudged bankrupt or declared insolvent, or unless the ship is under arrest or is sold by the authority of any such court as aforesaid, or unless any justices acting under the authority of this Act refer the case to be adjudged by such court, or unless neither the owner nor master is or resides within 20 miles of the place where the seaman or apprentice is discharged or put ashore. (Sec. 189.) By 24 Vict. c. 10 s. 10 the High Court of Admiralty is declared to have jurisdiction over any claim for wages, provided always that if the plaintiff do not recover 50*l.* he shall not be entitled to costs, unless the judge shall certify that the case was a fit one to be tried in the said court.

*No Seaman to sue for Wages abroad, except in Cases of Discharge or of Danger to Life.*—No seaman who is engaged for a voyage or engagement which is to terminate in the United Kingdom, shall be entitled to sue in any court abroad for wages, unless he is discharged with such sanction as herein required and with the written consent of the master, or prove such ill-usage on the part of the master or by his authority as to warrant reasonable apprehension of danger to the life of such seaman if he were to remain on board; but if any seaman on his return to the United Kingdom proves that the master or owner has been guilty of any conduct or default which but for this enactment would have entitled the seaman to sue for wages before the termination of the voyage or engagement, he shall be entitled to recover in addition to his wages such compensation not exceeding 20*l.* as the court hearing the case thinks reasonable. (17 & 18 Vict. s. 190.)

*Master to have same Remedies for Wages as Seamen.*—Every master of a ship shall, so far as the case permits, have the same rights, liens, and remedies for the recovery of his wages which by this Act or by any law or custom any seaman, not being a master, has for the recovery of his wages; and if in any proceeding in any Court of Admiralty

be entitled to be paid on one-fourth part of the and every master or owner to make payment in man- sufficient cause, shall pay to exceeding the amount of 2 the days, not exceeding 10 ment is delayed beyond aforesaid, and such sum wages. (Sec. 187.)

#### Recovery of Wages.

*Wages in a summary manner.* Justice, or any person duly appointed, may sue in a summary way in any of the justices of the peace acting in the county in which the seaman or apprentice was engaged, or at which any person upon whom such justice or before the within which any such place amount of wages due to such not exceeding 50*l.* over and proceeding for the recovery of the same becomes payable; to by such justices or sheriff final. (Sec. 188.)

*Writs for Wages in Superior Court.* proceeding for the recovery of 50*l.* shall be instituted by seaman or apprentice in any Vice-Admiralty, or in the Scotland, or in any superior Majesty's dominions, un- ship is adjudged bankrupt or unless the ship is under the authority of any such or unless any justices acting of this Act refer the case to be court, or unless neither the or resides within 20 miles of seaman or apprentice is dis- (Sec. 189.) By 24 Viet. Court of Admiralty is declared over any claim for wages, pro- if the plaintiff do not recover entitled to costs, unless the that the case was a fit one to court.

*Writ for Wages abroad, except in case of Danger to Life.*—No seaman for a voyage or engagement in the United Kingdom, may sue in any court abroad for discharged with such sanction and with the written consent of such ill-usage on the part of his authority as to warrant or provision of danger to the life of were to remain on board; but his return to the United King- the master or owner has been in fact or default which but for would have entitled the seaman to the termination of the voyage shall be entitled to recover in such compensation not ex- court hearing the case thins 18 Viet. s. 190.)

*Same Remedies for Wages as in case of a ship shall, so far as have the same rights, liens, and recovery of his wages which by law or custom any seaman, not for the recovery of his wages; in any Court of Admiralty*

or Vice-Admiralty touching the claim of a master to wages any right or set-off or counter-claim is set up, it shall be lawful for such court to enter into and adjudicate upon all questions and to settle all accounts then arising or outstanding and unsettled between the parties to the proceeding, and to direct payment of any balance which is found to be due. (Sec. 191.)

#### Relief to Seamen's Families out of Poor Rates.

*Relief to Seamen's Families to be chargeable on Proportion of their Wages.*—Whenever during the absence of any seaman on a voyage, his wife, children, and step-children, or any of them, become or becomes chargeable to any union or parish in the United Kingdom, such union or parish shall be entitled to be reimbursed out of the wages of such seaman earned during such voyage any sums properly expended during his absence in the maintenance of his said relations, or any of them, so that such sums do not exceed the following proportions of his said wages, viz.:—

(1) If only one of such relations is chargeable,  $\frac{1}{2}$  of such wages.

(2) If two or more of such relations are chargeable,  $\frac{2}{3}$  of such wages.

But if during the absence of the seaman any sum has been paid by the owner to or on behalf of any such relation as aforesaid, under an allotment note given by the seaman in his, her, or their favour, any such claim for reimbursement as aforesaid shall be limited to the excess (if any) of the proportion of the wages hereinbefore mentioned over the sums so paid. (Sec. 192.)

Clause 193 directs the mode to be pursued by the guardians of the poor &c. to obtain reimbursement of advances to relations of seamen.

#### Wages and Effects of Deceased Seamen.

*Masters to take charge of or sell Effects of Deceased Seamen which are on board.*—Whenever any seaman or apprentice belonging to or sent home in any British ship, whether a foreign-going ship or a home trade ship, employed on a voyage which is to terminate in the United Kingdom, dies during such voyage, the master shall take charge of all money, clothes, and effects which he leaves on board, and shall, if he think fit, cause all or any of the said clothes and effects to be sold by auction at the most or other public auction, and shall thereupon sign an entry in the official log book containing the following particulars, viz.:—

(1) A statement of the amount of the money, and a description of the effects so left by the deceased;

(2) In case of a sale, a description of each article sold, and the sum received for each;

(3) A statement of the sum due to the deceased as wages, and the total amount of the deduction (if any) to be made therefrom;

And shall cause such entry to be attested by a mate and by one of the crew. (Sec. 194.)

*Such Effects and Wages to be paid either to Consul or to Shipping Master, with full Accounts.*—In the cases provided for by the last preceding section, the following rules shall be observed (that is to say):—

(1) If the ship proceeds at once to any port in the United Kingdom, without touching on the way at any foreign port, the master shall within 48 hours after his arrival deliver any such effects as aforesaid remaining unsold, and pay any money which he has taken charge of or received from such sale as aforesaid, and also the balance of wages due to the deceased, to the shipping master at the port of destination in the United Kingdom:

(2) If the ship touches and remains for 48

hours at some foreign port or at some port in her Majesty's dominions abroad before coming to any port in the United Kingdom, the master shall report the case to the British consular officer or officer of customs there, as the case may be, and shall give to such officer any information he requires as to the destination of the ship and probable length of the voyage; and such officer may thereupon, if he considers it expedient so to do, require the said effects, money, and wages to be delivered and paid to him, and shall upon such delivery and payment give to the master a receipt, and the master shall within 48 hours after his arrival at his port of destination in the United Kingdom produce the same to the shipping master there; and such consular officer or officer of customs shall in such case indorse and certify upon the agreement with the crew such particulars with respect to such delivery and payment as the Board of Trade requires:

(3) If such officer as aforesaid does not require such payment and delivery to be made to him, the master shall take charge of the said effects, money, and wages, and shall within 48 hours after his arrival at his port of destination in the United Kingdom deliver and pay the same to the shipping master there:

(4) The master shall in all cases in which any seaman or apprentice dies during the progress of a voyage or engagement give to the Board of Trade, or to such officer or shipping master as aforesaid, an account in such form as they respectively require of the effects, money, and wages so to be delivered and paid; and no deductions claimed in such account shall be allowed unless verified, if there is any official log book, by such entry therein as hereinbefore required, and also by such other vouchers (if any) as may be reasonably required by the Board of Trade, or by the officer or shipping master to whom the account is rendered:

(5) Upon due compliance with such of the provisions of this section as relate to acts to be done at the port of destination in the United Kingdom, the shipping master shall grant to the master a certificate to that effect, and no officer of customs shall clear inwards any foreign-going ship without the production of such certificate. (Sec. 195.)

*Penalties for not taking charge of, remitting, or accounting for such Moneys and Effects.*—If any master fail to take such charge of the money or other effects of a seaman or apprentice dying during a voyage, or to make such entries in respect thereof, or to procure such attestation to such entries, or to procure such payment or delivery of any money, wages, or effects of any seaman or apprentice dying during a voyage, or to give such account in respect thereof as hereinbefore respectively directed, he shall be accountable for the money, wages, and effects of the seaman or apprentice to the Board of Trade, and shall pay and deliver the same accordingly; and such master shall in addition for every such offence incur a penalty not exceeding treble the value of the money or effects not accounted for, or if such value is not ascertained, not exceeding 50*l.*; and if any such money, wages, or effects are not duly paid, delivered, or accounted for by the master, the owner of the ship shall pay, deliver, and account for the same, and such money and wages and the value of such effects shall be recoverable from him accordingly; and if he fail to account for and pay the same, he shall, in addition to his liability for the said money and value, incur the same penalty which is hereinbefore mentioned as incurred by the master for the like offence; and

all money, wages, and effects of any seaman or apprentice dying during a voyage shall be recoverable in the same courts, and by the same modes of proceeding by which seamen are hereby enabled to recover wages due to them. (Sec. 196.)

*Officers of Customs and Consuls to take charge of Effects left by Seamen abroad.*—If any such seaman or apprentice as last aforesaid die abroad, at any place either in or out of her Majesty's dominions, leaving any money or effects not on board his ship, the chief officer of customs or the British consular officer at or nearest to the place, as the case may be, shall claim and take charge of such money and effects; and such officer shall, if he think fit, sell all or any of such effects, or any effects of any deceased seaman or apprentice delivered to him under the provisions before contained; and every such officer shall, quarterly, or at such other times as the Board of Trade directs, remit to her Majesty's paymaster general all moneys belonging to or arising from the sale of the effects of, or paid as the wages of, any deceased seaman or apprentice, which have come to his hands under the provisions hereinbefore contained, and shall render such accounts in respect thereof as the Board of Trade requires. (Sec. 197.)

*Wages and Effects of Deceased Seamen.*—The 197th section of the principal Act shall extend to seamen or apprentices who within the 6 months immediately preceding their death have belonged to a British ship; and such section shall be construed as if there were inserted in the first line thereof after the words 'such seaman or apprentice as last aforesaid,' the words 'or if any seaman or apprentice who has within the 6 months immediately preceding his death belonged to a British ship,' (25 & 26 Vict. c. 63 s. 20.)

*Wages and Effects of Seamen dying at home to be paid in certain Cases to Board of Trade.*—Whenever any seaman or apprentice dies in the United Kingdom, and is at the time of his death entitled to claim from the master or owner of any ship in which he has served any unpaid wages or effects, such master or owner shall pay and deliver or account for the same to the shipping master at the port where the seaman or apprentice was discharged or was to have been discharged, or to the Board of Trade, or as it directs. (17 & 18 Vict. c. 104 s. 198.)

*Recovery of Wages &c. of Seamen lost with their Ship.*—The wages of seamen or apprentices who are lost with the ship to which they belong shall be dealt with as follows (that is to say):—

(1) The Board of Trade may recover the same from the owner of the ship in the same manner in which seamen's wages are recoverable:

(2) In any proceedings for the recovery of such wages, if it is shown by some official return produced out of the custody of the registrar-general of seamen or by other evidence that the ship has 12 months or upwards before the institution of the proceeding left a port of departure, and if it is not shown that she has been heard of within 12 months after such departure, she shall be deemed to have been lost with all hands on board, either immediately after the time she was last heard of or at such later time as the court hearing the case may think probable:

(3) The production out of the custody of the registrar-general of seamen or of the Board of Trade of any duplicate agreement or list of the crew made out at the time of the last departure of the ship from the United Kingdom, or of a certificate purporting to be a certificate from a consular or other public officer at any port abroad, stating that certain seamen or apprentices were shipped in the ship from the said port, shall, in

the absence of proof to the contrary, be sufficient proof that the seamen or apprentices therein named were on board at the time of the loss:

(4) The Board of Trade shall deal with such wages in the manner in which they deal with the wages of other deceased seamen and apprentices under the principal Act. (25 & 26 Vict. c. 63 s. 21.)

*If less than 50l., Wages and Property of deceased Seamen may be paid over without Probate or Administration to Persons entitled.*—If the money and effects of any deceased seaman or apprentice paid, delivered, or remitted to the Board of Trade or its agents, including the moneys received for any part of the said effects which have been sold either before delivery to the Board of Trade or by its direction, do not exceed in value the sum of 50l., then, subject to the provisions after contained, and to all such deductions for expenses incurred in respect of the seaman or apprentice or of his said money and effects as the said board thinks proper to allow, the said board may, if it think fit, pay and deliver the said money and effects either to any claimants who can prove themselves to the satisfaction of the said board either to be his widow or children, or to be entitled to the effects of the deceased under his will (if any) or under the statutes for the distribution of the effects of intestates, or under any other statute, or at common law, or to be entitled to procure probate or take out letters of administration or confirmation, although no probate or letters of administration or confirmation have been taken out, and shall be thereby discharged from all further liability in respect of the money and effects so paid and delivered, or may, if it thinks fit, require probate or letters of administration or confirmation to be taken out, and thereupon pay and deliver the said money and effects to the legal personal representatives of the deceased; and all claimants to whom such money or effects are so paid or delivered shall apply the same in due course of administration, and if such money and effects exceed in value the sum of 50l., then, subject to the provisions hereinafter contained and to deduction for expenses, the Board of Trade shall pay and deliver the same to the legal personal representatives of the deceased. (17 & 18 Vict. c. 104 s. 199.)

*Mode of Payment under Wills made by Seamen.*—In cases where the deceased seaman or apprentice has left a will, the Board of Trade shall have the following powers; viz. :—

(1) It may in its discretion refuse to pay or deliver any such wages or effects as aforesaid to any person claiming to be entitled thereto under a will made on board ship, unless such will is in writing, and is signed or acknowledged by the testator in the presence of the master or first or only mate of the ship, and is attested by such master or mate.

(2) It may in its discretion refuse to pay or deliver any such wages or effects as aforesaid to any person not being related to the testator by blood or marriage who claims to be entitled thereto under a will made elsewhere than on board ship, unless such will is in writing, and is signed or acknowledged by the testator in the presence of two witnesses, one of whom is some shipping master appointed under this Act, or some minister or officiating minister or curate of the place in which the same is made, or, in a place where there are no such persons, some justice of the peace, or some British consular officer, or some officer of customs, and is attested by such witnesses.

Whenever any claim made under a will is rejected by the Board of Trade on account of the

the contrary, be sufficient in or apprentices therein at the time of the loss:

made shall deal with such in which they deal with deceased seamen and apprentices Act. (25 & 26 Vict., c. 63)

es and Property of deceased or without Probate or Ad-entitled.—If the money and seaman or apprentice paid, o the Board of Trade or its oneys received for any part ch have been sold either

Board of Trade or by us d in value the sum of 500. utions after contained, and s for expenses incurred in or apprentice or of his aid the said board thinks propa d may, if it think fit, pay money and effects either to n prove themselves to the id board either to be his to be entitled to the effect- r his will (if any) or under distribution of the effects of ny other statute, or as com- itted to procure probate or ministration or confirmation, r letters of administration or en taken out, and shall be from all further liability y and effects so paid and t thinks fit, require probate ration or confirmation to be on pay and deliver the said e legal personal representa- ; and all claimants to whom re so paid or delivered shall e course of administration, id effects exceed in value the ject to the provisions herei- b deduction for expenses, the pay and deliver the same to representatives of the decesat. s. 199.)

nder Wills made by Seamen. deceased seaman or appren- e Board of Trade shall have ; viz. :—

discretion refuse to pay or ges or effects as aforesaid to be entitled thereto under l ship, unless such will is in ed or acknowledged by the ce of the master or first or ip, and is attested by such

discretion refuse to pay or ges or effects as aforesaid to related to the testator by who claims to be entitled ade elsewhere than on board is in writing, and is signed the testator in the presence of of whom is some shipping ler this Act, or some minister r or curate of the place in ade, or, in a place where persons, some justice of the sh consular officer, or some nd is attested by such wit-

aim made under a will is d of Trade on account of the

said will not being made and attested as herein- before required, the wages and effects of the de- ceased shall be dealt with as if no will had been made. (Sec. 200.)

Clause 201 directs the procedure to be followed in dealing with the claims of the creditors of deceased seamen.

Clause 202 lays down the mode of dealing with unclaimed wages of deceased seamen.

**Punishment for Forgery and false Representations to obtain Wages and Property of deceased Seamen.**—Every person who, for the purpose of obtaining, either for himself or for another, any money or effects of any deceased seaman or apprentice, forges, assists in forging, or procures to be forged, or fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any document purporting to show or assist in showing a right to such wages or effects, and every person who for the purpose aforesaid makes use of any such forged or altered document as aforesaid, or who for the purpose aforesaid gives or makes or procures to be given or made, or assists in giving or making or procuring to be given or made, any false evidence or representation, knowing the same to be false, shall be punishable with penal servitude for a term not exceeding 4 years, or with imprisonment with or without hard labour for any period not exceeding 2 years, or if summarily prosecuted and convicted, by imprisonment, with or without hard labour, for any period not exceeding 6 months. (Sec. 203.)

Clause 204 enacts that the effects of seamen discharged from navy are to be disposed of by accountant-general of navy.

**5. Leaving Seamen abroad [MASTER].**—The desertion of their ships by seamen, when abroad, is an offence which, as we have seen, has been much and justly complained of. But the seamen may themselves be deserted; that is, they may be left when on shore with leave or for some necessary purpose, or they may be forced on shore by the master, and then left by him. These being offences of a very grave character, there can be no doubt that they should be visited with some suitable punishment. It is, also, highly expedient that such seamen as have the misfortune to be shipwrecked or left abroad, should be conveyed back to their mother country by the first opportunity. And hence all maritime codes concur in imposing penalties on masters, when abroad, forcing seamen on shore, or leaving them, without just cause; and they, also, make provision for the return home of such shipwrecked or deserted seamen. The following clauses of the Merchant Shipping Act have these objects in view:—

**On Discharge of Seamen abroad, by Sale of Ship or otherwise, Seamen to be sent home at Expense of Owner.**—Whenever any British ship is transferred or disposed of at any place out of her Majesty's dominions, and any seaman or apprentice belonging thereto does not in the presence of some British consular officer, or, if there is no such consular officer there, in the presence of one or more respectable British merchants residing at the place, and not interested in the said ship, signify his consent in writing to complete the voyage if continued, and whenever the service of any seaman or apprentice belonging to any British ship terminates at any place out of her Majesty's dominions, the master shall give to each such seaman or apprentice a certificate of discharge in the form sanctioned by the Board of Trade, and in the case of any certificated mate whose certificate he has retained shall return such certificate to him, and shall also, besides paying the wages to which such seaman or apprentice is entitled, either pro-

vide him with adequate employment on board some other British ship bound to the port in her Majesty's dominions at which he was originally shipped, or to such other port in the United Kingdom as is agreed upon by him, or furnish the means of sending him back to such port, or provide him with a passage home, or deposit with such consular officer or such merchant or merchants as aforesaid such a sum of money as is by such officer or merchants deemed sufficient to defray the expenses of his subsistence and passage home; and such consular officer or merchants shall indorse upon the agreement of the ship which the seaman or apprentice is leaving the particulars of such payment, provision, or deposit; and if the master refuses or neglects to comply with the requirements of this section, such expenses as last aforesaid, if defrayed by such consular officer or by any other person, shall, unless such seaman or apprentice has been guilty of barratry, be a charge upon the ship to which such seaman or apprentice belonged and upon the owner for the time being thereof, and may be covered against such owner, with costs, at the suit of the consular officer or other person defraying such expenses, or, in case the same has been allowed to the consular officer out of the public moneys, as a debt due to her Majesty either by ordinary process of law, or in the manner in which seamen are hereby enabled to recover wages; and such expenses, if defrayed by the seaman or apprentice, shall be recoverable as wages due to him. (Sec. 205.)

**Forcing Seamen on Shore a Misdemeanor.**—If the master or any other person belonging to any British ship wrongfully forces on shore and leaves behind, or otherwise wilfully and wrongfully leaves behind, in any place, on shore or at sea, in or out of her Majesty's dominions, any seaman or apprentice belonging to such ship before the completion of the voyage for which such person was engaged or the return of the ship to the United Kingdom, he shall for each such offence be deemed guilty of a misdemeanor. (Sec. 206.)

**No Seamen to be discharged or left abroad without Certificate of some Functionary.**—If the master of any British ship does any of the following things, viz. :—

(1) Discharges any seaman or apprentice in any place situate in any British possession abroad (except the possession in which he was shipped), without previously obtaining the sanction in writing indorsed on the agreement of some public shipping master or other officer duly appointed by the local government in that behalf, or (in the absence of any such functionary) of the chief officer of customs resident at or near the place where the discharge takes place:

(2) Discharges any seaman or apprentice at any place out of her Majesty's dominions without previously obtaining the sanction so indorsed as aforesaid of the British consular officer there, or (in his absence) of two respectable merchants resident there:

(3) Leaves behind any seaman or apprentice at any place situate in any British possession abroad on any ground whatever, without previously obtaining a certificate in writing so indorsed as aforesaid from such officer or person as aforesaid, stating the fact and the cause thereof, whether such cause be unfitness or inability to proceed to sea, or desertion or disappearance:

(4) Leaves behind any seaman or apprentice at any place out of her Majesty's dominions, on shore or at sea, on any ground whatever, without previously obtaining the certificate indorsed in manner and to the effect last aforesaid of the British consular officer there, or (in his absence)

of two respectable merchants, if there is any such at or near the place where the ship then is: He shall for each such default be deemed guilty of a misdemeanor; and the said functionaries shall and the said merchants may examine into the grounds of such proposed discharge or into the allegation of such unfitness, inability, desertion, or disappearance as aforesaid, in a summary way, and may for that purpose, if they think fit, administer oaths, and may either grant or refuse such sanction or certificate as appears to them to be just. (Sec. 207.)

*Proof of such Certificate to be upon the Master.*—Upon the trial of any information, indictment, or other proceeding against any person for discharging or leaving behind any seaman or apprentice, contrary to the provisions of this Act, it shall be upon such person either to produce the sanction or certificate hereby required, or to prove that he had obtained the same previously to having discharged or left behind such seaman or apprentice, or that it was impracticable for him to obtain such sanction or certificate. (Sec. 208.)

*Wages to be paid when Seamen are left behind on Ground of Inability.*—Every master of any British ship who leaves any seaman or apprentice on shore at any place abroad in or out of her Majesty's dominions, under a certificate of his unfitness or inability to proceed on the voyage, shall deliver to one of the functionaries aforesaid or (in the absence of such functionaries) to the merchants by whom such certificate is signed, or, if there be but one respectable merchant resident at such place, to him, a full and true account of the wages due to such seaman or apprentice, such account when delivered to a consular officer to be in duplicate, and shall pay the same either in money or by a bill drawn upon the owner; and in the case of every bill so drawn, such functionary, merchants, or merchant as aforesaid, shall by indorsement certify thereon that the same is drawn for money due on account of a seaman's wages, and shall also indorse the amount for which such bill is drawn with such further particulars in respect of the case as the Board of Trade requires, upon the agreement of the ship; and every such master as aforesaid who refuses or neglects to deliver a full account of such wages, and pay the amount thereof in money or by bill, as hereinbefore required, shall for every such offence or default be liable, in addition to the payment of the wages, to a penalty not exceeding 10*l.*; and every such master who delivers a false account of such wages shall for every such offence, in addition to the payment of the wages, incur a penalty not exceeding 20*l.* (25 & 26 Vict. c. 63 s. 209.)

*Payment of Wages to Seamen abroad under Section 209 of Principal Act.*—The payment of seamen's wages required by the 209th section of the principal Act shall, whenever it is practicable so to do, be made in money and not by bill; and in cases where payment is made by bill drawn by the master, the owner of the ship shall be liable to pay the amount for which the same is drawn to the holder or indorsee thereof; and it shall not be necessary in any proceeding against the owner upon such bill to prove that the master had authority to draw the same; and any bill purporting to be drawn in pursuance of the said section, and to be indorsed as therein required, if produced out of the custody of the Board of Trade or of the registrar-general of seamen, or of any superintendent of any mercantile marine office, shall be received in evidence; and any indorsement on any such bill purporting to be made in pursuance of the said section, and to be signed by one of the functionaries therein mentioned, shall also be re-

ceived in evidence, and shall be deemed to be prima facie evidence of the facts stated in such indorsement.

Clause 210 of 17 & 18 Vict. c. 104 directs that such wages are to be treated as money due to the seamen, subject to payment of expense of their subsistence and passage home.

*Distressed Seamen found Abroad may be relieved and sent Home at the Public Expense.*—The governors, consular officers, and other officers of her Majesty in foreign countries shall, and in places where there are no such governors or officers any two resident British merchants may, provide for the subsistence of all seamen or apprentices, being subjects of her Majesty, who have been shipwrecked, discharged, or left behind at any place abroad, whether from any ship employed in the merchant service or from any of her Majesty's ships, or who have been engaged by any person acting either as principal or agent to serve in any ship belonging to any foreign power or to the subject of any foreign state, and who are in distress in any place abroad, until such time as they are able to provide them with a passage home, and for that purpose shall cause such seamen or apprentices to be put on board some ship belonging to any subject of her Majesty bound to any port of the United Kingdom, or to the British possession to which they belong (as the case requires), which is in want of men to make up its complement, and in default of any such ship shall provide them with a passage home as soon as possible in some ship belonging to a subject of her Majesty bound as aforesaid, and shall indorse on the agreement of any ship on board of which any seaman or apprentice is so taken or sent the name of every person so sent on board thereof, with such particulars concerning the case as the Board of Trade requires, and shall be allowed for the subsistence of any such seaman or apprentice such sum per diem as the Board of Trade from time to time appoints; and the amount due in respect of such allowance shall be paid out of any moneys applicable to the relief of distressed British seamen, and granted by Parliament for the purpose, on the production of the bill of the disbursements, with the proper vouchers. (17 & 18 Vict. c. 104 s. 211.) The 22nd section of 18 & 19 Vict. c. 91 provides for the return of distressed lascars to India.

*Masters of British Ships compelled to take them.*—The master of every British ship so bound as aforesaid shall receive and afford a passage and subsistence to all seamen or apprentices whom he is required to take on board his ship under the provisions before contained, not exceeding one for every 50 tons burden, and shall during the passage provide every such seaman or apprentice with a proper berth or sleeping-place effectually protected against sea and weather; and on the production of a certificate signed by any governor, consular officer, or merchants by whose directions any such seaman or apprentice was received on board, specifying the number and names of such seamen or apprentices, and the time when each of them respectively was received on board, and on a declaration made by such person before a justice, and verified by the registrar-general of seamen, stating the number of days during which each seaman or apprentice received subsistence and was provided for as aforesaid on board his ship, and stating also the number of men and boys forming the complement of his crew, and the number of seamen and apprentices employed on board his ship during such time, and every variation (if any) of such number, such person shall be entitled to be paid out of the said moneys applicable to the relief

of distressed British seamen, in respect of the subsistence and passage of every seaman or apprentice so conveyed, subsisted, and provided for by him exceeding the number (if any) wanted to make up the complement of his crew, such sum per diem as the Board of Trade from time to time appoints; and if any person having charge of any such ship fails or refuses to receive on board his ship, or to give a passage home, or subsistence to, or to provide for any such seaman or apprentice as aforesaid, contrary to the provisions of this Act, he shall incur a penalty not exceeding 100*l.* for each seaman or apprentice with respect to whom he makes such default or refusal. (17 & 18 Vict. c. 104 s. 212.)

*Relief of Distressed Seamen to be regulated by Board of Trade.*—Whereas under the 211th and 212th sections of the principal Act, and the 16th section of 'The Merchant Shipping Act Amendment Act 1855,' provision is made for relieving and sending home seamen found in distress abroad; and whereas doubts are entertained whether power exists under the said sections of making regulations and imposing conditions which are necessary for the prevention of desertion and misconduct and the undue expenditure of public money: He it enacted, and it is hereby declared, that the claims of seamen to be relieved or sent home in pursuance of the said sections or any of them shall be subject to such regulations and dependent on such conditions as the Board of Trade may from time to time make or impose; and no seaman shall have any right to demand to be relieved or sent home except in the cases and to the extent provided for by such regulations and conditions.

#### *Volunteering into the Navy.*

*Seamen allowed to leave their Ships to enter the Navy.*—Any seaman may leave his ship for the purpose of forthwith entering into the naval service of her Majesty, and such leaving his ship shall not be deemed a desertion therefrom, and shall not render him liable to any punishment or forfeiture whatever; and all stipulations introduced into any agreement whereby any seaman is declared to incur any forfeiture or be exposed to any loss in case he enters into her Majesty's naval service shall be void, and every master or owner who causes any such stipulation to be so introduced shall incur a penalty not exceeding 20*l.* (Sec. 214.)

Clause 215 directs that the clothes of seamen entering the navy are to be delivered at once, and that wages are to be given to the Queen's officer on account of the seamen.

Clauses 217, 218, 219, and 220 relate to the proceedings to be taken by owners who claim extra expenses for having substitutes to replace the seamen who have entered the navy.

It may be asked, Is the power granted by these clauses any longer necessary? And is it not likely to lead to great abuses? Numerous instances might be mentioned where its exercise entirely destroyed that discipline so essential to the good management of merchant ships, and placed the ship herself in peril by the reduction of the crew. No provision is made for the place where the ship may be at the time, or the danger involved by being under-manned, or the difficulty—nay, it might be the impossibility—of obtaining other seamen to fill the places of those who had, under the provisions of this Act, violated the terms of their agreement, and entered her Majesty's service.

We are aware that the Admiralty instructions are to the effect that the captains of our ships of

war are to be cautious how they exercise the power of withdrawing seamen from merchant vessels at distant stations; but we have no hesitation in stating that, however much that power may have been requisite in times past, the necessity for its exercise no longer exists, and if not entirely abolished, it should be confined to periods of war. No such power can be necessary for the welfare of the state during a time of peace.

*6. Provisions, Health, and Accommodation on Board.*—These important objects are now provided for as follows, viz.:—

*Survey of Provisions and Water on Complaint made.*—Any three or more of the crew of any British ship may complain to any officer in command of any of her Majesty's ships, or any British consular officer, or any shipping master, or any chief officer of customs, that the provisions or water for the use of the crew are at any time of bad quality, unfit for use, or deficient in quantity; and such officer may thereupon examine the said provisions or water, or cause them to be examined; and if on examination such provisions or water are found to be of bad quality and unfit for use, or to be deficient in quantity, the person making such examination shall signify the same in writing to the master of the ship; and if such master does not thereupon provide other proper provisions or water in lieu of any so signified to be of a bad quality and unfit for use, or does not procure the requisite quantity of any so signified to be insufficient in quantity, or uses any provisions or water which have been so signified as aforesaid to be of a bad quality and unfit for use, he shall in every such case incur a penalty not exceeding 20*l.*; and upon every such examination as aforesaid the officers making or directing the same shall enter a statement of the result of the examination in the official log, and shall send a report thereof to the Board of Trade, and such report, if produced out of the custody of such Board or its officers, shall be received in evidence in any legal proceeding. (Sec. 221.)

*Forfeiture for Frivolous Complaint.*—If the officer to whom any such complaint as last aforesaid is made certifies in such statement as aforesaid that there was no reasonable ground for such complaint, each of the parties so complaining shall be liable to forfeit to the owner out of his wages a sum not exceeding one week's wages. (Sec. 222.)

*Allowance for short or bad Provisions.*—In the following cases, viz.:—

(1) If during a voyage the allowance of any of the provisions which any seaman has by his agreement stipulated for is reduced (except in accordance with any regulations for reduction by way of punishment contained in the agreement, and also except for any time during which such seaman wilfully and without sufficient cause refuses or neglects to perform his duty, or is lawfully under confinement for misconduct, either on board or on shore):

(2) If it is shown that any of such provisions are or have during the voyage been bad in quality and unfit for use:

The seaman shall receive by way of compensation for such reduction or bad quality, according to the time of its continuance, the following sums, to be paid to him in addition to and to be recoverable as wages; that is to say:—

(1) If his allowance is reduced by any quantity not exceeding one-third of the quantity specified in the agreement, a sum not exceeding 4*d.* per day.

(2) If his allowance is reduced by more than one-third of such quantity, 8*d.* per day.

(3) In respect of such bad quality as aforesaid, a sum not exceeding 1s. per day.

But if it is shown to the satisfaction of the court before which the case is tried, that any provisions the allowance of which has been reduced could not be procured or supplied in proper quantities, and that proper and equivalent substitutes were supplied in lieu thereof, the court shall take such circumstances into consideration, and shall modify or refuse compensation as the justice of the case may require. (Sec. 223.)

**Medicines, Lime or Lemon Juice, Sugar, and Vinegar, to be provided and kept on board certain Ships.**—The following rules shall be observed with respect to medicines, medical stores, and anti-scorbutics; that is to say:—

(1) The Board of Trade shall from time to time issue and cause to be published a scale of medicines and medical stores suitable to accidents and diseases arising on sea voyages. (See Table below.)

(2) The owner of every ship navigating between the United Kingdom and any place out of the same shall provide and cause to be constantly kept

on board such ship a supply of such medicines and medical stores in accordance with the said scale. (17 & 18 Vict. c. 104 s. 224.)

In lieu of the regulations (3 and 4) in the 17 & 18 Vict. c. 104 s. 224, as to the issue of lemon juice, and other anti-scorbutics, the Merchant Shipping Act of 1867 (30 & 31 Vict. c. 124) lays down certain rules which will be found at length under **JUICE OF LEMONS.**

The Merchant Shipping Act of 1867 provides also for the seaman's expenses in case of his illness through the neglect of owner or master, and declares the forfeiture of his wages when incapable for duty through illness caused by his own default. It also provides for proper accommodation for seamen on board ship, and lays down rules for the medical inspection of seamen. Consequently on this Act, the Board of Trade issued instructions in Nov. 1867, for obtaining, testing, and preserving lime or lemon juice for use in the merchant service.

**Masters to keep Weights and Measures on board.**—Every master shall keep on board proper weights and measures for the purpose of deter-

	Quantities required, varying according to the Number of Persons on board, viz. for Vessels carrying				Quantities required, varying according to the Number of Persons on board, viz. for Vessels carrying

mining the quantities of the several provisions and articles served out, and shall allow the same to be used at the time of serving out such provisions and articles in the presence of a witness whenever any dispute arises about such quantities, and in default shall for every offence incur a penalty not exceeding 10*l.* (Sec. 225.)

**Board of Trade and Local Boards may appoint Inspectors of Medicines.**—Any local marine board

may, upon being required by the Board of Trade, appoint and remove a medical inspector of ships for the port, and may fix his remuneration, such remuneration to be subject to the control of the Board of Trade; and at ports where there are no local marine boards the Board of Trade may appoint and remove such inspectors, and fix their remuneration; and it shall be the duty of such inspectors to inspect the medicines, medical

ly of such medicines and  
ance with the said scale.  
24.)

as (3 and 4) in the 17 & 18  
the issue of lemon juice,  
, the Merchant Shipping  
ct. c. 124 lays down cer-  
e found at length under

ing Act of 1867 provides  
expenses in case of illness  
t of owner or master, and  
of his wages when in ill-  
ness caused by his  
provides for proper accom-  
board ship, and lays down  
specification of seamen. Con-  
the Board of Trade issued  
1867, for obtaining, testing,  
lemon juice for use in the

ights and Measures on board.  
l keep on board proper  
for the purpose of deter-

stores, lime or lemon juice, or other articles, sugar  
and vinegar, required to be kept on board any  
such ships as aforesaid; and such inspection, if  
made at places where there are local marine  
boards, shall be made under their direction, and  
also in any special cases under the direction of  
the Board of Trade, and if made at places where  
there are no local marine boards, shall be made  
under the direction of the Board of Trade; and  
such medical inspectors shall, for the purposes of  
such inspection, have the same powers as the in-  
spectors appointed by the Board of Trade under  
the first part of this Act; but every such inspector,  
if required by timely notice in writing from the  
master, owner, or consignee, shall make his  
inspection three days at least before the ship pro-  
ceeds to sea, and if the result of the inspection  
is satisfactory shall not again make inspection  
before the commencement of the voyage, unless he  
has reason to suspect that some of the articles  
inspected have been subsequently removed, in-  
jured, or destroyed; and whenever any such  
medical inspector is of opinion that in any ship  
herely required to carry such articles as aforesaid  
the same or any of them are deficient in quantity  
or quality, or are placed in improper vessels, he  
shall signify the same in writing to the chief  
officer of customs of the port where such ship is  
lying, and also to the master, owner, or consignee  
thereof, and thereupon the master of such ship,  
before proceeding to sea, shall produce to such  
chief officer of customs a certificate under the  
hand of such medical inspector or of some other  
medical inspector, to the effect that such deficiency  
has been supplied or remedied, or that such im-  
proper vessels have been replaced by proper ves-  
sels, as the case may require; and such chief  
officer of customs shall not grant a clearance for  
such ship without the production of such certifi-  
cate, and if such ship attempts to go to sea  
without a clearance, may detain her until such  
certificate is produced; and if such ship proceeds  
to sea without the production of such certificate,  
the owner, master, or consignee thereof shall incur  
a penalty not exceeding 20*l*. (Sec. 226.)

**Penalty for selling &c. Medicines &c. of bad  
quality.**—Any person who manufactures, sells, or  
keeps or offers for sale, any medicines or medical  
stores, as aforesaid, of bad quality, shall for each  
such offence incur a penalty not exceeding 20*l*.  
(Sec. 5 of 30 & 31 Vict. c. 124.)

**Expense of Medical Attendance &c. how to be  
defrayed.**—The following rules shall be observed  
with respect to expenses attendant on illness and  
death, viz.:

(1) If the master or any seaman or apprentice  
receives any hurt or injury in the service of the  
ship to which he belongs, the expense of providing  
the necessary surgical and medical advice, with  
attendance and medicines, and of his subsistence  
until he is cured, or dies, or is brought back to  
some port in the United Kingdom, if shipped in  
the United Kingdom, or if shipped in some  
British possession to some port in such possession,  
and of his conveyance to such port, and the exp-  
ense (if any) of his burial, shall be defrayed by  
the owner of such ship, without any deduction  
on that account from the wages of such master,  
seaman, or apprentice.

(2) If the master or any seaman or apprentice  
is on account of any illness temporarily removed  
from his ship for the purpose of preventing  
infection, or otherwise for the convenience of  
the ship, and subsequently returns to his  
duty, the expense of such removal, and of  
providing the necessary advice with attendance  
and medicines and of his subsistence whilst

away from the ship, shall be defrayed in like  
manner.

(3) The expense of all medicines and surgical  
or medical advice and attendance given to any  
master, seaman, or apprentice whilst on board his  
ship shall be defrayed in like manner.

(4) In all other cases any reasonable expenses  
duly incurred by the owner for any seaman in  
respect of illness, and also any reasonable exp-  
enses duly incurred by the owner in respect of  
the burial of any seaman or apprentice who dies  
whilst on service, shall, if duly proved, be deduc-  
tion from the wages of such seaman or apprentice.  
(17 & 18 Vict. c. 104 s. 228. See also 30 & 31 Vict.  
c. 124 ss. 7, 3.)

**Expenses, if paid by Consul, to be recoverable  
from Owner.**—If any such expenses in respect of  
the illness, injury, or hurt of any seaman or  
apprentice, as are to be borne by the owner, are  
paid by any consular officer or other person on  
behalf of her Majesty, or if any other expenses in  
respect of the illness, injury, or hurt of any  
seaman or apprentice whose wages are not ac-  
counted for to such officer under the provisions  
before contained are so paid, such expenses shall  
be repaid to such officer or other person by the  
master of the ship, and if not so repaid, the  
amount thereof, with costs, shall be a charge  
upon the ship, and be recoverable from the said  
master or from the owner of the ship for the time  
being as a debt due to her Majesty, and shall  
be recoverable either by ordinary process of law  
or in the manner in which seamen are hereby  
enabled to recover wages; and in any proceeding  
for the recovery thereof the production of a  
certificate of the facts, signed by such officer or  
other person, together with such vouchers (if  
any) as the case requires, shall be sufficient proof  
thereof; the said expenses were duly paid by such  
consular officer or other person as aforesaid. (17 &  
18 Vict. c. 104 s. 229.)

**Certain Ships to carry Medical Practitioners.**—  
Every foreign-going ship having 100 persons or  
upwards on board shall carry on board as part of  
her complement some person duly authorised by  
law to practise as physician, surgeon, or apothec-  
ary; and in default the owner shall for every  
voyage of any such ship made without such  
medical practitioner incur a penalty not exceed-  
ing 100*l*.; provided that nothing herein contained  
shall in anywise affect any provision contained  
in the 'Passengers Act 1852,' concerning the  
carriage of medical practitioners by the class of  
ships therein named passenger ships, nor shall  
any such passenger ship, if not thereby required  
to carry a medical practitioner, be hereby required  
to do so. (Sec. 230.)

**Place appropriated to Seamen to have a certain  
Space for each Man &c.**—The following rules  
shall be observed with respect to accommodation  
on board British ships, viz.:

(1) Every place in any ship occupied by  
seamen or apprentices, and appropriated to their  
use, shall have for every such seaman or appren-  
tice, a space of not less than 72 cubic feet, and  
of not less than 12 superficial feet, measured on  
the deck or floor of such place.

(2) Every such place shall be such as to make  
the space aforesaid available for the proper accom-  
modation of the men who are to occupy it, shall  
be securely constructed, properly lighted and  
ventilated, properly protected from weather and  
sea, and, as far as practicable, properly shut off  
and protected from effluvia which may be caused  
by cargo or bilge water.

(3) No such place as aforesaid shall be deemed  
to be such as to authorise a deduction from

Quantities required, varying  
according to the Number  
of Persons on board, viz. for  
Vessels carrying

15 Men, and up	Above 15, but under 30	Above 30

registered tonnage, under the provisions herein-after contained, unless there is or are in the ship one or more properly constructed privy or privies for the use of the crew; such privy or privies to be of such number and of such construction as may be approved by the surveyor herein-after mentioned.

(4) Every such place shall, whenever the ship is registered or re-registered, be inspected by one of the surveyors appointed by the Board of Trade under Part IV. of the principal Act, who shall, if satisfied that the same is in all respects such as is required by this Act, give to the collector of customs a certificate to that effect, and thereupon such place shall be deducted from the registered tonnage.

(5) No such deduction from tonnage as aforesaid shall be authorised unless there is permanently cut in a beam, and cut in or painted on or over the doorway or hatchway of every such place, the number of men which it is constructed to accommodate, with the words, 'certified to accommodate seamen.'

(6) Every such place shall be kept free from stores or goods of any kind, not being the personal property of the crew in use during the voyage.

(7) Upon any complaint concerning any such place as aforesaid, one of the surveyors appointed by the Board of Trade may inspect such place, and if he finds that any of the provisions of this Act with respect to the same are not complied with he shall report the same to the Collector of Customs at the port where the ship is registered, and thereupon the registered tonnage shall be altered, and the deduction aforesaid in respect of space disallowed, unless and until it shall be certified by such surveyor, or by some other surveyor appointed by the Board of Trade, that the provisions of the Act in respect of such place are fully complied with.

(8) If in any such place in any ship is not kept free from goods and stores as aforesaid, the master shall be deemed to be in fault, and shall for every such failure to comply with the provisions of this section forfeit and pay to each seaman lodged in such place the sum of one shilling a day for each day after complaint made to him by any two or more of such seamen during which any goods or stores, not being the personal property of the crew, are stored or kept therein.

(9) If in any other respect the provisions of this section are not observed with respect to any such place in any ship the owner shall be deemed to be in fault, and shall for every failure to comply with the provisions of this section incur a penalty not exceeding 20*l.* (80 & 31 Vict. c. 124 s. 9.)

#### *Power of making Complaint.*

*Seamen to be allowed to go ashore to make Complaint to a Justice.*—If any seaman or apprentice whilst on board any ship states to the master that he desires to make complaint to a justice of the peace, or consular officer, or naval officer in command of any of her Majesty's ships, against the master or any of the crew, the said master shall, if the ship is then at a place where there is a justice or any such officer as aforesaid, so soon as the service of the ship will permit, and if the ship is not then at such a place so soon after her first arrival at such a place as the service of the ship will permit, allow such seaman or apprentice to go ashore or send him ashore in proper custody, so that he may be enabled to make such complaint, and shall, in default, incur a penalty not exceeding 10*l.* (17 & 18 Vict. c. 104 s. 282.)

#### *Protection of Seamen from Imposition.*

*Sale of and Charge upon Wages to be invalid.*—No wages due according to any seaman or apprentice shall be subject to attachment or arrestment from any court; and every payment of wages to a seaman or apprentice shall be valid in law, notwithstanding any previous sale or assignment of such wages, or of any attachment, incumbrance, or arrestment thereon; and no assignment or sale of such wages or of salvage made prior to the accruing thereof shall bind the party making the same; and no power of attorney or authority for the receipt of any such wages or salvage shall be irrevocable. (Sec. 233.)

*No Debt exceeding 5*s.* recoverable till End of Voyage.*—No debt exceeding in amount 5*s.* incurred by any seaman after he has engaged to serve shall be recoverable until the service agreed for is concluded. (Sec. 234.)

*Penalty for Overcharges by Lodging-house Keepers.*—If any person demands or receives from any seaman or apprentice to the sea service, payment in respect of his board or lodging in the house of such person for a longer period than such seaman or apprentice has actually resided or boarded therein, he shall incur a penalty not exceeding 10*l.* (Sec. 235.)

*Penalty for detaining Seamen's Effects.*—If any person receives or takes into his possession or under his control, any moneys, documents, or effects of any seaman or apprentice to the sea service, and does not return the same or pay the value thereof, when required by such seaman or apprentice, subject to such deduction as may be justly due to him from such seaman or apprentice in respect of board or lodging, or otherwise, or detentions therein, he shall incur a penalty not exceeding 10*l.*; and any two justices may, besides inflicting such penalty, by summary order, direct the amount of value of such moneys, documents, or effects, subject to such deduction as aforesaid, to be forthwith paid to such seaman or apprentice. (Sec. 236.)

*Persons not to go on board before the final Arrival of Ships without Permission.*—Every person who, not being in her Majesty's service, and not being duly authorised by law for the purpose, goes on board any ship about to arrive at the place of her destination, before her actual arrival in dock or at the place of her discharge, without the permission of the master, shall for every such offence incur a penalty not exceeding 20*l.*; and the master or person in charge of such ship may take any such person so going on board as aforesaid into custody, and deliver him up forthwith to any constable or peace officer, to be by him taken before a justice or justices or the sheriff of the county in Scotland, and to be dealt with according to the provisions of this Act. (Sec. 237.)

*Penalty for Solicitations by Lodging-house Keepers.*—If, within 24 hours after the arrival of any ship at any port in the United Kingdom, any person then being on board such ship solicits any seaman to become a lodger at the house of any person letting lodgings for hire, or takes out of such ship any effects of any seaman except under his personal direction and with the permission of the master, he shall for every such offence incur a penalty not exceeding 5*l.* (Sec. 238.)

For the next four clauses, see MASTER.  
7. *Crimes Committed on the High Seas and Abroad.*—Clause 267 directs that all offences committed by seamen at sea or in foreign parts shall be within Admiralty jurisdiction; and by the subsequent Acts already cited these crimes are now punishable in the colonies and India.

*Conveyance of Offenders and Witnesses to United Kingdom &c.*—The following rules shall

*Seamen from Imposition.*

upon Wages to be invalid.—Referring to attachment or arrest, and every payment of wages and sentence shall be valid in law, previous sale or assignment, any attachment, incumbrance, and no assignment or sale of salvage made prior to the time shall bind the party making the same, or of attorney or authority for such wages or salvage shall be void. (Sec. 233.)

§ 58. recoverable till End of voyage.—If any seaman after he has engaged to serve until the service agreed for is discharged, the wages shall be recoverable till the end of the voyage. (Sec. 234.)

*Penalties by Lodging-house Keepers.*—If any seaman or apprentice is taken into the sea service, payment for board or lodging in the house of a lodging-house keeper for a longer period than such seaman or apprentice actually resided or boarded, shall be a penalty not exceeding 10*l*. (Sec. 235.)

*Seaman's Effects.*—If any seaman or apprentice takes into his possession or under his control any money, documents, or effects of any kind, or any other articles, or pretence to the sea service, and same or pay the value thereof, such seaman or apprentice, or any other person, shall be liable to a penalty not exceeding 10*l*.; and if he is a seaman or apprentice, besides inflicting such penalty, the court may, by any order, direct the amount of such penalty to be applied to the purchase of any money, documents, or effects, or to the purchase of any other articles, or to the purchase of any other articles, or to the purchase of any other articles, or to the purchase of any other articles. (Sec. 236.)

*Seaman on board before the final Arrived.*—Every person who is taken into the service of her Majesty's service, and not discharged by law for the purpose of the Act, shall be liable to a penalty not exceeding 10*l*.; and if he is a seaman or apprentice, besides inflicting such penalty, the court may, by any order, direct the amount of such penalty to be applied to the purchase of any money, documents, or effects, or to the purchase of any other articles, or to the purchase of any other articles, or to the purchase of any other articles. (Sec. 237.)

*Penalties by Lodging-house Keepers.*—If any seaman or apprentice is taken into the sea service, payment for board or lodging in the house of a lodging-house keeper for a longer period than such seaman or apprentice actually resided or boarded, shall be a penalty not exceeding 10*l*.; and if he is a seaman or apprentice, besides inflicting such penalty, the court may, by any order, direct the amount of such penalty to be applied to the purchase of any money, documents, or effects, or to the purchase of any other articles, or to the purchase of any other articles, or to the purchase of any other articles. (Sec. 238.)

*Penalties by Lodging-house Keepers.*—If any seaman or apprentice is taken into the sea service, payment for board or lodging in the house of a lodging-house keeper for a longer period than such seaman or apprentice actually resided or boarded, shall be a penalty not exceeding 10*l*.; and if he is a seaman or apprentice, besides inflicting such penalty, the court may, by any order, direct the amount of such penalty to be applied to the purchase of any money, documents, or effects, or to the purchase of any other articles, or to the purchase of any other articles, or to the purchase of any other articles. (Sec. 239.)

*Offenders and Witnesses to Offences.*—The following rules shall

be observed with respect to offences committed on the high seas or abroad, viz. :—

(1) Whenever any complaint is made to any British consular officer of any offence on the high seas having been committed by any master, seaman, or apprentice belonging to any British ship, such consular officer may enquire into the case upon oath, and may, if the case so requires, take any steps in his power for the purpose of placing the offender under necessary restraint, and of sending him as soon as practicable in safe custody to the United Kingdom, or to any British possession in which there is a court capable of taking cognisance of the offence, in any ship belonging to her Majesty, or to any of her subjects, to be there proceeded against according to law.

(2) For the purpose aforesaid such consular officer may order the master of any ship belonging to any subject of her Majesty, bound to the United Kingdom, or to such British possession as aforesaid, to receive and afford a passage and subsistence during the voyage to any such offender as aforesaid, and to the witnesses, so that such master be not required to receive more than one offender for every 100 tons of his ship's registered tonnage, or more than one witness for every 50 tons of such tonnage; and such consular officer shall indorse upon the agreement of the ship such particulars with respect to any offenders or witnesses sent in her as the Board of Trade requires.

(3) Every such master shall, on his ship's arrival in the United Kingdom, or in such British possession as aforesaid, give every offender so committed to his charge into the custody of some police officer or constable, who shall take the offender before a justice of the peace or other magistrate by law empowered to deal with the matter, and such justice or magistrate shall deal with the matter as in cases of offences committed upon the high seas.

And any such master as aforesaid who, when required by any British consular officer to receive and afford a passage and subsistence to any offender or witness, does not receive him and afford such passage and subsistence to him, or who does not deliver any offender committed to his charge into the custody of some police officer or constable as hereinbefore directed, shall for each such offence incur a penalty not exceeding 50*l*., and the expense of imprisoning any such offender and of conveying him and the witnesses to the United Kingdom or to such British possession as aforesaid in any manner other than in the ship to which they respectively belong, shall be part of the costs of the prosecution, or be paid as costs incurred on account of seafaring subjects of her Majesty left in distress in foreign parts. (Sec. 238.)

*Enquiry into Cause of Death on board.*—Whenever any case of death happens on board any foreign-going ship, the shipping master shall on the arrival of such ship at the port where the crew is discharged enquire into the cause of such death, and shall make on the list of the crew delivered to him as herein required an indorsement to the effect either that the statement of the cause of death therein contained is in his opinion true or otherwise, as the result of the enquiry requires; and every such shipping master shall for the purpose of such enquiry have the power hereby given to inspectors appointed by the Board of Trade under the first part of this Act; and if in the course of such enquiry it appears to him that any such death as aforesaid has been caused by violence or other improper means, he

shall either report the matter to the Board of Trade, or, if the emergency of the case so requires, shall take immediate steps for bringing the offender or offenders to justice. (Sec. 239.)

*Depositions to be received in Evidence when Witness cannot be produced.*—Whenever in the course of any legal proceedings instituted in any part of her Majesty's dominions before any judge or magistrate, or before any person authorised by law or by consent of parties to receive evidence, the testimony of any witness is required in relation to the subject-matter of such proceeding, then upon due proof, if such proceeding is instituted in the United Kingdom, that such witness cannot be found in that kingdom, or if in any British possession, that he cannot be found in the same possession, any deposition that such witness may have previously made on oath in relation to the same subject-matter before any justice or magistrate in her Majesty's dominions, or any British consular officer elsewhere, shall be admissible in evidence, subject to the following restrictions, viz. :—

(1) If such deposition was made in the United Kingdom, it shall not be admissible in any proceeding instituted in the United Kingdom.

(2) If such deposition was made in any British possession, it shall not be admissible in any proceeding instituted in the same British possession.

(3) If the proceeding is criminal, it shall not be admissible unless it was made in the presence of the person accused.

Every deposition so made as aforesaid shall be authenticated by the signature of the judge, magistrate, or consular officer, before whom the same is made; and such judge, magistrate, or consular officer shall, when the same is taken in a criminal matter, certify if the fact is so, and that the accused was present at the taking thereof, but it shall not be necessary in any case to prove the signature or official character of the person appearing to have signed any such deposition; and in any criminal proceeding such certificate as aforesaid shall, unless the contrary is proved, be sufficient evidence of the accused having been present in manner thereby certified; but nothing herein contained shall affect any case in which depositions taken in any proceedings are rendered admissible in evidence by any Act of Parliament, or by any act or ordinance of the legislature of any colony, so far as regards such colony, or to interfere with the power of any colonial legislature to make such depositions admissible in evidence, or to interfere with the practice of any court in which depositions not authenticated as hereinbefore mentioned are admissible. (Sec. 270.)

8. *Registration of and Returns respecting Seamen.* [LOG, OFFICIAL.]—*Establishment of Register Office.*—There shall be in the port of London an office, to be called the 'General Register and Record Office of Seamen,' and the Board of Trade shall have control over the same, and may appoint and from time to time remove a registrar-general, and such assistants, clerks, and servants as may be necessary, and may from time to time, with the consent of the Treasury, regulate their salaries and allowances; and such salaries and allowances, and all other necessary expenses, shall be paid by the Treasury out of any moneys, to be granted by Parliament for that purpose; and the Board of Trade may direct the business of the register office at any of the outports to be transacted at the shipping office, or, with the consent of the Commissioners of Customs, at the custom-house of the port, and may appoint the shipping master, or, with such consent as aforesaid, some officer of customs, to conduct the same; and such business shall thereupon be

conducted accordingly, but shall in all cases be subject to the immediate control of the Board of Trade. (Sec. 271.)

*Register of Seamen to be kept.*—The said registrar-general of seamen shall, by means of the agreements, lists, and other papers to be transmitted to him as herein directed, or by such other means as are in his power, keep a register of all persons who serve in ships subject to the provisions of this Act. (Sec. 272.)

*Lists to be made for all Ships, containing certain Particulars.*—Every master of every foreign-going ship of which the crew is discharged in the United Kingdom, in whatever part of her Majesty's dominions the same is registered, and of every home trade ship, shall make out and sign a list in a form sanctioned by the Board of Trade, containing the following particulars, viz. :—

(1) The number and date of the ship's register and her registered tonnage.

(2) The length and general nature of the voyage or employment.

(3) The Christian names, surnames, ages, and places of birth of all the crew, including the master and apprentices; their qualities on board, their last ships or other employments, and the dates and places of their joining the ship.

(4) The names of any members of the crew who have died or otherwise ceased to belong to the ship, with the times, places, causes, and circumstances thereof.

(5) The names of any members of the crew who have been maimed or hurt, with the times, places, causes and circumstances thereof.

(6) The wages due to any of the crew who have died, at the times of their respective deaths.

(7) The clothes and other effects belonging to any of the crew who have died, with a statement of the manner in which they have been dealt with, and the money for which any of them have been sold.

(8) The name, age, and sex of every person, not being one of the crew, who dies on board, with the date and the cause thereof.

(9) Every birth which happens on board, with the date thereof, with the sex of the infant, and the names of the parents.

(10) Every marriage which takes place on board, with the date thereof, and the names and ages of the parties.

*Lists for foreign-going Ships to be delivered to Shipping Master.*—In the case of foreign-going ships, the master shall, within 48 hours after the ship's arrival at her final port of destination in the United Kingdom, or upon the discharge of the crew, whichever first happens, deliver to the shipping master before whom the crew is discharged such list as is herein required, and if he fail so to do shall for every default incur a penalty not exceeding 5*l.*; and such shipping master shall thereupon give to the master a certificate of such delivery; and no officer of customs shall clear inwards any foreign-going ship, without the production of such certificate, and any such officer may detain any such ship until the same is produced. (Sec. 274.)

*Lists to be delivered by home trade Ships half-yearly.*—The master or owner of every home trade ship shall, within 21 days after June 30 and December 31, in every year, transmit or deliver to some shipping master in the United Kingdom, such list as hereinbefore required for the preceding half-year, and shall in default incur a penalty not exceeding 5*l.*; and such shipping master shall give to the master or owner a certificate of such transmission or delivery; and no officer of customs shall grant a clearance or

transire for any home trade ship without the production of such certificate, and any such officer may detain any such ship until the same is produced. (Sec. 275.)

*Lists to be sent Home in case of Transfer of Ship and in case of Loss.*—If any ship cease, by reason of transfer of ownership or change of employment, to fall within the definition of a foreign-going or of a home trade ship, the master or owner thereof shall, if such ship is then in the United Kingdom, within 1 month, and if she is elsewhere, within 6 months, deliver or transmit to the shipping master at the port to which the ship has belonged such list as before mentioned, duly made out to the time at which she ceased to be a foreign-going or home trade ship, and in default shall for each offence incur a penalty not exceeding 10*l.*; and if any ship is lost or abandoned, the master or owner thereof shall, if practicable, and as soon as possible, deliver or transmit to the shipping master at the port to which the ship belonged such list as hereinbefore mentioned, duly made out to the time of such loss or abandonment, and in default shall for each offence incur a penalty not exceeding 10*l.* (Sec. 276.)

*Shipping Masters and other Officers to transmit Documents to Registrar.*—All shipping masters and officers of customs shall take charge of all documents which are delivered or transmitted to or retained by them in pursuance of this Act, and shall keep them for such time (if any) as may be necessary for the purpose of settling any business arising at the place where such documents come into their hands, or for any other proper purpose, and shall, if required, produce them for any of such purposes, and shall then transmit them to the registrar-general of seamen, to be by him recorded and preserved; and the said registrar shall, on payment of a moderate fee to be fixed by the Board of Trade, or without payment of any fee if the Board of Trade so direct, allow any person to inspect the same; and in cases in which the production of the original of any such document in any court of justice or elsewhere is essential, shall produce the same, and in other cases shall make and deliver to any person requiring it a certified copy of any such document or of any part thereof; and every copy purporting to be so made and certified shall be received in evidence, and shall have all the effect of the original of which it purports to be a copy. (Sec. 277.)

*Officers of Customs to make Returns.*—The collector or comptroller of customs at every port in the United Kingdom, shall on or before February 1 and August 1 in every year transmit to the registrar-general of seamen a list of all ships registered in such port, and also of all ships whose registers have been transferred or cancelled in such port since the last preceding return. (Sec. 278.)

*Agreements, Indentures, and Assignments, on Arrival at a Foreign Port, to be deposited with the Consul; at a Colony, with the Officers of Customs.*—The following rules shall be observed with respect to the delivery of documents to British consular officers (that is to say):—

(1) Whenever any ship, in whatever part of her Majesty's dominions the same is registered (except ships whose business for the time being is to carry passengers), arrives at any foreign port where there is a British consular officer, or at any port in any British possession abroad, and remains thereat for 48 hours, the master shall, within 48 hours of the ship's arrival, deliver to such consular officer, or to the chief officer of customs (as the case may be), the agreement with the crew, and also all indentures and assignments of apprenticeships, or, in the case of a ship belonging to a

British possession, such of the said documents as such ship is provided with.

(2) Such officer shall keep such documents during the ship's stay in such port, and, in cases where any indorsements upon the agreement are hereby required, shall duly make the same, and shall return the said documents to the master a reasonable time before his departure, with a certificate indorsed on the agreement, stating when the same were respectively delivered and returned.

(3) If it appears that the required forms have been neglected, or that the existing laws have been transgressed, such officer shall make an indorsement to that effect on the agreement, and forthwith transmit a copy of such indorsement, with the fullest information he can collect regarding such neglect or transgression, to the registrar-general of seamen.

And if any master fails to deliver any such document as aforesaid he shall, for every such default, incur a penalty not exceeding 20*l.*; and in any prosecution for such penalty it shall lie upon the master either to produce the certificate of the consular officer or officer of customs hereinbefore required, or to prove that he duly obtained the same, or that it was impracticable for him so to do. (Sec. 279.)

**9. Regulations in regard to taking Apprentices on board Ship.**—We have already noticed, under the article APPRENTICE, the important fact that it is no longer necessary that any ship, whether she be above or below 80 tons burden, should take on board any apprentice or apprentices. But though no longer compulsory, they may be, and continue to be, taken. The following clauses of the Merchant Shipping Act relate to the binding of such apprentices, more especially of those which are appreciated by guardians or overseers of the poor.

**Shipping Masters to assist in binding Apprentices.**—All shipping masters appointed under this Act, shall, if applied to for the purpose, give to any board of guardians, overseers, or other persons desirous of apprenticing boys to the sea service, and to masters and owners of ships requiring apprentices, such assistance as is in their power for facilitating the making of such apprenticeships, and may receive from persons availing themselves of such assistance such fees as may be determined by the Board of Trade, with the concurrence, so far as relates to pauper apprentices in England, of the poor law board in England, and so far as relates to pauper apprentices in Ireland, of the poor law commissioners in Ireland. (Sec. 141.)

**Indenture of Apprentices to Sea Service by Guardians &c. to be witnessed by 2 Justices.**—In the case of every boy bound apprentice to the sea service by any guardians or overseers of the poor, or other persons having the authority of guardians of the poor, the indentures shall be executed by the boy and the person to whom he is bound in the presence of and shall be attested by 2 justices of the peace, who shall ascertain that the boy has consented to be bound, and has attained the age of 12 years, and is of sufficient health and strength, and that the master to whom the boy is to be bound is a proper person for the purpose. (Sec. 142.)

**Indentures of Apprenticeship to be exempt from Stamp Duty.**—All indentures of apprenticeship to the sea service shall be exempt from stamp duty; and all such indentures shall be in duplicate; and every person to whom any boy whatever is bound as an apprentice to the sea service in the United Kingdom, shall within 7 days after the execution of the indentures take or transmit the same to the registrar-general of seamen or to some shipping

master; and the said registrar or shipping master shall retain and record one copy, and shall indorse on the other that the same has been recorded, and shall re-deliver the same to the master of the apprentice; and whenever any such indenture is assigned or cancelled, and whenever any such apprentice dies or deserts, the master of the apprentice shall, within 7 days after such assignment, cancellation, death, or desertion, if the same happens within the United Kingdom, or if the same happens elsewhere so soon afterwards as circumstances permit, notify the same either to the said registrar of seamen, or to some shipping master, to be recorded; and every person who fails to comply with the provisions of this section shall incur a penalty not exceeding 10*l.* (Sec. 143.)

**Rules to govern Apprenticeship of Paupers in Britain and Ireland.**—Subject to the provisions before contained, all apprenticeships to the sea service made by any guardians or overseers of the poor, or persons having the authority of guardians of the poor, shall, if made in Great Britain, be made in the same manner and be subject to the same laws and regulations as other apprenticeships made by the same persons, and if made in Ireland shall be subject to the following rules; viz.:

(1) In every union the guardians of the poor, or other persons duly appointed to carry into execution the Acts for the relief of the destitute poor and having the authority of guardians of the poor, may put out and bind as an apprentice to the sea service any boy who or whose parent or parents is or are receiving relief in such union, and who has attained the age of 12 years, and is of sufficient health and strength, and who consents to be so bound.

(2) If the cost of relieving any such boy is chargeable to an electoral division of a union, then (except in cases in which paid officers act in place of guardians) he shall not be bound unless the consent in writing of the guardians of such electoral division or of a majority of the guardians (if more than one) be first obtained, such consent to be, when possible, indorsed upon the indentures.

(3) The expense incurred in the binding and outfit of an apprentice shall be charged to the union or electoral division (as the case may be) to which the boy or his parent or parents is or are chargeable at the time of his being apprenticed.

(4) All indentures made in any union may be sued upon by the guardians of the union or persons having the authority of guardians therein for the time being, by their name of office, and actions brought by them upon such indentures shall not abate by reason of death or change in the persons holding the office; but no such action shall be commenced without the consent of the Irish poor law commissioners.

(5) The amount of the costs incurred in any such action and not recovered from the defendant therein, may be charged upon the union or electoral division (as the case may be) to which the boy or his parent or parents was or were chargeable at the time of his being apprenticed. (Sec. 144.)

**Apprentices and their Indentures to be brought before Shipping Master before Voyage.**—The master of every foreign-going ship shall, before carrying any apprentice to sea from any place in the United Kingdom, cause such apprentice to appear before the shipping master before whom the crew is engaged, and shall produce to him the indenture by which such apprentice is bound and the assignment or assignments thereof (if any); and the name of such apprentice, with the date of the

to trade ship without the presence, and any such officer may until the same is produced.

**Time in case of Transfer of Ship.**

—If any ship cease, by reason of the death of the master, or of the change of ownership, or of the change of the definition of a foreign-trade ship, the master or owner of such ship is then in the United Kingdom, or if she is elsewhere, the master or owner shall deliver or transmit to the shipping master of the port to which the ship has been before mentioned, duly made up, a copy of the agreement which she ceased to be a foreign-trade ship, and in default shall for every such default incur a penalty not exceeding 10*l.*; and if, in practice, and as soon as may be, the master or owner of such ship transmitted to the shipping master of the port to which the ship belonged such list as is before mentioned, and in default of so doing, he shall incur a penalty not exceeding 10*l.*

**Officers and other Officers to transmit Documents to Registrar.**

—All shipping masters and other officers of customs shall take charge of all records delivered or transmitted to them in pursuance of this Act, and shall, at such time (if any) as may be required by the registrar, for the purpose of settling any business connected with such documents, or for any other proper purpose, produce them for the use of the registrar, and shall then transmit them to the registrar of seamen, to be by him reviewed; and the said registrar shall, for every such default, incur a moderate fee to be fixed by the registrar, or without payment of any fee if he so direct, allow any person to examine such documents; and in cases in which the production of any such document in pursuance of this Act is essential, shall be, and in other cases shall make such arrangements as may be required by any person requiring it a certified copy of the document or of any part thereof; and he shall be so made and received in evidence, and shall be returned to the registrar of seamen. (Sec. 277.)

**Officers to make Returns.**—The collector of customs at every port in Great Britain, shall on or before February 1st in every year transmit to the registrar of seamen a list of all ships which have been registered at that port, and also of all ships whose names have been transferred or cancelled in such list during the preceding return. (Sec. 278.)

**Indentures, and Assignments, on Foreign Ports, to be deposited with the Registrar of Customs.**—The following provisions shall be observed with respect to the transmission of documents to British consular officers (as the case may be):—  
In the case of any ship, in whatever part of her voyage she is registered (except in the case of the time being is required by any person requiring it a certified copy of the document or of any part thereof; and he shall be so made and received in evidence, and shall be returned to the registrar of seamen. (Sec. 277.)

indenture and of the assignment or assignments thereof (if any), and the name of the port or ports at which the same have been registered, shall be entered on the agreement; and for any default in obeying the provisions of this section the master shall for each offence incur a penalty not exceeding 5*l.* (Sec. 145.)

*Seamen (Corporation for Relief of).*—During the reign of George II. an establishment attached to Greenwich Hospital was erected by the 20 Geo. II. c. 38 'for the relief and support of disabled seamen, and the widows and children of such as shall be killed, slain, or drowned in the merchant ship, or other private ship or vessel, belonging to any of his Majesty's subjects in England (except apprentices under the age of 18, persons employed in boats upon the coast in taking fish which are brought fresh on shore, or in boats within rivers, or upon boats on the coasts, and pilots—except persons employed in the service of the East India Company, and who were not entitled to the benefit of this institution, being provided for by a fund established by the Company), paid 6*d.* per month, which was deducted out of his wages by the master, and paid over to the persons appointed under the authority of the Act at the port to which the ship belonged, before she was allowed to clear inwards. For the management and distribution of this fund, a corporation was created, composed chiefly of eminent merchants, with power to purchase lands and erect an hospital, and to provide for seamen rendered incapable of service by sickness, wounds, or other accidental misfortunes, and decrepit and worn out by age, either by receiving them into the hospital, or by pensions: and also to relieve the widows and children of seamen killed or drowned in the merchant service, provided the children are not of the age of 14 years; or if of that age and upwards are incapable of getting a livelihood by reason of lameness, blindness, or other infirmity, and are proper objects of charity; and to make reasonable allowances to those who shall lose an eye or a limb, or be otherwise hurt or maimed, in fighting, defending, or working their ships, or doing any other duty in their service, in proportion to their hurt; so far forth as the income and revenues of the charity will extend for these purposes. But no person is to be provided for as a worn-out seaman who has not been employed in the merchant service five years and paid the contribution. And in providing for this class a preference is given to such as have served longest and contributed most.

In order to ascertain the times of service and payment of the contribution, the master was obliged to keep a muster-roll of the persons employed in the ship, and had before her departure to deliver a duplicate to the collector or receiver of duties for the seamen's hospital at the port; and, during the voyage, to enter the time and place of discharge, quitting, and desertion, and of receiving other persons on board, and of any hurt, damage, death, or drowning; of which he had also to deliver a duplicate at his return, under the penalty of 20*l.*, to the truth whereof he might be examined upon oath by the collector. And in case any person employed on board any ship or vessel should, in doing his duty on shore or on board, break an arm or a leg, or be otherwise hurt or maimed, he was to be properly relieved until sufficiently recovered to be sent to the place to which the ship belonged.

But, notwithstanding the praiseworthy principle on which this establishment was founded, it was not found to be productive of the benefits, in

a practical point of view, that had been anticipated. Perhaps this was to be in part explained by the circumstance of its being attached to Greenwich Hospital, which is peculiarly intended as a retreat for the worn-out and disabled seamen belonging to the Royal Navy. But, however this may be, it appears from accounts laid before Parliament, that in 1829, when the merchant seamen paid an annual contribution of 26,137*l.* to the hospital, there was not one of them within its walls, except such as had also served on board line-of-battle ships. The system was, in consequence, much complained of by the seamen and others interested in the merchant service; and it is obvious that these complaints were not unfounded, and that the seamen reaped no advantage from the institution at all equivalent to the sacrifice they made for its support.

To obviate this state of things, a new system was introduced in 1835, when it was ordered, by the Act 4 & 5 Wm. IV. c. 34, that the contribution of 6*d.* per month by seamen in the merchant service to Greenwich Hospital should cease from January 1, 1835; and that 20,000*l.* a-year should be advanced from the consolidated fund to the Hospital to make good the deficiency caused by the cessation of such contribution.

*New Establishment for Support of Merchant Seamen &c.*—And to provide still more effectually for the relief and support of maimed and disabled merchant seamen, and of the widows &c. of those killed or drowned in the merchant service, the Act 4 & 5 Wm. IV. c. 52 was passed. This Act repealed the 20 Geo. II. c. 38, except in so far as it related to the establishment of the corporation of the president and governors for the relief of maimed &c. merchant seamen, and of the widows and children of seamen killed or drowned in the merchant service; and it also repealed as much of the Act 37 Geo. III. c. 73 as related to the wages of seamen-dying while employed in ships trading to the West Indies. And having thus cleared the way, it proceeded to introduce a new system, which was further extended and perfected by the 6 & 7 Wm. IV. c. 15, and the 7 & 8 Vict. c. 112. Under this system, all masters of British ships, whether owners or not, and all British seamen employed in navigating the same, were obliged to contribute certain sums out of their wages to the support of the Merchant Seamen's Fund. In the case of seamen this contribution, which, in the first instance, was only 6*d.* per month, was subsequently raised to 2*s.* per month. And in addition to these contributions, the wages and other effects of deceased seamen were, in the event of their not being claimed by their relations, paid over to the fund.

In a former edition we stated that the contribution to this fund amounted, in 1842, in London and the ports under the management of the society, to 16,936*l.*; and that a large additional sum was also collected at the outports. And we pointed out the abuses connected with its management, and especially that the expenses of collecting seemed to be quite enormous, amounting to from 8 to 10, and sometimes even 15 per cent. and upwards, of the sums received.

These abuses were not rectified; and in consequence partly of their operation, and partly of too large a proportion of the available funds of the society having been distributed among the widows and children of the seamen, the system became very unpopular among the latter. And Government, being aware of the reasonableness of this feeling, passed an Act in 1851, for winding up the fund.

Another institution for the benefit of merchant

seamen is the *Seamen's Hospital Society*, established in 1821, and incorporated by the 3 & 4 Wm. IV. c. 9. It is supported by voluntary contributions, and by a payment from the Treasury equal to the sums annually paid into the exchequer on account of fines or penalties inflicted under the Mercantile Shipping Act of 1854 &c.

Provisions for affording aid to merchant seamen when abroad and in distress are embodied in the Acts 17 & 18 Vict. c. 104 ss. 211, 212, 18 & 19 Vict. c. 91, s. 16, and 25 & 26 Vict. c. 63 s. 22.

**SEAWORTHY.** A term applied to a ship, indicating that she is in every respect fit for her voyage. It is provided in all charterparties, that the vessel chartered shall be 'tight, staunch, and strong, well apparelled, furnished with an adequate number of men and mariners, tackle, provisions &c.' If the ship be insufficient at any of these particulars, the owners, though ignorant of the circumstance, will be liable for whatever damage may, in consequence, be done to the goods of the merchant, and if an insurance have been effected upon her, it will be void.

Whether the condition of seaworthiness be in the charterparty or not, it is always implied. 'In every contract,' said Lord Ellenborough, 'between a person holding himself forth as the owner of a lighter or vessel ready to carry goods for hire, and the person putting goods on board, or employing his vessel or lighter for that purpose, it is a term of the contract on the part of the lighterman or carrier implied by law, that his vessel is tight, and fit for the purpose for which he offers and holds it forth to the public; it is the immediate foundation and substratum of the contract that it is so: the law presumes a promise to that effect on the part of the carrier, without any actual proof; and every reason of sound policy and public convenience requires that it should be so.'

Not only must the ship and furniture be sufficient for the voyage, but she must also be furnished with a sufficient number of persons of competent skill and ability to navigate her. And for sailing down rivers, out of harbours, or through roads &c., where either by usage or the laws of the country a pilot is required, a pilot must be taken on board. But no owner or master of a ship shall be answerable for any loss or damage by reason of no pilot being on board, unless it shall be proved that the want of a pilot shall have arisen from any refusal to take a pilot on board; or from the negligence of the master in not heaving to, for the purpose of taking on board any pilot who shall be ready and offer to take charge of the ship. (48 Geo. III. c. 164.)

A ship is not seaworthy unless she be provided with all the documents or papers necessary for the manifestation of the ship and cargo. Neither is she seaworthy; if, during war, she be not supplied with the sails required to facilitate her escape from an enemy. 'It is not sufficient to defeat the liability of the owner, that he did not know that the ship was not seaworthy, for he ought to have known that she was so at the time he chartered her. The sufficiency of the ship is the foundation of the contract between the parties, and a ship not capable of conveying the goods in a proper state is a failure of the condition precedent to the whole contract. The seaworthiness of the ship is not a question of fraud or good intention, but it is a positive stipulation that the ship shall be so; and, therefore, although the owner may himself have been deceived by the shipbuilder, repairer &c., if the vessel be, in fact, unseaworthy, have an insufficient bottom or unsound timbers, it is a breach of a preliminary condition, and is fatal, as such,

to the contract.' (Holt's *Law of Shipping*, 2nd ed. p. 383.)

It is only necessary, to guarantee the owners from loss, that the ship should be seaworthy at the time of her departure. She may cease to be so in a few hours, and yet they may not be liable. The question to be decided in such cases always is, whether the ship's disability arose from any defect existing in her before her departure, or from a cause which occasioned it afterwards. But if a ship, within a day or two of her departure, become leaky or foundered at sea, or be obliged to put back, without any visible or adequate cause to produce such an effect—such as the starting of a plank or other accident to which the best ships are liable, and which no human prudence can prevent—the fair presumption is that she was not seaworthy when she sailed; and it will be incumbent on the owners to show that she was seaworthy at that time. They are liable for damage occasioned by every injury arising from any original defect in the ship, or from bad stowage; but they are not liable for any injury arising from the act of God, the king's enemies, or the perils of the sea.

It is further to be observed, that how perfect soever a ship may be, yet, if, from the nature of her construction, or any other cause, she be incapable of performing the proposed voyage, with the proposed cargo on board, she is not seaworthy. She must be, in all respects, fit for the trade in which she is meant to be employed. And it is a wholesome rule, that the owners should be held to a pretty strict proof of this.

It has been already observed, that any defect in a point of seaworthiness invalidates an insurance. There is not only an express but an implied warranty in every policy, that the ship shall be 'tight, staunch, and strong' &c.; and the reason of this is plain. The insurer undertakes to indemnify the insured against the extraordinary and unforeseen perils of the sea; and it would be absurd to suppose that any man would insure against those perils, but in confidence that the ship is in a condition to encounter the ordinary perils to which every ship must be exposed in the usual course of the proposed voyage.

By the old law of France it was directed that every merchant ship, before her departure from the place of her outfit, should be surveyed by certain sea officers appointed for that purpose, and reported to be seaworthy; 'en bon état de navigation; and that previous to her return, before she took her homeward cargo on board, she should be again surveyed. Valin has shown (Tit. *Écrit*, art. 12) that very little confidence could be placed in these surveys, which, he tells us, were only made upon the external parts, for the ship was not unshathed; and, therefore, her internal and hidden defects could not be disclosed. This practice seems now to be abandoned by the French; at least there is no allusion to it in the *Code de Commerce*. It is, one would think, much better to leave the question as to the seaworthiness of the ship to be ascertained, as in England, after a loss has happened, by an investigation of the true cause of such loss, than to permit so important a question to be decided upon the report of officers without any motive to enquire carefully into her actual condition. A ship may, to all appearance, be perfectly capable of performing a voyage; and it is only after a loss has happened that her latent defects can be discovered, and her true state at the time of her departure rendered manifest. Indeed, the survey made by the French was not deemed a conclusive proof that the ship was, at her departure, really seaworthy:

it merely raised a *presumption* that such was the case; but it was still open to the freighter or the insurer to show the contrary.

For further information upon this point, the reader is referred to the able and excellent work of Chief Justice Abbott (Lord Tenterden) on the *Law of Shipping*, part iii. c. 3; Holt *On Shipping*, part iii. c. 3; and of Mr. Serjeant Marshall *On Insurance*, book i. c. 5. [SUITS; STEAM VESSELS.]

**SEEDS.** In Commerce, the grains of several species of graminæ. Those of most importance are clover seed, flax or linseed, hemp seed, rape seed, tares, mustard seed &c.; for which, see the respective articles. But it may be useful to subjoin the following

*Account of the Imports and Exports of the Principal Seeds in 1867.*

	Imports	Exports
Bears, kidney or French bushels	27,181	410
Canary - - - cwt.	36,905	3,351
Caraway - - - "	15,311	1,377
Clover - - - "	150,868	5,286
Cotton - - - tons	93,513	413
Flaxseed and linseed - cwt.	1,095,360	30,407
Garden, unenumerated - lb.	207,321	8,717
Grass - - - cwt.	61,342	37,000
Hemp - - - qr.	15,015	120
Lentils - - - bushels	208,119	120
Rillet - - - "	31,351	120
Mustard - - - cwt.	21,690	5,288
Poppy - - - qr.	59,678	21,127
Rape - - - "	60,779	229,842
Tares - - - "	10,872	3,169
Trefoil - - - cwt.	9,613	57
Not particularly described; commonly used for pressing oil therefrom - qr.	43,853	5,278

The total value of the seeds imported in 1867 was 6,918,433.

#### SEGARS or CIGARS. [TOBACCO.]

**SENNA** (Fr. *séné*; Ger. *sennablätter*; Ital. *senna*; Span. *sen*; Lat. *cassia senna*; Arab. *sunā*). The plant (*cassia senna*) which yields the leaves known in commerce and the *materia medica* by the name of *senna*, is an annual, growing wild in the interior of Africa, and is more especially a native of Upper Egypt. The leaves are collected by the Arabs frequenting the deserts to the east and west of the Nile, and sold by them in baskets at 3s. or 4s. per 100 lb. to Egyptian traders. It is packed and sent to Cairo, where it brings from 10s. to 15s. per 100 lb. Here or at Alexandria, it is repacked in bales and sent to Europe. A great deal of *senna* grown in Southern India is imported from Calcutta and Bombay. (*British Pharmacopœia*, 1867; Thomson's *Dispensatory*.) *Senna* is very extensively used in medicine. It is mixed with other leaves, some of which are nearly equally good, while others are very inferior. In 1867, the imports and exports of *senna* amounted respectively to 704,305 and 445,051 lb. An import duty of 1s. 3d. per lb., after being reduced in 1832 to 6d., and in 1842 to 1d., was wholly repealed in 1845.

**SHAGREEN** (Ger. *shagrin*; Ital. *zigrino*; Russ. *schagrim schagren*). A kind of grained leather, used for various purposes in the arts. It is extensively manufactured at Astrakhan in Russia. (Tooke's *Russia*, vol. iii. p. 403.)

#### SHANGHAE

**SIAMMY or CHAMOIS LEATHER** (Ger. *siamischleder*; Fr. *chamois*; Ital. *camosc Russ. samschantli, koshi*). A kind of leather dressed in oil, or tanned, and much esteemed for its softness, pliancy, and capability of bearing soap without hurt. The real *siammy* is prepared from the skin of the *chamois* goat. But leather prepared from the skins of the common goat, kid, and sheep, is frequently substituted in its stead.

**SHANGHAE or SHANGHAI.** A city and province of China, province Kiang-su, on the Wusung river, 40 miles by water from the sea, and 11 miles E.S.E. Nankin; lat. 31° 15' N., lon. 121° 26' E. Population estimated in 1861 at fr. 370,000 to 400,000. It stands in a level and well cultivated plain, producing good crops of cotton, rice, and wheat. Immediately outside the walls which it is enclosed are several populous suburbs. Streets narrow and filthy. Foundling hospital, tea-gardens, and vast ice-houses are the objects most worthy of notice in the city. It has a mint with manufactures of silk, vegetable oils and oil cake (of which vast quantities are annually sent into the interior), iron ware, glass, paper, iron ware &c.

This is the most northerly of the five Chinese ports which were opened to foreigners by the Treaty of 1842, and it is also the most important. The river, which may be navigated by ships of 450 or 500 tons for a considerable distance above the town, crosses the Grand Canal, so that Shanghai is an entrepôt for all the vast and fertile countries traversed by the canal, and by the great rivers, including the Yang-tse-Kiang and the Hoang-Ho, with which it is connected. Hence the present importance of the emporium, and hence, also, the indefinite extension to which its foreign trade may probably attain. Its inland and coasting trades are both very extensive. It is said to be annually visited by from 5,000 to 6,000 canal and river boats, some from very great distances, and by 1,500 or 1,600 coasting junks. The province of Kiang-su, in which Shanghai is situated, produces great quantities of silk; and besides supplying most part of the northern provinces of the empire, the shipments of silk to the foreigner are much greater from this than any other port. It is, also, well situated for the trade in green and black teas; and in their export, as well as in that of silk, it has shot far ahead of Canton and the other emporiums. Among the other exports are oil and oil-cake, cotton, drugs, porcelain, copper and copper-ware, nankeens, gold thread, alum, fans, hams, dried fish &c. Of the imports opium is by far the greatest. The value of the British cottons imported during 1867 amounted to 3,495,255*l.*, and that of the woollens to 2,365,742*l.* But despite these and other articles, the excess of the value of the exports was so very great, that immense quantities of silver were imported. The following table shows the progress of the import and export trade of China and the great comparative importance of Shanghai.

#### I.—Value of the Imports, Exclusive of Treasure, into Chinese Ports in the Years 1863 and 1864.

Years	Canton	Amoy	Foochowfoo	Ningpo	Shanghai	Hankin	Total
1863	2,281,354	2,046,053	2,616,637	3,388,601	29,709,575	3,308,772	43,400,992
1864	2,421,482	2,351,913	2,378,044	3,421,538	21,610,757	3,620,738	35,803,572

#### II.—Value of Exports from the same Ports, 1863-64.

Years	Canton	Amoy	Foochowfoo	Ningpo	Shanghai	Hankin	Total
1863	3,869,039	994,129	4,321,203	1,454,569	12,427,153	4,217,508	27,283,501
1864	3,414,863	917,194	4,374,685	2,083,433	13,289,589	4,481,975	28,561,544

# SHANGHAE

**CHAMOIS LEATHER** (Ger. r. chamois; Ital. camoscio; koshi). A kind of leather tanned, and much esteemed for its strength, and capability of bearing heat. The real shammy is prepared from the skins of the common goat, but is frequently substituted in its

place by SHANGHAI. A city and river province Kiang-su, on the Woosung, 100 miles from the sea, and 100 miles inland; lat. 31° 15' N., long. 121° 45' E., population estimated in 1864 at from 1,000,000. It stands in a level and well-watered country, producing good crops of cotton, rice, &c. Immediately outside the wall are several populous suburbs, and filthy. Foundling hospitals, and vast ice-houses are the objects of notice in the city. It has a mint, and produces silk, vegetable oils and oil-vast quantities are annually sent to the coast (iron ware, glass, paper, ivory

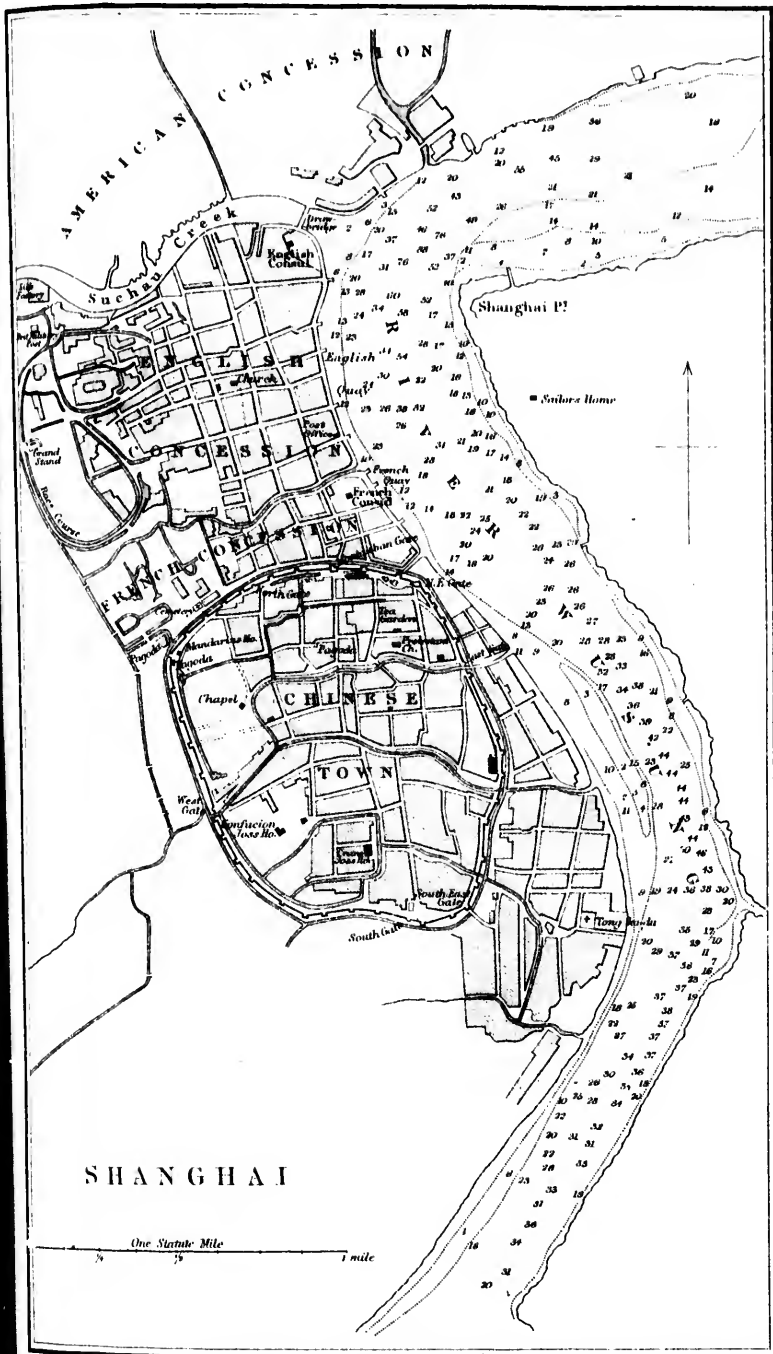

the most northerly of the five Chinese ports were opened to foreigners by the Treaty of 1842, and it is also the most important. The river can be navigated by ships of 1,000 tons for a considerable distance above the city, and by the Grand Canal, so that Shanghai is a great entrepôt for all the vast and fertile provinces of the Yang-tse-Kiang and the other rivers which it is connected. Hence the importance of the emporium, and the indefinite extension to which its trade may probably attain. Its inland trade is both very extensive. It is annually visited by from 5,000 to 10,000 river boats, some from very great distances, and by 1,500 or 1,600 coasting junks from the provinces of Kiang-su, in which Shanghai is the great market for silks; and it receives most part of the northern produce of the empire, the shipments of silk to the coast are much greater from this than from any other port. It is also well situated for the export of tea; and in their exports of silk and black teas; it has shot far ahead of Canton and the other emporiums. Other exports are oil and oil-cake, porcelain, copper and copper-ware, iron, thread, alum, fans, hams, dried fish, &c. The imports of opium is by far the most valuable of the British cottons imported, amounting to 3,495,255*l.*, and that of opium to 2,365,742*l.* But despite these and the excess of the value of the exports, the trade is very great, that immense quantities of goods are imported. The following tables show the progress of the import and export trade, and the great comparative importance of Shanghai.

## Ports in the Years 1863 and 1864.

VIII.—Imports of Opium into Shanghai in 1866 and 1867, and Value of the Imports in 1867.

	1866	1867	Value 1867
Malwa, imported	48,079 chests	30,019 chests	4,850,000
Bengal	11,090 "	10,439 "	2,850,000
Peruan	"	157 "	18,240

The highest price of Malwa was in February, 1867 - 600 taels  
 lowest " " November - 488 "  
 highest price of Patna was in March - 320 "  
 lowest " June - 440 "  
 The Peruan is generally sold at 100 taels below Malwa.

The inhabitants of Shanghai are much more hospitable and better disposed towards foreigners than those of Canton; and strangers may travel for miles into the interior all round the city with perfect security. Some very fine brick houses

have been built by the British and other foreign merchants in the suburbs.

We are indebted for some of the foregoing particulars to Consul Winchester's Report of March 31, 1868. [CANTON; HONG KONG &c.]

SHARKS' FINS form a regular article of trade to China; and are collected for this purpose in every country from the eastern shore of Africa to New Guinea. In the Canton price currents they are as regularly quoted as tea or opium; and the price of late years has been, according to quality, from 15 to 18 dollars per picul, equal to from 50s. to 60s. per cwt. In 1867, the value of the British imports of these fins into Shanghai from Hong Kong was 9,864 taels, or 3,2887. The shark fishery is now carried on to a considerable extent along the north and north-west coasts of Iceland, but chiefly for the sake of their oil.

SHAWLS (Ger. shawle; Fr. chals, châles; Ital. scialli; Span. chales). Articles of fine wool, silk, or wool and silk, manufactured after the fashion of a large handkerchief, used in female dress. The finest shawls are imported from India,

where they are highly esteemed, and cost from 50 to 300 guineas. But the British shawls manufactured at Norwich, Paisley, and particularly Edinburgh, have recently been very much improved; and though still inferior in point of quality to the finest specimens brought from the East, they look well, and are much cheaper. The native shawl manufacture is of very considerable value and importance.

**Cashmere Shawls.**—The shawl manufacture is believed to have originated in the valley of Cashmere, the ancient Caspira, in the north-west of India, between the 34th and 35<sup>th</sup> degrees of north latitude, and the 73rd and 76<sup>th</sup> degrees of east longitude. Though not so flourishing as it once was, the manufacture is still prosecuted in this province to a very considerable extent. The shawls are the very best that are made, possessing unequalled fineness, delicacy, and warmth. They are formed of the inner hair of a variety of the common goat (*Cypra hircus*), reared on the cold dry table land of Tibet, from 11,000 to 16,000 feet above the level of the sea. The goat thrives sufficiently well in many other countries; but in the sultry plains of Hindostan it has hardly more hair than a greyhound; and though in higher latitudes the hair is more abundant, it is for the most part shaggy and coarse. It is only in the intensely cold and dry climate of Tibet that it yields the peculiarly soft woolly hair that constitutes the material of the Indian shawl. We do not, therefore, suppose that the efforts to naturalise the shawl-goat in France will turn out well. On the contrary, we believe the chances of success would be about equal were an attempt made to breed beavers in a hot country, without water, or camels in a moist country, free from heat and drought.

The inner or fine wool is covered over and protected by a quantity of long shaggy hair, which is, of course, carefully separated from it before it is manufactured.

The genuine shawl wool has been imported into this country; and the finest Edinburgh and Paisley shawls have been produced from it. But it must be admitted that shawls have nowhere been made that can come, as respects quality, into successful competition with those of Cashmere. The manufacture has been established at Delhi and Lahore for some years; but notwithstanding it is carried on by native Cashmerians, and though the material carried on be quite the same, the fabrics are said to want the fineness of those made in Cashmere, and to have a degenerated, coarse appearance. It is difficult to account for this superiority. It has been ascribed to some peculiar quality of the water in the valley of Cashmere; but it is most probably owing to a variety of circumstances, which, though each may appear of little importance, collectively give a character to the manufacture.

The following details as to the manufacture of Cashmere shawls have been extracted from an English paper published at Delhi:—

The great mart for the wool of which shawls are made, is at Kilghet, which is said to be a dependency of Ladak, and situated 20 days' journey from the northern boundaries of Cashmere. There are two kinds of it: that which can be readily dyed is white; the other sort is of an ashy colour, which being with difficulty changed, or, at least, improved by art, is generally woven of its natural hue. About 2 lb. of either are obtained from a single goat once a-year. After the down has been carefully separated from the hairs, it is repeatedly washed with rice starch. This process is reckoned important; and it is to the

quality of the water of their valley that the Cashmerians attribute the peculiar and inimitable fineness of the fabrics produced there. At Kilghet the best raw wool is sold for about 1 rupee per pound. By the preparation and washing referred to, it loses  $\frac{1}{3}$ , and the remainder being spun, 3 rupees weight of the thread is considered worth 1 rupee.

Shawls are made of various forms, size, and borders, which are wrought separately, with the view of adapting them to the different markets. Those sent to Turkey used to be of the softest and most delicate texture. Carpets and counterpanes are fabricated of the hair or coarser part of the wool. From a variety of causes, among others the destruction of the Janisaries, who dressed much in shawls, the loss of royalty in Cabul, and the ruined finances of Lucknow, it is certain that the demand for this elegant commodity has greatly declined of late years. Under the Mogul emperors, Cashmere found work for 30,000 shawl looms. In the time of the Afghan kings, the number decreased to 18,000. There are now not more than 6,000 employed. I should attribute little of this diminution to the sale of English imitations among the Asiatic nations. When these counterfeits first appeared, the pretty patterns and brilliancy of the colours took the fancy of some, but their great inferiority in the softness and warmth which marks the genuine shawl, soon caused the new article to be neglected.

The average value of shawls exported from Cashmere amounts annually to 1,800,000 rupees. Runjeet Singh took  $\frac{1}{3}$  in kind as part of the gross revenue of the province, which was about 25 lacs a-year. He is said to have sold  $\frac{2}{3}$  of what he thus received, and to have kept the remainder for his own court. Of those disposed of by him and left for sale in the valley, 7 lacs worth went to Bombay and Western India; 3 to Hindostan, chiefly Oude;  $\frac{1}{2}$  lac each to Calcutta, Cabul, Herat, and Balk, whence some were carried to neighbouring countries.

A curious calculation of the successive exactions, from Cashmere to Bombay inclusive, which magnify the price of shawls, is herewith subjoined.

Actual cost for materials and labour in making a pair of reel shawls:—

Four Furrakabad seers of wool	fl. rs.
Cleaning, washing, and spinning	12 8
Dyeing	50 0
Wages to weavers	11 0
	24 6
<b>Total</b>	337 14
Duties on the same:—	
On sale and importation to Cashmere	5 11
On the thread	8 4
While the fabric is in the loom	125 0
Fees to chowdries, brokers, assessors &c.	35 0
<b>Total amount of duties in Cashmere</b>	174 15
Duties from Cashmere to Amritsir	12 6
From Amritsir to Bombay	3 4
At Bombay	20 0
<b>Total from Amritsir to Bombay</b>	36 10
Total from Kilghet to Bombay, 171 18 and 85 12 $\frac{1}{2}$	272 20 $\frac{1}{2}$
Freight cost	337 14
Proportion of carriage	0 12
Insurance	21 0
<b>Total cost</b>	640 56 $\frac{1}{2}$

A pair of such shawls might sell for 500 rupees at Amritsir, and in Bombay for 900. The amount of the imposts; and the sums levied by each Government, will appear more in relief if stated as they affect a camel load in its progress. It consists of 14 $\frac{1}{2}$  cutcha maunds, and contains, at an average, 2,000 shawls of different kinds, valued, on reaching Bombay, at 28,500 Furrakabad rupees.

The Government of Lahore exacts Rd. rs. 1,564 6; Patialah, 61; Bikancer, 43; Joudpore

121 4; Bhowninggur, 20; total 1,809; Bombay, 10 per cent. ad valorem, 2,850.  
By treaty, the ruler of Cashmere is bound to send to her Majesty every year 5 shawls, as an acknowledgment of the Royal supremacy.  
The value of the Cashmere shawls exported from British India by sea in the 5 years ending with 1866, was as follows:—

1862	459,441	1863	254,197
1863	265,537	1866	290,115
1864	275,591		

In the account of the exports of British manufactures, those of handkerchiefs and shawls are mixed, but in 1867 we exported 80,778 dozens of these articles, valued at 144,324/.

**SHEA BUTTER or VEGETABLE TALLOW.**  
The produce of the nut of the *Bassia Parkii*, belonging to the natural order *Sapotaceae* of botanists; a scrubby growing tree, indigenous to the interior of West Africa as the oil palm is to the sea coast. It is found in great abundance, covering immense tracts, both of hill and plain.

The *Bassia Parkii* is covered in the season with dense heads of whitish flowers, which have a fragrance similar to that of the hawthorn. The fruit, which ripens in May or June, is said to resemble an over-ripe pear, is exceedingly sweet, and is eaten by the natives. The nuts or kernels have the shape, and the exact colour, of the horse-chestnut, but are a little larger. After being freed from their shells, which is effected by thrashing or bruising after they have been for some time exposed to the action of a slow heat, the kernels are coarsely crushed, then boiled; a fatty matter is thereupon thrown to the surface, which is skimmed off, and put into earthen pots. It soon hardens into a solid mass, when it has the colour and consistence of animal tallow. It is then fit for use, and possesses the valuable quality of not getting rancid by keeping.

The small quantities of Shea butter at first imported into this country commanded a price of 5/ per ton above that of palm oil; but the larger parcels which have since been received have not brought so much. It is, however, said to be quite as valuable as palm oil, and possesses this superiority that, for the purposes to which it is applied, it does not, like the oil, require to undergo the expensive process of bleaching.

It may be used for any of the purposes to which palm oil is applied, and might be procured to any extent, were there cheap means of transport from the interior of Western Africa to the coast. (*Private Information.*) We imported in 1867,

only 707 cwt. of vegetable tallow, valued at 1,553/.

**SHEEP** (Ger. schafe; Fr. brebis, bêtes à laine, moutons; Ital. pecore; Span. pcoras, ovelas; Russ. owzli; Lat. oves). Of the domestic animals belonging to Great Britain, sheep, with the exception of horses, and perhaps cattle, are by far the most important. They can be reared in situations and upon soils where other animals would not live. They afford a large supply of food, and one of the principal materials of clothing. Wool has long been a staple commodity of this country, and its manufacture employs an immense number of people. 'The dressed skin,' says Mr. Pennant, 'forms different parts of our apparel; and is used for covers of books. The entrails, properly prepared and twisted, serve for strings for various musical instruments. The bones, calcined (like other bones in general), form materials for tests for the redner. The milk is thicker than that of cows, and consequently yields a greater quantity of butter and cheese; and in some places is so rich, that it will not produce the cheese without a mixture of water to make it part from the whey. The dung is a remarkably rich manure; inasmuch that the folding of sheep is become too useful a branch of husbandry for the farmer to neglect. To conclude; whether we consider the advantages that result from this animal to individuals in particular, or to these kingdoms in general, we may, with Columella, consider this, in one sense, as the first of the domestic quadrupeds.' (*Pennant's British Zoology.*) *Postmajores quadrupeds ovilli pecoris secunda ratio est; que prima sit ad magnitudinem utilitatis referas. Nam id precipue contra frigeris violentiam protegit, corporibusque nostris liberaliora prebet velamina; et . . . manus juvenum et numerosis dapibus exornat.* (*De Re Rustica*, lib. vii. cap. 2.) The importation of sheep was prohibited until 1842, when they were admitted on payment of duties (sheep 3s. a head, lambs 2s.), which were repealed in 1846. [**CATTLE.**] 539,726 sheep and lambs were imported into the United Kingdom in 1867.

In consequence of the prevalence of sheep pox on the continent of Europe, an order in council of August 20, 1868 was issued, publishing quarantine and other regulations in regard to the sheep to be imported thence into this country.

The number of sheep in Great Britain, as returned on June 25, 1868, was 30,711,396; adding to this 4,822,411 for Ireland, and 73,972 for the Isle of Man and Channel Islands, we have a grand total for the United Kingdom of 35,607,812.

of their valley that the Cash-

21. Datto, cross	Rains horned	White	Short wool (fine)	2	15	2

The above table exhibits a compendious view of the more prominent characteristics of the principal breeds of sheep in Great Britain.

For further details as to the number of sheep, the quantity and quality of wool &c., see **WOOL, SHERRY, [WINE.]**

## SHIPS, SHIPPING.

## I. SHIPS (GENERAL ACCOUNT OF).

## II. SHIPS (CLASSIFICATION OF).

## III. SHIPS (SAFETY OF).

## IV. SHIPPING OFFICERS.

## V. SHIPS' PAPERS.

## I. SHIPS (GENERAL ACCOUNT OF).

Nautical men apply the term ship to distinguish a vessel having 3 masts, each consisting of a lower mast, a topmast, and top-gallant mast, with their appropriate rigging. In familiar language, it is usually employed to distinguish an large vessel, however rigged; but it is also frequently used as a general designation for all vessels navigated with sails; and it is in this sense that we now employ it.

*Merchant Ships.*—It is hardly possible to divide merchant ships into classes, at least with any degree of precision. Their size, shape, the mode of their rigging &c., depend not merely on the particular trade for which they are destined, but on the varying tastes and fancies of their owners. The ships employed in the China and Indian trade are the largest and finest merchantmen belonging to this country; those in the Australian trade rank next, then follow the vessels employed in the trade with the Pacific, the Brazils, West Indies, and Mediterranean, and among the worst descriptions of sailing vessels are those engaged in the Canadian, Baltic, and coasting trades. But such vessels have been to a large extent superseded by screw steamers, though those that remain, especially in the coal trade, are very inferior, and in too many instances unseaworthy.

The reader will find, in the articles NAVIGATION LAWS, and REGISTRY, an account of the privileges enjoyed by British ships, the conditions and formalities necessary to be observed in order to acquire and preserve those privileges, the mode of transferring property in ships &c. And in the articles CHARTERPARTY, FREIGHT, MASTERS, OWNERS, SEAMEN, SEAWORTHY &c., the law with respect to ships and shipowners, in their capacity of carriers or public servants, and the reciprocal duties and obligations of the masters and crews, is pretty fully expounded. In this place, therefore, we shall content ourselves with laying before the reader some official statements exhibiting the progress and present magnitude of the mercantile navy of Great Britain.

*Increase of Shipping in England.*—It would be

to no purpose, even if our limits permitted, to enter into any details with respect to the shipping of England previously to the Revolution. Those who wish to examine the subject, will find most of the scattered notices of contemporary writers collected by Anderson, in his *Chronological History of Commerce*. The mercantile navy of England first became considerable in the reign of Elizabeth; and gradually increased under her successors, James I. and Charles I. At the restoration, the British shipping cleared outwards amounted to 95,266 tons; but such was the increase of navigation during the reigns of Charles II. and James II., that, at the Revolution, the British ships cleared outwards amounted to 190,533 tons. The war terminated by the treaty of Ryswick, in 1697, checked this progress. But commerce and navigation have steadily advanced, with the exception of two short periods during the war of 1739 and the American war, from the beginning of last century down to the present day.

The first really authentic account of the magnitude of the commercial navy of England was obtained in 1701-2, from returns to circular letters of the Commissioners of Customs, issued in January of that year. From these it appears that there belonged, at the period in question, to all the ports of England and Wales, 3,281 vessels, measuring (or rather estimated to measure) 261,222 tons, and carrying 27,196 men and 5,660 guns. Of these there belonged to

Ports (1701-2)	Vessels	Tons	Men
London	560	81,882	10,065
Bristol	165	17,538	2,539
Yarmouth	115	9,914	568
Karrier	121	7,007	94
Hull	115	7,561	187
Whitby	110	8,292	321
Liverpool	102	8,619	1,021
Scarborough	100	6,860	668

None of the other ports had 100 vessels; and there is some mistake in the returns as to the tonnage assigned to Newcastle and Ipswich. Of the Hull vessels, 80 were at the time laid up, which accounts for the small number of men in that port. (Macpherson's *Annals of Commerce*, anno 1701.)

The Table No. I. following, of the British and foreign shipping cleared outwards from 1663 to 1811, both inclusive, is taken from the last edition of Chalmers' *Comparative Estimate*. It gives a very complete view of the progress of the navigation of the country; and from the attention paid by the author to such subjects, and the facilities which his situation in the Board of Trade gave for acquiring authentic information, its accuracy may be depended on.

I.—Table of Ships Cleared Outwards from 1663 to 1811.

Years	British	Foreign	Total	Years	British	Foreign	Total	Years	British	Foreign	Total
tons	tons	tons	tons	tons	tons	tons	tons	tons	tons	tons	tons
1663	98,266	47,651	145,900	1760	540,241	107,237	647,478	1786	1,159,074	191,195	1,350,269

Total	2,293	650,514	2,255	512,235	1,675	433,820

*Ship-building.*—Sunderland, London, Glasgow, Newcastle, Liverpool, Hull, Yarmouth &c. are the principal building ports. The business has increased with extraordinary rapidity at Sunderland; so much so that while only 60 ships, of the burden of 7,560 tons, were built in that port in 1820, no fewer than 152 ships, of the burden of 68,479 tons, were built in it in 1853, and 158, of 50,068 tons, in 1867. Ships built in London, Liverpool, Bristol, and other western ports, are, however, in higher estimation than those built in the Tyne and the Wear, at least for those branches of trade where the best ships are required. We subjoin

An Account of the Ships and their Tonnage annually built in Sunderland in various Years since 1848.

Years	Ships	Tons	Average Tons
1848	112	37,878	266 2/3
1849	155	44,353	286
1850	158	51,373	325 1/2
1851	146	51,825	355
1852	142	56,645	398 2/3
1853	152	68,179	454 1/2
1854	151	68,099	451 1/2
1855	151	61,159	405
1856	151	63,019	409 1/2
1857	143	51,880	363 1/2
1858	110	42,023	381 1/2
1859	158	50,068	362 1/2

Within the last 20 years the building of iron vessels has been immensely extended on the Tyne, the Wear, and the Clyde; and although the latter still maintains the lead, the former places have made extraordinary strides since 1853. In 1853-4, when we became involved in the Russian war, a very great impetus was given to the construction of iron screw steamers, which has been fully maintained; and although the shipping interest since then has passed through more than one period of much depression, there has been no retrogression in the numbers annually launched of that particular description of vessels.

*State of the Shipping Interest in 1869.*—When the 1859 edition of this work was published the shipping interest was very depressed, as it is at present. The cessation of the Russian war, by putting an end to the extraordinary demand for ships for the conveyance of troops, was followed by an immediate fall of freights. And though the fall was in part, it was not wholly, counteracted by the demand for ships to convey troops to India to quell the revolt of the Bengal native army. Concurrently, too, with these circumstances, the revision, which at that time took place in the trade with Australia disengaged a considerable number of ships, while the vast additions made by the Americans, Norwegians, Danes, Swedes, Dutch &c. to their commercial marine contributed still more, by increasing competition beyond the demand, to lower the rate of freight.

But independent of these transitory circumstances, we apprehend that the grand cause of the depression of the shipping interest in this country especially, is to be found in the too great increase of shipping. The truth is, that ship-building is periodically completely overdone. It should be borne in mind that in consequence of

the more extensive employment of steam ships in the coasting and overseas trades, the same amount of tonnage performs a much greater amount of work. The mere substitution of steam for sailing ships, though there had been no increase of tonnage, would have been really equivalent to a large addition to the latter. Inasmuch, however, as both the proportion of steam ships to the total tonnage and the amount of the latter have greatly increased, we need not be surprised at the existing depression.

But there is no ground for thinking that the latter will be permanent. The continued increase of our trade will afford employment to a still increased amount of shipping; and the check given to building in the mean time will powerfully assist in bringing about the desired equilibrium between the demand and supply.

Ever since we repealed our navigation laws in 1849 our course as a whole has been onwards, and with a rapidity of which we could have had no conception previous to that time.

In 1841, when these laws were in full force, the number of vessels registered as belonging to the United Kingdom was 23,461, with a tonnage of 2,935,399; the number of men then employed was 172,341. In 1851, when the navigation laws were abolished, the number of vessels fell to 18,184, but their tonnage had increased to 3,386,395, while they were worked by the reduced number of 141,937 men; but from the customs returns lately published we learn that in 1867, 40,942 vessels were registered in the British empire, requiring 346,606 men, representing a total of 7,277,098 tons. Of this large number of vessels 27,918 belonged to the United Kingdom, 855 to the Channel Islands, and 12,165 to British plantations. A total of 32,756,112 tons of shipping entered inwards and cleared outwards during the year. Of this amount 11,197,685 tons British and 5,140,952 tons foreign entered inwards; and 11,172,205 British and 5,245,090 foreign cleared outwards.

Some very important changes have since 1850 been made, and are yet in progress, in the construction of ships. They are now built of a much larger size than formerly, of finer models, and with a power of sailing of which no just idea could previously have been formed. But in regard to size, as in most other things, we appear at one time to have run from one extreme into another; and from being too small, our ships, and those of the Americans, became too large and unwieldy. And, speaking generally, they are now being built of a less, though still large, and more convenient size than was customary a few years ago.

Even the *Great Republic*, built in New York about 15 years ago, though not one quarter the size of our *Great Eastern*, was found to be much too large for the ordinary purposes of commerce, and the sailing vessels of the United States of America seldom now exceed 1,200 tons register. But while we have been moving onwards with astonishing rapidity, the merchant navy of that country, which at one time bade fair to exceed our own, is now very little more than half of what it

their Tonnage, and the Number that belonged to the several Ports, respectively.

was in 1860. This remarkable decline, though in the first instance caused by the lamentable civil war which broke out in that year, is in a very great measure to be attributed to the high tariffs which have recently been imposed upon almost every article required for ship-building purposes; and unless the United States revert to a policy of free trade, they can never again hope to rival this country in its maritime commerce.

Iron ships are also, as previously stated, and exhibited in Table IX., very extensively constructed; and ships are now frequently fitted out with screws and steam engines to be used only as a subsidiary power in calms, and against contrary winds.

Most sorts of short passage traffic are now carried on by steamers; and it is probable that in the end they will engross the greater part of the coasting trade of most countries and of the trade between foreign countries adjacent to each other. But it is believed by many good judges, that the improved class of sailing ships have little to fear from the competition of steamers in all the more distant branches of trade. This, however, would appear to be very doubtful.

*Statements of Shipowners.*—It will not excite the reader's surprise to be told that a great many crude projects have been put forward in the view of removing the distress to which shipowners have been periodically subjected. But it must be left to time and to the efforts of the parties concerned to set it to rights. It would be much worse than useless to attempt to improve their situation by engaging in retaliatory proceedings against Spain and those countries that lay discriminating duties on articles conveyed to them in foreign ships. Such proceedings would seriously injure ourselves without having any favourable influence over the foreigner. Certainly he will not abandon the protective system because we complain of its operation, though that might very probably tempt him to extend it still further. But there can be little doubt that he will eventually renounce it, when he sees that our commerce and shipping, despite the temporary checks to which all departments of industry are necessarily liable, have vastly increased under a free and liberal system.

Besides their reasonings in favour of coercive measures, it has been the habit of shipowners to put forth statements intended to show that shippers only profit by a fall in the rate of freight, and that its reduction redounds in no degree to the advantage of the consumers. Suppose, to illustrate this extraordinary statement, that the freight of the barrel of flour from New York to Liverpool generally amounts to 8s. or 10s., but that it falls, from some cause or other, to 1s. the shipowners contend that the exporter will pocket the whole of the difference (9s. or 7s.) between the high and the low rate of freight, and that the British public will in no wise profit by the fall. And such would be the case for the moment; but it is not possible that the exporter should continue to enjoy an advantage of this sort for any length of time: for the fall of freight, by adding so much (9s. or 7s. per barrel) to the profits of the shippers of flour, would give such a stimulus to its exportation, and create so much competition in the trade, that its price would forthwith fall in England. And there can be no manner of doubt that it would continue to fall till the New York shippers realised only the same profits that are realised by the shippers of other articles either foreign or coastwise; that is, till the price of flour has been reduced 7s. or 9s. per barrel, or freight has risen to that amount, or till the equalisation has been brought about partly in the one way and partly in the other. To

suppose it should be otherwise is to suppose what is evidently contradictory and absurd. The price of articles not consumed on the spot where they are produced is made up of the cost of their production and carriage; and any reduction of the latter which is not momentary only, has precisely the same influence over the price of an article as if the expense of producing it were diminished to the same extent. One really feels ashamed to have to state what is so very obvious. It is not creditable to the shipowners that they put forth statements so palpably absurd as that now referred to. They can hardly fail, one should think, to be themselves aware of their fallacy; and they count too much upon the ignorance of others if they suppose that they will not be appreciated at their exact value.

Since the last edition of this work was published, it has afforded us no ordinary pleasure to note that our shipowners, instead of clamouring for a restoration of protection, have in most instances, and with great success, set to work to adapt their vessels to this altered position, and are now producing a class of vessels vastly superior to any we hitherto possessed, and with which we need not fear to compete with the vessels of all other nations.

France too has followed our example in free navigation; and in seeking to effect this change no one was more zealous than Mr. W. S. Lindsay, formerly M.P. for Sunderland, and himself an extensive shipowner. See his Letter to the Emperor of the French, printed as a Parliamentary Paper.

## II. CLASSIFICATION OF SHIPS.

To insure a ship on right principles, or in such a way that the premium shall be the fair equivalent of the risk, is no easy matter. The risk depends partly on the condition of the ship and the capacity of the master and crew; partly on the nature of the cargo she has to take on board; and partly on the voyage she has to perform. The last two circumstances disclose themselves, and their influence may be appreciated, at least with sufficient accuracy for practical purposes, without any difficulty; but it is far otherwise with the condition of the ship, and the capacity of the master and crew. It is essential to the adjusting of an insurance on fair terms, that these should be known; and it is, at the same time, exceedingly difficult to acquire any accurate information with respect to them.

It is plain that there is but one mode in which anything satisfactory can be learned with respect to the condition of ships, and that is by their inspection and examination by persons of competent information as to such matters. To acquire a just character as first, a ship should be repeatedly surveyed while she is being built; and to know her condition at any subsequent period, some of the planks should be taken off, and her hull and rigging subjected to a thorough examination. This is the only method to be followed if we wish to arrive at results that may be safely depended on. The age of a ship should not be overlooked in estimating her condition; but it is a criterion that, taken by itself, is worth scarcely anything. There is the greatest possible difference in the materials of which different ships are built, and in the way in which they are built, and in the wear and tear to which they are exposed. Some are so very bad, that they are almost unseaworthy on their first voyage; others, with difficulty, last for 3, 4, or 7 years; and others, again, run for 10, 15, and even 20 years, and upwards, with but little repair. It may be presumed that the con-

dition of ships built of similar materials, on the same plan, and employed in the same departments of trade, will depend materially on their ages, but a thousand circumstances conspire to defeat this presumption; and it would be ludicrous to suppose that it should apply at all in the case of ships constructed of different materials, and engaged in different lines.

But, notwithstanding the criterion of age is thus really worthless as a rule by which to judge of a ship's condition, it is almost the only one that was referred to in this country down to a late period. From about the year 1760, or perhaps earlier, down to 1834, ships were arranged, by the underwriters at Lloyd's, in classes marked by the letters A, E, I, and O, and the figures 1, 2, and 3; the former referring to the hull of the ship, and the latter to the rigging. A ship marked A 1 was in the highest class; that is, her hull and rigging were both declared to be in the best condition; ships marked E 1 were in the next class; those marked I 1 were in the lowest available class, or the class formed of such as were fit only for carrying coals, or other goods not liable to sea damage along the coast; ships marked O were unseaworthy. But to get into the highest class, no examination of the ship, or none worthy of the name, was required. Unless some very flagrant defect was obvious in their construction, all ships were entitled, when new, to be marked in the highest class; and they were entitled, whatever might be their real condition, to stand in it for a certain number of years, varying from 6 to 12, according to the port in which they happened to be built. It is not easy to imagine anything more absurd than such a classification; but the whole extent of the injury arising from it is not immediately obvious. The great majority of merchants and underwriters have not, and could not be expected to have, any personal knowledge of different ships, and have nothing to trust to but the classified accounts. Suppose, now, that two ships were built at the same time in London or any other port; that one was constructed of the best materials, and in the best way, while the other was constructed of the worst materials, and in the most defective manner: these two ships were placed side by side in the class A 1; the underwriters, seeing them there, were ready, without further enquiry, to insure them at the same premium, and the merchants were, for the same reason, quite as willing to employ the one as the other. A bounty was thus given on the construction of what have been called *shop-built* ships, or ships of an inferior class. For a half, or, at most, two-thirds, of what would be required to construct a good and really sufficient ship, a shipowner got an inferior vessel of an equal burden sent to sea; and, owing to the matchless absurdity of the system of classification, the inferior was placed in the same rank with the superior ship; enjoyed all the advantages such distinction could give; and was, in the public estimation, deemed quite as good and as deserving of employment as the other. This has been a more copious source of shipwreck than all the currents, rocks, and fogs that infest our seas; but it was not the only one. At the end of a certain number of years, depending (as already stated) on the port where the ship was built, both the vessels referred to above were degraded to the class E; and yet it might happen that the superior ship was, when so degraded, better entitled to continue in the class A than the inferior ship was ever to be in it. But even this does not exhaust the whole absurdity of this preposterous scheme; for, supposing that the superior ship had been so thoroughly repaired as

to be as good as the day she came off the stocks, and that the inferior ship had got no repair at all, still they were both placed, side by side, in the class E. All the annals of all the maritime nations of the world, from the Phœnicians downwards, furnish no example of a more perverse, contradictory, and absurd regulation. That it should have existed amongst us for the greater part of a century strikingly exemplifies the power of habit to procure toleration for the most destructive practices and errors.

It may be said, perhaps, that whatever system of classification is adopted, there must be great numbers of inferior vessels; for, though we did not, foreigners would build them; and, being consequently able to sail them cheaper, would drive us totally out of all trades in which they could come fairly into competition with us. This is true; but provided they be not engaged in the conveyance of passengers, who ever thought of proscribing inferior ships, or of dictating to the shipowner what sort of ships he should build, or to the merchant what sort he should employ? We do not object to inferior ships, but we do object to the same character being given to them that is given to superior ships. This is practising a gross fraud upon the public, and gives an unfair and unjust advantage to the owners of inferior vessels. The interests of navigation and of humanity imperatively require that ships should be correctly classified; that those that are not seaworthy should not be classed with those that are, but that the real state of each should be distinctly set forth in the register, and be made known to everyone. If this be done, the merchant and the underwriter may be safely left to deal with them as they think fit.

In consequence of the laudable exertions of Mr. Marshall and other gentlemen, the attention of the principal merchants, shipowners, and underwriters &c. of the metropolis was some years ago directed to this subject; and in 1824 a committee, consisting of representatives from these different bodies, was appointed to enquire into and report on it. The committee collected a great deal of valuable evidence, and laid an able Report before a general meeting of merchants, shipowners &c. on June 1, 1826. We subjoin an extract from this Report, which more than bears out all that we have stated:—

“From the absence of all control on the original construction of ships while building, and the impossibility of ascertaining, by any inspection after completion, their real quality, it appears to be indisputably proved, by an almost uniform concurrence of testimony, that the first character, or A 1, is indiscriminately extended to ships differing widely in strength, durability of materials, and all those qualities on which character ought to be dependent; that many ships to which the first class is assigned are decidedly inferior to others which are placed, from lapse of time alone, in a lower class; that many become totally unfit for the conveyance of dry cargoes, long before the expiration of the period during which they are entitled, according to the present system, to remain on the first letter, in which they are notwithstanding continued; that instances are on record of first-class ships which have been unfit from their origin for the conveyance of dry cargoes; and some are declared to have been hardly fit, when new, to proceed to sea with safety. One case is even adduced, in which, from ill construction and insufficiency of fastening in a new ship, her insecurity was predicted, and she actually foundered on her first voyage; and yet this identical vessel was ranked, according to the indiscriminate system pursued, in the first class.

Such, as respects new ships, appear by the evidence to be the practical results of a system which, assuming to designate by marks their intrinsic quality, provides no means of actually ascertaining that quality; but offers, in effect, a premium for the building of inferior and insufficient ships, by the inducement it holds forth to fraudulent construction and by the quality of character it indiscriminately extends to the best and the worst ships built at the same port.

Nor, your committee regret to have to report, is the evidence of the errors, inconsistencies, and evils arising from the existing system, as applied to old ships, by any means less conclusive. By the refusal to restore character, in consequence of repairs, however extensive, the inducement to maintain ships in an efficient state is removed; whilst, from the absence of all regular provision for stated or periodical examination, their efficiency or inefficiency is rendered dependent upon the var, of views, the caprices, or the interest of the proprietors. Hence, though the second character, or B, is declared by the rules of the system to be the designation of ships which, having lost the first character from age, are kept in perfect repair, and appear, on survey, to have no defects, and to be completely calculated to carry dry cargoes with safety, the whole body of evidence distinctly proves that character to be, in very numerous instances, assigned to ships which, from original defect or want of requisite repairs, are utterly unfit and unsafe for dry cargoes; while others, which, from sound constitution or efficient reparation, are pronounced in the evidence to be superior to many new ships, are indiscriminately classed with the actually worthless and unseaworthy. Hence, too, the employment of ships, after they have passed the period prescribed by a fallacious standard of classification, becomes uncertain, precarious, and difficult; the shipowner is injured; the shipper and underwriter misled; the building of superior ships, capable of long service, is discouraged, and direct inducement is held out to the construction of those of an inferior description; the general character of our mercantile marine is degraded; and it is to be feared that, could the system be traced to its ultimate results, it would be found to be productive of a lamentable loss of property and life.

It may have seemed surprising that, despite the continued complaints of the lowness of freights, and the want of employment for shipping, so many new ships should be annually built. But this was, to a considerable extent at least, occasioned by the system of classification now described. Instead of building a really good and durable ship, the principal object used to be to construct one that should, at furthest, be, as the phrase is, *run off her legs* in about 10 years or thereby; inasmuch as, whatever might be a ship's condition, she was then degraded from class A 1, and it was hardly possible, in most departments of trade, to find a merchant to employ, on anything like reasonable terms, a ship to which these symbols of imaginary excellence were not attached. Hence, the shipowner, instead of repairing his 10-years old ship, sold her for what she would fetch, and built a new one. But the person who purchased the ship degraded to E 1, forced her, though at an enormous reduction, into business; so that there were two bad or inferior ships in the field; whereas, under a reasonable system of classification, there would most likely have been only one good ship. The injury that this practice did to the shipping interest is too obvious to require to be pointed out. It has been infinitely more hostile to it than all those reciprocity treaties, and that

foreign competition, about which there has been so much unfounded clamour. 'If the system of classification were founded on the principle of *intrinsic merit*, if the real efficiency of the ship formed the basis on which character was given the consequence, in numerous instances, would be that, instead of supplying the place of those ships that at present lapse from age only into the second class with new ones, the owners would effectually repair the existing ships; so that there would speedily be not only a material improvement in the construction of ships, but a material increase in the amount of tonnage, and a corresponding increase in the rate of freight.' (Marshall's *Statistics*, p. 19.)

The conclusive Report and exposition referred to above did not produce the consequences that might have been anticipated. Government, for reasons known only to itself, but which appear to have been of a very questionable description, seems to have concluded that this was not a subject with which it should interfere; and it was laid aside for some years more. But the still increasing amount of shipwreck, and the loss of life and property consequent thereon, again roused the public attention to the subject; and at length the principal merchants, shipowners, and underwriters succeeded in setting on foot machinery by which a classified account of shipping has been obtained, founded on more correct principles. The public owe much to the individuals who imposed on themselves this difficult and important task. Notwithstanding the obstacles with which they had to contend, they have done a great deal to improve the character of our mercantile marine, and to lessen the disasters incident to a seafaring life.

**2. New System of Classification.**—This new classification is conducted under the direction and superintendence of a committee of merchants, shipowners, and underwriters, established in 1831. Many objections were frequently made to the manner in which this committee was chosen; and in the last edition we expressed an opinion that its composition might be improved, and that consequently it might be made to enjoy a larger share of the public confidence; but important changes have since then been made in the management of its affairs. It establishes rules for classifying ships, and appoints, controls, and dismisses the surveyors by whom they are inspected and examined. It is plain, therefore, that the power which it exercises over shipping is very considerable, and that it is of the greatest importance that it should be placed on sound principles, and exercised with the greatest discretion. A classified register is annually published, which should become more and more complete; and the expenses attending the institution are defrayed, partly by the fees charged on making an entry in the register, partly by the profits on the sale of the register or book, and partly from voluntary sources. But, as the subject is of much importance to everyone interested in commerce and navigation, we think we shall do an acceptable service to our readers by laying before them the statement prefixed by the society to their register. It fully explains their objects, the principles on which they proceed, and the means they profess to adopt for carrying their views into effect.

*Classification of Ships: Rules and Regulations for, in 1868.*

After announcing the formation of the society, the official statement goes on to say, that—

8. The superintendence of the affairs of the society is to be under the direction of a committee

about which there has been clamour. If the system of founded on the principle of the real efficiency of the ship which character was given, numerous instances, would be lying the place of those ships from ago only into the second the owners would effectually ships; so that there would y a material improvement in ships, but a material increase tonnage, and a corresponding of freight." (Marshall's *State-*

Report and exposition referred produce the consequences that anticipated. Government, for to itself, but which appear to very questionable description, luded that this was not a sub- should interfere; and it was e years more. But the still c of shipwreck, and the loss of consequent thereon, again raised n to the subject; and at length hants, shipowners, and under- in setting on foot machinery by account of shipping has been on more correct principles. The to the individuals who imposed is difficult and important task, the obstacles with which they have done a great deal of character of our mercantile marine, disasters incident to a seafaring

*of Classification.*—This new conducted under the direction and of a committee of merchants, underwriters, established in 1831, were frequently made to the this committee was chosen; and on we expressed an opinion that might be improved, and that ought be made to enjoy a larger ible confidence; but important ce then been made in the manage- s. But, of much importance to everyone mmerce and navigation, we think acceptable service to our readers them the statement prefixed by their register. It fully explains the principles on which they proceed, they profess to adopt for carrying effect.

*of Ships: Rules and Regulations for, in 1868.*  
ing the formation of the society, ment goes on to say, that—  
intendence of the affairs of the under the direction of a committee

of merchants, shipowners, and underwriters: twenty-four elected in London, and eleven at the principal outports. The chairman for managing the affairs of Lloyd's, and the chairman of the General Shipowners' Society, London; also the chairman and deputy-chairman of the Liverpool committee, and the chairman of the Liverpool classification committees for the time being, to be, ex officio, members of the committee.

9. Six of the members elected in London, namely, two of each of the constituent parts of the committee, to go out annually by rotation, but to be eligible to be re-elected. The vacancies so arising to be filled up by the election of two underwriters and one merchant by the committee for managing the affairs of Lloyd's, and two ship-owners and one merchant by the committee of the General Shipowners' Society.

10. The members elected at the outports to retire at the end of every four years, but to be eligible for re-election.

11. The committee to appoint from their own body, annually, a chairman and deputy-chairman, and also a chairman for a sub-committee of classification.

12. The committee to appoint a sub-committee of classification, to be so regulated that each member of the general committee may, in rotation, take his turn of duty therein throughout the year.

13. The secretary, clerks, and servants of the society, and the surveyors, to be appointed by and be under the direction of the general committee.

14. Special meetings to be convened by order of the chairman, or deputy-chairman, or on the requisition of any three members.

15. All elections and appointments to be made by ballot.

16. No member of the committee to be permitted to be present on the decision of the classification of any ship of which he is the owner, or wherein he is directly or indirectly interested.

17. The committee to be empowered to make such by-laws for their own government and proceedings as they may deem requisite, not being inconsistent with the original rules and regulations under which the society was established; but no new rule or by-law to be introduced, nor any rule or by-law altered, without special notice being given for that purpose at the meeting of the committee next preceding that at which such motion is intended to be made; such notice to be inserted in the summons convening the meeting. No new rule, or alteration in any existing rule, materially affecting the classification of ships, to take effect until the expiration of six months from the time it shall have been determined upon.

18. All reports of survey to be made in writing by the surveyors according to the forms prescribed, and submitted for the consideration of the general committee, or of the sub-committees of classification; but the character assigned by the latter to be subject to confirmation by the general committee.

19. The reports of the surveyors, and all documents and proceedings relating to the classification of ships, to be carefully preserved, and parties proving themselves to be interested therein to have access to the same under the direction of the chairman or deputy-chairman.

Copies of the original reports (if the ships be already classed, but not otherwise), so far as relates to the dimensions, scantlings, fastenings, and materials, in cases where the correctness of the reports in these particulars is certified by the builders, are granted on application.

20. Foreign ships and ships built in the British possessions abroad where there is not a surveyor (see also sec. 51), to be surveyed on their arrival at a port in the United Kingdom; but a due regard is to be had to the circumstance of their having been exempted from the supervision while building to which all British ships are subjected, and the character to be assigned to them is to be regulated according to their intrinsic quality, and from the best information the committee can obtain.

21. In every case in which the character assigned to a ship may be proposed, a survey, to be reduced, notice is to be given in writing to the owner, master, or agent, with an intimation that if the reduction be objected to, the committee will be ready to direct a special survey, on the owner, master, or agent agreeing to pay the expenses attending the same, provided on the said survey there shall appear sufficient ground for the proposed reduction.

22. When the surveyors consider repairs to be requisite, they are respectfully to communicate the same in writing to the owner, master, or agent; and if such repairs be not entered upon within a reasonable time, a corresponding report is to be made to the committee for their decision thereon.

23. Parties considering the repairs suggested by the surveyor to be unnecessary or unreasonable may appeal to the committee, who will direct a special survey to be held; but should the opinion of the surveyor be confirmed by the committee, then the expense of such special survey is to be paid by the party appealing.

24. The surveyors to the society not to be permitted (without the especial sanction of the committee) to receive any fee, gratuity, or reward whatsoever for their own use or benefit, for any service performed by them in their capacity of surveyors to this society, on pain of immediate dismissal.

25. The surveyors will be directed to attend on special surveys of ships while building or under damage or repair, when required by merchants, shipowners, or underwriters; the charge for which is to be regulated according to the nature and extent of the service performed. In all cases the application for the assistance of the surveyors must be made in writing addressed to the secretary.

26. The funds to be under the authority and control of the committee, and a statement of the receipts and expenditure to be annually printed for the information of the subscribers.

27. The following fees to be charged to the owners of ships prior to their vessels being classed and registered in the book:—

*For Entering and Classing Ships, and for Entering and Classing Ships surveyed for Continuation, or the Character A in red, or required for Restoration.*

For each ship under 100 tons	£	0	0
of 100 tons and under 200 "	2	0	0
200 "	3	0	0
300 "	4	0	0
400 " and upwards	5	0	0

*For Registering Repairs.*

For each ship under 500 tons	£	10	0
of 500 tons and under 500 "	1	0	0
500 "	1	0	0
1,000 " and upwards	3	0	0

*For Re-classing Ships (except when repaired) the Characters of which have been expunged, or Change of Owners.*

For each ship under 200 tons	£	10	0
of " and above	1	0	0

*Special Surveys.*

28. For ships built under the special superintendence of the surveyors (to entitle them to the distinctive mark  $\otimes$ ), 1s. per ton.

For surveys for damage, or for other surveys, held at the request of the owners, and for the survey of ships for restoration, continuation, or the character A in red, a charge (in addition to the fee for entry) will be made, according to the nature and extent of the service performed.

In cases where the caulking of ships is superintended and tested by the surveyor, a special charge will be made, according to the tonnage of the ship. All repairs which may be required on the surveys above referred to must be performed under the superintendence of the society's surveyors.

29. Certificates of character, of the form No. 7, signed by the chairman of the general committee, or by the chairman of the sub-committee of classification, and countersigned by the secretary, will be granted on application, the charge for which will be as follows:—

For ships under 200 tons	-	-	23	2	6
of 200, and above	-	-	0	3	0
Copies of original reports, as per sec. 19	-	-	1	1	0

31. *Characters.*—The characters to be assigned to ships to be, as nearly as possible, a correct indication of their real and intrinsic qualities—(ships which are not built in accordance with the principles of the society's rules will be marked in the register book thus '[*Expt. B. S.*]' denoting that they are built experimentally, and are classed subject to being surveyed biennially)—and to be in all cases fixed (not by the surveyors, but by the committee, after due consideration of the reports of the surveyors and such other documents as may be submitted to them, and will be distinguished as follows:—

*Ships A* to consist of new ships, or ships continued, or restored. (Secs. 31, 54, 55, 57.)

*Ships A in red* to consist of ships which have passed the period assigned on the original survey, or continuance, or restoration; and also of ships not having had an original character, and which are found on survey of superior description, fit for the conveyance of dry and perishable goods *to and from all parts of the world.* (Sec. 60.)

*Ships B* to consist of ships which are found on survey fit for the safe conveyance of dry and perishable goods on *shorter voyages.* (Sec. 61.)

*Ships E* will comprise ships which shall be found on survey fit for the conveyance of cargoes not in their nature subject to sea damage on *any voyage.* (Sec. 64.)

*Ships I* to consist of ships fit to carry cargoes, not liable to sea damage on *shorter voyages.* (Sec. 66.)

32. In flush-decked vessels having either one, two, or three decks (not being spar or awning decked), the tonnage under the upper deck, *without abatement of the tonnage of the space for the crew, or for the propelling power of steam vessels,* is to regulate all the scantlings of the hull, and also the equipment of the vessel.

In vessels having a *raised quarter deck,* or a poop, or top-gallant fore-castle, or deck houses, or awning deck, or spar deck, the total tonnage below the tonnage deck is to regulate the scantlings of the hull; but the register tonnage, as cut on the main beam of sailing vessels and of steamer vessels, *with the addition of the tonnage of the space required for propelling power,* is to regulate the equipment, and also, in iron or composite vessels, the size of the main piece of rudder and windlass, and the keel and keelsons and their number, and the

scantling of the stringer plates on the upper and lower deck beams, and the requirements as to double riveting.

But in vessels where the tonnage of the erections above the tonnage deck is less than that required for crew space, *then the difference* between the tonnage of these erections and the tonnage of the space allowed for crew is to be *added* to the register tonnage, cut on the main beam, for the tonnage that is to regulate the equipment and the size of the main piece of rudder and windlass, and the keel and keelsons and their number, the scantling of the stringer plates on the upper and lower deck beams, and the requirements for double riveting.

*Rules for Classification.*

33. *Ships A* will consist of new ships and those which have not passed a prescribed age, provided they are kept in a state of complete repair and efficiency. The character A will not, however, be granted to any vessel unless satisfactory evidence of the date and build and place where built is produced.

34. The number of years to be assigned for this character to be determined with reference to the original construction and quality of the vessels, the materials employed, and the mode of building; and their continuance for the time so assigned to depend upon its being shown by occasional surveys (annually, if practicable) that their efficiency is duly maintained.

The characters of ships classed A will be struck out of the register book unless they be submitted to the following intermediate survey, within periods not exceeding *four years* in the case of vessels *classed ei. A years and under,* either originally, or on restoration, or on continuation, and within periods not exceeding *half that assigned* in vessels classed for longer terms.

This regulation is applicable also to ships classed A in red.

The survey will be noted in the register book thus—'H. T.' (half-time), with the date of the survey affixed.

*Half-time or intermediate survey.*—The ship to be placed on blocks in dry dock, or on ways, so that the keel and bottom may be seen and properly examined (unless she has been thus surveyed by the society's officers within the previous twelve months); the hold to be cleared, and proper stages made both inside and outside; the limbers and all air courses to be cleared; and if the ship has not already got the air courses, described in rule, sec. 37, they are now to be made; the outside planking to be scraped bright where the surveyors may consider it to be necessary from any apparent defect; bolts of lower deck (if of iron) in number not less than six on each side, and treenails in number not less than twelve on each side, to be driven out at various parts of the ship. The attention of the surveyors is to be then particularly directed to the state of the upper or main deck and comings, the upper and lower deck bolts, *whether of iron or copper,* and the outside planks through which they pass, and to all other parts of the ship, so far as they can be examined; the windlass to be unhung and wood lining stripped; the condition of the caulking is also to be ascertained. The cables to be removed from the lockers and ranged, and, with the anchors and general equipment, examined so as to be satisfactorily reported upon.

35. New ships are to be surveyed while building, by the surveyors to this society, in the following three stages of their progress, or they will be liable to lose one year of the period to which they

might otherwise be entitled. (Sec. 53.) Ships intended to be built under *special survey*, must be placed under the surveyor's inspection from their commencement, so that all parts of the timbers, deadwood, keel, stem &c. may be examined.

*First*.—When the frame is completed, timbers dubbed fair inside and outside ready to receive planking, and before any planking is wrought.

*Second*.—When the beams are put in, but before the decks are laid, and with at least two strakes of the plank of the ceiling between the lower deck and the bilge unwrought, to admit of an examination of the inner surface of the plank of the bottom.

*Third*.—When completed, and before the plank be painted or pyed.

All ships for which a higher character than 10 years' A may be claimed, must be surveyed by an exclusive officer of the society, twice at least while building; namely, at the first and at the second stages of their progress as above prescribed. Due notice must be given by the builder or owner of their being ready for this additional survey.

36. A full statement, agreeably to Form No. 4, of the dimensions, scantlings &c. of all new ships, verified by the builder, is to be transmitted by the surveyor, and to be kept as a record in the office of the society.

#### Rules to be observed in building Ships.

37. The whole of the timber is to be of good quality and properly seasoned, of the descriptions shown in Table A, as applicable to the several terms of years for which ships may respectively be appointed to remain on the character A. The workmanship to be well executed, and equally so for all grades. Defects in workmanship or quality of timber will involve a reduction of class, to be determined by the committee in each case.

In ships claiming to stand 12 years from their timber materials, the stem, sternpost, beams, transoms, apron, knightheads, and keelsons are to be entirely free from sap and from all defects. The rest of the frame to be well squared and free from sap; each set of timbers to be frame-bolted together throughout their entire length; the butts of the timbers to be close, and not to be less than  $\frac{1}{4}$  of the entire moulding at that place; and in cases where the heads and heels of the timbers which come together are square, a dowel (to be of the diameter from  $\frac{1}{4}$  to  $\frac{1}{2}$  of the moulding of the timber) must be introduced into the ends of such timbers in order to connect them.

All ships building for classification to be well cross chocked with a proper butt at each end of the choek, each arm not to be less in length than one and a half the moulding of the timbers they connect; in all cases the choeks are to be of a description of wood equal to the best material required by the rules for the timbers which they unite, excepting the floorhead choeks, which may be of the materials allowed by the rules for first foothooks. Where the timbers are scarped, the scarfs to be of proper length and with a butt at each end.

In all ships an air course must be left all fore and aft, below each set of clamps, or between the clamps and spirketting of each tier of beams, and in the hold, at each end of the ship, between the keelson and hold beam clamp, to have in addition 1 or 2 tiers of air courses for  $\frac{1}{2}$  of the entire length of the ship.

In the construction of top-gallant forecastles and poops, the timbers must be of the same materials as are required by the society's Table A for the top-timbers of the frames of ships according to the several terms of years appointed for such

ships to remain on the character A, all the said timbers to extend to the plank-sheer. All the outside planking of top-gallant forecastles, and the sheerstrakes, plank-sheers, and spirketting of top-gallant forecastles and poops, must be of the materials required by Table A for the topsides of the said ship; and the shelf and clamps of poops and top-gallant forecastles may be of the same quality as those allowed in Table A for the shelf and clamp of the upper deck. All the beams of top-gallant forecastles, and the mast beams, breast beams, and transom beams of poops, to be of the materials required by Table A for the beams of the said ships; the remainder of the beams and the water-way of the poops, and the remainder of the planking of poops and top-gallant forecastles, may be of cedar, mahogany, Baltic, or American red pine, pitch pine, larch, hackmatack, tamarac, or cowdie, and rock-elm for such remainder of beams only, and yellow pine or American white spruce in ships below the seven years' grade. This rule does not apply to raised quarter-decks, the materials of which are required to be of the same quality as those named in Table A for the main body of the ship.

38. The scantlings of the timbers, keelson and keel, thickness of planking &c. are not to be less than those shown in the society's Table B.

In the inside and outside planking, waterways, plank-sheers, and flat of deck of raised quarter-decks, a reduction of  $\frac{1}{4}$  from the thickness required by the society's Table B for such parts in the range of the upper deck in ships with two decks will be allowed.

In the inside and outside planking, waterways, plank-sheers, and flat of deck of full poops and top-gallant forecastles, a reduction of  $\frac{1}{4}$  from the thickness required by the Table B for such planks in the range of the upper deck in ships with two decks will be allowed; and in the siding and moulding of the top timbers and beams of full poops and top-gallant forecastles, a reduction of  $\frac{1}{4}$  will be allowed. Parties desirous of making any alteration in the construction of poops, with a view to diminishing the weight (but preserving the requisite strength), may submit their plans for the committee's consideration and approval. The united lengths of poop and forecastle are not to exceed  $\frac{2}{3}$  of the entire length of the upper deck. (Sec. 41.)

In vessels having three decks or tiers of beams, where the space under the upper deck is to be used only for the accommodation of crew and passengers, or to enclose the engine openings of steam vessels, the scantlings are to be regulated as per section 32. The total depth of hold in spar-decked ships must not exceed  $\frac{13}{16}$  nor be less than  $\frac{10}{16}$  of the ship's extreme breadth.

In the construction of spar decks, the timbers must be of the same materials as are required by Table A for the top timbers of the frames of ships according to the several terms of years appointed for such ships to remain on the character A. If all the said timbers extend to the plank-sheer, their siding and moulding may be reduced  $\frac{1}{4}$  at their heads; but if only the *alternate* timbers run up to the top height, then a reduction of  $\frac{1}{2}$  only will be allowed in their moulding at their heads, and in that case there must be a perfect covering board worked all round the ship at the middle deck; and in all cases the middle deck must be a perfect deck laid and caulked. All the outside planking, and the sheerstrakes, plank-sheers, and spirketting must be of the materials required by Table A for the topsides of the said ship; and the shelf and clamp may be of

the same quality as those allowed in Table A for the shelf and clamp of the middle deck. All the beams before the foremast, and the mast beams, hatch beams, and transom beam, must be of the materials required by Table A for the beams of the said ships; and the remainder of the beams and the water-way of spar deck, and the remainder of the planking, may be of red cedar, mahogany, Baltic, or American red pine, pitch pine, larch, hackmatack, tamarac, or cowlie; and in ships below the 7 years' grade, the same may be of yellow pine, American white spruce, or white cedar.

In spar decks there may be a diminution of  $\frac{1}{4}$  from the dimensions, fastenings, and bolts prescribed in the tables for the upper deck of ships with two decks (except in the siding of the spar deck beams); but if the outside planking be of 12 years' wood, then a reduction of  $\frac{1}{2}$  may be made in the thickness from that prescribed in Table B for the main sheerstrakes of such vessels.

Deckhouses or other erections are allowed on spar decks, but only to the extent of  $\frac{1}{10}$  of the total superficial area of the spar deck, and are not to exceed 7 feet in height. They are not to be placed nearer to either of the ends than  $\frac{1}{5}$  of the entire length of the vessel.

Vessels to which this rule applies, as regards an entire spar deck, will be noted in the register book thus—'Spar decked.'

39. The intermediate dimensions for the scantling of timbers between the floor heads and the gunwale to be regulated in proportion to the distance from the two points. Should the timber and space be increased, the siding of the timbers to be increased in proportion. Whenever ships are built with double floors, thick strakes (Table B) must be worked inside, to extend from the lower part of the short floor-head cheeks to the upper part of the long floor-head cheeks, and be well bolted through and clenched, with one bolt at the head of each long and short arm of floors, and at the heel of each first and second foothook which come upon them, from the foremast extending a distance aft equal to three-fifths of the length of the ship; in such cases, the lumber strakes need not be through bolted.

*Ships of Great Length in proportion to their Breadth or Depth.*—All ships, the length of which (measured from the fore part of the stem to the after part of the stern-post on the range of upper deck) shall exceed 5 times their extreme breadth, or 8 times and under 9 times their depth, shall have diagonal iron plates closely inserted outside the frame. Parties objecting to fit the iron plates on frames as prescribed above, are at liberty to submit, through the resident surveyor, for the committee's consideration and approval, such compensation as will, in their opinion, render the introduction of the iron plates unnecessary. The said plates to extend from the upper side of upper tier of beams to the lower part of cheeks at first foothook heads amidship and to the same perpendicular height forward and aft, measured from the lower part of the keel. When ships are constructed with long and short armed floors, the said plates are to extend to half-way between long floor heads and first foothook heads; the sizes of the plates not to be less than as follows, viz.:—

In ships of 100 tons and under 200 tons	-	-	3	by 7	in.
200	"	400	"	4	"
400	"	700	"	4	"
700	"	1,000	"	5	"
1,000	"	1,500	"	5	"
1,500	"	2,000	"	6	"
2,000 and above	"		"	6	"

and to be fastened with bolts, one at each end alter-

nate timber, not less in diameter than the size given for *through butt bolts* in the society's Table D. The plates to be well protected by propping, likewise the timbers to be coated in the scores which are to receive the said plates.

The number of plates to be in proportion of no less than one pair to every 12 feet of the ship's entire length taken as above, but not to be more than 8 feet asunder measured on a square; the said plates are to be placed diagonally, at an angle of not less than 45 degrees, their lower end pointing to the after end of the keel in the fore body, and to the fore end of the keel in the fore body, four pairs crossing each other amidships.

All such ships to have shelves and waterways to each tier of beams, each equal in contents to the transverse sectional area of the beams of their respective decks at their ends; each of the said shelves and waterways to be bolted through the outside planking at every timber, with bolts of the sizes given in Table D; likewise the shifts of inside and outside planking not to be less than 6 feet, unless there be a strake wrought between them, and then a distance of 5 feet will be allowed.

In ships the length of which shall exceed six times their extreme breadth, or nine times and under ten times their depth, the number of plates must be not less than one pair to every 10 feet of the ship's entire length taken as above, but not to be more than 6 feet asunder measured on a square, and to be placed diagonally as above described. In cases where the length of the ship exceeds ten times the depth, the builders or owners are to submit, through the resident surveyor, for the committee's approval, their plans for giving the vessel the necessary strength longitudinally. And in addition to the requirements for ships of five times their breadth in length, such ships must be fitted with a rider keelson, or a pair of sister keelsons, at the option of the owner, the transverse sectional area of such rider keelson or sister keelsons each to be equal to  $\frac{2}{3}$  of that required in Table B for main keelsons. If a rider keelson be adopted, it is to be fastened with a through bolt (of the size required in Table D for keelson bolts) in every frame; or if the owner prefers it, every intermediate bolt may be short, passing only through the main and rider keelsons. In all cases in which a rider keelson is fitted, it must be fastened as prescribed above, irrespective of the relative dimensions of the ship. If sister keelsons be fitted, they must be fastened with through bolts, in number not less than one in every alternate timber, and of the size required in Table D for *scarphs of keels* &c.

40. The sizes of the deck and hold beams have been regulated so as to be determined by the length of the beams amidships, as shown in Table C. The beams will be required to be of the size of the midship beam, except those at the after end of the ship, which may be reduced in proportion to their length. If beams of spruce or yellow pine are used, the siding at such beams shall be  $\frac{1}{2}$  larger than is prescribed by the above Table, or be increased each way, siding and moulding, equal in area to that amount.

In cases where iron beams are fitted in wood ships, the beams of each deck are to be  $\frac{1}{2}$  of an inch thicker than is required by the rules for ships built of iron, in consideration of the greater space between; and the depth of lower deck or hold beams is to be increased one inch. The spaces between beams of the several decks not to exceed the spaces at present allowed for wood ships, as per rule, sec. 41. Each tier of beams must have stringer plates riveted on their

ess in diameter than the sizes  
butt bolts in the society's Table  
y be well protected by proper  
the timbers to be coated in the  
to receive the said plates.

plates to be in proportion of six  
to every 12 feet of the ship's  
as above, but not to be more  
measured on a square; the  
to be placed diagonally, at an  
15 degrees, their lower end  
end of the keel in the after  
fore end of the keel in the fore  
crossing each other amidships,  
to have shelves and waterways  
beams, each equal in contents to  
tional area of the beams of their  
at their ends; each of the end  
ways to be bolted through the  
at every timber, with bolts of  
Table D; likewise the shifts of  
planking not to be less than  
to be a strake wrought between  
a distance of 5 feet will be

length of which shall exceed six  
me breadth, or nine times their  
their depth, the number of plates  
than one pair to every 10 feet of  
length taken as above, but not  
6 feet asunder measured on a  
to be placed diagonally as above  
uses where the length of the ship  
exceeds the depth, the builders or  
submit, through the resident sur-  
committee's approval, their plans  
vessel the necessary strength.  
And in addition to the require-  
of five times their breadth in  
ships must be fitted with a rider  
of sister keelsons, at the option  
the transverse sectional area of  
on or sister keelsons each to be  
not required in Table B for main  
rider keelson be adopted, it is to be  
through bolt (of the size required  
keelson bolts) in every frame; or  
elers it, every intermediate bolt  
assing only through the main and

In all cases: which a rider  
it must be fastened as prescribed  
of the relative dimensions of  
ter keelsons be fitted, they must

ery alternate timber, and of the  
Table D for scurphs of keels &c.  
of the deck and hold beams have  
so as to be determined by the  
ams amidships, as shown in Table  
will be required to be of the size  
beam, except those at the after  
which may be reduced in pro-  
length. If beams of spruce or  
used, the siding at such beams  
than is prescribed by the above  
increased each way, siding and  
in area to that amount.

re iron beams are fitted in wood  
as of each deck are to be  $\frac{1}{2}$  of  
than is required by the rules  
of iron, in consideration of the  
between; and the depth of lower  
ams is to be increased one inch.  
ween beams of the several decks  
the spaces at present allowed for  
per rule, sec. 41. Each tier of  
ve stringer plates riveted on their

ends, and tie-plates fore and aft, on each side of  
the hatchways, in accordance with the rules for  
iron ships, sec. 15, and to be of the dimensions  
required in Table G, or of strength equal thereto.  
Parties are to submit, through the resident sur-  
veyor, their plans for attaching iron beams to the  
ship's sides, for the committee's approval.

11. The beams of all decks to be in number and  
size as hereinafter specified, and be securely  
fastened to the sides either with lodging-knees of  
iron or wood, or with a shelf-piece and water-  
way, or with a shelf-piece and knees, or with  
some other security equal thereto; and, in addi-  
tion, all ships of 150 tons and above to have  
vertical knees to the deck beams; and those of  
200 tons and above to have vertical knees to the  
hold beams, in number as shown in Table E.  
When the transverse sectional area of the shelf-  
pieces and waterways are each equal in contents  
to the transverse sectional area of the beams of  
their respective decks at their ends as given in  
Table C, and the beams are either doweled or  
doweled to their shelf-pieces and waterways,  
and the shelves and waterways are properly  
shoved, scarphed, and through bolted, having also  
a hanging knee to the lower side of every beam  
end, their lodging-knees may be dispensed with,  
except in the mast-rooms. In ships of 500 tons  
and under, where lodging-knees properly bolted  
are applied, the ordinary plank-clumps may be  
used, but the through bolting of them at alternate  
timbers, as per Table H, cannot be dispensed with.  
The vessels of 13 feet, and under 15 feet hold,  
the spacing of the hold beams not to exceed 8 feet  
apart, and the deck beams 4 feet; in vessels of 15  
feet and under 18 feet hold, the spacing not to  
exceed 8 feet and 4 feet apart alternately, or in  
that proportion; the deck beams to be placed one  
over every hold beam, and one in all double  
spaces; in vessels of 18 feet hold and above, the  
spacing of the beams not to exceed 4 feet 6  
inches; the deck beams to be one over every hold  
beam. The depth in all such cases to be deter-  
mined by taking the measure from the top of the  
limber-strake (the thickness of which, for mea-  
surement, to be taken as prescribed in Table B)  
to the top of the upper deck beams. Ships  
having a depth of hold, measured from the  
limber strake to the under side of the lower deck  
beam, above 13 feet but not exceeding 15 feet,  
must be secured with iron riders of the sizes, and  
be fastened, as shown in Table F, and in number  
not less than one on every fourth floor, on each  
side, from fore side of fore-mast to aft side of  
mizen-mast, to extend from the lower deck beams  
downwards, so as to receive not less than two  
bolts in a substantial part of the floors; or by  
orlop beams, sufficient in number and properly  
secured. All ships having two decks (viz. upper  
and lower deck), and exceeding 24 feet in depth  
from the top of the limber-strake to the top of  
the upper deck beams, or having three decks (viz.  
upper, middle, and lower deck), and exceeding 24  
feet in depth from the under side of the middle  
deck, to have orlop beams, the number to be in no  
case less than one-half the number of lower deck  
beams in the space between the foremast and the  
mizen-mast, except in the case of flush-deck  
ships, when a depth of 25 feet will be allowed,  
provided in either case the lower hold does not  
exceed 15 feet, measured as above from the limber-  
strakes to the under side of the lower deck beam.  
Should a house be constructed on a flush-deck  
ship for lodging crew or for store-room, the same  
not to extend aft beyond 10 feet from the mizen-  
mast. The application of this rule to British  
North American built ships and fir ships will not

exempt them from the full operation of the rule,  
sec. 62. All dimensions, fastenings, and bolts of  
the middle deck in vessels having three decks  
(viz. upper, middle, and lower deck) to be the  
same as those described in the Tables for the  
upper deck of ships having only two decks; and  
a reduction of  $\frac{1}{8}$  from the dimensions, fast-  
enings, and bolts prescribed in the Tables, for  
the upper deck of vessels having only two (viz.  
upper and lower deck), will be allowed in the  
third or upper deck, by some called a spar deck.  
The middle deck to be a perfect deck laid and  
caulked. The united lengths of poop and fore-  
castle not to exceed  $\frac{1}{2}$  of the entire length of  
the upper deck (see, 38). All timbers of the  
frame including poop and fore-castle to extend  
to the extreme height. Every ship exceed-  
ing 150 tons to have at least one crutch for the  
security of the keels of the after-timber of the  
frame; one pair of pointers in addition to a knee  
at each end of the wing transom to connect the  
stern frame with the after-body of the ship; and  
a transom over the keels of the stern timbers  
properly kneced. The heels of the cant timbers  
forward and aft to be stepped into the deadwood  
and bolted through.

12. Shifts of timber in ships of 200 tons and  
upwards, to be not less than  $\frac{1}{2}$  of the main breadth;  
and in ships under 200 tons, to be not less than  
 $\frac{1}{3}$  of the main breadth.

Plank.—13. The outside planking to be of good  
quality, of the description prescribed in Table A,  
to be clear of sap and free from all defects.

14. The inside planking to be of the description  
shown in Table A, and free from all foxy, druxy,  
or decayed knots. With regard to the ceiling  
plank, and the efficiency of its fastening, it will  
be required that the planking shall be properly  
shifted and fastened, so that there shall be at least  
either treennils or through bolts, or short bolts,  
in each plank of the ceiling in every timber.

15. No butts to be nearer than 5 feet to each  
other (see, 39), unless there be a strake wrought  
between them, and then a distance of 4 feet will  
be allowed; and no butts to be on the same  
timber, unless there be three strakes between,  
as more particularly shown in the diagram an-  
nexed (see Plate), but vessels under 20 tons will  
be exempted from the full operation of this rule;  
and in ships of larger tonnage a literal compliance  
with it will be dispensed with in cases wherein it  
may be satisfactorily proved that the departure  
from the rule is only partial, being confined to the  
ends of the ship, or the planking of the topside,  
and does not injuriously affect the ship's general  
strength; but such relaxation will not be sanc-  
tioned unless an accurate description of the shift-  
ing of the plank be transmitted by the surveyors,  
to enable the committee to form a proper judgment  
of the case.

The thickness of the plank, according to the  
tonnage of the ship, is not in any instance to be  
less than is prescribed in Table H.

The breadth of the wales in every case is to be  
regulated as under, viz. —

When the extreme length of the ship, measured  
from the fore-part of the stem to the after-part of  
the stern-post on the range of upper deck, is six  
times her depth of hold (and under), the wales  
are to be in breadth 3 inches to every foot of the  
depth of hold.

When the extreme length of the ship is eight  
times her depth of hold, the wales are to be in  
breadth  $3\frac{1}{2}$  inches to every foot of the depth of  
hold.

When the extreme length of the ship is ten  
times her depth of hold (and above), the wales are

to be in breadth 1 inch to every foot of the depth of hold.

And other intermediate dimensions in these proportions.

**Fastenings.**—46. Treenails to be of good quality, and of a description equal to the best material through which they pass; if, however, in ships built in the British North American colonies, or of treenails be used of materials not inferior to those comprised in line No. 2 in Table A, including locust and all Australian and tropical hard woods of durable quality, and beech in the bottom not higher than floor heads, a notation of '*Hard Wood Treenails*' will be inserted against the ship's name in the register book. The treenails are to be straight and circular, being either engine turned, compressed, or planed, not grain-cut or knotty, and must be free from sap and tightly driven, and in all cases the treenails are to be efficiently caulked or wedged outside. In all cases in which planks above 11 inches in width shall be used, they must be double fastened; and those above 8 inches in width must be treenailed double and single, except bolts intervene; and if less than that width, then to be treenailed single. Not less than 4 of the treenails are to be driven through the inside planking, clamps &c. Every butt in each outside plank to be fastened with two bolts, one of which may be in the adjoining timber, and one to be through and clenched. Where thick garboard strakes are used, they must be bolted horizontally through the keel and each other. The bilges to be secured with bolts so placed that from the foremast, extending a distance aft equal to  $\frac{1}{2}$  of the length of the keel, there shall, in ships under 300 tons, be at least one bolt through and clenched in each first foot-hook; and that in ships of 300 tons and upwards there shall be at least 2 bolts through and clenched for each set of timbers in one or other of the thick bilge strakes. All the bolts of the knees, breast-hooks, crutches, riders, transoms, pointers, and keelsons, shelf pieces, waterways, heels of timber against fore and after deadwood, and of all other material fastenings, are to be driven through and clenched on rings of the same metal as the bolts. The up and down bolts in the knees to beams are not required to be through the deck, but whether clenched upon the beams, or upon the deck, they must be clenched on rings of the same metal as the bolts. The 2 bolts, the nearest to the crowns of the pintles and braces of the rudder, are also to be through and clenched, those through the braces to be in the main piece of stern post. The timber-strakes to be bolted down to the floors, and one bolt in every floor, on each side, to be through and clenched. Watercourses are to be properly formed at underside of all floors and foothooks at the timbers on each side of middle line, so as to allow water to reach the pumps freely. When the heels of the first foothooks meet at the middle line on the keel under the keelson (either with full moulding or with butted cheeks) the through bolting of the timber-strakes may be dispensed with.

An additional year will be allowed to all ships of the A character, if fastened externally with treenails, and with copper or yellow metal bolts and dunnage, to the exclusion of iron, from the lower part of keel up to the height of  $\frac{1}{2}$  of the depth of hold, below the upper side of the upper deck, in one, or two, or three-decked ships (not being spar-decked ships), and below upper side of the main or tonnage-deck in spar-decked ships, above which all fastenings of every description outside, and the whole of the inside fastenings must be properly galvanised, except the frame

bolts, and the bolts in iron straps on timber otherwise admitted of iron.

And two years will be added to the A character, if, in lieu of treenails above the floor heads, the whole of the planking is fastened with bolts of copper, or yellow metal, to the above named height, and above such height with properly galvanised iron bolts. All inside fastenings hitherto admitted of iron, including all frame bolts, and bolts in iron straps on timbers, or between the thicknesses of outside planking, must also be properly galvanised.

In all cases of ships claiming extra time on the A character, the chain and preventer bolts are to be of properly galvanised iron, but the bolts in heels of timber abutting against deadwood, forward and aft, must be of copper or yellow metal.

In all such cases of substitution, the bolts must be in number the same as is already prescribed above for treenails; the proportion of through bolts must be at least two-thirds (wherever metal fastenings are used in lieu of treenails, this proportion must be observed); and all the through bolts must be of malleable metal, and clenched on rings (of the same metal) inside. The sizes of the copper or mixed metal bolts must be as under, viz. :—

Tons	Through bolts	Through bolts	Through bolts
Up to 150 tons and under 200 tons	5 in.	4 in.	3 in.
200 ..	5 1/2 in.	4 1/2 in.	3 1/2 in.
300 ..	6 in.	5 in.	4 in.
400 ..	6 1/2 in.	5 1/2 in.	4 1/2 in.
500 ..	7 in.	6 in.	5 in.
600 ..	7 1/2 in.	6 1/2 in.	5 1/2 in.
700 ..	8 in.	7 in.	6 in.
800 ..	8 1/2 in.	7 1/2 in.	6 1/2 in.
900 and above	9 in.	8 in.	7 in.

and the lengths of the short bolts not less than as follows, viz. :—

When used in plank of 2 1/2 in. to 7 in. long	Through bolts	Through bolts
3 in.	1 1/2 in.	1 in.
4 in.	2 in.	1 1/2 in.
5 in.	2 1/2 in.	2 in.
6 in.	3 in.	2 1/2 in.
7 in.	3 1/2 in.	3 in.

and so on in proportion for other thicknesses. The sizes of the bolts required in the several parts must not be less than is shown in Table B.

47. In every case where the butt and bilge bolts are not through and clenched, one year will be deducted from the period which would otherwise be assigned in the classification of the vessel.

48. The scantlings and dimensions for all sized vessels to be proportionately regulated, agreeably to the society's Table B.

49. Ships surveyed while building, in which all the materials required for a 12 years' ship shall have been used, and most of the other requisites for that grade fulfilled, but which, from partial deficiencies, may not appear to be in all respects entitled to the full period, although superior to the description of a 10 years' ship, may be marked in the book thus, 11 A; thereby denoting that they are to remain on that grade 11 years, provided they be kept in a state of efficient repair.

50. Ships surveyed while building, in which every alternate set of timbers are frame-bolted together throughout their entire lengths, and the scantling and shifts of the timbers, the thickness and shifts of the planks, and size of fastenings may be the same as are required by the rules, and the description of materials prescribed in Table A shall also have been used, but in which the frame is not so well squared as is required for 12 years' ships, but which shall be in other respects equal thereto, shall be marked 10 A; thereby denoting that they are to remain on that grade for 10 years, provided they be kept in a state of efficient repair.

51. In all other cases, ships surveyed while

is in iron straps on timber of iron.

It be added to the A character ships above the floor heads, the ring is fastened with bolts of metal, to the above named height with properly galvanized iron.

All inside fastenings including all frame bolts, and bolts on timbers, or between inside planking, must also be galvanized.

Ships claiming extra time on their main and preventer bolts are to be galvanized iron, but the bolts are to be put against deadwood, for the use of copper or yellow metal. In case of substitution, the bolts must be the same as already prescribed; the proportion of through bolts at least two thirds (whenever used in lieu of treenails, this observed); and all the through bolts of metal, and clenched on metal bolts must be as under,

Under 200 tons	5 in.
250 "	5 1/2 in.
300 "	6 in.
400 "	6 1/2 in.
500 "	7 in.
600 "	7 1/2 in.
700 "	8 in.
800 "	8 1/2 in.
900 "	9 in.
1000 "	9 1/2 in.

If the short bolts not less than 25 in.

In planks of 2 1/2 in. to 7 in. long

portion for 1 other thickness of the bolts required in the st not be less than is shown in

case where the butt and bilge bolts and clenched, one year will be period which would otherwise classification of the vessel. Dimensions and dimensions for all steel proportionately regulated, agreeably Table B.

except while building, in which all repaired for a 12 years' ship shall and most of the other requisites fulfilled, but which, from partial not appear to be in all respects 11 periods, although superior to the 10 years' ship, may be marked in A; thereby denoting that they are that grade 11 years, provided a state of efficient repair.

Surveyed while building, in which set of timbers are frame-bolted out their entire lengths, and the lifts of the timbers, the thickness of planks, and size of fastenings as are required by the rules, and of materials prescribed in Table A can be used, but in which the frame repaired as is required for 12 years' shall be in other respects equal marked 10 A; thereby denoting to remain on that grade for 10 they be kept in a state of efficient

er cases, ships surveyed while

building, and constructed of the materials of good quality, shown in the society's Table A, will be allowed the several terms of years respectively appointed, provided they be kept in a state of efficient repair. All ships, not built under survey, whether in the United Kingdom or abroad, for which a character may be claimed, must be placed in dry dock or laid on blocks in order that their bottoms may be seen and properly examined; they will also be required to have their timbers completely exposed for examination, by a plank or listing, as the surveyor (who must be an exclusive officer of the society) may direct, being taken out, either inside or outside, all fore and aft, on both sides, equal to one octave strike, at the first footlock heads, and another between decks, and a few treenails must likewise be driven out, so that the surveyors, from actual inspection, may be satisfied whether or not they are of the quality and make prescribed by the rules; and the same being thus ascertained, shall be reported to the committee, and a character assigned. If the ship be 100 tons and upwards, the survey must be made by two surveyors, and their report signed accordingly.

32. Ships built under a substantial and efficient plan, kept in good repair, which shall project at each end beyond the length, and on each side beyond the breadth, a quantity equal to half the breadth of the vessel, shall have 1 year added to the period prescribed, provided they shall have been surveyed whilst building, and shall have occupied a period of not less than 12 months in their construction, and in which no plank, except as follows, shall have been worked until the expiration of at least 3 months after the frame was completed, viz.: not more than 3 strikes of bilge planks, and 2 strikes of outside plank in the way of each tier of beams, also the clamps inside, so that the beams may be put in their places. In ships not exceeding 400 tons, a relaxation of the period herein required may be allowed (but not exceeding 4 months) provided application be made to the committee, who will appoint a special surveyor, and who will require a report of the date when the timber was felled, its condition after being sided and moulded, and stacked for seasoning, and also when in frame.

33. Ships built in the United Kingdom; or in Quebec; or St. John, New Brunswick; or Miramichi, and northern parts of New Brunswick, or in Prince Edward Island, or built in Nova Scotia after 1861; and not surveyed while building by the surveyors to this society, and all ships, the owners or builders of which may have refused or declined to permit them to be surveyed at the several periods prescribed by the rules, will have 1 year deducted from the period which would otherwise have been assigned, in consequence of their not having been submitted to survey during their construction. In no case, however, will a higher grade than 10 A be assigned to ships built in the United Kingdom which shall not have been surveyed while building.

Continuation of Ships A.—51. If, on the termination of the period of original designation, or if at any subsequent period, not exceeding 1/3 of the number of years assigned originally, or on restoration, an owner should wish to have his ship remain, or be replaced on the letter A (sec. 50), he is to send a written notice thereof to the secretary, and the committee shall then direct a special survey, as follows, to be held by not less than two competent persons to be appointed by the committee, one of them to be a surveyor, the exclusive officer of the society:—

Survey.—No. 1.—The ship to be either placed

in dry dock or laid on blocks, so that the keel may be examined, and be scraped or dubbed bright from the light water-mark upwards, including the planksheers and waterways, so as to expose the surface of the plank to view. If the ship has been sheathed with wood over felt, fastened with copper or mixed metal nails, within a period of 5 years, and the plank from the light water-mark upwards shall, when so sheathed, have been brightened, and the condition of the bolts, planking, treenails, and caulking ascertained, and favorably reported upon by the surveyors; and provided that the sheeting which covers the binding bolts and raft ports, and a strike of sheathing all fore and aft on each side under the wales be removed, and listings of sheathing cut out at head ends; and the planking, fastenings, and caulking so exposed shall prove to be in good condition; then, on application to the committee, the stripping from the light water-mark upwards may be dispensed with; but whenever the sheathing is removed, the outside planking is to be scraped or dubbed bright, and examined as prescribed by the above rule.

If the ship has been sheathed with metal within a period of 2 years, and it shall appear to the surveyors that stripping from the light water-mark upwards may be dispensed with, the ensowill receive due consideration on application to the committee. A listing, 4 inches wide, to be cut out of ceiling at each end of the hold on both sides, the entire length of the ship, between the keelson and air course under hold beam clamp. Bolts, if of iron, in number not less in any case than 6 on each side, in each range of deck fastenings, to be driven out in ships of 500 tons and under, and increased in number in proportion to the size of the ship, and one treenail to be driven out in every alternate frame or fourth timber between the upper edge of the wales and plank-sheers, and one in every alternate frame or fourth timber between the upper edge of the wales and the light water-mark, and at such other parts at the bottom as the surveyors may direct, so as to enable a judgment to be formed as to the general state of the treenails, timbers, and of the planking in the treenail holes. The hold to be cleared, and proper stages to be made both inside and outside. All air courses and the timbers to be cleared for the examination of the timbers. The windlass to be unhung, and the wood linings stripped. The attention of the surveyors shall then be particularly directed to the state of the upper or main deck and coverings, the upper and lower deck bolts, whether of iron or copper, and the outside planks through which they pass, the planksheers, waterways, and beams, so far as they can be examined; the hawse timbers, knight-heads, breasthooks, and transoms; the floors and keelsons; the keel, rudder, and windlass; the planking outside and inside, and the treenails; and the frame and inner surface of the outside planking, where they can be seen; and the sheer and general form of the ship; the condition of the oakum and caulking also to be ascertained, and the ship to be efficiently repaired with suitable materials, as hereinafter stated. Anchors, cables, and general equipments to be attended to as prescribed in secs. 71 to 76.

In British North American built ships and fir ships where the middle line bolts are of iron, their condition is to be ascertained; and if this be not practicable, additional bolts of sufficient size must be driven through the keelson, floors, and keel, in each alternate frame, also through the stem, apron, sternpost, and deadwood.

The surveyors shall transmit to the committee a detailed report, accompanied by such observa-

tions as may occur to them, from inspection of the ship, or from information of the repairs she may have received. If, from the report of such special survey, the ship shall appear to be in a sound and efficient state, the committee shall continue such ship on the letter A for such further period as they may think fit, not exceeding, however,  $\frac{1}{2}$  of the number of years which had been originally assigned, subject to the usual annual survey. Ships classed A for 4 years, will be allowed a continuation for 2 years, provided that, in addition to the above requisitions, the owners shall have removed a strake in the topsides, fore and aft, on both sides; this, however, will not exempt ships built in the British North American colonies from the operation of the rule. (See, 63.)

Ships so continued shall be distinguished in the register book by the number of years for which the character is extended, being inserted separately under the number assigned on the original character, thereby denoting that the ship has been found on survey in such good and efficient order as to entitle her to be continued for years. The period assigned for continuation will, upon all occasions, commence from the time the ship may have gone off the letter A, without regard to the date when the survey for this purpose may have been held. (For periodical surveys, see sec. 24.)

*Survey.—No. 2.*—But should a shipowner at the period for continuation as above described be willing to subject his ship to the following survey, the committee will continue such ship for a longer time, viz. not exceeding  $\frac{3}{4}$  beyond the term originally assigned, provided application be first made to the committee for such survey.

And for the purpose of holding such survey, the ship must be placed in dry dock or laid on blocks upon ways, so that the keel may be examined; all sheathing to be entirely stripped off the bottom and elsewhere; all the outside planking from light water-mark upwards, including the planksheers and waterways, to be scraped or dubbed bright; all the air courses and the timbers to be cleared; the timbers of the frame to be further exposed to view by the removal of planking equal to one strake fore and aft, on each side above the wales; a short plank in each buttock; a strake of planking to be removed, or listing of sufficient breadth, not less than 4 inches, all fore and aft, on each side, at the discretion of the surveyor, in the ceiling above the floor heads (or if the shipowner should prefer it, a strake of planking outside at the same height), and a reasonable number of treenails, in addition to those above named, so as to ascertain the state of the lower timbers of the frame; and in order to ascertain the condition of the beam ends, either a strake of deck next the waterways on each side to be taken out, or an examination to be made by boring each end, at the option of the shipowner; iron bolts and treenails to be driven out at the various parts as prescribed in Survey No. 1; proper stages to be made both inside and outside; the windlass to be unhung, and the wood linings stripped; and when in the state above described, the special survey to be held, as directed in Survey No. 1, upon all the parts exposed to view; the condition of the oakum and caulking to be ascertained; the ship to be efficiently repaired with suitable materials, as hereinafter stated.

The surveyors on these points shall transmit to the committee a detailed report, accompanied by such observations as may occur to them, from inspection of the ship, or from information of the repairs she may have received. If, from the report of such special survey, the ship shall appear to be in a sound and thoroughly efficient state, the

committee shall continue such ship on the letter A for such further period as they think fit, not exceeding, however, two-thirds of the number of years which had been originally assigned, so continued shall be distinguished in the register book by the number of years by which the character is extended, being inserted separately under the number assigned on the original character, thereby denoting that the ship has been found on survey in such good and efficient order as to entitle her to be continued for years. The period assigned for continuation will, upon all occasions, commence from the time the ship may have gone off the letter A, without regard to the date when the survey for this purpose may have been held. (For periodical surveys, see sec. 24.)

In cases of the repair of ships for continuation under the rules, sec. 51, materials of inferior description (but not below those prescribed for the six years' grade) may be permitted to be used in those parts which must of necessity, under the operation of the rules, sec. 56, be entirely removed on a repair for restoration; subject, however, to the shipowner in every instance making a special application to the committee for the previous sanction.

*Survey.—No. 2.—For British North American built Ships and Fir Ships.*—To entitle such ships to continuation for a period of  $\frac{3}{4}$  of the term originally assigned to them, they must, in addition to the examination prescribed above, be double diagonally from the keel to above the first strake of lower deck spirketting. The doubling to be of the thickness, and be fastened as prescribed in sec. 68; or, if the owner objects to double his ship, she may be submitted to the following survey, viz. :—

The ship must be placed in dry dock or laid on blocks upon ways, so that the keel may be examined and proper stages made both inside and outside; all sheathing to be entirely stripped off the bottom and elsewhere; all the outside planking from the lower part of chocks at floor heads upwards, including the planksheers and waterways, to be scraped or dubbed bright; the timbers of the frame to be exposed to view by the removal of the planksheer or of planking equal to one strake fore and aft on each side, above the wales (either inside or outside, at the discretion of the surveyor) also a strake outside all fore and aft between the wales and light water-mark, a short plank in each buttock, and planking or listing of sufficient breadth on each side at the discretion of the surveyor, in the ceiling above the floor heads all fore and aft (or if the shipowner should prefer it, planking outside equal to one strake at the same height), and in order to ascertain the condition of the beam ends, a strake of deck next the waterways on each side is to be taken out; and a sufficient number of treenails to be driven out from various parts of the bottom, so as to ascertain their condition, and that of the planks and timbers through which they pass; the windlass to be unhung, and the wood linings stripped, and when in the state above described, the special survey to be held upon all the parts exposed to view; the condition of the oakum and caulking to be ascertained; the treenails from the upper part of chocks and second foothook heads to the lower part of chock at floor heads to be renewed with through treenails of hardwood for at least half the length of the ship amidships, unless they are already of hardwood and prove to be in good condition; and where the middle line bolts are of iron, their condition is to be ascertained, and if this be not practicable, additional bolts of sufficient size must

continue such ship on the letter A period as they think fit, not exceeding two-thirds of the number of years originally assigned. Ships distinguished in the register by the number of years by which the character, being inserted separately under the original character, and that the ship has been found in good and efficient order as to be continued for years. The continuation will, upon all occasions from the time the ship may be letter A, without regard to the survey for this purpose may have for periodical surveys, see sec.

repair of ships for continuation of the rules, sec. 51, materials of iron (but not below those prescribed grade) may be permitted to be used in places which must of necessity, under the rules, sec. 56, be entirely repaired for restoration; subject, however, to the sanction of the committee for their approval.

**2.—For British North American and Fir Ships.**—To entitle such ships for a period of 3 that are assigned to them, they must, in addition to the provisions prescribed above, be double-planked in the keel to above the first strake of spirketting. The doubling to be done, and be fastened as prescribed in the rules, if the owner objects to double his ship, he must submit to the following survey:

1. The keel must be placed in dry dock or laid on ways, so that the keel may be exposed to view; the keel must be scraped or dubbed bright; the timbers under the keel must be exposed to view by the removal of the planksheer and waterways; the planksheer and waterways on each side, above the wales (either side, at the discretion of the surveyor), to be stripped off; the outside planking on each side, above the floor heads all round, to be stripped off; the shipowner should prefer to have the keel and outside planking equal to one strake at the same time, in order to ascertain the condition of the keel, a strake of deck next the wales on each side is to be taken out; and a number of treenails to be driven out from the keel, so as to ascertain the condition of the bottom, so as to ascertain the condition of the planks and timbers which they pass; the windlass to be unhung, the wood linings stripped, and when as above described, the special survey to be made, all the parts exposed to view; the caulking and caulking to be ascertained from the upper part of cheeks and hook heads to the lower part of cheeks and to be renewed with through freeboards for at least half the length of the keel, unless they are already in good and prove to be in good condition; and the middle line bolts are of iron, their condition to be ascertained, and if this be not proved, bolts of sufficient size must be

driven through the keelson, floors, and keel, in each alternate frame, also through the stem, apron, stern post, and deadwood; and if the ship in other respects, she will be allowed continuation for a period not exceeding two-thirds of the term of years originally assigned, subject to annual survey. (For periodical surveys, see sec. 31.)

**Restoration of Ships to the Character A.**—*First Rule.*—55. If, at any time before the expiration of 3 of the number of years beyond the period originally assigned, an owner be desirous to have his ship restored to the A character, such restoration (on his consenting to the special survey hereinafter described, to be held by two surveyors, and performing the repairs found requisite) will be granted for a period not exceeding two-thirds of the time originally assigned, the same to be calculated from the date of such repairs.

**Requisites for Restoration.**—56. All the bolts in the range of each deck to be driven out, and the planks taken out; the upper deck waterways, and planksheers and spirketting, and the strake next the waterways on the lower deck in the midships, to be taken out; the sheathing to be entirely stripped off the bottom; all the outside planking from the light water-mark upward, to be scraped bright; a strake in the upper course of the bottom, between the wales and the light water-mark fore and aft, and a plank in the ceiling at the floor heads on each side, to be taken out, the timbers to be clear, and the hooks forward to be exposed; the windlass to be unhung, and the wood linings stripped; and in that state the ship to be submitted to a special survey and examination, at which the attention of the surveyors appointed by this society is to be particularly directed to the state of the decks, the remaining plank of the topsides, the wales, upper courses, and treenails, and other fastenings; also to the state of the frame, hawse timbers, and knightheads, keelson, floors, loothooks, ceiling, and breasthooks, the rudder in all its parts and hangings. In ships built entirely of teak, and iron fastened, if a sufficient number of bolts in the range of each deck be driven out, and the planksheer, also the strake of deck next the waterways or next the binding strake, on the main and lower decks on both sides, be removed, also the throat bolts of all knees be driven out, and the other requisitions relating to the bottom, ceiling &c. be carried into effect, the further removal of fastenings, bolts, and planks may, under the sanction of the committee, be dispensed with, provided their condition be carefully ascertained and favourably reported upon by the surveyors.

In the case of ships fastened with copper or yellow metal, and galvanised iron, in conformity with the rule, sec. 46, where there is no poop or fore-castle, if the whole of the planksheer and spirketting of upper deck and outside planking equal to one strake all fore and aft be removed in way of fastening bolts to each tier of beams, below the upper deck beams; and where there is a poop and fore-castle, then if the whole of the planksheer and spirketting of poop, fore-castle, and waist, and a strake of outside planking (in way of fastening bolts to upper deck beams), the entire lengths of the poop and fore-castle, and outside planking equal to one strake all fore and aft be removed in way of fastening bolts to each tier of beams below the upper deck beams; and in all cases a strake of deck next the waterway of each deck, on both sides, be removed, also the throat bolts of all knees, together with the other requisitions relating to the bottom, ceiling &c., the further removal of fastenings, bolts, and planks may, under the

sanction of the committee, be dispensed with, provided their condition be carefully ascertained and favourably reported upon by the surveyors.

The above relaxations, so far as they relate to the removal of plank and fastenings in the range of the lower deck, will be extended to all ships in which all the lower deck fastenings are of copper or yellow metal.

If, after the above examination, the owner should consent to take out all planks, timbers, beams, knees, waterways, fastenings, and other parts that may be found defective, or objected to, and replace them with materials of the same species or of equal quality with those of which the ship was originally constructed, such ships to be entitled to restoration for a period proportionate to their real condition and the extent of the repairs performed; or if timber of an inferior description, or second-hand English or African oak or teak be used, then for a period not exceeding that for which such materials would have entitled a new ship to stand A according to the tables, subject in either case to the ship being at all times thereafter kept in a state of efficient repair. (For periodical surveys, see sec. 34.)

**Second Rule.**—57. If, at any age of a vessel, an owner be desirous to have his ship restored, such restoration (on his consenting to the special survey hereinafter described, to be held by two surveyors, and performing the repairs thereby found requisite) will be granted for so long a period as may be deemed expedient by the committee, not exceeding, in any case, the term of eight years.

**Requisites for Restoration.**—58. The whole of the outside plank of the vessel to be taken off as low as the second foothook heads. The remainder of the planking, either outside or inside, together with all the decks, to be removed, so as to expose the timbers of the frame entirely to view, the windlass to be unhung, and the wood linings stripped, and in that state the ship to be submitted to a special survey and examination by the surveyors appointed by this society; and if, after such examination, all timbers, beams, knees, keelsons, transoms, breasthooks, remaining plank, inside or outside, or other parts found to be defective, be replaced with materials of the same species, or of equal quality with those of which the ship was originally constructed, and all the treenails driven out and renewed, such ship may be restored. But if timber of an inferior description, or second-hand English or African oak or teak be used, then for a period not exceeding that for which such materials would have entitled a new ship to stand A according to the Tables, subject in either case, to the ship being at all times thereafter kept in a state of efficient repair. (For periodical surveys, see sec. 34.)

**Restoration of British North American built Ships and Fir Ships to the Character A.**—*First Rule.*—55.\* At any time before the expiration of 3 of the number of years beyond the period originally assigned, a ship may be restored to the A character, on being submitted to the special survey hereinafter described, to be held by two surveyors, and performing the repairs found requisite.

**Requisites for Restoration.**—56.\* All the bolts in the range of each deck to be driven out, and the planks taken out. The upper deck waterways, and planksheers and spirketting, and the strake next the waterways on the lower deck in the midships to be taken out. In the case of ships fastened with copper or yellow metal and galvanised iron, in conformity with the rules, sec. 46, where there is no poop or fore-castle, if the whole of the

plank-sheer and spirketting of upper deck and outside planking equal to one strake all fore and aft be removed in way of fastening bolts to each tier of beams, below the upper deck beams; and where there is a poop and fore-castle, then if the whole of the plank-sheers and spirketting of poop, fore-castle, and waist, and a strake of outside planking (in way of fastening bolts to upper deck beams), the entire lengths of the poop and fore-castle, and outside planking equal to one strake all fore and aft be removed in way of fastening bolts to each tier of beams below the upper deck beams; and in all cases a strake of deck next the waterway of each deck on both sides be removed, also the throat bolts of all knees, together with the other requisitions relating to the bottom, ceiling &c., the further removal of fastenings, bolts, and planks may, under the sanction of the committee, be dispensed with, provided their condition be carefully ascertained and favourably reported upon by the surveyors.

The above relaxations, so far as they relate to the removal of plank and fastenings in the range of the lower deck, will be extended to all ships in which all the lower deck fastenings are of copper or yellow metal. All sheathing to be entirely stripped off. All the outside planking, from the light water-mark upwards, to be entirely dubbed bright. A strake in the bottom, between the wales and the light water-mark fore and aft, to be taken out. Planking, either inside or outside, at the discretion of the surveyors, in quantity equal to one entire strake fore and aft, on both sides to be taken out in midships immediately above the turn of the bilge, and forward and aft at such height as may, in their judgment, best expose the timbers of the frame to view. The timbers to be clear, and the hooks, transoms, and crutches to be exposed. The windlass to be unlung, and the wood linings stripped; and in that state the ship to be submitted to a special survey and examination, at which the attention of the surveyors is to be particularly directed to the state of the decks, the remaining plank of the topsides, the wales, upper courses, and treenails, and other fastenings; also to the state of the frame, lawse timbers, knightheads, apron, breasthooks, transoms, and crutches, keelsons, floors, foothooks, and ceiling, the rudder in all its parts and hangings, and also the general sheer and form of the ship. Where the middle line bolts are of iron, their condition is to be ascertained, and if this be not practicable, additional bolts of proper size must be driven through the keel-son, floors, and keel, in each alternate frame, also through the stem, apron, and sternpost.

If, after the above examination, the owner should take out all materials and fastenings that may be found defective, or objected to, and replace them with materials allowed by the rules for the period for which the vessel is to be restored, such ships to be entitled to restoration for a period not exceeding  $\frac{2}{3}$  of that originally assigned to them.

In addition to the above requirements, ships of 500 tons and upwards must be doubled diagonally from the keel to above the first strake of lower deck spirketting. The doubling to be of the thickness and be fastened as prescribed in sec. 68. If these regulations be complied with within the first period to which the vessels may be entitled to be continued, under sec. 54, they will be allowed restoration for a period equal to the number of years originally assigned. The restoration will, in all such cases, date from the termination of the original period; but at the expiration thereof they may be entitled to a continuation of one-third of the period of original

designation, under sec. 54, Survey No. 1, in the case of doubled ships, or ships of peculiar construction, special application may be made to the committee. (For periodical surveys, see sec. 34.)

*Second Rule.*—57.\* If, at any age of a vessel, an owner be desirous to have her restored, and restoration (on his consenting to the special survey hereinafter described, to be held by two surveyors, and performing the repairs thereby found requisite) will be granted for a period not exceeding that originally assigned to her.

*Requisites for Restoration.*—58.\* The whole of the outside plank of the vessel to be taken off as low as the second foothook heads. The remainder of the planking, either outside or inside, and all the treenails, together with the decks and waterways, to be removed, so as to expose the frame and beams entirely to view. The windlass to be unlung, and the wood lining stripped; and in that state the ship to be submitted to a special survey and examination, and all materials and fastenings found to be defective must be replaced with materials of the same species, or of equal quality with those of which the ship was originally constructed. If timber of an inferior description be used, a period not exceeding that which such materials would have entitled a new ship to stand according to the tables will be granted. (For periodical surveys, see sec. 34.)

59. Ships which have been restored shall be entitled to continuation, subject to the same conditions of survey and examination as are prescribed for ships proposed to be continued at the expiration of the period first assigned to them (see 54); but in like manner, the term of such extended continuance shall be limited to a period not exceeding  $\frac{1}{3}$  or  $\frac{2}{3}$  of the number of years for which the ships may respectively have been restored, without any reference whatever to the period originally assigned to them.

At the termination of the several periods assigned to ships for remaining on the character A, or A in red, they will have the word 'expired' inserted against them; and if not surveyed prior to the reprinting of the register book, they will appear without any character. (The terms of years assigned to ships on the character A, launched previously to July 1, 1859, also of ships launched during the first 6 months of the years 1860, 1861, 1862, and 1863, will expire on December 31 of the last year of the periods assigned to them respectively. The terms assigned to ships launched during the last 6 months of the years 1859, 1860, 1861, and 1862, will expire on June 30, next after the last year of the periods assigned to them respectively. In the case of ships launched on and after July 1, 1863, the period originally assigned to them on the A 1 character will in every case date from the month in which the vessel may be launched, and will expire at the end of the corresponding month in the year at which the period assigned terminates.) But if, during the last twelve months of the period assigned to them, the owners of a ship shall, in consequence of her being about to proceed on a distant foreign voyage, apply to have her surveyed for continuation on the letter A, or for the character A in red, a special survey shall be held conformably to the rules 54, 54 or 60, as the case may be; and if, from the report of such special survey, the ship shall appear to be in all respects in a sound and efficient state, such as is required by those rules, the committee shall, from the period at which the ship's character would terminate, continue her on the letter A, or assign to her the character A in red in accordance with the rules referred to.

sec. 51, Survey No. 1. In  
 led ships, or ships of peculiar  
 application may be made to  
 (For periodical surveys, see

57.\* If, at any age of a vessel, an  
 is to have her restored, such  
 his consenting to the special  
 or described, to be held by two  
 performing the repairs thereby  
 will be granted for a period not  
 originally assigned to her.

**Restoration.**—58.\* The whole of  
 of the vessel to be taken off as  
 foothook heads. The remainder  
 either outside or inside, and all  
 with the decks and waterways,  
 so as to expose the frame  
 to view. The windlass to be  
 wood lining stripped; and the  
 ship to be submitted to a special  
 mination, and all materials and  
 to be defective must be replaced  
 of the same species, or of equal  
 of which the ship was originally  
 timber of an inferior description  
 not exceeding that which such  
 have entitled a new ship to stand  
 the tables will be granted. (For  
 s, see sec. 34.)

which have been restored shall be  
 mination, subject to the same con-  
 and examination as are pre-  
 scribed to be continued at the ex-  
 period first assigned to them (see,  
 in manner, the term of such extended  
 all be limited to a period not  
 of the number of years for  
 s may respectively have been re-  
 any reference whatever to the  
 y assigned to them.

mination of the several periods assigned  
 maintaining on the character A, or A in  
 have the word "expired" inserted  
 and if not surveyed prior to the  
 register book, they will appear  
 character. (The terms of years  
 ships on the character A, launched  
 July 1, 1859, also of ships launched  
 6 months of the years 1860, 1861,  
 will expire on December 31 of the  
 e periods assigned to them respec-  
 ns assigned to ships launched during  
 hths of the years 1859, 1860, 1861,  
 expire on June 30, next after the  
 he periods assigned to them re-  
 case of ships launched on and  
 1863, the period originally assigned  
 e A 1 character will in every case  
 month in which the vessel may be  
 will expire at the end of the corre-  
 h in the year at which the period  
 inates.) But if, during the last  
 of the period assigned to them, the  
 ship shall, in consequence of her  
 proceed on a distant foreign voyage,  
 her surveyed for continuation on  
 for the character A in red, a special  
 held conformably to the rule, &c.  
 he case may be; and if, from the  
 special survey, the ship shall appear  
 ects in a sound and efficient state,  
 ired by those rules, the committee  
 period at which the ship's character  
 te, continue her on the letter A, or  
 he character A in red in accordance  
 referred to.

60. *Ships A, in red.*—Ships that have passed  
 one periods which have or might have been  
 assigned to them for the character A originally,  
 or on continuation, or for restoration, and shall be  
 found on survey to be of a superior description,  
 being fit for the safe conveyance of dry and  
 perishable goods to and from all parts of the world,  
 shall be classed A in red, as the second description  
 of the first class. (For British North American  
 built ships and fir ships, see Second Survey, latter  
 part.)

In all cases in which the owner may claim this  
 character, the ship must undergo a special sur-  
 vey by two surveyors (to be appointed in  
 every instance by the committee), one of whom  
 shall be an exclusive officer of the society, and  
 be subject in other respects to a compliance  
 with the undermentioned requisitions of survey,  
 viz:—

**First Survey for A, in red.**—The ship to be  
 either placed in dry dock or hid on blocks, so  
 that the keel may be examined, and be scraped or  
 clubbed bright from the light water-mark upwards,  
 including the plank-sheers and waterways, so as to  
 expose the surface of the plank to view. (If the  
 ship has been sheathed with wood over felt,  
 fastened with copper or mixed metal nails, within  
 a period of 5 years, and the plank from the light  
 water-mark upwards shall, when so sheathed, have  
 been brightened, and the condition of the bolts,  
 planking, treenails, and caulking ascertained, and  
 favourably reported upon by the surveyors; and  
 provided that the sheathing which covers the  
 leading bolts and raft ports, and a strake of  
 sheathing all fore and aft on each side under the  
 wales be removed, and listings of sheathing cut  
 out at hood ends; and the planking, fastenings,  
 and caulking so exposed shall prove to be in good  
 condition, then, on application to the committee,  
 the stripping from the light water-mark upwards  
 may be dispensed with; but whenever the sheath-  
 ing is removed, the outside planking is to be  
 scraped or clubbed bright, and examined as pre-  
 scribed by the above rule. If the ship has been  
 sheathed with metal within a period of two years,  
 and it shall appear to the surveyors that stripping  
 from the light water-mark upwards may be dis-  
 pensed with, the case will receive due consideration  
 on application to the committee.) Bolts, if of iron,  
 in number not less in any case than 6 on each  
 side, in each range of the deck fastenings to be  
 driven out in ships of 500 tons and under, and  
 increased in number in proportion to the size of  
 the ship, and one treenail to be driven out in every  
 alternate frame or fourth timber between the  
 upper edge of the wales and plank-sheers, and one in  
 every alternate frame or fourth timber between the  
 upper edge of the wales and the light water-mark,  
 and such other parts of the bottom as the surveyors  
 may direct, so as to enable a judgment to be  
 formed as to the general state of the treenails,  
 timbers, and of the planking at the treenail holes.  
 The hold to be cleared, and proper stages made  
 both inside and outside. The windlass to be  
 unhung, and the wood linings stripped. The  
 attention of the surveyors shall then be particularly  
 directed to the state of the upper or main deck  
 and comings, the upper and lower deck bolts, and  
 the outside planks through which they pass, the  
 plank-sheers, waterways, and beams, so far as they  
 can be examined; the bawse timbers, knight-  
 heads, breasthooks, and transoms; the floors and  
 keelsons; the keel, rudder, and windlass; the  
 planking outside and inside, and the treenails;  
 and the frame and inner surface of the outside  
 planking, where they can be seen; and the sheer  
 and general form of the ship; the condition of the

oakum and caulking also to be ascertained, and  
 the ship to be efficiently repaired with suitable  
 materials as hereinafter stated.

The term for which a vessel may be assigned  
 the character A in red upon a compliance with  
 the foregoing requirements, will not exceed  
 $\frac{2}{3}$  the number of years beyond that assigned  
 originally, or on restoration. (For periodical  
 surveys, see sec. 34.)

**Second Survey for A, in red (after two-thirds  
 the number of years beyond that assigned originally,  
 or on Restoration, have expired).**—But when a  
 period of  $\frac{2}{3}$  of the number of years beyond that  
 originally assigned for a vessel's retaining the  
 A character, or if a period of  $\frac{2}{3}$  the number  
 of years beyond that assigned on restoration has  
 elapsed, an owner desirous to have his ship retain,  
 or be placed upon, this character, application must  
 be made to the committee in writing, who will  
 direct the survey to be made by two surveyors,  
 one of whom shall be an exclusive officer of the  
 society; and for the purpose of holding such  
 survey, the ship must be placed in dry dock, or  
 laid on blocks upon ways, so that the keel may be  
 examined; all sheathing to be entirely stripped off  
 the bottom and elsewhere; all the outside planking  
 from light water-mark upwards, including the  
 plank-sheers and waterways, to be scraped or  
 clubbed bright; the timbers of the frame to be  
 exposed to view by the removal of planking equal  
 to one strake fore and aft, on each side, above the  
 wales, either inside or outside, at the discretion of  
 the surveyor; a short plank in each buttock; a  
 plank or listing of sufficient breadth, on each side,  
 at the discretion of the surveyor, in the ceiling  
 above the floor heads all fore and aft (or, if the  
 shipowner should prefer it, a plank outside at the  
 same height), and a reasonable number of treenails  
 before and abaft the same, so as to ascertain  
 the state of the lower timbers of the frame; and in  
 order to ascertain the condition of the beam ends,  
 either a strake of deck next the waterways on  
 each side to be taken out, or an examination be  
 made by boring, at the option of the shipowner;  
 iron bolts and treenails to be driven out at the  
 various parts as prescribed above (in the case of  
 double ships, or ships of peculiar construction,  
 special application may be made to the committee);  
 proper stages to be made both inside and outside;  
 the windlass to be unhung, and the wood linings  
 stripped; and when in the state above described,  
 the special survey to be held as above directed  
 upon all the parts exposed to view; the condition  
 of the oakum and caulking to be ascertained; the  
 ship to be efficiently repaired with suitable ma-  
 terials, as hereinafter stated. And to entitle them  
 to continue this character, such vessels will be re-  
 quired, in addition to the usual annual survey, to  
 undergo a special re-survey, as prescribed above,  
 within a period (from the date of the last special  
 re-survey) not exceeding two-thirds of the several  
 terms of years originally assigned to them, or  
 earlier, if, in the judgment of the surveyors, upon  
 a careful examination of the ship, the same shall  
 appear to them to be necessary. (For periodical  
 surveys, see sec. 34.)

In the repair of vessels for the above character,  
 no materials may be used of a description inferior  
 to those allowed in new ships for the 6 years'  
 grade, except in the case of vessels originally  
 classed for a shorter period than 6 years, when  
 materials equal to those used in the original con-  
 struction will be permitted.

**British North American built Ships and Fir  
 Ships.**—All ships built in the British North  
 American colonies and all fir ships seeking the  
 character A in red, must be submitted to the

iron knees and riders prescribed have one year deducted from which they would otherwise be based in the register book.

The British North American ships, the frames of which are of 600 tons and upwards, and all built) the length of which the fore part of the stem to the stern-post on the range of upper deck live times their extreme times and under nine times all have diagonal iron plates outside the frame. The said from the upper side of upper tier a lower part of cheeks at first midship, and to the same perpendicular and aft, measured from the keel. When ships are engaged and short armed floors, to extend to half-way between and first foothook heads; the es not to be less than as follows,

Under 200 tons	3 1/2 in.
400 "	4 "
700 "	4 1/2 "
1,000 "	5 "
1,500 "	5 1/2 "
2,000 "	6 "
2,500 "	6 1/2 "

with bolts, one at each alternate less in diameter than the size of the butt bolts in Table D. The well protected by proper coating, members to be coated in the screws receive the said plates.

of plates to be in proportion of not pair to every 12 feet of the ship's main as above, but not to be more under mensural on a square; the to be placed diagonally, at an angle of 45 degrees, their lower ends after the end of the keel in the fore end of the keel in the fore crossing each other amidship.

to have shelves and waterways beams, each equal in contents to sectional area of the beams of their ends at their ends; each of the said waterways to be bolted through the deck at every timber, with bolts as in Table D: likewise the shifts of side planking not to be less than 6 inches; a strake wrought between a distance of 5 feet will be

length of which shall exceed six extreme breadth, or nine times as their depth, the number of plates shall be more than one pair to every 10 feet of the length taken as above, but not more than 6 feet asunder measured on a square; the said plates to be placed diagonally as above in cases where the length of the ship exceeds its depth, the builders to submit, through the resident surveyor, the necessary strength of the vessel the committee's approval, their plans to be approved of by the committee. And in addition to the requirements of five times their breadth in ships must be fitted with a rider pair of sister keelsons, at the option of the resident surveyor, the keelson or sister keelsons each to be of the length of the keelson as required in Table B for the keelson. If a rider keelson be adopted

it is to be fastened with a through bolt (of the size required in Table D for keelson bolts) in every frame; or if the owner prefers it, every intermediate bolt may be short, passing through the main and rider keelsons. (In all cases in which a rider keelson is fitted, it must be fastened as prescribed above, irrespective of the relative dimensions of the ship.) If sister keelsons be fitted, they must be fastened with through bolts, in number not less than one in every alternate timber, and of the size required in Table D for scarpa of keels &c.

63. All British North American built ships, which have gone, or may go off the list of ships of the A character, or which may be of an age exceeding the period for which they might have had claims to be put upon that grade (whether classed or not), shall, as from time to time they come under examination, be subjected to a careful survey, to be made by one of the surveyors to this society; and no further character shall be assigned them unless a survey shall be held as follows; and planking, either inside or outside, at the discretion of the surveyors, in quantity equal to one entire strake fore and aft on both sides, shall be removed; to be taken out in midships immediately above the turn of the bilge, and at such height forward and aft as may, in their judgment, best expose the members of the frame to view; that a special report of the state of these members, and of the general state and condition of the upper deck fastenings, waterways, spiraling, plank sheers, topsides, upper deck with its appendages, lower deck fastenings, wales, counter, plank and treenails outside to the water's edge, rudder, windlass, and capstan, beams and breasthooks, shall be transmitted by the surveyors to the committee; and on the receipt of such report the character shall be assigned. If the E character be then assigned, it shall be continued (subject to an annual survey) for a period not exceeding the number of years originally assigned; at the expiration of which the character will be discontinued, unless a similar survey and examination of the frame be again submitted to.

64. Ships E will comprise all ships which shall be found on survey fit for the conveyance of cargoes not in their nature subject to sea damage on any voyage.

65. Subject to occasional inspection, at least once in every 2 years, ships will continue in this class so long as their condition shall, in the opinion of the committee, entitle them thereto.

66. Ships I will comprise ships which shall be found on survey fit for the conveyance, on shorter voyages (not out of Europe), of cargoes in their nature not subject to sea damage.

67. The bottom of every ship is to be caulked once in every 5 years, unless wood-sheathed and felted, and then once in every 7 years, except in the case of teak-built ships, upon which a special survey may have been requested, and the surveyors having ascertained, by the removal of a strake of sheathing fore and aft under the wales, and a strake at the first foothook heads, and by causing listings to be cut out at the wood's end, that such caulking is not required, the same may then be dispensed with. In cases where ships have been doubled with doubling of less thickness than is required by, or not fastened in accordance with the rules, it will not be imperative that such doubling be stripped at the expiration of 7 years, as required for ordinary sheathing; but if, upon survey, the doubling be found in good condition, the period for its remaining on may be extended, with the sanction of the committee, to a term not

exceeding 10 years, provided the doubling below the wales be copper or yellow metal fastened or treenailed. If any ship shall be stripped within the periods above mentioned, her bottom is to be caulked, if necessary.

68. In all cases in which ships may be doubled, doubling of not less than the thickness hereinafter mentioned will be required, the same to be properly wrought and fastened as follows: in every instance the doubling is to be at least single fastened either with treenails or with bolts, and a through bolt in every butt. Ships hereafter doubled, if the doubling be iron fastened, will lose their character, if such fastenings be coppered over. If treenails be used, every treenail must, if practicable, be a through fastening; and if bolts be used, then  $\frac{1}{4}$  of them from the lower part of the bilge upwards must be through and clenched on the ceiling in addition to the butt bolts. In all cases of doubling, the rudder braces are to be removed.

The throat bolts of iron knees, and the bolts of iron hooks, crutches, and pointers, must be renewed through the doubling.

The thickness of the doublings for the wales and bottoms, on ships

Under 100 tons to be not less than	2 in.
100 " and under 500 tons	2 1/2 in.
500 " and above	3 in.

On the topsides of ships not exceeding 300 tons, the thickness may be  $1\frac{1}{2}$  inches.

If the doubling be applied diagonally, it will be allowed to be of the following thicknesses, viz.:

In ships under 500 tons	1 1/2 in.
500 tons and under 1,000 tons	2 in.
1,000 tons and upwards	2 1/2 in.

No ship hereafter doubled shall be entitled to the character A, or A in red, unless at the time of doubling it be ascertained, in either case, that the frame is capable of securely retaining the fastenings, by one treenail being driven out in every alternate frame or fourth timber between the upper edge of the wales and the light-water mark, and at such other parts of the bottom as the surveyors may direct, so as to enable a judgment to be formed as to the general state of the treenails and timbers, and of the planking in the treenail holes; or should the state of the treenails indicate defective timbers, or should the outside plank be bolt-fastened, then, by cutting out listings or plank at the discretion of the surveyor.

Diagonal doubling on ships built in the British North American colonies, or on ships built of fir, is to be fastened as under, viz.:

If worked not above 11 inches broad may be single fastened with a through bolt at every butt, every fifth fastening to be a through bolt or a through treenail of hardwood; the distance between these through fastenings not to exceed 4 feet 6 inches. The remaining fastenings to consist of through treenails or 2 long and 2 short dump bolts; the length of the short dumps may be  $\frac{1}{2}$  an inch less than the combined thickness of the doubling and the original outside plank, and that of the long dumps to be not less than the thickness of the doubling added to twice the thickness of the original outside plank.

Before doubling the original fastenings in the outside planking and the rider bolts should be ascertained to be in efficient condition, or be made good, but all treenails, from the lower part of the cheeks at the floor heads to the upper part of the cheeks at the second futtock heads, throughout the bilges for one half the length of the ship amidships, shall be renewed through the original inside and outside planking with hardwood treenails, unless such

treenails were originally of hardwood or have been recently renewed—then application may be made to the committee with the view of dispensing with this requirement. In all cases the throat bolts and the bolt next thereto in the iron knees and riders must be renewed through the doubling. The upper ends of the diagonal doubling to be worked against a fore and aft strake of doubling, the upper edge of which is to be let into the original plank sufficient to form a caulking seam, say not less than  $1\frac{1}{2}$  inch. The lower ends of the diagonal doubling to be worked against 2 strakes of fore and aft doubling, the lower edge of the lower strake being rabbeted into the keel, and to be not less in thickness than one-and-a-half times the thickness of the doubling. All diagonal doubling to be of rock elm or of equally suitable material, and be wrought on hair felt.

69. *Iron-fastened Ships.*—All ships, although iron-fastened (except as hereinafter mentioned), shall be classed in the same manner as copper-fastened ships, so long as they remain unsheathed with copper, provided they are, in all other respects, constructed in accordance with the rules; but when sheathed with copper over the iron fastenings, the words 'coppered over iron bolts' shall be added to the character in the register book, and continued until the ship be thoroughly copper-fastened.

70. Ships built in India, although fastened with iron, shall be permitted to be copper-sheathed without any mark being placed in the book, provided the bottom be felled or chunamed and wood-sheathed, and subjected to a careful examination of the iron fastenings on every occasion on which the sheathing is stripped off, for which purpose some of the bolts and nails are to be taken out of the lower part of the bottom, and to be seen by the surveyor; but no such ship shall be permitted to continue either on the A or on the A in red class for a longer period than one-half the number of years beyond the term originally assigned for her remaining on the A character, unless the bottom shall have been doubled, or the whole of the iron fastenings taken out or properly secured, and the bottom refastened with bolts, or treenails, or both, including the middle line, breasthook, and crutch bolts.

71. *Equipment.*—All vessels are required to have their masts, spars, and rigging, the rudder, pumps, windlass or capstan, scuppers, and hawse pipes, in good order, and sails in sufficient number and in good condition.

Windlasses, if of wood, are in all cases to have a square iron spindle passed right through them, the diameter of the spindle to range from  $2\frac{1}{2}$  to 5 inches, according to tonnage.

72. Every ship is to be provided with anchors, cables &c., of approved quality, properly tested at a public machine (see notice in Appendix at end of register book), in number and length, as set forth in the society's Table, No. 22 annexed. (See also sec. 32.)

A certificate of all chains and anchors having been tested, and of the strain applied to them, must be produced before the ship is classed.

73. The length and condition of the chain cables are to be ascertained by removal from the lockers on every special survey for classification.

74. In all cases where hepen cables are used,  $\frac{1}{8}$  more in length will be required.

75. *Boats.*—All vessels under 150 tons to be provided with one good boat; and every vessel of 150 tons and above to have a suitable number.

76. The efficient state and condition of the whole of the ships' equipment will be designated by the figure 1; and where the same are found

insufficient in quantity, or defective in quality, by the figure 2.

77. *Ships navigated by Steam.*—Steam ships are to be subject to the same periodical surveys as sailing vessels, and whenever the boilers are taken out, the vessel is to be submitted to a particular and special survey, in order to ascertain her general condition.

78. That with respect to the boilers and machinery, the owners are required to produce to the surveyors at the above-directed surveys, a certificate from some competent engineer, describing their state and condition at those periods; and which certificate it is desirable there should be a description of the particulars of the same, as far as may be practicable, in the manner and form annexed, No. 8; to be appended to the report of survey, and delivered to the committee, who will thereupon insert in the register book the letters 'M.C.' denoting that the boilers and machinery have been inspected and certified to be in good order and safe working condition; but if no certificate of their condition be furnished by the owner or master, then no character can be assigned for the machinery.

79. *Hull.*—The surveyors are directed to examine and report the scantling of timbers, planks, and fastenings, and to state where built, and by whom, in the same manner as directed for sailing vessels.

80. The surveyors are required to report the number, size, length, fastenings, and mode of arrangement of the engine and boiler sleepers, and the description of timber of which they are composed, and whether diagonally trussed with wood or iron, and to what extent; the length, size, and fastenings of shelf-pieces and paddle-beams; and whether the vessel be constructed with sponges, and how they are formed; and to give the length and shifting of the plank outside and inside.

81. *Materials and Equipment.*—The surveyors are to examine and report the number and description of the masts, sails, anchors, cables, hawsers, warps, and boats, as directed to be done for sailing vessels. For weight of anchors, size and length of chains, see Table No. 22.

82. The surveyors are to be particular in examining and reporting the condition of the boats of all vessels employed in carrying passengers.

*Foreign-built Ships.*—It having been deemed desirable that foreign-built ships, which have not been constructed in accordance with the rules of the society, should nevertheless be entered in the register book with a character of efficiency if their condition be such as to entitle them thereto, the following regulations have been adopted for their survey and classification, viz.:

Foreign-built ships which have not been constructed in accordance with the rules, and have not been surveyed by the surveyors to this society while building, for which the owners are desirous of a character of condition or efficiency for seagoing purposes, will be surveyed for entry in the register book on application being made to the committee, in writing, stating the name of the vessel (and if at any time she had any other name, such is to be inserted in the application); likewise where and when she was built, and her length, breadth, depth, and tonnage (whether British or foreign).

The committee will then direct a special survey to be held by two surveyors, to be appointed in every instance by the committee, one of whom at least shall be an exclusive officer of the society, and the ship submitted to a compliance with the undermentioned requisitions of survey, viz.:

In all cases the ship must be placed in dry

ty, or defective in quality, by

*d by Steam.*—Steam ships are the same periodical surveys as whenever the boilers are taken to be submitted to a particular survey, in order to ascertain her

respect to the boilers and machinery are required to produce to the above-directed surveys, a competent engineer, describing the condition at those periods; and it is desirable there should be particulars of the same, as far as possible, in the manner and form to be appended to the report of the committee, who will enter in the register book the letters which the boilers and machinery are certified to be in good condition; but if no certificate be furnished by the owner, a character can be assigned for

surveyors are directed to examine the scantling of timbers, planks, and to state where built, and by what manner as directed for sailing;

Surveyors are required to report the length, fastenings, and mode of arrangement of engine and boiler sleepers, and of timber of which they are composed diagonally trussed with wood that extent; the length, size, and self-pieces and paddle-beams; and how they are constructed with spencings, and to give the length of the plank outside and inside.

*and Equipment.*—The surveyors are to report the number and description of masts, sails, anchors, cables, and boats, as directed to be done. For weight of anchors, size of sails, see Table No. 22.

Surveyors are to be particular in reporting the condition of the boats employed in carrying passengers.

*Ships.*—It having been deemed expedient that foreign-built ships, which have not been entered in accordance with the rules of the Act, should nevertheless be entered in the register with a character of efficiency if their condition be such as to entitle them thereto, the following regulations have been adopted for their registration, viz. :—

1 F denotes ships which have not been surveyed in accordance with the rules, and have not been certified by the surveyors to this society for which the owners are desirous of condition or efficiency for sea service. They will be surveyed for entry in the register on application being made to the surveyors, stating the name of the ship, and any time she had any other name, and whether she was built, and her length, and tonnage (whether British or

foreign) will then direct a special survey to be appointed in two surveyors, to be appointed in by the committee, one of whom at an exclusive officer of the society, to be submitted to a compliance with the requisitions of survey, viz. :— the ship must be placed in dry

dock or laid on blocks, so that the keel and bottom may be seen and properly examined; the hold to be cleared, and proper stages to be made both inside and outside; the timbers to be cleared, bolts and treenails to be driven out at different parts of the ship, and in sufficient number to enable the surveyors to ascertain their condition; the condition of the plank and timbers in the cargo-holes also to be ascertained; the beam ends in ships of 4 or more years old must be examined by boring. The surveyors must then examine and report upon the ship, as to the state of the timbers of the frame (where examined), planking inside and outside, decks, waterways, beams, keels, keelsons, stem, apron, hawse timbers, knees, keel, breasthooks, transoms, rudder, and nightheads, the sheer and general form of the ship, particulars of materials and scantlings, so far as they can be ascertained, and spacing of timbers and beams, thickness and shifting of plank, mode of fastening, sizes and condition of bolts and treenails, and state of caulking in all parts of the vessel.

Survey No. 1. If the ship is less than 4 years old, a listing of not less than 4 inches wide and equal to  $\frac{1}{2}$  of the length of the ship on each side, to be cut out below each set of clamps or shelves in such parts as the surveyors may require, sufficient to enable them to ascertain the size and condition of the frame.

Survey No. 2. If the ship is 4 or more years old, she must be scraped bright from the light water-mark upwards, including the plank-sheers and waterways, and a listing of not less than 4 inches wide must be cut fore and aft below each set of clamps or shelves, and at the bilges at the discretion of the surveyor, and a short listing outside at each buttock. This must apply to all ships of 4 or more years old, whether they have had the short listings previously cut or not.

If after such examination all repairs are done to the satisfaction of the surveyors, so as to enable them to make a favourable report, a class of efficiency will be granted by the committee, and entered in the register book, which class will be retained for 12 months only, unless it shall be made to appear by the owner that the ship had not been in any port in the United Kingdom during that period; but in no case will it be continued for more than 2 years, unless the vessel be re-surveyed as above; but upon such re-survey the openings described therein will not be required to be repeated before a period of 4 years.

There will be three designations of condition or character, distinguished thus :

1 F  
2 F  
3 F

1 F denotes ships which are found on survey to be of a superior description, fit for the conveyance of dry and perishable goods to and from all parts of the world.

2 F denotes ships which, although not equal to the foregoing, are nevertheless found on survey to be in a good and efficient condition, and fit for the conveyance of dry and perishable goods, on shorter voyages.

3 F denotes ships which shall be found on survey fit for the conveyance of cargoes not in their nature subject to sea damage.

It is to be distinctly understood that the foregoing regulations will be confined in their application to foreign-built ships.

To entitle the ships to the fig. 1, they must be supplied with stores in accordance with Table 22, attached to the rules.

No one can question the advantages that re-

sult from carrying a plan of this sort completely into execution, or those that have already been derived from the extent to which it has been carried. We confess, however, that we incline to think that the classification of ships should be effected by Government agents. It is invidious to impose on one set of merchants and shipowners the task of deciding upon the condition of the ships or other property belonging to others; and, though we have every confidence in the integrity of the gentlemen composing the committee, the most honourable men are liable to be influenced by an esprit de corps, and by insensible biases.

We, therefore, cannot help thinking that the scheme would have a much better chance of success, and that the classification would be more likely to be correct, were it managed by individuals nowise connected with business. The surveyors, on whose capacity and honesty the whole scheme principally depends, should be quite independent of the good or ill will of those on whose property they have to report. But can that be said to be the case at present? and can it be fairly presumed that merchants or shipowners will deal by the property of their friends and neighbours as it might be dealt with by officers appointed by, and responsible only to, Government? We apprehend that both these questions must be answered in the negative; and hence our conviction that this is a matter in which Government should interfere. No one can doubt that it is bound to do everything in its power to promote the safety of navigation, and to preserve the lives of our seamen. In this view it erects lighthouses, and prescribes regulations as to pilotage &c. But, how indispensable soever, these are not more essential to the interests of navigation than a proper classification of ships; and, if other means should fail fully to effect this desirable purpose, Government will certainly neglect a most important duty if it do not interpose. In the meantime, however, the mercantile and shipping interests are deeply indebted to the gentlemen who have done so much to obviate the abuses of the old system. (For a further discussion of this important question, see the article on the 'Frequency of Shipwrecks,' in the 122nd number of the *Edinburgh Review*; see also the *Reports of the Commons Committees of 1836 and 1843 on Shipwreck, and other Parliamentary Papers.*)

### III. SHIPS (SAFETY OF).

The self-interest and the security of the owners and masters of ships may, perhaps, be supposed to afford the only real guarantee against the occurrence of accidents. But this guarantee is not always, nor perhaps in most instances, to be depended upon; and to obviate in as far as possible the calamitous results that might be occasioned by the carelessness of owners and the ignorance or misconduct of masters, the Legislature has enacted certain rules in the view of securing the proper fitting out of ships and their management. But it is needless to say that a vast deal depends in such cases on the way in which the rules are enforced. And it were better that they did not exist at all, and that passengers and others were left to depend on their own estimate of the parties, than that they should be taught to place an undeserved reliance on rules which are not properly carried out. The following rules on this subject are embodied in part of the Mercantile Shipping Act of 1854, the 17 and 18 Vict. c. 104 of the Merchant Shipping Act and Amendment Act, 25 & 26 Vict. c. 63. (See also ANCHORS and CABLES.)

*Application of Part IV. of Act 17 & 18 Vict.*

c. 104.—The fourth part of this Act shall apply to all British ships; and all foreign steam ships carrying passengers between places in the United Kingdom, shall be subject to all the provisions contained in the fourth part of this Act, and likewise to the same provisions with respect to the certificates of the masters and mates thereof to which British steam ships are subject. (Sec. 291.)

**Boats for Sea-going Ships.**

**Rules as to Boats and Life Buoys.**—The following rules shall be observed with respect to boats and life buoys, viz.:—

1. No decked ship (except ships used solely as steam tugs and ships engaged in the whale fishery) shall proceed to sea from any place in the United Kingdom, unless she is provided, according to her tonnage, with boats duly supplied with all requisites for use, and not being fewer in number

nor less in their cubic contents than the boats, number and cubic contents of which are specified in the following Table:

2. No ship carrying more than ten passengers shall proceed to sea from any place in the United Kingdom, unless, in addition to the boats above required, she is also provided with a life boat furnished with all requisites for use, or unless one of her boats above required is rendered buoyant in the manner of a life boat:

3. No such ship as last aforesaid shall proceed to sea unless she is also provided with two life buoys: and such boats and life buoys shall be kept so as to be at all times fit and ready for use provided, that the enactments with respect to boats and life buoys herein contained shall not apply in any case in which a certificate has been duly obtained under the 10th sec. of the 'Passengers' Act,' 1852 (the 15 & 16 Vict. c. 11 s. 10). [PASSENGERS.] (Sec. 292.)

*Number and Dimensions of Boats with which Sea-going Ships are to be Provided.*

Registered Tonnage		COLUMN 1						COLUMN 2						COLUMN 3						Total Number of Boats
		To be carried by Sailing Ships and Steam Ships						To be carried by Sailing Ships and Steam Ships when they do not carry Boats in col. 3						To be carried by Steam Ships which do not carry the Boat in col. 2						
Sailing Ships	Steam Ships	Boats			Boats			Launches			Boats			Life Boats			Ships carrying Steam Ships			
		Number	Length	Breadth	Depth	Number	Length	Breadth	Depth	Number	Length	Breadth	Depth	Number	Length	Breadth		Depth		
tons	tons	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.	ft.		
..	1,000 and upwards	1	18	5	6	2	3	2	2	23	5	6	2	6	2	2	2	2	2	
..	500 to 1,000	1	18	5	6	2	3	2	2	26	6	6	2	8	1	26	8	0	3	
800 and upwards	500 to 800	1	18	5	6	2	3	2	2	24	5	6	2	6	1	26	8	0	3	
(800 to 900)	360 to 500	1	16	5	6	2	3	2	2	24	5	6	2	6	1	25	7	0	3	
100 to 600	240 to 360	1	16	5	6	2	3	2	2	22	5	6	2	5	1	22	6	6	3	
200 to 400	120 to 240	1	14	5	0	2	2	2	2	..	..	..	..	..	..	..	..	..	..	
100 to 200	60 to 120	1	14	5	0	2	2	2	2	..	..	..	..	..	..	..	..	..	..	
Under 100	Under 60	1	14	5	0	2	2	2	2	..	..	..	..	..	..	..	..	..	..	

**Note.**—In sailing ships carrying the number of boats above specified, and steam ships carrying the larger of the two numbers above specified, the boats are to be considered sufficient, if their aggregate cubic contents are equal to the aggregate cubic contents of the boats specified.

In steam ships carrying the smaller of the two numbers above specified, one of the boats must be a launch of the capacity specified in col. 2.

In sailing ships of 200 tons burden and under, not carrying passengers, a dingy may be substituted for the boat in col. 1.

In sailing ships of 150 tons burden and under, not carrying passengers, a substantial boat of capacity sufficient to carry the crew may be substituted for those above specified.

In all steam ships, two paddlebox boats may be substituted for any two of the boats in col. 3.

**Penalties on Masters and Owners &c. neglecting to provide Boats and Life Buoys.**—In any of the following cases, viz.:—

1. If any ship herein required to be provided with boats or life buoys proceeds to sea without being so provided therewith, or if any of such boats or life buoys are lost or rendered unfit for service in the course of the voyage through the wilful fault or negligence of the owner or master; or,

2. If, in case of any of such boats or life buoys being accidentally lost or injured in the course of the voyage, the master wilfully neglects to replace or repair the same on the first opportunity; or,

3. If such boats and life buoys are not kept so as to be at all times fit and ready for use;

Then, if the owner appears to be in fault, he shall

incur a penalty not exceeding 100*l.*, and if the master appears to be in fault, he shall incur a penalty not exceeding 50*l.* (Sec. 293.)

**Officers not to clear Ships not complying with the above Provisions.**—No officer of customs shall grant a clearance or transire for any ship herein required to be provided with boats or with life buoys unless the same is duly so provided; and if any such ship attempts to go to sea without such clearance or transire, any such officer may detain her until she is so provided. (Sec. 294.)

**Lights and Fog Signals, and Meeting and Passing, Build and Equipment of Steam Ships.**

**Iron Steamers to be divided by Water-tight Partitions.**—The following rules shall be observed with respect to the build of iron steam ships, viz.:—

1. Every steam ship built of iron, of 100 tons or upwards, the building of which commences after August 28, 1816, and every steam ship built of iron of less burden than 100 tons, the building of which commences after August 7, 1851 (except ships used solely as steam tugs), shall be divided by substantial transverse water-tight partitions, so that the fore part of the ship shall be separated from the engine room by one of such partitions, and so that the after part of such ship shall be separated from the engine room by another of such partitions:

2. Every steam ship built of iron, the building of which commences after the passing of this Act, shall be divided by such partitions as aforesaid into not less than three equal parts, or as nearly as circumstances permit:

3. In such last-mentioned ship each such part

so as to involve risk of collision, the ship which has the other on her own starboard side shall keep out of the way of the other.

Art. 15. If two ships, one of which is a sailing ship and the other a steam ship, are proceeding in such directions as to involve risk of collision, the steam ship shall keep out of the way of the sailing ship.

Art. 16. Every steam ship, when approaching another ship so as to involve risk of collision, shall slacken her speed, or, if necessary, stop and reverse; and every steam ship shall, when in a fog, go at a moderate speed.

Art. 17. Every vessel overtaking any other vessel shall keep out of the way of the said last-mentioned vessel.

Art. 18. Where by the above rules one of two ships is to keep out of the way, the other shall keep her course, subject to the qualifications contained in the following article.

Art. 19. In obeying and construing these rules due regard must be had to all dangers of navigation; and due regard must also be had to any special circumstances which may exist in any particular case rendering a departure from the above rules necessary in order to avoid immediate danger.

Art. 20. Nothing in these rules shall exonerate any ship or the owner or master or crew thereof from the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper look-out, or of the neglect of any precaution which may be required by the ordinary practice of seamen or by the special circumstances of the case. [COLLISION.]

*Equipment of Steam Ships.*—Steam ships shall be provided as follows (that is to say):—

1. Every steam ship of which a survey is hereby required, shall be provided with a safety valve upon each boiler, so constructed as to be out of the control of the engineer when the steam is up, and, if such valve is in addition to the ordinary valve, it shall be so constructed as to have an area not less and a pressure not greater than the area and pressure on that valve.

2. Every sea-going steam ship employed to carry passengers shall have her compasses properly adjusted from time to time; such adjustment, in the case of ships surveyed as after mentioned, to be made to the satisfaction of the shipwright surveyor, and according to such regulations as may be issued by the Board of Trade.

3. Every sea-going steam ship (unless used solely as a steam tug) shall be provided with a hose adapted for the purpose of extinguishing fire in any part of the ship and capable of being connected with the engines of the ship.

4. Every sea-going ship employed to carry passengers shall be provided with the following means of making signals of distress; viz. 12 blue lights or 12 port fires, and 1 cannon with ammunition for at least 12 charges, or, in the discretion of the master or owner of such ship, with such other means of making signals (if any) as may have previously been approved by the Board of Trade.

5. Every home trade steam ship employed to carry passengers by sea shall be provided with such shelter for the protection of deck passengers (if any) as the Board of Trade, having regard to the nature of the passage, the number of deck passengers to be carried, the season of the year, the safety of the ship, and the circumstances of the case, may require:

And if any steam ship as aforesaid plies or goes to sea from any port in the United Kingdom without being so provided as herein required, then

for each default in any of the above requisites the owner shall (if he appears to be in fault) incur a penalty not exceeding 100*l.*, and the master shall (if he appears to be in fault) incur a penalty not exceeding 50*l.* (17 & 18 Vict. c. 104 s. 301.)

*Penalty for improper Weight on Safety Valve.*—If any person places an undue weight on the safety valve of any steam ship, or, in the case of steam ships surveyed as hereinafter mentioned, increases such weight beyond the limits fixed by such engineer surveyor as hereinafter mentioned, he shall, in addition to any other liabilities he may incur by so doing, incur a penalty not exceeding 100*l.* (See, 302.)

Every steam ship which is required by the 17 & 18 Vict. c. 104 to have a master possessing a certificate, shall also have an engineer or engineers possessing a certificate or certificates from the Board of Trade. (25 & 26 Vict. c. 63 s. 5.)

#### *Survey of Passenger Steamers.*

*Definition of Passenger Steamer.*—For the purpose of the enactments herein contained with respect to surveys and certificates of passenger steam ships, the word 'passengers' shall be held to include any persons carried in a steam ship, other than the master and crew and the owner, his family and servants; and the expression 'passenger steamer' shall be held to include every British steam ship carrying passengers to, from, or between any place or places in the United Kingdom, excepting steam ferry boats working in chains, commonly called steam bridges. (17 & 18 Vict. c. 104 s. 303.)

*Passenger Steamers to be surveyed.*—Every passenger steamer shall be surveyed twice at least in each year in manner after mentioned. (See, 304.)

*Board of Trade to appoint Surveyors and fix their Remuneration.*—The Board of Trade may from time to time appoint such number of fit and proper persons to be shipwright surveyors and engineer surveyors for the purposes of this Act at such ports or places as it thinks proper, and may also appoint a surveyor-general for the United Kingdom, and may from time to time remove such surveyors or any of them, and may from time to time fix and alter the rates of remuneration to be received by such surveyors. (See, 305.)

*Surveyors to have Power to inspect.*—It shall be lawful for the said surveyors in the execution of their duties to go on board any steam ship at all reasonable times, and to inspect the same or any part thereof, or any of the machinery, boats, equipments, or articles on board thereof, or any certificates of the master or mate to which the provisions of this Act or any of the regulations to be made by virtue thereof apply, not unnecessarily detaining or delaying the ship from proceeding on any voyage, and, if in consequence of any accident to any such ship or for any other reason they consider it necessary so to do, to require the ship to be taken into dock for the purpose of surveying the hull thereof; and any person who hinders any such surveyor from going on board any such steam ship or otherwise impedes him in the execution of his duty under this Act, shall incur a penalty not exceeding 5*l.* (See, 306.)

*Board of Trade to regulate Mode of making Surveys.*—The said surveyors shall execute their duties under the direction of the Board of Trade, and such board shall make regulations as to the manner in which the surveys after mentioned shall be made, and as to the notice to be given to the surveyors when surveys are required, and as to the amount and payment of any travelling or other expenses incurred by such surveyors in the execution of their duties, and may thereby deter-

any of the above requisites the captain (to be in fault) incur a penalty not exceeding 100*l.*, and the master shall (in fault) incur a penalty not exceeding 50*l.* (Sec. 307.)

**Penalty on Surveyors receiving Fees unduly.**—Every surveyor who demands or receives directly or indirectly from the owner or master of any ship surveyed by him under the provisions of this Act any fee or remuneration whatsoever for or in respect of such survey, otherwise than as the officer and by the direction of the Board of Trade, shall incur a penalty not exceeding 50*l.* (Sec. 308.)

**Owners to have Surveys made by Shipwright and Engineer Surveyors &c.**—The owner of every passenger steamer shall cause the same to be surveyed at the times hereinafter directed by one of the said shipwright surveyors and by one of the said engineer surveyors appointed as aforesaid; such shipwright surveyor being, in the case of iron steamers, a person who is, in the judgment of the Board of Trade, properly qualified to survey such ships; and such surveyors shall thereupon, if satisfied that they can with propriety do so, give to such owner declarations as follows:—

The declaration of the shipwright surveyor shall contain statements of the following particulars (that is to say):—

1. That the hull of the ship is sufficient for the service intended and in good condition.

2. That the partitions, bents, life buoys, lights, signals, compasses, and shelter for deck passengers, and the certificates of the master and mate or mates, are such, and in such condition, as required by this Act.

3. The time fit less than six months) for the said hull and equipments will be sufficient.

1. The limits (if any) beyond which, as regards the hull and equipments, the ship is, in the surveyor's judgment, not fit to ply.

2. The number of passengers which the ship is, in the judgment of the surveyor, fit to carry, distinguishing, if necessary, between the respective numbers to be carried on the deck and in the cabins; and in different parts of the deck and cabins; such numbers to be subject to such conditions and variations, according to the time of year, the nature of the voyage, the cargo carried, or other circumstances, as the case requires.

And the declaration of the engineer surveyor shall contain statements of the following particulars (that is to say):—

1. That the machinery of the ship is sufficient for the service intended, and in good condition.

2. The time (if less than six months) for which such machinery would be sufficient.

3. That the safety valves and fire hose are such and in such condition as are required by this Act.

4. The limits of the weight to be placed on the safety valves.

5. The limits (if any) beyond which, as regards the machinery, the ship, in the surveyor's judgment is not fit to ply.

And such declarations shall be in such form as the Board of Trade directs. (Sec. 309.)

**Transmission of Declarations to Board of Trade.**—The said owner shall transmit such declarations to the Board of Trade within 14 days after the dates of the receipt thereof respectively; and in default shall forfeit a sum not exceeding 10*l.* for every day that the sending of such declarations is delayed; and such sum shall be paid upon the delivery of the certificate hereinafter mentioned, in addition to the fee payable for the same, and shall be applied in the same manner as such fees. (Sec. 310.)

**Times appointed for Surveys and Transmission of Declarations.**—In all cases where it is possible the said half-yearly surveys shall be made in the

months of April and of October, and the declarations shall be transmitted on or before April 30 and October 31 respectively; but if the owner of any passenger steamer is unable to have the same surveyed in the month of April or October (as the case may be), either by reason of such ship being absent from the United Kingdom during the whole of those periods respectively or by reason of such ship or the machinery thereof being under construction or repair, or of such ship being laid up in dock, or for any other reason satisfactory to the Board of Trade, then he shall have the same surveyed as aforesaid as soon thereafter as possible, and shall transmit such declarations to the Board of Trade within 14 days after the receipt thereof, together with a statement of the reasons which have prevented the survey of such ship at the time before prescribed, and shall, in case of delay in transmitting the declarations, be liable to a forfeiture similar to that mentioned in the last section. (Sec. 311.)

**Board of Trade to issue Certificates.**—Upon the receipt of such declarations, the Board of Trade shall, if satisfied that the provisions of the fourth part of this Act have been complied with, cause a certificate in duplicate to be prepared and issued, to the effect that the provisions of the law with respect to the survey of the ship and the transmission of declarations in respect thereof have been complied with; and such certificate shall state the limits (if any) beyond which, according to the declaration of the surveyors, such ship is not fit to ply, and shall also contain a statement of the number of passengers which, according to the declaration of the shipwright surveyor, such ship is fit to carry, distinguishing (if necessary) between the respective numbers to be carried on the deck and in the cabins and in different parts of the deck and cabins, such number to be subject to such conditions and variations according to the time of year, the nature of the voyage, the cargo carried, and other circumstances, as the case requires. (Sec. 312.)

**Issue and Transmission of Certificates.**—The Board of Trade shall transmit such duplicate certificate to the shipping master or to some other public officer at such port as the owner may mention for the purpose, or at the port where the owner or his agent resides or where the ship was surveyed and is for the time being lying, and shall cause notice of such transmission to be given by post or otherwise to the master or owner or his agent; and the said shipping master or officer shall deliver such duplicate certificate to the said owner, master, or agent, on his applying and paying the fees and other sums (if any) herein mentioned as payable in that behalf; and in proving the due issue and transmission to the owner, agent, or master of such certificate, it shall be sufficient to show that the same has been duly received by such shipping master or public officer as aforesaid, and that due notice of the transmission thereof to such shipping master or officer has been given to such owner, master, or agent. (Sec. 313.)

**Fees to be paid for Certificates.**—The owner of every passenger steamer requiring a certificate under this Act shall pay for every certificate granted by the Board of Trade such fees as such Board directs, not exceeding the fees undermentioned:—

For steamers not exceeding 100 tons . . . . . 4*l.*

For steamers exceeding 100 and not exceeding 500 tons . . . . . 5

For steamers exceeding 500 and not exceeding 600 tons . . . . . 4

And for every additional 500 tons an additional . . . . . 1

(Sec. 314.)

**How long Certificates to continue in force.**—No such certificate shall be held to be in force for the

months of April and of October, and the declarations shall be transmitted on or before April 30 and October 31 respectively; but if the owner of any passenger steamer is unable to have the same surveyed in the month of April or October (as the case may be), either by reason of such ship being absent from the United Kingdom during the whole of those periods respectively or by reason of such ship or the machinery thereof being under construction or repair, or of such ship being laid up in dock, or for any other reason satisfactory to the Board of Trade, then he shall have the same surveyed as aforesaid as soon thereafter as possible, and shall transmit such declarations to the Board of Trade within 14 days after the receipt thereof, together with a statement of the reasons which have prevented the survey of such ship at the time before prescribed, and shall, in case of delay in transmitting the declarations, be liable to a forfeiture similar to that mentioned in the last section. (Sec. 311.)

**Board of Trade to issue Certificates.**—Upon the receipt of such declarations, the Board of Trade shall, if satisfied that the provisions of the fourth part of this Act have been complied with, cause a certificate in duplicate to be prepared and issued, to the effect that the provisions of the law with respect to the survey of the ship and the transmission of declarations in respect thereof have been complied with; and such certificate shall state the limits (if any) beyond which, according to the declaration of the surveyors, such ship is not fit to ply, and shall also contain a statement of the number of passengers which, according to the declaration of the shipwright surveyor, such ship is fit to carry, distinguishing (if necessary) between the respective numbers to be carried on the deck and in the cabins and in different parts of the deck and cabins, such number to be subject to such conditions and variations according to the time of year, the nature of the voyage, the cargo carried, and other circumstances, as the case requires. (Sec. 312.)

**Issue and Transmission of Certificates.**—The Board of Trade shall transmit such duplicate certificate to the shipping master or to some other public officer at such port as the owner may mention for the purpose, or at the port where the owner or his agent resides or where the ship was surveyed and is for the time being lying, and shall cause notice of such transmission to be given by post or otherwise to the master or owner or his agent; and the said shipping master or officer shall deliver such duplicate certificate to the said owner, master, or agent, on his applying and paying the fees and other sums (if any) herein mentioned as payable in that behalf; and in proving the due issue and transmission to the owner, agent, or master of such certificate, it shall be sufficient to show that the same has been duly received by such shipping master or public officer as aforesaid, and that due notice of the transmission thereof to such shipping master or officer has been given to such owner, master, or agent. (Sec. 313.)

**Fees to be paid for Certificates.**—The owner of every passenger steamer requiring a certificate under this Act shall pay for every certificate granted by the Board of Trade such fees as such Board directs, not exceeding the fees undermentioned:—

For steamers not exceeding 100 tons . . . . . 4*l.*

For steamers exceeding 100 and not exceeding 500 tons . . . . . 5

For steamers exceeding 500 and not exceeding 600 tons . . . . . 4

And for every additional 500 tons an additional . . . . . 1

(Sec. 314.)

**How long Certificates to continue in force.**—No such certificate shall be held to be in force for the

purpose of this Act beyond the date fixed by the Board of Trade for the expiration thereof; and no certificate shall be in force after notice is given by the Board of Trade to the owner, agent, or master of the ship to which the same relates, that such board has cancelled or revoked the same; provided, that if any passenger steamer is absent from the United Kingdom at the time when her certificate expires, no penalty shall be incurred for the want of a certificate until she first begins to ply with passengers after her next subsequent return to the United Kingdom; and the Board of Trade may require any certificate which has expired, or has been revoked or cancelled, to be delivered up as it directs; and any owner or master who, without reasonable cause, neglects or refuses to comply with such requirement, shall incur a penalty not exceeding 10*l.* (Sec. 315.)

**Board of Trade may cancel Certificates.**—The Board of Trade may revoke and cancel such certificates in any case in which it has reason to believe,

1. That the declarations of the sufficiency and good condition of the hull, equipments, and machinery of any passenger steamer, or either of them, have been fraudulently or erroneously made; or,

2. That such certificate has otherwise been issued upon false or erroneous information; or,

3. That since the making of such declarations the hull, equipments, or machinery of such ship have sustained any injury, or are otherwise insufficient.

And in every such case the Board of Trade may, if it think fit, require the owner to have the hull, equipments, or machinery of such ship again surveyed, and to transmit a further declaration or declarations of the sufficiency and good condition thereof, before re-issuing any certificate or granting a fresh one in lieu thereof. (Sec. 316.)

**Copy of Certificate to be placed in conspicuous Part of Ship.**—The owner or master of every passenger steamer shall forthwith, on the transmission of any such certificate as aforesaid to him or his agent, cause one of the duplicates thereof so transmitted to be put up in some conspicuous part of the ship, so as to be visible to all persons on board the same, and shall cause it to be continued so put up so long as such certificate remains in force and such ship is in use; and in default, such owner or master shall for every offence incur a penalty not exceeding 10*l.* (Sec. 317.)

**Ship not to proceed on her Voyage without Certificate.**—It shall not be lawful for any passenger steamer to proceed to sea or upon any voyage or excursion with any passengers on board, unless the owner thereof has transmitted to the Board of Trade the declarations before required, nor unless the owner or master thereof has received from such board such a certificate as is before provided for, such certificate being a certificate applicable to the voyage or excursion on which such ship is about to proceed; and no officer of customs shall grant any clearance or transire for any passenger steamer unless upon the production of such certificate; and if any passenger steamer attempts to ply or go to sea without such production, any such officer may detain her until such certificate is produced; and if any passenger steamer plies or goes to sea with any passengers on board, without having one of the duplicates of such certificate as aforesaid (being a certificate then in force, and applicable as aforesaid) so put up as aforesaid in some conspicuous part of the ship, the owner thereof shall for such offence incur a penalty not exceeding 100*l.*, and the master of such ship

shall also incur a further penalty not exceeding 20*l.* (Sec. 318.)

**Penalty for carrying Passengers in Excess of Numbers specified in Certificate.**—If the owner or master or other person in charge of any passenger steamer receives on board thereof, or if such ship has on board, any number of passengers which having regard to the time, occasion, and circumstances of the case, is greater than the number of passengers allowed by the certificate, the owner or master shall incur a penalty not exceeding 2*l.*, and also an additional penalty not exceeding 1*l.* for every passenger over and above the number allowed by the certificate, or, if the fare of any of the passengers on board exceeds 5*s.*, not exceeding double the amount of the fares of all the passengers who are over and above the number so allowed as aforesaid, such fares to be estimated at the highest rate payable by any passenger on board. (Sec. 319.)

**Forgery of Declaration or Certificate a Misdemeanor.**—Every person who knowingly and willfully makes or assists in making or procures to be made a false or fraudulent declaration or certificate with respect to any passenger steamer requiring a certificate under the fourth part of this Act, or who forges, assists in forging, or procures to be forged, fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any declaration or certificate required by the fourth part of this Act, or any words or figures in any such declaration or certificate, or any signature thereto, shall be deemed guilty of a misdemeanor. (Sec. 320.)

**Surveyors to make Returns of the build and other Particulars of Steam Ships &c.**—The said surveyors shall from time to time make such returns to the Board of Trade as it requires with respect to the build, dimensions, draught, bunkers, rate of sailing, room for fuel, and the nature and particulars of machinery and equipments of the ship surveyed by them; and every owner, master, and engineer of any such ship, shall, on demand, give to such surveyors all such information and assistance within his power as they require for the purpose of such returns; and every such owner, master, or engineer who, on being applied to for that purpose, willfully refuses or neglects to give such information or assistance, shall be liable to a penalty not exceeding 5*l.* (Sec. 321.)

**Penalties on Persons forcing Way on Board, or refusing to quit the Ship.**—The following offenders, viz.:

1. Any person who, after having been refused admission into any steamer by the owner or person in charge thereof or by any person in the employ of the owner, on account of such steamer being full, and after having had the full amount of his fare (if he has paid the same) returned or tendered to him, nevertheless persists in attempting to enter the same; and

2. Any person, having got on board any steamer, who, upon being requested on the like account by the owner or person in charge thereof or by any person in the employ of the owner to leave such steamer before the same has quitted the place at which such person got on board, and upon having the full amount of his fare (if he has paid the same) returned or tendered to him, refuses to comply with such request; Shall for each such offence incur a penalty not exceeding 40*s.*, to be paid to the said owner. (Sec. 322.)

**Penalty for avoiding Payment of Fares.**—The following offenders, viz.:

1. Any person who travels or attempts to travel in any passenger steamer which has been

ther penalty not exceeding 20*l*.

**Carrying Passengers in Excess of a Certificate.**—If the owner or person in charge of any passenger board thereof, or if such ship, number of passengers which, the time, occasion, and circumstances is greater than the number of by the certificate, the owner or a penalty not exceeding 20*l*. or over and above the number certificate, or if the fare of any on board exceeds 5*s*., not exceed amount of the fares of all the passenger and above the number so 2*l*., such fares to be estimated as payable by any passenger on board.

**Declaration or Certificate a Misdeed.**—Any person who knowingly and wilfully assists in making or procures to be made a false declaration or certificate on any passenger steamer requiring a (the fourth part of this Act, or is in forging, or procures to be forged, or assists in fraudulently altering, or procures to be fraudulently altered, any certificate required by the fourth part of this Act, or any words or figures in any certificate, or any signature, or is deemed guilty of a misdemeanour.

**Make Returns of the build and other particulars of Steam Ships &c.**—The said returns shall be made at such times as the Board of Trade as it requires with respect to the dimensions, draught, burden, rate of consumption of fuel, and the nature and quantity of the machinery and equipments of the ship; and every owner, master, and person in charge of such ship, shall, on demand, give to the Board of Trade, or to any person appointed by the Board of Trade, all such information and assistance as they require for the purpose of making such returns; and every owner, master, or person who, on being applied to for such information, wilfully refuses or neglects to give the same, shall be liable to a penalty not exceeding 5*l*. (Sec. 321.)

**Persons forcing Way on Board, or on the Ship.**—The following offences,

1. Any person who, after having been refused admittance on board any steamship by the owner or person in charge thereof, or by any person in the employ of the owner, or by any person in the employ of any other steamship, enters on board of or by any person in the employ of such steamship, or attempts to do so, or to procure any other person to do so, or to procure any other person to attempt to do so, shall be liable to a penalty not exceeding 50*l*. (Sec. 322.)

2. Any person who, after having been refused admittance on board any steamship by the owner or person in charge thereof, or by any person in the employ of the owner, or by any person in the employ of any other steamship, enters on board of or by any person in the employ of such steamship, or attempts to do so, or to procure any other person to do so, or to procure any other person to attempt to do so, shall be liable to a penalty not exceeding 50*l*. (Sec. 322.)

**Provision to be entered in Official Log.**—In every case of collision, in which it is practicable so to do, the master shall immediately after the occurrence cause a statement thereof, and of the circumstances under which the same occurred, to be entered in the official log book (if any), such entry to be signed by the master, and also by the mate or one of the crew, and in default shall incur a penalty not exceeding 20*l*. (Sec. 328.)

**Provisions to prevent carrying dangerous Goods without due Notice.**—No person shall be

duly surveyed in conformity with the provisions of this Act, without having previously paid his fare, and with intent to avoid payment thereof; and

2. Any person who, having paid his fare for a certain distance, knowingly and wilfully proceeds in any such steamer beyond such distance, without previously paying the additional fare for the additional distance, and with intent to avoid payment thereof; and

3. Any person who knowingly and wilfully refuses or neglects, on arriving at the point to which he has paid his fare, to quit any such steamer; shall for every such offence incur a penalty not exceeding 5*s*., in addition to the fare payable by him, such penalty to be payable to the owner of such steamer. (Sec. 323.)

**Penalty on Persons refusing to give their Name and Address.**—Every person who, having committed any of the offences mentioned in the two last preceding sections or either of them, refuses, on application of the master of the ship or of any other person in the employ of the owner, to give his name and address, or who on such application gives a false name or address, shall incur a penalty not exceeding 20*l*., to be paid to the said owner. (Sec. 324.)

**Power to refuse or remove Passengers who are drunk or misconduct themselves.**—The master of any home trade passenger steamship may refuse to receive on board thereof any person who by reason of drunkenness or otherwise is in such a state, or misconducts himself in such a manner, as to cause annoyance to other passengers on board, or if such person is on board, may put him on shore at any convenient place; and no person so refused admittance or put on shore shall be entitled to the return of any fare he may have paid. (Sec. 325.)

**Accidents to Steam Ships to be reported to Board of Trade.**—Whenever any steamship has sustained or caused any accident occasioning loss of life, or any serious injury to any person, or has received any material damage affecting her seaworthiness or her efficiency either in her hull or in any part of her machinery, the owner or master shall, within 24 hours after the happening of such accident or damage, or as soon thereafter as possible, send to the Board of Trade, by letters signed by such owner or master, a report of such accident or damage, and of the probable occasion thereof, stating the name of the ship, the port to which she belongs, and the place where she is; and if such owner or master neglects so to do, he shall for such offence incur a penalty not exceeding 50*l*. (Sec. 326.)

**Notice to be given of apprehended Loss of Steam Ships.**—If the owner of any steamship have reason, owing to the nonappearance of such ship, or to any other circumstance, to apprehend that such ship has been wholly lost, he shall as soon as conveniently may send notice thereof in like manner to the Board of Trade, and if he neglects so to do within a reasonable time he shall for such offence incur a penalty not exceeding 50*l*. (Sec. 327.)

**Collisions to be entered in Official Log.**—In every case of collision, in which it is practicable so to do, the master shall immediately after the occurrence cause a statement thereof, and of the circumstances under which the same occurred, to be entered in the official log book (if any), such entry to be signed by the master, and also by the mate or one of the crew, and in default shall incur a penalty not exceeding 20*l*. (Sec. 328.)

**Provisions to prevent carrying dangerous Goods without due Notice.**—No person shall be

entitled to carry in any ship, or to require the master or owner of any ship to carry therein, any goods which, in the judgment of such master or owner, are of a dangerous nature; and if any person carries or sends by any ship any goods of a dangerous nature, without distinctly marking their nature on the outside of the package containing the same, or otherwise giving notice in writing to the master or owner at or before the time of carrying or sending the same to be shipped, he shall for every such offence incur a penalty not exceeding 100*l*., and the master or owner of any ship may refuse to take on board any parcel that he suspects to contain goods of a dangerous nature, and may require them to be opened to ascertain the fact. (Sec. 329.)

#### IV. SHIPPING OFFICES &c.

These were established by the 13 & 14 Vict. c. 93. Their object, as explained below, was to afford facilities for the engagement of seamen and apprentices; to keep an account of their names and characters; to see to their being on board when required; and generally to promote their interests and those of the masters. The following clauses of the Mercantile Shipping Act, the 17 & 18 Vict. c. 104, relate to this subject, viz.:

**Marine Boards to establish Shipping Offices.**—In every seaport in the United Kingdom, in which there is a Local Marine Board, such board shall establish a shipping office or shipping offices, and may for that purpose, subject as after mentioned, procure the requisite premises, and appoint and from time to time remove and re-appoint superintendents of such offices, to be called shipping masters, with any necessary deputies, clerks, and servants, and regulate the mode of conducting business at such offices, and shall have complete control over the same; and every act done by or before any deputy duly appointed shall have the same effect as if done by or before a shipping master. (Sec. 122.)

**Board of Trade to have partial Control over Shipping Offices.**—The sanction of the Board of Trade shall be necessary so far as regards the number of persons appointed by any Local Marine Board, and the amount of their salaries and wages and all other expenses; and the Board of Trade shall have the immediate control of such shipping offices, so far as regards the receipt and payment of money thereat; and all shipping masters, deputies, clerks, and servants appointed as aforesaid shall before entering upon their duties give such security (if any) for the due performance thereof as the Board of Trade requires; and if in any case the Board of Trade has reason to believe that any shipping master, deputy, clerk, or servant appointed by any Local Marine Board does not properly discharge his duties, the Board of Trade may cause the case to be investigated, and may, if it thinks fit so to do, remove him from his office, and may provide for the proper performance of his duties until another person is properly appointed in his place. (Sec. 123.)

**Business of such Offices Generally.**—It shall be the general business of shipping masters appointed as aforesaid—

To afford facilities for engaging seamen by keeping registries of their names and characters.

To superintend and facilitate their engagement and discharge in manner hereinafter mentioned.

To provide means for securing the presence on board at the proper times of men who are so engaged.

To facilitate the making of apprenticeships to the sea service.

To perform such other duties relating to merchant seamen and merchant ships as are hereby or may hereafter under the powers herein contained be committed to them. (Sec. 124.)

**Fees to be paid upon Engagements and Discharges.**—Such fees, not exceeding the sums specified in the annexed Table, as are from time to time fixed by the Board of Trade, shall be payable upon all engagements and discharges effected before shipping masters as after mentioned, and the Board of Trade shall cause scales of the fees payable for the time being to be prepared and to be conspicuously placed in the shipping offices; and all shipping masters, their deputies, clerks, and servants, may refuse to proceed with any engagement or discharge unless the fees payable thereon are first paid. (Sec. 125.)

**Fees to be charged for Matters transacted at Shipping Offices.**

1. Engagement of crews.

	£ s.		£ s.
Under 60 tons	0 4	500 to 600 tons	1 15
60 to 100 "	0 7	600 to 700 "	2 0
100 to 200 "	0 15	700 to 800 "	2 5
200 to 300 "	1 0	800 to 900 "	2 10
300 to 400 "	1 5	900 to 1,000 "	2 15
400 to 500 "	1 10	Above 1,000 "	3 0

And so on for ships of larger tonnage, adding for every 100 tons above 1,000, 5s.

2. Engagement of seamen separately.

2s. for each.

3. Discharge of crews.

	£ s.		£ s.
Under 60 tons	0 4	500 to 600 tons	1 15
60 to 100 "	0 7	600 to 700 "	2 0
100 to 200 "	0 15	700 to 800 "	2 5
200 to 300 "	1 0	800 to 900 "	2 10
300 to 400 "	1 5	900 to 1,000 "	2 15
400 to 500 "	1 10	Above 1,000 "	3 0

And so on for ships of larger tonnage, adding for every 100 tons above 1,000, 5s.

4. Discharge of seamen separately.

2s. for each.

**Masters to pay Fees, and to deduct Part from Wages.**—Every owner or master of a ship engaging or discharging any seaman or seamen in a shipping office or before a shipping master, shall pay to the shipping master the whole of the fees hereby made payable in respect of such engagement or discharge, and may, for the purpose of in part reimbursing himself, deduct in respect of each such engagement or discharge from the wages of all persons (except apprentices) so engaged or discharged, and retain any sums not exceeding the sums specified in the prefixed Table, provided that if in any cases the sums which the owner is so entitled to deduct exceed the amount of the fee payable by him, such excess shall be paid by him to the shipping master in addition to such fee. (Sec. 126.)

**Sums to be deducted from Wages by way of partial Repayment of Fees in preceding Table.**

1. In respect of engagements and discharges of crews, upon each engagement and each discharge. From wages of any mate, purser, engineer, surgeon, carpenter, or steward, 1s. 6d. From wages of all others except apprentices, 1s.

2. In respect of engagements and discharges of seamen separately, upon each engagement and each discharge, 1s.

**Penalty on Shipping Masters taking other Remuneration.**—Any shipping master, deputy shipping master, or any clerk or servant in any shipping office, who demands or receives any remuneration whatever, either directly or indirectly, for hiring or supplying any seaman for any merchant ship, excepting the lawful fees payable under this Act, shall for every such offence incur a penalty not exceeding 20l., and shall also be liable to be dismissed from his office by the Board of Trade. (Sec. 127.)

**Business of Shipping Offices may be transacted at Custom-houses.**—The Board of Trade may, with the consent of the Commissioners of Customs, direct that at any place in which no separate shipping office is established, the whole or any part of the business of the shipping office shall be conducted at the custom-house, and thereupon the same shall be there conducted accordingly; and in respect of such business such custom-house shall for all purposes be deemed to be a shipping office, and the officer of customs there to whom such business is committed shall for all purposes be deemed to be a shipping master within the meaning of this Act. (Sec. 128.)

**In London Sailors' Homes may be Shipping Offices.**—The Board of Trade may appoint any superintendent of or other person connected with any sailors' home in the port of London to be a shipping master, with any necessary deputies, clerks, and servants, and may appoint any officer in any such home to be a shipping officer; and all shipping masters and shipping officers so appointed shall be subject to the immediate control of the Board of Trade, and not of the Local Marine Board of the port. (Sec. 129.)

**Dispensation with Shipping Master's Superintendence.**—The Board of Trade may from time to time dispense with the transaction before a shipping master or in a shipping office of any matters required by this Act to be so transacted; and thereupon such matters shall, if otherwise duly transacted as required by law, be as valid as if transacted before a shipping master or in a shipping office. (Sec. 130.)

V. SHIPS' PAPERS.

The papers or documents required for the manifestation of the property of the ship and cargo &c. are of two sorts; viz. 1st, those required by the law of a particular country—as the certificate of registry, license, charterparty, bills of lading, bill of health &c.—(see these titles)—required by the law of England to be on board British ships; and, 2ndly, those required by the law of nations to be on board neutral ships, to vindicate their title to that character. Mr. Sergeant Marshall, following Hubner (*De la Saisie des Bâtimens neutres*, i. 241—252), has given the following description of the latter class of documents:—

1. *The Passport, Sea Brief, or Sea Letter.*—This is a permission from the neutral state to the captain or master of the ship to proceed on the voyage proposed, and usually contains his name and residence; the name, property, description, tonnage, and destination of the ship; the nature and quantity of the cargo, the place whence it comes, and its destination; with such other matters as the practice of the place requires. This document is indispensably necessary for the safety of every neutral ship. Hubner says that it was the only paper rigorously insisted on by the Baryat officers; by the production of which alone their friends were protected from insult.

2. *The Proofs of Property.*—These ought to show that the ship really belongs to the subjects of a neutral state. If she appear to either belligerent to have been built in the enemy's country, proof is generally required that she was purchased by the neutral before, or captured and legally condemned and sold to the neutral after, the declaration of war; and in the latter case the bill of sale, properly authenticated, ought to be produced. Hubner admits that these proofs are so essential to every neutral vessel, for the prevention of frauds, that such as sail without them have no reason to complain if they be interrupted in their voyages, and their neutrality disputed.

Shipping Offices may be transacted. The Board of Trade may, with the commissioners of Customs, direct in which no separate shipping office, the whole or any part of the shipping office shall be conducted, and thereupon the same shall be accordingly; and in respect to custom-house shall for all purposes be a shipping office, and there to whom such business is or all purposes be deemed to be within the meaning of this Act.

Shippers' Homes may be Shipping Office. The Board of Trade may appoint any other person connected with the port of London to be a deputy, and may appoint any other person to be a shipping office; and all shipping offices so appointed to the immediate control of the Board of the Local Marine Board (c. 129.)

Shipping Master's Superintendant. The Board of Trade may from time to time transact before a shipping office of any matters to be so transacted; and there shall, if otherwise duly transacted by law, be as valid as if transacted by the shipping master or in a shipping office.

#### SHIPPERS' PAPERS.

Documents required for the manifest of the ship and cargo: viz. 1st, those required by the particular country—as the certificate of clearance, charterparty, bills of lading, &c.—(see these titles)—required for England to be on board British ships; those required by the law of the board neutral ships, to vindicate that character. Mr. Serjeant Hulmer (*De la Saisides Billets* 241—252), has given the following of the latter class of documents:—*Port, Sea Brief, or Sea Letter*, issued from the neutral state to the owner of the ship to proceed on the coast, and usually contains his name, the name, property, description, destination of the ship; the nature and cargo, the place whence it comes, and with such other matters as the law requires. This document is necessary for the safety of every ship. Hulmer says that it was the only one insisted on by the Barbary corsairs, production of which alone protected from insult.

*Bill of Property*.—These ought to be really belongs to the subject. If she appear to either have been built in the enemy's country, she is generally required that she was neutral before, or captured and sold to the neutral state; or in the latter case, she is properly authenticated, ought to be admitted that these proofs are every neutral vessel, for the goods, that such as sail without them to complain if they be interrupted, and their neutrality disputed.

3. *The Muster Roll*.—This, which the French call *role d'équipage*, contains the names, ages, quality, place of residence, and, above all, the place of birth, of every person of the ship's company. This document is of great use in ascertaining a ship's neutrality. It must naturally excite a strong suspicion if the majority of the crew be found to consist of foreigners, still more if they be natives of the enemy's country. [SEAMEN.]

4. *The Charterparty*.—Where the ship is chartered, this instrument serves to authenticate many of the facts on which the truth of her neutrality must rest, and should therefore be always found on board chartered ships.

5. *The Bills of Lading*.—By these the captain acknowledges the receipt of the goods specified therein, and promises to deliver them to the consignee or his order. Of these there are usually several duplicates; one of which is kept by the captain, one by the shipper of the goods, and one transmitted to the consignee. This instrument being only the evidence of a private transaction between the owner of the goods and the captain, does not carry with it the same degree of authenticity as the charterparty.

6. *The Invoices*.—These contain the particulars and prices of each parcel of goods, with the amount of the freight, duties, and other charges thereon, which are usually transmitted from the shippers to their factors or consignees. These invoices prove by whom the goods were shipped, and to whom consigned. They carry with them, however, but little authenticity; being easily fabricated where fraud is intended.

7. *The Log Book, or Ship's Journal*.—This contains a minute account of the ship's course, with a short history of every occurrence during the voyage. If this be faithfully kept, it will throw great light on the question of neutrality; if it be in any respect fabricated, the fraud may in general be easily detected. [LOG, OFFICIAL.]

8. *The Bill of Health*.—This is a certificate, properly authenticated, that the ship comes from a place where no contagious distemper prevails; and that none of the crew, at the time of her departure, were infected with any such disorder. It is generally found on board ships coming from the Levant, or from the coast of Barbary, where the plague so frequently prevails.

A ship using false or simulated papers is liable to confiscation. (Marshall *On Insurance*, book i. c. 9. s. 6.) [STEAM VESSELS.]

SHOES (Dutch, schoenen; Fr. souliers; Ger. schuhe; Ital. scarpe; Russ. baschmaki; Span. zapatos). Articles of clothing that are universally worn, and require no description. The shoe manufacture is of great value and importance—much more so, indeed, than is generally supposed; for it ranks in the public estimation far below many branches to which it is really much superior in intrinsic value. This results from the circumstance of machinery being hardly introduced into the business, and from its being principally carried on either in petty workshops, or, as is the more usual practice, in the houses of the shoemakers. It is very extensively practised in the metropolis, where the best shoes are made; and is diffused over every part of the country. Northamptonshire and Staffordshire have attained to considerable distinction in the business, large quantities of shoes being made in them, partly for the supply of the metropolis and other large towns, where they are sold 'ready made,' and partly for exportation. Shoemaking (boot-making is always included) is the most extensively practised of all the common trades, next to millinery and dressmaking. By the census of 1861 no

fewer than 279,563 persons (238,090 males, and 41,473 females) were engaged in Great Britain in boot and shoemaking, exclusive of 90,970 shoemakers' wives. In London the business furnished employment to 42,691 persons, and in Northamptonshire to 17,237.

The estimate given in the art. LEATHER, of the value of the shoes annually manufactured in the United Kingdom is 16,000,000*l.*, so that the share of Great Britain may at present (1869) be safely estimated at above 13,000,000*l.* If we reckon the wages of the 279,563 persons employed in the business at 20*l.* a-year at an average (which, as young people and women are extensively employed, is probably not far from the mark), their total amount will be 5,591,260*l.*, to which has to be added the value of the leather and other materials.

Boots and shoes used formerly to be prohibited, but they are now admitted duty free. Of boots and shoes, we imported in 1867, chiefly from France, 282,953 pairs for women, 98,574 pairs for men, and 504 pairs for children, besides 75,324 pairs of boot fronts, the whole valued at 89,324*l.* The exports of boots and shoes in the six years ending with 1867 were in quantity and value as follows:—

Years	Quantities	Value
1862	5,375,747 pairs	1,677,559
1863	4,439,291 "	1,105,819
1864	4,819,629 "	1,181,421
1865	5,271,298 "	1,362,115
1866	5,549,618 "	998,888
1867	5,288,150 "	952,801

The chief consumers being our Australian and West Indian colonies and Brazil.

Massachusetts is the grand seat of the shoemaking business in the United States; and large quantities of shoes are annually shipped from Boston for New York and the Southern ports.

Though many, and some very ingenious, efforts have been made to manufacture shoes by the aid of machinery, they have hitherto had but little success. This will not appear surprising when it is considered that the size and shape of the feet differ extremely in different persons, and that, consequently, the articles to be produced are destitute of that sameness in their corresponding parts that is so essential in work produced by machinery. The latter has, however, been applied with considerable advantage to the manufacture of shoes or clogs with wooden soles; and it may also be applied, though with no great advantage, where fine work and accurate fitting are little cared for. On the whole, it would seem that the craft of St. Crispin is not very likely to be disturbed by those inventions that have so greatly changed so many other handicrafts. And the vast improvement in the shoes of modern times, compared with those used in antiquity, seems rather to result from the superiority of the leather, or material of which they are made, and the greater skill and dexterity of the workmen, than from the improvement of their tools.

SHUMAC or SUMAC: (Ger. schmack, sumack; Fr. sumac, roure, roux; Ital. sommacco; Span. zamaque; Russ. sumak). Common shumac (*Rhus coriaria*) is a shrub that grows naturally in Syria, Palestine, Hungary, Spain, and Portugal. That which is cultivated in Italy, and is improperly called *young fustic*, is the *Rhus Cotinus*. It is cultivated with great care: its shoots are cut down every year quite to the root; and, after being dried, they are chipped or reduced to powder by a mill, and thus prepared for the

purposes of dyeing and tanning. The shumac cultivated in the neighbourhood of Montpellier is called *rédout* or *roudo*. Shumac may be considered of good quality when its odour is strong, colour of a lively green, is well ground, and free from stalks. Italian shumac is used in dyeing a full high yellow, approaching to the orange, upon wool or cloth; but the colour is fugitive. Common shumac is useful for drab and dove colours in calico printing, and is also capable of dyeing black. (Baneroff *On Colours*, vol. ii, p. 100.)

Of 13,140 tons of shumac imported in 1867, no fewer than 11,404 were from Italy. In 1867 we re-exported 1,679 tons. The price of shumac varies from 11*l.* 15*s.* to 21*l.* per ton.

The duty of 1*s.* per ton on shumac was repealed in 1815.

**SIERRA LEONE.** An English settlement, near the mouth of the river of the same name, on the west coast of Africa, lat. 8° 30' N., long. 13° 18' W. There is a fixed light on the cape visible 15 miles off, and a small green light on the Government wharf erected in 1863.

*Objects of the Colony.*—This colony was founded partly as a commercial establishment, but more from motives of humanity. It was intended to consist principally of free blacks, who, being instructed in the Christian religion and in the arts of Europe, should become, as it were, a focus whence civilization might be diffused among the surrounding tribes. About 1,200 free negroes, who, having joined the royal standard in the American war, were obliged, at the termination of that contest, to take refuge in Nova Scotia, were conveyed thither in 1792: to these were afterwards added the Maroons from Jamaica; and, since the legal abolition of the slave trade, the negroes taken in the captured vessels, and liberated by the mixed commission courts, have been carried to the colony. The total population of the colony in 1856 amounted to 11,806, all black or coloured, with the exception of about 130 whites.

*Success of the Efforts to civilise the Blacks.*—Great efforts have been made to introduce order and industrious habits amongst these persons. We are sorry to be obliged to add, that these efforts, though prosecuted at an enormous expense of blood and treasure, have been signally unsuccessful. There is, no doubt, some discrepancy in the accounts of the progress made by the blacks. It is, however, sufficiently clear that it has been very inconsiderable, and we do not think that any other result could be rationally anticipated. Their laziness has been loudly complained of, but without reason. Men are not industrious without a motive; and most of those motives that stimulate all classes in colder climates to engage in laborious employments are unknown to the indolent inhabitants of this burning region, where clothing is of little importance, where sufficient supplies of food may be obtained with comparatively little exertion, and where more than half the necessaries and conveniences of Europeans would be positive incumbrances. And had it been otherwise, what progress could a colony be expected to make, into which there have been annually imported crowds of liberated negroes, most of whom are barbarians in the lowest stage of civilization?

*Influence of the Colony upon the illicit Slave Trade.*—As a means of checking the prevalence of the illicit slave trade, the establishment of a colony at Sierra Leone has been worse than useless. The trade is principally carried on with the countries round the Bight of Biafra and the Bight of Benin, many hundred miles distant from Sierra Leone; and the mortality in the captured

ships during their voyage to the latter is often very great. The truth is, that this traffic will never be effectually put down otherwise than by the great Powers declaring it to be piracy, and treating those engaged in it, wherever and by whomsoever they may be found, as sea robbers or pirates. Such a declaration would be quite conformable to the spirit of the declaration put forth by the Congress of Vienna in 1824. [SLAVE TRADE.] But the jealousies with respect to the right of visitation and search are so very great that it is exceedingly doubtful whether the maritime Powers will ever be brought to concur in any declaration of the kind now alluded to; unless, however, something of this sort be done, we apprehend there are but slender grounds for supposing that the trade will be speedily suppressed.

*Climate of Sierra Leone.*—The soil in the vicinity of Sierra Leone seems to be of indifferent fertility, and the climate is about the most destructive that can be imagined. The mortality among the Africans sent to it seems unusually great; and amongst the whites it is quite excessive. Much as we desire the improvement of the blacks, we protest against its being attempted by sending our countrymen to certain destruction in this most pestiferous of all pestiferous places. It would seem, too, that it is quite unnecessary, and that blacks may be employed to fill the official situations in the colony. But if otherwise, it should be unconditionally abandoned.

*Commerce of Sierra Leone and the West Coast of Africa.*—Commercially considered, Sierra Leone appears to quite as little advantage as in other points of view. We import from it teak wood, palm oil, ginger, and ground-nuts, with small quantities of camwood, ivory, hides, gum copal, and other articles; but their value is inconsiderable, not amounting to more than from 70,000*l.* to 80,000*l.* a-year. Palm oil is the great article of export from the west coast of Africa; and by far the largest portion of it is furnished by the coast to the west and south of the Rio Volta, many hundred miles from Sierra Leone. We doubt, indeed, whether the commerce with the latter will ever be of much importance. At all events, we hardly think that it can be expected materially to increase if it be conducted in the way in which it is affirmed that the intercourse with the liberated negroes is at present conducted. (Report on Colonial Possessions, 1851, p. 175.) If there be not some mistake or exaggeration in the statement now referred to, nothing can be conceived more disgraceful. Should it, however, be ascertained that an establishment is really required for the advantageous prosecution of the trade to Western Africa, it is abundantly obvious that it should be placed much farther to the south than Sierra Leone. The island of Fernando Po has been suggested for this purpose; but, after the dear-bought experience we have already had, it is to be hoped that nothing will be done with respect thereto without mature consideration.

In 1864 and 1866 the exports of palm oil from Sierra Leone to all parts amounted to 166,492 and 358,180 gallons. The exports of British produce to the colony consist principally of cottons, apparel, and haberdashery, arms and ammunition, and are but inconsiderable. In 1867 their value amounted to 225,653*l.*, but that was much above the average. The only manufacture that can be said to exist in the colony is the expression of the oil from the ground-nut by means of machinery. [NEXT, GROUND.]

*Expenses incurred on account of Sierra Leone.*—The pecuniary expense occasioned by this colony, and our unsuccessful efforts to suppress

Account of the Quantities and Values of the Principal Articles Imported into the United Kingdom from Sierra Leone in each of the 3 Years ending with 1867.

voyage to the latter is often truth is, that this traffic will put down otherwise than by declaring it to be piracy, and engaged in it, wherever and by many be found, as sea robbers or celebration would be quite credit of the declaration put forth of Vienna in 1824. [SIERRA LEONE.]

jealousies with respect to the and search are so very great, and doubtful whether the measure be brought to concur in any kind now alluded to; unless of this sort be done, we apprehend grounds for supposing to be speedily suppressed.

**Sierra Leone.**—The soil in the Leone seems to be of individual the climate is about the that can be imagined. The the Africans sent to it seems and amongst the whites it is. Much as we desire the improvements, we protest against its being our countrymen to certain is most pestiferous of all would seem, too, that it is quite that blacks may be employed to tations in the colony. But if ld be unconditionally abandoned.

**Sierra Leone and the West Coast** mercerally considered, Sierra Leone as little advantage as in other We import from it teak wood, and ground-nuts, with small wood, ivory, hides, gum copal, as; but their value is inconsidering to more than from 70,000, to Palm oil is the great article of west coast of Africa; and by far on of it is furnished by the coast south of the Rio Volta, many from Sierra Leone. We doubt, the commerce with the latter will importance. At all events, we at it can be expected materially be conducted in the way in which at the intercourse with the latter present conducted. (*Report on the Slave Trade*, 1851, p. 175.) If there be an exaggeration in the statement, nothing can be conceived more would it, however, be ascertained, is really required for the prosecution of the trade to Western indubitably obvious that it should be further to the south than Sierra land of Fernando Po has been this purpose; but, after the distance we have already had, it is to be being will be done with respect to consideration.

1866 the exports of palm oil from all parts amounted to 166,192 and The exports of British produce consist principally of cottons, apparel, arms and ammunition, and are able. In 1867 their value amounted that was much above the average. A fact that can be said to exist is the expression of the oil from by means of machinery. [NEXT.]

incurred on account of Sierra Leone. Every expense occasioned by this or unsuccessful efforts to suppress

the foreign slave trade, have been altogether enormous. Mr. Keith Douglas is reported to have stated in the House of Commons, so long ago as July 1831, that 'down to the year 1824 the civil expenses of Sierra Leone amounted to 2,268,000l.; and that the same expenses had amounted, from 1824 to 1830, to 1,082,000l. The naval expenses from 1807 to 1824 had been 1,630,000l. The payments to Spain and Portugal, to induce them to relinquish the slave trade, amounted to 1,230,000l. The expenses on account of captured slaves were 533,092l. The expenses incurred on account of the mixed commission courts were 198,000l. Altogether, this establishment had cost the country (even at that time) nearly 8,000,000l.' The expenditure on account of Sierra Leone in 1866 was 60,539l.

The prodigality of this expenditure is unmatched, except by its uselessness. It is doubtful whether it has prevented a single African from being dragged into slavery, or conferred the smallest real advantage on Africa. It, however, enabled the sovereigns of Spain and Portugal to turn their mercenary humanity to good account.

For further details with respect to Sierra Leone and the trade of Western Africa, see the *Report of the Select Committee of the House of Commons on the West Coast of Africa*, Sess. 1842, and the *Parliamentary Paper* for 1851, already referred to.

**SILK** (Lat. sericaria, from Seres, the supposed ancient name of the Chinese; Fr. soie; Ital. seta; Span. seda; Ger. seide). A fine glossy thread or filament, spun by various species of caterpillars or larve of the *Phalena* genus. Of these, the *Phalena atlas* produces the greatest quantity; but the *Phalena bombyx* is that commonly employed for this purpose in Europe. The silkworm, in its caterpillar stage, which may be considered as the first stage of its existence, after acquiring its full growth (about 3 inches in length), proceeds to enclose itself in an oval-shaped ball, or cocoon, which is formed by an exceedingly slender and long filament of fine yellow silk, emitted from the stomach of the insect preparatory to its assuming the shape of the chrysalis or moth. In this latter stage, after emancipating itself from its silken prison, it seeks its mate, which has undergone a similar transformation; and in two or three days afterwards, the female having deposited her eggs (from 300 to 500 in number), both insects terminate their existence. According to Réaumur, the *phalena* is not the only insect that affords this material—several species of the *aranea*, or spider, enclose their eggs in very fine silk.

**Raw Silk** is produced by the operation of winding off, at the same time, several of the balls or cocoons (which are immersed in hot water, to soften the natural gum on the filament) on a common reel, thereby forming one smooth, even thread.

When the skein is dry, it is taken from the reel and made up into hanks; but before it is fit for weaving, and in order to enable it to undergo the process of dyeing, without furring up or separating the fibres, it is converted into one of three forms; viz. *singles*, *tram*, or *organzine*.

*Singles* (a collective noun) is formed of one of the reeled threads, being twisted, in order to give it strength and firmness.

*Tram* is formed of 2 or more threads twisted together. In this state it is commonly used in weaving, as the *shoot* or *welt*.

*Thrown Silk* is formed of 2, 3, or more singles, according to the substance required, being twisted together in a contrary direction to that in which the singles of which it is composed are twisted. This process is termed organzining; and the silk so twisted, *organzine*. The art of throwing was originally confined to Italy, where it was kept a secret for a long period. Stow says it was known in this country since the 5th of Queen Elizabeth, 'when it was gained from the strangers;' and in that year (1562) the silk throwsters of the metropolis were united into a fellowship. They were incorporated in the year 1629; but the art continued to be very imperfect in England until 1719. (See post.)

1. *Historical sketch of the Manufacture.*—The art of rearing silkworms, of unravelling the threads spun by them, and manufacturing the latter into articles of dress and ornament, seems to have been first practised by the Chinese. Virgil is the earliest of the Roman writers who has been supposed to allude to the production of silk in China, and the terms he employs show how little was then known at Rome of the real nature of the article:—

Velleraque ut folia depectant tenuia Seres? (*Georg. lib. ii. lin. 121.*)

But it may be doubted whether Virgil do not, in this line, refer to cotton rather than silk. Pliny, however, has distinctly described the formation of silk by the *bombyx*. (*Hist. Nat. lib. xi. c. 17.*) It is uncertain when it first began to be introduced at Rome; but it was most probably in the age of Pompey and Julius Cæsar, the latter of whom displayed a profusion of silks in some of the magnificent theatrical spectacles with which he sought to conciliate and amuse the people. Owing principally, no doubt, to the great distance of China from Rome, and to the difficulties in the way of the intercourse with that country, which was carried on by land in caravans whose route lay through the Persian empire, and partly, perhaps, to the high price of silk in China, its cost, when it arrived at Rome, was very great; so much so, that a given weight of silk was sometimes sold for an equal weight of gold; at first it was only used by a few ladies eminent for their rank and opulence. In the beginning of the reign of Tiberius, a law was passed, 'ne vestis serica viros foedaret'—that no man should disgrace himself by

wearing a silken garment. (Tacit. *Annal.* lib. ii. c. 33.) But the profligate Heliogabalus despised this law, and was the first of the Roman emperors who wore a dress composed wholly of silk (*holosericum*). The example once set, the custom of wearing silk soon became general among the wealthy citizens of Rome, and throughout the provinces. According as the demand for the article increased, efforts were made to import larger quantities; and the price seems to have progressively declined from the reign of Aurelian. That this must have been the case is obvious from the statement of Ammianus Marcellinus, that silk was in his time (anno 370) very generally worn, even by the lowest classes. 'Sericum ad usum antehac nobilium, nunc etiam infimorum sine ulla discretionis proficiens.' (Lib. xviii. c. 6.)

Till the 6th century, China continued to draw considerable sums from the Roman empire in return for silk, now become indispensable to the Western World. About the year 550, two Persian monks, who had long resided in China and made themselves acquainted with the mode of rearing the silkworm, encouraged by the gifts and promises of Justinian, succeeded in carrying the eggs of the insect to Constantinople. Under their direction they were hatched and fed; they lived and laboured in a foreign climate; a sufficient number of butterflies was saved to propagate the race, and mulberry trees were planted to afford nourishment to the rising generations. A new and important branch of industry was thus established in Europe. Experience and reflection gradually corrected the errors of a new attempt; and the Sogdoite ambassadors acknowledged, in the succeeding reign, that the Romans were not inferior to the natives of China in the education of the insects, and the manufacture of silk. (Gibbon, *Decline and Fall*, vol. vii. p. 99.)

Greece, particularly the Peloponnesus, was early distinguished by the rearing of silkworms, and by the skill and success with which the inhabitants of Thebes, Corinth, and Argos carried on the manufacture. Until the 12th century Greece continued to be the only European country in which these arts were practised; but the force of Roger, king of Sicily, having, in 1147, sacked Corinth, Athens, and Thebes, carried off large numbers of the inhabitants to Palermo, who introduced the culture of the worm, and the manufacture of silk, into Sicily. From this island the arts spread into Italy; and Venice, Milan, Florence, Lucca &c. were soon after distinguished for their success in raising silkworms, and for the extent and beauty of their manufactures of silk. (Gibbon, vol. x. p. 110; *Biographie Universelle*, art. 'Roger II.')

The silk manufacture was introduced into France in 1480; Louis XI. having invited workmen from Italy, who established themselves in Tours. The manufacture was not begun at Lyons till about 1520; when Francis I., having got possession of Milan, prevailed on some artisans of the latter city to establish themselves, under his protection, in the former. Nearly at the same period the rearing of silkworms began to be successfully prosecuted in Provence, and other provinces of the south of France. Henry IV. rewarded such of the early manufacturers as had supported and pursued the trade for 12 years with patents of nobility.

*Silk Manufacture of England.*—The manufacture seems to have been introduced into England in the 15th century. Silk had, however, been used by persons of distinction two centuries previously. The manufacture does not appear to have made much progress till the age of Elizabeth; the tranquillity of whose long reign, and the in-

flux of Flemings, occasioned by the disturbances in the Low Countries, gave a powerful stimulus to the manufactures of England. The silk throwsters of the metropolis were united, as already observed, in a fellowship, in 1562; and were incorporated in 1629. Though retarded by the civil wars, the manufacture continued gradually to advance; and so flourishing had it become, that it is stated in a preamble to a statute passed in 1666 (13 & 14 Ch. II. c. 15), that there were at that time no fewer than 40,000 individuals engaged in the trade. And it is of importance to observe, that though the importation of French and other foreign silks was occasionally prohibited during the reigns of James I. and Charles I., the Protectorate, and the reign of Charles II., the prohibition was not strictly enforced; and, generally speaking, their importation was quite free.

A considerable stimulus, though not nearly so great as has been commonly supposed, was given to the English silk manufacture by the revocation of the Edict of Nantes, in 1685. Louis XIV. drove, by that disgraceful measure, several hundreds of thousands of his most industrious subjects to seek an asylum in foreign countries; of whom it is supposed about 50,000 came to England. Such of these refugees as had been engaged in the silk manufacture established themselves in Spitalfields, where they introduced several new branches of the art. When the refugees fled to England, foreign silks were freely admitted; and it appears from the Custom-house returns, that from 600,000*l.* to 700,000*l.* worth were annually imported in the period from 1685 to 1692, being the very period during which the British silk manufacture made the most rapid advances. But the manufacture was not long permitted to continue on this footing. In 1692, the refugees, who seem to have been quite as conversant with the arts of monopoly as with those either of spinning or weaving, obtained a patent, giving them an exclusive right to manufacture lustrings and à-la-modes, the silks then in greatest demand. This, however, was not enough to satisfy them; for, in 1697, Parliament passed an Act, in compliance with their solicitations, prohibiting the importation of all French and other European silk goods; and in 1701, the prohibition was extended to the silk goods of India and China.

These facts show the fallacy of the opinion, so generally entertained, that we owe the introduction and establishment of the silk manufacture to the prohibitive system. So far from this being the case, it is proved, by statements in numerous Acts of Parliament, and other authentic documents, that the silk manufacture had overcome all the difficulties incident to its first establishment, had been firmly rooted, and had become of great value and importance, long before it was subjected to the trammels of monopoly; that is, before the manufacturers were taught to trust more to fiscal regulations, and the exertions of custom-house officers, than to their skill and ingenuity, for the sale of their goods.

The year 1719 is an important epoch in the history of the British silk manufacture; a patent being then granted to Mr. (afterwards Sir Thomas) Lombe and his brother, for the exclusive property of the famous silk mill erected by them at Derby; for throwing silk, from models they had clandestinely obtained in Italy. At the expiration of the patent, Parliament refused the petition of Sir Thomas Lombe for its renewal; but granted him 14,000*l.* in consideration of the services he had rendered the country, in erecting a machine which, it was supposed, would very soon enable us to dispense wholly with the supplies of thrown silk

we had previously been in the habit of importing from Italy: but instead of being of any advantage, it is most certainly true that the establishment of throwing mills in England has proved one of the most formidable obstacles to the extension of the manufacture amongst us. These mills could not have been constructed unless oppressive duties had been laid on thrown or organzine silk; and the circumstance of their having been erected, and a large amount of capital vested in them, was successfully urged, for more than a century, as a conclusive reason for continuing the high duties.

From this period down to 1824 the history of the silk manufacture presents little more than complaints, on the part of the manufacturers, of the importation of foreign silks; of impotent efforts on the part of Parliament to exclude them; and of combinations and outrages on the part of the workmen. Among the multitude of Acts that were passed in reference to this manufacture, from 1637 to the era of Mr. Huskisson, we believe it would be exceedingly difficult to point out one that is bottomed on anything like sound principle, or that was productive of any but mischievous consequences. The French writers estimate the average exportation of silks from France to England, during the period from 1688 to 1741, at about 12,500,000 francs, or 500,000*l.* a-year. In 1763 attempts were made to check the prevalence of smuggling; and the silk mercers of the metropolis, to show their anxiety to forward the scheme, are said to have recalled their orders for foreign goods. It would seem, however, either that their patriotic ardour had very soon cooled, or they had been supplanted by others not quite so scrupulous: for it appears from a report of a committee of the Privy Council, appointed, in 1766, to enquire into the subject, that smuggling was then carried on to a greater extent than ever, and that 7,072 looms were out of employment. The same committee reported, that though the French were decidedly superior to us in some branches of the trade, we were quite equal, and even superior, to them in others; but instead of proposing, consistently with their report, to admit French silks on a reasonable duty, a measure which would have proved very advantageous to those branches of the manufacture in which we were superior, or nearly equal, to the French, without doing any material injury to the others, which were already in the most depressed condition, they recommended the continuance of the old system; substituting absolute prohibitions in the place of the prohibitory duties that formerly existed. Whatever immediate advantages the manufacturers might have reaped from this measure, the ultimate tendency of which could not fail of being most injurious, were effectually counterbalanced by the turbulent proceedings of the workmen, who succeeded, in 1773, in obtaining from the Legislature an Act which, by itself, was quite sufficient to have destroyed even a prosperous trade. This, which has been commonly called the Spitalfields Act, entitled the weavers of Middlesex to demand a fixed price for their labour, which should be settled by the magistrates; and while both masters and men were restricted from giving or receiving more or less than the fixed price, the manufacturers were liable to heavy penalties if they employed weavers out of the district. The monopoly which the manufacturers had hitherto enjoyed, though incomplete, had had sufficient influence to render inventions and discoveries of comparatively rare occurrence in the silk trade; but the Spitalfields Act extinguished every germ of improvement. Parliament, in its wisdom, having seen fit to enact that a manufacturer should be obliged to pay as

much for work done by the best machinery as if it were done by hand, it would have been folly to have thought of attempting anything new! It is not, however, to be denied that Macclesfield, Manchester, Norwich, Paisley &c. are under obligations to this Act. Had it extended to the whole kingdom, it would have totally extirpated the manufacture; but being confined to Middlesex, it gradually drove the most valuable branches from Spitalfields to places where the rate of wages was determined by the competition of the parties, on the principle of mutual interest and compromised advantage. After having done incalculable mischief, the Act was repealed in 1821. Had it continued down to the present day, it would not have left employment in the metropolis for a single silk weaver.

But, as the effects of this Act did not immediately manifest themselves, it was at first exceedingly popular. After 1785, however, the substitution of cottons in the place of silk gave a severe check to the manufacture, and the weavers then began to discover the real nature of the Spitalfields Act. Being interdicted from working at reduced wages, they were totally thrown out of employment; so that, in 1793, upwards of 4,000 Spitalfields looms were quite idle. In 1798 the trade began to revive, and continued to extend slowly till 1815 and 1816, when the Spitalfields weavers were again involved in sufferings far more extensive and severe than at any former period.

It appears from this brief sketch of the progress of the English silk trade, that from the year 1695 down to our own times it has been exposed to the most appalling vicissitudes. The reason is obvious. The monopoly enjoyed by the manufacturers, and the Spitalfields Act, effectually put a stop to all improvement; so that the manufacture continued stationary in England, while on the Continent it was rapidly advancing. Whenever, therefore, the markets were, either from the miscalculation of the manufacturers or a change of fashion, overloaded with silks, there were no means of disposing of the surplus profitably abroad, and the distress became extreme. Notwithstanding the unparalleled advances we had made in other departments of manufacturing industry, it was affirmed, in 1826, by the member for Coventry (Mr. Ellice), in his place in the House of Commons, 'that there were in that city 9,700 looms; 7,500 of which were in the hands of operative weavers, who applied their manual labour, as well as their machinery, to the manufacture of ribbons. These looms were, for the most part, of the *worst possible construction*; and it would scarcely be believed that the improved loom in France would, in a given time, produce five times as much ribbon as the common loom in England with the same manual labour. He could also state that there existed an improved manufacture in Germany, by which one man could make *forty-eight times as much velvet as could be made in an equal time by an English machine*. What chance was there that the English manufacturer could maintain such a competition?'

Perhaps these statements may have been somewhat exaggerated; but there can be no doubt of their substantial accuracy. Surely, however, no one believes that the inferiority of the machinery used by the English manufacturers was ascribable to anything except that the protection they enjoyed had made them indifferent to improvements. No one believes that the French or Germans are superior to the English in the construction of machines; on the contrary, their inferiority is admitted by themselves, and by

oned by the disturbances in

everybody else. That that spirit of invention which has effected such astonishing results in the cotton manufacture should have been so long wholly unknown in that of silk, is entirely to be ascribed to the fact of the former never having been the object of legislative protection. The cotton manufacturers were not bribed into the adoption of a routine system; they could not rest satisfied with mediocrity; but being compelled to put forth all their powers—to avail themselves of every resource of science and of art—they have, in a few years, raised the British cotton manufacture from a subordinate and trifling, to the very first place amongst the manufactures, not of this country only, but of the world.

*Change, in 1826, of the Monopoly System.*—At length, however, the impolicy of the system by which the silk manufacture had been so long depressed, became obvious to every intelligent individual. The principal manufacturers in and about London subscribed, in 1824, a petition to the House of Commons, in which they stated that 'this important manufacture, though recently considerably extended, is still depressed below its natural level, by laws which prevent it from attaining that degree of prosperity which, under more favourable circumstances, it would acquire.' Fortified by this authority, by the experience of 130 years, during which the prohibitive system had been allowed to paralysed the energies of the manufacturers, and by the sanction of Parliamentary committees, Mr. Huskisson moved, on March 8, 1824, that the prohibition of foreign silks should cease on July 5, 1826, and that they should then be admitted for importation on payment of a duty of 30 per cent. ad valorem. On this occasion Mr. Huskisson observed: 'The monopoly had produced, what monopoly was always sure to produce, an indifference with regard to improvement. That useful zeal which gives life to industry, which fosters ingenuity, and which in manufactures occasions unceasing efforts to produce the article in the most economical form, had been comparatively extinguished. To the prohibitive system it was to be ascribed, that in silk only, in the whole range of manufactures, we were left behind our neighbours. We have here a proof of that chilling and benumbing effect which is sure to be produced when no genius is called into action, and when we are rendered indifferent to exertion by the indolent security derived from restrictive regulations. I have not the slightest doubt that if the same system had been continued with respect to the cotton manufacture, it would have been at this moment as subordinate in amount to the woollen as it is junior in its introduction into the country.' (*Speeches*, vol. ii. p. 249.)

We have already alluded to the enormous duties imposed, in 1719, when Sir Thomas Lombe erected his throwing mill at Derby, on foreign organzine silk. These, though subsequently reduced, amounted, in 1824, to no less than 1*s.* 7½*d.* per lb. There was also, at the same time, a duty of 4*s.* per lb. on raw silk imported from Bengal, and of 5*s.* 7½*d.* per lb. on that imported from other places. Even had the manufacture been otherwise in a flourishing condition, such exorbitant duties on the raw material were enough to have destroyed it. Mr. Huskisson, therefore, proposed, by way of preparing the manufacturers for the approaching change of system, that the duty on foreign-thrown silk should be immediately reduced to 7*s.* 6*d.* (it was further reduced to 5*s.* in 1826), and the duty on raw silk to 3*d.* per lb. These proposals were all agreed to; and considerable reductions were at the same time

effected in the duties charged on most of the stuffs used in the manufacture.

It is to be regretted that Mr. Huskisson did not propose that the reduction of the duties on raw and thrown silk, and the legalised importation of foreign silks, should be simultaneous and immediate. During the interval that was allowed manufacturers to make preparations for the change, the French accumulated a large stock of goods to pour into our markets. To quiet the alarm occasioned by this circumstance, a singular device was fallen upon. The French had long been accustomed to manufacture their goods of a certain length; and, in the view of rendering their accumulated stock unfit for our markets, a law was passed in 1826, prohibiting the importation of any silks except such as were of entirely different lengths from those commonly manufactured by the French. No one can regret that this wretched trick, for it deserves no better name, entirely failed of its object. The French manufacturers immediately commenced, with redoubled zeal, the preparation of goods of the legitimate length, and the others, having become unsaleable at any thing like fair prices, were purchased up by the smugglers, and imported, almost entirely, into this country.

But no permanent injury arose from this circumstance; and, on the whole, the effect of the opening of the trade has been such as to justify all the anticipations which the advocates of the measure had formed of its success.

*Effects of the Change of 1826.*—We do not exaggerate, we only state the plain matter of fact, when we affirm that the silk manufacture down to 1826 made a more rapid progress after the abolition of the prohibitive system in 1826 than it had done during the preceding century. The former disparity in quality between goods of French and English make had been materially abated in most articles, while in some the superiority was on our side. The majority of our readers will, probably, be rather surprised to learn that the real or declared value of the silk goods of British manufacture exported to France in 1852 amounted to 257,537*l.*

But though a great step at the time, the change of system effected in 1826 was far from being sufficiently complete. The duty then imposed of 30 per cent. on the importation of foreign silks was, at least, double what it should have been. The expenses of smuggling silk goods into England may, speaking generally, be estimated at about 12 or 15 per cent.; so that the high duty, instead of excluding them, acted as a bounty on their importation through clandestine channels; and probably occasioned, by the temptation which it held out to gambling adventures, a larger quantity to be imported than if the duty had been more nearly proportioned to the expense of smuggling. We ventured to contend in a former edition that in 'the event of the duties being reduced to 12 or 15 per cent. ad valorem, the legitimate imports of foreign silk goods would be considerably increased, and their clandestine importation more than proportionally diminished; and the apparent protection given to the manufacture being reduced, a new stimulus would be applied to industry and invention.' We had predicted that, under such a system, in no very long time, perhaps not more than 5 or 6 years, our superiority over France in some important departments of the silk manufacture would be little less decided than in that of cotton.

It was not, however, to be supposed that all departments of the silk manufacture would be equally benefited by the change of system from prohibition to duties.—*Non omnia possunt.* The pro-

charged on most of the domestic manufacture. It is stated that Mr. Huskisson did not recommend the reduction of the duties on raw silk, and the legalised importation of silk should be simultaneous and immediate. The interval that was allowed for the preparation for the change, and the large stock of goods to be accumulated, to quiet the alarm of the manufacturers, a singular device. The French had long been manufacturing their goods of a certain quality, and in view of rendering their accounts for our markets, a law was passed prohibiting the importation of any goods as were of entirely different quality. These goods were commonly manufactured by one person, and one can regret that this wretched system has no better name, entirely deserving it. The French manufacturers, however, proceeded, with redoubled zeal, to improve the quality of the goods of the legitimate length; and having become unsaleable at any prices, were purchased up by the smugglers, almost entirely, into this

country. Injury arose from this circumstance, the whole, the effect of the opening of the market, has been such as to justify all the claims of the advocates of the measure.

**Change of 1826.**—We do not only state the plain matter of fact, but also the rapid progress after the abolition of the system in 1826 than it had done in the preceding century. The former difference between goods of French and British manufacture had been materially abated in most instances, and in some the superiority was on our side. We trust our readers will, probably, be desirous to learn that the real or declared value of the goods of British manufacture exported in 1852 amounted to 257,555*l.* a year, a great step at the time, the change effected in 1826 was far from being complete. The duty then imposed on the importation of foreign silks was such as to prevent it from being what it should have been. The smuggling of silk goods into England, and the consequent loss of revenue, generally, be estimated at about 1,000,000*l.* annually; so that the high duty, instead of acting as a bounty on their exportation through clandestine channels; and, instead of being a temptation which is a source of smuggling, a larger quantity of goods than if the duty had been more moderate, and the expense of smuggling, reduced, to contend in a former edition that the value of the duties being reduced to 12 per cent. on the value of the goods, the legitimate imports of goods would be considerably increased, and the illegitimate importation more than diminished; and the apparent protection afforded by the manufacture being reduced, a new duty should be applied to industry and industry had predicted that, under such a system, in a very long time, perhaps not more than 10 or 15 years, our superiority over France in the manufacture of the silk in the most important departments of the silk manufacture would be little less decided than in that

of the wool. It is, however, to be supposed that all the goods of the silk manufacture would be destroyed by the change of system from protection to free trade.—*Non omnia possumus.* The pro-

tection of the wool, placed on a proper footing, would be divided between the English and French. In point of substantial excellence, the plain silk goods manufactured in England are equal to those of France; and the difference in favour of the latter in point of finish has become less perceptible; while in all mixed manufactures, of silk and wool, silk and cotton, silk and linen &c., our ascendancy is admitted by the French themselves. On the other hand, the ribbons, figured gauzes, and light fancy goods, manufactured in France, are superior to those of this country. But even in this department we have made great progress; and fancy goods are now produced at Spitalfields, Coventry, and other places, contrasting most advantageously, in point of taste and beauty, with those produced previously to the introduction of the new system. Still, however, we are not sanguine in our expectations of our countrymen being able to maintain a successful competition with our neighbours in the manufacture of this class of articles. The greater attention paid to the art of designing in Lyons, the consequent better taste of the artists, and the superior brightness and lustre of their colours, give them advantages with which it will be very difficult to contend.

But supposing the trade to be partitioned between the two countries in the way now stated, it was easy to see that a large share would belong to us, and that that share would be more valuable than the whole manufacture formerly was. Proofs of the accuracy of these statements have since been supplied in abundance. Notwithstanding the decline of the trade at a few places, the manufacture, taken as a whole, greatly increased. During 1821, 1822, and 1823, when the restrictive system was in its vigour, the imports of all sorts of raw and thrown silk amounted at an average to 2,339,000 lb. a-year. But, despite the sinister predictions indulged in with respect to the ruin of the manufacture, the imports amounted, at an average of 1850, 1851, and 1852, to above 7,000,000 lb., and the consumption to above 6,000,000 lb.; being an increase of more than 250 per cent. upon the quantity consumed during the monopoly.

The manufacture of silk in France also materially improved, and a large increase took place in the value of the silks exported, which amounted in 1852 to about 280,000,000 fr., or about 11,200,000*l.* But it is satisfactory to know that we were able to make head against this formidable competitor, and that, while the value of the exports of our silk goods amounted in 1823, when the monopoly system was in full vigour, to only 351,409*l.*, it amounted in 1852 to 1,551,846*l.*, being an increase in the interval of nearly 500 per cent. In fact, we undersold the French in some of the heavier and more important species of goods in every market equally accessible to both parties. The value of our exports of silk goods to the United States amounted in 1852 to 461,500*l.*; and does anyone suppose that the Americans would have bought so largely of us, or that they would have bought anything at all, had the French or any other party been able to supply them on lower terms?

When we formerly ventured to recommend a reduction of the duty of 30 per cent. on silks, we were inclined to think that it might, perhaps, oblige some of the manufacturers of fine and fancy goods to relinquish their employment; and we endeavoured to show that that was not too great a sacrifice to incur to place the trade on a proper footing. Happily, however, no such sacrifice was required; and writing in 1853, we stated that there was no department of the manufacture in which we

had anything to fear, with the then existing duty, from the competition of the foreigner. Indeed, the fair presumption then was that the duties might be advantageously reduced.

No doubt, however, the improvement of the manufacture had at that time been considerably promoted by the total abolition of the duties on raw and thrown silk effected in 1845.

**State of the Silk Trade previously to 1826.**—Those unacquainted with the history of the silk trade, who may have looked into the pamphlets and speeches of those opposed to the alterations in 1825, will probably be disposed to think that, though more limited in point of numbers, the condition of the workmen engaged in the trade was better previously to 1825 than afterwards. But those who have looked, however cursorily, into the history of the trade, must know that such is not the fact; and that the situation of those engaged in it has been most materially improved since 1825. We have already adverted to the state of the trade in 1793 and 1816. At the last mentioned period, 7 years before any relaxation of the monopoly had been so much as thought of, the distress in the silk trade was infinitely more severe than it has ever been since the introduction of the new system. In proof of this, we may mention, that at a public meeting held for the relief of the Spitalfields weavers, at the Mansion House, on November 26, 1816, the secretary stated, that *two-thirds* of them were without employment, and without the means of support; that some had deserted their homes in despair, unable to endure the sight of their starving families; and many pined under languishing diseases brought on by the want of food and clothing.' And Sir Fowell Buxton stated, at the same meeting, that the distress among the silk manufacturers was so intense, that '*it partook of the nature of a pestilence, which spreads its contagion around, and devastates an entire district.*' Such was the state of the workmen under that monopoly system that has been the worthless theme of so much eulogy. But such, we are glad to say, is not their state at present. The trade, being no longer conducted under an artificial system, is comparatively secure against revulsions: it would, indeed, be an absurdity to imagine that measures that have about trebled the manufacture, should have been otherwise than supremely advantageous to the workmen.

We have already noticed the smuggling of foreign silks carried on in the early part and towards the middle of last century. The evil was not afterwards abated. The vigilance of the custom-house officer was no match for the ingenuity of the smuggler; and at the very moment when the most strenuous efforts were made to exclude them, the silks of France and Hin lostan were openly displayed in the drawing-rooms of St. James's, and in the House of Commons, in mockery of the impotent legislation which sought to exclude them. 'I have lately,' said Mr. Huskisson, in an able speech in vindication of his policy as to the silk trade, 'taken some pains to ascertain the quantity of smuggled silks that has been seized inland throughout the kingdom during the last 10 years; and I find that the whole does not exceed 5,000*l.* a-year. I have endeavoured, on the other hand, to get an account of the quantity of silk goods actually smuggled into this country. Any estimate of this quantity must be very vague; but I have been given to understand that the value of such goods as are regularly entered at the custom-houses of France, for exportation to this country, is from 100,000*l.* to 150,000*l.* a-year; and this, of course, is exclusive

of the far greater supply which is poured in throughout all the channels of smuggling, without being subjected to any entry. In fact, to such an extent is this illicit trade carried, that there is scarcely a haberdasher's shop in the smallest village of the United Kingdom, in which prohibited silks are not sold; and that in the face of duty, and to a very considerable extent.

The honourable member for Coventry (Mr. Ellice) has mentioned the silk goods from India as those against which anything but prohibition would prove an unavailing protection. Now, in my opinion, it is scarcely possible to conceive a stronger case than those very silks furnish against the honourable member's own argument. I believe it is universally known that a large quantity of Bandma handkerchiefs are sold every year, for exportation, by the East India Company. But does any gentleman suppose that these Bandmas are sent to the Continent for the purpose of remaining there? No such thing! They are sold at the company's sales, to the number of about 800,000 or 1,000,000 a year, at about 4s. each; they are immediately shipped off for Hamburg, Antwerp, Rotterdam, Ostend, or Guernsey, and thence they nearly all illicitly find their way back to this country.

Mark, then, the effect of this beautiful system. These Bandmas, which had previously been sold for exportation at 4s., are finally distributed in retail to the people of England at about 8s. each:

and the result of this prohibition is to levy on the consumer a tax, and to give those who live evading your law a bounty of 4s. upon each handkerchief sold in this country.' (*Speeches*, vol. p. 510.)

This, no doubt, was all very true and striking. But had Mr. Huskisson been in the House of Commons in 1844, he might have nearly the same language. He scolded, but he did not kill the snake. The 30 per cent. ad valorem duty which he established, was but little less productive of smuggling than the prohibition which he repealed: and being about double the expense of the clandestine importation of foreign silks, gave rise within the port of London, and, indeed, within the very walls of the custom-house, to a system of fraud ruinous alike to the interests of the revenue and of the honest dealers. The abuse continued till 1845, when Sir Robert Peel reduced the duty to 15 per cent. ad valorem. And while this liberal measure went far to suppress smuggling, and to place all classes of dealers on the footing, it did not materially increase the import of silk goods. In 1860 the duties on foreign silk of every kind were abolished by Mr. Gladstone.

Since the repeal in 1845 of the duties on raw and thrown silk, it is no longer possible to give any account of the exact quantities admitted for consumption. But they may, notwithstanding, be learned with sufficient precision for every practical purpose from the following statements.

I.—Account, illustrative of the Progress of the Silk Manufacture, showing the Quantities of Raw, Waste, and Thrown Silk Imported at different Periods. (*Report of 1832 on Silk Trade*, p. 10, and later *Parl. Papers*.)

Average Imports	Raw	Waste	Thrown	Total
	lb.	lb.	lb.	lb.
1765, 1766, 1767, being the commencement of the absolute prohibition	552,000	..	365,000	917,000
1785, 1786, 1787	551,000	..	357,000	908,000
1801 to 1812	760,000	..	550,000	1,310,000
1815, 1816, 1817, being fifty years after prohibition, and the first 3 years of peace	1,095,000	27,000	893,000	1,915,000
1821, 1822, 1823, being the years immediately previous to the abolition of the prohibition	1,070,000	74,000	555,000	1,699,000
1831, 1832, 1833	3,157,371	608,269	245,270	3,990,910
1839, 1840, 1841	5,518,076	1,055,737	267,085	6,840,908
1850, 1851, 1852	5,127,265	1,605,101	497,156	7,229,522
1861, 1862, 1863, subsequent to the abolition of the duties	9,451,649	3,319,136	82,061	12,852,846
1865, 1866, 1867	6,519,300	5,128,733	107,722	11,755,755

II.—Account of the Quantities of Raw, Waste, and Thrown Silk entered for Consumption in the undermentioned years between 1815 and 1841, with the Total Amount of Duty received on the same. (*Parl. Paper*, No. 296, Sess. 1842.)

Years	Raw	Waste	Thrown	Total of all Sorts	Duty received
	lb.	lb.	lb.	lb.	£ s. d.
1815	1,069,596	27,971	377,822	1,475,389	516,027 12 11
1820	1,622,299	94,863	509,953	2,047,115	611,378 13 7
1825	2,208,506	105,910	659,612	2,974,028	846,150 19 2
1830	3,711,069	485,015	136,535	4,693,619	1,391,011 5 3
1835	4,131,008	1,398,872	254,578	5,784,458	1,620,011 3 3

China raw	102	Italian	290
thrown	112	Persian (ballot)	75
Canton	110		

The silk exported from China consists of two leading varieties, known in commerce by the names of Canton and Nanking. The first, which is raised principally in the province of Canton, is divided into five sorts. The Nanking silk, produced in the province of Kiangnan, is divided into two sorts, known in commerce by the names of Tsatlee and Tsyssnam. It is very superior to the other, and usually fetches more than double its price. It is wholly imported from Shanghai.

The chief ports for the export of Chinese silks are Shanghai and Canton. Thus the exports of raw silk in 1866 were, from Shanghai, 21,329 bales, valued at 10,331,750 taels; and from Canton, 14,339 bales, valued at 5,670,701 taels. The silk grower looks to the home market for fixing the value of his produce, and prices range according as that demand is active or dull, little or no effect being produced by the foreign exportation, except among speculative holders at the ports.

East India native silk comes almost wholly from Bengal and Pegu. About the year 1760, the East India Company introduced the Italian mode of reeling silk, which was productive of a very great improvement in the quality of the article; but we are not aware that any subsequent improvement has been effected. The silk goods brought from India are not only inferior, in point of quality, to those of Europe, but also to those of China. The total value of the exports of raw silk from British India by sea, in 1866, was 745,345*l.*, and of silk goods 88,289*l.*, both, however, being considerably below the average of the previous 3 years. As will be seen from the foregoing statement, Egypt supplies more than a half of our whole supplies of raw silk.

Turkey silk wholly consisted some years back of what is termed long reel and short reel bratia, a rather coarse description, suited to few buyers, and chiefly used in the ribbon trade of Coventry; but of late it has been imported of a very far superior texture and quality, coming successfully into competition with Italian and China silk. The qualities now known as bratias may be classed as follows; viz. long reel bratia, short reel bratia long reel Mestup (being a finer thread than common bratia), short reel Mestup Seli (a finer sort, generally in loose skeins), Demirdask (a superior kind).

The plains of Brusa (the seat of the silk trade in Asia Minor), and the adjacent villages, produce different qualities, varying considerably in size, colour, and quality. The village of Demirdask produces the finest, owing to the care taken by the natives in selecting the best cocoons, and attending carefully to the evenness of the thread throughout the process of reeling; consequently this description commands a high price, and is approved by our throwsters.

The water of this place is considered favourable to the brightness and glossiness of the silk, by which it may be distinguished from that of Brusa. The silk at Brusa is taken by the country people in small parcels to the behestar or customs, where it pays duty. The proprietor with a broker then takes it to the silk bazaar, where it is handed round to the different stands and sold to the highest bidder, resembling, in this respect, the mode of selling the ores in Cornwall to the different smelters.

A person buying assortments as well as he can the different qualities for packing. It is generally bought by speculators for the Constantinople market, and is forwarded to Ghimelick on camels for shipment per steamers to Constantinople, where it finds its way to the Mizan or some broker's rooms, to be sold to the different merchants. The finest longes are mostly bought for the French and Russian markets, generally the latter. The long reels are going out of use in this country, as the more modern machinery is not adapted to its use.

The Persian silk crop of 1863-4 is stated by Mr. Abbot to have yielded 1,129,536 lb., valued at 731,138*l.* Average price per lb. 12*s.* to 1*s.* best quality 18*s.* Of this produce 400,000 lb. were shipped to Great Britain, 30,000 lb. to France, and 141,600 lb. to Russia.

By far the greater part of the raw and thrown silk that comes to us from France is not the growth of that country, but of Italy. The Italian silk crop of 1867, which (ex. Venetia) yielded about 812,492 myriagrammes or 159,848 cwt., showed an increase of over 6 per cent. beyond the average annual produce during the 11 years since 1857, when the disease of the silkworm first appeared. (*Report of Mr. Consul Colmaghi of January 6, 1868.* See also *Report of April 1868*, by Mr. Secretary of Legation Herries on *The Industrial Condition of Italy*.) The produce of cocoons in France declined from 24,250,000 kilos in 1852 to 4,000,000 in 1865. Though silk, or material having silk for a component part, was never in more general use than at present, no manufacture used for dress is more liable than this to suffer in one or more of its branches from the sudden caprices of fashion. If there be a run upon ribbon, probably down goes lace, and vice versa. The old seats of the manufacture, too, are apparently subject to serious mutations of fortune. Thus the Lyons silk weavers have experienced a sad decline of prosperity since 1856; the produce of their trade in that year, as compared with 1855, being as 74 to 11 (*Times of October 24, 1866*, on the authority of the *Salut Public of Lyons*). On the other hand, the manufacture seems to thrive steadily both in Switzerland (especially in and near Zurich) and in the Rhenish provinces of Prussia.

The following table of the prices of silk is extracted from the very comprehensive circular of Jan. 7, 1869, issued by Messrs. T. & H. Little-dale of Liverpool, to which we have been indebted also for information regarding the crops and prices of sugar &c.

SILVER (Ger. silber; Dutch, zilver; Dan. solv; Swed. silver; Fr. argent; Ital. argento; Span. plata; Port. prata; Russ. серебро; Pol. srebro; Lat. argentum; Gr. ἄργυρος; Arab. faz-zeh). A metal of a fine white colour, without either taste or smell; being in point of brilliancy inferior to none of the metallic bodies, if we except polished steel. It is softer than copper; but harder than gold. When melted its specific gravity is 10.474; when hammered, 10.51. In malleability, it is inferior to none of the metals, if we except gold. It may be beaten out into leaves only  $\frac{1}{1000}$  of an inch thick. Its ductility is equally remarkable; it may be drawn out into wire much finer than a human hair; so fine, indeed, that a single grain of silver may be extended about 400 feet in length. Its tenacity is such, that a wire of silver  $\frac{1}{100}$  inch in diameter is capable of supporting a weight of 187.13 lb. without breaking. Silver is easily alloyed with copper by fusion. The compound is harder and more sonorous than silver, and retains its white colour even when the proportion of copper exceeds  $\frac{1}{2}$ . The hardness is at a maximum when the copper amounts to one-fifth of the silver. The standard or sterling silver of Britain, of which coin is made, is a compound of 124 parts silver and 1 copper. Its specific gravity is 10.2. The specific gravity of Fine standard silver, composed of 137 parts silver and 7 copper, is 10.175. The French silver coin during the old Government was not nearly so fine, being composed of 261 parts silver and 27 copper, or  $\frac{261}{288}$  parts silver to 1 part copper. The Austrian silver coin contains  $\frac{13}{288}$  of copper. The silver coin of the ancients was nearly pure, and appears not to have been mixed with alloy. Besides being used as coin, or money, silver is extensively employed in the arts. The value of the silver plate annually manufactured is very considerable. Large quantities are also used in plating.

The most productive silver mines are in America, particularly in Mexico, Peru, and California. There are also silver mines in Hungary, Saxony, Spain, Norway, and other parts of Europe, and in Asiatic Russia. In 1867 we exported, exclusive

of bullion, 3,391 tons of silver ore, chiefly from Chill, valued at 165,887. [*PRECIOUS METALS.*] And we have already seen [*LEAD*] that considerable quantities of silver have been obtained in this country by the refining of lead. In proof of this, we subjoin the following statement of the silver produced from ores raised in the United Kingdom during each of the 4 years ending with 1867. (*Hunt's Mining Records for 1868 &c.*)

	1864	1865	1866	1867

SINGAPORE is one of several British dependencies, called the STRAITS SETTLEMENTS. These are situated in the Straits of Malacca, and comprise Singapore, Penang, otherwise called Prince of Wales' Island, and Malacca, all formerly under the government of the East India Company. These possessions came under British rule at different periods, but were in 1826 united into one government, under an officer with the title of Governor of Prince of Wales' Island, Singapore, and Malacca, and for some years afterwards ranked as an Indian presidency. In 1850 the presidency was abolished, when the incorporated settlements became subordinate to Bengal, but were subsequently placed in direct correspondence with the Supreme Government of India. In November 1858, when the government of the East India Company was abolished, these settlements, in common with all the other territories belonging to it, came under the dominion of the Crown, but were still administered by the Government of India. The inhabitants, however, having previously petitioned Parliament that the settlements in the Straits should be formed into a direct dependency of the Crown, and this having been acceded to, they were, in April 1867, transferred to the Colonial Office, and now form the colony of the Straits Settlements, under a governor commissioned by her Majesty. This change brought along with it the power of making laws for the colony, subject to confirmation by the Crown, and led to the introduction of the usual machinery for that purpose, in the shape of a legislative council, presided over by the governor. This officer has his residence in Singapore, with a lieutenant-governor under him at each of the other stations. We shall now proceed to give some account of the three places separately, and begin with Singapore, which in its commercial relations is indisputably the most interesting and important of them.

Singapore is an island at the south-eastern extremity of the Straits of Malacca, the town being in lat. 1° 17' 22" N., and in long. 103° 50' 47" E., and about 30 miles distant from the most southerly point of the Asiatic continent. It is of an elliptical form, about 25 miles in its greatest length, and 14 in breadth, containing an estimated area of 206 square miles. But the British settlement embraces a circumference of 120 miles, in which are included about 75 islets, with here and there a scattered seafaring population, and the seas and straits within 10 miles of the principal island. The latter is separated from the mainland by a strait of the same name, of small breadth throughout, and less than half a mile wide in its narrowest part, which, in the early period of European navigation, was the thoroughfare between India and China. But the grand commercial highway

between the eastern and western parts of maritime Asia now passes along the south side of the island on which the town is built, between it and a chain of islands about 12 miles distant; the safest and most convenient channel being so near to Singapore that ships in passing and repassing come close to the roads. Singapore has been from its foundation a free port, in the widest sense of the term, open to the flags of every nation, and without either import or export duties on goods, the only import being a trivial charge on ships, towards the maintenance of the lighthouses on the eastern and western approaches to the roadsteads. To this circumstance, combined with the manifold advantages of its position, and the absence up to this time of all vexatious or troublesome regulations, the settlement is indebted for its rapid rise to a commercial prosperity which is without example in the eastern seas, and has caused its progress to be likened rather to that of an American than an Asiatic settlement. It has thus become an entrepôt in which are brought together and exchanged the products and manufactures of the western world, of India, Cochinchina, Siam, the Malayan peninsula, and of the whole wide region of the Eastern Archipelago from its western limits in Sumatra, to the meridian of New Guinea and the Philippines. The commercial part of the town occupies a site on the western bank of a river, or rather salt-water creek, and on its southern side faces the sea, the creek being navigable for a considerable distance from its entrance, so as to admit of lighters discharging their cargoes on the quay in front of the warehouses. Besides the Raffles light on Coney Islet in the Strait of Singapore, there has been, since 1855, a fixed light on Fort Canning (1° 16' 15" N. lat., 103° 50' 57" E. long.), seen for 15 miles in clear weather, and visible from St. John's Island to Johore shoo. There are also 2 other lights belonging to the Straits Settlements, one on Cape Ruchada, and another on St. Paul Hill, Malacca, the former visible for 25 and the latter for 12 miles. Ships lie in the roads or open harbour, those of the largest finding secure anchorage at a distance of two miles from the town, while those of inferior size approach within a mile of it, or even less, the smaller craft lying close to the shore. The assistance of a number of convenient lighters, which are always in readiness, enables them to load and unload with scarcely any interruptions throughout the year, the anchorage ground, open as it is, being never troubled by storms. Of late years, moreover, means have been in progress by which the facilities for discharging and unloading ships have been largely added to, and will be still further increased. Besides the open roadstead already spoken of, the port includes an inner harbour, to which the name of *New Harbour* has long been given, and which lies a few miles to the westward of the town, formed by the mainland of Singapore itself, and a chain of islets facing its southern shore. Here considerable lines of wharfage have already been constructed, admitting of vessels of the largest burden being received alongside, while more extensive works of a similar kind are understood to be in contemplation in the same locality. The premises of the Peninsular and Oriental Company, of the Messageries Impériales Company, the Patent Ship and Dock Company, the Borneo Company (limited), the Tanjong Paggar Company (limited), and of other important establishments, are all situated on the shores of *New Harbour*, and a railway, of which the length will not exceed 3½ miles, has been projected, to connect the whole with the town, and with which a line of telegraph already com-

silver; Dutch, silver; Dan. silver; Fr. argent; Ital. argento; Port. prata; Russ. серебро; Pol. srebro; Gr. ἄργυρος; Arab. فضة of a fine white colour, without smell; being in point of hardness to none of the metallic bodies, polished steel. It is softer than gold than gold. When melted it is 10-174; when hammered, 105, it is inferior to none of the except gold. It may be beaten out of an inch thick. Its malleability is remarkable; it may be drawn much finer than a human hair; so that a single grain of silver may be 400 feet in length. Its tenacity is such that a wire of silver 0.078 inch in diameter will support a weight of 100 lbs without breaking. Silver is harder and more sonorous than copper by fusion. The hardness increases as its white colour even when the copper exceeds 5. The hardness increases when the copper amounts to 10. The standard or sterling silver which coin is made, is a compound of silver and 1 copper. Its specific gravity is 10.47. The specific gravity of Paris gold is composed of 137 parts silver and 175. The French silver coin diameter is not nearly so fine, being 61 parts silver and 27 copper, or 2 to 1 part copper. The Assam silver contains 23 of copper. The silver coins were nearly pure, and appear mixed with alloy. Besides being used for money, silver is extensively used in the arts. The value of the silver manufactured is very considerable. It is also used in plating. The most productive silver mines are in America, in Mexico, Peru, and California. Other silver mines in Hungary, Saxony, and other parts of Europe, and Russia. In 1867 we exported, exclusive

municates. The port has always afforded ready means for the repairing of merchant ships, but the completion of the large and costly docks of the Patent Ship and Dock Company, and of the Tanjong Pagar Dock Company, now offers facilities for the repair of ships of the largest burden, whether built of wood or of iron, as well as of steam machinery, equal perhaps to any that are available in the eastern seas.

The settlement, which exhibits these signal marks of prosperity was founded on February 6, 1819, at which time the island was covered by a primeval forest, while its only inhabitants consisted of a few hundred Malay fishermen, occupying the single villages on its coasts, and which had been founded no further back than 1811. The right of the British to form a settlement on the island was at the time disputed by the Netherlands Government, on the ground of its prior cession to themselves by the native sovereign. But these objections having been withdrawn, the island of Singapore, with numerous adjacent islets, were ceded in absolute property and sovereignty to the East India Company by a treaty concluded in August 1824, with the two Malay princes to whom it belonged. They received in exchange a sum of 60,000 dollars in money, and an annuity of 12,500 dollars to the one and 500 to the other, during their natural lives, with other incidental advantages. The settlement having been originally founded by Mr. (afterwards Sir) Stamford Raffles, then lieutenant-governor of Fort Marlborough, Bencoolen, it was in the first instance a dependency of that Government; but being subsequently transferred to Bengal, it remained under that presidency until its incorporation with the other two settlements in the straits as above.

Being only 80 miles from the equator, there is, of course, little variety in the seasons, but the climate, though hot, is remarkably salubrious, an advantage which is no doubt owing to the thorough ventilation which the island receives from the change of monsoons. There are no regular periodical rains, but showers fall throughout the year; and during the prevalence of the N.E. monsoon, from October till March, rain comes down in sufficient quantity for the inhabitants to mark that period of the year as their most rainy, as well as their coolest season. The range of Fahrenheit's thermometer is from 71° to 89°.

Five years after the foundation of the settlement the first census was taken, when the population was found to amount to 10,683. In 1850 it had approximated 60,000; and the following details of the last census, which was taken in 1860, will at once exhibit the continued increase of the population, and the various nationalities which it includes:—

Europeans and Eurasians (including Indo-Britons, Jews, Portuguese, Armenians, Parsees &c.)	2,115
Malays	10,888
Kingis (or natives of the Coromandel coast)	11,735
Bengalies	1,236
Chinese (including Cochin Chinese)	50,043
Burmese and Siamese	14
Bugs (natives of Celebes)	900
Javanese and Boyanese	3,408
Arabs	117
Total	80,792

The number of Europeans included in the first of the above items was only 360; but it is believed that a more than proportionate increase has since taken place in that branch of the population. The population in 1865 was estimated at 90,700, among whom were 58,000 Chinese, 13,500 Malays, and about 800 Europeans.

The European mercantile body comprises British, Americans, Germans, French &c., and the former includes the principal firms. There is also a considerable number of respectable and opulent

Chinese and Arab merchants, and important mercantile establishments conducted by Jews, Parsees and others. The shopkeepers are mostly Chinese and Kingis, the former preponderating, and also including the most valuable portion of the labouring population.

According to the official returns for 1865-66 the latest at present before the public, the number of Chinese immigrants that arrived at Singapore during that year is reported at no less than 11,279, including 455 females. Of these, over 4,300 found their way to Malacca, Penang, and the immediate neighbourhood, while about 350 embarked for the Mauritius.

The boatmen are chiefly natives of the Coromandel coast; and the Malays employ themselves as fishermen, in cutting timber, and in supplying the settlement with the rude produce of the neighbourhood. There are good daily markets, open at all hours, and well supplied with vegetables, fruits, grain, fish, pork, and green turtle; the latter, the cheapest animal food that can be procured. There is a registry of imports and exports compiled from reports made to the master attendant by the masters of vessels, and invoices delivered to the superintendent of imports and exports.

#### COINS, WEIGHTS, AND MEASURES.

##### Money.

China.—Accounts are kept in Indian currency and Spanish dollars, as follows:—

10 pica	make 1 copang.
10 copangs	1 Spanish dollar, equal to 5s. sterling.

##### Exchange.

1 Spanish dollar	= 2 sonat rupes 5 am
From 10 to 16 ditto	= 10 star pagodas.
ditto	= 1 pound sterling.
100 Spanish dollars	= 2187 sonat rupes.
100 ditto ditto	= 2398 sicca "
100 Spanish dollars	= 2004 Bombay rupes.
100 star pagodas	= 425 current "

##### Measures for Grain, Oil &c.

4 chupas	make 1 ganton = 1½ gallon.
10 gantons	1 parah.
20 ditto of rice	1 bag = 1 peul.
40 peculs or bags	1 covang = 2 tons of 7 cwt.
2 qrs. avoirdupois,	or 5,395 lb. in a covang of rice.

##### Weights.

16 taels	make 1 catty.
100 catties	1 peul.
20 peculs	1 covang of 5,395 lb. avoirdupois.
The large peul, by which tin and pepper are sold, weighs 1324 lb.	
3 large peculs	make 1 bulnar of 421 lb. avoirdupois.

Also—10 gantangs	make 1 parah.
80 parals	1 covang.
1 bag of salt	weighs 100 lb. avoirdupois.
1 bag of rice	161 "
1 bag of dholl	161 "
1 bazar mound	824 "
1 ceer	2 lb. 1 oz. avoirdupois.

##### Gold and Silver Weights.

16 mians	make 1 bucal = 1 oz. 9 dwts. 10 grains Troy.
20 bucalis	1 catty = 29 or 15 dwts. 11½ grains.

##### Land Measure.

12 sq. R.	make 1 jumbas.
20 jumbas	1 orlong = ¼ of English acre.

##### Goldsmith's Weights.

12 vagas	make 1 miam = 52 grains Troy.
16 mians	1 bucal or 2 Spanish dols. = 832 grains.
20 bucalis	1 catty = 16,640 grains.

A catty of gold is heavier than the common catty in the proportion of 105 to 78.

At Atchet, Siak, Malacca &c. places on the east side of the Malay peninsula, the bucal and catty weights are about 10 per cent. less than the above. There is also a bucal measure, which is in frequent use amongst Europeans and native traders to the eastward, and which is found to weigh very nearly 2 dollars, or 832 grains Troy.

**Commercial Weights.**

16 taels	make	1 tael nearly	lb. avo. dr.
100 catties		1 catty	0 0 23 avo. dr.
3 mowly }		1 mowly peul	147 10 109 "
100 mowly }		1 bahr	498 0 0 "
40 (China } peuls }		1 coyang	5,353 0 0 "

The Malay catty weighs 24 Spanish dollars; the Chinese 22½; hence 15 Malay catties equal 16 Chinese. By the Malay or large peul of 142½ avoirdupois, merchants purchase pepper, tin &c. from native vessels, but sell by the Chinese or Hazar peul of 133½ lb. avoirdupois.

**Measure of Capacity.**

4 chopas	make	1 ganton	cubic inches.
100 gantons		1 coyang	27,165 "

The chopas is divided into halves and quarters. A parah (a common measure) of 10 gantons, but sometimes consists of 5, 15, or 20 gantons.

**Long Measure.**

The haats or equal equals 18 English inches, but the Chinese shopkeepers use the English yard.

**Land Measure.**

4 haats	make	1 depoh	= 2 English yards.
2 depohs		1 jumbas	= 4 "
20 jumbas		1 orlong	= 80 ds. or 1 acre.
		1 rood	= 12 perches English.

English weights and measures are frequently used in reference to European commodities. The mode of transacting business among the European merchants is simple and efficient. Instead of trusting their affairs to native agents, as in other parts of India, they transact them in person, with the occasional assistance of a Chinese erode as an interpreter and broker. The European merchants transact business on their own account; but a great deal of their employment consists in acting as agents for houses in London, Liverpool, Glasgow, Amsterdam, Antwerp, Hamburg, Calcutta, Bombay, Madras, Canton, and Batavia. They are also agents for numerous insurance offices at all these places, and policies of insurance to any extent may be effected without difficulty. The language of commercial intercourse, where many of the natives of the East are concerned, is universally Malay—a simple and easy dialect, of which all the resident merchants have a sufficient acquaintance to enable them to transact ordinary business. The *Straits Times*, a daily newspaper, is now the only journal published in Singapore; it contains a price current, an account of the arrivals and departures of shipping, and an official detail of the exports and imports of the preceding week. The administration of justice is entirely English. A supreme court has been constituted for the colony, of which the chief justice resides at Singapore, and goes on circuit to Malacca, the other judge of the court being permanently resident in Penang.

**Commodities and Prices.**—Singapore is chiefly an entrepot, having, with the exception of pearl sago manufactured on the spot from the raw material imported from the north coast of Sumatra, implements of agriculture, and some others fabricated by the Chinese from European iron, with gambier and catechu grown and manufactured on the island, few commodities of its own for exportation. Large quantities of teak from the neighbouring forests are disposed of here, and much of this has been used lately for the construction of railways in the East. The grain produced on the island not being sufficient for the consumption of the inhabitants for a week, their supplies of rice, wheat &c., are mostly all imported, principally from Java and Calcutta.

**Notes of Commission at Singapore adopted at a General Meeting of Merchants, on February 19, 1830, and revised by the Singapore Chamber of Commerce, on May 8, 1855.**

1. On all sales or purchases, except as otherwise provided for	Per cent.
2. On purchase of goods or produce for returns	5
3. On sale or purchase of opium	5
4. On sale or purchase of ships, vessels, houses, or lands	5
5. On sale, purchase, or shipment of bullion	1
6. On sale or purchase of diamonds, jewels &c.	2
7. On returns in treasury, bullion, or bills	1
8. On all goods consigned and withdrawn—half commission.	5
9. On sale, purchase, or negotiating of bills, not serving for purchase of goods or produce	5
10. On all goods sold by auction in addition to the above	1
11. On <i>del credere</i> , or guaranteeing sales	2½
12. Shortage, 1 per mille.	
13. On all advances of money for the purpose of trade, whether the goods are consigned to the agent or not, and where a commission of 5 per cent. is not charged	2½
14. On receiving goods, or superintending the fulfilment of contracts where no other commission is desired	2½
15. On guaranteeing bills, bonds, or other engagements, and on becoming security for the administration of estates or to Government or individuals for a contract, agreement &c.	2½
16. On acting for the estates of persons deceased as executors or administrators	5
17. On the management of estates for others, on the amount received	5
18. On procuring freight, or advertising as the agent of owners or commanders—on the amount of freight, whether the same passes through the hands of the agent or not	5
19. On chartering ships for other parties	2½
20. On effecting insurances, or writing orders for ditto	4
21. On settling insurance losses, total or partial, and on procuring return of premium	2½
22. On debts when a process of law or arbitration is necessary 2½ per cent. on the amount claimed, and if recovered by such means	5
23. On bills of exchange noted or protested	5
24. On collecting house-rent	5
25. On ship's disbursements	5
26. Bills when in funds	2½
27. On negotiating loans on respondentia	2
28. On letters of credit granted for mercantile purposes	2½
29. On purchasing or selling Government securities, or on exchanging or transferring the same	5
30. On delivering up dds.	4
31. On all advances not punctually liquidated, the agent to have the option of charging a second commission, as upon a fresh advance, provided the charge be only made once in the same year.	1
32. On transhipping all goods or produce	1
33. Ditto treasure	1
34. At the option of the agent, on the amount debited or credited within the year, including interest, and excepting only such items on which at least 2½ per cent. has been charged on account made up to a particular period, unless where such balance is withdrawn without reasonable notice.	1
35. On collecting freight	2½
36. On the freight of vessels consigned to an agent in Singapore, (unless the freight having been paid at the port of loading, when the vessel is loaded <i>outwards</i> by another agent, or proceeds elsewhere for a cargo, in absence of any special agreement)	2½
37. On advances made to account of contracts for produce, the usual guarantee commission and interest to be charged.	5
38. In purchasing produce, the commission to be charged on the invoice, including charges.	5

**Wharfage.**

**Scale of Charges for Landing, Shipping, and Warehousing Goods at the Wharves in New Harbour, and for Storing Coals &c.**

On every ton of cargo landed or shipped	25 cents
Treasure &c.	2½ per cent.
Opium per chest	10 cents
Horses and cattle, each	25 "

**Godowns.**—Vessels lying at the wharf have free use of the godowns alongside, for cargo.

Goods remaining in the godowns over seven days, or stored there for a fixed period, pay store rent and fire insurance, at about half the rates authorised by the Chamber of Commerce.

Treasure and other valuable articles are stored, at the risk of parties placing them in the godowns.

No articles of a dangerous nature, such as gunpowder, sulphuric or other acids &c., are received.

**Coals.**—Store rent on coal is 4 per cent. per month. Coal is stored, with ventilators through the heaps, in sheds of small width.

Cooly hire discharging coal ships is 12½ cents per ton, and storing, 12½ cents per ton; removing from sheds and putting on board ship, 25 cents per ton.

Steamers requiring great despatch can be supplied with coolies at 50 cents per day and 75 cents per night.

rechants, and important mercantile, conducted by Jews, Parsees, and others. The Chinese are mostly Chinese, and their influence is predominant, and also a valuable portion of the

official returns for 1865-66, before the public, the immigrants that arrived at Singapore is reported as not less than 55 females. Of these, over 1000 went to Malacca, Penang, and the neighbourhood, while about 350 remained in Singapore.

chiefly natives of the Coromandel, the Malays employ themselves in cutting timber, and in cement with the rice produce of the country. There are good daily markets, and well supplied with grain, fish, pork, and green vegetables. There is a registry of imports and exports, and reports made to the superintendent of immigration.

**COINS, AND MEASURES.**

**Money.**  
The coins are kept in Indian currency, as follows:—

1 rupee = 16 annas.  
Spanish dollar, equal to 50. sterling.

**Exchange.**

2 annas	= 2 sonat ruypees 5 annas
10 annas	= 10 star ruypees
1 anna	= 1 pound sterling
2 annas	= 2185 sonat ruypees
1 anna	= 2193 alicia
1 anna	= 2243 Bombay ruypees
1 anna	= 445 current "

**Measures for Grain, Oil &c.**

1 ganton	= 11 gallon.
1 parah.	= 1 peul.
1 bog	= 1 peul.
1 coyang	= 2 tons of 7 cwt.
1 bahr,	or 5,353 lb. in a coyang of rice.

**Weights.**

1 catty.	1 peul.
1 coyang of 5,353 lb. avoirdupois.	which tin and pepper are sold, weigh 100 lb. avoirdupois.
1 bahar of 421 lb. avoirdupois.	
1 parah.	
1 coyang.	
100 lb. avoirdupois.	
161 "	
161 "	
821 "	
2 lb. 1 oz. avoirdupois.	

**Land and Silver Weights.**

1 bucal	= 1 oz. 9 dwts. 101 grains Troy.
1 catty	= 29 oz. 15 dwts. 114 grains.

**Land Measure.**

1 jumbas	= 1 orlong = 3 of English acre.
----------	---------------------------------

**Goldsmith's Weights.**

1 miam	= 52 grains Troy.
1 bucal	or 2 Spanish dols. = 532 grains.
1 catty	= 16,510 grains.

It is heavier than the common portion of 105 to 78. It is used in Malacca &c. places on the east peninsula, the bucal and catty only 10 per cent. less than the above. The bucal measure, which is in fact European and native traders and which is found to weigh very 832 grains Troy.

Boat hire or cartage from the wharf to the town of Singapore is 50 cents per koyan, the same as boat hire from the roadstead to godowns in town.

The following is a statement of the prices of the principal articles of Eastern produce at Singapore on December 8, 1868, from Paterson, Simons & Co.'s circular of that date.

Description of Produce	Present Prices	At Exchange, 4s. 6d. per dollar

PENANG, another of the Straits Settlements, is an island at the North-western end of the Straits of Malacca, of which the chief port, called George Town, lat. 5° 24' 15" north, 100° 21' east long., is distant from the opposite mainland of the Malayan peninsula about 2 miles. The island is between 13 and 14 miles in length, and from 5½ to about 10 miles in breadth, and contains an area of over 68,000 acres. There is, however, belonging to the settlement, a strip of territory, called Province Wellesley, on the main land, which is much more extensive, and is estimated to contain 150,000 acres. The island is mountainous, and the summit of the highest of the hills is about 3,000 feet above the level of the sea. Province Wellesley is, on the contrary, an alluvial flat, only a few feet above the level of the sea, but its soil is well adapted for the growth of the sugar cane, as well as the production of rice and other tropical articles. The harbour of Penang lies in the channel formed between the island and the opposite mainland, and is exceedingly spacious, well sheltered, and commodious, the depth of water allowing vessels of large burden to approach within a very short distance of the town. Abundance of water and provisions, including excellent fish, is easily procured.

Penang owes its existence as a British settlement to the enterprise and sagacity of Francis

Light, the master of a merchantman, who, in pursuit of his avocations, had become well acquainted with the resources of the surrounding countries. His recommendations to found a settlement at Penang were first addressed to and favourably received by Warren Hastings, when Governor-General of Bengal, though not acted upon until the administration of his successor. The island, then uninhabited and covered with dense jungle, was formally taken possession of, July 17, 1786, by Captain Light, in the name of the East India Company, to whom it had been ceded and sold by the Rajah of Quedah or Kedah, subject, however, to an annual quit-rent of 10,000 dollars, which from that day to this has been regularly paid to himself and his descendants. Captain Light saw in the new settlement—a port favourable to commerce—a place of refuge for merchant ships where they may refit and be supplied with provisions, wood, and water, and protected from the insults of enemies; and an emporium centrally situated, where the merchants of all nations may conveniently meet and exchange their commodities. He was not deceived in these anticipations. The new settlement began to increase rapidly in trade and population, the imports being reported of the value of 130,000l. within three years after its foundation. In 1810 the annual value of the trade had reached 1,107,000l.; but thirty years later, it had not advanced beyond about 1,500,000l. It took a new start from 1850, since which it has steadily increased, averaging over 3,000,000l. in the five years ending 1860; and considerably over 4,000,000l. in the succeeding five years. In 1865-66, the imports and exports reached 4,301,957l.; and in 1867, 5,341,650l.; the particulars for which year are shown in the following table:—

*Return of the Value of Imports into and Exports from Prince of Wales' Island or Penang in 1867.*

Population.—The first census, in 1810, included, as every subsequent one has done, the province as well as the island, the population amounting to 31,600. In 1855, it numbered 55,354, and the census of 1860 gave 121,772, exclusive of the military. Of this population the Malays form the chief portion, the Chinese amounting to about 1 of the whole, the remaining population consisting of natives of Bengal and Madras, Arabs, Burmese, Siamese &c. &c., besides Europeans and their descendants. The English are the principal merchants; while some of the Asiatics, such as the Chinese, Arabs, &c. also carry on extensive trade, and frequently attain considerable opulence. There are several bank agencies, and numerous branches of Sea, Life, and Fire Insurance established in the settlement.

a merchantman, who, in pursuance of the arrangements made by the Government, had become well acquainted with the surrounding countries, was found a settlement in the Straits Settlements, and was addressed to and favourably received by the Government. Although not acted upon until the death of his successor, the island, then covered with dense jungle, was discovered, on July 17, 1786, by the name of the East India Company, and it had been ceded and sold by the Sultan of Keddah, subject, however, to a payment of 10,000 dollars, which has been regularly paid to his descendants. Captain Light saw this name are situated on the western side of the Malay peninsula. The town, built close on the sea shore, in lat. 2° 14' North, and long. 102° 12' East, is distant about 100 miles from Singapore and 260 from Penang. There is a light vessel in Malacca Straits 2° 52' 30" N. lat., and 101° E. long. Malacca was in former times a large commercial emporium, and possessed an extensive trade, when the small river on which it lies must have afforded important facilities, as it is capable of admitting trading vessels of some burden. But, though a free port, its trade has now long ceased to be of any relative importance, and is almost wholly confined to the two neighbouring settlements of Singapore and Penang. There is no harbour, properly so called; but though ships lie in an open roadstead, the anchorage is safe, and exposed only to the squalls which mark the breaking up of the monsoons. The climate is noted for its salubrity.

**Agriculture &c.**—The cultivation of the clove and nutmeg was extensively prosecuted in the island, but after a long time of apparent prosperity it resulted in complete failure, and the produce of the soil includes little beyond the Malayan fruits. It has been otherwise in Province Wellesley, where cultivation has been extensively carried on in several branches, particularly in that of the sugar cane, several thousand tons of sugar being annually exported. Tapioca is also produced and exported in large quantities, and attention is being turned to the more extensive production of rice; European capital and skill bearing a large share in promoting these results.

**MALACCA.** The town and territory bearing this name are situated on the western side of the Malay peninsula. The town, built close on the sea shore, in lat. 2° 14' North, and long. 102° 12' East, is distant about 100 miles from Singapore and 260 from Penang. There is a light vessel in Malacca Straits 2° 52' 30" N. lat., and 101° E. long. Malacca was in former times a large commercial emporium, and possessed an extensive trade, when the small river on which it lies must have afforded important facilities, as it is capable of admitting trading vessels of some burden. But, though a free port, its trade has now long ceased to be of any relative importance, and is almost wholly confined to the two neighbouring settlements of Singapore and Penang. There is no harbour, properly so called; but though ships lie in an open roadstead, the anchorage is safe, and exposed only to the squalls which mark the breaking up of the monsoons. The climate is noted for its salubrity.

Malacca, as is well known, was first of all a Portuguese possession, having been captured from the Malays by Albuquerque in 1511. In 1641 it was taken by the Dutch, who continued its masters until 1795, when the town was surrendered to

a British force, and remained, with its territory, in our possession until 1818. Then it was again given up to the Dutch, under the treaty of Vienna. It finally returned to our possession in 1825, as arranged by treaty with the Dutch of March 1821. The territory stretches over 40 miles along the coast, extending inland in breadth of from 10 to 28 miles. The soil is not fertile, but produces the tropical fruits in great variety and abundance. Pepper as well as rice is grown; and attempts have of late years been made to extend cultivation to other branches. Tin mines have also been worked in the interior to a considerable extent, but trade latterly has been declining. Whatever may have been the former claims of Malacca to importance in other respects, it has certainly increased in population since it became a British settlement. In 1828 the population was estimated at under 30,000; in 1847, at 55,000; and by the last census, in 1860, it numbered 67,667, and is understood to be still on the increase. The greater proportion, perhaps  $\frac{2}{3}$  of the whole population consists of Malays; the Chinese being certainly the most numerous, and constituting the principal traders as well as workers of the tin mines.

The following is a statement of the value of the trade of Malacca for the five years ending with 1865-66, from the latest returns published:—

Years	Imports	Exports	Total
1861-62	Rs. 4,512,699	Rs. 5,535,745	8,048,444
1862-63	4,526,511	5,598,106	8,124,617
1863-64	4,542,918	5,596,011	8,138,929
1864-65	4,535,160	5,681,826	8,216,986
1865-66	4,582,551	5,685,207	8,267,758

**Trade of Singapore.**—The following Table is extracted from the *Annual Report on the Administration of the Straits Settlements for 1865-66*:—

The number of square-rigged vessels, including the flags of every European maritime nation, as well as of Arabia, China, Cambodia, Siam, and Chik, which arrived in the roads of Singapore during 1865-66, amounted to 1730, and comprised 738,083 tons, of which 1,036 of 389,529 tons were British.

It may be remarked that a considerable portion of the trade which used at an earlier period to be carried on in native vessels, has of late years been transferred to square-rigged vessels, owned and fitted out by resident Chinese traders.

Much communication with Europe is kept up by the steamers of the Peninsular and Oriental Company and of the Messageries Impériales Company, both of which arrive and depart twice every month; and the Netherlands India Steam Company run a line of steamers, timed to meet the arrival and departure of the Europe mails, between Singapore, Batavia, and the principal outports of the Archipelago.

Telegraphic communication throughout Java has been for some years established by the Government of the Netherlands India, and more recently extended to Sumatra, where a junction is proposed with a line from Singapore, in continuation of the Indian system of telegraphs, which already reaches Moulemin. And the European inhabitants of Singapore look forward with confidence to the prolongation of the line from Java to the Australian colonies, as an immediate consequence of the early connection of England and India by submarine telegraph.

The straits within which the three settlements are situated are formed by the Malayan peninsula on the east, and by the large extent of Sumatra on the west. They bear in a direction from north-west to south-east, and their extreme length may be stated at 500 miles, with numerous bays at both ends, particularly at the south-easterly one. The straits vary in breadth from 40 to 300 miles, and, as already shown, are lighted sufficiently to render the navigation safe.

The greater portion of the materials for this article have been kindly supplied by a gentleman long resident in, and well acquainted with, Singapore. See also *Parl. Papers on Straits Settlements*, &c.

SINOPE. A town of Asia Minor, on the south coast of the Black Sea, lat. 42° 2' 30" N., long. 63° 9' 45" E. Population uncertain, estimated at 10,500. Sinope is situated on a low narrow isthmus, connecting the high rocky promontory of Ad with the mainland. Its port, which is the best on this coast, on the south side of the town, is protected from the north and north-east gales by the isthmus and promontory already mentioned. Ships anchor within ½ mile of the town, from 13 to 17 fathoms; or nearer to it, in from 5 to 7 fathoms. There is a roadstead on the north side of the isthmus, but it is open and exposed. Sinope is one of the principal stations of the Turkish fleet, and there are docks and arsenals for its accommodation and outfit. But the fortifications can afford sufficient protection neither to the town nor the shipping. This was strikingly exemplified in the latter part of 1853, when a Russian squadron attacked, and, without any material loss to itself, totally destroyed, 6 Turkish frigates with several transports at anchor in the roads. Its exports are inconsiderable, the principal being timber, salt, cordage, fish oil &c.

In ancient times, Sinope was a city of great wealth, magnitude, and importance. It was the birthplace of Diogenes the Cynic; and Mithridates made it the capital of his dominions. After his conquest by the Romans under Lucullus, it

became the seat of a colony; and continued for a lengthened period to enjoy a good deal of consideration.

Should civilisation and the arts once more revive in the ancient Pontus and the other countries to the south of the Black Sea, the excellence of its port could not fail to restore to Sinope some portion of its former grandeur. Even now a considerable intercourse is beginning to take place with the countries east and south of Sinope. Diarbekr on the Tigris, in lat. 37° 54' N., long. 39° 53' 45" E., is one of the principal seats of eastern commerce; and caravans set out regularly from it for Aleppo, Smyrna, and Constantinople; but anyone who consults a map of Asia Minor, and of the contiguous countries, will see at once that Trebisond and the neighbouring ports on the south-east coast of the Black Sea are the natural channels through which Armenia, Koordistan, and the north-western ports of Persia may best maintain an intercourse with Europe. We shall afterwards show that the danger to vessels in the roads of Trebisond has been very much exaggerated. [TREBISOND.] In the event, however, of the commerce with the countries referred to becoming of any considerable importance, Sinope would be an advantageous entrepôt to which goods might be brought, and whence they might be conveyed in proper vessels, and at proper times, to the other ports. At all events, it is of material importance that a direct intercourse with the southern coast of the Black Sea should be established, and that the trade with it should not be carried on, as hitherto, through Odessa. (For further particulars as to Sinope, see *Tournefort, Voyage au Levant*, tom. ii. pp. 203-212; and *Norie's Sailing Directions for the Black Sea*.) [TREBISOND.]

SKINS. The term is applied in commercial language to the skins of those animals, as deer, goats, kids, lambs &c., which, when prepared, are used in the lighter works of bookbinding, the manufacture of gloves, parchment &c.; while the term hides is applied to the skins of the ox, horse &c., which, when tanned, are used in the manufacture of shoes, harness, and other heavy and strong articles. Lamb and kid skins are principally used in the glove manufacture; 120 skins being supposed to produce, at an average, 18 dozen pairs of gloves. [LEATHER.]

The duty on skins having been repealed in 1816, the quantities retained for consumption cannot be stated.

SLATE (ROOF), (Ger. schiefer; Fr. ardoise; Ital. lavagna, lastra; Span. pizarra). A fossil or compact stone (argillaceous schistus) that may be readily split into even, smooth, thin laminae. There are several varieties of this valuable mineral, the prevailing colours being grey, blue, and brown. But the tints are very various; and slates are often marked with streaks of a different colour from the ground. Slate is principally used in the covering of houses, for which purpose it is infinitely superior to thatch or tiles, and is far less expensive than lead. Good roofing slate should not absorb water; and it should be so compact as not to be decomposed by the action of the atmosphere. When properly selected, roof slates are of almost perpetual duration; but those which are spongy and imbibe moisture speedily get covered with moss, and require, at no very distant period, to be renewed.

The use of slates in the covering of houses is entirely European. From the Hellespont to China inclusive there is not a single slated house; and this does not arise from any want of slate, which is as abundant in Asia as in Europe.

Slates carried by land have never been subjected to any duty; but those carried coastwise were, until 1831, charged with duties varying according to their size and species. The injustice of this distinction, and the impolicy of laying any duty on an article of this sort, are obvious. The revenue it produced was quite inconsiderable, not exceeding 35,000*l.* a-year. It was repealed at the same time as the duty on coal carried coastwise.

Since the repeal of the duty, the consumption of slate has been materially increased; and it is now extensively employed for various purposes to which it was not formerly made applicable, such as the flooring of warehouses and vanits, the paving of streets, the formation of cisterns, the covering of worn or decayed floors, and of the walls of houses in exposed situations &c. The slate used for these purposes is cut by the circular saw

into pieces of from 3 an inch to 2 inches. Many hundred tons have been used in the of the last few years in paving, flooring &c. London Docks, and other large establishments.

The principal slate quarries in Great Britain are in Caernarvonshire. Those belonging to Colonel Pennant (now Lord Penrhyn), near Llanberis employ about 1,500 men and boys, and is the most extensive and valuable in the empire, other quarries in the same county employ 1,620 men and boys; and there are some in parts of Wales. There are also extensive quarries at Ulverstone, in Lancashire; and others, of inferior magnitude, in various parts of Westmoreland and Cumberland.

The principal slate quarries in Scotland are Eastdale and Balnclulish, in Argyshire. Generally, the Scotch quarries do not afford the size and smoothness of those obtained in the Welsh quarries; and the woodwork of roofs covered with them requires to be strong.

Roofing slates are of different sizes, and denominated Imperials, Queens, Princesses. Their price, supposing their quality to be in respects equal, depends partly on their size, partly on their weight. In 1867 we exported (chiefly to the United States and Australasia) 5,364,000 slates by tale, 14,628 tons of the value of the whole being 81,318*l.*

SLAVES AND SLAVE TRADE. A slave, in the ordinary sense of the term, is an individual who is the absolute disposal of another, who has no right to employ and treat him as he pleases. But the state of slavery is susceptible of innumerable modifications; and it has been used in most countries where it has been long established to limit in various ways the power of the master over the slave. The *slave trade* is, of course, the business of those who deal in slaves.

*Origin of Slavery.*—A great deal of learning has been employed in tracing the history of slavery, though the subject is still far from exhausted, seems most probable that it originally grew out of a state of war. In rude uncivilised communities where the passion of revenge acquires a strong and unknown in more advanced states of society, captives taken in war are adjudged to belong to the victors, who may either put them to death, or reduce them to a state of servitude, and antiquity, the ideas of war and slavery are inseparable. Probably in very remote ages prisoners were most commonly put to death; but the selfish gradually predominated over the more passionate feelings, and for many ages was usual to reduce them to the condition of slaves; being either sold by their captors, or others, or employed by them, as they might think fit.

The practice of reducing men to a state of slavery, having once begun, was extended in various ways. The progeny of slaves of women in a state of slavery were slaves; and a born free might sell themselves as slaves; and parents had authority, in Judea and Rome, to dispose of their children for the same purpose. (Michaëlis *On the Laws of Moses*, ii. 63, Eng.) It was the law of Rome, and of most of the ancient states, that the persons of debtors who had contracted obligations which they could not discharge, should become the property of their creditors. 'Servi,' says Justinian, 'nascuntur aut tunc: nascuntur ex ancillis non fiant aut jure gentium, id est ex captivitate jure civili, cum liber homo major viginti annis ad pretium patris servum esse vendidit potest.' (*Instit.* lib. i. tit. 8.)

*Treatment of Slaves.*—The treatment of slaves

from 1/2 an inch to 2 inches thick, and have been used in the course of years in paving, flooring &c. at the various large establishments, and other large quarries in Great Britain, especially in Devonshire. Those belonging to the late Lord Penrhyn, near Bangor, employed 1,500 men and boys, and are the most valuable in the empire. There are also extensive quarries in Lancashire; and others, in various parts of Westmorland.

Slate quarries in Scotland are chiefly in Argyshire. Speaking of Scotch quarries do not afford the smoothness of those obtained from the marbles; and the woodwork of the buildings with them requires to be stronger. The quarries are of different sizes, and are worked by the Imperial, Queens, Princesses &c. The quality of the slate depends partly on their size and weight. In 1867 we exported to the United States and Australia 1,000 slates by tale, 14,628 tons of slates, the whole being 81,318.

**AND SLAVE TRADE.** A slave, in the sense of the term, is an individual whose disposal of another, who has employed and treat him as he pleases, and who is susceptible of the same rights and obligations as those who deal in slaves.

**Slavery.**—A great deal of learning has been expended in tracing the history of slavery, but the subject is still far from exhausted. It is probable that it originally grew out of the war. In rude uncivilised communities, the passion of revenge requires a struggle; and in more advanced states of society, men in war are adjudged to belong to the victor, who may either put them to death, or reduce them to a state of servitude. The ideas of war and slavery were probably in very remote ages, and were most commonly put to death. The practice gradually predominated over the humane feelings, and for many ages, to reduce them to the condition of slaves, either sold by their captors, or employed by them, as they might

the practice of reducing men to a state of slavery once begun, was extended to all days. The progeny of slaves were in a state of slavery were slaves; and might sell themselves as slaves; and the authority, in Judaea and Rome, was their children for the same purpose. On the *Laws of Moses*, ii. 63, English law of Rome, and of most countries, that the persons of debtors were subject to obligations which they could not become the property of their creditors. 'Servi,' says Justinian, 'causam autem habent: nascuntur ex ancillis, nascuntur ex gentium, id est ex captivitate; nascuntur liber homo major viginti annorum a partibus: nascuntur esse vendunturque.' (lib. i. tit. 3.)

**Slavery.**—The treatment of slaves

in antiquity, as in more modern times, differed very widely in different countries and periods, and among different classes of slaves in the same country and at the same time. A great deal also depended on the character of particular masters. Slaves bred up in the house or family of the masters were uniformly treated with greater indulgence than others, and became entitled, by custom, to several important privileges. At Athens, slaves appear to have been better treated than in any other ancient state; and Demosthenes alludes, in his second *Philippic*, that 'a slave was better off at Athens than a free citizen in many other countries.' In republican Rome, the masters had the power of life and death over their slaves, who were often treated with the most detestable barbarity. It was not an uncommon practice to expose old, useless, or sick slaves to starve in an island in the Tiber. We may, as Hume has justly remarked, 'imagine what others would practise, when it was the professed maxim of the elder Cato to sell his superfluous slaves at any price, rather than maintain what he esteemed a useless burden.' (Plutarch, in *Vita Catonis*.) *Ergastula*, or dungeons, where slaves were confined and chained at night, and where they were sometimes made to work in the day, were common all over Italy. Columella advises that they be always built under ground (lib. i. c. 6); and remains of them are still seen in the lower stories of ancient buildings in Italy and Sicily. Hundreds of slaves were sometimes put to death for the crime of one only; and they were exposed, when they committed any petty fault, to all the violence of the most capricious and unrestrained despotism.

It was not uncommon in the barbarous ages to immolate captives on the tomb of such chiefs as had fallen in battle; and magnificent games were celebrated on these occasions. (Achilles sacrificed twelve Trojan captives on the tomb of Patroclus. *Iliad*, lib. xxiii.) The gladiatorial exhibitions, so common at Rome after the Punic wars, seem to have grown out of this practice. These were contests between slaves, denominated gladiators, trained to fight in public for the amusement of a ferocious populace, who took the greatest delight in their sanguinary combats. Thousands of unfortunate wretches were annually sacrificed in this inhuman sport. After his triumph over the Decians, Trajan exhibited spectacles, in which no fewer than 11,000 wild beasts of different kinds were killed, and 10,000 gladiators fought. (Adam's *Roman Antiquities*, p. 317.)

The cruelties inflicted on the slaves occasioned frequent revolts, attended by the most dreadful excesses. Spartacus, a Thracian captive, destined for the profession of a gladiator, headed a rebellion of gladiators and slaves, which continued for three years, and required all the force of the republic to suppress. When finally defeated by Crassus, about 6,000 of the gladiator's followers were nailed to the cross, in double rows, that extended almost from Capua to Rome. (Ferguson's *Roman Republic*, c. 16.) No one acquainted with the manners of the Romans can be surprised at the atrocities of so many of the emperors. The worst of them treated the citizens better than the latter treated the slaves. Humanity could not be looked for in the rulers of a state in which human life was held in contempt, and human suffering made the subject of popular sport.

In consequence partly of their ill-usage, and partly of its being accounted cheaper to buy than to breed slaves, vast numbers were annually imported into Italy. Thrace and the countries round the Black Sea furnished large supplies of the best slaves; and numbers were obtained from

Egypt, Syria, Britain, Gaul, and other countries. The famous island of Delos, in the centre of the Cyclades, was the greatest slave market of antiquity; as many as 10,000 slaves have been sold there in a single day. (Strabo, lib. xiv.)

It should, however, be observed, that slavery among the ancients was very different from the slavery of modern times, at least from the slavery that lately existed in our West India islands, the United States, Cuba &c. Slaves in antiquity were physically identical with freemen, and were discriminated only by peculiar marks, or by the character of their employments. (Slaves wore their beards and hair long; and when manumitted, they shaved their head and put on a cap, which has in consequence become the symbol of liberty. Brutus, after the assassination of Cæsar, coined money, on which the figure of a cap was impressed, to indicate that the people had been rendered free. See Adam's *Antiquities*, p. 376; see, also, Barlemaqui, *Principes du Droit des Gens*, iv. 45), where the reader will remark a singular error.) It was truly said of them, 'Servi homines sunt, et æque animi licentiam biberunt, etiamsi illos malum fatum oppresserit.' (Petronius, *cl. Burræ*, cap. 71.) But modern slaves belong to a different variety of the human race, the distinction between them and their masters being obvious and striking. Owing to this difference between the slaves of ancient and modern times, the influence of slavery at the two periods has been materially different. The freemen of antiquity, who were accustomed to tyrannise over persons in all respects (except their social rank) on a level with themselves, could hardly fail to acquire a ferocity of disposition, and coarseness of manner, that either disappear, or are much softened down, in a society where all are equal. But such results do not certainly follow to the same, nor perhaps to any extent, from the practice of modern slavery. In this case the masters do not tyrannise over their equals, but over those who differ from the class to which they belong by the broadest and most distinctly marked characters; and their behaviour towards their slaves is found to have very little influence over their behaviour towards their fellow-citizens. The white inhabitants of Virginia, for example, so lately slaveowners, are quite as gentlemanlike in their manners, and observant of the respect due to others, as their countrymen of New York or New England. Indeed, if there be any difference between them, it will probably be found to be in favour of the former.

Although, therefore, there can be no doubt that the slavery that existed in the ancient world had a brutalising influence over the manners of the people, and gave them a degree of ferocity to which happily we have long been strangers, it by no means follows that the slavery which prevails in the New World should have the same influence. In the former case, masters and slaves were of the same variety of the species; but in the latter, the masters belong to one variety, and the slaves to a totally distinct, and most probably lower, variety; so that the domination of the one set, and the subjection of the other, partake in some measure of the character of the supremacy exercised by man over the lower animals, and have comparatively little influence over the morals or conduct of the masters. There can be no manner of doubt that the slavery that existed in the ancient world was unfavourable to the progress of arts and industry. In the most celebrated nations of antiquity, the greater number of mechanical employments were principally carried on by slaves and the dregs of the free population;

so that, while the workmen employed in them were without emulation or invention, the employments themselves were looked upon as mean and servile. To such an extent did this prejudice operate, that in Rome, Sparta, and other celebrated states, agriculture and arms were the only occupations that were reckoned worthy of a freeman, or in which he could engage without being degraded.

But the principal difference between the slavery of the ancient and modern world consists in the fact that in the former freemen were quite as well suited as slaves for carrying on every art and employment; while in the latter the peculiar constitution of the slaves fit them for employments which, though of the highest importance, cannot be carried on by their masters. The greater intelligence of the whites enables them to exercise a decided superiority over the black or coloured natives of the torrid zone, notwithstanding the latter are incomparably better adapted for the prosecution of those laborious occupations which are indigenous, as it were, to the soil they occupy. It is doubtful whether the constitution of the whites will ever be so accommodated to the climate of the tropics as to enable them to engage in that field labour, carried on in the lower and hotter districts (*tierras calientes*), which is congenial to the blacks. At all events, no such accommodation has hitherto taken place; and, therefore, it would appear that some modification of slavery, or that a supply of suitable compulsory labour of some sort or other, is necessary to enable civilised man to occupy, and to turn to a useful account, some of the most fertile and extensive regions of the earth. And hence the propriety of enquiring into the policy of institutions like this, and of carefully considering the peculiar conditions or circumstances under which they are to be acted upon. Slavery in Europe may be, and we believe is (notwithstanding the opinion of Michaëlis to the contrary), in all respects most objectionable; but it is quite another matter with slavery in Louisiana, Cuba, and Brazil; the circumstances under which they are placed are so very different from ours, that an institution exceedingly inexpedient on this side the Atlantic may be especially suited to them.

The establishment of Christianity contributed more, perhaps, than anything else, first to mitigate, and finally to suppress, slavery in Europe. But, within no very long period after its abolition had been completely effected in this part of the world, it began to be established in America.

The African Slave Trade was commenced by the Portuguese in 1442. It was, however, but of trifling extent till the commencement of the sixteenth century. In consequence, however, of the rapid destruction of the Indians employed in the mines of St. Domingo or Hayti, Charles V. authorised, in 1517, the introduction into the island of African slaves from the establishments of the Portuguese on the coast of Guinea. The concurrence of the emperor was obtained by the intercession of the celebrated Las Casas, bishop of Chiapa, who laboured to protect the Indians by enslaving the Africans; though, as the latter were certainly more vigorous and capable of bearing fatigue than the former, the measure was not in reality so contradictory as it would, at first sight, appear to be. (Robertson's *History of America*, book iii.)

The importation of negroes into the West Indies and America, having once begun, gradually increased, until the traffic became of great extent and importance. Sir John Hawkins was the first

Englishman who engaged in it; and such was the ardour with which our countrymen followed his example, that they exported from Africa more than 300,000 slaves between the years 1680 and 1700; and between 1700 and 1786, 610,000 Africans were imported into Jamaica only; to which adding the imports into the other islands and continental colonies, and those who died on the passage, the number carried from Africa will appear immense. (Bryan Edwards, *History of West Indies*, ii. 64.) The importations by other nations, particularly the French and Portuguese, were also very great.

We do not intend, though the subject be of the highest interest, to make any lengthened enquiries as to the legitimacy or illegitimacy, the policy or impolicy, of the slave trade. We may, however, shortly observe that there can be no doubt that slavery has always existed in Africa, and it is sufficiently well known that previous to the commencement of the traffic, such of the captives taken in war as could not be advantageously employed as slaves were most commonly put to death—cannibalism, the exposure of infants, and human sacrifices, being then also very frequent. The slave trade, by opening a ready and profitable market for slaves, assisted in putting an end to these enormities, though it is at the same time, true that the desire of profiting by their sale has tempted the petty princes to make war on each other for the chance of making captives, and has given a stimulus to man-stealing, and other atrocities. (*Geographical Dictionary*, art. 'Africa.')

There can, however, be no reasonable doubt that civilisation has been, on the whole, advanced by the practice of the trade. At all events, no evidence either has been, or, we believe, can be, produced to show that the state of Africa would have been perceptibly improved had the slave trade never been heard of. But it is quite certain, had such been the case, that there would have been a wide difference in the condition of the West Indies, the Southern States of North America, Brazil &c. It will, we apprehend, be found that the culture of sugar and other great colonial staples cannot be profitably carried on in these countries, nor, perhaps, anywhere within the tropics, without a supply of compulsory labour of some sort or other (see ante, COLONIES). Neither, we apprehend, can there be a question that the extensive culture of these staples has added greatly to the comforts and conveniences of the inhabitants of most civilised countries; and, if this addition to their enjoyments has been effected without injury to the slaves, it will not be so easy a matter as has been supposed to show the impolicy of the trade. But those who enquire dispassionately into the subject will probably come to the conclusion that, instead of being injured, the slaves have gained by being carried from the Old to the New World. Speaking generally, the negroes are in the lowest state of barbarism, possessing merely the rudiments of the most indispensable arts, a prey to the vilest superstitions and tyranny, without any tincture of learning, and with little or no regard for the future. The circumstances under which they are placed in their native land may, perhaps, account for this low state in which we find them; but, however explained, the genuine negroes of Africa are admitted, even by those least inclined to depreciate them, to be, for the most part, 'either ferocious savages, or stupid, sensual, or indolent.' (Prideaux, *History of Man*, ii. 238, 3rd ed.) Excepting the violence done to their habits and inclinations by one who knows anything of their state in Africa and in the western hemisphere can possibly

doubt that they have gained most materially by their transference to the latter.

But, supposing their character to be such as represented, still it may be contended that their weakness or inferiority gives the whites no right to lord it over them, to convey them to foreign countries, and to reduce them to a state of bondage; and no doubt it is exceedingly difficult to specify in how far the civilised portion of mankind may be entitled to control those that are decidedly less intelligent and advanced than themselves. That they have done so from the earliest ages is, however, indisputable; and everyone who has any acquaintance, however slight, with the history of this society, is aware that the consequences of this control have been in the highest degree advantageous: for, though polished nations have too often abused their superior power and intelligence, still it is abundantly certain that but for their dictating to and subjugating others, half the civilised world at this moment have been immersed in the grossest barbarism. But without entering into any discussion respecting the application of this principle in the case of Africa, it is enough to know that the Europeans did not originate slavery in that continent; the Africans were enslaved and disposed of as other goods and chattels for centuries before they began to be purchased by the former; and the conduct of the whites is to be determined by the nature of the treatment which the slaves received at their hands.

Now, though it be abundantly certain that this has been on the whole indulgent, it is not to be denied that very many enormities have been perpetrated, which the law should have prohibited and severely punished. The crowding of slaves together in their passage across the Atlantic, and the cruelties which some worthless masters have been accustomed to commit, are of this description. But these outrages are not of the essence of slavery; and they might and should, no doubt, have been suppressed. An institution is not to be confounded with its abuse. The object of the slave trade was to procure a supply of compulsory labourers for the service of the colonists in the West Indies and other tropical countries; but it did not, therefore, follow that the colonists were to be under no restraint, either as to the methods by which they sought to procure such bondage, or as to the power which they might exercise over them.

Neither does it follow, because the slave trade may have been for the general advantage of mankind at a particular period, that it should be indefinitely extended. When as large a supply of negroes has been imported as may be necessary to supply its markets with labour, there can be no good reason for allowing their further importation into a country, at the same time that there seem to be sundry good reasons why it should be put a stop to. By preventing the importation of fresh slaves, the proprietors may find it for their interest to be more attentive to the condition of those already in their possession than they might otherwise be; for it is evident that in such cases they could only look to the natural increase of their slaves for a supply of labour in future, and that they could not expect to supply by foreign importations the place of those who might perish by bad treatment. On these grounds we are inclined to think that the English and Americans acted with quite as much prudence as humanity, in forbidding, in 1807, the further importation of slaves into their dominions. In consequence of the operations of our emissaries in Brazilian waters, the Brazilian Government in 1850 also passed a

severe penal law against the trade. No doubt, too, the slave population in Cuba and Brazil has of late been quite large enough to furnish, with proper treatment, an adequate supply of labourers, how rapidly soever we may suppose them to advance in the career of industry.

We have ventured to submit these statements to the consideration of the reader, not because we have any desire to extenuate the evils inseparable from a state of slavery, or the cruelties of which slave-dealers and slave-proprietors may be justly accused. But, after making every allowance for these drawbacks, it is evident, if the preceding statements be well founded, that slavery as it has existed in more modern times, and still more as it might be established, is not the unqualified abuse it has almost uniformly been represented. On the contrary, we are disposed to regard it as being, under proper modifications, all but indispensable to the profitable cultivation of the western countries in which it is still met with. It is to no purpose to say that free labour is cheaper than slave labour. We more than doubt whether, when applied to them, there be any foundation for such a statement; but that is really immaterial, the fact being, that, were slavery abolished, few or no free labourers would be found to engage in the great departments of industry carried on in the slave-holding countries. It would, indeed, be a contradiction and an absurdity to suppose that it should be otherwise. In countries with a fruitful soil and under a tropical sun, the principal wants of the inhabitants are supplied with but little exertion, and the dolce far niente is their summum bonum. In such situations industry is a sickly plant; and instead of employing their surplus time in the production of articles of ostentation and luxury, the inhabitants most commonly waste it in idleness and apathy. Were the slaves completely emancipated in Brazil, as they have lately been in the Southern States of America, and are about to be in Cuba, it is all but certain that the culture of sugar and cotton would be as completely abandoned in them as in Haiti. And if the change were accompanied by a considerable improvement in the condition of the black population, the sacrifice might not, perhaps, be deemed too great. But where is the ground for supposing that such would be the case? Indeed the fair presumption seems to be the other way. Little, at all events, would be gained by turning a laborious well-fed slave into an idle, improvident, and perhaps beggarly freeman.

There may, however, be such a thing in a colony as a quasi emancipation of slaves, or, which is the same thing, regulations may be enacted giving the slaves freedom, and at the same time excluding them from the possession of that which can alone make that freedom of any practical value. Speaking generally, the blacks in our colonies have little or no capital; and, therefore, they must live either by occupying patches of land on their own account, or by working for others. And provided they be debarred, by regulations effectual to their object, from acquiring or occupying small portions of land, they will necessarily be compelled, how much soever they may dislike it, to engage as labourers on the estates of others. This, however, is probably the very worst sort of compulsory labour. It gives the blacks enough of freedom to make them in the last degree dissatisfied with the regulations by which it is sought practically to nullify it, and makes them at once discontented, refractory, and idle. But, wretched as it is, we believe that at this moment the obstacles that have been and

may be thrown in the way of the blacks obtaining patches of land are the principal dependence of the colonists in our West India islands for the continued culture of colonial staples.

Without entering further on a subject which would require a long essay for its discussion, we may remark that a good work on the subject of slavery is a desideratum which will not, probably, be speedily supplied. In this country it has been treated as if it were everywhere the same, and as if it were in every case an unmixed evil, and an outrage on humanity. This, however, is to confound the most obvious distinctions, to substitute abuse for reasoning, assertion for enquiry, and prejudice for principle. Those who enquire dispassionately into the matter will, perhaps, see abundant reason for agreeing in opinion with Michælis and Grotius (*De Jure Belli*, lib. ii. cap. 27), that while slavery has its evils, it may also have its advantages, and that if there be countries and states of society in which the former very decidedly preponderate, there are those also in which the preponderance is as certainly on the side of the latter.

*Abolition of the Slave Trade.*—Notwithstanding the sanction it received from Parliament, and the sapience of the public, the slave trade was frequently denounced by distinguished individuals, in this and other countries, as essentially cruel and unjust.

The first motion with relation to it in Parliament was made in 1776; but the subject was not taken up systematically till 1787, when a committee was formed, of which Mr. Granville Sharp and Mr. Clarkson, whose names are imperishably associated with the abolition of the slave trade, were members. This committee collected some highly coloured evidence of the enormities produced by the trade, which they circulated throughout the country, and thereby succeeded in making a great impression on the public mind. After a number of witnesses on both sides had been examined before the Privy Council, Mr. Willberforce, on May 12, 1789, moved a series of resolutions condemnatory of the traffic. They were supported by Mr. Burke, Mr. Pitt, and Mr. Fox. But notwithstanding the resolutions were carried, nothing was done to give them effect. The friends of the trade having obtained leave to produce evidence at the bar of the House, contrived to interpose so many delays that the session passed off without anything being done. In the following sessions the struggle was continued with various success, but without any definite result. At length the triumph of the abolitionists was finally consummated in 1807; a bill for the total and immediate abolition of the slave trade, having been carried in both Houses by immense majorities, received the royal assent on March 25, being the last Act of the administration of Mr. Fox and Lord Grenville.

America abolished the slave trade at the same time as England.

But notwithstanding what had been done, further measures were soon discovered to be necessary. The Spanish and the Portuguese continued to carry on the trade to a greater extent than ever; and British subjects did not hesitate, under cover of their flags, to become partners in their adventures. An effectual stop was put to this practice in 1811, by the enactment of a law introduced by Mr. (afterwards Lord) Brougham, that made trading in slaves punishable by transportation for 14 years, or by confinement to hard labour for a term of not more than 5 years nor less than 3 years. And since that period the British Government has zealously exerted itself

for the suppression of the slave trade in every part of the world. But, in defiance of its efforts, considerable numbers of slaves continued for many years to be carried across the Atlantic to America and Cuba, and it will be no easy matter to suppress the trade. Provided, indeed, the Powers were to concede a mutual right of search and to make the traffic in slaves piracy, it might be effectually put down; but there are all too superable prejudices and jealousies in the way of their consenting to adopt such measures. Bantinel's work on the Slave Trade contains the clearest and best exposition that is anywhere to be found of its rise, progress, and suppression, and of the efforts made by the British Government to induce other nations to abandon it.)

The British laws relative to the slave trade were consolidated by the Act 5 Geo. IV. c. 113, as the greater part of this Act was superseded by the statute for the extinction of slavery (3 Wm. IV. c. 73), we shall merely lay before the reader the clauses still in force relating to dealing in slaves.

*Dealing in Slaves in the High Seas &c. deemed Piracy.*—And if any subject or subject of his Majesty, or any person or persons residing being within any of the dominions, forts, settlements, factories, or territories, now or hereafter belonging to his Majesty, or under his Majesty's occupation or possession, or under the government of the United Company of Merchants of England trading to the East Indies, shall, except in such cases as are by this Act permitted, after January 1, 1825, upon the high seas, or in any haven, river, creek, or place where the admiral has jurisdiction, knowingly and wilfully carry away, convey, remove, or aid or assist in carrying away, conveying, or removing, any person or persons as slave or slaves, or for the purpose of his, her, or their being imported or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; or shall, after the said January 1, 1825, except in such cases as are by this Act permitted, upon the high seas or within the jurisdiction aforesaid, knowingly and wilfully ship, embark, receive, detain, or confine, or assist in shipping, embarking, receiving, detaining, or confining, on board any ship, vessel, or boat, any person or persons for the purpose of his, her, or their being carried away, conveyed, or removed as a slave or slaves, or for the purpose of his, her, or their being imported, or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; then and in every such case the persons so offending shall be deemed and adjudged guilty of piracy, felony, and robbery, and be convicted thereof shall suffer death without benefit of clergy—and loss of lands, goods, and chattels, as pirates, felons, and robbers upon the seas ought to suffer. (Sec. 9.)

*Persons dealing in Slaves, or exporting or importing Slaves &c. guilty of Felony.*—And except in such special cases as are by this Act permitted, if any persons shall deal or trade in, purchase, sell, barter, or transfer, or contract for the dealing or trading in, purchase, sale, barter, or transfer of slaves, or persons intended to be dealt with as slaves; or shall, otherwise than as aforesaid, carry away or remove, or contract for the carrying away or removing of slaves or other persons, or shall import or bring, or contract for the importing or bringing, into any place whatsoever

of the slave trade in every part of the world, and in defiance of its efforts, the traffic of slaves continued for many years across the Atlantic to Brazil, and will be no easy matter wholly to eradicate. Provided, indeed, the great principle of a mutual right of search, and of a mutual right of search, is maintained; but there are all but insuperable difficulties in the way of adopting such measures. (On the Slave Trade contains the exposition that is anywhere to rise, progress, and suppression, made by the British Government, and the reasons for its determination to abandon it.)

laws relative to the slave trade, and by the Act 5 Geo. IV. c. 113. But the part of this Act was superseded by the extinction of slavery (3 & 4 Geo. IV. c. 78), and we shall merely lay before the reader the laws still in force relating to dealing

*Slaves in the High Seas &c. to be seized.*—And if any subject or subjects of any person or persons residing or being in the dominions, forts, settlements, or territories, now or hereafter belonging to His Majesty, or being in His Majesty's possession, or under the government of any Company of Merchants of England, or in the East Indies, shall, except in such cases as are permitted, after January 1, 1807, in any high seas, or in any haven, river, or creek, where the admiral has jurisdiction, wilfully carry away, convey, or assist in carrying away, or employ any person or persons as a slave, or for the purpose of his, her, or their being imported or brought as a slave or as a slave to any island, colony, country, territory, or place, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave; or shall, after the said 1st January, 1807, except in such cases as are permitted, upon the high seas or within any haven, river, or creek, knowingly and wilfully receive, detain, or confine, or assist in receiving, detaining, or confining any ship, vessel, or boat, any person or persons, for the purpose of his, her, or their being imported or brought as a slave or as a slave to any island, colony, country, territory, or place, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave; then and in every such case the said ship, vessel, or boat, and the cargo thereof shall be deemed and adjudged to be the property of His Majesty, and the crew thereof shall suffer death without benefit of clergy, and the goods and chattels on board, and the robbers upon the seas ought to be seized.

*Dealing in Slaves, or exporting or importing &c. guilty of Felony.*—And (except in such cases as are permitted by this Act) any person shall be guilty of felony who shall deal or trade in, purchase, sell, or transfer, or contract for the dealing in, purchase, sale, barter, or transfer of any person intended to be dealt with as a slave, or otherwise than as aforesaid, or remove, or contract for the carrying away, or removing of slaves or other persons, or to their being dealt with as slaves, or to their being brought, or contract for their being brought, into any place whatsoever,

slaves, or other persons, as or in order to their being dealt with as slaves; or shall, otherwise than as aforesaid, ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transshipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being carried away or removed, or as or in order to their being dealt with as slaves; or shall ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transshipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being imported or brought into any place whatsoever, as or in order to their being dealt with as slaves; or shall fit out, man, navigate, equip, dispatch, use, employ, let, or take to freight or on hire, or contract for the fitting out, manning, navigating, equipping, despatching, using, employing, letting, or taking to freight, or on hire, any ship, vessel, or boat, in order to accomplish any of the objects, or the contracts in relation to the objects, which objects and contracts have hereinbefore been declared unlawful; or shall knowingly and wilfully lend or advance, or become security for the loan or advance, or contract for the lending or advancing, or becoming security for the loan or advance of money, goods, or effects, employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have hereinbefore been declared unlawful; or shall knowingly and wilfully become guarantee or security, or contract for the becoming guarantee or security, for agents employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have hereinbefore been declared unlawful; or in any other manner to engage, or contract to engage, directly or indirectly, therein, as a partner, agent, or otherwise; or shall knowingly and wilfully ship, tranship, lade, or receive or put on board, or contract for the shipping, transshipping, lading, receiving, or putting on board of any ship, vessel, or boat, money, goods, or effects, to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have hereinbefore been declared unlawful; or shall take the charge or command, or navigate or enter and embark on board, or contract for the taking the charge or command, or for the navigating or entering and embarking on board of any ship, vessel, or boat, as captain, master, mate, surgeon, or supercargo, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so take the charge or command, or navigate or enter and embark, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have hereinbefore been declared unlawful; or shall knowingly and wilfully insure, or contract for the insuring, of any slaves, or any property or other subject-matter engaged or employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have hereinbefore been declared unlawful; or shall wilfully and fraudulently forge or counterfeit any certificate, certificate of valuation, sentence or decree of condemnation or restitution, copy of sentence or decree of condemnation or restitution, or any receipt (such receipts being required by this Act), or any part of such certificate, certificate of valuation, sentence or decree of condem-

nation or restitution, copy of sentence or decree of condemnation or restitution, or receipt as aforesaid; or shall knowingly and wilfully utter or publish the same, knowing it to be forged or counterfeited, with intent to defraud His Majesty, or any other person or persons whatsoever, or any body politic or corporate; then, and in every such case, the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be felons, and shall be transported for a term not exceeding 14 years, or shall be confined and kept to hard labour for a term not exceeding 5 or less than 3 years, at the discretion of the court before whom such offenders shall be tried. (Sec. 10.)

*Seamen &c. serving on board such Ships guilty of Misdemeanor.*—And (except in such special cases as are for such special purposes as are by this Act permitted) if any person shall enter and embark on board, or contract for the entering and embarking on board of any ship, vessel, or boat, as petty officer, seaman, marine, or servant, or in any other capacity not hereinbefore specifically mentioned, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so enter and embark on board, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have hereinbefore been declared unlawful; then, and in every such case, the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be guilty of a misdemeanor only, and shall be punished by imprisonment for a term not exceeding 2 years. (Sec. 11.)

*Abolition of Slavery.*—We have already alluded (ante, COLONIES) to the memorable Act of 1833, for the abolition of slavery throughout the British colonies. In enacting this celebrated statute, Parliament endeavoured to reconcile the apparently conflicting claims of humanity and justice, by providing for the emancipation of the slaves, without prejudice to the just rights and claims of their proprietors. This was effected by assigning to the latter the sum of twenty millions sterling, which was distributed amongst them on their complying with the provisions of the Act. This is, perhaps, the greatest pecuniary sacrifice ever voluntarily made by any nation in vindication of the right of property. But it was not too great for the object in view: for had that right been violated in this instance, a precedent would have been set for its violation in others, and the consequences would have been most disastrous. The measure, in fact, reflects quite as much credit on the wisdom and honesty, as on the generosity, of the British nation. In addition to the famous statutes already cited, we may mention that the following also bear on the subject viz., 5 & 6 Vict. c. 101, for preventing the importation of slaves into India by sea, 6 & 7 Vict. c. 98, and 8 & 9 Vict. c. 93 ss. 88 and 89.

We gave, in the previous edition of this work, an abstract of this celebrated statute, to which we beg to refer the reader who may wish to become minutely acquainted with its provisions. It is sufficient, now, to mention that it enacted that slavery should cease in all our possessions on August 1, 1834; when the slaves were to become apprenticed labourers, their final and complete emancipation taking place partly on August 1, 1838, and partly on August 1, 1840. But a clamour having been raised against the duration of the apprenticeship, its period was shortened, and the blacks became universally free in 1838.

*Distribution of Slave Compensation.*—The commissioners for the apportionment of the 20,000,000*l.*, granted by Parliament as compensation to slave owners, under the Act 3 & 4 Wm. IV. c. 73, issued the following Table, showing the

average value of a slave in each colony; the number of slaves in each; the total value of the slaves, supposing the annual value of each were realised; and the proportion of the 20,000,000*l.*, received by each colony.

Colony	Average Value of a Slave from 1822 to 1830			Number of Slaves by the last Registration in this Country	Relative Value of the Slaves			Proportion of the 20,000,000 <i>l.</i> , to which each Colony is entitled

During the civil war in the United States of America, a law was passed abolishing slavery throughout this territory, and there can be little doubt that the Spanish revolution of 1868 will lead to the extinction of slavery in Cuba.

SMALTZ or SMALT (Ger. *schmalz*; Dutch, *smalt*; Fr. *smalt*; Ital. *smalto azzurro*, *smaltino*; Span. *esmalte*, *azul azul*; Russ. *lazor*). An oxide of cobalt, melted with siliceous earth and potash. It is a sort of glass, of a beautiful deep blue colour; and being ground very fine, is known by the name of powder blue. The colour of smaltz is not affected by fire; and it is consequently in great demand in the painting of earthenware. It is also employed in the colouring of paper, and for other purposes in the arts. Beckmann has proved that the process used in the preparation of smaltz was invented about the end of the 15th or the beginning of the 16th century; and that the blue glass of the ancients owes its colour, not to the presence of cobalt or of smaltz, but to that of iron. (*Hist. of Inventions*, vol. ii. art. 'Cobalt.')

Smaltz is principally manufactured in Germany and Norway. 766 cwt., of the value of 5,362*l.*, were imported into the United Kingdom in 1867, and the exports in the same year amounted to 56 cwt.

SMUGGLING. The offence of importing prohibited articles, or of defrauding the revenue by the introduction of articles into consumption, without paying the duties chargeable upon them. It may be committed indifferently either upon the excise or customs revenue.

*Origin and Prevention of Smuggling.*—This crime, which occupies so prominent a place in the criminal legislation of all modern states, is wholly the result of vicious commercial and financial legislation. It is the fruit either of prohibitions of importation, or of oppressively high duties. It does not originate in any depravity inherent in man; but in the folly and ignorance of legislators. A prohibition against importing a commodity does not take away the taste for it; and the imposition of a high duty on any article occasions a universal desire to escape or evade its payment. Hence the rise and occupation of the smuggler. The risk of being detected in the clandestine introduction of commodities under any system of fiscal regulations may always be valued at a certain average rate; and whenever the duties exceed this rate, smuggling immediately takes place. Now, there are plainly but

two ways of checking this practice—either the temptation to smuggle must be diminished by lowering the duties, or the difficulties in the way of smuggling must be increased. The first is obviously the more natural and efficient method of effecting the object in view; but the second has been most generally resorted to, even in cases where the duties were quite excessive. Governments have uniformly almost consulted the persons employed in the collection of the revenue with respect to the best mode of rendering taxes effectual; though it is clear that the interests, prejudices, and peculiar habits of such persons utterly disqualify them from forming a sound opinion on such a subject. They cannot recommend a reduction of duties as a means of repressing smuggling and increasing revenue, without acknowledging their own incapacity to detect and defeat illicit practices; and the result has been, that, instead of ascribing the prevalence of smuggling to its true causes, the officers of customs and excise have almost universally ascribed it to some defect in the laws, or in the mode of administering them, and have proposed repressing it by new regulations, and by increasing the number and severity of the penalties affecting the smuggler. As might have been expected, these attempts have, in the great majority of cases, proved signally unsuccessful. And it has been invariably found, that no vigilance on the part of the revenue officers, and no severity of punishment, can prevent the smuggling of such commodities as are either prohibited or loaded with oppressive duties. The smuggler is generally a popular character; and whatever the law may declare on the subject, it is ludicrous to expect that the bulk of society should ever be brought to think that those who furnish them with cheap brandy, Geneva, tobacco &c. are guilty of any very heinous offence.

'To pretend,' says Adam Smith, 'to have any scruple about buying smuggled goods, though a manifest encouragement to the violation of the revenue laws, and to the perjury which almost always attends it, would, in most countries, be regarded as one of those pedantic pieces of hypocrisy, which, instead of gaining credit with anybody, seems only to expose the person who affects to practise them to the suspicion of being a greater knave than most of his neighbours. By this indulgence of the public, the smuggler is often encouraged to continue a trade, which he is thus

have in each colony; the total value of the annual value of each were a portion of the 20,000,000, &c.

Proportion of the 20,000,000, to which each Colony is entitled

ing this practice—either the angle must be diminished by or the difficulties in the way be increased. The first is ob- tural and efficient method of in view; but the second has y resorted to, even in cases ere quite excessive. Govern- ally almost consulted the pro- collection of the revenue. The best mode of rendering taxes it is clear that the interests, cular habits of such persons them from forming a sound subject. They cannot recom- of duties as a means of re- and increasing revenue, with- their own incapacity to detect practices; and the result has of ascribing the prevalence of true causes, the officers of so have almost universally defect in the laws, or in ring them, and have proposed new regulations, and by in- and severity of the penalties ggler. As might have been attempts have, in the great proved signally unsuccessful. It invariably found, that no art of the revenue officers, and shment, can prevent the smug- nodities as are either prohibited sive duties. The smuggler ular character; and whatever re on the subject, it is ludicrous bulk of society should ever be at those who furnish them with vea, tobacco &c. are guilty of offence. As Adam Smith, 'to have any ing smuggled goods, though a cement to the violation of the l to the perjury which almost would, in most countries, be re- those pedantic pieces of hypo- of gaining credit with any- to expose the person who affects o the suspicion of being a greater of his neighbours. By this public, the smuggler is often tinue a trade, which is thus

taught to consider as, in some measure, innocent; and when the severity of the revenue laws is ready to fall upon him, he is frequently disposed to defend with violence what he has been accustomed to regard as his just property; and from being at first rather imprudent than criminal, he, at last, too often becomes one of the most determined violators of the laws of society.' (*Walth of Nations*, p. 406.)

To create by means of high duties an overwhelming temptation to indulge in crime, and then to punish men for indulging in it, is a proceeding completely subversive of every principle of justice. It revolts the natural feelings of the people; and teaches them to feel an interest in the worst characters—for such smugglers generally are—to espouse their cause, and avenge their wrongs. A punishment which is not proportioned to the offence, and which does not carry the sanction of public opinion along with it, can never be productive of any good effect. The true way to put down smuggling is to render it unprofitable; to diminish the temptation to engage in it; and this is not to be done by surrounding the coasts with cordons of troops, by the multiplication of oaths and penalties, and making the country the theatre of ferocious and bloody contests in the field, and of perjury and chicanery in the courts of law; but by repealing prohibitions, and reducing duties, so that their collection may be enforced with a moderate degree of vigilance; and that the forfeiture of the article may be a sufficient penalty upon the smuggler. It is in this, and in this only, that we must seek for an effectual check to illicit trafficking. Whenever the profits of the fair trader become nearly equal to those of the smuggler, the latter is forced to abandon his hazardous profession. But so long as prohibitions and oppressively high duties are kept up, or which is in fact the same thing, so long as *high bounties* are held out to encourage the adventurous, the needy, and the profligate to enter on this career, we may be assured that armies of excise and customs officers, backed by the utmost severity of the revenue laws, will be insufficient to hinder them.

It would be useless to enter in this place into any lengthened details to prove the truth of these statements. Unluckily the entire financial and commercial history of this country and others abounds with instances in point, many of which must be familiar to every reader. The prohibition of foreign products, or the imposition of heavy duties on foreign or native products, does not take away the taste for them. On the contrary, it would seem as if the desire to obtain prohibited or over-taxed articles acquired new strength from the obstacles opposed to its gratification.

Per damna, per censes, ab ipso  
Ducit opes animanique ferro.

The prohibition of foreign silks which existed previously to 1826 did not hinder their importation in immense quantities. The vigilance and integrity of the custom-house officers were no match for the ingenuity, daring, and douceurs of the smugglers. And at the very moment when the most strenuous efforts were made to effect their exclusion, the silks of France and Hindostan were openly displayed in Almack's, in the drawing-rooms of St. James's, and in the House of Commons, in mockery of the impotent legislation by which it was attempted to shut them out. There is, in truth, great room for doubting whether the substitution of an ad valorem duty for the whole system of prohibition was at first productive of any material increase in the imports of foreign silks.

The repeal of the prohibition was a most judicious measure; but the duty being unfortunately fixed at too high a limit, it gave an overwhelming stimulus to smuggling. Before the abolition of the duty on silks, the expense of their clandestine importation from France was roughly estimated at about 15 per cent. ad valorem; and as the duty on silks, down to 1845, was double that amount, or 30 per cent., we need not wonder that it was estimated, by well-informed parties, that from a third to a half of the total quantity of imported silks escaped the duty. Indeed, everyone is aware that their clandestine importation was carried on to a great extent, within the port of London, and in the custom-house itself, by the corruption and connivance of the officers. And this, we may be assured, was not a solitary instance. The corruption of the officers is in truth an inevitable consequence of the over-tax system.

The enormous duties that were imposed previously to 1826 on home-made Scotch and Irish spirits produced, as is seen in the art. SMUTTER, an extent of smuggling and demoralisation of which it is not easy for those who have not attended to such matters to form an idea. At present, however, the duties on tobacco, brandy, and hollands, but especially the first, are the great incentives to smuggling. The preventive water-guard is kept up at great expense for little other purpose than to hinder the clandestine importation of these articles. But notwithstanding its efforts, considerable quantities of them find their way into the country without being subjected to any duty. And how should it be otherwise? The price of tobacco in the contiguous continental ports may, at an average, be taken at from 8*d.* to 10*d.* per lb.; and as the duty on tobacco is from 3*s.* 6*d.* to 5*s.* per lb., need we be surprised to learn that, allowing for the expenses of smuggling, if one cargo out of three be safely landed, the business is as profitable as it is adventurous and exciting? 'But it is not so much by the introduction of tobacco from abroad as by its admixture or adulteration with other articles that the contraband dealers endeavour to defeat the duty.' (*Treatise on Taxation*, 3rd ed. p. 347.)

It may, however, be right to state that it must not be imagined that the mere diminution of an oppressive duty on any article will put down the smuggling to which the duty may have given rise. The diminution may not be sufficiently great; and if so, it will have but little influence. Thus, taking, as above, the cost of smuggling French and other silks into England at 15 per cent. ad valorem, a reduction of the late duty of 30 to 25 or even 20 per cent. would, it is plain, have done little or nothing to prevent their clandestine importation. But its reduction, in 1845, to 15 per cent., by taking away the supposed advantage on the side of the smuggler, all but destroyed his occupation. In reducing duties, either for the prevention of smuggling or the increase of consumption, the reduction must be effectual to its end; that is, in the former case, it must be such as to bring the duty below, or nearly to the level of, the cost of smuggling, and in the latter it must be such as to bring the article within the command of a decidedly larger class of consumers. A reduction of 5*s.* or 6*s.* from the late duty of 22*s.* 10*d.* per gallon on foreign brandy and hollands would have been of no use; for it would not have had any sensible influence either in lessening smuggling or increasing consumption. Even the reduction effected in 1845, by Sir Robert Peel, of 7*s.* 10*d.* per gallon, though advantageous, was too small to have the desired effect. It should have been 10*s.* per gallon.

These considerations show the degree of weight which should be attached to the statements of those who endeavour to excuse or apologise for exorbitant duties by showing that they have sometimes been reduced without any material increase taking place in the consumption of the articles on which they are laid, or any material diminution of smuggling. In exemplification of this, it has been stated that though the duty on tobacco was reduced in 1825 from 4s. to 3s. per lb., the consumption was not increased in anything like the same proportion; and that notwithstanding the rapid growth of population, a period of 10 years elapsed before the tobacco revenue rose to its former level. But no one acquainted with the facts could have anticipated any other result. Taking the cost of tobacco at an average at 6d. per lb. (which is beyond the mark), the duty previously to and since the reduction has been respectively 800 and 600 per cent. ad valorem. And it is needless to say that the least of these duties holds out an overwhelming temptation to smuggling and fraud. The truth is, that the reduction of duty in 1825 was an ill-advised measure; and there is perhaps no great reason to conclude that the further reduction of the present duty of 3s. per lb. to 2s. would be much wiser, or that, while it sacrificed revenue, it would be at all sufficient to suppress illicit practices. It is idle, therefore, by referring to instances of this sort, to endeavour to make it be believed that an adequate diminution of taxation is not followed by a corresponding increase of consumption. Had the duty on coffee, instead of being reduced, in 1808, from 1s. 8d. per lb. to 7d., been reduced only to 1s. 3d. (the proportion in which the tobacco-duty was reduced), the effect would have been all but imperceptible; and instead of the consumption being immediately increased from about 1,000,000 lb. to 9,000,000 lb., the presumption is it would not have been increased to 1,500,000 lb. In taxation, as in everything else, unless the means be adequate to the desired ends, the result will be nothing. If you offer a premium of 3 to 1 on smuggling, do you imagine you will abate the nuisance you have called into existence by reducing the premium to 6 to 1 or 4 to 1? It will be found in every case in which a reduction of duty is not followed by a more than corresponding increase of consumption, that the article continues to be over-taxed, or that the duty left upon it either exceeds the cost of smuggling, or places it beyond the reach of those who might otherwise become its consumers. We are bold to say that no instance can be found in the financial history of this or any other country of an adequate reduction of the duty on an over-taxed article not being followed by a cessation of smuggling and a great increase of consumption. (See *Treatise on Taxation*, by the author of this work, part ii. c. 9, 3rd ed.)

*Law as to Smuggling in England.*—The penalties imposed on illicit dealing in commodities subject to duties of excise have been specified in the articles on such commodities. The following extract from the Customs Consolidation Act, the 16 & 17 Vict. c. 107, refers expressly to smuggling. The importance of the subject has induced us to give a full abstract of the clauses.

#### RESTRICTIONS ON SMALL CRAFT, AND THE REGULATIONS FOR THE PREVENTION OF SMUGGLING.

*Commissioners may make General Regulations for Vessels and Boats not exceeding 100 tons.*—The Commissioners of Customs may from time to time, by order under their hands, make such

general regulations as they shall deem expedient in respect of vessels and boats not exceeding 100 tons burden, for the purpose of prescribing, with reference to the tonnage, build, or description of such vessels or boats, the limits within which the same may be employed, the mode of navigation in the manner in which such vessels or boats shall be so employed, and if armed, the number and description of arms, the quantity of ammunition and such other terms, particulars, conditions, and restrictions as the said commissioners may think fit, and also from time to time may revoke, alter, or vary such regulations; and the general regulations made under any former Act, and in force at the time of the passing of this Act, shall remain and continue in force until altered, varied, or revoked. (Sec. 196.)

*Vessels and Boats used contrary to Regulation forfeited.*—Every ship or boat which shall be used or employed in any manner contrary to the regulations prescribed by the Commissioners of Customs shall be liable to forfeiture, unless the same shall have been specially licensed by the Commissioners of Customs to be so used or employed as next hereinafter provided. (Sec. 197.)

*Commissioners of Customs may grant Special Licenses on Terms.*—The Commissioners of Customs may, if they shall so think fit, grant licenses in respect of any vessels or boats not exceeding 100 tons burden, upon such terms and conditions, and subject to such restrictions and stipulations, as in such licenses mentioned, notwithstanding any general regulations made in pursuance of this Act, whether the said regulations shall be revoked or not; and if any vessel or boat so licensed shall not comply with the conditions imposed by or expressed in any such license, or if such vessel or boat shall be found without having such license on board, such vessel or boat shall be forfeited. (Sec. 198.)

*Commissioners may revoke Licenses.*—The Commissioners of Customs may revoke, alter, or vary any license or licenses granted under any former Act, or which may hereafter be granted under this or any other Act relating to the customs. (Sec. 199.)

*Vessels made use of in Removal of uncustomed or prohibited Goods forfeited.*—If any such vessel or boat shall be used in the importation, landing, removal, carriage, or conveyance of any uncustomed or prohibited goods, the same shall be forfeited, and the owner and master of every such vessel or boat shall each forfeit and pay a penalty equal to the value of such vessel or boat, not in any case exceeding 500*l.* (Sec. 200.)

*Regulations to extend to Channel Islands.*—All the regulations which shall be so made by the said commissioners of customs relating to vessels and boats, and the power to grant, revoke, or vary such licenses, shall extend to the Channel Islands. (Sec. 201.)

*Ships not to sail from Channel Islands without Clearance.*—No ship or boat belonging wholly or in part to her Majesty's subjects shall sail from the Channel Islands without a clearance, whether in ballast or having a cargo; and if with cargo, the master shall give bond to her Majesty in double the value of such cargo for the due landing thereof at the port for which such ship or boat clears; and every such ship or boat not having such clearance, or which, having a clearance for her cargo, shall be found light, or to have discharged any part of her cargo before arrival at the port or place of discharge specified in the clearance, shall be forfeited. (Sec. 202.)

*Boats of Vessels to bear Name of Vessel, Port, and Master.*—The owner of every ship belonging

they shall deem expedient and boats not exceeding 100 tons for the purpose of preserving, with the name, build, or description of the vessel, the limits within which they are to be employed, the mode of navigation, the number of such vessels or boats shall be determined, the number and description of the quantity of ammunition, arms, and particulars, conditions, and regulations, and the said commissioners may think fit from time to time may revoke, alter, or amend the same; and the general regulations made in any former Act, and in force at the passing of this Act, shall remain in force until altered, varied, or repealed. (Sec. 196.)

*Boats used contrary to Regulations.*—If any ship or boat which shall be used in any manner contrary to the regulations made by the Commissioners of Customs, or which shall be licensed by the Commissioners, or used or employed as next hereinafter mentioned. (Sec. 197.)

*Boats of Customs may grant Special Licenses.*—The Commissioners of Customs may think fit, grant licenses to any vessel or boats not exceeding 100 tons upon such terms and conditions, and subject to such restrictions and stipulations, as they shall think fit, notwithstanding any regulations made in pursuance of the said Acts, and such regulations shall be revoked, altered, or amended as the conditions imposed by or under such license, or if such vessel or boat without having such license, shall be forfeited. (Sec. 198.)

*Commissioners may revoke Licenses.*—The Commissioners may revoke, alter, or vary any license granted under any former Act, and hereafter to be granted under this Act, relating to the customs. (Sec. 199.)

*Penalty in Removal of uncustomed or unlicensed Goods.*—If any such vessel or boat, or conveyance of any unlicensed goods, the same shall be forfeited, and the owner and master of every such vessel or boat shall pay a penalty of £500. (Sec. 200.)

*Boats to extend to Channel Islands.*—All the provisions of the said Acts, and the regulations made thereunder, shall extend to the Channel Islands. (Sec. 201.)

*Boats from Channel Islands without License.*—If any ship or boat belonging wholly or in part to Her Majesty's subjects shall sail from the Channel Islands without a clearance, whether for a cargo; and if with cargo, the owner shall give bond to Her Majesty for the due landing of such cargo for the due landing of which such ship or boat shall be liable; and if such ship or boat, or any such ship or boat not having such clearance, or which, having a clearance for such cargo, shall be found light, or to have discharged her cargo before arrival at the place of destination specified in the clearance. (Sec. 202.)

*Boats to bear Name of Vessel, Port, and Owner.*—The owner of every ship belonging

wholly or in part to any of Her Majesty's subjects shall paint or cause to be painted upon the outside of the stern of every boat belonging to such ship the name of such ship and the port or place to which she belongs, and the master's name within-side the transom, in white or yellow Roman letters, not less than 2 inches in length, on a black ground, on pain of the forfeiture of every such boat not so marked, wherever the same shall be found. (Sec. 203.)

*Boats not belonging to Ships to have Name of Owner and Port thereon.*—The owner of every boat not belonging to any ship shall paint or cause to be painted upon the stern of such boat, in white or yellow Roman letters, of 2 inches in length, on a black ground, the name of the owner of the boat and the port or place to which she belongs, on pain of the forfeiture of such boat not so marked, wherever the same shall be found. (Sec. 204.)

*British Vessels having secret Places for concealing or Devices for running Goods, and Foreign Vessels having Goods in secret Places, forfeited.*—All ships and boats belonging wholly or in part to Her Majesty's subjects having false bulkheads, false bows, double sides or bottoms, or any secret or disguised place whatsoever, adapted for the purpose of concealing goods, constructed in such ships or boats, or having any hole, pipe, or device in or about such ships or boats adapted for the purpose of running goods, shall be forfeited; and all foreign ships or boats coming into any port of the United Kingdom having on board any goods liable to the payment of duties, or prohibited to be imported into the United Kingdom, concealed in false bulkheads, false bows, double sides or bottoms, or in any secret or disguised place whatsoever, constructed in such ships or boats, shall be forfeited. (Sec. 205.)

*Goods unshipped without Payment of Duty, and prohibited Goods, liable to Forfeiture.*—If any goods liable to the payment of duties shall be unshipped from any ship or boat in the United Kingdom (customs or other duties not being first paid or secured), or if any prohibited goods whatsoever shall be imported or brought into any part of the United Kingdom, or if any goods whatever which shall have been warehoused or otherwise secured in the United Kingdom, either for home consumption or exportation, shall be clandestinely or illegally removed from or out of any warehouse or place of security; or if any goods which are prohibited to be exported shall be put on board any ship or boat, with intent to be laden or shipped for exportation, or shall be brought to any quay, wharf, or other place in the United Kingdom, in order to be put on board any ship or boat for the purpose of being exported; or if any goods which are prohibited to be exported shall be found in any package produced to any officer of customs as containing goods not so prohibited; or if any goods subject to any duty or restriction in respect of importation, or which are prohibited to be imported into the United Kingdom, shall be found or discovered to have been concealed in any manner on board any ship or boat within the limits of any port of the United Kingdom, or shall be found either before or after landing to have been concealed in any manner on board any such ship or boat, within such limits as aforesaid; then and in every of the foregoing cases all such goods shall be forfeited, together with any goods which shall be found packed with or used in concealing them. (Sec. 206.)

*Spirits and Tobacco found removing to be deemed run.*—All spirits and tobacco which shall be found removing without a legal permit or cer-

tificate for the same shall be deemed to be spirits or tobacco respectively liable to and unshipped without payment of duty, unless the party in whose possession the same shall be found or seized shall prove to the contrary. (Sec. 207.)

*Restricted Goods to be deemed run.*—All goods the importation of which is in any way restricted, which are of a description admissible to duty, and which shall be found or seized in the United Kingdom under any law relating to the customs or excise, shall, for the purpose of proceeding for the forfeiture of them, or for any penalty incurred in respect of them, be described in any information exhibited on account of such forfeiture or penalty as and on the trial or hearing thereof be deemed and taken to be goods liable to and unshipped without payment of duties, unless the contrary be proved. (Sec. 208.)

*Vessels found within certain Distances of the Coast of the United Kingdom or Channel Islands with certain Goods on board forfeited, with the Goods.*—If any ship or boat belonging wholly or in part to Her Majesty's subjects, or having half the persons on board subjects of Her Majesty, shall be found or discovered to have been within 4 leagues of that part of the coast of the United Kingdom which is between the North Foreland on the coast of Kent and Beachy Head on the coast of Sussex, or within 8 leagues of any other part of the coast of the United Kingdom, or if any foreign ship or boat having one or more subjects of Her Majesty on board shall be found or discovered to have been within 3 leagues of the coast of the United Kingdom, or if any foreign ship or boat shall be found or discovered to have been within 1 league of the coast of the United Kingdom, or if any ship or boat shall be found or discovered to have been within 1 league of the Channel Islands, any such ship or boat so found or discovered, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits, not being in a cask or other vessel capable of containing liquids of the size or content of 20 gallons at the least, or any tea exceeding 6 lb. weight in the whole, or any tobacco or snuff not being in a cask or package containing 200 lb. weight of tobacco or snuff at the least, or being separated or divided in any manner within any cask or package, or any tobacco stalks, tobacco stalk flour, snuff work, or any cordage or other articles adapted and prepared for slinging or sinking small casks, or any casks or other vessels whatsoever of less size or content than 20 gallons, of the description used for the smuggling of spirits, then and in every such case the said spirits, tea, tobacco, snuff, tobacco stalks, tobacco stalk flour, and snuff work, together with the casks or packages containing the same, and the cordage or other articles, casks, and other vessels of the description aforesaid, and also the ship or boat, shall be forfeited. (Sec. 209.)

*Vessels or Boats arriving within any Port of the United Kingdom or of the Channel Islands having prohibited Goods on board or attached thereto forfeited.*—If any ship or boat shall be found or discovered to have been within any port, bay, harbour, river, or creek of the United Kingdom or the Channel Islands, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits, not being in a cask or other vessel capable of containing liquids of the size or content of 20 gallons at the least, or any tobacco or snuff, not being in a cask or package containing 200 lb.

weight of such tobacco or snuff at the least, or being separated or divided in any manner within any cask or package, or any tobacco stalks, tobacco stalk flour, or snuff work, every such ship or boat, and such spirits, tobacco, snuff, tobacco stalks, tobacco stalk flour, and snuff work shall be forfeited; but if it shall be made to appear to the satisfaction of the Commissioners of Customs that such spirits, tobacco, snuff, tobacco stalks, tobacco stalk flour, or snuff work were on board without the knowledge or privity of the owner or master of such ship or boat, and without any wilful neglect or want of reasonable care on their parts, then and in such case the said Commissioners shall deliver up the said ship or boat to the owner or master of the same. (Sec. 210.)

*Forfeiture not to extend to Ships and Goods in certain Cases.*—Nothing herein contained shall extend to render any ship of 120 tons burden or upwards liable to forfeiture on account of any tobacco coming direct from the East Indies or the Turkish dominions, including Egypt, if in packages each containing not less than 100 lb. nett weight of such tobacco; nor on account of any snuff or negrohead tobacco the produce of and imported direct from the United States of America, if in packages each containing not less than 150 lb. nett weight of such snuff or tobacco; nor on account of any tobacco imported from Malta in packages each containing not less than 80 lb. nett weight of such tobacco; nor on account of any tobacco the produce of Porto Rico, Mexico, South America, St. Domingo, Cuba, the British possessions in America and the West Coast of Africa, if in packages each containing not less than 80 lb. nett weight of such tobacco, and imported direct from those places or from the United States of America; nor on account of any cigars, if in packages each containing not less than 100 lb. nett weight of such cigars; nor on account of any cigarillos or cigarettos, if in packages each containing not less than 75 lb. nett weight of such cigarillos or cigarettos; nor to render any ship of 150 tons burden or upwards liable to forfeiture on account of any tea, or of any spirits in glass bottles or stone bottles not exceeding the size of 3 pints each, such tobacco, snuff, cigars, cigarillos or cigarettos, tea, and spirits being really part of the cargo of such ship; nor to render any ship liable to forfeiture on account of any spirits, tea, or tobacco really intended for the consumption of the seamen or passengers on board during their voyage, and not being more in quantity than is necessary for that purpose; nor to render any ship liable to forfeiture if really bound from one foreign port to another foreign port, and pursuing such voyage, wind and weather permitting. (Sec. 211.)

*Ships in Port with a Cargo and afterwards found in Ballast, and Cargo unaccounted for, forfeited.*—If any ship or boat whatever shall be found within the limits of any port of the United Kingdom with a cargo on board, and such ship or boat shall afterwards be found light or in ballast, and the master is unable to give a due account of the port or place within the United Kingdom where such ship or boat shall have legally discharged her cargo, such ship or boat shall be forfeited. (Sec. 212.)

*Certain Ships from which Goods are thrown overboard to prevent Seizure to be forfeited.*—Every ship or boat belonging wholly or in part to her Majesty's subjects, or having on board one or more of her Majesty's subjects, which shall be found or discovered to have been within 4 leagues of that part of the coast of the United Kingdom which is between the North Foreland on the coast of Kent and Beechy Head on the coast of Sussex, or within 8 leagues of any other part of the coast of the

United Kingdom from which any part of the lading of such ship or boat shall have been thrown overboard, or on board which any of the goods shall be staved or destroyed to prevent seizure, shall be forfeited. (Sec. 213.)

*Ships throwing overboard any Goods during Chase, forfeited, and Persons escaping deemed Subjects.*—When any ship or boat belonging wholly or in part to her Majesty's subjects, or having half the persons on board subjects of her Majesty shall be found within 100 leagues of the coast of the United Kingdom, and shall not bring to upon signal made by any vessel or boat in her Majesty's service or in the service of the revenue, hoisting the proper pendant and ensign in order to bring such ship or boat to, and thereupon chase shall be given, if any person or persons on board such ship or boat so chased shall during the chase, or before such ship or boat shall bring to, throw overboard any part of her lading, or shall stove or destroy any part of such lading, to prevent seizure thereof, then and in any such case such ship or boat shall be forfeited; and all persons escaping from any such ship or boat, or from any foreign ship or boat, during any chase made thereof by any vessel or boat in her Majesty's service or in the service of the revenue, shall be deemed subjects of her Majesty, unless the contrary be proved. (Sec. 214.)

*Ships not bringing to may be fired into.*—If any ship or boat liable to seizure or examination under this or any Act for the prevention of smuggling shall not bring to when required so to do, on being chased by any vessel or boat in her Majesty's navy having the proper pendant and ensign of her Majesty's ships hoisted, or by any vessel or boat duly employed for the prevention of smuggling, having a proper pendant and ensign hoisted, it shall be lawful for the captain, master, or other person having the charge or command of such vessel or boat in her Majesty's navy, or employed as aforesaid (first causing a gun to be fired as a signal), to fire at or into such ship or boat, and such captain, master, or other person acting in his aid or by his direction, shall be and is hereby indemnified and discharged from any indictment, penalty, action, or other proceeding for so doing. (Sec. 215.)

*Ships may be searched within the Limits of the Ports.*—Any officer or officers of the army, navy, or marine duly employed for the prevention of smuggling, and on full pay, or any officer or officers of customs, producing his or their warrant or deputation (if required), may go on board any ship which shall be within the limits of any port of the United Kingdom, and rummage and search the cabin and all other parts of such ship for prohibited or uncustomed goods, and remain on board such ship so long as she shall continue within the limits of such port. (Sec. 216.)

*Officers of Customs may, on probable Cause, stop Carts &c., and search for Goods.*—Any officer of customs or excise, or other person acting in his or their aid, or duly employed for the prevention of smuggling, may, upon reasonable suspicion, stop and examine any cart, waggon, or other means of conveyance, for the purpose of ascertaining whether any smuggled goods are contained therein; and if no such goods shall be found, the officer or other person so stopping and examining such cart, waggon, or other conveyance, having had probable cause to suspect that such cart, waggon, or other conveyance had smuggled goods contained therein, shall not, on account of such stoppage and search, be liable to any prosecution or action at law on account thereof; and all persons driving or conducting such cart, waggon,

om which any part of the boat shall have been thrown and which any of the goods destroyed to prevent seizure. (Sec. 213.)

**Officers authorised by Writ of Assistance may search Houses for uncustomed or prohibited Goods.**—Any officer of customs, or person acting under the direction of the Commissioners of Customs, having a writ of assistance issued from the Court of Exchequer, may, in the daytime, enter into and search any house, shop, cellar, warehouse, room, or other place, and in case of resistance break open doors, chests, trunks, and other packages, and seize and bring away any uncustomed or prohibited goods, and put and secure the same in the Queen's warehouse, and may take with him any constable, headborough, police, or other public officer, duly sworn as such, who may act as well without the limits of the parish or other place for which he shall be so sworn as within such limits; and all writs of assistance so issued shall continue in force during the reign for which they were granted, and for six months afterwards. (Sec. 218.)

**Ships and Boats used in Removal of run Goods to be forfeited.**—All ships, boats, carriages, or other means of conveyance, together with all horses and other animals made use of in the removal, carriage, or conveyance of any goods liable to forfeiture under this or any other Act relating to the customs, shall be forfeited. (Sec. 219.)

**Ships, Boats, Goods, and Persons may be seized or detained, and Goods delivered to the proper Officer.**—All ships and boats, and all goods whatsoever, liable to forfeiture, and all persons liable to be detained for any offence under this or any other Act relating to the customs, shall and may be seized or detained in any place, either upon land or water, by any officer or officers of her Majesty's army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer or officers of customs or excise, or by any person having authority from the Commissioners of Customs or Inland Revenue to seize, or duly employed for the prevention of smuggling; and all ships, boats, and goods so seized shall, as soon as conveniently may be, be delivered into the care of the proper officer appointed to receive the same; and the forfeiture of any ship or boat shall be deemed to include her tackle, apparel, and furniture, and the forfeiture of any goods shall be deemed to include the package in which the same are found, and all the contents thereof. (Sec. 220.)

**Police Officers seizing Goods to carry them to the Customs Warehouse.**—If any goods liable to forfeiture under this or any other Act relating to the customs shall be stopped or taken by any police officer or other person acting by virtue of any Act of Parliament, or otherwise duly authorised, such goods shall be carried to the customs warehouse next to the place where the goods were stopped or taken, and there delivered to the proper officer appointed to receive the same, within 48 hours after the said goods were stopped and taken. (Sec. 221.)

**Goods stopped by Police Officers may be retained until Trial of Persons charged with stealing them.**—If any such goods shall be stopped or taken by any police officer on suspicion that the same had been feloniously stolen, the said officer may carry the same to the police office to which the offender is taken, there to remain until and in order to be produced at the trial of the offender, and in such case the officer is required to give notice in writing

to the Commissioners of Customs of his having so detained the said goods, with the particulars of the same; and immediately after the trial of such offender all such goods shall be conveyed to and deposited in the customs warehouse as aforesaid, to be proceeded against according to law; and in case any police officer making detention of any such goods shall neglect to convey the same to such warehouse, or to give the notice of having stopped the same as before prescribed, such officer shall forfeit the sum of 20*l.* (Sec. 222.)

**Notice to be given by seizing Officer to Owner of Ships or Goods seized, and Seizures to be claimed within One Month.**—Whenever any ship, boat, or goods shall be seized as forfeited under this or any Act relating to the customs, the seizing officer shall forthwith give notice in writing of such seizure, and of the grounds thereof, to the master or owner of such ship, boat, or goods, if known, either by delivering the same to him personally, or by letter addressed to him at his place of abode, if known, and transmitted by post; and all ships, boats, or goods so seized under any law relating to the customs shall be deemed and taken to be condemned, and may be sold, in the manner directed by law in respect to ships, boats, and goods seized and condemned for breach of any law relating to the customs, unless the person from whom such ships, boats, and goods shall have been seized, or the owner of them, or some person authorised by him, shall, within one calendar month from the day of seizing the same, give notice in writing, if in London, to the person seizing the same, or to the secretary or solicitor for the customs, and, if elsewhere, to the person seizing the same, or to the collector, comptroller, or other chief officer of the customs at the nearest port, that he claims the ship, boat, or goods, or intends to claim them. (Sec. 223.)

**Commissioners of Treasury or of Customs may restore Seizures.**—The Commissioners of the Treasury or of the Customs may, by any order made by them for that purpose, direct any ship, boat, goods, or commodities whatever seized under this or any Act relating to the customs to be delivered to the proprietor thereof, whether condemnation shall have taken place or not, upon such terms and conditions as the said commissioners respectively may see fit. (Sec. 224.)

**Ships and Goods seized may be disposed of as Commissioners of Customs direct.**—All ships and boats and all goods whatsoever which shall have been seized and condemned for breach of any law relating to the customs shall be disposed of, as soon as conveniently may be after the condemnation thereof, in such manner as the Commissioners of Customs may direct; and any nets, dredges, instruments, or implements of fishing liable to seizure or forfeiture and seized under the Act 6 & 7 Vict. c. 79, and the convention and articles therein referred to, shall and may be sold or otherwise disposed of, as the Commissioners of Customs may direct, unless claimed within one month after the seizure thereof, or within one month after the passing of this Act as to such as may be then under seizure, such claim being made in the same manner as is prescribed by the 223rd sec. of this Act with respect to ships, boats, or goods seized under this Act. (Sec. 225.)

**AS TO OFFENCES COMMITTED BY AND PENALTIES ATTACHING TO PERSONS.**

**Persons may be searched if Officers have Reason to suspect smuggled Goods are concealed upon them.**—Any officer of customs, or of the army, navy, or marines, duly employed in the prevention of

smuggling, or any other person acting by virtue of any Act of Parliament, or otherwise duly authorised, may, if he has reasonable cause to suspect that any person has concealed upon him any goods liable to forfeiture under this or any other Act relating to the customs, search such person, and if he finds any such goods, he may seize and detain the same, and may also search any baggage, box, chest, trunk, or other package, and if he finds any such goods, he may seize and detain the same, and may also search any baggage, box, chest, trunk, or other package, and if he finds any such goods, he may seize and detain the same. (Sec. 226.)

**Persons may be searched if Officers have Reason to suspect smuggled Goods are concealed upon them.**—Any officer of customs, or of the army, navy, or marines, duly employed in the prevention of

smuggling, or any other person acting by virtue of any Act of Parliament, or otherwise duly authorised, may, if he has reasonable cause to suspect that any person has concealed upon him any goods liable to forfeiture under this or any other Act relating to the customs, search such person, and if he finds any such goods, he may seize and detain the same, and may also search any baggage, box, chest, trunk, or other package, and if he finds any such goods, he may seize and detain the same. (Sec. 226.)

**AS TO OFFENCES COMMITTED BY AND PENALTIES ATTACHING TO PERSONS.**

**Persons may be searched if Officers have Reason to suspect smuggled Goods are concealed upon them.**—Any officer of customs, or of the army, navy, or marines, duly employed in the prevention of

smuggling and on full pay, may search any person on board any ship or boat within the limits of any port in the United Kingdom or the Channel Islands, or any person who shall have landed from any ship or boat, provided such officer shall have good reason to suppose that such person has any uncustomed or prohibited goods secreted about his person; and if any person shall obstruct any such officer in going, remaining, or returning from on board, or in searching such ship or boat or person, every such person shall forfeit the sum of 100*l.*; and if any passenger or other person on board any such ship or boat, or who may have landed from any such ship or boat, shall, upon being questioned by any such officer whether he has any foreign goods upon his person or in his possession, deny the same, and any such goods shall after such denial be discovered to be or to have been upon his person or in his possession, such goods shall be forfeited, and such person shall forfeit treble the value of such goods. (Sec. 226.)

*Person before Search may require to be taken before a Justice or Officers of Customs.*—Before any person shall be searched by any such officer as aforesaid, such person may require such officer to take him or her before any justice, or before the collector, comptroller, or other acting principal officer of the customs, who shall, if he see no reasonable cause for search, discharge such person, but if otherwise, direct such person to be searched, and if a female, she shall not be searched by any other than a female. (Sec. 227.)

*Penalty on Officers for Misconduct.*—Any officer required to take any such person before such justice, collector, comptroller, or other superior officer of customs shall do so with all reasonable despatch; but if such officer shall require any person to be searched, not having reasonable ground to suppose that he has uncustomed or prohibited goods about his person, such officer shall forfeit and pay any sum not exceeding 10*l.* (Sec. 228.)

*Persons concerned in importing prohibited or restricted Goods &c. to forfeit treble the Value, or 100*l.**—Every person who shall be concerned in importing or bringing into the United Kingdom any prohibited goods, or any goods the importation of which is restricted, contrary to such prohibition or restriction, and whether the same be unshipped or not; and every person who shall unship or assist or be otherwise concerned in the unshipping of any goods which are prohibited or of any goods which are restricted and imported contrary to such restriction, or of any goods liable to duty, the duties for which have not been paid or secured; or who shall knowingly harbour, keep, or conceal, or shall knowingly permit or suffer or cause or procure to be harboured, kept, or concealed, any such goods, or any goods which shall have been illegally removed without payment of duty from any warehouse or place of security in which they may have been deposited; or to whose hands and possession any such goods shall knowingly come; or who shall assist or be concerned in the illegal removal of any goods from any warehouse or place of security in which they shall have been deposited as aforesaid; or who shall be in any way knowingly concerned in conveying, removing, depositing, concealing, or in any manner dealing with any goods liable to duties of customs, with intent to defraud her Majesty of such duties or any part thereof; or who shall be in any way knowingly concerned in any fraudulent evasion or attempt at evasion of such duties or any part thereof; shall in each and every of the foregoing cases forfeit either treble the value of the goods or the penalty of 100*l.*, at the election of the commissioners of customs. (Sec. 229.)

*If Goods be removed Prior to Examination, Penalty upon the Party concerned in the Removal.*—Every person who shall remove any goods imported into the United Kingdom from any ship, quay, wharf, or other place previous to the examination thereof by the proper officer of customs, unless under the care or authority of such officer, or who shall remove or withdraw from any quay, wharf, or other place any goods entered to be warehoused after the landing thereof, so that no sufficient account is taken thereof by the proper officer, or so that the same are not duly warehoused, and every person who shall assist or be otherwise concerned in such removal or withdrawal, or shall knowingly harbour, keep, or conceal, or shall knowingly permit or suffer, or cause or procure to be harboured, kept, or concealed, any such goods, or to whose possession any such goods shall knowingly come, every such person shall forfeit either treble the value thereof or the penalty of 100*l.*, at the election of the commissioners of customs. (Sec. 230.)

*Persons unshipping or concerned in the carrying away or concealing Spirits or Tobacco to forfeit 100*l.* and may be detained.*—Every person who shall unship or be aiding or concerned in the unshipping of any spirits, tobacco, snuff, tobacco stalks, tobacco stalk flour, or snuff-work, or of any tea, such tea being of the value of 10*l.* or upwards, liable to forfeiture under this or any other Act relating to the customs or excise, or who shall carry, convey, or conceal, or be aiding, assisting, or concerned in the carrying, conveying, or concealing of any such spirits, tobacco, snuff, tobacco stalks, tobacco stalk flour, or snuff-work, or of any such tea as aforesaid, shall forfeit for each such offence treble the value of such goods, or the sum of 100*l.*, at the election of the commissioners of customs; and every such person may be detained, to be dealt with as hereinafter directed. (Sec. 231.)

*Persons found or discovered to have been on board Vessels liable to Forfeiture subject to be committed to any House of Correction.*—Every subject of her Majesty who shall be found or discovered to have been on board any ship or boat liable to forfeiture under this or any Act relating to the customs for being found or discovered to have been within any of the distances in this Act mentioned from the United Kingdom or the Channel Islands, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, such goods or things as subject such ship or boat to forfeiture, or who shall be found or discovered to have been within any such distances as aforesaid on board any ship or boat from which any part of the cargo or lading shall have been thrown overboard, or staved or destroyed, to prevent seizure, and every person, not being a subject of her Majesty, who shall be found or discovered to have been on board any ship or boat liable to forfeiture for any of the causes last aforesaid within one league of the coast of the United Kingdom or of the Channel Islands, shall, upon being duly convicted of any of the said offences before any justice, be adjudged by such justice, for the first of such offences, to be imprisoned in any house of correction, and there kept to hard labour, for any term not less than 6 nor more than 9 months, and for the second of such offences for any term not less than 9 nor more than 12 months, and for the third or any subsequent offence for 12 months; and every such person may be detained, and taken before any justice, to be dealt with as hereinafter directed. (Sec. 232.)

red Prior to Examination, ty concerned in the Removal, shall remove any goods into Kingdom from any ship, her place previous to the by the proper officer of or the care or authority of all remove or withdraw from other place any goods ended after the landing thereof, account is taken thereof by so that the same are not duly person who shall assist or ed in such removal or with- owingly harbour, keep, or harbour, kept, or concealed, whose possession any such come, every such person ble the value thereof or the e election of the commissioners. (30.)

g or concerned in the carrying Spirits or Tobacco to forfeit detained.—Every person who aiding or concerned in the spirits, tobacco, snuff, tobacco flour, or snuff-work, or of any of the value of 10l. or upwards, under this or any other Act omos or excise, or who shall nceal, or be aiding, assisting, carrying, conveying, or con- spirits, tobacco, snuff, tobacco flour, or snuff-work, or of any id, shall forfeit for each such value of such goods, or the sum ction of the commissioners of such person may be detained, as hereinafter directed. (Sec.

or discovered to have been on to Forfeiture subject to be some of Correction.—Every subject shall be found or discovered board any ship or boat liable to this or any Act relating to the found or discovered to have of the distances in this Act the United Kingdom or in having on board or in any tere, or having had on board attached thereto, or conveying in any manner, such goods or such ship or boat to forfeiture, and or discovered to have been istances as aforesaid on board which any part of the cargo be thrown overboard, or d, to prevent seizure, and every a subject of her Majesty, who iscovered to have been on board liable to forfeiture for any of the aid within one league of the ed Kingdom or of the Channel n being duly convicted of any of before any justice, be adjudged the first of such offences, to be house of correction, and there ur, for any term not less than 6 months, and for the second of any term not less than 9 not nths, and for the third or any for 12 months; and every such detained, and taken before any t with as hereinafter directed.

Persons on board Vessels within Ports of the United Kingdom with Contraband Articles, subject to Penalty of 100l. and Detention.—Every person who shall be found or discovered to have been on board any ship or boat liable to forfeiture under this or any other Act relating to the customs for being found or discovered to have been within any port, bay, harbour, river, or creek of the United Kingdom, or of the Channel Islands, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying in any manner, such goods or things as subject such ship or boat to forfeiture, or who shall be found or discovered to have been on board any of her Majesty's ships or vessels, or on board any ship or vessel in her Majesty's employ- ment or service, or on board of any foreign post-office packet, being a national vessel, employed in carrying the mails between any foreign country and the United Kingdom, such last-mentioned ships, vessels, or packets being found or discovered to have been within any port, bay, harbour, river, or creek of the United Kingdom or the Channel Islands, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits, not being in a cask or other vessel capable of containing liquids of the size or content of 20 gallons at the least, or any tobacco or snuff, not being in a cask or package containing 20 lb. of such tobacco or snuff at least, or being separated or divided in any manner within any cask or package, shall forfeit the sum of 100l.; and every such person shall and may be detained, and taken before any justice, to be dealt with as hereinafter directed. (Sec. 233.)

Persons in her Majesty's Service detained, to be secured on board until Warrant procured.—Where any person or persons, being part of the crew of any of her Majesty's ships or vessels, or of any ship or vessel in her Majesty's employment or service, and liable to detention, shall have been detained under any law relating to the customs, such person or persons, upon notice thereof by the detaining officer to the commanding officer of the ship or vessel, shall be placed in security by such commanding officer on board such ship or vessel until such detaining officer shall have obtained a warrant from a justice for bringing such person or persons before him or any other justice or justices, to be dealt with according to law, which warrant such justice is required to grant upon complaint made to him by such officer of customs stating the offence for which such person or persons is or are liable to detention. (Sec. 234.)

Any Person escaping may afterwards be detained.—If any person liable to be detained under this or any other Act relating to the customs shall not be detained at the time of committing the offence for which he is so liable, or shall after detention make his escape, such person shall and may at any time afterwards be detained and taken before any justice, to be dealt with as if detained at the time of committing such offence. (Sec. 235.)

Magistrates to proceed to Conviction of Smug- glers in certain Cases without an Order of Customs.—Whenever any person shall have been detained, and taken before any justice, for being found or discovered to have been on board any ship or boat within any port, bay, harbour, river, or creek of the United Kingdom or the Channel Islands, such ship or boat having on board or having had on board spirits or tobacco in such casks or packages as would, under this or any other Act relating to customs, subject the same to forfeiture, or for un-

shipping or for aiding or being concerned in the unshipping of any spirits or tobacco liable to for- feiture under this or any other Act relating to the customs or excise, or for carrying, conveying, or concealing, or for aiding or being concerned in the carrying, conveying, or concealing of any such spirits or tobacco, and it shall appear to such justice that the quantity of spirits in respect of which such person has been so detained does not exceed 2 gallons, or that the quantity of tobacco in respect of which such person has been so detained does not exceed 10 lb. weight, such justice may proceed summarily upon the case without any information, and although no direction shall have been given by the Commissioners of Customs, and convict such person of such offence, and adjudge that such person shall, in lieu of any other penalty, forfeit any sum not less than the single value nor more than treble the value of such goods, including the duties of importation due thereon, and in default of payment of such sum of money commit such person to any of her Majesty's gaols for any time not exceeding one month. (Sec. 236.)

Where Persons are taken before a Justice under any Act relating to the Customs, such Justice may order them to be detained a reasonable Time, or admit to Bail.—When any person shall have been detained for any offence against this or any other Act relating to the customs, and taken before any justice, such justice may, if he see reasonable cause, order such person to be detained in gaol, or in the custody of the police or constabulary force, a reasonable time, to obtain the order of the Com- missioners of Customs or Inland Revenue, and to prepare the necessary informations, convictions, and warrants of commitment, and at the expiration of such time to be brought before him, or any other justice or justices, who may then finally hear and determine the matter: but any person so detained may be liberated, on giving by recognisance, security to the satisfaction of such justice in the sum of 100l., or in the amount of the penalty sought to be recovered, to appear at such time and place as shall be appointed by such justice for hearing the case. (Sec. 237.)

Penalty on persons offering Goods for Sale under Pretence of being run or prohibited.—If any person shall offer for sale any goods under pretence that the same are prohibited, or have been unshipped and run on shore without payment of duties, all such goods (although not liable to any duties or prohibited) shall be forfeited, and every person so offering the same for sale shall forfeit treble the value of such goods. (Sec. 238.)

No subjects except Officers to take up Spirits in small Casks sunk or floating upon the Sea.—No subject of her Majesty, other than officers of the navy, customs, or excise, shall intermeddle with or take up any spirits, being in casks of less content than 20 gallons, which may be found floating upon or sunk in the sea within 100 leagues of the United Kingdom, and if any spirits shall be so intermeddled with or taken up, the same shall be forfeited, together with any ship or boat in which they are found. (Sec. 239.)

Commissioners of Treasury or Customs may restore Seizures &c.—The Commissioners of the Treasury or Customs may mitigate or remit any penalty or fine, or any part of any penalty or fine, incurred under this or any Act relating to the customs, or release from confinement any person committed under this or any Act relating to the customs, on such terms and conditions as to them shall appear proper. (Sec. 240.)

Persons signalling Smuggling Vessels may be detained, and forfeit 100l., or be kept to Hard Labour

for One Year.—No person shall, after sunset and before sunrise between September 21 and April 1, or after the hour of 8 in the evening and before the hour of 6 in the morning at any other time of the year, make, aid, or assist in making any signal in or on board or from any ship or boat, or on or from any part of the coast or shore of the United Kingdom, or within 6 miles of any part of such coast or shore, for the purpose of giving notice to any person on board any smuggling ship or boat, whether any person so on board of such ship or boat be or not within distance to notice any such signal; and if any person, contrary to this Act, shall make or cause to be made, or aid or assist in making, any such signal, such person so offending shall be guilty of a misdemeanor; and any person may stop, arrest, and detain the person so offending, and convey him before any justice, who, if he see cause, shall commit the offender to the next county gaol, there to remain until delivered by due course of law; and it shall not be necessary to prove on any indictment or information in such case that any ship or boat was actually on the coast; and the offender being duly convicted shall, by order of the court before whom he shall be convicted, either forfeit the penalty of 100*l.*, or, at the discretion of such court, be committed to the common gaol or house of correction, there to be kept to hard labour for any term not exceeding one year. (Sec. 241.)

*Proof of a Signal not being intended on Defendant.*—If any person be charged with or indicted for having made or caused to be made, or for aiding or assisting in making, any such signal as aforesaid, the burden of proof that such signal so charged as having been made with intent and for the purpose of giving such notice as aforesaid was not made with such intent and for such purpose shall be upon the defendant against whom such charge is made or such indictment is found. (Sec. 242.)

*Any Person may prevent Signals, and enter Lands for that Purpose.*—Any person whatsoever may prevent any signal being made as aforesaid, and may go upon any lands for that purpose, without being liable to any indictment, suit, or action for the same. (Sec. 243.)

*Persons assembling to the Number of Three or more to run Spirits, Tobacco, or obstructing Officers, to be sent to House of Correction.*—All persons assembling to the number of 3 or more, for the purpose of unshipping, carrying, conveying, or concealing any spirits or tobacco, or any tea or silk (such tea or silk being of the value of 10*l.* or more), liable to forfeiture under this or any other Act relating to the customs or excise, and every person who shall by any means procure or hire, or shall depute or authorise any other person to procure or hire, any person or persons to assemble for the purpose of being concerned in the landing or unshipping, or carrying, conveying, or concealing any goods which are prohibited to be imported, or the duties for which have not been paid or secured, and every person who shall obstruct any officer or officers of the army, navy, or marines, being duly employed for the prevention of smuggling, or any officer or officers of customs or excise, or any person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, in the execution of his or their duty, or in the due seizing of any goods liable to forfeiture by this Act or any Act relating to the customs, or who shall rescue, attempt or endeavour to rescue, or cause to be rescued, any goods which have been duly seized, or who shall before or at or after any seizure stave, break, or otherwise destroy, or attempt or endeavour to break, stave, or other-

wise destroy, any goods, to prevent the seizure thereof or the securing of the same, shall, upon being duly convicted of any of the said offences before any justice of the peace, be adjudged by such justice for the first offence to be imprisoned in any house of correction and there kept to hard labour for any term not less than 6 nor more than 9 months, and for the second offence for any term not less than 9 nor more than 12 months, and for the third or any subsequent offence for 12 months. (Sec. 244.)

*Three or more armed Persons assembled to hide or rescue smuggled goods guilty of Felony.*—If any persons, to the number of 3 or more, armed with firearms or other offensive weapons, shall, within the United Kingdom, or within the limits of any port, harbour, or creek thereof, be assembled in order to be aiding and assisting in the illegal landing, running, or carrying away of any prohibited goods, or any goods liable to any duties which have not been paid or secured, or in rescuing or taking away any such goods as aforesaid after seizure from the officer of the customs, or other officer authorised to seize the same, or from any person or persons employed by or assisting them, or from the place where the same shall have been lodged by them, or in rescuing any person who shall have been apprehended for any offence made felony by this or any Act relating to the customs, or in the preventing the apprehension of any person who shall have been guilty of such offence, or in case any persons to the number of 3 or more so armed as aforesaid shall, within the United Kingdom, or within the limits of any port, harbour, or creek thereof, be so aiding or assisting, every person so offending, and every person aiding, abetting, or assisting therein, shall, being thereof convicted, be adjudged guilty of felony, and shall be liable, at the discretion of the court before which he shall be convicted, to be transported beyond the seas for the term of his natural life, or for any term not less than 15 years, or to be imprisoned for any term not exceeding 3 years. (Sec. 245.)

*Persons shooting at Boats belonging to Navy or Revenue Service, guilty of Felony.*—If any person shall maliciously shoot at any vessel or boat belonging to her Majesty's navy, or in the service of the revenue, within 100 leagues of any part of the coast of the United Kingdom, or shall maliciously shoot at, maim, or wound any officer of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or any person acting in his aid or assistance, or duly employed for the prevention of smuggling, in the execution of his office or duty, every person so offending, and every person aiding, abetting, or assisting therein, shall, upon conviction, be adjudged guilty of felony, and shall be liable, at the discretion of the court before which he shall be convicted, to be transported beyond the seas for the term of his natural life, or for any term not less than 15 years, or to be imprisoned for any term not exceeding 3 years. (Sec. 246.)

*Any person in company with Four others, having smuggled Goods, or with one other, armed or disguised, guilty of Felony.*—If any person in company with more than 4 others be found with any goods liable to forfeiture under this or any other Act relating to the customs or excise, or in company with 1 other person, within 5 miles of the sea coast or of any tidal river, and carrying offensive arms or weapons, or disguised in any way, every such person shall be adjudged guilty of felony, and shall, on conviction of such offence, be transported as a felon for the term of 7 years. (Sec. 247.)

*Persons assaulting Officers by Force or Violence may be transported.*—If any person shall, by force or violence, assault, resist, or obstruct any officer of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or other person duly employed for the prevention of smuggling, in the due execution of his or their duty, or any person acting in his or their aid, every person so offending, being thereof convicted, shall be transported for 7 years, or sentenced to be imprisoned in any house of correction or common goal, and kept to hard labour, for any term not exceeding 3 years, at the discretion of the court before whom such offender shall be tried and convicted as aforesaid. (Sec. 218.)

Clause 219 enacts that the commanding officers of boats for the prevention of smuggling may haul them on shore without being liable to be sued for so doing.

Clause 250 authorises officers of army, navy, and marines, to patrol the coasts for the prevention of smuggling without being liable to suit for so doing.

#### *As to Compensations and Rewards.*

*Officers wounded to be provided for &c.*—If any officer or seaman employed in the service of the customs or inland revenue shall be killed, maimed, wounded, or in any way injured in the due execution of his office, or if any person acting in his aid, or duly employed for the prevention of smuggling, shall be so killed, maimed, wounded, or in any way injured while so aiding such officer or seaman, or so employed, the Commissioners of Customs or Inland Revenue respectively may, with the sanction of the Commissioners of the Treasury, make such provision for such officer or person, or for the widows and families of such as shall be killed, as they may see fit. (Sec. 251.)

*Rewards for detaining Smugglers.*—The Commissioners of Customs may award to any officer or other person detaining any person liable to detention under this or any other Act relating to the customs, if convicted, such reward as they may think fit, not exceeding the sum of 20*l.* for each person. (Sec. 252.)

*Rewards out of Penalties.*—The Commissioners of Customs may order such reward as they see fit out of any pecuniary penalty or composition to any officer or other person by whose means the same is recovered. (Sec. 253.)

*Rewards to Officers making Seizures.*—The Commissioners of Customs may order to be paid in respect of any seizure made under this or any Act relating to the customs, to the person or persons making the same, such rewards as they may see fit, not exceeding the value of the goods or things so seized, and for this purpose the value of spirits and tobacco seized as aforesaid shall be deemed and taken to be such as the Lords of the Treasury or the Commissioners of Customs may think fit. (Sec. 254.)

*How Value is to be ascertained.*—In all cases where any penalty the amount of which is to be determined by the value of any goods, is directed to be sued for under any Act relating to the customs or excise, such value shall, as regards proceedings in any court or before justices, be estimated and taken according to the rate and price for which goods of the like kind but of the best quality upon which the duties of importation shall have been paid were sold at or about the time of the offence, or according to the rate and price for which the like sort of goods were sold in bond at or about the time of the offence, with the duties due thereon added to such rate or price in bond, except as to

tobacco stalks, tobacco stalk flour, and snuff-work, the value of which shall, for the purpose of any suit or proceeding under this or any Act relating to the customs, be estimated at the same rate as that of unmanufactured tobacco upon which the duties of importation shall have been paid. (Sec. 255.)

*All Rewards and Seizures payable to Officers of Army, Navy, or Marines to be regulated by Order in Council.*—Every reward or share of any such seizure, or of the value thereof, payable to any officer or officers, non-commissioned officers, petty officers, seamen, or privates of her Majesty's army, navy, or marines, or acting under the orders of the Lord High Admiral or Commissioners of the Admiralty, shall be divided and distributed in such proportions, and according to such rules, regulations, and orders, as her Majesty shall, by royal proclamation in that behalf, be pleased to direct and appoint. (Sec. 256.)

*Commissioners may distribute Officers' Shares of Seizures so as to reward Persons not actually present.*—The Commissioners of Customs or Inland Revenue respectively may, in case of any seizure of ships, boats, or goods, or of the apprehension of any parties, under this or any other Act relating to the customs, direct the distribution of the seizer's share of such ship, boats, or goods, or of any penalties or rewards that may be recovered on account of any seizure, so that any other person through whose information or means such seizure shall have been made or penalty recovered or partly apprehended, and who may by them be deemed to be so entitled, may participate in such proportions as the said Commissioners shall respectively deem expedient. (Sec. 257.)

*Rewards to Persons giving Information of Goods floating or sunk in the Sea.*—If any person shall discover any spirits in casks of less content than 20 gallons found floating upon or sunk in the sea, and shall give information to any officer of the customs, or other person duly authorised to make seizure of such spirits, so that seizure shall be made of the same, the person giving such information shall be entitled to and shall receive such reward as the Commissioners of Customs may direct. (Sec. 258.)

#### *As to Collusive Seizures.*

*Penalty on Officers and Persons making collusive Seizures, or taking Bribes, and on Persons offering them.*—If any officer of customs or excise, or of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or any other person or persons whomsoever duly employed for the prevention of smuggling, shall make any collusive seizure, or deliver up, or make any agreement to deliver up or not to seize any vessel or boat, or any goods liable to forfeiture, or shall take any bribe, gratuity, recompense, or reward for the neglect or nonperformance of his duty, or conspire or connive with any person to import or bring into the United Kingdom or the Channel Islands, or any of the British possessions abroad, or be in any way concerned in the importation or bringing into the United Kingdom, or the said islands or possessions, of any goods prohibited to be imported or liable to duties of customs for the purpose of seizing any ship, boat, or goods, and obtaining any reward for such seizure or otherwise, every such officer or other person shall forfeit for every such offence the sum of 500*l.*, and be rendered incapable of serving her Majesty in any office whatever, either civil or military; and every person who shall give or offer, or promise to give or procure to be given, any bribe, recompense, or reward to, or shall make any collusive agreement with, any such offi-

goods, to prevent the seizure of the same, shall, upon conviction of any of the said offences of the peace, be adjudged for the first offence to be imprisoned for 6 months, and there kept to hard labour, not less than 6 nor more than 12 months, and for the second offence for any term not less than 12 months, and for the third offence for 12 months.

*Persons assembled to land goods guilty of Felony.*—If any person, or a number of 3 or more, armed with offensive weapons, shall, within the limits of the kingdom, or within the limits of any creek thereof, be assembled together for the purpose of committing and assisting in the illegal carrying away of any property or goods liable to any duties of customs, or in rescuing any such goods as aforesaid from any officer of the customs, or other person employed by or assisting them, where the same shall have been seized, or in rescuing any person who has been apprehended for any offence made good by any Act relating to the customs, or in assisting in the apprehension of any person who has been guilty of such offence, or in assisting to the number of 3 or more persons to land, within the limits of the kingdom, or within the limits of any creek thereof, be so aiding or assisting, or every person aiding, abetting, or assisting therein, shall, being thereof convicted, be so aiding or assisting, and shall be adjudged guilty of felony, and shall be liable to be transported beyond the limits of the kingdom, or to be imprisoned for any term not exceeding 3 years.

*Boats belonging to Navy or Army guilty of Felony.*—If any person shall shoot at any vessel or boat belonging to her Majesty's navy, or in the service of the army, within 100 leagues of any part of the coast of the United Kingdom, or shall maliciously wound any officer of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any other person acting in his aid, or any officer of customs or excise, or any person acting in his aid, or duly employed for the prevention of smuggling, in the execution of his duty, or any person so offending, and every person so offending, or assisting therein, shall, being thereof convicted, be adjudged guilty of felony, and shall be liable to be transported beyond the limits of the kingdom, or to be imprisoned for any term not exceeding 3 years.

*Boats belonging to Navy or Army guilty of Felony.*—If any person shall shoot at any vessel or boat belonging to her Majesty's navy, or in the service of the army, within 100 leagues of any part of the coast of the United Kingdom, or shall maliciously wound any officer of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any other person acting in his aid, or any officer of customs or excise, or any person acting in his aid, or duly employed for the prevention of smuggling, in the execution of his duty, or any person so offending, and every person so offending, or assisting therein, shall, being thereof convicted, be adjudged guilty of felony, and shall be liable to be transported beyond the limits of the kingdom, or to be imprisoned for any term not exceeding 3 years.

*Boats belonging to Navy or Army guilty of Felony.*—If any person in company with four others, having on board any arms, or with one other, armed or disguised, shall be found with any other person, within 5 miles of any tidal river, and carrying any arms, or weapons, or disguised in any way, shall be adjudged guilty of felony, and shall be liable to be transported beyond the limits of the kingdom, or to be imprisoned for any term not exceeding 3 years.

cer or person as aforesaid to induce him in any way to neglect his duty, or to do, conceal, or connive at any act whereby any of the provisions of any Act of Parliament relating to the customs may be evaded, shall forfeit the sum of 200*l.* (See, 259.)

**SMYRNA.** A large city and seaport of Asiatic Turkey, on the western side of Asia Minor, lat. 38° 25' 36" N., long. 27° 6' 45" E. Population estimated at from 130,000 to 150,000, of whom  $\frac{1}{2}$  may be Turks, and the remainder Greeks, Armenians, Franks, Jews &c. Smyrna is situated at the bottom of a deep gulf; the entrance to which lies between Mytilene on the north, and Cape Carabourun, in lat. 38° 41' 30" N., long. 26° 21' E., on the south. In addition to the light placed on Sanjak Kalessi in 1848, there were three other lights placed in the gulf in 1863, viz. a lighthouse on Cape Mermiui, 38° 37' N. lat., 26° 46' 29" E. long., and two light vessels, one off Tani Kedesse, and the other on Sanjak Spit. The accompanying illustration gives a better idea of the Gulf of Smyrna than could be derived from any description. The dotted line shows the course inwards. The passage between James' Castle (D) on the south and the opposite sand-bank is narrow; but there is from 9 to 10 fathoms water, with blue clay bottom. Merchant ships anchor abreast of the city in from 7 to 8 fathoms; but the water is so deep that they may come close to the quays. The *inbat*, or sea breeze, blows from morning till evening, and is always waited for by ships going up to the city. There is excellent anchorage in most parts of the gulf, merely avoiding the shoals on the north side.

Smyrna is a place of great antiquity. The excellence of its port, and its admirable situation, have made it to be several times rebuilt, after being destroyed by earthquakes. On approaching it from the sea, it has the appearance of an amphitheatre; the castle is at the back of the town, which it commands on the top of the hill; but it is in a state of decay, and could oppose no resistance to an invading force. The interior of the city does not correspond to its external appearance; the streets being, for the most part, narrow, dirty, and ill-paved. Owing to the want of cleanliness, and of all sorts of precautions, on the part of the Turks, Smyrna is frequently visited by the plague. In 1814 from 50,000 to 60,000 of the inhabitants are said to have been cut off by this dreadful scourge. The trade of this city is more extensive than that of any other in the Turkish empire, and Smyrna is the great steam centre for the whole Levant. The caravans from Persia are chiefly composed of Armenians. They arrive and depart at fixed periods, which are nearly identical with those of the arrival and departure of most of the foreign ships frequenting the port. But it is now connected by railway with Ghuzel-Hissar, or Aidin, near the Mendere, 62 miles S.E. of Smyrna. Bargains are principally effected by Jew brokers, many of whom have amassed considerable fortunes. The principal articles of import consist of furs, iron, butter &c. from Odessa and Taganrog; and of cotton-stuffs and twist, silk and woollen goods, coffee, sugar, cochineal, and dye-woods, iron, coal, tin and tin plates, rum, brandy, paper, cheese, glass, wine &c. from Great Britain, France, Italy, the United States &c. The exports consist principally of cotton, which is the most valuable article, madder, dried fruits, valonia, opium, sponges, carpets, silk, wool, box-wood, emery-stone, drugs, yellow-berries, galls, wax, copper, hare-skins, goats' wool, &c.

We are indebted to Mr. Rolleston's *Report* on Smyrna, to Mr. Consul Cumberbatch's *Report* of June 20, 1868, and to private information, for most part of the following details.

'The business,' says Mr. Rolleston, 'of exporting and importing goods to and from Europe is becoming more and more monopolised by the Greek merchants. They are compelled by the conditions of the insurance companies to employ European bottoms and sailors to transport their freight, and they have a line of English steamers in their employment. It is in great measure their local knowledge and connections which enable them to compete with merchants of other nations at so great an advantage in this particular branch of business. There are many instances to be pointed out in Smyrna of Greek merchants who have raised themselves by their own exertions and industry from a very poor condition to one of opulence, and on the other hand it is said that their very wealthiest merchants are in the habit of furthering their own interests by methods which, though not positively dishonest, are yet such as none but the pettiest tradesman of another race would condescend to employ.'

But this natural result of the brutal tyranny under which (thanks to the jealousies and selfishness of the principal Christian Powers) they have so long groaned, is now rapidly wearing away; and at the present time there are many Greek merchants who are not more distinguished by their intelligence and enterprise than by their straightforwardness and integrity.

Mr. Rolleston says that hatred of the Turks is so deeply rooted in the heart of every Greek as to constitute a part of their moral nature; and it would have been extraordinary indeed had such not been the case.

The Turkish population is almost wholly occupied in agricultural labour, or in the rudest sorts of manufactures. The porterage of Smyrna gives employment to about 3,000 of the lowest order of Turks.

*Sales* are effected by a merchant's broker, and what is termed a street or out-door broker; the former receiving his instructions from the seller, and the latter acting on behalf of the buyer. When the terms are mutually agreed upon, the real buyer and seller personally meet; and a bond or obligatory note stating the terms and amount of the transaction is drawn out and signed by the buyer; and when not much approved of, one or more signatures are required to the bond, who individually and collectively become responsible for the fulfilment of it.

*Purchases* are similarly made, except that the purchaser or agent himself, in the first instance, and his brokers, inspect the goods he is about to treat for: cash down is generally expected; and it is but seldom that a short credit of 1 or 2 couriers is obtained; it not unfrequently happens, also, that  $\frac{1}{4}$  or even  $\frac{1}{2}$  of the purchase amount is advanced to the seller, when an insufficient quantity of the article wanted by the buyer is in the place, and which must then be procured from the interior or place of growth. The money advanced (which is to be returned if the quality does not suit) is sent by a confidential person on the part of the purchaser, accompanied either by the seller in person, or by some one representing him.

*Barter* are generally attended with delay, impediments, and sacrifices to the European agent, who exchanges his constituents' goods for native produce, and are never completed without his paying a large portion in cash, which is mostly  $\frac{1}{2}$ , sometimes even  $\frac{3}{4}$ , but never less than  $\frac{1}{4}$  of the full amount; besides always paying a higher price for the produce than if it were bought for ready money. On the other hand, so far as the agent's transaction goes in goods, the price of

 reduce than if it were bought for  
 On the other hand, so far as the  
 tion goes in goods, the price of

which he also advances, it is equal to an advantageous cash sale, deducting a discount; but still he loses, as we have just stated, in that part of the operation which subjects him to the necessity of giving ready money for such part of the produce as remains above the counter-value given in goods, at a higher rate than it is worth in the open market. Thus the advantage is all in favour of this country, and against the agent. Indeed, barterers are seldom undertaken unless when a profitable result is anticipated, when European goods are difficult to be placed upon selling conditions, either from the want of demand or a glutted market, or when (which is mostly the case) the holder of such goods has orders from the owners of them to remit them in produce, and thus realise their property, if not upon profitable terms, at least without the risk arising from bad debts; sometimes, also, outstanding bonds are taken in part payment, to the extent occasionally of  $\frac{1}{3}$ ; another  $\frac{1}{3}$  is taken in goods at an advance of from 5 to 10 or 12 per cent. above current prices; and the remaining  $\frac{1}{3}$  in cash against produce, at from 5 to 10 per cent. more than it fetches in the bazaars. However, it is by barter alone that any extensive transaction ever takes place, or that it can be either readily or safely effected.

**Sales on Credit.**—The terms of credit vary considerably, and depend entirely upon the quality of the goods which the agent sells.

**Sales for Cash.**—These very seldom occur indeed, and then only when money is abundant, or the article sold scarce and in great demand; in fact, not 1 sale in 100 is made on these terms; and in about the same ratio is a discount taken off from a bazaar bond at even an exorbitant rate, however short the period may be that it has to run; occasionally a sale is, however, effected for  $\frac{1}{2}$  cash, and the other  $\frac{1}{2}$  short credit, for some very rare goods.

#### Imports.

The value of the imports in 1867 was less than in 1866 by 186,790*l*.

**Coffee.**—This is one of the most current articles received here, and is sent from England, France, Holland, Trieste, Marseilles, Leghorn, Genoa, and America; but first, and principally of late years, from the latter country—600 sacks, although occasionally that amount is doubled. France follows, but on a less extensive scale; and Austria, Holland, and the small ports in the south of Europe, do not together export more than 4 different qualities of coffee in the market; namely, Mocha, St. Domingo, Havannah, and Brazil: the first is sent from Alexandria, and by American vessels, and but seldom from Europe; the consumption is, however, limited, and does not exceed 60,000 okes annually. At Constantinople the consumption is much greater. An Asiatic cannot do without his coffee; and it is well known that in Smyrna alone not less than perhaps 400,000 cups of it are daily drunk, which, computed at the cost price of 2 paras each, amount to 20,000 piastres. St. Domingo and Havannah coffees are preferred to the Brazil, although, when the latter is of a fair round quality, there is not more than 2 per cent. difference in price; the small green West India berry certainly commands a ready sale; but, for the finest sort, not more than 6 or 8 per cent. can be obtained above the middling and sound quality. Coffee is amongst the very few articles which occasionally meet with a partial and entire cash sale and short credit; and is, moreover, from the means and character of the dealers in it, the least liable to risk from insolvency. It is also the easiest through which an

advantageous barter can be effected, as a much larger quantity of coffee will be taken in exchange for produce than almost any other item of European merchandise.

**Sugar** is the next in consequence. This article is supplied from the same sources as coffee, and is attended in its disposal with similar results. White crushed, white Havannah, brown do., white East India, refined in small loaves of 4 lb. and in large of 8 lb. each; the 2 latter are mostly shipped from America and England. The brown and ordinary sorts are not so current.

**Indigo** always meets a ready sale, and not unfrequently a profitable one; it is attended likewise with all the advantages and facilities attached to coffee and sugar, and is furnished by Europe and America, but principally by England. The qualities received consist of East India purple and copper, ditto common, and Guatemala. The first of the 3 is the kind best adapted for our markets, and is placed sooner and better than the other 2; but, as is the case with coffee, the *very fine* will not pay cost price, and ought therefore never to be sent. The pieces suited for our buyers ought to be good sized, with about an equal proportion of purple and copper in each piece.

**Manufactures.**—White or unprinted cotton goods are most in demand during the warm weather, and the coloured or printed stuffs during winter, although a considerable quantity of all sorts is regularly and largely sold throughout the whole year. East Indian manufactures are supplied by America and England exclusively; the latter country also sends fair imitations of the East Indian loom, in long cloths, seersuckers &c. The native consumers are exceedingly fastidious in their choice of designs and colours, which ought very frequently to be altered, in order to meet their capricious taste. Manufactured goods are always sold at long credits, but large barterers are often effected through them. A person desirous of entering into this item of our commerce is almost certain ultimately to reap an advantage; but he must have patience, a large capital, and must not be disheartened at the first or second result of his enterprise, should it disappoint his hopes of profit. He must also enter into the thing with spirit, and keep his agent always supplied with the goods he may recommend; and he is to remember that many months must elapse before he can expect a return by bills of exchange, but sooner if he order a barter. The capital employed must also at least be to the amount of 20,000*l*. to do any good; and further, this sum ought to be disbursed by him without any pecuniary embarrassment or inconvenience. For a person willing to undertake such a step, he would require to be regularly furnished with patterns, and advices of the manner in which they ought to be printed and varied; and with *competent means*, a real desire to follow the branch up firmly, and full information of what is required, a most extensive and finally lucrative business would be done.

**Cotton Twist** forms no inconsiderable article in this trade, and is supplied exclusively from England. Mule twist has, however, superseded, in some degree, the demand which formerly existed for water twist, and is consequently more in request. Water twist is nevertheless saleable, and both qualities ought to be of rather high numbers. This article is often given in barter, but mostly sold at rather long credits, and hardly ever for cash.

**Iron, machinery, and coal** are all largely imported, especially since the commencement of the railway to Aidin. They are wholly supplied by England.

*Rum and Brandy.*—Leeward Island and Jamaica rum furnished by America and England; the former particularly in the lower qualities, of which we have a full market at low prices. The better kind and brandy are supplied from England, but do not obtain a proportionate advance compared with the common sorts. Brandy is but of limited demand, and 2 or 3 puncheons are sufficient at a time. It ought, as well as rum, to be deeply coloured.

*Spices* are all saleable in small parcels at a time, particularly pepper and pimento; the latter of which, in small sound berries, is demanded at good prices. Nutmegs are very abundant, and offering very low without finding purchasers. France, America, and England supply spices, but France more cloves than other kinds; and it may be remarked that the qualities received from England are preferred. Credit on selling is generally short.

*Cochineal* is a fair article new and then in small quantities; and when in demand, at times fetches good prices, occasionally a cash sale, and always one of the shortest credits. Annual consumption, 4,500 okes.

In concluding our observations on imports, we could wish to impress the conviction that a poor man's purpose cannot be answered in speculating to this country; for, should his circumstances require a speedy remittance in bills, he must submit to a heavy sacrifice, in order to meet his wants, by selling his property for whatever it may fetch in cash; and such a measure cannot but be attended with very heavy loss. On the contrary, when an opulent person finds that his property cannot be realised at saving prices, he can afford to wait until a more favourable moment presents itself; and such a moment, in less than 12 months, is almost certain to arrive, when he retires his money with an advantage more than equal to any interest he could obtain for it in Europe.

*Account of the Quantities and Values of the Articles Imported into Smyrna in 1866.*

*Exports.*

The value of the exports in 1867 exceeded in value those of 1866 by 848,930*l.*

*Figs* are exported in larger quantity for America than for England, but those intended for the English market are of a finer quality. A considerable quantity of the figs intended for America are shipped on board the Liverpool line of steamers for England, and are subsequently transhipped at that port. The certainty and expedition of this route to America have begun to cause a diminution in the number of clippers employed in the fruit trade between America and Asia Minor.

*Carpets.*—England takes more than  $\frac{1}{3}$  of the

carpets manufactured in Anatolia. These carpets are made in the interior, and by the aid of very simple machinery, manual labour entering largely into the means employed. Orders are given by an agent, and it is generally necessary for him, on account of the poverty of the workers, to advance a considerable sum of money to enable them to purchase materials. As much as  $\frac{1}{3}$  of the entire value of the carpets is thus advanced sometimes previously to their completion. As regards the dyeing of the carpet, the red colour in the Turkey carpet is generally, and ought to be always, produced by madder. Logwood is also employed, and cochineal; but where the latter is made use of, the colour of the carpet is apt to fade. Blue comes from indigo, and yellow from the yellow Persian berries.

*Silk.*—Much of the silk exported from Smyrna is brought from Brusa and other places in the interior; but within the last few years a good deal has been prepared in Smyrna.

*Drugs and Gums* form a principal branch of commerce, and are almost entirely in the hands of the Jews. It is only when gum-arabic and mastic are scarce, or the demand for exportation very brisk, that much variation exists in the price of drugs. Trieste, and occasionally America, consume a considerable portion of gums, but the largest quantity goes to the English markets. Barbers are often effected through this medium. It is impossible to ascertain the quantities of drugs received in Smyrna, and equally so to know the quantity remaining, as they are dispersed all over the city, and consumed so irregularly in Europe as bids defiance to all regular calculation.

*Opium.*—The produce in 1867 was about 1,200 chests, and of good quality, and exported principally to China, Europe, and America.

*Sponges* are an article of considerable moment, particularly for the English markets, and a good deal found among the islands in the Grecian Archipelago, brought here, and cleaned for exportation. They vary in price from 6 to 90 piastres per oke, according to fineness and quality: the better sorts alone answer for speculation, and they are, from the considerable quantity sent to London, turned to good account. The produce depends so entirely on chance, that no correct estimate of the yearly quantity can be formed; however, we are seldom in want of a moderate supply. The malpractices of the sponge agents at Smyrna in loading them with black sand and gum water lead to much litigation.

*Galls* are shipped in considerable quantities for the English, German, and French markets; the two former, however, being the largest consumers: for England, the blue galls are those principally sent. Annual produce of all sorts, 5,500 kintals.

*Valonic* employs more British shipping for full cargoes of only one article than any other species of produce, if we except, perhaps, fruit. It can be had to any extent, and at all periods. The crop of 1867 produced 32,000 tons, half of which was exported to Europe.

*Fruit.*—This is an article which occupies the attention of all Smyrna, more or less, and produces, during the season, great interest and activity. Figs come to market early in September, and raisins are ready for shipping early in October; the former are procurable only at Smyrna, where the latter in all their qualities may be procured; but the shipments are generally made at Cesne, Vouria, Carabourna, Usbeck &c., from which ports the name of the raisin takes its origin. Large sums are frequently gained in fruit speculations; and when the demand in England is brisk, and

in Anatolia. These carpets are made by the aid of very manual labour entering largely. Orders are given by generally necessary for him, poverty of the workers, to a sum of money to enable materials. As much as of the carpets is thus advanced to their completion. As of the carpet, the red colour is generally, and ought to be dyed by madder. Logwood is used cochineal; but where the f, the colour of the carpet is apt from indigo, and yellow Persian berries.

The silk exported from Smyrna and other places in the in the last few years a good deal in Smyrna.

As from a principal branch of the almost entirely in the hands is only when gum-arabic and or the demand for exportation such variation exists in the price and occasionally America, considerable portion of gums, but the goes to the English markets, effected through this medium, ascertain the quantities of drugs, and, and equally so to know the as, as they are dispersed all over summed so irregularly in Europe all regular calculation.

The produce in 1867 was about 4,300 and quality, and exported principally Europe, and America. article of considerable moment, the English markets, and a islands in the Grecian Archipelago, and cleaned for exportation. Price from 6 to 90 piastres per oke, less and quality: the better sorts speculation, and they are, from quantity sent to London, and the Produce depends so entirely no correct estimate of the yearly formed; however, we are seldom moderate supply. The malpractices ents at Smyrna in loading them and gum water lead to much

opped in considerable quantities German, and French markets; however, being the largest con-land, the blue galls are these Annual produce of all sorts,

ys more British shipping for full one article than any other species e except, perhaps, fruit. It can extent, and at all periods. The duced 32,000 tons, half of which Europe.

is an article which occupies the Smyrna, more or less, and pro-ble season, great interest and ome market early in September, ady for shipping early in October; their qualities may be procured; ts are generally made at Cestée, ma, Usbeck &c., from which ports raisin takes its origin. Large tly gained in fruit speculations; demand in England is brisk, and

the prices and quality fair with us, it very seldom happens indeed that any loss is sustained; it is, however, attended with risk; must be shipped dry; and ought only to go in a very fast, sound vessel, as much depends upon a first, or at least an early arrival, which obtains in general a higher price than the latter arrivals. The quantity produced is always uncertain.

Comparison of the Navigation and Trade of Smyrna in 1866 and 1867.

Years	Entered			Cleared		
	Num-ber	Tonnage	Value of Cargoes	Num-ber	Tonnage	Value of Cargoes
1866	1,506	600,317	3,589,690	1,508	600,630	3,558,640
1867	1,461	531,917	3,103,900	1,421	515,804	3,107,570
	De-crease 42	Decrease 68,400	Decrease 186,790	De-crease 81	Decrease 84,826	Increase 819,350

Coasting Trade 1866, 1867.—The native coasting trade is not included, and may be stated as follows:—

Entered.—1,603 small craft, of 23,506 tons, value of cargoes 172,840l., in 1866; and 1,423 small craft, of 21,004 tons, with cargoes worth 164,280l., in 1867.

Cleared.—1,576 small craft, of 22,602 tons, value of cargoes 47,600l., in 1866; and 1,396 small craft, of 20,584 tons, with cargoes worth 58,630l., in 1867.

Port Regulations.—No alterations have taken place in the port and quarantine regulations and dues since 1865, which are as follows:—

Masters can anchor their vessels in this port at discretion. Immediately after their anchoring they are requested to proceed to the health office, to produce bill of health, and to perform certain other formalities in order to obtain free entry.

No master is allowed to throw ballast overboard in this port.

Charges on Entrance. Anehorage.—A fee of 6d. is payable by every vessel anchoring.

For obtaining Pratique the following fees are payable by the master:—

	£	s.	d.
For a vessel not exceeding 75 tons	0	4	4
200 "	0	11	1
250 "	1	10	0
over 250 tons	3	8	0

Charges on Clearing. Bill of Health.—Vessels clearing for a Turkish port are required to be furnished with a Turkish bill of health, the charge for which varies as follows:—

	£	s.	d.
For a vessel not exceeding 25 tons	0	4	4
75 "	0	6	0
125 "	1	10	0
175 "	2	2	0
250 "	2	11	0
300 "	3	8	0
over 300 tons	4	5	0

If provided from any other Turkish port with such a document, the same can be used, and then half of the above is payable.

Consular Fees (British).—For every vessel: entrance and clearance fee, 10s.; hospital dues, 3d. per ton. This latter payment is not demanded from vessels which arrive and depart in ballast, which do not receive any benefit from the hospital.

*Light Dues* are payable at this port by all vessels before clearing as follows:—

About 1*l.* per ton for entry;  
1*d.* per ton for clearing;

but for every ton exceeding 800 tons the dues are reduced to one-half the above amounts.

*Quarantine*.—The following expenses are to be defrayed by the ship, in case she is placed in quarantine:—

For 2 guard-on board, per day, each	-	£	4	d.	1
Besides on every vessel not exceeding 25 tons	-	£	1	6	1
75 "	-	£	1	10	0
125 "	-	£	2	9	0
175 "	-	£	3	8	0
250 "	-	£	4	6	0
500 "	-	£	5	6	0
Over 500 tons	-	£	6	3	0

*Goods* are required to be landed at the lazaretto.

For 1 bale not weighting over 110 lb.	-	£	2	d.	3
250 "	-	£	5	2	0
350 "	-	£	7	1	0
Above those weights	-	£	9	0	0

*Goods* of value, from which disinfection is difficult:—

Each bale not exceeding 110 lb.	-	£	0	d.	9
250 "	-	£	1	6	0
350 "	-	£	2	2	0
Over 350 tons	-	£	5	5	0
Guards for duty if required, each per day	-	£	4	4	0

*Passengers* must be landed likewise at the lazaretto; each room per day, 8*s.* 2*d.*; guard required per day, 4*s.* 4*d.*

*Pilots*.—There are no regular pilots at this port, but some are procurable; they are generally engaged by masters merely to assist in navigating their vessels free of this gulf, and are landed before getting out of the same, for which the fee is about 1*l.*

Ships can likewise be provided at the entrance of the Gulf of Smyrna at the cost of 2*l.* for bringing their vessels to this anchorage.

The number of British vessels entered and cleared in 1866 and 1867 was as follows:—

Entered			Cleared		
Vessels	Tonnage	Value of Cargoes	Vessels	Tonnage	Value of Cargoes
162	92,665	£ 1,163,509	161	93,951	£ 1,550,049
212	117,511	£ 1,247,065	206	115,153	£ 1,771,150

Of which 76 were steamers.

*Lines of Steamers*.—Austrian, French, and English call regularly at Smyrna. Most of the merchant steamers carrying thither the Austrian or the French flag belong either to the Austrian Lloyd, or the Messageries Impériales Company. Both these companies are richly endowed by their respective Governments, and the latter of the two has for some time carried the English mails. Though these steam companies aim especially at securing passenger traffic, they nevertheless afford considerable facilities for shipping cargo, and goods of all kinds are weekly exported and imported by their agency.

There are several lines of steam-ships between Smyrna and Liverpool. These ships are all, without exception, propelled by the screw; the majority are barque and a few ship-rigged. Their average tonnage is much larger than that of the other two lines, and they direct their attention to the securing of good freights rather than passengers, who, though well provided for in other respects, might be inconvenienced in these boats by the long stay which their waiting for cargo sometimes entails upon them in Smyrna and Alexandria. The Liverpool ships generally go to Constantinople first, and having discharged cargo there, they return by Smyrna. If they succeed in getting a full cargo there, they return

direct to England; but if not, they go round by Alexandria. Besides the English lines belonging to English houses, there is also, as already mentioned, a line of English steam-ships in the employ of a company of Greek and Armenian merchants. Though there is no regular line of steam communication between Smyrna and London, yet this means of intercourse between the two places does exist, and about once every month a steamer sails direct for London.

The profuse supply of steam-ships has begun to affect the interests of sailing vessels engaged in the Smyrna trade. A good average passage for a sailing vessel, when favoured by the wind, from England to Smyrna, may be estimated at 50 days; it is not unfrequently done in less time; and we have heard of an instance in which a ship arrived in Smyrna in 21 days after leaving Cardiff. But these are all voyages performed under favourable conditions, and these favourable conditions are very frequently wanting. The Liverpool steamers will, under the most unfavourable circumstances, reach Liverpool within 17 days from the date of their leaving Smyrna. It is obvious that sailing vessels must compete with great disadvantage with these steamers, in all cases where certainty and expedition are required; and in the fruit trade it is said that steam will at no distant period enjoy almost a monopoly in freights. The merchant in America finds it answer his purpose better in many cases to have his cargo of furs shipped in a steamer at Smyrna for Liverpool, and subsequently transhipped at the latter port, than to have them brought direct without any transhipment in a sailing ship from Smyrna to America. The same causes will operate still more powerfully upon the European fruit ships. In fact, the peculiarities of the Mediterranean navigation seem to require steam more than most other seas. The Mediterranean possesses no trade winds, and is, on the contrary, especially liable to sudden changes and dead calms. Schooners and brigs were the favourite class of vessels employed in the Smyrna fruit trade, but have been superseded by a somewhat higher style of vessel.

*Railways*.—The Aidin and Smyrna Railway was open to Aidin in September 1866, as well as the Casaba line to Casaba. The result of the former has not been satisfactory, as the expenses are barely defrayed; but it has not yet had a fair trial. Nearly half of the traffic of this district is still carried on by the camels.

The Casaba line was more successful, and obtains at least nine-tenths of the traffic from that district, realising about 7 per cent. upon the capital expended.

In his *Lettres sur la Turquie* (i. 425), the well-informed M. Ubicini estimated the value of the imports into Smyrna in 1851 at 28,473,000 fr., and that of the exports at 36,682,000 fr. The coasting trade, as that between Smyrna, Constantinople, Syra, Alexandria, and the Levant generally is usually denominated, is almost entirely in the hands of the Greeks, and is very extensive. Ubicini reckoned the value of the imports of English and Swiss cottons at above 14,000,000 fr.; the other leading articles of import are English and German woollens, French silks, and colonial products.

**SNUFF** (Ger. schmpftabak; Fr. tabac en poudre; Ital. tabacco da naso; Span. tabaco de polvo; Russ. nosowoi tabak). A powder formerly in very general use as an erfine. Tobacco is the usual basis of snuff; but small quantities of other articles are frequently added to it, to vary its pungency, flavour, scent &c. Though substantially

lid of an Ayrshire snuff-box. Some very wretched imitations of Ayrshire boxes have been produced in different parts of England; but they can deceive no one who ever saw a genuine box. The hinge, as well as the finishing, is clumsy in the extreme.

The article on this curious manufacture in our former edition was written by the late John M'Diarmid, Esq., editor of the *Dumfries Courier*; but the business has materially changed during the last 20 years. The statements in the present article have been derived from Mauchline.

SOAP (Ger. seife; Fr. savon; Ital. sapone; Spau. jabon; Russ. mtillo; Lat. sapo). The soap met with in commerce is generally divided into two sorts, *hard* and *soft*: the former is made of soda and tallow or oil, and the latter of potash and similar oily matters. Soap made of tallow and soda has a whitish colour, and is, therefore, sometimes denominated *white* soap: but it is usual for soap-makers, in order to lower the price of the article, to mix a considerable portion of resin with the tallow; this mixture forms the common *yellow* soap of this country. Soap made of tallow &c. and potash does not assume a solid form; its consistence is never greater than that of hog's lard. The properties of soft soap as a detergent do not differ materially from those of hard soap, but it is not nearly so convenient to use. The alkali employed by the ancient Gauls and Germans in the formation of soap was potash; hence we see why it was described by the Romans as an unguent. The oil employed for making soft soap in this country is whale oil. A little tallow is also added, which, by a peculiar management, is dispersed through the soap in fine white spots. The soap made in countries which produce olive oil, as the south of France, Italy, and Spain, is preferable to the soap of this country, which is usually manufactured from grease, tallow &c. (Thomson's *Chemistry*).

For a full account of the manufacture, see *Ure's Dictionary*, by Hunt.

The use of soap as a detergent is well known: it may, in fact, be considered as a necessary of life. Its consumption in most civilised countries is immense. Pliny informs us that soap was first invented by the Gauls; that it was composed of tallow and ashes; and that the German soap was reckoned the best. (Lib. xviii. c. 51.)

Down to 1833, a duty was charged on hard soap which is by far the most extensively used, of 3s. per lb., or 28s. per cwt., while the price of soap-duty paid rarely exceeded 6d. per lb., or 66s. per cwt., so that the duty was fully 100 per cent. But besides this high duty, the substances of which soap is made, viz. tallow, barilla, and turpentine, or resin, were respectively charged with duties of 3s. 4d., 2s., and 4s. 4d. per cwt.; and taking these indirect taxes into account, it may be truly stated that soap was taxed from 120 to 130 per cent. ad valorem. The imposition of so exorbitant a duty on an article indispensable to the prosecution of many branches of manufacture, and to the comfort and cleanliness of all orders of persons, was in the last degree inexpedient. During the five years ending with 1832, the consumption of duty-paid soap was nearly stationary; though there can be little doubt, from the increase of manufactures and population during that period, that it would have been very considerably extended, but for the increase of smuggling. This practice was facilitated by the total exemption which Ireland enjoyed from this duty; for it not unfrequently happened that the soap made in this country, and sent to Ireland under a drawback, was again clandestinely introduced into Great Britain. It is, perhaps, needless to say that nothing but the effectual reduction of the duty could put a stop to the smuggling and fraud that had been so generally practised. So long

An Account of the Quantity of Soap made in different Towns of Great Britain, distinguishing between Silticated, Hard, and Soft Soap, during the Year ending January 5, 1852.

of the manufacture, see Urea.

a detergent is well known, considered as a necessary of life, in most civilised countries. It informs us that soap was first used; that it was composed of tallow and that the German soap was (Lib. xviii. c. 61.)

Duty was charged on hard soap, most extensively used, of 3d. per cwt., while the price of soft soap exceeded 6d. per lb., or 6s. per ton, was fully 100 per cent. But duty, the substances of which—tallow, barilla, and turpentine—were actively charged with duties of 4d. per cwt.; and taking these into account, it may be truly stated that from 120 to 130 per cent. addition of so exorbitant a duty is payable to the prosecution of the manufacture, and to the comfort and orders of persons, was in the end. During the five years of the consumption of duty-paid soap, though there can be no increase of manufactures and that period, that it would have been extended, but for the increase. This practice was facilitated in which Ireland enjoyed from not unfrequently happened that in this country, and sent to Ireland was again clandestinely introduced. It is, perhaps, needless to say that the effectual reduction of a stop to the smuggling and so generally practised. So long

Great Britain, distinguishing the period ending January 5, 1852.

as the profit to be made by breaking the law was so high as 120 or 130 per cent., so long was it sure to be broken, despite the multiplication of penalties and the utmost activity and vigilance of the officers. But the duty having been reduced 50 per cent. in 1833, the temptation to smuggle was materially diminished. And the increased consumption which followed the reduction of duties hindered the revenue from declining more than 1/4th or 25 per cent. Hence the advantages resulting from the diminished temptation to smuggling and fraud, and the influence of the reduced price of the article, in facilitating manufacturing industry, and in promoting habits of cleanliness, were obtained without any very considerable sacrifice.

In a former edition of this work we took leave to observe that 'the entire repeal of the soap duty would be a popular measure; but, seeing that a large amount of revenue must be raised, and that those taxes only are productive which affect all classes of the community, we should not be disposed to recommend such a measure. It is not the tax itself, but the oppressive extent to which it was carried, that made it objectionable. Instead of proposing its repeal, we think it should be extended to Ireland. The exemption of one part of the empire from a duty of this sort imposed on another part, is contrary to all principle, and is fraught with pernicious results. It will be impossible to get rid of smuggling so long as this unjust distinction is suffered to exist. Were the duty extended to Ireland, the necessity for granting drawbacks on the soap exported to it, and of laying countervailing duties on that imported from it, would, of course, fall to the ground. And we feel pretty confident, that though a still further deduction were made from the rate of duty its productiveness would not, under such circumstances, be impaired, even in England.'

Government, however, not feeling disposed to support an unpopular, and, in some respects, an objectionable tax, consented in 1853 to its repeal.

The Table on preceding page is interesting, inasmuch as it shows the extent of the manufacture during the last year but one that it was subject to a duty, and as it will be an authentic standard with which to compare its future progress.

The total net revenue derived from soap amounted in 1852 to 1,126,046. In 1851, 13,487,270 lb. soap were exported, the drawback on which amounted to 88,468.

Drawbacks and allowances were also made during the same year of 104,420. to the woollen, silk, flax, and cotton manufacturers on account of the soap used by them. And the trouble to the manufacturers arising from this system, with the opportunities which it afforded for the commission of fraud, constituted the principal objections to the duty.

The declared value of 219,372 cwt. of soap exported in 1867 amounted to 289,206.

## SODA. [ALKALI.]

SOUTH SEA DUTIES. The Act of the 9 Anne, c. 21 establishing the South Sea Company, conveyed to them the exclusive privilege of trading to the Pacific Ocean, and along the east coast of America, from the Orinoco to Cape Horn.

This privilege was taken away by 47 Geo. III. c. 23; and to raise a guarantee fund for the indemnification of the Company, a duty of 2 per cent. ad valorem was imposed by 55 Geo. III. c. 37 on all goods, except those from Brazil and Dutch Surinam (the provinces of Rio de la Plata were afterwards added), and except blubber, oil &c. of whales, or fish caught by crews of British or Irish ships, imported from within the aforesaid limits. A duty of 1s. 6d. per ton was also

imposed on all vessels (except in ballast or importing) the produce of the fishery of British subjects) entering inwards or clearing outwards from or to places within the said limits. The duties ceased when the guarantee fund was completed.

SOY. A species of sauce prepared in China and Japan from a small bean, the produce of the *Dolichos soja*. It is eaten with fish and other articles. It should be chosen of a good flavour, not too salt nor too sweet, of a good thick consistency, a brown colour, and clear: when shaken in a glass it should leave a coat on the surface of a bright yellowish-brown colour; if it do not, it is of an inferior kind, and should be rejected. Japan soy is deemed superior to the Chinese. It is worth from 3s. to 4s. per gallon. It is believed to be extensively counterfeited. In 1867 we imported 11,493 gallons of soy, valued at 1,795*l.*, and exported 2,166 gallons. (Millburn's *Oriental Com.; Chinese Repository*; &c.)

SPAIN. [ALICANTE; BARCELONA; CADIZ; MALAGA; &c.] An order of the Spanish Provisional Government is published in the *London Gazette* (March 23, 1869), extending to the ships of every nation the power, hitherto enjoyed by Spanish vessels only, of going to foreign ports with cargoes from foreign America, and with cargoes of dried fish from the same ports, with a consular register under the same rates and formalities as are established by Articles 8 and 260 of the customs ordinances, and by a subsequent decree (see *London Gazette* of April 8, 1869). British vessels coming from British India are entitled to national treatment in respect of the payment of port and navigation dues on the Spanish colonies.

SPELTER. A name frequently given to ZINC. SPERMACEI (Ger. wallrath; Fr. blanc de baleine, sperme de baleine; Ital. spermacci; Span. esperma de ballena; Russ. spermazet). A product obtained from the brain of the *Physeter macrocephalus*, a species of whale inhabiting the Southern Ocean. The brain being dug out from the cavity of the head, the oil is separated from it by dripping. The residue is crude spermacci, of which an ordinary-sized whale will yield 12 barrels. After being brought to England, it is purified. It then concretes into a white, crystallised, brittle, semitransparent, unctuous substance, nearly odorous and insipid. On being cut into small pieces, it assumes a flaky aspect. Its specific gravity is 9.433. It is used in the manufacture of candles, in medicine &c. We imported in 1867, besides 320,081 lb. of spermacci, 3,226 tons of spermacci, or head matter, valued at 373,367*l.*, of which 2,832 tons were from the United States.

SPICES (Ger. spezerien; Dutch, spezerijen; Fr. épicerie, épices; Ital. spezi, spezierio; Span. especias, especerías; Port. especiaria; Russ. priánte korenja). Under this denomination are included all those vegetable productions which are fragrant to the smell and pungent to the palate; such as cloves, ginger, nutmegs, allspice &c. These will be found under their proper heads.

## SPIRIT OF WINE. [ALCOHOL.]

SPIRITS. All inflammable liquids obtained by distillation, as brandy, rum, geneva, whisky, gin &c., are comprised under this designation. The term *British spirits* is applied indiscriminately to the various sorts of spirits manufactured in Great Britain and Ireland. Of these, gin and whisky are by far the most important.

The manufacture of spirits is placed under the surveillance of the excise, and a very large revenue is obtained from it. The Act 23 & 24 Vict. c. 114 lays down most of the regulations to be followed

by the distillers in the manufacture, and by the officers in charging the duties. This Act is of great length, having no fewer than 223 clauses: it is, besides, exceedingly complicated, and the penalties in it amount to many thousand pounds. It would, therefore, be to no purpose to attempt giving any abstract of it in this place. Everyone carrying on the business of distillation must have the Act in his possession, and be practically acquainted with its operation.

Several subsequent Acts, such as the 24 & 25 Vict. c. 91 s. 3; the 28 & 29 Vict. c. 96 s. 27; and the 31 & 32 Vict. c. 124 s. 5, refer more especially to methylated spirits.

1. *Spirit Duties. Consumption of British Spirits in Great Britain and Ireland.*—There are, perhaps, no better subjects for taxation than spirituous and fermented liquors. They are essentially luxuries; and while moderate duties on them are, in consequence of their being very generally used, exceedingly productive, the increase of price which they occasion has a tendency to lessen their consumption by the poor, to whom, when taken in excess, they are exceedingly pernicious. Few Governments, however, have been satisfied with imposing moderate duties on spirits; but, partly with the view of increasing the revenue, and partly with the view of placing them beyond the reach of the lower classes, have almost invariably loaded them with such oppressively high duties as have entirely defeated both objects. The imposition of such duties does not take away the appetite for spirits; and as no vigilance of the officers or severity of the laws has been found sufficient to secure a monopoly of the market to the legal distillers, the real effect of the high duties has been to throw the supply of a large proportion of the demand into the hands of the illicit distiller, and to superadd the atrocities of the smuggler to the illness and dissipation of the drunkard.

During the latter part of the reign of George I. and the earlier part of that of George II. gin-drinking was exceedingly prevalent; and the cheapness of ardent spirits, and the multiplication of public houses, were denounced from the pulpit, and in the presentments of grand juries, as pregnant with the most destructive consequences to the health and morals of the community. At length ministers determined to make a vigorous effort to put a stop to the further use of spirituous liquors except as a cordial or medicine. For this purpose an Act was passed in 1736, the history and effects of which deserve to be studied by all who are clamorous for an increase of the duties on spirits. Its preamble is to this effect:—'Whereas the drinking of spirituous liquors, or strong water, is become very common, especially among people of lower and inferior rank, the constant and excessive use of which tends greatly to the destruction of their health, rendering them unfit for useful labour and business, debauching their morals, and inciting them to perpetrate all vices; and the ill consequences of the excessive use of such liquors are not confined to the present generation, but extend to future ages, and tend to the destruction and ruin of this kingdom.' The enactments were such as might be expected to follow a preamble of this sort. They were not intended to repress the vice of gin-drinking, but to root it out altogether. To accomplish this, a duty of twenty shillings per gallon was laid on spirits, exclusive of a heavy license duty on retailers. Extraordinary encouragements were at the same time held out to informers, and a fine of 100*l.* was ordered to be rigorously exacted from those who, were it even through inadvertency, should vend the smallest quantity of spirits which had not paid the full duty. Here was an Act which

might, one should think, have satisfied the bitterest enemy of gin. But instead of the anticipated effects, it produced those directly opposite. The respectable dealers withdrew from a trade proscribed by the Legislature; so that the spirit business fell almost entirely into the hands of the lowest and most profligate characters, who, as they had nothing to lose, were not deterred by penalties from breaking through all its provisions. The populace having in this, as in all similar cases, espoused the cause of the smugglers and unlicensed dealers, the officers of the revenue were openly assaulted in the streets of London and other great towns; informers were hunted down like wild beasts and drunkenness, disorders, and crimes increased with a frightful rapidity.

Within two years of the passing of the Act, says Tindal, 'it had become odious and contemptible, and policy as well as humanity forced the Commissioners of Excise to mitigate its penalties.' (*Continuation of Rapin*, vol. viii. p. 358, ed. 1759.) The same historian mentions (vol. viii. p. 390), that during the two years in question no fewer than 12,000 persons were convicted of offences connected with the sale of spirits. But no exertion on the part of the revenue officers and magistrates could stem the torrent of smuggling. According to a statement made by the Earl of Cholmondeley in the House of Lords (*Timberland's Debates in the House of Lords*, vol. viii. p. 388), it appears that at the very time when the sale of spirits was declared to be illegal, and every possible exertion made to suppress it, upwards of SEVEN MILLIONS of gallons were annually consumed in London and other parts immediately adjacent. Under such circumstances Government had but one course to follow—to give up the unequal struggle. In 1742 the high prohibitory duties were accordingly repealed, and such moderate duties imposed as were calculated to increase the revenue by increasing the consumption of legally distilled spirits. The bill for this purpose was vehemently opposed in the House of Lords by most of the bishops, and many other peers, who exhausted all their rhetoric in depicting the mischievous consequences that would result from a toleration of the practice of gin-drinking. To these declamations it was unanswerably replied, that whatever the evils of the practice might be, it was impossible to repress them by prohibitory enactments; and that the attempts to do so had been productive of far more mischief than had ever resulted, or could be expected to result, from the greatest abuse of spirits. The consequences of the change were highly beneficial. An instant stop was put to smuggling; and if the vice of drunkenness was not materially diminished, it has never been stated that it was increased.

But it is unnecessary to go back to the reign of George II. for proofs of the impotency of high duties to take away the taste for such an article, or to lessen its consumption. The occurrences that took place in later reigns, though they would seem to be already forgotten, are equally decisive as to this question.

*Duties in Ireland.*—Perhaps no country has suffered more from the excessive height to which duties on spirits have been carried than Ireland. If heavy taxes, enforced by severe fiscal regulations, could make a people sober and industrious, the Irish would be the most so of any on the face of the earth. In order to make the possessors of property join heartily in suppressing illicit distillation, the novel expedient was here resorted to of imposing a heavy fine on every parish, town land, manor land, or lordship in which an unlicensed still was found; while the unfortunate wretches found working it were subjected to

transportation for seven years. But instead of putting down illicit distillation, these unheard-of severities rendered it universal, and filled the country with bloodshed, and even rebellion. It is stated by the Rev. Mr. Chichester, in his valuable pamphlet on the *Irish Distillery Laws*, published in 1818, that 'the Irish system seemed to have been formed in order to perpetuate smuggling and anarchy. It has culled 'the evils of both savage and civilised life, and rejected all the advantages which they contain. The calamities of civilised warfare are, in general, inferior to those produced by the Irish distillery laws; and I doubt whether any nation of modern Europe, which is not in a state of actual revolution, can furnish instances of legal cruelty commensurate to those which I have represented.' (Pp. 92—107.)

These statements are borne out to the fullest extent by the official details in the *Reports of the Revenue Commissioners*. In 1811, say the Commissioners (*Fifth Report*, p. 19), when the duty on spirits was 2s. 6d. per gallon, duty was paid in Ireland on 6,500,361 gallons (Irish measure); whereas, in 1822, when the duty was 5s. 6d., only 2,910,483 gallons were brought to the charge. The Commissioners estimate that the annual consumption of spirits in Ireland was at this very period not less than TEN MILLIONS of gallons; and, as scarcely three millions paid duty, it followed that seven millions were illegally supplied; and 'taking one million of gallons as the quantity fraudulently furnished for consumption by the licensed distillers, the produce of the unlicensed stills may be estimated at six millions of gallons.' (*Ib.* p. 8.) Now, it is material to keep in mind that this vast amount of smuggling was carried on in the teeth of the above barbarous statutes, and in despite of the utmost exertions of the police and military to prevent it; the only result being the exasperation of the populace, and the perpetration of revolting atrocities both by them and the military. 'In Ireland,' say the Commissioners, 'it will appear, from the evidence annexed to this report, that parts of the country have been absolutely disorganised, and placed in opposition not only to the civil authority, but to the military force of the Government. The profits to be obtained from the evasion of the law have been such as to encourage numerous individuals to persevere in these desperate pursuits, notwithstanding the risk of property and life with which they have been attended.'

To put an end to such evils, the Commissioners recommended that the duty on spirits should be reduced from 5s. 6d. to 2s. the wine gallon (2s. 4d. the imperial gallon), and Government wisely consented to act upon this recommendation. In 1823 the duties were accordingly reduced; and the official account given on p. 1318 will show what has been the result of this measure.

It may appear, on a superficial view of this table, as if the consumption of spirits in Ireland had been nearly trebled in consequence of the reduction of the duty in 1823; but in point of fact it was not in any degree increased. The reduction of the duties substituted legal for illicit distillation, and freed the country from the perjuries and other atrocities that grew out of the previous system; but it would be wholly erroneous to say that it increased drunkenness. We have already seen that the Commissioners, who had the best means of obtaining accurate information, estimated the consumption of spirits in Ireland, in 1823, at TEN MILLIONS of gallons; and when greatest, in 1838, 13 years after, the consumption was only 12,296,842 gallons. No doubt, therefore, the measure deserves to be considered as having

been in every point of view most successful. It will be seen that the increase of duty from 2s. 10d. to 3s. 4d. in 1830 perceptibly diminished the quantity of spirits brought to the charge; and as it was found to give a considerable stimulus to illicit distillation, which had previously been nearly extinct, the duty was reduced to 2s. 4d. in 1835. The extraordinary decrease in the consumption of spirits after 1839, though in some degree, perhaps, ascribable to the addition of 4d. per gallon made to the duty in 1840, was no doubt principally owing to the exertions of Father Mathew, and the spread of temperance societies; and notwithstanding the loss of revenue it occasioned, the change was certainly of great public advantage; provided it had been maintained, it is not easy to suppose that anything could have occurred better fitted to improve the physical and moral condition of the people. The addition of 1s. per gallon made to the duty in 1842 was repealed in 1844; for while it gave a stimulus to clandestine distillation, it was pretty obvious it would not have added anything to the revenue, or given any additional impetus to the temperance movement. The apparent effect of the additions to the duty in 1858 and 1860 on the consumption in Ireland was a fall from 6,783,207 gallons in the year ended March 31, 1858, to 5,418,409 gallons in the following official year, and a further fall from 5,550,241 gallons in the year ended March 31, 1860, to 4,191,560 gallons in the succeeding year.

*Duties in Scotland.*—The experience of Scotland is hardly decisive as to this question. The exorbitance of the duties produced nearly the same effects there as in Ireland. Mr. John Hay Forbes, sheriff-depute of Perthshire, and afterwards a lord of session, stated in evidence before the Commissioners, that, according to the best information he could obtain, the quantity of illegally distilled spirits annually produced in the Highlands could not amount to less than two millions of gallons. In corroboration of this, he stated that, in 1821, only 298,138 gallons were brought to the charge in the Highlands; and of these, 254,000 gallons were permitted to the Lowlands, leaving only 44,000 gallons for the consumption of the whole country—a supply which, we are well assured, would hardly be sufficient for the demand of two moderately populous parishes. In a letter of Captain Munro of Teaninich to the Commissioners, it is stated that, 'at Tain, where there are upwards of 23 licensed public houses, not one gallon had been permitted from the legal distilleries for upwards of twelve months,' though a small quantity of smuggled whisky had been purchased at the excise sales, to give a colour of legality to the trade. The same gentleman thus expresses himself in another part of his letter:—'The moral effect of this baneful trade of smuggling on the lower classes is most conspicuous, and increasing in an alarming degree, as evidenced by the multiplicity of crimes, and by a degree of insubordination formerly little known in this part of the country. In several districts, such as Strathconan, Strathcarron &c., the excise officers are now often deforced, and dare not attempt to do their duty; and smuggled whisky is often carried to market by smugglers escorted by armed men, in defiance of the laws. In short, the Irish system is making progress in the Highlands of Scotland.'

To arrest the progress of demoralisation, Government, pursuant to the judicious advice of the Commissioners, reduced the duties on Scotch to the same level as those on Irish whisky; and the consequences were equally salutary. The prefixed statement sets the influence of the reduction of the duty in 1823 in the most striking point

of view, the consumption of duty-paid spirits having more than doubled in the course of 2 years, at the same time that illicit distillation was all but suppressed. But we much doubt whether the existing duties (1869) be not a great deal too high. They are now, it is true, more easily collected than formerly, and spirit drinking is, no doubt, much too prevalent in Scotland; but the latter will not be lessened by any increase of duty that gives a stimulus to smuggling.

*Duties in England.*—Previously to the reduction of the duty on Irish and Scotch spirits, the duty on English spirits had been as high as 11s. 8d. per gallon. This high duty, and the restrictions under which the trade was placed, were productive of the worst effects. They went far to enable the distillers to fix the price of spirits, and consequently (we quote the words of the Commissioners of Excise Inquiry) to raise it much beyond that which was sufficient to repay, with a profit,

1.—An Account of the Quantities of Home-made Spirits charged with Consumption Duties, and specifying the Rates of Duty in each Division of the Empire since 1800, with the Total Amount of the Duty.

the cost of the manufacture and the duty advanced to the Crown.' And, in proof of this, the Commissioners mention, that in November 1823, 'when corn spirits might be purchased in Scotland for about 2s. 3d. per gallon, raw spirits could not be purchased in England for less than 4s. 6d. ready money, and 4s. 9d. credit, omitting, in both cases, the duty.' In consequence of this state of things the adulteration of spirits was carried on to a great extent in England; and the large profits made by the smuggler occasioned clandestine importation in considerable quantities from Scotland and Ireland. To obviate these inconveniences, and at the same time to neutralise the powerful additional stimulus that the reduction of the duties in Scotland and Ireland would have given to smuggling, had the duties in England been continued at their former amount, the latter were reduced, in 1826, to 7s. per gallon, facilities being at the same time given to the importation of spirits from the other parts of the empire. Many complaints have been made of the influence of this measure in increasing drunkenness, but nothing can be imagined more completely destitute of foundation. The Commissioners estimated the consumption of British spirits in England and Wales, in 1823, at 5,000,000 gallons (*Supp. to Fifth Report*, p. 8); and it appears from the prefixed account that it amounted, for the year ending January 5, 1844, to 7,724,051 gallons, producing 3,025,245*l.* of revenue; so that, making allowance for the increase of population since 1823, and for the check given to adulteration and smuggling, and considering, also, that the consumption of foreign spirits was not greater in 1843 than in 1823, it may be safely affirmed that the practice of spirit-drinking had not increased in England during the 20 years ending with 1844; nor has it increased in the 10 years ending with 1867. No doubt, however, it is still a great deal too prevalent, and large sums of money are wasted by the poor on liquor which had far better be expended on other things. But how much soever we may deplore the prevalence of gin-drinking, we may be assured that the evil is not one that can be cured, or even mitigated, by increasing the existing duties on spirits. Such increase would substitute illegitimate for legitimate channels of supply; it would injure the public revenue, and diffuse among the populace the idle, disorderly, and predatory habits that mark the character of the smuggler; and it would do all this without lessening in any degree the vice of drunkenness.

*Spirit Drinking in Scotland.*—The extraordinary prevalence of spirit drinking in Scotland, and the many abuses to which it gives rise, have occasioned a great deal of discussion, and led to sundry efforts for its diminution. But, speaking generally, we doubt whether these have been bottomed on sound principles. They all, or mostly all, have

too much of a puritanical spirit about them; and expect to bring that reformation about by dint of police regulations, that would be more likely to be introduced and promoted by a less officious system.

An Act was passed in 1853, the 16 & 17 Viet. c. 67 (applicable to Scotland only), which, among other things, gave the Justices of the peace increased power over the licensing of public houses, and added considerably to the duties on licenses. Much discussion has taken place with respect to the real influence of this very questionable measure, and there would seem to be no little exaggeration in the statements both of its opponents and defenders. It has certainly reduced, though in a very arbitrary manner, the number of licensed taverns; and if the facilities for getting whisky or ought else be diminished, the chances are ten to one that its consumption will also be diminished. But it is alleged that the diminution in the number of public houses in Scotland is not real, but apparent only; and that while some have been legally shut up, an equal number have been surreptitiously opened, and that the latter are at the same time of a comparatively worthless description. And the convictions that have taken place of parties for selling spirits without licenses show that this statement has some foundation, and that in endeavouring to put down one form of abuse, we may introduce another and a much more dangerous one in its stead.

The better, as well as the more constitutional plan, would be to make an end of the system of interference. Why should not A, or B, or C be entitled to open a house for the sale of spirituous liquors, and be permitted to keep it open so long as he pays the license duty, and conducts his establishment in an orderly and proper manner? To weaken the taste for liquor, let all sorts of cheap, interesting, and innocent amusements be open to the public. To prohibit the sale of spirits on Sundays, and at the same time to shut up museums, parks, and public places, and to prevent as far as possible (as is done at Glasgow) all travelling by sea or land, is a contradictory as well as an oppressive policy; and wherever it is carried to the greatest extent, there the population is the most brutalised and debased.

It is not easy, since the equalisation of the duties, to obtain any accurate information in regard to the consumption of spirits in any one of the great divisions of the empire. But though great in Scotland, it is not so very great as is commonly supposed. Spirits may be sent from one part of the United Kingdom to another under bond, under permit, or under certificate from the dealer's stock. In the first case the duty is not paid till the spirits are taken for consumption; whereas in the last two cases it is paid before the spirits are removed. And hence, unless we knew the quantity of spirits removed from and brought into Scotland under permits and certificates, the

fact of so many gallons having been charged in it with the consumption duty, would not enable us to specify what the consumption really amounted to. Thus, in 1858, duty was paid in Scotland on 6,836,037 gallons; but the Commissioners of Inland Revenue, after making the provisions mentioned above, estimated the consumption at only 5,301,000 gallons, this amount being, of course, exclusive of foreign spirits, and of all such British spirits as might have been illegally brought into consumption.

*Equalisation of the Duties on Spirits.*—It would require very cogent reasons to vindicate the policy of imposing different duties on the same article in the different divisions of the United Kingdom. And it was supposed that in the case of the duties on spirits, the greater facilities for illegal distillation in Scotland and Ireland afforded a valid plea for the duties being less in them than in England. Though this may have been the case formerly, the more perfect civilisation of both countries has doubtless tended, in this respect, to assimilate them more and more to England. And there cannot, as we think, be a doubt of the expediency of the recent equalisation of the duties. But it does not, therefore, follow that 8s. or 10s. per gallon is a proper sum at which to fix the general duty. We apprehend that either will be found to be too high, and that while a lower duty would yield as large, or perhaps a larger revenue, it would do this without stimulating drunkenness, by checking smuggling and adulteration.

*Trade in Spirits.*—The old law, 6 Geo. IV. c. 80, as to rectifying, dealing in, and retailing spirits has been repealed, and the Spirits Act (23 & 24 Vict. c. 114) already referred to contains the present regulations for the guidance of those connected with these branches of the business.

For the regulations as to the importation &c. of foreign spirits, and duties thereon, see BRANDY, GENEVA, and RUM.

**SPONGE** (Ger. schwamm; Fr. éponge; Ital. spugna; Span. esponja). A soft, light, very porous, and compressible substance, readily imbibing water, and as readily giving it out again.

It is found adhering to rocks, particularly in the Mediterranean Sea, about the islands of the Archipelago. It was formerly supposed to be a vegetable production, but is now classed among the zoophytes; and analysed, it yields the same principles as animal substances in general. The inhabitants in several of the Greek islands have been trained from their infancy to dive for sponges. They adhere firmly to the bottom, and are not detached without a good deal of trouble. The extraordinary clearness of the water facilitates the operations of the divers. Smyrna is the great market for sponge. The price varies from 6 to 16 piastres per oke for ordinary and dirty, and from 80 to 100 piastres per oke for fine and picked specimens. Sponge is also fished for in the Red Sea. (Ure's *Dictionary*; Savary's *Letters on Greece*, Eng. ed. p. 109; and *private communications*.)

About 20 miles S.E. from Napoli di Romania (Naplia), in the gulf of that name, is the small town of Cranidi, the inhabitants of which are the principal sponge-fishers of the Archipelago and Levant. The fishery is carried on partly by spearing, and partly by diving; the latter securing the sponge free from injury, which is not the case with the former. The Cranidiots are most expert divers, and anecdotes approaching to the marvellous are told of their feats. After the sponge is fished up, when perfectly free from sand, and dry, it is so very light that large pieces of it are moved with

the slightest breath of air. It is customary, however, to impregnate it with sand. This is done by stringing the sponges together, and laying them on the sand to allow the ripple of the sea to wash them with the finest particles. They are then placed in heaps under piles of stones which press them closely together, so that they become, when dry, hard and flat, and have to be beaten and sifted. But though this be done, and though they are sometimes further washed and sifted, they will, though apparently quite clean, weigh three or four times their original weight. It is, perhaps, needless to add that they are always sold by weight.

Sponge is used in surgery, and for a variety of purposes in the arts. It was formerly charged with a duty of 6d. per lb., which was repealed in 1815. In 1867, our imports and exports of sponge were respectively 980,259 lb. and 149,968 lb., valued at 86,201l. and 15,154l.

**SQUILL** (Ger. meerzweibel; Fr. scille, oignon marin; Ital. scilla, cipolla marina; Span. cebolla albarann), or, as it is sometimes denominated, the *Sea onion*, is a plant with a large pear-shaped, bulbous root, which is the only part that is used.

It grows spontaneously on sandy shores in Spain and the Levant; whence we are annually supplied with the roots. They should be chosen large, plump, fresh, and full of a clammy juice; some are of a brownish-red colour, and others white; but no difference is observed in the qualities of the two sorts. The root is very nauseous, intensely bitter, and acrid; much handled, it ulcerates the skin. The bulbs are brought to England preserved fresh in sand. The acrimony of the roots, on which their virtue depends, is partially destroyed by drying and long keeping, but if exposed readily recovers moisture. Squill is one of the most powerful and useful remedies in the materia medica. (*British Pharmacopœia*, 1867; Lewis's *Mat. Med.*; Thomson's *Dispensatory*.)

**STADE**. A small city of Hanover, on the Schwinge, 22 miles W. by N. of Hamburg, lat. 53° 36' 32" N., long. 9° 28' 34" E. Pop. (1864) 8,421. It has very little trade, and would be quite unworthy of notice in a work of this sort, except for the circumstance that a toll or duty, charged by the Government of Hanover (before it fell into the hands of Prussia), on goods conveyed up the Elbe to Hamburg, whether for consumption or transit, used to be charged at the castle of Brunshausen contiguous to this town.

All vessels bound for Hamburg had to heave to (and those of some countries to anchor) in passing the guard-ship opposite to the castle, and send their papers, including manifests, bills of lading, cocketts &c., on shore, that the duty, which was in general about  $\frac{1}{2}$  per cent. ad valorem, might be computed from them. This being done, the ship was allowed to proceed, and the duty was paid at Hamburg.

On former occasions we expressed our surprise that an obstruction of this sort should have been tolerated for so long a period. The duties fell heavily on certain descriptions of goods; and were, at an average, decidedly higher than the duties charged in Hamburg. They were most objectionable, however, from their requiring many troublesome regulations to be complied with; the unintentional deviation from any one of which exposed the cargo to confiscation, and never failed to occasion a great deal of delay, trouble, and expense. As the principal part of the foreign trade of the Elbe was in our hands, we were, of course, principally affected by the Stade toll; and considering the source of the nuisance, it was not a little astonishing it should not have been abated long ago. The

ou, and never failed to occasion  
e, trouble, and expense. As  
the foreign trade of the Elbe  
ere, of course, principally  
le toll; and considering the  
it was not a little astonishing  
been abated long ago. The

sum which the Hanoverian Government derived  
from the duties was but trifling compared with the  
injury they inflicted on our trade; and we sug-  
gested that the British Government should buy  
an exemption from so vexatious a duty; as few  
things would do more to extend our trade with  
Hamburg than the completion of an arrangement  
of this sort.

By an agreement effected with Hanover in 1814,  
the duties were reduced and placed on an improved  
footing; and British vessels, with those belong-  
ing to countries having reciprocity treaties with  
Hanover, were no longer obliged to *heave to* in  
passing the guard-ship at Irons-hausen, but might  
proceed direct to Hamburg, and pay the duties in  
the toll-office in that city. Still, however, this  
arrangement was merely an improvement of what  
was in its nature incurably bad. This toll on the  
Elbe was an outrage on all commercial nations;  
and the precedent set by the abolition of the  
Sound dues was followed, and the different coun-  
tries which trade with Hamburg, by a self-imposed  
contribution in proportion to the number of  
their ships engaged in the trade, at length bought  
it up.

But it is not enough that the Stade duties have  
been abolished. All the duties imposed on the  
traffic carried on by the Elbe above Hamburg  
ought, also, to be suppressed. This great high-  
way should be open to the free use of those who  
may be inclined to avail themselves of the facilities  
which it affords for the importation and exporta-  
tion of products into and from the centre of Europe.  
It is quite monstrous that it should be in the  
power of the governments of petty states to shut  
up or encumber one of the principal channels of  
the trade of this quarter of the world. (For full  
details with respect to the Stade duty, see the  
*Report of the Committee of the House of Commons*  
on the subject, Paper No. 429, Sept. 1858. Mr.  
Cousin Ward in his last *Report* holds out a hope of  
speedy abolition of the tolls in the Upper Elbe.)

STARCH (Ger. amidan; Fr. amidon; Ital.  
amidi, amito; Span. amidon, almidon; Russ.  
knechmal). A substance obtained from vegetables.  
It has a fine white colour, and is usually con-  
creted in lough masses; it has scarcely any smell,  
and very little taste. When kept dry, it continues  
for a long time uninjured, though exposed to the  
air. It is insoluble in cold water; but combines  
with boiling water—forming with it a kind of  
jelly. It exists chiefly in the white and brittle  
parts of vegetables, particularly in tuberose roots,  
and the seeds of the graminaceous plants. It may  
be extracted by pounding these parts, and agitating  
them in cold water; when the *parenchyma* or  
fibrous parts will first subside; and these being  
removed, a fine white powder diffused through the  
water will gradually subside, which is the starch.  
Or: the pounded or grated substance, as the roots  
of potatoes, acorns, or horse chestnuts, for instance,  
may be put into a hair sieve, and the starch  
washed through the cold water, leaving the grosser  
matter behind. Farinaceous seeds may be ground  
and treated in a similar manner. Oily seeds re-  
quire to have the oil expressed from them before  
the farina is extracted. Potato starch goes a good  
deal further than wheat starch—a less quantity  
of it sufficing to form a paste of equal thickness with  
water. It has a very perceptible crystalline ap-  
pearance, and is apparently heavier than common  
starch. (Thomson's *Chemistry*; Ure's *Dictionary*.)

Starch was charged, down to 1834, with an  
exise duty of 84d. per lb.; but the injurious in-  
fluence of the duty, the nett produce of which did  
not exceed 85,000*l.*, having been forcibly pointed  
out by the Commissioners of Revenue Inquiry, it

was repealed in the course of the above year. In  
1833, duty was paid on 8,070,028 lb. starch. The  
manufacture has since, however, been greatly ex-  
tended. In 1867 we exported 14,965 cwt. of starch,  
valued at 13,468*l.*

STATIONERY. A term which is not very well  
defined; but which is now commonly understood  
to designate the pens, ink, paper, wax, wafers,  
and other materials necessary to the writing of  
letters, including pen-knives, erasers &c. Formerly  
the term had a wider signification, stationer and  
bookseller being held to be synonymous. (John-  
son, voce 'Stationer.') And hence it is that the  
Stationers' Company formerly comprised, and  
continues to comprise, all the more eminent book-  
sellers and publishers of the metropolis. The  
name has no doubt been derived from the *stationes*  
(stations) that were assigned in the forum at Rome  
to the vendors of books, which were classed among  
the *mercium vilissimarum*. (Ducange, vi. 715, voce  
'Stationaril'.)

Besides the vast quantities of stationery con-  
sumed at home, the value of our exports amounted,  
in 1867, to 943,602*l.*, while our imports, chiefly of  
paper, were valued at 564,486*l.* [PAPER; &c.]

The stationery for the British Government is  
supplied by a peculiar department called the  
'Stationery Office,' which has, also, the charge of  
the public printing.

STEAM VESSELS (REGULATION OF).  
Subjoined are those parts of the Merchant Ship-  
ping Act of 1854 (17 & 18 Vict. c. 104) and the  
Merchant Shipping Act Amendment Act of 1862  
(25 & 26 Vict. c. 63) which refer more especially to  
the regulation of steam navigation, and the lights  
&c. to be carried by sea-going vessels.

*Board of Trade may appoint Inspectors.*—The  
Board of Trade may from time to time, when-  
ever it seems expedient to them so to do, appoint  
any person, as an inspector, to report to them  
upon the following matters (that is to say):—

(1) Upon the nature and causes of any accident  
or damage which any ship has sustained or caused,  
or is alleged to have sustained or caused:

(2) Whether the provisions of this Act, or any  
regulations made under or by virtue of this Act,  
have been complied with:

(3) Whether the hull and machinery of any  
steam ship are sufficient and in good condition.  
(Sec. 14.)

*Powers of Inspectors.*—Every such inspector as  
aforesaid shall have the following powers (that  
is to say):—

(1) He may go on board any ship, and may  
inspect the same or any part thereof, or any of  
the machinery, boats, equipments, or articles on  
board thereof to which the provisions of this Act  
apply, not unnecessarily detaining or delaying her  
from proceeding on any voyage:

(2) He may enter and inspect any premises  
the entry or inspection of which appears to him to  
be requisite for the purpose of the report which he  
is directed to make:

(3) He may, by summons under his hand,  
require the attendance of all such persons as he  
thinks fit to call before him and examine for such  
purpose, and may require answers or returns to  
any enquiries he thinks fit to make:

(4) He may require and enforce the production  
of all books, papers, or documents which he  
considers important for such purpose:

(5) He may administer oaths, or, in lieu  
of requiring or administering an oath, require  
every person examined by him to make and  
subscribe a declaration of the truth of the state-  
ments made by him in his examination. (Sec. 15.)

The Board of Trade have issued a Book of

Instructions to their surveyors of steam vessels under the Merchant Shipping Act of 1854, par. 4. See also Regulations as to Passenger Ships. [PASSENGERS.]

*Allowance for Engine Room in Steamers.*—In every ship propelled by steam or other power requiring engine room, an allowance shall be made for the space occupied by the propelling power, and the amount so allowed shall be deducted from the gross tonnage of the ship ascertained as aforesaid, and the remainder shall be deemed to be the register tonnage of such ship; and such deduction shall be estimated as follows (that is to say):—

(a) *To be rateable in ordinary Steamers.*—As regards ships propelled by paddle-wheels in which the tonnage of the space solely occupied by and necessary for the proper working of the boilers and machinery is above 20 per cent. and under 30 per cent. of the gross tonnage of the ship, such deduction shall be  $\frac{30}{100}$  of such gross tonnage; and in ships propelled by screws in which the tonnage of such space is above 13 per cent. and under 20 per cent. of such gross tonnage, such deduction shall be  $\frac{32}{100}$  of such gross tonnage:

(2) *In case of separate Compartments.*—If in any ship in which the space aforesaid is to be measured the engines and boilers are fitted in separate compartments, the contents of each shall be measured severally in like manner, according to the above rules, and the sum of their several results shall be deemed to be the tonnage of the said space:

(3) *Shaft Trunk of Screw Steamer.*—In the case of screw steamers in which the space aforesaid is to be measured, the contents of the shaft trunk shall be added to and deemed to form part of such space, and shall be ascertained by multiplying together the mean length, breadth, and depth of the trunk, and dividing the product by 100:

(4) *Alteration of Engine Room.*—If in any ship in which the space aforesaid is to be measured any alteration be made in the length or capacity of such space, or if any cabins be fitted in such space, such ship shall be deemed to be a ship not registered until remeasurement:

(5) *Penalty for carrying Goods in such Space.*—If in any ship in which the space aforesaid is to be measured any goods or stores are carried in such space, the master and owner shall each be liable to a penalty not exceeding 100*l.* (Sec. 23.)

*Power to remeasure Engine Rooms improperly extended.*—If it appears to the Commissioners of Customs that in any steam ship measured before this Act comes into operation store rooms or coal bunkers have been introduced into or thrown across the engine room, so that the deduction from the tonnage on account of the engine room is larger than it ought to be, the said Commissioners may, if they think fit, direct such engine room to be remeasured according to the rules in force before this Act comes into operation, excluding the space occupied by such store rooms or coal bunkers, or may, if the owners so desire, cause the ship to be remeasured according to the rules hereinbefore contained, and subject to the conditions contained in the last preceding section; and after remeasurement, the said Commissioners shall cause the ship to be registered anew, or the registry thereof to be altered, as the case may require. (Sec. 28.)

*Officers may be appointed and Regulations made for Measurement of Ships.*—The Commissioners of Customs may, with the sanction of the Treasury, appoint such persons to superintend the survey and admeasurement of ships as they think fit; and

may, with the approval of the Board of Trade, make such regulations for that purpose as may be necessary; and also, with the like approval, make such modifications and alterations as from time to time become necessary in the tonnage rules hereby prescribed, in order to the more accurate and uniform application thereof, and the effectual carrying out of the principle of admeasurement therein adopted. (Sec. 29.)

*Build and Equipment of Steam Ships.*

*Iron Steamers to be divided by water-tight Partitions.*—The following rules shall be observed with respect to the build of iron steam ships (that is to say):—

(1) Every steam ship built of iron, of 100 tons or upwards, the building of which commenced after August 28, 1846, and every steam ship built of iron of less burden than 100 tons, the building of which commenced after August 7, 1851, (except ships used solely as steam tugs), shall be divided by substantial transverse water-tight partitions, so that the fore part of the ship shall be separated from the engine room by one of such partitions, and so that the after part of such ship shall be separated from the engine room by another of such partitions:

(2) Every steam ship built of iron, the building of which commences after the passing of this Act, shall be divided by such partitions as aforesaid into not less than 3 equal parts, or as nearly so as circumstances permit:

(3) In such last-mentioned ships each such partition as aforesaid shall be of equal strength with the side plates of the ship with which it is in contact:

(4) Every screw steam ship built of iron, the building of which commences after the passing of this Act, shall, in addition to the above partitions, be fitted with a small water-tight compartment inclosing the after-extremity of the shaft:

*Officers of Customs not to grant Certificates except so divided.*—And no officer of customs or other person shall grant a clearance or transire for any iron steam ship required to be divided or fitted as aforesaid, unless the same is so divided and fitted; and if any such ship attempts to ply or go to sea without such clearance or transire, any such officer may detain her until she is so divided and fitted; and if any steam ship hereinbefore to be so divided or fitted plies or goes to sea without being so divided or fitted, the owner shall incur a penalty not exceeding 100*l.* (Sec. 300.)

*Equipment of Steam Ships.*—Steam ships shall be provided as follows (that is to say):—

(1) *Safety Valve.*—Every steam ship of which a survey is hereby required shall be provided with a safety valve upon each boiler, so constructed as to be out of the control of the engineer when the steam is up, and, if such valve is in addition to the ordinary valve, it shall be so constructed as to have an area not less and a pressure not greater than the area of and pressure on that valve:

(2) *Compasses to be adjusted.*—Every sea-going steam ship employed to carry passengers shall have her compasses properly adjusted from time to time; such adjustment, in the case of ships surveyed as hereinafter mentioned, to be made to the satisfaction of the shipwright surveyor, and according to such regulations as may be issued by the Board of Trade:

(3) *Fire Hose.*—Every sea-going steam ship (unless used solely as a steam tug) shall be provided with a hose adapted for the purpose of extinguishing fire in any part of the ship, and capable of being connected with the engines of the ship:

of the Board of Trade, for that purpose as may be with the like approval, make alterations as from time to time necessary in the tonnage rules in order to the more accurate application thereof, and the effectual principle of measurement.

#### Construction of Steam Ships.

Every steam ship shall be divided by water-tight bulkheads, and the following rules shall be observed in the construction of iron steam ships (that

Every steam ship built of iron, of 100 tons and upwards, and every steam ship built of iron, of less than 100 tons, the building of which commenced after August 7, 1861, and which is solely or principally employed as a steam tug, shall be divided into transverse water-tight compartments, and every part of the ship shall be so divided, and the engine room by one of such compartments, and the after part of such ship shall be so divided from the engine room by a transverse bulkhead.

Every steam ship built of iron, the building of which commenced after the passing of this Act, shall be so divided into equal parts, or as nearly so as may be, by transverse bulkheads.

Every steam ship of such strength and construction as to be equal in strength to the ship with which it is to be compared.

Every steam ship built of iron, the building of which commenced after the passing of this Act, shall be so divided into equal parts, or as nearly so as may be, by transverse bulkheads, and every part of the ship shall be so divided, and the engine room by one of such compartments, and the after part of such ship shall be so divided from the engine room by a transverse bulkhead.

Every steam ship built of iron, the building of which commenced after the passing of this Act, shall be so divided into equal parts, or as nearly so as may be, by transverse bulkheads, and every part of the ship shall be so divided, and the engine room by one of such compartments, and the after part of such ship shall be so divided from the engine room by a transverse bulkhead.

Every steam ship built of iron, the building of which commenced after the passing of this Act, shall be so divided into equal parts, or as nearly so as may be, by transverse bulkheads, and every part of the ship shall be so divided, and the engine room by one of such compartments, and the after part of such ship shall be so divided from the engine room by a transverse bulkhead.

Every steam ship built of iron, the building of which commenced after the passing of this Act, shall be so divided into equal parts, or as nearly so as may be, by transverse bulkheads, and every part of the ship shall be so divided, and the engine room by one of such compartments, and the after part of such ship shall be so divided from the engine room by a transverse bulkhead.

Every steam ship built of iron, the building of which commenced after the passing of this Act, shall be so divided into equal parts, or as nearly so as may be, by transverse bulkheads, and every part of the ship shall be so divided, and the engine room by one of such compartments, and the after part of such ship shall be so divided from the engine room by a transverse bulkhead.

(4) *Signal.*—Every sea-going steam ship employed to carry passengers shall be provided with the following means of making signals of distress (that is to say): 12 blue lights or 12 port fires, and 1 cannon with ammunition for at least 12 charges, or, in the discretion of the master or owner of such ship, with such other means of making signals (if any) as may have previously been approved by the Board of Trade:

(5) *Shelter for Deck Passengers.*—Every home trade steam ship employed to carry passengers by sea shall be provided with such shelter for the protection of deck passengers (if any) as the Board of Trade, having regard to the nature of the passage, the number of deck passengers to be carried, the season of the year, the safety of the ship, and the circumstances of the case, may require: and if any steam ship as aforesaid applies or goes to sea from any port in the United Kingdom without being so provided as herebefore required, then for each default in any of the above requisites the owner shall (if he appears to be in fault) incur a penalty not exceeding 100*l.*, and the master shall (if he appears to be in fault) incur a penalty not exceeding 50*l.* (Sec. 301.)

*Penalty for improper Weight on Safety Valve.*—If any person places an undue weight on the safety valve of any steam ship, or, in the case of steam ships surveyed as hereinafter mentioned, increases such weight beyond the limits fixed by such engineer surveyor as hereinafter mentioned, he shall, in addition to any other liabilities he may incur by so doing, incur a penalty not exceeding 100*l.* (Sec. 302.)

#### Survey of Passenger Steamers.

*Definition of 'Passengers' and 'Passenger Steamer.'*—For the purpose of the enactments herein contained with respect to surveys and certificates of passenger steam ships, the word 'passengers' shall be held to include any person carried in a steam ship, other than the master and crew and the owner, his family and servants; and the expression 'passenger steamer' shall be held to include every British steam ship carrying passengers to, from, or between any place or places in the United Kingdom, excepting steam ferry boats working in channels, commonly called steam bridges. (Sec. 303.) [PASSENGERS.]

*Passenger Steamers to be surveyed.*—Every passenger steamer shall be surveyed twice at the least in each year in manner hereinafter mentioned. (Sec. 304.)

*Board of Trade to appoint Surveyors, and fix their Remuneration.*—The Board of Trade may from time to time appoint such number of fit and proper persons to be shipwright surveyors and engineer surveyors for the purposes of this Act at such ports or places as it thinks proper, and may also appoint a surveyor-general for the United Kingdom, and may from time to time remove such surveyors or any of them, and may from time to time fix and alter the rates of remuneration to be received by such surveyors. (Sec. 305.)

*Surveyors to have Power to inspect.*—It shall be lawful for the said surveyors in the execution of their duties to go on board any steam ships at all reasonable times, and to inspect the same or any part thereof, or any of the machinery, boats, equipments, or articles on board thereof, or any certificates of the master or mate to which the provisions of this Act or any of the regulations to be made by virtue thereof apply, not unnecessarily detaining or delaying the ship from proceeding on any voyage, and if in consequence of any accident to any such ship or for any other reason they

consider it necessary so to do, to require the ship to be taken into dock for the purpose of surveying the hull thereof; and any person who hinders any such surveyor from going on board any such steam ship, or otherwise impedes him in the execution of his duty under this Act, shall incur a penalty not exceeding 5*l.* (Sec. 306.)

*Board of Trade to regulate Mode of making Surveys.*—The said surveyors shall execute their duties under the direction of the Board of Trade, and such Board shall make regulations as to the manner in which the surveys hereinafter mentioned shall be made, and as to the notice to be given to the surveyors when surveys are required, and as to the amount and payment of any travelling or other expenses incurred by such surveyors in the execution of their duties, and may thereby determine the persons by whom and the conditions under which such payment shall be made.

*Penalty on Surveyors receiving Fees unlawfully.*—Every surveyor who demands or receives directly or indirectly from the owner or master of any ship surveyed by him under the provisions of this Act any fee or remuneration whatsoever for or in respect of such survey, otherwise than as the officer and by the direction of the Board of Trade, shall incur a penalty not exceeding 50*l.* (Sec. 308.)

*Owners to have Surveys made by Shipwright and Engineer Surveyors, and Surveyors to give Declarations.*—The owner of every passenger steamer shall cause the same to be surveyed at the times hereinafter directed by one of the said shipwright surveyors and by one of the said engineer surveyors so appointed as aforesaid; such shipwright surveyor being, in the case of iron steamers, a person who is, in the judgment of the Board of Trade, properly qualified to survey such ships; and such surveyors shall thereupon, if satisfied that they can with propriety do so, give to such owner declarations as follows.

The declaration of the shipwright surveyor shall contain statements of the following particulars (that is to say):—

(1) That the hull of the ship is sufficient for the service intended, and in good condition:

(2) That the partitions, boats, life buoys, lights, signals, compasses, and shelter for deck passengers, and the certificates of the master and mate or mates, are such, and in such condition, as required by this Act:

(3) The time (if less than 6 months) for which the said hull and equipments will be sufficient:

(4) The limits (if any) beyond which, as regards the hull and equipments, the ship is, in the surveyor's judgment, not fit to ply:

(5) The number of passengers which the ship is, in the judgment of the surveyor, fit to carry, distinguishing, if necessary, between the respective numbers to be carried on the deck and in the cabins, and in different parts of the deck and cabins; such numbers to be subject to such conditions and variations, according to the time of year, the nature of the voyage, the cargo carried, or other circumstances, as the case requires.

And the declaration of the engineer surveyor shall contain statements of the following particulars (that is to say):—

(1) That the machinery of the ship is sufficient for the service intended, and in good condition:

(2) The time (if less than 6 months) for which such machinery will be sufficient:

(3) That the safety valves and fire hose are such and in such condition as are required by this Act:

(4) The limits of the weight to be placed on the safety valves:

(5) The limits (if any) beyond which, as re-

gards the machinery, the ship is, in the surveyor's judgment, not fit to ply :

And such declarations shall be in such form as the Board of Trade directs. (Sec. 309.)

**Transmission of Declarations to Board of Trade.**  
**Penalty for Delay.**—The said owner shall transmit such declarations to the Board of Trade within 14 days after the dates of the receipt thereof respectively, and in default shall forfeit a sum not exceeding 10s. for every day that the sending of such declarations is delayed ; and such sum shall be paid upon the delivery of the certificate hereinafter mentioned, in addition to the fee payable for the same, and shall be applied in the same manner as such fees. (Sec. 310.)

**Times appointed for Surveys and Transmission of Declarations.**—In all cases where it is possible the said half-yearly surveys shall be made in the months of April and of October, and the declarations shall be transmitted on or before April 30 and October 31 respectively ; but if the owner of any passenger steamer is unable to have the same surveyed in the month of April or October (as the case may be), either by reason of such ship being absent from the United Kingdom during the whole of those periods respectively, or by reason of such ship or the machinery thereof being under construction or repair, or of such ship being laid up in dock, or for any other reason satisfactory to the Board of Trade, then he shall have the same surveyed as aforesaid as soon thereafter as possible, and shall transmit such declarations to the Board of Trade within 14 days after the receipt thereof, together with a statement of the reasons which have prevented the survey of such ship at the time hereinbefore prescribed, and shall, in case of delay in transmitting the declarations, be liable to a forfeiture similar to that mentioned in the last preceding section. (Sec. 311.)

**Board of Trade to issue Certificates.**—Upon the receipt of such declarations the Board of Trade shall, if satisfied that the provisions of the fourth part of this Act have been complied with, cause a certificate in duplicate to be prepared and issued, to the effect that the provisions of the law with respect to the survey of the ship and the transmission of declarations in respect thereof have been complied with ; and such certificate shall state the limits (if any) beyond which, according to the declaration of the surveyors, such ship is not fit to ply, and shall also contain a statement of the number of passengers which, according to the declaration of the shipwright surveyor, such ship is fit to carry, distinguishing (if necessary) between the respective numbers to be carried on the deck and in the cabins and in different parts of the deck and cabins, such number to be subject to such conditions and variations according to the time of year, the nature of the voyage, the cargo carried, and other circumstances, as the case requires. (Sec. 312.)

**Issue and Transmission of Certificates.**—The Board of Trade shall transmit such duplicate certificate to the shipping master or to some other public officer at such port as the owner may mention for the purpose, or at the port where the owner or his agent resides or where the ship was surveyed and is for the time being lying, and shall cause notice of such transmission to be given by post or otherwise to the master or owner or his agent ; and the said shipping master or officer shall deliver such duplicate certificate to the said owner, master, or agent, on his applying and paying the fees and other sums (if any) herein mentioned as payable in that behalf ; and in proving the due issue and transmission to the owner, agent, or master of such certificate, it shall

be sufficient to show that the same has been duly received by such shipping master or public officer as aforesaid, and that due notice of the transmission thereof to such shipping master or officer has been given to such owner, master, or agent. (Sec. 313.)

**Fees to be paid for Certificates.**—The owner of every passenger steamer requiring a certificate under the fourth part of this Act, shall pay for every certificate granted by the Board of Trade such fees as such Board directs, not exceeding the fees mentioned in the Table marked T. in the schedule hereto. (Sec. 314.)

**How long Certificates to continue in force.**—No certificate shall be held to be in force for the purposes of the fourth part of this Act beyond the date fixed by the Board of Trade for the expiration thereof ; and no certificate shall be in force after notice is given by the Board of Trade to the owner, agent, or master of the ship to which the same relates, that such Board has cancelled or revoked the same : provided, that if any passenger steamer is absent from the United Kingdom at the time when her certificate expires, no penalty shall be incurred for the want of a certificate until she first begins to ply with passengers after her next subsequent return to the United Kingdom ; and the Board of Trade may require any certificate which has expired, or has been revoked or cancelled, to be delivered up as it directs ; and any owner or master who, without reasonable cause, neglects or refuses to comply with such requirement, shall incur a penalty not exceeding 10l. (Sec. 315.)

**Board of Trade may cancel Certificates and require fresh Declarations.**—The Board of Trade may revoke and cancel such certificates, in any case in which it has reason to believe—

(1) That the declarations of the sufficiency and good condition of the hull, equipments, and machinery of any passenger steamer, or either of them, have been fraudulently or erroneously made ; or,

(2) That such certificate has otherwise been issued upon false or erroneous information ; or,

(3) That since the making of such declarations the hull, equipments, or machinery of such ship have sustained any injury, or are otherwise insufficient :

And in every such case the Board of Trade may, if it thinks fit, require the owner to have the hull, equipments, or machinery of such ship again surveyed, and to transmit a further declaration or declarations of the sufficiency and good condition thereof, before re-issuing any certificate or granting a fresh one in lieu thereof. (Sec. 316.)

**Copy of Certificate to be placed in conspicuous part of Ship.**—The owner or master of every passenger steamer shall forthwith, on the transmission of any such certificate as aforesaid to him or his agent, cause one of the duplicates thereof so transmitted to be put up in some conspicuous part of the ship, so as to be visible to all persons on board the same, and shall cause it to be continued so put up so long as such certificate remains in force and such ship is in use ; and in default such owner or master shall for every offence incur a penalty not exceeding 10l. (Sec. 317.)

**Ship not to proceed on her Voyage without Certificate.**—It shall not be lawful for any passenger steamer to proceed to sea or upon any voyage of excursion with any passengers on board, unless the owner thereof has transmitted to the Board of Trade the declarations hereinbefore required, nor unless the owner or master thereof has received from such Board such a certificate as hereinbefore provided for, such certificate being

at the same has been duly  
ing master or public officer  
due notice of the trans-  
shipping master or officer  
h owner, master, or agent.

**Certificates.**—The owner of  
er requiring a certificate  
of this Act, shall pay for  
ed by the Board of Trade  
l directs, not exceeding the  
Table marked T. in the  
314.)

**to continue in force.**—No  
1 to be in force for the pur-  
of this Act beyond the  
of Trade for the expiration  
ate shall be in force after  
the Board of Trade to the  
er of the ship to which the  
ch Board has cancelled or  
voided, that if any passenger  
om the United Kingdom at  
ertificate expires, no penalty  
the want of a certificate until  
y with passengers after her  
rn to the United Kingdom;  
de may require any certificate  
or has been revoked or can-  
led up as it directs; and any  
o, without reasonable cause,  
o comply with such require-  
penalty not exceeding 10l.

**may cancel Certificates and  
ations.**—The Board of Trade  
cancel such certificates, in any  
reason to believe—

variations of the sufficiency and  
the hull, equipments, and ma-  
essenger steamer, or either of  
fraudulently or erroneously made;

ertificate has otherwise been  
erroneous information; or,  
e making of such declarations  
s, or machinery of such ship  
injury, or are otherwise in-

case the Board of Trade may,  
re the owner to have the hull,  
achinery of such ship again sur-  
mit a further declaration of  
sufficiency and good condition  
giving any certificate or granting  
hereof. (Sec. 316.)

**to be placed in conspicuous  
owner or master of every pas-  
senger forthwith, on the transmission  
ate as aforesaid to him or his  
e duplicates thereof so trans-  
p in some conspicuous part of  
visible to all persons on board  
cause it to be continued so  
uch certificate remains in force  
use; and in default such owner  
every offence incur a penalty  
(Sec. 317.)**

**ed on her Voyage without Cer-  
ot be lawful for any passenger  
to sea or upon any voyage or  
passengers on board, unless  
has been transmitted to the Board  
of Trade hereinafore required,  
er or master thereof has re-  
ceived such a certificate as  
ed for, such certificate being**

a certificate applicable to the voyage or excursion on which such ship is about to proceed; and no officer of customs shall grant any clearance or transire for any passenger steamer unless upon the production of such certificate as aforesaid (being a certificate then in force and applicable as aforesaid); and if any passenger steamer attempts to ply or go to sea without such production, any such officer may detain her until such certificate is produced; and if any passenger steamer plies or goes to sea with any passengers on board, without having one of the duplicates of such certificate as aforesaid (being a certificate then in force, and applicable as aforesaid), so put up as aforesaid in some conspicuous part of the ship, the owner thereof shall for such offence incur a penalty not exceeding 100l., and the master of such ship shall also incur a further penalty not exceeding 20l. (Sec. 318.)

**Penalty for carrying Passengers in Excess of Numbers specified in Certificate.**—If the owner or master or other person in charge of any passenger steamer receives on board thereof or on or in any part thereof, or if such ship has on board thereof or on or in any part thereof, any number of passengers which, having regard to the time, occasion, and circumstances of the case, is greater than the number of passengers allowed by the certificate, the owner or master shall incur a penalty not exceeding 20l., and also an additional penalty not exceeding 5s. for every passenger over and above the number allowed by the certificate, or, if the fare of any of the passengers on board exceeds 5s., not exceeding double the amount of the fares of all the passengers who are over and above the number so allowed as aforesaid, such fares to be estimated at the highest rate of fare payable by any passenger on board. (Sec. 319.)

**Forgery of Declaration or Certificate a Misdemeanor.**—Every person who knowingly and wilfully makes or assists in making or procures to be made a false or fraudulent declaration or certificate with respect to any passenger steamer requiring a certificate under the fourth part of this Act, or who forges, assists in forging, or procures to be forged, fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any declaration or certificate required by the fourth part of this Act, or any words or figures in any such declaration or certificate, or any signature thereto, shall be deemed guilty of a misdemeanor. (Sec. 320.)

**Surveyors to make Returns of the Build and other Particulars of Steam Ships, and Owners and Masters to give Information for that purpose.**—The said surveyors shall from time to time make such returns to the Board of Trade as it requires with respect to the build, dimensions, draught, burden, rate of sailing, room for fuel, and the nature and particulars of machinery and equipments of the ships surveyed by them; and every owner, master, and engineer of any such ship shall, on demand, give to such surveyors all such information and assistance within his power as they require for the purpose of such returns; and every such owner, master, or engineer who, on being applied to for that purpose, wilfully refuses or neglects to give such information or assistance, shall be liable to a penalty not exceeding 5l.

**Misconduct by Passengers in Steamers.**

**Penalties on Persons forcing way on board, or refusing to quit the Ship.**—The following offenders, that is to say—

(1) Any person who, after having been refused admission into any steamer by the owner or

person in charge thereof or by any person in the employ of the owner thereof, on account of such steamer being full, and after having had the full amount of his fare (if he has paid the same) returned or tendered to him, nevertheless persists in attempting to enter the same; and

(2) Any person, having got on board any steamer, who, upon being requested on the like account by the owner or person in charge thereof or by any person in the employ of the owner, to leave such steamer before the same has quitted the place at which such person got on board, and upon having the full amount of his fare (if he has paid the same) returned or tendered to him, refuses to comply with such request; Shall for each such offence incur a penalty not exceeding 40s., to be paid to the said owner. (Sec. 322.)

**Penalty on avoiding Payment of Fares.**—The following offenders, that is to say—

(1) Any person who travels or attempts to travel in any passenger steamer which has been duly surveyed in conformity with the provisions of this Act, without having previously paid his fare, and with intent to avoid payment thereof; and

(2) Any person who, having paid his fare for a certain distance, knowingly and wilfully proceeds in any such steamer beyond such distance, without previously paying the additional fare for the additional distance, and with intent to avoid payment thereof; and

(3) Any person who knowingly and wilfully refuses or neglects, on arriving at the point to which he has paid his fare, to quit any such steamer; Shall for every such offence incur a penalty not exceeding 5s., in addition to the fare payable by him, such penalty to be payable to the owner of such steamer. (Sec. 323.)

**Penalty on Persons refusing to give their Name and Address.**—Every person who, having committed any of the offences mentioned in the two last preceding sections or either of them, refuses, on application of the master of the ship or of any other person in the employ of the owner thereof, to give his name and address, or who on such application gives a false name or address, shall incur a penalty not exceeding 20l., to be paid to the said owner. (Sec. 324.)

**Power to refuse or remove Passengers who are drunk or misconduct themselves.**—The master of any home trade passenger steam ship may refuse to receive on board thereof any person who by reason of drunkenness or otherwise is in such a state, or misconducts himself in such a manner, as to cause annoyance to other passengers on board, or, if such person is on board, may put him on shore at any convenient place; and no person so refused admittance or put on shore shall be entitled to the return of any fare he may have paid. (Sec. 325.)

#### Accidents.

**Accidents to Steam Ships to be reported to Board of Trade.**—Whenever any steam ship has sustained or caused any accident occasioning loss of life or any serious injury to any person, or has received any material damage affecting her seaworthiness or her efficiency either in her hull or in any part of her machinery, the owner or master shall, within 24 hours after the happening of such accident or damage, or as soon thereafter as possible, send to the Board of Trade, by letter signed by such owner or master, a report of such accident or damage, and of the probable occasion thereof, stating the name of the ship, the port to which she belongs, and the place where she is;

and if such owner or master neglect so to do, he shall for such offence incur a penalty not exceeding 50*l.* (Sec. 326.)

*Notice to be given of apprehended Loss of Steam Ships.*—If the owner of any steam ship have reason, owing to the non-appearance of such ship or to any other circumstance, to apprehend that such ship has been wholly lost, he shall as soon as conveniently may be send notice thereof in like manner to the Board of Trade; and if he neglect so to do within a reasonable time, he shall for such offence incur a penalty not exceeding 50*l.* (Sec. 327.)

*Collisions to be entered in Official Log.*—In every case of collision, in which it is practicable so to do, the master shall immediately after the occurrence cause a statement thereof, and of the circumstances under which the same occurred, to be entered in the official log book (if any), such entry to be signed by the master, and also by the mate or one of the crew, and in default shall incur a penalty not exceeding 20*l.* (Sec. 328.) [COLLISION.]

#### *Carrying dangerous Goods.*

*Provisions to prevent the taking dangerous Goods on board without due Notice.*—No person shall be entitled to carry in any ship, or to require the master or owner of any ship to carry therein, any aquafortis, oil of vitriol, gunpowder, or any other goods which, in the judgment of such master or owner, are of a dangerous nature; and if any person carries or sends by any ship any goods of a dangerous nature without distinctly marking their nature on the outside of the package containing the same, or otherwise giving notice in writing to the master or owner at or before the time of carrying or sending the same to be shipped, he shall for every such offence incur a penalty not exceeding 100*l.*; and the master or owner of any ship may refuse to take on board any parcel that he suspects to contain goods of a dangerous nature, and may require them to be opened to ascertain the fact. (Sec. 329.)

#### *Certificates for Engineers (Part III. of Merchant Shipping Act, 1854).*

*Steam Ships to carry Certificated Engineers.*—On and after June 1, 1863, every steam ship which is required by the principal Act to have a master possessing a certificate from the Board of Trade shall also have an engineer or engineers possessing a certificate or certificates from the Board of Trade as follows (that is to say):—

(1) Engineers' certificates shall be of two grades, viz. 'first-class engineer's certificates,' and 'second-class engineer's certificates':

(2) Every foreign-going steam ship of 100 nominal horse power or upwards shall have as its first and second engineers 2 certificated engineers, the first possessing a 'first-class engineer's certificate,' and the second possessing a 'second-class engineer's certificate' or a certificate of the higher grade:

(3) Every foreign-going steam ship of less than 100 nominal horse power shall have as its only or first engineer an engineer possessing a 'second-class engineer's certificate' or a certificate of the higher grade:

(4) Every sea-going home trade passenger steam ship shall have as its only or first engineer an engineer possessing a 'second-class engineer's certificate' or a certificate of the higher grade:

(5) Every person who, having been engaged to serve in any of the above capacities in any such steam ship as aforesaid, goes to sea in that capacity without being at the time entitled to and possessed

of such certificate as is required by this section, and every person who employs any person in any of the above capacities in such ship without ascertaining that he is at the time entitled to and possessed of such certificate as is required by this section, shall for each such offence incur a penalty not exceeding 50*l.* (25 & 26 Vict. c. 63 s. 5.) [PASSENGERS; SEAMEN; SHIPPING.]

**STEEL** (Fr. *acier*; Ger. *stahl*; Ital. *acciaio*; Lat. *chalybs*; Russ. *stal*; Span. *acero*; Swed. *stål*) is iron combined with a small portion of carbon, and has been, for that reason, called *carburetted iron*. The proportion of carbon has not been ascertained with much precision. It is supposed to amount, at an average, to  $\frac{1}{100}$ . Steel is so hard as to be unmalleanable while cold; or at least it acquires that property by being immersed, while ignited, in a cold liquid: for this immersion, though it has no effect upon iron, adds greatly to the hardness of steel. It is brittle, resists the file, cuts glass, affords sparks with flint, and retains the magnetic virtue for any length of time. It loses this hardness by being ignited, and cooled very slowly. It is malleable when red hot, but scarcely so when raised to a white heat. It may be hammered out into much thinner plates than iron. It is more sonorous; and its specific gravit. when hammered is greater than that of iron—varying from 7.78 to 7.81. Steel is usually divided into 3 sorts, according to the method in which it is prepared; as *natural steel*, *steel of cementation*, and *cast steel*. The latter is the most valuable of all, as its texture is the most compact, and it admits of the finest polish. It is used for razors, surgeons' instruments, and similar purposes. Steel is chiefly employed in the manufacture of swords, knives, and cutting instruments of all sorts used in the arts; for which it is peculiarly adapted by its hardness, and the fineness of the edge which may be given to it. We imported from Sweden in 1867, exclusive of manufactured articles, 4,656 tons of unwrought steel, valued at 69,042*l.* (Thomson's *Chemistry*; see also *Ure's Dictionary* by Hunt.) [IRON.]

**STETTIN.** A city of Prussia, on the left bank of the Oder, about 36 miles from its mouth, in lat. 53° 25' 8" N., long. 14° 34' E. It is well built, strongly fortified, and had in 1867 a population, including military, of 73,581.

Stettin is the seat of an extensive and growing commerce. She owes this distinction mainly to her situation. The Oder, which flows through the centre of the Prussian dominions, is navigable as far as Ratibor, near the extreme southern boundary of Prussian Silesia, and is united by means of canals with the Vistula, the Elbe, the Spree &c. Stettin is, consequently, the principal emporium of some very extensive and flourishing countries; being not only the port of Frankfort-on-the-Oder, Breslau &c., but also of Berlin. She is also the centre of an extensive system of railways, communicating with Berlin and the west parts of Germany on the one hand, and on the other with Posen, Bromberg, and Danzig. Hence, at the proper seasons, her wharves are crowded with lighters that bring down the produce of the different countries traversed by the river, and bring back colonial products, and other articles of foreign growth and manufacture. Vessels of considerable burden, or those drawing above 7 or 8 feet water, load and unload, by means of lighters, at the mouth of the river, at Swinemünde, the outpost of Stettin, on the east coast of the Isle of Usedom, in lat. 53° 55' N., long. 14° 15' 15" E. Formerly there were not more than 7 feet water over the bar adjacent to Swine-

is required by this section, employs any person in any cities in such ship without a certificate as is required by each such offence incurring 50l. (25 & 26 Vict. SEAMEN; SHIPPING.) Ger. stahl; Ital. acciaio; Span. acero; Swed. stål; with a small portion of iron, for that reason, called carboniferous, the proportion of carbon has not much precision. It is malleable, at an average, to 1/20, but is unamalleable while cold; it loses this hardness by being heated, in a cold liquid; for which it has no effect upon the hardness of steel. It is brittle, cuts glass, affords sparks, and loses this hardness by being heated very slowly. It is malleable scarcely so when raised to a red heat, to be hammered out into much iron. It is more sonorous; when hammered is greater—varying from 778 to 781, divided into 3 sorts, according to which it is prepared; as natural cast steel, and as its texture is altered, and it admits of the finest razors, surgeons' instruments, &c. Steel is chiefly employed of swords, knives, and cutting instruments used in the arts; for which it is early adapted by its hardness, and the edge which may be given to it from Sweden in 1807, exported articles, 4,656 tons of value at 69,042l. (Thomson's Dictionary by Hunt)

city of Prussia, on the left bank of the Oder, 86 miles from its mouth, in lat. 53° 14' N., long. 14° 34' E. It is well built, and had in 1867 a population of 73,581.

It is the seat of an extensive and growing commerce, owes this distinction mainly to the Oder, which flows through the Prussian dominions, is navigable as far as the extreme southern boundary of the Vistula, the Elbe, the Spree, and consequently, the principal emporium for every extensive and flourishing trade, not only the port of Frankfurt-on-Oder, but also of Berlin, and the centre of an extensive system of communication with Berlin and the other cities of the one hand, and on the other with Posen, Bromberg, and Danzig. In the proper seasons, her wharves are crowded with boats that bring down the produce of the interior countries traversed by the Oder, and other colonial products, and other goods, and manufactures. It is a considerable burden, or those drawing water, load and unload, by means of a lock at the mouth of the river, at Swinemünde, on the east coast of the bay, in lat. 53° 55' N., long. 14° 34' E. Formerly there were not more than 100 boats over the bar adjacent to Swine-

münde; but the harbour of the latter has recently been so much improved by the construction of piers and breakwaters, dredging &c., that it is now the best on the Prussian coast, and admits vessels drawing from 18 to 19 feet water. A lighthouse has been erected at the extremity of the eastern pier, in 53° 56' N. lat. and 14° 17' E. long., visible 10 miles off, and there is another (visible for 21 miles) situated a mile and a half south of the Mole Light. There are also two light-ships between Swinemünde and Stettin. Stettin is a free port; that is, a port into and from which all sorts of goods may be imported and re-exported free of duty. Goods brought through the Sound, imported at Stettin, and entered for home consumption in the Prussian dominions, used to be charged with 2 1/2 per cent. less duty than if they had been imported through any other channel. This was intended to reimburse the merchant for the Sound duties, and to encourage importation by this direct route in preference to that carried on through Hamburg and Embden; but as the Sound duties have been abolished, it is probable that goods imported at Stettin will no longer enjoy this preference. There is a great wool fair in the month of June each year.

*Money, Weights, and Measures,* same as at DANZIG. The Bank of Berlin has a branch at Stettin, and there are also insurance offices.

*Imports and Exports.*—The principal articles of import at Stettin are sugar, coffee, dye-woods, wine, iron, and hardware, oil, tallow, cotton and cotton goods, herrings, spirits, linseed, coal, salt &c. The principal exports are corn, especially wheat; spirits, seeds, spelter, timber &c.

*Shipping Dues.*—In 1863, the shipping dues were considerably reduced, viz. the sea dues 37 per cent., and the river dues 25 per cent.

On December 1, 1867, a still greater reduction took place; the dues to be levied on and from that day being fixed by a royal edict, as follows:—

*Sea Dues for all Vessels entering and leaving the Harbour of Swinemünde.*

With cargoes—	Groschen	Groschen
On entering	4	4
On leaving	4	4
In ballast—	2	2
On leaving	2	2
On entering	2	2

Per normal last—about 1 1/2 register ton.

*River Dues.*—The river dues for vessels navigating the Swine, Peene, and Divenow, and the Haff—consequently for all vessels proceeding from Swinemünde to Stettin, and from Stettin to Swinemünde—which amounted to 1 groschen and 1/2 groschen per last, are abolished.

The present rate of 4 groschen per last would be about 26s. 8d. per 100 reg. tons.

Vessels above 40 lasts burden have also to pay 9 pennings per last—about 5s. per 100 reg. tons—for port charges at Stettin.

By another royal decree, which came into operation on March 1, 1868—

1. Vessels under 40 lasts are to pay one-half of the dues levied on vessels above that burden, i.e. 2 groschen and 1 groschen.

2. Vessels with cargoes consisting entirely of coals, coke, turf, slates, tiles, bricks, paving and quarry stones, granite, limestone, gypsum, chalk, clay, sand, raw sulphur, or salt, to be charged the same as vessels in ballast, viz. 2 groschen per last.

3. No dues to be levied:—

(a) On vessels in ballast that enter the harbour of Swinemünde in search of freight, and leave it in ballast.

(b) On vessels that enter the harbour to receive orders and leave it without either discharging or taking in cargo.

4. Vessels above 40 lasts proceeding directly between any of the following ports, viz. Swinemünde, Colbergermünde, Stolpmünde, Rugenwalde, Dantzie, and Neufahrwasser, are exempted from the entrance dues of the harbour to which they are bound.

As the river dues are now abolished, and the sea dues reduced 50 per cent., and vessels with cargoes of coals pay the same dues as vessels in ballast, and as almost all the British vessels that discharge at Swinemünde arrive at that port with coals and leave in ballast, the reduced charges for such vessels will amount to 66 1/2 per cent., and for vessels bound to Stettin, with other cargoes than coals, slates &c., to 55 1/2 per cent.

*Pilotage.*

From Swinetin to Swinemünde } Swinemünde to Stettin } up to	10 lasts, 2 r. dols.
from 11 to 20	3 "
21 "	3 1/2 "
31 "	4 "
41 "	4 1/2 "
and upwards, for each 10 lasts,	1/2 dollar more.

Ships of more than 150 lasts burden to pay the same dues as those of 141 to 150 lasts.

Stettin is one of the principal shipping ports in the Prussian dominions, and is connected with Berlin by railway. See also DANZIG.

*Port Regulations.*—All vessels are prohibited entering Swinemünde unless forced by stress of weather, without previously heaving to for, and receiving a pilot on board. But when compelled to enter without a pilot, the master is to observe the signals made from the beacon erected on the eastern and western moles as follows:—

*Notice.*

1. When pilots cannot put to sea, and captains of ships are nevertheless resolved to enter the harbour, a red flag will be hoisted on the direction beacon of the eastern mole.

2. The captains will then steer until they find themselves E.E. by S. on the compass, from the lighthouse placed on the utmost point of the east mole, taking care to keep the outermost great white buoy, situate on the end of the western ground in a depth of 16 feet, on the starboard, and the next black buoy, in an oblique line towards the lighthouse, on the larboard.

3. In that situation of the vessel the two new beacons cover themselves in the direction of S.S.E., and in this course, keeping the two beacons completely covered, the captains sail into the port up to the second landing berth of the eastern mole, four cables' length beyond the lighthouse, keeping off the mole half a cable's length.

4. At that place, the captains, taking care to remain a little South, are expected by the pilots to go on board of their vessels.

5. On entering the port all the white buoys are to remain on the starboard side of the vessel (see 2).

6. For facilitating the finding and keeping the directions given in this instruction in case the buoys should have been removed by sea, or taken up on account of the advanced season, signals will be given with a red flag from the direction beacon on the eastern mole.

7. The captains must follow the signals in so far as to steer to that part where the flag is hoisted perpendicularly.

8. Should there be no pilot at sea, and no flag hoisted on the beckoning beacon, the captains must not attempt to enter the port at all, but either anchor in the roads or remain at sea.

SHIPPING AND NAVIGATION.

Account of the Number, Tonnage &c. of British Vessels arrived at Stettin and Swinemunde in 1866 and 1867.

Trade.—The abolition of the Sound dues, and the improved communications by means of railways with the interior, have led to a great increase in the trade of Stettin. This is evident from the following account of the imports and exports of the town by sea:—

Years	Imports	Exports	Total
	£	£	£
1855	2,601,234	1,011,969	3,616,902
1856	3,604,567	1,709,693	5,314,260
1857	4,308,636	2,722,451	6,331,088
1865	6,905,778	2,420,969	9,326,745
1866	5,395,346	2,237,419	8,632,765
1867	8,374,547	4,665,773	13,040,320

This is a very extraordinary increase. In the import trade it has principally taken place in the articles of coals, iron, and raw cotton, from England; oils, seeds, coffee, potash &c. The

great articles of export from Stettin are corn, timber, and spirits.

Account of the Quantities of the different Varieties of Corn Exported from Stettin in 1866, specifying the Quantities sent to Great Britain and to other Countries, in Imperial Quarters.

Articles	1866			Total in 1865
	To Great Britain	To other Countries	Total	
Wheat - - - - -	Imp. qr. 315,361	qr. 55,688	367,549	249,235
Rye - - - - -	5,380	73,120	79,500	79,574
Barley - - - - -	869,650	29,101	298,754	167,048
Oats - - - - -	51,494	8,223	59,647	8,708
<b>Total Corn</b>	641,315	164,135	806,450	496,564
Buckwheat, vetches - - - - -	..	..	..	3,170
Peas, beans - - - - -	27,425	5,941	33,566	29,581
Potatoes - - - - -	22	16,438	16,480	17,246
<b>Total</b> - - - - -	668,762	186,514	855,296	539,311

The total quantity of corn exported in 1867 was 972,076 quarters.

In addition to corn, timber, and spirits, the principal articles of export are spelter, oil-cake, bones, clover and other seeds, wool, glass &c.

We also send to Prussia large quantities of foreign and colonial produce, the value of the exports thereof in 1867 having amounted to 2,498,165*l*. Sometimes, however, they are much greater. But it can hardly be necessary to add, that a large (though not so large now as formerly) portion of our trade with Prussia is indirect, being carried on through the Hanse Towns, Holland &c. (Much of the information in this article has been derived from Mr. Consul Blackwell's very instructive Report of March 25, 1868.)

the case, she now exports large quantities of oats and other grain. (See post, for her exports of corn to England.) Still iron, timber, and deals form the principal articles of export. Swedish iron is of very superior quality, and is rather extensively used in Great Britain, our imports of pig and bar iron from Sweden amounting, in 1867, to upwards of 76,313 tons, exclusive of 4,656 tons of steel. In addition to the above leading articles, Stockholm exports pitch, tar, copper &c. The timber is inferior to that from the southern ports of the Baltic. The imports principally consist of colonial products; cotton stuffs and yarn; iron, hardware, machinery, and coal, mostly from England; with woollens, wine, silks, salt, hides, guano, fish, brandy, wool, fruit &c.

**Pilotage.**—Pilots may be obtained by vessels coming from the north, at Arholm and Söderam; and by vessels from the east and south, at Land-sort, Hufvuds-kär, and Sandhamn.

The entrance from Sandhamn is the shortest and straightest, and therefore the easiest and cheapest passage to Stockholm.

#### Pilotage Charges.

Swedish Tons	From Land-sort to Stockholm, 72 English Miles	Swedish Tons	From Sandhamn to Stockholm, 38 English Miles	Swedish Tons	From Arholm to Stockholm, 56 English Miles
1	rksh. 0re	6	rksh. 0re	6	rksh. 0re
2	30 30	7	16 00	7	21 30
3	37 80	8	20 00	8	21 30
4	45 30	9	21 30	9	37 60
5	52 80	10	28 30	10	44 10
6	60 40	11	32 40	11	50 70
7	67 90	12	36 00	12	57 30
8	75 50	13	40 70	13	63 10
9	83 10	14	44 80	14	70 30
10	90 50	15	49 00	15	76 90
11	98 20	16	53 00	16	83 30
12	105 60	17	57 30	17	89 70
13	113 30	18	61 30	18	96 30
14	120 70	19	65 50	19	102 90
15	128 30	20	69 60	20	109 40
16	135 90		73 70		115 90

For vessels clearing outward in ballast, the above charges are reduced by one-half. An extra charge of 1 riksdaler 50 öre is made for attestation.

The winter charges, dating from September 1 to April 30, are increased by 25 per cent. from the sea to the first pilot station inside the buoys.

Pilot's return fares, about 12 riksdaler.

Vessels bound to any place on the line of passage up to Stockholm must take pilots at Land-sort.

**Light Dues.**—Inwards—84 riksdaler; outwards with cargo—84 riksdaler.

Outwards in ballast—42 riksdaler.

**Lock Dues.**—For the vessel—Under 50 Swedish nylläst, 6 öre per nylläst; for every nylläst above 50, 35 öre per nylläst.

For the cargo—For every nylläst, 30 öre per nylläst.

**Shipping and Character of Sailors.**—In 1866 there belonged to Sweden 3,323 vessels, of the aggregate burden of 447,795 English tons. 'I would,' says the British consul at Stockholm, 'beg to remark, that in consequence of the superior education of the masters and mates of Swedish mercantile vessels, the subordination and steadiness of their crews, combined with great care in loading and unloading their cargoes, they and the Norwegians have become favourite carriers with merchants of all nations. This preference is not to be attributed to a lower rate of freight, though they offer that advantage also, but to the confidence reposed in the zeal and intelligence of the masters and crews.' This is the true cause of the great increase, of late years, in the number of Swedish ships bringing cargoes from foreign countries to England.

Table, showing the Number and Tonnage of British Vessels which arrived at the Port of Stockholm in the Decade 1858-67.

Years	Number of Sailing Vessels	Number of Steamers	Total	Aggregate Tonnage
1858	16	1	17	5,501
1859	28	1	29	5,533
1860	16	1	17	5,513
1861	26	4	30	6,812
1862	45	2	47	9,309
1863	39	5	44	10,911
1864	31	5	36	9,559
1865	63	18	81	21,617
1866	48	20	68	24,811
1867	55	21	76	20,093

#### Currency.

The unit is the riksdaler divided into 100 öre.

Taking the exchange at par, 18 riksdaler to the £ sterling.

1 riksdaler = 1s. 3d. English.

1 öre = about  $\frac{1}{16}$  English.

#### Weights.

The unit is the skelpund (100 skelpund = 23\*7117 lb. avoirdupois).

The skelpund is subdivided into 100 ort, and 10,000 korn; 100 korn make 1 centner, and 10,000 skelpund 1 nylläst.

1 nylläst = about 85 cwt. 75 lb. avoirdupois.

1 centner = 110 lb. 11 oz. avoirdupois.

1 skelpund = 11 oz. 7 dr. 2 sc. 9 gr. avoirdupois.

1 skippund = 100 Swedish skelpund.

#### Measures.

**Long Measure.**—The unit is the fot (100 fot = 97\*110 English feet).

The fot is subdivided into 10 tum, and 100 linker.

10 fot make 1 stang, and 100 fot 1 ref.

1 ref. = about 12 fathoms 1 yd. 4 in. 2 barley-corns English.

1 stang = 1 fathom 1 yd. 4 in.

1 fot = 11 in. 2 barley-corns.

1 tum = 1 in.

**Square Measure.**—The unit of Swedish superficial measurement is the square fot.

11 square fot = 136\*675 English square inches.

The square fot is subdivided into 100 square tum, and 10,000 square linker.

100 square fot make 1 square stang, and 10,000 square fot 1 square ref.

1 square ref. = about 55 square rods, 4 yds. 2 ft. 10 in. 7 barley-corns.

1 square stang = 10 sq. yds. 4 ft. 127 in. 7 barley-corns.

1 square fot = 136\*675 sq. in. 6 barley-corns.

1 square tum = 1 in. 5 barley-corns.

**Cubic Measure.**—Applied to the measurement of dry goods, liquids, and solids.

The unit is the cubic fot (100 cubic fot equal to 92 English cubic feet—7\*15\*1117 inches).

The cubic fot is subdivided into 10 kanner, 1,000 cubic tum, and 1,000,000 cubic linker.

1 cubic fot = 1597\*91117 English cubic inches.

1 cubic kanner = 159\*719117

For dry goods:—1 tunna = 5 cubic fot 6 kanner, Swedish.

For liquids:—1 tunna = 4 cubic fot 8 kanner, Swedish.

We export to Sweden considerable quantities of colonial and foreign produce, the value thereof having amounted in 1866 to 716,717*l.*, and in 1867 to 752,889*l.*

The Swedish smelting furnaces and iron-works are licensed to produce certain quantities, some being as low as 50 tons, and others as high as 400 or 500 tons; and some fine bar iron-works have licenses for 1,000 tons each. These licenses are granted by or over all the College of Mines, which has a control over iron-works and mining operations. The iron-masters make annual returns of their manufacture, which must not exceed the privileged or license quantity, on pain of the overplus being confiscated. The college has established courts of mines in every district, with supervising officers of various ranks. All iron sent to a port of shipment must be landed at the public weigh-house, the superintendent of which is a delegate of the college, so that it is impossible for an iron-master to send more iron to market than his license authorises. It is true that sales are made to inland consumers at the forges, of which no returns are made out, and in so far the licenses are exceeded; but it is not supposed that the quantity so disposed of exceeds a few thousand tons a-year. Every furnace and forge pays a certain annual duty to the Crown. Its amount is fixed by the college when the license is granted; and care is taken not to grant the license to anyone unless he have the command of forests equal to the required supply of charcoal, without encroaching on the supply of this material required for the existing forges in the neighbour-

Account of the Values of the Imports and Exports of Sweden in 1865-6, from and to each Country traded with; showing the Average Amounts of the 5 Years ending with 1865.

hood. As the supply of pig-iron is limited to the quantity licensed to be made, the college, in granting new licenses to bar-iron works, always takes into consideration how far this may be done without creating a scarcity of pig-iron. Hence, the creation of new forges depends—1st, on having a supply of charcoal, without encroaching on the forests which supply your neighbour; and 2nd, on the quantity of pig-iron which the college, knows to be disposable. The courts of the mines decide all disputes that arise among the iron-masters regarding the exceeding of their licenses, encroachments &c.; an appeal to the college lying from

their decision, and ultimately to the king in council, or to the supreme court of the kingdom.

It is needless to dwell on the impolicy of such regulations. No doubt it is quite right for Government to interfere to prevent the waste and destruction of the forests; but, having done this, it should abstain from all other interference, and leave everyone at liberty to produce as much iron as he may think proper. Mines of any importance are usually held by a society of shareholders. Some of them are only worked occasionally; and, as the labour is performed by peasants, who live ostensibly by industry, it is impossible to form any

correct estimate of the numbers engaged in mining industry. Sweden now (1869) boasts upwards of 1,000 English miles of railway.

STOCKINGS, as everyone knows, are coverings for the legs. They are formed of only one thread entwined, so as to form a species of tissue, extremely elastic, and readily adapting itself to the figure of the part it is employed to cover. This tissue cannot be called cloth, for it has neither warp nor woof, but it approaches closely to it; and for the purposes to which it is applied, it is very superior.

1. *Historical Sketch of the Stocking Manufacture.*—It is well known that the Romans and other ancient nations had no particular clothing for the legs. During the middle ages, however, hose or leggings, made of cloth, began to be used; and at a later period the art of knitting stockings was discovered. Unluckily, nothing certain is known as to the individual by whom, the place where, or the time when, this important invention was made. Howell, in his *History of the World* (vol. iii, p. 222), says that Henry VIII. wore none but cloth hose, except there came from Spain by great chance a pair of silk stockings; that Sir Thomas Gresham, the famous merchant, presented Edward VI. with a pair of long silk stockings from Spain, and that the present was much taken notice of; and he adds, that Queen Elizabeth was presented, in the third year of her reign, with a pair of black knit silk stockings, and that from that time she ceased to wear cloth hose. It would appear from this circumstantial account, that the art of knitting stockings, or at least that the first specimens of knit stockings, had been introduced into England from Spain about the middle of the 16th century; and such seems to have been the general opinion, till an allusion to the practice of knitting, in the pretended poems of Rowley, forged by Chatterton, made the subject be more carefully investigated. The result of this investigation showed clearly that the practice of knitting was well known in England, and had been referred to in Acts of Parliament, a good many years previously to the period mentioned by Howell. But it had then, most probably, been applied only to the manufacture of woollen stockings; and the general use of cloth hose shows that even these had not been numerous. There is no evidence to show whether the art is native to England, or has been imported. (Beckmann's *Inventions*, vol. iv. art. 'Knitting, Nets, and Stockings.')

It is singular that the stocking frame, which, even in its rudest form, is a very complex and ingenious machine, that could not be discovered accidentally, but must have been the result of deep combination and profound sagacity, should have been discovered so early as 1589; before, in fact, the business of knitting was generally introduced. The inventor of this admirable machine was Mr. William Lee, of Woodborough, in Nottinghamshire. He attempted to set up an establishment at Calverton, near Nottingham, for the manufacture of stockings, but met with no success. In this situation he applied to the queen for assistance; but instead of meeting with that remuneration to which his genius and invention so well entitled him, he was discouraged and discountenanced! It need not, therefore, excite surprise that Lee accepted the invitation of Henry IV. of France, who having heard of the invention, promised him a magnificent reward if he would carry it to France. Henry kept his word, and Lee introduced the stocking frame at Rouen with distinguished success; but after the assassination of the king,

the concern got into difficulties, and Lee died in poverty at Paris. A knowledge of the machine was brought back from France to England by some of the workmen who had emigrated with Lee, and who established themselves in Nottinghamshire, which still continues to be the principal seat of the manufacture. (Beckmann's *Inventions*, vol. iv. pp. 313-324; and *Letters on the Utility and Policy of Machines*, Lond. 1870.)

During the first century after the invention of the stocking frame, few improvements were made upon it, and two men were usually employed to work one frame. But in the course of last century the machine was very greatly improved. The late ingenious Mr. Jedediah Strutt, of Derby, was the first individual who succeeded in adapting it to the manufacture of ribbed stockings.

2. *Statistical View of the Stocking Trade.*—It is not possible, perhaps, to obtain any very satisfactory information in regard to the extent or value of the stocking trade. It embraces not only stockings, properly so called, but a great many other articles, including woollen and cotton drawers, gloves, mitts, nightcaps, socks, knitted shawls &c. And even as respects stockings, the varieties are so very numerous and differ so widely, comprising all sorts, from those of the finest to those of the coarsest silk, cotton, and wool, that nothing better than a rough estimate can be formed of their value.

In 1832, Mr. Felkin, of Nottingham, who made many elaborate enquiries into the subject, estimated the number of frames at work at 33,000, and the total value of the hosiery produced at 1,991,000*l.* This estimate was probably underrated at the time; and is now, there can be no doubt, greatly below the mark. From the best information we can obtain, we incline to think that the entire value of the hosiery produced in Great Britain, whether by frames or otherwise, may (1868) amount to somewhere about 6,500,000*l.* a-year. The average consumption per individual of hosiery in the same division of the empire may, it is believed, be taken at about 4*s.* a-year; and if we take the population at 25 millions, this will give 5,000,000*l.* for their consumption; and adding to this 1,000,000*l.* for the value of the exports to foreign countries (1,200,627*l.* in 1860), a sum of 500,000*l.* will remain to defray the cost of those sent to Ireland. We are pretty well satisfied that this estimate is not far from the mark. And moderate as it may seem to be when compared with others that have been put forward, it sets the great importance of the manufacture in a very striking point of view.

Of 1,206,626 dozen pairs of cotton and woollen stockings and socks, of the value of 448,028*l.* exported in 1867, 334,951 dozen pairs, worth 131,415*l.* were shipped for Australia. Of the residue, which were sent to a great many places, the United States and the Argentine Confederation took the largest numbers.

In Mr. Felkin's paper on the state of the lace and hosiery trades of Nottingham, read at the meeting of the Social Science Association held in 1866, he says:—

'In the hosiery business of Nottingham there were at work in 1865 11,000 narrow hand machines, employing domestically 7,500 men and 3,500 women and youths, at wages from 6*s.* to 26*s.*, averaging, by the statements of the accounts of the hands themselves, 40*s.* 6*d.* weekly; also 4,250 wide hand machines, likewise domestically employing 4,250 men, from 10*s.* to 30*s.*, averaging, according to the workmen's statement, 15*s.* weekly wages. These 15,250 hand frames were placed in 4,620 shops, in 80 parishes spread over the

ilities, and Lee died in knowledge of the machine in France to England by who had emigrated with themselves in Nottingham, to be the principal (Heckmann's *Inventories*, 324; and *Lettres on the Machines*, Lond. 1870.)

After the invention of improvements were made were usually employed in the course of last century greatly improved. The John Strutt, of Derby, was successful in adapting it ribbed stockings.

**of the Stocking Trade**—It is to obtain any very in regard to the extent of trade. It embraces not only called, but a great many fling woollen and cotton stockings, socks, knitted in as respects stockings, are numerous and differ so in sorts, from those of the coarsest silk, cotton, and other than a rough estimate value.

of Nottingham, who made estimates into the subject, estimates frames at work at 33,000 of the hosiery produced estimate was probably under- and is now, there can be no the mark. From the best obtain, we incline to think of the hosiery produced in by frames or otherwise, to somewhere about

The average consumption hosiery in the same division is believed, be taken at about we take the population at all give 5,000,000, for their adding to this 1,000,000, for exports to foreign countries), a sum of 500,000, will cost of those sent to Ireland, satisfied that this estimate is k. aper on the state of the lace of Nottingham, read at the al Science Association held

business of Nottingham there 1865 11,000 narrow hand domestically 7,500 men and ouths, at wages from 6s. to the statements of the accountants elves, 40s. 6d. weekly; also chimes, likewise domestically, from 10s. to 30s., averaging men's statement, 13s. weekly 50 hand frames were placed in parishes spread over the

county of Nottingham. The entire average wages of 42,000 frames in 1844 was about 6s. a week only. These two classes of hand machines, it is computed, give employment to about 20,000 women and girls as winders and senners, earning 4s. each on an average. There are about 1,000 wide power rotary frames, employing 700 men, at from 20s. to 32s.; and about 15,000 girls and women, senners and winders, on an average of 5s. weekly. There are about 1,200 sets of circular round power frames improved, employing 500 men and 500 youths, at from 12s. to 35s. weekly; and 1,000 women, getting 12s. to 20s. weekly wages. The winders, cutters, menders, and others attached to these are about 11,000 women and girls, averaging 7s. to 12s. a week. And there are about 400 warp machines making hosiery by power, employing 400 men, at 14s. to 35s.; and 200 youths, at 12s. to 20s.; besides 400 warpers &c. (men), gaining about 25s., and also 2,000 women and girls stitching &c., at 8s. a week on an average. It is probable that there are 2,000 men employed in bleaching, dyeing &c., and as porters &c., at 20s. to 35s. weekly; besides 5,000 menders, folders &c., working in warehouses, at from 8s. to 12s. weekly. To these must be added the warehousemen and clerks in 86 establishments for finishing and sale of goods in Nottingham. The Nottingham hosiery business is now believed to be giving employment to about 17,000 males and 41,000 females—together 61,000 workpeople. The estimated returns amounted in 1865 to about 3,000,000. The two staple trades of Nottingham, therefore, distributed in return an amount of somewhat more than 3,000,000 sterling last year, and furnished in the aggregate, employment to nearly 200,000 workpeople.

#### STORAX. [BALSAM.]

STORES, MILITARY AND NAVAL, include arms, ammunition &c. It is enacted that the importation of arms and ammunition may be prohibited by proclamation or order in council (s. 45), and the exportation, or carrying coastwise of military and naval stores, may be prohibited in the same way (s. 150), and the importation of gunpowder, ammunition, arms, or utensils of war, into British America or the Mauritius, except from the United Kingdom or any British possession, is absolutely prohibited (s. 159). (16 & 17 Vict. c. 107, or Customs Consolidation Act.)

STORES. In Commercial Navigation, the supplies of different articles provided for the subsistence and accommodation of the ship's crew and passengers.

It is laid down, in general, that the surplus stores of every ship arriving from parts beyond seas are to be subject to the same duties and regulations as those which affect similar commodities when imported as merchandise; but if it shall appear to the collector of customs that the quantity of such stores is not excessive, nor unsuitable, under all the circumstances of the voyage, they may be entered for the private use of the master, purser, or owner of such ship, on payment of the proper duties, or be warehoused for the future use of such ship, although the same could not be legally imported by way of merchandise. (16 & 17 Vict. c. 107.)

For such places as are not included in the annexed list, the same allowance should be granted as is given to the place nearest thereunto.

Goods delivered into the charge of the searchers to be shipped as stores, may be so shipped without entry or payment of any duty, for any ship of the burden of 50 tons at least bound upon a voyage to foreign parts, the probable duration of which

out and home will not be less than 40 days; provided such stores be duly borne upon the ship's victualling bill, and be shipped in such quantities, and subject to such directions and regulations, as the Commissioners of Customs shall direct and appoint. (16 & 17 Vict. c. 107 s. 140.)

Rum of the British plantations may be delivered to the searcher, to be shipped as stores for any ship, without entry or payment of any duty; and any surplus stores of any ship may be delivered to the searcher, to be re-shipped as stores for the same ship, or for the same master in another ship, without entry or payment of any duty—such rum and such surplus stores being duly borne upon the victualling bills of such ships respectively; and if the ship, for the future use of which any surplus stores have been warehoused, shall have been broken up or sold, such stores may be so delivered for the use of any other ship belonging to the same owners, or may be entered for payment of duty, and delivered for the private use of such owners or any of them, or of the master or purser of the ship. (Sec. 17.)

The searchers in London, on clearance of vessels coastwise to take in cargoes for foreign parts, are to apprise the collectors of customs at the outports where the vessels may be bound, of the quantity and description of the goods which may have been shipped as stores on board such vessels, and that bond has been given by the masters of the vessels that no part of such stores shall be consumed by the crews, or any package opened or altered, until the vessels have actually been cleared on their foreign voyages; and the collectors of customs at the out-ports are in like manner to cause a similar communication to be made to the ports where the outward cargoes are to be taken on board, and the officers at such ports are to take care to ascertain that the several goods so shipped are actually on board the vessels on their arrival, and have neither been consumed nor run on shore during the coasting voyage; and if so, to report the same to the Board. (*Min. by Com. of Customs*, February 13, 1833.)

*List of Foreign Goods allowed (with the addition of 25 per cent. to guard against the casualties of a sea voyage) to be shipped as Stores from the bonded Warehouses free of Duty. (Customs Minute, November 29, 1832, and numerous subsequent orders of that Board, and the 11 & 12 Vict. c. 122.)*

Tea,  $\frac{3}{4}$  oz.; coffee or cocoa, or cocoa paste, 1 oz. per day for each person on board, with the option to ship the entire quantity required for the voyage of either species of these articles, half an oz. of tea being considered equal to one oz. of coffee or cocoa, or cocoa paste.

Wine, 1 quart per day for the master, each mate, and cabin passenger.

Wine may be shipped instead of spirits, or a proportion of each, 1 pint of wine being equal to  $\frac{1}{2}$  pint of spirits.

Wine bottled in the bonded warehouses for exportation may be shipped as stores, in packages containing not less than 1 doz. reputed quarts or 2 doz. reputed pint bottles.

Spirits, viz. brandy, geneva, rum (British plantation),  $\frac{3}{4}$  pint per day for each person on board.

British plantation or East India rum or British spirits to be in the proportion of  $\frac{1}{3}$  of the whole quantity of spirits shipped. Spirits imported in bottles, or bottled in the bonded warehouses for exportation, may be shipped as stores, in pack-

free of average under 31, per cent. unless general, or the ship be stranded.

It is, therefore, of the greatest importance accurately to define what shall be deemed a stranding. But this is no easy matter; and much diversity of opinion has been entertained with respect to it. It would, however, appear that merely striking against a rock, bank, or shore, is not a stranding; and that, to constitute it, the ship must be upon the rock &c. for some time (how long?). Mr. Justice Park has the following observations on this subject: 'It is not every touching or striking upon a fixed body in the sea or river that will constitute a stranding. Thus Lord Ellenborough held, that in order to establish a stranding, the ship must be stationary; for that merely striking on a rock, and remaining there a short time (as in the case then at the bar, about a minute and a half), and then passing on, though the vessel may have received some injury, is not a stranding. Lord Ellenborough's language is important. — *Ex re termini* stranding means lying on the shore, or something analogous to that. To use a vulgar phrase, which has been applied to this subject, if it be *touch and go* with the ship, there is no stranding. It cannot be enough that the ship lie for a few moments on her beam ends. Every striking must necessarily produce a retardation of the ship's motion. If by the force of the elements she is run aground, and becomes stationary, it is immaterial whether this be on piles, on the muddy bank of a river, or on rocks on the sea shore; but a mere striking will not do, wherever that may happen. I cannot look to the consequences, without considering the *causa causans*. There has been a curiosity in the cases about stranding not creditable to the law. A little common sense may dispose of them more satisfactorily.'

This is the clearest and most satisfactory statement we have met with on this subject; still it is very vague. Lord Ellenborough and Mr. Justice Park hold, that to constitute a stranding, the ship must be stationary; but they also hold, that if she merely remain upon a rock &c. for a short time, she is not to be considered as having been stationary. Hence everything turns upon what shall be considered as a short time. And we cannot help thinking that it would be better, in order to put to rest all doubts upon the subject, to decide either that every striking against a rock, the shore &c., by which damage is done to the ship, should be considered a stranding; or that not striking against a rock &c. should be considered as such, provided the ship be got off within a specified time. Perhaps a tide would be the most proper period that could be fixed.

The insurance companies exclude the words 'or the ship be stranded' from the memorandum. [INSURANCE, MARINE.]

**STURGEON FISHERY.** The sturgeon is a large, valuable, and well-known fish, of which there are several species, viz. the sturgeon, properly so called, or *Acipenser sturio*; the beluga, or *Acipenser huso*; the sevruga, or *Acipenser stellatus* &c. The sturgeon annually ascends our rivers, but in no great number, and is taken by accident in the salmon nets. It is plentiful in the North American rivers, and on the southern shores of the Baltic; and is met with in the Mediterranean &c. But it is found in the greatest abundance on the northern shores of the Caspian, and in the rivers Wolga and Ural; and there its fishery employs a great number of hands, and is an important object of national industry. Owing to the length and strictness of the Lents in the Greek Church, the consumption

of fish in Russia is immense; and from its central position, and the facilities afforded for their conveyance by the Wolga, the products of the Caspian fishery, and those of its tributary streams, are easily distributed over a vast extent of country. Besides the pickled carcases of the fish, caviar is prepared from the roes; and blinglass, of the best quality, from the sounds, and both are largely exported. The caviar made by the Ural Cossacks is reckoned the best. The belugas are sometimes of a very large size, weighing from 1,000 lb. to 1,500 lb.; and yield a good deal of oil. The seal fishery is also pretty extensively prosecuted in the Caspian. The reader will find a detailed account of the mode in which the fishery is carried on in this sea, and in the rivers Wolga and Ural, in Tooke's *Russia*, vol. iii, pp. 49-72.

M. Tegoborski estimated the total value of the produce of the fisheries now referred to at 5,000,000 silver roubles a-year. In 1867, 22,192 cwt. of caviar were exported from Taganrog. In 1867 we imported 120 cwt., valued at 1,826l.

**SUCCADES.** Of succades and confectionery (including fruits and vegetables preserved in sugar, and exclusive of 341,799 lb. of preserved ginger (valued at 25,769l.), we imported, in 1867, 1,636,185 lb., valued at 81,764l. Of these, 791,167 lb. were entered for home consumption, paying a duty of 1d. per lb. In 1867 we exported 1,636,644 lb. of British, and 1,618,977 lb. of foreign confectionery, worth in all 130,312l.

**SUGAR** (Fr. sucre; Ger. zucker; Ital. zucchero; Russ. sachar; Span. azucar; Arab. sukhir; Malay, soola; Sans. sarkari). A sweet granulated substance, too well known to require any particular description. It is everywhere in extensive use; and in this country ranks rather among the indispensable necessities of life than among luxuries. In point of commercial importance it is second to very few articles. It is chiefly prepared from the expressed juice of the *arundo saccharifera*, or sugar cane; but it is also procured from an immense variety of other plants, as maple, beet-root, birch, pارسnep &c.

**I. Species of Sugar.**—The sugar met with in commerce is usually of four sorts—brown, or muscovado sugar; clayed sugar; refined, or loaf sugar; and sugar candy. The difference between one sort of sugar and another depends altogether on the different modes in which they are prepared.

**1. Brown, or Muscovado Sugar.**—The plants or canes being crushed in a mill, the juice, having passed through a strainer, is collected in the clarifier, where it is first exposed to the action of a gentle fire, after being 'tempered' (mixed with alkali), for the purpose of facilitating the separation of the liquor from its impurities. It is then conveyed into the large evaporating copper, and successively into two others, each of smaller size; the superintending boiler freeing it, during the process, from the scum and feculent matters which rise to the surface. The syrup then reaches the last copper vessel, called the 'striking tache,' where it is boiled till sufficiently concentrated to be capable of granulating in the cooler, whence it is transferred with the least possible delay, to prevent charring. Here it soon ceases to be a liquid; and when fully crystallised, is put into hogsheds (called 'potting'), placed on their ends in the curing-house, with several apertures in their bottoms, through which the molasses drain into a cistern below. In this state they remain till properly cured, when the casks are filled up, and prepared for shipment.

**2. Clayed Sugar** is prepared by taking the

Goods, viz. beer, ale, and separate), 1 quart per day for each passenger. per week for each person on

Ships, Brandy  $\frac{1}{2}$  of the allowed sorts issued to other ships. Cane Juice, or Syrup, 3 oz.

**LEMENTS.** [SINGAPORE.] In Navigation, the running of the beach. The practice to subjoin the name to policies of insurance of individuals in this country: salt, fruit, flour, and seed from average, unless general, and; sugar, tobacco, hemp, and; and all other and freight, are warranted

juice, as in the case of muscovado sugar when boiled to a proper consistency, and pouring it into conical pots with the apex downwards. These pots have a hole at the lower extremity, through which the molasses or syrup is allowed to drain. After this drain has continued for some time, a stratum of moistened clay is spread over the surface of the pots; the moisture of which, percolating through the mass, is found to contribute powerfully to its purification.

3. *Refined Sugar* may be prepared from muscovado or clayed sugar, by redissolving the sugar in water, and, after boiling it with some purifying substances, pouring it, as before, into conical pots, which are again covered with moistened clay. A repetition of this process produces *double refined* sugar. But a variety of improved processes are now resorted to.

4. *Sugar Candy*.—Solutions of brown or clayed sugar, boiled till they become thick, and then removed into a hot room, formed upon sticks or strings put into the vessels for that purpose, into crystals, or candy.

11. *Historical Notice of Sugar*.—The history of sugar is involved in a good deal of obscurity. It was very imperfectly known by the Greeks and Romans. Theophrastus, who lived about 320 years before the Christian era, the first writer whose works have come down to us by whom it is mentioned, calls it a sort of 'honey extracted from canes or reeds.' Strabo states, on the authority of Nearchus, Alexander's admiral, that 'reeds in India yield honey without bees.' And Seneca, who was put to death A.C. 65, alludes to sugar in a way which shows how little was then known respecting it (Epist. 84):—'Alunt,' says he, 'inveni apud Indos mel in arundinum foliis, quod aut ros illius cœli, aut ipsius arundinis humor dulcis et pinguis gignat.'

Of the ancients, Dioscorides and Pliny have given the most precise description of sugar. The former says, it is 'a sort of conereted honey, found upon canes, in India and Arabia Felix; it is in consistence like salt, and is, like it, brittle between the teeth.' And Pliny describes it as 'honey collected from canes, like a gum, white and brittle between the teeth; the largest is of the size of a hazel nut: it is used in medicine only.' (Saccharum et Arabia fert, sed laudatius India; est autem mel in arundinibus collectum, gummiuum modo candidum, dentibus fragile, amplissimum nucis avellane magnitudine, ad medicinam tantum usum.—Lib. xii. c. 17.)

It is evident, from these statements, that the knowledge of the Greeks and Romans with respect to the mode of obtaining sugar was singularly imperfect. They appear to have thought that it was found adhering to the cane, or that it issued from it in the state of juice, and then conereted like gum. Indeed, Lucan expressly alludes to Indians near the Ganges—

Quilque bibunt tenerâ dulces ab arundine succos.—Lib. iii. 237.

But these statements are evidently without foundation. Sugar cannot be obtained from the cane without the aid of art. It is never found native. Instead of flowing from the plant, it must be forcibly expressed, and then subjected to a variety of processes. It is not, however, quite so clear as has been generally supposed that the Romans were wholly unacquainted with the mode of procuring sugar. The remarkable line of

Et quas percoquili Ebusa cannas.—Sylv. lib. i. v. 15.

has been conjectured, apparently on pretty good grounds, to refer to the boiling of the juice of the

cane. But the passage has been differently read, and is too enigmatical to be much depended on.

Dr. Moseley conjectures, apparently with much probability, that the sugar described by Pliny and Dioscorides, as being made use of at Rome, was sugar candy obtained from China. This, indeed, is the only sort of sugar to which their description will at all apply. And it would seem that the mode of preparing sugar candy has been understood and practised in China from a very remote antiquity; and that large quantities of it have been in all ages exported to India, whence it is most probable, small quantities found their way to Rome. (*Treatise on Sugar*, 2nd ed. pp. 66-71. This, as well as Dr. Moseley's *Treatise on Coffee*, is a very learned and able work.)

Europe seems to be indebted to the Saracens, not only for the first considerable supplies of sugar, but for the earliest example of its manufacture. Having, in the course of the 9th century, conquered Rhodes, Cyprus, Sicily, and Crete, they introduced into them the sugar cane, with the cultivation and preparation of which they were familiar. It is mentioned by the Venetian historians, that their countrymen imported, in the 12th century, sugar from Sicily at a cheaper rate than they could import it from Egypt. (*Essai de l'Histoire du Commerce de Venise*, p. 100.) The Crusades tended to spread a taste for sugar throughout the Western world; but there can be no doubt that it was cultivated as now stated, in modern Europe, antecedently to the era of the Crusades and that it was also previously imported by the Venetians, Amalfitans, and others, who carried on a commercial intercourse, from a very remote epoch, with Alexandria and other cities in the Levant. It was certainly imported into Venice in 996.—(See the *Essai*, &c. p. 70.)

The art of refining sugar, and making what is called loaf-sugar, is said, by Dr. Moseley, to be a modern European invention, the discovery of a Venetian about the end of the 15th or the beginning of the 16th century. (Moseley, p. 66.) But this is doubtful, for Le Grand d'Aussy has shown that white or, as he calls it, refined sugar (*sucre blanc ou raffiné*), had been introduced into and used in France for more than a century and a half previously to the date assigned for the discovery of the process of refining in Venice. (*Le privilège des François*, ii. 198, ed. 1815.) But white sugar is not necessarily, as Le Grand d'Aussy seems to suppose, refined; it may be merely clayed, like Havannah sugar, which is as white as refined sugar. This sugar was imported from Egypt principally by Italians; and the probability is, that the latter were the first Europeans who practised the art, which, however, would appear to have originated in the East.

The cane had, as already seen, been introduced into Sicily, and its culture practised, previously to the middle of the 12th century. It also was carried to Spain and cultivated by the Saracens soon after they obtained a footing in that country. The first plantations were at Valencia; but they were afterwards extended to Granada and Murcia. Mr. Thomas Willoughby, who travelled over great part of Spain in 1664, has given an interesting account of the state of the Spanish sugar plantations, and of the mode of manufacturing the sugar.

Plants of the sugar cane were carried by the Spaniards and Portuguese to the Canary Islands, and Madeira, in the early part of the 15th century; and it has been asserted by many, that these islands furnished the first plants of the sugar cane that ever grew in America.

has been differently read, to be much depended on. It is, apparently with much probability, described by Pliny as made use of at Rome, and obtained from China. This is not of sugar to which they apply. And it would seem that refined sugar candy has been used in China from a very early period, and that large quantities of it were exported to India, whence small quantities found their way to Europe. (See *Treatise on Sugar*, 2nd edit. pp. 10, 11, as Dr. Moseley's *Treatise on the Art of Refining and Making Candy*.)

It is indebted to the Saracens for the introduction of considerable supplies of it. The earliest example of its manufacture is found in the course of the 9th century, in Cyprus, Sicily, and Crete. It was then the sugar cane, with preparation of which they were mentioned by the Venetian in their countrymen imported, and from Sicily as a cheaper article to import it from Egypt. (See *du Commerce de Venise*, vol. ii. p. 238.) It then tended to spread a taste for it in the Western world; but it was not cultivated in Western Europe, antecedently to the 15th century, and that it was also introduced by the Venetians, Amaltheo carried on a commercial traffic in it, at a very remote epoch, with Alexandria in the Levant. It was introduced into Venice in 996.—(See the

history of sugar, and making what is called, by Dr. Moseley, to be a new invention, the discovery of which is dated at the end of the 15th or the beginning of the 16th century. (Moseley, p. 66.) But Le Grand d'Aussy has shown that refined sugar (saccharum) had been introduced into Europe more than a century and a half before the date assigned for the discovery of refining in Venice. (See *Le Grand d'Aussy*, vol. ii. p. 198, ed. 1815.) But white refined sugar, which is as white as snow, this sugar was imported from Italy by the Venetians; and the latter were the first Europeans to refine it, which, however, would not have been introduced into Europe until the 12th century. It was also introduced and cultivated by the Saracens in Sicily and in that country. It was first introduced at Valencia; and they then tended to Granada and Murcia. The Venetian, who travelled over the island in 1664, has given an account of the state of the Spanish sugar industry, and the mode of manufacturing the

sugar cane were carried by the Portuguese to the Canary Islands. It was in the early part of the 15th century that it was first introduced, as has been asserted by many, that the first plants of the cane were first grown in America.

But though it is sufficiently established that the Spaniards early conveyed plants of the sugar cane to the New World, there can be no doubt, notwithstanding Humboldt seems to incline to the opposite opinion (*Essai Politique sur la Nouvelle Espagne*, liv. iv. c. 10), that this was a work of supererogation, and that the cane was indigenous both to the American continent and islands. It was not for the plant itself, which flourished spontaneously in many parts when it was discovered by Columbus, but for the art of making sugar from it, that the New World is indebted to the Spaniards and Portuguese; and these to the nations of the East. (Lafitau, *Mœurs des Sauvages*, tome ii. p. 150; Edwards's *West Indies*, vol. ii. p. 238.)

Barbadoes is the oldest settlement of the English in the West Indies. We took possession of it in 1627; and so early as 1616 began to export sugar thence to England. The trade of Barbadoes attained its maximum in 1676, furnishing, it is said, employment, at that period, for 400 sail of vessels, averaging 150 tons burden; but this statement is most probably exaggerated.

Jamaica was discovered by Columbus, in his second voyage, and was first occupied by the Spaniards. It was wrested from them by an expedition sent against it by Cromwell in 1656; and has since continued in our possession, forming by far the most valuable of our West Indian colonies. At the time when it was conquered, there were only 3 small sugar plantations upon it, but, in consequence of the influx of English settlers from Barbadoes and the mother country, fresh plantations were speedily formed, and continued rapidly to increase.

The sugar cane is said to have been first cultivated in St. Domingo, or Hayti, in 1506. It succeeded better there than in any other of the West Indian Islands. Peter Martyr, in a work published in 1590, states that, in 1518, there were 20 sugar-works in St. Domingo established by the Spaniards. 'It is marvellous,' says he, 'to consider how all things increase and prosper in the island. There are now 28 sugar presses, whereas great plenty of sugar is made. The canes or reeds wherein the sugar groweth, are bigger and higher than in any other place; and are as big as a man's wrist, and higher than the stature of a man by the half. This is much wonderful, that whereas in Valencia, in Spain, where a great quantity of sugar is made yearly, whensoever they apply themselves to the great increase thereof, yet doth every root bring forth not past 5 or 6, or at most 7 of these reeds; whereas at St. Domingo, 1 root beareth 20, and oftentimes 30.' (Eng. trans. p. 172.)

Sugar from St. Domingo formed, for a lengthened period, the principal part of the European supplies. Previously to its devastation in 1790, no fewer than 65,000 tons of sugar were exported from the French portion of the island.

III. *Sources whence the Supply of Sugar is derived.*—The West Indies (including Cuba), Louisiana, Java, Brazil, Mauritius, Madras, the Isle de Réunion, and the Philippines, are the principal sources whence the foreign supplies required for the European, American, and Australian markets are derived. But of late years the supplies of tropical sugar brought to Europe have been materially increased by the beet-root sugar raised in France, Belgium, Germany, Russia &c.

On the whole we incline to think that we shall be sufficiently near the mark if we estimate the produce of sugar in 1868 at about 1,600,000 tons cane, and 400,000 tons beet-root, making a

total produce of perhaps 2,000,000 tons, or even more.

Loaf or lump sugar is unknown in the East, sugar candy being the only species of refined sugar that is made use of in India, China &c. The manufacture of sugar candy is carried on in Hindostan, but the process is extremely rude and imperfect. In China, however, it is manufactured in a very superior manner, and large quantities are exported. When of the best description, it is in large white crystals, and is a very beautiful article. Two sorts of sugar candy are met with at Canton, viz. Chinchew and Canton; the former being the produce of the province of Fokien, and the latter, as its name implies, of that of Canton. The Chinchew is by far the best, and is about 50 per cent. dearer than the other. Chinese sugar candy is extensively consumed by Europeans at the different settlements throughout the East. With the exception of 1852, when 2,085 tons raw sugar were imported from China, very little has latterly been brought to our markets from that empire. It seems, indeed, to be pretty well understood that the sugar of China is unable to withstand the competition of that of Java, Brazil, and Cuba.

*Consumption of Tropical Sugar.*—It is exceedingly difficult, or rather we should say quite impossible, to get any correct information with respect to the consumption of sugar in most countries. In as far as regards this country, the subjoined tables furnish ample information. It appears from them that, at an average of the 5 years ending with 1844, the consumption of sugar in the United Kingdom amounted to about 200,000 tons a-year, exclusive of about 10,000 tons of bastard or inferior sugar, obtained from boiling molasses. In the course of the ensuing year Sir Robert Peel reduced the duties on British colonial muscovado sugars from 25s. 2½d. to 14s. per cwt., a considerable reduction being made, at the same time, in the duty on foreign sugar the produce of free labour. In consequence of this reduction the entries of sugar for home consumption increased from 206,472 tons in 1814 to 242,830 tons in 1845, exclusive in both years of molasses equivalent to about 15,000 tons. In 1846 further changes were made in the duties by the admission of foreign slave-grown sugar at a reasonable rate; and in 1854 the entries for consumption amounted to 416,619 tons. But they declined during the next 3 years. The entries in 1858, however, rose, including refined, to about 437,000 tons, and in 1868, with lower duties, they reached, including the quantities used in breweries &c., 600,000 tons, to which about 20,000 tons may be added for molasses. (See post.)

The statements given by Schnitzler (*Statistique de la France*, i. 296) show that, at an average of 1840 and 1841, the consumption of colonial and foreign sugars amounted in France to 73,139,000 kilog., or 71,425 tons a-year; and adding to this quantity the produce of the beet-root plantations for these years, amounting to about 30,000,000 kilog., the whole consumption would be about 103,000,000 kilog., exclusive of the quantity surreptitiously introduced. But the home supply of sugar has greatly increased in the interval; and it further appears that, in 1865, 209,585,832 kilog. of foreign and colonial sugar were entered for home consumption. Perhaps we should hardly be justified in estimating the imports (minus re-exports) of foreign and colonial sugar into France at above 200,000 tons in ordinary years, making, with beet-root, the consumption about 350,000 tons.

The Low Countries, Germany, and Austria are supplied through Holland, the Hanse Towns, the

ports on the south shore of the Baltic, and Trieste. Most part of the produce of the Dutch colonies is imported into Holland, and considerable quantities are also imported from other countries; so that, on the whole, the imports into the Dutch ports may be fairly estimated at from 90,000 to 100,000 (97,912 in 1865) tons a-year. The imports into Hamburg, Bremen, and Lubeck, amount (including refined), at an average, to about 25,000 tons a-year, and those into Belgium to above 20,000 tons. There is also a considerable importation of sugar into Stettin and other Baltic ports belonging to Germany and Prussia. The imports into the Austrian dominions through Trieste and other channels may be taken at about 30,000 tons.

The consumption of sugar in Spain was estimated by Montveran (*Statistique des Colonies*, p. 92) at 41,050 tons. But, despite the considerable consumption of cocoa in Spain, and the moderation of the duties on sugar, we have little or no doubt that this estimate at the time was beyond the mark. Probably, were the consumption now stated at 55,000 tons, it would be quite as much as it amounts to. We may, perhaps, estimate the consumption of Portugal at about 12,000 tons.

In 1863 duty was paid in Russia on nearly 35,000 tons of raw sugar, exclusive of what is clandestinely imported, and exclusive, also, of the clandestine imports of refined sugar. This, with beet-root sugar, may raise the total supply to 70,000 tons.

Table showing the Quantities and Values of the Imports of Foreign Sugar, of all Sorts, into European Russia, exclusive of Finland, in 1861, 1862, 1863, and 1865.

Years	Quantities	Values
	poods	silver roubles
1861	1,092,136	5,596,624
1862	1,261,502	6,121,418
1863	2,150,806	10,759,412
1865	2,137,528	1,718,640

To the average, or 950,000 poods, has to be added about 35,000 tons of beet-root sugar raised in the empire, besides what is smuggled.

During the year ending June 30, 1865, the United States imported (principally from Cuba and Porto Rico) 607,937,674 lb., of which 30,350,081 lb. were re-exported, leaving 577,587,593 lb., or upwards of 257,000 tons, for the consumption of the Union. But in addition to increasing imports of foreign sugar the United States draw a large portion of their supply from the plantations in Louisiana, the produce of which had increased rapidly down to the commencement of the Civil War. Perhaps the produce might then be estimated at about 180,000 tons at an average. Mr. Consul Donohoe, of New Orleans, in Feb. 1867, says that the production in 1866 was greater than in 1865, but that there is no foreign export of sugar and molasses from that port. The whole shipments of native raw and refined sugar from the Union during the year ended June 30, 1864, amounted only to 2,328,483 lb., or about 1,040 tons. The States derive a further supply of 18,000 or 20,000 tons of sugar from the maple.

On the whole, therefore, we shall not perhaps be far wrong in estimating the consumption of colonial, tropical, and beet-root sugar as follows, viz.:

	tons	tons
The United Kingdom, inclusive of distilleries &c.	-	550,000
France, including beet-root	-	350,000
Colonial sugars for the Netherlands, Belgium, Germany, Prussia, Austria, Hungary, and Italy, per Dutch ports, deducting re-exports to Russia and other countries	-	70,000
Hanse Towns	-	30,000
Belgium	-	20,000

	tons	tons
Roslock, Stettin, Königsberg, and other ports on the Baltic, including the imports from Holland and the Hanse Towns	-	10,000
Austria by Trieste	-	30,000
Beet-root	-	100,000
Spain	-	40,000
Portugal	-	12,000
Russia, including beet-root	-	70,000
Denmark and Sweden	-	15,000
Italy, Sicily, Sardinia, Turkey, Greece, and the Levant generally	-	55,000
United States	-	500,000
Canada, Australia, Cape of Good Hope &c.	-	50,000
		1,916,000

Now, supposing these statements to be reasonably correct, it would appear that the aggregate supply of sugar so far exceeds the demand, that it may be fairly presumed that the permission now given to employ sugar in our distilleries and breweries, at an excise duty of 3s. 6d. per cwt., can have no lasting influence over its price. The quantities taken for this purpose have hitherto been inconsiderable, viz. in 1856, 131,623 cwt.; 1857, 5,225 do.; 1858, 17,554 do.; and in the year ended March 31, 1868, 356,088 do. It is, no doubt, true that the demand for sugar is rapidly increasing in this and most other countries; but, as the power to increase its supply (so long at least, as Cuba and Brazil are supplied with slave labour) is all but illimitable, no permanent rise of prices need at present be anticipated.

Taking the price of sugar at the rate of only 20s. per cwt. or 20l. per ton, the prime cost of the article (1,846,000 tons) to the people of Europe, the United States, and other countries above mentioned, will be 36,920,000l. sterling; to which adding 50 per cent. for duty, its total cost will be 55,380,000l. This is sufficient to prove the paramount importance of the trade in this article. Exclusive of sugar, the other products of the cane, as rum, molasses, treacle &c., are of very great value. The gross revenue derived by the British treasury from rum alone, amounted, in the year ended March 31, 1868, to 2,137,553l.

*Progressive Consumption of Sugar in Great Britain.*—We are not aware that there are any authentic accounts with respect to the precise period when sugar first began to be used in England. It certainly was imported in small quantities by the Venetians and Genoese in the 14th and 15th centuries (in Marin's *Storia del Commercio de Veneziani*, vol. v. p. 306, there is an account of a shipment made at Venice for England in 1319, of 100,000 lb. sugar, and 10,000 lb. sugar candy: the sugar is said to have been brought from the Levant); but honey was then, and for long after, the principal ingredient employed in sweetening liquors and dishes. Even in the early part of the 17th century the quantity of sugar imported was very inconsiderable; and it was made use of only in the houses of the rich and great. It was not till the latter part of the century, when coffee and tea began to be introduced, that sugar came into general demand. In 1700 the quantity consumed in Great Britain was about 10,000 tons, or 22,400,000 lb.; whereas, in 1867, the consumption amounted to above 584,866 tons, or more than 1,310,000,000 lb.; so that sugar forms not only one of the principal articles of importation and sources of revenue, but an important necessary of life.

Great, however, as the increase in the use of sugar has certainly been, it may, we think, be fairly presumed that the demand for it is still a good deal below its natural limit; and now that the duties are reasonable, and the trade placed on a proper footing, we confidently anticipate that the consumption of sugar, and also the revenue derived from it, will yet be considerably increased.

During the first half of last century the consumption of sugar increased five-fold. It amounted, as already stated—

In 1710,		to 10,000 tons,		or	
tons	lb.	tons	lb.	tons	lb.
1710	14,000	-	-	22,000,000	-
1754	49,000	-	-	31,500,000	-
1784	55,270	-	-	110,000,000	-
1771-75	72,500 (average)	-	-	162,500,000	-
1786-90	81,000	-	-	181,500,000	-

In the reign of Queen Anne, the duty on sugar amounted to 3s. 5d. per cwt. Small additions were made to it in the reign of George II.; but in 1780 it was only 6s. 8d. In 1781 a considerable addition was made to the previous duty; and in 1787 it was as high as 12s. 4d. In 1791 it was raised to 15s.; and while its extensive and increasing consumption pointed it out as an article well fitted to augment the public revenue, the pressure on the public finances, caused by the French war, occasioned its being loaded with duties, which, though they yielded a large return, would, there is good reason to think, have been

more productive had they been lower. In 1797 the duty was raised to 17s. 6d.; two years after, it was raised to 20s.; and by successive augmentations in 1803, 1804, and 1806, it was raised to 30s.; but in the last-mentioned year it was enacted that, in the event of the market price of sugar in bond, or exclusive of the duty, being for the four months previous to January 5, May 5, or September 5, below 49s. per cwt., the lords of the Treasury might remit 1s. per cwt. of the duty; that if the prices were below 48s., they might remit 2s.; and if below 47s., they might remit 3s., which was the greatest reduction that could be made. In 1826 the duty on West India sugar was declared to be constant at 27s., without regard to price; the duty on sugar from the Mauritius being then also reduced to 27s. In 1830 the duty was reduced to 21s. on West India and Mauritius sugar, and to 32s. on East India sugar; and in 1836 the duty on the latter was reduced to the same level as that on the former.

Account of the Quantity of Sugar retained for Home Consumption in Great Britain, the Net Revenue derived from it, and the Rates of Duty with which it was charged, in each Year from 1789 to 1814, both inclusive.

We had occasion, in a former edition of this work, to remark on the impolicy and injustice of charging sugar from our possessions in the East Indies with a higher rate of duty than was laid on sugar from the West Indies. But, as already

seen, this distinction was suppressed in 1836, and the sugar of our various colonial possessions and dependencies is now admitted for consumption on the same terms.

Previously to 1845 the duty on sugar from a

... and other  
... including the  
... and the  
10,000  
30,000  
100,000  
560,000  
57,000  
12,000  
70,000

... these statements to be reason-  
... appear that the aggregate  
... exceeds the demand, that it  
... had that the permission now  
... sugar in our distilleries and  
... and of 3s. 6d. per cwt.  
... influence over its price. The  
... this purpose have hitherto  
... viz. in 1856, 134,623 cwt.;  
... 17,553 do.; and in the year  
... 1868, 356,088 do. It is, no  
... demand for sugar is rapidly  
... and most other countries; but,  
... increase its supply (so long as  
... Brazil are supplied with slave  
... limitable, no permanent rise of  
... can be anticipated.

... of sugar at the rate of only  
... per ton, the prime cost of the  
... (ons) to the people of Europe,  
... and other countries, is  
... 36,920,000 sterling. It is  
... for duty, its total cost would  
... be sufficient to cover the pa-  
... of the trade in this article,  
... for, the other products of the  
... usses, trencle &c., are of very  
... gross revenue derived by the  
... from run alone, amounted, in  
... the year 31, 1868, to 2,137,533l.

... assumption of Sugar in Great  
... not aware that there are any  
... with respect to the precise  
... first began to be used in Eng-  
... was imported in small quanti-  
... ties and Genoese in the 14th  
... (in Marin's Storia del Com-  
... ni, vol. v. p. 306, there is an  
... ment made at Venice for Eng-  
... 10,000 lb. sugar, and 10,000 lb.  
... sugar is said to have been  
... Levant); but honey was then,  
... the principal ingredient em-  
... in liquors and dishes. Even in  
... the 17th century the quantity of  
... is very inconsiderable; and it  
... in the houses of the rich and  
... in the latter part of the century,  
... began to be introduced, that  
... general demand. In 1700 the  
... in Great Britain was about  
... 2,400,000 lb.; whereas, in 1867,  
... amounted to above 584,866 tons,  
... 310,000,000 lb.; so that sugar  
... one of the principal articles of  
... sources of revenue, but an im-  
... of life.

... as the increase in the use of  
... ly been, it may, we think, be  
... that the demand for it is still a  
... its natural limit; and now that  
... sonable, and the trade placed on  
... we confidently anticipate that  
... of sugar, and also the revenue  
... will yet be considerably increased.

An Account, showing the Quantities in Cents, of the several Sorts of Raw, excluding Refined, Sugar Imported into the United Kingdom; the Quantities retained for actual Consumption within the same; the Rates of Duty charged on Sugar when entered for Home Consumption, and the Nett Revenue accruing thereon; in each Year since 1815: with a Statement of the Average Prices per Cent. of British and Foreign Sugar in Bond for the same Years.

British possession was decidedly too high, being no less than 25s. 2d. (24s. + 5 per cent.) per cwt. But whether this were so or not, there cannot, we apprehend, be so much as the shadow of a doubt that the duty on foreign sugars was then more than twice as great as it should have been. This duty, which amounted for a lengthened period to 63s. per cwt., was, in fact, intended to be prohibitory; and so long as our foreign dependencies furnished so much sugar as not only to supply the markets of the United Kingdom, but to furnish, besides, a considerable excess for exportation to others, there was little to object to in the magnitude of the duty. Latterly, however, it became most oppressive in its operation. In consequence, as already seen, of the measures connected with the emancipation of the slaves, the imports of sugar from the West Indies declined from 4,117,746 cwt. in 1831, to 2,857,703 cwt. in 1845. Owing to the immigration of hill-coolies, and other circumstances, the emancipation of the slaves in the Mauritius had comparatively little

effect; and since 1845 there has been a very great increase in the exports of sugar from that island. [Poiré Louis.] But despite this circumstance, and the increase in the imports of sugar from India since 1840, the decrease in the imports from the West Indies was not, for a considerable time, fully compensated. On the one hand, therefore, we had a rapidly increasing population, and on the other we had that population confined by an oppressive duty to a market for sugar, the supply of which had been diminished. The consequences were such as every man of sense might have anticipated from the outset. The business of refining for the foreign market, and our export trade in sugar, were all but annihilated, while the average Gazette price of muscovado sugar admissible to the English markets amounted during the 3 years ending with 1841 to about double the price of foreign sugar in bond, of equal or superior quality. We beg, in illustration of what is now stated, to subjoin an

*Account of the Quantities of Sugar retained for Consumption, of the Nett Produce of the Duties thereon, and of the Prices per Cwt. of British Sugar (ex Duty), and Brazil Sugar in Bond, in 1842, 1843, 1844, with the Average of these 3 Years.*

Years	Quantities cwt.	Nett Revenue from Duties on Sugar £	Average Prices of British Muscovado Sugar		Average Prices of Brazil Sugar (Brown and Yellow)	
			s. d.	s. d.	s. d.	s. d.
1842	5,668,437	4,874,812	36 11	18 5	17 2	
1843	4,028,507	5,076,326	33 9½	17 2	17 0	
1844	4,129,991	5,205,222	35 5	17 0	17 0	
Total	13,826,935	15,156,360	103 11½	£2 12 5		
Average of 3 years	5,008,912½	5,051,153½	34 7½	17 5½		

Now, it appears from this statement, that while the price of British sugar (exclusive of duty) amounted during the 3 years ending with 1844 to 34s. 7½d. per cwt., the price of Brazil (and Cuba) sugar was only 17s. 5½d. per do. And hence it follows, that, had the then prohibitory duty of 63s. on foreign sugar been reduced to the same rate (25s. 2d., or 24s. + 5 per cent.) as the then duty on British sugars, the people of the United Kingdom might have bought the same quantity of sugar for 17s. 5½d. that cost them 34s. 7½d.; that is, they might have got about 2 lb. of sugar for the same sacrifice it cost them to get 1 lb. The aggregate loss to the public from this preposterous arrangement of the sugar duties, during the period in question, was quite enormous. It appears from the above account that the average consumption of sugar, during each of the 3 years ending with 1844, amounted to 4,008,912½ cwt., which at 34s. 7½d. cost 6,944,605l. 14s. 5d. But had we been allowed to go into the foreign market for sugar, we might have got the same quantity for 3,502,230l. 13s., being a saving in 1 year of no less than 3,442,375l. 1s. 5d., and in 3 years, of 10,327,125l. 4s. 3d. But it may, perhaps, be said, that had our ports been open to the free importation of Brazilian and other foreign sugars, the price of the latter would have been raised: and so probably it would; though, considering the vast extent and productiveness of the field from which sugar may be brought, we doubt whether this effect would be very sensible. But, supposing that the opening of our ports had raised the price of foreign sugar from 17s. 5½d. to 22s. per cwt., still the saving would have amounted to 2,534,801l. 15s. 9d. a-year.

Under these circumstances there could no longer be a doubt that the reduction of the old prohibitory duty of 63s. per cwt. on foreign sugar was imperatively required; this was partially effected in 1841, when the duty on foreign sugar, if produced by free labour, was reduced to 36s. 8½d. per cwt.;

and when, in 1845, the duty on British colonial sugars was reduced to 14s. per cwt., that on free labour sugar was further reduced to 23s. 4d. per cwt.

But though these reductions of duty effected a great improvement in the old system, they were inadequate to place it on a satisfactory footing. The reduction of the duty on foreign sugar applied to that only which was produced by free labour, the sugar produced by the labour of slaves (unless we happened to be bound by treaty to admit it at the low duty) continuing subject to the old prohibitory duty of 66s. per cwt. Nothing, however, could be more inexpedient than this distinction, on which we took the liberty to animadvert as follows in a former edition of this work:—

'We take, without any scruple, the cotton, tobacco, rice, and other products of slave-holding countries; and such being the case, it is not very easy to see on what principle we refuse to take their sugar. There is no reason to think that we are at all likely to hasten, by this refusal, the emancipation of their slaves (even if that were certainly desirable), or to improve their condition: our policy in this respect is injurious to ourselves, without being of the smallest advantage to anyone else.

'But the truth is, if we look a little narrowly into the circumstances, we shall find that we do the very thing we pretend not to do. We annually export large quantities of British produce to Cuba and Brazil; but the sugar of those countries, the principal article they have to send us, being excluded from our markets, we cannot bring it direct to this country, but we carry it to Hamburg and other continental emporiums, and there exchange it for wool, flax, and other articles we are allowed to import; so that, in effect, we transmute the slave-grown sugar into other things, and consume it under its new form. We do not employ it to sweeten tea and coffee; but we clothe ourselves with wool and flax, manure our lands with bones,

there has been a very great increase of sugar from that island, despite this circumstance, the imports of sugar from Cuba and Brazil, have increased, and the decrease in the imports from Java, for a considerable time. On the one hand, therefore, the increasing population, and on the other, the population confined by an artificial market for sugar, the supply is not exhausted. The consequences of this are, in some measure, of course, in a sense might have been anticipated. The business of refining sugar, and our export trade in refined sugar, while the average price of muscovado sugar admitted to duty mounted during the 3 years mentioned above, about double the price of Java and Manilla sugar of equal or superior quality, the duty on what is now stated, to

*Nett Produce of the Duties on Sugar and Brazil Sugar in Bond, in*

the duty on British colonial sugar to 14s. per cwt., that on Java further reduced to 23s. 4d.

reductions of duty effected in the old system, they were in it on a satisfactory footing. The duty on foreign sugar applied was produced by free labour, by the labour of slaves (unless bound by treaty to admit it at a certain price, subject to the old prices per cwt. Nothing, however, expedient than this distinction, the liberty to animadvert as an edition of this work:—

without any scruple, the cotton, and other products of slave-holding, being the case, it is not very far from principle we refuse to take any notice of it. There is no reason to think that we should hasten, by this refusal, to deprive our slaves (even if that were the case) of any improvement in their condition: respect is injurious to ourselves, and the smallest advantage to any-

one, if we look a little narrowly at the matter, we shall find that we do not pretend not to do. We annually import a quantity of British produce to Cuba, the sugar of those countries, they have to send us, being exported to our markets, we cannot bring it direct to us, we carry it to Hamburg and other emporiums, and there exchange it for other articles we are allowed to import. In effect, we transmute the sugar into other things, and consume it in that form. We do not employ it to grow coffee; but we clothe ourselves with it, manure our lands with bones,

and manufacture our paper of rags, which are all bought by it. But suppose we were a little more Quixotic, and that after getting the sugar we threw it into the sea, the result, as respects Cuba and Brazil, would be the same. We give, by buying their sugar, all the encouragement in our power to the slavery that exists in them; what we shall do with the sugar is our own affair; and whether we use it, sell it to others, or destroy it, is, as far as slavery is concerned, quite immaterial. But it is by no means immaterial as respects our trade with slave-holding countries; inasmuch as the preference we give to the sugars of others tempts them to lay discriminating duties on our products, and to discourage and embarrass our trade. And even were it otherwise desirable, it may be doubted whether it be in our power to exclude slave-grown sugar. Certificates of origin will, we apprehend, be rather a slender security for this result. But supposing them to be effectual, the consequence will be that a greater quantity of Java and Manilla sugar being consumed in England, less of it will remain to be sent to the Continent, where, by means of our policy, a corresponding market will be opened for slave-grown sugar.

But admitting that something might be found to say in favour of the policy of wholly excluding slave-grown sugar, we, in effect, abandon it, by admitting the slave-grown sugar of the United States and other countries with which we have treaties of reciprocity; so that, after all, our policy in this respect is prohibitive only of the sugars of Cuba, Porto Rico, and Brazil. If the Americans chose to send us the whole sugar grown in Louisiana, every ounce of which is the produce of slave labour, importing in its stead sugar from the Hawaiian and Bahia, it would be freely admitted to our markets. Hence it is that, while we exclude the slave-grown sugar of those friendly countries of whose trade we might, if we chose, have a virtual monopoly, we admit the slave-grown sugar of our rivals—of the only people whose commercial marine can come into competition with our own. And to show that this contradiction is not imaginary, we may mention that, during the (then) present year (1845) about 300 tons of the sugar of Louisiana (the quality of the latter is not, as now prepared, well suited to our markets) and Venezuela have been admitted to consumption under the new Act. Is it, we beg to ask, possible to speak too harshly of such a policy? to imagine anything more perverse, contradictory, and absurd?

It were really, therefore, to be wished that we should cease to rave, as we have done for the last 20 years, about slavery; and that we should allow our merchants to buy sugar, as we allow them to buy cotton and other things, without enquiring how, or by whom, it is produced. We may be assured that we should give as little encouragement to slavery by so doing as we give by our present system, while we should, at the same time, give greater facilities to our trade, and full scope to the late, and in other respects, wise and liberal measures.

We are glad to have to state that the principle contended for in the above paragraphs has since been fully admitted by the Legislature; the Act of 1846, 9 & 10 Vict. c. 63, having equalised the duty on all descriptions of foreign sugars.

It will further be observed that under the system adopted in 1845, a discriminating duty of 9s. 4d. per cwt. was imposed on foreign muscovado sugar admitted to consumption over and above the duty (14s. per cwt.) imposed on British sugar. Inas-

much, however, as the latter was inadequate to the supply of the United Kingdom, the effect of this regulation was to add 9s. 4d. per cwt. to the price of all the sugar, British as well as foreign, entered for consumption. And it was hardly to be supposed, after the striking recognition of the principles of free trade given by the Legislature in passing the Act for the abolition of the corn laws, that the protective system would be permitted to continue for the sake of the sugar colonies. The abolition of the former was, in truth, all but equivalent to the abolition of the latter. And the 9 & 10 Vict. c. 63, referred to above, which put an end to the distinction between free and slave-grown sugar, provided also for the equalisation of the duties on British and foreign sugars, which, had it been maintained, would have been finally effected on July 5, 1851.

This last Act, however, was afterwards superseded by the 11 & 12 Vict. c. 97, which, exclusive of some changes in the duties, deferred their complete equalisation till 1854.

*Comparative Efficiency of Free and Slave Labour in the Production of Sugar.*—But though it was not to be expected that a discriminating duty in favour of the sugar of our colonies would be tolerated, it is by no means clear that its abolition has not been an injustice to the latter. The equalisation of the duties would have been in all respects unobjectionable, were the circumstances under which the planters in our colonies are placed identical with or similar to those under which their competitors are placed in Cuba, Brazil, and Java. Such, however, is not the case. The instruments of production possessed by the latter are totally different from those possessed by the former. In Brazil and Cuba the planters are furnished with slave labour, and in Java the population, though not enslaved, is subjected to compulsory service. Unless, therefore, it can be shown that free labour is as efficient in the production of sugar in the West Indies and Demerara as slave or compulsory labour, it will necessarily follow that the equalisation of the duties on British and foreign sugars was an injustice to our colonists.

It has been alleged over and over again in vindication of this equalisation, that free labour is at once cheaper and more efficient than slave labour; and without enquiring into the truth of this allegation, we shall admit the greater cheapness of free labour in countries where freemen and slaves are equally suited to the employments carried on in them, and where these employments would be spontaneously followed by the slaves were they emancipated. But the conditions under which the production of sugar is carried on in the inter-tropical regions of the New World are entirely different from those now stated. Whites are not capable of field labour in such climates; and the raising of sugar is not an employment that would be voluntarily undertaken by free blacks. The latter have few wants. They reckon as useless incumbrances many articles in "insupportable in cold or temperate climates. Hence the *curis accensu mortalia corda*, so powerful in Europe, has but little influence in Jamaica and Trinidad. Men are not instinctively laborious or enterprising. Industry is with them merely a means to an end, a sacrifice they make to obtain supplies of the necessaries and conveniences of human life. Whenever the sacrifice required to procure food, clothes, and other necessary accommodations is considerable, the population is generally industrious; and a taste for labour being widely diffused, those who are not obliged to apply

themselves to the production of necessities, engage in the production of superfluities. But wherever the principal wants of man may be supplied with but little exertion, idleness becomes the distinguishing characteristic of the population; and, instead of employing their spare time in the production of articles of ostentation and luxury, they usually waste it in idleness and apathy. Now this is the precise state of the blacks in the West Indies. Their necessities and desires are of a very limited description; and are generally indeed fully satisfied by the produce of a small patch of land, requiring but little labour in its cultivation: and such being the case, it would be contradictory to suppose that they should voluntarily employ themselves in the hard labour necessary to produce sugar. Consistently with what is now stated, we find that Hayti, or St. Domingo, though the most fruitful of the West Indian islands, and though, when a colony of France, it furnished immense supplies of sugar, does not export, now that it is occupied by free blacks, a single ton. This, also, is the case in Mexico: and what reasonable ground have we for supposing that the result would be different in Jamaica, Cuba, or Brazil, were the blacks free and able (which is not the case in our islands) easily to obtain patches of land? The possession of the latter is requisite to enable them to exist without engaging in laborious service; and in the event of their not being able to obtain land, they may be forced to employ themselves in the culture of sugar; though, as it is against their inclination, they will withdraw from their work on the first

opportunity, and will, while employed, indulge as much as possible in idleness.

Hence it would seem that, whether slave and compulsory labour be cheaper or dearer than free labour, it is indispensable to the production of sugar. We do not presume, in making this statement, to give any opinion in regard to the policy or impolicy of the suppression of slavery in our colonies. The freedom of the blacks may be a more than sufficient compensation for the cessation of supplies of sugar from them. But, whether it be so or not, we regard it as the merest illusion to suppose that the severe drudgery of sugar planting will ever be efficiently carried on in the West Indies by really free labourers.

The mere exclusion of slave-grown sugar would not, however, as many seem to suppose, have in any degree obviated the hardships to which our planters have been exposed. It would merely have forced a larger quantity of the sugars of Java and China upon our markets, and opened a larger field for the consumption of slave-grown sugar on the Continent. Justice to our colonists required that either a discriminating duty should have been imposed in their favour on all foreign sugars, or that they should have been compensated in some other way. But as the former method of dealing fairly by them would have been repugnant to the national feeling and highly objectionable, at the same time that it is more than doubtful whether it would have done real service to the planters, some less offensive and more efficient alternative should have been resorted to. We subjoin

*Sugar Duties.*—The 11 & 12 Vict. c. 97 regulated and materially reduced the duties on colonial and foreign sugars. But the war with Russia occasioned their subsequent increase. And though they have since been thrice reduced, viz. by the 20 & 21 Vict. c. 61, the 27 & 28 Vict. c. 18, and by the 30 Vict. c. 10, it is very doubtful whether that reduction will be permanent. The probability,

indeed, seems to be quite the other way. And it must be admitted that when fairly imposed, and not carried to an extravagant height, these duties afford one of the least exceptional means by which a large revenue may be most conveniently raised. The sugar duties at present are as follows, viz. :—

while employed, indulge as  
ness,

that, whether slave and  
cheaper or dearer than free  
able to the production of  
in making this state-  
ment in regard to the policy or

Sugar not equal to refined, according to the standard samples approved by the Lords of the Treasury for assessing the duties of cus- toms on sugar imported into the United Kingdom, viz.—		12 0
First class	11	3
Second class	10	6
Third class	9	7
Fourth class	8	0
Molasses	3	6

The quantity of sugar consumed in Great Bri-  
tain, previously to the change in 1845, allowing  
for the quantity sent to Ireland, was more than  
double what it was in 1790. But had the duty  
continued at 12s. 4d., its amount in that year,  
there cannot, we think, be much doubt, provided  
foreign sugars had also been admitted under a  
reasonable duty, that the consumption would have  
been trebled or more. During the intervening  
period the population had been little less than  
doubled, and the proportion which the middle  
classes bear to the whole population had been de-  
cidedly augmented. The consumption of coffee—  
an article in the preparation of which a great deal  
of sugar is used in this country by all who can  
afford it—is about 85 times as great now as in  
1790; that is, it has increased from under  
1,000,000 lb. to about 35,000,000 lb. The con-  
sumption of tea is more than sixfold; and  
there has been a great increase in the use of  
home-made wines, preserved and baked fruits &c.  
Instead, therefore, of having done little more than  
increase proportionally to the increase of popula-  
tion, it may be fairly presumed that the con-  
sumption of sugar would, had there not been some  
powerful countervailing cause in operation, have  
increased in a far greater degree. Instead of  
amounting, in 1844, to little more than 4,000,000  
cwt., the consumption of Great Britain should  
have amounted to about 6,000,000 cwt.

Taking the aggregate consumption of sugar in  
Great Britain previously to 1845 at 400,000,000 lb.,  
and the population at 20,000,000, the average  
consumption of each individual would have been  
about 20 lb., ex molasses. This, though a far  
greater average than that of France, or any of the  
continental states, was but small compared with  
what it was supposed it would amount to when  
supplied under a more liberal system. In work-  
houses, the customary annual allowance for each  
individual is, we believe, 34 lb.; and, in private  
families, the smallest separate allowance for do-  
mestics is 1 lb. a-week, or 52 lb. a-year. These  
facts strongly corroborate what we formerly stated  
as to the extent to which the consumption of  
sugar would probably be increased under the new  
system; and others may be referred to, that are  
little less conclusive. Mr. Huskisson observed, in  
his place in the House of Commons, on Mr. Grant's  
motion for a reduction of the sugar duties, May  
25, 1829, that 'in consequence of the present  
onerous duty on sugar, the poor working man  
with a large family, to whom peace were a serious  
consideration, was denied the use of that commo-  
dity; and he believed he did not go too far when  
he stated that TWO-THIRDS of the poorer consumers

of coffee drank that beverage without sugar. If,  
then, the price of sugar were reduced, it would  
become an article of his consumption, like many  
other articles—woollens, for example, which are  
now used for their cheapness—which he was for-  
merly unable to purchase.' (Speeches, vol. iii. p. 455.)  
Mr. Huskisson's conclusions are now in the way of  
being fully realised. In 1844, for example, the  
consumption of the United Kingdom amounted to  
205,472 tons; in 1847 it had increased to 290,282  
tons; in 1850 to 310,390; and in 1851, when the  
duties were equalised, it amounted to 401,437 tons  
raw, and 15,182 do. refined; while in the year to  
March 31, 1868, our consumption of sugar of all  
kinds exceeded 600,000 tons. And this, it will be  
observed, is exclusive of about 20,000 tons mo-  
lasses entered for consumption. And we may  
add, in illustration of the way in which this ex-  
traordinary increase has been effected, that while,  
in London and other parts of the country, the  
sales of sugar by the grocers who supply the  
higher classes have been but little extended, the  
sales by those who principally deal with the lower  
classes have augmented from 50 to 100, and in  
some cases, to 150 and 200 per cent. This is  
the best possible proof of the salutary as well as  
of the powerful influence of the reduction of the  
duties. But it is only what might have been an-  
ticipated; inasmuch as the consumption of the  
more opulent classes was but little affected by the  
previous high duty.

In Ireland, especially, the most beneficial effects  
have resulted from the reduction of the duties on  
sugar. The direct importations of sugar into  
Ireland did not, previously to the late changes,  
exceed 18,500 tons; and, adding to these 6,000  
tons for the second-hand importations (including  
bastards) from Great Britain, which, we believe,  
was quite as much or more than they amounted  
to, the entire consumption of that country would  
be 25,000 tons, or 57,000,000 lb., which, taking the  
then population at 8,000,000, gave 7-125 lb.  
to each individual; or nearly  $\frac{1}{4}$  of the average  
consumption of each individual in Great Britain.  
So singular a result must, no doubt, be principally  
ascribed to the poverty of the Irish; but there  
can be no doubt that it was partly, also, owing to  
over-taxation. And the reduction of the duty,  
though it occasioned an immediate loss of revenue  
in Ireland, was sure in the end to be productive  
of its increase, besides being attended with other  
and still more beneficial consequences. Next to  
the suppression of agitation and assassination, the  
'one thing needful' in Ireland is to inspire the  
population with a taste for the conveniences and  
enjoyments of civilised life; and the first step to-  
wards supplying this desideratum is, if possible,  
to make articles of convenience and luxury at-  
tainable by the mass of the people. If this be  
done, whether by a reduction of duties or other-  
wise, we may expect that the desire inherent in  
all individuals of improving their condition will  
impel them to exert themselves to obtain them.  
A taste for such articles will be gradually diffused  
among all ranks; and ultimately, it may be pre-  
sumed, it will be thought discreditable to be  
without them. It is probable, owing to the late  
extraordinary decrease of the population in Ire-  
land, that the deliveries of sugar may not be  
so great now as formerly; but if it be main-  
tained at near its old level, it will show a great  
increase in the consumption per individual.

The Board of Inland Revenue made some elab-  
orate enquiries with respect to the comparative  
consumption of sugar and tea by the higher, the  
middle, and the lower classes. But it would be  
wrong to lay much stress upon the conclusions

resulting from such investigations. At the best they should be regarded only as very rude approximations. Even as such, however, they are deserving of attention. We subjoin the result of the Board's enquiries in as far as they relate to sugar.

*Proportional Consumption of Sugar in Great Britain by the Higher, the Middle, and the Poorer or Working Classes.*

	England	Scotland	Great Britain
	per cent.	per cent.	per cent.
The upper classes consume . . .	23	22	22½
The middle classes . . .	57	40	54
The poorer or working classes . . .	40	38	39½
Total . . .	100	100	100

Mr. Ogilvie, a very intelligent customs officer, has made the following observations in regard to the consumption of sugar:—

<sup>1</sup> In England, sugar is generally used by the working classes in the raw or unrefined state, though the preference for refined sugar is gradually and extensively increasing. In London and other large towns, when refined sugar can be purchased for 6d. per lb., it is universally preferred; but when the price rises above that, the poor are obliged to fall back upon the raw.

<sup>2</sup> In Scotland, raw sugar is but little used, except by the very poorest: inferior qualities of refined, known as "crushed lump" and "bastards," being generally used by the middling and lower classes, the use of loaf sugar being confined to the wealthier classes.

<sup>3</sup> In the north of Ireland, particularly in the manufacturing districts around Belfast and Londonderry, the produce of Liverpool and Greenock refineries meets with a large sale. In Limerick it is stated that two-thirds of the consumption consist of refined loaf and crushed; but in the other parts of Ireland raw sugar is the chief article of consumption among the working classes, loaf sugar being consumed only by the rich, and by the better classes of mechanics and farmers in their whisky punch. Among all classes, sugar is more an article of consumption than tea, because the poor use it with coffee and cocoa as well as with tea, and among the rich it enters largely into many culinary preparations.' (*Parl. Paper*, No. 184, sess. 1857.)

*United States.*—Next to Great Britain, the United States are now, as previously seen, by far the largest consumers of sugar; and Louisiana had become, previous to the commencement of the civil war and the abolition of slavery, a principal producing country.

Allowing 36,000 tons for molasses and maple sugar, and taking the population of the Union at 35,000,000, the total average consumption in 1868 has been estimated at nearly 31 lb. for each individual.

The crops of sugar in Louisiana are very fluctuating, being apt to be injured by frost. Probably the average produce may not, as previously stated, exceed from 170,000 to 180,000 tons. The refining business has made rapid progress in the United States; so much so, that the produce of refined sugar has been estimated at about 170,000 tons.

It may, perhaps, be proper to state that these estimates, like others of the same kind, though nearly, are not to be considered as being entirely accurate; and the best of them always differ more or less from each other. Again, it does not follow that quantities entered for consumption in any one year are actually consumed in that period.

To decide this point we must know the stocks on hand at the beginning and end of the year, and these it is either impossible or very difficult to learn exactly.

*Use of Sugar in Distilleries and Breweries.*—In a former edition of this work we expressed ourselves on this subject as follows: 'The use of sugar in these establishments, though not absolutely prohibited, is at present placed under restrictions which are equivalent to a prohibition. There can, however, be no doubt that these restrictions should be abolished, and free leave given to the growers and importers of sugar and molasses, and, indeed, of everything else, to convert them to any purpose to which they may be applicable. This has hitherto been objected to, except in periods of scarcity, partly from a wish to promote the interests of the barley growers and maltsters in this country, and partly from the alleged risk of smuggling and loss to the revenue. But now that the policy, or rather impolicy, of protection has been renounced by the Legislature, and that foreign barley may be imported and employed in any way, under a nearly nominal duty, there is plainly no ground or pretence on which the agriculturists can object to the use of sugar; and as respects the risk of fraud and loss to the revenue, we do not think it amounts to much. In cases where sugar only is to be used in distilleries and breweries, the risk of fraud could hardly amount to anything; and in the cases in which it is partly used along with malt or raw grain, or both, it would be easy, seeing that the capacity of sugar to produce spirits and beer, as compared with malt and grain, is well known, to take such precautions as would prevent any amount of fraud worth talking about. But, however it may be carried into effect, it would seem to be indispensable that the distilleries and breweries, as well as every other legitimate channel of consumption carried on in the kingdom, should be open to all who raise or import sugar, or anything else, on their paying the customary rates of duty. This is the only way in which the interests of the consumers, which are identical with those of the public, can be effectually secured; and it is obvious that, to carry out the great principle of the freedom of industry, it is not merely necessary to permit the free importation of colonial and other products, but to allow them, after being imported, to be employed in any way their owners may think fit. Under this system justice will be done to all parties, and the public be supplied with the best and the cheapest articles.' And we are glad to have to state that this principle has since been fully carried into effect by the Acts 10 Vict. c. 3, 11 & 12 Vict. c. 100, 27 & 28 Vict. c. 18, and 30 Vict. c. 10, to which we beg to refer.

*Adulteration.*—Sugar is an article which is especially liable to adulteration; and its high price during many years, coupled with the high duty, gave a powerful stimulus to this nefarious practice. Perhaps we might not be far from the mark, were we to estimate the quantity of foreign matters intentionally mixed up with sugar, and sold as such in this country, previously to the late reduction of duties, at 10,000 or 12,000 tons a-year. Sago and potato flour are the articles which have been most extensively used for this purpose. When mixed with sugar they give it a whiter and finer appearance; and, unless the dose be overdone, increase its price about 4s. per cwt. It is extremely difficult to deal with an abuse of this sort. No doubt the fall in the price of sugar following the placing of the trade on a proper footing, and the reduction of the duty, have lessened the temptation to adulterate. But they

we must know the stocks on hand at the end of the year, and it is possible or very difficult to

**Distilleries and Breweries.**—In this work we expressed our object as follows: 'The use of distilleries, though not at present placed under restraint, is not equivalent to a prohibition, and we do not think that these should be abolished, and free leave be given to importers of sugar and molasses, and of everything else, to the purpose to which they may be applied. It has hitherto been objected that the use of distilleries is a source of secrecy, and that the interests of the barley growers in this country, and partly from the loss of the revenue, and partly from the policy, or rather impolicy, of the Legislature, should be renounced by the Legislature, and that barley may be imported and sold at a nearly nominal price, under a nearly nominal duty, and no ground or pretence on which the Government can object to the use of distilleries, or that the risk of fraud and loss to the public does not think it amounts to more than a mere sugar only is to be used in the manufacture of spirits, the risk of fraud could be avoided, and in the cases in which it is used along with malt or raw sugar, it could be easily, seeing that it is not so difficult to produce spirits and beer, as it is to produce wheat and grain, is well known, to be used as would prevent any amount of adulteration. But, however it may be effected, it would seem to be the distilleries and breweries, and the legitimate channel of commerce in the kingdom, should be free to import sugar, or anything else, at the customary rates of duty, and in which the interests of the public are identical with those of the country; and it is obvious that the great principle of the freedom of trade is merely necessary to permit of colonial articles at other products, and after being imported, to be sold at their own prices, and that justice will be done to all articles which can be supplied with the best articles.' And we are glad to see that this principle has since been adopted by the Acts 10 Vict. c. 5, 18, 27 & 28 Vict. c. 18, and 30 Vict. c. 5, which we beg to refer to.

There is an article which is liable to adulteration; and its high price, coupled with the high duty, is a stimulus to this nefarious trade, which we might not be far from estimating the quantity of foreign sugar mixed up with sugar, and sold in this country, previously to the late Act, at 10,000 or 12,000 tons a year. The articles most extensively used for this purpose are those which are mixed with sugar they give it a white appearance; and, unless the dose be its price about 4s. per cwt. it is difficult to deal with an abuse of this kind in the price of sugar, and to the trade on a proper education of the duty, have been found to adulterate. But they

have not wholly removed it, the materials employed to adulterate being decidedly cheaper than sugar, however supplied. In this, as in most cases of the sort, the best security against adulteration is to deal only with grocers of the highest character.

**Refining of Sugar for Home Consumption.**—Of late years the refining of British colonial sugar for exportation has wholly ceased. Indeed the tide has now turned the other way. In 1857, 11,896, and in 1867 38,576, tons foreign refined sugar, principally from Holland, France, and Belgium, were taken for our consumption, while we only exported 8,632 tons of British refined and candy sugar. But despite this circumstance, the refining of sugar for home use is extensively carried on, and has increased considerably since the reduction of the duties. At present (1868) there are upwards of 50 refining establishments in Great Britain, with a capital probably exceeding 1,500,000. It is supposed that these establishments will use in the course of the current year from 230,000 to 250,000 tons raw sugar, which will produce, exclusive of molasses and bastards, from about 180,000 to 200,000 tons refined sugar. A large portion of this produce consists of what is called 'crushed lumps,' a variety of refined sugar which is rapidly superseding the finer descriptions of East Indian sugar, and even of West Indian muscovades. Refined sugar is now used by very many families by whom it was formerly never tasted.

According to the mean of several estimates—

100 cwts. of sugar, double-refined for corresponding in quality to double refined	are equal to 129 cwts. raw sugar.	cwts.
100 cwts. of sugar single-refined	"	119
100 " bastards	"	85
100 " molasses	"	39

**Drawback or Bounty on the Exportation of Refined Sugar.**—It may be doubted whether the business of refining sugar for exportation has ever been productive of any material national advantage to us. It was long suspected—and the fact seems to have been sufficiently established—that the drawback formerly allowed on the exportation of refined sugar was greater than the duty charged on the raw sugar used in its manufacture; the excess being, in fact, a bounty paid to those engaged in the trade. Previously to 1826, the drawback on double-refined sugar was 4s. per cwt.; it was then reduced to 3s.; but there is reason to think that that was still considerably above the mark. The average price of sugar in bond in this country was, for several years, from 5s. to 6s. per cwt. above what sugar of the same quality brought on the Continent; a difference which, as we then exported sugar, could not have been maintained, had it not been for the bounty. The same conclusion was established by trials made at a sugar-house taken for the purpose by Government; and in consequence the drawback was reduced to what was supposed to be the fair equivalent of the duties paid on the raw sugar; a measure of the expediency of which no doubt can be entertained.

The existing bounties or drawbacks on the exportation of British refined sugar are as follows, viz.:

**Drawbacks allowed by the Act 30 Vict. c. 10 on Refined Sugar when Exported to Foreign Parts, or removed to the Isle of Man for Consumption therein, or Deposited in Customs' Warehouse for Delivery as Ships' Stores, or for the purpose of sweetening British Spirits in Bond.**

Upon refined sugar in loaf, complete and whole, or lumps duly refined, having been perfectly clarified and thoroughly dried in the stove, and being of a uniform whiteness throughout, and

Upon such sugar powdered, crushed, or broken in a warehouse approved by the Commissioners of Customs, such sugar having been there first inspected by the officers of customs in lumps or leaves, as if for immediate shipment, and then packed for exportation in the presence of such officers, and at the expense of the exporter, and upon cards and also upon sugar refined by the centrifugal or by any other process, and not in any way inferior to the export standard sample No. 1 approved by the lords of the Treasury	cwt. 12	0
Upon refined sugar unpowdered, crushed, or broken, and not in any way inferior to the export standard sample No. 2 approved by the lords of the Treasury, and which shall not contain more than five per cent. of moisture over and above what the same would contain if thoroughly dried in the stove	"	11 5
Upon other refined sugar unpowdered, being in lumps or pieces ground, powdered, or crushed	"	11 3
Not in any way inferior to the export standard sample No. 3 approved by the lords of the Treasury	"	10 6
Not in any way inferior to the export standard sample No. 4 approved by the lords of the Treasury	"	9 7
Inferior to the above last-mentioned standard sample	"	8 0

Most foreign countries have endeavoured to bolster up the refining business, not merely by excluding foreign refined sugars from their markets, but by granting the most lavish bounties on the exportation of sugar refined at home. In France, this sort of policy, if we may so call it, was carried so far, that out of a gross revenue of about 40,000,000 francs (1,570,000*l.*) paid into the treasury on account of the sugar duties in 1832, about 19,000,000 (750,000*l.*) were returned as drawback on the export of refined sugar. As the French Government could not afford to lose the sugar duties, which would very speedily have been swallowed up by the drawback, necessity compelled them to modify their system, by making the allowance to the exporter more nearly correspond with the duty. The refining of sugar has been carried on within the last few years to a very great extent in Holland; but here also the business has received an unnatural extension, by artificial encouragement.

Prussia, and most parts of Germany, to which we formerly exported large quantities of refined sugar, no longer admit it except at a high duty.

**BEET-ROOT SUGAR.**—The manufacture of sugar from beet-root is carried on to a very considerable extent in several parts of the Continent, particularly in France and the North of Germany. It began in France during the exclusion of colonial products in the reign of Napoleon, and received a severe check at the return of peace, by the admission of West Indian sugars at a reasonable duty. It is probable, indeed, that it would long since have been entirely extinguished, but for the additions made to the duties on colonial and foreign sugars in 1820 and 1822. After the last-mentioned epoch, however, the production of beet-root sugar began rapidly to increase; and such was its progress, that though, in 1828, its produce did not exceed 4,000,000 kilos, it amounted in 1838 to 39,199,408 kilos. But this extension of cultivation, instead of being of any advantage, entailed a heavy loss on the public, inasmuch as the beet-root growers sold their sugar, which paid no duty, at the same rate that the colonists sold theirs, which paid a large revenue to the treasury. It was not possible that such a system could be permanent. And the well-founded complaints of the colonists of the injustice of which they were the victims, enforced by the rapid decline of the revenue derived from sugar, which, indeed, was threatened with total extinction, occasioned the imposition, in 1838, of a duty of 16 fr. 50 cents, per 100 kilos. (about 6s. 9d. per cwt.) on beet-root sugar, which, in 1840, was increased to 27 fr. 50 cents. (about 11s. per cwt.). But even this last

increase left a differential duty (or bounty) of 20 fr. per 100 kilos. in favour of beet-root sugar, as compared with colonial raw sugar; so that, while the beet-root cultivators affirmed they should be ruined, the colonists vehemently complained of the preference that was given to them. It was, indeed, known, from the facility with which the beet-root growers had previously contrived to evade the duty, that its increase would not be so injurious to them as was supposed; but the manufacture sustained notwithstanding a severe check, and sundry plantations were abandoned.

But further and still more considerable changes have since been made in the conditions under which the culture of beet-root is carried on. In 1842 it was proposed, in order to get rid of the difficulties in which it had involved the country, to grub up the plantations, paying the planters 40,000,000 fr. (1,600,000*l.*) as an indemnity for their loss. And this was at the time considered by many as the best and most equitable mode of dealing with what was confessedly a very difficult matter. It was not, however, adopted; and next year it was resolved annually to raise the duty on beet-root sugar by 5 fr. per 100 kilos., till the duty on it should be equalised with that on colonial sugar. This new system came into operation on August 1, 1844; and in August 1848 the nominal equalisation of the duties was effected. It was very generally believed at the time that this measure would go far to annihilate the production of beet-root sugar; but such has not been the case. The falling off in the supplies of sugar from the French colonies which took place in the 5 or 6 years immediately posterior to 1848, when the slaves were emancipated, and the high differential duty on foreign sugars, were very favourable to the beet-root growers, and gave them, indeed, a modified monopoly of the home market. These, which were uncertain and evanescent advantages, disappeared with the increased production of sugar in the Isle of Réunion (Bourbon) and the diminution of the differential duties. Owing, however, to the very great improvements that had been effected in the interval in the production of beet-root sugar, it was not injuriously affected by these circumstances, and has continued not only to keep its ground in competition with colonial and foreign sugars, but to make a rapid increase. It is affected, of course, by variations in the seasons, in the price of corn, and other circumstances. But such was its progress, that in 1858 (certainly an unusually favourable year), the crop was estimated at 151,514,436 kilos., or about 150,000 tons; and in 1868 sufficient land was sown to expect a production of 300,000 tons. And besides France, the production of beet-root sugar is largely carried on, and is increasing in Belgium, which produces about 40,000 tons per annum, and in Germany and Russia. A table in the Report of Mr. Secretary of Legation Baillie, of December 1868, shows that the production of raw sugar in the Zollverein, in the 2 years from September 1 to August 31, 1866 and 1867, was 3,713,912 centners and 3,900,000 centners. See also Mr. Secretary of Legation Fenton's Report of June 1868, on the manufacture of beet-root sugar in the States of the Zollverein. Hence it would appear that what was long considered as a sort of exotic industry, introduced when colonial sugar was excluded from the Continent, and depending in great measure on custom-house regulations, will most probably become a well-established, leading, industrial pursuit. This is a very unprecedented result, and one which we certainly did not anticipate. There are very few instances in the history of industry, of any important business or employment, origi-

nating under such peculiar circumstances, being able to maintain its ground after they have ceased to exist. Whether, indeed, it be really worth the sacrifices that have been incurred in its establishment, may be fairly doubted. At all events, in this case they appear to have been sufficient to insure their object.

But, though the beet-root sugar of France and the Continent generally were loaded with the same duty as colonial sugar, and though its culture were notwithstanding extensively prosecuted, that would give no countenance to the opinion of those who contend that free labour is universally as effective in the production of sugar as slave or compulsory labour. The question which the Legislature and people of America had to consider, was not between the efficiency of free and slave labour in Europe, but between free and slave labour in the Intertropical regions of the New World. Admitting that the free labourers of France and Prussia raise sugar as cheaply as the slaves of Cuba and Brazil, does that afford any solid ground for concluding that the blacks of Louisiana and Texas, now that they are really free, will be equally successful in their competition with them? There is plainly no analogy between the cases. And our conviction is, as previously stated, that without compulsory labour of some sort or other, not a pound of sugar will eventually be raised either in Louisiana, or in our colonies or anywhere else in America.

Sugar raised in the United Kingdom is charged with the like duty that is laid on colonial sugar.

**MAPLE SUGAR.**—A species of maple (*Acer saccharinum*, Linn.) yields a considerable quantity of sugar. It grows plentifully in the United States and in Canada; and in some districts furnishes the inhabitants with more of the sugar they make use of. Though inferior in grain and strength to that which is produced from the cane, maple sugar granulates better than that of the beet-root, or any other vegetable, the cane excepted. It is produced from the sap, which is obtained by perforating the tree in the spring, to the depth of about 2 inches, and setting a vessel for its reception. The quantity afforded varies with the tree and the season. From 2 to 3 gallons may be about the daily average yield of a single tree, but some trees have yielded more than 20 gallons in a day, and others not more than a pint. The process of boiling the juice does not differ materially from what is followed with the cane juice in the West India. It is necessary that it should be boiled as soon after it is drawn from the tree as possible. If it be allowed to stand above 24 hours, it is apt to undergo the vinous and acetous fermentation, by which its saccharine quality is destroyed. (Bouchette's *British America*, vol. i. p. 371; *Timber Trees and Fruits, Library of Entertaining Knowledge*.)

The following is an extract and relative list of prices in January 1868 and 1869, from the Circular of Messrs. T. & H. Littledale & Co., of Liverpool, January 7, 1869:—

'Sugar.—The past year (1868) has been one of general disappointment to the importer and refiner alike. In the spring there was a rally of 1s. to 2s., but it was soon lost, large arrivals subsequently taking place in excess of general expectation, and chiefly from Cuba, where the crop turned out 75,000 tons larger than the previous year, being estimated at 670,000 tons, against 595,000 tons. The total import has been about 55,000 tons greater than in 1867, and the consumption, partly through an indifferent fruit season, 20,000 tons less. The stock in the four ports is 147,000 tons, against 123,000 last year, 178,000 in 1867, 189,000 in

of the middle and upper classes. There are several newspapers and other periodical publications.

Sydney is admirably adapted for the capital of a great trading colony. Port Jackson is one of the finest natural basins in the world. It stretches about 15 miles into the country, and has numerous creeks and bays; the anchorage is everywhere excellent, and ships are protected from every wind. The entrance to this fine bay is between two gigantic cliffs, not quite 2 miles apart. On the most southerly, in lat. 33° 51' 14" S., long. 151° 18' 15" E., a lighthouse, with a revolving light visible 21 miles off, was erected in 1817, the lantern of which is elevated 76 feet above the ground, and about 345 feet above the sea; and on the inner south head there is a fixed light visible for 14 miles. The bay is navigable for ships of any burden to the distance of 15 miles from its entrance, or 7 miles above Sydney, up what is called the Paramatta River. Ships come close up to the wharves and stores of the town, their cargoes being hoisted from the ship's hold into the warehouses. Sydney is consequently the emporium of all the settlements in this part of Australia, and has a very extensive trade.

Down to the discovery of the gold fields in 1851, wool was by far the most important product raised in the colony. The increase of cattle and sheep, but especially the latter, in Australia, has, in truth, been altogether extraordinary. Previously to the arrival of the English settlers in New South Wales in 1778, neither horse nor cow, sheep nor hog, had ever set foot on the continent. The stock they brought with them was limited in the extreme, consisting only of 7 horses, 7 head of cattle, 29 sheep, 19 goats, and 74 pigs. And

from this late and scanty stock, assisted by a few subsequent importations, have been derived all the vast numbers of sheep and other useful animals now to be found in the Australian continent. For a while the rate of increase was comparatively slow. But from 1810 down to the present time, the multiplication of sheep and other stock, especially the former, has been rapid beyond all precedent. This is shown by the following

Account of the Sheep's Wool Annually Imported from Australia into the United Kingdom since 1818.

Years	Quantity	Years	Quantity	Years	Quantity
	lb.		lb.		lb.
1818	78,525	1838	7,837,423	1858	47,076,010
1820	89,415	1840	10,128,774	1859	47,489,659
1825	325,993	1841	9,721,453	1860	49,142,706
1826	1,106,303	1842	12,399,080	1861	54,622,159
1827	512,738	1843	12,959,671	1862	49,009,655

1829	1,376,612	1845	17,590,712	1864	55,700,441
1830	1,967,279	1846	21,150,687	1865	59,166,329
1831	2,511,205	1847	21,865,270	1866	68,506,222
1832	2,377,057	1848	26,058,815	1867	71,759,092
1833	3,516,869	1849	30,034,567	1868	77,173,446
1834	5,558,091	1850	35,771,671	1869	99,037,459
1835	4,210,507	1851	59,048,224	1870	109,234,961
1836	4,996,615	1852	41,810,137	1871	115,772,091
1837	7,060,525	1853	45,127,301	1872	133,098,476

Down to 1851 the colony of New South Wales comprised the extensive province of Port Phillip, now Victoria. But the latter was then separated from the former, and formed into an independent State, with a governor and legislature of its own. And the district called Moreton, on the north, was separated from it in 1859, and formed into the independent colony of Queensland. [See also BRISBANE; MELBOURNE.]

We subjoin a

Table Illustrative of the Progress of the Colony from 1845 to 1866 inclusive.

Years	Population	Value of Exports (exclusive of specie)	Value of Imports	Value of Produce or Manufacture of the United Kingdom	Land in Cultivation	Value of Exports of Wool	Value of Exports of Tallow	Produce of Land Sales	Receipts from Licenses, and Duties and Quota
1845	181,556	1,922,389	985,561	612,912	158,237	612,705	90,479	11,101	29,111
1850	265,595	1,537,784	1,333,113	964,561	141,617	788,054	167,538	55,251	41,157
1856	296,823	5,150,800	5,420,971	3,475,359	185,015	1,503,750	137,402		
1866	431,112	5,162,615	8,867,071	2,917,577		4,326,105			

The value of the exports of tallow in 1865 amounted to 131,976*l*.

The revenue of the colony amounted in 1866 to 3,253,179*l*, and the expenditure to 3,012,571*l*.

N.B.—The returns of the population include

the late district of Port Phillip, now the colony of Victoria, down to the year 1850 inclusive, and that of Queensland down to 1856.

Trade of the United Kingdom with New South Wales.

The establishment of a mint at Sydney will account for the small amount of gold exported in 1855 and 1856.

The colony is naturally better suited for pasturage than for tillage, and, in consequence, considerable quantities of corn and rice are imported from Van Diemen's Land and other places. But we may remark, by the way, that the preference given to pasturage has been in no inconsiderable degree occasioned by the policy (if so we may designate a worthless compound of pedantry and quackery) that has been pursued in regard to the sale of waste lands in the colony. We have elsewhere shown that when the minimum price charged for these waste lands, 4 or 5 acres of which are required to depasture a single sheep, was fixed at no less than 20s. an acre (!), the purchase of land for agricultural purposes comparatively ceased; and it was taken

in large tracts for grazing by leasees, or squatters. In consequence the progress of cultivation, and the settlement of the colony, have been seriously interrupted by this system; while, instead of concentrating the population, as we were told it would do, it led to its all but indefinite dispersion. But a *felix-velocitas* policy of this sort cannot be long maintained. And when it has been abandoned, a fresh stimulus will be given to agriculture and emigration, and the prosperity of this and the other Australian colonies will be materially increased.

Considering the character of a large proportion of the population, one need not be surprised at the circumstance of drunkenness being a prevalent vice, and consequently that spirits and wines are very largely imported. The other great articles of importation are manufactured goods and apparel of all sorts, hardware, earthenware, saddlery, books and stationery, carriages &c., from England; tea from China; and sugar from the Mauritius and Calcutta.

The value of the imports into Sydney exceeded for a lengthened period the value of the exports; the excess of the former being, in fact, the amount of the remittances from this country on account of the convict establishment. But since the latter was suppressed, the value of the exports has been equal to that of the imports, and now greatly exceeds them. Occasionally there has been a great deal of overtrading at Sydney; and the revulsions consequent thereon have been quite as ruinous there as in England and elsewhere. There are several banks in the town, and a savings' bank.

*Population &c.*—The British settlements in New South Wales were originally intended to serve as penal establishments, to which convicts might be transported, and employed in public and private works; and were, till very lately, used for this purpose. The first vessel with convicts arrived at Botany Bay in January 1788; but it having been found to be quite unsuitable as a site for a colony, the establishment was removed to Port Jackson. Convicts of all sorts continued to be sent to the latter till 1839; but from that period down to 1843 none were sent, except those who had been confined in Pentonville and other penitentiaries. In the last-mentioned year the system entirely ceased; and from that period no convicts have been sent to Sydney. During the period that transportation continued in force, 54,583 convicts, of whom 47,092 were males and 7,491 females, were carried to Sydney. In 1846 the convicts of all classes in New South Wales amounted to 10,555, of whom 6,500 were liberated in 1848; and the residue had been reduced to 1,708 in December 1851. Convictism (to borrow a colonial phrase) has, therefore, terminated in New South Wales; but the taint it has imparted to the population will not be easily effaced.

The total population of the colony of New South Wales, ex Victoria, amounted, in 1866, to 431,412, of whom 239,820 were males. The progress of the colony has been much more rapid than might have been anticipated, considering the character and habits of the convicts annually landed upon its shores, the difficulties which the great distance from England interposes in the way of an immigration of voluntary settlers, and the inferiority of the soil. Owing to the circumstance of the great majority of the convicts and other emigrants being males, a great disproportion has always existed between the sexes in the colony, which has materially retarded its progress, and been, in other respects, productive of per-

nicious results. Government, however, availing itself of the assistance of benevolent individuals at home and in the colony, has within these few years materially lessened the disproportion referred to, by sending out considerable numbers of young unmarried females free of expense. Much, it was obvious, of the influence of this measure was to depend on the discrimination with which the female emigrants were selected; and various precautions were taken, by the organisation of committees, and otherwise, to exclude from amongst them those whose character was in any degree suspicious. It could not be expected that these precautions should be completely successful; and very conflicting accounts have been received as to the conduct of the females on their landing, and the influence of their immigration on the colony. But though the results of the scheme may, in some respects, have fallen short of the anticipations of its more sanguine promoters, there can be no manner of doubt that it has been, on the whole, decidedly advantageous; and that it has tended both to increase the population and to improve the morals of the colony.

Emigration to New South Wales, independently of the allurements of the gold fields, holds out several advantages to the industrious emigrant, which, again, are partially counterbalanced by some disadvantages. There has been at all times a pretty brisk demand for labour; wages, though not extravagant, have been high; provisions, except in years of drought, have been moderately cheap; and the climate is mild, moderately healthy, and suitable for European constitutions. The drawbacks are—the immense distance from Europe, and the consequent cost of the voyage; the general inferiority and exorbitant price of land, which will no doubt be shortly obviated; the frequent recurrence of droughts; and, perhaps, also, the taint of convictism, in a large portion of the population. The greater mildness and salubrity of the climate appears to be the principal recommendation in favour of emigrating to Australia rather than to Canada or the United States. Whether this be a sufficient counterpoise to the disadvantages attending it is a point which we do not presume to decide, but which deserves the serious consideration of intending emigrants. It seems to be the unanimous opinion of everyone acquainted with the colony, and entitled to be heard upon such a subject, that *'in every case, emigrants of every sort will find it for their interest to come out married.'*

The stimulus given to immigration by the discovery of gold has been less felt here than in Victoria; but it has, notwithstanding, been very powerful. Still, it is impossible, to form any conjecture in regard to its continuance, as that must in great measure depend on the future productiveness of the gold fields. But whether it continue about stationary, diminish or increase, it is plain that the demand of those engaged in the search for gold, for provisions and other articles of accommodation, cannot fail in the end to give a corresponding impulse to every branch of industry, and to re-establish that general equality, taking all things into account, which usually subsists between wages and profits in different departments. How prosperous soever the 'diggings' may be, the labourers drawn to them in the first instance from agriculture and other pursuits will be sure to be restored to the latter, or replaced by others.

*Moneys, Weights, and Measures.*—Accounts are kept in sterling money; the Sydney mint coining large quantities of sovereigns, which are now cur-

ts, and Measures.—Accounts are  
 money; the Sydney mint coin-  
 of sovereigns, which are now cur-

rent coin, and legal tender in the mother country,  
 as well as Australia, but Spanish dollars are  
 abundant. They pass current at 5s. each. The  
 weights and measures are the same as those of  
 England.

[COLONIES; TARIFFS; COLONIAL.]

SYRA, the ancient Syros, one of the islands of  
 the Greek Archipelago (part of the modern  
 kingdom of Greece), whose salubrity and fertility  
 have been celebrated by Homer (*Iliad*, book xv.  
 438 &c.), in the group called the  
 Northern Cyclades, 15 miles W. from the greater  
 Delos, its port, on the east side of the island, being  
 in lat. 37° 26' 30" N., long. 24° 57' E. It is from  
 9 to 10 miles in length, by about 5 in breadth.  
 Though rugged, it is carefully cultivated, and  
 produces garden stuffs, wine, olives, figs, cotton  
 &c., with a little barley. The population in 1830  
 was set down by Mr. Urquhart at 4,500; but in  
 1861 it had risen to 18,511.

It is indebted for this extraordinary increase of  
 population to the convenience and excellence of its  
 port and its central situation, which have made  
 it a considerable commercial entrepôt. Though  
 small, its harbour is accessible to line-of-battle  
 ships. The holding ground is good, and it has in  
 its centre about 10 fathoms water. Merchantmen  
 from 400 to 500 tons burden moor within about  
 100 yards of the wharves. Winds from the S.E.  
 round to E.N.E. throw in a heavy swell; but  
 the port is well protected from winds from all  
 other points. A lighthouse, with a revolving light,  
 visible 20 miles off, has been erected on Gaidaro  
 island, about 1½ mile S.E. from the port, and  
 there is a red fixed light on the East Mole. Most  
 part of the trade that formerly centred at Scio, is  
 now carried on here; and the island has not only  
 received numerous immigrants from Scio, but also  
 from many other parts of Greece. Great Britain  
 and most European Powers have consuls in Syra;  
 and it also is the principal seat of the Protestant  
 missionaries to the Levant. The town is on the  
 N. side of the harbour. The oldest portion occu-  
 pies the summit of a conical-shaped hill, probably  
 the site of the acropolis of the ancient city. (See  
 the sketch in Tournefort, *Voyage du Levant*, i. 321.)  
 But the new streets and houses, of which there  
 are many, come down to the water's edge. It has  
 an appearance of great bustle and animation. Its

copious spring of pure fresh water has been en-  
 gaged by Clarke. (*Travels*, vi. 153.) Pherecydes,  
 one of the most celebrated of the ancient Greek  
 philosophers, the disciple of Pittacus, and the  
 master of Pythagoras, was a native of this island.

For *Port Regulations, Quarantine, Tonnage*  
*Duty, Tariff &c.*, see PATRAS.

*Pilotage*.—There are no fixed dues for pilotage;  
 but when a vessel makes a signal for a pilot, the  
 harbour master sends his boat to pilot the vessel  
 in, for which service a fee of 5 Spanish dollars is  
 paid.

*Weights and Measures* same as at PATRAS.

A few miles to the east of Syra lies Delos.  
 This island, regarded in antiquity with peculiar  
 veneration from its being the birthplace of Apollo  
 and Diana, is no less celebrated in the com-  
 mercial than in the religious history of ancient  
 Greece. Its sacred character, by insuring its  
 immunity from hostile attacks, and its central  
 situation, made it a favourite mart for the pro-  
 ducts of the states of Greece, Asia Minor,  
 Phœnicia, Egypt &c. Religion, pleasure, and  
 trade had all their votaries at its festivals; which  
 were famous throughout the ancient world for  
 the splendour of the rites and processions, and the  
 magnitude of the business transacted. It were  
 too much to expect that Syra should ever attain  
 to equal importance, even as an entrepôt. But  
 as she enjoys most of those advantages of position  
 that contributed to render Delos one of the  
 principal emporiums of antiquity, it may be hoped,  
 now that there is a reasonable prospect of good  
 order and freedom being again established in  
 Greece, that she may also acquire some portion  
 of her celebrity. It may be worth while mentioning,  
 as strikingly evincing the mutability of human  
 affairs, that at present both the great and the  
 little Delos are uninhabited. And Tournefort  
 states, that the inhabitants of Mycone were, in  
 the early part of last century, in the habit of  
 holding the greater Delos, for the purposes of  
 pasturage, paying to the Grand Seigneur a rent of  
 20 crowns a-year for that famous island. (Tourne-  
 fort, *Voyage du Levant*, 4to. ed. tome i. pp. 290—  
 325. There is a good account of the religious  
 rites celebrated at Delos, though but a very  
 indifferent one of its commerce, in the *Travels of*  
*Anacharsis*.)

## T

TACAMAHAC. A resin obtained chiefly from  
 the *Fagrus ostiandra*; and formerly in use for  
 fumigation and plasters. There are two sorts,  
 the West and East Indian, the latter being, how-  
 ever, uncommon. It is of a light brown colour,  
 very brittle, and easily melted when heated.  
 When pure, it has an aromatic smell, between  
 that of lavender and musk; and dissolves im-  
 perfectly in alcohol, but completely in ether, water  
 having no action upon it. (Thomson's *Chemistry*;  
 Watt's *Dictionary of Chemistry*.)

TAGANROG. A city of European Russia, on  
 the north coast of the Sea of Azof, near the mouth  
 of the river Don, lat. 47° 12' 48" N., long. 38° 33'  
 E. Its population has been estimated at 24,304  
 in 1863, but Mr. Consul Carruthers, writing in June  
 1868, says, that without statistical information  
 there are no precise data to rely on. It has a naval  
 hospital, a lazaretto &c.; and there are annual  
 fairs in May, August, and November. Taganrog  
 is a place of considerable commercial importance.

It was intended by its illustrious founder, Peter  
 the Great, to replace Azof, the ancient emporium  
 of the Don, the port of which had become all but  
 inaccessible; and its whole consequence is de-  
 rived from this circumstance, or from its being  
 the entrepôt of the commerce of the countries  
 traversed by that great river. The largest  
 portion by far of the trade is carried on with  
 Constantinople, Smyrna, and other Turkish ports;  
 but a good deal is also carried on with the Italian  
 and other foreign ports; and there is an ex-  
 tensive coasting trade with Odessa and other  
 Russian ports. In 1868 the exports to foreign  
 countries comprised, among other articles, 1,632,541  
 quarters of wheat, 91,168 lb. tallow, 6,117,264 lb.  
 wool, 25,134 cwt. caviar, 206,622 quarters linned  
 &c. The highest price per quarter of the best  
 hard wheat in 1868 was 2*l.* 12*s.* 7*d.*, and the  
 lowest 2*l.* 3*s.* 7*d.*, both free on board.

Seeing that Taganrog was built to obviate the  
 difficulties that had to be encountered by vessels

entering the Don, through the shallowness of the water, it might have been supposed that care would be taken to place it in a position in which it should be, in as far as possible, free from this defect. This important consideration seems, however, to have been to a great degree overlooked. The Gulf of the Don is seldom navigable by vessels drawing more than from 10 to 11 feet water, and even these cannot approach within less than about 700 yards of the town. They are principally loaded by carts, drawn each by a single horse, the expenses being so very considerable that it costs from 120 to 150 copecks to ship a chetwert of wheat. Without altering the position of the town, these defects might, as was suggested in the last edition of this work, be obviated with but little difficulty, by constructing a wooden pier by which vessels in the roads might be sheltered, and from which they might be laden. However, Mr. Consul Carruthers, in his *Report* of January 19, 1869, intimates that at length a new mole is being constructed, and the municipality, under some extraordinary impulse, has also contracted for lighting the streets with gas, a branch bank has been established, and a railway to connect Taganrog with Kharkoff has just been commenced.

*Sea of Azof.*—Anyone who takes up a map of Russia in Europe will at once perceive the vast importance of this sea (the *Pelus Mæotis* of the ancients) as an outlet for the products of the most fertile provinces of the empire. At its N.E. extremity it receives the Don (an. *Tanusis*), which, with its navigable tributaries the Donetz, Medveditza &c., flows through an immense extent of fruitful territory. Peter the Great was fully sensible of the paramount importance of this channel of communication; and he not only, as stated above, founded Taganrog on the estuary of the Don, but joined the latter to the Wolga by means of a canal, uniting in this way the Caspian with the sea of Azof. It is singular, however, that the Russian Government, which has, in other respects, so sedulously followed up the plans of the great father of his country, would seem of late years rather to have discouraged the trade of the Sea of Azof. As evidence of this, we may mention that no efforts have been made to deepen the channel over the bar at the mouth of the Don, to remove the other obstructions to the easy navigation of the river, or to improve any of the ports on the sea; and though all vessels entering the sea are no longer obliged to perform a lengthened quarantine at Kertsch on the W. side of the Straits of Yenikalé, still the delays to shipping consequent on the defecation and vexatious arrangements as to pilotage, lighterage and quarantine, are loudly complained of. (Mr. Consul Barrow's *Report* of January 1, 1867, and February 10, 1868.) The Russian Government wished to make Kertsch a dépôt for the produce of the various ports on the Sea of Azof, which it was supposed would be con-

veyed to it in lighters. But experience has shown that this expectation is not destined to be realised; the charges attending the bringing of produce to the Straits of Yenikalé by means of lighters, and its transhipment, being so very heavy that more than  $\frac{2}{10}$  of the shipping that arrive at Kertsch proceed to load at Taganrog, Mariapol, and other ports on the sea. Kertsch has a population of about 20,000.

It is not surely too much to expect that the Russian Government will see the advantage of removing all obstructions to the navigation of one of the principal channels for the commerce of the empire; and thus to permit its subjects to avail themselves of those gigantic means of production which a less illiberal policy would enable them fully to command. It is plain that ships may load and unload at Taganrog with as little danger to the health of the contiguous provinces as at Kertsch; and such being the case, why should they not be permitted to sail direct for the former? Through the efforts of the British Consul in 1867, much of the extortion and injustice practised at the Quarantine and Customs Departments was suppressed.

The Sea of Azof is usually shut by frost for about 3 months in winter, and it is besides shallow, and in parts encumbered with sand banks. But it may, notwithstanding, be navigated by vessels of considerable burden with but little risk or difficulty. Its greatest depth in the middle is about 7 fathoms; but it shoals gradually to the sides, and at Taganrog there is only from 10 to 11 feet water. Its depth is, however, materially affected by the direction and strength of winds. The only entrance to this sea is by the Straits of Yenikalé, the *Bo-jorus Cimærius* of the ancients, a narrow and difficult passage, having in some places not more than 13 feet water. Owing to the great quantity of fresh water poured into the Sea of Azof, and its limited magnitude, its water is brackish merely. (Norie's *Sailing Directions for the Mediterranean and Black Seas*; &c.) Mr. Consul Barrow called attention in 1866 to the fact that the revolution of the Yenikalé light occupied 2' 14", and not 1 minute, as given out, but no doubt the defect has been remedied.

It is impossible to form any estimate of the future magnitude of the trade of this sea, were it placed under a more liberal policy, and reasonable facilities afforded for its extension. No doubt, however, it would be very great; it being the natural seat of the commerce of some of the most extensive and fertile countries of Eastern Europe. The subjoined returns show that even now it is of the first importance; and with a little encouragement, or with the mere absence of obstruction, it would no doubt rapidly increase. It may, indeed, be fully concluded that sooner or later Taganrog is destined to become one of the first commercial ports in the world, if not the very first.

N.B. The total value of the imports in 1868 was 541,000.

By far the largest portions of the wheat and tallow exported from ports on the Sea of Azof are shipped for England. (For an account of the imports from south Russia, see art. PETERSBURG.) In 1866 the ports on the Sea of Azof were visited by 1,821 British and foreign ships, of the aggregate burden of 303,718 tons, of which only 7,609 were Russian. Were the navigation of the Don improved, and facilities given to foreigners entering the sea, the exports might be largely increased, even with recent prices, which have been nearly the same as those of Odessa. The harvests in the south of Russia fluctuate very greatly. [Odessa.]

The imports into the Sea of Azof are but inconsiderable, principally consisting of tobacco, Greek wines, oils, dried fruits, and such like articles.

The Emperor Alexander, whose reign will always form a memorable and brilliant era in the history of Russia, expired at Taganrog on November 19, 1825. (For further particulars see Schmitzer, *La Russie*, p. 717; Hagemeister *On the Trade of the Black Sea*, p. 31 &c.; *Russian Official Accounts*; and *Reports* by the British Consuls at Taganrog and Odessa.)

*Money, Weights, and Measures*, same as those of Petersburg.

*Caspian Sea, Magnitude, Ports of &c.*—The Caspian Sea, or rather Lake (the *Mare Hyrcanum* of the ancients), extends lengthwise from north to south about 740 miles, varying in breadth from 112 to 275 miles. In some parts, particularly on the southern shores, it is so very deep that a line of 450 fathoms will not reach the bottom; whereas in the northern parts, and opposite to the mouths of the Volga, it is comparatively shallow; and owing to the frequent occurrence of shoals, it is not safely navigated by vessels drawing more than 10 or 12 feet water. Its level had been variously estimated by Olivier and Lowitz at from 64 to 53 feet below that of the Black Sea; but the observations of M. Humboldt made the difference of level between them no less than 300 feet. This, however, was supposed to involve some mistake; and its level has since been ascertained by an expedition fitted out by the Russian Government to

be 116 feet below the level of the Black Sea. The water of the Caspian is not salt, but brackish merely; it has no tides, but gales of wind raise a very heavy sea. It is extremely prolific of fish and seals. The value of the sturgeon caught in the Russian fisheries amounts to a very large sum. [STURGEON FISHERY.] They proceed in shoals up the rivers, where they are captured without the least apparent diminution of their numbers. The salmon is remarkably fine; and herrings are in such abundance, that, after a storm, the shores of the Persian provinces of Gilian and Mazandaran are nearly covered with them. (Kinneir's *Memoir of the Persian Empire*, p. 6; *Memoir on the Caspian Sea*, in Malte Brun's *Geography*; Humboldt, *Fragmens de Geologie &c.*)

Astrakhan is situated on an island of the Volga, more than 50 miles from the mouth of that river; and owing to the extensive command of internal navigation it possesses, it is a place of very considerable commercial importance. In 1863 the value of the imports into Astrakhan was 1,330,636 silver roubles, and of the exports 287,277 silver roubles. Baku, acquired by the Russians in 1801, is, however, the best port on the western side of the Caspian. It is situated on the southern shore of a peninsula that projects far into the sea, in lat. 40° 22' N., long. 51° 10' E. The harbour is spacious and convenient; and its central and advanced position gives it superior advantages as a trading station. Prodigious quantities of naphtha are procured in the vicinity of Baku. It is drawn from wells, some of which yield from 1,000 to 1,500 lb. a-day. It is used as a substitute for lamp oil; and when ignited, emits a clear light, with much smoke and a disagreeable smell. Large quantities are exported in skins to the Persian and Tartar ports on the south and east shores of the sea.

*Vessels*.—The largest class of vessels by which the Caspian Sea is navigated are called by the Russians *schuyts*, and belong wholly to Astrakhan and Baku; their burden varies from 90 to 150, and, in some instances, 200 tons. They are not built on any scientific principle, and are con-

structed of the worst materials, that is, of the timber of the barks that bring grain down the Wolga to Astrakhan. There are supposed to be, in all, about 100 sail of these vessels. There is a second class of vessels employed in the trade of the Caspian, called *razchives*. They carry from 70 to 140 tons, and sail better than the schuyts. Their number is estimated at about 50. Exclusive of the above, there are great numbers of small craft employed in the coasting trade, in the rivers, in the fisheries, and in acting as lighters to the schuyts. Steam boats are extensively employed on the Wolga; and they are now also found in most parts of the Caspian. The masters and crews of the vessels employed on this sea are, for the most part, as ignorant as can well be imagined. They are generally quite incapable of making an observation, or of keeping a reckoning; so that accidents frequently occur, that might be avoided by the most ordinary acquaintance with the principles of navigation. (These statements are made, partly upon official, and partly upon private authority: the latter may, however, be safely relied on.)

The trade of this great sea is entirely in the hands of the Russians; by whom it is carried on from the ports of Astrakhan and Baku, with the Persian ports of Astrabad, Balfoosh &c. on the south; and with the Tartar ports of Mangishlak, Balkan &c. on the east. It is very insignificant, compared with what it ought to be; the value of the total imports into Asiatic Russia having been 3,799,120*l.*, and that of the exports 2,163,256*l.* On the whole, however, a gradual improvement is taking place; and whatever objections may, on other grounds, be made to the encroachments of Russia in this quarter, there can be no manner of doubt, that, by introducing comparative security and good order into the countries under her authority, she has materially improved their condition, and accelerated their progress to a more advanced state.

**TALC.** This mineral occurs both crystallised and massive. It is soft, smooth, greasy to the feel, and may be split into fine plates or leaves, which are flexible, but not elastic. It has a greenish, whitish, or silver-like lustre. The leaves are transparent, and are used in many parts of India and China, as they were used in ancient Rome (Plin. *Hist. Nat. lib. xxxvi. c. 22*), in windows instead of glass. In Beugal, a seer of talc costs about 2 rupees, and will sometimes yield a dozen panes 12 inches by 9, or 10 by 10, according to the form of the mass, transparent enough to allow ordinary subjects to be seen at 20 or 30 yards' distance. It should be chosen of a beautiful pearl colour; but it has, in general, either a yellowish or faint blue tinge. Its pure translucent flakes are frequently used by the Indians for ornamenting the baubles employed in their ceremonies. Talc is employed in the composition of *rouge végétal*. The Romans prepared with it a beautiful blue, by combining it with the colouring fluid of particular kinds of testaceous animals. Talc is met with in Aberdeenshire, Perthshire, and Banffshire in Scotland; and in various parts of the Continent, where rocks of serpentine and porphyry occur. The talc brought from the Tyrollese mountains is called in commerce Venetian talc. Several varieties are found in India and Ceylon. (Thomson's *Chemistry*; Rees's *Cyclopædia*; Milburn's *Orient. Com.*; Ainslie's *Materia Indica*; Watt's *Chemical Dictionary*, ed. 1868.)

**TALLOW** (Fr. suif; Ger. talg; Ital. sevo, sego; Russ. сало, topenoc; Span. sebo). Animal fat melted and separated from the fibrous matter mixed with it. Its quality depends partly on the

animal from which it has been prepared, but more, perhaps, on the care taken in its purification. It is firm, brittle, and has a peculiar heavy odour. When pure, it is white, tasteless, and nearly insipid; but the tallow of commerce has usually a yellowish tinge; and is divided, according to the degree of its purity and consistence, into candle and soap tallow.

Tallow is an article of great importance. It is manufactured into candles and soap, and is extensively used in the dressing of leather, and in various processes of the arts. Besides our extensive supplies of native tallow, we annually import a very large quantity, principally from Russia, the River Plate, and the Australian colonies. M. Tegoborski estimated the average annual exports of tallow from Russia at 3,810,000 poods, of the value of 13,871,000 roubles; that is, taking the rouble at 3*s.* 2*d.*, 2,196,241*l.* sterling. (*Forces productives de la Russie*, i. 242.) And the total export from European Russia (ex Finland) in 1865 was 2,938,077 poods, valued at 11,752,308 silver roubles. Of this immense supply by far the largest portion is brought to England: the remainder being exported to Prussia, France, the Hanse Towns, Turkey &c.

We borrow from the work of Mr. Barrison on the Commerce of Petersburg the following details with respect to the tallow trade of that city:

Tallow is divided into different sorts; namely, white and yellow *candle tallow*, and common and Siberian *soap tallow*; although it is allowed that the same sort often differs in quality.

Tallow is brought to Petersburg from the interior; and the best soap tallow from Siberia, by various rivers, to the Lake Ladoga; and thence, by the canal of Schlussemburg, to the Neva.

An *ambare*, or warehouse, is appropriated to the reception of tallow, where, on its arrival, it is selected and assorted (*bracketed*). The casks are then marked with three circular stamps, which state the quality of the tallow, the period of selecting, and the name of the selector (*bracket*).

The casks in which white tallow is brought have a singular appearance; their form being conical, and their diameter at one end about 2*ft.* feet, and at the other only 1½ foot; the casks of yellow tallow are of the common shape. There are also others, denominated ½ casks.

To calculate the tare, the tallow is removed from a certain number of casks, which are weighed, and an average tare is thence deduced for the whole lot. A cask weighs 8*½*, 9, 10, or 11 per cent., but the average is generally about 10 per cent. of the entire weight of tallow and cask.

colour throughout. The white candle tallow, when good, is white, brittle, hard, dry, and clean. The best white tallow is brought from Woronesch. As for soap tallow, the more greasy and yellow it is, the better the quality. That from Siberia is the purest, and commonly fetches a higher price than the other sorts.

Formerly the oil and tallow warehouses were the same; and this occasioned great difficulties in shipping, because all vessels or lighters taking in tallow or oil were obliged to haul down to the *ambare* and wait in rotation for their cargoes. The consequence was, that when much business was doing, a vessel was often detained for several weeks at the *ambare* before she could get her cargo on board. Now the tallow and oil warehouses are separated, and every article has its own place. When a shipment of tallow is made, the agent is furnished by the selector (*bracker*) with a sample from each cask.

Captains, in order to obtain more freight, usually load some casks of tallow upon deck; but it is more for the interest of the owner to avoid this, if possible, because the tallow loses, through the

heat of the sun, considerably both in weight and quality.

One hundred and twenty poods of tallow, at gross weight, make a Petersburg last, and 63 poods an English ton.

Before the abolition of the duty tallow from foreign countries was charged with a duty of 1s. 6d. per cwt., while that from a British possession was charged with a duty of only 1d. per cwt. In a financial point of view, these duties were of little importance; but they were imposed on an illiberal principle, were justly offensive to other countries, and provoked them to retaliate.

The price of tallow fluctuated very much during the last European war, and during the Russian war. This was occasioned, principally, by the obstacles that were at different periods thrown in the way of supplies from Russia. The price of tallow is also affected by the state of the seasons. Some very extensive speculations have at various periods been attempted in tallow; but seldom, it is believed, with much advantage to the parties. Yellow candle tallow was worth, in the London market, in April 1869, from 46s. to 46s. 6d. per cwt. In 1867 we imported 707 cwt. of vegetable tallow.

tallow, when good, should be when broken, and of a fine yellow

TALLY TRADE. The name given to the system of dealing carried on in London and other large towns, by which shopkeepers furnish certain articles on credit to their customers, the latter agreeing to pay the stipulated price by certain weekly or monthly instalments.

In the metropolis there are about 60 or 70 tally-shops of note, and from 500 to 600 on a smaller scale. They are also spread over the country to a considerable extent, particularly in the manufacturing districts. The customers of the tally-shops are mostly women; consisting, principally, of the wives of labourers, mechanics, porters &c., servant girls, and females of loose character. Few only of the more respectable classes have been infatuated enough to resort to them. Drapery goods, wearing apparel, coals, household furniture, hardware &c. are furnished; and even funerals are performed; but few or no articles of food, except tea, are sold upon the tally plan.

We believe that this is the very worst mode in which credit is afforded. The facility which it gives of obtaining an article when wanted, and the notion so apt to be entertained that the weekly or monthly instalments may be paid without difficulty, make those who resort to the tally-shops overlook the exorbitant price, and usual bad quality, of the articles they obtain from them, and generate habits of improvidence that seldom fail to involve

the parties in irretrievable ruin. It is not going too far to say that nine-tenths of the articles supplied by tally-shops might be dispensed with. As already observed, women are the principal customers; and it is not easy to exaggerate the mischief that has been entailed on the families of many industrious labourers by their wives having got entangled with tally-shops. They buy goods without the knowledge of their husbands; and these are not unfrequently pawned, and the proceeds spent in gin. So destructive, indeed, is the operation of the system, that the establishment of a tally-shop in any district is almost certain to occasion an increase in the paupers belonging to it. Even the unmarried females who do not pay are demoralised and ruined by the system; because, if a woman who buys 3 gowns pays for the 2 first, and runs away from the payment of the last, she gains nothing in point of saving, while she becomes indifferent to an act of dishonesty. As tally debts can only be collected whilst a supply of goods is kept up, as soon as that supply is stopped the debtor either flies to another district, or awaits a summons. Where the wife has contracted the debt, she usually appears before the commissioners, who in general order the debt to be paid by weekly or monthly instalments. But it often occurs, from the wife not being able to keep up such payments, that execu-

tion issues, and the poor husband is frequently arrested and lodged in prison for a debt of the existence of which he was entirely ignorant. In this way numbers of the working classes are completely ruined; they lose their employment, and themselves and families are reduced to beggary. The intelligent keeper of Whitecross-street Prison (Mr. Barrett) stated that from 150 to 200 persons are annually imprisoned there for tally-shop debts, in sums of from 10s. to 5l., and that in one year 30 prisoners were at the suit of one tally-shop alone. Such imprisonments, however, are now much decreased, in consequence, as is believed, of the Court of Requests discouraging the tally system by ordering claims of this kind to be paid by extremely small instalments, and these at very distant intervals; and also in consequence of no composition being allowed by the charities for the relief of poor prisoners with reference to such debts.

It is estimated that in London alone about 850,000l., or nearly 1,000,000l. sterling, is annually returned in this trade. From his large profits (generally from 25 to 40 per cent.), it is obvious that in a few transactions the tally-shop keeper becomes independent of the existing debt; and with capital and good management, it is said that some have realised considerable sums of money in this business.

According to the custom of the trade, Mondays, Tuesdays, Wednesdays, and Thursdays are the days set apart for collecting money from the customers. The tally-man sends round his collector through the different 'walks,' and the amount of a collection which keeps the collector engaged from morning till night, even in a good tally concern, seldom exceeds 4l. a day. The payments are invariably made in shillings and sixpences—but the people seldom or never pay at the tally-shops; they rarely call there unless something else is wanted. The tally-shop keeper trusts one party on the recommendation of another; but guarantees are never required—certainly no written guarantees; and a verbal guarantee is, according to Lord Tenterden's Act, not binding. It is part of the collector's business, besides getting money, to beat up for fresh customers in his walk.

The greater number of the small tally concerns are kept by Scotchmen: it is a curious fact, that when a 'tally-walk' is to be sold, which is often the case, a Scotchman's walk will bring 15 per cent. more than an Englishman's. It is believed to contain a better description of customers.

From the causes above mentioned, assisted, perhaps, by the salutary influence of savings banks, this obnoxious trade is understood to be rather on the wane. It will never, however, be completely rooted out except by adopting the plan we have previously suggested [CREDIT] for placing all small debts beyond the pale of the law; and the fact that the adoption of this plan would have so beneficial a result is an additional and powerful recommendation in its favour. In cases where failures take place, the creditors of a tally-shop keeper are in general terrified into the acceptance of a small composition. The very sight of the tally ledgers, from 10 to 20 in number, containing debts from 5s. to 5l., dotted over the pages like a small pattern on a piece of printed cotton, and spread over every district in and round London, determines the creditors to accept of any offer, however small, rather than encounter the collection of such disreputable assets. In an affair of this kind, concluded a few years since, where the business was under the management of a respectable accountant in the

City, the whole debts due to the concern, good, bad, and doubtful, amounted to 8,700l., while the number of debtors was 7,600, giving an average of 22s. 10d. each.

N.B.—This article has been compiled wholly from private, but authentic, information.

**TAMARINDS** (Ger. tamarinden; Fr. tamarins; Ital. and Span. tamarindo; Arab. imbilic; Hind. tintiri), the preserved pulp of the *Tamarindus Indica*, a tree which grows in the East and West Indies, in Arabia, and Egypt. In the West Indies the pods or fruit, being gathered when ripe, and freed from the shelly fragments, are placed in layers in a cask, and boiling syrup poured over them till the cask be filled; the syrup pervades every part quite down to the bottom; and when cool, the cask is headed for sale. The East India tamarinds are darker coloured and drier, and are said to be preserved without sugar. When good, tamarinds are free from any degree of mustiness; the seeds are hard, flat, and clean; the strings tough and entire; and a clean knife thrust into them does not receive any coating of copper. They should be preserved in closely covered jars. (Thomson's *Dispensatory*; *British Pharmacopœia*, 1867.) The duty on tamarinds, after being greatly reduced in 1842, was wholly repealed in 1853. Our imports of tamarinds in 1867 amounted to 1,701,673 lb., valued at 17,781l.

**TAPIOCA**. A species of starch or white coarse powder derived from the roots of the bitter cassava (*Janipha manihot*), an American plant, raised all over South America, but principally in Brazil, where it is called *nandio* or *manioc*, and in Singapore and the Eastern Straits Settlements. The roots of the plant, being peeled, are subjected to pressure under water in a kind of bag made of rushes; the juice which is forced out by this process being a deadly poison, and employed as such by the Indians to poison their arrows. But the residuum, or farinaceous matter remaining after the expulsion of the juice, is perfectly wholesome, and makes excellent bread. Tapioca, as stated above, is prepared from this residuum, and being nutritious, and easy of digestion, is extensively used in the making of puddings. When dressed, it is not easily distinguished from sago. The imports amounted in 1867 to 25,782 cwt., whereof 15,660 cwt. were from Singapore and the Straits Settlements, and 5,066 cwt. from Brazil. Duty 4½d. per cwt.

**TAR** (Fr. goudron; Ger. theer; Ital. catrame; Pol. amola gesta; Russ. degot, smola shikajia; Swed. tjara). A thick, black, unctuous substance, chiefly obtained from the pine, and other turpentine trees, by burning them in a close smothering heat.

The tar of the north of Europe is very superior to that of the United States, and is an article of great commercial importance. The process followed in making it has been described as follows by Dr. Clarke:—"The inlets of the Gulf (Bothnia) everywhere appeared of the grandest character, surrounded by noble forests, whose tall trees, flourishing luxuriantly, covered the soil quite down to the water's edge. From the most southern parts of Westro-Bothnia to the northern extremity of the Gulf, the inhabitants are occupied in the manufacture of tar, proofs of which are visible in the whole extent of the coast. The process by which the tar is obtained is very simple; and as we often witnessed it, we shall now describe it, from a tar-work we halted to inspect upon the spot. The situation most favourable to the process is in a forest near to a marsh or bog; because the roots of the fir, from which tar is principally extracted, are always most

ts due to the concern, got  
mounted to 8,700L, while the

north of Europe is very superior  
United States, and is an article of  
importance. The process follow-  
it has been described as follows:  
The inlets of the Gulf (Bothnia)  
are of the grandest character.  
noble forests, whose tall trees,  
riantly, covered the soil quite  
water's edge. From the north  
Westro-Bothnia to the northern  
Gulf, the inhabitants are occu-  
pied with the manufacture of tar, proofs of which  
the whole extent of the coast. The  
the tar is obtained is very  
often witnessed it, we shall  
from a tar-work we halted to  
spot. The situation most favour-  
able is in a forest near to a marsh  
the roots of the fir, from which  
is extracted, are always most

productive in such places. A conical cavity is  
then made in the ground (generally in the side of  
a bank or sloping hill); and the roots of the fir,  
together with logs and billets of the same, being  
neatly trussed in a stack of the same conical  
shape, are let into this cavity. The whole is then  
covered with turf, to prevent the volatile parts  
from being dissipated, which by means of a heavy  
wooden mallet, and a wooden stamper, worked  
separately by two men, is beaten down and ren-  
dered as firm as possible above the wood. The stack  
of billets is then kindled, and a slow combustion  
of the fir takes place, without flame, as in making  
charcoal. During this combustion the tar ex-  
udes; and a cast iron pan being at the bottom of  
the funnel, with a spout which projects through  
the side of the bank, barrels are placed beneath  
this spout to collect the fluid as it comes away.  
As fast as the barrels are filled, they are bunged  
and ready for immediate exportation. From this  
description it will be evident that the mode of  
obtaining tar is by a kind of distillation *per de-  
scensum*; the turpentine, melted by fire, mixing  
with the sap and juices of the fir, while the wood  
itself, becoming charred, is converted into char-  
coal. The most curious part of the story is, that  
this simple method of extracting tar is precisely  
that which is described by Theophrastus and  
Dioscorides; and there is not the smallest differ-  
ence between a tar-work in the forests of Westro-  
Bothnia and those of ancient Greece. The Greeks  
made stacks of pine; and having covered them  
with turf, they were suffered to burn in the same  
smothered manner; while the tar, melting, fell to  
the bottom of the stack, and ran out by a small  
channel cut for the purpose.

Tar was charged, previously to 1844, on being  
admitted to consumption, with a duty of 15s. per  
barrel; but this duty being repealed in the  
course of that year, it has since been admitted  
duty free. It is principally brought from Russia.  
Thus of 155,372 barrels, valued at 116,949L, im-  
ported in 1867, 143,814 were supplied by Russia,  
N.B. The last contains 12 barrels, and each barrel  
3½ gallons.

TARE. An abatement or deduction made from  
the weight of a parcel of goods on account of the  
weight of the chest, cask, bag &c. in which they  
are contained. Tare is distinguished into *real*  
*tare*, *customary tare*, and *average tare*. The first  
is the actual weight of the package; the second,  
its supposed weight, according to the practice  
among merchants; and the third is the medium  
tare, deduced from weighing a few packages, and  
taking it as a standard for the whole. In Am-  
sterdam, and some other commercial cities, tares  
are generally fixed by custom; but in this coun-  
try, the prevailing practice, as to all goods that  
can be unpacked without injury, both at the  
Custom-house and among merchants, is to ascer-  
tain the real tare. Sometimes, however, the  
buyer and seller make a particular agreement  
about it. We have, for the most part, specified  
the different tares allowed upon particular com-  
modities, in the descriptions given of them in this  
work. (For the tares at AMSTERDAM, BORDEAUX,  
&c., see these articles; see also ALLOWANCES.)

TARE, VETCH, or FITCH. A plant (*Vicia*  
*sativa*, Linn.) that has been cultivated in this  
country from time immemorial, principally for  
its stem and leaves, which are used in the feeding  
of sheep, horses, and cattle, but partly also for  
its seed. Horses are said to thrive better upon  
tares than upon clover and rye grass; and cows  
that are fed upon them to give most milk. The  
seed is principally used in the feeding of pigeons  
and other poultry. The imports in 1866 amounted

to 15,911 qrs. from Denmark, Prussia, the Hanse  
Towns, and France.

TARIFF. A table, alphabetically arranged,  
specifying the various duties, drawbacks, boun-  
ties &c. charged and allowed on the importation  
and exportation of articles of foreign and domestic  
produce.

I. TARIFF, BRITISH.  
II. TARIFFS, COLONIAL.  
III. TARIFFS, FOREIGN.

I. BRITISH TARIFF.

The first two columns of the subjoined Table  
contain an account of the duties existing on  
January 1, 1869, on the various articles charged  
with duties on being imported for consumption  
into the United Kingdom, distinguishing between  
the duties when the articles come from foreign  
countries and from colonial possessions.

Those who compare the following tariff with  
the tariffs in the copies of this work issued pre-  
viously to 1842 will be forcibly struck with the  
vast difference between them. Notwithstanding  
the improvements effected by Mr. Huskisson, the  
tariff continued down to the epoch now referred  
to, on a most objectionable footing. Hundreds of  
articles were loaded with duties which, while  
they brought little revenue into the public  
treasury, opposed formidable obstacles to the  
extension of commerce; a host of other articles,  
including live cattle and fresh provisions, were  
wholly prohibited; high duties were laid on  
various articles of consumption, and on others  
that were necessary to the prosecution of some of  
our principal manufactures; and some most im-  
portant articles, including corn, sugar, and timber,  
were burdened with duties imposed not so much  
for the sake of revenue as of protection. But the  
change in these respects since 1842 has been  
greater than any one, however sanguine, could  
have anticipated. Then Sir Robert Peel began  
that course of commercial reform which will,  
for ever, distinguish his administration; and  
such were the energy, skill, and success with  
which that great minister prosecuted his plans,  
that in the brief space of 4 years he obviated,  
with but little sacrifice of revenue, almost all  
the defects alluded to above, and effected a  
vast and most salutary change in our commercial  
policy.

Sir Robert Peel's commercial reforms were  
principally embodied in the Acts 5 & 6 Vict. c.  
47, 8 Vict. c. 12, 9 & 10 Vict. c. 22, and 9 & 10  
Vict. c. 23. The first of these Acts permitted  
cattle, sheep, hogs, beef, salmon, and other  
articles that had previously been prohibited, to  
be imported under reasonable duties; the second,  
or the 8 Vict. c. 12, repealed the duties on about  
420 different articles; and though many of these  
were of comparatively trifling importance, the  
list comprised others of a very different class,  
such, for example, as ashes, barilla, bark, flax  
and tow, cotton wool, hemp, hides, indigo,  
madder; palm, olive, and train oil; sago, salt-  
petre, raw silk, all sorts of skins and furs, straw  
for plating, all sorts of fancy woods, with a host  
of others; the third of the above-mentioned  
statutes, or the 9 & 10 Vict. c. 22, is the famous  
Act for the modification and repeal of the corn  
laws; and the fourth and last, the 9 & 10 Vict.  
c. 23, is the Tariff Act of 1846, which entirely  
repealed the duties on cattle, sheep, hogs, beef,  
bacon, and other leading products; at the same  
time that it reduced the duties on silks, butter,  
cheese, and nearly 100 other articles.

Sir Robert Peel also reduced the duty on

\* The Chancellor of the Exchequer this year, 1869, proposes to abolish the duties marked thus \*.

muscovado sugar from a British possession, from 25s. 2d. to 14s. per cwt., at the same time that he made a very great reduction in the duty on certain descriptions of foreign sugar. And Lord John Russell subsequently followed up the policy of his predecessor in this respect, by making an end of the distinction between free and slave grown sugars; and providing for the gradual equalisation of the duties on sugars, without regard to their origin.

Independent of the powerful influence which the repeal and reduction of the duties on so many important articles has had on the well-being and industry of the people, it must always be borne in mind that owing to the reciprocity which is of the essence of all commercial transactions, it is impossible to increase the importation of foreign articles, without at the same time proportionally increasing the exportation of the native products with which the former must be paid. It is, therefore, no easy matter to estimate the future influence of such extensive changes on the trade and prosperity of the United Kingdom. It has already been, and there can be no doubt that it will continue to be, very great. And beside contributing to improve our manufactures, it can hardly fail to deepen and enlarge the existing channels of commercial intercourse, and gradually to open others with which we may now, perhaps, be wholly unacquainted.

Sir Robert Peel left but little for others to do in the way of commercial reform, and that little has since been in great measure accomplished. The duty on tea was the only very objectionable one in the amended tariff bequeathed to the country by Sir Robert Peel; and he had merely deferred to a more convenient opportunity his determination to place it on a more reasonable and equitable footing. He did not, unhappily, live to effect this object; but it has since been effected by others. The reduction of the tea duties formed a striking feature in the budget proposed by Mr.

Disraeli in 1852, and after the rejection of the latter, the project was introduced into the budget of Mr. Gladstone, and was passed into a law.

But, among its other bad consequences, the war with Russia unfortunately interfered to prevent this reduction being carried out so soon as it otherwise would have been; and made the retention, and, in some instances, even the increase of customs duties, not of the most unobjectionable description, a matter not of choice but of necessity. However, in the interval between the peace with Russia and the present time, a host of trifling articles have disappeared from our tariff, and the duties on the rest have been in many cases materially reduced, so that tobacco is now (1869) the only decidedly over-taxed article in our tariff; though, except in the check it would give to smuggling and adulteration, the reduction of the duty on it is of secondary importance.

We have excluded from the following table numerous articles which are now (April 1869) duty free; and we have annexed to the table of existing duties two additional columns; the first exhibiting the amount of the customs duties in 1819, as fixed by the Act 59 Geo. III. c. 52; and the second, their amount in 1787, as fixed by Mr. Pitt's Consolidation Act, the 27 Geo. III. c. 13. The reader has, therefore, before him, and may compare, the present customs duties with the duties on the same articles as they existed after the termination of the last European war, and of the American war. It must, however, be carefully borne in mind, that this table does not fully represent the customs duties as they existed in 1787 and 1819. It exhibits those duties only which were charged at the epochs in question on the articles now (April 1869) subject to customs duties; whereas the tariff embraced in 1787 and 1819 more than 500 articles not included in the present tariff. No table of this sort is to be met with in any other publication, unless it be purloined from

Wares, and Merchandise  
British Possessions; and  
from Foreign Parts.

.., and to reduce those marked thus 1.

this. It was furnished in its more extended form for a former edition of this work by the late Mr. J. D. Hume, of the Board of Trade.

The duties in the preceding table have been imposed by various statutes.

The rules and regulations to be followed in regard to the importation and exportation of goods are embodied in the Customs Consolidation Act of 1853, and subsequent Acts; and will be found in this work under the head IMPORTATION AND EXPORTATION. But it may be useful to subjoin the following clause in regard to the importation of duty-free goods, viz.:-

**Particulars of Entry.**—The importer of any goods not subject to duties of customs, or his agent, shall deliver to the collector a bill of entry of such goods in the same manner and form and containing the same particulars as are required on the entry of dutiable goods, so far as the same is practicable, which entry, so far as regards the goods, shall be a transcript of the report, and shall therein describe such goods according to the terms upon which such goods are free of duty, and the value of such goods as shall have been previously chargeable with duty at value; and such bill of entry, when signed by the collector, shall be transmitted to the proper officer, and be his warrant for the delivery of the goods mentioned therein; and the importer, owner, or consignee of such goods, or his agent, shall within 14 days after the entry and landing thereof, deliver to the collector, or other proper officer of customs a full and true account of the goods so landed; provided, that at Liverpool, and with the sanction of the Commissioners of Customs at any other port where the docks, quays, and wharfs shall in like manner be wholly or principally under the control and management of one and the same corporate body, the owner, master, or consignee of the importing ship, or his agent, shall sign and leave with the collector of the customs, within 14 days next after the final discharge of such goods, a full and accurate list thereof, stating the quantities

and distinguishing the weights and contents by measurement of such goods, if any, comprised therein, as shall be chargeable by weight or by measurement for the freight payable thereon, and the names of the consignees (according to the bills of lading), or the names of the persons actually paying freight for the same; and on failure to leave such list, such owner, master, consignee, or agent shall forfeit the sum of 20*l.* (Sec. 60.)

**Inland Revenue (Excise) Duties in the United Kingdom, January 1, 1869.**

Chicory, or any other vegetable matter applicable to the uses of chicory or ruffles, grown in the United Kingdom, raw or kiln-dried	cwt.	£ s. d.

4		0 8 0
Sugar used by any brewer of beer for sale, in the brewing or making of beer		0 3 6
Molasses		0 3 6

\* These articles are subject to an additional duty of 5 per cent.

The excise or inland duties are repaid, or, as it is termed, drawn back, on the goods being exported. The drawback on the malt used in brewing is computed at the rate of 5*s.* the barrel of 36 imperial gallons.

**Duties repealed.**—We subjoin a list of the articles the duties on which were repealed in 1815, 1816, 1833, 1860, and down to 1868, by the Acts 8 Vict. c. 12, 9 & 10 Vict. c. 23, 16 & 17 Vict. c. 106, and 23 & 24 Vict. c. 110 &c. &c.

Agates or cornellians, set or not set	fowling-pieces, or guns of any other sort not enumerated, and pistols	Books, of editions printed prior to 1815, bound or unbound
Alumum	Art. Works of	Borax, refined
Alkazobilla seed	Albee, pearl and jet	Borax or glass, unrefined
Alkali	soy, seed, and wood	Bottles of glass, earth, and stone, empty
Alkanet root	unenumerated	Brazils
Almonds, bitter, sweet, &c.	Asphaltum or Bitum. in Judæicum	brass
Jordan	Balsam, Canada	Braz wood
Aloes	capivi	Bran and pollard
Almo	Peru	Brass, manufactures of, not otherwise enumerated
Aluminium	Riga	branded
Amber, rough	holm	powder of
manufactured, except beads	of Gilead, and unenumerated	old, fit only to be remanufactured
Ambergris	Balsam	wire
Amboina wood	capivi	Brazil wood
Ammunition, shot, large and small, lead iron	Riga	Brazillets wood
rockets and other combustibles, for purposes of war, not enumerated	holm	Brics or clinkers
Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	of Gilead, and unenumerated	Dutch
Archives	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	other sorts
Angelica, not rindled	Basil	Brimstone, refined in rolls
Animals, living; viz.:	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	in flour
asses	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	not refined
goats	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Britles, rough, or in any way sorted
hills	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Broads of gold or silver
oxen and bulks	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Bronze, all works of art
cows	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	manufactures of, or of metal branded or lacquered
calves	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	powder
horses, mares, geldings, colts, foals	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Brooms and brushes of all sorts
mules	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Burashes
sheep	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Buttons and foreign coin of gold or silver
horns	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Butter
swine and hogs	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Buttons and studs
pigs, sucking	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Cabinet ware
Annatto, roll or flag	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Cables, not being iron cables, tarred or not tarred, old and new
Antimony, ore of crude	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	iron
regulus of	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Carnes, not set
Apples, raw	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Caromille flowers
dried	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Campfire, refined and unrefined
Aquaticis	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Canwood
Argol	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Candles
Aristolochia	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	spermaceti
Arms, viz.:	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	stearine
swords, cutlasses, matchets, bayonets, gun-barrels, gunlocks, cannon, and mortars of iron, not mounted or accompanied with carriages	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	tallow
cannon and mortars of brass, not mounted or accompanied with carriages	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	wax
cannon and mortars, mounted or accompanied with carriages, and other fire arms, viz.:	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Candlewick
muskets, rifles, carbines,	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Candela alba
Boracic acid	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	Canes, bamboo
Boracic acid	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	reed
Boracic acid	Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes	rattans, not ground or sticks, unenumerated

## Leather manufactures, viz.:

boot backs  
boot fronts  
gloves of leather, viz.—  
habit mitts  
habit gloves  
men's gloves  
women's gloves or mitts  
any articles made of leather, or any  
manufacture whereof leather is the  
most valuable part, not otherwise enu-  
merated or described

Leaves of roses  
Lecithes  
Lentils  
Lignum vitæ  
Limes  
Linen; viz. :  
cambrics and lawns, commonly called  
French lawns, plain  
bordered handkerchiefs  
damask  
diamond diaper  
sails of all sorts  
lawns of any sort, not French  
says  
cambric handkerchief, hemmed, or hem-  
stitched, not trimmed  
plain linen or diaper, whether chequered  
or striped with dye yarn or not, and  
manufactures of linen, or of linen  
mixed with cotton or with wool, not  
particularly enumerated, or otherwise  
charged with duty, not being articles  
wholly or in part made up.

Liquorice root :  
paste  
juice  
powder

Litharge  
Live creatures illustrative of natural history  
Logwood  
Losh biles  
Lucifers of wood, the cubic foot of external  
packings, measured internally  
Maccaroni and vermicelli  
Mace  
Madrier  
Madrier root  
Magna græcia ware  
Mahogany  
Manganese, ore of  
Manna  
Manures, unenumerated  
Manuscripts  
Maps and charts, or parts thereof, plain or  
coloured  
Maple wood  
Mats and matting  
Mattresses  
Meat, salted or fresh, not otherwise described,  
or preserved in any other way than salted  
Medals of any sort  
Medullar  
Mercury, prepurged  
Metal, bell  
leaf (not gold) of all kinds  
Mill boards  
Minerals and fossils, unenumerated  
Moles of rock or wood  
Morphia and its salts  
Moss, lichen islandicus  
other than rock or Iceland moss  
rock, for dyers' use  
Mother-of-pearl shells  
Musical  
Musical instruments :  
musical boxes, small, not exceeding 1 in.  
in length  
large  
ventures or extra accompaniments  
pianofortes, horizontal grand  
upright or square  
harmoniums or setaphones  
accordions, commonly called Chinese  
other sorts, including flutinas, and com-  
mon German concertinas  
brass instruments, all sorts  
not otherwise enumerated or described

Musk  
Mustard flour  
mixed or manufactured (except flour)

Myrrhain  
Myrrh  
Naphtha  
New Zealand wood  
Nicaragua wood  
Nickel, arseniate of, in lumps or powder  
being in an unrefined state  
metallic, and oxide of, refined  
ore of  
Nitre, cubic  
Nitrogen  
wild, in the shell  
or other species or admixtures thereof,  
ground  
Nuts :  
kernels of walnuts, and of peach stones,  
and of nuts or kernels thereof, unenu-  
merated, commonly used for expressing  
oil therefrom  
cocos nuts  
Pistachio  
small nuts  
walnuts  
nuts and kernels, unenumerated  
Nux vomica  
Oakum  
Ochre  
Oil, animal

Oil, castor  
cocos nut  
olive  
lard  
palm  
parau  
rock  
resin  
train, blubber, spermaceti oil, or lard  
matter  
hemmed  
linseed  
rapeseed  
walnut  
or spirit of turpentine  
seed, unenumerated  
of almonds  
bays  
chemical, essential, or perfumed  
of cloves  
Oil cloth for table covers  
Oil seed rape  
Olibanum  
Olive wood  
Olives  
Onions  
Opera glasses, single  
double, and all marine and race glasses  
not being telescopes  
Opium  
Orange flower water  
Oranges and lemons  
peel of  
Orefal  
Ore, unenumerated  
Orpiment  
Orris root  
Oryzæ  
Painters' colours, unenumerated, manu-  
factured or unmanufactured  
Palmetto thatch  
Palmetto thatch manufactures  
Paper :  
brown, made of old rope or cordage only,  
without separating or extracting the  
pitch or tar therefrom, and without any  
mixture of other materials therewith  
printed, painted, or stained paper hang-  
ings, or flock paper  
waste, or paper of any other sort not par-  
ticularly enumerated or described, not  
otherwise charged with duty  
gilt, stained, coloured, embossed, and all  
fancy kinds, not being paper hangings  
Parchment  
Partridge wood  
Pasteboard  
Pearls  
Pears, raw  
dried  
Pecolts of date and other sorts  
Pens  
Pepper of all sorts  
Percussion caps  
Perfumery, not otherwise enumerated  
Petroleum  
Powder, manufacturer's, or not otherwise enu-  
merated  
Phosphorus  
Pickles preserved in vinegar  
and vegetables preserved in salt  
Pictures  
Pimento  
Pink root  
Pitch  
Birgumly  
Plantains  
Plants, shrubs, and trees alive  
Plaster of Paris  
Plate, hatted as bullion  
wires, gilt or plated  
Platina, and ore of platina  
Plating, of chips, not being of greater value  
than 6d. per piece of 60 yards  
or other manufactures of straw, chip,  
or other materials to be used in, or proper  
for, making or ornamenting hats or  
bonnets, not otherwise enumerated or  
charged with duty  
cordnet, single and twist of straw, or of  
other materials  
willow squares  
Plumbago  
Pollard  
Pomatum  
Pungent  
peel of  
Pork, fresh  
salted, not hams  
Potash  
Potatoes  
Pots, melting, for goldsmiths  
of stone  
Poultry, game, and rabbits, alive or dead  
Precious stones  
Prints and drawings, plain or coloured  
admitted under treaties of international  
copyright  
or and of the option of the importer, single  
bound  
Puddings and sausages  
Purple wood  
Pyrites  
Quassa  
Quicksilver  
Quills, goose  
swan  
Quinines  
Quinine

2. That, in lieu of the duties of customs now chargeable on beer and ale, as denominated in the tariff, on importation into Great Britain or Ireland, the following duties shall be charged, viz. :—

Beer and ale, viz. :—

Mum, the barrel of 36 gallons	£ s. d.
Spruce, the barrel of 36 gallons	1 1 0

Of other sorts, viz. :—

Beer, the worts of which were before fermentation of a specific gravity not exceeding 1,065°, the barrel of 36 gallons	0 8 0
Exceeding 1,065°, and not exceeding 1,090°, the barrel of 36 gallons	0 11 0
Exceeding 1,090°, the barrel of 36 gallons	0 16 0

**Grant of Income Tax.**—3. That, towards raising the supply granted to her Majesty, there shall be charged, collected, and paid for one year, commencing on April 6, 1869, for and in respect of all property, profits, and gains mentioned or described as chargeable in the Act passed in the sixteenth and seventeenth years of her Majesty's reign, c. 34, for granting to her Majesty duties on profit arising from property, professions, trades, and offices, the following rates and duties (that is to say) :—

For every 20s. of the annual value or amount of all such property, profits, and gains (except those chargeable under Schedule (B) of the said Act), the rate or duty of 6d.

And for and in respect of the occupation of lands, tenements, hereditaments, and heritages chargeable under Schedule (B) of the said Act, for every 20s. of the annual value thereof, in England, the rate or duty of 3d., and in Scotland and Ireland respectively, the rate or duty of 2½d.

Subject to the provisions contained in sec. 3 of the Act 26 Viet. c. 22 for the exemption of persons whose whole income from every source is under 100l. a-year, and relief of those whose income is under 200l. a-year.

**Repeal of Assessed Taxes.**—4. That the duties of assessed taxes now payable in Great Britain shall cease to be assessed in respect of male servants, carriages, horses, mares or geldings, mules, hair powder, and armorial bearings employed, kept, used, or worn respectively after April 5, 1869, in England, and after May 24, 1869, in Scotland, and on persons using or exercising the trade and business of a horse dealer after such days respectively.

**Repeal of Excise Locomotion Duties.**—5. That, on January 1, 1870, the following duties of excise shall cease to be payable (that is to say) :—

Upon licenses to let horses for hire in Great Britain.

Upon licenses to let to hire horses for the purpose of travelling post by the mile, or from stage to stage in Ireland.

Upon licenses to keep, use, and let to hire hackney carriages, within the limits of the metropolitan police district and the city of London, and also the weekly duties payable in respect of such hackney carriages.

Upon licenses to keep, use, and employ stage carriages in Great Britain, and also the mileage duty payable in respect of such stage carriages.

**Grant of Excise Duties on Male Servants, Carriages, Horses, Mules, and Armorial Bearings, and on Horse Dealers.**—6. That towards raising the supply granted to her Majesty, there shall be granted, charged, levied, and paid on and after January 1, 1870, in and throughout Great Britain the following duties of excise upon licenses to be taken out annually by the persons who shall employ any male servant, or who shall keep any carriage, or horse or mule, or who shall wear or use any armorial bearings, or who shall exercise or carry on the trade of a horse dealer.

**Male Servants.**

For every male servant employed either wholly or partially in any of the following capacities, viz. :—maitre d'hôtel, house steward, master of the horse, groom of the chambers, valet de chambre, butler, under butler, clerk of the kitchen, confectioner, cook, house porter, footman, page, waiter, coachman, groom, postillion, stable boy or helper in the stables, gardener, under gardener, park keeper, game keeper or game wacher, huntman and whipper-in, or in any capacity involving the duties of any of the above descriptions of servants by whatever style the person acting in such capacity may be called

**Carriages.**

For every carriage drawn by a horse or mule, or by horses or mules (except a wagon, cart, or other vehicle used solely for the conveyance of any goods or burden in the course of trade or husbandry, and whereon the Christian name and surname, and place of abode or place of business of the owner, shall be visibly and legibly painted).  
If such carriage shall have 4 or more wheels, and shall be of the weight of 3 cwt. or upwards

If such carriage shall have less than 4 wheels, or having 4 or more wheels, shall be of less weight than 3 cwt.

**Horses and Mules.**

For every horse or mule (including a horse or pony of any sex or description or age, but not including a foal, filly, or foxy, or mule, which shall never have been used for any purpose of draught or riding)

**Armorial Bearings.**

For armorial bearings (including any armorial bearings, crest, or ensign, by whatever name the same shall be called).  
If such armorial bearings shall be painted, marked, or affixed on or to any carriage  
If such armorial bearings shall be otherwise worn or used

**Horse Dealers.**

Every horse dealer in Great Britain

**Repeal of the Percentage Duty on Fire Insurances.**—7. That, on June 25, 1869, the stamp duty at the rate of 1s. 6d. per cent. per annum, now payable in respect of insurances against loss of damage by fire only, shall cease to be payable.

**Repeal of Excise Duties on Tea Licenses.**—8. That, from July 5, 1869, the duties of excise now payable upon licenses to be taken out by persons trading in or selling coffee, tea, cocoa nuts, chocolate, or pepper, shall cease to be payable.  
For Tariff of the Isle of Man, see MAN, ISLE OF.

**II. TARIFFS, COLONIAL.**  
See also ADELAIDE, CAPE TOWN, MELBOURNE, TASMANIA &c.

Statements showing the alterations on colonial tariffs are laid before Parliament periodically.  
For Indian Tariff, see CALCUTTA.

III. TARIFFS, FOREIGN.

The more important of these will be found, in more or less detail, under the following heads, viz. *BATAVIA*, *NEW YORK*, *PETERSBURG*, and under *TREASURY*, see sub-heads, *Austria*, *Belgium*, *China*, *France*, *Morocco*, *Siam*.

But these tariffs, like the colonial, are subject to constant change, as may be seen from the papers on the subject laid before Parliament from time to time, as well as by the Board of Trade notices which appear in almost every number of the *London Gazette*. The most important that has appeared in the *Gazette*, between April 1 and 12, 1869, is the following, as to the increase of duties on exports from Cuba:—

	In Spanish Ships	In other Ships
Sugar, per box	dol. etc. 0 75	dol. etc. 0 87½
Muscovado sugar, in hogsheads, per cwt. of 25 lb.	0 4	0 5
Raw tobacco, per quintal, 100 lb.	1 0	1 7½
Molasses, per hogshead of 120 gal.	0 50	0 50
Rum, per cask of 30 gallons	1 0	1 0

TARTAR. [ARGAL.]

TASMANIA or VAN DIEMEN'S LAND. A large island belonging to Great Britain, forming part of Australia, lying between 41° 20' and 43° 40' S. lat., and 141° 40' and 148° 20' W. long. It contains 26,215 square miles. (See the *Merchant's Chart* prefixed to this work.)

This land was discovered by the Dutch navigator Tasman in 1642, and was named in honour of Anthony Van Diemen, at that time governor-general of the Dutch possessions in the East Indies; but it is now usually called Tasmania, from its discoverer. Previously to 1798 it was supposed to form part of New Holland, but it was then ascertained to be an island. It was taken possession of by the British in 1803; and in 1804 Hobart Town, the capital, was founded.

The surface is generally hilly and mountainous; but, though none of the land be of the first quality, there are several moderately fertile plains, and a good deal of the hilly ground is susceptible of being cultivated. On the whole, however, it is not supposed that more than about a third part of the entire surface of the island can be considered arable; but about a third more may be advantageously used as sheep pasture. As compared with New Holland, it is well watered. The climate, though variable, is, generally speaking, good, and suitable for European constitutions; and it is not exposed to the tremendous droughts that occasion so much mischief in New South Wales. Wheat is raised in considerable quantities; though wool is at present the staple produce of the colony.

Van Diemen's Land, like New South Wales, was originally intended to serve as a penal colony, and it received between 1823 and 1850 no fewer than 58,243 convicts. It has also received, especially of late years, large numbers of free settlers.

In 1867 the total population of the island amounted to 98,454.

For some considerable time great dissatisfaction was felt by the colonists at the continued importation of convicts; and previously to 1850 very vigorous measures were taken to effect its suppression. It was finally abandoned in 1853. In truth, after the discovery of the gold fields in the adjoining continent, it could no longer be continued. The convicts landed in Van Diemen's Land very speedily escaped to Victoria or New South Wales; where a large proportion of them recommenced the same career which had led to their ejection from their mother country. A nuisance of this sort could not be tolerated. And however our criminal population may be disposed of, it is no longer to be permitted to contaminate and brutalise the Australian continent.

Hobart Town or Hobarton, as it is usually termed, is situated in the southern part of the island, on the west side of the river Derwent, near its junction with Storm Bay, lat. (Port Mulgrave) 42° 53' 5" S., long. 147° 21' 5" E. The water is deep, and the anchorage good. A jetty has been constructed, accessible to the largest ships. The situation appears to have been very well chosen, and the town has been judiciously laid out. In 1862 Hobarton contained 19,449 inhabitants. The houses are supposed to be worth, at an average, 50*l.* a-year. There are several printing establishments in the town, and various newspapers, some of them very well conducted. There are also a Book Society, a Mechanics' Institute, and several respectable schools and academies. The Van Diemen's Land Banking Company, the Australasian Bank, the Union Bank, the Commercial Bank &c., have offices in Hobarton. They are joint-stock companies. A lighthouse, with a fixed light 70 feet in height, has been erected on Cape Direction, on a small island about 6 miles S. from Hobarton.

Launceston, the second town in the island, is situated in the northern part, at the head of the navigable river Tamar, which falls into Port Dalrymple. Its population amounted in 1862 to 10,359. It has a considerable trade with Sydney and Hobarton, and with England.

*Trade of Van Diemen's Land.*—In 1867, 643 vessels, of 107,903 tons, entered the ports of Tasmania. Haberdashery, apparel, cotton and linen goods, hardware, malt liquor, tea, sugar, wine &c., form the principal articles of import.

Here, as in New South Wales, wool forms by far the most important article of export; next to it are flour and oats, live stock, timber, sperm oil, potatoes, mimosa bark, and various less important articles. The usual excess of the imports over the exports is accounted for by the remittances to defray the cost of the convict establishment.

We subjoin accounts of the principal articles exported from, and imported into, the two chief ports of Tasmania in 1864, 1865, and 1866.

Account of the Quantities and Values of the Principal Articles Exported from Hobart Town and Launceston in each of the Years 1864, 1865, and 1866.

Of the imports, about  $\frac{3}{4}$  are from the United Kingdom, and more than  $\frac{1}{2}$  of the residue from India and other British possessions. About  $\frac{1}{3}$  of the exports are destined for the United Kingdom, and the rest for our colonies and possessions.

In 1867 the value of the total imports into the United Kingdom from Tasmania was 406,430*l.*, and that of the total exports from the United Kingdom to Tasmania 223,923*l.*, of which 216,850*l.* represented British produce and manufactures.

Number and Tonnage of Vessels Entered and Cleared, with Cargoes and in Ballast, at each of the Two Chief Ports of Tasmania in 1866.

The discovery of the gold fields in Victoria and New South Wales had an instantaneous and powerful effect on Tasmania. All sorts of industrious undertakings were paralysed. The emigration from the colony was sudden and excessive; and many farmers were all but totally deserted by their labourers. But, though exposed for a while to great difficulties, a revulsion soon began to take effect in favour of the Tasmanian colonists. An unlimited market, at greatly advanced prices, was opened in the adjoining continent for their grain, potatoes, timber, and other products. Hence

many of the better class of labourers again returned to the colony, some with considerable sums of money. And the emigration had the effect of ridding the island of the worst portion of the convicts, who were found carrying on their depredations at the 'diggings,' on the roads, and in the towns of Victoria and New South Wales. (See the valuable work of Westgarth, entitled *Victoria, its Gold Mines &c.*, cap. vi.) The emigration, however, has had a marked effect on the imports and exports of the colony, as will be seen from the foregoing as well as the following table.

Statement of the Declared Value of Imports into, and Exports from, Tasmania, and the Rate per Head of Population, for each of Ten Years ending with 1866.

Years	Imports	Exports	Population	Rate per Head of					
				Imports		Exports			
	£	£		£	s.	d.	£	s.	d.

*Tariff.*—The Legislature of Van Diemen's Land, after advising with the other Australian colonies, passed an Act, which came into operation in February 1853, simplifying and reducing the tariff. It proceeds on the principle of imposing duties on a few articles in extensive demand, and more especially on those belonging to the class of stimulants, and exempting the others. Hence ardent spirits have attracted the marked attention of the Tasmanian financiers, for the scale of duties is as follows, viz.:—

	£	s.	d.	p.	d.
Brandy, per gal.	..	..	..	12	0
Hollands, rum, gin, and all other spirits, per gal.	..	..	..	12	0
Wine, in wood	..	..	..	2	0
Bottle, per doz.	..	..	..	4	0 and 8

Tobacco, per lb.	..	..	..	..	..
Sugar, raw, per cwt.	..	..	..	..	..
Tea, per lb.	..	..	..	..	..
Coffee, per lb.	..	..	..	..	..
Malt liquor, in wood, per gal.	..	..	..	..	..
per doz.	..	..	..	..	..
Dried fruits, per lb.	..	..	..	..	..

If the pilot does not board the vessel outside the middle ground at the Heads at George Town, or the weather not permitting his going outside, if he be not ready to show the channel by keeping his boat in the fair way until the ship can be boarded, he shall forfeit half the pilotage inwards.

For every number of inches below 6, no charge is to be made; for 1/2 a foot and upwards, 1 foot is to be charged.

Colonial vessels are exempted from the payment of pilotage, unless the master shall make the signal for a pilot and accept his service.

These details have been partly derived from the *Statistics of the Colony*, published at Hobart Town; and partly from Mr. Westgarth's book, and different *Parliamentary Papers*.

TATTA or TATTAL. A town in the territory of Sinde, situated about 60 miles in a direct line from the sea, at a short distance from the western bank of the river Indus, in lat. 24° 41' N., long. 68° E. Population uncertain, probably about 8,000. The streets are narrow and dirty; but the houses, though built of mud, chopped straw, and timber, are superior to the low huts seen in the adjoining towns and villages.

Trade.—Being situated a little above the part where the Indus divides into the two great branches by which its waters are poured into the Indian Ocean, it might be supposed that Tatta would be a place of great trade; but, owing to the unwholesomeness of the climate, the barbarism of the tribes on its banks, and other causes, its commerce has never corresponded with what might have been anticipated, looking at its position on the map. It had probably attained the acmé of its prosperity in the beginning of the 16th century. In 1555, the Portuguese, by way, as they stated, of avenging the treachery of the king of Sinde, infamous massacred 8,000 of the inhabitants, and burned the town. (*Conquêtes des Portugais*, tome iv. p. 183.) It is probable that Tatta never fully recovered from this dreadful blow; but Mr. Hamilton mentions that in the 17th century it was extensive and populous, possessing much commerce, with manufactures of silk, wool, and cabinet ware. The decayed state in which we now find it, has been a consequence of the misgovernment and rapacity of its late rulers, the Ameers of Sinde, under whose sway it fell more than 50 years before it became, in 1844, British territory.

In 1635 the English established a factory at Tatta, in the view of facilitating the disposal of woollens and other goods in the countries traversed by the Indus; and the building occupied by the factory, though far from magnificent, was recently, if it be not still, the best, not in Tatta only, but in the whole country of Sinde.

The chief exports are rice, shawls from Cashmere, opium from Malwah, hides, ghee, cotton, goats' wool, carpets, drugs &c. Patchock, an article largely consumed in China, is a peculiar export of Sinde. The imports comprise a variety of articles, but the quantities are trifling; they consist principally of spices, dye stuffs, hardware, tin, iron &c., broad cloths, English cottons, silks &c. But at present the trade is quite inconsiderable; and no one could believe, a priori, that the natural emporium of so great a river as the Indus, traversing many extensive countries, would cut so insignificant a figure in the trading world. It may be said to be well nigh superseded by Kurrahee, which now boasts railway communication with Hyderabad and the Indus, and telegraphic communication with Aden.

Navigation and Trade of the Indus.—The navigation of this magnificent river by the fleet of Alexander the Great has conferred on it a classical celebrity not to be matched by any other river of the East. Its magnitude, too, is worthy of its fame. It may be navigated by that bottomed boats as far as Attock, and its tributary stream the Ravee is navigable to Lahore, both places being above 1,000 miles from the sea. But, unfortunately, its navigation is extremely difficult, and it may be doubted whether it will ever realise any considerable portion of the advantages which have of late years been anticipated from its being opened. The mouths of the river are ill-defined, shallow, and infested with movable sand-banks, while the violence of the bore, or tide, makes their entrance at all times a matter of difficulty for vessels of a small draught of water suitable to their navigation, and during the period of the western monsoon they are all but impracticable. Whatever other changes may have taken place in the river, the tides at its mouth would seem to have been nearly the same in antiquity as at present. Their violence created the greatest alarm in the fleet of Alexander; and occasioned, indeed, the loss of several vessels. (Arrian, lib. vi. c. 19.) This, no doubt, is the reason that for centuries past the navigation from and to the sea through the delta of the Indus has been almost wholly abandoned; and that all products brought down the river and destined for exportation by sea are conveyed from Tatta overland to Kurrahee, a seaport a little to the north of the most northerly mouth of the river, about 60 miles in a direct line from Tatta; and that all those coming from parts beyond sea and destined for countries on the Indus are conveyed from Kurrahee to Tatta by the same route, or by the railway to Hyderabad already referred to.

Even after it has been entered, the navigation of the Indus is peculiarly difficult, partly from the strength of the current during the period of the inundation, and partly from shallows, and the sudden and constant shifting of the channel: what was a navigable passage one day is not unfrequently quite unnavigable a day or two after. The *dummers*, or native craft, by which the river is navigated, though of very small burden, frequently get aground.

If the Indus should ever become a considerable commercial highway, it will, most probably, be brought about by the intervention of suitable steamers; and it seems to be the opinion of the best judges, that, provided the steamers employed be flat bottomed, and do not draw more than 28 or 30 inches water, they might, with proper precautions, be navigated from the sea for nearly 1,000 miles inland. But exclusive of the physical obstacles to the navigation of the river, the backward state of the country through which it flows,

and the poverty and barbarism of the inhabitants, are formidable obstacles to its becoming of much importance as a commercial highway. The inhabitants along its banks have little taste for foreign commodities; and even if they had, they have few products suitable for export to exchange for them. No doubt, should regular government, industry, and civilisation be introduced into the Punjab, Candah, and the contiguous countries, the case might be very different, and the trade of the Indus might become of very considerable importance. But this, if it be ever effected, must require a lengthened period to bring it about; so that those who look for any material addition being speedily made to our trade, or to that of India, by the opening of the Indus, will, there is too much reason to think, be entirely disappointed. (See, for further particulars, the art. 'Indus' in the *Geographical Dictionary*, and the authorities there referred to; see also Captain Postans' work on Sind; and especially the memoir in the appendix (p. 361) of Captain Carless, *On the Navigation of the Indus*.)

Dr. Faist, the very well-informed editor of the *Bombay Times*, in his work on the British expedition into Afghanistan, made the following observations on the trade of the Indus:—

'The glowing descriptions of Burnes appear to have given a very exaggerated idea of the value of the internal traffic of the countries beyond the Indus. It was forgotten that where there was no industry, no manufactures or mineral wealth, no sea-coast or rivers to permit exportation, there could be little or nothing to give in exchange for imports; and that the wants of a population purely nomadic must at all times be simple and singularly few. The whole of our commerce with Persia has never exceeded 2,000,000*l.* sterling a-year, rarely above 1,000,000*l.*; the total of our trade with Afghanistan certainly never exceeded 1,000,000*l.* annually, and has very rarely amounted to more than the half of 1,000,000*l.* Besides this, the Indus in reality was never closed save by its own dangerous entrances and shallow depth of water. Lord Ellenborough has opened the Indus as far as Mithen Kote; and the Sutlej, in continuation of this, to the Markanda, where it ceases to be navigable for the smallest craft. Yet the gross value of the British goods consumed by the countries adjoining does not at present amount to a quarter of 1,000,000*l.* sterling, and will not in all likelihood be doubled for 10 years to come; the expense of maintaining troops betwixt Kurrachee and Bukkur, both stations included, exceeding 600,000*l.* a-year; with a less force it would be unwise to think of keeping these stations at all. The great line of traffic was not along but across the Indus, by the Delhi frontier, or parallel to it at a distance of 100 miles, by Sonmence and Kelat. The countries beyond the Indus, besides, have always been open to the free admission of every variety of foreign imports on paying a moderate fixed duty. The chief obstruction in reaching these is irremediable by treaty; and arises from the attacks of the plundering tribes in the passes, which cannot be restrained save by the payment of a black mail or subsidy.'

The delta of the Indus has little in common with the delta of the Nile, except its shape. Not a fourth part of it is cultivated, and its few inhabitants principally lead a pastoral life. It is overgrown with tamarisks and other wild shrubs; and though intersected by the numerous mouths of the river, its surface is dry and arid, and it is in a great degree destitute of fresh water. [KURRACHEE.]

### Weights and Measures same as at Calcutta.

#### DESCRIPTION OF THE TEA PLANT.—TEA TRADE OF CHINA.

*Description of the Plant.*—Places where it is cultivated.—The tea plant ordinarily grows to the height of from 3 to 6 feet, and has a general resemblance to the myrtle, as the latter is seen in congenial situations in the southern countries of Europe. It is a polyandrous plant, of the natural order *Camellifera*, and has a white blossom, with yellow style and anthers, not unlike those of a small dog-rose. The stem is bushy, with numerous branches, and very leafy. The leaves are alternate, on short, thick, channelled footstalks, evergreen, of a longish elliptic form, with a blunt, notched point, and serrated except at the base. These leaves are the valuable part of the plant. The *Camellias*, particularly the *Camellia Sasanqua*, of the same natural family as the tea tree, and very closely resembling it, are the only plants liable to be confounded with it by a careful observer. The leaves of the particular *camellia* just named are, indeed, often used in some parts of China as a substitute for those of the tea tree.

The effects of tea on the human frame are those of a very mild narcotic; and, like those of many other narcotics taken in small quantities—even of opium itself—they are exhilarating. The green varieties of the plant possess this quality in a higher degree than the black; and a stronger infusion of the former will, in most constitutions, produce considerable excitement and wakefulness. Of all narcotics, however, tea is the least pernicious; if, indeed, it be so in any degree, which we very much doubt.

The tea shrub may be described as a very hardy evergreen, growing readily in the open air, from the equator to the 45th degree of latitude. For the last 60 years it has been reared in this country, without difficulty, in greenhouses; and thriv-

name as at Calcutta.

excitement and wakefulness,  
ever, tea is the least permit-  
so in any degree, which is

be described as a very hardy  
readily in the open air, from  
5th degree of latitude. For  
has been reared in this coun-  
y, in greenhouses; and thir-

ing plants of it are to be seen in the gardens of  
Java, Singapore, Malacca, and Penang; all with-  
in 6 degrees of the equator. The climate most  
congenial to it, however, seems to be that between  
the 25th and 23rd degrees of latitude, judging  
from the success of its cultivation in China. For  
the general purposes of commerce, the growth of  
good tea is confined to China; and is there re-  
stricted to 5 provinces, or rather parts of pro-  
vinces, viz. Fokien and Canton; but more particu-  
larly the first, for black tea; and Kiang-nan,  
Kiang-si, and Che-kiang, but chiefly the first of  
these, for green. The tea districts all lie between  
the latitudes just mentioned, and the 115th and  
122nd degrees of East longitude. However, al-  
most every province of China produces more or  
less tea, but generally of an inferior quality, and  
for local consumption only; or when of a superior  
quality, like some of the fine wines of France,  
losing its flavour when exported. The plant is  
also extensively cultivated in Japan, Tonquin,  
and Cochin-China; in India, and in some of the  
mountainous parts of Ava; the people of which  
country use it largely as a kind of *pickle preserved*  
*in oil*.

In 1835-6 the East India Company tried as  
an experiment the cultivation of tea in the North-  
west Provinces, and so successfully, that in 1853  
2250 acres were under cultivation; the chief pro-  
duct being bohea. But it is calculated that  
British India comprises wellnigh 1,000,000 acres  
suited for tea culture.

Botanically considered, the tea tree is a single  
species; the green and black, with all the diver-  
sities of each, being mere varieties, like the varie-  
ties of the grape, produced by difference of cli-  
mate, soil, locality, age of the crop when taken,  
and modes of preparation for the market. Con-  
sidered as an object of agricultural produce, the  
tea plant bears a close resemblance to the vine.  
In the husbandry of China it may be said to  
take the same place which the vine occupies in  
the southern countries of Europe. Like the latter,  
its growth is chiefly confined to hilly tracts, not  
suited to the growth of corn. The soils capable of  
producing the finest kinds are within given dis-  
tricts limited, and partial. Skill and care, both  
in husbandry and preparation, are quite as neces-  
sary to the production of good tea as to that of  
good wine.

The best wine is produced only in particular  
latitudes, as is the best tea; although, perhaps,  
the latter is not restricted to an equal degree.  
Only the most civilised nations of Europe have  
succeeded in producing good wines, which is  
also the case in the East with tea; for the agricul-  
tural and manufacturing skill and industry of the  
Chinese are there unquestionably pre-eminent.  
These circumstances deserve to be attended to in  
estimating the difficulties which must be encoun-  
tered in any attempt to propagate the tea plant  
in colonial or other possessions. These difficulties  
are obviously very great; and, perhaps, all but  
insuperable. Most of the attempts hitherto made  
to raise it in foreign countries were not, indeed,  
of a sort from which much was to be expected.  
Considerable efforts, however, have been made by  
the Dutch Government of Java to produce tea  
on the hills of that island; and having the assist-  
ance of Chinese cultivators from Fokien, who  
form a considerable part of the emigrants to  
Java, a degree of success has attended them  
beyond what might have been expected in so  
warm a climate. The Brazilians have made  
similar efforts; having also, with the assistance  
of Chinese labourers, attempted to propagate the  
tea shrub near Rio de Janeiro; and a small quan-

tity of tolerably good tea has been produced.  
But owing to the high price of labour in America,  
and the quantity required in the cultivation and  
manipulation of tea, there is no probability, even  
were the soil suitable to the plant, that its culture  
can be profitably carried on in that country.

It may, perhaps, succeed in Assam, where its  
culture is now being attempted; for labour is  
there comparatively cheap, and the hilly and  
table lands are said to bear a close resemblance  
to those of the tea districts of China; but we  
are not sanguine in our expectations as to the  
result.

In 1860 about 4,000 acres in Assam were  
devoted to the growth of tea, but that produced  
was said to be not so suitable for use separately  
or in its pure state as for mixing with other teas  
of less strength and character.

*Species of Tea.*—*Manner in which they are*  
*manufactured.*—The black teas usually exported  
by Europeans from Canton are as follows, begin-  
ning with the lowest qualities: Bohan, Congon,  
Suehchong, and Pekoe. The green teas are Twankay,  
Hyson skin, young Hyson, Imperial, and  
Gimpowder. All the black teas exported (with  
the exception of a part of the bohan, grown  
in Wopien, a district of Canton) are grown in  
Fokien—a hilly, maritime, populous, and indus-  
trious province, bordering to the north-east on  
Canton. Owing to the peculiar nature of the  
Chinese laws as to inheritance, and probably,  
also, in some degree, to the despotic genius of  
the Government, landed property is much sub-  
divided throughout the empire; so that tea is  
generally grown in gardens or plantations of no  
great extent. The plant comes to maturity and  
yields a crop in from 2 to 3 years. The leaves  
are picked by the cultivator's family, and imme-  
diately conveyed to market; where a class of  
persons who make it their particular business  
purchase and collect them in quantities, and  
manufacture them in part; that is, expose them  
to be dried under a shed. A second class of per-  
sons, commonly known in the Canton market as  
'the tea merchants,' repair to the districts where  
the tea is produced and purchase it in its half-  
prepared state from the first class, and complete  
the manufacture by garbling the different quali-  
ties; in which operation, women and children  
are chiefly employed. A final drying is then  
given, and the tea packed in chests, and divided,  
according to quality, into parcels of from 100 to  
600 chests each. These parcels are stamped with  
the name of the district, grower, or manufacturer,  
exactly as is practised with the wines of Bor-  
deaux and Burgundy, the indigo of Bengal, and  
many other commodities; and, from this circum-  
stance, get the name of *chops*, the Chinese term  
for a seal or signet. Some of the leaf-buds of  
the finest black tea plants are picked early in  
the spring, before they expand. These consti-  
tute pekoe, or black tea of the highest quality;  
sometimes called 'white-blossom' tea, from there  
being intermixed with it, to give it a higher per-  
fume, a few blossoms of a species of olive (*Olea*  
*fragrans*), a native of China. A second crop is  
taken from the same plants in the beginning of  
May, a third about the middle of June, and a  
fourth in August; which last, consisting of large  
and old leaves, is of very inferior flavour and  
value. The younger the leaf, the more highly  
flavoured, and consequently the more valuable, is  
the tea. With some of the congous and sou-  
chongs is occasionally mixed a little pekoe, to  
enhance their flavour; and hence the distinction,  
among the London tea dealers, of these sorts of  
tea into the ordinary kinds and those of 'Pekoe

flavour.' Bohea, or the lowest black tea, is partly composed of the lower grades; that is, of the fourth crop of the teas of Fokien, left unsold in the market of Canton after the season of exportation has passed; and partly of the teas of the district of Woping in Canton. The green teas are grown and selected in the same manner as the black, to which the description now given more particularly refers; and the different qualities arise from the same causes. The gumpowder here stands in the place of the pekoe; being composed of the unopened buds of the spring crop. Imperial hyson, and young hyson, consist of the second and third crops. The light and inferior leaves, separated from the hyson by a winnowing machine, constitute hyson skin, an article in considerable demand amongst the Americans. The process of drying the green teas differs from that of the black; the first being dried in iron pots or vases over a fire, the operator continually stirring the leaves with his naked hand. The operation is one of considerable nicety, particularly with the finer teas, and is performed by persons who make it their exclusive business.

The following is Mr. Hall's (*Cultivation and Manufacture of Tea*) summary of the process of manufacture. 'Place the leaves in a sieve, expose them to the sun and air, toss and turn them, as lay, then place them in the shade till they give out a certain degree of fragrance; then roast them in an iron vessel, roll them with hands or feet, and finally dry them over a charcoal fire—and you will have fair congou tea.' Four pounds of fresh leaves make 1 lb. of tea. Mr. Wray calculates that the consumption of tea in China itself is not less than 2,000,000,000 lb., and the area over which it is cultivated as equal to 25,000,000 acres.

*Tea Trade in China.*—The tea merchants commonly receive advances from the principal merchants and other capitalists of Canton; but, with this exception, are altogether independent of them; nor have the latter any exclusive privilege or claim of pre-emption. They are very numerous; those connected with the green tea districts alone being about 400 in number. The black tea merchants are less numerous, but more wealthy. The greater part of the tea is brought to Canton by land carriage, or inland navigation, but chiefly by the first; it is conveyed by porters; the roads of China, in the southern provinces, not generally admitting of wheel carriages, and beasts of burden being very rare. A small quantity of black tea is brought by sea, but probably smuggled; for this cheaper mode of transportation is discouraged by Government, which it deprives of the transit duties levied on inland carriage. The length of land carriage from the principal districts

where the green teas are grown to Canton is probably not less than 700 miles; nor that of the black tea, over a mountainous country, less than 200 miles. The tea merchants begin to arrive in Canton about the middle of October, and the busy season continues until the beginning of March; being briskest in November, December, and January. Tea, for the most part, could, previously to the late changes, only be bought from the Hong or licensed merchants; but some of these, the least prosperous in their circumstances, were supported by wealthy *outside* merchants, as they are called; and thus the trade was considerably extended. The prices in the Canton and other markets vary from year to year with the crop, the stock on hand, and the external demand, as in any other articles, and in any other market. After the season is over, or when the westerly monsoon sets in, during the month of March, and impedes the regular intercourse of foreigners with China, there is a fall in the price of tea, not only arising from this circumstance, but from a certain depreciation in quality, from the age of the tea; which, like most other vegetable productions, is injured by keeping, particularly in a hot and damp climate.

*Foreign Trade in Tea.*—There seems to be little mystery in the selection and purchase of teas; for the business is both safely and effectively accomplished, not only by the supercargoes of the American ships, but frequently by the masters; and it was ascertained by the sales at the East India House, that there was no difference between the qualities of the teas purchased by the commanders and officers of the Company's ships without any assistance from the officers of the factory, and those purchased for the Company by the latter. An unusual degree of good faith, indeed, appears to be observed, on the part of the Chinese merchants, with respect to this commodity; for it was proved before the select committee of the House of Commons, in 1830, that it was the regular practice of the Hong merchants to receive back, and return good tea for, my chest or parcel upon which any fraud might have been practised, which sometimes happens in the conveyance of the teas from Canton on board ship. Such restitution has occasionally been made even at the distance of 1 or 2 years. The Company enjoyed no advantage over other purchasers in the Canton market except that which the largest purchaser has in every market, viz. a selection of the teas, on the payment of the same prices as others; and this advantage they enjoyed only as respects the black teas, the Americans being the largest purchasers of green teas.

We subjoin a Table for calculating the cost of tea,

Comparison of the Cost of Tea per Picul (133 1/2 lb. Avoirdupois) with the Rate per Pound and Ton of 9 Cwt. or 1,008 lb. per Ton.

Per Picul	Exchange 1s. per Dol.		Exchange 1s. 5d. per Dol.		Exchange 1s. 4d. per Dol.		Exchange 1s. 5d. per Dol.		Exchange 1s. 6d. per Dol.

36	18	75 0 0	19-231	80 6 6	19-500	81 18 0	19-875	83 9 6	20-250	85 1 3/4
37	18 1/2	77 0 0	19-772	82 11 1 1/4	20-041	83 3 6	20-247	85 15 10 1/4	20-813	87 8 3/4
38	19	79 0 0	20-313	84 15 9	20-583	86 9 0	20-929	88 2 3/4	21-375	89 15 6
39	19 1/2	81 0 0	20-854	87 0 3/4	21-125	88 14 6	21-531	90 8 7 1/2	21-938	92 2 3/4
40	20	83 0 0	21-395	89 5 0	21-668	91 0 0	21-983	92 15 0	22-500	94 10 0

Thus, 1s. 5d. per dollar, one teel per picul is equal to 24s. per lb.

*Real Net Weight and Measurement of a Chest of different Descriptions of Tea.*

	weight	sol. meas.
China, whole chests	caties 1 1/2	feet 8 1/2
do. "	8 1/2	8 1/2
do. "	10	8 3/4
China chests	63 to 61	8 1/2
Ben's bag	60 to 62	8 1/2
East "	19 to 20	8 3/4
Hyson "	48 to 50	8 1/2
Hyson skin	48 to 50	8 1/2
Tea and long chests	62 to 63	8 1/2
Cam's seler	60 to 61	8 1/2
English "	70 to 71	8 1/2
Young Hyson	60 to 72	8 1/2

Thus, 1s. 3d. per dollar, 1 tael per picul is equal to 5d. per pound.

II. RISE AND PROGRESS OF THE BRITISH TEA TRADE.—CONSUMPTION OF TEA.

The late rise and present magnitude of the British tea trade are among the most extraordinary phenomena in the history of commerce. Tea was wholly unknown to the Greeks and Romans, and even to our ancestors previously to the end of the 16th or the beginning of the 17th century. It seems to have been originally imported in small quantities by the Dutch; but was hardly known in this country till after 1650. In 1659, however, it began to be used in coffee houses; for, in an Act passed in that year, a duty of 8d. is laid on every gallon of coffee, chocolate, sherbet, and tea, made and sold. But it is abundantly evident that it was then only beginning to be introduced. The following entry appears in the Diary of Mr. Pepys, secretary to the Admiralty:—'September 25, 1661, I sent for a cup of tea (a China drink), of which I had never drank before.' In 1663, the East India Company bought 2 lb. 2 oz. of tea as a present for his Majesty. In 1667, they issued the first order to import tea, directed to their agent at Bantam, to the effect that he should send home 100 lb. of the best tea he could get (Milburn's *Oriental Com.* ii. 530; Macpherson's *Hist. of Com. with India*, p. 130-132.) Since then, the consumption seems to have gone on regularly though slowly increasing. In 1689, instead of charging a duty on the decoction made from the leaves, an excise duty of 5s. per lb. was laid on the tea itself. The importation of tea from 1710 downwards is exhibited in the following Tables.

The reductions made in the duties on tea in 1715 and 1781, strikingly evince the superior productiveness of low duties on articles in general demand, and are, in that respect, especially worth attention. Previously to 1715, tea was charged with an excise duty of no less than 4s. per lb., and with a customs duty of 14 per cent. ad valorem; and it appears that at an average of the 5 years ending Midsommer, 1745, the teas entered for consumption amounted to 768,520 lb. a-year, yielding an average excise and customs revenue of 175,222l. a-year. But though the taste for tea was then comparatively little diffused, it was well known that its clandestine importation was extensively carried on, and that its real consumption was much greater than its apparent consumption. To check this illegitimate traffic, which enriched the smuggler at the expense of the revenue and of the fair trader, a bill was carried through Parliament in 1745, in pursuance of the recommendation of a Committee of the House of Commons, by which the excise duty on tea was reduced from 4s. to 1s. per lb. and 25 per cent. ad valorem; and as the price of the teas sold at the Company's sales was then about 4s. per lb., the 25 per cent. was, in fact, equivalent to 1s. per lb., making the new excise duty 2s. per lb., being a reduction of 50 per cent. This measure, which had in a great degree the merit of originality, was eminently

successful. In the year immediately after the reduction of the duty, the entries of tea for consumption amounted to about 1,800,000 lb., being nearly three times as much as they had amounted to in the last year of the high duties; and the increase in the second and third years of the new system was also most striking. But to set the operation of this well-considered measure in the clearest point of view, we subjoin—

*An Account of the Quantities of Tea entered for Consumption, and of the Produce of the Excise and Customs Duties thereon during each of the Five Years preceding, and subsequent to Midsommer, 1745, when the Excise Duty on Tea was reduced from 4s. to 2s. per lb. (McCulloch, On Taxation, p. 332.)*

Years	Quantities		Duties	
	lb.	£	£	s.
1741	880,704	206,799	0	0
1742	836,000	190,653	10	0
1743	2,767,000	183,504	10	0
1744	2,088,500	161,538	0	0
1745	6,010,000	141,500	0	0
Total	3,612,600	876,412	0	0
Average of 5 years	722,520	175,282	0	0
1746	1,800,000	294,000	0	0
1747	2,000,000	26,000	0	0
1748*	2,000,000	25,800	0	0
1749	2,200,000	37,500	0	0
1750†	2,200,000	37,500	0	0
Total	11,000,000	315,800	0	0
Average of 5 years	2,200,000	63,160	0	0

\* In 1748, 5 per cent. was added to the customs duty on all dry goods, but its influence on tea was next to imperceptible.  
† In 1750 the entries increased to 3,600,000 lb.

But notwithstanding this unanswerable demonstration of the superior productiveness of low duties, they were again increased in 1759; and fluctuated, between that epoch and 1781, from about 65 to 120 per cent. ad valorem. The effects which followed this inordinate extension of the duties are equally instructive with those which followed their reduction. The revenue was not increased in anything like a corresponding proportion; and as the use of tea had become comparatively general, smuggling was carried to an infinitely greater extent than at any former period. In the nine years preceding 1780, above 118,000,000 lb. of tea were exported from China to Europe in ships belonging to the continent, and about 50,000,000 lb. in ships belonging to England. But from the best information attainable, it appears that the real consumption was almost exactly the reverse of the quantities imported; and that while the consumption of the British dominions amounted to above 13,000,000 lb. a-year, the consumption of the Continent did not exceed 5,500,000. If this statement be nearly correct, it follows that an annual supply of about eight million lb. must have been clandestinely imported into this country, in defiance of the revenue laws. But this was not the worst effect of the high duties; for many of the retail dealers who purchased tea at the East India Company's sales, being in a great measure beaten out of the market, were, that they might put themselves in a condition to stand the competition of the smugglers, tempted to adulterate their teas by mixing them with sloe and ash leaves. (Macpherson's *Commerce with India*, p. 208; Milburn's *Oriental Commerce*, vol. ii. p. 540.) At length, in 1781, ministers, having in vain tried every other resource for the suppression of smuggling, resolved to follow the precedent of 1745, and reduced the duty on tea from 11s. to 12½ per cent. This measure was as successful as the former; smuggling and the practice of adulteration were immediately put an end to. The following statement shows that the quantity of tea sold by

grown to Canton is prodigious; nor that of the adjacent country, less than the merchants begin to arrive in the month of October, and the beginning of the year, in November, December, or the most part, could be changed, or only by bought and sold merchants; but some prosperous in their circumstances; by wealthy outside merchants; and thus the trade was... 1781 (du <sup>tes</sup> reduced)		10,418,257			

§ Macpherson's *Commerce with India*, p. 416.

While the quantity of tea sold at the Company's sales was thus rapidly augmented, in consequence of the reduction of the duty, the quantity of tea imported into the Continent from China, which had, in 1784, amounted to 19,927,300 lb., declined with still greater rapidity, and, in 1791, was reduced to only, 2,291,500 lb. (*Ibid.* p. 249.)

The duties on tea, at an average of the 5 or 6 years preceding 1784, produced about 700,000l.

a-year. And, on their being reduced to 12½ per cent., an additional duty, estimated to produce 600,000l., was laid on windows, as a *commutation* tax, to compensate for the deficiency which it was supposed would take place in the revenue derived from tea. But, instead of the duties falling off in the proportion of 119 to 12½, or from 700,000l. to 73,000l., they only fell off, in consequence of the increased consumption, in the proportion of about *two to one*, or from 700,000l. to 310,000l. The Commutation Act has been always regarded as one of the most successful financial measures of Mr. Pitt's administration. The plan was generally understood at the time to have been suggested by Mr. Richardson, accountant-general of the East India Company; but the popularity of the measure was so great as to induce several other individuals to claim this honour, and even to occasion some hot disputes on the subject in the House of Commons. In point of fact, however, the merit of originally

British Currency

An Account of the Quantities of Tea Imported into the United Kingdom during each of the undermentioned Years ending with 1867; specifying the Quantities re-exported, the Quantities Annually Retained for Home Consumption, the Rates of Duty, and the Annual Produce of the Duties.

Table with columns: Years, Quantities Imported (lb.), Quantities re-exported (lb.), Quantities retained for Consumption (lb.), Amount of Duty received thereon (£), and Rates of Duty. Data spans from 1853 to 1867.

Britain from 1789 to 1862, from 1789 to 1827; specific Duty.

Ireland

Table with columns: d., 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20. Includes sub-tables for 'Rates of Duty' and 'On all Teas'.

suggesting the plan neither belonged to Mr. Richardson, nor to any of those who then claimed it; and such of our readers as will take the trouble to look into a pamphlet ascribed to Sir Matthew Decker (Serious Considerations on the present High Duties), published in 1733, will find that the measure adopted in 1784 had been strenuously recommended 40 years before.

But the principle of the Commutation Act, and the striking advantage that had resulted from the reduction of the duty, were soon lost sight of. In 1795 the duty was augmented to 25 per cent.; and after successive augmentations in 1797, 1798, 1800, and 1804, it was raised in 1806, to 36 per cent. ad valorem, at which it continued till 1843, when it was raised to 100 per cent. on all teas that brought above 2s. per lb. at the Company's sales.

The preceding and following statements show the progress of the consumption of tea in this country from a very remote epoch down to the present time:—

An Account showing the Quantity of Tea annually consumed in the United Kingdom, with the average Rate and aggregate Amount of Duty collected thereon; and the average Price, exclusive and inclusive of the Duty.

Table with columns: Year, Tea consumed in Great Britain, Amount of Duty, Average Price per lb., Average Price per lb. in Bond, Average Price per lb. including Duty. Data spans from 1817 to 1867.

Account of the Quantity of Tea remaining for Home Consumption in Great Britain from 1711 to 1786, obtained by deducting the Quantity exported from the Quantity sold at the Company's Sales.

Table with columns: Years, Lb., Years, Lb., Year, Lb. Data spans from 1711 to 1786.

N.B.—We have made up this statement from the accounts given in Milburn's Oriental Commerce (vol. ii. p. 531), and Postlethwayt's Dictionary, art. 'Tea.'

Account of the Quantity of Tea entered for Home Consumption in the United Kingdom, the Net Amount of Duty received thereon, and the Rates of Duty, from 1848 to 1867.

Table with columns: Years, Quantities (lb.), Duty received thereon (£), Rates of Duty. Data spans from 1848 to 1867.

The following table, compiled by the Inspector-General of Imports and Exports, sets the most material circumstances connected with the tea trade in a very clear and striking point of view. The Inspector-General has added to his table two more columns, one showing the annual population of the United Kingdom, and the other the annual average consumption of tea by each individual of that population. But we have omitted these, inasmuch as the average in question was wholly

fallacious. The consumption of tea per individual in Great Britain was formerly a good deal more than double its consumption per individual in Ireland. And though the proportional consumption in the latter has increased since the occurrence of the potatoe rot in 1816, it is still much below

the consumption either in England or Scotland. This, indeed, is very clearly exhibited in the table showing the comparative consumption of tea at different epochs in each of the three kingdoms. The quantity for Ireland in 1866 is that given on an average of 3 years to 1865, in Thom's *Directory*.

*Account of the Total and Average Consumption of Tea by Each Individual of the Population in England, Scotland, and Ireland, in 1811 and 1856, and Great Britain and Ireland in 1866.*

### III.—EAST INDIA COMPANY'S MONOPOLY—INFLUENCE OF, ON THE PRICE OF TEA—CONDITIONS UNDER WHICH IT WAS HELD—ABOLITION OF.

From its origin down to 1831, the trade in tea was monopolised by the East India Company. Considerable quantities of tea were, indeed, at different times, smuggled into the country; but no British subject, not authorised by the Company, was ever allowed openly to import tea. Being thus the *only sellers*, they had it in their power, by limiting the quantity brought to market, to raise its price above its natural elevation, and to realise immense profits at the expense of the public. They might, no doubt, have declined availing themselves of this power; but no such forbearance could be rationally expected from the Company, or from any other body of men. All individuals and associations exert themselves to obtain the highest price for whatever they have to sell: and it is found that those who are protected from the competition of others, or who have obtained a monopoly of any market, invariably raise the price of their commodities to a very high pitch. The East India Company did this, probably, to a less extent than most other bodies that have enjoyed such exclusive privileges. Still, however, it is an undoubted fact, that the teas sold by them during the last years of the monopoly cost the people of Britain upwards of 1,500,000*l.* a-year more than they would have cost had they been sold at the price at which teas of equal quality were sold, under a system of free competition, in New York, Hamburg, Amsterdam &c. (For proofs of this statement, see 1st edition of this *Dictionary*, p. 1031.)

The Legislature endeavoured at different periods, to prevent the Company from abusing their monopoly, by enacting regulations as to the sale of tea; and though no longer of any practical importance, it may be worth while briefly to notice some of the more important, and the means by which they were defeated. In 1745, for example, when the great deduction was made from the amount of the tea duties, it was enacted, by a statute passed in that year (18 Geo. II. c. 26), in order to prevent the Company from depriving the public of the benefit of this reduction, that in case the tea imported by the East India Company shall not always be sufficient to answer the consumption thereof in Great Britain, and to keep the price of tea in this country upon an equality with the price thereof in the neighbouring Continent of Europe, it shall be lawful for the said Company, and their successors, to import into Great Britain such quantities of tea as they shall think necessary from any part of Europe: and by another section of the same statute, it is enacted, that if the East India Company shall, at any time, neglect to keep the British market supplied with a sufficient

quantity of tea at reasonable prices, it shall be lawful for the lords of the Treasury to grant licenses to any other person or persons, body politic or corporate, to import tea into Great Britain from any port of Europe.

Had this statute been enforced, it would certainly have restrained the demands of the Company within reasonable limits; but it was very soon forgotten, and the Company continued, as before, to sell their teas at an enormous advance as compared with their prices in Hamburg and Amsterdam.

The same well-founded jealousy, which dictated the Act of 1745, was again displayed in the proceedings at the reduction of the duties in 1784. It was then enacted (21 Geo. III. c. 58), that the East India Company should make 4 sales of tea every year as near as conveniently may be at equal distances of time from each other, and should put up at such sales such quantities of tea as may be judged sufficient to supply the demand; and at each sale the tea to be put up shall be sold without reserve to the highest bidder, provided an advance of 1*l.* per pound be bid upon the price at which the same is put up. By another clause it was enacted, that it should not be lawful for the East India Company to put up their teas for sale at a price which shall, upon the whole of the teas so put up at any sale, exceed the prime cost thereof, with the freight and charges of importation, together with lawful interest from the time of arrival of such teas in Great Britain, and the common premium of insurance as a compensation for the sea risk incurred thereon. The Company were further ordered to keep a stock, equal to at least 1 year's consumption, according to the sales of the preceding year, always beforehand. And they were bound to lay before the lords of the Treasury copies of the accounts and estimates upon which their orders for importation, prices for sale, and quantities put up to sale, should be grounded.

The object of these conditions is obvious. They were intended to secure a plentiful supply of tea to the public, and to prevent its being sold at an oppressive increase of price. But monopoly and low prices are altogether incompatible. The conditions now referred to were, as to all practicable purposes at least, quite inoperative.

1. In the first place, the Company made various additions to the prime cost, and consequently to the putting-up price of their tea, which they ought not to have made, but which the lords of the Treasury, had they been so disposed, could hardly disallow. They always, for example, charged the cost of the factory in Canton to the price of tea. This establishment consisted of about 20 persons, and cost at an average about 100,000*l.* a-year. We do not presume to say that it was altogether useless. Undoubtedly, however, it might have been conducted at half the expense.

in England or Scotland. The consumption of tea at the three kingdoms. In 1866 is that given on 1865, in Thom's *Directory*.

reasonable prices, it shall be the duty of the Treasury to grant bounties on persons, body politic or corporate, who import tea into Great Britain from any foreign country.

When the duty has been enforced, it would be necessary to limit the demands of the consumers to reasonable limits; but it was found that the Company continued to import teas at an enormous quantity, with their prices in Ham-

burgh, which dictated a course of action again displayed in the production of the duties in 1781. (21 Geo. III. c. 38), that the Company should make 4 sales of tea in each year, as conveniently may be at equal intervals of time from each other, and that the sales such quantities of tea as were sufficient to supply the demand; that the tea to be put up shall be sold by public auction to the highest bidder, provided that the price per pound be bid upon the price is put up. By another clause it should not be lawful for the Company to put up their teas for sale in any other manner than shall, upon the whole of the year, exceed the prime cost of the teas, and charges of importation, freight and interest from the time of purchase in Great Britain, and the cost of insurance as a compensation for the risk thereof. The Company were to keep a stock, equal to at least 12 months of the sales of the year, always beforehand. And that the accounts and estimates upon which the Company were to put up to sale, should be grounded upon the actual conditions is obvious. They were to secure a plentiful supply of tea, and to prevent its being sold at an excessive price. But monopoly and free trade are together incompatible. The conditions were, as to all practical purposes, quite inoperative.

In the place, the Company made various alterations in the prime cost, and consequently in the price of their tea, which they were to make, but which the terms of the Act had been so disposed, could not be done.

They always, for example, sold the tea of the factory in Canton to the Company at an average of 10 per cent. We do not presume to say that this was a useless. Undoubtedly, however, it was conducted at half the expense.

It is a fact, that the whole American business at Canton has been transacted by the captains of the ships; and every one knows that they have had fewer disturbances with the natives than the English.

2. In the second place, it was established by the evidence taken before the select committee of 1830, that the Company had for many years thrown the whole losses arising from their outward investment upon tea, by estimating the value of the tea, or Chinese money in which the accounts are kept, at the price which it cost for the purpose of being vested in tea. This was a complete evasion of the provisions of the statute; but it was one which it was very difficult, if not impossible, to defeat.

3. In the third place, the obligation imposed on the Company, of keeping a year's supply of tea in their warehouses, contributed both to raise its price, and deteriorate its quality. From a return made to an order of the select committee of the House of Commons in 1830 (*First Report*, App. p. 23), it appeared that the shortest time any tea sold by the Company had been in store was 14 months; and that, at an average, all the teas sold during the 3 years ending with 1829 had been 17 months in store. But, according to the evidence of the most respectable American witnesses, the black and coarser kinds of tea are depreciated at least 5 per cent. by being kept a twelvemonth, and are, indeed, hardly saleable after the arrival of fresh teas from China. Adding, therefore, warehouse rent, interest of capital, and insurance for 17 months, to the deterioration in point of quality, we may estimate the loss to the public, by this well-meant but most injudicious interference of the Legislature, at 15 per cent. upon the price of all the teas sold.

4. In the fourth place, it is obvious, even supposing the prime cost of the Company's teas had not been improperly enhanced, that the regulation obliging them to be sold at an advance of 1d. per lb., if offered, on the putting-up price, could not be otherwise than nugatory. Had the trade been open, private merchants would have undersold each other, until the price of tea, like that of sugar or coffee, had been reduced to the very lowest point that would yield the sellers the customary rate of profit. But the Company was in an entirely different situation. Being the *only sellers*, they invariably *understocked* the market. Instead of bringing forward such quantities of tea as might have occasioned its sale at a small advance upon the upset price, they adjusted the supply so that the price was raised to a much higher elevation. Now, it will be observed, that all that this system of management put into the Company's coffers consisted of *extra profit*; for the putting-up price embraced every item that could fairly enter into the cost of the tea, including both interest on capital and insurance, and including also, as we have seen, several items that had but little to do with it. To show the extent to which this source of profit was cultivated, we may mention, that at the June sale in 1830, the Company put up congruous at 1s. 8d. and 2s. 1d. per lb.; the lowest sort, or that put up at 1s. 8d., being sold partly at 2s. 1 1/2d., being an advance of *twenty-two and a half* per cent., and partly at 2s. 5d., being an advance of *forty-five* per cent.; while the highest sort, or that put up at 2s. 1d., was sold partly at 2s. 2d., being an advance of *four* per cent., and partly at 3s. 7d., being an advance of *no less than seventy-two* per cent. above the upset price; that is, above a price calculated to yield *ordinary profits*. Mr. Mills, an intelligent tea merchant, in a paper laid before the committee of the House of Lords on

East India affairs, showed, that the advance on teas sold at the Company's June sale in 1830, above the putting-up price, amounted to 122,177. 18s. 1d.; and as there are 4 such sales in the year, the total advance must have been about 500,000l.; and this was considerably under what it had been a few years previously.

These statements show generally how the Company deflected the provisions of the Act of 1781, and, indeed, turned them to its own advantage. But, as already observed, nothing else could be expected. It is nugatory to attempt to combine monopoly with low prices and good qualities. They never have existed, and it is not possible they ever should exist, together. Monopoly is the parent of dearth and scarcity; freedom, of cheapness and plenty.

Great, however, as was the sacrifice entailed on the people of Britain by the Company's monopoly, it is doubtful whether it yielded any considerable amount of revenue to the Company. Everyone, indeed, must be satisfied, on general grounds, that it was impossible for the Company to make anything like the same profits by the privileges conceded to them, that would have been made by private individuals enjoying similar advantages. 'The spirit of monopolists,' to borrow the just and expressive language of Gibbon, 'is narrow, lazy, and oppressive. Their work is more costly and less productive than that of independent artists; and the new improvements, so eagerly grasped by the competition of freedom, are admitted with slow and sullen reluctance, in those proud corporations above the fear of a rival, and below the confession of an error.' We have no doubt that the directors of the East India Company were disposed to extend its commerce, and to manage it according to the most approved principles, but they were wholly without the means of giving effect to their wishes. They had to operate through servants; and it is to be imagined that the *employés* of such bodies will ever display that watchful attention to their interests, or conduct the business entrusted to their care with the unsparing economy practised by private merchants trading on their own account, superintending their own concerns, and responsible in their own private fortunes for every error they may commit? The affairs of the Company, notwithstanding the efforts of the directors to introduce activity and economy, have always been managed according to a system of routine. Their captains and mercantile agents were, we doubt not, 'all honourable men;' but it were an insult to common sense to suppose that they may be compared for a moment with individual trading on their own account, in the great requisites of zeal, conduct, and skill.

Several gentlemen of great knowledge and experience, who carefully enquired into the state of the Company's affairs in 1830, expressed their decided conviction that they made nothing by the tea trade; the increased price at which they sold the article not being more than sufficient to balance the immense expenses incident to the monopoly. Perhaps this statement may be somewhat exaggerated, though we incline to think it is not far from the mark. Taking, however, the accounts laid by the Company before the committee on Indian affairs, as they stand, it would appear that the profits realised by them during the 3 years ending with 1827-28 amounted to 2,542,569l., being at the rate of 817,523l. a-year. (*Appendix to Second Report of Select Committee of 1830*, p. 95.) But we have already seen that the excess of price received by the Company for their teas, over the price of similar teas sold at New York and Hamburg, has been above 1,500,000l. a-year; so that,

according to the Company's own showing, their monopoly occasioned an *absolute loss* of 452,477*l.*, exclusive of its mischievous influence in lessening the consumption of tea, and in confining our trade with China to less than a third of what it will probably amount to under a system giving free scope to the energies of individual enterprise.

The renewal of a monopoly productive of such results was, therefore, wholly out of the question. There was hardly, indeed, in 1833, an individual in the empire out of the pale of the Company who was not anxious for the opening of the trade to China; and the Act 3 & 4 Wm. IV. c. 85 (ante, EAST INDIA COMPANY), abolishing the company's monopoly, and making it lawful for all individuals to import tea, was passed with almost no opposition.

#### IV.—DUTIES OF TEA.—CONSUMPTION OF TEA IN THE UNITED KINGDOM, THE CONTINENT, THE UNITED STATES, ETC.

Down to April 22, 1834, the duty on tea was an *ad valorem* one of 96 per cent. on all teas sold under 2*s.* a pound, and of 100 per cent. on all that were sold at or above 2*s.* charged on the prices which they brought at the Company's sales. This was, certainly, a high duty; though, as a large amount of revenue must be raised, we do not know, had the trade been free, that it could have been fairly objected to on that ground. But, under the monopoly system, the duty was, in fact, about 200 per cent. *ad valorem*. For, the price of the tea sold by the Company being forced up to nearly double what it would have been under a free system, it followed, inasmuch as the duty varied directly as the price, that it also was doubled when the latter was doubled. The price of congou in Hamburg, for example, varied, during the latter years of the monopoly, from 1*s.* 2*d.* to 1*s.* 4*d.* per lb.; and had the Company supplied our markets with congou at the same rate, it would have cost us, duty included, nearly 2*s.* 4*d.* and 2*s.* 8*d.* per lb. But instead of this, the congou sold by the Company was, at an average, a good deal above 2*s.* per lb.; and the duty being as much, it invariably cost from 4*s.* to 5*s.* per lb. Hence, though the duty was only 100 per cent. on the Company's price, it was really above 200 per cent. on the price of tea in an open market. The mischief of the monopoly was thus greatly aggravated; inasmuch as every addition made by it to the cost of the article made an equal addition to the duty on it.

The *ad valorem* duties ceased on April 22, 1834; and, under the Act 3 & 4 Wm. IV. c. 101, all tea imported into the United Kingdom for home consumption was charged with a customs duty as follows:—

	per lb.
Bohea	4 d.
Congou, twankay, hy-on skin, orange pekoe, and camouf	1 6
Son-hong, hoowry pekoe, hyson, young hyson, gunpowder, imperial, and other teas not enumerated	2 2
	3 0

If we compare these duties with the wholesale prices of tea, they will be seen to have been exceedingly heavy, particularly on bohea and congou. Bohea may be sold, exclusive of duty, at or under 10*d.* or 1*s.* per lb.; so that the fixed duty was equivalent to an *ad valorem* duty of 150 per cent. or upwards. But to impose such a duty on an article fitted to enter largely into the consumption of the lower classes, seems to us in the last degree oppressive. It must have gone far to neutralise the beneficial effects that would otherwise have resulted from the abolition of the monopoly; and by confining the consumption of the article within comparatively narrow bounds, have rendered the duty less productive than it would

have been had it been lower. In consequence, however, of the complaints of the importers of tea that the discriminating duties were not, and could not be, fairly assessed, and that teas were sometimes charged at 2*s.* 2*d.* or 3*s.* per lb. that should only have paid 1*s.* 6*d.*, the duty was repealed in about two years, by the Act 5 & 6 Wm. IV. c. 32, which enacted that an equal duty of 2*s.* 4*d.* per lb. (increased in 1810 to 2*s.* 2*d.*) should be charged, after July 1, 1836, on all teas entered for consumption in the United Kingdom.

Considering the very great differences in the qualities and the prices of the different varieties of tea, it would have been extremely desirable, had it been practicable, that the duty on them should have been assessed on an *ad valorem* principle. But after the Company's sales had ceased, and the trade had been fully opened, this was no longer possible; and it was found in the case of tea, as of wine, sugar, and similar articles, that it was better to adopt an unfair principle which could be fairly carried out, than to adopt a principle which, though fair in the abstract, was sure in its practical operation to lead to every species of abuse.

We remarked on this subject in our *Treatise on Taxation*, as follows:—

“But while we admit that the necessity of the case, or the impossibility of fairly assessing discriminating duties on the different varieties of tea, fully justified their repeal, and the imposition of a single duty in their stead, we contend that nothing can justify the magnitude of this single duty, which is, beyond all question, the most objectionable in our tariff.”

“It has, we are aware, been alleged that the duty of 2*s.* 4*d.* per lb. is not really so bad as it looks; that it is a mistake to suppose that the lower classes use inferior teas, and that the reduction of the duty on them would not materially increase their consumption. But those who make such statements either know nothing of the facts of the case, or reckon on the ignorance of those to whom they address themselves. It appears from the official returns, that in 1816-17 and 1817-18 the price of bohea sold at the Company's sales was about 5*s.* 6*d.*; so that it must have cost the buyer, duty included, about 5*s.* per lb.; and in these years the consumption amounted, at an average, to 1,781,000 lb. a-year. But in 1830-31 and 1831-32, when the price of bohea to the buyer was reduced to 3*s.* 4*d.* per lb. (1*s.* 8*d.* price and 1*s.* 8*d.* duty), the consumption rose to 6,285,000 lb.; showing, beyond all dispute, that a fall of 1*s.* 8*d.* in the price of bohea had more than trebled its consumption. And though St. Augustine has said that “nullum mendacium tam impudens est ut teste careat,” we hardly think that anyone will venture to affirm, in the teeth of an experiment like this, that bohea would not be used, if it could be procured by the poorer classes; or that the demand for it would not be very greatly extended by a reduction of 1*s.* 2*d.* or 1*s.* 3*d.* per lb. in its price.”

“Taking the average price of bohea in bond in London at 8*d.*, 10*d.*, or 1*s.* per lb., a duty of the same amount would, of course, be equal to an *ad valorem* duty of 100 per cent., which is certainly high for a duty on a necessary consumed by the poor. But even with a duty of 1*s.* per lb. bohea might be retailed at 2*s.* or 2*s.* 2*d.* per lb.; and at this price there can be no manner of doubt that the consumption would amount to 10 or 12,000,000 of pounds. The reduction of the duty on congou to 1*s.* per lb. would, also, be of the greatest importance to the lower and middle classes; and the powerful stimulus it would give to consumption

lower. In consequence of the duties were not, and could not, and that teas were some- or 3s. per lb. that should the duty was repealed in Act 5 & 6 Wm. IV. c. 32, equal duty of 2s. 1d. per lb. (to 2s. 2½d.) should be repealed, on all teas exported from the Kingdom.

The great differences in the prices of the different varieties of tea have been extremely desirable, so that the duty on them assessed on an ad valorem the Company's sales had not been fully opened, this duty; and it was found in the sugar, and similar articles, carried out an unfair principle adopted, than to adopt a fair in the abstract, was operation to lead to every

is subject in our Treatise on

it that the necessity of the duty of fairly assessing the different varieties of tea, repeal, and the imposition of our steel, we contend that the magnitude of this single and all question, the most

ware, been alleged that the lb. is not really so bad as it is—take to suppose that the inferior teas, and that the re- on them would not materially caption. But those who make per know nothing of the facts on the ignorance of those to themselves. It appears from that in 1816-17 and 1817-18 the Company's sales was at 5s. have cost the buyer, at 3s. per lb.; and in these on amount, at an average year. But in 1830-31 and price of bohea to the buyer was 1s. 8d. or 1s. 3d. price and 1s. 8d. option rose to 6,285,000 lb.; dispute, that a fall of 1s. 8d. had more than trebled its though St. Augustine has mendacium tam impudens est ardly think that anyone will in the teeth of an experiment would not be used, if it could poorer classes; or that the not be very greatly extended 1s. 2d. or 1s. 3d. per lb. in its

age price of bohea in bond in 1s. per lb., a duty of the lb. of course, be equal to an ad 10 per cent, which is certainly a necessary consumed by the with a duty of 1s. per lb. bohea at 2s. or 2s. 2d. per lb.; and at no manner of doubt that it would amount to 10 or 12,000,000 reduction of the duty on congou also, be of the greatest im- and middle classes, and be it would give to consu-

and consequently, also, to the demand for sugar, which is indispensable to the use of tea, makes it all but certain, that in no very lengthened period the revenue would lose little by the change.

We admit, however, that a reduction of the duty to 1s. per lb. would occasion at the outset a very considerable loss of revenue, amounting to, perhaps, from 1,000,000*l.* to 1,500,000*l.* a year. But this loss might be advantageously compensated by adding ½ per cent. to the house-tax, and extending it to all houses under 10*l.* a year. A measure of this sort, besides being just and proper in itself, would be in accordance with the precedent set by Mr. Pitt in 1781. And while it would be advantageous to the trade of the country, the occupiers of houses would gain more by the fall in the price of teas than they would lose by the imposition and increase of the house-tax. A duty of 1 per cent. on a house of 10*l.* a year would only amount to 8s. And supposing the duty on black teas to be reduced to 1s. per lb., a fall of 1s. 2½d. per lb. would be effected in the price; so that, supposing the consumption of tea by families occupying 10*l.* houses to amount, at an average, to only 10 lbs. a year, they would save 3s. 10½d. a year, or nearly half their house-tax, by the commutation.

Taking the price of bohea and low congou in bond in London at 1s. per lb. (and it is usually less), the duty of 2s. 2½d., with which they are at present charged, is equivalent to an ad valorem one of considerably more than two hundred per cent.; whereas, taking the price of the hyson and other superior teas consumed by the rich at from 3s. to 4s. per lb., the duty on them does not exceed from about 50 to 67 per cent. ad valorem, that is, it does not amount to more than ¼ to ½ part of the duty laid on the teas consumed by the poor. Surely, however, this is neither an age nor a country in which an anomaly of this sort can be safely maintained. The public necessities require that the tea, sugar, and other necessaries of the poor should be taxed; but the obvious principles of justice, also, require that the duties on them should be, if not lower, at all events no higher than those laid on the necessities or luxuries of the rich. The existing tea duties contradict this plain principle, and are at once unjust and exorbitant. The duty on bohea and the lower congous should not, in fact, exceed 6*l.* or 8*l.* per lb., and means may be found, in the commutation we have ventured to suggest, of reducing it to that amount.

It has been supposed that such an effectual reduction of the duties on tea would greatly increase our trade with China. But others doubt whether such would be the case, so far, at least, as regards our exports, and we are inclined to agree with them. The demand of the Chinese for opium far exceeds their demand for any other foreign product; and it is at present, and has long been, the most advantageous article of export to China. The presumption, consequently, is, that were increased quantities of tea sent from China, it would lead rather to an increase of the imports of opium than of the cottons or hardware of England; or it might, perhaps, check or lessen the heavy drain for bullion that is now operating on China. But though it might not increase our exports to China, it would not fail to make a corresponding addition to those to India, which furnishes the opium sent to China. Every increase of imports is sure to occasion, directly or indirectly, an equal increase of exports. But whatever may be its immediate or remote influence on the trade with the east, a reduction of the duty on tea is required by other and more pressing considerations,

by a regard to the well-being of our own people, and to those principles of equal and impartial justice with which the duty we have suggested is in perfect harmony, and to which the present duty on tea is in direct contradiction. (*Treatise on Taxation*, 2nd ed. p. 318.)

The plan we ventured to suggest for a commutation of the duty was not adopted, but its effectual reduction was then determined on and eventually carried out. All parties appear to have become satisfied that the former duty could no longer be maintained. Its reduction formed a prominent feature in the Budget proposed by Mr. Disraeli; and after the rejection of the latter, it formed an equally prominent feature in the Budget introduced by Mr. Gladstone, and was afterwards passed into a law; the duty being regulated as follows, viz.:—

To April 5, 1854	From April 5, 1854, to April 5, 1857	From April 5, 1857, to April 5, 1859	From and after April 5, 1859
1 <i>l.</i> 10 <i>d.</i> per lb.	1 <i>l.</i> 6 <i>d.</i> per lb.	1 <i>l.</i> 5 <i>d.</i> per lb.	1 <i>l.</i> 0 <i>d.</i> per lb.

But among its other mischievous effects, the war with Russia made it necessary, not merely to suspend this arrangement, but to raise the duties to 1s. 3*d.* per lb., at which rate they continued till April 6, 1857, when they were reduced to 1s. 5*d.*

This rate of duty was continued until Mr. Gladstone, in April 1863, as one of the principal features of his Budget, carried the reduction to 1s. per lb., which, two years afterwards, in June 1865, he further supplemented by decreasing it to 6*d.* per lb., at which point it now stands.

We beg to subjoin an estimate, which we have submitted to the highest mercantile authorities, showing in detail the different items which enter into the price of tea, and its cost to the public.

*Estimate of the Cost to the Public of the Tea retained for Home Consumption in the United Kingdom, supposing it to amount to 114,700,000 lb.*

Cost of tea free on board in China, all charges inclusive,	£
114,700,000 lb. at 1 <i>l.</i> per lb.	5,735,000
Freight at 1 <i>d.</i> per ton, measuring 50 cubic ft., and averaging about 1,000 lbs. of tea to the ton	13,000
Loading charges and dock rates	201,000
Marine insurance and in-land charges, 3 per cent.	172,000
Interest for 6 months on the price of tea in China	113,000
Cost of tea in England	6,720,000
Duty	2,200,000
Outlay, and profits of wholesale and retail dealers &c.	1,800,000
Making the average cost to the consumer very near 2 <i>l.</i> 10 <i>d.</i> per lb.	11,758,750

We believe that this estimate comes as near the mark as it is possible to do in such enquiries. It sets the oppressiveness of the late duty in a striking point of view. It may be supposed, perhaps, that we have overrated the profits of the dealers; but we do not admit that such is the case. There are above 177,000 retail dealers in tea, and taking their profits at 10*l.* each at an average, they would exceed 1,770,000*l.* It should, also, be borne in mind that the profits made by the retail of tea are to be regarded as including the greater part of those made by the retail of sugar, which is sold almost at its cost price. Indeed, very many grocers will not supply customers with sugar unless they also supply them with tea.

The following statements in regard to the deliveries &c. and prices of tea, are derived from the valuable circular of Messrs. Percival & Co., 10 Philpot Lane, 1865-1867.

The annexed table shows the sources whence we derived our supplies of tea in 1867.

*Capacity of China to furnish additional Supplies of Tea.*—It had been sometimes contended, that should the duties on tea be materially reduced,

the increased demand of this country could not be supplied, and that the reduction of the duty would not really benefit the British consumer, but the Chinese. Our readers will hardly expect that we should enter at any length into the refutation of so absurd a notion. At the commencement of last century the entire annual consumption of tea in this country, the Continent, and America, did not certainly amount to 500,000 lb.; whereas the consumption of Great Britain, the Continent, the United States, and Australia, amounts at present (1867) to about 160,000,000 or 170,000,000 lb.; and yet every one acquainted with the history of the trade is aware that, though the consumption has increased more than three hundred and forty times, the prices in all open markets have, with few exceptions, been regularly declining. We may, therefore, rest quite easy upon this point. The production of tea is rapidly extending in China, and its vast extent, its capacities for raising unlimited quantities of tea, and the extent to which it is there used, negative the idea that any conceivable increase of the consumption of this country should have any perceptible or permanent influence on its cost price. But at the same time, occurrences of rebellion or extensive commotions in the country may for a while interrupt the usual supply, and occasion a temporary rise of price. The export of Assam tea from India to Great Britain has, within the last five years, doubled, and is still apparently on the increase, the greatest attention being now paid to the cultivation of the plant.

*The Quantities of Tea exported by Sea from China in ordinary Years may (1868) be estimated as follows, viz.:*

	lb.
United Kingdom	123,000,000
America	22,000,000
Australia	12,000,000
Holland	3,000,000
India	1,000,000
Other places	5,000,000
Total	166,000,000

The exports of tea to Russia by land amount to 11,000,000 or 15,000,000 lb. a-year.

**Retail Dealers in Tea.**—Retailers in tea are obliged to take out a license, which costs 11s. 6d. a-year to those rated at 8l. or upwards, and 2s. 6d. to those rated under 8l. In 1868 their numbers were, for the United Kingdom, 104,798 of the first, and 72,351 of the second, but the Chancellor of the Exchequer (Mr. Lowe) proposes to abolish the license tax in the course of this year, 1869.

**Adulteration of Tea.**—It might have been fairly enough anticipated, from the high price of, and the high duty on tea, and the facility with which it may be mixed up with foreign substances, that it would not escape adulteration; and the records of the courts of justice show that such is the case, several dealers having been convicted of this pernicious practice. The adulteration is usually effected either by the intermixture of sloe or ash leaves with fresh teas, or by mixing the latter with tea that has been already used. The penalties on such offenses are stated below; but the best, or rather the only, security on which any reliance can be placed, is to be found in the character and respectability of the parties dealing in tea. Even were he influenced by nothing else, it would be extreme folly in any person carrying on an extensive business to engage in such dishonest practices; for they can hardly fail of being detected; and the ruin of his business, that would follow such exposure, would be more than balance whatever gains he could hope to make by his fraudulent schemes.

**Penalties on Adulteration.**—If any dealer in or seller of tea dye or fabricate any sloe or other

leaves in imitation of tea, or mix or colour leaves of tea with terra Japonica or other ingredient, or vend or expose to sale, or have in possession the same, he shall forfeit, for every pound of such adulteration, 10l. (1 Geo. II. c. 11 s. 11.)

Every person, whether a dealer in or seller of tea, or not, who shall dye or fabricate any sloe leaves, liquorice leaves, or the leaves of tea that have been used, or the leaves of the ash, elder, or other tree, shrub, or plant, in imitation of tea, or who shall mix or colour such leaves with terra Japonica, copperas, sugar, molasses, clay, logwood, or other ingredient, or who shall sell or expose to sale, or have in custody, any such adulteration in imitation of tea, shall for every pound forfeit, on conviction, by the oath of 1 witness, before a justice, 5l.; or on non-payment, be committed to the house of correction for not more than 12 nor less than 6 months. (17 Geo. III. c. 29 s. 1.)

Any person having in possession any quantity exceeding 6 pounds of sloe, ash, or elder leaves, or the leaves of any other tree, plant, or shrub, grown or manufactured, and shall not prove to the satisfaction of the justice hearing the matter that the same were gathered with the consent of the owner of the trees &c., and that they were gathered for some other purpose than that of being fabricated in imitation of tea, shall forfeit 5l. for every pound in his possession, or, on non-payment, be committed to prison. (Sec. 2.)

If an officer of excise, or other person, make oath that he suspects herbs dyed, or otherwise prepared in imitation of tea, are hid or lodged in any place, a justice may issue a warrant for seizing the same by day or night (in the night in presence of a constable), together with all waggons, tubs, and packages in which they may be contained; the herbs may be directed to be burnt, and the waggons &c. sold, and after deducting expenses, the proceeds to be shared, half to informer, and half to poor of the parish. Obstructing such seizure subjects the offender to a penalty of 50l., or not less than 6 nor more than 12 months' imprisonment. (Sec. 3.)

Herbs not to be burnt, if owner can prove, within 24 hours, that they were gathered with consent of proprietor of trees, plants, or shrubs, and that they were not intended to be fabricated in imitation of tea. (Sec. 4.)

Occupier of premises where herbs are found, liable to the penalties, unless he can prove they were lodged without his consent. (Sec. 5.)

**Consumption of Tea on the Continent and in the United States.**—Of the Continental states, Russia and Holland are the only ones in which the consumption of tea is considerable. In 1865 the imports of tea into European Russia, ex Finland, amounted to 365,339 pounds. The consumption of tea in Holland amounted in 1865 to 5,500,000 lb. The consumption of France does not exceed 700,000 lb. The importations into Hamburg vary between 3,000,000 and 3,500,000 lb., the greater part of which is forwarded to the interior of Germany.

The consumption of the United States amounts to from 35,000,000 to 40,000,000 lb. a-year. Duties on tea used to form one of the largest items of American revenue, having in some years produced 650,000l. Their magnitude, however, was justly complained of; and it is probably owing to this circumstance that, while the consumption of tea was for several years pretty stationary in the United States, that of coffee increased with even greater rapidity than in England. The flourishing state of the revenue for a number of years having admitted of a very great reduction of duties, those on tea were for a time wholly re-

pealed. As was to be expected, the consumption, while duty free, rapidly increased. The duty under the present United States tariff is 25 cents per lb.

**TEAK WOOD or INDIAN OAK.** The produce of the *Tectona grandis*, a large forest tree, that grows in dry and elevated districts in the south of India, the Burman empire, Pegu, Ava, Siam, Java, the Straits Settlements &c.

Teak timber is by far the best in the East; it works easily, and, though porous, is strong and durable; it is easily seasoned, and shrinks very little; it is of an oily nature, and, therefore, does not injure iron. Mr. Crawford says, that in comparing teak and oak together, the useful qualities of the former will be found to preponderate. 'It is equally strong, and somewhat more buoyant. Its durability is more uniform and decided; and to insure that durability it demands less care and preparation; for it may be put in use almost green from the forest, without danger of dry or wet rot. It is fit to endure all climates and alternations of climate.' (Tredgold's *Principles of Carpentry*, p. 206; Crawford's *East Archip.*, vol. 1, p. 431; Rees's *Cyclopaedia* &c.)

The teak of Malabar, produced on the high table land of the south of India, is deemed the best of any. It is the closest in its fibre, and contains the largest quantity of oil, being at once the heaviest and the most durable. This species of teak is used for the keel, timbers, and such parts of a ship as are under water; owing to its great weight, it is less suitable for the upper works, and is not at all fit for spars. The teak of Java ranks next to that of Malabar, and is especially suitable for planking. The Rangoon or Burmah teak, and that of Siam, are not so close grained or durable as the others. They are, however, the most buoyant, and are, therefore, best fitted for masts and spars. Malabar teak is extensively used in the building yards of Bombay. Ships built wholly of it are almost indestructible by ordinary wear and tear; and instances are not rare of their having lasted from 80 to 100 years; they are said to sail indifferently; but this is probably owing as much to some defect in their construction as to the weight of the timber. Calcutta ships are never wholly built of teak; the timbers and framework are always of native wood, and the planking and deck only of teak. The teak of Burma, being conveyed with comparatively little difficulty to the ports of Rangoon and Maulmain, is the cheapest and most abundant of any, and it is mainly owing to the facility with which supplies of it are obtained that ship-building is now carried on so very extensively at Maulmain. It is largely exported to Calcutta and Madras. [RANGOON.] (*Private information.*)

In 1866 we imported, chiefly from Singapore and the Straits Settlements, 35,724 loads of teak, valued at 342,101.

A species of timber called African teak is exported from the west coast of Africa. But, in point of fact, it is not teak, and it is destitute of several of its most valuable properties. It is, however, for some purposes, a useful species of timber.

**TEASEL or FULLERS' THISTLE** (Ger. weberdistel, kratzdistel; Fr. chardon à carder; Ital. cardo da cardare; Span. cardencha, cardo peinador). This plant, which is cultivated in the north and west of England, is an article of considerable importance to clothiers, who employ the crooked awns of the heads for raising the nap on woollen cloths; for this purpose they are fixed round the periphery of a large broad wheel, against which the cloth is held while the machine is turned. In

choosing teasels, the preference should be given to those with the largest bur, and most pointed, which are generally called *male teasels*. They are mostly used in preparing and dressing stockings and coverlets; the smaller kind, commonly called the fullers' or drapers', and sometimes the *female teasels*, are used in the preparation of the finer stuffs, as cloths, ratons &c.

**TEETH, ELEPHANTS'.** [IVORY.]

**TELEGRAPH** (the term is derived from the Greek *τῆλε* and *γράφω*). An instrument to write at a distance. The use of telegraphs, or of some mode of communication by signals or signs, is of very ancient date (Rollin's *Ancient History*, book xviii. sec. 6), but commerce derived comparatively little direct advantage from them till the modern application of electro-magnetism to telegraphic purposes. Any scientific description of the principle and action of the electro-magnetic telegraph, even if appropriate, as it is not, to a work like this, would be unintelligible to most readers were it not accompanied by diagrams or other illustrations. We would therefore refer for this information, in succinct form and moderate compass, to Brande and Cox's *Dictionary of Science and Art*; or, for a more elaborate dissertation on the subject, to the last edition of the *Encyclopaedia Britannica*, the article in which embodies very full descriptions of some of Sir Charles Wheatstone's inventions, and much other interesting matter.

Suffice it here to say, that we can not only send messages in an incredibly short time to the uttermost parts of Europe, but also to America by the Atlantic cable, and to India &c. And doubtless we shall soon be enabled to communicate in this expeditious way with every civilised portion of the globe. A good operator can send 2,000 words per hour.

The introduction of this modern telegraph followed so closely on that of railways, and has been so intimately associated with them, that their direction in this country has not been of that perfectly independent character that the extent and importance of this sort of communication, especially in commercial and political matters, would seem to demand. The Legislature having taken this view of the matter last year (1868), passed an Act (31 & 32 Vict. c. 110), empowering the Government to acquire and maintain the various telegraphs in the United Kingdom, and to work them through the medium of the Post Office. Probably the arrangements for the purchase of the whole will be effected in the course of this year (1869), and the issue of fresh regulations and tables of rates may be looked for ere long.

Already, under EAST INDIES, the scale of charges for messages by the Indian telegraph has been given; but as changes in those at home are immediately in prospect, it would be superfluous to state in detail the present tariffs of the various telegraph companies.

In demonstrating the advantages of a low scale of charges, Mr. Cyrus Field has informed us, that under the 25*l.* tariff the receipts of the Atlantic Telegraph Company were 505*l.* per day, while they were 579*l.* under a 10*l.* rate, and 630*l.* under the 5 guinea tariff. In an extract from the *New York Tribune*, given by the *Times* of October 18, 1868, the number of miles of telegraph lines worked in the United States is stated to have been about 12,000 in 1848, 40,000 in 1858, and 120,000 in 1868.

In 1867 we exported telegraph wire and apparatus (chiefly to Norway, Cuba, India, and Newfoundland) of the aggregate value of 210,000*l.*

**THREAD** (Ger. zwirn; Dutch, gareen; Fr. fil; Ital. filo, refe; Span. hilo, torzal; Russ. nitki). A

preference should be given to the largest bur, and most pointed, called male tussels. They are used for mending and dressing stockings of the smaller kind, commonly called female, and sometimes the female is used for the preparation of the finer threads.

**PLANTS. [IVORY.]** The term is derived from the fact that it is used to write the characters of telegraphs, or of some mode by signals or signs, is of very recent origin. See *Ancient History*, book xviii. It is derived comparatively little from them till the modern application of the term to telegraphic purposes. The principle of the electro-magnetic telegraph, even if it is not, to a work like this, intelligible to most readers were they by diagrams or other illustrations, therefore refer for this information and moderate compass, to *Dictionary of Science and Art*; for a dissertation on the subject, to the *Encyclopedia Britannica*, which embodies very full descriptions of the interesting matter.

say, that we can not only send telegrams incredibly short time to the uttermost parts of the globe, but also to America by the route to India &c. And doubtless we are enabled to communicate in this way with every civilised portion of the globe, and can send 2,000 words

of this modern telegraph follow the route of railways, and has been associated with them, that their country has not been of that particular character that the extent and rapidity of its communication, especially in its political matters, would be greatly increased. The Legislature having taken this matter last year (1868), passed an Act (Vict. c. 110), empowering the Secretary of State to acquire and maintain the various telegraph lines in the United Kingdom, and to work them by the medium of the Post Office, and to make arrangements for the purchase of the telegraph lines affected in the course of this year. The Act also provides for the issue of fresh regulations and may be looked for ere long.

**THE EAST INDIES**, the scale of the telegraph, but as changes in those at home in prospect, it would be superfluous to detail the present trials of the telegraph companies.

ing the advantages of a low scale of rates. Mr. Fox Field has informed us, that the receipts of the Atlantic telegraph company were 506l. per day, while under a 10l. rate, and 693l. under a 15l. rate. In an extract from the *Times* of October 18, 1868, it is stated that the number of miles of telegraph lines in the United States is stated to have been 100,000 in 1848, 40,000 in 1858, and

1,000,000 in 1868. The telegraph wire and apparatus in Norway, Cuba, India, and New Zealand, aggregate a value of 210,000l. The telegraph companies in France, Prussia, the Netherlands, Denmark, the United States, and the United Kingdom, are

TILES

small line made up of a number of fibres of some vegetable or animal substance, such as flax, cotton, or silk; whence its names of cotton, linen, or silk thread. [COTTON; LINEN; SILK.]

*Exports of Cotton, Linen, and Silk Scoring Thread, in 1867.*

	Quantities	Values
Cotton - lb.	6,511,559	1,115,515
Linen - "	2,755,859	512,959
Silk - "	8,313	165,111

**TILES** (Ger. dachziegel; Fr. tuiles; Ital. tegole; embrici; Span. tejas; Russ. tscherepiza). A sort of thin bricks, dried in kilns, and used in covering and paving different kinds of buildings. The best brick earth only should be made into tiles. [BRICKS AND TILES.]

**TIMBER** (Ger. bauholz; zimmer; Dutch. timmerhout; Fr. bois de charpente, bois à bâtir; Ital. legname da fabbricare; Span. madera de construccion; Russ. stroéwoi gess; Pol. cembrowana). The term used to express every large tree squared, or capable of being squared, and fit for being employed in house or ship building. In the language of the customs, when a tree is sawn into

TIMBER TRADE

thin pieces, not above 7 inches broad, it is called batten; when above that breadth, such thin pieces are called deal. Wood is the general term, comprehending under it timber, dye woods, fire wood &c.

Timber is generally sold by the load. The following are the contents of the loads of different species of timber, hewn and unhewn:—

A load of timber unhewn	10 cub. feet.
sun-red timber	50
1 inch juniper	20 square feet.

554 Przem ditto	10	11	9	1
3 Riga logs	10	11	9	1

The price of timber has, owing to the reduction of freight and abolition of the duties, and the greater facility of importation, fallen very materially since the peace of 1815. We subjoin an account of the wholesale prices of the principal species of timber in Liverpool on January 29, 1869, from the circular of Messrs. Farnworth and Jardine of Liverpool.

**TIMBER TRADE.** Having, in separate articles, described those species of timber most in demand in this country, we shall confine ourselves, in this article, to a few remarks on the policy of the regulations under which the trade in timber has been and is now conducted, thus retaining some statements that appeared in for-

mer editions, which may still have historical interest, however inapplicable to the present state of things.

**1. Importance of a cheap Supply of Timber.**—It is surely unnecessary to enter into any lengthened statements on this head. If there be one article more than another with which it is of primary

importance that a great commercial and manufacturing nation like England should be abundantly supplied on the lowest terms, that article is timber. Owing to the deficiency of our home supplies, most part of the timber, with the exception of oak, required for building ships and houses, and most part, also, of that employed in the construction of machinery, is imported from abroad. Any individual acquainted with the purposes to which timber is applied, but ignorant of our peculiar policy with respect to it, would never, certainly, imagine that such an article could have been made the subject of oppressive duties, and of still more oppressive preferences. Timber is not to be looked at in the same light as most other commodities. It is against all principle to impose heavy duties on materials intended to be subsequently manufactured; but timber is the raw material of the most important of all manufactures—that of the instruments of production. Suppose it were proposed to lay a heavy duty on ships, waggons, looms, or workshops when completed; would not such a proposal be universally scouted? And yet this is what was really done. The finished articles were not, indeed, directly taxed; but the principal material of which they were made, and without which they could not be constructed, was burdened with an exorbitant duty. To dwell on the impolicy of such a tax would be worse than useless. Of all things essential to the prosperity of manufacturing industry, improved and cheap machinery is the most indispensable. Most individuals amongst us were ready enough to ridicule the contradictory conduct of the French Government, who, at the very moment that they were endeavouring to bolster up a manufacturing interest, laid enormous duties on foreign iron, and thus doubled or trebled the price of some of the most important manufacturing implements. Timber is, however, of quite as much importance in this respect as iron; and our conduct in having burdened it with exorbitant duties partook as largely of the *fish-de-se* character as that of our neighbours. Indeed, as will be immediately seen, it was perhaps less defensible. Some plausible, and probably conclusive, reasonings may be urged in defence of moderate duties on iron and timber, when they are imposed for the sake of revenue; but this apology for financial rapacity cannot be set up in defence of the iron duties of France or the late timber duties of England. The former, however, were the least objectionable; they were imposed to encourage the production of iron in France; whereas the duties on timber in England were imposed for the sake, principally, of promoting the lumber trade of Canada, and of forcing the employment of a few thousand additional tons of shipping. We did not sacrifice the goose for the sake of the golden eggs, but for the sake of the oil she had picked up.

2. *Origin and Operation of the discriminating Duty in favour of American Timber.*—The practice of encouraging the importation of the timber of Canada and our other possessions in North America in preference to that of foreign countries is but of recent growth. It took its rise during the administration of Mr. Vansittart, and bore in every part the impress of his favourite policy. The events that took place in 1808 having seriously affected our previous relations with the Baltic Powers, a deficiency in the accustomed supply of timber began to be apprehended; and the ship-owners and Canada merchants naturally enough availed themselves of this circumstance to excite the fears of the ministry, and to induce them to change the fair and liberal system on

which the trade in timber had been conducted down to that time, by granting extraordinary encouragement to its importation from Canada. Even as a temporary expedient, applicable to a peculiar emergency, the policy of giving any such encouragement is extremely doubtful. Supposing timber not to have been any longer obtainable from the north of Europe, its price would have risen, and it would, of course, have been imported from Canada, the United States, or wherever it could be had, without any interference on the part of Government. But, in 1809, a large addition was made to the duties previously charged on timber from the north of Europe, at the same time that those previously charged on timber from Canada and our other possessions in America were almost entirely repealed; and in the very next year (1810) the duties thus imposed on Baltic timber were *doubled*. Nor did the increase of duties on such timber stop even here. In 1814, after Napoleon's disastrous campaign in Russia, and when the free navigation of the Baltic had been restored, 25 per cent. was added to the duties on European timber. The expediency of increasing the revenue was, no doubt, pleaded in justification of this measure; but we believe it was really intended to augment the preference in favour of Canada timber; for how could it be supposed that an increase of the duties on an article imported from a particular quarter of the world, that was already taxed up to the very highest point, could add any thing considerable to the revenue, when a convertible article might be imported from another quarter duty free? The various duties laid on European timber amounted, when consolidated by the Act 59 Geo. III. c. 52, to 3*l.* 5*s.* per load.

Admitting, for the moment, that the peculiar and unprecedented aspect of things in 1808 and 1809 warranted the giving of some preference to the importation of timber from Canada, such preference should plainly have ceased in 1813. So long as the communication with the bridge is interrupted, we may be forced to use a boat to cross the river; but when the communication is again opened, and when there is not the remotest chance of its future interruption, it would be a singular absurdity to refuse to resume the use of the bridge, and to continue the costly and inconvenient practice of being ferried over. This, however, is exactly what we did in the case of the Canada trade. Because a fortuitous combination of circumstances obliged us, upon one occasion, to import inferior timber at a comparatively high price, we resolved to continue the practice. The history of commerce affords few such displays of gratuitous folly.

The absurdity of this conduct will appear still more striking if we reflect for a moment on the peculiar situation of the countries in the north of Europe. The nations round the Baltic have made little progress in manufacturing industry. They abound in valuable raw products; but they are wholly destitute of the finer species of manufactured commodities, and of colonies. Nor have they any real inducement to attempt supplying themselves directly with the former, or to establish the latter. Their iron and copper mines, their vast forests, and their immense tracts of fertile and hitherto unoccupied land, afford far more ready and advantageous investments for their deficient capital than could be found in manufactures or foreign trade. Russia and Prussia were, indeed, tempted, by our corn and timber laws, to exclude some species of manufactured goods; but it is not possible that they should succeed in materially limiting our exports to

timber had been conducted by granting extraordinary importation from Canada, a policy of giving any is extremely doubtful. Sup- have been any longer obtain of Europe, its price would, of course, have been und, the United States, or had, without any interference. But, in 1809, a large the duties previously charged north of Europe, at the same ously charged on timber from possessions in America were ealed; and in the very next aties thus imposed on Baltic her. Nor did the increase of er stop even here. In 1811, disastrous campaign in Russia, navigation of the Baltic had er cent, was added to the duties er. The expediency of issue was, no doubt, pleaded in s measure; but we believe it l to augment the preference in timber; for how could it be increase of the duties on an om a particular quarter of the already taxed up to the very ld add any thing considerable a convertible article might be other quarter duty free? Be- 1 on European timber amounted, 4 by the Act 59 Geo. III. c. 52.

the moment, that the peculiar aspect of things in 1808 and the giving of some preference of timber from Canada, &c. certainly have ceased in 1813. No communication with the bridge is by forced to use a boat to cross when the communication is again a there is not the remotest chance of resumption, it would be a singular se to resume the use of the bridge, the costly and inconvenient practice over. This, however, it did in the case of the Canada a fortuitous combination of cir- ed us, upon one occasion, to timber at a comparatively high d to continue the practice. The ce affords few such displays of

of this conduct will appear still we reflect for a moment on the n of the countries in the north of tions round the Baltic, have made a manufacturing industry. They able raw products; but they are of the finer species of manufac- ves, and of colonies. Nor have inducement to attempt supplying ily with the former, or to establish air iron and copper mines, their their immense tracts of fertile noccupied land, afford far more advantageous investments for that l than could be found in man- eign trade. Russia and Prussia emptied, by our corn and timber e some species of manufactured is not possible that they should terially limiting our exports to

them, provided we do not second their efforts by refusing to admit their products.

Of all the countries in the world, there is obviously none which has so many facilities for carrying on an advantageous trade with the north as Great Britain. We have a surplus of all those products of which Russia, Prussia, Sweden, Denmark, and Norway stand most in need; and, on the other hand, they have a surplus of many of those of which we are comparatively destitute. The immense traffic we carry on with the Baltic does not, therefore, depend, in any considerable degree, on artificial or accidental circumstances. It does not rest on the wretched foundation of custom-house regulations or discriminating duties, but on the gratification of mutual wants and desires. It has been justly remarked by the Marquis Gärner, the excellent translator of the *Wealth of Nations*, that no considerable portion of the increased power and wealth of England may be traced to the growing opulence of Russia. But the Russian empire is yet only in the infancy of civilisation; she must continue for a very long period to advance in the career of improvement; and it will be our own fault if we do not reap still greater advantages from her progress.

Such is the nature of that commerce against which the discriminating duties on timber from the north of Europe aimed a severe blow. In 1809, when this system began, 428,000 tons of British shipping entered inwards from the Baltic. In 1811, the year after the 25 per cent. of additional duty had been imposed on Baltic timber, and when all the ports of that sea were open to our ships, only 212,900 tons of British shipping entered inwards, being little more than the half of what it amounted to when the system began. And notwithstanding the vast increase, in the interval, of population and wealth in the countries round the Baltic, our trade with the different ports on that sea had not recovered, in 1813, from the blows inflicted on it in 1809 and 1811. In 1812 only 295,135 tons of British shipping left the Baltic for the United Kingdom.

The following extract from the evidence of Mr. Edward Patzeker, a merchant of Memel, given before the committee of the House of Commons on the foreign trade of the country, in 1821, shows the effect that the increased duties on timber had on the commerce with Prussia:—

‘Has there been a great alteration in the timber trade between Memel and this country of late years?’—‘Since the war, a great alteration: before the war we used to have 950 to 1,000 English ships in a year, and since the war we have had from 200 to 300 only.’

‘When you talk of 900 ships, do you mean 900 ships trading between Great Britain and Memel?’—‘Yes.’

‘Do you mean that number of cargoes were loaded in the year for England?’—‘Yes.’

‘How many cargoes were loaded for Great Britain during the last year (1820)?’—‘About 250 or 280 cargoes; there have not been more.’

‘To what cause do you attribute that diminution in the trade?’—‘To the high duties in England; for formerly the duties were only 16s. and some pence; now they are 3*l.* 5*s.* in a British, and 2*l.* 8*s.* in a foreign ship.’

‘Has that diminished trade in timber produced a great alteration in the circumstances of the people of Prussia?’—‘Yes; for it is the only trade which we can carry on; wheat and all the rest of our articles cannot be brought here: timber is the only one that can be brought, and the trade from Poland has very much ceased in consequence of the diminished demand for it; the people cannot

sell their goods, and we cannot take such quantities of timber as we used to do; and, therefore, they cannot take English goods from us.’

‘If such an alteration was to take place in the duties on timber in this country as to give the Prussians a larger share of the trade than they at present enjoy, do you think that would produce increased friendly feelings on the part of the people of your country to the people of this country?’—

‘It would. *They would certainly take far more goods from hence, as they could get better rid of them.* The Poles, also, would take more of them.’ (*Report*, March 9, 1821, p. 107.)

The effect that the increased duties had on the trade with Norway and Sweden, aggravated as they in some degree were by the method of charging the duty on deals, was still more striking and extraordinary. These countries had few products, except timber and iron, to exchange for our commodities; and as neither of these could be advantageously imported into England under the new system, the trade with them almost entirely ceased; and they were reluctantly compelled to resort to the markets of France and Holland for the articles they had formerly imported from us. In proof of this, we may mention that the exports to Sweden, which amounted in 1811 to 211,818*l.*, declined in 1819 to 46,556*l.*, and even in 1812 were only 199,313*l.*; while the exports to Norway, which had, in 1813, amounted to 199,902*l.*, fell in 1813 to 61,711*l.*, and in 1812 had only increased to 131,701*l.*

This extraordinary falling off in so very important a branch of our commerce having been established beyond all question by evidence taken before the committees of Lords and Commons on the foreign trade of the country in 1820, an approach to a better system was made in 1821, when the duty on timber from the north of Europe was reduced from 3*l.* 5*s.* to 2*l.* 6*s.* per load, at the same time that a duty of 10*s.* per load was laid on timber from British America. This, however, was a comparatively inefficient measure. It was stated, to be sure, at the time, that the 2*l.* 5*s.* per load of excess of duty that was thus continued on Baltic timber over that laid on timber imported from Canada was not more than enough to balance the higher prime cost, the greater freight, and other charges consequent upon the importation of the latter; and that it would, therefore, be in future indifferent to a merchant whether he imported timber from Memel or Miramichi. In point of fact, however, the discriminating duty continued in favour of Canada timber was far too high to allow of this equalisation being effected. So much was this the case, that there were instances of ships loading with timber in the north of Europe, carrying that timber to Canada, and then bringing it to England as Canada timber; the difference of duty having been about sufficient to indemnify the enormous expense of this round about voyage. We do not mean to say that this was a common practice; but what are we to think of a commercial regulation that admitted of such an adventure being undertaken with any prospect of success? Admitting, however, that the duty had been adjusted so as to have had the anticipated effect, could anything be more preposterous and absurd than to impose it on such a principle? There are mines of coal in New Holland; but what should we think, were an attempt made to impose such duties on coals from Newcastle as should render it indifferent to a London dealer whether he imported a cargo of coal from the Tyne or Botany Bay? Now, the case of the timber duties was, in point of principle, precisely the same. We may obtain timber from

countries so near at hand that our ships may make 3, 4, 5, and even 6 voyages a-year to them. According to the evidence of Mr. J. D. Powles, then secretary to the London Dock Company, ships can make six voyages from Norway, 3 or 4 from Prussia, and 2 from Russia, in a season. (*Commons' Report*, p. 89.) And we refused to admit it unless loaded with a duty that raised its price to a level with what was brought from the other side of the Atlantic—a voyage which our ships cannot, at most, perform above twice a-year.

3. *Comparative Quality of Baltic and Canada Timber.*—Had the timber of Canada been, at the period we speak of, decidedly superior to that of the north of Europe, something might have been found to say in favour of the discriminating duty; for it might have been contended, with some show of reason, that it was of the utmost consequence, considering the application of timber to ship and house building, and other important purposes, to prevent the importation of an inferior species, even though it might be cheaper. But the system we adopted was of a totally different character. We did not attempt to shut out an article which, though cheap, was inferior; but committed the twofold absurdity of shutting out one that was at once cheap and at that time really, or supposed to be, superior.

The committee of the House of Lords observe, in their *First Report on the Foreign Trade of the Country*, that 'the North American timber is more soft, less durable, and every description of it more liable, though in different degrees, to the dry rot, than timber of the north of Europe. The red pine, however, which bears a small proportion to the other descriptions of timber, and the greater part of which, though imported from Canada, is the produce of the United States, is distinguished from the white pine by its greater durability. On the whole, it is stated by one of the commissioners of his Majesty's navy, most distinguished for practical knowledge, experience, and skill, that the timber of Canada, both oak and fir, does not possess, for the purpose of ship-building, more than half the durability of wood of the same description the produce of the north of Europe. The result of its application to other purposes of building is described by timber merchants and carpenters to be nearly similar' (p. 4).

Important evidence was given in support of this view; but though such was the opinion of the best informed parties at the time, and though its correctness is in some respects not to be doubted, still there can be no question that the inferiority of British North American timber was set in too strong a light in the evidence referred to, and that it is, in fact, better fitted for several important purposes than Baltic timber. Not only is the red American pine of a very superior quality, but the pine and spruce planks of New Brunswick and Nova Scotia, especially the latter, are universally preferred, for the purposes to which they are applied, to all other varieties of timber; and notwithstanding the reduction of the discriminating duty, and eventual abolition of all duties on timber, their importation, as will be seen, has increased beyond all precedent. These circumstances were not, however, known to the parties who introduced the discriminating system, which was at the time, and for long after, most injurious to the best interests of the United Kingdom.

4. *Apologies for the Discriminating Duty.*—If anything ought, more than another, to make legislators pause before enacting a restrictive regulation, it is the difficulty of receding from it. After it has been enforced for a while, a variety of interests usually grow up under its protection,

which may be materially injured by its repeal. All, however, that the persons so interested can justly claim, is, that sufficient time, and every possible facility, should be afforded them to prepare for a change of system. Because the interest of a comparatively small portion of the community may be injuriously affected by the abolition of a regulation ascertained to be inimical to the public, it is, therefore, to be contended that we should, in all hazards, continue to enforce the regulation we have so unwisely enacted? To maintain the affirmative would be to give perpetuity to the worst errors and absurdities, and would be an effectual bar to every sort of improvement. No change, even from a bad to a good system, should be rashly set about; but when once the expediency of an alteration has been clearly established, it ought to be resolutely carried into effect.

It was objected to the abolition of the discriminating duties on timber, that it would be injurious to Canada and the shipping interest. We believe, however, that the injury was not nearly so great as has been represented; that it was, in fact, quite inconsiderable. So far from the *lumber trade*—or the trade of felling wood, squaring it, and floating it down the rivers to the shipping ports—being advantageous to a colony, it is distinctly and completely the reverse. The habits which it generates are quite subversive of that sober, steady spirit of industry so essential to a settler in a rude country; to such a great degree, indeed, is this the case, that lumberers have been described as the pests of a colony, 'made and kept vicious by the very trade by which they live.' But, abstracting altogether from the circumstances now alluded to, it has been shown, over and over again, that the abolition of the lumber trade would materially benefit the real interests of the colonies. It is ludicrous, indeed, seeing that not one tree in a hundred is fit for the purposes of being squared for timber, to suppose that the discontinuance of the trade could be any serious loss. But the fact is, that when trees are cut down by lumberers, for export as timber, instead of being burnt down, so great a growth of brushwood takes place, that it actually costs more to clear the ground where the lumberers have been than where they have not been. Mr. Richards, who was sent out by Government to report on the influence of the lumber trade, represented it as most unfavourable; and observed that 'when time or chance shall induce or compel the inhabitants to desist from this employment, agriculture will begin to raise its head.' The statements of Captain Moorsom, in his *Letters from Nova Scotia*, are exactly similar. He considered the depression of the timber market, although a severe loss to many individuals, a 'decided gain to the colony,' from the check it has given to the 'lumbering mania' (p. 53).

The statements that were made as to the amount of capital expended on sawmills, and other fixed works for carrying on the lumber trade, had been singularly exaggerated, and Mr. P. Thomson (afterwards Lord Sydenham), who used the best means of acquiring accurate information on this point, stated, in his speech on March 18, 1831, that if 500,000*l.* were taken as the amount, it would be a great deal above rather than under the real value.

The fact is, that in so far as the interests of the colonies are concerned, it is plain they did not really lose by the repeal of the differential duties on foreign timber. For the quality of their timber having been well ascertained, and the prejudice with which it had formerly to contend having subsided, it was found quite able successfully to maintain its ground, under a free system, with the timber of the Baltic or of anywhere else.

colonial timber. Probably, indeed, it may be supposed that it had better be repealed. But we beg to dissent from this opinion; though it might be as well, perhaps, to allow ships to be built in bond. But except on them, the duty, supposing it were extended to colonial timber, is too limited to have any sensible, or, at all events, any prejudicial effect.

The review of the Liverpool timber trade of 1868, in Mr. Edward Chaloner's annual circular, states that the total tonnage employed in the importation of wood to that port had been 277,831 tons in 1868, against 390,278 in 1867. But notwithstanding this falling off, the prospects of the trade were more favourable on February 1, 1869, than on February 1, 1868.

TIN (Ger. blech, weissblech; Fr. fer blanc; Ital. laita, banda stagnata; Span. hoja de lata; Russ. blücha, sheet; Arab. resas; Sansc. trapu and ranga). A metal which has a fine white colour like silver; and when fresh, its brilliancy is very great. It has a slightly disagreeable taste, and emits a peculiar smell when rubbed. Its hardness is between that of gold and lead. Its specific gravity is 7.29. It is very malleable:

tin foil, or tin leaf, is about  $\frac{1}{100}$  of an inch thick; and it might be beaten out into leaves still thinner again, if such were required for the purpose of art. In ductility and tenacity it is very inferior. A tin wire 0.078 inch in diameter is capable of supporting a weight of 347 lb. only without breaking. Tin is very flexible, and produces a crackling noise when bent. It may be readily alloyed with copper, zinc &c., forming very valuable compounds. (Thomson's Chemistry)

Ure's Dictionary, by Hmt.) The ores of this metal are found in comparatively few places; the principal, and perhaps the only, ones are Cornwall, Galicia, Erzgebirge in Saxony, Bohemia, the Malay countries, China, and Banca in Asia. They are peculiar to primitive rocks, generally in granite, either in veins or beds, and are often associated with copper and iron pyrites.

Tin is much used as a covering to several of the metals: iron is tinned, to prevent its rapid oxidation when exposed to air and moisture; and the same process is applied to copper, to avoid the injurious effects to which those who use it are in the habit of employing cooking utensils made of the

leaf, is about  $\frac{1}{1000}$  of an inch  
might be beaten out into leaves as  
thick as required for the purposes  
of its ductility and tenacity it is very inferior.  
A tin 78 inch in diameter is capable of  
weight of 347 lb. only without  
it is very flexible, and produces a  
ring when bent. It may be readily  
combined with copper, zinc &c., forming very  
valuable alloys. (Thomson's Chemistry,  
vol. iv., by Hunt.)

This metal are found in comparative  
abundance; the principal, and perhaps the  
most important, are Cornwall, Galicia, Erzgebirge in  
Saxony, the Malay countries, China,  
and Java. They are peculiar to primary  
igneous rocks, and are often associated with copper and  
iron.

It is used as a covering to several other  
metals, to prevent its rapid oxidation,  
and to render it more ductile; and it is  
applied to copper, to avoid the  
oxide which those who use it in the  
preparing cooking utensils made of this

metal are always liable. The solutions of tin in  
the nitric, muriatic, nitro-sulphuric, and tartaric  
acids, are much used in dyeing, as giving a degree  
of permanency and brilliancy to several colours,  
to be obtained by the use of no other mordants  
with which we are at present acquainted: tin  
forms the basis of pewter, in the composition of  
which it is alloyed with lead; when rolled into  
thin sheets, it is called tin-foil, and is applied,  
with the addition of mercury, to cover the surface of  
glass, thus forming looking-glasses, mirrors &c.;  
and in combination with sulphur, it constitutes  
what is called mosaic gold. (Joyce's Chem. Min.)

TIN PLATES, known in Scotland by the name  
of white iron, are applicable to a great variety of  
purposes. They are formed of thin plates of iron  
dipped into molten tin. The tin not only covers  
the surface of the iron, but penetrates it com-  
pletely, and gives the whole a white colour. It  
is used to add about  $\frac{1}{10}$  of copper to the tin, to  
prevent it from forming too thick a coat upon the  
iron.

The demand for tin plates, which has always  
been considerable, has latterly increased with  
extraordinary rapidity. The exports in 1867  
amounted to 1,579,692 cwt., valued at 2,063,269*l.*,  
of which no less than 1,390,064*l.* worth went to  
the United States. In 1866 the value of the  
exports amounted to 1,896,192*l.* During 1867,  
81,209 cwt. of British, and 26,576 cwt. of foreign  
and colonial tin were exported from this country,  
in addition to the unwrought tin plates and tin  
and tinned wares.

Historical Notices of the British Tin Trade.—  
The tin mines of Cornwall have been worked from  
a very remote era. The voyages of the Phœnicians  
to the Cassiterides, or tin islands, are men-  
tioned by Herodotus (lib. iii. c. 115), Diodorus  
Siculus (lib. iv. p. 301, ed. 1604), and Strabo  
(Geog. lib. iii.). Some difference of opinion has  
indeed, been entertained as to the particular  
islands to which the Phœnicians applied the term  
Cassiterides; but Borlase (*Account of the Scilly  
Islands*, p. 72), Larcher (*Herodote*, tome iii. p.  
384, ed. 1802), and the ablest critics, agree that  
they are the Scilly Islands and the western ex-  
tremity of Cornwall. After the destruction of  
Carthage, the British tin trade, which was always  
reckoned of peculiar importance, was carried on  
by the merchants of Marseilles, and subsequently  
by the Romans. Besides Britain, Spain furnished  
the ancients with considerable quantities of tin.  
We have no very precise information as to the  
purposes to which they applied this metal. It  
has been supposed that the Phœnicians, so famous  
for their purple dyes, were acquainted with the  
use of the solution of tin in nitro-muriatic acid in  
fixing that colour. The best of the ancient  
mirrors, or *specula*, were also made of a mixture  
of copper and tin: and tin was used in the coating  
of copper vessels. (Watson's *Chemical Essays*,  
vol. iv.)

In modern times, the tin mines of Cornwall and  
Devon have been wrought with various degrees of  
energy and success. Queen Elizabeth brought  
over some German miners, by whom some of the  
processes were improved. During the civil wars,  
the mines were much neglected. At the com-  
mencement of last century, however, the business  
of mining was carried on with renewed vigour;  
and from 1720 to 1740 the annual produce was  
about 2,100 tons. The produce went on gradually  
increasing, till it amounted, in the 10 years from  
1730 to 1800, to 3,254 tons a-year. During the  
next 15 years the produce fell off; and for the 5  
years ending with 1815, it was always consider-  
ably under 3,000 tons a-year. But in the last-

mentioned year a considerable increase took  
place: and since 1816, the produce has been, with  
the exception of 1820, always above 3,000 tons a-  
year. And latterly it has so increased, that on  
the average of the 5 years ending with 1867, the  
annual produce of the mines has been 12,991 tons  
of tin ore, and 8,385 tons of metallic tin, of the  
value of 1,441,798*l.*

The price of British tin was 92*l.* per ton in  
1800 and at an average, from 1811 to 1815 in-  
clusive, was about 140*l.* per ton. Its fall from 1815  
to 1820, and its comparatively low price for several  
years thereafter, were owing to a variety of  
causes: partly to improvements in the art of  
working the mines, partly to the increased supply  
of metal obtained from them, and partly and  
principally to the competition of the tin of Banca  
and of the Malay countries. Previously to 1814,  
we had in some measure a monopoly of the  
market of the world. But since then the Banca  
mines have been wrought with unusual spirit;  
and their produce has been so much increased, as  
not only fully to supply the market of China, to  
which we formerly exported from 600 to 1,000  
tons, but to meet us in every European market.  
Malay tin is now very extensively imported, for  
warehousing, into England, at the same time that  
large quantities are carried direct to Holland,  
where there are refining houses. But, with-  
standing these circumstances, both our exports of  
tin and its price have increased considerably of  
late years.

Duty on British Tin.—All tin produced in  
Cornwall was subject, from a very remote period  
down to 1837, to a coinage duty of 4*l.* per ton,  
payable to the Duke of Cornwall: the tin raised  
in Devonshire was subject to a similar duty of  
1*l.* 13*s.* 4*d.* per ton. This duty produced from  
16,000*l.* to 20,000*l.* a-year; and was felt to be a  
serious grievance, not only from its amount, but  
from the vexatious regulations under which it  
was collected. Luckily, however, the duty on  
tin, and all regulations with respect to its coinage,  
were abolished by 1 & 2 Vict. c. 120. Compensa-  
tion was made to the duchy of Cornwall for the  
loss arising from this abolition, by settling on its  
possessors a perpetual annuity equal to the net  
average amount of the duties during the 10 years  
ending with 1837.

TIN, ORIENTAL. (Malay, tina; Hin. kalai;  
Siamese, dibuk; Burmese, kye-p'kyu, white  
copper). In commercial language usually called  
Banca tin. It is found in several provinces of  
China; but the most extensive and, probably,  
richest tin district in the world exists in the  
Malay countries. This comprehends the whole  
of the peninsula, from the extreme cape to the  
latitude of 14° on its western side, and to 11° on  
its eastern, and comprehends several of the small  
islands lying in the route between the peninsula  
and Java, as far as the latitude of 9° south; so  
that the whole of this tin district has an extreme  
length of near 1,200 miles. By far the greater  
number of the mines within these limits are as  
yet unwrought and unexplored. It was only in  
the beginning of last century that the mines of  
Banca, the most productive at present worked,  
were accidentally discovered. The whole tin of  
the Malay countries is the produce of alluvial  
ores, or what is called, in Cornwall, 'Stream-  
work'; and from the abundance in which the  
mineral has been found by the mere washing of  
the soil, no attempt has hitherto been made at  
regular mining, or obtaining the ore from its  
rocky matrix. Malay tin, consequently, is grain  
tin, or tin in a very pure state; that being the  
species which alluvial ore uniformly produces,

The mines, or rather excavations, are perpendicular pits of from 15 to 25 feet deep; and when the soil and a superstratum of common clay are removed, the bed containing the ore, consisting of quartz and granitic gravel, is reached. The sand and gravel are separated from the ore by passing a stream of water through the whole materials. The ore so obtained is preserved in heaps, and smelted periodically with charcoal in a blast furnace. The mine or pit is kept clear of water by the Chinese wheel. No cuttle are used in any part of the process, human labour being had recourse to throughout the whole of its stages. The most imperfect part of the process is the smelting. The stream ores of Cornwall, which are generally poor, afford from 65 to 75 per cent. of grain tin; whereas, owing to the imperfection of the process, from those of Banca not more than 55 or 60 are usually obtained.

With very trifling exceptions, the whole tin of the Malay islands is mined and smelted by Chinese settlers; and before their skill and enterprise were applied to its production, the metal seems to have been obtained by the inhabitants of the countries which produced it, by processes hardly more skillful than those by which the precious metals were procured by the native inhabitants of America, prior to the introduction of European skill and machinery. The following estimate has been given of the annual produce of the principal states and places producing tin:—

East coast of the Malay peninsula—		meals
Junk Ceylon	-	5,000
Quela	-	2,000
Pera	-	5,000
Salangore	-	5,000
Malacca	-	4,000
Total	-	17,000
West coast of the Malay peninsula and islands—		
Singora and Patani	-	5,000
Tringau	-	2,000
Pahang	-	5,000
Singkep	-	5,000
Banca	-	75,000
Total	-	95,000

This can be considered only as a rough estimate; but we believe it is not far wide of the truth. The most considerable port of exportation is Batavia; from which there is sent annually, either directly or through orders from the Dutch Government or the authorities at Banca, between 4,000 and 5,000 tons. In Hunt's mineral statistics, the production of the Scotch Banca mines is stated at 4,182 tons in 1865, 4,807 tons in 1866, and 4,260 tons in 1867, and the *Economist* of January 2, 1869, quoting the official returns of the Dutch Trading Company, stated the total stock of Banca tin in Holland in December 1868 to have been 142,014 slabs. From Prince of Wales Island there is also a considerable quantity exported; and a smaller one direct to China in junks, from several of the native ports on the eastern shore of the Malay peninsula. The great marts for the consumption of tin are China, Hindostan, and the continent of Europe. The quality of the different descriptions of Malay tin, although there may be some inconsiderable difference in the quality of the original ores, seems to be derived chiefly from the greater or less skill with which the process of smelting is conducted; and this, again, necessarily depends upon the extent of capital and goodness of the machinery employed. The mining operations of Banca have long been conducted upon a larger scale, and with more skill, than in any other of the Malay countries; and, consequently, the metal produced in this island is superior by from 10 to 12 per cent.: in the market of Canton it is called 'old tin,' in contradistinction to 'new tin,' the produce of the

other Malay countries. Next, in point of quality to the produce of Banca, are those of Tringau and Singkep, which are not more than 5 per cent. inferior to it. The tin of the state of Pera, a considerable part of which is produced by the natives themselves, without Chinese assistance, is the worst, and usually about 15 per cent. below that of Banca. The native tin of China is 10 per cent. inferior to that of Banca, and is probably blown tin, like the greater part of that of Cornwall, and, like it, the produce of regular mining operations, and not alluvial. The produce of the Chinese mines is said of late years to have greatly decreased; probably owing to the great increase which has recently taken place in the produce of the Malay countries, and the cheapness and abundance with which it finds its way to China. It should be added, that of late years, and chiefly owing to the very low price and abundance of German spelter (zinc) in the Indian market, the commodity has occasionally been fraudulently mixed with tin. The Chinese brokers of Canton, however, are sufficiently expert to detect the adulteration; and it is believed that this discreditable practice has lately ceased.

The price of tin, taking the Dutch market as the standard, has fluctuated in the 10 years from 1870 to 1867 from 111s. to 81s. 95s. being the price in September 7, 1867. (Hunt's *Mineral Statistics* for 1867; Crawford's *History of the Indian Archipelago*; Dr. Horstfeld's *M.S. Statistical View of the Island of Banca*; *Singapore Chronicle*; *Canton Register*; &c.)

TOBACCO (Dan. tobak; Dutch, tabak; Ger. tabak; Ital. tabacco; Pol. tobakia; Russ. tabak; Span. tabaco; Arab. bujjerbhag; Hind. tum-bakū; Malay, tambracoo). The dried leaves of the *Nicotiana Tabacum*, a plant indigenous to America, but which succeeds very well, and is extensively cultivated, in most parts of the Old World. The recent leaves possess very little odour or taste; but when dried, their odour is strong, narcotic, and somewhat fetid; their taste bitter and extremely acrid. When well cured, they are of a yellowish green colour. When distilled, they yield an essential oil, on which their virtue depends, and which is said to be a virulent poison. The leaves are used in various ways; being chewed, smoked, and ground and manufactured into snuff. It is in the last mentioned form that tobacco was for many years principally used in Great Britain; but now almost the whole consumption is effected by smoking. Though the contrary has been often asserted, the use of tobacco does not seem to be productive of any perceptible bad consequence.

1. *Historical Sketch of Tobacco.*—The taste for tobacco, though apparently administering only to a frivolous gratification, has given birth to a most extensive commerce, and been a powerful spur to industry. Being a native of the New World, its introduction into Europe dates only from the early part of the sixteenth century. Seeds of the plant were sent, in 1560, from Portugal, to Catherine de' Medici, by Jean Nicot, the French ambassador in that country, from whom it has received its botanical name. The notion, at one time so general, that the specific appellation tobacco was derived from its having been imported from Tobago, is now universally admitted to be without foundation. Humboldt has shown that tobacco was the term used in the Haytian language to designate the pipe, or instrument made use of by the natives in smoking the herb; and the term, having been transferred by the Spaniards from the pipe to the herb itself, has been adopted by the other nations of the

ies. Next, in point of quality, Banca, are those of Tringana are not more than 5 per cent. tin of the state of Pera, a conch which is produced by the natives at Chinese assistance, is the about 15 per cent. below that five tin of China is 10 per cent. Banca, and is probably block or part of that of Cornwall; produce of regular mining operational. The produce of the mid of late years to have greatly owing to the great increase taken place in the produce of es, and the cheapness and abundance, it finds its way to China. It that of late years, and chiefly y low price and abundance of (ine) in the Indian market, this occasionally been fraudulently The Chinese brokers of Canton. Scientific expert to detect the l it is believed that this cile has lately ceased.

aking the Dutch market as the tuated in the 10 years from 187 to, to 81s., 95s. being the price in 17. (Hunt's *Mineral Statistics* Ford's *History of the India* Horsfield's *M.S. Statistical View Banca; Singapore Chronicle*, &c.)

Dan. tobak; Dutch. tabak; Ger. Tabacco; Pol. tobaka; Russ. tabak; Arab. bujjerhang; Hind. tambak (bramboo). The dried leaves of America, a plant indigenous to America, grows very well, and is extensively in the parts of the Old World. The leaves possess very little odour or taste; their odour is strong, narcotic, and their taste bitter and ex- When well cured, they are of a yellow colour. When distilled, they yield an oil, on which their virtue is said to be a virulent poison, which is used in various ways; being used in ground and manufactured in the last mentioned form that in many years principally used in but now almost the whole collected by smoking. Though the use often asserted, the use of tobacco seem to be productive of any consequence.

*Sketch of Tobacco.*—The taste for tobacco apparently administering only gratification, has given birth to a commerce, and been a powerful inducement into a native of the New World. Being into Europe dates early part of the sixteenth century. Tobacco plants were sent, in 1560, from the West Indies to France, by Jean Nicot, ambassador in that country, from which it received its botanical name. The time so general, that the specific name tobacco was derived from its having been first introduced into Europe from Tobago, is now universally admitted without foundation. Humboldt tobacco was the term used in the age to designate the pipe, or the use of by the natives in smoking the term, having been transferred from the pipe to the herb itself, and by the other nations of the

ancient world. (*Essai politique sur la Nouvelle-Espagne*, vol. iii. p. 50, 2nd edit.) Tobacco is believed to have been first introduced into England by the settlers who returned, in 1586, from the colony which it had been attempted to found in Virginia, under the auspices of Sir Walter Raleigh, in the preceding year. Harriott, who accompanied this expedition, gives, in his description of Virginia, an account of the tobacco plant, and of the manner in which it was used by the natives; adding, that the English, during the time they were in Virginia, and since their return home, were accustomed to smoke it after the fashion of the Indians, and found many rare and wonderful experiments of the virtue thereof. (Hakluyt, vol. i. p. 75.)

Raleigh, and other young men of fashion, having adopted the practice of smoking, it spread amongst the English; as it had previously spread amongst the Spaniards, Portuguese, French, and other Continental nations. But it made its greatest progress in this country after the foundation of the colony at James Town in Virginia, in 1607. The soil of the colony being found particularly well fitted for the culture of tobacco, considerable quantities were raised and sent home; and the numerous individuals interested in the colony contributed to introduce that taste for it which was diffused amongst all classes with astonishing rapidity.

James I. attempted, by repeated proclamations and publications, some of them couched in very strong terms, to restrain the use of tobacco. But his efforts had very little effect; and the settlers in Virginia continued to experience a more rapidly increasing and better demand for tobacco than for any other product of the colony.

During the earlier part of the reign of Charles I., the trade in tobacco was monopolised by the Crown. This monopoly was not, however, of long continuance, and totally ceased at the breaking out of the civil war.

Tobacco plants had been early introduced into England, and were found to answer remarkably well. Their cultivation was, indeed, prohibited by James, and afterwards by Charles, but apparently without effect. At length, however, the growing consumption of tobacco having excited the attention of the government financiers, it was seen that, by imposing a duty on its importation, a considerable revenue might be raised; but that, were it allowed to be freely cultivated at home, it would be very difficult to collect a duty upon it. In 1643, the Lords and Commons imposed a moderate duty, for the sake of revenue, on plantation tobacco; but instead of directly prohibiting the use of native tobacco, they burdened it with such a duty as, it was supposed, would occasion its culture to be abandoned. The facility, however, with which the duty was evaded, soon satisfied the republican leaders that more vigorous measures were required to stop its cultivation, and consequently to render its importation a source of revenue. Hence, in 1652, an Act was passed, prohibiting the growth of tobacco in England, and appointing commissioners to see its provisions carried into effect. This Act was confirmed at the Restoration, by the Act Charles II. c. 34, which ordered that all tobacco plantations should be destroyed. These measures were believed, at the time, to have been principally brought about by the solicitations of the planters; but their real intention was not so much to conciliate or benefit the latter, as to facilitate the collection of a revenue from tobacco; and, considered in this point of view, their policy seems quite unexceptionable.

This Act did not, however, extend to Ireland; and, previous to 1830, the cultivation of tobacco made considerable progress in the country. Had this been allowed to continue, there can be no question that, in a few years, the revenue from tobacco, amounting to about 4,500,000*l.* a year, would have been most materially diminished; for it would be quite visionary to suppose that any plan could have been devised for collecting a duty even of 100 per cent. upon tobacco—(see *post*)—supposing it to have been generally cultivated in Ireland. No one, therefore, can question the wisdom of the Act 1 & 2 Wm. IV. c. 13, prohibiting its growth in that country, and the rigorous enforcement of its provisions. Any advantage Ireland might have gained by its cultivation would have been but a poor compensation for the sacrifice of revenue it must have occasioned.

In some countries, as England, tobacco was, down to a comparatively late period, much used in the form of snuff; in others it is principally chewed; but, in one form or other, it is everywhere made use of. So early as 1624, Pope Urban VIII. issued a bull, excommunicating those who smoked in churches! The practice of smoking was at one time exceedingly prevalent in this country; but during the reign of George III. it was well nigh superseded, at least amongst the higher and middle classes, by the practice of snuff-taking. Latterly, however, smoking has been extensively revived, and is much more generally practised than formerly, while snuffing is no longer in fashion.

We quote the following statement as to the universality of the use of tobacco from a learned paper on its 'Introduction and Use,' in the 22nd volume (p. 142) of the *Asiatic Journal*: 'In Spain, France, and Germany, in Holland, Sweden, Denmark, and Russia, the practice of smoking tobacco prevails amongst the rich and poor, the learned and the gay. In the United States of America, smoking is often carried to an excess. It is not uncommon for boys to have a pipe or cigar in the mouth during the greatest part of the day. The death of a child is not unfrequently recorded in American newspapers, with the following remark subjoined:—"supposed to be occasioned by excessive smoking." If we pass to the East we shall find the practice almost universal. In Turkey, the pipe is perpetually in the mouth; and the most solemn conferences are generally concluded with a friendly pipe, employed like the calumet of peace amongst the Indians. In the East Indies, not merely all classes, but both sexes, inhale the fragrant steam; the only distinction among them consisting in the shape of the instrument employed, and the species of the herb smoked. In China, the habit equally prevails; and a modern traveller in that country (Barrow) states, that every Chinese female, from the age of 8 or 9 years, wears, as an appendage to her dress, a small silken purse or pocket to hold tobacco, and a pipe, with the use of which many of them are not unacquainted at this tender age. This prevalence of the practice, at an early period, amongst the Chinese, is appealed to by M. Pallas as an evidence that "in Asia, and especially in China, the use of tobacco for smoking is more ancient than the discovery of the New World." He adds—"Amongst the Chinese, and amongst the Mongol tribes who had the most intercourse with them, the custom of smoking is so general, so frequent, and has become so indispensable a luxury; the tobacco purse affixed to their belt so necessary an article of dress; the form of the pipes, from which the Dutch seem to have taken the model of theirs, so original; and, lastly, the

preparation of the yellow leaves, which are merely rubbed to pieces and then put into the pipe, so peculiar; that they could not possibly derive all this from America by way of Europe; especially as India, where the practice of smoking is not so general, intervenes between Persia and China."

This, however, is a very doubtful proposition. It seems sufficiently established that the tobacco plant was first brought from Brazil to India about the year 1617; and it is most probable that it was thence carried to Siam, China, and other eastern countries. The names given to it in all the languages of the East are obviously of European, or rather American, origin; a fact which seems completely to negative the idea of its being indigenous to the East.

*Sources of Supply. Importation into Great Britain.*—Tobacco is now very extensively cultivated in France, the Zollverein States, Austria, and other European countries, in the Levant, and in India; but the tobacco of the United States and Cuba is still very generally admitted to be decidedly superior to most others. It is much higher flavoured than the tobacco of Europe; a superiority attributable in some degree, perhaps, to a different mode of treatment; but far more, it is believed, to differences of soil and climate. In the circular of Messrs. Parry and Crosbie, of Liverpool, dated January 4, 1869, the high character of American strips is especially noted.

Previously to the American war, our supplies of tobacco were almost entirely derived from Virginia and Maryland; and they are still principally imported from these states: of 57,586,287 lb. of unmanufactured tobacco imported in 1867, no fewer than 37,547,166 lbs. came from the United States. Mr. Jefferson, in his *Notes on Virginia*, has given a very unfavourable view of the effects of the tobacco culture. It was, indeed, well known to be a crop that speedily exhausted all but the very best lands; and in addition to this, Mr. J. says that 'it is a culture productive of infinite wretchedness. Those employed in it are in a continued state of exertion, beyond the powers of nature to support. Little food of any kind is raised by them; so that the men and animals on these farms are badly fed, and the earth is rapidly impoverished.' (English ed. p. 278.)

Tobacco is extensively cultivated in Mexico, but only for home consumption. It might probably, however, were it not for the restrictions under which it is placed, form a considerable article of export from that country. Under the Spanish Government, the tobacco monopoly was one of the principal sources of revenue; yielding from 4,000,000 to 4,500,000 dollars, exclusive of the expenses of administration, amounting to about 800,000 dollars. No tobacco was allowed to be cultivated, except in a few specified places. Commissioners, or *guardias de tabaco*, were appointed, whose duty it was to take care that all tobacco plantations without the privileged districts should be destroyed. The Government fixed the price at which the cultivators of tobacco were obliged to sell it to its agents. The sale of the manufactured tobacco was farmed out; and cigars were not allowed to be sold, except at the royal *estancos*. No one was allowed to use cigars of his own manufacture. This oppressive monopoly was established in 1764. It has been continued, from the difficulty of supplying the revenue which it produces, by the revolutionary Governments. (Humboldt, *Nouvelle-Espagne*, iii. 49; Poinsett's *Notes on Mexico*, note 116, Lond. ed.) In France, Spain, Austria, and some other countries, the trade in tobacco is monopolised by

their respective governments, and yields a large revenue.

Cuba is celebrated for its tobacco, particularly its cigars. These consist of the leaves, formed into small rolls, for the purpose of smoking. At one time their importation into this country was prohibited; but for many years this has been permitted, and the exorbitant duty of 9s. per lb. having been reduced since March 1863 to 5s. the entries for consumption have more than doubled in the interval, the entries in 1868 having amounted to 885,622 lb. Havana cigars are usually reckoned the best. Previously to 1820, the cultivation and sale of tobacco were subjected to the same sort of monopoly in Cuba as in Mexico; but, at the period referred to, the trade was thrown open. In consequence of the freedom thus given to the business, the production and exportation of tobacco both rapidly increased, though hardly, perhaps, so much as might have been expected; the culture of sugar and coffee being for a while reckoned more profitable; that, however, is no longer the case. In 1867 were exported from Havannah alone 7,716,802 lb. of tobacco and 199,027,000,000 cigars.

*Consumption of Duty-paid Tobacco in the United Kingdom.*—It appears from the following account, which is not elsewhere to be met with, that the consumption of duty-paid tobacco in Great Britain has increased from about 8,000,000 lb. in 1789, to 40,726,767 lb. in 1867; the duty on unmanufactured tobacco having fluctuated during the same period from 1s. 3d. to 4s. per lb. The present rates of duty as fixed by the 26 & 27 Vict. c. 7 are specified in the annexed Table No. II. There are, however, good grounds for thinking that the consumption would have been much greater, perhaps nearly doubled, had the duty continued at 1s. 3d. per lb. The subjoined table shows that during the 3 years ending with 1797, when the duty in Ireland was 8d. per lb., the annual average consumption of duty-paid tobacco, in that part of the United Kingdom, was 7,455,221 lb. And the population having increased in the interval from about 4 to 5½ millions, the fair presumption is, had the duty continued the same, that the consumption of tobacco would have increased in the same proportion. But, instead of this, the average annual consumption during the 3 years ending with 1865 has only been 6,725,479 lb., or not quite two-thirds of what it might, under the supposed circumstances, have been reasonably expected to be. But the inference thence arising as to the influence of the duty is not, after all, quite so conclusive as it would appear to be from this statement. For it is next to certain that at the first mentioned period duty-paid tobacco would be extensively smuggled from Ireland into England, where the duty was 11d. per lb. heavier; and since the equalisation of the duty between the two countries it is probable that some considerable portion of the tobacco used in Ireland, and carried thither by the cross-channel trade, has already paid duty in this country. Apart, however, from all considerations of this sort, there can be no manner of doubt that the consumption both in Britain and Ireland would be very largely increased by reducing the duty to 1s. 6d. or 1s. per lb.

*Smuggling.*—The price of tobacco in bond varies from 3d. and 4d. to 6d., 8d., and 10d. per lb.; so that a duty of even 3s. amounts to 1,200 per cent. on the inferior, and to 360 per cent. on the superior qualities. But, though quite excessive, this is one of those articles on which a high duty is least objectionable. It is true that the more the wants and desires of man are multiplied the more in-

II.—Account of the Quantities of Tobacco of all sorts Entered for Home Consumption in the United Kingdom; the Nett Revenue of Customs; and the Rates of Duty thereon from 1859 to 1867.

Years	Quantities Entered for Home Consumption			Nett Revenue of Customs	Rates of Duty
	Unmanufactured	Manufactured	Total		
£	lb.	lb.	lb.	£	
1859	31,495,075	298,197	31,793,272	5,552,517	{ Unmanufactured, 5s. 14-5d. per lb. } May 15,

from the leaf, whether manufactured or not, and tobacco stalk flower.

Not to be Imported except under the following Conditions.—Tobacco and snuff from the East Indies, and tobacco from the Turkish dominions including Egypt, unless direct from any of those places in packages containing not less than 100 lb. nett weight each.

Negrohead tobacco, and also snuff being the produce of the United States of America, unless in hogsheds, casks, chests, or cases containing not less than 200 lb. nett weight each, or unless direct from the United States in packages containing not less than 150 lb. nett weight each.

Tobacco from Malta, and tobacco the produce of Porto Rico, Mexico, South America, St. Domingo, Cuba, the British possessions in America and the West Coast of Africa, unless in hogsheds, casks, chests, or cases containing not less than 200 lb. nett weight each, or unless direct from those places or from the United States of America in packages containing not less than 80 lb. nett weight each.

Tobacco and snuff, the produce of the Philippine Islands, unless in hogsheds, casks, chests, or cases containing not less than 200 lb. nett weight each, or unless such tobacco or snuff be from Manilla direct, in bales or packages containing not less than 200 lb. nett weight each.

Tobacco and snuff, of or from any country or place not before enumerated, unless in hogsheds, casks, chests, or cases containing not less than 200 lb. nett weight each.

Cigars, unless in packages containing not less than 100 lb. nett weight each.

Cigarillos or cigarettes, unless in packages containing not less than 75 lb. nett weight each.

Tobacco, not being cigars, cigarillos, or cigarettes, and snuff, separated or divided in any manner within any package in which the same may be by the foregoing table be imported, except tobacco from the dominions of the Turkish empire, or from Egypt, in outer packages containing not less than 100 lb. nett weight each.

Tobacco, snuff, cigars, cigarillos, or cigarettes of any kind, or from any country or place whatever, whether heretofore enumerated as especially restricted or not, unless in ships of not less than 120 tons burden, and into such ports only as are or may be approved of by the Commissioners of Customs.

The ports which are at present (1869) authorized to import tobacco and snuff are London, Liverpool, Bristol, Lancaster, Cowes, Falmouth, Fleetwood, Hartlepool, Whitehaven, Hull, Goole, Grimsby, Harwich, Cardiff, Portsmouth, Ramsgate, Glasgow, Port Glasgow, Greenock, Aberdeen, Leith, Newcastle, Plymouth, Southampton, Preston, Swansea, Belfast, Cork, Drogheda, Dublin, Galway, Limerick, Londonderry, Newry, Sligo, Waterford, and Wexford. A rent of 4s. is charged

Regulations as to Importation.—These are embodied in the Customs Consolidation Act, the 16 & 17 Viet. c. 107 s. 41, and the 26 & 27 Viet. c. 7, under which the existing duties are levied. The latter permits the manufacture of cavendish and negrohead in bond. The chief provisions of the earlier Act are as follows, viz. —

Not to be Imported.—Tobacco stalks stripped

Rates of Duty	
100 lbs. of cigars, 2s. 1.4.5d. per lb.	May 15, 1839, and July 31, 1842
100 lbs. of cigars, 2s. 3d. per lb.	1849, and July 31, 1852
100 lbs. of cigars, 2s. 6d. per lb.	1857
100 lbs. of cigars, 2s. 9d. per lb.	1863
100 lbs. of cigars, 2s. 12d. per lb.	1867

her manufactured or not, and

ed except under the following conditions and snuff from the East from the Turkish dominions, unless direct from any of those containing not less than 100 lbs.

co, and also snuff being the United States of America, unless in chests, or cases containing 100 lbs. nett weight each, or unless in the United States in packages containing 150 lbs. nett weight each. Malta, and tobacco the produce of Mexico, and South America, St. Domingo, and British possessions in America west of Africa, unless in hogheads, or cases containing not less than 100 lbs. each, or unless direct from the United States of America containing not less than 80 lbs. nett

snuff, the produce of the Philippines in hogheads, chests, or cases, containing not less than 200 lb. nett weight each, or unless such tobacco or snuff be direct, in bales or packages containing 200 lb. nett weight each.

snuff, or of from any country or enumerated, unless in hogheads, or cases containing not less than 100 lbs. each.

in packages containing not less than 100 lbs. nett weight each.

cigarettes, unless in packages containing not less than 75 lbs. nett weight each. being cigars, cigarillos, or cigarettes, separated or divided in any package in which the same are enumerated in the foregoing table be imported, except from the dominions of the Turkish empire, or in outer packages containing not less than 100 lbs. nett weight each.

if, cigars, cigarillos, or cigarettes, from any country or place whatsoever, hereinafter enumerated as excepted, or not, unless in ships of not less than 100 tons burthen, and into such ports only as are approved of by the Commissioners

which are at present (1869) authorized to receive tobacco and snuff are London, Bristol, Lancaster, Cowes, Falmouth, Southampton, Whitehaven, Hull, Newcastle, Liverpool, Whitehaven, Hull, Newcastle, Cardiff, Portsmouth, Ramsey, Glasgow, Greenock, Aberdeen, Plymouth, Southampton, Belfast, Cork, Drogheda, Dublin, Wick, Londonderry, Newry, Sligo, and Wexford. A rent of 4s. is charged

upon every hoghead, cask, chest, or case of tobacco warehoused in every warehouse provided by the Crown; 2s. being paid immediately upon depositing the tobacco in the warehouse, and 2s. more before the tobacco is taken out for home consumption, or exportation; it may remain for five years in the warehouse without any additional charge for rent. No abatement is made from the tobacco duties on account of damage. The duty is to be charged on the quantity found on delivery. The allowance of duty-free tobacco for each sailor on board her Majesty's navy, and for each soldier on foreign service, is fixed at 2 lb. per lunar month.

TON. An English weight, containing 20 cwt. TONNAGE. In Commercial Navigation, the number of tons burden that a ship will carry.

The mode in which the tonnage of British ships was formerly ascertained may be seen in the Registry Act, 3 & 4 Wm. IV. c. 55 ss. 16 and 17. This mode, however, led to very inaccurate conclusions; and as most shipping charges depend on the tonnage, it occasioned the building of ships of an improper form for the purposes of navigation, in order that, by measuring less than their real burden, they might evade part of the duties. It was, therefore, long felt to be desirable that some change should be made in the plan of measuring ships; but the practical obstacles in the way of the change were greater than might have been supposed. The accurate estimation of the tonnage of a ship is a difficult problem; and it is indispensable that any system to be adopted in practice be not very complex; or for if so, it will either be wholly inapplicable, or it will be sure to be inaccurately applied. In this case, as in most others, *summa virtus est simplicitas*. At best, therefore, only an approximate measurement can be obtained. A committee of scientific and practical gentlemen having been appointed in 1831 to consider the subject, a bill was introduced into Parliament, at their recommendation, embodying a plan for the more correct measurement of ships, and was subsequently passed into a law, the 5 & 6 Wm. IV. c. 56. The rules it laid down were not so simple or easily applied as those that were previously used; but they gave the tonnage of all ships, however built, with tolerable accuracy, and consequently took away the temptation, that till then existed, to build ships of such a form that they might measure less than their true burden. But these rules have been again considerably modified. Those which at present (1869) exist are embodied in the Mercantile Shipping Act of 1851, the 17 & 18 Vict. c. 101, amended by the 25 & 26 Vict. c. 63, and are subjoined. And whatever may be their merit in other respects, they do not certainly seem to have much of that perspicuity and simplicity which appear to be essential to such rules.

**Tonnage Deck; Feet; Decimals.**—Throughout the following rules the tonnage deck shall be taken to be the upper deck in ships which have less than three decks, and to be the second deck from below in all other ships; and in carrying such rules into effect all measurements shall be taken in feet and fractions of feet, and all fractions of feet shall be expressed in decimals. (Sec. 20.)

**For Ships to be registered of which the Tonnage is clear.**—The tonnage of every ship to be registered, with the exceptions mentioned in the next section, shall previously to her being registered, be ascertained by the following Rule 1; and the tonnage of every ship to which such rule can be applied, whether she is about to be registered or not, shall be ascertained by the same rule.

1. Measure the length of the ship in a straight line along the upper side or the tonnage deck from the inside of the inner plank (average thickness) at the side of the stem to the inside of the midship stern timber or plank there, as the case may be (average thickness), deducting from this length what is due to the rake of the bow in the thickness of the deck, and what is due to the rake of the stern timber in the thickness of the deck, and also what is due to the rake of the stern timber in  $\frac{1}{4}$  of the round of the beam; divide the length so taken into the number of equal parts required by the following table, according to the class in such table to which the ship belongs:

TABLE.—Class 1. Ships of which the tonnage deck is according to the above measurement 50 feet long or under, into 4 equal parts;

Class 2. Ships of which the tonnage deck is according to the above measurement above 50 feet long, and not exceeding 120, into 6 equal parts;

Class 3. Ships of which the tonnage deck is according to the above measurement above 120 feet long, and not exceeding 180, into 8 equal parts;

Class 4. Ships of which the tonnage deck is according to the above measurement above 180 feet long, and not exceeding 225, into 10 equal parts;

Class 5. Ships of which the tonnage deck is according to the above measurement above 225 feet long, into 12 equal parts.

2. Then, the hold being first sufficiently cleared to admit of the required depths and breadths being properly taken, find the transverse area of such ship at each point of division of the length as follows: Measure the depth at each point of division, from a point at a distance of  $\frac{1}{4}$  of the round of the beam below such deck, or, in case of a break, below a line stretched in continuation thereof, to the upper side of the floor timber at the inside of the huller strake, after deducting the average thickness of the ceiling which is between the bilge planks and huller strake; then, if the depth at the midship division of the length do not exceed 16 feet, divide each depth into 4 equal parts; then measure the inside horizontal breadth at each of the 3 points of division, and also at the upper and lower points of the depth, extending each measurement to the average thickness of that part of the ceiling which is between the points of measurement; number these breadths from above (i.e. numbering the upper breadth 1, and so on down to the lowest breadth); multiply the second and fourth by 4, and the third by 2; add these products together, and to the sum add the first breadth and the fifth; multiply the quantity thus obtained by  $\frac{1}{4}$  of the common interval between the breadths, and the product shall be deemed the transverse area; but if the midship depth exceed 16 feet, divide each depth into 6 equal parts instead of 4, and measure as before directed the horizontal breadths at the 5 points of division, and also at the upper and lower points of the depth; number them from above as before; multiply the second, fourth, and sixth by 4, and the third and fifth by 2; add these products together, and to the sum add the first breadth and the seventh; multiply the quantity thus obtained by  $\frac{1}{4}$  of the common interval between the breadths, and the product shall be deemed the transverse area.

3. Having thus ascertained the transverse area at each point of division of the length of the ship as required by the above table, proceed to ascertain the register tonnage of the ship in the

following manner: Number the areas successively 1, 2, 3 &c., No. 1, being at the extreme limit of the length at the bow, and the last number at the extreme limit of the length at the stern; then, whether the length be divided according to the table into 4 or 12 parts as in Classes 1 and 5, or any intermediate number as in Classes 2, 3, and 4, multiply the second and every even numbered area by 4, and the third and every odd numbered area (except the first and last) by 2; add these products together, and to the sum add the first and last if they yield anything; multiply the quantity thus obtained by 4 of the common interval between the areas, and the product will be the cubical contents of the space under the tonnage deck; divide this product by 100, and the quotient being the tonnage under the tonnage deck shall be deemed to be the register tonnage of the ship, subject to the additions and deductions hereinafter mentioned.

4. If there be a break, a poop, or any other permanent closed-in space on the upper deck, available for cargo or stores, or for the berthing or accommodation of passengers or crew, the tonnage of such space shall be ascertained as follows: Measure the internal mean length of such space in feet, and divide it into two equal parts: measure at the middle of its height three inside breadths, namely, one at each end and the other at the middle of the length; then to the sum of the end breadths add 4 times the middle breadth, and multiply the whole sum by one-third of the common interval between the breadths; the product will give the mean horizontal area of such space; then measure the mean height, and multiply by it the mean horizontal area; divide the product by 100, and the quotient shall be deemed to be the tonnage of such space, and shall be added to the tonnage under the tonnage deck, ascertained as aforesaid, subject to the following provisos; 1st, that nothing shall be added for a closed-in space solely appropriated to the berthing of the crew, unless such space exceeds  $\frac{1}{20}$  of the remaining tonnage of the ship, and in case of such excess the excess only shall be added; and 2ndly, that nothing shall be added in respect of any building erected for the shelter of deck passengers, and approved by the Board of Trade.

5. If the ship has a third deck, commonly called a spar deck, the tonnage of the space between it and the tonnage deck shall be ascertained as follows: Measure in feet the inside length of the space at the middle of its height from the plank at the side of the stem to the lining on the timbers at the stern, and divide the length into the same number of equal parts into which the length of the tonnage deck is divided as above directed; measure (also at the middle of its height) the inside breadth of the space at each of the points of division, also the breadth of the stem and the breadth at the stern; number them successively 1, 2, 3 &c., commencing at the stem; multiply the second and all the other even numbered breadths by 4, and the third and all other odd numbered breadths (except the first and last) by 2; to the sum of these products add the first and last breadths; multiply the whole sum by one-third of the common interval between the breadths, and the result will give in superficial feet the mean horizontal area of such space; measure the mean height of such space, and multiply by it the mean horizontal area, and the product will be the cubical contents of the space; divide this product by 100, and the quotient shall be deemed to be the tonnage of such space, and shall be added to the other tonnage of the ship ascertained as aforesaid; and if the ship has more

than 3 decks, the tonnage of each space between decks above the tonnage deck shall severally be ascertained in manner above described, and shall be added to the tonnage of the ship ascertained as aforesaid. (Sec. 21.)

*Rules for Ships not requiring Registry or Cargo on Board.*—Ships which, requiring to be measured for any purpose other than register tonnage, have cargo on board, and ships which, requiring to be measured for the purpose of registry, can be measured by the rule above given, shall be measured by the following Rule 2;

1. Measure the length on the upper deck from the outside of the outer plank at the stem to the outside of the stern post, deducting therefrom the distance between the outside of the stern post and the rabbet of the stern post at the point where the counter plank crosses it; measure also the greatest breadth of the ship to the outside of the outer planking or wales, and then, having first marked on the outside of the ship on both sides the height of the upper deck at the ship's side, draw the ship at the greatest breadth in a direct perpendicular to the keel from the height marked on the outside of the ship on the one side to the height so marked on the other side, passing a chain under the keel; to half the girth thus taken add half the main breadth; square the sum; multiply the result by the length of the ship taken as aforesaid; then multiply this product by the factor '0018 (18-10,000ths) in the case of ships built of wood, and by '0021 (21-10,000ths) in the case of ships built of iron, and the product shall be deemed the register tonnage of the ship, subject to the additions and deductions hereinafter mentioned.

2. If there be a break, a poop, or other closed-in space on the upper deck, the tonnage of such space shall be ascertained by multiplying together the mean length, breadth, and depth of such space, and dividing the product by 100, and the quotient so obtained shall be deemed to be the tonnage of such space, and shall, subject to the deductions for a closed-in space appropriated to the crew as mentioned in Rule 1, be added to the tonnage of the ship ascertained as aforesaid. (Sec. 22.)

*Allowance for Engine Room in Steamers.*—In every ship propelled by steam or other power requiring engine room, an allowance shall be made for the space occupied by the propelling power, and the amount so allowed shall be deducted from the gross tonnage of the ship ascertained as aforesaid, and the remainder shall be deemed to be the register tonnage of such ship, and such deduction shall be estimated as follows:—

a. As regards ships propelled by paddle-wheel, in which the tonnage of the space solely occupied by and necessary for the proper working of the boilers and machinery is above 20 per cent. and under 30 per cent. of the gross tonnage of the ship, such deduction shall be 37-100ths of such gross tonnage; and in ships propelled by screw in which the tonnage of such space is above 10 per cent. and under 20 per cent. of such gross tonnage, such deduction shall be 32-100ths of such gross tonnage;

b. As regards all other ships, the deduction shall, if the Commissioners of Customs and the owner both agree thereto, be estimated in the same manner; but either they or he may in their or his discretion require the space to be measured, and the deduction estimated accordingly; and whenever such measurement is so required the deduction shall consist of the tonnage of the space actually occupied by or required to be enclosed for the proper working of the boilers and machinery.

tonnage of each space be-  
the tonnage deck shall be  
in manner above described,  
to the tonnage of the ship  
said. (Sec. 21.)

*not requiring Registry with*  
ships which, requiring to be  
purpose other than registry,  
and ships which, requiring  
the purpose of registry, cannot  
the rule above given, shall be  
following Rule 2:

length on the upper deck from  
outer plank at the stem to the  
post, deducting therefrom the  
the aftside of the stern post and  
tern post at the point where the  
see it; measure also the greatest  
to the outside of the outer  
and then, having first marked  
of the ship on both sides thereof  
upper deck at the ship's sides,  
the greatest breadth in a direction  
the keel from the height so  
astide of the ship on the one side  
marked on the other side by  
under the keel; to half the girth  
half the main breadth; square the  
the result by the length of the  
said; then multiply this product  
118 (18-10,000ths) in the case of  
wood, and by .0021 (21-10,000ths)  
ships built of iron, and the product  
the register tonnage of the ship.  
additions and deductions herein-

a break, a poop, or other closed-in  
upper deck, the tonnage of such  
ascertained by multiplying together  
breadth, and depth of such space,  
the product by 100, and the quotient  
shall be deemed to be the tonnage of  
shall, subject to the deductions  
space appropriated to the crew a-  
fore said, be added to the tonnage of  
lined as aforesaid. (Sec. 22.)

*for Engine Room in Steamers.*—In  
propelled by steam or other power  
the room, an allowance shall be de-  
space occupied by the propelling  
amount so allowed shall be de-  
gross tonnage of the ship a-  
foresaid, and the remainder shall be  
the register tonnage of such ship.  
tion shall be estimated as follows:

ships propelled by paddle-wheels  
tonnage of the space solely occupied  
ary for the proper working of the  
machinery is above 20 per cent, and  
cent, of the gross tonnage of such  
tion shall be 37-100ths of such  
and in ships propelled by screws  
tonnage of such space is above 13  
under 20 per cent, of such gross  
deduction shall be 32-100ths of such

all other ships, the deduction  
Commissioners of Customs and the  
agree thereto, be estimated in that  
but either they or he may in their  
require the space to be measured  
tion estimated accordingly; and  
measurement is so required the  
l consist of the tonnage of the space  
ed by or required to be enclosed for  
rking of the boilers and machinery.

with the addition in the case of ships propelled by  
paddle-wheels of one-half, and in the case of ships  
propelled by screws of three-fourths of the tonnage  
of such space; and the measurement and use of  
such space shall be governed by the following  
rules, viz:—

1. Measure the mean depth of the space from  
its crown to the ceiling at the timber strake,  
measure also three, or, if necessary, more, than  
three breadths of the space at the middle of its  
depth, taking one of such measurements at each  
end, and another at the middle of the length;  
take the mean of such breadths; measure also the  
mean length of the space between the foremost  
and aftermost bulkheads or limits of its length,  
excluding such parts, if any, as are not actually  
occupied by or required for the proper working  
of the machinery; multiply together these three  
dimensions of length, breadth, and depth, and the  
product will be the cubical contents of the space  
below the crown; then find the cubical contents  
of the space or spaces, if any, above the crown  
aforesaid, which are framed in for the machinery  
or for the admission of light and air, by multi-  
plying together the length, depth, and breadth  
thereof; add such contents to the cubical contents  
of the space below the crown; divide the sum by  
100; and the result shall be deemed to be the  
tonnage of the said space:

2. If in any ship in which the space aforesaid  
is to be measured the engines and boilers are fitted  
in separate compartments, the contents of each  
shall be measured severally in like manner, ac-  
cording to the above rules, and the sum of their  
several results shall be deemed to be the tonnage  
of the said space:

3. In the case of screw steamers in which the  
space aforesaid is to be measured, the contents of  
the shaft trunk shall be added to and deemed to  
form part of such space, and shall be ascertained  
by multiplying together the main length, breadth,  
and depth of the trunk, and dividing the product  
by 100:

4. If in any ship in which the space aforesaid  
is to be measured any alteration be made in the  
length or capacity of such space, or if any  
cabins be fitted in such space, such ship shall be  
deemed to be a ship not registered until re-  
measurement:

5. If in any ship in which the space aforesaid  
is to be measured any goods or stores are stowed  
or carried in such space, the master and owner  
shall each be liable to a penalty not exceeding  
100l. (Sec. 23.)

*Open Ships, how Measured.*—In ascertaining the  
tonnage of open ships, the upper edge of the upper  
strake is to form the boundary line of measurement,  
and the depths shall be taken from an athwart-  
ship line, extending from upper edge to upper  
edge of the said strake at each division of the  
length. (Sec. 24.)

*Tonnage and Number of Certificate to be carried  
on Main Beam.*—In every registered British ship  
the number denoting the register tonnage, as-  
certained as herein-before directed, and the number  
of her certificate of registry, shall be deeply carved  
or otherwise permanently marked on her main  
beam, and shall be so continued; and if it at any  
time cease to be so continued, such ship shall no  
longer be recognised as a British ship. (Sec. 25.)

*Tonnage when once ascertained to be ever after  
deemed the Tonnage.*—Whenever the tonnage of  
any ship has been ascertained and registered in  
accordance with the provisions of this Act, the  
same shall thenceforth be deemed to be the tonnage  
of such ship, and be repeated in every subsequent  
registry thereof, unless any alteration is made in

the form or capacity of such ship, or unless it is  
discovered that the tonnage of such ship has been  
erroneously computed; and in either of such  
cases such ship shall be remeasured, and her  
tonnage determined and registered according to  
the rules herein contained. (Sec. 26.)

*Remeasurement of Ships already registered.*—  
The rules for the measurement of tonnage herein  
contained shall not make it necessary to alter the  
present registered tonnage of any British ship  
registered before this Act came into operation;  
but if the owner of any such ship desires to have  
the same remeasured according to such rules, he  
may apply to the Commissioners of Customs for the  
purpose, and such Commissioners shall thereupon,  
and on payment of such reasonable charge for  
the expenses of remeasurement, not exceeding  
the sum of 7s. 6d. for each transverse section, as  
they may authorise, direct such remeasurement  
to be made, and such ship shall thereupon be  
remeasured according to such rules as aforesaid,  
or according to such of them as may be applicable;  
and the number denoting the register tonnage  
shall be altered accordingly. (Sec. 27.)

*Power to remeasure Engine Rooms improperly  
extended.*—If it appears to the Commissioners of  
Customs that in any steam ship measured before  
this Act came into operation store rooms or coal  
bunkers have been introduced into or thrown  
across the engine room, so that the deduction  
from the tonnage on account of the engine room  
is larger than it ought to be, the said commis-  
sioners may, if they think fit, direct such engine  
room to be measured according to the rules in  
force before this Act comes into operation, ex-  
cluding the space occupied by such store rooms or  
coal bunkers, or may, if the owners so desire,  
cause the ship to be remeasured according to the  
rules hereinbefore contained, and subject to the  
conditions contained in the last preceding section;  
and after remeasurement the said Commissioners  
shall cause the ship to be registered anew, or the  
registry thereof to be altered, as the case may  
require. (Sec. 28.)

*Officers may be appointed and Regulations made  
for Measurement of Ships.*—The Commissioners of  
Customs may, with the sanction of the Treasury,  
appoint such persons to superintend the survey  
and admeasurement of ships as they think fit;  
and may, with the approval of the Board of  
Trade, make such regulations for that purpose as  
may be necessary; and also, with the like ap-  
proval, make such modifications and alterations  
as from time to time become necessary, in the  
tonnage rules hereby prescribed, in order to the  
more accurate and uniform application thereof,  
and the effectual carrying out of the principle of  
admeasurement therein adopted. (Sec. 29.)

**TOOLS AND MACHINES.** Under this de-  
signation are comprised all sorts of instruments  
employed to assist in the performance of any  
undertaking, from the rudest and simplest to the  
most improved and complex. But we only men-  
tion them here for the purpose of making one or  
two remarks on the restrictions to which the  
trade in them was till a comparatively recent  
period subjected.

*Importation and Exportation of Tools and Ma-  
chines.*—Tools and machines being instruments of  
production, it is obviously of the utmost im-  
portance that they should be as much improved  
as possible; and hence the expediency of allowing  
their free importation. Their exclusion, or the  
exclusion of the articles of which they are made,  
would obviously lay every branch of industry  
carried on in a nation less advanced than others  
in their manufacture, under the most serious

disadvantages. And supposing the implements it employed to be superior to those of other countries when the exclusion took place, the absence of foreign competition, and of the emulation which it inspires, would most probably, in a very short time, occasion the loss of this superiority. The injury arising from the prohibition of most other articles is comparatively limited, affecting only the producers and consumers of those that are prohibited. But a prohibition of machines strikes at the root of every species of industry: it is not injurious to one, or a few branches, but to all.

The question whether the exportation of machinery ought to be free, is not so easy of solution. It is the duty of a nation to avail itself of every fair means for its own aggrandisement; and supposing the machinery belonging to any particular people were decidedly superior to that employed by their neighbours, and that they had it in their power to preserve this advantage, their generosity would certainly outrun their sense, were they to communicate their improved machinery to others. We do not, however, believe that it is possible, whatever measures may be adopted in that view, for one country to monopolise, for any considerable period, any material improvement in machinery or the arts: and on this ground we think that the former restraints on the exportation of machinery were wisely abolished. Drawings and models of all sorts of machines used in Manchester, Glasgow, and Birmingham, were always to be found in most parts of the Continent; and at Rouen, Paris, &c., numbers of the best English workmen were employed in the manufacture of prohibited machines. And it did certainly appear not a little preposterous to prevent the exportation of a machine, at the same time that we allowed (it could not, indeed, be prevented) the free egress of the workmen by whom it was made. The effect of this policy was not to secure a monopoly of improved machines for the manufactures of England; but to occasion the emigration of English artificers to the Continent, and the establishment there of machine manufactories under their superintendance. The prejudice that arose from this state of things to the interests of England, is too obvious to require being pointed out. It is plain, therefore, that sound policy dictated that the exportation of all sorts of machinery should be allowed on payment of a moderate duty. And this policy was at length adopted in the Act 6 & 7 Vict. c. 84, which repealed the restraints previously imposed on the exportation of machinery. A policy of this sort affords a much more efficient encouragement to our manufactures than they hitherto enjoyed; for while it lessens the temptation to our artificers to emigrate, it helps to make England the grand seat of the tool as well as of the cotton manufacture. The total declared value of the machinery and mill-work exported in 1867 amounted to 2,737,057*l.*, and that of tools and implements of industry, including agricultural (154,403*l.*), to 208,067*l.*

**TOPAZ** (Ger. *topas*; Fr. *topaze*; Ital. *topazio*; Span. *topacio*; Russ. *topas*). The name topaz has been restricted by M. Henry to the stones called by mineralogists Occidental ruby, topaz, and sapphire; which, agreeing in their crystallisation and most of their properties, were arranged under one species by M. Romé de Lisle.

The word topaz, derived from an island in the Red Sea, where the ancients used to find topazes, was applied by them to a mineral very different from ours. One variety of our topaz they denominated Chrysolite. Colour, wine yellow. From

pale wine yellow it passes into yellowish white, greenish white, mountain green, sky blue; from deep wine yellow into flesh red and crimson red. Specific gravity from 3.464 to 3.611. (Thomson's *Chemistry*.)

**Yellow Topaz**.—In speaking of the topaz, gem of a beautiful yellow colour is always understood; it is wine yellow of different degrees of intensity; and the fuller and deeper the tinge the more the stone is esteemed. In hardness it yields to the spinelle. (Mawe *On Diamonds*.)

The yellow sapphire or oriental topaz is of very little value in commerce. (Emanuel *On Diamonds &c.*)

There are few gems more universal favourites than the yellow topaz, when perfect: the rich warm tone of its colour, the vivacity of its lustre (which it retains even by the side of the diamond) and its large size, compared with many others, are characters which deservedly entitle it to distinction; it bears accordingly a high price when of good quality.

It is chiefly employed for necklaces, ear-drops, bracelets &c. in suit. No little skill and taste are required in cutting and duly proportioning this gem; the table should be perfectly symmetrical, and not too large; the bezel of sufficient depth, and the collet side should be formed in delicate steps. It works easily on the mill, and the lapidaries are in general tolerably well acquainted with it; yet it is uncommon to meet with one well cut.

The yellow topaz varies in price according to its beauty and perfection. A superlatively fine stone, perfect in colour and workmanship, sufficiently large for an armlet, or any other ornament, weighing nearly 80 carats, was sold for 100*l.*

Topazes have become more common since our intercourse with Brazil; consequently they are less in demand, and lower in price. (Mawe *On Diamonds*.)

They are not now in vogue as they were 50 years ago, and a fine stone can at present be had for a few shillings. (Emanuel *On Diamonds*.)

**Pink Topaz**.—This is made from the brownish yellow, which, when of intense colour, is put into the bowl of a tobacco pipe or small crucible, covered with ashes or sand; on the application of a low degree of heat, it changes its colour from a yellow to a beautiful pink. This is performed with little hazard; and if the colour produced happens to be fine, the price is much augmented.

**Red Topaz**.—This beautiful gem, which very seldom occurs naturally, is of a fine crimson colour, tinged with a rich brown; it is extremely rare, and generally taken to be a variety of ruby, for which I have seen it offered for sale. Its price, from its scarcity, is quite capricious; it has an exquisite pleasing colour, very different from the glare of the artificial pink topaz.

**Blue Topaz**.—It is also a beautiful gem, of a fine celestial blue colour. It has occurred of considerable magnitude; the finest specimen known, I brought in the rough from Brazil; when cut and polished, it weighed about 14 oz. Smaller specimens are not uncommon, and when light-coloured are often taken for aqua-marinas, from which they may always be distinguished by their greater weight and hardness &c.

**White Topaz**.—is familiarly called *Minas Nova*. It is a beautiful pellucid gem, and is used for bracelets, necklaces &c. It possesses greater brilliancy than crystal; and from its hardness, has been used to cover paste &c., and to form doublets. (Mawe *On Diamonds &c.*, 2nd ed. p. 108-112.)

passes into yellowish white, faint green, sky blue; from into, flesh red and crimson red. n 3464 to 3641. (Thomson's

is familiarly called *Minus Nord*, pellucid gem, and is used for laces &c. It possesses greater crystal; and from its hardness, to cover paste &c., and to form *On Diamonds* &c., 2nd ed.

TORTOISESHELL (Fr. écaillé de tortue; Ital. scaglia di tartaruga; Ger. schildpatt; Malay, sisik kuala, &c.). The brown and yellow scales of the *Testudo imbricata*, or tortoise, a native of the tropical seas. It is extensively used in the manufacture of combs, snuff-boxes &c., and in inlaying and other ornamental work.

The best tortoiseshell is that of the Indian Archipelago; and the finest of this quarter is obtained on the shores of the Spice Islands and New Guinea. Under the name East Indian, a great deal of inferior shell is imported, brought from various parts of the East Indies. The goodness of tortoiseshell depends mainly on the thickness and size of the scales, and in a smaller degree on the clearness and brilliancy of the colours. Before the opening of the British intercourse with India, the greater part of the tortoiseshell which eventually found its way to Europe, was first carried to Canton, which then formed the principal mart for the commodity. It is still an article of trade from that city; but the imports and exports are inconsiderable, Singapore being now the chief mart for this article. Its price at the latter varies from 750 and 900 l. from 1,000 to 1,600 dollars per picul, according to quality. (Crawford's *Indian Archipelago*; *Singapore Chronicle*; *Canton Register*.)

Exclusive of 4,507 lb. of tortoiseshell, the imports of tortoiseshell in 1867 amounted to 34,825 lb., valued at 21,257l.; and the re-exports to 25,576 lb., of the value of 15,559l. Duty repealed in 1843.

TOYS (Ger. spielzeug, spielsachen; Dutch, speelgoed; Fr. jouets, bimbelots; Ital. trastulli; Span. dijes, juguetes de niños; Russ. igraushki) include every trifling article made expressly for the amusement of children.

How frivolous soever these articles may appear in the estimation of superficial observers, their manufacture employs hundreds of hands, and gives bread to many families in London, Birmingham &c. The greatness of the demand for them may be inferred from the fact, that a manufacturer of glass beads, and articles of that description, has received a single order for 500l. worth of dolls' eyes. (*Fourth Report, Artisans and Machinery*, p. 314.) Considerable quantities are also imported from Holland; which supplies us with several sorts of wooden toys on more reasonable terms than we can afford to produce them. But of late years these have been made in greater abundance in England than formerly.

In 1866, the value of the foreign toys imported was 196,651l., and the value of the toys exported was 74,770l. In 1853 the duty of 10 per cent. ad valorem was repealed, and subsequently the duty was repealed.

TRADE. Under this head we annex two tables, the information in which was not available at the time the article COMMERCE passed through the press.

Account showing the Value of the Imports and Exports of the United States of America in 1867.

	UNITED STATES.	1867
		Dollars.
Value of imports	- - -	367,915,411
Bullion and specie	- - -	107,16,501

[COMMERCE; IMPORTS AND EXPORTS.]

TRADE MARKS. In consequence of the fraudulent use of names of well-known manufacturers or their recognised marks of merchandise for the purpose of vending spurious and inferior articles, the Act 25 & 26 Vict. c. 88 was passed in 1862. For its provisions, see COPYRIGHT.

TRAGACANTH. A species of gum the produce of the *Astragalus Trugacanth*, a thorny shrub growing in Persia, Crete, and the islands of the Levant.

It exudes about the end of June from the stem and larger branches, and soon dries in the sun. It is inodorous; impressing a very slightly bitter taste as it softens in the mouth. It has a whitish colour; is semitransparent; and in very thin, wrinkled, vermiform pieces; it is brittle, but not easily pulverised, except in frosty weather, or in a warmed mortar. It should be chosen in long twisted pieces, white, very clear, and free from all other colours; the brown, and particularly the black pieces, should be wholly rejected. (Dr. A. T. Thomson's *Dispensary*; *Milburn's Orient. Com.*) In 1866, 698 cwt. tragacanth were imported. Duty repealed in 1846.

TRANSIT. The following are our existing customs regulations as to the treatment of goods in transit:—

Goods for exportation in transit must be imported as merchandise, in packages of legal size and in vessels of legal tonnage; and must be so reported in the ship's inward report, which must also specify the description of the goods.

The exporter is to enter into transhipment bond and pass a shipping bill, which should contain full particulars of the goods; he will then obtain an order for the delivery of the goods from the importing vessel, and a pricking note for the shipment on board the export vessel.

The goods, on delivery from the importing vessel, must be conveyed to the exporting vessel by licensed lightermen (unless the vessels be alongside, to the searcher on the station where the export vessel is lying, within 24 hours in London, and 12 hours at the outports; otherwise the goods to be subject to a more extended examination), and in charge of an officer at the exporter's expense.

Transhipments are not allowed to proceed after dark (excepting by permission of the inspector-general, in cases of real necessity), nor to take place in the river below Deptford Creek.

In order that lighters may not be made floating warehouses, spirits, wines, tea, and tobacco must be shipped within three days, and other goods within six days from the time of delivery

from the importing vessel, but this time may be extended in case they have been unavoidably shut out.

The officers of customs may make an examination sufficient to satisfy themselves of the integrity of the transaction.

Goods which have been landed from the import ship, except they have been landed in the transit sheds, cannot be exported under the transshipment regulations. At ports where lighters are not in use, and goods in transit are necessarily conveyed by cart or van, a cart-follower must be sent in charge of the goods, at the exporter's expense.

Samples of such goods as are usually sold by sample, in transit may be drawn by permission of the surveyor, and under the supervision of the examining officer, either on board the import ship or alongside the import or export vessel, on payment (if dutiable goods) of the duty, if it exceed 1s. in amount, but one sample only of each mark is allowed to be taken.

Corn may be transhipped at ports to which the general transshipment regulations do not extend, under similar regulations.

Transhipment of arms and ammunition, not allowed to the British possessions in America, the Mauritius, or Cape of Good Hope.

A duplicate shipping bill is to be furnished to the proper officer at the port at which goods may be entered for exportation, in transit to the British possessions.

These regulations are at present applicable only to the ports of London, Liverpool, Hull, Southampton, Glasgow, Goole, Grimsby, Newhaven, Poole, and Newcastle, but at the latter place it is restricted to vessels lying alongside each other.

The total value of the articles transhipped in 1867 is estimated in the Board of Trade returns at 6,655,527l.

The following extract of a letter of March 7, 1867, of the Director-General of Customs &c., with relative statement, shows the regulation adopted by France with regard to direct transit.

The obligation of direct transit, stipulated in our various treaties of commerce, has lost much of its importance since the advantages of the Conventional Tariff have been extended to the majority of the European Powers, and we are able at this moment to depart, without real inconvenience, from the rigour of the laws established in this respect. Commencing from the time of the receipt of this letter, the obligation of direct transit shall be applied, in the case of merchandise mentioned in the Conventional Tariff, only in the case of those articles designated by name in the statement below.

This special category of goods will also be freed from the above restriction, whenever they have been brought by land, or by means of internal navigation from the place of their origin to the place of their arrival in France, and have not been carried by sea during any part of their transit.

\*Statement of the articles which remain subject to the obligation of direct transit, with the exception of importations from the country of origin into France by land or by means of internal navigation without any sea transit.

TREATIES (COMMERCIAL). By a commercial treaty is meant a treaty between two independent nations, for facilitating, and most commonly, also, regulating the commerce carried on between them.

*Origin, Objects, and Policy of modern Commercial Treaties.*—During the middle ages, and down, indeed, to a comparatively recent period, foreigners resident in a country, whether for commercial or other purposes, were, for the most part, subject to very harsh treatment. At one time, it was usual in England to make aliens liable for the debts and crimes of each other; and the practice, formerly so common, of laying heavier duties on the goods imported and exported by aliens than by British subjects, is not even yet, we grieve to say, altogether abandoned. In France, and some other countries, during the 14th and 15th centuries, a stranger was incapable of bequeathing property by will; and the whole of his personal as well as real estate, fell, at his death, to the king or the lord of the barony. This barbarous law was known by the name of *Droit d'Aubaine*, and was not completely abolished in France till a very late period. (Robertson's *Charles V.* vol. i. note 22.) Previously to last century, the laws with respect to shipwreck, though infinitely more humane than they had been at a more remote period, were calculated rather to promote the interest of the sovereign of the country, or the feudal lords on whose territories shipwrecked vessels might be thrown, than those of the unfortunate owners or survivors. [WRECK.] The practice of confiscating shipwrecked property continued in France till 1681, when it was abolished by an edict of Louis XIV. It was at one time common in Germany, to use the words of M. Boucheaud, "pour les prédateurs de prier Dieu en chaire, qu'il se fiasse bien des naufrages sur leurs côtes!" (*Théorie des Traités de Commerce*, p. 118.) And the fact, that the celebrated jurist Thomasius wrote a dissertation in defence of such prayers, affords, if possible, a still more striking proof of the spirit of the period. The most serious obstacles were then, also, opposed, by the prevalent insecurity, and the arbitrary nature of the tolls which the lords were in the habit of exacting, to the transit of commodities through the territories of one state to those of another.

Under such circumstances, it became of much importance for commercial states to endeavour to obtain, by means of treaties, that protection and security for the persons and properties of their subjects, when abroad, against unjust treatment

and vexatious exactions, which they could not have obtained from the laws of the countries in which they might happen to reside. Thus, it was stipulated by Edward II., in 1325, that the merchants and mariners of Venice should have power to come to England for 10 years, with liberty to sell their merchandise and to return home in safety, 'without having either their persons or goods stopped on account of other people's crimes or debts.' (Anderson, anno 1325.) The commercial treaties negotiated during the 15th, 16th, and 17th centuries, are full of similar conditions; and there can be no doubt that by providing for the security of merchants and seamen when abroad, and suspending, with respect to them, the barbarous laws and practices then in force, they contributed materially to accelerate the progress of commerce and civilisation.

Commercial treaties were also negotiated at a very early period for the regulation of neutral commerce during war; and for defining the articles that should be deemed contraband, or which it should not be lawful for neutral ships to convey or carry to either belligerent. These are obviously points that can only be decided by express stipulations. There is a good collection of treaties as to this point, in the appendix to the excellent work of Lampredi, *Del Commercio de' Popoli Neutrali*. [CONTRABAND.]

Instead, however, of confining commercial treaties to their legitimate and proper purposes—the security of merchants and navigators, and the facility of commercial transactions—they very soon began to be employed as engines for promoting the commerce of one country at the expense of another. For more than two centuries, those engaged in framing commercial treaties have principally employed themselves to secure, either by force or address, some exclusive advantage in favour of the ships and products of their particular countries. Hence these compacts are full of regulations as to the duties to be charged on certain articles, and the privileges to be enjoyed by certain ships, according as they were either produced by or belonged to particular countries. It was in the adjustment of these duties and regulations that the skill of the negotiator was chiefly put to the test. It was expected that he should be thoroughly acquainted with the state of every branch of industry, both in his own country and in the country with which he was negotiating; and he was to endeavour so to adjust the tariff of duties, that those branches in which his own country was deficient might be benefited, and those in which the other was superior might be depressed. The idea of conducting a negotiation of this sort on a fair principle of reciprocity is of very late origin: success in circumventing, in over-reaching, or in extorting from fear or ignorance some oppressive, but at the same time worthless privilege, was long esteemed the only proof of superior talent in negotiators.

In an able tract, attributed to Mr. Eden, afterwards Lord Auckland, published in 1787 (*Historical and Political Remarks on the Tariff of the French Treaty*), there is the following outline of the qualifications necessary to the negotiator of a commercial treaty: 'Besides a general knowledge of the trade and reciprocal interests of the contracting parties, he ought to be precisely acquainted with their several kinds of industry and skill, to discover their wants, to calculate their resources, and to weigh with nicety the state of their finances, and the proportionate interest of their money; nay, further, he should be able to ascertain the comparative population and strength of each country, together with the price and

quality both of first materials, and also of the labour bestowed upon them: for this purpose he should enquire into the operations of every class of merchants and manufacturers concerned in the trade; should consult their expectations on each of its several branches; and collect their hopes and fears on the effect of such a commercial revolution on the competition of rival nations. A good treaty of commerce, independent of the art of negotiation, is pronounced, by one who well knew the extent and difficulty of the subject, to be a "masterpiece of skill." (P. 10.)

Had Mr. Eden concluding by stating, that no individual, or number of individuals, ever possessed, or ever would possess, the various qualifications which in his estimation were required in negotiating a 'good commercial treaty,' he would only have affirmed what is most certainly true. We believe, however, that he had formed a totally false estimate, not only of the qualifications of a negotiator, but of the objects he ought to have in view. It was the opinion of the Abbé Mably (*Droit public de l'Europe*, tome ii. p. 561), an opinion in which we are disposed, with very little modification, to concur, that when a few general rules are agreed upon for the effectual security of trade and navigation, including the importation and exportation of all commodities not prohibited by law; the speedy adjustment of disputes; the regulations of pilotage, harbour and lighthouse duties; the protection of the property and effects of merchants in the event of a rupture &c.; all is done that ought to be attempted in a commercial treaty. It may, indeed, be properly stipulated that the goods of the contracting powers shall be admitted into each other's ports on the same terms as 'those of the most favoured nations,' that is, that no higher duties shall be charged upon them than on those of others. But here stipulation ought to cease. It is an abuse and a perversion of commercial treaties, to make them instruments for regulating duties or prescribing custom-house regulations.

We admit, indeed, that occasions may occur in which it may be expedient to stipulate for a reduction of duties or an abolition of prohibitions on the one side, in return for similar concessions on the other. But all arrangements of this sort should be determined by a convention limited to that particular object; and a fixed and not very distant term should be specified, when the obligation in the convention should expire, and both parties be at liberty to continue or abandon the regulations agreed upon. Generally speaking, all treaties which determine what the duties on importation or exportation shall be, or which stipulate for preferences, are radically objectionable. Nations ought to regulate their tariffs in whatever mode they judge best for the promotion of their own interests, without being shackled by engagements with others. If foreign powers be all treated alike, none of them has just grounds of complaint; and it can rarely be for the interest of any people to show preferences to one over another. Those, for example, by whom we may be most advantageously supplied with foreign products, require no preferences; and if we exclude them, or give a preference to others, we incontestably injure ourselves: and yet 19 out of 20 of the regulations as to duties in commercial treaties have been founded on this preposterous principle. They have been employed to divert trade into channels where it would not naturally flow; that is, to render it less secure and less profitable than it would otherwise have been.

A great deal of stress has usually been laid upon the advantages supposed to be derived from the

privileges sometimes concealed in commercial treaties. But we believe that those who enquire into the subject will find that such concessions have, in every case, been not only injurious to the party making them, but also to the party in whose favour they have been made. The famous commercial treaty with Portugal, negotiated by Mr. Metanen in 1703, was almost universally regarded, for a very long period, as admirably calculated to promote the interests of this country; but it is now generally admitted, by every one who has reflected upon such subjects, that few transactions have taken place by which these interests have been more deeply injured. It stipulated for the free admission of British woollens into Portugal, from which they happened, at the time, to be excluded; but in return for this concession—a concession far more advantageous to the Portuguese than to us—we bound ourselves 'for ever hereafter' to admit wines of the growth of Portugal into Great Britain at  $\frac{1}{3}$  of the duty payable on the wines of France. Thus, in order to open an access for our woollens to the limited market of Portugal, we consented, in all time to come, to drink inferior wine, bought at a comparatively high price. [WINE.] This, however, was not all. By excluding one of the principal equivalents the French had to offer for our commodities, we necessarily lessened their ability to deal with us; at the same time that we provoked them to adopt retaliatory measures against our trade. It is owing more to the stipulations in the Methuen treaty than to anything else, that the trade between England and France—a trade that would naturally be of vast extent and importance—has so long been confined within comparatively narrow limits.

It is visionary to imagine that any nation will ever continue to grant to another any exclusive advantage in her markets, unless she obtain what she reckons an equivalent advantage in the markets of the other. And if a commercial treaty stipulating for an exclusive privilege be really and bonâ fide observed by the country granting the privilege, we may be sure that the concessions made by the country in whose favour it is granted are sufficient fully to countervail it. Those who grasp at exclusive privileges in matters of this sort, or who attempt to extort valuable concessions from the weakness or ignorance of their neighbours, are uniformly defeated in their object. All really beneficial commercial transactions are bottomed on a fair principle of reciprocity; and that nation will always flourish most, and have the foundations of her prosperity best secured, who is a universal merchant, and deals with all the world on the same fair and liberal principles.

The justness of these principles, we are glad to observe, is now beginning to be very generally admitted. Stipulations as to duties and Custom-house regulations are disappearing from commercial treaties; and it is to be hoped that at no distant period every trace of them may have vanished.

A good work on the principles, style, and history of commercial treaties is a desideratum. The best we have seen are Mascovius *De Fœderibus Commercialium*, 4to. Leipzig, 1735; and Bouchaud, *Théorie des Traités de Commerce*. 12mo. Paris, 1777. But these are principally works of erudition, and were written before the sound principles of commercial policy had been unfolded. There is no good collection of commercial treaties in the English language; but Mr. Hertlet's work is valuable, as containing the recent treaties in an accessible form.

We subjoin copies of or references to the principal

commercial treaties and conventions existing at this moment between Great Britain and other powers, viz. ARGENTINE REPUBLIC, AUSTRIA, BELGIUM, CHINA, DENMARK, FRANCE, GREECE, HANSE TOWNS, ITALY, MEXICO, MOROCCO, NETHERLANDS, PERSIA, PERU, PORTUGAL, PRUSSIA & C., RUSSIA, SIAM, TURKEY, UNITED STATES, URUGUAY, AND ZOLLVEREIN.

#### ARGENTINE REPUBLIC.

*Treaty of Amity, Commerce, and Navigation between his Majesty and the United Provinces of Rio de la Plata.* (Feb. 2, 1825.)

Article 1. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United Provinces of Rio de la Plata and their inhabitants.

2. There shall be, between all the territories of his Britannic Majesty in Europe and the territories of the United Provinces of Rio de la Plata, a reciprocal freedom of commerce; the inhabitants of the two countries, respectively, shall have liberty, freely and securely to come, with their ships and cargoes, to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are or may be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and generally, the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce, subject always to the laws and statutes of the two countries respectively.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that in all his dominions situated out of Europe, the inhabitants of the United Provinces of Rio de la Plata shall have the like liberty of commerce and navigation stipulated for in the preceding article, to the full extent in which the same is permitted at present, or shall be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty, of any articles of the growth, produce, or manufacture of the United Provinces of Rio de la Plata, and no higher or other duties shall be imposed on the importation into the said United Provinces, of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed, in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories or dominions of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation or importation of any articles the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said United Provinces, which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light, or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of the said United Provinces, on British vessels of the burden of above 120 tons, than those payable in the same ports by vessels of the said United Provinces of the same burden, nor in the ports of any of his Britannic Majesty's territories on the vessels of the United Provinces of

and conventions existing at Great Britain and other THE REPUBLIC, AUSTRIA, DENMARK, FRANCE, GREECE, ITALY, MEXICO, MOROCCO, PERSIA, PERU, PORTUGAL, SIAM, TURKEY, UNITED STATES, AND ZOLLVEREIN.

**VI. COMMERCE.**

*Commerce, and Navigation between the United Provinces of Rio de la Plata, (Feb. 2, 1825.)*

There shall be perpetual amity between the subjects of his Majesty and the Kingdom of Great Britain and the United Provinces of Rio de la Plata.

Between all the territories of his Majesty in Europe and the territories of his Majesty in Rio de la Plata, a free trade of commerce; the inhabitants of the said territories, respectively, shall have liberty to come, with their ships and cargoes, to the ports, places, and rivers in the said territories, to which other foreigners are not admitted, to come, to enter into the said territories, and to reside in any part of the said territories, respectively; also to hire and occupy warehouses for the purposes of commerce, and generally, the merchants and traders of the said territories, respectively, shall enjoy the same protection and security for their persons and property as is always to the laws and statutes of the said territories, respectively.

The King of the United Kingdom and Ireland engages further, that the subjects of his Majesty in the United Provinces of Rio de la Plata shall have the like liberty of commerce as is stipulated for in the preceding articles, in all extent in which the same is not prohibited, or shall be permitted hereafter.

For other duties shall be imposed upon the importation into the territories of his Majesty, of any articles of the growth, produce, or manufacture of the United Provinces of Rio de la Plata, and no higher or other duties shall be imposed upon the importation into the said territories, of any articles of the growth, produce, or manufacture of his Britannic Majesty's territories, or shall be payable on the importation of the growth, produce, or manufacture of any foreign country; nor shall any duties or charges be imposed, in the said territories, on the exportation of any articles of the growth, produce, or manufacture of the said territories, or of any other foreign country; nor shall any prohibition be imposed upon the importation of any articles of the growth, produce, or manufacture of his Britannic Majesty's territories, or of the said United Provinces, which shall not equally extend to all other

or other duties or charges on accises, light, or harbour dues, pilotage, or of damage or shipwreck, or any other duties or charges, shall be imposed, in any of the said United Provinces, on British vessels of above 120 tons, than in the same ports by vessels of the said territories, or of the same burden, nor in any of his Britannic Majesty's territories, or of the said United Provinces, shall be payable, in the same

above 120 tons, than shall be payable, in the same ports, on British vessels of the same burden. 6. The same duties shall be paid on the importation into the said United Provinces of any article of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in vessels of the said United Provinces, or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty of any article of the growth, produce, or manufacture of the said United Provinces, whether such importation shall be in British vessels, or in vessels of the said United Provinces; and the same duties shall be paid, and the same drawbacks and bounties allowed on the exportation of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions to the said United Provinces, whether such exportation shall be in vessels of the said United Provinces, or in British vessels; and the same duties shall be paid, and the same drawbacks and bounties allowed on the exportation of any articles of the growth, produce, or manufacture of the said United Provinces to his Britannic Majesty's dominions, whether such exportation shall be in British vessels or in vessels of the said United Provinces.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British vessel or a vessel of the said United Provinces, it is hereby agreed, that all vessels built in the dominions of his Britannic Majesty, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of the said United Provinces, properly registered, and owned by the citizens thereof, or any of them, and whereof the master and three-fourths of the mariners, at least, are citizens of the said United Provinces, shall be considered as vessels of the United Provinces.

8. All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have the same liberty in all the territories of the said United Provinces as the natives thereof, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes, nor to pay them any salary or remuneration, unless they shall choose to employ them; and absolute freedom shall be allowed in all cases to the buyer and seller to bargain and fix the price of any goods imported into or exported from the said United Provinces, as they shall see good.

9. In whatever relates to the lading and unlading of ships, the safety of merchandise, goods, and effects, the disposal of property of every sort and denomination, by sale, donation, or exchange, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the two contracting parties shall enjoy, in their respective dominions, the same privileges, liberties, and rights as the most favoured nation, and shall not be charged in any of these respects with any other duties or imposts than those which are paid or may be paid by the native subjects or citizens of the power in whose dominions they may be resident. They shall be exempted from all compulsory military service whatsoever, whether by sea or land, and from all forced loans, or military exactions or requisitions; neither shall they be compelled to pay any ordinary taxes, under any pretext whatsoever, greater than those that are paid by native subjects or citizens.

10. It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall, in the usual form, be approved and admitted by the Government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be so excepted.

11. For the better security of commerce between the subjects of his Britannic Majesty and the inhabitants of the United Provinces of Rio de la Plata, it is agreed, that if at any time any interruption of friendly commercial intercourse, or any rupture, should unfortunately take place between the two contracting parties, the subjects or citizens of either of the two contracting parties residing in the dominions of the other shall have the privilege of remaining and continuing their trade therein without any manner of interruption, so long as they behave peaceably and commit no offence against the laws; and their effects and property, whether intrusted to individuals or to the state, shall not be liable to seizure or sequestration, or to any other demands than those which may be made upon the like effects or property belonging to the native inhabitants of the state in which such subjects or citizens may reside.

12. The subjects of his Britannic Majesty residing in the United Provinces of Rio de la Plata shall not be disturbed, persecuted, or annoyed on account of their religion, but they shall have perfect liberty of conscience therein, and to celebrate divine service either within their own private houses, or in their own particular churches or chapels, which they shall be at liberty to build and maintain in convenient places, approved of by the Government of the said United Provinces; liberty shall also be granted to bury the subjects of his Britannic Majesty who may die in the territories of the said United Provinces in their own burial places, which, in the same manner, they may freely establish and maintain. In the like manner, the citizens of the said United Provinces shall enjoy, within all the dominions of his Britannic Majesty, a perfect and unrestrained liberty of conscience, and of exercising their religion publicly or privately, within their own dwelling-houses, or in the chapels and places of worship appointed for that purpose, agreeably to the system of toleration established in the dominions of his said Majesty.

13. It shall be free for the subjects of his Britannic Majesty residing in the United Provinces of Rio de la Plata, to dispose of their property, of every description, by will or testament, as they may judge fit; and in the event of any British subject dying without such will or testament in the territories of the United Provinces, the British consul-general, or, in his absence, his representative, shall have the right to nominate curators to take charge of the property of the deceased for the benefit of his lawful heirs and creditors, without interference, giving convenient notice thereof to the authorities of the country; and reciprocally.

14. His Britannic Majesty being extremely desirous of totally abolishing the slave trade, the United Provinces of Rio de la Plata engage to co-operate with his Britannic Majesty, for the completion of so beneficent a work, and to prohibit all persons inhabiting within the said United Provinces, or subject to their jurisdiction, in the most effectual manner, and by the most solemn laws, from taking any share in such trade.

15. The present treaty shall be ratified, and the ratification shall be exchanged in London within 4 months, or sooner, if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed their seals thereunto.

Done at Buenos Ayres, the 2nd day of February, in the year of our Lord 1825.

WOODRINE PARISH, H. M. Consul-General.  
MANU. J. GARCIA.

An order in council, dated September 3, 1827, orders that vessels of the United Provinces of Rio de la Plata entering the ports of the United Kingdom of Great Britain and Ireland, in ballast, or laden direct from any of the ports of Rio de la Plata, or departing from the ports of the said United Kingdom, together with the cargoes on board the same, such cargoes consisting of articles which may be legally imported or exported, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports; or on similar articles when imported into or exported from such ports in British vessels; and also such articles, when exported from the said ports in vessels of the United Provinces of Rio de la Plata, respectively, shall be entitled to the same bounties, drawbacks, and allowances that are granted on similar articles when exported in British vessels.

*Local Dues.*—Provided nevertheless, that nothing herein shall extend to any duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges to which any vessels of the United Provinces of Rio de la Plata, of the burden of 120 tons, or of any less burden, are now by law liable in the ports of any of his Majesty's dominions; it appearing to his Majesty and his privy council, that British vessels of the burden of 120 tons, or of any less burden, are subject in the ports of the said United Provinces to higher duties and charges than are levied in those ports on vessels of the said United Provinces of the burden of 120 tons, or of any less burden.

#### AUSTRIA.

*Treaty of Amity, Commerce, and Navigation between her Britannic Majesty and the Emperor of Austria. Signed at Vienna, July 3, 1838.*

Article 1. From the date of the ratification of this present treaty, British vessels arriving in or departing from the ports of his Majesty the Emperor of Austria, and Austrian vessels arriving in or departing from the ports of the United Kingdom of Great Britain and Ireland, and those of all the possessions of her Britannic Majesty, shall be subject to no other or higher duties or charges, of whatsoever nature they may be, than those which are actually or may hereafter be imposed on national vessels, on their entering into or departing from such ports respectively.

2. All productions of the soil, industry, and art of the states and possessions of his Majesty the Emperor of Austria, including the said productions which may be exported through the northern outlet of the Elbe, and the eastern outlet of the Danube, and which may be imported into the ports of the United Kingdom and the possessions of her Britannic Majesty; and also all the productions of the soil, industry, and art of the United Kingdom and possessions of her Britannic Majesty, which may be imported into the ports of his Majesty the Emperor of Austria, shall enjoy reciprocally, in all respects, the same privi-

leges and immunities, and may be imported and exported exactly in the same manner, in vessels of the one as in vessels of the other of the high contracting parties.

3. All commodities which are not the productions of the soil, industry, and art of the two respective states or their possessions, and which may be legally imported from the ports of Austria, including those of the Danube, into the ports of the United Kingdom of Great Britain and Ireland, of Malta, and Gibraltar, and other possessions of her Britannic Majesty, in Austrian vessels, shall be subject to the same duties only which would be paid on the same articles, if they were imported in British vessels.

Her Britannic Majesty extends by this treaty to Austrian navigation and trade, the full benefits of the two British Acts of Parliament passed on the 28th of August, 1833, regulating the trade and navigation of the United Kingdom and British possessions, as well as all other privileges of commerce and navigation now enjoyed, or to be hereafter granted, by existing laws, by orders in council, or by treaties to the most favoured nations.

4. All Austrian vessels arriving from the ports of the Danube, as far as Galatz inclusively, shall, together with cargoes, be admitted into the ports of the United Kingdom of Great Britain and Ireland, and of all the possessions of her Britannic Majesty exactly in the same manner as if such vessels came direct from Austrian ports, with all the privileges and immunities stipulated by the present treaty of navigation and commerce. In like manner, all British vessels, with their cargoes, shall continue to be placed upon the same footing as Austrian vessels, whenever such British vessels shall enter into or depart from the same ports.

5. In consideration of British vessels, arriving direct from other countries than those belonging to the high contracting parties, being admitted with their cargoes into Austrian ports, without paying any other duties whatever than those paid by Austrian vessels, so also the productions of the soil and industry of the parts of Asia or Africa situated within the Straits of Gibraltar, which shall have been brought into the ports of Austria, may be re-exported from thence in Austrian vessels directly into British ports, in the same manner, and with the same privileges, as to all manner of duties and immunities, as if these productions were imported from Austrian ports in British vessels.

6. All commodities and articles of commerce which, according to the stipulations of the present treaty, or by the existing laws and ordinances of the respective states, may be legally imported into or exported from the states and possessions of the two high contracting parties, whether under the British or the Austrian flag, shall in like manner be subject to the same duties, whether imported by national vessels or by those of the other state; and upon all commodities and articles of commerce which may be legally exported from ports of either state, the same premiums, drawbacks, and advantages shall be accorded, whether they are exported by the vessels of the one or by those of the other state.

7. All commodities and articles of commerce which shall be imported, placed in depôt, or warehoused in the ports of the states and possessions of the two high contracting parties, so long as they shall remain in depôt or warehouse, and shall not be used for internal consumption, shall be subject, upon re-exportation, to the same treatment and duties, whether that re-exportation

and may be imported and  
in the same manner, in vessels  
of the other of the high

which are not the produce  
of the industry, and art of the two  
of their possessions, and which  
from the ports of Aus-  
of the Danube, into the ports  
of Great Britain and  
of Gibraltar, and other posses-  
of his Majesty, in Austrian  
to the same duties only  
on the same articles, if they  
fish vessels.

fish vessels by this treaty  
and trade, the full benefits  
of Acts of Parliament passed on  
1833, regulating the trade  
of the United Kingdom and  
as well as all other privileges  
of navigation now enjoyed, or  
granted, by existing laws, by  
or by treaties to the most

vessels arriving from the ports  
of Galatz inclusively, shall,  
be admitted into the ports  
of Great Britain and  
of the possessions of her Britan-  
in the same manner as if  
direct from Austrian ports,  
and immunities stipulated  
of navigation and commerce.  
All British vessels, with their  
to be placed upon the  
Austrian vessels, whenever such  
shall enter into or depart from the

of British vessels, arriving  
from countries than those belong-  
ing to the contracting parties, being admitted  
into Austrian ports, without  
duties whatever than those  
of vessels, so also the productions  
of the industry of the parts of Asia or  
within the Straits of Gibraltar,  
when brought into the ports of  
and re-exported from thence in  
directly into British ports, in the  
with the same privileges, as to  
duties and immunities, as if these  
imported from Austrian ports in

articles and articles of commerce  
to the stipulations of the present  
existing laws and ordinances of  
the states, may be legally imported into  
the states and possessions of the  
contracting parties, whether under  
the Austrian flag, shall in like manner  
the same duties, whether imported  
or by those of the other state;  
and articles of commerce  
shall be legally exported from ports  
of the same premiums, drawbacks,  
shall be accorded, whether they  
of the vessels of the one or by those

articles and articles of commerce  
imported, placed in depôt, or ware-  
houses of the states and possessions  
of the contracting parties, so long as  
in in depôt or warehouse, and  
for internal consumption, shall  
re-exportation, to the same treat-  
ment, whether that re-exportation

shall be made in the vessels of the one or in  
those of the other state.

8. No priority or preference shall be given,  
directly or indirectly, by the Government of  
either country, or by any company or corporation,  
or agent acting on its behalf or under its author-  
ity, in the purchase of any article the production  
of the soil, industry, or art of either of the two  
states and their possessions, imported into the  
ports of the other, on account of the nationality  
of the vessel in which such articles may be im-  
ported; it being the true intent and meaning  
of the high contracting parties that no differ-  
ence or distinction whatever shall be made in  
this respect.

9. In regard to the commerce to be carried on  
in Austrian vessels with the British possessions  
in the East Indies, her Britannic Majesty con-  
sents to grant the same facilities and privileges  
to the subjects of his Imperial and Royal Apo-  
stolic Majesty as are or may be enjoyed under  
any treaty or Act of Parliament by the subjects  
or citizens of the most favoured nations; subject  
to the laws, rules, regulations, and restrictions  
which are or may become applicable to the vessels  
and subjects of any other foreign country enjoy-  
ing the like advantages and privileges of trading  
with the said possessions.

10. The present treaty does not include the  
navigation and carrying trade between one port  
and another, situated in the dominions of one  
contracting party, by the vessels of the other, as  
far as regards the carrying of passengers, commo-  
dities, and articles of commerce; this navigation  
and transport being reserved to national vessels.

11. The vessels and subjects of the high con-  
tracting parties shall, by the present treaty, enjoy  
reciprocally all the advantages, immunities, and  
privileges, within the ports of their respective  
states and possessions, which are now enjoyed by  
the navigation and commerce of the most favoured  
nations; the effect hereof being to secure, in  
the United Kingdom and British possessions, to  
Austrian vessels and subjects, the full and entire  
advantages of navigation and commerce allowed  
by the Navigation Act passed in London on the  
26th of August, 1833, and by another Act of the  
same date, regulating the trade of the British  
possessions abroad; or which may be accorded by  
orders in council or by treaty to other powers;  
and in like manner British vessels and subjects  
shall enjoy, in the ports of the states and posses-  
sions of his Imperial and Royal Apostolic Ma-  
jesty, the full and entire advantages of naviga-  
tion and commerce granted by existing laws,  
regulations, and ordinances, or by treaty, to  
foreign powers; and her Majesty the Queen of  
the United Kingdom of Great Britain and Ire-  
land, and his Imperial and Royal Apostolic Ma-  
jesty, engage reciprocally not to grant any  
favours, privileges, or immunities whatsoever,  
in matters of commerce and navigation, to the sub-  
jects of any other state, which shall not be also  
at the same time extended to the subjects of the  
one or of the other of the high contracting  
parties, gratuitously if the concession in favour  
of the other state shall have been gratuitous, or  
upon giving as nearly as possible the same com-  
pensation or equivalent in case the concession  
shall have been conditional.

12. The clause of Article VII. of the conven-  
tion concluded at Paris on the 5th November,  
1815, between the courts of Great Britain, Aus-  
tria, Prussia, and Russia, relative to the commerce  
between the states of his Imperial and Royal  
Apostolic Majesty and the United States of the  
Ionian Islands, shall remain in force.

13. The present treaty, after being signed and  
ratified, shall replace the convention of navigation  
and commerce concluded the 21st December,  
1829, in London, between the Governments of his  
Britannic Majesty and of his Imperial and Royal  
Apostolic Majesty; and shall continue in force  
until the 31st of December, 1848; and further,  
until the expiration of 12 months after one of the  
high contracting parties shall have notified to  
the other the intention to terminate its duration.  
It is further agreed that in 12 months after one  
of the high contracting parties has received from  
the other such notification, this treaty, and all  
the stipulations it contains, shall cease to be  
obligatory upon either party.

14. The present treaty shall be ratified, and the  
ratifications exchanged at Vienna, in the space of  
one month, or sooner if possible.

In witness whereof &c. plenipotentiaries have  
signed the same, and have affixed thereto the  
seals of their arms.

Done at Vienna the 3rd day of July, in the  
year of our Lord 1838.

FREDERIC JAMES LAMB.  
METTERNICH.

*Declaration signed by the respective Plenipotentiaries on the conclusion of the preceding Treaty.*

With a view to prevent beforehand all doubt  
which might hereafter arise with regard to the  
true sense of the expressions contained in the  
treaty of commerce and navigation signed this  
day between the plenipotentiaries of her Majesty  
the Queen of the United Kingdom of Great Britain  
and Ireland, and of his Majesty the Emperor of  
Austria, King of Hungary and Bohemia, the high  
contracting parties have agreed, by common con-  
sent, that the French text of the said treaty shall  
be considered by the Austrian Government as the  
original text.

In witness whereof the present declaration has  
been done in duplicate, and signed by the respec-  
tive plenipotentiaries.

Vienna, 3rd July, 1838.

FREDERIC JAMES LAMB.  
METTERNICH.

*Declaration made by the Plenipotentiary of her  
Britannic Majesty on the Exchange of the  
Ratifications of the preceding Treaty.*

In proceeding to the exchange of the ratifica-  
tions of the treaty of commerce and navigation  
between her Majesty the Queen of the United  
Kingdom of Great Britain and Ireland and his  
Majesty the Emperor of Austria, King of Hungary  
and Bohemia, concluded and signed at Vienna on  
the 3rd of July, 1838, the undersigned plenipoten-  
tiary of her Britannic Majesty is commanded by  
her Majesty to explain and declare:—

1. That in the preamble of the said treaty, the  
words 'the commercial relations of their respective  
states and possessions' shall be understood to  
mean 'the commercial relations between their re-  
spective states and possessions,' the latter form of  
words being that adopted in the preamble of the  
convention of commerce between Great Britain  
and Austria signed at London, December 21, 1829.

2. That the stipulations of the third article of  
the aforesaid treaty of the 3rd of July, 1838, re-  
lating to goods not the produce of the respective  
states, shall be understood to be mutual.

3. That by the seventh article of the aforesaid  
treaty of the 3rd of July, 1838, it is understood  
that goods placed in warehouse shall not be liable  
to duty unless entered for consumption, and may  
be exported on the same terms in the ships of the  
one as in those of the other country.

Her Britannic Majesty's ratification of the aforesaid treaty of commerce and navigation is exchanged under the explicit declarations and understandings above mentioned.

Done at Milan, the 14th day of September, 1838.  
FREDERIC JAMES LAMB.

*Counter-Declaration made by the Austrian Plenipotentiary.*

In consequence of the declaration presented this day by his Excellency Sir Frederic Lamb, Ambassador of her Britannic Majesty to his Imperial and Royal Apostolic Majesty, on the occasion of the exchange of the ratifications of the treaty of commerce and navigation concluded and signed at Vienna on the 3rd of July, between the plenipotentiaries of his Imperial and Royal Apostolic Majesty and of her Britannic Majesty, which declaration is conceived in the following terms—

1. That in the preamble of the said treaty the words 'the commercial relations of their respective states and possessions' shall be understood to mean 'the commercial relations between their respective states and possessions,' the latter form of words being that adopted in the preamble of the convention of commerce signed at London on the 21st of December, 1829, between Austria and Great Britain.

2. That the stipulations of the 3rd article of the aforesaid treaty of the 3rd of July, 1838, relating to goods not the produce of the respective states, shall be understood to be mutual.

3. That by the 7th article of the treaty of the 3rd of July, 1838, it is understood that goods placed in warehouse shall not be liable to duty unless entered for consumption; and may be exported on the same terms in the ships of the one as in those of the other country.

The undersigned, Chancellor of Court and State, is authorised by his Majesty the Emperor, his august master, to accede, in every particular, to this declaration presented by his Excellency the Ambassador of her Britannic Majesty.

Done at Milan, the 14th of September, 1838.  
METTERNICH.

*Treaty of Commerce between her Majesty and the Emperor of Austria, with the final Protocol. Signed at Vienna, December 16, 1865.*

Article 1. During the continuance of the present treaty, the subjects and commerce of Austria shall enjoy within all the dominions and possessions of her Britannic Majesty, including her Majesty's colonies and foreign possessions, the same advantages which have been conceded to French subjects and commerce by the treaty between her Majesty and the Emperor of the French, signed at Paris on the 23rd of January, 1860, and to the subjects and commerce of the States of the Zollverein by the treaty between her Majesty and his Majesty the King of Prussia, representing the sovereign states and territories united to the Prussian system of customs and contributions, signed at Berlin on the 30th of May, 1865; and further, Austrian subjects and commerce shall be placed in all other respects on the footing of the subjects and commerce of the most favoured nation.

2. From and after the 1st of January, 1867, British subjects and commerce shall, within the dominions of his Imperial and Royal Majesty, be placed in every respect upon the footing of the most favoured nation, and share in all the advantages and favours which are enjoyed by the commerce and subjects of any third power.

From this rule are excepted:—

a. Advantages such as those which, for the

sole purpose of facilitating frontier traffic, are present conceded, or may hereafter be conceded to the States of the German Zollverein, or other neighbouring States; and also those reductions of, or exemptions from, customs duties which are valid only at certain parts of the frontier, or for the inhabitants of particular localities.

b. Those advantages which belong, or may hereafter be conceded, to the subjects of the German Confederation in virtue of Federal treaties and Federal laws.

c. Those special and ancient privileges which are enjoyed by Turkish subjects, as such, for Turkish commerce in Austria.

3. The Austrian Customs Tariff (the present system of calculating customs duties by weight being maintained) shall be so regulated that the duty to be levied upon articles the produce or manufacture of the dominions of her Britannic Majesty, upon their importation into the Austrian States, shall, from the 1st of January, 1867, not exceed 25 per cent. of the value, with the addition of the cost of transport, insurance, and commission necessary for the importation into Austria as far as the Austrian Customs frontier; and for this purpose there shall serve as basis the average value of the articles included under one and the same denomination in each position of the future Austrian Tariff.

From and after the 1st of January, 1870, the maximum of these duties shall not exceed 20 per cent. of the value, with the additions above defined.

The articles of State monopolies (tobacco, salt, gunpowder), and further, the goods comprised in Classes 1 and 7 of the present Austrian tariff, are excepted from these maxima.

4. Commissioners from both Governments shall meet, not later than the month of March, 1866, for the purpose of ascertaining and determining the values and additional charges, and they shall take as the basis of their calculations the average prices at the principal centres of production and commerce of the United Kingdom for the year 1865.

Three years after the duties fixed by treaty shall have come into operation, each of the contracting parties shall have the right to claim a revision of the values.

5. Those duties of the future Austrian tariff to come into operation on the 1st of January, 1867, to which England attaches a special interest, shall form the subject of a supplementary convention to be concluded between the two contracting parties.

The articles of State monopoly, as also the goods subject to fiscal duties included in Classes 1 and 7 of the present tariff, remain also here excepted.

6. Internal imposts which are levied in the territory of one party on the production, preparation, or use of any article, whether on account of the state or on account of municipalities and corporations, shall under no pretext affect the productions of the other party in a higher or more onerous degree than the same productions of native origin.

7. The contracting parties agree that every reduction in their tariffs of import or export duties, and every privilege, favour, or immunity which either contracting party may hereafter grant to the subjects and commerce of a third power, shall be extended immediately and unconditionally to the other contracting party, with a reserve, however, of the exceptions enumerated in Article 2, a and b.

8. The subjects of one of the contracting parties shall enjoy, in the dominions and possessions of the other, equality of treatment with native subjects in regard to charges on loading and unloading, to warehousing, and to the transit trade, as also in regard to bounties, facilities, and drawbacks.

9. The subjects of one of the two high contracting powers shall, in the dominions of the other, enjoy the same protection as native subjects in regard to the rights of property in trade marks, and other distinctive marks, as well as in patterns and designs for manufacture.

10. The high contracting parties reserve to themselves to determine hereafter, by a special convention, the means of reciprocally protecting copyright in works of literature and the fine arts within their respective dominions.

11. The present treaty shall remain in force for the space of ten years, to date from the 1st of January, 1867; and in case neither of the high contracting powers shall have notified to the other, twelve months before the expiration of the said period of ten years, the intention to put an end to its operation, the treaty shall continue in force for another year, and so on from year to year, until the expiration of a year counting from the day on which one or other of the high contracting parties shall have announced its intention to put an end to it.

The high contracting parties reserve to themselves the right to introduce, by common consent, into this treaty, any modification which is not opposed to its spirit and principles, and the utility of which shall have been shown by experience.

12. The present treaty shall be ratified, and the ratifications shall be exchanged in Vienna, in three weeks or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Vienna, this 16th day of December, 1865.

BLOOMFIELD,  
ALEXANDER GRAF MENSENDORFF-  
POUILLY, *F.M.L.*  
BERNHARD-BARON WÜLLERSTORF,  
*C. Admiral.*

#### *Final Protocol.*

Upon proceeding to the signature of the treaty of commerce concluded this day between Great Britain and Austria, the plenipotentiaries of the two powers made the following declarations:—

1. The plenipotentiaries of his Majesty the Emperor of Austria declared that in virtue of Article XIII. of the treaty of customs and contributions union of the 23rd December, 1863, between Austria and Liechtenstein, the treaty of commerce concluded this day would apply equally to the principality of Liechtenstein, and the British plenipotentiary accepted this declaration.

2. In order to avoid any future doubt as to the intention of Article III., the plenipotentiaries of the two powers agreed to the following explanation:—

In the construction of a tariff of specific duties by weight within fixed ad valorem rates, it is necessary to determine what shall be the unit of value to which each specific duty shall be applied.

In adopting the basis of value established by Article III., it is understood that it is not intended to depart from the general principle of the article, viz., the application of certain maximum ad valorem rates of duty to all articles of British produce and manufacture, but to guard against

the necessity of making separate provision for every variety of each article, thereby creating minute and inconvenient subdivisions in the tariff.

With this view it becomes necessary to group together those different qualities and descriptions of the same article or of similar articles which, from their approximation in value and general resemblance in character, it is found possible to include under one and the same denomination in one position of the tariff.

But it is understood that in fixing the denominations in each position of the future Austrian tariff, they shall be so arranged that the duty affixed to any one position shall not exceed the 'maximum' rates fixed by Article III. of the treaty upon the average value of any kind of goods of commercial importance included under any one denomination in such position, unless by common consent it is considered expedient or necessary.

3. With reference to title IV., the plenipotentiaries likewise agreed that if it shall be found that the prices of any kinds of goods have been essentially disturbed by exceptional causes during the twelve months of the year 1865, the Commissioners of the two Governments shall endeavour to find such a basis of value as shall be considered to correspond to a fair average value for future years.

In the case of textile manufactures (the prices of which have been seriously deranged during the late war in the United States of America) it is agreed that if the average prices of the year 1865 be taken as a basis of value, either contracting party may claim a revision of such valuation after the 1st of January, 1868.

4. The British plenipotentiary then declared that:

Her Britannic Majesty engages to recommend to Parliament the abolition of the duties payable on the importation of wood and timber into the United Kingdom, and also the reduction of the duties payable on wine in bottle to the amount of those payable on wine in wood upon importation into the United Kingdom.

5. The Imperial Austrian plenipotentiaries on their part declared that:

The duty upon the export of rags from the states and possessions of his Imperial and Royal Majesty shall, from and after the 1st of July, 1866, be reduced to 2 florins the Zollcentner; and that:

The duty upon the importation of salted herrings into the states and possessions of his Imperial and Royal Majesty shall, from the 1st of February, 1866, be reduced to 50 kreutzers per Zollcentner; gross weight.

In witness whereof the undersigned plenipotentiaries have drawn up the present protocol in duplicate form, to which, after it had been duly read, they affixed their signatures.

Vienna, this 16th day of December, 1865.

BLOOMFIELD,  
ALEXANDER GRAF MENSENDORFF-  
POUILLY, *F.M.L.*  
BERNHARD-BARON WÜLLERSTORF,  
*C. Admiral.*

*Treaty of Navigation between her Majesty and his Majesty the Emperor of Austria. Signed at Vienna, April 30, 1868. Ratifications exchanged at Vienna, June 26, 1868.*

Article 1. British ships and their cargoes in all the dominions of his Imperial and Royal Apostolic Majesty, and ships belonging to the citizens

of the Imperial and Royal States and their cargoes in all the dominions of her Majesty the Queen of the United Kingdom of Great Britain and Ireland, from whatever place arriving and whatever may be their place of destination, and whatever may be the place of origin or destination of their cargoes, shall be treated in every respect as national ships and their cargoes.

Every favour or exemption in these respects, or any other privilege in matters of navigation, which either of the contracting parties shall grant to a third power, shall be extended immediately and unconditionally to the other party.

It is, however, agreed that this stipulation shall not be applicable to the national fisheries of either of the two countries.

2. The stipulations contained in the preceding article are also to be applied to the colonies and foreign possessions of her Britannic Majesty, as well as to the ships and cargoes of the same; but, as regards the coasting trade, only in those colonies and foreign possessions the coasting trade of which shall have been, or shall be hereafter, opened to foreign ships in conformity with the Acts of Parliament which govern this matter.

The foreign possessions and colonies of her Britannic Majesty, the coasting trade of which has been already so opened to foreign ships, and in which the vessels belonging to the citizens of the Imperial and Royal States are placed on the national footing, are—

British India,  
Ceylon,  
Cape of Good Hope,  
Victoria,  
St. Lucia.

3. If any ship of war or merchant-vessel of one of the contracting parties should run aground or be wrecked, or meet with any casualty upon the coasts of the other, the same aid and assistance shall be rendered to it, and to the cargo, apparel, and furniture thereof, as to a national vessel; and in such case no other expenses shall be paid by the owners or their agents and representatives for the preservation of the property or of the lives of the persons on board the ship, than would be payable in the like case of a wreck of or casualty to a national vessel.

In case the master of a merchant-vessel should be under the necessity of disposing of a part of his merchandise in order to defray any salvage expenses, no impediment shall be opposed by the authorities, the master being bound, however, to conform to the existing regulations and tariffs.

The goods and merchandise saved from the wreck shall be exempt from all duties of customs, unless cleared for consumption.

The respective consuls-general, consuls, vice-consuls, and consular agents shall, if the owner or master, or other agent of the owner, is not present, or is present and requires it, or is bound by the laws of his country to accept consular assistance, be authorised to interpose in order to afford the necessary assistance to those concerned.

4. The consuls-general, consuls, vice-consuls, and consular agents of each of the contracting parties residing in the dominions and possessions of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

5. All vessels which according to British law are to be deemed British vessels, and all vessels which, according to the laws prevailing in the States of his Imperial and Royal Apostolic Majesty, are to be deemed vessels belonging to the subjects of his Imperial and Royal Apostolic Ma-

esty, shall, for the purposes of this treaty, be respectively deemed British vessels, and vessels belonging to the citizens of the Imperial and Royal States.

6. The present treaty shall remain in force from the exchange of the ratifications thereof until the 31st of December, 1877; and in case neither of the high contracting powers shall have notified to the other, twelve months before the expiration of the said period, the intention to put an end to its operation, the treaty shall continue in force for another year, and so on from year to year, until the expiration of a year, counting from the day on which one or other of the high contracting parties shall have announced its intention to put an end to it.

7. The present treaty shall be ratified, and the ratifications shall be exchanged at Vienna, within eight weeks, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Vienna, this 30th day of April, in the year of our Lord 1862.

BLOOMFIELD,  
LOUIS MALLEE,

BELGIUM.

*Treaty of Commerce and Navigation between her Majesty and the King of the Belgians. Signed at London, July 23, 1862. Ratifications exchanged at London, August 30, 1862.*

Article 1. There shall be reciprocal liberty of commerce between all the dominions and possessions of the two high contracting parties; and the subjects of each of them shall, throughout the whole extent of the territories and possessions of the other, enjoy the same rights, privileges, liberties, favours, immunities, and exemptions, in matters of commerce and navigation, which are or may be enjoyed by native subjects.

2. The subjects of one of the two high contracting parties residing in the dominions of the other, shall have the same liberty as native subjects to manage their own affairs themselves, or to commit them to the management of any other persons as brokers, factors, agents, or interpreters. They shall not be restrained in their choice, and shall not be obliged to pay any salary or remuneration to any person whom they shall not choose to employ in those capacities; buyers and sellers being at perfect liberty to bargain together, and to fix the price of any goods or merchandise imported or destined for exportation, on condition of observing the regulations and the customs laws of the country.

3. In all that relates to navigation and commerce, the high contracting parties shall not grant any privilege, favour, or immunity to any other country, which shall not be also and immediately extended to their respective subjects.

4. All vessels which according to the laws of Great Britain are to be deemed British vessels, and all vessels which according to the laws of Belgium are to be deemed Belgian vessels, are declared to be British and Belgian vessels respectively.

5. No duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature or under whatever denomination, levied for the profit or in the name of the Government, public functionaries, communes, corporations, or establishments of whatever kind, shall be imposed in the ports of either country, upon the vessels of the other country, from whatever port or place arriving, which

claim in Great Britain exclusive property in a mark, model, or pattern, unless they shall have previously complied with the regulations, if any, which are or may be in force for the deposit at London, by British subjects, of marks, models, or patterns.

Reciprocally, British subjects shall not have the right to claim in Belgium exclusive property in a mark, model, or pattern, unless they shall have previously complied with the laws and regulations on those subjects which are or may be in force in Belgium.

18. Each of the high contracting parties shall have the right to name consuls for the protection of trade in the dominions and territories of the other party; and the consuls who may be so appointed shall enjoy, within the territories of each party, all the privileges, exemptions, and immunities which are or may be granted in those territories to agents of the same rank and character appointed by or authorised to act for the Government of the most favoured nation.

Before any consul can act as such, he must, however, in the usual form be approved and admitted by the Government of the country to which he is sent; and each of the two high contracting parties shall have the right to except from the residence of consuls any particular places which either of them may judge proper to be excepted.

19. If any vessel of war or merchant-vessel of either of the two countries should be wrecked upon the coasts of the other, such vessel, or any parts thereof, and all furniture and appurtenances belonging thereto, as well as all goods and merchandise which shall be saved therefrom, or the proceeds thereof, if sold, shall be restored to the proprietors or to their agents, on being claimed by them. In case there should be no such proprietors or agents upon the spot, the said articles and goods, or the proceeds thereof, as well as all the papers found on board of any such vessel, shall be delivered to the British or Belgian consul in whose district the wreck shall have taken place; and such consul, proprietors, or agents shall not be called upon to pay any charge but the expenses incurred in the preservation of the property, and the same rate of salvage which would be equally payable, under the like circumstances, by a national vessel. The goods and merchandise saved from the wreck shall not be subject to the established duties, unless cleared for consumption.

20. The British flag shall continue to enjoy in Belgium the repayment of the Scheldt toll so long as the Belgian flag shall enjoy the same.

21. From and after, at latest, the day on which the capitalisation of the Scheldt toll shall be effected by a general arrangement—

(1) The tonnage duty imposed in Belgian ports shall cease to be levied;

(2) The pilotage duties in Belgian ports and in the Scheldt, so far as depends upon Belgium, shall undergo a reduction

Of 20 per cent. for sailing vessels;

Of 25 per cent. for vessels towed;

Of 30 per cent. for steam-vessels.

(3) The system of local taxes imposed by the city of Antwerp shall be throughout diminished.

22. As a temporary exception to the stipulations of Article 14, and for the space of 2 years from the 1st of October, 1862, the new system shall be applied in the following manner to certain articles of British origin hereinafter enumerated:—

Cotton yarns twisted, warped, or dyed, shall pay the duties imposed upon single yarns, un-

bleached or bleached, with an addition of 5 centimes for twisted yarns, 10 centimes for warped yarns, and 15 centimes for dyed yarns, per kilogramme.

The duty on stuff of wool mixed with cotton shall be 22½ per cent. until the 1st of October, 1863, and 20 per cent. until the 1st of October, 1864. During the continuance of the transitory system the importer may, at his choice, pay either 180 francs the 100 kilogrammes, or the duties stipulated above.

The duty upon printed cotton tissues shall be 150 francs the 100 kilogrammes.

23. It is understood that in case the present duty on the importation of foreign spirits should be maintained in the British tariff, the article relative to spirits which is contained in the treaty concluded between Belgium and France on the 1st of May, 1861, shall not be applied to British spirits, so far as regards the reductions therein stipulated, until the 1st of October, 1865.

24. The Ionian Islands being under the protection of her Britannic Majesty, the subjects and vessels of those islands shall enjoy, in the dominions of his Majesty the King of the Belgians, all the advantages which are granted to the subjects and vessels of Great Britain by the present treaty, as soon as the Government of the Ionian Islands shall have agreed to grant to the subjects and vessels of his Majesty the King of the Belgians the same advantages which are granted in those islands to the subjects and vessels of her Britannic Majesty; it being understood, that in order to prevent abuses, every Ionian vessel claiming the benefits of that treaty, shall be furnished with a patent signed by the Lord High Commissioner of her Britannic Majesty, or by his representative.

25. The present treaty shall continue in force for 10 years, dating from the 10th day after the exchange of the ratifications. In case neither of the two high contracting parties should have notified, 12 months before the end of the said period, its intention to terminate the treaty, it shall remain in force until the expiration of 1 year dating from the day on which either of the high contracting parties shall have given notice for its termination.

The high contracting parties reserve to themselves the right to introduce into the treaty, by common consent, any modifications which may not be at variance with its spirit or principles, and the utility of which may be shown by experience.

26. From and after the date fixed by the preceding article, the treaty of commerce and navigation of the 27th of October, 1851, shall cease to be in force.

27. The present treaty shall be ratified, and the ratifications shall be exchanged at London before the 1st day of September, 1862.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done in duplicate at London, the 23rd day of July, in the year of our Lord 1862.

Protocol held at the Foreign Office, between the Plenipotentiaries of Great Britain and of Belgium.

The plenipotentiaries of her Britannic Majesty the King of the Belgians, in consequence of the signature of the treaty of com- munication between their august

sovereigns, place upon record that they have agreed upon the following points:—

(1) That the declarations relative to the arrest of seamen deserters, dated the 4th of January, 1853, and the order in council bearing date the 8th of February, 1853, and published in the *London Gazette*, of the 13th of February, shall continue in force and validity, as if they had been inserted in the said treaty.

(2) That although the fishery convention concluded on the 22nd of March, 1852, between her Britannic Majesty and his Majesty the King of the Belgians, is provisionally maintained, it is under the reservation made by the Government of his Majesty the King of the Belgians, that they will again bring forward, in a future negotiation, the proposition relative to the reciprocal permission to fish within the marine territorial limit.

In maintaining the said convention concluded on the 22nd of March, 1852, an exception to the stipulations of the treaty of commerce and navigation signed this day, is made in so far as regards the advantages which are or may be given in either country to the produce of national fishery.

(3) With regard to sugar, the Government of his Majesty the King of the Belgians reserve to themselves to renew their proposition that an agreement should be come to between Great Britain, Belgium, France, the Zollverein, and the Netherlands, for respectively bringing the duties upon raw and refined sugars imported from any one of those countries into the others to an equality with the taxes imposed upon the same productions of national origin, and for terminating simultaneously in those 5 countries the system of bounties on the exportation of sugar.

The Belgian Government rely upon the support and co-operation of the Government of her Britannic Majesty for this purpose.

RUSSELL,

THOMAS MILNER GIBSON.

SYLVAIN VAN DE WEYER.

Protocol of Conference held at the Foreign Office, August 30, 1862, between the Plenipotentiaries of Great Britain and of Belgium.

The undersigned, in proceeding to the exchange of the ratifications of the treaty of commerce and navigation concluded on the 23rd of July, 1862, between her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the King of the Belgians, have agreed to record in the present protocol the modifications in the said treaty arranged this day between them; and in consequence of which the following tariff is adopted:—

Cotton Yarns.		1st Year	2nd Year
No.	in	ct.	ct.
20,000 and under	-	22	20
2,000 to 20,000	-	30	25
50,000 to 100,000	-	15	35
400,000 to 650,000	-	60	50

Above 65,000 free entry (weighing charge of 10 centimes) during the whole duration of the treaty.

These modifications shall have the same force and effect as if they were textually inserted in the said treaty, and they shall come into operation from the 1st of October, 1862, the old duties continuing to be applied to the above-mentioned articles, as well as the mixed tissues (Article 22 of the treaty), up to that date.

In testimony whereof the plenipotentiaries have signed the present protocol, and have thereto affixed their seals.

Done in London the 30th of August, 1862.

RUSSELL,

THOMAS MILNER GIBSON.

SYLVAIN VAN DE WEYER.

CHINA.

*Treaty of Peace, Friendship, and Commerce, between her Majesty and the Emperor of China, Signed in the English and Chinese languages, at Tien-tsin, June 26, 1858. Ratifications exchanged at Peking, October 24, 1860.*

Article 1. The treaty of peace and amity between the two nations, signed at Nanking on the 29th day of August, in the year 1842, is hereby renewed and confirmed. [CANONS.]

The supplementary treaty and general regulations of trade having been amended and improved, and the substance of their provisions having been incorporated in this treaty, the said supplementary treaty and general regulations of trade are hereby abrogated.

2. For the better preservation of harmony in future, her Majesty the Queen of Great Britain and his Majesty the Emperor of China mutually agree that, in accordance with the universal practice of great and friendly nations, her Majesty the Queen may, if she see fit, appoint ambassadors, ministers, or other diplomatic agents to the Court of Peking; and his Majesty the Emperor of China may, in like manner, if he see fit, appoint ambassadors, ministers, or other diplomatic agents to the Court of St. James'.

3. His Majesty the Emperor of China hereby agrees, that the ambassador, minister, or other diplomatic agent, so appointed by her Majesty the Queen of Great Britain, may reside, with his family and establishment, permanently at the capital, or may visit it occasionally, at the option of the British Government. He shall not be called upon to perform any ceremony derogatory to him as representing the sovereign of an independent nation on a footing of equality with that of China. On the other hand, he shall use the same forms of ceremony and respect to his Majesty the Emperor as are employed by the ambassadors, ministers, or diplomatic agents of her Majesty towards the sovereigns of independent and equal European nations.

It is further agreed, that her Majesty's Government may acquire at Peking a site for building, or may hire houses for the accommodation of her Majesty's mission, and that the Chinese Government will assist it in so doing.

Her Majesty's representative shall be at liberty to choose his own servants and attendants, who shall not be subjected to any kind of molestation whatever.

Any person guilty of disrespect or violence to her Majesty's representative, or to any member of his family or establishment, in deed or word, shall be severely punished.

4. It is further agreed, that no obstacle or difficulty shall be made to the free movements of her Majesty's representative, and that he, and the persons of his suite, may come and go, and travel at their pleasure. He shall, moreover, have full liberty to send and receive his correspondence, to and from any point on the sea-coast that he may select; and his letters and effects shall be held sacred and inviolable. He may employ, for their transmission, special couriers, who shall meet with the same protection and facilities for travelling as the persons employed in carrying despatches for the Imperial Government; and, generally, he shall enjoy the same privileges as are accorded to officers of the same rank by the usage and consent of Western nations.

All expenses attending the diplomatic mission of Great Britain in China shall be borne by the British Government.

5. His Majesty the Emperor of China agrees to

nominate one of the secretaries of state, or a president of one of the boards, as the high officer with whom the ambassador, minister, or other diplomatic agent of her Majesty the Queen shall transact business, either personally or in writing, on a footing of perfect equality.

6. Her Majesty the Queen of Great Britain agrees that the privileges hereby secured shall be enjoyed in her dominions by the ambassadors, ministers, or diplomatic agents of the Emperor of China, accredited to the court of her Majesty.

7. Her Majesty the Queen may appoint one or more consuls in the dominions of the Emperor of China; and such consul or consuls shall be at liberty to reside in any of the open ports or cities of China, as her Majesty the Queen may consider most expedient for the interests of British commerce. They shall be treated with due respect by the Chinese authorities, and enjoy the same privileges and immunities as the consular officers of the most favoured nation.

Consuls and vice-consuls in charge shall rank with intendents of circuits; vice-consuls, acting vice-consuls, and interpreters, with prefects. They shall have access to the official residences of these officers, and communicate with them, either personally or in writing, on a footing of equality, as the interests of the public service may require.

8. The Christian religion, as professed by Protestants or Roman Catholics, inculcates the practice of virtue, and teaches man to do as he would be done by. Persons teaching or professing it, therefore, shall alike be entitled to the protection of the Chinese authorities, nor shall any such, peaceably pursuing their calling, and not offending against the law, be persecuted or interfered with.

9. British subjects are hereby authorised to travel, for their pleasure or for purposes of trade, to all parts of the interior, under passports which will be issued by their consuls, and countersigned by the local authorities. These passports, if demanded, must be produced for examination in the localities passed through. If the passport be not irregular, the bearer will be allowed to proceed, and no opposition shall be offered to his hiring persons or hiring vessels for the carriage of his baggage or merchandise. If he be without a passport, or if he commit any offence against the law, he shall be handed over to the nearest consul for punishment, but he must not be subjected to any ill-usage in excess of necessary restraint. No passport need be applied for by persons going on excursions from the ports open to trade to a distance not exceeding 100 li, and for a period not exceeding 5 days.

The provisions of this article do not apply to crews of ships, for the due restraint of whom regulations will be drawn up by the consul and the local authorities.

To Nanking, and other cities disturbed by persons in arms against the Government, no pass shall be given, until they shall have been recaptured.

10. British merchant-ships shall have authority to trade upon the great river (Yang-tsze). The upper and lower valley of the river being, however, disturbed by out-laws, no port shall be for the present opened to trade, with the exception of Chin-kiang, which shall be opened in a year from the date of the signing of this treaty.

As soon as peace shall have been restored, British vessels shall also be admitted to trade at such ports as far as Han-kow, not exceeding 3 in number, as the British minister, after consultation with the Chinese Secretary of State, may determine shall be ports of entry and discharge.

11. In addition to the cities and towns of Canton, Amoy, Fuchow, Ningpo, and Shanghai,

opened by the treaty of Nanking, it is agreed that British subjects may frequent the cities and port of New-Chwang, Tang-Chow, Tai-Wan (Formosa), Chuan-Chow (Swatow), and Kiung-Chow (Hainan).

They are permitted to carry on trade with whomsoever they please, and to proceed to and from at pleasure with their vessels and merchandise.

They shall enjoy the same privileges, advantages, and immunities at the said towns and ports, as they enjoy at the ports already opened to trade, including the right of residence, of buying or renting houses, of leasing land therein, and of building churches, hospitals, and cemeteries.

12. British subjects, whether at the ports or at other places, desiring to build or open houses, warehouses, churches, hospitals, or burial-grounds, shall make their agreement for the land or buildings they require, at the rates prevailing among the people, equitably, and without exactions on either side.

13. The Chinese Government will place no restrictions whatever upon the employment, by British subjects, of Chinese subjects in any lawful capacity.

14. British subjects may hire whatever boats they please for the transport of goods or passengers, and the sum to be paid for such boats shall be settled between the parties themselves, without the interference of the Chinese Government. The number of these boats shall not be limited, nor shall a monopoly in respect either of the boats, or of the porters or coolies engaged in carrying the goods, be granted to any parties. If any smuggling takes place in them, the offenders will, of course, be punished according to law.

15. All questions in regard to rights, whether of property or person, arising between British subjects, shall be subject to the jurisdiction of the British authorities.

16. Chinese subjects who may be guilty of any criminal act towards British subjects shall be arrested and punished by the Chinese authorities, according to the laws of China.

British subjects who may commit any crime in China shall be tried and punished by the consul, or other public functionary authorised therein, according to the laws of Great Britain.

Justice shall be equitably and impartially administered on both sides.

17. A British subject having reason to complain of a Chinese, must proceed to the consulate, and state his grievance. The consul will enquire into the merits of the case, and do his utmost to arrange it amicably. In like manner, if a Chinese have reason to complain of a British subject, the consul shall no less listen to his complaint, and endeavour to settle it in a friendly manner. If disputes take place of such a nature that the consul cannot arrange them amicably, then he shall request the assistance of the Chinese authorities, that they may together examine into the merits of the case, and decide it equitably.

18. The Chinese authorities shall at all times afford the fullest protection to the persons and property of British subjects, whenever these shall have been subjected to insult or violence. In all cases of incendiarism or robbery, the local authorities shall at once take the necessary steps for the recovery of the stolen property, the suppression of disorder, and the arrest of the guilty parties, whom they will punish according to law.

19. If any British merchant-vessel, while within Chinese waters, be plundered by robbers or pirates, it shall be the duty of the Chinese authorities to use every endeavour to capture and punish the said robbers or pirates, and to recover the stolen

Nanking, it is agreed that the cities and ports of Che-w, Tai-Wan (Formosa), and Kiang-Chow (Hainan)

to carry on trade with vessels, and to proceed to and from the same ports, and to enjoy the same privileges, advantages, and facilities, as at the said towns and ports, already opened to trade, of residence, of buying or selling land therein, and of opening hospitals, and of erecting hospitals, or burial-grounds, for the use of the British subjects, at the rates prevailing among the natives, and without exactions on

Government will place no restriction upon the employment of Chinese subjects in any lawful

trading may hire whatever boats or vessels for the transport of goods or passengers, to be paid for such boats shall be by the parties themselves, without the intervention of the Chinese Government. The amount shall not be limited, nor shall it be levied either of the boats, or of the crews, or of the passengers, or of the cargo, or of the parties. If any smuggling be committed, the offenders will, of course, be liable to law.

In regard to rights, whether arising between British subjects, or between British subjects and the Chinese, the jurisdiction of the

British subjects who may be guilty of any offence, British subjects shall be tried by the Chinese authorities, and the laws of China.

Who may commit any crime in the said ports, and be punished by the consular authorities, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

Who may commit any crime in the said ports, shall be punished by the consular authorities, and the laws of Great Britain.

property, that it may be handed over to the consul for restoration to the owner.

20. If any British vessel be at any time wrecked or stranded on the coast of China, or be compelled to take refuge in any port within the dominions of the Emperor of China, the Chinese authorities, on being apprised of the fact, shall immediately adopt measures for its relief and security; the persons on board shall receive friendly treatment, and shall be furnished, if necessary, with the means of conveyance to the nearest consular station.

21. If criminals, subjects of China, shall take refuge in Hong Kong, or on board the British ships there, they shall, upon due requisition by the Chinese authorities, be searched for, and, on proof of their guilt, be delivered up.

In like manner, if Chinese offenders take refuge in the houses or on board the vessels of British subjects at the open ports, they shall not be harboured or concealed, but shall be delivered up, on due requisition by the Chinese authorities, addressed to the British consul.

22. Should any Chinese subject fail to discharge debts incurred to a British subject, or should he fraudulently abscond, the Chinese authorities will do their utmost to effect his arrest, and enforce recovery of the debts. The British authorities will likewise do their utmost to bring to justice any British subject fraudulently absconding or failing to discharge debts incurred by him to a Chinese subject.

23. Should natives of China who may repair to Hong Kong to trade incur debts there, the recovery of such debts must be arranged for by the English courts of justice on the spot; but should the Chinese debtor abscond, and be known to have property, real or personal, within the Chinese territory, it shall be the duty of the Chinese authorities, on application by, and in concert with, the British consul, to do their utmost to see justice done between the parties.

24. It is agreed that British subjects shall pay, on all merchandise imported or exported by them, the duties described by the tariff; but in no case shall they be called upon to pay other or higher duties than are required of the subjects of any other foreign nation.

25. Import duties shall be considered payable on the landing of the goods, and duties of export on the shipment of the same.

26. Whereas the tariff fixed by Article 10 of the treaty of Nanking, and which was estimated so as to impose on imports and exports a duty at about the rate of 5 per cent. ad valorem, has been found, by reason of the fall in value of various articles of merchandise, therein enumerated, to impose a duty upon these considerably in excess of the rate originally assumed as above to be a fair rate, it is agreed that the said tariff shall be revised, and that as soon as the treaty shall have been signed, application shall be made to the Emperor of China to depute a high officer of the Board of Revenue to meet, at Shanghai, officers to be deputed on behalf of the British Government, to consider its revision together, so that the tariff, as revised, may come into operation immediately after the ratification of this treaty.

27. It is agreed that either of the high contracting parties to this treaty may demand a further revision of the tariff, and of the commercial articles of this treaty, at the end of 10 years; but if no demand be made on either side within 6 months after the end of the first 10 years, then the tariff shall remain in force for 10 years more, reckoned from the end of the preceding 10 years; and so it shall be, at the end of each successive period of 10 years.

28. Whereas it was agreed in Article 10 of the treaty of Nanking, that British imports, having paid the tariff duties, should be conveyed into the interior free of all further charges, except a transit duty, the amount whereof was not to exceed a certain percentage on tariff value; and whereas no accurate information having been furnished of the amount of such duty, British merchants have constantly complained that charges are suddenly and arbitrarily imposed by the provincial authorities as transit duties upon produce on its way to the foreign market, and on imports on their way into the interior, to the detriment of trade; it is agreed that within 4 months from the signing of this treaty, at all ports now open to British trade, and within a similar period at all ports that may hereafter be opened, the authority appointed to superintend the collection of duties shall be obliged, upon application of the consul, to declare the amount of duties leviable on produce between the place of production and the port of shipment, and upon imports between the consular port in question and the inland markets named by the consul; and that a notification thereof shall be published in English and Chinese for general information.

But it shall be at the option of any British subject, desiring to convey produce purchased inland to a port, or to convey imports from a port to an inland market, to clear his goods of all transit duties, by payment of a single charge. The amount of this charge shall be leviable on exports at the first barrier they may have to pass, or, on imports, at the port at which they are landed; and on payment thereof, a certificate shall be issued, which shall exempt the goods from all further inland charges whatsoever.

It is further agreed, that the amount of this charge shall be calculated, as nearly as possible, at the rate of 2½ per cent., ad valorem, and that it shall be fixed for each article at the conference to be held at Shanghai for the revision of the tariff.

It is distinctly understood that the payment of transit dues, by commutation or otherwise, shall in no way affect the tariff duties on imports or exports, which will continue to be levied separately and in full.

29. British merchant-vessels, of more than 150 tons burden, shall be charged tonnage-dues at the rate of 4 mace per ton; if of 150 tons and under, they shall be charged at the rate of 1 mace per ton.

Any vessel clearing from any of the open ports of China for any other of the open ports, or for Hong Kong, shall be entitled, on application of the master, to a special certificate from the customs, on exhibition of which she shall be exempted from all further payment of tonnage-dues in any open port of China, for a period of 4 months, to be reckoned from the date of her port clearance.

30. The master of any British merchant-vessel may, within 48 hours after the arrival of his vessel, but not later, decide to depart without breaking bulk, in which case he will not be subject to pay tonnage-dues. But tonnage-dues shall be held due after the expiration of the said 48 hours. No other fees or charges upon entry or departure shall be levied.

31. No tonnage-dues shall be payable on boats employed by British subjects in the conveyance of passengers, baggage, letters, articles of provision, or other articles not subject to duty, between any of the open ports. All cargo boats, however, conveying merchandise subject to duty shall pay tonnage-dues once in 6 months, at the rate of 4 mace per register ton.

32. The consuls and superintendents of customs shall consult together regarding the erection of beacons and lighthouses, and the distribution of buoys and light-ships, as occasion may demand.

33. Duties shall be paid to the bankers, authorised by the Chinese Government to receive the same in its behalf, either in sycee or in foreign money, according to the assay made at Canton on the 13th day of July, 1843.

34. Sets of standard weights and measures, prepared according to the standard issue to the Canton Custom-house by the Board of Revenue, shall be delivered by the superintendent of customs to the consul at each port, to secure uniformity and prevent confusion.

35. Any British merchant-vessel arriving at one of the open ports, shall be at liberty to engage the services of a pilot to take her into port. In like manner, after she has discharged all legal dues and duties, and is ready to take her departure, she shall be allowed to select a pilot, to conduct her out of port.

36. Whenever a British merchant-vessel shall arrive off one of the open ports, the superintendent of customs shall depute one or more customs officers to guard the ship. They shall either live in a boat of their own, or stay on board the ship, as may best suit their convenience. Their food and expenses shall be supplied them from the custom-house, and they shall not be entitled to any fees whatever from the master or consignee. Should they violate this regulation, they shall be punished proportionately to the amount exacted.

37. Within 24 hours after arrival, the ship's papers, bills of lading, &c., shall be lodged in the hands of the consul, who will, within a further period of 24 hours, report to the superintendent of customs the name of the ship, her register tonnage, and the nature of her cargo. If, owing to neglect on the part of the master, the above rule is not complied with, within 48 hours after the ship's arrival, he shall be liable to a fine of 50 taels for every day's delay; the total amount of penalty, however, shall not exceed 260 taels.

The master will be responsible for the correctness of the manifest, which shall contain a full and true account of the particulars of the cargo on board. For presenting a false manifest, he will subject himself to a fine of 500 taels; but he will be allowed to correct, within 24 hours after delivery of it to the customs officers, any mistake he may discover in his manifest, without incurring this penalty.

38. After receiving from the consul the report in due form, the superintendent of customs shall grant the vessel a permit to open hatches. If the master shall open hatches and begin to discharge any goods without such permission, he shall be fined 500 taels, and the goods discharged shall be confiscated wholly.

39. Any British merchant who has cargo to land or ship, must apply to the superintendent of customs for a special permit. Cargo landed or shipped without such permit, will be liable to confiscation.

40. No transshipment from one vessel to another can be made without special permission, under pain of confiscation of the goods so transhipped.

41. When all dues and duties shall have been paid, the superintendent of customs shall give a port-clearance, and the consul shall then return the ship's papers, so that she may depart on her voyage.

42. With respect to articles subject, according to the tariff, to an ad valorem duty, if the British merchant cannot agree with the Chinese officer in

fixing a value, then each party shall call two or three merchants to look at the goods, and the highest price at which any of these merchants would be willing to purchase them, shall be assumed as the value of the goods.

43. Duties shall be charged upon the nett weight of each article, making a deduction for the weight of coohee, &c. To fix the tare on an article such as tea, if the British merchant cannot agree with the custom-house officer, then each party shall choose so many chests out of every 100, which being first weighed in gross, shall afterwards be tared, and the average tare upon these chests shall be assumed as the tare upon the whole; and upon this principle shall the tare be fixed upon all other goods in packages. There should be any other points in dispute which cannot be settled, the British merchant may appeal to his consul, who will communicate the particulars of the case to the superintendent of customs, that it may be equitably arranged. But the appeal must be made within 24 hours, or it will not be attended to. While such points are still unsettled, the superintendent of customs shall postpone the issue of the same in his books.

44. Upon all damaged goods a fair reduction of duty shall be allowed, proportionate to their deterioration. If any disputes arise, they shall be settled in the manner pointed out in the clause of this treaty having reference to articles which pay duty ad valorem.

45. British merchants who may have imported merchandise into any of the open ports and paid the duty thereon, if they desire to re-export the same, shall be entitled to make application to the superintendent of customs, who, in order to prevent fraud on the revenue, shall cause examination to be made by suitable officers, to see that the duties paid on such goods, as entered in the custom-house books, correspond with the representation made, and that the goods remain with their original marks unchanged. He shall also make a memorandum on the port-clearance of the goods and of the amount of duties paid, and shall deliver the same to the merchant; and shall also certify the facts to the officers of customs of the other ports. All which being done, on the arrival in port of the vessel in which the goods are loaded, everything being found on examination there to correspond, she shall be permitted to break bulk and land the said goods, without being subject to the payment of any additional duty thereon. But if, on such examination, the superintendent of customs shall detect any fraud on the revenue in the case, then the goods shall be subject to confiscation by the Chinese Government.

British merchants desiring to re-export duty-paid imports to a foreign country, shall be entitled, on complying with the same conditions as in the case of re-exportation to another port in China, to a drawback-certificate, which shall be valid tender to the customs in payment of import or export duties.

Foreign grain brought into any port of China in a British ship, if no part thereof has been landed, may be re-exported without hindrance.

46. The Chinese authorities at each port shall adopt the means they may judge most proper to prevent the revenue suffering from fraud or smuggling.

47. British merchant-vessels are not entitled to resort to other than the ports of trade declared open by this treaty. They are not unlawfully to enter other ports in China, or to carry on clandestine trade along the coasts thereof. Any vessel violating this provision shall, with her cargo, be

each party shall call two or look at the goods, and the which any of these merchants o purchase them, shall be as- of the goods.

be charged upon the nett weight taking a deduction for the tare, &c. To fix the tare on any if the British merchant cannot custom-house officer, then each so many chests out of every first weighed in gross, shall and the average tare upon be assumed as the tare upon the this principle shall the tare other goods in packages. If any other points in dispute settled, the British merchant is consul, who will communicate of the case to the superintendents, that it may be equitable. But the appeal must be made or it will not be attended to. If the goods are still unsettled, the superintendents shall postpone the in question to books.

merchant-vessels are not entitled to e than the ports of trade declared treaty. They are not unlawfully to rts in China, or to carry on clandest- ing the coasts thereof. Any vessel provision shall, with her cargo, be

subject to confiscation by the Chinese Govern- ment.

48. If any British merchant-vessel be concerned in smuggling, the goods, whatever their value or nature, shall be subject to confiscation by the Chinese authorities, and the ship may be prohibited from trading further, and sent away as soon as her accounts shall have been adjusted and paid.

49. All penalties enforced, or confiscations made, under this treaty, shall belong and be appropriated to the public service of the Government of China.

50. All official communications addressed by the diplomatic and consular agents of her Majesty the Queen to the Chinese authorities shall, henceforth, be written in English. They will for the present be accompanied by a Chinese version, but it is understood that, in the event of there being any difference of meaning between the English and Chinese texts, the English Government will hold the sense as expressed in the English text to be the correct sense. This provision is to apply to the treaty now negotiated, the Chinese text of which has been carefully corrected by the English original.

51. It is agreed, that henceforward the character barbarian shall not be applied to the Government or subjects of her Britannic Majesty, in any Chinese official document issued by the Chinese authorities, either in the capital or in the provinces.

52. British ships of war coming for no hostile purpose, or being engaged in the pursuit of pirates, shall be at liberty to visit all ports within the dominions of the Emperor of China, and shall receive every facility for the purchase of provisions, procuring water, and, if occasion require, for the making of repairs. The commanders of such ships shall hold intercourse with the Chinese authorities on terms of equality and courtesy.

53. In consideration of the injury sustained by native and foreign commerce from the prevalence of piracy in the seas of China, the high contracting parties agree to concert measures for its suppression.

54. The British Government and its subjects are hereby confirmed in all privileges, immunities, and advantages conferred on them by previous treaties; and it is hereby expressly stipulated, that the British Government and its subjects will be allowed free and equal participation in all privileges, immunities, and advantages that may have been, or may be hereafter, granted by his Majesty the Emperor of China to the Government or subjects of any other nation.

55. In evidence of her desire for the continuance of a friendly understanding, her Majesty the Queen of Great Britain consents to include in a separate article, which shall be in every respect of equal validity with the articles of this treaty, the conditions affecting indemnity for expenses incurred and losses sustained in the matter of the Canton question.

56. The ratifications of this treaty, under the hand of her Majesty the Queen of Great Britain and Ireland, and his Majesty the Emperor of China, respectively, shall be exchanged at Peking, within a year from this day of signature.

In token whereof, the respective plenipotentiaries have signed and sealed this treaty.

Done at Tien-tsin, this 26th day of June, in the year of our Lord 1858; corresponding with the Chinese date the 16th day 5th moon of the 8th year of Hien-Fung.

ELGIN AND KINCARDINE.

Signature of first Chinese Plenipotentiary.

Signature of second Chinese Plenipotentiary.

Seal of the Chinese Plenipotentiaries.

Agreement made in pursuance of Article XXVI. of the Treaty. Signed November 8, 1858.

Whereas it was provided by the treaty of Tien-tsin that a conference should be held at Shanghai between officers deputed by the British Government on the one part, and by the Chinese Government on the other part, for the purpose of determining the amount of tariff-duties and transit-dues to be henceforth levied, a conference has been held accordingly; and its proceedings having been submitted to the Right Honourable the Earl of Elgin and Kincardine, high commissioner and plenipotentiary of her Britannic Majesty the Queen, on the one part; and to Kwelliang, Hwashana, Ho Kweitsing, Mingshen, and Twau Ching-Shih, high commissioners and plenipotentiaries of his Imperial Majesty the Emperor, on the other part; these high officers have agreed and determined upon the revised tariff hereto appended, the rate of transit-dues therewith declared, together with other rules and regulations for the better explanation of the treaty aforesaid; and do hereby agree that the said tariff and rules—the latter being in ten articles thereto appended—shall be equally binding on the Governments and subjects of both countries with the treaty itself.

In witness whereof, they hereto affix their seals and signatures.

**Rule 1.—Unenumerated Goods.**—Articles not enumerated in the list of exports, but enumerated in the list of imports, when exported will pay the amount of duty set against them in the list of imports; and similarly, articles not enumerated in the list of imports, but enumerated in the list of exports, when imported will pay the amount of duty set against them in the list of exports.

Articles not enumerated in either list, nor in the list of duty-free goods, will pay an ad valorem duty of 5 per cent., calculated on their market value.

**Rule 2.—Duty-free Goods.**—Gold and silver bullion, foreign coins, flour, Indian meal, sago, biscuit, preserved meats and vegetables, cheese, butter, confectionery, foreign clothing, jewellery, plated ware, perfumery, soap of all kinds, charcoal, firewood, candles (foreign), tobacco (foreign), cigars (foreign), wine, beer, spirits, household stores, ship's stores, personal baggage, stationery, carpeting, druggeting, cutlery, foreign medicine, and glass and crystal ware.

The above pay no import or export duty; but, if transported into the interior, will, with the exception of personal baggage, gold and silver bullion, and foreign coins, pay a transit duty at the rate of 2½ per cent. ad valorem.

A freight or part-freight of duty-free commodities (personal baggage, gold and silver bullion and foreign coins excepted) will render the vessel carrying them, though no other cargo be on board, liable to tonnage dues.

**Rule 3.—Contraband Goods.**—Import and export trade is alike prohibited in the following articles: Gunpowder, shot, cannon, fowling-pieces, rifles, muskets, pistols, and all other munitions and implements of war; and salt.

**Rule 4.—Weights and Measures.**—In the calculations of the tariff, the weight of a peul of 100 catties is held to be equal to 133¼ lb. avoirdupois; and the length of a *chang* of ten Chinese feet, to be equal to 141 English inches.

One Chinese *chih* is held to equal 14½ inches English; and 4 yards English, less 3 inches, to equal 1 *chang*.

**Rule 5.—Regarding certain Commodities heretofore Contraband.**—The restrictions affecting trade in opium, cash, grain, pulse, sulphur, brimstone,

sulphur, and spelter, are relaxed, under the following conditions:—

1. Opium will henceforth pay 30 taels per pecul import duty. The importer will sell it only at the port. It will be carried into the interior by Chinese only, and only as Chinese property; the foreign trader will not be allowed to accompany it. The provisions of Article 9 of the Treaty of Tien-tsin, by which British subjects are authorised to proceed into the interior with passports to trade, will not extend to it, nor will those of Article 28 of the same treaty, by which the transit-dues are regulated; the transit-dues on it will be arranged as the Chinese Government see fit: nor, in future revisions of the tariff, is the same rule of revision to be applied to opium as to other goods.

2. *Copper Cash.*—The export of cash to any foreign port is prohibited; but it shall be lawful for British subjects to ship it at one of the open ports of China to another, on compliance with the following regulation:—The shipper shall give notice of the amount of cash he desires to ship, and the port of its destination, and shall bind himself, either by a bond with two sufficient sureties, or by depositing such other security as may be deemed by the customs satisfactory, to return, within six months from the date of clearance, to the collector at the port of shipment, the certificate issued by him, with an acknowledgment thereon of the receipt of the cash at the port of destination, by the collector at that port, who shall thereto affix his seal; or, failing the production of the certificate, to forfeit a sum equal in value to the cash shipped. Cash will pay no duty inwards or outwards; but a freight or part-freight of cash, though no other cargo be on board, will render the vessel carrying it liable to pay tonnage-dues.

3. The export of rice and all other grain whatsoever, native or foreign, no matter where grown or whence imported, to any foreign port, is prohibited; but these commodities may be carried by British merchants from one of the open ports of China to another, under the same conditions in respect of security as cash, on payment at the port of shipment of the duty specified in the tariff.

No import duty will be leviable upon rice or grain; but a freight or part-freight of rice or grain, though no other cargo be on board, will render the vessel importing it liable to tonnage-dues.

4. *Pulse.*—The export of pulse and bean-cake from Tung-chau and Niu-chwang, under the British flag, is prohibited. From any other of the open ports, they may be shipped on payment of the tariff-duty, either to other ports of China or to foreign countries.

5. Sulphur, sulphur, brimstone, and spelter, being munitions of war, shall not be imported by British subjects, save at the requisition of the Chinese Government, or for sale to Chinese duly authorised to purchase them. No permit to land them will be issued until the customs have proof that the necessary authority has been given to the purchaser. It shall not be lawful for British subjects to carry these commodities up the Yangtze-kiang, or into any port other than those open on the seaboard, nor to accompany them into the interior on behalf of Chinese. They must be sold at the ports only; and except at the ports they will be regarded as Chinese property.

Infractions of the conditions, as above set forth, under which trade in opium, cash, grain, pulse, sulphur, brimstone, sulphur, and spelter may be henceforward carried on, will be punishable by confiscation of all the goods concerned.

*Rule 6.—Liability of Vessels entering Port.*—To the prevention of misunderstanding, it is agreed that the term of 24 hours, within which British

vessels must be reported to the consul under Article 37 of the treaty of Tien-tsin, shall be understood to commence from the time a British vessel comes within the limits of the port; and as the term of 24 hours allowed her by Article 36 of the same treaty to remain in port without payment of tonnage-dues.

The limits of the port shall be defined by the customs, with all consideration for the convenience of trade, compatible with due protection of revenue; also the limits of the anchorages within which lading and discharging is permitted by the customs; and the same shall be notified to the consuls for public information.

*Rule 7.—Transit Dues.*—It is agreed that Article 28 of the treaty of Tien-tsin shall be interpreted to declare the amount of transit-dues leviable upon merchandise imported or exported by British subjects, to be 1/2 per cent. of the duties, except in the case of the duty-free goods liable to a transit-duty of 2 1/2 per cent. ad valorem as provided in Article 2 of these rules. Merchandise shall be cleared of its transit-dues under the following conditions:—

*In the case of Imports.*—Notice being given at the port of entry from which the imports are to be forwarded inland, of the nature and quantity of the goods, the ship from which they have been landed, and the place inland to which they are bound, with all other necessary particulars; the collector of customs will, on due inspection made, and on receipt of the transit-duty due, issue a transit-duty certificate. This must be produced at every barrier station, and *viséd*. No further duty will be leviable upon imports so certificated, no matter how distant the place of their destination.

*In the case of Exports.*—Produce purchased by a British subject in the interior will be inspected and taken account of at the first barrier it passes on its way to the port of shipment. A memorandum, showing the amount of the produce and the port at which it is to be shipped, will be deposited there by the person in charge of the produce; he will then receive a certificate, which must be exhibited and *viséd* at every barrier on his way to the port of shipment. On the arrival of the produce at the barrier nearest the port, notice must be given to the customs at the port, and the transit-dues due thereon being paid, it will be passed. On exportation the produce will pay the tariff-duty.

Any attempt to pass goods inward or outward otherwise than in compliance with the *visa* here laid down, will render them liable to confiscation.

Unauthorised sale, *in transitu*, of goods that have been entered as above for a port, will render them liable to confiscation. Any attempt to pass goods in excess of the quantity specified in the certificate, will render all the goods of the same denomination named in the certificate liable to confiscation. Permission to export produce which cannot be proved to have paid its transit-dues will be refused by the customs until the transit-dues shall have been paid.

The above being the arrangement agreed to regarding the transit-dues, which will thus be levied once and for all, the notification required under Article 28 of the treaty of Tien-tsin, for the information of British and Chinese subjects, is hereby dispensed with.

*Rule 8.—Foreign Trade under Passports.*—It is agreed that Article 9 of the treaty of Tien-tsin shall not be interpreted as authorising British subjects to enter the capital city of Peking for purposes of trade.

*Rule 9.—Abolition of the Meltage Fee.*—It is agreed that the percentage of 1 tael 2 mace hitherto charged in excess of duty-payments

ported to the consul under treaty of Tien-tsin, shall be free from the time a British vessel enters the limits of the port; as also allowed her by Article 30 of the same in port without pay.

port shall be defined by the consideration for the convenience with due protection of the limits of the anchorages within which anchoring is permitted by the same shall be notified to the information.

**Dues.**—It is agreed that treaty of Tien-tsin shall be in force the amount of transit-dues upon merchandise imported or exported as subjects, to be 1/2 of the tariff-duty of 2 1/2 per cent. ad valorem, and 1/2 of these rules. Merchandise of its transit-dues under the

**Imports.**—Notice being given at the time from which the imports are to be made, of the nature and quantity of the goods from which they have been placed inland to which they are subject, the necessary particulars; the collector, on due inspection made, and transit-duty due, issue a transit-due certificate, to be produced at every import. No further duty will be levied on imports so certificated, no matter of their destination.

**Exports.**—Produce purchased by the importer in the interior will be inspected at the first barrier it passes beyond the port of shipment. A memorandum amount of the produce and the person in charge of the produce; he will receive a certificate, which must be extended at every barrier on his way to the port. On the arrival of the produce nearest the port, notice must be given to the customs, and the transit-dues being paid, it will be passed. The produce will pay the transit-duty, to pass goods inward or outward, in compliance with the rules here rendered them liable to confiscation. The goods, in transit, of goods that are to be exported as above for a port, will render the same liable to confiscation. Any attempt to pass the goods of the quantity specified in the certificate named in the same. Permission to export produce which has been paid its transit-dues, shall be given by the customs until the transit-dues have been paid.

By the arrangement agreed to in the transit-dues, which will thus be levied, all the notification required under the treaty of Tien-tsin, for the import and Chinese subjects, is hereby fulfilled.

**Foreign Trade under Passports.**—It is provided in Article 9 of the treaty of Tien-tsin, interpreted as authorising British vessels to trade in the capital city of Peking and other ports.

**Abolition of the Melloge Fee.**—It is provided in the percentage of 1 tael 2 mace, levied in excess of duty-payments, to

defray the expenses of melting; in the Chinese Government, shall be no longer levied on British subjects.

**Rule 10.—Collection of Duties under one System at all Ports.**—It being, by treaty, at the option of the Chinese Government to adopt what means appear to it best suited to protect its revenue, accruing on British trade, it is agreed that one uniform system shall be enforced at every port.

The high officer appointed by the Chinese Government to superintend foreign trade, will accordingly, from time to time, either himself visit, or will send a deputy to visit, the different ports. The said high officer will be at liberty, of his own choice, and independently of the suggestion or nomination of any British authority, to select any British subject he may see fit to aid him in the administration of the customs revenue; in the

prevention of smuggling; in the definition of port boundaries; or in discharging the duties of harbour-master; also in the distribution of lights, buoys, beacons, and the like, the maintenance of which shall be provided for out of the tonnage-dues.

The Chinese Government will adopt what measures it shall find requisite to prevent smuggling up the Yang-tze-kiang, when that river shall be opened to trade.

Done at Shanghai, in the province of Kiang-su, this 8th day of November, in the year of our Lord 1858, being the 3rd day of the 10th moon of the 8th year of the reign of Hien-Fung.

ELGIN AND KINCARDINE.  
Signatures and Seal of the Five Chinese High Commissioners and Plenipotentiaries.

Convention between her Majesty and the Emperor of China. Signed in the English and Chinese Languages, at Peking, October 24, 1860.

Article 1. A breach of friendly relations having been occasioned by the Act of the garrison of Ta-ku, which obstructed her Britannic Majesty's representative when on his way to Peking for the purpose of exchanging the ratifications of the treaty of peace concluded at Tien-tsin in the month of June, 1858, his Imperial Majesty the Emperor of China expresses his deep regret at the misunderstanding so occasioned.

2. It is further expressly declared, that the arrangement entered into at Shanghai in the month of October, 1858, between her Britannic Majesty's ambassador the Earl of Elgin and Kincardine, and his Imperial Majesty's commissioners Kweiliang and Hwahshun, regarding the residence of her Britannic Majesty's representative in China, is hereby cancelled, and that, in accordance with Article 3 of the treaty of 1858, her Britannic Majesty's representative will henceforward reside permanently or occasionally at Peking, as her Britannic Majesty shall be pleased to decide.

3. It is agreed that the separate article of the treaty of 1858 is hereby annulled; and that in lieu of the amount of indemnity therein specified, his Imperial Majesty the Emperor of China shall pay the sum of 8,000,000 of taels in the following proportions or instalments, namely: At Tien-tsin, on or before the 30th day of November, the sum of 300,000 taels; at Canton, and on or before the 1st day of December, 1860, 333,333 taels, less the sum which shall have been advanced by the Canton authorities towards the completion of the British factory site at Shamen; and the remainder at the ports open to foreign trade, in quarterly payments, which shall consist of  $\frac{1}{4}$  of the gross revenue from customs there collected. The first of the said payments being due on the 31st day of December, 1860, for the quarter terminating on that day.

It is further agreed that these moneys shall be paid into the hands of an officer whom her Britannic Majesty's representative shall specially appoint to receive them, and that the accuracy of the amounts shall, before payment, be duly ascertained by British and Chinese officers appointed to discharge this duty.

In order to prevent future discussion, it is moreover declared, that of the 8,000,000 of taels herein guaranteed, 2,000,000 will be appropriated to the indemnification of the British mercantile community at Canton, for losses sustained by them, and the remaining 6,000,000 to the liquidation of war expenses.

4. It is agreed that on the day on which this convention is signed, his Imperial Majesty the Emperor of China shall open the port of Tien-tsin to trade, and that it shall be thereafter competent to British subjects to reside and trade there under the same conditions as at any other port of China by treaty open to trade.

5. As soon as the ratifications of the treaty of 1858 shall have been exchanged, his Imperial Majesty the Emperor of China will, by decree, command the high authorities of every province to proclaim throughout their jurisdictions, that Chinese choosing to take service in the British colonies, or other parts beyond sea, are at perfect liberty to enter into engagements with British subjects for that purpose, and to ship themselves and their families on board any British vessel at any of the open ports of China; also that the high authorities aforesaid shall, in concert with her Britannic Majesty's representative in China, frame such regulations for the protection of Chinese emigrating, as above, as the circumstances of the different open ports may demand.

6. With a view to the maintenance of law and order in and about the harbour of Hong Kong, his Imperial Majesty the Emperor of China agrees to cede to her Majesty the Queen of Great Britain and Ireland, and to her heirs and successors, to have and to hold as a dependency of her Britannic Majesty's colony of Hong Kong, that portion of the township of Cowloon, in the province of Kwang-tung, of which a lease was granted in perpetuity to Harry Smith Parkes, Esquire, Companion of the Bath, a member of the allied commission at Canton, on behalf of her Britannic Majesty's Government, by Lan Tsung Kwang, governor-general of the Two Kwang.

It is further declared that the lease in question is hereby cancelled; that the claims of any Chinese to property on the said portion of Cowloon shall be duly investigated by a mixed commission of British and Chinese officers; and that compensation shall be awarded by the British Government

to any Chinese whose claim shall be by the said commission established, should his removal be deemed necessary by the British Government.

7. It is agreed that the provisions of the treaty of 1858, except in so far as these are modified by the present convention, shall without delay come into operation as soon as the ratifications of the treaty aforesaid shall have been exchanged.

It is further agreed that no separate ratification of the present convention shall be necessary, but that it shall take effect from the date of its signature, and be equally binding, with the treaty above mentioned, on the high contracting parties.

8. It is agreed that as soon as the ratifications of the treaty of the year 1858 shall have been exchanged, his Imperial Majesty the Emperor of China shall, by decree, command the high authorities in the capital and in the provinces to print and publish the aforesaid treaty and the present convention, for general information.

9. It is agreed that as soon as this convention shall have been signed, the ratifications of the treaty of the year 1858 shall have been exchanged, and an imperial decree respecting the publication of the said convention and treaty shall have been promulgated, as provided for by Article 8 of this convention, Chusan shall be evacuated by her Britannic Majesty's troops there stationed, and her Britannic Majesty's force now before Peking shall commence its march towards the city of Tientsin, the forts of Taku, the north coast of Shungtung, and the city of Canton, at each or all of which places it shall be at the option of her Majesty the Queen of Great Britain and Ireland to retain a force until the indemnity of 8,000,000 of taels, guaranteed in Article 3, shall have been paid.

Done at Peking, in the Court of the Board of Ceremonies, on the 24th day of October, in the year of our Lord 1860.

ELGIN AND KINCAIDINE,  
Signature and Seal of the Chinese Plenipotentiary.

#### DENMARK.

*Convention of Commerce between Great Britain and Denmark, signed at London, the 16th of June, 1824.*

Article 1. From and after the 1st day of July next, Danish vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Danish Majesty's dominions, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Denmark respectively, in vessels of the one country, shall, in like manner, be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports and dominions of the King of Denmark, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Danish ships; and the same reciprocity shall be observed with regard to Danish vessels in the ports of the said United Kingdom of Great Britain and Ireland in respect to all articles not the growth, produce, or manufacture of the dominions of his Danish

Majesty, which can legally be imported into ports of the United Kingdom in Danish ships.

4. All goods which can legally be imported the ports of either country shall be admitted the same rate of duty, whether imported in vessels of the other country or in national vessels; all goods which can be legally exported from ports of either country shall be entitled to the same bounties, drawbacks, and allowances, when exported in vessels of the other country or in national vessels.

5. No priority or preference shall be given directly or indirectly, by the Government of either country, or by any company, corporation, or agent acting on its behalf or under its authority, in the purchase of any article the growth, produce, manufacture of either country imported into the other, on account of or in reference to the character of the vessel in which such article was imported, it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. The high contracting parties having mutual possessions or colonies, determined not to include in the present convention their respective colonies, in which are comprehended, on the part of Denmark, Greenland, Iceland, and the islands of Ferroe; it is expressly agreed that the intercourse which may at present legally be carried on by the subjects or ships of either of the said high contracting parties with the colonies of the other, shall remain upon the same footing as if this convention had never been concluded.

7. The present convention shall be in force for the term of 10 years from the date hereof; and, further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged at London within 1 month from the date hereof, or soon after, if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 16th of June, 1824.

GEORGE CANNING,  
W. HUSKISSON,  
C. E. MOLTKE.

#### Separate Articles.

The high contracting parties reserve to themselves the right to enter upon additional stipulations for the purpose of facilitating and extending, beyond what is comprehended in the convention of this date, the commercial regulations of the respective subjects and dominions, upon the principle either of reciprocal or equivalent advantage as the case may be. And in the event of any articles or article being concluded between the said high contracting parties for giving effect to such stipulations, it is hereby agreed that such article or articles which may hereafter be so concluded shall be considered as forming part of the aforesaid convention.

#### Additional Articles.

Their Britannic and Danish Majesties mutually agree that no higher or other duties shall be levied

legally be imported into the Kingdom in Danish ships. Such can legally be imported into any country shall be admitted at any port, whether imported in vessels of any country or in national vessels; and no goods shall be legally exported from the Kingdom shall be entitled to the drawback, and allowances, whether in favour of the other country or in

or preference shall be given. It shall be the duty of either party, by the Government of either party, company, corporation, or agent, to execute, or to cause to be executed, all or under its authority, in the article the growth, produce, or manufacture of either country imported into the Kingdom, or of or in reference to the character of which such article was imported, the intent and meaning of the high contracting parties, that no distinction or difference shall be made in this respect.

Contracting parties having mutually agreed to include in the present convention the colonies, in which are comprised the part of Denmark, Greenland, the islands of Ferroe; it is expressly agreed that the intercourse which may at present exist between the high contracting parties with the said colonies, shall remain upon the same footing as if this convention had never been

ratified. This convention shall be in force for a term of ten years from the date hereof; and at the end of 12 months after either of the high contracting parties shall have given notice of its intention to terminate the same, the right of giving such notice shall be reserved to the other of the high contracting parties, and the provisions of this convention shall be in force for a term of 12 months after such notice shall be given, and all the provisions of this convention shall be in force together cease and determine.

This convention shall be ratified, and the ratifications shall be exchanged at London, on or before the 16th of June, 1824.

GEORGE CANNING.  
W. HUSKISSON.  
C. E. MOLTKER.

#### Separate Articles.

Contracting parties reserve to themselves the right to stipulate upon additional stipulations for facilitating and extending, even to the most extensive, the commercial regulations of their respective territories and dominions, upon the principle of mutual concessions, reciprocal or equivalent advantages, as they may see fit. And in the event of any article being concluded between the high contracting parties for giving effect to the same, it is hereby agreed that the provisions which may hereafter be so concluded shall be considered as forming part of the present convention.

#### Additional Articles.

The Danish and British Majesties mutually agreed that no higher or other duties shall be levied

in either of their dominions (their respective colonies being excepted from the convention of this date), upon any personal property of their respective subjects, on the removal of same from the dominions of their said Majesties reciprocally, either upon the inheritance of such property, or otherwise, than as or shall be payable in each state upon the like property when removed by a subject of such state respectively.

For treaty as to abolition of sound dues, see ELSNEUB.

#### FRANCE.

*Convention of Navigation between his Britannic Majesty and the Most Christian King, together with two additional Articles thereto annexed. Signed at London, January 26, 1826.*

Article 1. French vessels coming from or departing for the ports of France, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of the United Kingdom, either on entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which British vessels, in respect of the same voyages, are or may be subject on entering into or departing from such ports; and, reciprocally, from and after the same period, British vessels coming from or departing for the ports of the United Kingdom, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of France, either in entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which French vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; whether such duties are collected separately, or are consolidated in one and the same duty—his Most Christian Majesty reserving to himself to regulate the amount of such duty or duties in France, according to the rate at which they are or may be established in the United Kingdom: at the same time, with a view of diminishing the burdens imposed upon the navigation of the two countries, his Most Christian Majesty will always be disposed to reduce the amount of the said burdens in France, in proportion to any reduction which may hereafter be made of those now levied in the ports of the United Kingdom.

2. Goods which can or may be legally imported into the ports of the United Kingdom, from the ports of France, if so imported in French vessels, shall be subject to no higher duties than if imported in British vessels; and, reciprocally, goods which can or may be legally imported into the ports of France, from the ports of the United Kingdom, if so imported in British vessels, shall be subject to no higher duties than if imported in French vessels. The produce of Asia, Africa, and America, not being allowed to be imported from the said countries, nor from any other, in French vessels, nor from France in French, British, or any other vessels, into the ports of the United Kingdom, for home consumption, but only for warehousing and re-exportation, his Most Christian Majesty reserves to himself to direct that, in like manner, the produce of Asia, Africa, and America shall not be imported from the said countries, nor from any other, in British vessels, nor from the United Kingdom in British, French, or any other vessels, into the ports of France, for the consumption of that kingdom, but only for warehousing and re-exportation.

With regard to the productions of the countries of Europe, it is understood between the high contracting parties, that such productions shall not be imported, in British ships, into France, for the consumption of that kingdom, unless such ships shall have been laden therewith in some port of the United Kingdom; and that his Britannic Majesty may adopt, if he shall think fit, some corresponding restrictive measure, with regard to the productions of the countries of Europe imported into the ports of the United Kingdom in French vessels: the high contracting parties reserving, however, to themselves the power of making, by mutual consent, such relaxations in the strict execution of the present article as they may think useful to the respective interests of the two countries upon the principle of mutual concessions, affording each to the other reciprocal or equivalent advantages.

3. All goods which can or may be legally exported from the ports of either of the two countries shall, on their export, pay the same duties of exportation, whether the exportation of such goods be made in British or in French vessels, provided the said vessels proceed, respectively, direct from the ports of the one country to those of the other. And all the said goods so exported in British or French vessels shall be reciprocally entitled to the same bounties, drawbacks, and other allowances of the same nature, which are granted by the regulations of each country, respectively.

4. It is mutually agreed between the high contracting parties, that in the intercourse of navigation between their two countries, the vessels of any third power shall in no case obtain more favourable conditions than those stipulated, in the present convention, in favour of British and French vessels.

5. The fishing-boats of either of the two countries, which may be forced by stress of weather to seek shelter in the ports or on the coast of the other country, shall not be subject to any duties or port charges of any description whatsoever; provided the said boats, when so driven in by stress of weather, shall not discharge or receive on board any cargo, or portion of cargo, in the ports or on the parts of the coast where they shall have sought shelter.

6. It is agreed that the provisions of the present convention between the high contracting parties shall be reciprocally extended and in force in all the possessions subject to their respective dominions in Europe.

7. The present convention shall be in force for the term of 10 years from the 5th of April of the present year; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate its operation; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is agreed between them, that, at the end of 12 months' extension agreed to on both sides, this convention, and all the stipulations thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged in London, within the space of 1 month, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 26th day of January, in the year of our Lord 1826.

GEORGE CANNING.  
WILLIAM HUSKISSON.  
LE PRINCE DE POLIGNAC.

*Additional Articles.*

Article 1. French vessels shall be allowed to sail from any port whatever of the countries under the dominion of his Most Christian Majesty, to all the colonies of the United Kingdom (except those possessed by the East India Company), and to import into the said colonies all kinds of merchandise (being productions the growth or manufacture of France, or of any country under the dominion of France), with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the British dominion; and the said French vessels, as well as the merchandise imported in the same, shall not be subject, in the colonies of the United Kingdom, to other or higher duties than those to which British vessels may be subject on importing the same merchandise from any foreign country, or which are imposed upon the merchandise itself.

The same facilities shall be granted, reciprocally, in the colonies of France, with regard to the importation in British vessels of all kinds of merchandise (being productions the growth and manufacture of the United Kingdom, or any country under the British dominion), with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the dominion of France. And whereas all goods, the produce of any foreign country, may now be imported into the colonies of the United Kingdom, in the ships of that country, with the exception of a limited list of specified articles which can only be imported into the said colonies in British ships, his Majesty the King of the United Kingdom reserves to himself the power of adding to the said list of excepted articles any other the produce of the French dominions, the addition whereof may appear to his Majesty to be necessary for placing the commerce and navigation to be permitted to the subjects of each of the high contracting parties with the colonies of the other upon a footing of fair reciprocity.

2. French vessels shall be allowed to export from all the colonies of the United Kingdom (except those possessed by the East India Company) all kinds of merchandise which are not prohibited to be exported from such colonies in vessels other than those of Great Britain; and the said vessels, as well as the merchandise exported in the same, shall not be subject to other or higher duties than those to which British vessels may be subject on exporting the said merchandise, or which are imposed upon the merchandise itself; and they shall be entitled to the same bounties, drawbacks, and other allowances of the same nature, to which British vessels would be entitled, on such exportation.

The same facilities and privileges shall be granted, reciprocally, in all the colonies of France, for the exportation in British vessels of all kinds of merchandise which are not prohibited to be exported from such colonies in vessels other than those of France.

These 2 additional articles shall have the same force and validity as if they were inserted, word for word, in the convention signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Jan. 26, 1826.

GEORGE CANNING.  
WILLIAM HUSKISSON.  
LE PRINCE DE POLIGNAC.

A Treasury letter, dated 28th of March, 1826, directs that French vessels, and their cargoes legally imported or exported on board the same according to the terms of the convention in the preceding pages, are from the 5th of April, 1826, to be charged with such and the like duties only of whatever kind they may be, that are charged on British vessels, and similar cargoes laden on board thereof; and in like manner the same bounties, drawbacks, and allowances are to be paid on articles exported in French vessels, that are paid, granted, or allowed on similar articles exported in British vessels. And the necessary instructions are to be transmitted to the officers in the colonies for carrying into effect the stipulations contained in the 2 additional articles of the said convention, respecting French vessels and their cargoes, from the 1st of October, 1826.

A convention regulating the respective limits of the British and French oyster and other fisheries was signed at Paris on the 2nd of August, 1839, and another in 1868.

*Treaty of Commerce between her Majesty and the Emperor of the French. Signed at Paris, January 23, 1860. Ratifications exchanged at Paris, February 4, 1860.*

Article 1. His Majesty the Emperor of the French engages that on the following articles of British production and manufacture, imported from the United Kingdom into France, the duties shall in no case exceed 30 per cent. ad valorem, the two additional decimes included.

The articles are as follows:—  
Refined sugar;  
Turmeric in powder;  
Rock crystal worked;  
Iron forged in lumps or prisms;  
Brass wire (copper alloyed with zinc), polished or unpolished, of every description;  
Chemical productions, enumerated or non-enumerated;  
Extracts of dye-woods;  
Garancine;  
Common soap of every description, and perfumed soap;  
Stone-ware and earthen-ware, fine and common;  
China and porcelain-ware;  
Glass, crystal, mirrors, and plate-glass;  
Cotton yarn;  
Worsted and woollen yarn of every description;  
Yarns of flax and hemp;  
Yarns of hair, enumerated or non-enumerated;  
Cotton manufactures;  
Horse-hair manufactures, enumerated or non-enumerated;  
Worsted and woollen manufactures, enumerated or non-enumerated;  
Cloth list;  
Manufactures of hair;  
Silk manufactures;  
Manufactures of waste and floss-silk;  
Manufactures of bark and all other vegetable fibres, enumerated or non-enumerated;  
Manufactures of flax and hemp;  
Mixed manufactures of every description;  
Hosiery;  
Haberdashery, and small wares;  
Manufactures of caoutchouc and gutta percha, pure or mixed;  
Articles of clothing, wholly or in part made up;  
Prepared skins;  
Articles of every sort, manufactured from leather or skins, included or not under the denomination of small wares, fine or common;  
Plated articles of every description;  
Cutlery;

dated 28th of March, 1826, vessels, and their cargoes ported on board the same, of the convention in the of the 6th of April, 1826, and the like duties only, y may be, that are charged and similar cargoes laden in in like manner the same and allowances are to be erted in French vessels, that allowed on similar articles vessels. And the necessary e transmitted to the officers rrying into effect the stipu- the 2 additional articles of respecting French vessels and the 1st of October, 1826, ulating the respective limits rench oyster and other fisheries on the 2nd of August, 1830,

etween her Majesty and the French. Signed at Paris, Ratifications exchanged at 1, 1860.

Majesty the Emperor of the at on the following articles of and manufacture, imported ngdom into France, the duties exceed 30 per cent. ad valorem, decimes included, as follows:—

ver;   
orked;   
umps or prisms;   
per alloyed with zinc), polished every description;   
uctions, enumerated or non-en-   
-woods;   
every description, and perfumed   
earthen-ware, fine and common;   
celain-ware;   
mirrors, and plate-glass;   
woollen yarn of every description;   
and hemp;   
enumerated or non-enumerated;   
ctures;   
manufactures, enumerated or non-   
woollen manufactures, enumerated   
ed;   
of hair;   
ures;   
of waste and floss-silk;   
of bark and all other vegetable   
ed or non-enumerated;   
of flax and hemp;   
ctures of every description;   
and small wares;   
of caoutchouc and gutta percha,   
thing, wholly or in part made up;   
;   
every sort, manufactured from   
included or not under the deo-   
ll wares, fine or common;   
of every description;

Metal wares, whether enumerated or not;   
Pig and cast-iron of every description, without distinction of weight;   
Bar and wrought-iron, with the exception of the kinds specified in Article 17;   
Steel;   
Machinery, tools, and mechanical instruments of every description;   
Carriages on springs, lined and painted;   
Cabinet ware, carved work, and turnery of every description; worked ivory and wood;   
Brandy, spirits, including those not distilled from wine, carries, molasses, or rice;   
Ships and boats;   
With respect to refined sugar and chemical productions of which salt is the basis, the excise or inland duties shall be added to the amount of the above specified duties.

2. His Imperial Majesty engages to reduce the import duties in France on British coal and coke to the amount of 15 centimes for the 100 kilogrammes, with the addition of the 2 decimes.

His Majesty the Emperor also engages, within 4 years from the date of the ratification of the present treaty, to establish upon the importation of coal and coke by land and by sea, a uniform duty, which shall not exceed that which is fixed by the preceding paragraph.

3. It is understood that the rates of duty mentioned in the preceding articles are independent of the differential duties in favour of French shipping, with which duties they shall not interfere.

4. The duties ad valorem stipulated in the present treaty shall be calculated on the value at the place of production or fabrication of the object imported, with the addition of the cost of transport, insurance, and commission necessary for the importation into France as far as the port of discharge.

For the levying of these duties, the importer shall make a written declaration at the custom-house, stating the value and description of the goods imported. If the custom-house authorities shall be of opinion that the declared value is insufficient, they shall be at liberty to take the goods on paying to the importer the price declared, with an addition of 5 per cent.

This payment, together with the restitution of any duty which may have been levied upon such goods, shall be made within the 15 days following the declaration.

5. Her Britannic Majesty engages to recommend to Parliament to enable her to abolish the duties of importation on the following articles:—

Sulphuric acid, and other mineral acids;   
Agates and cornelians, set;   
Lucifers of every description;   
Peterson caps;   
Arms of every description;   
Jewels, set;   
Toys;   
Corks;   
Brocade of gold and silver;   
Embroideries and needle-work of every description;   
Brass and bronze manufactures, and bronzed metal;   
Canes, walking canes or sticks, umbrella or parasol sticks, mounted, painted, or otherwise ornamented;   
Hats, of whatever substance they may be made;   
Gloves, stockings, socks, and other articles of cotton or linen, wholly or in part made up;   
Leather manufactures;   
Lace manufactured of cotton, wool, silk, or linen;

Manufactures of iron and steel;   
Machinery and mechanical instruments; tools, and other instruments;   
Cutlery, and other articles of steel, iron, or cast-iron;   
Fancy ornaments of steel and iron;   
Articles covered with copper by galvanic process;   
Millinery and artificial flowers;   
Raw fruits;   
Gloves, and other leather articles of clothing;   
Manufactures of caoutchouc and gutta percha;   
Oils;   
Musical instruments;   
Worsted and woollen shawls, plain, printed, or patterned;   
Coverlids, woollen gloves, and other worsted and woollen manufactures, not enumerated;   
Handkerchiefs, and other manufactures not enumerated, of linen and hemp;   
Perfumery; cabinet ware, carved work, and turnery of every description;   
Clocks, watches, and opera glasses;   
Manufactures of lead, enumerated or not enumerated;   
Feathers, dressed or not;   
Gout's, and other hair manufactures;   
China and porcelain ware;   
Stone and earthenware;   
Grapes;   
Sulphate of quinine;   
Salts of morphine;   
Manufactures of silk, or of silk mixed with any other materials, of whatever description they may be;

Articles not enumerated in the tariff, now paying an ad valorem duty of 10 per cent.; subject, however, to such measures of precaution as the protection of the public revenue may require, against the introduction of materials liable to custom or excise duties, in the composition of articles admitted duty free in virtue of the present paragraph.

6. Her Britannic Majesty engages also to propose to Parliament that the duties on the importation of French wine be at once reduced to a rate not exceeding 3s. per gallon, and that from the 1st April, 1861, the duties on importation shall be regulated as follows:—

(1) On wine containing less than 15 degrees of proof spirit, verified by Sykes's hydrometer, the duty shall not exceed 1s. per gallon.

(2) On wine containing from 15 to 26 degrees, the duty shall not exceed 1s. 6d. per gallon.

(3) On wine containing from 26 to 40 degrees, the duty shall not exceed 2s. per gallon.

(4) On wine in bottles, the duty shall not exceed 2s. per gallon.

(5) Wine shall not be imported at any other ports than those which shall be named for that purpose before the present treaty shall come into force; her Britannic Majesty reserving to herself the right of substituting other ports for those which shall have been originally named, or of increasing the number of them.

The duty fixed upon the importation of wine at ports other than those named, shall be 2s. per gallon.

(6) Her Britannic Majesty reserves to herself the power, notwithstanding the provisions of this article, to fix the maximum amount of proof spirit which may be contained in liquor declared as wine, without, however, the maximum being lower than 37 degrees.

7. Her Britannic Majesty promises to recommend to Parliament to admit into the United Kingdom merchandise imported from France, at

a rate of duty equal to the excise duty which is or shall be imposed upon articles of the same description in the United Kingdom. At the same time the duty chargeable upon the importation of such merchandise may be augmented by such a sum as shall be an equivalent for the expenses which the system of excise may entail upon the British producer.

8. In accordance with the preceding article, her Britannic Majesty undertakes to recommend to Parliament the admission into the United Kingdom of brandies and spirits imported from France, at a duty exactly equal to the excise duty levied upon home-made spirits, with the addition of a surtax of 2*d.* per gallon, which shall make the actual duty payable on French brandies and spirits 8*s.* 2*d.* the gallon.

Her Britannic Majesty also undertakes to recommend to Parliament the admission of rum and tafia imported from the French colonies, at the same duty which is or shall be levied on these same articles imported from the British colonies.

Her Britannic Majesty undertakes to recommend to Parliament the admission of paper-hangings imported from France, at a duty equal to the excise tax, that is to say, at 14*s.* per cwt.; and cardboard of the same origin, at a duty which shall not exceed 15*s.* per cwt.

Her Britannic Majesty further undertakes to recommend to Parliament the admission of gold and silver plate imported from France, at a duty equal to the stamp or excise duty which is charged on British gold and silver plate.

9. It is understood between the two high contracting powers, that if one of them thinks it necessary to establish an excise tax or inland duty upon any article of home production or manufacture which is comprised among the preceding enumerated articles, the foreign imported article of the same description may be immediately liable to an equivalent duty on importation.

It is equally understood between the high contracting powers, that in case the British Government should deem it necessary to increase the excise duties levied upon home-made spirits, the duties on the importation of wines may be modified in the following manner:—

For every increase of 1*s.* per gallon of spirits on the excise duty, there may be, on wines which pay 1*s.* 6*d.* duty, an augmentation not exceeding 1½*d.* per gallon; and on wines which pay 2*s.*, an augmentation not exceeding 2½*d.* per gallon.

10. The two high contracting powers reserve to themselves the power of levying upon all articles mentioned in the present treaty, or upon any other article, landing or shipping dues, in order to pay the expenses of all necessary establishments at the ports of importation and exportation.

But in all that relates to local treatment, the dues and charges in the ports, basins, docks, roadsteads, harbours, and rivers of the two countries, the privileges, favours, or advantages which are or shall be granted to national vessels generally, or to the goods imported or exported in them, shall be equally granted to the vessels of the other country, and to the goods imported or exported in them.

11. The two high contracting powers engage not to prohibit the exportation of coal, and to levy no duty upon such exportation.

12. The subjects of one of the two high contracting powers shall, in the dominions of the other, enjoy the same protection as native subjects in regard to the rights of property in trade-marks and in patterns of every description.

13. The ad valorem duties established within

the limits fixed by the preceding articles shall be converted into specific duties by a supplement convention, which shall be concluded before the 1st of July, 1860. The medium prices during the twelve months preceding the date of the present treaty shall be taken as the basis for this conversion.

Duties shall, however, be levied in conformity with the bases above established:—

(1) In the event of this supplementary convention not having come into force before the expiration of the period fixed for the execution of France of the present treaty;

(2) Upon those articles the specific duties which shall not have been settled by common consent.

14. The present treaty shall be binding for the United Kingdom of Great Britain and Ireland, as soon as the necessary legislative sanction shall have been given by Parliament, with the reserve made in Article 6 respecting wines.

Further, her Britannic Majesty reserves to herself the power of retaining, upon special grounds, and by way of exception, during a period not exceeding 2 years, dating from the 1st of April, 1860, half of the duties on those articles the free admission of which is stipulated by the present treaty.

This reserve, however, does not apply to articles of silk manufacture.

15. The engagements contracted by his Majesty the Emperor of the French shall be fulfilled, as to the tariffs previously indicated as payable on British goods and manufactures shall be applicable within the following periods:—

(1) For coal and coke, from the 1st of July, 1860.

(2) For bar and pig iron, and for steel of the kinds which are not subject to prohibition, from the 1st of October, 1860.

(3) For worked metals, machines, tools, and mechanical instruments of all sorts, within a period which shall not exceed the 31st of December, 1860.

(4) For yarns and manufactures in flax and hemp, from the 1st of June, 1861.

(5) And for all other articles from the 1st of October, 1861.

16. His Majesty the Emperor of the French engages that the ad valorem duties payable on the importation into France of merchandise of British production and manufacture, shall not exceed a maximum of 25 per cent. from the 1st of October, 1864.

17. It is understood between the two high contracting powers, as an element of the conversion of the ad valorem duties into specific duties, that for the kinds of bar iron which are at present subjected on importation into France to a duty of 10 francs not including the 2 additional decimes the duty shall be 7 francs on every 100 kilogrammes until the 1st of October, 1861, and 5 francs from that period, including in both cases the two additional decimes.

18. The arrangements of the present treaty of commerce are applicable to Algeria, both for the exportation of her produce, and for the importation of British goods.

19. Each of the two high contracting powers engages to confer on the other any favour, privilege, or reduction in the tariff of duties of importation on the articles mentioned in the present treaty, which the said power may concede to any third power. They further engage not to enter into one against the other any prohibition of importation or exportation, which shall not at the same time be applicable to all other nations.

20. The present treaty shall not be valid until her Britannic Majesty shall be authorised by the assent of her Parliament to execute the engagements

the preceding articles shall be the duties by a supplementary shall be concluded before the medium prices during the date of the present treaty be basis for this conversion.

*Additional Article to the Treaty of Commerce concluded at Paris, January 23, 1860, between her Majesty and the Emperor of the French. Signed at Paris, February 25, 1860. Ratifications exchanged at Paris, February 28, 1860.*

By Article 8 of the treaty of commerce between her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the Emperor of the French, signed at Paris on the 23rd of January last, her Britannic Majesty undertook to recommend to Parliament the admission into the United Kingdom of brandies and spirits imported from France, at a duty exactly equal to the excise duty levied upon home-made spirits, with the addition of a surtax of 2*l.* per gallon, which would make the actual duty payable on French brandies and spirits 8*s.* 2*d.* per gallon.

Since the ratification of the said treaty the Government of her Britannic Majesty have ascertained that the surtax of 2*l.* per gallon is not sufficient to countervail the charges with which, in consequence of the operation of the laws of customs and excise, home-made British spirits have now to contend; and that a surtax limited to the rate of 2*l.* per gallon would still leave home-made British spirits subject to a differential duty in favour of foreign brandies and spirits.

Consequently the Government of her Britannic Majesty having represented these circumstances to the Government of his Majesty the Emperor of the French, and his Imperial Majesty having consented that the amount of the said surtax shall be increased, the two high contracting parties to the said treaty of commerce do, by the present additional article, agree that the amount of such surtax shall be 5*l.* per gallon; and her Britannic Majesty engages to recommend to Parliament the admission into the United Kingdom of brandies and spirits imported from France at a duty exactly equal to the excise duty levied upon home-made spirits, with the addition of a surtax of 5*l.* per gallon.

The present additional article shall have the same force and validity as if it had been inserted in the treaty of commerce of the 23rd of January last.

It shall be ratified, and the ratifications thereof shall be exchanged at Paris within 5 days from the date of its signature.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at Paris, this 25th day of February, in the year of our Lord 1860.

COWLEY.

L. BAROQUE.  
F. ROCHER.

*Second Additional Article to the Treaty of Commerce concluded at Paris, January 23, 1860, between her Majesty and the Emperor of the French. Signed at Paris, June 25, 1860. Ratifications exchanged at Paris, July 1, 1860.*

It having been found impossible to conclude the negotiation of the arrangement which is to fix, according to paragraph 1 of Article 13 of the treaty of commerce concluded between Great Britain and France, the 23rd of January last, the rate of the specific duties to be levied on British merchandise imported into France, within the period stipulated by the said article, the high contracting parties have considered it advisable, in the interest of the respective commerce of the two countries, to make a fresh arrangement with a view to ensure the gradual execution of the aforesaid treaty within the periods fixed by the same.

In consequence whereof, the undersigned, invested with full powers on the part of her Majesty the Queen of the United Kingdom of Great Britain and Ireland, on one side, and of his Majesty the Emperor of the French on the other, have agreed upon the following articles:—

1. Instead of a single convention establishing the specific duties to be paid by British merchandise imported into France, three separate conventions shall be successively concluded; the first of which shall comprise bar and pig iron, steel and worked metals, machines, tools, and mechanical instruments of all sorts; the second, yarns and manufactures in flax and hemp; the third, all other articles of British production and manufacture enumerated in Article 1 of the treaty of the 23rd of January.

2. These conventions shall be negotiated, concluded, and ratified in such a manner as to come into force with respect to the articles to which they apply, at each of the periods fixed by Article 15, of the treaty of which they will form the complement. Nevertheless, the last of these conventions shall be concluded and ratified before the 1st of November next.

The present additional article shall have the same force and validity as if it had been inserted in the treaty of commerce of the 23rd of January last. It shall be ratified, and the ratifications thereof shall be exchanged at Paris within four days at latest from the date of its signature.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Paris, this 25th day of June, in the year of our Lord 1860.

COWLEY.

E. THOUVENEL.

*Convention between her Majesty and the Emperor of the French, supplementary to the Treaty of Commerce of January 23, 1860, with a Tariff annexed thereto. Signed at Paris, October 12, 1860. Ratifications exchanged at Paris, October 25, 1860.*

Article 1. The articles of British origin or manufacture enumerated in the tariff annexed to

the present convention, shall, when imported direct from the United Kingdom, under the French or the British flag, be admitted into France at the duties specified by the said tariff.

2. In order to establish the fact that the goods are of British origin or manufacture, the importer must present at the French Custom-house either an official declaration made before a British magistrate exercising jurisdiction at the place of despatch, or a certificate granted by the chief officer of the customs at the port of embarkation, or a certificate granted by the consuls or consular agents of France at the places of despatch or at the ports of embarkation. The above-mentioned consuls or consular agents of France shall legalise the signatures of the British authorities.

3. The importer of machines and mechanical instruments, complete or in detached pieces, of British origin or manufacture, shall be exempt from the obligation of producing at the French customs any model or drawing of the imported article.

4. The importer of any goods of British origin or manufacture taxed ad valorem, must attach to the declaration verifying the value of that article, and to the certificate of origin, an invoice emanating from the manufacturer or from the seller, which shall show the real price, and shall be *visé* by a consul or consular agent of France in the United Kingdom.

5. When articles upon which an ad valorem duty is levied have been previously warehoused, the duty shall be levied according to the value of those articles at the time of their actual entry into France.

6. The importer against whom the French customs may desire to exercise the right of pre-emption stipulated in the treaty of the 23rd of January, 1860, may, if he prefers to do so, demand a valuation of his goods by experts.

The same demand may be made by the French customs when they may not think fit to have immediate recourse to pre-emption.

7. If the result of such valuation by experts should prove that the goods have not a value of 5 per cent. above that which has been declared by the importer, the duty shall be levied upon the amount of the declaration.

If the proved value is 5 per cent. above the value declared, the French customs shall be entitled, at their choice, either to exercise the right of pre-emption, or to levy the duty on the value determined by the experts.

This duty shall be increased by 50 per cent., as a fine, if the valuation of the experts is 10 per cent. above the declared value.

If the value, as determined by the arbitration, exceeds the declared value by 5 per cent., the cost of the enquiry by the experts shall be defrayed by the declarant. In the contrary case, they shall be defrayed by the French Custom-house.

8. In the cases contemplated by Article 6 the two arbitrating experts shall be named, one by the declarant, the other by the local chief of the French Custom Service. If there be difference of opinion between them, or if at the time of appointing the experts the declarant shall require it, the experts shall choose an umpire. In default of agreement, this umpire shall be appointed by the president of the tribunal of commerce at the port of importation, or, in his default, by the president of the tribunal of commerce at the nearest place.

The decision of the arbitrators shall be given within the 15 days which follow their nomination.

9. Independently of the duties of customs, articles of goldsmith's work and of jewellery of British manufacture in gold, silver, platinum, or other metals, imported into France, shall be subject to the system of control established in that country for similar articles of domestic manufacture, and shall pay, if it becomes necessary, on the same basis as those, the duties of marking and guarantee.

10. The tariff annexed to the present convention shall, independently of the articles already admissible under the treaty of the 23rd of January last, be immediately applicable to refined sugars, to works in metal, to machines, to detached pieces of machines, to tools, and to mechanical instruments of every description.

11. The present convention shall have the same duration as the treaty concluded between the high contracting parties on the 23rd of January last, of which it is a complement.

12. The present convention shall be ratified, and the ratifications shall be exchanged at Paris within 15 days, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed it, and have affixed thereto the seal of their arms.

Done in duplicate, at Paris, the 12th day of October, 1860.

N.B.—The machines and machinery on board such ships shall be charged separately, according to the rates fixed by the Tariff for 'Machines and Machinery.'

The present tariff is approved and annexed to the convention concluded on the 12th October, 1860, between Great Britain and France.

COWLEY,  
RICHARD COBDEN,  
E. THOUVENEL,  
F. ROUJER.

Paris, October 12, 1860.

*Convention between her Majesty and the Emperor of the French, supplementary to the Treaty of Commerce of January 23, 1860; with a Tariff annexed thereto. Signed at Paris, November 16, 1860. Ratifications exchanged at Paris, November 30, 1860.*

Article 1. The articles of British origin or manufacture enumerated in the tariff annexed to the present convention shall, when imported direct from the United Kingdom under the British or the French flag, be admitted into France at the duties specified by the said tariff.

2. The rules established by Articles 2, 4, 5, 6, 7, and 8, of the convention concluded on the 12th of October last between the high contracting powers, for the proofs of origin, the declarations of importation, and the valuation by experts of the productions taxed ad valorem, shall equally apply to the various articles of British origin or manufacture enumerated in the tariff annexed to the present convention.

Article 3 of the convention of the 12th of October last, which exempts the importers of British origin or manufacture, from the obligation of producing models or drawings, is declared to be applicable to all the goods the importation whereof was subject to that formality, and which are comprised either in the present convention or in that of the 12th of October last.

3. Independently of the duties of customs stipulated in the tariff annexed to the present convention, and by application of Articles 1 and 9 of the treaty concluded between the high contracting powers on the 23rd of January last, the under-mentioned articles of British origin or manufacture shall, on their importation into France, and by way of compensation for equivalent duties paid by French manufacturers, be subjected to the supplementary duties hereinafter prescribed:—

	fr. c.	per 100 kil.
Raw soda - - - - -	4 55	"
Crystals of soda - - - - -	4 55	"
Sulphate of soda:		
Pure anhydrous - - - - -	6 0	"

Beer - - - - -	2 40	"
Spirits of wine varnish, per hectolitre of pure alcohol contained in the varnish - - - - -	90 0	"

It is understood that refined sugar is not comprised in this list, because the duty of 41 francs per 100 kilogrammes, fixed on the importation of that article, includes the duty on consumption with which it is now charged in France.

It is equally agreed between the high contracting powers that, in the event of the modification or the suppression of the duties of excise now imposed upon French manufacturers, goods of British origin and manufacture shall, with regard to such duties of excise, be subjected to the same conditions as similar French goods. If, however, in consequence of the suppression of any of such duties the Government should establish a supervision or control, or an administrative system over certain articles of French manufacture, the direct or indirect charges which may be borne by the French manufacturer shall be counterbalanced by an equivalent surtax imposed upon similar British articles. It is further understood that if drawbacks are granted to other articles of French manufacture, the duties of customs which

Tariff referred to in Treaty with France—continued.

5. Neither of the two Governments, and no company, corporation, or agent acting on behalf of, or under the authority of either Government, shall, in the purchase of any article which is the growth, produce, or manufacture of one country, and is imported into the other, give, either directly or indirectly, any priority or preference on account of or in reference to the national character of the vessel in which such article may be imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. In order to avoid any misunderstanding with regard to the regulations which may determine the conditions which constitute a British or Greek vessel, it is hereby agreed that all vessels built in the dominions of her Britannic Majesty, and all vessels which, having been captured from an enemy by her Majesty's ships of war, or by the subjects of her said Majesty, furnished with letters of marque by the Lords Commissioners of the Admiralty, shall have been regularly condemned in one of her said Majesty's prize courts as lawful prize; and all vessels which shall have been condemned in any competent court for a breach of the laws made for the prevention of the slave trade; and which shall be owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of Greece, or which shall have been captured from an enemy by the ships of war of the Greek Government, or by Greek subjects furnished with letters of marque, and shall have been regularly condemned in one of the prize courts of the kingdom of Greece as a lawful prize, and which shall be wholly owned by any subject or subjects of Greece, and whereof the master and three-fourths of the crew are subjects of Greece, shall be considered as Greek vessels.

7. If any ships of war or merchantmen of the one nation should be wrecked on the coasts of the other, all such parts of the said ships of war or merchantmen, or of the furniture or appurtenances thereof, as also all goods and merchandise which shall be saved, or the produce thereof, and likewise the papers found on board the vessel, shall be carefully preserved until they are claimed by the proprietors, or their agents duly authorised, or by the respective consuls in whose district such wreck may have taken place, if such claim be preferred within the period fixed by the laws in force in the states of the high contracting parties; and such consul, proprietor, or agent shall pay only the expenses incurred in the preservation of the property, and the rate of salvage which would have been payable, in the like case, upon a national vessel; and the said goods and merchandise saved from the wreck shall not be liable to pay duties, unless cleared for local consumption.

8. Her Britannic Majesty and his Majesty the King of Greece have agreed that each of the high contracting parties shall have the right to nominate and appoint consuls-general, consuls, and vice-consuls, in all the ports of the dominions of the other contracting party wherein such consular officers are or may be necessary for the advancement of commerce and for the protection of the trade of the subjects of either crown; and it is expressly stipulated that such consuls, of whatever class, shall, in the country in which they are stationed, be placed upon the footing of the consuls of the most favoured nation.

9. Her Britannic Majesty consents to grant to the subjects of his Majesty the King of Greece the same facilities and privileges, with respect to

the commerce to be carried on in Greek vessels with the British dominions in the East Indies, as are or may be enjoyed under any treaty or Act of Parliament, by the subjects or citizens of the most favoured nation; it being always understood that the laws, rules, regulations, and restrictions which are or may be applicable to the ships and subjects of any other foreign country, enjoying the same facilities and privileges of trading with the dominions, shall be equally applicable to the subjects of the King of Greece.

10. All subjects of her Britannic Majesty shall, within the dominions of the King of Greece, be free as native Greeks to manage their own affairs themselves, or to commit the management of those affairs to any other person whom they may please to appoint, as broker, factor, agent, interpreter; nor shall British subjects be restrained in their choice of persons to act in such capacities, nor be called upon to pay any salary or remuneration to any person whom they shall not choose to employ. Absolute freedom shall also be allowed, in all cases, to the buyer and seller to bargain together, and to fix, as to them may seem meet, the price of any goods, wares, or merchandise imported into, or to be exported from, the dominions of the King of Greece, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of her Britannic Majesty by the subjects of his Majesty the King of Greece, under the same conditions.

11. In all that relates to the police of ports, the lading and unlading of vessels, and to the safety of merchandises, goods, and effects, the laws and police regulations of each country shall be applied to the subjects of both, without discrimination or distinction; and throughout the whole extent of the territories of each contracting party, the subjects of both shall enjoy full and entire protection for their persons and property. They shall have free and easy access to the courts of justice in the prosecution and defence of their rights, and shall be at liberty to employ the lawyers, attorneys, or agents, of whatever denomination, whom they may deem the best qualified to maintain and defend their interests; it being understood that they shall conform, in this respect, to the obligations imposed upon native subjects by the laws of the country. In all that concerns the administration of justice, they shall enjoy the same privileges, rights, and franchises that belong to natives; and in none of these shall they be subject to any other duty or tax than that imposed upon natives. They shall be exempt from all compulsory military service, either by sea or by land; no forced loan shall be imposed upon them; and their property shall be subject to no other charge, requisition, or tax, than that to which the property of natives shall be liable.

12. Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the King of Greece, agree that the subjects of the respective countries shall enjoy, within the dominions of the other, the full benefit of the complete toleration and protection for the profession of all religious opinions, which at present exist in both countries by law.

13. It shall be free for the subjects of her Britannic Majesty residing in the dominions of the King of Greece, and for the subjects of his Majesty the King of Greece residing in the dominions of her Britannic Majesty, to dispose of their property, of every description, by will or testament, as they may judge fit; and if any British subject shall die in the territories of the King of Greece, or any Greek subject shall die

carried on in Greek vessels  
in the East Indies, as  
under any treaty or Act of  
subjects or citizens of the most  
being always understood that  
ations, and restrictions which  
licable to the ships and subjects  
country, enjoying the like  
leges of trading with the said  
equally applicable to the sub-  
of Greece.

of her Britannic Majesty shall,  
ons of the King of Greece, be as  
cks to manage their own affairs  
commit the management of  
y other person whom they may  
s, as broker, factor, agent, or

all be at liberty to employ the  
eys, or agents, of whatever deno-  
ey they may deem the best qual-  
d defend their interests; it being  
t they shall conform, in this re-  
gulations imposed upon native sub-  
aws of the country. In all that  
ministration of justice, they shall  
e privileges, rights, and franchises  
natives; and in none of these shall  
t to any other duty or tax than is  
natives. They shall be exempted  
ulsory military service, either by  
; no forced loan shall be imposed  
nd their property shall be subject  
rge, requisition, or tax, than those  
roperty of natives shall be liable.  
 Majesty the Queen of the United King-  
ritain and Ireland, and his Majesty  
reece, agree that the subjects of the  
ntries shall enjoy, within the do-  
e other, the full benefit of the com-  
n and protection for the professions  
s opinions, which at present exists  
by law.

be free for the subjects of her Brit-  
y residing in the dominions of the  
ce, and for the subjects of his Brit-  
annic Majesty, to dispose of  
y, of every description, by will or  
y they may judge fit; and if any  
ct shall die in the territories of the  
ce, or any Greek subject shall die in

the territories of the Queen of Great Britain,  
without will or testament, the respective consuls  
or vice-consuls shall exercise the right of admi-  
nistering to the property of subjects of their nation  
so dying, intestate, for the benefit of the legitimate  
heirs to such property, and of the creditors upon  
the estate, so far as the laws of the respective  
countries shall admit.

11. The high contracting parties agree that  
the stipulations of the present convention shall  
be applicable to Gibraltar and to the island of  
Malta.

12. The present convention shall be in force for  
10 years from the date of the exchange of the  
ratifications thereof; and further, until the end of  
12 months after either of the high contracting  
parties shall have given notice to the other of its  
intention to terminate the same; each of the high  
contracting parties reserving to itself the right of  
giving such notice to the other at the end of the  
10 years above mentioned, or at any other period  
after that time; and it is hereby agreed between  
them, that at the expiration of 12 months after  
such notice shall have been received by either  
party from the other, this convention, and all the  
provisions thereof, shall altogether cease and deter-  
mine.

13. The present convention shall be rati-  
fied, and the ratifications shall be exchanged  
at London, within 3 months from the date  
hereof.

In witness whereof, the respective plenipoten-  
taries have signed the same, and have affixed  
thereto the seals of their arms.

Done at London, the 4th day of October, in the  
year of our Lord 1837.

PALMERSTON.  
TRICOURT.

An order in council, dated July 5, 1838, directs  
that Greek vessels, entering or departing from the  
ports of the United Kingdom of Great Britain  
and Ireland, together with the cargoes on board  
the same (such cargoes consisting of articles  
which may be legally imported or exported),  
shall not be subject to any other or higher duties  
or charges whatever than are or shall be levied  
on British vessels entering or departing from such  
ports, or on similar articles, when imported into  
or exported from such ports in such vessels; and,  
also, such articles, when exported from the said  
ports in Greek vessels, shall be entitled to the  
same bounties, drawbacks, and allowances that  
are granted on similar articles when exported in  
British vessels.

#### HANSE TOWNS.

*Convention of Commerce between his Britannic  
Majesty and the Free Hanseatic Republics of  
Lubeck, Bremen, and Hamburg. Signed at Lon-  
don, September 29, 1825.*

Article 1. From and after the date hereof, Brit-  
ish vessels entering or departing from the ports  
of the free Hanseatic republics of Lubeck, Bremen,  
or Hamburg; and Lubeck, Bremen, or Hamburg  
vessels entering or departing from the ports of  
the United Kingdom of Great Britain and Ire-  
land, shall not be subject to any other or higher  
ship duties or charges than are or shall be levied  
on national vessels entering or departing from  
such ports respectively.

2. All goods, whether the production of the  
territories of the free Hanseatic republics of Lu-  
beck, Bremen, or Hamburg, or of any other coun-  
try, which may be legally imported from any of  
the ports of the said republics into the United  
Kingdom of Great Britain and Ireland in British

vessels, shall, in like manner, be permitted to be  
imported in Lubeck, Bremen, or Hamburg vessels;  
and all goods, whether the productions of any of  
the dominions of his Britannic Majesty, or of any  
other country, which may be legally exported  
from the ports of the United Kingdom in British  
vessels, shall, in like manner, be permitted to  
be exported from the said ports in Lubeck, Bre-  
men, or Hamburg vessels. And all goods, which  
may be legally imported into or exported from  
the ports of Lubeck, Bremen, or Hamburg, in  
national vessels, shall, in like manner, be per-  
mitted to be imported into or exported from the  
ports of Lubeck, Bremen, or Hamburg, in British  
vessels.

3. All goods which can be legally imported into  
the ports of the United Kingdom directly from the  
ports of Lubeck, Bremen, or Hamburg, or either of  
them, shall be admitted at the same rate of duty,  
whether imported in British vessels, or in vessels  
belonging to either of the said republics; and all  
goods which can be legally exported from the  
United Kingdom, shall be entitled to the same  
bounties, drawbacks, and allowances, whether ex-  
ported in British or Hanseatic vessels. And the  
like reciprocity shall be observed in the ports of  
the said republics, in respect to all goods which  
can be legally imported into or exported from any  
or either of the said ports in vessels belonging to  
the United Kingdom.

4. No priority or preference shall be given, di-  
rectly or indirectly, by any or either of the con-  
tracting parties, nor by any company, corporation,  
or agent, acting on their behalf or under their  
authority, in the purchase of any article, the  
growth, produce, or manufacture of their states  
respectively, imported into the other, on account  
of or in reference to the character of the vessel in  
which such article was imported; it being the  
true intent and meaning of the high contracting  
parties that no distinction or difference whatever  
shall be made in this respect.

5. In consideration of the limited extent of the  
territories belonging to the republics of Lubeck,  
Bremen, and Hamburg, and the intimate connec-  
tion of trade and navigation subsisting between  
these republics, it is hereby stipulated and agreed,  
that any vessel which shall have been built in  
any or either of the ports of the said republics,  
and which shall be owned exclusively by a citi-  
zen or citizens of any or either of them, and of  
which the master shall also be a citizen of either  
of them, and provided  $\frac{3}{4}$  of the crew shall be sub-  
jects or citizens of any or either of the said re-  
publics, or of any or either of the states comprised  
in the Germanic Confederation, such vessel, so  
built, owned, and navigated, shall, for all the pur-  
poses of this convention, be taken to be and be  
considered as a vessel belonging to Lubeck, Bre-  
men, or Hamburg.

6. Any vessel, together with her cargo, belong-  
ing to either of the three free Hanseatic republics  
of Lubeck, Bremen, or Hamburg, and coming from  
either of the said ports to the United Kingdom,  
shall, for all the purposes of this convention, be  
deemed to come from the country to which such  
vessel belongs; and any British vessel and her  
cargo trading to the ports of Lubeck, Bremen,  
or Hamburg, directly or in succession, shall,  
for the like purposes, be on the footing of a Han-  
seatic vessel and her cargo making the same  
voyage.

7. It is further mutually agreed that no higher  
or other duties shall be levied, in any or either of  
the states of the high contracting parties, upon  
any personal property of the subjects and citizens  
of each respectively, or the removal of the same

from the dominions or territory of such states (either upon the inheritance of such property, or otherwise), than are or shall be payable, in each state, upon the like property when removed by a subject or citizen of such state respectively.

8. The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial relations of their respective subjects and dominions, citizens, and territories, upon the principle either of reciprocal or equivalent advantages, as the case may be; and, in the event of any article or articles being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed that the article or articles which may hereafter be so concluded shall be considered as forming part of the present convention.

9. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after the King of the United Kingdom of Great Britain and Ireland, on the one part, or the Governments of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or either of them, on the other part, shall have given notice of their intention to terminate the same; each of the said high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either of the parties from the other, this convention, and all the provisions thereof, shall altogether cease and determine, as far as regards the states giving and receiving such notice; it being always understood and agreed, that, if one or more of the Hanseatic republics aforesaid shall, at the expiration of 10 years from the date hereof, give or receive notice of the proposed termination of this convention, such convention shall, nevertheless, remain in full force and operation, as far as regards the remaining Hanseatic republics or republic which may not have given or received such notice.

10. The present convention shall be ratified, and the ratification shall be exchanged at London, within one month from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, September 29, 1825.

GEORGE CANNING.  
W. HUSKISSON.  
JAMES COLQUHOUN.

*Supplementary Convention to the Treaty of Commerce and Navigation of September 29, 1825, between the Senates of the Free Hanseatic Cities of Lubeck, Bremen, and Hamburg, and her Majesty the Queen of Great Britain and Ireland. Signed at London, August 3, 1841.*

Article I. The senate of the free Hanseatic cities of Lubeck, Bremen, and Hamburg, hereby agree that British vessels coming from countries not being part of the dominions of her Britannic Majesty, shall henceforward, together with their cargoes, be admitted into the ports of Lubeck, Bremen, and Hamburg, and all vessels shall on their admission pay dues not higher nor other than those which shall be paid in similar circumstances by vessels belonging to Lubeck, Bremen, or Hamburg, and the duties to be paid upon the cargoes of such British vessels shall not be higher nor other than if such cargoes had been imported

in vessels belonging to Lubeck, Bremen, or Hamburg. And in consideration thereof, her Britannic Majesty agrees that from and after the date of the exchange of the ratification of this present convention, the vessels of the said free Hanseatic republics of Lubeck, Bremen, and Hamburg, when coming from Hanseatic ports shall, together with their cargoes, be admitted into the ports of all her Britannic Majesty's possessions; and such vessels shall, on their admission, pay dues not higher nor other than those which shall be paid in similar circumstances by British vessels; and the duties to be paid upon the cargoes of such Hanseatic vessels shall not be higher nor other than if such cargoes had been imported in British vessels.

2. In consideration of the privileges extended to British trade and navigation by the first article of the present convention, her Britannic Majesty further agrees that all goods, being the produce of the states of the free Hanseatic cities of Lubeck, Bremen, and Hamburg, or of the other states of the Germanic Confederation, or of the states comprised in the Germanic Union of Customs, and which may be imported in any foreign vessels from the ports of Lubeck, Bremen, and Hamburg, or from any port situated on the Elbe or Weser, into the ports of the British possessions abroad, including Gibraltar and Malta, shall also be permitted to be imported from the said ports of the free cities of Lubeck, Bremen, and Hamburg, into the ports of the said British possessions abroad, including Gibraltar and Malta, in vessels belonging to Lubeck, Bremen, and Hamburg, built, owned, and navigated as stipulated in the fifth article of the convention of commerce and navigation, concluded on the 29th of September, 1825, between Great Britain on the one part, and the free Hanseatic cities of Lubeck, Bremen, and Hamburg, on the other part; and such goods, wares, and merchandise being the produce of the free Hanseatic republics, or of the other states of the Germanic Confederation, or of the states of the Germanic Union of Customs, and so imported in Hanseatic vessels into the ports of the said British possessions abroad, including Gibraltar and Malta; and all goods, wares, and merchandise exported in Hanseatic vessels, built, owned, and navigated as aforesaid, from the ports of the British possessions abroad, including Gibraltar and Malta, to any foreign country whatever, shall pay no other or higher duties than if the same were imported or exported in British vessels.

3. The present convention, which shall be considered as supplementary to the convention concluded between Great Britain and the free Hanseatic republics on the 29th of September, 1825, shall be ratified, and the ratifications shall be exchanged at London as soon as possible within the space of six weeks.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed the seals of their arms.

Done at London, on the 3rd day of August, in the year of our Lord 1841.

PALMERSTON.  
BANKS.

By an order in council dated September 11, 1841, her Majesty is pleased to order that all goods being the produce of the states of the free Hanseatic cities of Lubeck, Bremen, and Hamburg, or of the other states of the Germanic Confederation, or of the states comprised in the Germanic Union of Customs, and which may be imported in any foreign vessels from the ports of Lubeck, Bremen, and Hamburg, or from any port situated on the Elbe or Weser into the

luges, and shall be treated in all respects in the same manner, as national vessels and native subjects.

The provisions of this Article shall, however, as respects the colonial coasting trade, be deemed to extend only to the coasting trade of such of the colonial possessions of her Britannic Majesty as may have petitioned or may hereafter petition her Majesty, under the provisions of the Act relating thereto, to throw open their coasting trade to foreign vessels.

9. All vessels which according to British law are to be deemed British vessels, and all vessels which according to Italian law are to be deemed Italian vessels, shall for the purposes of this treaty be deemed British and Italian vessels respectively.

10. The contracting parties agree that in all matters relating to commerce and navigation, any privilege, favour, or immunity whatever, which either contracting party has actually granted, or may hereafter grant, to the subjects or citizens of any other State, shall be extended immediately and unconditionally to the subjects or citizens of the other contracting party; it being their intention that the trade and navigation of each country shall be placed, in all respects, by the other on the footing of the most favoured nation.

11. Any import duty levied *ad valorem* in the territories of his Majesty the King of Italy shall be calculated on the value at the place of production or fabrication of the object imported, with the addition of the cost of transport, insurance, and commission necessary for the importation into Italy, its dominions and possessions, as far as the port of discharge.

For the levying of these duties, the importer shall make a written declaration at the custom-house, stating the value and description of the goods imported, with the addition aforesaid. If the custom-house authorities shall be of opinion that the declared value is insufficient, they shall be at liberty to take the goods on paying to the importer the price declared, with an addition of 5 per cent.

This payment, together with the restitution of any duty which may have been levied upon such goods, shall be made within the 15 days following the declaration.

12. The subjects of each of the contracting parties shall have, in the dominions and possessions of the other, the same rights as native subjects in regard to trade-marks and designs of every description applicable to articles of manufacture.

13. It shall be free for each of the contracting parties to appoint consuls-general, consuls, vice-consuls, and consular agents, to reside in the towns and ports of the dominions and possessions of the other. Such consuls-general, consuls, vice-consuls, and consular agents, however, shall not enter upon their functions until after they shall have been approved and admitted, in the usual form, by the Government to which they are sent. They shall exercise whatever functions, and enjoy whatever privileges, exemptions, and immunities are or shall be granted there to consuls of the most favoured nation.

14. The subjects of each of the contracting parties, confining themselves to the laws of the country:—

1. Shall have full liberty, with their families, to enter, travel, or reside in any part of the dominions and possessions of the other contracting party.

2. They shall be permitted to hire or possess the houses, manufactories, warehouses, shops, and premises, which may be necessary for them.

3. They may carry on their commerce, either in person or by any agents whom they may think fit to employ.

4. They shall not be subject, in respect of their persons or property, or in respect of passports, licenses for residence or establishment, nor in respect of their commerce or industry, to any tax, whether general or local, nor to imposts or obligations of any kind whatever, other or greater than those which are or may be imposed upon native subjects.

15. The subjects of each of the contracting parties in the dominions and possessions of the other shall be exempted from all compulsory military service whatever, whether in the army, navy, or national guard or militia. They shall be equally exempted from all judicial and municipal functions whatever, as well as from all contributions, whether pecuniary or in kind, imposed as a compensation for personal service; and, finally, from forced loans and military exactions or requisitions.

16. The subjects of each of the contracting parties in the dominions and possessions of the other shall be at full liberty to acquire, possess, and dispose of every description of property which the laws of the country may permit any foreigners, whatsoever nation, to acquire and possess. They may acquire and dispose of the same, whether by purchase, sale, donation, exchange, marriage, testament, succession *ab intestato*, or in any other manner, under the same conditions as are established by the laws of the country for all foreigners. Their heirs and representatives may succeed to and take possession of such property, either in person or by agents acting on their behalf, in the same manner and in the same legal forms as subjects of the country. In the absence of heirs and representatives the property shall be treated in the same manner as the like property belonging to a subject of the country under similar circumstances.

In none of these respects shall they pay upon the value of such property any other or higher impost, duty, or charge, than is payable by subjects of the country. In every case the subjects of the contracting parties shall be permitted to export their property, or the proceeds thereof if sold, freely, and without being subjected on such exportation to pay any duty as foreigners, or any other or higher duties than those to which subjects of the country are liable under similar circumstances.

17. The dwellings, manufactories, warehouses and shops of the subjects of each of the contracting parties in the dominions and possessions of the other, and all premises appertaining thereto, destined for purposes of residence or commerce, shall be respected. If there should be occasion to make a search of, or a domiciliary visit to such dwellings and premises, or to examine or inspect books, papers, or accounts, such measure shall be executed only in conformity with the legal warrant or order in writing of a tribunal, or of the competent authority.

The subjects of each of the two contracting parties in the dominions and possessions of the other shall have free access to the courts of justice for the prosecution and defence of their rights. They shall enjoy in this respect the same rights and privileges as subjects of the country, and shall, like them, be at liberty to employ, in all causes, their advocates, attorneys, or agents, from among the persons admitted to the exercise of those professions according to the laws of the country.

18. Any ship of war or merchant-vessel of either

of the contracting parties which may be compelled by stress of weather, or by accident, to take shelter in a port of the other, shall be at liberty to reft therein, to procure all necessary stores, and to put to sea again, without paying any dues other than such as would be payable in a similar case by a national vessel. In case, however, the master of a merchant-vessel should be under the necessity of disposing of a part of his merchandise in order to defray his expenses, he shall be bound to conform to the regulations and tariffs of the place to which he may have come.

If any ship of war or merchant-vessel of one of the contracting parties should run aground or be wrecked upon the coasts of the other, such ship or vessel, and all parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise saved therefrom, including any which may have been cast into the sea, or the proceeds thereof if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents when claimed by them. If there are no such owners or agents on the spot, then the same shall be delivered to the British or Italian consul-general, consul, or vice-consul, in whose district the wreck or stranding may have taken place, upon being claimed by him within the period fixed by the laws of the country; and such consuls, owners, or agents, shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the like case of a wreck of a national vessel.

The goods and merchandise saved from the wreck shall be exempt from all duties of customs, unless cleared for consumption, in which case they shall pay the same rate of duty as if they had been imported in a national vessel.

In the case either of a vessel being driven in by stress of weather, run aground, or wrecked, the respective consuls-general, consuls, vice-consuls, and consular agents shall, if the owner or master or other agent of the owner is not present, or is present and requires it, be authorised to interpose in order to afford the necessary assistance to their fellow-countrymen.

19. The consuls-general, consuls, vice-consuls, and consular agents of each of the contracting parties, residing in the dominions and possessions of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

20. The present treaty of commerce and navigation, when ratified, shall be substituted for the treaties in force between the high contracting parties, namely, those concluded on the 5th of April, 1847, and 30th of December, 1854, between Great Britain and Tuscany; and on the 29th of April, 1845, between Great Britain and the Two Sicilies; and on the 27th of February, 1851, and 9th of August, 1854, between Great Britain and Sardinia; and shall remain in force for 10 years from the date of the exchange of the ratifications, and further until the expiration of 12 months after either of the contracting parties shall have given notice to the other of its intention to terminate the same; each of the contracting parties being at liberty to give such notice to the other at the expiration of the first 9 years, or at any time afterwards.

21. The present treaty shall be ratified, and the ratifications shall be exchanged at London, in six weeks, or sooner if possible.

In witness whereof the respective plenipoten-

tiaries have signed the same, and have affixed thereto the seal of their arms.

Turin, August 6, 1863.

JAMES HUDSON,  
GIOVANNI MANNA.

## MEXICO.

*Treaty of Amity, Commerce, and Navigation, between Great Britain and Mexico. Signed at London, December 26, 1826.*

Article 1. There shall be perpetual amity between the dominions and subjects of His Majesty the King of the United Kingdom of Great Britain and Ireland, and the United States of Mexico, and their citizens.

2. There shall be, between all the territories of His Britannic Majesty in Europe and the territories of Mexico, a reciprocal freedom of commerce. The inhabitants of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places and rivers in the territories aforesaid, saving only such particular ports to which other foreigners shall not be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce.

In like manner, the respective ships of war and post-office packets of the two countries shall have liberty freely and securely to come to all harbours, rivers, and places, saving only such particular ports (if any) to which other foreign ships of war and packets shall not be permitted to come, to enter into the same, to anchor, and to remain there and reft; subject always to the laws and statutes of the two countries respectively.

By the right of entering the places, ports, and rivers mentioned in this article, the privilege of carrying on the coasting trade is not understood, in which national vessels only are permitted to engage.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that the inhabitants of Mexico shall have the like liberty of commerce and navigation stipulated for in the preceding article, in all his dominions situated out of Europe, to the full extent in which the same is permitted at present, or shall be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the dominions of his Britannic Majesty, of any article of the growth, produce, or manufacture of Mexico, and no higher or other duties shall be imposed on the importation into the territories of Mexico, of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation of any articles, the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said territories of Mexico, to or from the said dominions of his Britannic Majesty, or to or from the said territories of Mexico,

which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of Mexico, on British vessels, than those payable in the same ports by Mexican vessels (see additional articles at the end of this treaty); nor, in the ports of his Britannic Majesty's territories, on Mexican vessels, than shall be payable, in the same ports, on British vessels.

6. The same duties shall be paid on the importation into the territories of Mexico of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in Mexican (see additional articles at the end of this treaty) or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty, of any article the growth, produce, or manufacture of Mexico, whether such importation shall be in British or in Mexican vessels. The same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation to Mexico of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such exportation shall be in Mexican or in British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation of any articles the growth, produce, or manufacture of Mexico, to his Britannic Majesty's dominions, whether such exportation shall be in British or in Mexican vessels.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or Mexican vessel, it is hereby agreed that all vessels built in the dominions of his Britannic Majesty, or vessels which shall have been captured from an enemy by his Britannic Majesty's ships of war or by subjects of his said Majesty, furnished with letters of marque by the Lords Commissioners of the Admiralty, and regularly condemned in one of his said Majesty's prize courts as a lawful prize, or which shall have been condemned in any competent court for the breach of the laws made for the prevention of the slave trade, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of Mexico, or captured from the enemy by the ships of Mexico, and condemned under similar circumstances, and which shall be owned by any citizen or citizens thereof, and whereof the master and  $\frac{2}{3}$  of the mariners are citizens of Mexico, excepting where the laws provide for any extreme cases, shall be considered as Mexican vessels.

And it is further agreed, that every vessel, qualified to trade as above described under the provisions of this treaty, shall be furnished with a register, passport, or sea letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries (the form of which shall be communicated), certifying the name, occupation, and residence of the owner or owners, in the dominions of his Britannic Majesty, or in the territories of Mexico, as the case may be; and that he or they is or are the sole owner or owners, in the proportion to be specified; together with the name, burden, and description of the vessel as to build and measurement, and the several particulars constituting the national character of the vessel, as the case may be.

8. All merchants, commanders of ships, and

others, the subjects of his Britannic Majesty, shall have full liberty, in all the territories of Mexico, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes than those employed by Mexicans, nor to pay them any other salary or remuneration than such as is paid, in like cases, by Mexican citizens; and absolute freedom shall be allowed, in all cases, to the buyer and seller, to bargain and fix the prices of any goods, imported into or exported from Mexico, as they shall see good, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of his Britannic Majesty, by the citizens of Mexico, under the same conditions.

The citizens and subjects of the contracting parties, in the territories of each other, shall receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries, respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

9. In whatever relates to the succession to personal estates, by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the two contracting parties shall enjoy, in their respective dominions and territories, the same privileges, liberties, and rights, as native subjects; and shall not be charged, in these respects, with any higher imposts than those which are paid, or may be paid, by the native subjects or citizens of the power in whose dominions or territories they may be resident.

10. In all that relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the subjects of his Britannic Majesty, and the citizens of Mexico, respectively, shall be subject to the local laws and regulations of the dominions and territories in which they may reside. They shall be exempted from all compulsory military service, whether by sea or land. No forced loans shall be levied upon them; nor shall their property be subject to any other charges, requisitions, or taxes than such as are paid by the native subjects or citizens of the contracting parties in their respective dominions.

11. It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but, before any consul shall act as such, he shall, in the usual form, be approved and admitted by the Government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be excepted. The Mexican diplomatic agents and consuls shall enjoy, in the dominions of his Britannic Majesty, whatever privilege, exceptions, and immunities are or shall be granted to agents of the same rank belonging to the most favoured nation; and, in like manner, the diplomatic agents and consuls of his Britannic Majesty in the Mexican territories shall enjoy, according to the strictest reciprocity, whatever

privileges, exceptions, and immunities are or may be granted to the Mexican diplomatic agents and consuls in the dominions of his Britannic Majesty.

12. For the better security of commerce between the subjects of his Britannic Majesty and the citizens of the Mexican States, it is agreed that if, at any time, any interruption of friendly intercourse, or any rupture, should unfortunately take place between the two contracting parties, the merchants residing upon the coast shall be allowed 6 months, and those of the interior a whole year, to wind up their accounts, and dispose of their property; and a safe conduct shall be given them to embark at the port which they shall themselves select. All those who are established in the respective dominions and territories of the two contracting parties, in the exercise of any trade or special employment, shall have the privilege of remaining and continuing such trade and employment therein, without any manner of interruption, in full enjoyment of their liberty and property, as long as they behave peaceably, and commit no offence against the laws; and their goods and effects, of whatever description they may be, shall not be liable to seizure or sequestration, or to any other charges or demands than those which may be made upon the like effects or property belonging to the native subjects or citizens of the respective dominions or territories in which such subjects or citizens may reside. In the same case, debts between individuals, public funds, and the shares of companies, shall never be confiscated, sequestrated, or detained.

13. The subjects of his Britannic Majesty residing in the Mexican territories shall enjoy, in their houses, persons, and properties, the protection of the Government; and continuing in possession of what they now enjoy, they shall not be disturbed, molested, or annoyed, in any manner, on account of their religion, provided they respect that of the nation in which they reside, as well as the constitution, laws, and customs of the country. They shall continue to enjoy, to the full, the privilege already granted to them of burying, in the places already assigned for that purpose, such subjects of his Britannic Majesty as may die within the Mexican territories; nor shall the funerals and sepulchres of the dead be disturbed in any way, or upon any account. The citizens of Mexico shall enjoy, in all the dominions of his Britannic Majesty, the same protection, and shall be allowed the free exercise of their religion, in public or private, either within their own houses, or in the chapels and places of worship set apart for that purpose.

14. The subjects of his Britannic Majesty shall on no account or pretext whatsoever be disturbed or molested in the peaceable possession and exercise of whatever rights, privileges, and immunities they have at any time enjoyed within the limits described and laid down in a convention signed between his said Majesty and the King of Spain, on the 14th of July, 1786; whether such rights, privileges, and immunities shall be derived from the stipulations of the said convention, or from any other concession which may at any time have been made by the King of Spain, or his predecessors, to British subjects and settlers residing and following their lawful occupations within the limits aforesaid; the two contracting parties reserving, however, for some more fitting opportunity, the further arrangements on this article.

15. The Government of Mexico engages to cooperate with his Britannic Majesty for the total abolition of the slave trade, and to prohibit

all persons inhabiting within the territories of Mexico, in the most effectual manner, from taking any share in such trade.

16. The two contracting parties reserve to themselves the right of treating and agreeing hereafter, from time to time, upon such other articles as may appear to them to contribute still further to the improvement of their mutual intercourse, and the advancement of the general interests of their respective subjects and citizens; and such articles as may be so agreed upon, shall, when duly ratified, be regarded as forming a part of the present treaty, and shall have the same force as those now contained in it.

17. The present treaty shall be ratified, and the ratifications shall be exchanged at London within the space of 6 months, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 25th day of December, in the year of our Lord 1826.

SEBASTIAN CAMACHO,  
WILLIAM HENKINSON,  
JAMES J. MORIER.

#### Additional Articles.

1. Whereas, in the present state of Mexican shipping, it would not be possible for Mexico to receive the full advantage of the reciprocity established by the Articles 5, 6, 7 of the treaty signed this day, if that part of the 7th Article which stipulates that, in order to be considered as a Mexican ship, a ship shall actually have been built in Mexico, should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of 10 years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships, *wherever built*, being *bonâ fide* the property of and wholly owned by one or more citizens of Mexico, and whereof the master and  $\frac{3}{4}$  of the mariners, at least, are also natural-born citizens of Mexico, or persons domiciliated in Mexico, by act of the Government, as lawful subjects of Mexico, to be certified according to the laws of that country, shall be considered as Mexican ships; his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of 10 years, to claim the principle of reciprocal restriction stipulated for in the Article 7 above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity in favour of Mexican shipping.

2. It is further agreed that, for the like term of 10 years, the stipulations contained in Articles 5 and 6 of the present treaty shall be suspended; and in lieu thereof, it is hereby agreed that, until the expiration of the said term of 10 years, British ships entering into the ports of Mexico from the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, and all articles the growth, produce, or manufacture of the United Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and reciprocally, it is agreed, that Mexican ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the States of Mexico, and all articles the growth, produce, or manufacture of the said States, imported in such ships, shall pay no other or higher duties than are

or may hereafter be payable in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article, the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of 10 years, the stipulations of the said 5th and 6th Articles shall, from thenceforward, be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of December, in the year of our Lord 1826.

SEBASTIAN CAMACHO.  
WILLIAM HUSKISSON.  
JAMES J. MORIER.

An order in council, dated September 3, 1827, orders that vessels of the United States of Mexico, entering the ports of the United Kingdom of Great Britain and Ireland in ballast, or laden direct from any of the ports of Mexico, or departing from the ports of the said United Kingdom, together with the cargoes on board the same, such cargoes consisting of articles which may be legally imported or exported, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports, or on similar articles when imported into or exported from such ports in British vessels; and also such articles, when exported from the said ports in vessels of the United States of Mexico respectively, shall be entitled to the same bounties, drawbacks, and allowances that are granted on similar articles when exported in British vessels.

N.B.—Treatises similar to the above have been negotiated with Columbia, Buenos Ayres &c.

#### Morocco.

##### *Convention of Commerce and Navigation between her Britannic Majesty and the Sultan of Morocco.*

Article 1. There shall be reciprocal freedom of commerce between the British dominions and the dominions of the Sultan of Morocco. The subjects of her Britannic Majesty may reside in and trade to any port of the territories of the Sultan of Morocco to which any other foreigners are or shall be admitted.

They shall be permitted to hire houses, and to build houses, stores, or warehouses, as stipulated in Article 4 of the general treaty of this date.

They shall enjoy full protection for their persons and properties, as specified in Article 4 of the general treaty; they shall be allowed to buy from, and to sell to, whom they like, all articles not prohibited in Article 2 of this convention, either by wholesale or retail, at all places in the Moorish dominions, without being restrained or prejudiced by any monopoly, contract, or exclusive privilege of purchase or sale whatever, except the articles of export and those of import enumerated in Article 2; and they shall, moreover, enjoy all other rights and privileges which

hereafter may be granted to any other foreign subjects, or citizens of the most favoured nation.

The subjects of the Sultan of Morocco shall, return, enjoy in the dominions of her Britannic Majesty the same protection and privileges which are or may be enjoyed by the subjects or citizens of the most favoured nation.

2. The Sultan of Morocco engages to abolish all monopolies or prohibitions on imported goods except tobacco, pipes of all kinds used for smoking, opium, sulphur, powder, saltpetre, lead, arms of all kinds, and ammunition of war; and further to abolish all monopolies of agricultural produce or of any other article whatsoever in the dominions of the Sultan, except leeches, bark, tobacco and other herbs used for smoking in pipes.

3. No tax, toll, duty, or charge whatsoever, beside the export duty hereinafter mentioned, shall, under any pretext or on any account, be imposed by any person whatsoever, in any part of the dominions of Morocco, upon or in respect of any goods or produce whatsoever which may have been purchased for exportation by or on behalf of any British subject; but the said goods or produce, when so purchased, shall be conveyed from any place in Morocco to, and embark from, any port therein, absolutely free and exempted from all other taxes, tolls, duties, or charges whatsoever. No permit, or any similar document, shall be requisite to enable them to be so conveyed or embarked, nor shall any officer or subject of the Sultan offer any impediment to, or lay any restriction on, the conveyance or embarkation of such goods (except those goods or produce which the Sultan of Morocco shall prohibit from being exported, as arranged in Article 5), or on any pretext demand or receive any money in respect or on account of such goods; and should any such officer or subject act contrary to this stipulation, the Sultan shall immediately punish with severity the governor, officer, or other subject who shall have been guilty of such misconduct, and render full justice to British subjects for all injuries or losses which they may duly prove themselves to have suffered thereby.

4. The subjects of her Britannic Majesty, within the dominions of his Majesty the Sultan, shall be free to manage their own affairs themselves, or to commit those affairs to the management of any persons whom they may appoint as their broker, factor, or agent; nor shall such British subjects be restrained in their choice of persons to act in such capacities; nor shall they be called upon to pay any salary or remuneration to any person whom they shall not choose to employ; but those persons who shall be thus employed, and who are subjects of the Sultan of Morocco, shall be treated and regarded as other subjects of the Moorish dominions. Absolute freedom shall be given in all cases to the buyer and seller to bargain together, and no interference on the part of the Sultan's officers shall be permitted. Should any governor or other officer interfere in the bargains between British and Moorish subjects, or place any impediments in the lawful purchase or sale of goods or merchandise imported into, or to be exported from the Sultan's dominions, his Sheriffian Majesty shall severely punish the said officer for such misconduct.

5. Should the Sultan of Morocco at any time think proper to exhibit the exportation of any kind of grain or other article of commerce from his dominions, British subjects shall in no manner be prevented from embarking all the grain or other articles which they may have in their magazines, or which may have been bought previously to the said prohibition; but they shall be

ed to any other foreigners, the most favoured nation. Sultan of Morocco shall, in dominions of her Britannic Majesty and privileges which by the subjects or citizens of her Britannic Majesty. Morocco engages to abolish prohibitions on imported goods of all kinds used for smoking powder, saltpetre, lead, arms ammunition of war; and further duties on agricultural produce, and whatsoever in the dominions, except leeches, bark, tobacco, for smoking in pipes, duty, or charge whatsoever, duty hereinafter mentioned, in any account, be reduced, in any part of Morocco, upon or in respect of Morocco whatsoever which may be exported for exportation by or on behalf of any subject; but the said goods, when purchased, shall be conveyed to Morocco to, and embark from, absolutely free and exempt from duties, tolls, duties, or charges, permit, or any similar document, to enable them to be so conveyed, nor shall any officer or subordinate, offer any impediment to, or lay any obstacle to, the conveyance or embarkation of such goods or produce of Morocco shall prohibit from being arranged in Article 5), or on board or receive any money in payment of such goods; and should any subject act contrary to this, the Sultan shall immediately punish the same, or any other subordinate, if he has been guilty of such misconduct, and shall severely punish the same, if he has been guilty of such misconduct, which they may duly prove to have suffered thereby. of her Britannic Majesty, with the Sultan, shall be their own affairs themselves, or the affairs of the management of them they may appoint as their agent; nor shall such British subjects, in their choice of persons to employ; nor shall they be called to any salary or remuneration to any subject; but they shall not choose to employ; but they shall be thus employed, and the Sultan of Morocco, shall be regarded as other subjects of the Sultan. Absolute freedom shall be granted to the buyer and seller to bargain and to interfere on the part of no interference be permitted. Should any other officer interfere in the barter of British and Moorish subjects, or in the lawful purchase or sale of merchandise imported into, or from the Sultan's dominions, his Majesty shall severely punish the said subjects for such misconduct. The Sultan of Morocco at any time may exhibit the exportation of any other article of commerce from British subjects shall in no manner be prohibited from embarking all the grain or other goods which they may have in their possession, which may have been bought or sold, but they shall be

allowed to continue to export all they may have in their possession, during the term of 6 months from the time the prohibition was publicly made known; but on the day when the order of the Sultan of Morocco regarding the prohibition shall arrive, and shall be published to the merchants, British subjects shall, within the term of 2 days, declare and give proofs of the amount of produce they shall possess in their stores, on which the prohibition is imposed, and they shall also present legal certificates regarding the amount of the said produce which they shall have bought in the interior or elsewhere, previously to the promulgation of the order for the prohibition. No prohibition, either as to the exportation, or importation of any article, shall apply to British subjects, unless such prohibition shall apply to subjects of every other nation.

6. Merchandise or goods, except the articles enumerated in Article 2, imported by British subjects in any vessel, or from any country, shall not be prohibited in the territories of the Sultan of Morocco, nor be subject to higher duties than are levied on the same kind of merchandise or goods imported by the subjects of any other foreign power, or by native subjects, after the date of this convention.

All articles, except those enumerated in Article 2, the produce of Morocco, may be exported therefrom by British subjects in any vessels, on as favourable terms as by the subjects of any other foreign country, or by native subjects.

7. In consideration of the favourable terms upon which the produce of Morocco is admitted into the territories of her Britannic Majesty, and with a view to the extension of commercial intercourse between Great Britain and Morocco, for their mutual advantage, his Majesty the Sultan of Morocco hereby agrees that the duties to be levied on all articles imported into the territories of his Majesty by British subjects, shall not exceed 10 per cent. in cash on their value, at the port of their disembarkation; and that the duties to be levied on all articles exported from the territories of his Majesty by British subjects, shall not exceed in amount the duties marked in the following tariff:—

The Sultan of Morocco has the right of prohibiting any article of exportation; but when a prohibition on any article shall be imposed, it shall be in conformity with what is arranged in Article 5; but upon the exportation of articles the prohibition of which shall be taken off, the duties noted in the tariff shall alone be paid. With regard to wheat and barley, should the Sultan think proper to prohibit the exportation of these articles, but should desire to sell to merchants the grain which belongs to Government, it shall be sold at the price the Sultan thinks proper to impose. Should the Sultan augment or diminish the price of the grain, there shall be granted to the purchaser for exporting that which he shall have bought, the term stated in Article 5; but should the grain be free for exportation, the duties imposed thereon shall be in conformity with what is stated in the tariff.

Should the Sultan of Morocco think proper to reduce the duties on articles of exportation, his Majesty shall have the right of doing so, on condition that British subjects shall pay the lowest duty that shall be paid by any other foreign or native subjects.

8. Should a British subject, or his agent, desire to convey by sea, from one port to another in the dominions of the Sultan of Morocco, goods upon which the 10 per cent. duty has been paid, such goods shall be subject to no further duty, either on their embarkation, or disembarkation, provided they be accompanied by a certificate from a Moorish administrator of customs.

9. If any article of Moroccan produce, growth, or manufacture, except the articles enumerated in Article 2, be purchased for exportation, the same shall be conveyed by the British merchant, or by his agent, free of any kind of charge or duty whatsoever, to a convenient place of shipment. Subsequently, on exportation, the export duty according to the tariff in Article 7 shall alone be paid on it.

10. No anchorage, tonnage, import, or other duty or charge, shall be levied in the dominions of the Sultan of Morocco on British vessels, or on goods imported or exported in British vessels, beyond what is, or may be, levied on national vessels, or on the like goods imported or exported in national vessels; they shall not, however, exceed in amount the rates of the following scale, viz.:— Six moozoonats per ton shall be levied upon every British vessel (except steam-vessels) that does not exceed 200 tons in measurement. Upon every vessel (not a steam-vessel) measuring more than 200 tons, the following charge shall be made, viz. 6 moozoonats per ton shall be paid for 200 of her tons, and 2 moozoonats per ton for the remainder. Should the administrator of customs have any doubt regarding the tonnage of a British vessel, as declared by the master, the British consul or vice-consul shall, on appeal being made to him, cause the ship's papers, wherein the tonnage is formally stated, to be exhibited. The same charges shall be made in all the ports of Morocco except Rabat and Larache, at which ports 4 moozoonats per ton shall be paid for pilotage into the river, should the vessel enter the river, and 4 moozoonats per ton for pilotage out of the river; 3 moozoonats per ton shall also be levied upon each vessel entering the river, on account of anchorage. Should a vessel, however, not enter the river, the same charges shall be levied upon her as those which are paid at the other ports. At Mogadore, 4 moozoonats per ton shall be paid on British vessels for pilotage on their entering the port only, and 6 moozoonats per ton for anchorage.

Should the master of a British vessel require, at any other port, a pilot, he shall pay for him at the rate of 2 moozoonats per ton; but this charge shall not be exacted except when the master of a vessel requires a pilot.

The sum of 16 dollars shall be levied, on account of anchorage, on a steam-vessel entering a port in the Moorish dominions for the purpose of discharging or embarking cargo. If, afterwards, the said steam-vessel proceed from that port to any other port or ports in the Moorish dominions, and on her arrival at the latter embark or discharge cargo, the aforesaid charge of 16 dollars for anchorage shall again be levied; but if the said steam-vessel, on her return voyage, should enter a Moorish port at which the said anchorage dues shall have already been paid, no further charge on account of anchorage shall be levied upon her unless the said steam-vessel depart on a second voyage to a Moorish port, or unless during her return voyage she shall have touched at any port other than a port of the Moorish dominions, in which case the aforesaid charge of 16 dollars shall again be levied. The charge, however, for anchorage on a steamer of 150 tons burden, or less, shall not exceed what is due from a sailing-vessel of the same size.

The masters of all vessels shall pay, in addition to the aforesaid charges, the following sums to officers of the ports, but no other payments shall be demanded of them; viz.:-

A vessel measuring 25 tons or less, 20 ounces; a vessel exceeding 25 and not over 50 tons, 40 ounces; a vessel exceeding 50 and not over 100 tons, 60 ounces; a vessel exceeding 100 and not over 200 tons, 80 ounces; a vessel exceeding 200 tons, 100 ounces.

In addition to these charges, the master of every British vessel visiting the port of Tetuan shall pay 10 ounces for the messenger who shall convey the ship's papers from the port of Marteen to Tetuan; 5 ounces to the trumpeter who shall announce the arrival of the vessel; and 3 ounces to the public crier; but no other payments shall be demanded at the port of Tetuan. No charge for anchorage shall be levied on account of British vessels which may enter the ports of Morocco for the purpose of seeking shelter from the weather, and which do not embark or discharge cargo, nor shall any charge for anchorage be levied upon fishing-vessels.

And, in like manner, no anchorage, tonnage, import, or other duty or charge, shall be levied in the British dominions on Moorish vessels, or on goods imported or exported in Moorish vessels, beyond what is or may be levied on national vessels, or on the like goods imported or exported in national vessels.

11. Should British subjects desire to embark in or discharge goods from vessels arriving in the ports of Morocco, they shall employ the Moorish Government boats for that purpose; but if within two days after the arrival of a vessel the Moorish Government boats are not placed at their disposal for the aforesaid purpose, the British subjects shall have the right of employing private boats, and shall not pay, in such case, to the port authorities more than one half of what would have been paid, had they employed the Government boats. This regulation shall not be applicable to the ports of Tangier and Tetuan, inasmuch as there is a sufficient number of Government lighters at those two ports.

The charges now paid for lighters at the different ports of Morocco shall not be augmented, and the administrator of customs at each port of Morocco shall deliver to the British vice-consul

a tariff of the charges now demanded for lighters.

12. The articles of this convention shall be applicable to all the ports in the empire of Morocco and should his Majesty the Sultan of Morocco open the ports of Mehedea, Agadecr, or Wadnoon or any other ports within the limits of his Majesty's dominions, no difference shall be made in the levying of duties, or anchorage, between the said ports and other ports in the Sultan's dominions.

13. If a British subject be detected in smuggling into the Moroccan territories goods of any description, the goods shall be confiscated to the Sultan; and such British subject shall, on conviction before the British consul-general, consul-vice-consul, or consular agent, be liable to be fined in an amount not exceeding treble the amount of duties leviable on such goods, or in case of goods not admitted to importation, treble the value of the goods at the current price of the day; and failing payment of such fines, such British subject shall, on conviction before the British consul-general, consul, vice-consul, or consular agent, be liable to be imprisoned; or, without being fined, any British subject on conviction as aforesaid may be imprisoned, but in either case for a time not exceeding one year, in such place as the consul-general, consul, vice-consul, or consular agent may determine.

14. In order that the two high contracting parties may have the opportunity of hereafter treating and agreeing upon such other arrangements as may tend still further to the improvement of their mutual intercourse, and to the advancement of the interests of their respective subjects, it is agreed that at any time after the expiration of five years from the date of the exchange of the ratifications of the present convention of commerce and navigation, either of the high contracting parties shall have the right to call upon the other to enter upon a revision of the same; but until such revision shall have been accomplished by common consent, and a new convention shall have been concluded and ratified, the present convention shall continue and remain in full force and effect.

Done at Tangier, the 9th of December, in the year 1856, corresponding to the Moorish date of the 10th of Rabea the second, in the year 1273.

*Treaty between his Britannic Majesty and the King of the Netherlands, respecting Territories and Commerce in the East Indies. Signed at London, March 17, 1824.*

Article 1. The high contracting parties engage to admit the subjects of each other to trade with their respective possessions in the Eastern Archipelago, and on the continent of India and in Ceylon, upon the footing of the most favoured nation; their respective subjects conforming themselves to the local regulations of each settlement.

2. The subjects and vessels of one nation shall not pay upon importation or exportation, at the ports of the other in the Eastern seas, any duty at a rate beyond the double of that at which the subjects and vessels of the nation to which the port belongs are charged.

The duties paid on exports or imports at a British port, on the continent of India, or in Ceylon, on Dutch bottoms, shall be arranged so as in no case to be charged at more than double the

now demanded for lighter-

this convention shall be in the empire of Morocco; by the Sultan of Morocco, Agadeer, or Wadnooa, within the limits of his jurisdiction, no difference shall be made in duties, or anchorage, between their ports in the Sultan's

subject be detected in smuggling territories goods of any description shall be confiscated to the British subject shall, on conviction, be liable to be fined exceeding treble the amount of such goods, or in case of goods of no value, treble the value of the goods at the current price of the day; and such fines, such British consular agent, or consular agent, before the British consul-general, or consul, or without being fined, or on conviction as aforesaid, but in either case for a term not exceeding one year, in such place as the consul, vice-consul, or consular agent.

at the two high contracting parties the opportunity of hereafter arranging upon such other arrangements still further to the improvement of their respective subjects, it is any time after the expiration of the date of the exchange of the present convention of commerce either of the high contracting parties the right to call upon the other in revision of the same; but until all have been accomplished by and a new convention shall have been and ratified, the present convention shall continue and remain in full force

er, the 9th of December, in the depending to the Moorish date of the sea the second, in the year 1273.

his Britannic Majesty and the Netherlands, respecting Territories in the East Indies. Signed at London, the 17th, 1824.

high contracting parties engaged to of each other to trade with their possessions in the Eastern Archipelago, and in India and in Ceylon, upon the most favoured nation; their subjects conforming themselves to the laws of each settlement. The ships and vessels of one nation shall be admitted to importation or exportation, at the same rate in the Eastern seas, any duty not exceeding the double of that at which the vessels of the nation to which they are charged.

paid on exports or imports at the same rate in the Eastern seas, any duty not exceeding the double of that at which the vessels of the nation to which they are charged at more than double the

amount of the duties paid by British subjects, and on British bottoms.

In regard to any article upon which no duty is imposed when imported or exported by the subjects or on the vessels of the nation to which the port belongs, the duty charged upon the subjects or vessels of the other shall in no case exceed 6 per cent.

3. The high contracting parties engage that no treaty hereafter made by either, with any native power in the Eastern seas, shall contain any article tending, either expressly, or by the imposition of unequal duties, to exclude the trade of the other party from the ports of such native power; and that if, in any treaty now existing on either part, any article to that effect has been admitted, such article shall be abrogated upon the conclusion of the present treaty.

It is understood that, before the conclusion of the present treaty, communication has been made by each of the contracting parties to the other, of all treaties or engagements subsisting between each of them, respectively, and any native powers in the Eastern seas; and that the like communication shall be made of all such treaties concluded by them, respectively, hereafter.

4. Their Britannic and Netherland Majesties engage to give strict orders, as well to their civil and military authorities, as to their ships of war, to respect the freedom of trade, established by Articles 1, 2, and 3; and in no case to impede a free communication of the natives in the Eastern Archipelago, with the ports of the two Governments, respectively, or of the subjects of the two Governments with the ports belonging to native powers.

5. Their Britannic and Netherland Majesties, in like manner, engage to concur effectually in repressing piracy in those seas: they will not grant either asylum or protection to vessels engaged in piracy, and they will in no case permit the ships or merchandise captured by such vessels to be introduced, deposited, or sold in any of their possessions.

6. It is agreed that orders shall be given by the two Governments, to their officers and agents in the East, not to form any new settlement on any of the islands in the Eastern seas, without previous authority from their respective Governments in Europe.

7. The Molucca Islands, and especially Amboyna, Banda, Ternate, and their immediate dependencies, are excepted from the operation of the 1st, 2nd, 3rd, and 4th Articles, until the Netherland Government shall think fit to abandon the monopoly of spices; but if the said Government shall, at any time previous to such abandonment of the monopoly, allow the subjects of any power, other than the Asiatic native power, to carry on any commercial intercourse with the said islands, the subjects of his Britannic Majesty shall be admitted to such intercourse upon a footing precisely similar.

8. His Netherland Majesty cedes to his Britannic Majesty all his establishment on the continent of India; and renounces all privileges and exemptions enjoyed or claimed in virtue of those establishments.

9. The factory of Fort Marlborough, and all the English possessions on the island of Sumatra, are hereby ceded to his Netherland Majesty: and his Britannic Majesty further engages that no British settlement shall be formed on that island, nor any treaty concluded, by British authority, with any native prince, chief, or state therein.

10. The town and fort of Malacca, and its dependencies, are hereby ceded to his Britannic Majesty; and his Netherland Majesty engages, for himself and his subjects, never to form any

establishment on any part of the peninsula of Malacca, or to conclude any treaty with any native prince, chief, or state therein.

13. All the colonies, possessions, and establishments which are ceded by the preceding articles, shall be delivered up to the officers of the respective sovereigns on the 1st of March, 1825. The fortifications shall remain in the state in which they shall be at the period of the notification of this treaty in India; but no claim shall be made, on either side, for ordnance, or stores of any description, either left or removed by the ceding power, nor for any arrears of revenue, or any charge of administration whatsoever.

16. It is agreed that all accounts and reclamations, arising out of the restoration of Java, and other possessions, to the officers of his Netherland Majesty in the East Indies—as well as those which were the subject of a convention made at Java on the 24th of June, 1817, between the commissioners of the two nations, as all others—shall be finally and completely closed and satisfied, on the payment of the sum of 100,000*l.* sterling money, to be made in London on the part of the Netherlands, before the expiration of the year 1825.

17. The present treaty shall be ratified and the ratifications exchanged at London, within 3 months from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and affixed thereto the seals of their arms.

Done at London, the 17th day of March, in the year of our Lord 1824.

CHARLES WATKINS WILLIAMS WYNN.

H. FAGEL.

A. R. FALCK.

*Treaty of Commerce and Navigation between her Majesty and the King of the Netherlands. Signed at the Hague, October 27, 1837.*

Article 1. There shall be reciprocal liberty of commerce and navigation between and amongst the subjects of the two high contracting parties; and the subjects of the two sovereigns respectively shall not pay in the ports, harbours, roads, cities, towns, or places whatsoever in either kingdom, any other or higher duties, taxes, or imposts, under whatsoever names designated or included, than those which are there paid by the subjects of the most favoured nation: and the subjects of each of the high contracting parties shall enjoy the same rights, privileges, liberties, favours, immunities, and exemptions, in matters of commerce and navigation, that are granted, or may hereafter be granted, in either kingdom, to the subjects of the most favoured nation. No duty of customs or other impost shall be charged upon any goods the produce of one country, upon importation, by sea or by land, from such country into the other, higher than the duty or impost charged upon goods of the same kind, the produce of or imported from any other country; and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the King of the Netherlands, do hereby bind and engage themselves not to grant any favour, privilege, or immunity, in matters of commerce and navigation, to the subjects of any other state, which shall not be also, and at the same time, extended to the subjects of the other high contracting party; gratuitously, if the concession in favour of that other state shall have been gratuitous; and on giving as nearly as possible the same compensation or equivalent, in case the concession shall have been conditional.

2. No duties of tonnage, harbour, lighthouses, pilotage, quarantine, or other similar or corresponding duties, of whatever nature or under whatever denomination, shall be imposed in either country upon the vessels of the other, in respect of voyages between the two countries, if laden, or in respect of any voyage if in ballast, which shall not be equally imposed, in the like cases, on national vessels; and in neither country shall any duty, charge, restriction, or prohibition be imposed upon, nor any drawback, bounty, or allowance be withheld from, any goods imported from or exported to the other country, in the vessel of that other country, which shall not be equally imposed upon or withheld from such goods when so imported or exported in national vessels.

3. In order to avoid any misunderstanding with regard to the regulations that determine the conditions which constitute a British or a Dutch vessel, it is hereby agreed that all vessels built in the dominions of her Britannic Majesty, and all vessels which, having been captured from an enemy by her Majesty's ships of war, or by the subjects of her said Majesty, furnished by the lords commissioners of the Admiralty with letters of marque, shall have been regularly condemned in one of her said Majesty's prize courts as a lawful prize; and all vessels which shall have been condemned in any competent court, for a breach of the laws made for the prevention of the slave trade; shall, provided they are owned, navigated, and registered according to the laws of Great Britain, be considered as British vessels; and that all vessels built in the territories of the King of the Netherlands, or which, having been captured from an enemy by his Majesty's ships of war, or by the subjects of his said Majesty furnished with letters of marque, shall have been regularly condemned in one of the prize courts of the kingdom of the Netherlands as a lawful prize; and all vessels which shall have been condemned in any competent court, for a breach of the laws made for the prevention of the slave trade, shall, provided they are wholly owned by any subject or subjects of the King of the Netherlands, and provided that the master and three-fourths of the crew are Netherland subjects, be considered as Netherland vessels.

4. It is further agreed, that in all cases where, in either kingdom, the duty to be levied upon any goods imported, shall be, not a fixed rate, but a proportion of the value of the goods, such ad valorem duty shall be ascertained and secured in the following manner; that is to say, the importer shall, on making his entry for the payment of duty at the custom-house of either country, sign a declaration, stating the value of the goods at such amount as he shall deem proper; and in case the officers of customs should be of opinion that such valuation is insufficient, he or they shall be at liberty to take the goods, on paying to the importer the value according to his declaration, together with the addition of 10 per cent., and on returning the duty paid.

The amount of these sums to be paid by the officers on the delivery of the goods to them, which must be within 15 days from the first detention of the goods.

5. Forasmuch as all merchandise, of whatever origin, whether admissible for home consumption or not, may be received and warehoused in all the ports of the United Kingdom of Great Britain and Ireland, which are by law appointed to be warehousing ports for such articles, pending the entry of the same either for home consumption or for re-exportation, as the case may be, under the regulations appointed for this purpose, and with-

out such articles being liable, in the meantime, to the payment of any of the duties with which they would be charged, if upon arrival they were entered for consumption within the United Kingdom; in like manner, the King of the Netherlands consents and agrees, that all the ports of his Netherland Majesty's dominions, which are now or which shall hereafter become warehousing ports by law, shall be free ports for the reception and warehousing of all merchandise imported in British ships, and of all articles whatever, the produce or manufacture of the British dominions, in whatever ships imported, either for home consumption or for re-exportation, as the case may be; and the articles thus received and warehoused, subject to due regulations, shall not be liable, in the meantime, to any of the duties with which they would be charged, if they were entered for consumption on their arrival in the Netherlands.

6. If any ships of war or merchant vessels should be wrecked on the coasts of either of the high contracting parties, such ships or vessels, or all parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise which shall be saved therefrom, or the produce thereof, if sold, shall be faithfully restored to the proprietors, upon being claimed by them or by their duly authorised factors; and if there are no such proprietors or factors on the spot, then the said goods and merchandise, or the proceeds thereof, as well as all the papers found on board such wrecked vessels, shall be delivered to the British or Netherland consul in whose district the wreck may have taken place; and such consul, proprietors, or factors shall pay only the expenses incurred in the preservation of the property, together with the rate of salvage which would have been payable in the like case of a wreck of a national vessel; and the goods and merchandise saved from the wreck shall not be subject to duties, unless cleared for home consumption.

7. The present treaty shall be in force for the term of 10 years from the date hereof, and farther, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same: each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years.

And it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this treaty, and all the provisions thereof, shall altogether cease and determine.

8. The present treaty shall be ratified, and the ratifications shall be exchanged at the Hague within 1 month from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at the Hague, this 27th day of October, in the year of our Lord 1837.

*Declaration made by the Plenipotentiary of her Britannic Majesty, on the exchange of the Ratification of the preceding Treaty.*

In proceeding to the exchange of the ratifications of the treaty of commerce and navigation between her Majesty the Queen of the United Kingdom of Great Britain and Ireland and his Majesty the King of the Netherlands, concluded and signed at the Hague on the 27th of October,

liable, in the meantime, to the duties with which they upon arrival they were en- within the United King- r, the King of the Nether- grees, that all the ports of ty's dominions, which are greater become warehousing free ports for the reception all merchandise imported in all articles whatever, the re of the British dominions, ported, either for home con- portation, as the case may s thus received and ware- ue regulations, shall not be ne, to any of the duties with e charged, if they were en- on on their arrival in the

of war or merchant vessels in the coasts of either of the isies, such ships or vessels, or d all furniture and apparte- reunto, and all goods and shall be saved therefrom, or if sold, shall be faithfully rioriters, upon being claimed rly authorised factors; and r proprietors or factors on the goods and merchandise, or the well as all the papers found igned vessels, shall be delivered therland consul in whose dis- have taken place; and such r factors shall pay only the h the preservation of the pro- h the rate of salvage which ayable in the like case of a l vessel; and the goods and from the wreck shall not be unless cleared for home con-

ty shall be in force for the m in the date hereof, and further, 2 months after either of the rties shall have given notice s intention to terminate the h contracting parties reserv- ight of giving such notice to of the said term of 10 years. e agreed between them, that at months after such notice shall by either party from the other, the provisions thereof, shall determine.

ty shall be ratified, and the be exchanged at the Hague in the date hereof, or sooner if

of, the respective plenipoten- d the same, and have affixed their arms.

gue, this 27th day of October, Lord 1837.

TOLK DE SOELEN.

ARD CROMWELL DISBROWE.

by the Plenipotentiary of her ty, on the exchange of the Rati- ceeding Treaty.

the exchange of the ratifica- of commerce and navigation ty the Queen of the United t Britain and Ireland and his of the Netherlands, concluded Hague on the 27th of October,

1837, the undersigned, plenipotentiary of her Britannic Majesty, is commanded by her Majesty to explain and declare that her Majesty has ratified the said treaty, notwithstanding that the preamble contains the words 'in Europe,' which her Majesty's Government had objected to as redundant; but that her Majesty considers those words to be without meaning, so far as her Majesty's dominions are concerned; because those words appear to establish a distinction between a kingdom in Europe and a kingdom out of Europe, whereas, by the word 'kingdom,' in the said treaty, her Majesty, as far as regards her own territories, means only the United Kingdom of Great Britain and Ireland, which is well known to be in Europe, and does not mean any of the possessions of her Majesty's crown beyond sea. Her Majesty's ratification of the said treaty is exchanged under the explicit declaration and understanding above mentioned.

Done at the Hague, the 22nd day of November, 1837.

EDWARD CROMWELL DISBROWE.

*Counter-Declaration of the Plenipotentiary of his Majesty the King of the Netherlands.*

The plenipotentiary of her Britannic Majesty having, previously to the exchange of the ratifications of the treaty of commerce and navigation, concluded on the 27th of October, 1837, between his Majesty the King of the Netherlands and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, delivered to the undersigned, plenipotentiary of his Majesty the King of the Netherlands, a declaration stating that her Britannic Majesty had not in view in the said treaty the possessions of her crown beyond sea; the undersigned is charged by his Majesty the King of the Netherlands to declare that his said Majesty accepts the above-mentioned declaration, and that he likewise, on his part, has not meant to comprise in the said treaty the possessions of his crown beyond sea.

With regard to the observations made as to the use of the words 'in Europe,' the Cabinet of the Hague is of opinion, that their interpretation is to be found in the circumstance, that the phrase 'in Europe' applies to the word 'ports,' and not to the word 'kingdom.'

The Hague, the 22nd of November, 1837.

VERSTOLK DE SOELEN.

PERSIA.

*Treaty of Commerce between her Majesty and the Shah of Persia. Signed at Tehran, October 28, 1841.*

Article 1. The merchants of the two mighty states are reciprocally permitted and allowed to carry into each other's territories their goods and manufactures of every description, and to sell or exchange them in any part of their respective countries; and on the goods which they import or export, custom duties shall be levied; that is to say, on entering the country, the same amount of custom duties shall be levied, once for all, that is levied on merchandise imported by the merchants of the most favoured European nations; and at the time of going out of the country, the same amount of custom duties which is levied on the merchandise of merchants of the most favoured European nations shall be levied from the merchants, subjects of the high contracting parties; and except this, no claim shall be made upon the merchants of the two states in each other's dominions on any pretext or under any denomination; and the merchants or persons connected with

or dependent upon the high contracting parties in each other's dominions, mutually, shall receive the same aid and support, and the same respect, which are received by the subjects of the most favoured nations.

2. As it is necessary, for the purpose of attending to the affairs of the merchants of the two parties respectively, that from both Governments commercial agents should be appointed to reside in stated places; it is therefore proposed that two commercial agents on the part of the British Government shall reside, one in the capital, and one in Tabreez, and in those places only, and on this condition, that he who shall reside at Tabreez, and he alone, shall be honoured with the privileges of consul-general; and as for a series of years a resident of the British Government has resided at Bushire, the Persian Government grants permission that the said resident shall reside there as heretofore. And, in like manner, two commercial agents shall reside on the part of the Persian Government, one in the capital of London, and one in the port of Bombay, and shall enjoy the same rank and privileges which the commercial agents of the British Government shall enjoy in Persia.

3. This commercial treaty, we, the plenipotentiaries of the high contracting parties, have agreed to; and in witness thereof, have set thereunto our hands and seals, at the capital city of Tehran, this 28th day of October, in the year of our Lord 1841, corresponding to the 12th day of the month Ramazan, in the year of the Hejira 1257.

JOHN M'NEILL.

MEERZA ABUL HASSAN KHAN.

PERU-BOLIVIAN CONFEDERATION.

*Treaty of Amity, Commerce, and Navigation between His Majesty and the Peru-Bolivian Confederation, together with 2 additional Articles thereunto annexed, of June 5, 1837.*

Article 1. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, his heirs and successors, and the Peru-Bolivian confederation and its citizens.

2. There shall be, between all the territories of his Britannic Majesty in Europe, and the territories of the Peru-Bolivian confederation, a reciprocal freedom of commerce. The subjects and citizens of the two countries respectively shall have liberty freely and securely to come with their ships and cargoes to all places, ports, and rivers in the territories aforesaid, to which other foreigners are or may be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purpose of their commerce; and generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce; subject always to the laws and statutes of the two countries respectively.

In like manner, the respective ships of war and post-office packets of the two countries shall have liberty freely and securely to come to all harbours, rivers, and places to which other foreign ships of war and packets are or may be permitted to come, to enter into the same, to anchor, and to remain there and rest; subject always to the laws and statutes of the two countries respectively.

By the right of entering the places, ports, and rivers mentioned in this article, the privilege of carrying on the coasting trade is not understood,

in which national vessels only are permitted to engage.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that the inhabitants of the Peru-Bolivian confederation shall have the like liberty of commerce and navigation stipulated for in the preceding article, in all his dominions situated out of Europe, to the full extent in which the same is permitted at present, or may be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the dominions of his Britannic Majesty of any article of the growth, produce, or manufacture of the Peru-Bolivian confederation, and no higher or other duties shall be imposed on the importation into the territories of the Peru-Bolivian confederation of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories or dominions of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation or importation of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said territories of the Peru-Bolivian confederation, to or from the said dominions of his Britannic Majesty, or to or from the said territories of the Peru-Bolivian confederation, which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed in any of the ports of the Peru-Bolivian confederation, on British vessels, than those payable in the same ports, by Peru-Bolivian vessels; nor in the ports of his Britannic Majesty's territories, on Peru-Bolivian vessels, than shall be payable in the same ports on British vessels.

6. The same duties shall be paid on the importation into the territories of the Peru-Bolivian confederation of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in Peru-Bolivian or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty, of any article the growth, produce, or manufacture of the territories of the Peru-Bolivian confederation, whether such importation shall be in British or in Peru-Bolivian vessels. The same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation to the ports of the Peru-Bolivian confederation, of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such exportation shall be in Peru-Bolivian or British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation of any articles the growth, produce, or manufacture of the Peru-Bolivian confederation, to his Britannic Majesty's dominions, whether such exportation shall be in British or in Peru-Bolivian vessels.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or Peru-Bolivian vessel, it is hereby agreed that no ship shall be admitted to be a ship of either country, unless she shall be

of the built of such country, or have been made prize of war to such country, and condemned a such; or have been forfeited to such country under any law of the same made for the prevention of the slave trade, and condemned in any competent court as forfeiture for a breach of such law; nor unless she be navigated by a master who is a subject of such country, and by a crew, of whom at least are subjects of such country; nor unless she be wholly owned by subjects of such country, usually residing therein, or under the dominion thereof; excepting where the laws provide for any extreme cases. And it is further agreed, that no ship, admitted to be a ship of either country, shall be qualified to trade as above described, under the provisions of this treaty, unless furnished with a register, passport, or sea-letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries (the form of which shall be communicated), certifying the name, occupation, and residence of the owner or owners, in the dominions of his Britannic Majesty, or in the territories of the Peru-Bolivian confederation, as the case may be, and that he or they is or are the sole owner or owners, in the proportion to be specified; together with the name, burden, and description of the vessel, as to build and measurement, and the several particulars constituting the national character of the vessel, as the case may be.

8. All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have full liberty, in all the territories of the Peru-Bolivian confederation, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes than those employed by Peru-Bolivians; nor to pay them any other salary or remuneration than such as is paid, in like cases, by Peru-Bolivian citizens; and absolute freedom shall be allowed, in all cases, to the buyer and seller to bargain and fix the price of any goods, wares, or merchandise imported into or exported from the Peru-Bolivian confederation, as they shall see good, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of his Britannic Majesty, by the citizens of the Peru-Bolivian confederation, under the same conditions.

The citizens and subjects of the contracting parties, in the territories of each other, shall receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents, of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

9. In whatever relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the succession to personal estates by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the two contracting parties shall enjoy, in their respective dominions and territories, the same privileges, liberties, and rights, as native subjects; and shall not be charged, in any of these respects, with any higher imposts or

advantage of the reciprocity established by the Articles 5, 6, and 7 of the treaty signed this day, if that part of the 7th Article which stipulates that, in order to be considered as a Peru-Bolivian ship, a ship shall actually have been built in the Peru-Bolivian confederation, should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of 15 years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships, wheresoever built, being bona fide the property of and wholly owned by one or more citizens of the Peru-Bolivian confederation, and whereof the masters and three-fourths of the mariners, at least, are also natural-born citizens of the Peru-Bolivian confederation, or persons domiciliated in the Peru-Bolivian confederation by act of the Government, as lawful subjects of Peru-Bolivian confederation, to be certified according to the laws of that country, shall be considered as Peru-Bolivian ships; his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of 15 years, to claim the principle of reciprocal restriction stipulated for in the Article 7 above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity in favour of Peru-Bolivian shipping.

2. It is further agreed that, for the like term of 15 years, the stipulations contained in the Articles 5 and 6 of the present treaty shall be suspended; and, in lieu thereof, it is hereby agreed that, until the expiration of the said term of 15 years, British ships entering into the ports of the Peru-Bolivian confederation, from the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, and all articles, the growth, produce, or manufacture of the United Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and reciprocally, it is agreed that Peru-Bolivian ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the Peru-Bolivian confederation, and all articles, the growth, produce, or manufacture of the said confederation, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article, the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of 15 years, the stipulations of the said 5th and 6th Articles shall from thenceforward be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratification shall be exchanged at the same time.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at Lima, 5th of June, 1837.

BELFOID HINTON WILSON.  
LORENZO BAZO.

*Treaty of Friendship, Commerce, and Navigation between her Majesty and the Republic of Peru. Signed at London, April 10, 1850. Ratifications exchanged at London, October 15, 1852.*

Article 1. There shall be perpetual friendship between her Majesty the Queen of the United Kingdom of Great Britain and Ireland, her heirs and successors, and the Republic of Peru, and between their respective subjects and citizens.

2. There shall be, between all the dominions of her Britannic Majesty and the territories of the Republic of Peru, a reciprocal freedom of commerce. The subjects and citizens of each of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places, ports, and rivers in the territories of the other, where trade with other nations is permitted. They may remain and reside in any part of the said territories respectively; and hire and occupy the houses and warehouses which they may require; and may trade by wholesale or retail in all kinds of produce, manufactures, and merchandise of lawful commerce, enjoying the same exemptions and privileges as native subjects or citizens, and subject always to the same laws, decrees, and established customs as native subjects or citizens.

In like manner, the ships of war and post-office packets of each country, respectively, shall have liberty to enter into all harbours, rivers, and places, within the territories of the other, to which the ships of war and packets of other nations are or may be permitted to come, to anchor there, and to remain and relit; subject always to the laws and regulations of each country respectively.

The stipulations of this article do not apply to the coasting trade, which each country reserves to itself respectively, and shall regulate according to its own laws.

3. The two high contracting parties hereby agree that any favour, privilege, or immunity whatever, in matters of commerce or navigation, which either contracting party has actually granted, or may hereafter grant, to the subjects or citizens of any other State, shall be extended to the subjects or citizens of the other contracting party, gratuitously, if the concession in favour of that other State shall have been gratuitous, or in return for an equivalent compensation if the concession shall have been conditional.

4. No other or higher duties shall be imposed on the importation into the dominions of her Britannic Majesty, of any article of the growth, produce, or manufacture of the Republic of Peru; and no other or higher duties shall be imposed on the importation into the Republic of Peru, of any article of the growth, produce, or manufacture of her Britannic Majesty's dominions, than are or shall be payable on the like article, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed in the dominions or territories of either of the contracting parties, on the exportation of any article to the dominions or territories of the other, than such as are or may be payable on the exportation of the like article to any other foreign country. No prohibition shall be imposed upon the importation of any article the growth, produce, or manufacture of the territories of either of the two contracting parties into the territories of the other, which shall not equally extend to the importation of the like article, being the growth, produce, or manufacture of any other country. Nor shall any prohibition be imposed upon the exportation of any article from the territories of either of the two contracting parties to the territories of the other, which shall not equally extend to the exportation

nunities, are or may be there granted to agents of the same rank of the most favoured nation.

12. For the better security of commerce between the subjects of her Britannic Majesty and the citizens of the Republic of Peru, it is agreed that if, at any time, any interruption of friendly intercourse, or any rupture should unfortunately take place between the two contracting parties, the subjects or citizens of either the two contracting parties, residing upon the coasts, shall be allowed 6 months, and those residing in the interior a year, to wind up their accounts, and dispose of their property; and a safe-conduct shall be given them to embark at the port which they shall themselves select. All subjects or citizens of either of the two contracting parties who may be established in the dominions or territories of the other, in the exercise of any trade or special employment, shall have the privilege of remaining and continuing such trade or employment therein, without any manner of interruption, in full enjoyment of their liberty and property, as long as they behave peaceably, and commit no offence against the laws; and their goods and effects, of whatever description they may be, whether in their own custody, or entrusted to individuals or to the State, shall not be liable to seizure or sequestration, or to any other charges or demands than those which may be made upon the like effects or property belonging to native subjects or citizens. In the same case, debts between individuals, public funds, and the shares of companies, shall never be confiscated, sequestered, or detained.

13. The subjects or citizens of either of the two contracting parties, residing in the dominions or territories of the other, shall continue to enjoy, as hitherto, in regard to their houses, persons, and properties, the protection of the Government.

In like manner, the subjects and citizens of each contracting party shall enjoy, in the dominions or territories of the other, full liberty of conscience, and shall not be molested on account of their religious belief, provided they respect the established laws and customs; and such of those subjects and citizens as may die in the territories of the other party, shall be buried in the public cemeteries or accustomed places, with suitable decorum and respect.

14. If any ship of war or merchant-vessel of either of the contracting parties should be wrecked on the coasts of the other, such ship or vessel, or any parts thereof, and all furniture and appurtenances belonging thereunto, and all goods, and merchandise which shall be saved therefrom, or the produce thereof, if sold, shall be faithfully restored to the proprietors, upon being claimed by them or by their duly authorised agents; and if there are no such proprietors or agents on the spot, then the said goods and merchandise, or the proceeds thereof, as well as all the papers found on board such wrecked ship or vessel, shall be delivered to the British or Peruvian consul in whose district the wreck may have taken place; and such consul, proprietors, or agents, shall pay only the expenses incurred in the preservation of the property, together with the rate of salvage which would have been payable in the like case of a wreck of a national vessel. The goods and merchandise saved from the wreck shall not be subject to duties, unless cleared for consumption.

15. The Republic of Peru engages to co-operate with her Britannic Majesty for the total abolition of the slave trade, and to prohibit all persons inhabiting the territories of the Republic, or subject to its jurisdiction, in the most effectual manner, and by penal laws, from taking any share in such trade.

16. In order that the two contracting parties may have the opportunity of hereafter treating and agreeing upon such other arrangements as may tend still further to the improvement of the mutual intercourse, and to the advancement of the interests of their respective subjects or citizens, it is agreed that, at any time after the expiration of seven years from the date of the exchange of the ratifications of the present treaty, either of the contracting parties shall have the right of giving to the other party notice of its intention to terminate Articles 3, 4, 5, and 6, of the present treaty; and that at the expiration of 12 months after such notice shall have been received by either party from the other, the said Articles, and all the stipulations contained therein, shall cease to be binding on the two contracting parties.

17. The present treaty shall be ratified by her Britannic Majesty the Queen of the United Kingdom of Great Britain and Ireland, and by the President of the Republic of Peru, with the authority of the congress; and the ratifications shall be exchanged at London in 2 years, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London the 10th day of April, in the year of our Lord 1850.

PALMERSTON.  
H. LANOUCHERE.  
JOAQUIN J. DE OSMA.

*Declaration made by the British Plenipotentiary on the exchange of the Ratifications of the preceding Treaty.*

Whereas by the second paragraph of Article 10 of the treaty of friendship, commerce, and navigation, between her Majesty the Queen of the United Kingdom of Great Britain and Ireland and the Republic of Peru, concluded and signed at London on the 10th of April, 1850, it was stipulated, that if any of the crew shall desert from the vessels of war or merchant-vessels of either contracting party, while such vessels are within any port in the territory of the other party, the authorities of such port and territory shall be bound to give every assistance in their power for the apprehension of such deserters, on application to that effect being made by the consul of the party concerned, or by the deputy or representative of the consul; and that no public body whatever shall protect or harbour such deserters:

And whereas the power of apprehending such deserters in the British dominions is by law confined to seamen, not being slaves, who may desert from merchant ships belonging to the subjects of a foreign Power:

The undersigned, plenipotentiary of her Britannic Majesty, in proceeding to the exchange of the ratifications of the treaty above mentioned, therefore declares, that the ratifications are exchanged on the understanding that the above quoted stipulations of Article 10 thereof shall, in the British dominions, be held to be applicable only to seamen, not being slaves, who may desert from merchant-ships belonging to citizens of the Republic of Peru.

London, October 15, 1852.

MALMESBURY.

PORTUGAL.

*Treaty of Commerce between Great Britain and Portugal. Signed at Lisbon, December 27, 1763.*

Article 1. His Sacred Royal Majesty of Portugal promises, both in his own name and that of his

dominions of either contracting party, the laws and established customs of the country being duly observed.

The subjects of either of the high contracting parties residing within the dominions of the other shall be at liberty to open retail stores and shops, under the same municipal and police regulations as native subjects; and they shall not, in this respect, be liable to any other or higher taxes or imposts than those which are or may be paid by native subjects.

4. There shall be reciprocal liberty of commerce and navigation between the subjects of the two high contracting parties; and the subjects of the two sovereigns respectively shall not pay, in the ports, harbours, roads, cities, towns, or places whatsoever in either kingdom, any other or higher duties, taxes, rates, or imposts, under whatsoever names designated or included, than those which are there paid by the subjects or citizens of the most favoured nation.

No duty of customs or other impost shall be charged upon any goods, the produce of the one country, upon importation by sea or by land from that country into the other, higher than the duty or impost charged upon goods of the same kind, the produce of and imported from any other country; and no duty, restriction, or prohibition shall be imposed upon the importation and exportation from one country to the other, of the goods and produce of each, which shall not be imposed upon goods of the same kind, when imported from or exported to any other country: and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and her Majesty the Queen of Portugal, do hereby bind and engage themselves, their heirs and successors, not to grant any favour, privilege, or immunity, in matters of commerce and navigation, to the subjects or citizens of any other State, which shall not also and at the same time be extended to the subjects of the other high contracting party, gratuitously, if the concession in favour of that other State shall have been gratuitous; and on giving, as nearly as possible, the same compensation or equivalent, if the concession shall have been conditional.

5. No duties of tonnage, and no harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, shall be imposed in either country upon the vessels of the other, in respect of voyages between the two countries, if laden; or in respect of any voyage, if in ballast, which shall not be equally imposed, in the like cases, on national vessels.

6. All goods, the growth, produce, or manufacture of their respective possessions, which can legally be imported into either country from the other, in ships of that other country, shall, when so imported, be subject to the same duties, whether they be imported in ships of the one country or in ships of the other; and in like manner, all goods which can legally be exported from either country to the other, in ships of that other country, shall, when so exported, be subject to the same duties, and be entitled to the same drawbacks, bounties, and allowances, whether they be exported in ships of the one country or in ships of the other.

7. In order to promote and encourage the commercial intercourse between the dominions of the high contracting parties, for the mutual benefit of their respective subjects, her Britannic Majesty and her Most Faithful Majesty agree to take into consideration the duties now levied upon articles the produce or manufacture of either country, with a view to make such reductions in those duties as

may be consistent with the interest of the high contracting parties respectively.

This matter shall without delay be made the subject of a special negotiation between the two Governments.

8. British ships shall be allowed to proceed direct from any port of her Britannic Majesty's dominions to any colony of her Most Faithful Majesty, and to import into such colony any goods the growth, produce, or manufacture of the United Kingdom, or of any of the British dominions, except such goods as are prohibited to be imported into such colony, or which are admitted into it only from the dominions of her Most Faithful Majesty; and such British ships and such goods so imported in them, shall be liable in such colony of her Most Faithful Majesty to no higher or other duties and charges than would be there payable on Portuguese ships importing the like sort of goods, or on the like goods, the growth, produce, or manufacture of any foreign country, and allowed to be imported into the said colony in Portuguese ships.

In like manner, Portuguese ships shall be allowed to proceed direct from any port of her Most Faithful Majesty's dominions to any colony of her Britannic Majesty, and to import into such colony any goods the growth, produce, or manufacture of Portugal, or of any of the Portuguese dominions, except such goods as are prohibited to be imported into such colony, or which are admitted into it only from the dominions of her Britannic Majesty; and such Portuguese ships, and such goods so imported in them, shall be liable, in such colony of her Britannic Majesty, to no higher or other duties and charges than would be there payable on British ships importing the like sort of goods, or on the like goods, the growth, produce, or manufacture of any foreign country, and allowed to be imported into the said colony in British ships.

9. British ships shall be allowed to export from any colony of her Most Faithful Majesty to any place not under the dominion of her said Majesty, any goods not generally prohibited to be exported from such colony; and such British ships, and such goods so exported in them, shall be liable in such colony, to no other or higher charges than would be payable by, and shall be entitled to the same drawbacks or bounties as would be there allowable on, Portuguese ships exporting such goods, or on such goods exported in Portuguese ships.

In like manner Portuguese ships shall be allowed to export from any colony of her Britannic Majesty to any place not under the dominion of her said Majesty, any goods not generally prohibited to be exported from such colony; and such Portuguese ships, and such goods so exported in them, shall be liable in such colony to no other or higher charges than would be payable by, and shall be entitled to the same drawbacks or bounties as would be there allowable on, British ships exporting such goods, or on such goods exported in British ships.

10. It is hereby declared that the stipulations of the present treaty are not to be understood as applying to the navigation and carrying trade between one port and another, situated in the dominions of either contracting party, if such navigation and trade should in those dominions be reserved by law exclusively to national vessels. Vessels of either country shall, however, be permitted to discharge part of their cargoes at one port in the dominions of either of the high contracting parties, and then to proceed, with the remainder of their cargo, to any other port or ports

th the interest of the high  
spectively.  
without delay be made the  
egotiation between the two

shall be allowed to proceed  
of her Britannic Majesty's  
loy of her Most Faithful  
port into such colony any  
duce, or manufacture of the  
of any of the British do-  
goods as are prohibited to  
ch colony, or which are ad-  
from the dominions of her  
ty; and such British ships,  
imported in them, shall be  
of her Most Faithful Majesty  
or duties and charges than  
yable on Portuguese ships  
ort of goods, or on the like  
roduce, or manufacture of  
and allowed to be imported  
in Portuguese ships.

Portuguese ships shall be  
direct from any port of her  
ty's dominions to any colony  
Majesty, and to import into such  
ne growth, produce, or manu-  
of any of the Portuguese  
uch goods as are prohibited to  
a colony, or which are admitted  
e dominions of her Britannic  
Portuguese ships, and such  
n them, shall be liable, in such  
nnic Majesty, to no higher or  
charges than would be there  
ships importing the like sort  
e goods, the growth, produce,  
of any foreign country, and  
orted into the said colony in

shall be allowed to export from  
Most Faithful Majesty to any  
dominion of her said Majesty,  
rally prohibited to be exported  
and such British ships, and  
rted in them, shall be liable, in  
other or higher charges than  
y, and shall be entitled to the  
r bounties as would be there  
tuguese ships exporting such  
goods exported in Portuguese

Portuguese ships shall be  
om any colony of her Britannic  
ec not under the dominion of  
any goods not generally pro-  
orted from such colony; and  
hips, and such goods so exported  
liable in such colony to no other  
hann would be payable by, and  
the same drawbacks or bounties  
e allowable on, British ships  
ods, or on such goods exported

declared that the stipulations  
ty are not to be understood as  
avigation and carrying trade  
and another, situated in the  
er contracting party, if such  
ade should in those dominions  
exclusively to national vessels,  
country shall, however, be per-  
ge part of their cargoes at one  
ions of either of the high con-  
und then to proceed, with the  
ergo, to any other port or ports

in the same dominions, without paying any higher  
or other duties in such cases, than national vessels  
would pay in like circumstances; and they shall  
be permitted to land, in like manner, at different  
ports in the same voyage onwards.

11. The reciprocal liberty of commerce and  
navigation declared and stipulated for by the  
present treaty, shall not extend to contraband of  
war, or to articles the property of the enemies of  
either party.

The power granted by former treaties to carry,  
in the ships of either country, goods and merchan-  
dise of any description whatever, the property of  
the enemies of the other country, is now mutually  
renounced.

12. In all cases in which, in either kingdom, the  
duty to be levied upon any goods imported from  
the other kingdom shall be not a fixed rate, but a  
proportion of the value of the goods, such ad va-  
lorem duty shall be ascertained and secured in the  
following manner; that is to say, the importer  
shall, on making his entry for the payment of  
duty at the custom-house, sign a declaration, stat-  
ing the description and value of the goods at such  
amount as he shall deem proper; and in case the  
officer or officers of the customs shall be of opinion  
that such valuation is insufficient, he or they shall  
be at liberty to take the goods, on paying to the  
importer the value thereof according to the decla-  
ration of the importer, together with an addition  
of 10 per cent.; and the custom-house officer shall,  
at the same time, return to the importer any duty  
which the importer may have paid upon such  
goods; and the amount of these sums shall be  
paid to the importer on the delivery of the goods  
to the said officer or officers, which must not be  
later than 15 days from the first detention of the  
goods.

13. Inasmuch as all merchandise, of whatever  
origin, whether admissible for home consump-  
tion or not, may be received and warehoused in  
all those ports of the United Kingdom of Great  
Britain and Ireland which are by law appointed  
to be warehousing ports for such articles, pending  
the entry of the same, either for home consump-  
tion or for re-exportation, as the case may be,  
under the regulations appointed for this purpose,  
and without such articles being liable, in the  
meantime, to the payment of any of the duties  
with which they would be charged, if upon arrival  
they were entered for consumption within the  
United Kingdom;—in like manner the Queen of  
Portugal consents and agrees that the ports of her  
Most Faithful Majesty's dominions, which now  
are or which shall hereafter become by law, ware-  
housing ports, shall be free ports for receiving and  
warehousing, either for home consumption or for  
re-exportation, as the case may be, all merchan-  
dise imported in British ships, and all articles  
whatever, the produce or manufacture of the  
British dominions, imported by Portuguese ships;  
and the articles thus received and warehoused,  
subject to due regulations, shall not be liable, in  
the meantime, to any of the duties with which  
they would be charged, if they were entered for  
consumption on their arrival in the dominions of  
her Most Faithful Majesty.

14. All goods or merchandise found on board  
of, or which shall have formed the cargo or part  
of the cargo of a vessel of the one country, which  
shall be wrecked, or left derelict, on or near the  
coast of the other country, unless the importation  
of such goods or merchandise shall be absolutely  
prohibited by law, shall be admitted for home  
consumption in the country on or near the coast  
of which such vessel shall be wrecked, or left  
derelict, or such goods or merchandise may be

found, on payment of the same duty, as if the said  
goods or merchandise had been imported in a  
national vessel, even though such goods or mer-  
chandise could not by law be imported into the  
said country in any other than national vessels;  
and in fixing the amount of duty to be paid on  
such goods or merchandise, regard shall be had to  
any damage which the said goods or merchandise  
may have sustained.

To prevent frauds, the Board of Customs of each  
nation shall exercise their judgment as to the  
causes of wrecks; and when they are satisfied  
that the said wrecks were the result of accident  
or misfortune, and free from suspicion of collusion,  
they shall authorise, at the option of the proprie-  
tor or agent, if present, or otherwise of the consul,  
the transhipment, or the sale for home consump-  
tion, of the goods or merchandise, provided that  
such goods and merchandise could have been  
legally imported by the ships of the one country  
into the ports of the other country.

If any ships of war or merchant vessels should  
be wrecked on the coasts of either of the high  
contracting parties, such ships or vessels, or any  
parts thereof, and all furniture and appurtenances  
belonging thereunto, and all goods or merchandise  
which shall be saved therefrom, or the produce  
thereof if sold, shall be faithfully restored to the  
proprietors, upon being duly claimed by them, or  
by their agents duly authorised; or if there are  
no such proprietors or agents on the spot, by the  
respective consuls of the nation to which the pro-  
prietors of the said ships, vessels, or goods may  
belong, and in whose district such wreck may  
have taken place, provided such claim be preferred  
within a year and a day from the time of such  
wreck; and such consul, proprietor, or agent shall  
pay only the expenses incurred in the preservation  
of the property, together with the rate of salvage  
which would have been payable in the like case  
of a wreck of a national vessel; and the goods  
and merchandise saved from the wreck shall not  
be subject to duties, unless cleared for local con-  
sumption.

15. If any merchant vessel of either country  
should be driven into the ports of the other by  
stress of weather, for the purpose of effecting ne-  
cessary repairs, every facility shall be afforded to  
such vessel for obtaining the assistance it may be  
in need of.

The strictest reciprocity shall be observed, in  
the most favourable sense, as to the relief to be  
afforded to such vessel from the duties, charges,  
and expenses in the ports of either nation, to  
which vessels, entering solely for the purposes of  
trade, are subjected. Sufficient time shall be  
allowed for the completion of repairs; and while  
the vessel shall be undergoing repair, its cargo  
shall not unnecessarily be required to be landed,  
either in whole or in part; and any difference of  
opinion which may arise between the custom-  
house authorities and the masters of the said  
vessel, as to the necessity of landing all or any  
part of the cargo, shall be referred to two sworn or  
public surveyors, one to be named by the chief  
custom-house authority of the port, and the other  
by the consul of the nation to which the vessel  
belongs.

Her Majesty the Queen of Portugal engages  
that the commerce of British subjects within the  
Portuguese dominions shall not be restrained,  
interrupted, or otherwise affected by the operation  
of any monopoly, contract, or exclusive privilege  
of sale or purchase whatsoever; but that the  
subjects of the United Kingdom shall have free  
and unrestrained permission to buy from and sell  
to whomsoever they please, and in whatever form

and manner may be agreed upon between the purchaser and seller, without being obliged to give any preference or favour in consequence of any such monopoly, contract, or exclusive privilege of sale and purchase. And her Britannic Majesty engages that a like exemption from restraint in respect to purchases or sales, shall be enjoyed by the subjects of her Most Faithful Majesty trading to or residing in the United Kingdom. But it is distinctly to be understood, that the present article shall not be interpreted as affecting the special regulations now in force, or which may hereafter be enacted, with a view solely to the encouragement and amelioration of the Donro wine trade (it being always understood that British subjects shall in respect of the said trade be placed on the same footing as Portuguese subjects), or with regard to the exportation of the salt of St. Ubes.

This article does not invalidate the exclusive right possessed by the crown of Portugal, within its own dominions, to the farm for the sale of ivory, urzela, gold dust, soap, gunpowder, and tobacco for home consumption: provided, however, that should the above-mentioned articles, generally or separately, ever become articles of free commerce within the dominions of her Most Faithful Majesty, the subjects of her Britannic Majesty shall be permitted to traffic in them as freely and on the same footing as the subjects or citizens of the most favoured nation.

16. It is agreed and covenanted, that neither of the high contracting parties shall knowingly receive into, or retain in its service, any subjects of the other party who have deserted from the naval or military service of that other party; but that, on the contrary, each of the contracting parties shall respectively discharge from its service any such deserters, upon being required by the other party to do so.

It is further agreed and declared, that if either of the high contracting parties shall grant to any State any new favour or facility, with respect to the recovery of deserters, such favour or facility shall be considered as granted also to the other contracting party, in the same manner as if the said favour or facility had been expressly stipulated by the present treaty.

And it is further agreed, that if any apprentices or sailors shall desert from vessels belonging to the subjects of either of the high contracting parties, while such vessels are within any port in the territory of the other party, the magistrates of such port and territory shall be bound to give every assistance in their power for the apprehension of such deserters, on application to that effect being made by the consul of the party concerned, or by the deputy or representative of the consul; and no public body, civil or religious, shall protect or harbour such deserters.

17. Her Britannic Majesty, on the representation of her Most Faithful Majesty, and in contemplation of the improving system of law and justice in Portugal, hereby consents to give up the exercise of the rights connected with the Conservatorial Court, so soon and so long as British subjects are admitted in Portugal to the benefit of securities similar or equivalent to those enjoyed by the subjects of her Most Faithful Majesty in Great Britain, as regards trial by jury, protection from arrest without a warrant from a magistrate, and examination within 24 hours after apprehension, *in flagrante delicto*, and admission to bail. It being always understood, that in other respects the subjects of her Britannic Majesty in Portugal shall be placed on the same footing as Portuguese subjects, in all causes, whether civil or criminal;

and that they shall not, except in cases *flagrantia delicti*, be liable to imprisonment without formal commitment (*culpa formada*) under a warrant signed by legal authority.

18. It is hereby agreed, that her Britannic Majesty, relying upon the guarantees which are or may be afforded to British subjects by the law of Portugal under the present constitutional system, henceforward claims for British subjects in Portugal no privileges which are not enjoyed by Portuguese subjects in the Portuguese or British dominions. It being, however, understood, that her Britannic Majesty will be entitled, in the event (which God forbid) of political troubles affecting the operation of the above-mentioned guarantees, to claim the re-establishment and observance of the privileges surrendered by the present and preceding Article.

19. The present treaty shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years, or at any subsequent time.

And it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this treaty, and all the provisions thereof, shall altogether cease and determine.

It is agreed, nevertheless, that either of the two high contracting parties shall have the right, at the end of 5 years, to require a revision of any articles not affecting the principle of the treaty, on giving 6 months' notice of a desire to make such revision: provided, however, that it be distinctly understood that the power of giving such notice shall not extend beyond, nor be recognised after, the termination of the fifth year.

The present treaty shall be ratified, and the ratifications shall be exchanged at Lisbon at the expiration of 2 months from the date of its signature, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Lisbon, the 3rd of July, in the year of our Lord 1842.

HOWARD DE WALDEN.  
DUQUE DE PALMELLA.

*True Intent and Spirit of certain Points of Treaty.*

Lisbon, July 3, 1842.

The undersigned, her Britannic Majesty's plenipotentiary for the negotiation of a treaty of commerce and navigation between Great Britain and Portugal, has the honour to declare to his Excellency the Duke of Palmella, that with reference to Article 5, all vessels built in the territory of her most faithful Majesty, or which shall be British built, or which shall have been captured from the enemy by the ships of the Portuguese Government, and slave vessels condemned under similar circumstances, and which shall be wholly owned by any subject or subjects of her Most Faithful Majesty, and whereof the master and three-fourths of the mariners are subjects of her Most Faithful Majesty, will be considered as Portuguese, and will be entitled to be placed on the footing of national vessels, and to be treated on an equality with the vessels of the most favoured nation, in the ports of her Britannic Majesty, i.e., in Great Britain and Ireland and the colonies hereinafter enumerated.

With reference to Article 8, in the words

in cases *flagrantis*  
it without formal  
under a warrant

that her Britannic  
guarantees which are  
subjects by the law  
constitutional sys-  
British subjects in  
are not enjoyed by  
Portuguese or British  
er, understood, that  
be entitled, in the  
of political troubles  
the above-mentioned  
establishment and  
surrendered by the

be in force for the  
hereof; and further,  
or either of the high  
give notice to the  
state the same; each  
reserving to itself  
to the other at the  
ars, or at any subse-

between them, that, at  
as after such notice  
either party from the  
the provisions thereof,  
terminate.

that either of the two  
all have the right, at  
give a revision of any  
people of the treaty, on  
a desire to make such  
; that it be distinctly  
of giving such notice  
or be recognised after  
year.

It be ratified, and the  
signed at Lisbon at the  
on the date of its sig-

respective plenipoten-  
taries, and have affixed  
their seals.

Done at London, the 2nd day of April, in the year of our Lord 1824.

HOWARD DE WALDEN.  
DUKE DE PALMELLA.

*Certain Points of Treaty.*

Lisbon, July 3, 1842.

Her Britannic Majesty's plenipotentiary, and three-fourths of the plenipotentiary of Great Britain and Ireland, do declare to his Excellency, the Governor of the said Kingdom of Portugal, that with reference to the territory of her Majesty which shall be British, and which shall be British, when captured from the Portuguese Government, and under similar circumstances, shall be wholly owned by her Majesty, and three-fourths of the plenipotentiary, Portuguese, and will be the footing of national equality with the said nation, in the ports of the said Kingdom, in Great Britain and Ireland, hereinafter enumerated, in article 8, in the words

'growth, produce, and manufacture,' the wines and brandies of Portugal are comprehended.

With reference to Article 14, the jurisdiction of the Cinque Ports does not interfere with the stipulations of this article.

With reference to Article 17, in respect to the declaration of her Britannic Majesty regarding the conditional surrender of the rights connected with the Conservatorial Court, whenever the Portuguese Government shall have officially communicated to her Majesty's Government any law or laws establishing the guarantees in question, her Majesty will recognise the right of the Portuguese Government to declare the further jurisdiction and authority of the British Conservatorial Court to have ceased by consent of her Majesty.

The colonies referred to are Canada, Newfoundland, Nova Scotia, Cape Breton, New Brunswick, Prince Edward Island, and all other British possessions in North America, British West Indies, including the islands and possessions on the continent of South America, Cape of Good Hope, and other possessions in Africa; the Mauritius, the Island of Ceylon, Van Diemen's Land, New South Wales, New Zealand.

HOWARD DE WALDEN.

Lisbon, July 3, 1842.

The undersigned, her Most Faithful Majesty's plenipotentiary, has the honour to declare, by order of the Government, to Lord Howard de Walden, in reference to the Article 1 of the treaty of commerce and navigation, by both concluded and signed to-day, between Portugal and Great Britain, that the maximo that can be collected from any British subject for *mancio* or *decima industrial*, will be 20 per cent. upon the rent of their shops, dwellings, and warehouses, which will serve as an invariable rule to the tribunal of the treasury for deciding the appeals made by British subjects.

DUKE OF PALMELLA.

Lisbon, July 3, 1842.

#### PRUSSIA.

*Convention of Commerce between his Britannic Majesty and the King of Prussia. Signed at London, April 2, 1824.*

Article 1. From and after the 1st of May next, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Prussian Majesty's dominions, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Prussia, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland, into the ports of Prussia, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Prussian ships; and the same reciprocity shall be observed in the ports of the United Kingdom, in respect to all articles not the growth, produce, or manufac-

ture of the dominions of his Prussian Majesty, which can legally be imported into the ports of the United Kingdom in Prussian ships.

4. All goods, which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the Government of either country, or by any company, corporation, or agent, acting on its behalf or under its authority, in the purchase of any article, the growth, produce, or manufacture of either country, imported into the other, on account of or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties that no distinction or difference whatever shall be made in this respect.

6. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intent to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years: and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

7. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 2nd day of April, in the year of our Lord 1824.

GEORGE CANNING.  
W. HUSKISSON.  
WERTHER.

An order in council, dated May 25, 1824, directs that, from May 1, 1824, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports; that all articles of the growth, produce, or manufacture of any of the dominions of his Prussian Majesty, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be imported into and exported from the said ports in Prussian vessels; that all articles not of the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported from Prussia into the ports of the United Kingdom in Prussian vessels, shall be subject only to the same duties as are payable upon the like articles if imported in British ships; that all goods which can legally be imported into the ports of the United Kingdom shall be admitted at the same rate of duty, when imported in Prussian vessels, that is charged on similar articles imported in British vessels; and that all goods which can be legally exported from the ports of the United Kingdom, shall be entitled to the same bounties,

drawbacks, and allowances, when exported in Prussian vessels, that are granted, paid, or allowed on similar articles when exported in British vessels.

A Treasury letter, dated October 13, 1824, directs, that with respect to pilotage and all other duties charged on vessels belonging to Prussia, Sweden, and Norway, Denmark, Hanover, and Hamburg, which have entered or which may enter the ports of the United Kingdom, either from stress of weather or from any other causes, it was the intention of the lords of the committee of Privy Council for Trade, that such dues should not be higher than are charged upon British vessels, and that it is only to the case of goods imported into this country, and not brought direct from the country to which the vessel belongs, that the equality of duty does not apply.

An order in council, dated May 3, 1823, states, that his Majesty is pleased to declare, that the ships of and belonging to the dominions of his Majesty the King of Prussia are entitled to the privileges granted by the law of navigation, and may import from the dominions of his Majesty the King of Prussia, into any of the British possessions abroad, goods the produce of such dominions, and may export goods from such British possessions abroad, to be carried to any foreign country whatever.

PRUSSIA, BAVARIA &c.

*Convention of Commerce and Navigation between Great Britain, on the one part; and Prussia, Bavaria, Saxony, Wurtemberg, Baden, the Electorate of Hesse, the Grand Duchy of Hesse, the States forming the Commercial Union of Thuringia, Nassau, and Frankfort, on the other part. March 2, 1841.*

Article I. In consideration of the circumstance that British vessels are admitted, together with their cargoes, to entry in the ports of Prussia, and of the other states of the aforementioned Union of Customs, when coming from the ports of all countries, and in consideration of the concessions stipulated in this present convention for British trade with all the states of this Union of Customs; in consideration also of the facility which the application of steam power to inland navigation affords for the conveyance of produce and merchandise of all kinds up and down rivers; and in consideration of the new opening which may by these means be given to the trade and navigation between the United Kingdom and the British possessions abroad on the one hand, and the states now composing the Union of Customs on the other; some of which states use as the natural outlet of their commerce ports not within their own dominions; it is agreed that, from and after the date of the exchange of the ratifications of this present convention, Prussian vessels, and the vessels of the other states forming the said Union of Customs, together with their cargoes, consisting of all such goods as can be legally imported into the United Kingdom and the British possessions abroad, by the said vessels from the ports of the countries to which they respectively belong, shall, when coming from the mouths of the Meuse, of the Ems, of the Weser, and of the Elbe, or from the mouths of any navigable river lying between the Elbe and the Meuse, and forming the means of communication between the sea and the territory of any of the German states which are parties to this treaty, be admitted into the ports of the United Kingdom, and of the British possessions abroad, in as full and ample a manner, as if the ports from which such vessels may have come, as

aforsaid, were within the dominions of Prussia, or of any other of the states aforsaid; and such vessels shall be permitted to import the goods above mentioned upon the same terms on which the said goods might be imported if coming from the national ports of such vessels; and also that, in like manner, such vessels proceeding from Great Britain and her colonial possessions abroad to the places thus referred to, shall be treated as if returning to a Prussian Baltic port: it being understood that these privileges are to extend to the vessels of Prussia and of the states aforsaid, and to their cargoes, only in respect to each of the said ports in which British vessels and their cargoes shall, upon their arrival thereat, and departure therefrom, continue to be placed on the same footing as the vessels of Prussia and of the other states of the union.

2. The King of Prussia, in his own name, and in the name of the states aforsaid, agrees to place, always and in every way, the trade and navigation of the subjects of her Britannic Majesty, in respect to the importation of sugar and rice, upon the same footing as that of the most favoured nation.

3. In the event of other German states joining the Germanic Union of Customs, it is hereby agreed that such other states shall be included in all the stipulations of the present convention.

4. The present convention shall be in force until the 1st of January, 1842, and further for the term of 5 years, provided neither of the high contracting parties shall have given to the other 6 months' previous notice that the same shall cease to be in force on the said 1st of January, 1842; and if neither party shall have given to the other 6 months' previous notice that the present convention shall cease on the first day of January, 1848, then the present convention shall further remain in force until the 1st of January, 1854, and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same, each of the high contracting parties reserving to itself the right of giving such notice to the other; and it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

The present convention shall be ratified, and the ratifications thereof shall be exchanged at London, at the expiration of 2 months, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 2nd day of March, in the year of our Lord 1841.

PALMERSTON.  
H. LADOUCHÈRE.

By an order in council, dated August 28, 1841, it is ordered, that Prussian vessels, and the vessels of the other states forming the German Union of Customs, together with their cargoes, consisting of all such goods as can be legally imported into the United Kingdom and the British possessions abroad, by the said vessels, from the ports of the countries to which they respectively belong, shall, when coming from the mouths of the Meuse, of the Ems, of the Weser, and of the Elbe, or from the mouths of any navigable river, lying between the Elbe and the Meuse, and forming the means of communication between the sea and the territory of any of the German states, which are

dominions of Prussia, and such ed to import the goods the same terms on which imported if coming from a vessels; and also that vessels proceeding from colonial possessions abroad ed to, shall be treated as if in Baltic port: it being privileges are to extend to and of the states aforesaid, ly in respect to each of the British vessels and their arrival thereat, and to be placed on the vessels of Prussia and of the

council, dated August 28, 1811, Russian vessels, and the vessels forming the German Union of with their cargoes, consisting s can be legally imported into and the British possessions vessels, from the ports of the they respectively belong, shall, the mouths of the Meuse, of eser, and of the Elbe, or from navigable river, lying between Meuse, and forming the means between the sea and the ter- the German states, which are

parties to this treaty, be admitted into the ports of the United Kingdom and of the British possessions abroad, in as full and ample a manner as if ports from which such vessels may have come as aforesaid, and such vessels shall be permitted to import the goods above-mentioned upon the same terms on which the said goods might be imported from the national ports of such vessels; and also that in like manner such vessels proceeding from Great Britain and her colonial possessions abroad, to the ports or places thus referred to, shall be treated as if returning to a Prussian Baltic port; it being understood that these privileges are to extend to the vessels or Prussia, and the states aforesaid, and to their cargoes only in respect to each of the said states, which British vessels and their cargoes shall, upon their arrival thereat and departure therefrom, continue to be placed upon the same footing as the vessels of Prussia and of the other states of the union.

*Treaty of Commerce between her Majesty and the Zollverein. Signed at Berlin, May 30, 1865. Ratifications exchanged at Berlin, June 30, 1865.*

Article 1. The subjects of her Britannic Majesty who dwell either temporarily or permanently in the States of the Zollverein, and the subjects of the States of the Zollverein who dwell either temporarily or permanently in the dominions or possessions of her Britannic Majesty, shall enjoy therein, in respect to the exercise of commerce and trades, the same rights as, and be subjected to no higher or other taxes than, the subjects of any third country the most favoured in those respects.

2. The produce and manufactures of the dominions and possessions of her Britannic Majesty which may be imported into the Zollverein, and the produce and manufactures of the States of the Zollverein which may be imported into the United Kingdom of Great Britain and Ireland, whether intended for consumption, warehousing, re-exportation, or transit, shall therein be treated in the same manner as, and in particular shall be subject to no higher or other duties than, the produce and manufactures of any third country the most favoured in those respects.

3. No other or higher duties shall be levied in the Zollverein on the exportation of any goods to the dominions and possessions of her Britannic Majesty, nor in the dominions and possessions of her Britannic Majesty on the exportation of any goods to the Zollverein, than are or may be levied on the exportation of the like goods to any third country the most favoured in that respect.

4. The transit of goods to and from the United Kingdom of Great Britain and Ireland shall be free from all transit duties in the Zollverein, and the transit of goods to and from the Zollverein shall be free from all transit duties in the United Kingdom of Great Britain and Ireland.

5. Any favour, privilege, or reduction in the tariff of duties of importation or exportation, which either of the contracting parties may concede to any third Power, shall be extended immediately and unconditionally to the other.

No prohibition of importation or exportation shall be established by either of them against the other, which shall not at the same time be applicable to all other nations.

The contracting parties engage not to prohibit the exportation of coal, and to levy no duty upon such exportation.

The preceding provisions respecting the prohibition of exportation shall not invalidate the

obligations which the constitution of the Germanic Confederation imposes on the German States which compose the Zollverein.

6. With regard to the marks or labels of goods, or of their packages, and also with regard to patterns and marks of manufacture and trade, the subjects of the States of the Zollverein shall enjoy in the United Kingdom of Great Britain and Ireland, and the subjects of her Britannic Majesty shall enjoy in the States of the Zollverein, the same protection as native subjects.

7. The stipulations of the preceding Articles 1 to 6 shall also be applied to the colonies and foreign possessions of her Britannic Majesty. In those colonies and possessions the produce of the States of the Zollverein shall not be subject to any higher or other import duties than the produce of the United Kingdom of Great Britain and Ireland, or of any other country, of the like kind; nor shall the exportation from those colonies or possessions to the Zollverein be subject to any higher or other duties than the exportation to the United Kingdom of Great Britain and Ireland.

8. The present treaty shall come into force on the 1st of July, 1865, and shall remain in force until the 30th of June, 1877. In case neither of the contracting parties shall, 12 months before the last-mentioned day, have given notice to the other of the intention to terminate the operation of the treaty, then the same shall continue in force until the expiration of one year from the day upon which either of the contracting parties shall have given notice to the other to terminate the same.

9. The present treaty shall be ratified, and the ratifications thereof shall be exchanged at Berlin in three weeks (this term was subsequently extended by protocol to the 30th of June), or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Berlin, the 30th day of May, in the year of our Lord 1865.

#### RUSSIA.

*Treaty of Commerce and Navigation between her Majesty and the Emperor of all the Russias; with three Separate Articles thereunto annexed. Signed at St. Petersburg, January 12, 1859.*

Article 1. There shall be between all the dominions and possessions of the two high contracting parties, reciprocal freedom of commerce and navigation. The subjects of each of the two contracting parties, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places, ports, and rivers in the dominions and possessions of the other, to which other foreigners are or may be permitted to come; and shall, throughout the whole extent of the dominions and possessions of the other, enjoy the same rights, privileges, liberties, favours, immunities, and exemptions in matters of commerce and navigation, which are or may be enjoyed by native subjects generally.

It is understood, however, that the preceding stipulations in no wise affect the laws, decrees, and special regulations regarding commerce, industry, and police, in vigour in each of the

two countries, and generally applicable to all foreigners.

2. No other or higher duties shall be imposed on the importation into the dominion and possessions of her Britannic Majesty, of any article the growth, produce, or manufacture of the dominions and possessions of his Majesty the Emperor of all the Russias, from whatever place arriving, and no other or higher duties shall be imposed on the importation into the dominions and possessions of his Majesty the Emperor of all the Russias, of any article the growth, produce, or manufacture of her Britannic Majesty's dominions and possessions, from whatever place arriving, than are or shall be payable on the like article, the growth, produce, or manufacture of any other foreign country; nor shall any prohibition be imposed on the importation of any article the growth, produce, or manufacture of the dominions and possessions of either of the two contracting parties into the dominions and possessions of the other, which shall not equally extend to the importation of the like articles being the growth, produce, or manufacture of any other country.

3. No other or higher duties or charges shall be imposed in the dominions and possessions of either of the contracting parties, on the exportation of any article to the dominions and possessions of the other, than such as are, or may be, payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the dominions and possessions of either of the two contracting parties to the dominions and possessions of the other, which shall not equally extend to the exportation of the like article to any other country.

4. The same reciprocal equality of treatment shall take effect in regard to warehousing, and to the transit trade, and also in regard to bounties, facilities, and drawbacks, which are or may be hereafter granted by the legislation of either country.

5. All merchandise and articles of commerce, the produce or manufacture either of the dominions and possessions of his Majesty the Emperor of all the Russias, or of any other country, which are or may be legally importable into the ports of the United Kingdom of Great Britain and Ireland, its dominions and possessions, in British vessels, may likewise be imported into those ports in Russian vessels, without being liable to any other or higher duties, of whatever denomination, than if such merchandise and articles were imported in British vessels; and reciprocally, all merchandise and articles of commerce, the produce or manufacture either of the United Kingdom of Great Britain and Ireland, its dominions and possessions, or of any other country, which are or may be legally importable into the ports of the dominions and possessions of his Majesty the Emperor of all the Russias, in Russian vessels, may likewise be imported into those ports in British vessels, without being liable to any other or higher duties, of whatever denomination, than if such merchandise and articles were imported in Russian vessels. Such reciprocal equality of treatment shall take effect without distinction, whether such merchandise and articles come directly from the place of origin, or from any other place.

In the same manner, there shall be perfect equality of treatment in regard to exportation, so that the same export duties shall be paid, and the same bounties and drawbacks allowed, in the dominions and possessions of either of the high contracting parties, on the exportation of any

article which is or may be legally exportable therefrom, without distinction, whether such exportation shall take place in Russian or in British vessels, and whatever may be the place of destination, whether a port of the other contracting party, or of any third power.

6. No duties of tonnage, harbour, pilotage, lighthouse, quarantine, or other similar or corresponding duties of whatever nature, or under whatever denomination, levied in the name or for the profit of Government, public functionaries, private individuals, corporations, or establishments of any kind, shall be imposed in the ports of either country upon the vessels of the other country, which shall not equally and under the same conditions be imposed in the like cases on national vessels in general; the intention of the two high contracting parties being that, save certain exemptions which the shipping of some ports of the United Kingdom of Great Britain and Ireland enjoys from old times, in this respect there shall not exist in their respective dominions and possessions, in regard to the above-mentioned duties, any privilege or preference whatever favouring the national flag to the prejudice of the flag of the other party. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

7. In all that regards the stationing, loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country; the intention of the contracting parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

8. The stipulations of the preceding articles shall not apply to the coasting trade, which each of the high contracting parties shall regulate according to its own laws.

The vessels of each of the two contracting parties shall, however, be at liberty, according as the captain, proprietor, or other person duly authorised to act as agent for the vessel or cargo, shall consider advisable, to proceed from one port of one of the two States to one or several ports of the same State, in order to discharge the whole or part of their cargo brought from abroad, or in order to take in or complete their cargo, without paying other duties than those to which national vessels are, or may hereafter be liable in similar cases.

9. All vessels which according to the laws of Great Britain are to be deemed British vessels, and all vessels which according to the laws of the Empire of Russia are to be deemed Russian vessels, shall for the purposes of this treaty be deemed British and Russian vessels respectively.

10. Her Britannic Majesty engages that in all matters relating to commerce and navigation, the subjects of his Majesty the Emperor of all the Russias shall, in the British dominions, be entitled to every privilege, favour, and immunity which is actually granted, or may hereafter be granted, by her Britannic Majesty to the subjects or citizens of any other power; and his Majesty the Emperor of all the Russias, actuated by a desire to foster and extend the commercial relations of the two countries, engages that any privilege, favour, or immunity whatever, in regard to commerce and navigation which his Imperial Majesty has actually granted, or may hereafter grant, to the subjects or citizens of any other state, shall be extended to the subjects of her Britannic Majesty.

11. The subjects of either of the two high contracting parties, conforming themselves to the laws of the country, shall have—

(1) Full liberty, with their families, to enter, travel, or reside in any part of the dominions and possessions of the other contracting party.

(2) They shall be permitted, in the towns and parts, to hire or possess the houses, warehouses, shops, and premises, which may be necessary for them.

(3) They may carry on their commerce, either in person or by any agents whom they may think fit to employ.

(4) They shall not be subject, in respect of their persons or property, or in respect of passports, licenses for residence or establishment, nor in respect of their commerce or industry, to any taxes, whether general or local, nor to imposts or obligations of any kind whatever, other or greater than those which are or may be imposed upon native subjects.

12. The dwellings and warehouses of the subjects of either of the two high contracting parties in the dominions and possessions of the other, and all premises appertaining thereto, destined for purposes of residence or commerce, shall be respected. If there should be occasion to make a search of, or a domiciliary visit to, such dwellings and premises, or to examine or inspect books, papers, or accounts, such measure shall be executed only in conformity with the legal warrant or order in writing of a tribunal, or of the competent authority.

The subjects of either of the two contracting parties in the dominions and possessions of the other shall have free access to the courts of justice for the prosecution and defence of their rights. They shall enjoy in this respect the same rights and privileges as subjects of the country, and shall, like them, be at liberty to employ, in all causes, their advocates, attorneys, or agents from among the persons admitted to the exercise of those professions according to the laws of the country.

13. The subjects of either of the two contracting parties in the dominions and possessions of the other shall be at full liberty to acquire, possess, and dispose of every description of property which the laws of the country may permit any foreigners, of whatsoever nation, to acquire and possess. They may acquire and dispose of the same, whether by purchase, sale, donation, exchange, marriage, testament, succession *ab intestato*, or in any other manner, under the same conditions as are established by the laws of the country for all foreigners. Their heirs and representatives may succeed to and take possession of such property, either in person or by agents acting on their behalf, in the same manner and in the same legal forms as subjects of the country. In the absence of heirs and representatives, the property shall be treated in the same manner as the like property belonging to a subject of the country under similar circumstances.

In none of these respects shall they pay upon the value of such property any other or higher impost, duty, or charge, than is payable by subjects of the country. In every case the subjects of the contracting parties shall be permitted to export their property, or the proceeds thereof if sold, freely, and without being subjected on such exportation to pay any duty as foreigners, or any other or higher duties than those to which subjects of the country are liable under similar circumstances.

14. The subjects of either of the two high contracting parties in the dominions and possessions of

the other, shall be exempted from all compulsory military service whatever, whether in the army, navy, or national guard or militia. They shall be equally exempted from all judicial and municipal charges and functions whatever, as well as from all contributions, whether pecuniary or in kind, imposed as a compensation for personal service; and, finally, from forced loans and military exactions or requisitions.

In regard, however, to judicial and municipal charges and functions, those shall be excepted which are consequent upon the possession of real property or of a lease; and in regard to military exactions and requisitions, those which all subjects of the country may be required to furnish as landed proprietors or as farmers.

15. It shall be free for each of the two high contracting parties to appoint consuls-general, consuls, vice-consuls, and consular agents, to reside in the towns and ports of the dominions and possessions of the other. Such consuls-general, consuls, vice-consuls, and consular agents, however, shall not enter upon their functions until after they shall have been approved and admitted in the usual form by the Government to which they are sent. They shall exercise whatever functions, and enjoy whatever privileges, exemptions, and immunities are or shall be granted there to consuls of the most favoured nation.

16. Any ship of war or merchant-vessel of either of the high contracting parties which may be compelled by stress of weather or by accident to take shelter in a port of the other, shall be at liberty to reit therein, to procure all necessary stores, and to put to sea again, without paying any dues other than such as would be payable in a similar case by a national vessel. In case, however, the master of a merchant vessel should be under the necessity of disposing of a part of his merchandise in order to defray his expenses, he shall be bound to conform to the regulations and tariffs of the place to which he may have come.

If any ship of war or merchant vessel of one of the high contracting parties should run aground or be wrecked upon the coasts of the other, such ship or vessel, and all parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise saved therefrom, including any which may have been cast into the sea, or the proceeds thereof if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents when claimed by them. If there are no such owners or agents on the spot, then the same shall be delivered to the British or Russian consul-general, consul, or vice-consul in whose district the wreck or stranding may have taken place, upon being claimed by him within the period fixed by the laws of the country; and such consuls, owners, or agents, shall pay only the expenses incurred in the preservation of the property, together with the salvage, or other expenses, which would have been payable in the like case of a wreck of a national vessel.

The goods and merchandise saved from the wreck shall be exempt from all duties of customs, unless cleared for consumption, in which case they shall pay the same rate of duty as if they had been imported in a national vessel.

In the case either of a vessel being driven in by stress of weather, run aground, or wrecked, the respective consuls-general, consuls, vice-consuls, and consular agents shall, if the owner or master or other agent of the owner is not present, or is present and requires it, be authorised to interpose in order to afford the necessary assistance to their fellow-countrymen.

17. The consuls-general, consuls, vice-consuls, and consular agents of either of the high contracting parties, residing in the dominions and possessions of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from ships of war or merchant vessels of their respective countries.

18. The Ionian Islands being under the protection of her Britannic Majesty, the subjects and vessels of those Islands shall enjoy, in the dominions and possessions of his Majesty the Emperor of Russia, all the advantages which are granted by the present treaty to the subjects and vessels of Great Britain, as soon as the Government of the Ionian Islands shall have agreed to grant the same reciprocal advantages in those Islands to Russian subjects and vessels; it being understood that, in order to prevent abuses, every Ionian vessel claiming the benefits of the present treaty shall be furnished with a patent signed by the lord high commissioner or his representative.

19. The stipulations of the present treaty shall be applicable to all vessels navigating under the Russian flag, without any distinction between the Russian Mercantile Marine, properly so called, and that which belongs more particularly to the Grand Duchy of Finland, which forms an integral part of the empire of Russia.

In regard to commerce and navigation in the Russian possessions on the north-west coast of America, the convention concluded at St. Petersburg on the <sup>16</sup>/<sub>28</sub>th of February, 1825, shall continue in force.

20. The high contracting parties being desirous to secure, each within its own dominions, complete and effectual protection against fraud for the manufactures of the other, have agreed that any piracy, or fraudulent imitation in one of the two countries of the manufacturers' or tradesmen's marks originally affixed, bonâ fide, to goods produced in the other, in attestation of their origin and quality, shall be strictly prohibited and repressed. Her Britannic Majesty engages to recommend to her Parliament to adopt such measures as may be required to enable her to give the more complete execution to the stipulations of this article.

21. The high contracting parties reserve to themselves to determine hereafter, by a special convention, the means of reciprocally protecting copyright in works of literature and of the fine arts, within their respective dominions.

22. The present treaty of commerce and navigation shall remain in force for ten years from the date of the exchange of the ratifications; and further, until the expiration of twelve months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other at the expiration of the first nine years, or at any time afterwards.

The present treaty shall be ratified, and the ratification shall be exchanged at London in six weeks or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at St. Petersburg, this 12th day of  
January, in the year of our Lord 1859  
December, 31st day of 1858

JOHN F. CRAMPTON.  
PRINCE A. GORTCHACOW.

1. The commercial intercourse of Russia with the kingdoms of Sweden and Norway being regulated by special stipulations, which may hereafter be renewed, and which do not form part of the regulations applicable to foreign commerce in general, the two high contracting parties, being desirous of removing from their commercial relations every kind of doubt or cause for discussion, have agreed that those special stipulations granted in favour of the commerce of Sweden and Norway, in consideration of equivalent advantages granted in those countries to the commerce of the Grand Duchy of Finland, shall in no case apply to the relations of commerce and navigation established between the two high contracting parties by the present treaty.

11. It is equally understood that the exemptions, immunities, and privileges hereinafter mentioned, shall not be considered as at variance with the principle of reciprocity which forms the basis of the treaty of this date, that is to say:—

1. The exemption from navigation dues during the first three years, which is enjoyed by vessels built in Russia, and belonging to Russian subjects;

2. The permission granted to the inhabitants of the coast of the Government of Archangel, to import duty free, or on payment of moderate duties, into the ports of the said Government, dried or salted fish, as likewise certain kinds of furs, and to export therefrom, in the same manner, corn, rope, and cordage, pitch, and raven-duck;

3. The privilege of the Russian American Company;

4. The immunities granted in Russia to certain English and Netherland Companies, called 'Yacht Clubs.'

111. The present separate articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications thereof exchanged at the same time.

In witness whereof &c.

SIAM.

*Treaty of Friendship and Commerce between her Majesty the Queen of the United Kingdom and the Kings of Siam.*

Article 1. There shall henceforward be perpetual peace and friendship between her Majesty and her successors, and their Majesties the Kings of Siam and their successors. All British subjects coming to Siam shall receive from the Siamese Government full protection and assistance to enable them to reside in Siam in all security, and trade with every facility, free from oppression or injury on the part of the Siamese; and all Siamese subjects going to an English country shall receive from the British Government the same complete protection and assistance that shall be granted to British subjects by the Government of Siam.

2. The interests of all British subjects coming to Siam shall be placed under the regulation and control of a consul, who will be appointed to reside at Bangkok: he will himself conform to, and will enforce the observance by British subjects of, all the provisions of this treaty, and such of the former treaty negotiated by Captain Bumeo, in 1826, as shall still remain in operation. He shall also give effect to all rules or regulations that are now or may hereafter be enacted for the government of British subjects in Siam, the conduct of their trade, and for the prevention of violations of the laws of Siam. Any disputes

der which British Trade is  
acted in Siam.

Every English ship coming to  
Siam, either before or after  
it may be found convenient,  
at the vessel at the custom-house  
with the number of his crew  
from whence he comes.  
If a vessel at Paknam, he will  
carry the body of the custom-house  
ammunition; and a custom-  
house officer will be appointed to the vessel,  
or to Bangkok.

A Paknam without discharg-  
ing ammunition as directed in the  
manifest will be sent back to Paknam  
provisions, and will be fined  
or disobeyed. After delivery  
of the ammunition she will be permitted  
to trade.

Every vessel shall have cast anchor  
at Paknam, unless a Sunday should  
fall on a four-and-twenty hours after  
the British consulate, and de-  
posit papers, bills of lading &c.  
manifest of his import cargo;  
and reporting these particulars  
to the consulate, permission to break bulk  
of the latter.

When to report his arrival, or for  
his manifest, the master will subject  
himself to a penalty of 400 Ticals,  
if not correct, within twenty-  
four hours of it to the consul, any  
cover in his manifest, without  
mentioned penalty.

When a vessel breaking bulk, and com-  
ing before due permission shall  
be loading either when in the river  
shall be subject to the penalty  
of confiscation of the goods so  
loaded.

When a British vessel shall have dis-  
charged and completed her outward  
duties, and delivered a true  
manifest of her cargo to the British  
consulate, clearance shall be granted  
from the consul, who, in the  
absence of any impediment to her departure,  
will deliver the master his ship's papers,  
and permit her to leave. A custom-house  
officer will inspect the vessel at Paknam,  
and she will be inspected by the  
officers of that station, and will  
carry the guns and ammunition pre-  
pared to their charge.

On Inland Duties to be levied on  
Articles of Trade.

Articles of trade shall be entirely  
free from other taxes, on production of  
any export duties as follows:—

	Tical	Satang	Fuang	Hun	
21. Bird's nests, uncleaned	-	10	0	0	0 per 100
22. Kingfisher's feathers	-	0	2	0	0 per pecul
23. Catfish	-	0	2	0	0 "
24. Bayche seed (Nux vomica)	-	0	2	0	0 "
25. Panatrat seed	-	4	0	0	0 "
26. Ginn Benjamin	-	4	0	0	0 "
27. Anarat bark	-	0	2	0	0 "
28. Agila wood	-	2	0	0	0 "

TURKEY.

*Capitulations and Articles of Peace between Great  
Britain and the Ottoman Empire, as agreed upon,  
augmented, and altered, at different Periods,  
and, finally, confirmed by the Treaty of Peace  
concluded at the Dardanelles, in 1809.*

SULTAN MEHEMED,  
MAY HE LIVE FOR EVER.

*'Let everything be done in conformity to these  
capitulations, and contrary thereto let nothing be  
done.'*

Article 1. The English nation and merchants,  
and all other merchants sailing under the English  
flag, with their vessels and merchandise of all  
descriptions, may pass safely by sea, and go and come  
into dominions, without any the least prejudice  
or molestation being given to their persons, prop-  
erty, or effects, by any person whatsoever; but  
they shall be left in the undisturbed enjoyment  
of their privileges, and be at liberty to attend to  
their affairs.

2. If any of the English coming into our  
dominions by land be molested or detained, such  
persons shall be instantly released, without any  
further obstruction being given to them.

3. English vessels entering the ports and har-  
bours of our dominions shall and may at all times  
safely and securely abide and remain therein, and  
at their free will and pleasure depart therefrom,  
without any opposition or hindrance from anyone.

4. If it shall happen that any of their ships  
suffer by stress of weather, and not be provided  
with necessary stores and requisites, they shall be  
assisted by all who happen to be present, whether

the crews of our Imperial ships, or others, both by  
sea and land.

5. Being come into the ports and harbours of  
our dominions, they shall and may be at liberty to  
purchase at their pleasure, with their own money,  
provisions and all other necessary articles, and to  
provide themselves with water, without interrup-  
tion or hindrance from anyone.

6. If any of their ships be wrecked upon any of  
the coasts of our dominions, all beys, cadis, govern-  
ors, commandants, and others our servants, who  
may be near or present, shall give them all help,  
protection, and assistance, and restore to them  
whatsoever goods and effects may be driven  
ashore; and in the event of any plunder being  
committed they shall make diligent search and  
enquiry to find out the property, which, when  
recovered, shall be wholly restored to them.

7. The merchants, interpreters, bankers, and  
others of the said nation, shall and may, both by  
sea and land, come into our dominions, and there  
trade with the most perfect security; and in coming  
and going, neither they nor their attendants shall  
receive any the least obstruction, molestation, or  
injury, either in their persons or property, from  
the beys, cadis, sea captains, soldiers, and others  
our slaves.

17. Our ships and galleys, and all other vessels,  
which may fall in with any English ships in the  
seas of our dominions, shall not give them any  
molestation, nor detain them by demanding any-  
thing, but shall show good and mutual friend-  
ship the one to the other, without occasioning  
them any prejudice.

19. If the corsairs or galliots of the Levant  
be found to have taken any English vessels, or  
robbed or plundered them of their goods and  
effects, also if anyone shall have forcibly taken  
anything from the English, all possible diligence  
and exertion shall be used and employed for the  
discovery of the property, and inflicting condign  
punishment on those who may have committed  
such depredations; and their ships, goods, and  
effects shall be restored to them without delay  
or intrigue.

21. Duties shall not be demanded or taken of  
the English or of the merchants sailing under the  
flag of that nation, on any piastres and sequins they  
may import into our sacred dominions, or on those  
they may transport to any other place.

26. English merchants, and all others sailing  
under their flag, may freely and unrestrictedly,  
trade and purchase all sorts of merchandise (pro-  
hibited commodities alone excepted), and convey  
them, either by land or sea, or by the way of the  
river Tanais, to the countries of Muscovy or  
Russia, and bring back thence other merchandise  
into our sacred dominions, for the purposes of  
traffic, and also transport others to Persia and  
other conquered countries.

38. Should the ships bound for Constantinople  
be forced by contrary winds to put into Caffa, or  
any other place of those parts, and not be disposed  
to buy or sell anything, no one shall presume  
forcibly to take out or seize any part of their  
merchandise, or give to the ships or crews any  
molestation, or obstruct the vessels that are bound  
to these parts.

40. On their ships arriving at any port, and  
landing their goods, they may, after having paid  
their duties, safely and securely depart, without  
experiencing any molestation.

41. English ships bound to Constantinople,  
Alexandria, Tripoli of Syria, Scanderoon, or other  
ports of our sacred dominions, shall in future be  
bound to pay duties, according to custom, on  
such goods only as they shall, of their own free

will, land with a view to sale; and for such merchandise as they shall not discharge, no duty shall be demanded, neither shall the least molestation or hindrance be given to them.

44. English and other merchants navigating under their flags, who trade to Aleppo, shall pay such duties on the silks, brought and laden by them on board their ships, as are paid by the French and Venetians, and not one asper more.

55. The Imperial fleet, galleys, and other vessels, departing from our sacred dominions, and falling in with English ships at sea, shall in no wise molest or detain them, nor take from them anything whatsoever. English ships shall no longer be liable to any further search, or exaction at sea, under colour of search or examination.

70. English ships coming to the ports of Constantinople, Alexandria, Smyrna, Cyprus, and other ports of our sacred dominions, shall pay 300 aspers for anchorage duty, without an asper more being demanded of them.

72. No molestation shall be given to any of the aforesaid nation buying camlets, molairs, or program yarn, at Angora and Haghbazar, and desirous of exporting the same from thence, after having paid the duty of 3 per cent., by any demand of customs for the exportation thereof, neither shall one asper more be demanded of them.

75. That it being represented to us that English merchants have been accustomed hitherto to pay no custom or scale duty, either on the silks bought by them at Brussa and Constantinople or on those which come from Persia and Georgia, and are purchased by them at Smyrna from the Armenians; if such usage or custom really exists, and the same be not prejudicial to the empire, such duty shall not be paid in future.

(N.B.—These capitulations may be found entire in Hertzel's *Treaties*; and in Chitty's *Commercial Law*, vol. ii. pp. 290-511. Appen.)

*Treaty between Great Britain and the Sublime Porte, concluded at the Dardanelles, the 5th of January, 1809.*

Article I. From the moment of signing the present treaty, every act of hostility between England and Turkey shall cease.

5. In return for the indulgence and good treatment afforded by the Sublime Porte to English merchants, with respect to their goods and property as well as in all matters tending to facilitate their commerce, England shall reciprocally extend every indulgence and friendly treatment to the flags, subjects, and merchants of the Sublime Porte, which may hereafter frequent the dominions of his Britannic Majesty for the purpose of commerce.

The last Custom-house tariff established at Constantinople, at the ancient rate of 3 per cent., and particularly the article relating to the interior commerce, shall continue to be observed, as they are at present regulated, and to which England promises to conform.

English patents of protection shall not be granted to dependents, or merchants who are subjects of the Sublime Porte, nor shall any passport be delivered to such persons, on the part of ambassadors or consuls, without permission previously obtained from the Sublime Porte.

Done near the Castles of the Dardanelles, the 5th of January, 1809, which corresponds with the year of the Hegira 1223, the 19th day of the moon Zilkade.

SEYD MEHMET EMIN VAAD EFFENDI.  
ROBERT ADAIR.

*Treaty of Commerce and Navigation between her Majesty and the Sultan. Signed at Kauldja, April 29, 1861. Ratifications exchanged at Constantinople, July 9, 1861.*

Article I. All rights, privileges, and immunities which have been conferred on the subjects or ships of Great Britain by the existing capitulations and treaties, are confirmed now and for ever, with the exception of those clauses of the said capitulations which it is the object of the present treaty to modify; and it is moreover expressly stipulated, that all rights, privileges, or immunities which the Sublime Porte now grants or may hereafter grant to, or suffer to be enjoyed by, the subjects, ships, commerce, or navigation of any other foreign Power, shall be equally granted to, and exercised and enjoyed by, the subjects, ships, commerce, and navigation of Great Britain.

2. The subjects of her Britannic Majesty, or their agents, shall be permitted to purchase, at all places in the Ottoman dominions and possessions (whether for the purposes of internal trade or of exportation) all articles, without any exception whatsoever, the produce or manufacture of the said dominions and possessions; and the Sublime Porte having, in virtue of the second Article of the convention of commerce of August 16, 1838, formally engaged to abolish all monopolies of agricultural produce or of any other articles whatsoever, as well as all permits (*tesheres*) from the local governors, either for the purchase of any article, or for its removal from one place to another, when purchased, any attempt to compel the subjects of her Britannic Majesty to receive such permits from the local governors shall be considered as an infraction of treaties, and the Sublime Porte shall immediately punish with severity any viziers or other officers who shall have been guilty of such misconduct, and shall render full justice to British subjects for all injuries or losses which they may duly prove themselves to have suffered thereby.

3. If any article of Turkish produce or manufacture be purchased by British merchants or their agents, for the purpose of selling the same for internal consumption in Turkey, the said British merchants or their agents shall pay, at the purchase and sale of such articles, and in any manner of trade therein, the same duties that are paid in similar circumstances by the most favoured class of Ottoman subjects, or of foreigners engaged in the internal trade of Turkey.

4. No other or higher duties or charges shall be imposed in the dominions and possessions of either of the contracting parties, on the exportation of any article to the dominions and possessions of the other, than such as are or may be payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the dominions and possessions of either of the two contracting parties to the dominions and possessions of the other, which shall not equally extend to the exportation of the like article to any other country.

No charge or duty whatsoever will be demanded on any article of Turkish produce or manufacture purchased by British subjects or their agents, either at the place where such article is purchased, or in its transit from that place to the place where it is exported, at which it will be subject to an export duty not exceeding eight per cent. calculated on the value at the place of shipment, and payable on exportation; and all articles which shall once have paid this duty shall not again be

shall pass through the straits of the Dardanelles or of the Bosphorus, whether such goods shall pass through those straits in the ships that brought them, or shall have been transhipped to other vessels; or whether, after having been sold for exportation, they shall, for a certain limited time, be landed in order to be placed in other vessels for the continuance of their voyage.

In the latter case the goods in question shall be deposited at Constantinople in the magazines of the custom-house, called *transit* magazines; and in any other places where there is no entrepôt, they shall be placed under the charge of the administration of the customs.

12. The Sublime Porte desiring to grant by means of gradual concessions all facilities in its power to transit by land, it is stipulated and agreed that the duty of three (3) per cent. levied up to this time on articles imported into Turkey in their passage through Turkey to other countries, shall be reduced to two (2) per cent., payable, as the duty of three per cent. has been paid hitherto, on arriving in the Ottoman dominions; and at the end of eight years, to be reckoned from the day of the exchange of the ratifications of the present treaty, to a fixed and definite tax of one (1) per cent., which shall be levied, as is to be the case with respect to Turkish produce exported, to defray the expense of registration.

The Sublime Porte at the same time declares that it reserves to itself the right to establish, by a special enactment, the measures to be adopted for the prevention of fraud.

13. Her Britannic Majesty's subjects, or their agents, trading in goods the produce or manufacture of foreign countries, shall be subject to the same taxes, and enjoy the same rights, privileges, and immunities as foreign subjects dealing in goods, the produce or manufacture of their own country.

14. An exception to the stipulations laid down in the fifth article shall be made in regard to tobacco, in any shape whatsoever, and also in regard to salt, which two articles shall cease to be included among those which the subjects of her Britannic Majesty are permitted to import into the Ottoman dominions.

British subjects, however, or their agents, buying or selling tobacco or salt for consumption in Turkey, shall be subject to the same regulations, and shall pay the same duties, as the most favoured Ottoman subjects trading in the two articles aforesaid; and furthermore, as a compensation for the prohibition of the two articles above mentioned, no duty whatsoever shall in future be levied on those articles when exported from Turkey by the subjects of her Britannic Majesty.

British subjects shall, nevertheless, be bound to declare the quantity of tobacco and salt thus exported, to the proper custom-house authorities, who shall, as heretofore, have the right to watch over the export of these articles, without thereby being entitled to levy any tax thereon on any pretence whatsoever.

15. It is understood between the two high contracting parties, that the Sublime Porte reserves to itself the faculty and right of issuing a general prohibition against the importation into the Ottoman dominions of gunpowder, cannon, arms of war, or military stores; but such prohibition will not come into operation until it shall have been officially notified, and will apply only to the articles mentioned in the decree enacting the prohibition. Any of these articles which have not been so specifically prohibited, shall, on being imported into the Ottoman dominions, be subject

to the local regulations, unless her Britannic Majesty's embassy shall think fit to apply for a special license, which license will in that case be granted, provided no valid objection thereto can be alleged.

Gunpowder, in particular, when allowed to be imported, will be liable to the following stipulations:—

1st. It shall not be sold by subjects of her Britannic Majesty in quantities exceeding the quantities prescribed by the local regulations.

2ndly. When a cargo or a large quantity of gunpowder arrives in an Ottoman port on board a British vessel, such vessel shall be anchored at a particular spot to be designated by the local authorities, and the gunpowder shall thence be conveyed, under the inspection of such authorities, to depôts or fitting places designated by the Government, to which the parties interested shall have access under due regulations.

Fowling-pieces, pistols, and ornamental or fancy weapons, as also small quantities of gunpowder for sporting, reserved for private use, shall not be subject to the stipulations of the present article.

16. The firmans required for British merchant-vessels, on passing through the Dardanelles and the Bosphorus, shall always be delivered in such manner as to occasion to such vessels the least possible delay.

17. The captains of British merchant-vessels, with goods on board destined for the Ottoman empire, shall be obliged, immediately on their arrival at the port to which they are bound, to deposit in the custom-house of the said port a true copy of their manifest.

18. Contraband goods will be liable to confiscation by the Ottoman treasury; but a report or procès-verbal of the alleged act of contraband must, as soon as the said goods are seized by the authorities, be drawn up and communicated to the consular authority of the foreign subject to whom the goods said to be contraband shall belong; and no goods can be confiscated as contraband, unless the fraud with regard to them shall be duly and legally proved.

19. All merchandise, the produce or manufacture of the Ottoman dominions and possessions, imported into the dominions and possessions of Her Britannic Majesty, shall be treated in the same manner as the like merchandise the produce or manufacture of the most favoured nation.

All rights, privileges, or immunities which are now or may hereafter be granted to, or suffered to be enjoyed by, the subjects, ships, commerce, or navigation of any foreign Power in the British dominions or possessions, shall be equally granted to, and exercised and enjoyed by, the subjects, ships, commerce, and navigation of the Ottoman Porte.

20. The present treaty, when ratified, shall be substituted for the convention concluded between the two high contracting parties on the 16th of August, 1838, and shall remain in force for twenty-eight years from the day of the exchange of the ratifications; each of the high contracting parties being, however, at liberty to give to the other, at the end of fourteen years (that time being fixed, as the provisions of this treaty will then have come into full force), notice for its revision, or for its determination at the expiration of a year from the date of that notice, and so again at the end of twenty-one years.

The present treaty shall receive its execution in all and every one of the provinces of the Ottoman empire, that is to say, in all the possessions of his Imperial Majesty the Sultan situated in Europe

unless her Britannic Majesty think fit to apply for a concession in that case her objection thereto can

ar, when allowed to be to the following stipu

shall by subjects of her Britannic Majesty exceeding the local regulations,

or a large quantity of Ottoman port on board shall be anchored at a designated by the local powder shall thence be portion of such unthe places designated by the parties interested shall regulations.

ty, when ratified, shall be vention concluded between g parties on the 16th of 1 remain in force for twenty- of the exchange of the ly the high contracting parties e to give to the other, at ars (that time being fixed, his treaty will then have notice for its revision, or for e expiration of a year from y, and so again at the end of

shall receive its execution in e provinces of the Ottoman in all the possessions of his Sultan situated in Europe

or in Asia, in Egypt and in the other parts of Africa belonging to the Sublime Porte, in Servia, and in the united principalities of Moldavia and Wallachia.

The Sublime Porte declares that she is ready to grant to other foreign Powers who may seek to obtain them, the commercial advantages contained in the stipulations of the present treaty.

21. It is always understood that her Britannic Majesty does not pretend, by any Article in the present treaty, to stipulate for more than the plain and fair construction of the terms employed, nor to preclude in any manner the Ottoman Government from the exercise of its rights of internal administration, where the exercise of those rights does not evidently infringe upon the privileges accorded by ancient treaties, or by the present treaty, to British subjects or British merchandise.

22. The high contracting parties have agreed to appoint, jointly, commissioners for the settlement of a tariff of custom-house duties, to be levied in conformity with the stipulations of the present treaty, as well upon merchandise of every description being the produce or manufacture of the British dominions and possessions imported into the Sultan's dominions and possessions, as upon articles of every description the produce or manufacture of the dominions and possessions of the Sultan, which British subjects or their agents are free to purchase in any part of the Ottoman dominions and possessions for exportation to Great Britain or to any other country.

The new tariff to be so concluded shall remain in force during seven years, dating from the first of October, one thousand eight hundred and sixty-one.

Each of the contracting parties shall have the right, a year before the expiration of that term, to demand the revision of the tariff. But if, during the seventh year, neither the one nor the other of the contracting parties shall avail itself of this right, the tariff then existing shall continue to have the force of law for seven more years, dating from the day of the expiration of the seven preceding years; and the same shall be the case with respect to every successive period of seven years.

23. The present treaty shall be ratified, and the ratifications shall be exchanged at Constantinople in two calendar months, or sooner if possible, and shall be carried into execution from the first of October, one thousand eight hundred and sixty-one.

Done at Kaulidja, on the twenty-ninth day of April, one thousand eight hundred and sixty-one.

HENRY L. BULWER.  
AALI.

#### UNITED STATES.

*Convention of Commerce between Great Britain and the United States of America. Signed at London, the 3rd of July, 1815.*

Article 1. There shall be between all the territories of his Britannic Majesty in Europe, and the territories of the United States, a reciprocal liberty of commerce. The inhabitants of the two countries respectively shall have liberty freely and securely to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; and also to hire and occupy houses and warehouses for the purpose of their commerce; and generally the merchants and traders of each nation respec-

tively shall enjoy the most complete protection and security for their commerce; but subject always to the laws and statutes of the two countries respectively.

2. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty in Europe, of any articles, the growth, produce, or manufacture of the United States, and no higher or other duties shall be imposed on the importation into the United States, of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any higher or other duties or charges be imposed in either of the two countries on the exportation of any articles to his Britannic Majesty's territories in Europe, or to the United States, respectively, than such as are payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation or importation of any articles, the growth, produce, or manufacture of the United States, or of his Britannic Majesty's territories in Europe, to or from the said territories of his Britannic Majesty in Europe, or to or from the said United States, which shall not equally extend to all other nations.

No higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels, than those payable in the same ports by vessels of the United States; nor in the ports of any of his Britannic Majesty's territories in Europe on the vessels of the United States, than shall be payable in the same ports on British vessels.

The same duties shall be paid on the importation into the United States of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, whether such importation shall be in the vessels of the United States, or in British vessels; and the same duties shall be paid on the importation into the ports of any of his Britannic Majesty's territories in Europe of any articles, the growth, produce, or manufacture of the United States, whether such importation shall be in British vessels, or in vessels of the United States.

The same duties shall be paid, and the same bounties allowed, on the exportation of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, to the United States, whether such exportation shall be in vessels of the United States, or in British vessels; and the same duties shall be paid, and the same bounties allowed, on the exportation of any articles, the growth, produce, or manufacture of the United States, to his Britannic Majesty's territories in Europe, whether such exportation shall be in British vessels, or in vessels of the United States.

It is further agreed, that in all cases where drawbacks are or may be allowed upon the re-exportation of any goods, the growth, produce, or manufacture of either country respectively, the amount of the said drawbacks shall be the same, whether the said goods shall have been originally imported in a British or American vessel; but when such re-exportation shall take place from the United States in a British vessel, or from the territories of his Britannic Majesty in Europe in an American vessel, to any other foreign nation, the two contracting parties reserve to themselves, respectively, the right of regulating or diminishing, in such case, the amount of the said drawback.

The intercourse between the United States and his Britannic Majesty's possessions in the West Indies, and on the continent of North America, shall not be affected by any of the provisions of this article, but each party shall remain in the complete possession of its rights with respect to such an intercourse.

3. His Britannic Majesty agrees that the vessels of the United States of America shall be admitted and hospitably received at the principal settlements of the British dominions in the East Indies, viz. *Calcutta, Madras, Bombay, and Prince of Wales' Island*, and that the citizens of the said United States may freely carry on trade between the said principal settlements and the said United States, in all articles of which the importation and exportation respectively, to and from the said territories, shall not be entirely prohibited; provided only, that it shall not be lawful for them, in any time of war between the British Government and any state or power whatever, to export from the said territories, without the special permission of the British Government, any military stores, or naval stores, or rice. The citizens of the United States shall pay for their vessels, when admitted, no higher or other duty or charge than shall be payable on the vessels of the most favoured European nations, and they shall pay no higher or other duties or charges on the importation or exportation of the cargoes of the said vessels, than shall be payable on the same articles when imported or exported in the vessels of the most favoured European nations.

But it is expressly agreed, that the vessels of the United States shall not carry any articles from the said principal settlements to any port or place, except to some port or place in the United States of America, where the same shall be unladen.

It is also understood, that the permission granted by this article is not to extend to allow the vessels of the United States to carry on any part of the coasting trade of the said British territories; but the vessels of the United States, having in the first instance proceeded to one of the said principal settlements of the British dominions in the East Indies, and then going with their original cargoes, or any part thereof, from one of the said principal settlements to another, shall not be considered as carrying on the coasting trade. The vessels of the United States may also touch for refreshments, but not for commerce, in the course of their voyage to or from the British territories in India, or to or from the dominions of the Emperor of China, at the Cape of Good Hope, the island of St. Helena, or such other places as may be in the possession of Great Britain, in the African or Indian seas; it being well understood, that in all that regards this article, the citizens of the United States shall be subject in all respects to the laws and regulations of the British Government from time to time established.

4. It shall be free for each of the two contracting parties respectively to appoint consuls, for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall in the usual form be approved and admitted by the Government to which he is sent; and it is hereby declared, that in case of illegal and improper conduct towards the laws or Government of the country to which he is sent, such consul may either be punished according to law, if the laws will reach the case, or be sent back, the offended Government assigning to the other the reasons for the same.

It is hereby declared, that either of the con-

tracting parties may except from the residence of consuls such particular places as such party shall judge fit to be so excepted.

5. This convention, when the same shall have been duly ratified by his Britannic Majesty and by the President of the United States, by and with the advice and consent of their Senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said United States for 4 years from the date of its signature; and the ratifications shall be exchanged in 6 months from this time, or sooner if possible.

This convention was subsequently prolonged by conventions for that purpose in 1818 and 1827.

*Convention between Great Britain and the United States of America. Signed at London, October 20, 1818.*

Article I. Whereas differences have arisen respecting the liberty claimed by the United States for the inhabitants thereof, to take, dry, and cure fish, on certain coasts, bays, harbours, and creeks, of his Britannic Majesty's dominions in America, it is agreed between the high contracting parties, that the inhabitants of the said United States shall have for ever, in common with the subjects of his Britannic Majesty, the liberty to take fish of every kind on that part of the coast of Newfoundland which extends from Cape Ray to the Rameau Islands, on the western and northern coasts of Newfoundland, from the said Cape Ray to the Quirpon Islands, on the shores of the Magdalen Islands, and also on the coasts, bays, harbours, and creeks, from Mount Joly, on the southern coast of Labrador, to and through the Straits of Belleisle, and thence northwardly indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson Bay Company; and that the American fishermen shall also have liberty, for ever, to dry and cure fish in any of the unsettled bays, harbours, and creeks of the southern part of the coast of Newfoundland, and of the coast of Labrador; but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish, without previous agreement for such purpose with the inhabitants, proprietors, or possessors of the ground. And the United States hereby renounce for ever any liberty heretofore enjoyed or claimed by the inhabitants thereof to take, dry, or cure fish on or within 3 marine miles of any of the coasts, bays, creeks, or harbours of his Britannic Majesty's dominions in America, not included within the above-mentioned limits; provided, however, that the American fishermen shall be admitted to enter such bays or harbours for the purpose of shelter and of repairing damages therein, of purchasing wood, and of obtaining water, and for no other purpose whatever; but they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner abusing the privileges hereby reserved to them.

2. It is agreed that a line drawn from the most north-western point of the Lake of the Woods, along the 49th parallel of north latitude, or if the said point shall not be in the 49th parallel of north latitude, then that a line drawn from the said point due north or south, as the case may be, until

except from the residence of  
r places as such party shall  
elected.

when the same shall have  
his Britannic Majesty and  
the United States, by and  
consent of their Senate, and  
nations mutually exchanged,  
and obligations exchanged,  
and obligatory on his Majesty  
the United States for 4 years from  
signature; and the ratifications  
in 6 months from this time, or

the 3rd of July, 1815.

FRED. J. ROBINSON.  
HENRY GOULBURN.  
WILLIAM ADAMS.

H. CLAY.

ALBERT GALATIN.  
was subsequently prolonged  
that purpose in 1818 and 1827.

*Treaty Britain and the United  
States, Signed at London, October*

as differences have arisen re-  
lained by the United States  
thereof, to take, dry, and cure  
fish, bays, harbours, and creeks,  
the high contracting parties,  
of the said United States  
in common with the subjects  
of the said United States, the  
liberty to take fish of  
part of the coast of Newfound-  
land from Cape Ray to the Ramen-  
ster and northern coasts of  
the said Cape Ray to the  
shores of the Magdalen  
on the coasts, bays, harbours,  
Mount Joly, on the southern  
to and through the Straits of  
and northwardly indefinitely  
without prejudice, however, to  
the rights of the Hudson Bay  
at the American fishermen shall  
ever, to dry and cure fish in  
all bays, harbours, and creeks of  
the coast of Newfoundland,  
Labrador; but so soon as the  
on thereof, shall be settled, it  
for the said fishermen to dry  
at previous agreement for such  
inhabitants, proprietors, or pos-  
sessed. And the United States  
or over any liberty heretofore  
by the inhabitants thereof to  
fish on or within 3 marine miles  
of the coasts, bays, creeks, or harbours of  
the high contracting parties in America,  
in the above-mentioned limits;  
that the American fishermen  
to enter such bays or harbours  
shelter and of repairing damages  
using wool, and of obtaining  
for other purpose whatever; but  
under such restrictions as may be  
at their taking, drying, or curing  
in any other manner abusing the  
reserved to them.

that a line drawn from the most  
point of the Lake of the Woods,  
parallel of north latitude, or if the  
it be in the 49th parallel of north  
latitude, a line drawn from the said  
point south, as the case may be, until

the said line shall intersect the said parallel of  
north latitude, and from the point of such inter-  
section due west along and with the said parallel,  
shall be the line of demarcation between the ter-  
ritories of the United States and those of his  
Britannic Majesty, and that the said line shall  
form the northern boundary of the said territories  
of the United States, and the southern boundary  
of the territories of his Britannic Majesty, from  
the Lake of the Woods to the Stony Mountains.

3. It is agreed that any country that may be  
claimed by either party on the north-west coast  
of America, westward of the Stony Mountains,  
shall, together with its harbours, bays, and creeks,  
be free and open, for the term of 10 years from the  
date of the signature of the present convention, to  
the vessels, citizens, and subjects of the two  
Powers: it being well understood that this agree-  
ment is not to be construed to the prejudice of any  
claim which either of the two high contracting  
parties may have to any part of the said country,  
nor shall it be taken to affect the claims of any  
other Power or State to any part of the said  
country, the only object of the high contracting  
parties, in that respect, being to prevent disputes  
and differences among themselves.

4. All the provisions of the convention to re-  
gulate the commerce between the territories of  
the United States and of his Britannic Majesty,  
concluded at London, on July 3, in the year of  
our Lord 1815, with the exception of the clause  
which limited its duration to 4 years, and except-  
ing, also, so far as the same was affected by the  
declaration of his Majesty, respecting the island  
of St. Helena, are hereby extended and continued  
in force for the term of 10 years from the date  
of the signature of the present convention, in the  
same manner as if all the provisions of the said  
convention were herein specially recited.

5. Whereas it was agreed by the first article of  
the treaty of Ghent, that 'all territory, places, and  
possessions whatever, taken by either party from  
the other during the war, or which may be taken  
after the signing of this treaty, excepting only  
the islands hereinafter mentioned, shall be restored  
without delay, and without causing any destruc-  
tion, or carrying away any of the artillery, or  
other public property originally captured in the  
said forts or places, which shall remain therein  
upon the exchange of the ratifications of this  
treaty; or any slaves, or other private property;'  
and whereas, under the aforesaid article, the  
United States claim for their citizens, and as their  
private property, the restitution of, or full com-  
pensation for, all slaves who at the date of the  
exchange of the ratifications of the said treaty  
were in any territory, place, or possessions what-  
soever, directed by the said treaty to be restored  
to the United States, but then still occupied by  
the British forces, whether such slaves were, at  
the date aforesaid, on shore, or on board any  
British vessel lying in waters within the territory  
or jurisdiction of the United States; and whereas  
differences have arisen, whether by the true intent  
and meaning of the aforesaid Article of the treaty  
of Ghent, the United States are entitled to the  
restoration of, or full compensation for, all or any  
slaves as above described, the high contracting  
parties hereby agree to refer the said differences  
to some friendly sovereign or state to be named  
for that purpose: and the high contracting parties  
further engage to consider the decision of such  
friendly sovereign or state to be final and conclu-  
sive on all the matters referred.

6. This convention, when the same shall have  
been duly ratified by the President of the United

States, by and with the advice and consent of  
their senate, and by his Britannic Majesty, and  
the respective ratifications mutually, shall be  
binding and obligatory on the said United States  
and on his Majesty; and the ratifications shall be  
exchanged in 6 months from this date, or sooner  
if possible.

In witness whereof, the respective plenipoten-  
taries have signed the same, and have thereunto  
affixed the seal of their arms.

Done at London, October 20, 1818.

ALBERT GALATIN.

FREDERICK JOHN ROBINSON.  
HENRY GOULBURN.

#### URUGUAY.

*Treaty of Amity, Commerce, and Navigation be-  
tween her Majesty and the Oriental Republic of  
the Uruguay. Signed at London, August 26,  
1812.*

Article 1. There shall be perpetual peace and  
amity between the dominions and subjects of her  
Majesty the Queen of the United Kingdom of  
Great Britain and Ireland, her heirs and suc-  
cessors, and the Oriental Republic of the Uruguay  
and its citizens.

2. There shall be between all the territories of  
her Britannic Majesty in Europe, and the terri-  
tories of the Oriental Republic of the Uruguay, a  
reciprocal freedom of commerce. The subjects  
and citizens of the two countries, respectively,  
shall have liberty freely and securely to come,  
with their ships and cargoes, to all places, ports,  
and rivers in the territories aforesaid, to which  
other foreigners are or may be permitted to come;  
to enter into the same, and to remain and reside  
in any part of the said territories respectively;  
also to hire and occupy houses and warehouses  
for the purposes of their commerce; and, gene-  
rally, the merchants and traders of each nation  
shall enjoy, within the territories of the other, the  
most complete protection and security for their  
commerce; subject always to the laws and  
statutes of the land.

In like manner the respective ships of war and  
post-office packets of the two countries shall  
have liberty freely and securely to come to all  
harbours, rivers, and places, in either country, to  
which other foreign ships of war and packets are  
or may be permitted to come; and they shall be  
allowed to enter into the same, to anchor and to  
remain there and reef; subject always to the  
laws and statutes of the two countries respectively.

It is hereby declared, that the stipulations of  
the present article are not to be understood as  
applying to the navigation and carrying trade  
between one port and another, situated in the  
dominions of either contracting party; such  
navigation and trade being reserved exclusively  
to national vessels.

3. There shall be reciprocal liberty of commerce  
and navigation between and amongst the subjects  
and citizens of the two high contracting parties;  
and the subjects and citizens of the two countries  
respectively shall not pay in the ports, harbours,  
roads, cities, towns, or places whatsoever in either  
country, any other or higher duties, taxes, or  
imposts, under whatsoever names designated or  
included, than those which are there paid by the  
subjects or citizens of the most favoured nation;  
and the subjects and citizens of each of the high  
contracting parties shall enjoy the same rights,  
privileges, liberties, favours, immunities, and ex-  
emptions, in matters of commerce and navigation,  
that are granted or may hereafter be granted in

either country to the subjects or citizens of the most favoured nation.

No duty of customs or other impost shall be charged upon any goods the produce of one country, upon importation by sea or by land from such country into the other, higher than the duty or impost charged upon goods of the same kind, the produce of or imported from any other country. And her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and the Oriental Republic of the Uruguay, do hereby bind and engage themselves not to grant any favour, privilege, or immunity, in matters of commerce and navigation, to the subjects or citizens of any other state, which shall not be also and at the same time extended to the subjects or citizens of the other high contracting party; gratuitously, if the concession in favour of that other state shall have been gratuitous; and on giving as nearly as possible the same compensation or equivalent, in case the concession shall have been conditional.

4. No higher or other duties or payments on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any local charges, shall be imposed in any of the ports of the one country upon the vessels of the other, than are payable in those ports upon national vessels.

5. The same duties shall be paid on all articles, the growth, produce, or manufacture of her Britannic Majesty's dominions, when imported into the territories of the Oriental Republic of the Uruguay, whether such article be imported in vessels of the said republic, or in British vessels; and the same duties shall be paid on all articles the growth, produce, or manufacture of the said republic, when imported into the dominions of her Britannic Majesty, whether such article be imported in British vessels or in vessels of the said republic. The same duties shall be paid, and the same bounties and drawbacks allowed, on all articles the growth, produce, or manufacture of her Britannic Majesty's dominions, when exported to the said republic of the Uruguay, whether such articles be exported in vessels of the said republic, or in British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on all articles the growth, produce, or manufacture of the said republic, when exported to the dominions of her Britannic Majesty, whether such articles be exported in British vessels, or in vessels of the said republic.

6. In order to avoid any misunderstanding with respect to the regulations which may respectively determine what shall be considered a British vessel, or a vessel of the Oriental Republic of the Uruguay, when engaged in commerce between the two countries, it is hereby agreed, that all vessels built in the dominions of her Britannic Majesty, or having been made prize of war and condemned as such, or having been forfeited under any law made for the prevention of the slave trade, and condemned in any competent court for a breach of such law, and which shall be owned and navigated by subjects of her Majesty, and whereof the master and three-fourths at least of the mariners shall be subjects of her Britannic Majesty, and which shall be registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built within the territory of the said Oriental Republic of the Uruguay, or having been made prize of war and condemned as such, or having been forfeited under any law made for the prevention of the slave trade, and condemned in any competent court for a breach of such law, or

being of bona fide British construction, built in any port of her Britannic Majesty's dominions, and acquired by purchase; and which shall be owned and navigated by citizens of the said republic, and whereof the master and three-fourths at least of the mariners shall be citizens of the said republic, or matriculated subjects of her Britannic Majesty, and which shall be registered according to the laws of the said republic, shall be considered as vessels of the said Oriental Republic of the Uruguay, so far as shall relate to any commercial rights or privileges in the several ports of her Britannic Majesty's dominions.

And it is further agreed, that no ship considered as being the ship of either country shall be qualified to trade as above described under the provisions of this treaty, unless she be furnished with a register, passport, or sea-letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries, and in a form to be reciprocally communicated by the two Governments to each other. Such register, passport, or sea-letter shall certify the name, occupation, and residence of the owner or owners in the dominions of her Britannic Majesty, or in the territories of the Oriental Republic of the Uruguay, as the case may be; shall declare that he or they is or are the sole owner of the ship, or owners in the proportion to be specified; and shall state the name, burden, and description of the vessel, as to build and measurement; and if the vessel is of foreign build, of what country, and, as far as may be possible, when and from whom purchased, and all other particulars constituting the national character of the vessel, as the case may be.

7. The subjects of her Britannic Majesty shall have full liberty, in all the territories of the Oriental Republic of the Uruguay, to manage their own affairs themselves, or to commit them to the manage- ment of whomsoever they please, as broker, factor, agent, or interpreter; and they shall not be obliged to employ any other persons in those capacities than those employed by the citizens of the Oriental Republic of the Uruguay; and they shall not be restrained in their choice of persons to act in such capacities, nor be obliged to pay them any other salary or remuneration, than such as is paid in like cases by the citizens of the said republic; and absolute freedom shall be allowed in all cases to the buyer and seller to bargain and fix the price of any goods, wares, or merchandise imported into and exported from the Oriental Republic of the Uruguay, as they shall see fit, provided they observe the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of her Britannic Majesty by the citizens of the Oriental Republic of the Uruguay, under the same conditions.

The subjects and citizens of each of the contracting parties respectively shall, in the territories of the other, receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

8. In whatever relates to the police of ports; the lading and unlading of ships; the safety of merchandise, goods, and effects; the succession to personal estates by will or otherwise; and the disposal of personal property of every sort and

British construction, built in Her Majesty's dominions, and which shall be by citizens of the said re- master and three-fourths bers shall be citizens of the rculated subjects of her d which shall be registered of the said republic, shall be of the said Oriental Republic ar as shall relate to any privileges in the several Majesty's dominions.

And, that no ship considered rther country shall be qualie described under the provi- unless she be furnished with r, or sea-letter, under the r person authorised to grant to the laws of the respective orm to be reciprocally com- Governments to each other, r, or sea-letter shall certify a, and residence of the owner dominions of her Britannic territories of the Oriental agnauy, as the case may be; e, or they is or are the sole owners in the proportion to shall state the name, burden, the vessel, as to build and if the vessel is of foreign ntry, and, as far as may be from whom purchased, and rs constituting the national sel, as the case may be.

Her Britannic Majesty shall in all the territories of the of the Uruguay, to manage themselves, or to commit them of-whomsoever they please, as out, or interpreter; and they l to employ any other persons than those employed by the tial Republic of the Uruguay; be restrained in their choice of such capacities, nor be obliged other salary or remuneration, d in like cases by the citizens ic; and absolute freedom shall ases to the buyer and seller to price of any goods, wares, or ted into and exported from the of the Uruguay, as they shall ey observe the laws and esta- the country. The same privi- oyed in the dominions of her y the citizens of the Oriental rguay, under the same con-

l citizens of each of the con- spectively shall, in the ter- r, receive and enjoy full and e for their persons and property, e and open access to the courts id countries respectively, for the efence of their just rights; and berty to employ, in all causes, rorneys, or agents of whatever y they may think proper; and n this respect, the same rights ein as native citizens. relates to the police of ports; mading of ships; the safety of is, and effects; the succession to y will or otherwise; and the al property of every sort and

denomination by sale, donation, exchange, or in any other manner whatsoever; and to the administration of justice; the subjects and citizens of each of the two contracting parties shall enjoy, in the dominions and territories of the other, the same privileges, liberties, and rights, as native subjects or citizens; and they shall not be charged in any of these respects with any higher imposts or duties than those which are or may be paid by natives; conforming, of course, to the local laws and regulations of such dominions or territories.

And it is further agreed, that the subjects and citizens of the two contracting parties shall have and enjoy, in the dominions or territories of each other, the most full and perfect liberty to devise or dispose of their property and effects of every kind and denomination, and whosoever situate, by will or testament, to such person or persons, and in such proportions, as their own free will may dictate.

If any subject or citizen of either of the two contracting parties should die without will or testament in the dominions or territories of the other, the consul-general or consul, or, in his absence, the representative of such consul-general or consul, shall have the right to nominate curators to take charge of the property of the deceased, so far as the laws of the country will permit, for the benefit of the lawful heirs and creditors of the deceased, without being interfered with by the authorities of the country, but giving to those authorities due and proper notice.

9. The subjects of her Britannic Majesty residing in the territories of the Oriental Republic of the Uruguay, and the citizens of the said republic residing in the dominions of her Britannic Majesty, shall be exempted from all compulsory military service whatsoever, either by sea or land, and from all forced loans or military exactions or requisitions.

Neither shall they be compelled, under any pretext whatsoever, to pay any charges, requisitions, or taxes, greater than those which are or may be paid by native subjects or citizens of the territories in which they reside.

10. It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but no consul shall act as such until he shall in the usual form be approved and admitted by the Government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as they may judge fit to be excepted. The diplomatic agents and consuls of the Oriental Republic of the Uruguay, in the dominions of her Britannic Majesty, shall enjoy whatever privileges, exemptions, and immunities are or may there be granted to agents of the same rank belonging to the most favoured nation; and in like manner the diplomatic agents and consuls of her Britannic Majesty, in the territories of the Oriental Republic of the Uruguay, shall enjoy, according to the strictest reciprocity, whatever privileges, exemptions, and immunities are or may there be granted to the diplomatic agents and consuls of the most favoured nation.

11. For the better security of commerce between the subjects of her Britannic Majesty and the citizens of the Oriental Republic of the Uruguay, it is agreed, that if at any time any interruption of friendly intercourse or any rupture should unfortunately take place between the two countries, the subjects or citizens of either of the two contracting parties who may be within the territories of the other, shall, if residing upon the coasts, be

allowed 4 months, and if residing in the interior, 9 months, to wind up their accounts and to dispose of their property; and a safe conduct shall be given to all such of the aforesaid persons as may choose to quit the country, to enable them to embark unmolested at the port which the Government of the country shall select. It is, moreover, further agreed, that all subjects or citizens of either of the two contracting parties who, at the time of any such interruption of friendly relations between the two countries, shall be established in the exercise of any trade or special employment in the dominions or territories of the other, shall have the privilege of remaining and of continuing such trade and employment therein, without any manner of interruption, in full enjoyment of their liberty and property, so long as they conduct themselves peaceably, and commit no offence against the laws; and their goods and effects, of whatever description, whether in their own custody or entrusted to individuals or to the state, shall not be liable to seizure or sequestration, or to any other charges or demands than those to which like effects or property belonging to native subjects or citizens may be liable. Debts between individuals, property in the public funds, and shares of companies shall never be confiscated, sequestrated, or detained.

12. The subjects of her Britannic Majesty, and the citizens of the Oriental Republic of the Uruguay, respectively, residing in the territories of the other party, shall enjoy, in their houses, persons, and properties, the protection of the Government, and continue in possession of the privileges which they now legally enjoy. They shall not be disturbed, molested, or annoyed in any manner on account of their religion, but they shall have perfect liberty of conscience, provided they respect the religion of the country in which they reside, as well as the constitution, laws, and customs of the land. They shall also have permission to celebrate divine service, according to the rites and ceremonies of their own church, either within their own private houses, or in their own particular churches or chapels, which they shall be at liberty to build and maintain in convenient places, approved of by the Government. Liberty shall also be granted to the subjects or citizens of either of the two contracting parties resident in the territories of the other, to bury, in burial-places of their own, such of their fellow-subjects or fellow-citizens who may die in such territories. Such burial-places may be freely established and maintained; and the funerals and sepulchres of the dead shall not be disturbed in any way, or upon any account.

13. The present treaty shall be in force for the term of 10 years from the date thereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years, or at any subsequent time.

And it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this treaty, and all the provisions thereof, shall altogether cease and determine.

14. The present treaty shall be ratified, and the ratifications shall be exchanged at London, as soon as possible within the period of 18 months from the date thereof.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of August, in the year of our Lord 1842.

AMERDEEN.  
RIFOX.  
JOSE ELLAURI.

*Additional Article.*

Whereas by Article 9 of the treaty of amity, commerce, and navigation, concluded and signed this day between her Britannic Majesty and the Oriental Republic of the Uruguay, it is stipulated that the subjects of her Britannic Majesty residing in the said republic shall not be compelled, under any pretext whatsoever, to pay any charges, requisitions, or taxes, greater than those which are or may be paid by native citizens; and whereas, by a law of the Oriental Republic of the Uruguay, a foreigner pays for the license to open a shop, or other establishment included in the provisions of the said law, a sum greater than that which is paid by a native citizen; her Britannic Majesty engages, notwithstanding the provisions of the above-mentioned article, not to insist upon the abolition of this distinction, so long as it exists impartially with regard to the subjects or citizens of every other foreign nation.

And his Excellency the President of the Oriental Republic of the Uruguay engages, on his part, that if at any future time the amount payable by British subjects for such license should be increased, a corresponding increase shall at the same time be made in the sum payable by native citizens of the republic; so that the proportion between the sum payable by British subjects and the sum payable by citizens of the Oriental Republic of the Uruguay, respectively, shall never be altered to the prejudice of British subjects.

The present additional article shall have the same force and validity as if it were inserted, word for word, in the treaty signed this day. It shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of August, in the year of our Lord 1842.

RIFOX.  
JOSE ELLAURI.

*Second Additional Article.*

Whereas a strict and immediate execution of that part of Article 6 of the treaty of amity, commerce, and navigation, signed at London on the 26th of August, 1842, between her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and the Oriental Republic of the Uruguay, which stipulates that a ship must have been actually built within the territory of the Oriental Republic of the Uruguay, to be considered a ship of that republic, would, in the present state of Uruguay shipping, deprive the republic of the full advantage of the reciprocity intended to be established by the treaty; it is agreed that, for the space of 7 years from the date of the exchange of the ratifications of the said treaty, any ships, whosoever built, being owned, navigated, and registered in conformity with the provisions of Article 6 of the treaty, shall be considered as ships of the Oriental Republic of the Uruguay; her Majesty the Queen of the United Kingdom of Great Britain and Ireland reserving to herself the right to claim, at the end of the said term of 7 years, the strict enforcement of all the stipulations contained in the said article of the treaty,

relative to the conditions which are to determine the national character of vessels of the Oriental Republic of the Uruguay.

The present additional article shall have the same force and validity as if it had been inserted, word for word, in the aforesaid treaty of the 26th of August, 1842. It shall be ratified, and the ratifications shall be exchanged at the same time and place as those of the treaty.

In witness whereof, the undersigned plenipotentiaries of her Britannic Majesty, and of the Oriental Republic of the Uruguay, have signed the same, and have affixed thereto the seals of their arms.

Done at Montevideo, the 8th day of March, in the year of our Lord 1843.

J. H. MANDEVILLE.  
SANTIAGO VASQUEZ.

ZOLLVEREIN.

See treaty under Prussia in this article.

TREBIZOND (anciently Trapezus, from its resemblance to a trapezium). A town of Asia Minor, on the south-east coast of the Black Sea, lat. 41° 1' N., long. 39° 45' 48" E. Population estimated by Mr. Consul W. G. Palgrave, in his very instructive *Report on the Provinces of Trebizond &c.*, presented to Parliament in 1869, at 33,301. The old town is built on a rock rising rapidly from the sea. It is a place of great antiquity; and from the year 1203 to the final subversion of the Eastern empire by Mohammed II, in the 15th century was the seat of a dukedom, or, as it was sometimes called, an empire, comprising the country between the Phasis and the Halys. Its fortifications are still of some strength, at least for a Turkish city. The space included within the walls is not of great extent; but the chief part of the western town lies without these walls. The houses are mean in their outward appearance, and comfortless within. (Tournefort, *Voyage du Levant*, tome ii. pp. 231-9; Kinnier's *Journey through Asia Minor* &c. p. 338; Mr. Consul Palgrave's *Report on Anatolian Provinces*, vol. for August to December 1868, pp. 338, 339.)

The increase in the commerce of Trebizond, in consequence of its becoming the entrepôt for the transit trade with Persia as well as for the trade with the adjacent countries, led to its extension and improvement; and the stimulus so given was greatly increased by circumstances growing out of the late war with Russia.

*Harbour.*—Trebizond has two ports, one on the W. and one on the E. side of a small peninsula, or point of land, projecting a short way into the sea. That on the E. is the best sheltered, and is the place of anchorage for the largest ships. It is, however, exposed to all but the southerly gales; but it does not appear that, with ordinary precaution, any danger need be apprehended. The ground, from  $\frac{1}{4}$  to  $\frac{1}{2}$  mile E. from the point, is good sand and clay, and holds extremely well. Ships moor with open hawse to the north, and a good hawser and stream anchor on shore, as a sternfast. At night, the wind always comes off the land. There is a fixed light on the point, and there is a second light at Platana, about 6 miles west. Captain Middleton says that the only bad weather is from the N.W.; but that, though the swell be considerable, it does not cause any heavy strain upon the cables. (*Nautical Magazine*, vol. ii. p. 181.) At Platana, near Trebizond, and quite as exposed, Turkish vessels have from time immemorial rode in safety the whole winter; a satisfactory proof that the danger supposed to be incident to the Black Sea coast are wholly visionary. (*Id.* p. 211. *Id.*)

quite as exposed, Turkish vessels  
immemorial role in safety the  
satisfactory proof of what the dan-  
be incident to the coasting trade  
visionary. (N.W. p. 25.)

Palgrave says that only one vessel within living  
memory has been lost in this harbour.

**Trade.**—In antiquity, and in more modern  
times, previously to the conquest of Constanti-  
nople by the Turks, and the exclusion of all  
foreign vessels from the Black Sea, Trebizond was  
the seat of an extensive trade. Anyone, indeed,  
who casts his eye over a map of W. Asia, must be  
satisfied that this city is the natural emporium of  
all the countries to the S.E. of the Black Sea,  
from Kars on the east, round by Diarbekor to  
Amasia on the west. Erzeroum, the principal  
city of Armenia, is only about 135 miles S.E.  
from Trebizond. Its merchants are distinguished  
by their superior attainments, and by their enter-  
prise and activity. For a lengthened period they  
derived most part of their supplies of European  
commodities by way of Smyrna or Constantinople;  
nothing, however, but the impossibility of obtaining  
them at so convenient a port as Trebizond, could  
have made them resort to such distant markets  
as those now mentioned; and it may well excite  
surprise, considering the period during which the  
Black Sea has been open, that efforts were not  
sooner made to establish an intercourse with

Armenia, Georgia, and the north-western parts of  
Persia, through this channel. We are glad, how-  
ever, to have to state, that within these few years  
this has been done; and, notwithstanding the  
difficulties that necessarily attach to every at-  
tempt to open new channels of commerce with  
semi-civilised nations, the experiment has proved  
more than ordinarily successful.

The transit trade of Trebizond with Persia em-  
ploys, according to Mr. Palgrave, about 60,000  
pack horses, carrying yearly 120,000 loads, each  
about 3½ cwt., or 21,000 tons in all, 3,000 camels,  
3,000 oxen, and 6,000 asses, and is valued at about  
1,300,000*l.* yearly. There are no road dues, but  
a fixed 2 per cent. is charged as customs. Besides  
the East Anatolian inland traffic, valued at  
595,000*l.*, Trebizond has an extensive trade with  
Batoum, Ridont Kalé, and other ports on the  
Black Sea; and sometimes, when the crops in the  
adjacent territory are deficient, it imports large  
quantities of corn from the Danube and Odessa.  
The imports from England principally consist of  
cotton stuffs and twist; iron, hardware, machi-  
nery, and coal; tin and tin-plates; sugar, tea,  
and other articles of colonial produce &c.

Of the exports, silk is the most important;  
and next to it are raisins, nuts, saffron, tobacco,  
oppor, wax, shawls, beans, galls, leeches &c.

**Money, Weights, and Measures,** same as at  
CONSTANTINOPLE.

**Port Regulations.**—When a vessel arrives at  
Trebizond, the master comes ashore to the Health  
Office, to exhibit his bill of health, and, after  
undergoing a short interrogation, is admitted to

pratique, unless his bill of health happens to be a  
foul one. Sometimes the Health Office sends a  
boat off to the vessel, and thus saves the master  
the trouble.

**Mode of Landing Cargo.**—After a vessel re-  
ceives pratique, the master may begin to dis-  
charge, at his pleasure, into lighters provided by  
the consignees of the goods at their expense.  
Each of these lighters takes from 6 to 7 tons goods.

**Custom-house.**—There are no forms to undergo at the custom-house prior to discharging, nor even after the vessel has landed her cargo. The goods from the vessel are taken to the custom-house, and claimed thence by the owners, the captain's consignee sending a person to superintend the delivery.

**Ballast,** consisting of sand and shingle, may be had, on application to the harbour-master, for about 10s. (50 piastres) the lighter of 6 or 7 tons. The captain may, however, send his own boat to the beach, abreast of his ship, and, by the aid of his crew, load his own ballast, without paying any fee for it.

**Water** is to be obtained from the Mariamama river, E. of the anchorage. Masters of vessels may send their own boat and men for it; but it is advisable to employ a native boat, the latter being better acquainted with the entrance of the river, and better adapted to the service. English boats are liable to be swamped if there be any swell at the mouth of the stream. The expense of a native boat is moderate, say 5s. to 7s. 6d.

**Labourers** may be hired to assist at the loading or discharge of vessels at 2s. (10 piastres) per diem each.

**Provisions** are abundant, and moderate in price. The following are about the average rates of the articles generally required by shipping:—

Bread	-	-	1	piastre or 2½d.	per oke
Beef	-	-	1½	"	5½d. "
Mutton	-	-	1½	"	5½d. "
Vegetables	-	-	2	"	14d. "
Wine	-	-	1½	"	2½d. to 5½d. per oke
Eggs	-	-	1½	"	2½d. per dozen
Tobacco	-	-	12	"	2s. 6d. per oke

**Weights and Measures.**—Everything excepting linen, silken, and cotton stuffs, is sold by weight. Stuffs are sold by measure. The following will serve as a guide to the shipmaster:—

1 kintal,	41	okes =	121	lb.
1 barman	6	" =	16½	"
1 oke		" =	2½	"

The measure of length is called a pike, and is equal to 25 inches English.

**Quarantine Dues.**—A fee, not exceeding 2 dollars (9s. 6d.), is exacted by the Health Office for every bill of health granted to a vessel; but its cost depends upon the tonnage of the vessel.

No light dues or port dues are exacted; but the harbour-master, who, on seeing the vessel approaching the port, goes off and pilots her to her anchorage, is entitled to 20 piastres = 1s. (Mr. Consul Palgrave's Report, and private information.)

**TRIESTE.** A city and sea-port of the Austrian dominions, the capital of a district of Illyria, situated near the N.E. extremity of the Gulf of Venice, lat. of lighthouse on Santa Teresa mole, 45° 38' 49" N., long. 13° 40' 15" E. Population, in 1864, of the city district comprised within the limits of the free port, 105,000. It is divided into the old and new towns. The former is built upon elevated ground; the latter, which is lower down, is laid out with greater regularity, and is partly intersected by a canal, into which vessels not drawing more than 9 or 10 feet water enter to land and unload.

**Harbour.**—The harbour of Trieste, though rather limited in size, is easy of access and convenient. It is protected from southerly gales by the *Molo Santa Teresa*, so called from the Empress Maria Theresa, at the extremity of which the lighthouse, already mentioned, has been constructed. The port, with the mole, forms a crescent 1½ mile in length, being a continued quay, faced with hewn stones, with stairs and jetties for the convenience of embarkation. On the

north side of the port is a dock or harbour, appropriated exclusively for vessels performing quarantine. It is walled round; and is furnished with hotels, warehouses, and every sort of accommodation required for the use of passengers and goods. Ships under 300 tons but on lie close to the quays; those of greater size anchoring a little farther out.

The principal defects of the port are, its limited size, and its being exposed to the N.W. winds, which sometimes blow with much violence, and throw in a heavy sea. The gales, however, are seldom of long continuance; and the holding ground being good, when the anchors are backed and proper precautions taken, no accident occurs. The tide at Trieste is scarcely perceptible; but the depth of water is influenced by the wind, being increased by a long continued sirocco or S.E. wind, and diminished by the prevalence of the E.N.E. wind, known by the name of *Bura*. The access to the port is not obstructed by any bar or shallow; and there is good anchorage in the roads, in from 6 to 7 and 10 fathoms water. A good sailing vessel may beat in by night or by day, except it blow hard from the N.E. or E.N.E., when she had better anchor in the Bay of Rosos, or Pirano, where she will ride in perfect safety.

**Pilots.**—Ships bound for Trieste are under no obligation to take pilots; but those entering the port for the first time would do well to take one on making the coast of Istria. Boats are always hovering off Rovigno; they are not manned by regular pilots, but by fishermen, who, though unfit to be trusted with the management of the ship, know the bearings of the places and the depth of water. The fee usually paid them for pilotage is 20 dollars; in addition to which, they are supported at the ship's expense during the performance of quarantine.

**Lighthouses.**—The lighthouse at the extremity of the Santa Teresa mole is 106 feet (Eng.) high. The light is intermittent; and may be seen, supposing the eye of the observer to be elevated 12 feet above the level of the sea, about 15 nautical miles, or from Pirano on the side of Istria, and the shoals of Grado on the Italian coast. There are also fixed lights on Mole San Carlo and Mole Giuseppino. A lighthouse has also been erected on the point of Salvore, bearing from Trieste W. by S., distant about 18 miles. The lantern is elevated about 106 feet above the level of the sea, and is visible for 15 miles. From this point Pirano Bay opens, where vessels may anchor in safety in all sorts of weather.

**Money.**—Mercantile accounts are usually kept at Trieste in what is commonly called *convention money*, from an agreement entered into with respect to it by some of the German princes, in 1763. The current coins that are legal tender are dollars, ½ dollars or florins, zwanzigers, or pieces of 20 kreutzers. Ten dollars are coined out of the Cologne marc (3,608 gr. Eng.) of pure silver, so that the value of the dollar is 4s. 3d. sterling.

The florin (convention money) = 2s. sterling, and the florin (Austrian Standard) = about 1s. 10½d.; zwanzigers, or pieces of 20 kreutzers (50 to the marc), = 8½d. sterling. All contracts are either expressly declared, or are understood, to be in silver money; gold coins, not being legal tender, pass only as merchandise.

**Weights and Measures.**—Those chiefly in use at Trieste are those of Vienna. The commercial pound contains 4 quarters, 16 ounces, or 32 lobes; it is = 8,639 English grains. Thus, 100 lb. at Trieste = 123½ lb. avoirdupois; or 90½ lb. of Trieste = 112 lb. avoirdupois. The Zoll counter = 110½ lb. avoirdupois.

The principal dry measure is the stajo or storo= 2:31 Winch. bushels. The Vienna metzen, which is sometimes used=1:723 Winch. bushel. The polonick=0:861 Winch. bushel.

The principal liquid measure is the orna or cimer=40 boccali=14:91 wine or 12½ imperial gallons very nearly. The barile=173½ English wine gallons.

The orna of oil contains 5½ cattisi, and weighs about 107 commercial pounds. It is=17 wine or 14:16 imperial gallons.

The ell woollen measure 26:6 English inches. The ell for silk=25:2 English inches.

Trade.—Trieste has no command of internal navigation; but being the most convenient, or rather the only sea-port, not merely of the Illyrian provinces, but of the Duchy of Austria, and the greater part of Hungary, she possesses an extensive commerce. This has been increased by the facilities afforded to all sorts of mercantile transactions by the privilege of *porto franco* conferred on the town, and a considerable extent of contiguous country. Under this franchise, all goods, with but very few exceptions, may be imported into and exported from the city free of all duties whatever. Foreign products, when taken for consumption into the interior, are subject to duties.

Exports.—These are very various, consisting partly of the raw and partly of the manufactured products of Austria Proper, Illyria, Dalmatia, Hungary, and Italy; with foreign articles imported and warehoused. Among the principal articles of raw produce may be specified, corn, chiefly wheat, rye, and oats, with timber, rice, wine, oil, currants and raisins, shumac, tobacco, wax, &c.; silk, silk rags and waste, hemp, wool, flax, linen rags, hides, furs, skins &c.; the produce of the mines makes an important item, consisting of quicksilver, cinular, iron, lead, copper, brass, litharge, alum, vitriol &c.; the forests of Carniola furnish timber, for ship building and other purposes, of excellent quality and in great abundance, with staves, corkwood, box, hoops &c.; marble also ranks under this head. Of manufactured articles, the most important are, thrown silk, silk stuffs, printed cottons from Austria and Switzerland, coarse and fine linens, glass, and all sorts of leather; under this head are also ranked soap, with jewellery, tools and utensils of all sorts, glass ware, and mirrors, refined sugar, and a host of other articles. Of foreign articles imported and re-shipped, the most important are sugar, coffee, and dye stuffs. Trieste is also a considerable depot for all sorts of produce from the Black Sea, Turkey, and Egypt.

It is not possible to obtain any very accurate account of the quantity and value of the exports; but Mr. Money, the late British consul at Trieste, who carefully enquired into the subject, supposed that they might have amounted in 1863, exclusive of those shipped for Venice, Fiume, and other Austrian ports, to about 1,800,000*l.* a-year.

There has, however, been a considerable increase in the *interval*; for the entire value of the exports from Trieste to foreign countries was estimated, in 1864, at 6,000,000*l.* a-year.

Mr. Bonar, in his *Report* of March 1, 1867, of the Commerce of Austria, states the value of her foreign commerce in 1865, at 601,300,000 florins (viz. 240,800,000) for imports, and 344,500,000 for exports. We extract from the same gentleman's *Report* of July 10, 1868, an account of the value of the exports and imports (exclusive of the precious metals) of the Austrian dominions in 1866 and 1867.

This table shows that the value of the

exports in 1867 from Trieste by sea alone was 10,122,010*l.*

Account of the Value of the Imports into and Exports from Trieste in 1866 and 1867.

	Imports		Exports	
	1866	1867	1866	1867
By sea	flor.	flor.	flor.	flor.
By land	73,807,562	85,149,690	103,093,547	101,226,107
	79,885,574	85,149,690	315,878,197	45,480,052
Total	155,600,938	172,197,579	13,971,514	147,706,159

Showing an excess of imports over the exports amounting to a value of 24,751,611 florins, or 2,475,161*l.*

Trieste being a free port, goods destined for its consumption, and that of the adjoining territory, pay no duties whatever, and are exported and imported without notice by the customs. Goods brought from the interior for export at Trieste are charged an export duty on passing the custom-house line. Goods imported at Trieste, to be conveyed through the Austrian dominions to those of any other Power, are charged a small transit duty.

Gunpowder, salt, and tobacco, being articles monopolised by Government, are not allowed to be imported into Trieste except for sale to the Government or its contractors. Vessels arriving with gunpowder on board deliver it at the arsenal, and on their clearing out it is returned to them free of expense. The utmost vigilance is exerted to prevent the introduction of tobacco; but with very little effect. The only articles the exportation of which from the Austrian dominions is at present prohibited are gold and silver in bars, and silk cocoons.

Shipping.—Since the loss of Flanders, the mercantile navy of Austria has been confined wholly to the ports on the Adriatic. But it is, notwithstanding, very considerable; and engrosses at this moment a large share of the trade of the Mediterranean and Black Sea. The oak timber of Carniola and the Dalmatian coast is reckoned about the very best in the world, so that the Austrian ships, being built of it, are very strong, at the same time that they are particularly handsome. They are also well manned and provided. The seamen are expert, temperate, and orderly; and the laws for the regulation of the merchant service are excellent.

Account of the Number and Tonnage of Vessels Entered at the Principal Ports of Austria, in the Years 1862, 1863, 1864.

The number of vessels in 1866 and 1867, as shown by the second table on the next page, was no doubt affected by the events of the war with Prussia.

By far the greater number of vessels of large burden belong to Trieste. The rest belong to Fiume, Ragusa, and the Bocche di Cattaro. On

Number and Tonnage of Vessels of each Nation (Sailing and Steam) Entered at the Port of Trieste, in the Years 1863, 1864, 1865.

the other hand, the smaller vessels employed in the coasting trade, which is very considerable, are more equally divided; Venice having, probably, as many as Trieste, while a good number belong to the ports of Istria, Hungary, and Dalmatia.

The foreign trade of this port comprises all voyages beyond the limits of the Adriatic; and may be divided as follows:—

1. The Levant trade, including the Ionian Islands, Greece, Constantinople, Smyrna, Odessa &c., the ports in Syria, Cyprus, Candia, and Egypt, more especially Alexandria.

2. The *ponente* or Mediterranean trade, in the west, comprising the coast of Barbary, Spain, France, and Italy; being principally carried on with Marseilles, Genoa, and Leghorn.

3. The commerce on the ocean, which the Austrian merchants have attempted with considerable success. Several ships sail for Brazil, the United States, England, Hamburg &c.

**Customs Regulations.**—The Custom-house at Trieste has nothing whatever to do with the entry, reporting &c. of vessels. When a ship arrives, she is reported to the Health Office; which publishes a list of arrivals and departures, with a statement of their cargoes, as they appear in the manifests. Ships are cleared by the same office; the masters being assisted by the consuls of the country to which they belong. As soon as a vessel has performed quarantine, she loads or unloads without any interference or inspection by the customs officers, or by anyone else. Goods unsusceptible of contagion may be landed during quarantine.

**Tariff.**—By the commercial treaties lately

concluded between Austria and this country [TREATIES, COMMERCIAL] and between Austria and the Zollverein, decided steps towards freedom of trade have been taken; and Mr. Secretary Bonar, in his *Report* of July 10, 1868, says that, since the introduction of the reduced tariff, an unusual commercial activity is observable throughout the empire. Annexed is a list of the import duties on some articles largely produced in this country.

Articles	Duties	
	per cent.	£ s. d.
Iron and steel wire	-	0 8 11
Zinc, in sheets	-	0 1 6
Cotton yarn	minimum	0 8 11
Flax and hemp	minimum	0 1 6
Woolen	minimum	0 1 6
Cotton goods	minimum	1 10 5
Linen of flax or hemp	minimum	8 2 6
Silk goods	minimum	7 2 1
Paper for writing and printing	minimum	6 2 0
Salt-fry	minimum	2 4 6
Glass wares	minimum	0 2 0
Earthenware	minimum	0 12 2
Needles (sewing)	minimum	1 1 4
Firearms	minimum	0 1 6

**Port Charges.**—These are paid at the office of the harbour master on clearing out. They are the same, whatever may be the ship's stay, and are, perhaps, the most moderate of any in Europe.

railway has been constructed between Vienna and Trieste, a distance of more than 340 miles. This was a very great undertaking, and its completion reflects great credit on the Austrian Government and engineers. The whole length of Austrian railways now in activity amounts to upwards of 4,000 English miles, and thus Trieste and Vienna are connected with all the great towns of the empire, and with the rest of Europe.

**Careening, Stores &c.**—Timber at Trieste is excellent, workmen good, and their wages moderate; so that it is a very favourable place for careening and repairing. Water is very good, but rather scarce; so that, if a large supply be required, due notice must be given. Ships are served in regular rotation. Beef is very good, but rather high priced. Butter and cheese are dear; and fuel is excessively so. On the whole, therefore, Trieste cannot be considered as a favourable place for the provisioning of a ship.

**Banking.**—There are no public banks at Trieste. The bank of Vienna has an office here, but it is merely for the exchange of its notes for cash, or, more frequently, of large notes for small ones. These notes, being guaranteed by Government, are legal tender, and in general circulation, but no other company is allowed to issue notes to be used as a circulating medium. There is not, however, any deficiency of currency. Banking business is transacted by private companies, or by individuals, who are subject to certain regulations, and are obliged to lay before competent authority an attested statement of the capital embarked in their concerns. Their business principally consists in procuring bills of exchange from other places for the use of the merchants of Trieste, or in discounting (in which latter operation they have many private competitors), at the rate of from 4 to 6 per cent. per annum, according to the nature of the paper offered, and in proportion to the scarcity or abundance of cash.

The principal bankers of Trieste are of undoubted solidity, and do not indulge in dangerous speculations; and notwithstanding the apparent want of great banking establishments, the business of buying and selling, and of making payments and remittances, whether in bills or specie, is trans-

acted at this port with great facility; and there seldom arises any distress, pressure, or stagnation, from want of money or credit.

It is not usual for respectable bankers to give interest on deposits. The partners in joint-stock companies, banks &c. are, in general, responsible only to the extent of their declared capital; and the individuals composing them are only liable each to the extent of their share. The same individual is frequently a general merchant, a partner in a banking house, and a member of an insurance company. All these businesses may at present be said to be prosperous.

**Credit.**—Goods imported into Trieste are sometimes sold for ready money, a discount being usually understood, and allowed in such case, of 2 or 2½ per cent. But they are commonly sold at 3 months' credit, that is, by bills of that date; occasionally, but rarely, they are sold at 6 months.

Bills thus obtained, though offering no other guarantee than the signature of the drawer or acceptor, may be discounted or insured at a moderate rate by companies who dedicate themselves to this branch of business, and who, from their extensive dealings, are good judges of the risk. The practice has become almost universal; and it not only facilitates sales, but has a tendency to prevent bankruptcies, as it is difficult for a house long to conceal its insolvency; and its credit is, by this mode of trial, soon ascertained.

**Tares.**—Real tare is allowed on most articles of export; and on all articles of import, except cotton and sugar. The tare on Brazil sugar in chests depends on their length and size, but in general it amounts to from 15 to 18 per cent.; on Brazil sugar in bags the tare is 3 per cent.; on Havannah sugar a tare is allowed of 62 lb. English per box, being from 13 to 14 per cent.; on Jamaica sugar the tare is 14 per cent. Tare on American cotton, 4 per cent.

**Trade of Austria with the United Kingdom.**—The direct trade carried on with Austria by the ports on the Adriatic is not so great as might, perhaps, be expected; but it has increased of late years: the value of the exports of British produce to Austria having risen from 637,353*l.* in 1853, to 963,952*l.* in 1867. In addition to this, our indirect

The great drawback under which Austria labours, is the situation of by far the larger portion of her provinces in the central parts of Europe; and separated from the great markets for their produce, either by a wide tract of intervening country, or by high mountain ridges. Austria is naturally an agricultural country; and, unless compelled by circumstances to devote a portion of her energies to manufactures, will, no doubt, continue such for a lengthened period: and hence, as the products of agricultural industry are at once heavy and bulky in proportion to their value, the advantage of opening improved channels of communication with other countries. In this respect, the free navigation of the Danube is of much importance, though a great deal more stress has been laid upon it in this country than it deserves. The expense of carrying corn and timber from Hungary to the Black Sea, and thence to the ports of Western Europe, will, we apprehend, always be found too heavy to admit of England or France ever supplying themselves, at least to any considerable extent, with the corn, flax, or timber of Hungary or Transylvania. The cost of conveying produce from the interior of the continent to the nearest shipping ports is a most important element, which is too generally lost sight of in this country. To show its influence we may mention that on various occasions when wheat was sold at Lemberg, one of the principal markets of Galicia, for 15s. or 16s. per quarter, its price at Dantzic at the same time has been 40s. and upwards; the difference being occasioned by the difficulty and expense of conveying corn down the Viattula from Lemberg to Dantzic.

The Austrian Government and people have long been alive to the many advantages that would result from opening a communication between Hungary and Fiume, and other ports on the Adriatic. And notwithstanding the obstacles opposed by the interposition of the Julian Alps, and other mountain ridges, an excellent road has

been carried from Carlstadt to Fiume. Still, however, the expenses of the carriage of bulky products are too great to make this route sufficiently available; and the advantage of further improving and cheapening the communication is too obvious to need being pointed out. See ante, under the head *Railways* in this article.

TRINITY HOUSE. This society was incorporated by Henry VIII., in 1514, for the promotion of commerce and navigation by licensing and regulating pilots, and ordering and erecting beacons, lighthouses, buoys &c. A similar society, for the like purposes, was afterwards established at Hull; and also another at Newcastle-upon-Tyne in 1537; which 3 establishments, says Hakluyt, were in imitation of that founded by the Emperor Charles V. at Seville, in Spain; who, observing the numerous shipwrecks in the voyages to and from the West Indies, occasioned by the ignorance of seamen, established, at the *Casa de Contratacion*, lectures on navigation, and a pilot-major for the examination of other pilots and mariners; having also directed books to be published on that subject for the use of navigators. But Hakluyt must surely have been in error, for, as Charles V. was not born till 1500, he could not well before 1514 have set up any institution to serve as a model for our Trinity House. It is much more likely that he copied the English example.

Henry VIII., by his charter, confirmed to the Deptford Trinity House Society all the ancient rights, privileges &c., of the shij men and mariners of England, and their several possessions at Deptford, from which it is plain that the Society had existed long previously. The corporation was confirmed, in 1685, in the enjoyment of its privileges and possessions, by letters patent of the 1st James II. by the name of the master, wardens, and assistants of the Guild or Fraternity of the most glorious and undivided Trinity and of St. Clement's in the parish of Deptford Strand, in the County of Kent. At first, the corporation appears to have consisted of seamen only; but since the charter of James II., noblemen and gentlemen have been enrolled among its elder brethren. It is governed by 31 elder brothers, of whom 1 is master, 4 wardens, and 8 assistants: but the inferior members of the fraternity, named younger brethren, are not limited in point of number; every master or mate, expert in navigation, being admissible as such. Besides the power of erecting lighthouses, and other sea-marks, on the several coasts of the kingdom, for the security of navigation—[LIGHTHOUSES], the master, wardens, assistants, and elder brethren, are invested by charter with the following powers; viz. the appointment of pilots to conduct ships into and out of the Thames; the settling of several rates of pilotage. They formerly, also, enjoyed several other powers, which have since fallen into disuse or been vested in other hands. The corporation is authorised to receive voluntary subscriptions, benefactions &c.; and to purchase, in mortmain, lands, tenements &c. to the amount of 3000. per annum. The ancient Hall of the Trinity House at Deptford, where the meetings of the brethren were formerly held, still exists, but is now only used as a Pay Hall for Pensioners. The corporation now meet in a handsome building erected for the purpose in London, near the Tower.

The revenue under the management of the Trinity House, which arose from dues payable to the corporation on account of lighthouses, buoys, and beaconage, and ballastage, and from the interest of money in the funds and the rent of freehold property, has been principally expended on pensions to poor disabled seamen, and on the

maintenance of their widows, orphans &c. and it is admitted that it was both judiciously and economically administered. The duties for lights, buoys, and beacons henceforth, however, under the provisions of the 16 & 17 Vict. c. 131, form part of the 'Mercantile Marine Fund.' The Act provides that payments now chargeable on the 'fund' for pensions &c., may be commuted. The expenses of lighthouses, ballastage, and beacons, are also to be charged on the 'fund,' and the rates of toll are to be revised and fixed by her Majesty in council. The ballastage rates under the Trinity House, being a charge peculiar to the Thames, are to be made peculiarly applicable to services performed for the safety and convenience of the shipping frequenting that river. [BALLAST.]

TRINIDAD. [COLOMBUS.]  
TRIPANG or SEA SLUG (*Biche de Mer*). A species of fish of the genus *Holothuria*, found chiefly on coral reefs in the Eastern seas, and highly esteemed in China, into which it is imported in large quantities. It is an unseemly looking substance, of a dirty brown colour, hard, rigid, scarcely possessing any power of locomotion, or appearance of animation. Sometimes the slug is as much as 2 feet in length, and from 7 to 8 inches in circumference. A span in length, and 2 or 3 inches in girth, is, however, the ordinary size. The quality and value of the fish, however, do not by any means depend upon its size, but upon properties in it neither obvious to nor discernible by those who have not been long and extensively engaged in the trade. In shallow water the animal is taken out by the hand, but in deeper water it is sometimes speared. When taken it is gutted, dried in the sun, and smoked over a wood fire; this being the only preparation it receives.

The fishery is carried on from the western shores of New Guinea, and the southern shores of Australia, to Ceylon inclusive. Indeed, within the last few years it has been successfully prosecuted on the shores of the Mauritius. The whole produce goes to China. In the market of Macassar, the great staple of this fishery, not less than thirty varieties are distinguished, varying in price from 5 Spanish dollars a *picul* (133½ lb.) to 14 times that price, each variety being distinguished by well-known names. The quantity of tripang sent annually to China from Macassar is about 7,000 piculs, or 8,333 cwt.; the price usually varying from 8 dollars a picul to 110 and 115, according to quality. (Crawford's *Indian Archipelago*, vol. iii. p. 441.) There is also a considerable export of tripang from Manila to Canton.

Besides tripang, *fish-maws* and *sharks' fins* are exported to China from every maritime country of India.

TROY WEIGHT. One of the most ancient of the different kinds used in Britain. The pound English troy contains 12 ounces, or 5,760 grains. It is used in the weighing of gold, silver, and jewels; the compounding of medicines; in experiments in natural philosophy; in comparing different weights with each other; and was (by 5 Geo. IV. c. 74) made the standard of weight.

TROY WEIGHT, *Scotch*, was established by James VI. in the year 1618, who enacted that only one weight should be used in Scotland, viz. the French troy stone of 16 pounds, and 16 ounces to the pound. The pound contains 7,609 grains, and is equal to 17 oz. 6 dr. avoirdupois. The cwt. or 112 lb. avoirdupois, contains only 103 lb. 2½ oz. of this weight, though generally reckoned equal to 104 lb. This weight is very nearly identical with that formerly used at Paris and Amsterdam; and is generally known by the name of Dutch weight. Though prohibited by the articles of Union, it has

been used in most parts of Scotland in weighing iron, hemp, flax, and other Dutch and Baltic goods, meal, butcher's meat, lead &c. [WEIGHTS AND MEASURES.]

TRUCK SYSTEM. A name given to a practice that has prevailed, particularly in the mining and manufacturing districts, of paying the wages of workmen in goods instead of money. The plan has been, for the masters to establish warehouses or shops; and the workmen in their employment have either got their wages accounted for to them by supplies of goods from such depôts, without receiving any money; or they have got the money, with a tacit or express understanding that they were to resort to the warehouses or shops of their masters for such articles as they were furnished with.

*Advantages and Disadvantages of the Truck System.*—A great deal of contradictory evidence has been given, and very opposite opinions have been held, as to the practical operation and real effect of this system on the workmen. Nor is this to be wondered at, seeing that everything depends on the mode in which it is administered, and that it may be either highly advantageous or highly injurious to the labourer. If a manufacturer of character establish a shop supplied with the principal articles required for the use of the workmen in his employment, and give them free liberty to resort to it or not as they please, it can, at all events, do them no harm, and will, most likely, render them material service. The manufacturer, having the command of capital, may, in general, lay in his goods to greater advantage than they can be laid in by the greater number of retail tradesmen in moderate-sized towns; and not being dependent on the profits of his shop for support, he is, even though he had no advantage in their purchase, able to sell his goods at a cheaper rate than they can be afforded by the majority of shopkeepers. Sometimes, also, a factory is established in a district where shops either do not exist at all, or are very deficient; and in such cases the master consults the interest and convenience of those dependent on him when he provides a supply of the principal articles required for their subsistence. It is easy, therefore, to see that the keeping of shops by masters for the use of their workmen may be very beneficial to the latter. But to insure its being so, it is indispensable that the masters should be above taking an advantage when it is within their reach, and that their conduct towards the workmen should not be in any degree influenced by the circumstance of the latter dealing or not dealing with their shops.

Such disinterestedness is, however, a great deal more than could be rationally expected from the generality of men; and hence, though many instances may be specified in which the truck system was advantageous to the workmen, those of a contrary description were unfortunately far more numerous. It is obvious, indeed, that a practice of this sort affords very great facilities for fraudulent dealings. Under the old law, a manufacturer who had a shop, had means, supposing he were inclined to use them, not possessed by any ordinary shopkeeper as respects his customers, for forcing upon his workmen inferior goods at an exorbitant price. They are at first supplied on liberal terms, and are readily accommodated with goods in anticipation of wages, till they get considerably into debt. The pernicious influence of this deceitful system then begins fully to disclose itself. The workmen cease to be free agents; they are compelled to take such goods and at such prices as the master pleases; for, were they to at-

tempt to emancipate themselves from this state of thralldom by leaving their employment, they would be exposed to the risk of prosecution and imprisonment for the debts they had incurred. It is not easy to imagine the extent to which these facilities for defrauding the labouring class were taken advantage of in various districts of the country. In many instances, indeed, the profits made by the shops exceeded those made by the business to which they were contingent; and thousands of workmen, whose wages were nominally 30s. a week, did not really receive, owing to the bad quality and high price of the goods supplied to them, more than 20s., and often not so much.

*Abolition of the Truck System.*—A system of dealing with the labouring classes, so very susceptible of abuse, and which, in point of fact, was very extensively abused, was loudly and justly complained of. A bill was in consequence introduced for its suppression by Mr. Littleton (now Lord Hatherton), which, after a great deal of opposition and discussion, was passed into a law, 1 & 2 Wm. IV. c. 32. (See abstract subjoined.)

Those who opposed this Act did so on two grounds: 1st, that it was improper to interfere at all in a matter of this sort; and 2nd, that the interference would not be effective. The first of these objections does not appear entitled to any weight. In suppressing the truck system, the Legislature did nothing that could in anywise regulate or fetter the fair employment of capital; it interfered merely to put down abuse; to carry, in fact, the contract of wages into full effect, by preventing the workman from being defrauded of a portion of the wages he had stipulated for. The presumption no doubt is, in questions between workmen and their employers, that Government had better abstain from all interference, and leave it to the parties to adjust their disputes on the principle of mutual interest and compromised advantage. Still, however, this is merely a presumption; and must not be viewed as an absolute rule. Instances have repeatedly occurred where the interference of the Legislature to prevent or suppress abuse, on occasions of the sort now alluded to, has been imperiously required, and been highly advantageous. Those who claim its interposition are, indeed, bound to show clearly that it is called for to obviate some gross abuse, or that it will materially redound to the public advantage; and this, we think, was done in the completest manner by the opponents of the truck system. Regard for the interests of the more respectable part of the masters, as well as for those of the workmen, required its abolition; for, while it continued, those who despised taking an advantage of their dependants were less favourably situated than those who did. It is ludicrous, therefore, in a case of this sort, to set up a cuckoo cry about the 'freedom of industry.' The good incident to the truck system was in practice found to be vastly overbalanced by the abuses that grew out of it; and as these could not, under the existing law of debtor and creditor, be separately destroyed, the Legislature did right in attempting to suppress it altogether.

It was said, indeed, that this would be found to be impracticable; and the manufacturers would enter underhand into partnerships with the keepers of shops, and that the system would really be continued, in another and, perhaps, more objectionable form. This anticipation has, we believe, been in some degree realised; but the system has notwithstanding been in many places abandoned, and is nowhere practised to anything like the extent to which it was carried previously to the passing of Lord Hatherton's Act. It will not,

however, be completely rooted out, till all small debts, however they originate, be put beyond the pale of the law. We have already vindicated the expediency of this measure on other grounds [CURET]; and the influence it would have in effectually destroying whatever is most pernicious in the truck system, is a weighty additional recommendation in its favour. Were all right of action upon debts for less than 50l. or 100l. taken away, no master would think of acquiring a control over the free agency of his workmen, by getting them in debt to him; and no workmen would, under such circumstances, submit to be directed in his choice of shops or goods. The case of the Scotch colliers affords a curious illustration of what is now stated. Down to 1774, these persons were really *adscripti glebae*, or pradial slaves; that is, they and their descendants were bound to perpetual service at the works to which they belong, a right to their labour being acquired by any new proprietor to whom the works were sold. The 15 Geo. III. c. 28 was passed for the emancipation of the colliers from this state of bondage. It, however, failed of practically accomplishing its object; for the masters speedily contrived, by making them advances in anticipation of their wages, to retain them as completely as ever under their control. To obviate this abuse, the 39 Geo. III. c. 56 was passed; which most properly took from the masters all title to pursue the colliers for loans, unless advanced for the support of the collier and his family during sickness. This Act had the desired effect; and the colliers have since been as free as any other class of labourers. (See edition of the *Wealth of Nations* by the author of this work, p. 172.) In fact, were small debts put beyond the pale of the law, it would not be necessary to interfere directly with the truck system; for it would not then be possible to pervert it to any very injurious purpose.

The following are the principal clauses in the Act 1 & 2 Wm. IV. c. 37, entitled 'An Act to prohibit the Payment in certain Trades, of Wages in Goods, or otherwise than in the Current Coin of the Realm':—

1. In all contracts hereafter to be made for the hiring of any artificer in any of the trades hereinafter enumerated, or for the performance by any artificer of any labour in any of the said trades, the wages of such artificer shall be made payable only in the current coin of this realm, and not otherwise; any contract to the contrary being illegal, null, and void.
2. If such contract contain any stipulations as to the manner in which the wages shall be expended, it is void.
3. Wages must be paid to the workman in coin only. Payment in goods illegal and void.
4. Artificers may recover wages, if not paid in the current coin.
5. In an action brought for wages, no set-off shall be allowed for goods supplied by the employer, or by any shop in which he is interested.
6. No employer shall have any action or suit in equity against his artificer, for goods supplied to him on account of wages, or supplied by any shop in which he has an interest.
7. If the artificer, or his wife or children, become chargeable to the parish, the overseers may recover any wages earned within the 3 preceding months, and not paid in cash.
8. Nothing in this Act is to invalidate the payment of wages in bank notes or drafts on any bankers within 15 miles, if artificer consents.
9. Any employer of any artificer in any of the

rooted out, till all small  
 originate, be put beyond the

et is to invalidate the pay-  
 nk notes or drafts on any  
 es, if artificer consents.  
 any artificer in any of the

trades hereinafter enumerated, who shall, by him-  
 self, or by the agency of any other person directly  
 or indirectly enter into any contract, or make any  
 payment: hereby declared illegal, shall, for the  
 first offence forfeit a sum not exceeding 10l. nor  
 less than 5l., and for the second offence any sum  
 not exceeding 20l. nor less than 10l., and for a  
 third offence he shall be guilty of a misdemeanor,  
 and be punished by fine only, at the discretion  
 of the court, so that the fines shall not in any  
 case exceed 100l.

10. Offences shall be enquired of and fines  
 recovered before 2 justices, and the amount of  
 the fines shall be in the discretion of such justices,  
 or in cases of misdemeanor, of the court before  
 which the offence may be tried; and in case of a  
 second offence, it shall be sufficient evidence of  
 the previous conviction, if a certificate, signed by  
 the officer having the custody of the record, be  
 produced, stating in a compendious form the  
 general nature of the offence. But a second or  
 third offence shall only be punished as a first  
 or second offence, if committed within 10 days  
 after the prior conviction; and a fourth or any  
 subsequent offence shall be punished as a third  
 offence. But no second or third offence shall be  
 prosecuted after more than 2 years from the com-  
 mission of the next preceding offence.

11. Justices may compel the attendance of  
 witnesses, on the request of the parties. Penalty  
 for non-attendance without excuse and after proof  
 of due service of summonses at the usual place of  
 abode for such persons, 24 hours at least before the  
 time appointed for appearance, a commitment to  
 some prison within the jurisdiction of the justices,  
 without bail or mainprize, for not exceeding 14  
 days, or until such person shall submit to be  
 examined.

Sections from 12 to 18 inclusive regulate pro-  
 ceedings.

19. Act only to apply to the following trades:  
 Making, casting, converting, or manufacturing  
 of iron or steel, or any parts, branches, or pro-  
 cesses thereof; working any mines of coal, iron-  
 stone, limestone, salt rock; or working or getting  
 stone, slate, or clay; or making or preparing salt,  
 bricks, tiles, or quarries; or making or manufac-  
 turing any kinds of nails, chains, rivets, anvils  
 &c. keys &c., or any other articles or hardwares  
 made of iron or steel, or of iron and steel combined,  
 or of any plated articles of cutlery, or of any goods  
 or wares made of brass, tin, lead, pewter, or other  
 metal, or of any japanned goods or wares whatso-  
 ever; or making, spinning, throwing, doubling,  
 winding, weaving, combing, knitting, bleaching,  
 dyeing, printing, or otherwise preparing any kinds  
 of woollen, worsted, yarn, stuff, kersey, linen,  
 bastian, cloth, serge, cotton, 'eather, fur, hemp,  
 hair, mohair, or silk manufactures whatsoever, or  
 any manufactures whatsoever made of the said  
 last-mentioned materials, whether the same be  
 or be not mixed one with another; or making or  
 otherwise preparing, ornamenting, or finishing any  
 glass, porcelain, china, or earthenware whatso-  
 ever, or any parts, branches, or processes thereof,  
 or any materials used in any of such last-men-  
 tioned trades; or making or preparing of bone,  
 thread, silk, or cotton lace, or of lace made of any  
 mixed materials.

20. Not to extend to any domestic servant, or  
 servant in husbandry.

21. No one engaged in any of the trades or  
 occupations enumerated, or his father, son, or  
 brother, shall act as a justice.

22. County magistrates to act in cases where  
 those of towns are disqualified as above.

23. Not to prevent any employer from supply-

ing or contracting to supply to any artificer any  
 medicine or medical attendance, or any fuel, or  
 any materials, tools, or implements to be by such  
 artificer employed in his trade or occupation, if  
 such artificers be employed in mining, or any hay,  
 corn, or other provender to be consumed by any  
 horse or other beast of burden employed by any  
 such artificer in his trade and occupation; nor  
 from demising to any artificer employed in any  
 of the trades and occupations enumerated the  
 whole or any part of any tenement at any rent:  
 nor from supplying or contracting to supply to  
 any such artificer any victuals dressed or prepared  
 under the roof of any such employer, and there  
 consumed by such artificer; nor from making or  
 contracting to make any deduction from the  
 wages of any artificer for any such rent, or  
 medicine or medical attendance, or fuel, materials,  
 tools, implements, hay, corn, or provender, or  
 such victuals, or for any money advanced to each  
 artificer for any such purpose; but such deduction  
 shall not exceed the true value of such fuel,  
 materials, tools, implements, hay, corn, and pro-  
 vender, and shall not be in any case made from  
 the wages of such artificer unless the agreement  
 for such deduction shall be in writing and signed  
 by such artificer.

24. Not to prevent any such employer from  
 advancing to any such artificer any money to be  
 by him contributed to any friendly society or  
 bank for savings, or for his relief in sickness, or  
 for the education of any child of such artificer,  
 nor from deducting or contracting to deduct any  
 money from the wages of such artificers for the  
 education of any such child, provided the agreement  
 for such deduction shall be in writing and  
 signed by such artificer.

25. Workmen, labourers, and other persons in  
 any manner engaged in any employment or ope-  
 ration, in or about the several trades and occu-  
 pations aforesaid, shall be deemed 'artificers;' and  
 all masters, bailiffs, foremen, managers,  
 clerks, and other persons engaged in the hiring,  
 employment, or superintendence of the labour of  
 any such artificers shall be deemed to be 'em-  
 ployers;' and any money or other thing had or  
 contracted to be paid, or given as a remuneration  
 for any labour done or to be done, whether within  
 a certain time or to a certain amount, or for a  
 time or an amount uncertain, shall be deemed to  
 be the 'wages' of such labour; and any agree-  
 ment, understanding, device, contrivance, collu-  
 sion, or arrangement whatsoever on the subject  
 of wages, whether written or oral, whether direct  
 or indirect, to which the employer and artificer  
 are parties, or are assenting, or by which they  
 are mutually bound to each other, or whereby  
 either of them shall have endeavoured to impose  
 an obligation on the other of them, shall be  
 deemed a 'contract.'

TRUFFLES. A sort of vegetable production,  
 like a mushroom, formed under ground. A few  
 have been found in Northamptonshire; they are  
 pretty abundant in Italy, the south of France,  
 and several other countries. The French are  
 black and warty externally, while the Piedmon-  
 tese are smooth. They are reckoned a great  
 delicacy. The *pâtés aux truffes d'Angoulême* are  
 highly esteemed, and are sent as presents to very  
 distant places. In 1867 he imported 33,003 lb.  
 of truffles, valued at 18,565*l.*, and exported 284  
 lb. (Brande and Cox's *Dictionary of Science*  
*and Art*; &c.)

TUNIS. The capital of the regency of the  
 same name, on the northern coast of Africa, the  
 Goletta fort being in lat. 36° 48' 30" N., long.  
 10° 25' 45" E. The bay of Tunis is somewhat in

the form of a horseshoe. Its western extremity, Cape Carthage, is situated about 4 miles N.E. from the Goletta; and its eastern extremity, Cape Zafran, bears from Cape Carthage E. by S., distant about 13 miles. The bay is about 16 miles deep, and has good anchorage all over, in from 10 to 4 fathoms water. It is exposed to the N. and N.E. gales; but they seldom occasion any damage. Tunis lies on the west side of the bay, being separated from it by a large lagoon, having, where deepest, about 7 feet water. The port is at the Goletta, or channel, passing through the narrow belt of land separating the lagoon from the sea; the entrance to it is by a canal, in which there is at all times 15 feet water; and ships may use it on paying a fee of 3 dollars a-day. It is not, however, much resorted to; all vessels of considerable burden loading and unloading from their moorings in the bay, by means of lighters. The population of Tunis has been variously estimated at from 100,000 to 150,000, being the most populous of any African city after Cairo. The streets are narrow, unpaved, and filthy. The buildings, though of stone, are mean and poor; and the inhabitants present the picture of poverty and oppression. There is a fort at the Goletta, of considerable strength.

*Trade.*—Notwithstanding the various drawbacks arising out of the nature of the government, and the ignorance and prejudices of the people, commerce and industry are in a more advanced state in Tunis than in any other part of Northern Africa, Egypt excepted. Though subject to droughts, the climate is, on the whole, excellent. The soil still preserves that exuberant fertility for which it was famous in antiquity.

Non quicquid Libyæ teræ  
Fervens arena messibus. (Senec. in *Thyest.*)

It seldom receives any other manure than that of sometimes burning the weeds and stubble; and yet, in despite of its slovenly culture, the crops are luxuriant; and there is generally a considerable excess of wheat and barley for exportation. Corn is principally shipped at Biserta, about 50 miles west of Tunis. Olive oil is one of the principal articles of export. It is of various qualities; some good, and some very indifferent. Sesa is said to be the best place for its shipment. Soap of an excellent quality is largely manufactured in the regency. It may be had either soft or in wedges. The soft is made of barilla and pure oil, and is much esteemed. The hard soap is made from the lees of oil, and is reckoned very strong. The principal soap-works are at Sesa. Little, however, is prepared on a speculative anticipation of a demand for exportation; but any quantity may be had by contracting for it a few months before the period when it is wanted. A sort of woollen scull-caps are largely exported. They are in extensive demand all over the Levant, and are nowhere made in such perfection as here. Ivory and gold dust, hides, wax, morocco leather, sponge, barilla, coral, dates, ostrich feathers &c. are among the articles of export.

The imports from Europe consist of woollens, coarse German linens, cotton stuffs, hardware, sugar, coffee, spices, tin plates, gunpowder, lead, alum, dye stuffs, wine, silk, Spanish wool &c. There is very little direct trade between Tunis and England; but a good deal is indirectly carried on, through the intervention of Malta and Gibraltar. Marseilles has probably the largest share of the trade with the regency. The value of the exports to Tunis of British produce and manufactures, chiefly cotton, was in 1845, 102,077*l.*, and in 1867, 67,204*l.*, while the value of our imports sent thence in 1867 was 6,325*l.*

Exclusive of the trade by sea, a considerable trade is carried on between Tunis and the interior of Africa, by means of caravans. These import slaves, gold dust, ivory, feathers, drugs &c. They carry black cotton stuffs, linens, hardware, spices, coal,Neal &c.

Naval and military stores imported into Tunis pay no duty. Other articles pay a duty of 3 per cent, ad valorem on a rated tariff. Obstructions arising out of monopolies &c. are occasionally thrown in the way of exportation; and in general it is necessary, before proceeding to ship, to obtain a *tishery*, or license to that effect, from the bey. That, however, may be, for the most part, procured without much difficulty.

*Money.*—Accounts are kept in piastres of 40 carobas or 52 aspers. The piastre is worth about 1*s.* 1*d.* sterling. The asper is an imaginary money. The value of foreign coins depends on the state of the exchange.

*Weights.*—Gold, silver, and pearls are weighed by the ounce of 8 meticals; 16 of these ounces make the Tunis pound=7,773.5 Eng. grs. The principal commercial weight is the cantaro, containing 100 lb., or rotoli, being equivalent to 111.05 lb. avoird., or 50.36 kilogram.

*Measures.*—The principal corn measure is the caliz, divided into 16 whibas; and the whiba into 12 sahas. One caliz=14½ imperial bushels.

The wine measure is the millerolle of Marseilles=14.1 imp. gallons, or 64.33 litres. It is divided into 64 mitres. The principal oil measure is the metal or mettar=5.125 wine gallons, 19.39 litres; but it is of different dimensions in different parts of the country; and is larger at Sesa, whence most of the oil is exported, than at Tunis.

The pic, or principal long measure, is of four sorts; viz. the pic woollen measure=26.5 English inches; the pic silk measure=24.8 do.; and the pic linen measure=18.6 do.

For further particulars see that chapter Shaw's *Travels in Barbary* &c. (one of the most learned and excellent works of the kind in the English language), that treats of the kingdom of Tunis; Macgill's *Account of Tunis*, passed Jackson's *Commerce of the Mediterranean*, 55-56; Kelly's *Amibist*; *Parl. Papers*; &c.

**RUINS OF CARTHAGE.**—The famous city of Carthage, one of the greatest emporiums of the ancient world, long the mistress of the sea, and the most formidable enemy of Rome, was situated near the cape which still bears her name, about 10 miles north-east from Tunis. Such, however, have been the alterations on the coast, that a part of the city, within whose ample expanse whole navies used to ride, is now wholly filled up by antiquaries differ as to its situation; and there has in some places receded from 2 to 3 miles into the ruins of the buildings by which it was formerly skirted. The common sewers are still in very perfect state, as are several cisterns, public reservoirs, and other remains of that sort, which the fragment of a noble aqueduct that supplies the city with water. But besides these and very few Punic inscriptions that have been discovered, there is nothing left to attest the ancient grandeur and magnificence of the city, or to identify it with the illustrious people by whom it was founded and occupied till its destruction by Scipio Nasica. There are no temples, no triumphal arches, no granite columns or obelisks covered with Phœnician characters, and no ancient engravings. These have all fallen a sacrifice to hostile attacks, or to the destroying hand of time.

a colony was sent to it by Augustus, and  
final subversion by the Saracens in the seventh  
century.

**TURBITH** or **TURPETHI**. The cortical part  
the root of a species of *Covvolulus*, brought  
from different parts of the East Indies. It is a  
single root about the thickness of the finger,  
smooth, heavy, of a brownish hue without and  
whitish within. It is imported cloven in the  
middle, lengthwise, and the heart or woolly  
part taken out. The best is ponderous, not  
cracked, easy to break, and discovers to the eye  
a large quantity of resinous matter. At first it  
makes an impression of sweetness on the taste;  
but, when chewed for some time, betrays a nause-  
ous acrimony. It is used in medicine, but only  
to a small extent. (Lewiss's *Mat. Med.*)

**TURBITH** [**MINERAL**]. The name given by  
ancients to the subsulphate of mercury.

**TURBOT** (*Pleuronectes maximus*). A well-  
known and highly esteemed species of fish. Very  
considerable quantities of turbot are now taken on  
various parts of our coasts, from the Orkneys to  
the Land's End, yet a preference is given in the  
London markets to those caught by the Dutch.  
The latter arc said to have sometimes drawn as  
much as 80,000*l.* in a single year, for turbots sold  
in London.

Fresh turbots, however taken, or in whatever  
state imported, may be imported free of duty.

**TURKEY**. [**CONSTANTINOPLE**; **GALACZ**;  
**SCOPE**; **SMYRNA**; **TREBIZOND**; &c.]

**TURMERIC**. The root of the *Curcuma longa*.  
It is externally greyish, and internally of a deep  
brilliant yellow or saffron colour; very hard; and  
brittle, either in figure or size, to ginger.  
It should be preferred which is large, new,  
smooth, difficult to break, and heavy. It is im-  
ported from Bengal, Java, China &c. Small  
quantities of it have also been grown in England.  
It has a somewhat aromatic, and not very agree-  
able, smell; and a bitterish, slightly acrid, but  
rather warm taste. It used to be in considerable  
reputation as a medicine; and is extensively used  
in India for culinary purposes, entering into the  
composition of curry powder and other articles;  
in Europe, it is only used as a dye. It yields a  
beautiful bright yellow colour; which, however,  
is extremely fugitive, and no means have hitherto  
been discovered of fixing it. It is sometimes em-  
ployed to heighten the yellows made with weld,  
and to impart an orange tint to scarlet; but the  
whole imported by the turmeric soon disappears.  
(Lewiss's *Mat. Med.*; Bancroft's *On Colours*, vol. i.  
p. 576; *British Pharmacopœia*, 1867.)

The duties on turmeric, after being reduced in  
1828, were wholly repealed in 1845. The imports,  
which have been much augmented since 1850,  
amounted in 1867 to 1,841 tons, valued at 40,555*l.*;  
the re-exports during the same year being 1,397  
tons. The price of turmeric in London in 1867  
varied from 18*l.* 3*s.* to 22*l.* 7*s.* per ton. The  
Penang and Sindh bring the lowest, and the  
Bengal and Pegu the highest price.

**TURPENTINE** (Ger. *terpentia*; Fr. *térében-  
tine*; Ital. *trementina*; Russ. *skipidar*; Pol.  
*terpentyna*). There are several species of turpen-  
tine, but all of them possess the same general and  
chemical properties.

1. *Common Turpentine* is a resinous juice which  
exudes from the Scotch fir or wild pine (*Pinus  
sibirica*). The trees which are most exposed to  
the sun, and have the thickest barks, yield it in

the greatest abundance. They begin to produce  
it when about 40 years old. The bark of the tree  
is wounded and the turpentine flows out in drops,  
which fall into a hole, or sort of cup, previously  
dug at the foot of the tree, holding about 1½ pint.  
It is purified by being exposed to liquidity in the  
sun's rays, in barrels perforated in the bottom,  
through which it filters. In the United States,  
the collection of turpentine is conducted chiefly to  
negroes, each of whom has the charge of from  
3,000 to 4,000 trees. The process lasts all the  
year, although the incisions are not made in the  
trees till the middle of March, and the flow of the  
turpentine generally ceases about the end of Octo-  
ber. The boxes are emptied 5 or 6 times during  
the year; and it is estimated that 250 boxes will  
produce a barrel weighing 320 lb. Turpentine has  
a strong, somewhat fragrant odour, and a bitter,  
disagreeable taste; its consistence is greater than  
that of honey; its colour dirty yellow; and it is  
more opaque than the other sorts. We import it  
chiefly from the United States.

2. *Venice Turpentine* is the produce of the  
larch (*Pinus Larix*). It is obtained by boring a  
hole into the heart of the tree about 2 feet from  
the ground, and fitting into it a small tube  
through which the turpentine flows into vessels  
prepared for its reception. It is purified by strain-  
ing through cloths, or hair sieves. It is more  
fluid, having the consistence of new honey, a yel-  
lowish colour, and is less unpleasant to the smell  
and taste than the common turpentine. Genuine  
Venetian turpentine is principally obtained from  
the forests of Baye, in Provence; but much of  
that to be found in the shops comes from America,  
and is, perhaps, obtained from a different species  
of fir.

3. *Canadian Balsam, or Turpentine*, is obtained  
from incisions in the bark of the *Pinus balsamea*,  
a native of the coldest regions of North America.  
It is imported in casks, each containing about 1  
cwt. It has a strong, not disagreeable odour, and  
a bitterish taste; is transparent, whitish, and has  
the consistence of copivau balsam. [**BALSAM.**]

4. *Chian, or Cyprus Turpentine*, is obtained  
from the *Pistacia Terebinthus*, a native of the  
north of Africa and the south of Europe, and cul-  
tivated in Chios and Cyprus. It flows out of  
incisions made in the bark of the tree in the  
month of July; and is subsequently strained and  
purified. It has a fragrant odour, a moderately  
warm taste, devoid of acrimony or bitterness, and  
a white or very pale yellow colour; it is about as  
consistent as thick honey, is clear, transparent,  
and tenacious. From its comparative high price,  
Chian turpentine is seldom procured genuine,  
being for the most part adulterated either with  
Venetian or common turpentine. The different  
species of turpentine may be dissolved in rectified  
spirit, or pure alcohol; and, by distillation, they  
all give similar oils, which, from their being dis-  
tilled (and not from any resemblance to alcohol,  
or spirits properly so called), are vulgarly termed  
spirit of turpentine. If the distillation be per-  
formed with water, the produce is an essential oil,  
the common spirit of turpentine; and if the dis-  
tillation be carried on in a *retort*, without water,  
the product is more volatile and pungent—a con-  
centrated oil, as it were—and is called the ethe-  
real spirit of turpentine. The residuum that is  
left, in both cases, is a brownish resinous mass,  
brittle, capable of being melted, highly inflam-  
mable, insoluble in water, but mixing freely with  
oils: it is the common rosin of commerce. (*Lib.  
of Entert. Knowledge, Vegetable Substances*;  
Thomson's *Dispensatory*.)

In 1867 our imports of common turpentine were  
5 C

40,085 ewt., valued at 19,419*l*. Over two-thirds of this quantity came from the United States.

**TURPENTINE, OIL OF** (Ger. *terpentinöl*; Fr. *eau de raze, huile de térébenthine*; Ital. *acqun di rassa*; Span. *aguarra*). The essential oil drawn from turpentine by distillation. There are two sorts of this oil: the best, red; and the second, white. It is very extensively used by house painters, and in the manufacture of varnish, in medicine &c. The distillers have been charged with using it in the preparation of gin. Oil of turpentine is very often adulterated. That used in medicine is limpid, colourless, with a strong peculiar odour, and pungent and bitter taste. In 1867 we exported 75,791 gallons, valued at 12,824*l*., chiefly to India and Australia. (*British Pharmacopœia*, 1867.)

**TURQUOISE** (Ger. *türkiss*; Fr. *turquoise*; Ital. *turchina*; Span. *turquesa*). A precious stone, in considerable estimation.

Its colour, which is its principal recommendation, is a beautiful celestial blue, which changes into pale blue, and is sometimes tinged with green. Specific gravity, 2.6. It possesses a somewhat waxy lustre, and is somewhat translucent, although generally opaque. It is much worn in necklaces, and every part of ornamental jewellery, from the size of a pin's head to that of an almond: it contrasts beautifully with brilliants, or pearls, set in fine gold, and appears to most advantage when cut spheroidal. (Mawe *On Diamonds*, 2nd ed. p. 129; Emanuel *On Diamonds*, pp. 179—190.)

Real turquoises are exclusively furnished by Persia. The mines whence they are obtained are situated near Nishapore. They are the property of the Crown, and are farmed to the highest bidder. They bring a rent of from 2,000*l*. to 2,700*l*. a-year. (Fraser's *Travels on the Shores of the Caspian*, pp. 343—347.)

**TURTLE SHELLS.** [*TORTOISE SHELLS.*] **TUTENAGUE.** The name given in commercial language to the zinc or spelter of China. [*ZINC.*]

But it is improperly applied; for the article to which the Portuguese originally gave the name of *tutenag*, is, in fact, the gong metal of the Chinese, that is, an alloy of copper and tin. It is harder than zinc, though less so than iron, sonorous, compact, and has some malleability. The fresh fracture is brilliant, but soon tarnishes. It is made by melting 100 cattie of the mineral called *hung-tung* or red copper, with 25 cattie of tin, and running it, when intended for gongs, into a thin plate. The sonorous quality of these instruments is owing chiefly to long-continued and expert hammering, and their price depends in great measure upon the sound. Other instruments are also made of this alloy, as well as wash-basins, dishes, and small bells. Notwithstanding the prohibition which formerly existed against exporting unwrought metals from China, it is supposed that previously to 1820 about 2,500 tons tutenague were annually sent to India and the Malay countries. But this exportation has been superseded by the supplies of zinc which India &c. now get from Europe, and which is better fitted for the purposes to which tutenague was applied. European zinc is, also, finding its way to China. The export price of tutenague varies from 14 to 40 dols. per picul. Large gongs sell at from 40 to 50 cts. per catty. Small ones at half that price. (*Chinese Commercial Guide*, p. 199.)

**TYPES.** The value of printing types and materials for printing exported from this country in 1867 (chiefly to India, Australia, and the United States) was 68,094*l*.

**TYRE.** The principal city of Phœnicia, and the most celebrated emporium of the ancient world. This famous city was situated on the S.E. coast of the Mediterranean, where the inconsiderable town of *Tsour* now stands, in lat. 33° 17' N., long. 35° 14' 35" E. The trade that is at present carried on at *Tsour* is too trifling to deserve notice; but as this work is intended to give some account, however imperfect, of the revolutions in the channels of commercial enterprise, we may, perhaps, be excused for submitting a few statements with respect to the commerce carried on by so renowned a people as the Tyrians.

Tyre was founded by a colony from Sidon, the most ancient of the Phœnician cities. The date of this event is not certainly known, but Larcher supposes it to have been 1,690 years before Christian era. (*Chronologie d'Hérodote*, cap. ii. p. 131.) It is singular, that while Homer mentions Sidon, he takes no notice of Tyre, whose glory speedily eclipsed that of the mother city; but this is no conclusive proof, that the latter was not in his time a considerable emporium. The prophets Isaiah, Jeremiah, and Ezekiel, who flourished from 700 to 600 years before Christ, represent Tyre as a city of unrivalled wealth, whose 'merchants were princes, and her traffickers the honourable of the earth.' Originally, the city was built on the main land; but having been besieged for a lengthened period by the Babylonian monarch Nebuchadnezzar, the inhabitants conveyed themselves and their goods to an island at a little distance, where a new city was founded which enjoyed an increased degree of celebrity and commercial prosperity. The old city was, on that account, entitled *Palætyre*, and the other simply *Tyre*. The new city continued to flourish, extending its colonies and its commerce on all sides, till it was attacked by Alexander the Great. The resistance made by the Tyrians to that conqueror showed that they had not been enervated by luxury, and that their martial virtues were no wise inferior to their commercial skill and enterprise. The overthrow of the Persian empire was effected with less difficulty than the capture of this single city. The victor had not the magnanimity to treat the vanquished as their heroic conduct deserved. In despite, however, of the cruelty inflicted on the city, she rose again to considerable eminence. But the foundation of Alexandria, by diverting the commerce that had formerly centred at Tyre into a new channel, gave her an irreparable blow; and she gradually declined till consistently with the denunciation of the prophets her palaces have been levelled with the dust, and she has become 'a place for the spreading of nets in the midst of the sea.'

**Commerce, Colonies &c. of Tyre.**—Phœnicia was one of the smallest countries of antiquity. It occupied that part of the Syrian coast which stretches from Aradus (the modern *Road*) on the north, to a little below Tyre on the south, a distance of about 50 leagues. Its breadth was much less considerable, being for the most part bounded by Mount Libanus to the east, and Mount Carmel on the south. The surface of this narrow tract was generally rugged and mountainous; and the soil in the valleys, though moderately fertile, did not afford sufficient supplies of food to feed the population. Libanus and its dependent ridges were, however, covered with timber suitable for ship-building; and besides Tyre and Sidon, Phœnicia possessed the ports of Tripoli, Byblos, Beirut &c. In this situation, occupying a country unable to supply them with sufficient quantities of corn, hemmed in by mountains, and by power

city of Phœnicia, and the port of Sidon, the emporium of the ancient Phœnicia, was situated on the coast of the Mediterranean, where the labour now stands, in lat. 35° E. The trade that is now carried on at Tyre is too trifling to be worth notice. This work is intended to be a history of the city, and is never imperfect, of the results of commercial enterprise excused for submitting to the respect to the commerce of the world owned a people as the

a colony from Sidon, the Phœnician cities. The date is mainly known, but Larcher says it was founded in 1,690 years before the Christian era. (*logie d'Hérodote*, cap. ii.) that while Homer mentions a notice of Tyre, whose name is that of the mother city; it is a proof, that the latter was a considerable emporium. The prophet Isaiah, and Ezekiel, who lived 600 years before Christ, mention the city of unrivalled wealth, and her princes, and her traffic to all parts of the earth. Originally, the main land; but having been destroyed in a period by the Babylonian king, the inhabitants carried their goods to an island at the mouth of a new city was founded, and it attained a degree of celebrity and importance.

The old city was, on that side of the Tyre, and the other simply continued to flourish, extending its commerce on all sides. Alexander the Great, the Tyrians to that conquered city had not been enervated by martial virtues were not commercial skill and enterprise of the Persian empire were more than the capture of Tyre, the victor had not the magnanimity to destroy it as their heroic conduct.

however, of the crucifixion of Christ, she rose again to consider the foundation of Alexandria, the commerce that had formerly been carried on, a new channel, gave her a new life, and she gradually declined till the foundation of the province of Syria, levelled with the dust, since the time for the spreading of new settlements.

of Tyre.—Phœnicia was the shortest of antiquity. It is situated on the Syrian coast which is the most direct (the modern Road) on the coast of Tyre on the south, a narrow channel. Its breadth was diminished for the most part bounded by the east, and Mount Carmel, the surface of this narrow tract is high and mountainous; and though moderately fertile, it supplies of food to feed the city, and its dependent villages, and is supplied with timber suitable for building Tyre and Sidon, the islands of Tripoli, Byblos, Berytus, occupying a considerable tract with sufficient quantities of timber, mountains, and by power

ful and warlike neighbours, on the one hand, and having, on the other, the wide expanse of the Mediterranean, studded with islands, and surrounded by fertile countries, to invite the enterprise of her citizens, they were naturally led to engage in maritime and commercial adventures; and became the boldest and most experienced mariners, and the greatest discoverers, of ancient times.

From the remotest antiquity, a considerable trade seems to have been carried on between the Eastern and Western worlds. The spices, drugs, precious stones, and other valuable products of Arabia and India, have always been highly esteemed in Europe, and have been exchanged for the gold and silver, the tin, wines &c. of the latter. At the first dawn of authentic history, we find Phœnicia the principal centre of this commerce. Her inhabitants are designated in the early sacred writings by the name of Canaanites—a term which, in the language of the East, means merchants. The products of Arabia, India, Persia &c. were originally conveyed to her by companies of travelling merchants, or caravans; which seem to have been constituted in the same way, and to have performed exactly the same part in the commerce of the East, in the days of Jacob, that they do at present. (Gen. xxxvii. 25 &c.) At a later period, however, in the reigns of David and Solomon, the Phœnicians, having formed an alliance with the Hebrews, acquired the ports of Elath and Ezion-geber, at the north-east extremity of the Red Sea. Here they fitted out fleets, which traded with the ports on that sea, and probably with those of southern Arabia, the west coast of India, and Ethiopia. The ships are said to have visited Ophir; and a great deal of attention has been expended in attempting to determine the exact situation of that emporium or country. We agree, however, with Heeren, in thinking that it was not the name of any particular place; but that it was a sort of general designation given to the coasts of Arabia, India, and Africa, bordering on the Indian Ocean; somewhat in the same loose way as we now use the terms East and West Indies. (See the chapter on the *Navigation and Commerce of the Phœnicians*, in the translation of Heeren's work.)

The distance of the Red Sea from Tyre being very considerable, the conveyance of goods from the one to the other by land must have been tedious and expensive. To lessen this inconvenience, the Tyrians, shortly after they got possession of Elath and Ezion-geber, seized upon Rhinocourra, the port in the Mediterranean nearest to the Red Sea. The products of Arabia, India &c. being carried hither by the most expeditious route, were then put on board ships, and conveyed by a brief and easy voyage to Tyre. If we except the transit by Egypt, this was the shortest and most direct, and for that reason, no doubt, the cheapest, channel by which the commerce between Southern Asia and Europe could then be conducted. But it is not believed that the Phœnicians possessed any permanent footing on the Red Sea after the death of Solomon. The want of it does not, however, seem to have sensibly affected their trade; and Tyre continued, till the foundation of Alexandria, to be the grand emporium for Eastern products, with which it was abundantly supplied by caravans from Arabia, the bottom of the Persian Gulf and from Babylon, by way of Palmyra.

The commerce of the Phœnicians with the countries bordering on the Mediterranean was still more extensive and valuable. At an early period, they established settlements in Cyprus and

Rhodes. The former was a very valuable acquisition, from its proximity, the number of its ports, its fertility, and the variety of its vegetable and mineral productions. Having passed successively into Greece, Italy, and Sardinia, they proceeded to explore the southern shores of France and Spain, and the northern shores of Africa. They afterwards adventured upon the Atlantic; and were the first people whose flag was displayed beyond the pillars of Hercules. (Mons Calpe and Mons Abyla, the Gibraltar and Ceuta of modern times.)

Of the colonies of Tyre, Gades, now Cadiz, was one of the most ancient and important. It is supposed by M. de St. Croix to have originally been distinguished by the name of Tartessus or Tarshish, mentioned in the sacred writings. (*De l'état et du sort des anciennes Colonies*, p. 14.) Heeren, on the other hand, contends, as in the case of Ophir, that by Tarshish is to be understood the whole southern part of Spain, which was early occupied and settled by Phœnician colonists. (See also Huot, *Commerce des Anciens*, cap. 8.) At all events, it is certain that Cadiz early became the centre of a commerce that extended all along the coasts of Europe as far as Britain, and perhaps the Baltic. There can be no doubt that by the Cassiterides, or Tin Islands, visited by the Phœnicians, are to be understood the Scilly Islands and Cornwall. [Tin.] The navigation of the Phœnicians probably, also, extended a considerable way along the western coast of Africa; of this, however, no details have reached us.

But, of all the colonies founded by Tyre, Carthage has been by far the most celebrated. It was at first only a simple factory; but was materially increased by the arrival of a large body of colonists, forced by dissensions at home to leave their native land, about 883 years before Christ. (*St.-Croix*, p. 20.) Imbued with the enterprising mercantile spirit of their ancestors, the Carthaginians rose, in no very long period, to the highest eminence as a naval and commercial state. The settlements founded by the Phœnicians in Africa, Spain, Sicily &c. gradually fell into their hands; and after the destruction of Tyre by Alexander, Carthage engrossed a large share of the commerce of which it had previously been the centre. The subsequent history of Carthage, and the misfortunes by which she was overwhelmed, are well known. We shall only, therefore, observe, that commerce, instead of being, as some shallow theorists have imagined, the cause of her decline, was the real source of her power and greatness; the means by which she was enabled to wage a lengthened, doubtful, and desperate contest with Rome herself for the empire of the world.

The commerce and navigation of Tyre probably attained their maximum from 650 to 550 years before Christ. At that period the Tyrians were the factors and merchants of the civilized world; and they enjoyed an undisputed pre-eminence in maritime affairs. The prophet Ezekiel (chap. xxvii.) has described in magnificent terms the glory of Tyre; and has enumerated several of the most valuable productions found in her markets, and the countries whence they were brought. The fir trees of Senir (Hermon), the cedars of Lebanon, the oaks of Bashan (the country to the east of Galilee), the ivory of the Indies, the fine linen of Egypt, and the purple and hyacinth of the isles of Elishah (Peloponnesus), are specified among the articles used for her ships. The inhabitants of Sidon, Arvad (Aradus), Gebel (Byblos), served her as mariners and carpenters. Gold, silver, lead, tin, iron, and vessels of brass; slaves, horses,

miles, sheep, and goats; pearls, precious stones, and coral; wheat, balm, honey, oil, spices, and gums; wine, wool, and silk, are mentioned as being brought into the port of Tyre by sea, or to its markets by land, from Syria, Arabia, Damascus, Greece, Tarshish, and other places, the exact site of which it is difficult to determine. There is, in Dr. Vincent's *Commerce and Navigation of the Ancients in the Indian Ocean* (vol. ii, pp. 621—652), an elaborate and (like the other parts of that work) prolix commentary on this chapter of Ezekiel, in which most of the names of the things and places mentioned are satisfactorily explained. (Heeren *On the Phœnicians*, cap. iv.)

Such, according to the inspired writer, was Tyre, the 'Queen of the waters' before she was besieged by Nebuchadnezzar. But, as has been already remarked, the result of that siege did not affect her trade, which was as successfully and advantageously carried on from the new city as from the old. Inasmuch, however, as Carthage soon after began to rival her as a maritime and mercantile state, this may, perhaps, be considered as the era of her greatest celebrity.

It would not be easy to overrate the beneficial influence of that extensive commerce from which the Phœnicians derived such immense wealth. It inspired the people with whom they traded with new wants and desires, at the same time that it gave them the means of gratifying them. It everywhere gave fresh life to industry, and a new and powerful stimulus to invention. The rude uncivilised inhabitants of Greece, Spain, and Northern Africa acquired some knowledge of the arts and sciences practised by the Phœnicians; and the advantages of which they were found to be productive secured their gradual though slow advancement.

Nor were the Phœnicians celebrated only for their wealth, and the extent of their commerce and navigation. Their fame, and their right to be classed amongst those who have conferred the greatest benefits on mankind, rest on a still more unassailable foundation. Antiquity is unanimous in ascribing to them the invention and practice of all those arts, sciences, and contrivances that facilitate the prosecution of commercial undertakings. They are held to be the inventors of arithmetic, weights and measures, of money, of the art of keeping accounts, and, in short, of everything that belongs to the business of a counting-house. They were also famous for the invention of ship-building and navigation; for the discovery of glass [GLASS]; for their manufactures of fine linen and tapestry; for their skill in architecture, and in the art of working metals and ivory; and still more for the incomparable splendour and beauty of their purple dye. (See the learned and invaluable work of the President de Goguet, *Sur l'Origine des Loix etc.* Eng. trans. vol. i. p. 296, and vol. ii. pp. 95—100; see also the chapter of Heeren on the *Manufactures and Land Commerce of the Phœnicians*.)

But the invention and dissemination of these highly useful arts form but a part of what the people of Europe owe to the Phœnicians. It is not possible to say in what degree the religion of the Greeks was borrowed from theirs; but that it was to a pretty large extent seems abundantly certain. Hercules, under the name of Melcarthus, was the tutelary deity of Tyre; and his expeditions along the shores of the Mediterranean, and to the straits connecting it with the ocean, seem to be merely a poetical representation of the progress of the Phœnician navigators, who introduced arts and civilisation, and established the worship of Hercules, wherever they went. The temple

erected in honour of the god at Gades was long regarded with peculiar veneration.

The Greeks were, however, indebted to the Phœnicians, not merely for the rudiments of civilisation, but for the great instrument of its future progress—the gift of letters. No fact in ancient history is better established than that a knowledge of alphabetic writing was first carried to Greece by Phœnician adventurers; and it may be safely affirmed that this was the greatest boon any people ever received at the hands of another.

Before quitting this subject, we may briefly advert to the statement of Herodotus with respect to the circumnavigation of Africa by Phœnician sailors. The venerable Father of History mentions, that a fleet fitted out by Necho king of Egypt, but manned and commanded by Phœnicians, took its departure from a port on the Red Sea, at an epoch which is believed to correspond with the year 604 before the Christian era, and that, keeping always to the right, they doubled the southern promontory of Africa; and returned, after a voyage of three years, to Egypt, by the Pillars of Hercules. (*Herod.* lib. iv. s. 42.) Herodotus further mentions, that they related that, in sailing round Africa, they had the sun on their right hand, or to the north—a circumstance which he frankly acknowledges seemed incredible to him, but which, as everyone is now aware, must have been the case if the voyage was actually performed.

Many learned and able writers, and particularly Gosselin (*Recherches sur la Géographie systématique et positive des Anciens*, tome i. pp. 204—217), have treated this account as fabulous. But the objections of Gosselin have been successfully answered in an elaborate note by Larcher (*Herodote*, tome iii. pp. 458—464, ed. 1802); and Major Rennel has sufficiently demonstrated the practicability of the voyage. (*Geography of Herodotus*, p. 682 &c.) Without entering upon this discussion, we may observe, that not one of those who question the authenticity of the account given by Herodotus, presumes to doubt that the Phœnicians braved the boisterous seas on the coasts of Spain, Gaul, and Britain; and that they had, partially at least, explored the Indian Ocean. But the ships and seamen that did this much, might, undoubtedly, under favourable circumstances, double the Cape of Good Hope. The relation of Herodotus has, besides, such an appearance of good faith; and the circumstance, which he doubts, of the navigators having the sun on the right, affords so strong a confirmation of its truth, that there really seems no reasonable ground for doubting that the Phœnicians preceded, by 2,000 years, Vasco de Gama in his perilous enterprise.

*Present State of Syria.*—The principal modern ports on the coast of Syria are Alexandretta, Latakia, Tripoli, Beyrout, Seyde, and Acre. The commerce which they carry on is but inconsiderable compared with the extent and fertility of the countries of which they are the inlets. This, however, is not owing to the badness of the ports, the unsuitableness of the country, or to any natural cause, but wholly to long continued oppression and misgovernment. There is a passage in the dedication to Sandys's *Travels* that describes the state of Syria, Asia Minor, Egypt &c., about 250 years ago, with a force and eloquence which it is not very likely will soon be surpassed:—

‘Those countries, once so glorious and famous for their happy estate, are now, through vice and ingratitude, become the most deplorable spectacles of extreme misery; the wild beasts of mankind having broken in upon them and rooted out all

civilite, and the pride of a stern and barbarous  
tyrant possessing the thrones of ancient and just  
dominion; who, ryming only at the height of  
greatness and sensualitie, hath in t act of time  
reduced so great and goodly a part of the world,  
to that lamentable distresse and servitude under  
which (to the astonishment of the understanding  
beholders) it now fulfils and groneth. Those  
rich lands at this present remain waste and over-  
grown with bushes, receptacles of wild beasts,  
of thieves and murderers; large territories despoiled  
or thinly inhabited; goodly cities made desolate;  
sumptuous buildings become ruins; glorious  
temples either subverted, or prostituted to im-  
pictie; true religion discountenanced and op-

pressed; all nobilitie extinguished; no light of  
learning permitted, nor vertue cherished; violence  
and rapine insulting over all, and leaving no  
securitie save to an abject mind and imlook on  
povertie.

Those who compare this beautiful passage with  
the authentic statements of Volney—incom-  
parably the best of the modern travellers who  
have visited the countries referred to—will find  
that it continued down to a comparatively late  
period to be as accurate as it is eloquent. Lat-  
terly, however, thanks to the decay of the Turkish  
power, some improvement has taken place. And  
the trade of Beyrout, and the other ports referred  
to above, has considerably increased.

U

ULTRAMARINE (Ger. ultramarin; Fr. bleu  
d'outremer; Ital. ultramarino; Span. ultramar;  
Russ. ultramarin). A very the blue powder, made  
from the blue parts of *lapis lazuli*. It has the  
valuable property of never fading, nor becoming  
tarnished, on exposure to the air, or a moderate  
heat; and on this account is highly prized by  
painters. It was introduced about the end of the  
fifteenth century. Owing to its great price, artifi-  
cial marine is now used, and the tint of this is  
now superior to that of the natural, while its cost  
is comparatively trifling. Under this general  
head we give the following extracts from various  
reports of the United States Government De-  
partment just received. (Brande and Cox's *Dictionary*  
of *Science and Art*; &c.)

UMBRELLAS. The value of the umbrellas  
and parasols of British manufacture exported in

1867, chiefly to India, the United States, Brazil,  
and Australia, was 187,111.

UNITED STATES. [ALBANY; BALTIMORE;  
BOSTON; CHALLENGTON; GALVESTON; MOBILE;  
NEW ORLEANS; NEW YORK; PHILADELPHIA;  
SAN FRANCISCO; &c.]

In the Report of the Secretary of the Interior,  
dated Washington, November 30, 1868, which has  
just reached this country, it is stated that during  
the last fiscal year public lands were disposed of  
as follows:—

Cash sales	acres
Located with military warrants	914,911-33
Taken for homesteads	5,809,260
Appropd to States as swamp	2,326,923-25
Trans to railroads	209,197-82
Located with college scrip	437,437-57
	1,912,889-08
	6,535,744-50

A quantity less by 385,372 acres than that dis-  
posed of the previous year.

Table exhibiting the Number of Banks, with the Amount of Capital, Bonds Deposited, and Cir-  
culation, in each State and Territory, September 30, 1868. (From Report of the Comptroller  
of the Currency, December 7, 1868.)

\* 56 of these have never completed their organization, or have gone into liquidation.

The quantity of lands still undisposed of is 1,405,366,378 acres.

From among other remarks hostile to the existing tariff of the United States contained in the Report for 1868 of the Special Commissioner of the Revenue, we extract the following sentence: 'Another characteristic feature of the existing tariff is that it attempts indiscriminate or universal protection; an idea which, if fully carried out, would render all protection a nullity, and to the extent to which it is carried out does more for foreign, as compared with domestic, industry than almost any other one agency. [Tariff under New York.]

USANCE. A period of *one, two, or three months*, or of so many days, after the date of a bill of exchange, according to the custom of different places, before the bill becomes due. Double or treble usance is double or treble the usual time; and  $\frac{1}{2}$  usance is  $\frac{1}{2}$  the time. When a month is divided, the  $\frac{1}{2}$  usance, notwithstanding the difference, in the lengths of the months, is uniformly 15 days. Usances are calculated exclusively of the date of the bill. Bills of exchange drawn at usance are allowed the usual days of grace, and on the last of the 3 days the bill should be presented for payment. [EXCHANGE.]

USURY. [INTEREST AND ANNUITIES.]

## V

VALONIA. A species of acorn, forming a very considerable article of export from the Morea and the Levant. The more substance there is in the husk, or cup of the acorn, the better. It is of a bright drab colour, which it preserves so long as it is kept dry; any dampness injures it; as it then turns black, and loses both its strength and value. It is principally used by tanners, and is always in demand. Though a very bulky article, it is uniformly bought and sold by weight. A ship can only take a small proportion of her registered tonnage of valonia, so that its freight per ton is always high.

Of 19,547 tons of valonia imported in 1867, and valued at 331,264*l.*, 17,279 tons were brought from Turkey, and the residue almost entirely from Greece. The duty, after being reduced in 1842 from 20*s.* to 5*s.* per ton, was wholly repealed in 1845. The price of valonia in London in 1867 varied from 14*l.* to 17*l.* 6*s.* per ton.

VALPARAISO. The principal seaport of Chile, lat. (Fort St. Antonio) 33° 1' 9" S., long. 71° 37' 13" W. Population 70,438 in 1865. The water in the bay is deep, and it affords secure anchorage, except during northerly gales, to the violence of which it is exposed; but as the holding ground is good, and the pull of the anchor against a steep hill, accidents seldom occur to ships properly found in anchors and cables. The mole is neither strong nor extensive; but the water close to the shore is so deep, that it is customary for the smaller class of vessels to carry out an anchor to the northward, and to moor the ship with the stern ashore by another cable made fast to land. Large ships lie a little farther off, and load and unload by means of lighters. The best shelter is in that part called the Fisherman's Bay, lying between the castle and Fort St. Antonio, where, close to a clear shingle beach, there is 9 fathoms water. In the very worst weather, a landing may be effected in this part of the bay. There is a lighthouse with a fixed and flashing light on Angeles or Playa Ancha Point visible for 20 miles in clear weather. (Miers's *Chili and La Plata*, i. 440, and Admiralty list of lights 1868.) In 1866, 901 vessels of 354,123 tons entered the port.

The harbours of Valdivia and Concepcion are much superior to that of Valparaiso; the former being, indeed, not only the best in Chile, but second to few in any part of the world. But Valparaiso, being near the capital, Santiago, and being the central depot for the resources of the province, is most frequented. The town is conveniently situated, at the extremity of a mountainous ridge; most part of the houses being built either upon its acclivity or in its breaches.

Large quantities of corn and other articles of provision are shipped here for Callao and other ports along the Peruvian coast: the exports from San Francisco have nearly ceased. The principal articles of export are the precious metals, copper, tallow and hides, wheat and flour, wool, saltpetre &c. The produce of the Chilean mines of gold and silver has increased during the last few years, and their average produce may now be taken at about 4,000,000 dols., or 800,000*l.* a-year. But the increase in the production of copper has been much more considerable, having fully trebled since 1845. It would appear from a series of the Produce Reports of Messrs. W. P. Robertson & Co. of Valparaiso, ending with that of January 2, 1869, that, besides copper, considerable quantities of nitrate of soda and breadstuffs are regularly exported from this and adjacent ports. At that date freights were 2*l.* 15*s.* per ton for copper produce to Swansea, and 2*l.* 17*s.* 6*d.* for copper or wheat to Liverpool. In 1864 the entire value of the mineral products exported from Chile was estimated at 18,698,723 dols. The import and export trades of the republic have more than trebled since 1848, when their aggregate amount was 16,954,952 dols. The following were the principal articles of export, with their values, in 1866:—

Copper ore and copper	-	24,503,917
Corn, wheat, barley and flour	-	1,230,089
Silver	-	614,057

Total value of the exports in 1866, 5,817,978*l.* The total imports in 1866 were valued at 4,171,293*l.* Of these by far the largest portion is supplied by the United Kingdom, the United States, France, the Hanse Towns, Brazil, Peru &c.

The value of our exports of British produce to Chile amounted, in 1867, to 2,524,438*l.* Among other items they comprised, cottons worth 1,311,437*l.*, woollens 286,183*l.*, linens 141,995*l.*, hardware and cutlery 88,604*l.*, iron 125,378*l.*, apparel and haberdashery 45,875*l.*, empty bags 78,047*l.*, coal 44,790*l.* &c. Exclusive of gold and silver, we import from Chile considerable quantities of copper ore and copper, corn, silver ore, saltpetre, hides, wool &c. The value of the whole imports from Chile, chiefly copper and corn, into the United Kingdom in 1867, was 4,317,568*l.*

*Chilian Port Regulations. Export Duties.*—Chile Guano, 12½ cents per 1,000 lb.; 5 per cent. on the following articles: bar silver, on valuation of 9 dols. per marc; unmelted silver (pina), do; old plate (chafalonía), do.; copper, in bars, on valuation of 14 dols. per 100 lb.; do. retalla do., 9 dols. do.; do regulus ores, calcined ores, silver ores, mixed ores, and tailings not capable of amalgamation, and tailings, pay 5 per cent. on

...e, two, or three months, the date of a bill of exchange of different places, e. Double or treble the usual time; and in a month is divided, and the difference in is uniformly 15 days, exclusively of the date of drawn at usance in grace, and on the last could be presented for

ports in 1866, 5,817,978l. 1866 were valued at far the largest portion is Kingdom, the United Towns, Brazil, Peru &c. to 2,524,438l. Among rised, cottons worth 3,183l., linens 141,995l., 88,604l., iron 125,378l., ry 45,875l., empty bags

Exclusive of gold and Chile considerable quanti-copper, corn, silver ore, The value of the whole fly copper and corn into 1867, was 4,117,568l.

ons. *Export Duties.*— per 1,000 lb.; 5 per cent. : bar silver, on valuation melted silver (pina), do; do.; copper, in bars, on r 100 lb.; do. retalla do., ores, calcined ores, silver tailings not capable of ings, pay 5 per cent. on

proceeds of account sales when received from place of destination. The provincial contribution on export of copper ores is abolished, and in the Times of March 3, 1869, it is stated that the total receipts from customs at Valparaiso during the year 1868, amounted to 5,600,000 dols., of which 650,000 dols. appertains to December alone. Never before has the revenue from this source reached so high a figure.

*Port Charges.*—Tonnage dues, 25 cents per ton; light dues, 3/4 cents per ton; role and captain of the port's fees, 4 dols.; harbour master's fees, 3 dols. Whale ships, vessels in distress or in ballast, or discharging under 20 packages, are exempt from tonnage and light dues. Tonnage dues paid at one port are not levied in another.

The lading charges which are on account of the owner of the goods, may be calculated at from 125 dols. to 150 dols. per ton, according to the description of merchandise. Consignees charge generally 5 per cent. commission for sales, and 2 1/2 guarantees.

*Foreign Flags.*—The only ports of entry for foreign flags are Ancud, Valdivia, Talcahuano, Concepcion, Valparaiso, Coquimbo, and Caldera, and Lota and Coronel in ballast; and vessels from abroad entering any other port are liable to seizure. Coasting trade is prohibited to foreign flags, but they may discharge portions of their original cargoes in one or more ports; and load Chilean produce for a foreign port.

All communication with the shore is prohibited until after the visit of the port and revenue officer, who will require a general manifest of the cargo, or the bill of lading, and a list of stores. 24 hours are allowed for correction of errors or omissions. For any mistake discovered afterward, the captain is subjected to fines or seizure. Passengers' luggage free.

In 1866 the ports of Chile were entered by 3,994 vessels (of which 1,496 were British), with a total tonnage of 1,416,816.

Perhaps no part of South America has proflted more than Chile by the establishment of independence. The contrast between her present state and that in which she was found by M. de la Perouse is most striking. 'The influence of the Government,' said that accomplished navigator, 'is in constant opposition to that of the climate. The system of prohibition exists at Chile in its fullest extent. This kingdom, of which the productions would, if increased to their maximum, supply all Europe; whose wool would be sufficient for the manufactures of France and England; and whose herds, converted into salt provisions, would yield a vast produce: this kingdom, alas! has no commerce. Four or five small vessels bring, every year, from Lima, tobacco, sugar, and some articles of European manufacture, which the miserable inhabitants can obtain only at second or third hand, after they have been charged with heavy customs duties at Calliz, at Lima, and lastly, at their arrival at Chile; in exchange they give their tallow, hides, some deals, and their wheat, which, however, is at so low a price, that the cultivator has no inducement to extend his tillage. Thus Chile, with all its gold, and articles of exchange, can scarcely procure sugars, tobacco, snuff, linens, cambrics, and hardware, necessary to the ordinary wants of life.' (Pérouse's *Voyage*, vol. i. p. 50, Eng. ed.)

Instead, however, of 4 or 5 small ships from Lima, Valparaiso is now annually visited by well-nigh a thousand ships of all nations, exclusive of those visiting the other ports. All sorts of European goods are carried direct to Chile, and are admitted at reasonable duties. The advantages resulting from this extensive intercourse with

foreigners, and from the settlement of English and American adventurers in the country, have been already immense, and will every day become more visible. It was impossible, considering the ignorance of the mass of the people, that the old system of tyranny and superstition could be pulled to pieces without a good deal of violence and mischief; but the foundations of a better order of things have been laid, and Chile is becoming an opulent and a flourishing country.

Its population in 1865 amounted to 1,819,223. And Rosalis states, in his excellent work on Chile (*Essai sur le Chile*, Hambourg 1857), that in 1855 the consumption of sugar amounted to 32,785,250 lb., being nearly 22 lb. to each individual (p. 428). As a further evidence of its prosperity, we may mention that the public revenue, which in 1817 amounted to 1,752,127 dols., had in 1846 increased to 3,623,918 dols., and in 1864 to 9,274,920 dols.

*Monney, Weights, and Measures.*—The quintal of 4 arrobas, or 100 lb., = 101.34 lb. avoirdupois. The fanega, or principal corn measure, contains 3,439 English cubic inches, and is therefore = 1.599 Winchester bushels. Hence 5 fanegas = 1 Winchester quarter very nearly. The vara, or measure of length, = 0.927 English yard.

VANCOUVER'S ISLAND, amalgamated with British Columbia in 1866 (29 & 30 Vict. c. 67), since which time Victoria, its capital, has ceased to be a free port. The latter has about 6,000 inhabitants, and the island about 10,000. [COLONIES.]

VANILLA or VANELLOES. The fruit of the *Epidendrum Vanilla*, a species of vine extensively cultivated in Mexico.

It has a trailing stem, not unlike the common ivy, but not so woody, which attaches itself to any tree that grows near it. The Indians propagate it by planting cuttings at the foot of trees selected for that purpose. It rises to the height of 18 or 20 feet; the flowers are of a greenish yellow colour, mixed with white; the fruit is about 8 or 10 inches long, of a yellow colour when gathered, but dark brown or black when imported into Europe; it is wrinkled on the outside, and full of a vast number of seeds like grains of sand, having, when properly prepared, a peculiar and delicious fragrance. It is principally used for mixing with and perfuming chocolate, and in confectionery; and is, on that account, largely imported into Spain; but as chocolate is little used in England, vanilla is not much known in this country. In 1867, 8,178 lb. of it were imported, of the value of 2,864l., and 5,551 lb. were re-exported.

Vanilla is principally gathered in the intendancy of Vera Cruz, in Mexico, at Misantla, Colipa, Yaenatla, and other places. It is collected by the Indians, who sell it to the whites (*gente de razón*), who prepare it for market. They spread it to dry in the sun for some hours, then wrap it in woollen cloths to sweat. Like pepper, it changes its colour in this operation, becoming almost black. It is finally dried by exposing it to the sun for a day. There are 4 varieties of vanilla, all differing in price and excellence; viz. the *vanilla fina*, the *zocate*, the *rezocate*, and the *vasura*. The best comes from the forests surrounding the village of Zentilla, in the intendancy of Oaxaca. According to Humboldt, the mean exportation of vanilla from Vera Cruz might, at the time he wrote, amount to from 900 to 1,000 millares, worth at Vera Cruz from 30,000 to 40,000 dollars. Vanilla is also imported from Brazil, but it is very inferior. The finest Mexican vanilla is extremely high priced. The British duty of 5s. 3d. per lb. formerly charged on

vanilla was repelled in 1853. (Humboldt, *Nouvelle-Espagne*, 2nd edit. tome iii. pp. 37, 46; Poinsett's *Notes on Mexico*, p. 194 &c.; Braude and Cox's *Dictionary of Science and Art*; &c.)

**VEGETABLE WAX.** The produce of the berry of a tree (*Rhus succedaneum*) growing in Japan. The tree, which is well known to botanists, is said to be abundant; it varies in height from 15 to 25 feet, and the berries which it produces are found in clusters, not unlike bunches of grapes.

The native method of preparing the wax is of a very primitive description. The berries having been gathered, are washed and bruised after a rude fashion; and being then slowly boiled, the wax is extracted and thrown to the surface. Having been skimmed off, it is moulded into cakes of about 30 lb. each, which, being dried in the sun, are fit for use.

This beautiful wax, one parcel of which varies but little from another, has a bright cream colour, is nearly of the consistence of bees' wax, bears without softening a high degree of atmospheric heat; and as it contains a large percentage of stearine, it is highly suitable for the manufacture of candles, particularly of those known as 'composit,' as well as for other purposes.

Little is as yet known in this country of this valuable commodity. Small lots of it have occasionally been indirectly imported, but the first cargo brought hither direct, was imported into London in April 1859, by the American ship *Florence*, from Nagasaki, the principal seaport of Japan. In 1867, we imported 8,964 cwt., valued at 37,817.

**VEGETABLES.** In 1867, we imported vegetables (chiefly from France and Holland) of the value of 50,079*l.*

**VELLUM.** A species of fine parchment. [PARCHMENT.]

**VENEERS.** Thin plating, or layers of superior wood for covering inferior material. They are chiefly of wood. In 1867 we imported, principally from France, 4,976 cwt. of veneers, valued at 44,878*l.*

**VENICE.** A famous city, now of the kingdom of Italy, formerly the capital of the republic of that name, and previous to 1866 belonging to the Austrian empire, on a cluster of small islands towards the northern extremity of the Adriatic, now joined to the mainland by a railway bridge, part of the line to Padua, in lat. 45° 25' 53" N., long. 12° 20' 31" E. Population 123,762 in 1862. The commerce of Venice, once the most extensive of any European city, is now comparatively trifling; and the population, down to 1866, gradually diminishing, both in numbers and wealth. Her imports consist of wheat and other sorts of grain, from the adjoining provinces of Lombardy and the Black Sea; olive oil, principally from the Ionian Islands; cotton stuffs and hardware from England; sugar, coffee, and other colonial products from England, the United States, Brazil &c.; dried fish, dye stuffs &c. The exports principally consist of grain, raw and wrought silk, paper, woollen manufactures, fruits, cheese &c., the products of the adjoining provinces of Italy, and of her own industry; but her manufactures, so famous in the middle ages, are now much decayed.

**Port.**—The islands on which Venice is built lie within a line of long, low, narrow islands, running N. and S., and enclosing what is termed the lagoon, or shallows, that surround the city, and separate it from the mainland. The principal entrance from the sea to the lagoon is at Malamocco, about 1½ league S. from the city; but there are other, though less frequented, entrances,

both to the S. and the N. of this one. There is a bar outside Malamocco, on which there are not more than 10 feet at high water at spring tides; but there is a channel between the western point of the bar and the village of San Pietro, which has 16 feet water at springs, and 14 at neaps. Merchant vessels usually moor off the ducal palace; but sometimes they come into the grand canal which intersects the city, and sometimes they moor in the wider channel of the Giudecca. Vessels coming from the south for the most part make Pirano or Rovigno on the coast of Istria, where they take on board pilots, who carry them to the bar opposite to Malamocco. But the employment of Istrian pilots is quite optional with the master, and is not, as is sometimes represented, a compulsory regulation. When one is taken, the usual fee from Pirano or Rovigno to the bar is 20 Austrian dollars, or about 4*l.* On arriving at the bar, ships are conducted across it and into port by pilots, whose duty it is to meet them outside, or on the bar, and of whose services they must avail themselves. (For the charges on account of pilotage, see post.)

**Money.**—Formerly there were various methods of accounting here; but now accounts are kept, as at Genoa, in lire Italiane, divided into centesimi, or 100th parts. The lira is supposed to be of the same weight, fineness, and, consequently, value as the franc. But the coins *actually in circulation*, denominated lire, are respectively equal in sterling value to about 5*d.* and 4*d.* The latter were coined by the Austrian Government.

**Weights and Measures.**—The commercial weights are here, as at Genoa, of two sorts; the *peso sottile* and the *peso grosso*. The French kilogramme, called the *libra Italiana*, is also sometimes introduced.

100 lb. peso grosso=	105.186 lb. avoirdupois
	127.830 lb. Troy
	47.638 kilogrammes
	99.485 lb. of Hamburg
	96.569 " Amsterdam
sottile	66.416 lb. avoirdupois
	80.721 lb. Troy
	30.123 kilogrammes
	62.186 lb. of Hamburg
	60.986 " Amsterdam

The *moggio*, or measure for corn, is divided into 4 staja, 16 quarte, or 64 quartarli. The staja = 2.27 Winchester bushels.

The measure for wine, anfora = 4 bigonzi, or 8 mastelli, or 48 sechii, or 192 bozze or 768 quartuzzi. It contains 137 English wine gallons.

The *botta* = 5 bigonzi. Oil is sold by weight or measure. The *botta* contains 2 mighiie, or 80 miri of 25 lb. peso grosso. The *miro* = 4.028 English wine gallons.

The *braccio*, or long measure, for woollen = 26.6 English inches: the *braccio* for silks = 24.8 do. The foot of Venice = 13.68 English inches. (Neckenbrecher and Kelly.)

**Historical Notice.**—Venice was the earliest, and for a lengthened period the most considerable, commercial city of modern Europe. Her origin dates from the invasion of Italy by Attila in 452. A number of the inhabitants of Aquileia, and the neighbouring territory, flying from the ravages of the barbarians, found a poor but secure asylum in the cluster of small islands opposite the mouth of the Brenta, near the head of the Adriatic Gulf. In this situation they were forced to cultivate commerce and its subsidiary arts, as the only means by which they could maintain themselves. At a very early period they began to trade with Constantinople and the Levant; and notwithstanding the competition of the Genoese and Pisans, they continued to engross the principal trade in Eastern products, till the discovery of a

Venice was the earliest, and od the most considerable, dern Europe. Her origin of Italy by Attila in 452, itants of Aquilein, and the flying from the ravages of prior but secure asylum in ands opposite the mouth of head of the Adriatic Gulf. were forced to cultivate ositary arts, as the only ould maintain themselves. they began to trade with he Levant; and notwith ion of the Genoese and to engross the principal ets, till the discovery of a

route to India by the Cape of Good Hope turned this traffic into a totally new channel. The crusades contributed to increase the wealth and to extend the commerce and the possessions of Venice. Towards the middle of the fifteenth century, when the Turkish sultan, Mahomet II., entered Constantinople sword in hand, and placed himself on the throne of Constantine and Justinian, the power of the Venetians had attained its maximum. At that period, besides several extensive, populous, and well-cultivated provinces in Lombardy, the republic was mistress of Crete and Cyprus, of the greater part of the Morea, and most of the Isles in the Egean Sea. She had secured a chain of forts and factories that extended along the coasts of Greece from the Morea to Dalmatia; while she monopolised almost the whole foreign trade of Egypt. The preservation of this monopoly, of the absolute dominion she had early usurped over the Adriatic, and of the dependence of her colonies and distant establishments, were amongst the principal objects of the Venetian Government; and the measures it adopted in that view were skillfully devised, and prosecuted with inflexible constancy. With the single exception of Rome, Venice, in the fifteenth century was by far the richest and most magnificent of European cities; and her singular situation in the midst of the sea, on which she seems to float, contributed to impress those who visited her with still higher notions of her wealth and grandeur. Samozarius is not the only one who has preferred Venice to the ancient capital of the world; but none have so beautifully expressed their preference.

Viderat Adriaci Venetam Neptunus in undis  
Nare urbem, et toto povero jura mari.  
Nunc mihi Terephas quæ volentis, Jupiter, arces  
Objice, et ille tua intra Martia, ait:  
Si Tiberim pelago præfers, urbem aspice utramque,  
Illum nominis dicas, hanc postulare locos.

Though justly regarded as one of the principal bulwarks of Christendom against the Turks, Venice had to contend, in the early part of the sixteenth century, against a combination of the European Powers. The famous league of Cambray, of which Pope Julius II. was the real author, was formed for the avowed purpose of effecting the entire subjugation of the Venetians, and the partition of their territories. The emperor and the kings of France and Spain joined this powerful confederacy. But, owing less to the valour of the Venetians, than to dissensions amongst their enemies, the league was speedily dissolved without materially weakening the power of the republic. From that period the policy of Venice was comparatively pacific and cautious. But notwithstanding her efforts to keep on good terms with the Turks, the latter invaded Cyprus in 1570; and conquered it, after a gallant resistance, continued for 11 years. The Venetians had the principal share in the decisive victory gained over the Turks at Lepanto in 1571; but owing to the discordant views of the confederates, it was not properly followed up, and could not prevent the fall of Cyprus.

The war with the Turks in Candia commenced in 1645, and continued till 1670. The Venetians exerted all their energies in defence of this valuable island; and its acquisition cost the Turks above 200,000 men. The loss of Candia, and the rapid decline of the commerce of the republic, now almost wholly turned into other channels, reduced Venice, at the close of the seventeenth century, to a state of great exhaustion. She may be said, indeed, to have owed the last 100 years of her existence more to the forbearance and jealousies of others than to any strength of her own.

Nothing, however, could avert that fate she had seen overwhelm so many once powerful states. In 1797, the 'maiden city' submitted to the yoke of the conqueror: and the last surviving witness of antiquity—the link that united the ancient to the modern world—stripped of independence, of commerce, and of wealth, is now slowly sinking into the waves whence she arose.

The foundation of Venice is described by Gibbon, c. 35; and in his 60th chapter he has eloquently depicted her prosperity in the year 1200. Mr. Hallam, in his work on the *Middle Ages* (vol. i. pp. 470-87), has given a brief account of the changes of the Venetian Government. Her history occupies a considerable space in the voluminous work of M. Sismondi on the *Italian Republics*; but his details as to her trade and commercial policy are singularly meagre and uninteresting. All previous histories of Venice have, however, been thrown into the shade by the valuable work of M. Daru (*Histoire de la République de Venise*, 2nd ed. 8 vols. 8vo. Paris, 1821). Having had access to genuine sources of information, inaccessible to all his predecessors, M. Daru's work is as superior to theirs in accuracy, as it is in most other qualities required in a history.

*Trade, Navigation, and Manufactures of the Venetians in the Fifteenth Century.*—The Venetian ships of the largest class were denominated galleasses, and were fitted out for the double purpose of war and commerce. Some of them carried 50 pieces of cannon, and crews of 600 men. These vessels were sometimes, also, called argosers or argosies. They had early an intercourse with England; and argosies used to be common in our ports. In 1325, Edward II. entered into a commercial treaty with Venice, in which full liberty is given to the Venetians, for 10 years, to sell their merchandise in England, and to return home in safety, without being made answerable, as was the practice in those days, for the crimes or delicts of other strangers. (Anderson's *Chron. Deduction*, Anno 1325.) Sir William Monson mentions, that the last argosie that sailed from Venice for England was lost, with a rich cargo and many passengers, on the coast of the Isle of Wight, in 1587.

In the beginning of the fifteenth century, the annual value of the goods exported from Venice by sea, exclusive of those exported to the states adjoining her provinces in Lombardy, was estimated, by contemporary writers, at 10,000,000 ducats; the profits of the out and home voyage, including freight, being estimated at 4,000,000 ducats. At the period in question, the Venetian shipping consisted of 3,000 vessels of from 100 to 200 tons burden, carrying 17,000 sailors; 300 ships with 8,000 sailors; and 45 galleys of various size, kept afloat by the republic for the protection of her trade &c., having 11,000 men on board. In the dockyard, 16,000 labourers were usually employed. This is the statement of the native authorities; but there can be no doubt that it is greatly exaggerated—1,600 would be a more reasonable number. The trade to Syria and Egypt seems to have been conducted principally by ready money; for 500,000 ducats are said to have been annually exported to these countries; 100,000 were sent to England. (Daru, tome ii. p. 189 &c.) The vessels of Venice visited every port of the Mediterranean, and every coast of Europe; and her maritime commerce was, probably, not much inferior to that of all the rest of Christendom. So late as 1518, 5 Venetian galleasses arrived at Antwerp, laden with spices, drugs, silks &c. for the fair at that city.

The Venetians did not, however, confine them-

selves to the supply of Europe with the commodities of the East, and to the extension and improvement of navigation. They attempted new arts, and prosecuted them with vigour and success, at a period when they were entirely unknown in other European countries. The glass manufacture of Venice was the first, and for a long time the most celebrated, of any in Europe; and her manufactures of silk, cloth of gold, leather, refined sugar &c., were deservedly esteemed. The jealousy of the Government, and their intolerance of anything like free discussion, was unfavourable to the production of great literary works. Every scholar is, however, aware of the fame which Venice early acquired by the perfection to which she carried the art of printing. The classics that issued from the Aldine presses are still universally and justly admired for their beauty and correctness. The Bank of Venice was established in the twelfth century. It continued throughout a bank of deposit merely, and was skilfully conducted.

But the policy of Government, though favourable to the introduction and establishment of manufactures, was fatal to their progressive advancement. The importation of foreign manufactured commodities into the territories of the republic for domestic consumption was forbidden under the severest penalties. The processes to be followed in the manufacture of most articles were regulated by law. 'Dès l'année 1172, un tribunal avoit été créé pour la police des arts et métiers, la qualité et la quantité des matières furent soigneusement déterminées.' (Daru, iii. 153.) Having, in this way, little to fear from foreign competition, and being tied down to a system of routine, there was nothing left to stimulate invention and discovery; and during the last century the manufactures of Venice were chiefly remarkable as evincing the extraordinary perfection to which they had early arrived, and the absence of all recent improvements. An unexceptionable judge, M. Berthollet, employed by the French Government to report on the state of the arts of Venice, observed, 'que l'industrie des Vénitiens, comme celle des Chinois, avoit été précoce, mais étoit restée stationnaire.' (Daru, tome iii. p. 161.)

M. Daru has given the following extract from an article in the statutes of the State Inquisition, which strikingly displays the real character of the Venetian Government, and their jealousy of foreigners: 'If any workman or artisan carry his art to a foreign country, to the prejudice of the republic, he shall be ordered to return; if he do not obey, his nearest relations shall be imprisoned, that his regard for them may induce him to come back. If he return, the past shall be forgiven, and employment shall be provided for him in Venice. If, in despite of the imprisonment of his relations, he persevere in his absence, an emissary shall be employed to despatch him; and after his death his relations shall be set at liberty.' (Tom. iii. p. 150.)

The 19th book of M. Daru's history contains a comprehensive and well-digested account of the commerce, manufactures, and navigation of Venice. But it was not possible, in a work on the general history of the republic, to enter so fully into the details as to these subjects as their importance would have justified. The *Storia Civile e Politica del Commercio de' Veneziani*, da Carlo Antonio Marin, in 3 vols. 8vo., published at Venice at different periods, from 1798 to 1808, is unworthy of the title. It contains, indeed, a great many curious statements; but it is exceedingly prolix; and while the most unimportant and trivial subjects are frequently discussed at extreme length,

many of great interest are either entirely omitted, or are treated in a very brief and unsatisfactory manner. The commercial history of Venice remains to be written; and were it well executed, it would be a most valuable acquisition.

*Present Trade and Manufactures of Venice.*—From the period when Venice came into the possession of Austria, down to 1830, it seems to have been the policy of the Government to encourage Trieste in preference to Venice; and the circumstance of the former being a free port, gave her a very decided advantage over the latter. Latterly, however, a more equitable policy has prevailed. In 1830 Venice was made a free port, and down to 1866, when she became part of the kingdom of Italy, fully participated in every privilege conferred on Trieste. But, notwithstanding this circumstance, the latter continued to preserve the ascendancy; and the revival of trade that has taken place at Venice has not been so great as might have been anticipated. The truth is, that except in so far as she is the entrepôt of the adjoining provinces of Lombardy, Venice has no considerable natural advantage as a trading city; and her extraordinary prosperity during the middle ages is more to be ascribed to the comparative security enjoyed by the inhabitants, and to their success in engrossing the principal share of the commerce of the Levant, than to any other circumstance. Still, however, her trade is far from inconsiderable, though it was much depressed during 1866 in consequence of the war. The great articles of import are sugar, coffee, tobacco, and other colonial products; indigo and other dye stuffs, olive oil, oil seed, coal, iron, salted fish, various descriptions of cotton, woollen, and other manufactured goods; wheat and other grain, from the Black Sea; tin plates and hardware, raw cotton &c. The exports principally consist of silk and silk goods, wheat and other grain, paper, jewellery, glass, and glass wares, Venetian treacle, books, with a great variety of other articles, including portions of most of those that are imported.

*Account of Total Number of Vessels Entered and Cleared at Venice, including Custing Vessels, with Amount of Tonnage.*

	Vessels	Tons
1865	6,179	585,873
1866	5,699	601,643

*Total Imports and Exports united.*

		Ital. livres
1865	-	88,514,862
1866	-	86,667,324
Decrease	-	1,847,538 liv. = 267,017

The comparison of the trade by land and river navigation in 1865 and 1866 is as follows:—

	Total Imports	Total Exports
1865	Italian liv. 54,806,490	Italian liv. 38,156,448
1866	43,777,590	31,116,119
Decrease	11,028,900	7,040,329
Total decrease		18,068,539

From which it appears the decrease of trade by land and river navigation in 1866 was 18,068,539, which, added to the decrease in the amount of trade by sea, makes the total falling off (attributable entirely to the war, which ended in her transfer from Austria to Italy) 19,744,269 Italian livres, or 789,771 1/2 15s.

The following tables show the value of our trade with Venetia.

Table showing the Value, in Italian Livres, of Merchandise Imported and Exported by Sea at Venice, in the Year 1866, compared with 1865.

Countries	Imports		Exports

The Venetians may now look forward with hope to a new and more prosperous era in their commercial annals, resulting from the advantages they will derive from annexation to the kingdom of Italy under a liberal constitutional Government favourable to the system of free trade and moderate tariffs, and hostile to prohibitory duties. Tariff.—The Italian customs tariff is far more favourable than that of Austria formerly was to the importation of the following important articles of British commerce:—

	ITALIAN			AUSTRIAN		
	per cwt.	s. d.	..	per cwt.	s. d.	..
Fish: salmon, codfish, pilchard, herrings, and stockfish	1 7 1/2	..	..	3 6	..	..

either entirely omitted, brief and unsatisfactory history of Venice were it well executed, ble acquisition.

Manufactures of Venice.— Venice came into the light in 1830, it seems to have been the Government to encourage to Venice; and the latter being a free port, gave advantage over the latter. More equitable policy has since she became part of the Kingdom participated in every way. Trieste. But, notwithstanding, the latter continued to flourish; and the revival of commerce at Venice has not been anticipated. The Kingdom in so far as she is the provinces of Lombardy, the natural advantage as an extraordinary prosperity is more to be ascribed to the industry enjoyed by the inhabitants in engrossing the commerce of the Levant, and, in consequence, still, however, considerable though it was in 1866 in consequence of the liberal import on sugar, other colonial products; stuffs, olive oil, oil seed, various descriptions of other manufactured goods; iron, from the Black Sea; raw cotton &c. The silk and silk goods, paper, jewellery, glass, and metals, with a great deal, including portions of imported.

Trade by land and river in 1866 is as follows:—

Total Imports	Total Exports
Italian Liv. 4,806,090	Italian Liv. 39,156,448
3,777,580	31,116,119
1,028,510	7,040,329
18,008,339	..

There is a decrease of trade by land in 1866 was 18,068,339, a decrease in the amount of the total falling off (attributed to Italy) 19,744,269 Italian Livres.

show the value of our trade

**Leather.**—The Italian admits of the importation of tanned hides and leather, which was precluded by the Austrian tariff.

**Iron and Ironwares.**—The Italian duties on iron and all sorts of iron and steel, and on all descriptions of metal goods, afford facilities for their importation which the high duties of Austria impeded.

The manufactures of Venice are very various, and more extensive than is generally supposed. The famous glassworks produce magnificent mirrors, with every variety of artificial pearls and gems, coloured beads, enamel and Mosaic works &c. Jewellery, including gold chains, is also extensively produced; as are gold and silver stuffs, velvets, silks, laces, and other expensive goods; and leather, soap, earthenware, wax-lights &c., to a greater or less extent. Printing is more extensively carried on in this than in any other city of Italy, and books form a considerable article of export. Ship-building is also carried on to some extent, both here and at Chiozza. In 1836, the first steam-engine seen in Venice was set up for a sugar refinery.

From the circumstance of Venice being situated nearly opposite the mouth of the Brenta, which brings down large quantities of mud, the probability is that the lagoon, by which she is surrounded, will ultimately be filled up. Under the republic this was a subject of great apprehension, and every device was resorted to that seemed likely to avert a result so pregnant with danger to the independence of the city. But now that there is no particular motive for hindering the mud from accumulating in the lagoon, it is probable that, in the course of time, the shallow will be converted into terra firma, and Venice lose her insular position. The works projected and approved for deepening the entrance to the port of Malamocco, and for deepening and widening the channel from thence to the port and arsenal of Venice, will render the port easy of access to vessels of large tonnage, and afford important advantages to the foreign commerce of the port.

**Railway to Venice.**—Venice is connected with the mainland, and with the chief towns of Italy, and the rest of Europe, by railway. That part of this important work which passes through the lagoon is supported on arches. It may be expected that this new and easy channel of communication with some of the most fertile districts of Lombardy, will be of considerable service to Venice; and will tend, in some degree, to revive her decaying energies.

Many of the inhabitants depend for their subsistence on fishing in the lagoon, and the contiguous portions of the Adriatic.

**Italian Port Charges.**—These are considerably lower than those of Austria. Steam-ships, from whencesoever arrived: Health dues, 5 Italian cents per Italian ton; light dues, 50 cents per ton; total, 55 cents per ton, with liberty to touch at any Italian port within the month, on again paying the health dues only.

In steam-ships, the English ton has an advantage of about 10 per cent.; 40 per cent, instead of 30 per cent., being allowed for the engine and coal-room; the charges are, therefore, about 49 Italian cents, equal to 60 Austrian soldi ( $4\frac{1}{10}d.$ ) per ton.

Steamers may also pay the charges for 1 year, on payment of 150 Italian livre for light dues, and 50 cents for health dues.

In sailing vessels, the English ton is equal to the Italian, and pays for health dues, 20 cents, and light dues, 50 cents; together 70 cents, or about 28½ Austrian soldi ( $6\frac{1}{10}d.$ ).

**Banking Establishments.**—The old bank of Venice was founded so far back as 1171, being the most ancient establishment of the kind in Europe. It was a bank of deposit; and such was the estimation in which it was held, that its paper continued to bear an agio as compared with coin down to 1797, when the bank fell with the Government by which it had been guaranteed. At present (1869) there are in Venice, besides private bankers, a discount bank, or 'Società Mercantile,' a branch of the 'Banca del Popolo' of Florence, and a new bank called 'Banca Popolare.' The legal and usual rate of interest and discount is 6 per cent. It is not the practice to allow interest on deposits. Bills on London are usually drawn at three months.

**Brokers, Commission &c.**—The number of brokers is limited, and they are licensed by Government; but the business of commission merchant and factor is open to everyone. Before, however, commencing any trade or profession at Venice, a petition must be presented for leave to the authorities: but this is more a matter of form than anything else; its prayer being rarely, if ever, refused.

The usual rate of commission and factorage on the purchase or sale of colonial produce is 2 per cent., and on manufactured goods 3 per cent., inclusive of broker's commission, 1 per cent. A shipbroker's commission on the freight of a whole cargo is 2 per cent., and on a general cargo 4 per cent. By the custom of the place, merchants charge 2 per cent. on the inward, and 2 per cent. on the outward freight of all ships consigned to them; and this, though they had done no more than recommend the master to a broker. A bill broker's commission is ½ per mille. Merchants and bankers charge a commission on internal bills of ½ per cent., and on foreign ditto of 1 per cent.

**Insurances** are effected by companies and individuals. The Government charges no duty on the policies.

**Communications with Lombardy** are effected by flat-bottomed vessels, which, passing through the lagoon, enter the canals and rivers, and make their way through most part of the country watered by the Po and its tributaries. The freight of goods from Milan to Venice, distant about 170 miles, is about 1l. per ton. The principal products they bring down are grain, silk, hemp, and flax, cheese, rhubarb &c. The country to the north of Venice affords large quantities of deals, which are shipped for Malta, Sicily, and the Levant.

**Quarantine.**—Ships coming from without the Straits of Gibraltar, provided there be no infectious disease on board, are admitted to pratique on performing a short quarantine of 7 days in a part of the lagoon, about 1 mile from the city. Long quarantine is performed a little farther off. The lazaretto, and establishments for passengers &c. performing quarantine, are among the best in Europe.

**Provisions, Ships' Stores &c.**—These articles may all be had at Venice of excellent quality but not cheap, with, perhaps, the exception of bread. Water is conveyed to the city by lighters, and is, consequently, rather dear; fuel is very scarce, and very high priced.

**Tares.**—Cases, casks, and other coverings go into the scale with their contents, and the duty is levied on the gross weight. Wine, spirits &c. consumed in this city, being liable to an excise duty to cover the municipal expenses, have an allowance, if in iron-bound casks, of 18 per cent. on the weight; and if not in iron-bound casks, of 12 per

cent. The tares allowed between merchants are as follow:—

	per cent.
Cotton wool, Pernambuco and Bahia	3
East India Ac.	4
Sugar, Brazil	15 to 18
Amalca, macovano	14
Barboun, brown and yellow, and East India of all colours	15
Refined, crushed	12
Manilla	10
Indian hemp	2
Sladder root	4
Black pepper	10

On other articles, real tares are usually taken.

(Exclusive of the authorities already referred to, see Howling's Report on the Statistics of Italy; Geog. Dict.; Consular Reports; Commercial Circulars; &c.)

**VERA CRUZ.** The principal seaport on the western coast of Mexico; lat. 19° 11' 52" N., long. 96° 8' 45" W. Population estimated at 10,000 in 1865. Opposite the town, at the distance of about 400 fathoms, is a small island, on which is built the strong castle of St. Juan d'Ulloa, which commands the town. The harbour lies between the town and the castle, and is exceedingly insecure; the anchorage being so very bad, that no vessel is considered safe unless made fast to rings fixed for the purpose in the castle wall; nor is this always a sufficient protection from the fury of the northerly winds (*las norotes*), which sometimes blow with tremendous violence. Humboldt mentions, in proof of what is now stated, that a saip of the line, moored by 9 cables to the castle, tore, during a tempest, the brass rings from the wall, and was dashed to pieces on the opposite shore. (*Nouvelle-Espagne*, 2me éd. iv. 55.) Its extreme unhealthiness is, however, a more serious drawback upon Vera Cruz than the badness of its port. It is said to be the original seat of the yellow fever. The city is well built, and the streets clear; but it is surrounded by sand hills and ponds of stagnant water, which, within the tropics, are quite enough to generate disease. The inhabitants, and those accustomed to the climate, are not subject to this formidable disorder; but all strangers, even those from the Havannah and the West India Islands, are liable to the infection. No precautions can prevent its attack; and many have died at Xalapa, on the road to Mexico, who merely passed through this pestilential spot. During the period that the foreign trade of Mexico was carried on exclusively by the *flota*, which sailed periodically from Cadiz, Vera Cruz was celebrated for its fair, held at the arrival of the ships. It was then crowded with dealers from Mexico and most parts of Spanish America; but the abolition of the system of regular fleets in 1778 proved fatal to this fair, as well as to the still more celebrated fair of Portobello.

A lighthouse has been erected on the north-west angle of the castle of St. Juan. The light, which is a revolving one of great power and brilliancy, is elevated 80 feet above the level of the sea, and is visible 15 miles off in clear weather.

**Commerce.**—An individual, looking at a map of the world, would be apt to conclude that Mexico is one of the most favourably situated countries for commerce; and, in some respects, this is true. But her trade labours, notwithstanding, under some serious disadvantages. Though washed by the Atlantic and Pacific Oceans, neither of her coasts is accessible for several months of the year. On the east coast, or that bordering on the Gulf of Mexico, there is not a single good harbour; and during the season when the coasts are accessible, they are extremely unhealthy. Owing also to the rapid ascent from the shores to the interior, the construction of roads, and the transport of commodities to and from the inner provinces, is

alike difficult and expensive. No doubt, however, an efficient Government and an industrious people would speedily, in a great measure, overcome these obstacles to an extensive intercourse with the foreigner. But Mexico has neither the one nor the other; and, at present, her trade is confined within the narrowest limits. Down to 1778, when the Spanish Government relaxed the old prohibitive system, the foreign goods legally imported into Mexico comprised only a few Chinese and European manufactures; the former brought annually in one gallon of about 1,400 tons, and the latter sent *once in three years* exclusively in ships chartered by Government from Seville or Cadiz. On the opening of the trade in 1779, private capitalists engaged in it; and after that period, at an average of 12 years before and after, the returns for exports alone rose from 11,000,000 to 19,000,000 dollars, the difference being chiefly in the quantity of specie, but the trade was fettered with vexatious duties at every step, from the merchant to the consumer. On the breaking out of the civil war, the ports of Tampico, Mazatlan, and San Blas were opened by the new Government; and soon afterwards foreign vessels were admitted into all the ports on the same terms as Spaniards. The Spanish capitalists retired to Cuba or Spain; and their places were supplied by British and American merchants, who established themselves in the interior, and supplied the inhabitants in return for dollars with manufactured goods: the superior quality and cheapness of which has, no doubt, had some influence in depressing native manufactures. The jealousy of the natives, however, and the absurd threats of the Government against foreign artificers and traders, tended to prevent their settling in the country, and engaging in any considerable undertaking, other than the mines; and the depressed state of the latter, which have always furnished the principal article of export, has extended still farther to depress and paralyse commerce. The roads, too, instead of being improved, have been suffered to fall into a state of almost irreparable decay. In this respect, the following extract from one of the letters of M. Chevalier is decisive. 'The splendid road which, during the domination of the Spaniards, was constructed across deserts and precipices, by the merchants of Vera Cruz, to the summit of the upper country, is a melancholy instance of the carelessness with which the public interests of the country are directed. During the war of independence, this road was cut up in various points; and, down to this day, the enfranchised Mexicans have not replaced a single stone, or filled up a single trench, nor even cut down one of the trees, which, in the absence of any considerable traffic, and under the influence of a tropical sun, are rapidly growing up to a magnificent size in the very middle of the road. In the upper country nothing would be more easy than to open noble means of communication. The soil is naturally level; the basaltic rocks, particularly adapted for the construction of roads, are found in great abundance. But even where there are roads, the Mexicans make little use of them. They carry to a yet more extravagant length the inconceivable predilection of the Spanish race in favour of transporting their goods on the backs of animals. You expect to meet with carts and waggons; no such thing; everything is conveyed on the backs of mules or Indians. Troops of little consumptive donkeys bring into the city, in parcels not much bigger than a man's two fists, the charcoal required for the culinary operations of the inhabitants. The price of every bulky article is thus increased to an enormous degree. The interior

districts are as inaccessible as if they were cut off by an enemy's army, and famine frequently ensues.

In consequence of this wretched state of the roads, of the insecurity consequent to the prevalence of revolutions, and the torpor and indolence of the inhabitants (occasioned partly and principally by physical, but partly, also, by moral causes), industry of all kinds is at an extremely low ebb; and the commerce of the republic is far from being commensurate either with her population, or the number and value of her exportable products. Mr. Secretary of Legation Middleton, in his Report of November 29, 1867, states on the authority of an English gentleman employed on the projected railway between the capital and Vera Cruz, that if the line were completed, the deshecho or refuse, now thrown aside as worthless in the important mineral district of Pachuca, might be conveyed (all expenses by land and sea, freight included), at the rate of from 25 to 30 dollars per ton to Swansea, where it would be worth from 45 to 47 dollars per ton for smelting.

For a considerable period after the town of Vera Cruz had thrown off the Spanish yoke, the castle of St. Juan d'Ulloa continued in possession of the Spaniards. During this interval, the commerce of Vera Cruz was almost entirely transferred to the port of Alvarado, 12 leagues to the south-east. Alvarado is built upon the left bank of a river of the same name. The bar at the mouth of the river, about 1½ mile below the town, renders it inaccessible for vessels drawing above 10 or 12 feet water. Large ships are obliged to anchor in the roads, where they are exposed to all the violence of the north winds, loading and unloading by means of lighters. Alvarado is supposed, but probably without much foundation, to be a little healthier than Vera Cruz. The trade has now mostly reverted to its old channel.

For a few years, Tampico rose to considerable importance as a commercial seaport. Thus the value of its exports, which was 266,932*l.* in 1858, rose to 1,609,182*l.* in 1862, but fell to 235,473*l.* in 1864, but the value of its imports has increased steadily though less rapidly from 266,340*l.* in 1858 to 668,404*l.* in 1864. It is situated about 60 leagues N.N.W. of Vera Cruz, in lat. 20° 15' 30" N., long. 97° 52' W., being about 104 leagues from Mexico. Hitherto it is said to have been free from fever. The shifting of the bar at the mouth of the river, and the shallowness of the water on it, which is sometimes under 8, and rarely above 15 feet, are serious obstacles to the growth of the port. Vessels coming in sight are boarded by pilots, who conduct them, provided they do not draw too much water, over the bar. Those that cannot enter the port load and unload by means of lighters; mooring so that they may get readily to sea in the event of a gale coming on from the north.

**Exports and Imports.**—The precious metals have always formed the principal article of export from Mexico. During the 10 years ending with 1801, the average annual produce of the Mexican mines amounted, according to M. Humboldt, to 23,000,000 dollars (*Nouvelle-Espagne*, iv. 137); and in 1805 the produce was 27,165,888 dollars. (*Id.* iv. 83.) But during the revolutionary war, the old Spanish capitalists, to whom most of the mines belonged, being proscribed, emigrated with all the property they could scrape together: and this withdrawal of capital from the mines, added to the injury several of them sustained by the destruction of their works during the contest, the interruption of all regular pursuits which it occasioned, and the insecurity and anarchy that afterwards prevailed, caused an extraordinary

falling off in the produce of the mines. Within these few years, however, a considerable improvement has taken place. The efforts, and the lavish expenditure, of a few of the companies formed in this country for working the mines, assisted in bringing them into good order. Latterly, also, they have been conducted with greater skill and economy, and a considerable increase of produce has taken place. The coinage of gold and silver at the different Mexican mints in 1855 was as follows, viz:—

	Gold	Silver	Total
	dols.	dols.	dols.
Culliacan	144,208	237,968	892,176
Chihuahua	17,576	475,500	35,076
Durango	75,647	609,171	694,818
Mexico	155,265	4,013,359	4,168,624
Guajuquinto	555,200	4,698,800	5,254,000
Guadalupe	10,368	53,662	44,290
San Luis Potosi	..	1,849,795	1,849,795
Zacatecas	..	3,619,000	3,619,000
Total	..	..	17,595,177

But to this may be added from 8,000,000 to 10,000,000 dollars for those raised and exported without being brought to the mints, and for bullion assayed at the mints, and exported in bars.

And but for the prevalence of insecurity, a large increase of this produce might be expected.

We extract from the very interesting and instructive Report of Mr. Secretary of Legation Middleton, of July 10, 1866, a tabular statement, showing the amount of gold and silver coined at the various Mexican mints in the first three months of 1866:—

Mints	Gold	Silver	Total
	dols.	dols.	dols.
Mexico	80,024	1,082,202	1,162,226

Alamos	..	..	..
Total	225,912	3,630,158	3,856,070

It would appear, too, from this Report, and from Mr. Middleton's Reports of Dec. 31, 1866, and Dec. 31, 1867, the former on the sulphur deposits and the latter on the soda and salt producing districts of Mexico, that she is rich in minerals of every description.

Besides the precious metals, cochineal, flour, indigo, provisions, leather, saraparilla, vanilla, jalap, soap, logwood, and pimento are the principal articles exported from Vera Cruz.

The imports consist principally of cotton, woollen linen, and silk goods, paper, brandy, quicksilver, iron, steel, wine, wax &c.

According to Humboldt, the imports at Vera Cruz, before the revolutionary struggles, might be estimated, at an average, at about 15,000,000 dollars, and the exports at about 22,000,000 do.

It must, however, be observed, that this statement refers only to the registered articles, or to those that paid the duties on importation and exportation. And exclusive of these, the value of the articles clandestinely imported by the ports of the Gulf, previously to the revolution, was estimated at 4,500,000 dollars a-year; and 2,500,000 dollars were supposed to be annually smuggled out of the country in plate and bars, and ingots of gold and silver. A regular contraband trade used to be carried on between Vera Cruz and Jamaica, and notwithstanding all the efforts of Government for their exclusion and the excessive severity of its laws against smuggling, the shops of Mexico

can mints in 1855 was as

were always pretty well supplied with the products of England and Germany. (Humboldt, *Nouvelle-Espagne*, iv. 125; Poinsett's *Notes on Mexico*, p. 183.)  
Humboldt states that the total population of Mexico, exclusive of Guatemala, might be estimated at the time he wrote at about 7,000,000. Of this number about  $\frac{1}{3}$  were Indians, the rest

being descendants of Europeans, and mixed races. In 1857, the population amounted to 8,137,853. But notwithstanding their large numbers, the intelligence and want of industry of the mass of the people is such that the trade we carry on with them is quite inconsiderable compared with what might be expected. We subjoin in illustration of this remark an

gging, the shops of Mexico

It should, however, be observed, that the imports of British goods at second hand into Mexico and Colombia from the West Indies is still far from inconsiderable; and a pretty large proportion of the British goods sent to Chili are conveyed thence to Acapulco and other Mexican ports on the Pacific. Formerly the imports into Mexico supplied most part of the demand of Peru and the West coast of South America.

The Mexican Republican Government issued a revised tariff, which came into operation on October 1, 1853. It did credit to those by whom it was prepared. Some of the more oppressive duties were largely reduced; and, on the whole, it must be considered as a great advance towards a liberal system of commercial policy. Much, however, depends on the way in which such a reform is carried out. In a Government so fluctuating as that of Mexico, a policy or tariff in favour to-day may be repudiated to-morrow. In January 1867, the unfortunate Emperor Maximilian issued a decree, reforming the scales of tonnage and light-house dues affecting ships in the coasting and foreign trade, but neither during the existence nor since the dissolution of the empire, has any

settled Government, down to 1869, existed capable of preserving order or enforcing its decrees.

VERDIGRIS (Ger. grüspan; Fr. vert-de-gris; verdet; Ital. verdame; Span. cardenillo, verdin, verde-gris; Russ. jar). A kind of rust of copper, of a beautiful bluish-green colour, formed from the corrosion of copper by fermented vegetables.

Its specific gravity is 1.78. Its taste is disagreeably metallic: and, like all the compounds into which copper enters, it is poisonous. It was known to the ancients, and various ways of preparing it are described by Pliny. It is very extensively used by painters, and in dyeing; it is also used to some extent in medicine. The best verdigris is made at Montpellier; the wines of Languedoc being particularly well suited for corroding copper, and forming this substance. It is generally exported in cakes of about 25 lb. weight each. It is also manufactured in this country, by means of the refuse of cider &c. The goodness of verdigris is judged of from the deepness and brightness of its colour, its dryness, and its forming, when rubbed on the hand with a little water or saliva, smooth paste, free from grittiness. (Thomson's *Chemistry*; Rees's *Cyclopaedia*.) In

1866 the imports and exports of verjuice were respectively 792 and 226 cwt. In 1853 the ad valorem duty of 10 per cent, with which it was previously burdened, was repealed.

**VERJUICE** (Ger. *agrest*; Fr. *verjus*; Ital. *agresto*; Span. *agraz*). A kind of harsh, austere vinegar, made of the expressed juice of the wild apple, or crab. The French give this name to unripe grapes, and to the sour liquor obtained from them.

**VERMICELLI** (Ger. *nudeln*; Dutch, *meelneepen*; proppen; Fr. *vermicelle*; Ital. *vermicelli*, *tagliolini*; Span. *aletrias*). A species of wheaten paste formed into long, slender, hollow tubes, or threads, used amongst us in soups, broths &c. [**MACCARONI**.] Mr. Lowe proposes to repeal the duty on vermicelli and macaroni this year, 1869.

**VERMILION**. [**CINNABAR**.] Our imports of vermilion in 1867 were 100,147 lb., valued at 12,867*l*.

**VICTORIA**. [**COLONIES**; MELBOURNE; VANCOUVER ISLAND.]

**VINEGAR** (Ger. *essig*; Dutch, *azijn*; Fr. *vinaigre*; Ital. *aceto*; Span. and Port. *vinagre*; Russ. *ukzus*; Lat. *acetum*). [See **ACID (ACETIC)**, for a description of vinegar.] A duty of 2*l*. per gallon being formerly imposed on vinegar, its manufacture was placed under the control of the excise. A license, costing 5*l*., and renewable annually, has to be taken out by every maker of vinegar, or acetic acid. In 1812, the duty on vinegar produced 23,842*l*., showing that 2,861,000 gallons had been brought to the charge. The manufacture is almost confined to England; the quantities produced in Scotland and Ireland being quite inconsiderable. The duty was repealed in 1844, but in 1856 the present duty of 3*l*. per gallon was imposed on foreign vinegar, of which in 1867 we imported 51,097 gallons, chiefly from France, the price being from 1*s*. 6*d*. to 2*s*. per gallon.

**VITRIOL**. [**COPPERAS**.]

**VITRIOL, OIL OF**. [**ACID (SULPHURIC)**.]

## W

**WALNUTS**. The fruit of the *Juglans*, or walnut-tree, of which there are several varieties. The walnut is a large handsome tree, with strong spreading branches. The fruit is a pretty large smooth, ovate nut, containing an oily kernel, divided into four lobes. The nut has been always held in high estimation: it was called by the Romans *Jovis glans*, the acorn or mast of Jove, and hence the name of the tree.

The walnut tree is indigenous to Persia and the countries bordering on the Caspian Sea. It has long been introduced into Great Britain; but the fruit seldom ripens in the more northerly parts of the island. Previously to the very general introduction of mahogany, the wood of the walnut tree was extensively used among us in making of furniture; and it continues to be largely employed for that purpose in many parts of the Continent. It is much used by turners; and is superior to every other sort of wood for the mounting of guns; a circumstance which caused great devastation among our walnut plantations during the latter years of the war. Great numbers of walnut trees are annually consumed in the Haute Vienne and other departments of France, in the manufacture of the wooden shoes or clogs used by the peasantry. The nuts are either gathered when ripe, being served up at desserts without any preparation; or they are plucked green and pickled. (Poiret, *Histoire philosophique des Plantes*, tome vii. p. 213; Rees's *Cyclopædia*; &c.) The duty of 2*s*. 1*d*. per bushel on walnuts was reduced in 1853 to 1*s*. per bushel, and has since been abolished. The imports in 1852 were only 32,521 bushels, but in 1867 they amounted to 160,129 bushels, coming chiefly from France and Belgium.

**WANGHEES**, sometimes called **JAPAN CANES**. A species of cane imported from China. They should be chosen pliable, tough, round, and taper; the knots at regular distances from each other; and the heavier the better. Such as are dark-coloured, badly glazed, and light, should be rejected. (Milburn's *Orient. Com.*)

**WAREHOUSING SYSTEM**. By this system is meant the provisions made for lodging imported articles in public warehouses, at a reasonable rent, without payment of the duties on importation till

they be withdrawn for home consumption. If re-exported, no duty is ever paid.

1. *Expediency and Origin of the Warehousing System*.—It is laid down by Adam Smith, in one of his justly celebrated maxims on the subject of taxation, that 'Every tax ought to be levied at the time and in the manner that is most likely to be convenient for the contributor to pay it.' (*Wealth of Nations*, p. 371.) No one can doubt the soundness of this maxim; and yet it was very strangely neglected, down to 1803, in the management of the customs. Previously to this period, the duties on most goods imported had either to be paid at the moment of their importation, or a *bond*, with sufficient security for their future payment, had to be given to the revenue officers. The hardship and inconvenience of such a system is obvious. It was often very difficult to find sureties; and the merchant, in order to raise funds to pay the duties, was frequently reduced to the ruinous necessity of selling his goods immediately on their arrival, when, perhaps, the market was already glutted. Neither was this the only inconvenience that grew out of this system; for the duties having to be paid all at once, and not by degrees as the goods were sold for consumption, their price was raised by the amount of the profit on the capital advanced in payment of the duties: competition, too, was diminished, in consequence of the greater command of funds required to carry on trade under such disadvantages; and a few rich individuals were enabled to monopolise the importation of those commodities on which heavy duties were payable. The system had, besides an obvious tendency to discourage the carrying trade. It prevented this country from becoming the entrepôt for foreign products, by hindering the importation of such as were not immediately wanted for home consumption; and thus tended to lessen the resort of foreigners to our markets, inasmuch as it rendered it difficult, or rather impossible, for them to complete an assorted cargo. And in addition to all these circumstances, the difficulty of granting a really equivalent drawback to the exporters of such commodities as had paid duty, opened a door for the commission of every species of fraud. But these disadvantages and drawbacks, obvious

sig; Dutch, azijn; Fr. vinagre; Span. and Port. vinagre; a. [See ACID (ACETIC), p. 10.] A duty of 2d. per gallon imposed on vinegar, its sale to be under the control of the Excise, and renewable in 1812, the duty on vinegar was 2,861,000 l. In 1812, the duty on vinegar was 2,861,000 l., showing that 2,861,000 gallons of vinegar were consumed in the year. The duty on vinegar was confined to England; Scotland and Ireland being exempted. The duty on vinegar was 3d. per gallon, and 1097 gallons, chiefly from France, were imported in 1812.

[ACID (SULPHURIC).]

for home consumption, if ever paid.

**Origin of the Warehousing System.**—By Adam Smith, in one of his maxims on the subject of taxes, he says that the tax ought to be levied at the source, that is most likely to be paid by the contributor to pay it. (See *Maxims*, p. 371.) No one can doubt that the tax on vinegar was a maxim; and yet it was not levied, down to 1803, in the form of a duty on the wine. Previously to this time, the most goods imported had been of such a nature as to be sufficient security for their importation, and no duty was given to the revenue. It was often very difficult to get the merchant, in order to pay duties, was frequently obliged to sell his goods at a low price, when, perhaps, they were glutted. Neither was this price that grew out of this system, but a price that was having to be paid all at once as the goods were sold. The price was raised by the duties on the capital advanced in the system; competition, too, was the cause of the greater command over the trade under such a system. A few rich individuals were the importation of these heavy duties were payable. There is an obvious tendency to the free trade. It prevented this system from being the entrepôt for foreign goods, the importation of such as were wanted for home consumption, and lessened the resort of the merchants, inasmuch as it rendered it impossible for them to command. And in addition to all this, the difficulty of granting a drawback to the exporters of such goods had paid duty, opened a door to every species of fraud. Duties and drawbacks, obvious

as they may now appear, did not attract the public attention till a comparatively late period. Sir Robert Walpole seems to have been one of the first who had a clear perception of their injurious influence; and it was the principal object of the famous *Excise Scheme*, proposed by him in 1733, to oblige the importers of tobacco and wine to deposit them in public warehouses; relieving them, however, from the necessity of paying the duties chargeable on them till they were withdrawn for home consumption.

No doubt can now remain in the mind of any one, that the adoption of this scheme would have been of the greatest advantage to the commerce and industry of the country. But so powerful was the delusion generated in the public mind with respect to it, that its proposal well nigh caused a rebellion. Most of the merchants of the day had availed themselves of the facilities which the existing system afforded of defrauding the revenue; and they exerted every endeavour to thwart the success of a scheme which would have given a serious check to such practices, by making the public believe that it would be fatal to the commercial prosperity of the country. The efforts of the merchants were powerfully seconded by the spirit of party, which then ran very high. The political opponents of the ministry, anxious for an opportunity to prejudice them in the public estimation, contended that the scheme was only the first step towards the introduction of such a universal system of excise as would inevitably prove alike subversive of the comfort and liberty of the people. In consequence of these artful misrepresentations, the most violent clamours were everywhere excited against the scheme. On one occasion Sir Robert Walpole narrowly escaped falling a sacrifice to the ungovernable fury of the mob, which beset all the avenues to the House of Commons; and, after many violent and lengthened debates, the scheme was ultimately abandoned.

The disadvantages of the old plan, and the benefits to be derived from the establishment of a voluntary warehousing system, were most ably pointed out by Donn Tucker, in his *Essay on the Comparative Advantages and Disadvantages of Great Britain and France with respect to Trade*, published in 1750. But so powerful was the impression made by the violent opposition to Sir Robert Walpole's scheme, and such is the force of prejudice, that this obvious and signal improvement—the greatest, perhaps, that has been made in our commercial and financial system—could not be safely adopted till 1803.

**Regulations as to Warehousing.**—The statute 43 Geo. III. c. 132 laid the foundation of the system; but it was much improved and extended by subsequent statutes.

The existing regulations as to warehousing are embodied in the Customs Consolidation Act, the 16 & 17 Vict. c. 107, and subsequent Acts. They empower the Commissioners of the Customs, under the authority and direction of the lords of the Treasury, to nominate the ports at which goods may be warehoused without payment of duty, and the warehouses in which particular descriptions of goods may be deposited. The Act also fixes the time during which goods may be deposited and allowed to remain in the warehouse, the remission of the duties in case of loss by accident, the allowances for waste &c. But being of much importance, we have given a full abstract of the 16 & 17 Vict. c. 107, and subsequent modifications and alterations thereof, under **IMPORTATION and EXPORTATION.**

**Warehousing Ports &c.**—Certain ports only are warehousing ports; nor may all sorts of goods be warehoused in every warehousing port. We sub-

join a list of the warehousing ports and towns in Great Britain and Ireland. Goods of all sorts may, speaking generally, be warehoused in the principal ports; but the regulations as to those that may be warehoused in the lesser ports are perpetually varying.

WAREHOUSE RATES.

**Charges on Goods on Delivery from Warehouse for Home Consumption (23 & 24 Vict. c. 110).**

There shall be charged upon goods deposited in any warehouse for security of duties of customs, in addition to such duties and any other charges thereon, for every 100l. of such duties of customs payable thereon, the rates following, viz. :—

On delivery for home consumption from any warehouse approved under the 'Customs Consolidation Act, 1853,'

In respect of tobacco	-	-	2.	d.
other goods	-	-	4.	6
			5	0

Whether such tobacco or other goods shall have been removed to such warehouse under bond or not.

On delivery for home consumption from any warehouse at any port or place not possessing the privileges of bonding at the time of the passing of this Act, or from any warehouse approved under any Act other than the 'Customs Consolidation Act, 1853,' viz. :—

In respect of tobacco	-	-	5s.
other goods	-	-	10s.

WAREHOUSE RENT.

**Rates for Warehouse Rent on Goods Deposited in the Queen's Warehouses.**

Packages of baggage, and small packages of presents, such as boxes, kegs, jars &c., empty casks, samples, and wines, spirits, or other liquids, not exceeding 1 gallon	-	-	2d. per pack.
Packages of wine, spirits, or other liquids, exceeding 1 gallon and not exceeding 30 gallons	-	-	4d. "
Exceeding 30 gallons	-	-	6d. "

The baggage of passengers and surplus stores are allowed to remain a week, exclusive of the

day of receipt and delivery, and other goods 3 days, free of rent, to give the parties time for their examination and clearance.

Stores of naval officers paid off, remain 12 months free. Stores of merchant vessels are charged a low rent according to size or contents. [Stores.]

**WATCH.** A division of time on board ship, by which the duties of the crew are regulated. A ship's crew is divided into two watches, the starboard or captain's watch and the port or mate's watch. The first officer has the entire and independent charge of the port watch. The second officer attends to the starboard watch under the orders of the captain. Each watch is on deck for 4 hours or 8 bells, except from 4 to 8 P.M., which is divided into 4 bells each and is termed the dog watch. It is thus divided to equalise the time of the night duty, each watch taking eight hours, and four hours alternately.

**WATCHES** (Ger. uhren, taschenuhren; Fr. montres; Ital. orologi da tasca, o da sacceccia; Span. relojes de faltriquera; Russ. karmannto tschastil). Portable machines, generally of a small size and round flat shape, that measure and indicate the successive portions of time; having, for the most part, their motions regulated by a spiral spring. When constructed on the most approved principles, and executed in the best manner, a watch is not only an exceedingly useful, but a most admirable piece of mechanism. It has exercised the genius and invention of the most skillful mechanics, as well as of some of the ablest mathematicians, for nearly 3 centuries. And, considering the smallness of its size, its capacity of being carried about uninjured in every variety of position, the number and complexity of its movements, and the extraordinary accuracy with which it represents the successive portions of time as determined by the rotation of the earth on its axis, we need not wonder at Dr. Paley having referred to it as a striking specimen of human ingenuity.

Spring watches are constructed nearly on the same principle as pendulum clocks. Instead of the pendulum in the latter, a spring is used in the former, the isochronism of the vibrations of which corrects the unequal motions of the balance.

*Historical Notice.*—The invention of spring watches dates from about the middle of the seventeenth century, and has been warmly contested for Huygens and Hooke. The English writers generally incline in favour of the latter. Dr. Hutton says (*Mathematical Dictionary*, art. 'Watch') that the words 'Rob. Hooke invenit, 1658,' were inscribed on the dial plate of a watch presented to Charles II, in 1675. But Montucla

affirms (*Histoire des Mathématiques*, tom. ii. p. 413, ed. 1800) that Huygens made this 'belle découverte' in 1656, and presented a spring watch to the States of Holland in 1657. Comparing these statements, it certainly appears that the claim of Huygens to the priority of the discovery is the latter established of the two. We do not, however, believe that either of those distinguished persons owed, in this respect, anything to the other. The probability seems to be, that the happy idea of employing a spring to regulate the motion of watches occurred to them both nearly at the same time.

*Improvement of Watches.*—Owing to the facility with which the longitude may be determined by the aid of accurately going watches, it is of great importance to have them made as perfect as possible. In this view, liberal premiums have been given to the makers of the best marine watches, or chronometers, by the Governments of England, France, Spain &c. In the reign of Queen Anne, Parliament offered a reward of 20,000*l.* to anyone who should make a watch or other instrument, capable of determining the longitude at sea, within certain limits. This magnificent premium was awarded, in 1764, to the celebrated John Harrison, for a marine watch, which, being tried in a voyage to Barbadoes, determined its longitude with even more than the required accuracy. Other premiums, though of inferior amount, were subsequently given to Messrs. Mudge, Arnold, Earnshaw &c. Since 1822, two prizes, one of 300*l.* and one of 200*l.*, have been annually given to the makers of the two chronometers adjudged to be the best, after having been submitted to a twelve-month's trial at the Royal Observatory at Greenwich. And to such perfection has the manufacture attained, that some of the chronometers employed by navigators, though carried into the most opposite climates, have not varied to the extent of two seconds in their mean rate of going throughout the year.

*Watch Manufacture.*—The watch-making business, though latterly a good deal depressed, is largely carried on in London; the artists of which have attained to a high degree of excellence in this department. In 1866, there were 26,988 gold, and 103,515 silver, and in 1867, 25,437 gold and 98,143 silver watch cases assayed at Goldsmiths' Hall, London, the aggregate value of those for 1867 being, probably, not much under 650,000*l.* The manufacture is also carried on to a considerable extent at Birmingham and Chester, 11,700 silver cases having been assayed and marked at Birmingham, and 12,507 gold and 18,505 silver at Chester, in 1866.

On the Continent, watches are principally manufactured in Paris, Geneva, and in Neuchâtel. Some of the French and Swiss watches, particularly the latter, are excellent; but, generally speaking, they are slight, and inferior to those made in London. Paris and Geneva watches are largely exported to foreign countries; and are everywhere in high estimation, particularly among the ladies. In 1867 we imported 24,380 gold and 95,817 silver watches, chiefly from France.

Watches impressed with any mark or stamp, appearing to be or to represent any legal British assay mark or stamp, or purporting by any mark or appearance to be of the manufacture of the United Kingdom, or not having the name and place of abode of some foreign maker abroad visible on the frame and also on the face, or not being in a complete state, with all the parts properly fixed in the case, may not be imported into the United Kingdom, even for the

*himatiques*, tom. ii. p. 10. The Germans made this 'belle' presented a spring watch in 1857. Comparing it, it appears that the priority of the discovery of the two. We do not, either of those distinct in this respect, anything of probability seems to be, employing a spring to watches occurred to them time.

—Owing to the facility may be determined by watches, it is of great value made as perfect as liberal premiums have been of the best marine watches, by the Governments of &c. In the reign of offered a reward of should make a watch or sole of determining the in certain limits. This was awarded, in 1764, to Harrison, for a marine clock in a voyage to far magnitude with even more accuracy. Other premiums, sent, were subsequently to, Arnold, Earnshaw &c., one of 300*l.* and one of given to the makers of adjudged to be the best, awarded to a twelve-month's servatory at Greenwich. has the manufacture of the chronometers employed carried into the most not varied to the extent their mean rate of going

The watch-making business good deal depressed, in London; the artists of which degree of excellence in 1865, there were 26,988 and in 1867, 25,437 gold cases assayed at Goldsmiths' aggregate value of those not much under 650,000*l.* so carried on to a confirmingham and Chester, having been assayed and in, and 12,507 gold and in 1866.

Watches are principally manufactured, and in Neuchâtel, and Swiss watches, particularly excellent; but, generally light, and inferior to those of Geneva watches are foreign countries; and are particularly among imported 24,380 gold and chiefly from France. With any mark or stamp, present any legal British purporting by any mark the manufacture of the not having the name and the foreign maker abroad also on the face, or not date, with all the parts case, may not be in the Kingdom, even for the

purpose of being warehoused. (3 & 4 Wm. IV. c. 52 s. 58. See also Trade Marks Act, 25 & 26 Vict. c. 84.)

**Watches in China.**—Pretty considerable numbers of European watches are imported into China; and it may be worth mentioning, as a curious instance of the diversity of tastes, that the Chinese, as well as most other Eastern nations, who can afford it, uniformly wear watches in pairs! This sort of extravagance is not, however, confined to watches, but extends to a variety of other articles. Shawls, for example, are invariably worn in India in pairs of exactly the same pattern; and it is hardly possible, indeed, to find a native dealer who will sell a single shawl.

**WATER.** It may be thought unnecessary, perhaps, to say anything in a work of this sort with respect to a fluid so well known and so abundant.

But, besides being an indispensable necessary of life, water is, in most large cities, an important commercial article. It is in the latter point of view, principally, that we mean to consider it. Inasmuch, however, as the mode of supplying different places with water, and its price, necessarily vary in every possible way, we shall limit our remarks on these subjects to the metropolis only. The few remarks we intend to offer of a general nature will apply indifferently to any populous place, the supply of which with water occasions a considerable expense.

1. **Quality of Water.**—Dr. Ure has made the following statements with respect to the quality of water:—'Water,' says he, 'is a very transparent fluid, possessing a moderate degree of activity with regard to organised substances, which renders it friendly to animal and vegetable life, for both which it is, indeed, indispensably necessary. Hence it acts but slightly on the organs of sense, and is therefore said to have neither taste nor smell. It appears to possess considerable elasticity, and yields in a perceptible degree to the pressure of air in the condensing machine.'

'Natural water is seldom, if ever, found perfectly pure. The waters that flow within or upon the surface of the earth contain various earthy, saline, metallic, vegetable, or animal particles, according to the substances over or through which they pass. Rain and snow waters are much purer than these, although they also contain whatever floats in the air, or has been exhaled along with the watery vapours.'

'The purity of water may be known by the following marks or properties of pure water:—

'1. Pure water is lighter than water that is not pure.

'2. Pure water is more fluid than water that is not pure.

'3. It has no colour, smell, or taste.

'4. It wets more easily than the waters containing metallic and earthy salts, called hard waters, and feels softer when touched.

'5. Soap, or a solution of soap in alcohol, mixes easily and perfectly with it.

'6. It is not rendered turbid by adding to it a solution of gold in aqua regia; or a solution of silver, or of lead, or of mercury, in nitric acid; or a solution of acetate of lead in water.

'Water was, till modern times, considered as an elementary or simple substance; but it is now ascertained to be a compound of oxygen and hydrogen.'

2. **Supply of Water.**—London was very ill supplied with water previously to the early part of the seventeenth century, when the New River water was introduced into the city. This exceedingly useful work was planned and carried into effect by the famous Sir Hugh Myddelton, who expended his whole fortune on the project; having, like many other public benefactors, entailed poverty on himself and his posterity by embarking in an undertaking productive of vast wealth to others, and of great public utility. The New River has its principal source near Chadwell, between Hertford and Ware, about 20 miles from London; but the artificial channel in which the water is conveyed is about 40 miles in length. Sir Hugh Myddelton encountered innumerable difficulties during the progress of the undertaking, which it is probable would have been abandoned, at least for a time, but for the aid afforded by James I. The New River Company was incorporated in 1619, 6 years after the water had been brought to the reservoir at Islington. The undertaking yielded very little profit for a considerable number of years; but it has since become extremely profitable; so much so, that an original 500*l.* share has been sold for 16,000*l.*

The Chelsea Water-Works Company was formed in 1723, and (with the aid of 3 smaller companies, none of which are now in existence) it, and the New River, supplied all that part of the metropolis north of the Thames with water, down to the year

\* Excluding trade and business premises and public buildings.

† For domestic supplies only.

1810. In that year, however, 3 new companies, the East London, West Middlesex, and Grand Junction, were established under the authority of different Acts of Parliament. At present (1869) the metropolis is supplied with water by the following companies:—

New River,  
Chelsea,  
East London,  
West Middlesex,  
Grand Junction,  
Lambeth,  
Vauxhall, Southwark, and Kent Water Works.

The sources whence these companies draw their supplies are stated in Table No. I.

There have been several royal commissions appointed to enquire into the state of the supply of water in the metropolis. The report of that appointed in 1827 contains much useful information, and at present (1869) there is one commission turning its exclusive attention to the supply of London, while another on the pollution of rivers is carefully examining the quality of London water drawn from the Thames and other streams for human use.

*Monopoly of the Water Companies.*—The sanction of Parliament was given to the 3 new companies formed in 1810, not so much in the view of increasing the actual supply of water, as of checking monopoly, and reducing the rates by their competition. But these expectations have not been realised. For a while, indeed, the competition of the several companies was exceedingly injurious to their interests, and occasioned the total destruction of some of the inferior ones; but no sooner had this happened than the others dis-

covered that their interests were in reality the same, and that the true way to promote them was to concert measures together. In furtherance of this object, the 5 companies for the supply of that part of the metropolis north of the river proceeded to divide the town into as many districts, binding themselves, under heavy penalties, *not to encroach on each other's estates; and having in this way gone far to secure themselves against any new competitors, their next measure was to add five-and-twenty per cent. to the rates established in 1810; and these have, in several instances, been still further augmented.* The peculiar benefits that were expected to result from their multiplication have, therefore, proved quite imaginary; and though the supply of water has been increased, it might have been more abundant and cheaper under a different system.

We borrow Tables II. and III. from the evidence taken before the committee of the House of Commons in 1851 and in 1867 on the Metropolitan Water Bill:—

Table II.

Water Companies	Imperial Gallons supplied annually	Water Rates per Annum			Cost per Million Gallons to the Company
		£	s.	d.	
New River	5,531,000,000	129,453	17	5	22 8 3

ably trusted to the free erally be relied upon. If of springs adjacent to a certain springs more con- supplying it with water

than any other, a company acquiring a right to such springs, and incorporated for the purpose of conveying the water to town, thereby gain an exclusive advantage; and if no limits be set to its dividends, its partners may make an enormous profit at the expense of the public, without its being possible materially to reduce them by means of competition. What has happened in the case of the New River Company sufficiently evinces the truth of what has now been stated. Had its dividends been limited to anything like a reasonable profit, the water that is at present supplied by its means might have been furnished for a small part of what it actually costs. But in cases of this sort, priority of occupation, even without any other peculiar advantage, goes far to exclude all regular and wholesome competition. A company that has got pipes laid down in the streets may, if threatened by the competition of another company, lower its rates so as to make the latter withdraw from the field; and as soon as this is done, it may revert to its old, or even to higher charges. It is not, in fact, possible, in cumbrous concerns of this sort, to have anything like competition, in the ordinary sense of the term; and experience shows that whenever it is attempted, it only continues for a limited period, and is sure to be in the end effectually suppressed. We are, therefore, clearly of opinion, that no company should ever be formed for the conveyance of water into a large city, without a maximum being set both to the rates and the dividends; giving the company an option, in the event of the maximum rate yielding more than the maximum dividend, either to reduce the rate, or to apply the surplus to the purchase of the company's stock; so that ultimately the charge on account of the dividends may be got rid of.

We are glad to have to add, that we were supported in what we now and in former editions of this work have stated on this subject by the Report of the Select Committee of the House of Commons on the supply of water for the metropolis, printed in 1821. It is there said—'The public is at present without any protection even against a further indefinite extension of demand. In cases of dispute there is no tribunal but the boards of the companies themselves, to which individuals can appeal; there are no regulations but such as the companies may have voluntarily imposed upon themselves, and may therefore at any time revoke, for the continuance of the supply in its present state, or for defining the cases in which it may be withdrawn from the householder. All these points, and some others of the same nature, indispensably require legislative regulation, where the subject-matter is an article of the first necessity, and the supply has, from peculiar circumstances, got into such a course that it is not under the operation of those principles which govern supply and demand in other cases.'

'The principle of the Acts under which these companies were instituted, was to encourage competition; and certainly in this, as in other cases, it is only from competition, or the expectation of competition, that a perfect security can be had for a good supply. But your committee are satisfied, that, from the peculiar nature of these undertakings, the principle of competition requires to be guarded by particular checks and limits in its application to them, in order to render it effectual, without the risk of destruction to the competing parties, and thereby, ultimately, of a serious injury to the public.' And the committee proceeds to remark—'The submission of their accounts annually to Parliament, for a few years, would

necessarily throw light on this part of the question.'

We think that it would be highly expedient to adopt the suggestions of the committee, by calling upon the companies to lay annually detailed statements of their affairs before Parliament. They should be obliged in these statements to give an account of the rates charged by them, and to make a special report as to every case in which they have withdrawn water from a householder. It is to no purpose to repeat, in opposition to this proposal, the common-places about competition securing for the citizens a sufficient supply of water at the lowest prices, in the same way that the competition of bakers and butchers secures them supplies of beef and bread. The statements already made show that there is no analogy whatever in the circumstances under which these articles are supplied. If a man be dissatisfied with any particular butcher or baker, he may go to another, but it is not possible for him to change his water merchant, unless he also change the place of his residence. No water company will encroach upon the district assigned to another; and supposing an individual unlucky enough to quarrel with those who have the absolute monopoly of the supply of the district in which he resides, he must either migrate to another, or be without water, unless he can get a supply upon his own premises. Such being the actual state of things, it is quite ludicrous to talk about competition affording any real security against extortion and abuse. Even the publication of the proceedings of the companies would be a very inadequate check on their conduct; but such as it is, it is perhaps the only one that can now be resorted to; and as it would have considerable influence, it ought not to be neglected.

3. Quality of the London Water.—All the companies, with the exception of the New River and East London Companies, derive their supplies of water from the Thames; and in consequence of their taking it up to some extent within the limits to which the tide flows, and of the discharge of the sewerage of Oxford, Reading, and other towns on its banks into the river, the water taken from it is necessarily, in the first instance, loaded with many impurities. But the reports that were formerly so very prevalent, with respect to the deleterious quality of the London water, have been shown to have been exaggerated. By far the greater part of the impurities complained of are not chemically combined with it; and they may be separated from it by filtration. Most of the companies have recently made very considerable efforts to improve their water, and the forthcoming Reports of the two commissions will show how far they have been successful. But though the companies may not have done in this respect as much, perhaps, as they might and should have done, a great improvement has, on the whole, been effected; and notwithstanding all that has been said to the contrary, it is quite certain that, though not so pure as it might be, there is not the slightest foundation for the notion that its impurities have been such as to affect, in any serious degree, the health of the inhabitants.

The returns of 1851 are taken from the report by the Government Commission on the chemical quality of the supply of water to the metropolis in 1851; and those of 1856 are taken from the Reports to the Right Hon. William Cowper, M.P., president of the General Board of Health on the metropolis water supply in 1856.

In 1851, the population of London was 2,362,236; consequently there were 19.4 gals. of water supplied per head of the whole population. In 1856,

IV.—Comparison of the Quality and Quantity of Water supplied by the Metropolitan Water Companies in the Years 1851, 1856, and 1867.

\* This total includes 427,168 gallons of water daily, supplied by the Hampstead Company in 1851, 663,000 in 1856, and 1,186 by the Hampstead Water Company, and 550,000 gallons supplied in the same year by the Plumstead, Woolwich, and Charlton Water Company.

the population was 2,583,112; and the supply 30.2 gals. In 1867, the population being 3,067,536, the supply was 30.9 gals.

We doubt whether there be at this moment many considerable towns in the empire, or, indeed, in Europe, better supplied with excellent water than London.

According to the return furnished by the several water companies in 1850, it appeared that 270,581 houses were then supplied with water, the gross daily quantity delivered having been 44,383,332 gallons.

It will be observed from the preceding table No. I. that the supply of water to the metropolis by the companies has now reached the enormous quantity of upwards of 95 million gallons per day. Thus the average daily supply of water for all purposes, which in 1850 was 164 gallons per house, was, in 1868, as furnished by the various companies, for domestic purposes alone, from 21 to

upwards of 34 gallons per head of the population. Before the passing of the Metropolis Water Act of 1852, considerably more than half the supply was not filtered; and subsiding reservoirs were in such case the only means of clearing the water of impurities in suspension; but these are now for the most part employed as well as the filter beds, the cost of the entire water works of the metropolis having been considerably upwards of seven millions sterling. Even this amount, however, will fall short of the total expenditure; for the intermediate outlays between the former returns and the passing of the new Acts, and the cost of many works in hand, but not yet complete, are not included in this sum.

The subjoined table, No. V., illustrative of the quality of the water supplied to the chief towns of England and Scotland, is taken from the Report of the Commons' Committee of 1867. See also large table in Watts's Dictionary of Chemistry.

V.—Table, showing the Quality of the Water supplied to the following Towns in England and Scotland.

3.5	495,587	28.2
6.0	117,266	26.0
2.0	176,081	27.4
2.0	119,525	28.9
1.5	128,251	26.2
1.0	440,979	27.1
1.0	62,590	32.1
2.0	519,255	28.7
7.1	..	22.2
2.6	..	25.1
4.5	..	25.1

This is a very valuable table, and condenses a great deal of information within the narrowest compass.

But Dr. Strang appears to have underrated the supply of water to each inhabitant in London. A considerable portion of the immense population within the bills of mortality derive their supplies of water from other sources than those specified above.

4. Water for Ships.—Various improvements have been made in the art of preserving water on board ships. Of these, the principal are the charring the inside of the casks in which the water is kept, and the substitution of iron tanks for casks. The latter being made of the required shape, may be conveniently stowed into any part of the ship. In men-of-war, the iron tanks serve as ballast; the water being brought up by a forcing pump. Water is found to preserve better in them than in any other sort of vessel. Drip-stones may be employed with much advantage in the purification of water. When water is taken on board from a river into which the tide flows, it should, of course, be raised at low ebb.

WAX BEES' (Ger. wachs; Fr. cire; Ital. and Span. cera; Russ. work). A vegetable product. Several plants contain wax in such abundance as to make it worth while to extract it from them. But all that was known in commerce, down to a comparatively recent period, consisted of bees' wax. The honey is first pressed from the comb, and the wax is then melted into cakes. It has a slight odour of honey, is insipid, and of a bright yellow hue. It is brittle, yet soft, and somewhat unctuous to the touch. It is often adulterated with earth, pea meal, resin &c. The presence of the former may be suspected when the cake is very brittle, or when its colour inclines more to grey than to yellow; and the presence of resin may be suspected when the fracture appears smooth and shining, instead of being granulated. Wax, when bleached or purified, is white, perfectly insipid, inodorous, and somewhat translucent; it is hard not unctuous to the touch, heavier and less fusible than yellow wax, and does not melt under 150°. It is sometimes adulterated with the white oxide of lead to increase its weight, with white tallow, and with potato starch. The first is detected by melting the wax in water, when the oxide falls to the bottom; the presence of tallow is indicated by the wax being of a dull opaque white, and wanting the transparency which distinguishes pure wax; and starch may be detected by applying sulphuric acid to the suspected wax, as the acid carbonises the starch, without acting on the wax. The yellow wax is firm, breaking with granular fracture, of an agreeable, honey-like odour, not unctuous to the touch, and does

not melt under 140°. (Thomson's *Chemistry*, and Dr. A. T. Thomson's *Dispensatory; British Pharmacopoeia* 1867.)

Notwithstanding the large supply of wax produced at home, a considerable quantity is also imported from abroad. The duties on wax, which were formerly quite oppressive, after being greatly reduced in 1842, were wholly repealed in 1845. In 1833 the foreign wax retained for consumption amounted to 1,310 cwt. In 1867 the imports and re-exports of wax were respectively 9,856 and 4,674 cwt. Of 9,856 cwt. wax imported in 1867, and valued at 77,868*l.*, 1,334 cwt. came from Portugal, 1,061 cwt. from Morocco, 1,162 cwt. from the West Coast of Africa, 1,795 cwt. from the United States &c.

WEIGHTS AND MEASURES. Weights are used to ascertain the gravity of bodies—a quality depending partly on their magnitude and partly on their density. Measures are used to determine the magnitude of bodies, or the space which they occupy.

(For an account of the weights and measures used in foreign countries, and their equivalents in English weights and measures, see the notices of the great seaport towns dispersed throughout this work. Thus, for the Russian weights and measures, see *PETERSBURG*; for those of China, see *CANTON*; &c.)

Neither the magnitude nor the weight of any one body can be determined, unless by comparing it with some other body selected as a standard. It is impossible, indeed, to form any idea in respect of magnitude or weight, except in relation to some definite space or weight with which we are acquainted. We say that one article weighs 1 pound, another 2 pounds, a third 3 pounds, and so on; meaning not only that these weights are to each other as 1, 2, 3 &c., but also that the weight or specific gravity of the first is equal to the known and determinate weight denominated a pound, that the second is equal to 2 pounds, and so on.

Standards of Weight and Measure.—Standards of linear measure must have been fixed upon at the earliest period, and appear to have consisted principally of parts of the human body—as the cubit, or length of the arm from the elbow to the tip of the middle finger; the foot; the *ulna*, arm, or yard; the span; the digit, or finger; the fathom, or space from the extremity of one hand to that of the other, when they are both extended in opposite directions; the pace &c. Large spaces were estimated by measures formed out of multiples of the smaller ones; and sometimes in day's journeys, or by the space which it was supposed an ordinary man might travel in a day, using a reasonable degree of diligence.

But lineal measures can only be used to determine the magnitude of solid bodies; the magnitude of bodies in a liquid or fluid state has to be determined by what are called measures of capacity. It is probable that, in the infancy of society, shells, or other hollow instruments afforded by nature, were used as standards. But the inaccuracy of the conclusion drawn from referring to them must soon have become obvious; and it early occurred, that to obtain an accurate measure of liquids nothing more was necessary than to constitute an artificial one, the dimensions, and consequently the capacity, of which should be determined by the lineal measures previously adopted.

The determination of the gravity or weight of different bodies supposes the invention of the balance. Nothing is known of the steps which led to its introduction; but it was used in the remotest antiquity. It seems probable that, at first, cubes of some common lineal measure, as a foot, or the fraction of a foot, formed of copper, iron, or some other metal, were used as standards of weight. When the standard was selected, if it was desired to ascertain the specific gravity or weight of any given article, all that was necessary was to put it into one of the scales of the balance, and as many cubes or parts of cubes on the other as might be necessary to counterpoise it.

Weights have, however, been frequently derived from grains of corn. Hence, in this, and in some other European countries, the lowest denomination of weight is a *grain*; and 32 of these grains are directed, by the ancient statute called *Compositio Mensurarum*, to compose a pennyweight, whereof 20 make an ounce, 12 ounces a pound, and so upwards.

In every country in which commercial transactions are extensively carried on, the importance of having weights and measures determined by some fixed standard becomes obvious to everyone. But as the size of different parts of the human body differs in different individuals, it is necessary to select some durable article—a metallic rod, for example—of the length of an ordinary cubit, foot &c., and to make it a standard with which all the other cubits, feet &c. used in mensuration shall correspond. These standards have always been preserved with the greatest care: at Rome, they were kept in the temple of Jupiter; and among the Jews, their custody was intrusted to the family of Aaron. (Pauetou, *Métrologie*, p. 223.)

The principal standards used in the ancient world were, the cubit of the Jews, from which their other measures of length, capacity, and weight were derived; and the foot of the Greeks and Romans.

In England, our ancient historians tell us that a new, or rather a revived, standard of lineal measure was introduced by Henry I., who ordered that the ulna, or ancient ell, which corresponds to the modern yard, should be made of the exact length of his own arm, and that the other measures of length should be raised upon it. This standard has been maintained, without any sensible variation. In 1742 the Royal Society had a yard made, from a very careful comparison of the standard ells or yards of the reigns of Henry VII. and Elizabeth kept at the Exchequer. In 1758 an exact copy was made of the Royal Society's yard; and this copy having been examined by a committee of the House of Commons, and reported by them to be equal to the standard yard, it was marked as such; and this identical yard is declared, by the Act 5 Geo. IV. c. 74, to be the standard of lineal measure in Great Britain. The clause in the Act is as follows:—

'From and after the 1st of May, 1825 (subsequently extended to the 1st of January, 1826), the straight line or distance between the centres of the 2 points in the gold studs in the straight brass rod, now in the custody of the clerk of the House of Commons, whereon the words and figures "STANDARD YARD, 1760," are engraved, shall be the original and genuine standard of that measure of length or lineal extension called a yard; and the same straight line or distance between the centres of the said 2 points in the said gold studs in the said brass rod, the brass being at the temperature of 62° by Fahrenheit's thermometer, shall be and is hereby denominated the "IMPERIAL STANDARD YARD," and shall be and is hereby declared to be the unit or only standard measure of extension, wherefrom or whereby all other measures of extension whatsoever, whether the same be lineal, superficial, or solid, shall be derived, computed, and ascertained; and that all measures of length shall be taken in parts or multiples or certain proportions of the said standard yard; and that  $\frac{1}{4}$  of the said standard yard shall be a foot, and  $\frac{1}{12}$  of such foot shall be an inch; and that the pole or perch in length shall contain 5 $\frac{1}{2}$  such yards, the furlong 220 such yards, and the mile 1,760 such yards.' (Sec. 1.)

The superficial measures are formed on the basis of the square of this standard; it being enacted, that

'The rood of land shall contain 1,210 square yards, according to the said standard yard; and that the acre of land shall contain 4,840 such square yards, being 160 square perches, poles, or rods.' (Sec. 2.)

*Uniformity of Weights and Measures.*—The confusion and inconvenience attending the use of weights and measures of the same denomination, but of different magnitudes, were early remarked; and there is hardly a country in which efforts have not been made to reduce them to the same uniform system. Numerous Acts of Parliament have been passed, having this object in view, and enjoining the use of the same weights and measures, under very severe penalties. But, owing to the inveteracy of ancient customs, and the difficulty of enforcing new regulations, these statutes have always had a very limited influence, and the greatest diversity has continued to prevail, except in lineal measures. The statute of 5 Geo. IV. c. 74 seems to have, at length, effected what former statutes failed of accomplishing. It is, perhaps, indebted for its success in this respect to the moderate nature of the changes which it introduced. We have already seen that it made no alteration in the lineal measures previously in use. Neither did it affect the previously existing system of weights; both the Troy and the Avoirdupois weights having been preserved.

'The Troy weight,' says Mr. Davies Gilbert, late President of the Royal Society, 'appeared to us (the commissioners of weights and measures) to be the ancient weight of this Kingdom, having, as we have reason to suppose, existed in the same state from the time of St. Edward the Confessor; and there are reasons, moreover, to believe that the word Troy has no reference to any town in France, but rather to the monkish name given to London, of Troy Novant, founded on the legend of Brute. Troy weight, therefore, according to this etymology, is, in fact, London weight. We were induced, moreover, to preserve the Troy weight, because all the coinage has been uniformly regulated by it; and all medical prescriptions or formulæ now are, and always have been, estimated by Troy weight, under a peculiar sub-

division which the College of Physicians have expressed themselves most anxious to preserve.'

It was resolved, therefore, to continue the use of Troy weight; and also, on account of the accuracy of the Troy standard, to raise the Avoirdupois weight from this basis.

'We found,' said Mr. Davies Gilbert, 'the Avoirdupois weight, by which all heavy goods have been for a long time weighed (probably derived from Avoirs (Averia), the ancient name for goods or chattels, and Poids, weight), to be universally used throughout the kingdom. This weight, however, seems not to have been preserved with such scrupulous accuracy as Troy weight, by which more precious articles have been weighed; but we had reason to believe that the pound cannot differ by more than 1, 2, or 3 grains, from 7,000 grains Troy; some being in excess, and others, though in a less degree, in defect, but in no case amounting to above 1, 2, or 3 grains. It therefore occurred to us, that we should be offering no violence to this system of weights, if we declared that 7,000 grains Troy should be hereafter considered as the pound Avoirdupois.'

In accordance with these views, it was enacted—'That from and after the 1st day of May, 1825, the standard brass weight of 1 pound Troy weight, made in the year 1758, now in the custody of the clerk of the House of Commons, shall be, and the same is hereby declared to be, the original and genuine standard measure of weight, and that such brass weight shall be, and is hereby denominated, the Imperial Standard Troy pound, and shall be, and the same is hereby declared to be, the unit or only standard measure of weight, from which all other weights shall be derived, computed, and ascertained; and that  $\frac{1}{12}$  of the said Troy pound shall be an ounce; and that  $\frac{1}{20}$  of such ounce shall be a pennyweight; and that  $\frac{1}{24}$  of such pennyweight shall be a grain; so that 7,000 such grains shall be a Troy pound; and that 7,000 such grains shall be, and they are hereby declared to be, a pound Avoirdupois, and that  $\frac{1}{10}$  of the said pound Avoirdupois shall be an ounce Avoirdupois, and that  $\frac{1}{16}$  of such ounce shall be a dram.'

At the period of passing the statute 5 Geo. IV. c. 74, the measures of capacity were found to be in the greatest confusion; and a considerable change has consequently been made in them. The wine gallon formerly amounted to 231 cubic inches, the corn gallon to 268 8, and the ale gallon to 282. But these are superseded by the Imperial gallon, which contains 277 274 cubic inches, or 277 4 very nearly. It is deduced as follows:—

'The standard measure of capacity, as well for liquids as for dry goods not measured by heaped measure, shall be the GALLON, containing 10 lb. Avoirdupois weight of distilled water weighed in air, at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches; and a measure shall be forthwith made of brass, of such contents as aforesaid, under the directions of the Lord High Treasurer or the Commissioners of his Majesty's Treasury; and such brass measure shall be, and is hereby declared to be, the Imperial standard gallon, and shall be, and is hereby declared to be, the unit and only standard measure of capacity, from which all other measures of capacity to be used, as well for wine, beer, ale, spirits, and all sorts of liquids, as for dry goods not measured by heaped measure, shall be derived, computed, and ascertained; and all measures shall be taken in parts or multiples or certain

proportions of the said Imperial standard gallon; and the quart shall be  $\frac{1}{4}$  of such standard gallon, and the pint shall be  $\frac{1}{2}$  of such standard gallon, and 2 such gallons shall be a peck, and 8 such gallons shall be a bushel, and 8 such bushels a quarter of corn or other dry goods, not measured by heaped measure.' (Sec. 6.)

We subjoin a Table showing the contents of the different gallons, both in measure and weight.

	Cubic Inches	Avoirdupois Weight		Troy Weight	
		lb.	oz.	dr.	gr.
Imperial gallon	277 274	10	0	12	1 16
Corn gallon	268 8	9	10	12	11 9 7 12
Wine gallon	231	8	5	8 4	10 1 9 2 4
Ale gallon	282	10	2	11 1	12 4 6 8

**Heaped Measures.**—The greatest blemish, by far, in the Act 5 Geo. IV. c. 74 was the continuance and legitimization of the practice of selling by heaped measure. This practice has since, however, been abolished, along with the use of all local and customary measures, by the Act 5 & 6 Wm. IV. c. 63, which contains several important provisions.

This Act sets out with repealing the 4 & 5 of Wm. IV. c. 49, and the provisions in the Acts 5 Geo. IV. c. 74, and 6 Geo. IV. c. 12, which require that all weights and measures shall be exact models or copies in shape or form of the standards deposited in the exchequer; and those allowing the use of weights and measures, not in conformity with the Imperial standard, established by said Acts; or that allow goods or merchandise to be bought or sold by weights or measures established by local custom, or founded on special agreement. It then goes on to enact as follows:—

**Weights and Measures stamped at the Exchequer declared legal.**—Weights and measures verified and stamped at the exchequer as copies of standard weights and measures, shall be taken to be legal weights and measures, to be used for comparison as copies of the Imperial standard weights and measures, although not similar in shape to those required under the provisions of the said Acts; and the Comptroller-General, or other duly authorised officer of the exchequer, may compare and verify, and stamp as correct, standard measures of a yard, standard weights and standard measures of capacity, any weights and measures which correspond in length, weight, and capacity with the standards, or parts or multiples thereof, deposited in the exchequer, under the 5 Geo. IV. c. 74, although such weights and measures may not be models or copies in shape or form of the standards so deposited. (Sec. 4.)

**Copies of the Standard Weights and Measures worn to be re-verified.**—All copies of the Imperial standard weights and measures which have become defective, or have been mended, in consequence of wear or accident, shall forthwith be sent to the exchequer, for the purpose of being again compared and verified, and shall be stamped as re-verified copies of such standard weights and measures, provided the Comptroller-General, or other officer appointed for such verification, deem them fit for the purposes of standards; and every new comparison and verification shall be indorsed upon the original indenture of verification; and such weights and measures shall be stamped upon payment of fees of verification only; and the Comptroller-General, or other officer, shall keep an account of all copies of the Imperial standard weights and measures verified at the exchequer. (Sec. 5.)

**Local and Customary Measures abolished.**—From and after the passing of this Act, the Win-

t of May, 1825 (sub-  
st of January, 1826),  
e between the centres  
studs in the straight  
ody of the clerk of the

chester bushel, the Scotch ell, and all local or customary measures, shall be abolished; and every person who shall sell by any measure other than one of the Imperial measures, or some multiple or aliquot part thereof, shall be liable to a penalty not exceeding 40s. for every such sale; but nothing therein shall prevent the sale of any articles in any vessel, where such vessel is not represented as containing any amount of Imperial measure, or of any fixed, local, or customary measure heretofore in use. (Sec. 6.)

**Heaped Measure abolished.**—From and after the passing of this Act, so much of the said Acts as relates to heaped measure is hereby repealed, and the use of heaped measure shall be abolished, and all bargains, sales, and contracts made after the passing of this Act, by heaped measure, shall be null and void; and every person who shall sell any articles by heaped measure shall be liable to a penalty not exceeding 40s. for every such sale. (Sec. 7.)

**Articles sold by Heaped Measure, how to be sold.**—Whereas some articles heretofore sold by heaped measure are incapable of being stricken, and may not be conveniently sold by weight; it is enacted, that all such articles may henceforth be sold by a bushel measure, corresponding in shape with the bushel prescribed by the 5 Geo. IV. c. 74, for the sale of heaped measure, or by any multiple or aliquot part thereof, filled in all parts as nearly to the level of the brim as the size and shape of the articles will admit; but nothing herein shall prevent the sale by weight of any article heretofore sold by heaped measure. (Sec. 8.)

**Coals to be sold by Weight.**—From and after January 1, 1836, all coals, slack, culm, and cannel, of every description, shall be sold by weight and not by measure, under a penalty of 40s. for every sale. (Sec. 9.)

**All Articles to be sold by Avoirdupois, except &c.**—From and after the passing of this Act, all articles sold by weight shall be sold by Avoirdupois weight, except gold, silver, platina, diamonds, or other precious stones, which may be sold by Troy weight; and drugs, which, when sold by retail, may be sold by Apothecaries' weight. (Sec. 10.)

**The Stone, Hundred Weight &c.**—From and after the passing of this Act, the weight denominated a stone shall, in all cases, consist of 14 standard pounds Avoirdupois, the hundred weight of 8 such stones, and the ton of 20 such hundred weights; but nothing herein shall prevent any bargain, sale, or contract being made by any multiple or aliquot part of the pound weight. (Sec. 11.)

**Contents of Weights and Measures to be stamped on them.**—All weights made after the passing of this Act of the weight of 1 pound Avoirdupois, or more, shall have the number of pounds contained in them stamped or cast on the top or side thereof in legible figures and letters; and all measures of capacity made after the passing of this Act shall have their contents stamped or marked on the outside thereof in legible figures and letters. (Sec. 12.)

**Weights of Lead or Pewter not to be stamped.**—The stamping of weights of lead or pewter, or of any mixture thereof, is prohibited after January 1, 1836; but nothing herein shall prevent the use of lead or pewter, or any mixture thereof, in the manufacture of weights wholly and substantially cased with brass, copper, or iron, and legibly stamped or marked 'cased,' or prevent the insertion of such a plug of lead or pewter into weights as shall be bona fide necessary for adjusting them and affixing the stamp thereon. (Sec. 13.)

**Conversion of Rents, Tolls &c.**—Clauses 14 and

15 regulate the proceedings that are to take place in England, Ireland, and Scotland, for the conversion of rents, tolls &c. payable in weights or measures now abolished into Imperial standard weights and measures.

**Fair Prices.**—In Scotland, from and after the passing of this Act, the fair prices of all grain in every county shall be struck by the Imperial quarter, and all other returns of the prices of grain shall be set forth by the same, without any reference to any other measure whatsoever; and any sheriff clerk, clerk of a market, or other person offending against this provision, shall forfeit not exceeding 5*l.* (Sec. 16.)

**Copies of Standards, Inspectors &c.**—Clauses 17, 18, 19, and 20 prescribe the mode in which copies of the standard weights and measures shall be provided in counties, cities, boroughs &c., the appointment of inspectors of weights and measures &c. Clause 22 orders that the expense of providing copies of standard weights, with the remuneration to inspectors, be defrayed out of the county rate. Clause 23 prohibits any maker or seller of weights or measures from being appointed inspector, and orders all inspectors to enter into a bond of 200*l.* for the due performance of the duties of their office, and the safe custody of the stamps and standard weights and measures committed to their care. Clause 24 orders inspectors to attend at market towns when ordered by justices. The following clauses are of general importance.

**Magistrates to procure Stamps for Inspectors for Stamping all Weights &c.**—In England the justices in general or quarter sessions assembled, and in Scotland the justices and magistrates at a meeting called by the sheriff, and in Ireland the grand juries, shall provide the inspectors with good and sufficient stamps for stamping or sealing weights and measures; and all weights and measures whatsoever, except as herein excepted, used for buying and selling, or for the collecting of any tolls or duties, or for the making of any charges on the conveyance of any goods or merchandise, shall be examined and compared with one or more copies of the Imperial standard weights and measures provided under authority of this Act for such inspectors, who shall stamp, so as best to prevent fraud, such weights and measures, if they be found to correspond with the said copies; and the fees for such examination, comparison, and stamping shall be those in the schedule at the end of this Act; and every person using any weight or measure other than those authorised by this Act, or some aliquot part thereof, or which has not been stamped as aforesaid, except as herein excepted, or which shall be found light or otherwise unjust, shall forfeit not exceeding 5*l.*; and any coin, act, bargain, or sale made by such weights or measures shall be wholly null and void; and every light or unjust weight and measure shall, on being discovered by any inspector, be seized, and, on conviction, forfeited; but nothing herein shall require any single weight above 56 lb. to be inspected and stamped, nor any wooden or wicker measure used in the sale of lime, or other articles of the like nature, or any glass or earthenware jug or drinking cup, though represented as containing the amount of any Imperial measure, or of any multiple thereof; but any person buying by any vessel represented as containing the amount of an Imperial measure, or of any multiple thereof, is authorised to require the contents of such vessel to be ascertained by comparison with a stamped measure, such measure to be provided by the person using such wooden or wicker measure, glass, jug, or drinking cup; and in case the person using such last-mentioned mea-

sure or vessel refuse to make such comparison, or if, upon comparison being made, it be found to be deficient in quantity, the person using the same shall be subject to the forfeitures and penalties imposed on those using light or unjust weights or measures. (Sec. 21.)

**Weights and Measures once stamped need not be re-stamped.**—No weight or measure duly stamped by any inspector appointed under the 4 & 5 Wm. IV. c. 47, or this Act, or by any person or persons authorised to examine and stamp weights or measures, shall be liable to be re-stamped, although the same be used in any other place than that at which it was originally stamped, but shall be considered as a legal weight or measure throughout the United Kingdom, unless found to be defective or unjust. (Sec. 27.)

**Power to Justices &c. to enter Shops and inspect Weights and Measures.**—Justices, sheriffs, magistrates, and inspectors are authorised to examine weights and measures, and to order such as are light or otherwise unjust to be seized and forfeited; those using such weights and measures are subjected to a penalty of not more than 5*l.*; and a like penalty is imposed on those refusing to produce such weights and measures, or obstructing the magistrates. (Sec. 28.)

**Penalties on Inspectors counterfeiting Stamps &c.**—Inspectors or other persons authorised to inspect weights or measures, who shall stamp any weight or measure without verifying the same, or who shall otherwise misconduct themselves in their office, shall for every such offence forfeit not more than 5*l.*; persons forging or counterfeiting any stamp or mark used for stamping or marking weights or measures, forfeit for every offence not more than 50*l.*, and not less than 10*l.*; and persons knowingly using weights or measures marked with such counterfeited stamps, forfeit for every offence not more than 10*l.* nor less than 2*l.* (Secs. 29, 30.)

**Penalty on Price Lists &c.**—From and after January 1, 1836, any person printing, or clerk of any market or other person making any return, price list, price current, or any journal or other paper containing price list or price current, in which the weights and measures quoted or referred to denote or imply a greater or less weight or measure than is denoted or implied by the same denomination of Imperial weights and measures under the provisions of this Act, shall forfeit and pay not exceeding 10*s.* for every copy of every such return, price list, price current, journal, or other paper which they publish.

The remaining clauses relate to the recovery of penalties; and save the rights of the Founders' Company, and of the Universities of Oxford and Cambridge.

**Schedule of Fees to be taken by all Inspectors of Weights and Measures appointed under the Authority of this Act.**

For examining, comparing, and stamping all brass weights, within their respective jurisdictions—

Each half hundred weight	-	-	-	d.
quarter of a hundred weight	-	-	-	6
stone	-	-	-	4
weight under a stone to a pound inclusive	-	-	-	1
weight under a pound	-	-	-	0½
set of weights of a pound and under	-	-	-	2

For examining, comparing, and stamping all iron weights, or weights of other descriptions, not made of brass, within their respective jurisdictions—

Each half hundred weight	-	-	-	d.
quarter of a hundred weight	-	-	-	5
stone	-	-	-	2
weight under a stone	-	-	-	1
weight under a pound	-	-	-	0½
set of weights of a pound and under	-	-	-	2

three gallon	-	-	-	6
two gallon	-	-	-	4
gallon	-	-	-	2
half gallon	-	-	-	0 1
quarter and under	-	-	-	0 0½

The propriety of allotting a separate office for the preservation and re-adjustment of standards having been considered by the Standard Commission of 1841, and various committees in 1854, 1862, and 1864, an Act was at length passed, 29 & 30 Vict. c. 82, called the Standards of Weights and Measures and Coinage Act of 1866. This Act—1st, transfers from the Exchequer to the Board of Trade all duties in connection with the custody and management of the Parliamentary and secondary standard of weights and measures; 2nd, establishes a standard department; 3rd, provides for the re-verification of these standards, and for allowance of errors in the comparison of standards; 4th, abolishes stamp duty and fees taken at the Exchequer on the verification of standards; and 5th, directs an annual Report to the Board of Trade on the proceedings of the Government to be laid before Parliament. It would appear, from the first Report of Mr. Chisholm, Warden of the Standards, that from 1860 down to 1867, 5,542 standards have been verified for the first time, and 11,108 reverified.

The Acts 22 & 23 Vict. c. 56, and 23 & 24 Vict. c. 119 s. 15, provide that no copies of the standard weights shall be legal unless compared or reverified every 5 years, and copies of the standard measures to be compared every 10 years.

**Invariable or Natural Standards.**—As the standards adopted in most countries have been in a great degree arbitrary, it has long been the opinion of scientific men that to construct a more perfect system of weights and measures, some natural and unchangeable basis should be adopted. It has, indeed, been contended by Pauton and Bailly, that the measures of the ancients were deduced from a basis of this sort; and that the *stadium* always formed an aliquot part of the earth's circumference, that part differing amongst different nations and authors. But no learning or ingenuity can induce anyone to believe that is so obviously incredible. The ancients had no means of determining the earth's circumference with anything like the accuracy required to render it the great unit of a system of measures; and, what is equally decisive, no ancient author ever makes the slightest allusion to any such standard.

In more modern times, however, the idea of seeking for a unit of weight and measure in some unchanging natural object has been practically carried into effect. The standards that have been usually proposed for this object have been some aliquot part of the quadrant of the meridian, or the length of a pendulum vibrating seconds in some given latitude. The latter has been in so far adopted into the existing system of weights and measures established by the Act of 1823, that the length of the standard yard, as compared with that of a pendulum vibrating seconds in the latitude of London, is specified in the Act as follows:—

Whereas it has been ascertained by the commissioners appointed by his Majesty to enquire into the subject of weights and measures, that the said yard hereby declared to be the Imperial standard yard, when compared with a pendulum vibrating seconds of mean time in the latitude of London, in a vacuum at the level of the sea, is in the proportion of 36 inches to 39 inches and 1,393 ten-thousandth parts of an inch; be it therefore enacted and declared, that if at any time hereafter the said Imperial standard yard shall be lost, or shall be in any manner destroyed, defaced, or otherwise injured, it shall and may be restored by making, under the direction of the Lord High Treasurer, or the commissioners of his Majesty's Treasury of the United Kingdom of Great Britain and Ireland, or any three of them for the time being, a new standard yard, bearing the same proportion to such pendulum, as aforesaid, as the said Imperial standard yard bears to such pendulum.

TABLES OF ENGLISH WEIGHTS AND MEASURES, ACCORDING TO THE NEW OR IMPERIAL MEASURE.

*Imperial Troy Weight.*

The standard pound containing 5,760 gra.

		French Grammes.
24 Grains	= 1 Grain	= 0.0648
20 Pennyweights	= 1 Pennyweight	= 1.5552
32 Ounces	= 1 Ounce	= 31.1027
	= 1 Pound	= 373.2350

Troy weight is used in the weighing of gold, silver, jewels &c. It is also used in ascertaining the strength of spirituous liquors; in philosophical experiments; and in comparing different weights with each other.

*Apothecaries' Weight.*

		Fr. Gramm.
20 Grains	= 1 Grain	= 0.0648
3 Scruples	= 1 Scruple	= 1.2960
8 Drains	= 1 Dram	= 3.8880
12 Ounces	= 1 Ounce	= 31.1027
	= 1 Pound	= 373.2350

This weight is essentially the same as troy weight, but differently divided. It is chiefly used for medical prescriptions; but drugs are mostly bought and sold by avoirdupois weight.

*Diamond Weight.*—Diamonds and other precious stones are weighed by carats, the carat being divided into 4 grains, and the grain into 16 parts. The diamond carat weighs  $3\frac{1}{2}$  grains troy: thus,

Diamond Weight	Troy Weight	Decigrammes
16 Parts = 1 Grain	$\frac{0.8}{16}$ grains	= 51 $\frac{1}{2}$
4 Grains = 1 Carat	$3\frac{1}{2}$	= 205 $\frac{1}{2}$

*Imperial Avoirdupois Weight.*

		Fr. Grammes
16 Drains	= 1 Dram	= 1.771
16 Ounces	= 1 Ounce	= 28.346
28 Pounds	= 1 Pound	= 453.594
4 Quarters	= 1 Quarter	= 12,690 kil.
20 Hundredweights	= 1 Hundredwt.	= 50,796 "
	= 1 Ton	= 1015,920 "

The dram is subdivided into 3 scruples, and each scruple into 10 grains; the pound, or 7,680 grains avoirdupois, equals 7,000 grains troy, and hence 1 grain troy equals 1.097 grains avoirdupois.

Hence also 111 lb. avoirdupois = 175 lb. Troy and 192 oz. " = 175 oz. "

The stone is generally 14 lb. avoirdupois weight, but for butcher's meat or fish it is 8 lb. Hence the hundred weight (cwt.) equals 8 stone of 14 lb. or 14 stone of 8 lb.

A stone of glass is 5 lb. A seam of glass is 24 stone, or 120 lb.

Hay and straw are sold by the load of 36 trusses.

The truss of hay weighs 56 lb. and of straw 36

lb. The truss of new hay is 60 lb. until September 1.

The custom of allowing more than 16 ounces to the pound of butter used to be very general in several parts of the country.

*Cheese and Butter.*

8 Pounds	= 1 Cheese
72 Cloves	= 1 W. y in Essex
42 "	= 1 " Suffolk
36 Pounds	= 1 Firkin of butter

*Imperial Long Measure.*

		Fr. Metres
12 Inches	= 1 Foot	= 0.3048
3 Feet	= 1 Yard	= 0.9144
54 Yards	= 1 Pole or Rod	= 50.901
40 Poles	= 1 Furlong	= 201.1652
4 Furlongs	= 1 Mile	= 1609.3472
3 Miles	= 1 League	= 1827.3172
60 Geographical or 69 English Miles	1 Degree	= 11120.7112

Besides the above, there are the palm, which equals 3 inches; the haul, 4 inches; the span, 9 inches; and the fathom, 6 feet.

*Imperial Superficial Measure.*

		Fr. Sq. Metres
111 Inches	= 1 Square Foot	= 0.929
9 Square Feet	= 1 Square Yard	= 8.361
304 Square Yards	= 1 Square Pole	= 27.7061
40 Square Poles	= 1 Rood	= 1011.8562
4 Roods	= 1 Acre	= 10116.5448

The inch is generally divided, on scales, into 10ths, or decimal parts; but in squaring the dimensions of artificers' work, the duodecimal system is adopted; the inch being divided into 12 parts or lines, each part into 12 seconds, and each second into 12 thirds.

Land is usually measured by a chain of 4 poles, or 22 yards, which is divided into 100 links. Ten chains in length and 1 in breadth make an acre, which equals 160 square perches, or 4,840 square yards.

*Cubic or Solid Measure.*

		Fr. Cubic Metres
1,728 Cubic Inches	= 1 Cubic Foot	= 0.027
27 Cubic Feet	= 1 Cubic Yard	= 2.7027
40 Feet of rough timber, or 50 Feet hewn do.	= 1 Load or Ton	= 1.1756
12 Cubic Feet	= 1 Ton of shipping	= 1.1892

By cubic measure, marble, stone, timber, masonry, and all artificers' works of length, breadth, and thickness, are measured, and also the contents of all measures of capacity, both liquid and dry.

*Imperial Liquid and Dry Measure, deduced from the Standard Gallon, containing 10 lb. weight of Distilled Water, temperature 62°, barometer 30 inches.*

Weight of Water	Cubic Feet	Cubic Inches	Gills	Pints	Quarts	Pecks	Gallons	Imperial Measure	
								Bushels	Chaldons
5 oz.		8.665	1						
lb. 14		31.659	4	1

The dimensions of the Imperial standard bushel are as follows:—the outer diameter 19 $\frac{1}{2}$  inches, and the inner diameter 18 $\frac{1}{2}$ . The depth is 8 $\frac{1}{2}$ , and the height of the cone, for heaped measure, is 6 inches. The contents of the Imperial heaped bushel were 2815.4887 cubic inches. The subdivisions and multiples are in the same proportion.

*Wool Weight*

Like all other bulky articles, wool is weighed

hay is 60 lb. until Sep-  
ting more than 16 ounces  
used to be very general in  
entry.

and Butter.  
1 Clove = 1 Clove  
1 Way in Essex = 1 Way in Essex  
1 Saffron = 1 Saffron  
1 Firkin of butter = 1 Firkin of butter

Long Measure.

In some markets, corn is sold by weight, which is the fairest mode of dealing, though not the most convenient in practice. Even where measures are used, it is customary to weigh certain quantities or proportions, and to regulate the prices accordingly. The average bushel of wheat is generally reckoned at 60 lb.; of barley 47 lb.; of oats 38 lb.; peas 64 lb.; beans 63 lb.; clover 68 lb.; rye and canary 53 lb., and rape 48 lb. In some places a load of corn for a man is reckoned 5 bushels, and a cart load 40 bushels.

Coal Measure.

- 4 Pecks = 1 Bushel
- 3 Bushels = 1 Sack
- 3 Sacks = 1 Vat
- 4 Vats = 1 Chaldron
- 21 Chaldrons = 1 Score

Coal Measure.—Coals were formerly sold by the chaldron, which bears a certain proportion to Winchester measure.

The coal bushel holds 1 Winchester bushel more than the Winchester bushel; its contents being 2217.62 cubic inches. It is 19½ inches wide from outside to outside, and 8 inches deep. In measuring coals it was heaped up in the form of a cone, to the height of at least 6 inches above the brim (according to a regulation passed at Guildhall in 1806), the outside of the bushel being the extremity of the cone, so that the bushel should contain at least 2814.9 cubic inches, nearly equal to the Imperial heaped bushel. Hence the chaldron should measure 58.64 cubic feet.

But the sale of coals by measure has, in consequence of the frauds to which it led [COAL], been abolished; and they are now sold by weight.

Of Wood Fuel English Measure.—Wood fuel is assized into shids, billets, faggots, fall wood, and cord wood. A shid is to be 4 feet long, and according as they are marked and notched, their proportion must be in the girth; viz. if they have but 1 notch, they must be 16 inches in the girth; if 2 notches, 23 inches; if 3 notches, 28 inches; if 4 notches, 33 inches; and if 5 notches, 38 inches about. Billets are to be 3 feet long, of which there should be 3 sorts; viz. a single cask, and a cask of 2; the 1st is 7 inches, the 2nd 10 inches, and the 3rd 14 inches about: they are sold by the 100 of 5 score. Faggots are to be 3 feet long, and at the band 24 inches about, besides the knot of such faggots; 60 go to the load. Bavins and spray wood are sold by the 100, which are

accounted a load. Cord wood is the bigger sort of firewood, and it is measured by a cord, or line, whereof there are 2 measures; that of 14 feet in length, 3 feet in breadth, and 3 feet in height. The other is 8 feet in length, 4 feet in height, and 4 feet in breadth.

Measures of Wood.

- 1,000 billets of wood = 1 Cord
- 10 w. = 1 Cord
- 1 Cord = 1 Chaldron of coals
- 100 lb. = 1 Quintal of wood

French System of Weights and Measures.—The new metrical system established in France subsequently to the Revolution is founded on the measurement of the quadrant of the meridian, or of the distance from the pole to the equator. This distance having been determined with the greatest care, its ten-millionth part was assumed as the *mètre*, or unit of length, all the other linear measures being multiples or submultiples of it, in decimal proportion. The *mètre* corresponds pretty nearly to the ancient French *aune*, or yard, being equal to 3.07844 French feet, or 3.281 English feet, or 39.3708 English inches.

The unit of weight is the *gramme*, which is a cubic centimetre, or the 100th part of a *mètre* of distilled water of the temperature of melting ice; it weighs 15.434 English troy grains.

In order to express the decimal proportion, the following vocabulary of names has been adopted, in which the terms for multiplying are Greek, and those for dividing Latin:—

- For multipliers, the word
- Deca prefixed means - 10 times
- Hecto " " - 100 "
- Kilo " " - 1,000 "
- Myria " " - 10,000 "

- On the contrary, for divisors,
- the word Deci expresses the - 10th part
- Centi " " - 100th "
- Milli " " - 1,000th "

- Thus, *Décimètre* means 10 *mètres*.
- Décimètre* " the 10th part of a *mètre*
- Milli* " " 1,000th "
- Kilogramme* " 1,000 grammes &c.

The *are* is the element of square measure, being a square decamètre, equal to 3.955 English perches.

The *stère* is the element of cubic measure, and contains 35.317 cubic feet English.

The *litre* is the element of all measures of capacity. It is a cubic decimetre, and equals 2.1135 English pints. 100 litres make the hectolitre, which equals 26.419 wine gallons, or 2.838 Winchester bushels.

*Système Usuel, or Binary System.*—This new system has the metrical standard for its basis, but their divisions are binary, that is, by 2, 4, 8 &c.; and instead of the new vocabulary, the names of the ancient weights and measures are used, annexing the term *usuel* to each. Thus the half kilogramme is called the *livre usuelle*, and the double metre the *toise usuelle*.

The following tables show the proportions between the new or metrical French system and the English system:—

Comparison of French and English Weights and Measures, containing the New or Metrical Weights and Measures of France, with their Proportion to those of England, both according to the Decimal System and the *Système usuel*.

WELD or DYER'S WEED (Ger. wau; Dutch, wouw, wonwe; Fr. gaude; Ital. gindarella; Lat. luteola). An imperfect biennial, with small fusiform roots, and a leafy stem from 1 to 3 feet in height. It is a native of Britain, Italy, and various parts of Europe, and is cultivated for the sake of its stalk, flowers, and leaves, which are employed in the dyeing of yellow, whence its botanical name *Reseda luteola*. Weld requires the growth of nearly two summers before it comes to maturity; and the crop is liable to fail from so many causes, and is besides so exhausting, that its cultivation is by no means profitable, and is only carried on, in this country at least, to a small extent, principally in Essex. Weld is preferred to all other substances in giving the lively green lemon yellow. It is, however, expensive; and it is found, when employed in topical dyeing, to degrade and interfere with madder colours more than other yellows, and to stain the parts wanted to be kept white. Hence quercitron bark is now employed in calico printing, to the almost total exclusion of weld. It is still employed in dyeing silk a golden yellow, and in paper staining. (Loudon's *Ency. of Agriculture*; Bancroft *On Colours*, vol. ii, pp. 95-100; Rees's *Cyclopaedia*.)

## WESTERN AUSTRALIA. [COLONIES.]

## WEST INDIES. [COLONIES.]

WHALEBONE. A substance of the nature of horn, adhering in thin parallel laminae to the upper jaw of the whale. These vary in size from 3 to 12 feet in length; the breadth of the largest at the thick end, where they are attached to the jaw, is about a foot. They are extremely elastic.

Whalebone bore anciently a very high price, when the rigid stays and the expanded hoops of our grandmothers produced an extensive demand for this commodity. The Dutch have occasionally obtained 700l. per ton, and were accustomed to draw 100,000l. annually from England for this article. Even in 1763 it brought 500l., but soon after fell, and has never risen again to the same

## WHALE FISHERY (NORTHERN)

value. During the present century the price has varied between 60l. and 300l., seldom falling to the lowest rate, and rarely exceeding 150l. Mr. Scoresby reckoned the price, in the five years ending with 1818, at 90l.; in 1834 it amounted to from 130l. to 145l.; and in 1844 it varied from 280l. for southern to 350l. for northern. This is for what is called *size bone*, or such pieces as measure 6 feet or upwards in length; those below this standard are usually sold at half price. It may appear singular that whalebone should rise, while oil has been so decidedly lowered; but the one change, it is obvious, causes the other. Oil, being the main product of the fishery, regulates its extent; which being diminished by the low price, the quantity of whalebone is lessened, while the demand for it continuing as great as before, the value consequently rises. It is, however, probable that the high price of bone may, in some degree, tend to revive the fishery. In 1867 whale thus alone appear in the list of imports, and of these 137 tons, of the value of 51,286l., came into the United Kingdom, chiefly from the northern ports of the United States; the price per ton of the whole varying from 335l. to 440l.

It may be worth while to remark, as evincing the ignorance that at one time prevailed with respect to the whale, that by an old feudal law, the tail of all whales belonged to the queen, as a perquisite to furnish her Majesty's wardrobe with whalebone. (Blackstone, vol. i. p. 233.)

WHALE (COMMON). The *Balaena mysticetus* of Linnaeus, a marine animal of the cetaceous species, and the largest of all those with which men are acquainted. The whale has sometimes, it is affirmed, been found 160 feet in length; but this is most probably an exaggeration. In the northern seas it is at present seldom found above 60 feet long, being now, however, generally killed before it arrives at its full growth; this is no proof that the animal may not formerly have attained to a much larger size. The bodies of whales are covered, immediately under the skin, with a layer of fat or blubber, which, in a large fish, is from 12 to 18 inches thick. In young whales this fatty matter resembles hog's lard, but in old ones it is of a reddish colour. This is the valuable part of the whale, and the desire to possess it has prompted man to attempt the capture of this mighty animal. The blubber yields, by expression, nearly its own weight of a thick viscid oil (train oil). The common whale is now rarely found except within the Arctic circle; but at a former period it was not unfrequently met with on our coasts. There is a good account of the common whale, and of the manner in which the fishery is carried on, in Mr. John Linnæus's *Voyage to Spitzbergen*, one of the shortest, cheapest, and best of the innumerable books published on this neglected subject.

The *Physeter macrocephalus*, or black-headed spermæct whale, is chiefly found in the Southern Ocean. It usually measures about 60 feet in length, and 30 in circumference at the thickest part. The valuable part of the fish is the spongy, oily mass dug from the cavity of the head; this is crude spermæct; and of it an ordinary sized whale will yield about 12 large barrels.

WHALE FISHERY (NORTHERN). We do not propose entering, in this article, into any details as to the mode in which the fishery is carried on, but mean to confine ourselves to a brief sketch of its history and value in a commercial point of view.

It is probably true, as has been sometimes conjectured, that the Norwegians occasionally captured the whale before any other European nation en-

century the price has  
 300*l.*, seldom falling to  
 150*l.*. Mr. ...

has been sometimes con-  
 gians occasionally captured  
 other European nation en-

gaged in so perilous an enterprise. But the early  
 efforts of the Norwegians were not conducted on  
 any systematic plan, and should be regarded only  
 in the same point of view as the fishing expeditions  
 of the Esquimaux. The Biscayans were certainly  
 the first people who prosecuted the whale fishery  
 as a regular commercial pursuit. They carried it  
 on with vigour and success in the 12th, 13th, and  
 14th centuries. In 1388, Edward III. relinquished  
 to Peter de Puyname a duty of 6*l.* sterling a  
 whale, laid on those brought into the port of  
 Biarritz, to indemnify him for the extraordinary  
 expenses he had incurred in fitting out a fleet for  
 the service of his Majesty. This fact proves be-  
 yond dispute that the fishery carried on from  
 Biarritz at the period referred to must have been  
 very considerable indeed; and it was also prose-  
 cuted to a greater or less extent from Gibouret,  
 Vieux Boucan, and subsequently from Rochelle  
 and other places. (*Mémoire sur l'Antiquité de la*  
*Pêche de la Baleine*, par Noël, 12mo. Paris, 1795.)

The whales captured by the Biscayans were not  
 so large as those that are taken in the Polar seas,  
 and are supposed to have been attracted south-  
 ward in pursuit of herrings. They were not very  
 productive of oil, but their flesh was used as an  
 article of food, and the whalebone was applied to  
 a variety of useful purposes, and brought a very  
 high price.

This branch of industry ceased long since, and  
 from the same cause that has occasioned the  
 cessation of the whale fishery in many other  
 places—the want of fish. Whether it were that  
 the whales, from a sense of the dangers to which  
 they exposed themselves in coming southwards,  
 no longer left the icy sea, or that the breed had  
 been nearly destroyed, certain it is that they  
 gradually became less numerous in the Bay of  
 Biscay, and at length ceased almost entirely to  
 frequent that sea; and the fishers being obliged  
 to pursue their prey upon the banks of Newfound-  
 land and the coasts of Iceland, the French fishery  
 rapidly fell off.

The voyages of the Dutch and English to the  
 Northern Ocean, in order, if possible, to discover  
 a passage through it to India, though they failed  
 of their main object, laid open the haunts of the  
 whale. The companions of Barentz, who dis-  
 covered Spitzbergen in 1596, and of Hudson, who  
 soon after explored the same seas, represented to  
 their countrymen the amazing number of whales  
 with which they were crowded. Vessels were in  
 consequence fitted out for the northern whale  
 fishery by the English and Dutch, the harpooners  
 and a part of the crew being Biscayans. They  
 did not, however, confine their efforts to a fair  
 competition with each other as fishers. The  
 Muscovy Company obtained a royal charter, pro-  
 hibiting the ships of all other nations from fish-  
 ing in the seas round Spitzbergen, on pretext of  
 its having been first discovered by Sir Hugh  
 Willoughby. There can, however, be no doubt  
 that Barentz, and not Sir Hugh, was its original  
 discoverer; though, supposing that the fact had  
 been otherwise, the attempt to exclude other  
 nations from the surrounding seas on such a  
 ground was not one that could be tolerated. The  
 Dutch, who were at the time prompt to embark  
 in every commercial pursuit that gave any hopes  
 of success, eagerly entered on this new career,  
 and sent out ships fitted out equally for the pur-  
 poses of fishing and of defence against the attacks  
 of others. The Muscovy Company having at-  
 tempted to vindicate its pretensions by force,  
 several encounters took place between their ships  
 and those of the Dutch. The conviction at length

became general that there was room enough for  
 all parties in the northern seas; and in order to  
 avoid the chance of coming into collision with  
 each other, they parcelled Spitzbergen and the  
 adjacent ocean into districts, which were respec-  
 tively assigned to the English, Dutch, Ham-  
 burghers, French, Danes &c.

The Dutch, being thus left to prosecute the  
 fishery without having their attention diverted  
 by hostile attacks, speedily acquired a decided  
 superiority over all their competitors.

When the Europeans first began to prosecute  
 the fishery on the coast of Spitzbergen, whales  
 were everywhere found in vast numbers. Ignorant  
 of the strength and stratagems of the formidable  
 foe by whom they were now assailed, instead of  
 betraying any symptoms of fear, they surrounded  
 the ships and crowded all the bays. Their capture  
 was in consequence a comparatively easy task,  
 and many were killed which it was afterwards  
 necessary to abandon, from the ships being al-  
 ready full.

While fish were thus easily obtained, it was the  
 practice to boil the blubber on shore in the North,  
 and to fetch home only the oil and whalebone.  
 And, perhaps, nothing can give a more vivid idea  
 of the extent and importance of the Dutch fishery  
 in the middle of the seventeenth century, than  
 the fact, that they constructed a considerable  
 village, the houses of which were all previously  
 prepared in Holland, on the Isle of Amsterdam,  
 on the northern shore of Spitzbergen, to which  
 they gave the appropriate name of *Smeerenberg*  
 (from *smeeren*, to melt, and *berg*, a mountain).  
 This was the grand rendezvous of the Dutch  
 whale ships, and was amply provided with boilers,  
 tanks, and every sort of apparatus required for  
 preparing the oil and the bone. But this was not  
 all. The whale fleets were attended with a num-  
 ber of provision ships, the cargoes of which were  
 landed at Smeerenberg; which abounded during  
 the busy season with well-furnished shops, good  
 inns &c.; so that many of the conveniences and  
 enjoyments of Amsterdam were found within  
 about 11 degrees of the Pole. It is particularly  
 mentioned, that the sailors and others were every  
 morning supplied with what a Dutchman regards as  
 a very great luxury—*hot rolls* for breakfast. Bata-  
 vin and Smeerenberg were founded nearly at the  
 same period, and it was for a considerable time  
 doubted whether the latter was not the more im-  
 portant establishment. (*De Rieste, Histoire des*  
*Pêches* &c. tome i. p. 42.)

During the flourishing period of the Dutch  
 fishery, the quantity of oil made in the north  
 was so great that it could not be carried home by  
 the whale ships; and every year vessels were  
 sent out in ballast to assist in importing the pro-  
 duce of the fishery.

But the same cause that had destroyed the  
 fishery of the Biscayans, ruined that which was  
 carried on in the immediate neighbourhood of  
 Spitzbergen. Whales became gradually less com-  
 mon, and more and more timid and difficult to  
 catch. They retreated first to the open seas, and  
 then to the great banks of ice on the eastern  
 coast of Greenland. When the site of the fishery  
 had been thus removed to a very great distance  
 from Spitzbergen, it was found most economical  
 to send the blubber direct to Holland. Smeeren-  
 berg was in consequence totally deserted, and its  
 position is now with difficulty discoverable.

But though very extensive, the Dutch whale  
 fishery was not, during the first 30 years of its  
 existence, very profitable. This arose from the  
 circumstance of the right to carry it on having  
 been conceded, in 1614, to an exclusive com-  
 5 E

pany. The expense inseparable from such great associations, the wastefulness and unfaithfulness of their servants, who were much more intent upon advancing their own interests than those of the company, increased the outlays so much, that the returns, great as they were, proved little more than adequate to defray them, and the fishery was confined within far narrower limits than it would otherwise have reached. But after various prolongations of the charter of the first company, and the formation of some new ones, the trade was finally thrown open in 1612. The effects of this measure were most salutary, and afforded one of the most striking examples to be met with of the advantages of free competition. Within a few years the fishery was vastly extended; and though it became progressively more and more difficult from the growing scarcity of fish, it proved, notwithstanding these disadvantages, more profitable to the private adventurers, than it had ever been to the company, and continued for above a century to be prosecuted with equal energy and success. The famous John de Witt has alluded as follows to this change in the mode of conducting the trade:—

'In this respect,' says he, 'it is worthy of observation, that the authorised Greenland Company made heretofore little profit by their fishery, because of the great charge of setting out their ships; and that the train oil, blubber, and whale fins were not well made, handled, or cured; and being brought hither and put into warehouses, were not sold soon enough, nor to the company's best advantage. Whereas now that everyone equips their vessels at the cheapest rate, follow their fishing diligently, and manage all carefully, the blubber, train oil, and whale fins are employed for so many uses in several countries that they can sell them with that conveniency, that though there are now 15 ships for 1 that formerly sailed out of Holland on that account, and consequently each of them could not take so many whales as heretofore, and notwithstanding the new prohibition of France and other countries to import these commodities, and though there is greater plenty of them imported by our fishers; yet those commodities are so much raised in the value above what they were whilst there was a company, that the common inhabitants do exercise that fishery with profit, to the much greater benefit of our country than when it was (under the management of a company), carried on but by a few.' (*True Interest of Holland*, p. 63, 8vo. ed. London, 1746.)

The private ships sent by the Dutch to the whale fishery were fitted out on a principle that secured the utmost economy and vigilance on the part of everyone connected with them. The hull of a vessel was furnished by an individual, who commonly took upon himself the office of captain; a sail-maker supplied the sails, a cooper the casks &c. The parties engaged as adventurers in the undertaking. The cargo being brought to Holland and disposed of, each person shared in the produce according to his proportion of the outfit. The crew was hired on the same principle; so that everyone had a motive to exert himself, to see that all unnecessary expenses were avoided, and that those that were necessary were confined within the narrowest limits. This practice has been imitated to some extent in this and some other countries, but in none has it been carried so far as in Holland. It appears to us, that it might be advantageously introduced into other adventures.

When in its most flourishing state, towards the

year 1680, the Dutch whale fishery employed about 260 ships, and 14,000 sailors.

The English whale fishery, like that of Holland, was originally carried on by an exclusive association. The Muscovy Company was, indeed, speedily driven from the field; but it was immediately succeeded by others, that did not prove more fortunate. In 1725, the South Sea Company embarked largely in the trade, and prosecuted it for 8 years; at the end of which, having lost a large sum, they gave it up. But the Legislature, having resolved to support the trade, granted, in 1732, a bounty of 20s. per ton to every ship of more than 200 tons burden engaged in it; but this premium being insufficient, it was raised, in 1749, to 40s. per ton, when a number of ships were fitted out, as much certainly in the intention of catching the bounty as of catching fish. Deceived by the prosperous appearance of the fishery, Parliament imagined that it was firmly established, and in 1777 the bounty was reduced to 30s. The effects of this reduction showed the factitious nature of the trade, the vessels engaged in it having fallen off in the course of the next 5 years from 105 to 39. To arrest this alarming decline, the bounty was raised to its old level in 1781, and of course the trade was soon restored to its previous state of apparent prosperity. The hostilities occasioned by the American war reduced the Dutch fishery to less than half its previous amount, and gave a proportional extension to that of England. The bounty, which had in consequence become very heavy, was reduced, in 1787, to 30s. per ton; in 1792 it was further reduced to 25s.; and in 1795 it was reduced to 20s., at which sum it continued till 1824, when it ceased.

It appears from accounts given in Macpherson's *Annals of Commerce* (vol. iii, p. 511, vol. iv, p. 139), that the total bounties paid for the encouragement of the whale fishery, in the interval between 1750 and 1788, amounted to no less than 1,577,935*l*. It will be seen from the official account which follows that there are no means of furnishing any accurate account of the sums paid as bounties from the year 1789 to 1813 inclusive; but it is, notwithstanding, abundantly certain that the total bounties paid during the period from 1789 to 1824 considerably exceeded 1,000,000*l*. Here, then, we have a sum upwards of two millions AND A HALF laid out since 1750 in promoting the whale fishery. Now we believe that if we estimate the entire average value of the gross produce of the northern whale fishery (and it is to it only that the preceding statements apply) during its latter years, at 100,000*l*. a-year, we shall be considerably beyond the mark. But had the 2,500,000*l*. expended in bolstering up this branch of industry been laid out as capital in ordinary employment, it would have produced 125,000*l*. a-year of net profit; being 25,000*l*. a-year more than the total value of the produce of the fishery, without allowing anything for the capital wasted, and ships lost in carrying it on. Whatever, therefore, may be the value of the whale fishery as a nursery for seamen, it is absurd to regard it as contributing anything to the public wealth. The remark of Dr. Franklin, that he who draws a fish out of the sea draws out a piece of silver is ever in the mouths of those who are clamouring for bounties and protection against competition. But we apprehend that even Franklin himself, sagacious as he was, would have found it rather difficult to show how the wealth of those is to be increased, who, in fishing up one piece of silver, are obliged to throw another of greater value into the sea. We subjoin

An Account of the Number of Ships annually fitted out in Great Britain for the Northern Whale Fishery, of the Tonnage and Crews of such Ships, and of the Bounties paid on their Account, from 1789 to 1811.

Years	Ships	Tons	Men	Bounties paid

would have been got over, because, owing to the fewness of competitors, and the scanty supply of oil and whalebone, even a small cargo brought a high price; but since the fishery has been prosecuted on a large scale and at a very low rate of profit by the English, Americans, and Hamburgers, no new competitor coming into the field could expect to maintain himself unless he had nearly equal advantages. The Dutch have, therefore, done wisely in withdrawing from the trade. Any attempt to establish it by the aid of bounties and other artificial encouragements would be one of which the ultimate success must be very doubtful, and which could lead to no really useful result. During the 20 years preceding the French war ended 1815, the fishery of Holland was gradually declining, and had, in a great measure, ceased to be profitable. It would be folly to endeavour to raise anew, and at a great expense, a branch of industry that had become unproductive at a former period, when there is no ground for supposing that it would be more productive at this moment.

We have already noticed several changes of the bounties in which the whale fishery has been carried on at different periods; and within these few years others of the same kind have taken place. The Dutch fishers first began to frequent Davis's Straits in 1719; and as the whales had not hitherto been pursued into this vast recess, they were found in greater numbers than in the seas round Spitzbergen. From about this period it was usually resorted to by about three-tenths of the Dutch ships. It was not till a comparatively late period that Davis's Straits began to be frequented by English whalers; and down to 1820, when Captain Scoresby published his elaborate and valuable work on the whale fishery, that carried on in the Greenland seas was by far the most considerable. But it will be seen from the subjoined account, that from 1826 down to 1837 the Greenland seas were nearly abandoned. This was principally a consequence of the greater abundance of whales in Davis's Straits, but it was, also, in part owing to the various discoveries made by the expeditions fitted out by Government for exploring the seas and inlets to the westward of Davis's Straits and Baffin's Bay having made the fishers acquainted with several new and advantageous situations for the prosecution of their business. Since 1837, however, the few ships that have been sent out have gone mostly to the Greenland seas.

The sea in Davis's Straits is less incommoded with field ice than the Greenland and Spitzbergen sea, but it abounds with icebergs; and the fishery, when carried on in Baffin's Bay and Lancaster Sound, is more dangerous, perhaps, than any that has hitherto been attempted.

The Northern fishery declined rapidly down to 1842, from which period it continued nearly stationary down to 1846, when it revived a little. It should, however, be observed that the fishery is now rather for seals than for whales; the value of the produce obtained from the former considerably exceeding the value of that obtained from the latter.

During 1867, we imported 3,226 tons spermaceti oil, valued at 373,367*l*. During the same year the imports of train oil were 11,901 tons, of the value of 478,723*l*.

For a long time past the whale fishery has been more allied to a gambling than to an industrious pursuit, so that its decline is not really to be regretted. The extensive use of gas, and the increased imports of vegetable and mineral oils, occasioned in part by the reduction of the oppressive

value of the gross pro-

whale fishery (and it is

It is not even certain whether the expenditure of 2,500,000*l*. upon bounties would really have had the effect of making the whale fishery be carried on upon a considerable scale, but for the occupation of Holland by the French, and the consequent hostilities in which she was involved with this country. These did more to promote and consolidate the British fishery than anything else. The war entirely annihilated that of the Dutch; and our Government having wisely offered to the fishers of Holland all the immunities enjoyed by the citizens of Great Britain in the event of 'each settling amongst us, many availed themselves of the invitation, bringing with them their capital, industry, and skill. In consequence of this signal encouragement, the whale fishery of England was prosecuted with greater success than at any previous period; and at the termination of the war, in 1815, there were nearly 150 valuable ships and about 6,000 seamen engaged in the Northern fishery, and about 30 ships and 800 men in that to the South.

After peace was restored, the English capitalists and others became apprehensive lest the Dutch should engage anew with their ancient vigour and success in the whale fishery. But these apprehensions were without any real foundation. The Hollanders, during the 30 years they had been excluded from the sea, had lost all that practical acquaintance with the details of the fishery, for which they had long been so famous, and which is so essential to its success. The Government attempted to rouse their dormant energies by the offer of considerable premiums and other advantages to those who embarked in the trade. Three companies were in consequence formed for carrying it on; 1 at Rotte-dam, 1 at Harlingen, and 1 in South Hollar. But their efforts were limited, and altogether unfortunate. In 1826, the company of South Hollar was dissolved, while that of Harlingen despatched 4 ships, and that of Rotterdam 2. In 1827, Rotterdam sent only 1 ship, and Harlingen 2. In 1828, 1 solitary ship sailed from Holland—a feeble and last effort of the company of Harlingen; and since then a ship or two has been occasionally fitted out by private adventurers, but generally without success.

Such has been the fate of the Dutch whale fishery. The attempts to revive it failed, not because the ships sent out were ill calculated for the service, but because they were manned by unskilful seamen, and fish were deficient. In the early ages of the fishery, the former difficulty

duties with which the former were formerly affected, have prevented the diminution in the supply of whale oil from having any bad effect.

There has been a singular change in the ports from which the Northern fishery has been carried on. In London were undertaken all the discoveries which led to its establishment; and the great companies formed in this city enjoyed for a lengthened period nearly a complete monopoly of the business. So late as 1780 and 1790, the metropolis sent out 4 times the number of vessels that sailed from any other port; but it was observed that her fishery was, on the whole, less fortunate than that of the new rivals which had sprung up; and her merchants were so much discouraged, that in Mr. Scoresby's time they equipped only 17 or 18 vessels. They have wholly abandoned the trade, and have not sent out a single ship since 1836.

Hull early became a rival to London, having sent out vessels at the very commencement of the fishery. Though checked at first by the monopoly of the great companies, as soon as the trade became free she prosecuted it with distinguished success. Towards the end of last century, she attained, and preserved down to 1837, the character of the first whale-fishing port in Great Britain. In 1819 she sent out 65 ships, and her imports of oil amounted in 1820 to 8,086 tons. But such and so rapid was the decline of the fishery in the interval, that from 1838 to 1845 she only sent out a solitary ship. In 1846, however, the business took a start; and from that year down to the present time, Hull has sent from 10 to 13 or 14 ships. But she is not supposed to have made anything by this pursuit. [Docks; HULL.] At present (1869), Peterhead is one of the ports principally engaged in the fishery.

**WHALE FISHERY (SOUTHERN).**—This consists of three distinct branches; viz. 1st, the catch of the spermaceti whale, which furnishes the valuable substance called SPERMACETI; 2nd, that of the common black whale of the Southern seas; and 3rd, that of the sea elephant, or southern walrus.

The spermaceti whale (*Physeter macrocephalus*) is found in all tropical climates, and especially on the coasts of New Zealand and the adjoining seas. The ordinary duration of the voyage of a ship from England, employed in this department of the fishery, is about 3 years.

The common black whale of the Southern seas (*Physeter microps*) is met with in various places, but principally on the coast of Brazil; in the bays on the west coast of Africa; and in some of the bays of New South Wales, Van Diemen's Land &c.

Sea elephants (intermediate between the walrus of the Northern seas and the seal) are principally met with in the seas round the Islands of Desolation, South Georgia, and South Shetland, the coast of California &c. Vast numbers of these animals are annually captured; vessels frequently load entirely with them; and they are believed to furnish more oil than the common South Sea whale. The oil of the black whale and that of the sea elephant are both known in the market by the name of southern oil, and they are so very similar that those most versed in the trade can with difficulty distinguish the one from the other. Hence ships commonly engage indifferently in either fishing as opportunity offers. The usual duration of the voyage of a ship from England in either of the last two departments, or in the two combined, varies from 12 to 18 months.

The South Sea fishery was not prosecuted by the English till about the beginning of the

American war; and as the Americans had already entered on it with vigour and success, the American harpooners were sent out in each vessel. In 1791, 75 whale ships were sent to the South Sea; but the number has not been so great since; and latterly it has been unprosperous and declining, in consequence partly of the competition of the colonists in Australia, who are incomparably better situated for the prosecution of this branch of industry, and partly of that of the Americans. The *Macrocephalus*, or spermaceti whale, is particularly abundant in the neighbourhood of the Spice Islands; and the late Mr. Crawford, in his valuable work on the *Eastern Archipelago* (iii. 447), entered into some details to show that the fishery carried on there was of greater importance than the spice trade. Unluckily, however, the statements on which Mr. Crawford founded his comparisons were entirely erroneous, neither the ships nor the men employed amounting to more than  $\frac{1}{2}$  or  $\frac{1}{3}$  of what he represented. And the trade has now become quite insignificant. It is sufficient to mention, in proof of this statement, that in 1857 the Southern fishery supplied us with only 291 tons oil, and in 1867 it is not mentioned as having yielded any.

*American Whale Fishery.*—For a lengthened period, the Americans have prosecuted the whale fishery with greater vigour and success than, perhaps, any other people. They commenced in 1690, and for about 50 years found an ample supply of fish on their own shores. But the whale having abandoned them, the American navigators entered with extraordinary ardour into the fisheries carried on in the Northern and Southern Oceans. From 1758 to 1775, Massachusetts employed annually 183 vessels, carrying 13,820 tons, in the former; and 121 vessels, carrying 14,026 tons, in the latter. Mr. Burke, in his famous speech on American affairs in 1774, adverted to this wonderful display of daring enterprise as follows:—

'As to the wealth,' said he, 'which the colonies have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought these acquisitions of value, for they seemed to excite your envy; and yet the spirit by which that enterprising employment has been exercised, ought rather, in my opinion, to have raised esteem and admiration. And pray, sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the New England people carry on the whale fishery. While we follow them among the trembling oceans of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis's Straits; while we are looking for them beneath the Arctic circle, we hear that they have pierced into the opposite region of polar cold; that they are at the antipodes, and engaged under the frozen serpent of the South. Falkland Island, which seems too remote, and too romantic an object for the grasp of national ambition, is but a stage and resting-place for their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both poles. We learn, that while some of them draw the line or strike the harpoon on the coast of Africa, others run the longitude and pursue their gigantic game along the coast of Brazil. No sea, but what is vexed with their fisheries; no climate that is not witness of their toils. Neither the perseverance of Holland, nor the activity of France, nor the dexterous and firm sagacity of English enterprise, ever carried this most perilous mode of hardy industry to the extent to which it has been pursued by this recent people; a people who are

still in the gristle, and not hardened into manhood.'

The unfortunate war that broke out soon after this speech was delivered, checked for a while the progress of the fishery; but it was resumed with renewed vigour as soon as peace was restored. The American fishery was principally carried on from Nantucket and New Bedford in Massachusetts; and for a considerable time past the whalers have mostly resorted to the Southern Seas. 'Although,' says Mr. Pitkin, 'Great Britain has, at various times, given large bounties to her ships employed in this fishery, yet the whalers of Nantucket and New Bedford, unprotected and unsupported by anything but their own industry and enterprise, have generally been able to meet their competitors in a foreign market.' (*Commerce of the United States*, 2nd ed p. 46).

In 1858 the American whale fishery was of very great extent and importance. It employed about 600 ships, of the aggregate burden (June 30) of 198,593 tons, principally belonging to New Bedford, Nantucket, and other ports in Massachusetts, Rhode Island, and Connecticut. A very large portion of this immense fleet was employed in the Pacific; and the possession of San Francisco affords facilities for the fitting out and repair of ships for this business. In 1857 there were imported into the United States 78,440 barrels of sperm, and 24,094 barrels of whale oil, and 2,058,580 lb. of whalebone. In 1861 the imports of fish oil into the United States were 1,324,134 gals., worth 1,459,013 dol., while in 1865 they declined to 706,171 gals. Yet in 1867 the whole fish oil exported from the States amounted to 1,526,287 gals., worth 2,277,655 dol. On the whole, it appears more than probable that the American whale fishery has passed its zenith. The same cause that led to the cessation of the Biscay and Spitzbergen fisheries is operating throughout the wide extent of the Pacific. The supply of whales is everywhere becoming exhausted. And the risks and losses that have always attended the trade, and given to it so much of a gambling character, are being constantly increased. Hence the probability seems to be that the fishery of the United States will eventually experience the fate of that of Holland and England, and no doubt its decline has been somewhat precipitated by the late civil war. However, the petroleum springs in her territory render the great American republic quite independent of whale oil. The Sandwich Islands are at present the resort of the ships engaged in the Southern fishery. And the accounts from thence confirm its decline. There is as much enterprise and energy as ever, but the 'gigantic game' is deficient.

*French Whale Fishery.*—France, which preceded the other nations of Europe in the whale fishery, can hardly be said, for many years past, to have had much share in it. In 1784, Louis XVI. endeavoured to revive the fishery. With this view he fitted out 6 ships at Dunkirk on his own account, which were furnished with harpooners and a number of experienced seamen brought at a great expense from Nantucket. The adventure was more successful than could have been reasonably expected, considering the auspices under which it was carried on. Several private individuals followed the example of his Majesty, and in 1790 France had about 40 ships employed in the fishery. The revolutionary war destroyed every vestige of this rising trade. But since the peace, Government has made great efforts for its renewal: and high bounties have been granted to all vessels fitted out for the whale fisheries, but

especially to those engaged in the sperm fishery. These, however, have not been so successful in forcing ships into this trade as might have been anticipated: for it appears from the official accounts that, in 1857, only 4 ships, of the aggregate burden of 1,867 tons, arrived in the ports of France from the whale fishery, bringing with them 933,388 kilog. of oil. (*Administration des Douanes*, 1857, p. 318.) In 1865, 1,183,487 kilog. of oil, the produce of the fisheries, were imported, and 1,663,018 were entered for home consumption.

WHAMPOA. [CANTON.]

WHARF. A sort of quay, constructed of wood or stone, on the margin of a roadstead or harbour, alongside of which ships or lighters are brought for the sake of being conveniently loaded or unloaded.

There are two denominations of wharves, viz. *legal quays* and *suffrance wharves*. The former are certain wharves in all sea-ports, at which all goods are required by the 1 Eliz. c. 11, to be landed and shipped, and they were set out for that purpose by commission from the Court of Exchequer, in the reign of Charles II. and subsequent sovereigns. Many others have been legalised by Act of Parliament. In some ports, as Chepstow, Gloucester &c., certain wharves are deemed legal quays by immemorial practice, though not set out by commission, or legalised by Act of Parliament.

Suffrance wharves are places where certain goods may be landed and shipped, such as hemp, flax, coal, and other bulky goods, by special suffrance granted by the crown for that purpose.

The goods that may be landed at the different wharves are specified by the Commissioners of Customs, and depend partly on their situation, and partly on the character and capability of the warehouses connected with them.

WHARFAGE. The fee paid for landing goods on a wharf, or for shipping them off. The stat. 22 Ch. II. c. 11 (modified by 1 & 2 Geo. IV. c. 89), after providing for the establishment of wharves and quays, makes it lawful for any person to land or unload goods, on paying wharfage and cramage at the rate appointed by the king in council.

WHEAT (Ger. weizen; Dutch, tarw; Dan. hvede; Swed. hvete; Fr. froment, blé; Ital. grano, formento; Span. and Port. trigo; Russ. pschenia; Pol. pszenia). A species of bread corn (*Triticum* Linn.), by far the most important of any cultivated in Europe. We are totally ignorant of the country whence this valuable grain was first derived; but it was very early cultivated in Sicily. It is raised in almost every part of the temperate zones, and in some places as high as 2,000 feet above the level of the sea.

The kinds of wheat sown are numerous, but they may be classed under 4 heads: viz. one or bearded wheat, which, however, is now little cultivated; white wheat, of which there are innumerable varieties, the *white Dantzic* being considered one of the best; red wheat, which is seldom seen where the climate is good and early, and the land in proper condition; and spring wheat. A greater number of people are nourished by rice than by wheat; but owing to the greater quantity of gluten which the later contains, it makes by far the best bread. Rye comes nearer to wheat in its bread-making qualities than any other sort of grain; still, however, it is very inferior to it. The finest samples of wheat are small in the berry, thin skinned, fresh, plump, and bright, slipping readily through the fingers.

Being very extensively cultivated on soils of very various qualities, and frequently with very imperfect preparation, the produce of wheat crops in Great Britain varies from about 12 to 56

bushels per acres. According to the agricultural returns for 1868, there were 3,951,018 acres in the United Kingdom devoted to the cultivation of wheat; while France had 17,850,258 acres in 1867; Spain 7,311,892 acres in 1857; Bavaria 1,011,035 in 1863; and Prussia 3,573,253, and the United States 12,304,891 acres in 1867, all growing wheat crops and spelt.

The counties most distinguished for the quantity and quality of their wheat are Kent, Essex, Suffolk, Rutland, Hertfordshire, Berkshire, Hampshire, and Herefordshire, in England; and Berwickshire, and the Lothians, in Scotland. In the northern counties it is, speaking generally, of an inferior quality; being cold to the feel, dark coloured, thick skinned, and yielding comparatively little flour. In the best wheat countries, and in good years, the weight of a Winchester bushel of wheat is from 60 to 62 lb. In the Isle of Sheppey, in Kent (where, perhaps, the best samples of wheat sent to the London market are produced), this grain, in some favourable seasons, weighs 64 lb. a bushel. Where the climate is colder, wetter, or more backward, or in bad seasons, the weight of the bushel of wheat is not more than 56 or 57 lb. It is calculated that the average weight of the bushel of good English wheat is 58½ lb.; and that the average yield of flour is 13 lb. of flour to 14 lb. of grain. (London's *Ency. of Agriculture &c.*) In 1867 we imported 34,615,569 cwt. of wheat, and 3,592,269 cwt. of wheat meal and flour, 31,418,741 cwt. of the first and 3,564,891 cwt. of the last having been entered for home consumption. The average price of British wheat for the week ended April 24, 1869, was 45s. 5d. per quarter.

For a view of the regulations with respect to the importation and exportation of wheat &c., see CORN LAWS AND CORN TRADE; but as the Chancellor of the Exchequer (Mr. Lowe) proposes this year (1869) to abolish the duties on all descriptions of corn, we have appended his resolutions on this subject with others to TARIFF, BRITISH.

**WHISKY.** A spirit obtained by distillation from corn, sugar, or molasses, though generally from the former. Whisky is the *national spirit*, if we may so term it, of Scotland and Ireland; but that distilled in the former is generally reckoned superior to that of the latter. [SPIRITS.]

**WINE** (Ger. *wein*; Fr. *vin*; Ital. and Span. *vin*; Port. *vinho*; Russ. *wino*, *wino*; winogradnoe *winoe*; Lat. *vinum*; Gr. *oivos*; Arab. *klumr*). The fermented juice of the grape, or berries of the vine (*Vitis vinifera*).

The vine is indigenous to Persia and the Levant; but it is now found in most temperate regions. The limits within which it is cultivated in the northern hemisphere of the Old World vary from about 15° to 48° and 52°; but in North America, it is not cultivated farther north than 38° or 40°. It is rarely grown at a greater altitude than 3,000 feet. From Asia the vine was introduced into Greece, and thence into Italy. The Phœceans, who founded Marseilles, carried the vine to the south of France; but it is doubtful whether it was introduced into Burgundy till the age of the Antonines. The ancient writers give the most contradictory accounts with respect to the introduction of the vine into Gaul. See the learned and excellent work of Le Grand d'Aussy, *Vie privée des Français*, tome ii. pp. 329—333.) The statement given above seems the most probable. The species of *Vitis* indigenous to North America is very different from the *Vitis vinifera*. In favourable seasons, the vine ripens in the open air in England; and in the eleventh and twelfth centuries, considerable

quantities of inferior wine were made from native grapes. Vineyards are now, however, unknown in this country; but the grapes raised in hot-houses, and used at desserts, are excellent.

The vine grows in every sort of soil; but that which is light and gravelly seems best suited for the production of fine wines. It succeeds extremely well in volcanic countries. The best wines of Italy are produced in the neighbourhood of Vesuvius; the famous Tokay wine is also made in a volcanic district, as are several of the best French wines; many parts of the south of France bearing evident marks of extinct volcanoes. Hermitage is grown among the débris of granite rocks. The most favourable situation for a vineyard is upon a rising ground or hill facing the south-east, and the situation should not be too confined;

—apertus  
Ilicibus amat colles.

The art of expressing and fermenting the juice of the grape appears to have been practised from the remotest antiquity. The sacred writings tell us that Noah planted a vineyard soon after the deluge (Gen. ix. 20); and a modern Latin poet ingeniously represents the vine as a gift from Heaven, to console mankind for the miseries entailed upon them by that grand catastrophe.

Omnia vastatis ergo quum emerret arvis  
Desolata Deus, notis tellera viti  
Dona dedit; tristes hinc riuum quo munere fovit  
Ilicibus, invidi solatus, vite riuum.

Vander PRAE, Rusticum, lib. xi.

**Species of Wine.**—There are many varieties of wines; and this circumstance, combined with difference of soil, climate, mode of preparation &c., occasions an extreme variety in the species of wine. But between places immediately contiguous to each other, and where even a careful observer would hardly remark any difference, the qualities of the wines, though produced by the same species of grape, and treated in the same way, are often very different. A great deal evidently depends upon the aspect of the vineyard; and it is probable that a good deal depends on peculiarities of soil. But whatever may be the cause, it is certain that there are wines raised in a few limited districts, such as Tokay, Johannisberg, Consantia, the best Burgundy, Champagne, claret &c., that no art or care has hitherto succeeded in producing of equal goodness in other places.

**ANCIENT WINES.**—The wines of Lesbos and Chios among the Greeks, and the Falernian and Cœcian among the Romans, have acquired an immortality of renown. Great uncertainty, however, prevails as to the nature of these wines. Dr. Henderon thinks that the most celebrated of them all, the Falernian, approached, in its most essential characters, near to Madeira. In preparing their wines, the ancients often inspissated them till they became of the consistence of honey, or even thicker. These were diluted with water previously to their being drunk; and, indeed, the habit of mixing wine with water seems to have prevailed much more in antiquity than in modern times.

**MODERN WINES.**—The principal wines made use of in this country are Port, Sherry, Claret, Champagne, Madeira, Hock, Marsala &c.

**Port.**—The produce of a mountainous district situated on the banks of the river Douro, about 70 miles east of Oporto, whence it is shipped and its name derived. This district, not exceeding 30 miles in length and about 4½ in breadth, having been found peculiarly fitted for the production of exportable wine, was marked out in 1766 by the Marquis of Pombal, in a charter granted to the

vintages, when kept long in bottle, often deposit a crust on the glass, and the same may be said of all the red wines, particularly when bottled early.

In former times and before the use of claret became as general as it is, Bordeaux wines were rarely exported to the United Kingdom in a state of purity. But it is now quite the reverse, and experience has proved that the pure clarets of a good vintage will last, and keep their colour and flavour much longer when pure than when blended with hotter wines.

The price of claret varies from 12*l.* to 60*l.* and 80*l.* per hogshead, and sometimes as much as 100*l.* and 120*l.* per hogshead are paid for the superior growths of the very finest vintages. Cargo and ordinary clarets can be bought at from 6*l.* to 10*l.* per hogshead. Fine clarets in bottles sell from 36*s.* to 96*s.* per dozen, and there are instances of remarkably old and rare wines having brought in public sales above 50*l.* per dozen.

(See the valuable work of Dr. Henderson, *On Ancient and Modern Wines*, p. 184; and Jullien, *Typographie de Vignobles*, pp. 202—212. See also Mr. Beckwith 'On Fermented Drinks'—*Reports on Paris Exhibition*—who estimates the quantity of Bordeaux wine grown at 85,000,000 of gallons.)

*Champagne*, so called from the province of France of which it is the produce, is one of the most deservedly esteemed of the French wines.

The wines of Champagne are divided into white and red wines; these last, owing to the recent great extension of the trade in sparkling wines, are now made in but small quantities, and then only in such localities as cannot make good white wines, and these red wines are consumed in the country; the best of them, Bouzy, Clos St. Basle &c., greatly resemble in colour and aroma the wines of Burgundy, but have a peculiar character of Champagne.

The white wines are of two classes; those made of black, and those of white grapes. Of the first, the characteristics are 'elegance,' body and bouquet; the best are those of Ay, Verzenay, Bouzy &c. Of the second, noted for their lightness and exquisite flavour, the best are those of Cramant, Avize, Chouilly &c. In preparing the wines for sparkling, the different growths, such as Ay, Verzenay, and Cramant, are so mixed up as to form a wine possessing the different qualities appropriate to each, thus combining body with nerve, exquisite flavour and lightness &c.

All sparkling wines are thus made up of different growths, experience having shown that such wines are much more likely to keep in good condition and go on improving.

The still wines are made with the wines of Verzenay and Ay; they are much admired by connoisseurs, but the consumption of them is very limited. These wines are usually called 'Sillery sec' from the fact of all the wines of Verzenay having originally belonged to the 'marquis of Sillery,' who used to call these wines after his name. There are hardly any wines grown at Sillery, the locality being too much exposed, and the few that are there are annually frozen in the spring.

The annual exportation of Champagne amounts to 13,500,000 bottles, of which about 3,000,000 are consumed in France, and the greater part of the rest sent to England and its colonies.

The trade in wines is principally carried on in Reims, Epernay, Ay, and Avize.

The cellars in which the wines are stored are excavated from the rock of chalk, or from a calcareous tufa, the temperature of these being always about 48 degrees Fahrenheit.

In the last edition the produce of the province of Champagne was stated at about 1,000,000 hectolitres, or 22,000,000 of gallons. Mr. Beckwith (*Reports on Paris Exhibition of 1866*) estimates the average quantity of wine produced in the Champagne district at 52,000,000 of gallons, without, however, stating the data on which this estimate is founded.

*Burgundy*.—The best wines of this province, though not so popular in England as those of Champagne, probably because they are very apt to be injured by a sea-voyage, enjoy the highest reputation. 'In richness of flavour and perfume, and all the more delicate qualities of the juice of the grape, they unquestionably rank as the first in the world; and it was not without reason that the dukes of Burgundy, in former times, were designated as the *princes des bons vins*.' (Henderson, p. 161.) M. Jullien is not less decided:—'Les vins des premiers crus, lorsqu'ils proviennent d'une bonne année, réunissent, dans de justes proportions, toutes les qualités qui constituent les vins parfaits; ils n'ont besoin d'aucun mélange, d'aucune préparation pour atteindre leur plus haut degré de perfection. Ces opérations, que l'on qualifie dans certains pays de *soins qui aident à la qualité*, sont toujours nuisibles aux vins de Bourgogne' (p. 104).

Romané-Conti, Chambertin, the Clos Vougeot, and Richebourg are the most celebrated of the new wines of Burgundy. Chambertin was the favourite wine of Louis XIV. and of Napoleon. It is the produce of a vineyard of that name, situated 7 miles south from Dijon, and furnishing each year from 130 to 150 paucheons, from an extent of about 65 acres. It has a fuller body and colour, and greater durability, than the Romané, with an aroma nearly as fragrant.

The white wines of Burgundy are less numerous, and, consequently, less generally known, than the others; but they maintain the highest rank among French white wines, and are not inferior to the red either in aroma or flavour.

The entire annual produce of wine in Burgundy and Beaujolais may at present be estimated, at an average, at nearly 75,000,000 of gallons, of which about  $\frac{1}{2}$  suffices for the consumption of the inhabitants. Since the Revolution, the cultivation of the vine has been greatly extended in the province. Many of the new vineyards having necessarily been planted in comparatively unfavourable situations, a notion has been gaining ground that the wines of Burgundy are degenerating. This, however, is not the case. On the contrary, the quantity of *bons crus*, instead of being diminished, has increased considerably; though, as the supply of inferior wines has increased in a still greater degree, the fine wines bear a less proportion to the whole than they did previously to the Revolution. (Jullien, p. 90.)

The principal trade in Burgundy is carried on at Dijon, Gevrey, Châlons-sur-Saône &c.

Besides the above, France has a great variety of other excellent wines. Hermitage, Sauterne, St. Péry &c., are well known in England, and deservedly enjoy, particularly the first, a high degree of reputation.

This makes a total export of 2,868,398 hectolitres, worth 260,330,573 fr., or 10,847,107*l.* About 20 years ago the exports did not exceed 1,500,000 hectolitres, so that there has been a large increase in the interval. The average annual export from Bordeaux alone during the 5 years ending with 1864 was 13,361,976 gallons. And were France still further to liberalise her commercial policy, it is not easy to say to how great an extent her exports of wine, in the pro-

of the duty payable on those of France, we, in effect, gave the Portuguese growers a monopoly of the British market, and thereby attracted too great a proportion of the delicate capital of Portugal to the production of wine; while, on the other hand, we not only excluded one of the principal equivalents the French had to offer for our commodities, and proclaimed to the world that we considered it better to deal with *two* millions of poor beggarly customers, than with *thirty* millions of rich ones, but we also provoked the retaliation of the French, who forthwith excluded most part of our articles from their markets.

The injurious effect of the regulations in the Methuen treaty was distinctly pointed out by Dr. Davenant and Mr. Hume. The latter, in his *Essay on the Balance of Trade*, published in 1752, says, 'Our jealousy and hatred of France are without bounds. These passions have occasioned innumerable barriers and obstructions on commerce, where we are commonly accused of being the aggressors. But what have we gained by the bargain? We lost the French market for our woollen manufactures, and transferred the commerce of wine to Spain and Portugal, where we buy much worse liquor at a much higher price. There are few Englishmen who would not think their country absolutely ruined were French wine sold in England so cheap, and in such abundance, as to supplant ale and other home-brewed liquors. But, would we lay aside prejudice, it would not be difficult to prove that nothing could be more innocent, perhaps more advantageous. Each new acre of vineyard planted in France, in order to supply England with wine, would make it requisite for the French to take an equivalent in English goods, by the sale of which we should be equally benefited.'

In consequence of the preference so unwisely given to the wines of Portugal over those of France—a preference continued, in defiance of every principle of sound policy and common sense, down to 1831—the imports of French wine were for many years reduced to a mere trifle; and notwithstanding their increased consumption, occasioned by the reduction of the duties in 1825, the quantity of all sorts retained for consumption in 1852 did not exceed 475,948 gallons; while the consumption of Portuguese wines amounted in the same year to 2,489,350 gallons. This is the most striking example, perhaps, in the history of commerce, of the influence of customs duties in diverting trade into new channels, and altering the taste of a people. All but the most opulent classes having been compelled, for a long series of years, either to renounce red wine, or to use port, the taste for the latter had become apparently firmly rooted; the beverage that was originally forced upon us by necessity having for a time become congenial from habit. It was expected when the discriminating duty in favour of port was abolished in 1831, that the excellence of the French wines would speedily regain for them a large portion of that favour in the English market which they formerly enjoyed. And this, since our commercial treaty with France came into operation, has been fully realised. In 1867 there were entered for home consumption in the United Kingdom, 3,595,598 gallons of French wine, while but 2,828,098 gallons of Portuguese red wine were entered. (See post.)

*Madeira*, so called from the island of that name, is a wine that has long been in high estimation in this and other countries. Plants of the vine were conveyed from Crete to Madeira in 1421, and have succeeded extremely well. There is a considerable difference in the flavour and other

qualities of the wines of Madeira; the best are produced on the south side of the island. Though naturally strong, they receive an addition of brandy when racked from the vessels in which they have been fermented, and another portion is thrown in previously to their exportation. This is said to be required to sustain the wine in the high temperature to which it is subjected in its passage to and from India and China, to which large quantities of it are sent; it being found that it is mellowed, and its flavour materially improved by the voyage. It does not, however, necessarily follow that the wines which have made the longest voyages are always the best. Much must obviously depend on the original quality of the wine; and many of the parcels selected to be sent to India are so inferior, that the wine, when brought to London, does not rank so high as that which has been imported direct. But when the parcel sent out has been well chosen, it is very much matured and improved by the voyage; and it not only fetches a higher price, but is in all respects superior to the direct importations. Most of the adventitious spirit is dissipated in the course of the Indian voyage.

Madeira wines may be kept for a very long period. Like the ancient vintages of the Surrentine hills, they are truly *firmissima vinum*, retaining their qualities unimpaired in both extremes of climate, suffering no decay, and constantly improving as they advance in age. Indeed, they cannot be pronounced in condition until they have been kept for 10 years in the wood, and afterwards allowed to mellow nearly twice that time in bottle; and even then they will hardly have reached the utmost perfection of which they are susceptible. When of good quality, and matured as above described, they lose all their original harshness, and acquire that agreeable pungency, that bitter sweetness, which was so highly prized in the choicest wines of antiquity; uniting great strength and richness of flavour with an exceedingly fragrant and diffusible aroma. The nutty taste, which is often very marked, is not communicated, as some have imagined, by means of bitter almonds, but is inherent in the wine. (Henderson, p. 253.)

The wines of Madeira have latterly fallen into disrepute in England. The growth of the island, when greatest, was very limited; not exceeding 20,000 pipes, of which a considerable quantity went to the West Indies and America. Hence, when Madeira was a fashionable wine in England, every sort of deception was practised with respect to it, and large quantities of spurious trash was disposed of for the genuine vintage of the island. This naturally brought the wine into discredit; so that sherry has been for several years the fashionable white wine. It is difficult, however, to imagine that adulteration was ever practised to a greater extent upon Madeira than it is now practised upon sherry. It is not, therefore, improbable, that a reversion might have taken place in favour of Madeira, had not its growth been nearly extinguished for several years by the vine disease. Hopes were, however, entertained in 1868 of the possibility of restoring it to its former productiveness. [MADEIRA.] The quantity entered for home consumption in 1827 amounted to 308,295 gallons, whereas the quantity entered for home consumption in 1867 amounted to only 19,538 gallons.

Malmsey, a very rich, luscious species of Madeira, is made from grapes grown on rocky grounds, exposed to the full influence of the sun's rays, and allowed to remain on the vine till they are over-ripe.

The trade in Madeira wine is carried on at Funchal, the capital of the island, in lat. 32° 37' N., long. 17° 6' W. *Weights and Measures* same as at Lisbon. The island is said to have suffered very severely from the disease that recently attacked the vine.

*Teneriffe wine*—so called from the island of that name—resembles Madeira, and is not unfrequently substituted in its stead; but it wants the full body and rich flavour of the best growths of Madeira.

*German Wines*.—The wines of Germany imported into England are principally produced on the banks of the Rhine and Moselle. The Rhine wines constitute a distinct order by themselves. They are drier than the French white wines, and are characterised by a delicate flavour and aroma, which is quite peculiar to them, and of which it would, therefore, be in vain to attempt the description. A notion prevails, that they are naturally acid; and the inferior kinds, no doubt, are so; but this is not the constant character of the Rhine wines, which in good years have no perceptible acidity to the taste, at least not more than is common to them with the growths of warmer regions. Their chief distinction is their extreme durability. The wines made in warm dry years are always in great demand, and fetch very high prices.

The *Johannis-berger* stands at the head of the Rhine wines. It has a very choice flavour and perfume, and is characterised by an almost total want of acidity. The vineyard is the property of Prince Metternich. The *Steinberger* ranks next to the *Johannis-berger*. It is the strongest of all the Rhenish wines, and in favourable years has much flavour and delicacy.

The produce of cert- in vineyards on the banks of the Moselle is of superior quality. The better sorts are clear and dry, with a light pleasant flavour and high aroma; but they sometimes contract a stony taste from the strata on which they grow. They arrive at maturity in 5 or 6 years; though, when made in a favourable season, they will keep twice that time, without experiencing any deterioration. (Henderson, p. 226.) The importation of Rhenish wine has more than doubled in the 10 years down to 1867.

*Hungarian Wines*.—The finest of all the liquor wines is *Tokay*, so called from a town in Hungary, near which it is produced, on the Theiss, 44 miles N.N.W. Debreczin. It consists of three varieties: viz. the *Essence*, flowing spontaneously from the ripest grapes, and corresponding with the *Mustum sponte defluens antequam calcetur uve* of the ancients; the *Austrach*, obtained by pressing the grapes with the hand, a small quantity of good new wine, or must, being at the same time poured over them; and the *Maslas*, or inferior variety, produced by pouring a larger quantity of less choice must over the same berries, and subjecting them to the action of the press. Of these varieties the first, which is made only in very small quantities, is in the highest degree sweet and luscious, and is more sought for as a rarity than as being pleasant to the palate. It is on the *Austrach* that the reputation of *Tokay* depends. Mr. Paget says, 'It is sweet, rich, but not cloying; strong, full-bodied, but mild, bright, and clear; and has a peculiar flavour of most exquisite delicacy. I never tasted it in perfection but at private tables, and that only twice; I could then have willingly confessed it the finest wine in the world.' The *Maslas*, or inferior variety, is a much thinner wine, rather sweet, with a preponderating flavour of the dried grape. Mr. Paget estimates the entire produce of the *Tokay* vineyards in ordinary

years at about 250,000 eimers, of about 16 bottles each. The best *Austrach* is very dear; and but little that is genuine is seen in England. (Paget's *Travels in Hungary*, i. 481; Henderson, p. 228; Jullien, p. 446.)

Some other varieties of Hungarian wines are now (1869) sold in London; but they have not as yet displaced, to any appreciable extent, the wines to which the English have long been accustomed.

*Italian Wines*.—The Sicilian white wine called *Marsala*, from the town (the ancient Lilybæum) whence it is shipped, and near which it is made, is now pretty largely consumed in England; the entries for home consumption having increased from 79,686 gallons in 1823, to 387,750 in 1852; an extraordinary increase, particularly when it is considered that during the same period the consumption of most sorts of wine had been nearly stationary. Latterly, however, it has been rather declining, though 413,190 gallons of Sicilian wine were entered for consumption in the United Kingdom in 1867. *Marsala* is a dry wine; the best qualities closely resembling the lighter sorts of Madeira; but the increased demand for it seems to have been owing as much to its cheapness as to any peculiarity of quality. It is, however, when good, an agreeable dinner wine. *Marsala* has been brought to its present state of perfection and repute by the care and exertions of two Englishmen, the Messrs. Woodhouse, established in Sicily, who have an extensive factory in the neighbourhood of *Marsala*. The wine is shipped in large quantities for America; whence a considerable quantity is again conveyed to the West Indies, where it is not unfrequently disposed of as real Madeira.

With the exception of *Marsala*, very little wine either of Sicily or Italy is imported into England. The wines of those countries are, indeed, without, perhaps, a single exception, very inferior to those of France. The natives bestow no care upon the culture of the vine; and their ignorance, obstinacy, and want of skill in the preparation of wine, are said to be almost incredible. In some districts, as in Tuscany and parts of Naples, the art is, no doubt, better understood and practised than in others; the *Montepulciano* of the former, said, by Redi (*Bacco in Toscana*) to be *di ogni vino il re*, and the *Lacrima Christi* of the latter, being the most celebrated varieties. But the *lacrima* is better known by name than in reality, it being made in small quantities, and mostly reserved for royal cellars. (Henderson, p. 239.) And, despite the superior quality of those now mentioned, had not the *Falerian*, *Cecuban*, and other famous ancient wines, been incomparably better than the best of those that are at present produced, they never would have elicited the glowing panegyrics of Horace.

*Wines of Greece and Cyprus*.—The soil in most parts of Greece and of the Grecian islands is admirably fitted for the growth of the vine; and, in antiquity, they produced some of the choicest wines. But the rapacity of the Turks, and the insecurity of person and property that has always prevailed under their miserable Government, has effectually prevented the careful cultivation of the vine; and has occasioned, in many places, its total abandonment. It may, however, be fairly presumed, now that Greece has emancipated herself from the iron yoke of her oppressors, that the culture of the vine will attract some portion of that attention to which it is justly entitled; and that, at no distant period, wine will form an important article of export from Greece. At present (1869) Greek wines are sold in London, but have not as yet found much favour with the English.

Nowhere, perhaps, has the destructive influence of Turkish barbarism and misgovernment been so apparent as in Cindia and Cyprus. While these two renowned and noble islands were possessed by the Venetians, they supplied all Europe with the choicest dessert wines. Bacci allrms, that towards the end of the 16th century, Cindia sent annually 200,000 casks of malmscy to the Adriatic; whereas now-a-days it hardly produces sufficient to supply the wants of its few impoverished inhabitants. (Henderson, p. 213.) The wines of Cyprus, particularly those produced from the vineyard called the Commandery, from its having belonged to the Knights of Malta, were still more highly esteemed than those of Crete. In the earlier part of last century, the total produce of the vintage of the island was supposed to amount to above 2,000,000 gallons, of which nearly  $\frac{1}{2}$  was exported; but at present (1869) the wine grown and exported does not amount to  $\frac{1}{10}$  of these quantities. The oppression of which they have been the victims has reduced the peasantry to the extreme of indigence. At this time the population of the island is not supposed to exceed 200,000, and small as this number is, it is constantly diminishing by the inhabitants availing themselves of every opportunity of emigrating. (*Geog. Dict. art. 'Cyprus.'*)

*Cape Wines.*—Of the remaining wines imported into England, those of the Cape of Good Hope form the largest portion; the quantity entered for home consumption in 1867 being 25,890 imperial gallons. But the consumption of Cape wine was formerly more considerable, having amounted in 1827 to 698,434 gallons. The famous Constantia wine is the produce of two contiguous farms of that name, at the base of Table Mountain, between 8 and 9 miles from Cape Town. The wine is very rich and luscious; though, according to Henderson, it yields in point of flavour and aroma to the muscadine wines of Languedoc and Roussillon. But, with this exception, most part of the Cape wines brought to England have an earthy, disagreeable taste, are often acid, want flavour and aroma, and are, in fact, altogether execrable. And yet this trash, being the produce of a British possession, enjoyed till lately peculiar advantages in our markets; for while the duty on Cape wine was only 2s. 11d. per gallon, that on all other wines was 5s. 9d. The consequences of this unjust preference were doubly mischievous: in the first place, it forced the importation of an article of which little was directly consumed, but which was extensively employed as a convenient menstruum for adulterating and degrading sherry, Madeira, and other good wines; and, in the second place, it prevented the improvement of the wine; for, while the Legislature thought fit to give a bounty on the importation of so inferior an article, was it to be supposed that the colonists would exert themselves to produce anything better? It is not easy to imagine a more preposterous and absurd regulation. The Act enforcing it should have been entitled, an Act for the adulteration of wines in Great Britain, and for encouraging the growth of bad wine in the Cape Colony.

*Consumption of Wine in Great Britain. Duties.*—We have repeatedly had occasion, in the course of this work, to call the reader's attention to the injurious operation of unequal and exorbitant duties. Perhaps, however, the trade in wine has suffered more from this cause than any other department of commerce. We have already endeavoured to point out some of the effects resulting from the inequality of the duties, or from the preference so long given to the inferior wines of Portugal and Spain over the superior wines of

France. But the exorbitancy of the duties was, if possible, still more objectionable than the partial principle on which they were imposed. It appears from the subjoined table, that during the 9 years ending with 1794, when the duty on French wines was 4s. 10d., and on Portuguese 3s. 13d. per imperial gallon, the consumption in Great Britain amounted, at an average, to 7,921,770 gallons a-year, producing 900,000*l.* of revenue. It is probable, had the increase taken place *gradually*, that these duties might have been greatly increased without any material diminution of consumption. But in 1795 and 1796 they were raised to 10s. 6d. per gallon on French, and 6s. 1d. per gallon on Portuguese and Spanish wine; and the consequence of this sudden and inordinate increase, as exhibited in the table, was, that the consumption fell from above 7,000,000 gallons in 1795 to 4,189,710 gallons in 1796, and to 5,449,710 in 1797. But this unanswerable demonstration of the ruinous effect of heavy and sudden additions to the duties did not prevent them being raised, in 1804, to 13s. 9d. on French, and to 8s. 10d. on Portuguese and Spanish wine. They continued at this rate till 1825; and such was their influence, that notwithstanding the vast increase of wealth and population since 1790, and the general improvement in the style of living, the total consumption of wine, during the 3 years ending with 1824, amounted, at an average, to only 4,827,383 gallons a-year, being 697,507 gallons under the annual consumption of the 9 years ending with 1794. It may, therefore be truly said, making allowance for the increase of population, that the consumption of wine in Great Britain fell off full 50 per cent. between 1790 and 1824.

On Mr. Robinson (afterwards Lord Ripon) becoming Chancellor of the Exchequer, he resolved upon the effectual reduction of the wine duties; and took, in 1825, nearly 50 per cent. from their amount: and notwithstanding the spirit duties were at the same time reduced in a still greater degree, the consumption of wine in Great Britain increased in ordinary years from about 4,500,000 to about 6,300,000 imperial gallons, while there was no loss of revenue. We are, therefore, justified in affirming that this measure was very successful, and that it afforded a valuable example of the superior productiveness of low duties. An article in the *Edinburgh Review*, No. 80, contributed to bring about this measure. See also an excellent tract on the *Wine Trade*, by Mr. Warre, published in 1824.

The duties, as reduced by Mr. Robinson, were 7s. 3d. per imperial gallon on French wines, 4s. 10d. per ditto on all other foreign wines, and 2s. 5d. on those of the Cape of Good Hope. They continued on this footing till the Equalisation Act (1 & 2 Wm. IV. c. 30), which imposed a duty of 5s. 6d. per imperial gallon on all foreign wines, and 2s. 9d. on those of the Cape, to which 5 per cent. was added in 1840.

But the equalisation effected by this Act should not have been brought about by adding anything to the duties on port, sherry &c., but by reducing those on French wines to their level. The subjoined tables show that the consumption of wine in the United Kingdom was about stationary from 1826 to 1831; and the addition of 8d. per gallon, that was then made to the duties on all sorts of foreign wine, except French, from which 1s. 9d. was deducted, appears to have sensibly affected the consumption of 1832. Considering, indeed, the increasing wealth and population of the United Kingdom, and the more generally diffused use of wine, the stationary amount of the quantities retained for consumption is not a 1

ney of the duties was, ionable than the partial re imposed. It appears that during the 9 years duty on French wines agnese 3s. 13d. per imption in Great Britain to 7,021,770 gallons a- of revenue. The sub- the consumption of wine was about stationary d the addition of 8d. per de to the duties on all cept French, from which pears to have sensibly n of 1832. Considering, eath and population of and the more generally stationary amount of the nsumption is not a 1

surprising. A good deal is, we believe, ascrib- able to adulteration, and more, probably, to a change of habits. The duties were, also, perhaps, too high. But they were more objectionable from the mode in which they were assessed than from their amount. It is against all principle to impose the same duty on inferior and cheap wines, worth only 10l. per hogshead, as on the choicest Burgundy and Champagne, worth 60l. or 70l. per hogshead. Its injustice would not be exceeded, were the same duty charged on small beer that is charged on gin. The effect of this apparently equal, but really most unequal duty, was to exclude low priced wines from the English markets. Commercially speaking, Bordeaux is nearer London than Paris; and but for this system, the cheap wines of the Gironde, Languedoc, and Provence might have been bought here at a less price than in most parts of France. But, how desirable soever, it would be all but impossible to assess an ad valorem duty on wine. It is frequently no easy matter to distinguish between different descriptions of wine, and it is still more difficult to distinguish between different varieties of the same wine, though they may differ greatly in value. There can, in truth, be little doubt that any attempt to lay an ad valorem duty on wine would occasion such an amount of fraud as would greatly overbalance any advantage of which it might be productive.

In the last edition of this work the author remarked as follows: 'A proposal has recently been made, which has met with considerable support, for reducing the duty on all wines to 1s. per gallon. It is contended that a reduction of this extent would not occasion any permanent loss of revenue, inasmuch as it would have the effect, in no very lengthened period, of increasing the consumption to 5 or 6 times its present amount. But we greatly doubt whether such would be the case. A reduction of the duty to the extent supposed would not have any considerable influence in reducing the price of the finer descriptions of wine; and it is very questionable whether the inferior and low-priced wines that are now excluded, would, though there were no duty, be very generally introduced into this country. The better opinion seems that beer would continue, as at present, to be preferred by the bulk of the population; and if so, the measure would have little other influence than to occasion a reduction of revenue.'

'Besides, if the wine duties were reduced to 1s. per gallon, and the consumption to increase to the extent that has been anticipated, there would certainly be a serious decline in the consumption of malt and spirit, and, consequently, in the revenue derived from them. And to do justice to all parties, to the growers of barley and the distillers, as well as the importers of wine, it would be necessary to make a corresponding reduction in the duties on malt and spirits. Unless this were done, a reduction of the wine duties to 1s. per gallon would be really equivalent to a bounty or premium on the consumption of wine. But there should be no favouritism in taxation; and, however desirable, the substitution of one sort of stimulus for another is not to be effected by encroaching on that equality of taxation which should be a fundamental principle in every sound system of finance.'

'Unless, therefore, some means be discovered of fairly and easily assessing the wine duties on an ad valorem principle, little probably would be gained by disturbing the present arrangement. A reduction of the duties to 3s. per gallon, that is, to about 6d. per bottle, has been suggested; and if they are to be interfered with, this would seem to

be the most judicious plan. A duty of this amount would not be felt on the superior wines; and while it would be no great check to the consumption of the secondary growths, it would not give an undue stimulus to the use of wine.' Since the above was written, the duties have been reduced, and in 1866 the present rates were regulated as follows, viz. :—

On wine containing less than 26 degrees of proof spirit, 1s. per gallon; 26 and less than 32 degrees of proof spirit, 2s. 6d. per gallon; and additional for every degree of strength beyond the highest above specified, 3d. per gallon.

*Consumption of Wine in Ireland.*—In 1790, the duties on wine consumed in Ireland were considerably below the level of those imposed in Great Britain, and the average annual quantity of all sorts retained for home consumption in that country amounted to about 1,160,000 imperial gallons, producing about 138,000l. a-year revenue. Had those to whom the government of Ireland was intrusted possessed any knowledge of the merest elements of finance, or of the condition of the Irish people, they would not have attempted to add to the public revenue by augmenting the duties on wine. Owing to the limited number of the middle classes in Ireland, an increase of duty could not be expected to be productive; and though it had yielded 50,000l., or even 100,000l., a-year additional revenue, that would have been no compensation for the injury it was sure to do in checking the diffusion of that taste for luxuries and enjoyments so essential to the improvement of the people. But those who had to administer the affairs of Ireland were insensible to such considerations, and never doubted that 2 and 2 make 4 in the arithmetic of the customs as well as of Cocker. Such, indeed, was their almost incredible rapacity, that in the interval between 1791 and 1814, they raised the duty on French wine from 33s. 7s. per tun to 141l. 7s. 6d.; and that on port from 22l. 4s. 8d. to 95l. 11s. This was a much more rapid increase than had taken place in England; and as the country was far less able to bear even the same increase, the consequences were proportionally mischievous. In 1815, the quantity of wine retained for home consumption in Ireland had declined, notwithstanding the population had doubled, to 608,000 imperial gallons, or to about half the quantity consumed in 1790; and in 1824, the consumption had fallen to 467,000 gallons, while the revenue only amounted to 185,000l.

The reduction of the duties in 1825 nearly doubled the consumption of wine directly imported into Ireland, and added considerably to the revenue; but since 1814, when the duties on wine in Great Britain and Ireland were equalised, it has not been possible to state the consumption of wine in either with accuracy, on account of the transshipments from the former to the latter. It is, however, quite certain that the consumption of wine in Ireland, partly in consequence of the high duties, and partly of a change in the mode of living, did not in 1853 amount, as compared with the population, to half its amount in 1790. In Thom's Irish Almanack for 1869 the consumption in 1790 is stated at 1,117,556 proof gallons, and that in 1853 at 512,693 gallons, while in 1865 it is estimated at 973,901 gallons.

*Adulteration of Wine.*—We have already alluded to this practice. It was prosecuted to a very great extent previously to the reduction of the duties in 1825, and is still very far from being suppressed. It has been affirmed, but we are inclined to suspect the statement of exaggeration, that at one time more than a third part of all the

Vertical text on the left margin containing various numbers and small annotations, likely a reference or index for the tables.

sherry consumed in London was the produce of the *home presses*. Indeed, wines are every day offered for sale at prices at which everyone conversant with the trade knows they could not be afforded were they genuine. Mr. Fleetwood Williams, in his pamphlet on the *Wine Trade* (1823), gave some curious details on this subject.

The increase of the duties in the reigns of William and Anne first gave birth to this discreditable fraternity (see a paper by Addison in the *Tatler*, No. 131). But though adulteration be promoted by, it does not wholly depend on the duties, but will continue so long as the materials used in adulteration are cheaper than the wine, or article adulterated. See as to adulteration of port wine under *Geopigea*; and see also *Reports* of Mr. Secretary Lytton and Mr. Consul Cranford on the same subject, published by the Government in 1867.

The only security against being imposed upon is to deal with respectable houses largely engaged in the trade, to whom a reputation for selling good wine is of ten times more importance than anything they could expect to make by adulteration.

*Measures.*—According to the system of wine measures that prevailed down to 1826, the gallon contained 231 cubic inches; the tierce, 42 gallons; the puncheon, 81 gallons; the hoghead, 63 gallons; the pipe or butt, 126 gallons; and the tun, 252 gallons. But in the system of measures introduced by the Act 5 Geo. IV. c. 74, the imperial standard gallon contains 277.274 cubic inches; so that the tierce=35 (very nearly) imperial gallons; the puncheon=70 (very nearly) ditto; the hoghead=52½ (very nearly) ditto; the pipe or butt=105 (very nearly) ditto; and the tun=210 (very nearly) ditto. [WEIGHERS MEASURES.]

A very great quantity of wine is the consumer in dozens; much more, indeed, than is sold in any other way; and yet there is no regulation as to the size of bottles—a defect which has occasioned a great deal of abuse. No one doubts the propriety of making all gallons, bushels, &c. of the same capacity; and why should not similar regulations be enforced in the case of measures so universally used as bottles?

No abatement of duties made on account of any damage received by wine. (16 & 17 Vict. c. 107 s. 110.)

*Wine for Officers of Navy.*—For the quantity of duty-free wine to be allowed to officers of the navy, and the regulations under which it is to be allowed, see ante, *IMPORTATION AND EXPORTATION*, and for similar allowances for the merchant service, see *STONES*.

*Regulations as to Mixing, Bottling &c. in Warehouses.*—It shall be lawful, with the sanction of the commissioners of customs, and after notice given by the respective importers or proprietors, to draw off any wine or any spirits into reputed quart or pint bottles for exportation only; and to draw off and mix brandy with any wine, not exceeding the proportion of 10 gallons brandy to 100 gallons wine; and also to fill up any casks of wine or spirits from any other casks of the same respectively secured in the same warehouse; and also to rack off any wine from the lees, and mix any wines of the same sort, erasing from the cask all import brands, unless the whole of the wine so mixed be of the same brand; and also to take such samples as may be allowed by the commissioners of customs, with or without entry, and with or without payment of duty, except as the same may eventually become payable as on a deficiency of the original quantity. (16 & 17 Vict.

c. 107 s. 105.) Geopigea may be mixed with other wines under the same regulations, and in the same proportions as brandy.

We have borrowed the first part of the comprehensive Table No. 1. (p. 1531) from a valuable circular of Thomas George Shaw, Esq. The latter years are taken from parliamentary papers.

*Table showing the Quantities of Wine in the Bonded Warehouses of the United Kingdom on December 31, 1866 and 1867, and the Sources whence these Quantities were Imported.*

Countries	In Warehouses	
	Dec. 31, 1866	Dec. 31, 1867

Total	13,872,143	13,392,311

**WOAD** (Ger. waid; Dutch, weede; Fr. pastel, guède, vomède; Ital. gundone, gundo, gandro; Span. pastel, gualto). The *Isatis tinctoria* of bot. ... is a biennial plant, with a fusiform fibrous root, and smooth branched stem, rising from 3 to 5 feet in height. Woad is indigenous to most parts of Europe; and was extensively used from a very remote period, down to the general introduction of indigo, in the dyeing of blue. It is still cultivated to a considerable extent in France; but in this country its cultivation is chiefly restricted to a few districts in Lincolnshire. After being bruised by machinery, to express the watery part, it is formed into balls, which ferment and fall into a dry powder, which is sold to the dyer. Woad is now seldom employed without a mixture of indigo. By itself, it is incapable of giving a bright and deep blue colour; but the colour which it does give is very durable. The best methods of conducting the fermentation and preparation of woad are still so very ill understood that the goodness of any parcel of it can never be ascertained till it be actually used; so that it has the disadvantage of being purchased under the greatest uncertainty as to its true value. At the proper age, indigo plants yield about 30 times as much colouring matter, and of a far superior quality, as an equal weight of woad; so that there is no prospect that any improvement that may be made in its preparation will ever render it either in goodness or cheapness, a rival of the former. (London's *Encyc. of Agriculture*; Bancroft *On Colours*, vol. 1. p. 167.) We have previously [1810] given some account of the efforts made by the woad growers to prevent the use of indigo.

**WOOL.** [WOLL,] **WOOL** (Ger. wolle; Dutch, wol; Dan. uld; Swedish, ull; Fr. laine, lã; and Span. lana; Port. lãa; Russ. wolna, selherst; Pol. wlna; Lat. lana). A kind of soft hair or down. The term is not very well defined. It is applied both to the fine hair of animals, as sheep, rabbits, some species of goats, the vicuña &c., and to fine vegetable fibres, as cotton. In this article, however, we refer only to the wool of sheep—an article which has continued, from the earliest period down to the present day, to be of primary importance, having always formed the principal part of the clothing of mankind in most temperate regions.

*Species of Wool.*—It has been customary in

opiga may be mixed with the same regulations, and in some brands.

3. First part of the complete (p. 1531) from a valuable source, Mr. Shaw, Esq. The latter supplementary papers.

**Quantities of Wine in the Kingdom of the United Kingdom 1866 and 1867, and the Quantities were Imported**

Dutch, woele; Fr. pastel, gaudins, glands, glastro;

The *Indica tinctoria* of plant, with a fusiform fibrous stem, rising from a root is indigenous to most was extensively used from down to the general introduction of dyeing of blue. It is still verberle extent in France; its cultivation is chiefly restricted in Lincolnshire. After machinery, to express the oil into balls, which ferment wider, which is sold to the shloom employed without a y itself, it is incapable of deep blue colour; but the give is very durable. The eting the fermentation and e still so very ill understood any parcel of it can never be actually used; so that it has being purchased under the to its true value. At the ats yield about 30 times er, and of a far superior weight of wool; so that hat any improvement that paration will ever render it cheapness, a rival of the *Arquebute*; Baneroft (187.) We have previously account of the efforts made to prevent the use of indigo.

Dutch, wol; Dan, uld; me, H.; and Span. lana; ma, schers; Pol. weina; of soft hair or down. The defined. It is applied both als, as sheep, rabbits, some vicuna &c., and to fine ton. In this article, howo to the wool of sheep—an tained, from the earliest sent day, to be of primary ways formed the principal mankind in most temperate

It has been customary in

this country to divide wool into 2 great classes—long and short wools; and these again into subordinate classes, according to the fineness of the fibre.

Short wool is used in the cloth manufacture; and is, therefore, frequently called clothing wool; and may vary in length from 1 to 3 or 4 inches; if it be longer, it requires to be cut or broken to prepare it for the manufacture.

The *felting* property of wool is known to every one. The process of hat making, for example, depends entirely upon it. The wool of which hats are made is neither spun nor woven; but locks of it being thoroughly intermixed and compressed in warm water, cohere and form a solid tenacious substance.

Cloth and woollen goods are made from wool possessing this property; the wool is carded, spun, woven, and then, being put into the fulling mill, the process of felting takes place. The strokes of the mill make the fibres cohere; the piece subjected to the operation contracts in length and breadth, and its texture becomes more compact and uniform. This process is essential to the beauty and strength of woollen cloth. But the long wool of which stuffs and worsted goods are made is deprived of its felting properties. This is done by passing the wool through heated iron combs, which takes away the lamina or feathery part of the wool, and approximates it to the nature of silk or cotton.

Long or combing wool may vary in length from 3 to 8 inches. The shorter combing wools are principally used for hosiery, and are spun softer than the long combing wools; the former being made into what is called hard, and the latter into soft worsted yarn.

The fineness of the hair or fibre can rarely be estimated, at least for any useful purpose, except by the wool sorter or dealer, accustomed by long habit to discern those minute differences that are quite unappreciable by common observers. In sorting wools, there are frequently 8 or 10 different species in a single fleece; and if the best wool of one fleece be not equal to the finer sort, it is thrown to 2nd, 3rd, or 4th, or to a still lower sort, of an equal degree of fineness with it. The best English short native fleeces, such as the fine Norfolk and Southdown, are generally divided by the wool sorter into the following sorts, all varying in fineness from each other:—viz. 1, prime; 2, choice; 3, super; 4, head; 5, downrights; 6, seconds; 7, line abb; 8, coarse abb; 9, livery; 10, short coarse or breech wool. The relative value of each varies according to the greater demand for coarse, fine, or middle cloths.

The softness of the fibre is a quality of great importance. It is not dependent on the fineness of the fibre; and consists of a peculiar feel, approaching to that of silk or down. The difference in the value of 2 pieces of cloth made of 2 kinds of wool equally fine, but one distinguished for its softness and the other for the opposite quality, is such, that, with the same process and expense of manufacture, the one will be worth from 20 to 25 per cent. more than the other. Mr. Bakewell showed that the degree of softness depends principally on the nature of the soil on which sheep are fed; that sheep pastured on chalk districts, or light calcareous soils, usually produce hard wool; while the wool of those that are pastured on rich, loamy, argillaceous soils, is always distinguished by its softness. Of the foreign wools, the Saxon is generally softer than the Spanish. Hard wools are all defective in their *felting* properties.

In clothing wool, the colour of the fleece should

always approach as much as possible to the purest white; because such wool is not only necessary for cloths dressed white, but for all cloths that are to be dyed bright colours; for which a clear white ground is required to give a due degree of richness and lustre. Some of the English fine-woolled sheep, as the Norfolk and Southdown, have black or grey faces and legs. In all such sheep there is a tendency to grow grey wool on some part of the body, or to produce some grey fibres intermixed with the fleece, which renders the wool unfit for many kinds of white goods; for though the black hairs may be too few and minute to be detected by the wool sorter, yet when the cloth is stoved they become visible, forming reddish spots, by which its colour is much injured. The Herefordshire sheep, which have white faces, are entirely free from this defect, and yield a fleece without any admixture of grey hairs.

The cleanness of the wool is an important consideration. The Spanish wool, for example, is always scoured after it is shorn; whereas the English wool is only imperfectly washed on the sheep previous to its being shorn. In consequence, it is said that while a pack of English clothing wool of 210 lb. weight will waste about 70 lb. in the manufacture, the same quantity of Spanish will not waste more than 18 lb. Cleanliness, therefore, is an object of much importance to the buyer.

Before the recent improvements in the spinning of wool by machinery, great length and strength of staple was considered indispensable in most combing wools. The fleeces of the long-woolled sheep fed in the rich marshes of Kent and Lincoln used to be reckoned peculiarly suitable for the purposes of the wool comb; but the improvements alluded to have effected a very great change in this respect, and have enabled the manufacturer to substitute short wool of 3 inches staple, in the place of long combing wool, in the preparation of most worsted articles. A great alteration has, in consequence, taken place in the proportion of long to short wool since 1804; there having been in the interim, according to Mr. Hubbard's calculations (see post), an increase of 132,653 packs in the quantity of the former produced in England, and a decrease of 72,920 in the quantity of the latter.

Whiteness of fleece is of less importance in the long combing than in clothing wool, provided it be free from grey hairs. Sometimes, however, the fleece has a dingy brown colour, called a *winter stain*, which is a sure indication that the wool is not in a thoroughly sound state. Such fleeces are carefully thrown out by the wool sorter; being suitable only for goods that are to be dyed black. The fineness of heavy combing wool is not of so much consequence as its other qualities.

The Merino or Spanish breed of sheep was introduced into this country about the close of the last century. George III. was a great patron of this breed, which was for several years a very great favourite. But it has been ascertained that, though the fleece does not much degenerate here, the carcase, which is naturally ill formed, and affords comparatively little weight of meat, does not improve; and as the farmer, in the kind of sheep which he keeps, must look not only to the produce of wool, but also to the butcher market, he has found it his interest rather to return to the native breeds of his own country, and to give up the Spanish sheep. They have, however, been of considerable service to the flocks of England; having been judiciously crossed with the Southdown, Ryeland &c.

*Deterioration or Change in the Character of British Wool.*—It appears to be sufficiently es-

published, by the evidence taken before the House of Lords in 1828, and other authorities, that a considerable deterioration, or rather, perhaps, change, had taken place in the quality of British wool, particularly during the 30 preceding years. The great object of the agriculturist has been to increase the weight of the carcase and the quantity of the wool; and it seems very difficult, if not quite impossible, to accomplish this without injuring the fineness of the fleece. Mr. Culley said, that the Herefordshire sheep, that produce the finest wool, are kept lean, and yield 1½ lb. each; he added, 'if they be better kept, they grow large and produce more wool, but of an inferior quality.' This would seem to be universally true. The great extension of the turnip husbandry, and the general introduction of a larger breed of sheep, appear, in every instance, to have lessened the value of the fleece. Speaking of the Norfolk fleeces, Mr. Fison, a wool sorter, said, that 25 years ago the weight was 2½ lb. a fleece, and that now it is 3 lb. or 3½ lb. (*Report*, p. 356.) But according to a table furnished by the same gentleman, containing the results of his experience, it appeared that of 15 tods, or 420 lb., of clothing wool grown in Norfolk in 1790, 200 lb. were prime, while, in 1828, the same quantity of Norfolk wool only yielded 14 lb. prime. (*Ibid.* p. 207.) The statements of other witnesses were to the same effect. (*Ibid.* pp. 388, 640, and 644.) According to the estimate in Mr. Lucecock's *Treatise on English Wool*, which has always enjoyed the highest reputation, the produce of all sorts of wool in England, in 1800, was 384,000 packs, of 240 lb. a pack. But Mr. Hubbard, a very intelligent and extensive wool-stapler at Leeds, has shown that, supposing Mr. Lucecock's estimate of the number of sheep to be correct, the quantity of wool produced in 1828 could not, owing to the greater weight of the fleece, be estimated at less than 463,169 packs; and it is now (1869) believed to amount to more than 500,000 packs. It is, therefore, probable, notwithstanding the decline in the price of wool, that, taking into account the greater weight of the carcase, and the greater weight of the fleece, sheep produce more at present to the farmer than at any former period.

*Number of Sheep in Great Britain.*—It was not possible till the publication of the statistics of agriculture collected by Government to form any accurate estimate either of the number of sheep or of the quantity of wool annually produced. With the exception of Mr. Lucecock's, most of the statements put forth with respect to both these points were much exaggerated. But Mr. L.'s estimate, which was considerably under any that had previously appeared, was drawn up with great care; and, as will be seen, approached near to accuracy. According to Mr. Lucecock, the

Number of long-woolled sheep in England and Wales in 1800 was	-	4,157,508	
Number of short-woolled ditto	-	11,954,399	
Total number shorn	-		19,007,607

According to the Government returns, the number in England and Wales in 1868 was 23,595,289.

During the last half century a very decided increase has taken place in the number of sheep in Scotland, and a very great improvement in the breed, particularly in the Highlands. In this district, many of the proprietors have let their estates in large farms to *store farmers*, who have introduced the Cheviot breed of sheep, instead of the small black-faced heath breed that was formerly the only one to be met with. We may remark, by the way, that a good deal of unmerited odium has attached to the patrons of this system; for, though it be true that, in a few instances, the

peasantry were rudely ejected from their little possessions, there can be no doubt that it has, on the whole, been decidedly advantageous. Besides rendering large tracts of country more valuable to the proprietors and the public generally, the condition and habits of the peasantry have been materially improved. Instead of loitering away more than half their time, as was their former practice, they have now either become the servants of the large farmers, or have resorted to towns and villages, and been metamorphosed into industrious tradesmen, fishermen &c. A very small proportion of the whole has emigrated; and the country is more populous at present than before the sheep farming system began.

In the *General Report of Scotland*, 1814 (vol. iii. Appen. p. 6), the number of sheep is estimated at 2,850,000; but according to the census for 1868, the number was 7,112,112. And in consequence of the rapid extension of the practice of turnip-feeding, both the weight of the carcase and of the fleece have been largely increased.

According to Mr. Wakefield, there was not a single flock of breeding sheep in the whole province of Ulster. (*Account of Ireland*, 1812, vol. i. p. 341.) But according to the latest agricultural statistics, the whole number of sheep in Ireland in 1868 was 4,822,414.

The total number of sheep in Great Britain and Ireland, and including the Isle of Man and Channel Islands, in 1868, was 35,607,812. This number, though above the average, is more than 6,000,000 under that given by Dr. Colquhoun for 1812; but that learned person assigns no grounds whatever for his estimate, which is utterly inconsistent with all the really authentic information on the subject. It is curious enough to observe the German statistical writers referring to Colquhoun's statements, as if they were of standard authority. They would be about as near the mark, were they to quote the *Arabian Nights* in proof of any disputed historical fact.

Wool.—From 1660 down to wool was strictly prohibited, rds the end of the 17th and and during the first half of wool of England was superior r country; that long wool anywhere else; and that if

we succeeded in keeping the raw material at home, we should infallibly command the market of the world for our woollen manufactures. In consequence, innumerable statutes were passed, the enactments in some of which were the most arbitrary and severe that can be imagined, to prevent the clandestine exportation of wool. Mr. John Smith was one of the first who, in his excellent work, entitled *Memoirs of Wool*, exposed the injustice and absurdity of this system, by proving that whatever advantages the manufacturers might gain by preventing the exportation of wool, were more than lost by the agriculturalists. This learned and accurate work contains a great deal of information with respect to the progress of manufactures and commerce in England. But despite Mr. Smith's reasonings, which were enforced by many later writers, and which experience had proved to be in all respects accurate, the prohibition of the exportation of wool was continued till 1825, when Mr. Huskisson happily succeeded in procuring the abolition of this miserable remnant of a barbarous policy. The improvement of machinery, by enabling short or clothing wool to be applied to most of those purposes for which long or combing wool had been exclusively appropriated, had annihilated the only apparently tenable argument on which the prohibition of exportation had ever been vin-

deicated; and even this, as will be observed, applied only to a small proportion of the whole wool produced in England.

Down to 1802, the importation of foreign wool into Great Britain had been quite free; and, being the raw material of an important manufacture, the policy of allowing it to be imported free of duty is obvious. In 1802, however, a duty of 5s. 3d. per cwt. was laid on all foreign wool imported. In 1813 this duty was raised to 6s. 8d.; and in 1819 Mr. Vansittart raised it to the enormous amount of 56s. per cwt., or to 6d. per lb. Had English wool sufficed for all the purposes of the manufacture, such a duty would have been less objectionable; but the very reverse was the case. The use of foreign wool had become, owing to the deterioration, or rather, perhaps, to the change in the character, of British wool, and other circumstances, quite indispensable to the prosecution of the manufacture; and as our superiority over the foreigner in several departments of the trade was by no means decided, it is plain that the imposition of a duty which amounted to about 50 per cent. upon the price of a considerable quantity of the wool we were obliged to import must, had it been persevered in, have ruined the manufacture. It occasioned, indeed, during the period of its continuance, a considerable decline of the exports of woollens, and was productive of other mischievous

effects, from which the manufacture suffered for a considerable period after it was repealed.

The evidence as to the absolute necessity of employing foreign wool, taken before the Lords' committee, was as decisive as can well be imagined. Mr. Gott of Leeds, one of the most extensive and best informed manufacturers in the empire, stated to the committee that, in his own works, he used only foreign wool. On being asked whether he could carry on an export trade to the same extent as at the then present time, if he manufactured his cloth of British wool, Mr. Gott replied that in certain descriptions of cloth 'he could not make an article that would be merchantable at all for the foreign market, or even for the home market, except of foreign wool.'

The view taken by Mr. Gott of the effect of the importation of foreign wool on the price of British wool was supported by the concurrent testimony of all the manufacturing witnesses examined by the committee. Blankets, flannels of all sorts, baizes, carpets, bearskins &c. are made principally of English wool; and the command of foreign wool enables the manufacturers to use a considerable quantity of English wool in the manufacture of certain descriptions of, cloth, which, if made entirely of it, would be quite unsaleable. On Mr. Goodman, a wool-stapler of Leeds, being asked whether, if a duty were laid on foreign wool, it would force the use of English wool in the manufacture of cloths, from which it was excluded, he answered, 'Certainly not; we could not get people to wear such a cloth; they want a better, finer cloth; it is so much handsomer in its wear, and so much more durable.' (Report, p. 211.) Mr. Francis, of Hoxtesbury, declared that there was no demand for cloth made wholly of British wool; that it was principally applicable to the manufacture of blankets, baizes &c.; and that the exclusion of foreign wool would only injure the manufacture without raising the price of British wool. (P. 268.) Statements to the same effect were made by Mr. Webb (p. 270), Mr. Sheppard (p. 294), Mr. Ireland (p. 319), and, in short, by every one of the witnesses conversant with the manufacture.

The history of the manufacture since 1828 has completely confirmed the accuracy of the statements made by Mr. Gott and the other witnesses. Very large quantities of foreign wool have been imported during the interval; but the price of British wool has, notwithstanding, maintained its proper level; and has, in fact, been at an average considerably higher since the reduction and abolition of the duty on foreign wool than previously.

**Foreign Wool imported into England.**—A very great change has taken place, within the course of the present century, both as respects the quantity of foreign wool imported, and the countries whence it is derived. Previously to 1800 our average imports of wool did not much exceed 3,000,000 lb., mostly brought from Spain, the wool of which long maintained a high character. In 1809 our

imports amounted to near 9,000,000 lb.; and they have since gone on gradually increasing, till in 1867 they amounted to 230,224,467 lb. Instead, however, of being principally derived from Spain, as was the case down to 1814, the greater part by far of this immense supply of foreign wool is at present furnished by our Australian and South African colonies, the South American States, and the East Indies. The late King of Saxony, when Elector, introduced the breed of Merino sheep into his dominions, and exerted himself to promote the growth of this valuable race of animals. His praiseworthy efforts have been crowned with the most signal success. The Merino sheep seem to succeed better in Saxony and other German states than in Spain, and have increased so rapidly that the Spanish wool trade has become insignificant compared with that of Germany. The importations of German wool were quite trifling during the war—amounting in 1812 to only 28 lb.; but since the peace they have increased beyond all precedent. In 1841 they amounted to 3,432,456 lb.; in 1820 they were 5,113,442 lb.; in 1825 they rose to 28,799,661 lb.; but this being a year of overtrading, they declined in 1826 to 10,345,232 lb. Subsequently they recovered from this depression, and in 1836 amounted to 31,766,194 lb. They have since, however, sunk very rapidly, principally in consequence of the quickly increasing imports of colonial wool.

The re-exports of foreign wool amounted in 1866 to 66,573,488 lb. In 1867 the re-exports amounted to 90,832,581 lb., but that was much above the average.

*The price of Colonial Wool in London in April 1865 was as follows, viz.:*—

	per lb.	s.	d.	q.

The breed of sheep that was carried out to New South Wales and Van Diemen's Land has succeeded remarkably well; and Australia is already, perhaps, the principal wool-growing country of the world. The imports into Great Britain have increased with extraordinary rapidity. In 1833 they amounted to 3,516,869 lb., in 1839 to 10,128,774 lb., in 1858 to 51,104,560 lb., and in 1867 to 133,108,176 lb. The imports of wool from India only began in 1833, when they amounted to the inconsiderable quantity of 3,721 lb.; but such has been their increase in the interval, that in 1858 they amounted to 17,333,507 lb., and in 1867 to 15,234,620 lb. Of late years Russia has

become of primary importance among the wool-exporting countries, especially from her ports on the Black Sea. We said in a previous edition that provided tranquillity were maintained in South Africa, the probability was that it would in no very lengthened period rival New South Wales as a wool-exporting country. This anticipation has been more than realised, the imports having increased from 2,197,143 lb., in 1811, to 36,170,099 lb. in 1867, while the imports of wool from New South Wales in 1867 were 32,080,437 lb. Alpaca, and other wools of that sort, chiefly come from Peru; goats' wool comes principally from Turkey, but the best is that of Thibet.

**WOOLLEN MANUFACTURE.** The art of forming wool into cloth and stuffs. This has always ranked as an important branch of national industry; and until surpassed by the cotton manufacture, was decidedly the most important of all the manufactures carried on in England.

*Rise and Progress of the British Woollen Manufacture, Exports.*—There can be no doubt that the arts of spinning wool, and manufacturing the yarn into cloth, were introduced into England by the Romans, the inhabitants being previously clothed only in skins. From the period of the Romans quitting England down to the tenth century there are no notices of the manu-

facture, and those relating to the period from the tenth to the thirteenth century are but few and imperfect. It is certain, however, that the manufacture of broad cloths was established soon after the year 1200, if not previously. (Smith's *Memoirs of Wool*, i, 17.) But the woollen manufactures of Flanders being at this period, and long afterwards, in a comparatively advanced state, English wool was exported in large quantities to Bruges and other Flemish cities, whence the cloths and other products were brought back in exchange. Edward III. took the most judicious measures for improving the English manufacture by inviting over Flemish weavers, fullers, dyers, and others, and protecting them from the assaults of the rabble. Shortly after the first immigration of Flemings, or in 1337, an Act was passed, prohibiting the wear of any cloths made beyond sea, and interdicting the export of English wool. (*Ibid.* i, 25.) But in these turbulent times such restraining Acts were little better than a dead letter; and this, indeed, was soon after repealed. (*Ibid.* i, 32, 39.) From this remote period the manufacture has always been regarded as of primary importance, and has been the object of the especial solicitude of the legislature. It may be doubted, however, whether it has derived any real advantage from the numberless statutes that have been passed in the view of contributing to its advancement. With the exception indeed of the prohibition of the export of English wool, which was finally put a stop to in 1660, the other Acts, being mostly intended for the regulation of the manufacture, could not be otherwise than mischievous; and the benefit derived by the manufacturers from the prohibition was more apparent than real; inasmuch as it occasioned a diminished growth of wool, at the same time that it was impossible to prevent its clandestine exportation. Mr. Smith has proved that the manufacture made a far more rapid progress during the reign of Elizabeth, when wool might be freely carried out of the kingdom, than it ever did during any equal period subsequent to the restriction on exportation. Foreign wool began to be imported in small quantities in the thirteenth century.

At first the manufacture seems to have been pretty equally distributed over the country. In an insurrection that took place in 1525, more than 4,000 weavers and other tradesmen are said to have assembled out of Lancham, Sudbury, and other towns in Suffolk. The manufacture had been previously introduced into Yorkshire. In 1533 an Act was passed (34 & 35 Hen. VIII. c. 10), reciting 'that the city of York afore this time had been upholden principally by making and weaving of coverlets, and the poor thereof daily set on work in spinning, carding, dyeing, weaving &c. ;' and the manufacture, having spread into other parts, was 'thereby debased and discredited; and enacting, as a remedy for this evil, that henceforth 'none shall make coverlets in Yorkshire but inhabitants of the city of York!' This may be taken as a fair specimen of the commercial legislation of the time. Indeed, it was enacted, nearly at the same period, that the manufacture should be restricted, in Worcestershire, to Worcester and 4 other towns. Worsteds goods, so called from Worsted, now an inconsiderable town in Norfolk, where the manufacture was first set on foot, were produced in the reign of Edward II., or perhaps earlier; but Norwich soon after became, and, notwithstanding the competition and superior advantages of Bradford, is still, a principal seat of this branch of the manufacture. In an Act of Henry VIII. (33 Hen. VIII. c. 16) worsted yarn is described as 'the private

commodity of the city of Norwich.' In 1614 a great improvement took place in the woollen manufacture of the West of England by the invention of what is called medley or mixed cloth, for which Gloucestershire is still famous. During the reign of Charles II. there were many, though unfounded, complaints of the decay of the manufacture; and, by way of encouraging it, an Act was passed (30 Ch. II. st. 1. c. 3) ordering that all persons should be buried in woollen shrouds. This Act, the provisions of which were subsequently enforced, preserved its place on the statute book for more than 130 years.

Towards the end of the 17th century, Mr. Gregory King and Dr. Davenant—(Davenant's *Works*, Whitworth's ed. i. 233)—estimated the value of the wool shorn in England at 2,000,000l. a-year; and they supposed that the value of the wool (including that imported from abroad) was quadrupled in the manufacture; making the entire value of the woollen articles annually produced in England and Wales 8,000,000l., of which about 2,000,000l. were exported. In 1700 and 1701, the official value of the woollens exported amounted to about 3,000,000l. a-year. Owing to the vast increase of wealth and population, the manufacture must have been very greatly extended during last century; but the increase in the amount of exports was comparatively inconsiderable. At an average of the 6 years ending with 1789, the official value of the exports was 3,544,160l. a-year, being only about 540,000l. above the amount exported in 1700. The extraordinary increase of the cotton manufacture soon after 1780, and the extent to which cotton articles then began to be substituted for those of wool, though it did not occasion any absolute decline of the manufacture, no doubt contributed powerfully to check its progress. In 1802 the official value of the exports rose to 7,321,912l., being a larger amount than any to which they attained for several subsequent years. In 1836 the declared value of the exports rose to 7,639,354l., but it again fell back. The exports during the 3 years ending with 1852 were nearly stationary, their average amount being 8,562,688l. a-year. Although, therefore, it be not true, as has sometimes been contended, that the manufacture, taken as a whole, had declined, it had not down to that date increased rapidly; and might, indeed, be regarded as being in a nearly stationary state.

*Value of the Manufacture. Number of Persons employed.*—The most discordant estimates have been given as to both these points. For the most part, however, they have been grossly exaggerated. In a tract published in 1739, entitled *Considerations on the Running (Smuggling) of Wool*, the number of persons engaged in the manufacture is stated at 1,500,000, and their wages at 11,737,500l. a-year. Dr. Campbell, in his *Political Survey of Great Britain*, published in 1774, observes—'Many computations have been made upon this important subject, and, amongst others, one about 30 years since, which, at that time, was thought to be pretty near the truth. According to the best information that can be obtained, there may be from 10,000,000 to 12,000,000 sheep in England—some think more. The value of their wool may, one year with another, amount to 3,000,000l.; the expense of manufacturing this may probably be 9,000,000l., and the total value 12,000,000l. We may expect annually to the value of 3,000,000l., though one year we exported more than 4,000,000l. In reference to the number of persons who are maintained by this manufacture, they are probably upwards of 1,000,000. Sanguine men will judge

these computations too low, and few will believe them too high.' (ii. 158.) But the moderation displayed in this estimate was very soon lost sight of. In 1800 the woollen manufacturers objected strenuously to some of the provisions in the treaty of union between Great Britain and Ireland, and were allowed to urge their objections at the bar of the House of Lords, and to produce evidence in their support. Mr. Law (afterwards Lord Ellenborough), the counsel employed by the manufacturers on this occasion, stated in his address to their Lordships, on information communicated to him by his clients, that 600,000 packs of wool were annually produced in England and Wales, worth, at 11*l*. per pack, 6,600,000*l*.; that the value of the manufactured goods was 3 times as great, or 19,800,000*l*.; that not less than 1,500,000 persons were immediately engaged in the operative branches of the manufacture; and that the trade collaterally employed about the same number of hands. (*Account of the Proceedings of the Merchants, Manufacturers &c.* p. 31.)

It is astonishing that reasonable men, conversant with the manufacture, should have put forth such ludicrously absurd statements. We have already seen that the quantity of wool produced in England and Wales, in 1800, did not really amount to 400,000 packs; and the notion that three out of the nine millions of people then in the country were directly and indirectly employed in the manufacture is too ridiculous to deserve notice, though it was generally acquiesced in at the time. (Middleton's *Survey of Middlesex*, 2nd ed. p. 64; Adolphus's *British Empire*, iii. 236 &c.)

Mr. Stevenson, who is one of the very few writers on British statistics to whose statements much deference is due, gave the following estimate of the value of the woollen manufactured goods annually produced in England and Wales, and of the interest &c. of the capital, and the number of persons employed in the manufacture:

Total value of manufactured articles	18,000,000
Value of raw material	26,000,000
Interest on capital, sum to replace its wear and tear, and manufacturers' profits	4,100,000
Wages of workmen	9,600,000
	18,000,000
Number of people employed, 480,000, or perhaps 500,000.	

But even this estimate required to be materially

modified. Taking Scotland into account, and allowing for the increase of population and of exportation from the time Mr. Stevenson's estimate was made, the total value of the various descriptions of woollens annually produced in Great Britain might have been moderately estimated in 1858 at from 25,000,000*l*. to 27,000,000*l*., or 26,000,000*l*. at a medium. We have further been assured by high practical authorities, that Mr. Stevenson's distribution of the items was essentially erroneous; and that, assuming the value of the manufacture to have been 26,000,000*l*., it was made up nearly as follows:—

Total value of manufactured articles	26,000,000
Raw material, 110,000,000 lb. British wool at 1 <i>l</i> . 5 <i>s</i> . per lb. and 60,000,000 lb. foreign at 2 <i>s</i> . -	12,875,000
Wages -	7,725,000
Oil, dye stuffs, soap &c. -	1,200,000
Profits, sum to replace wear and tear of capital &c. -	4,200,000
	26,000,000

But this estimate is exclusive of the value of shoddy stuffs, which might perhaps have amounted to about 2,000,000*l*.

The wages of the workpeople amounted to about 30*l*. a-year, making the total number employed (ex those in the shoddy trade) about 257,500.

Mr. Baines, M.P., has, in his valuable account of the woollen manufactures of the United Kingdom (*Statistical Journal*, xxiii. p. 33), given the following elaborate estimate of their value (ex the worsted manufactures) in 1858:—

(1.) Raw Material:—	
73,905,566 Foreign and colonial wool	4,717,192
80,000,000 British wool, at 1 <i>l</i> . 5 <i>s</i> . per lb.	57,000,000
	Shoddy and mungo:—
15,000,000 150,000,000 lb. shoddy, at 2 <i>d</i> . per lb.	609,570
15,000,000 150,000,000 lb. mungo, at 3 <i>d</i> . per lb.	206,537
	Cotton and cotton warps, 1-50th of the wool
200,000,566	206,537
(2.) Dye-stuffs, oil, and soap	1,500,000
(3.) Wages—1,010,000 workpeople, at 12 <i>s</i> . 6 <i>d</i> . per week	4,875,000
(4.) Rent, wear and tear of machinery, repairs, coal, interest on capital, and profit, 30 per cent. on the above	5,381,680
Total	20,290,079

Looking to the vast increase in the exports since 1858, as shown in the subjoined table, the gross value of the woollens annually produced in the United Kingdom may now (1863) be set down at from 36,000,000*l*. to 37,000,000*l*.

*An Account of the Quantity and Value of the Woollen and Worsted Manufactures and Woollen Yarn of British Produce Exported from the United Kingdom in each of the 8 Years ending with 1867.*

The United States, the Hanse Towns, Holland and Belgium, but especially the first, are by far the largest markets for our woollen and worsted goods. British North America, Australia, and China also, take considerable quantities. Yarn is principally sent to the Hanse Towns, Holland, Russia, Hanover, and Belgium.

In 1820 the total exports of yarn amounted to only 3,924 lb., and in 1825 to 76,961 lb., whereas in 1867 they amounted to no fewer than 37,436,487 lb. of woollen and worsted yarn—an increase all but unparalleled in the history of industry.

*Account of the Declared Value of the Woollen Manufactures, exclusive of Woollen and Worsted Yarn, Exported from the United Kingdom in the under-mentioned Years, ending with 1867.*

f Norwich.' In 1614 a place in the woollen of England by the in-medley or mixed cloth, is still firm. During were very many, though the decay of the man-encouraging it, an Act st. l. c. 3) ordering that tried in woollen shrouds, which were subsequently face on the statute book

the 17th century, Mr. Gre-venant — (Davenant's ii. 233)—estimated the in England at 2,000,000, sed that the value of the (ported from abroad) was manufacture: making the en-er articles annually pro-ales 8,000,000*l*., of which exported. In 1700 and of the woollens exported 0,000*l*. a-year. Owing to health and population, the been very greatly ex-ure; but the increase in was comparatively in-crease of the 6 years ending value of the exports was ng only about 510,000*l*. orted in 1700. The extra-cotton manufacture soon ted to which cotton articles constituted for those of wool, which any absolute decline of ulti contributed powerfully

In 1802 the official value 7,321,012*l*., being a larger hich they attained for seven. In 1836 the declared value 7,639,354*l*., but it again fell uring the 3 years end-; stationary, their average 1*l*. a-year. Although, there- has sometimes been con-facture, taken as a whole, not down to that date in-ight, indeed, be regarded ationary state.

cture. Number of Persons discordant estimates have these points. For the most have been grossly exag-erated in 1739, entitled *Running* (Smuggling) of persons engaged in the at 1,500,000, and their a-year. Mr. Campbell, of Great Britain, published Many computations have is important subject, and, ont 30 years since, which, ight to be pretty near the the best information that may be from 10,000,000 to England—some think more. of may, one year with an-00,000*l*.; the expense of any probably be 3,000,000*l*., 000,000*l*. We may expect of 3,000,000*l*., though one re than 4,000,000*l*. is ma-facture, they are probably Sauguine men will judge

The different progress of the exports of manufactured goods and yarn depends, no doubt, on various causes; but principally, we believe, on the change, previously noticed, that has taken place in the character of our wool, which fits it much better than formerly for being made into worsted yarn, which is almost the only description of yarn that is exported. The operation of this change is evinced in a still more striking manner by comparing the export of cloth, properly so called, with that of stuffs, in the under-mentioned years.

	1816	1820	1810	1857
Exports of cloth	636,768	581,508	215,716	695,065
stuffs	595,308	1,158,588	1,718,617	2,558,162

While in 1867, the return being given in yards, 31,189,209 yards of cloth, and 200,167,067 yards of stuffs, were exported.

It is obvious that this declining or stationary amount on the one hand, and continued and rapid increase on the other, must have been occasioned by the operation of some powerful and permanent cause; and none such can be assigned other than the decreasing suitability of British wool for being made into cloth, and its increasing suitability for being made into worsted yarn and stuffs. We do not think that the duty on wool had, when it existed, much influence either one way or the other.

Latterly the stuff trade has made great progress. This has been mainly occasioned by the change of fashion in this and other countries, by which stuffs made of a mixture of cotton and worsted, and cotton and silk, have been largely substituted for cloths, and the home and foreign demand for them proportionally increased. In so far, indeed, as the extraordinary extension of the stuff trade depends on this change, it cannot, perhaps, be regarded as resting on any very solid foundation. But it is on the whole abundantly obvious that the export trade in cloth has declined; and that it is only in the stuff trade and in the production of yarn that we have decided superiority over foreigners. For an account of the recent history of the woollen trade, see the 2nd vol. of Bischoff's *History of the Woollen and Worsted Manufactures*, a useful work formed on the plan of Smith's *Memoir of Wool*, but neither so learned nor so able.

*Shoddy and Mungo Trade.*—The greater number, perhaps, of our readers may never have heard of that branch of the woollen manufacture called the *shoddy and mungo trade*, which has grown up of late years, and is now of very considerable value and importance. It is principally carried on at Batley, where it originated, and at Dewsbury, which has become the head-quarters of the business. Cloths, whether of shoddy or mungo, are made either wholly or in part of old, or worn, wool; the former, or those called shoddy, consisting of the wool of soft goods, such as stockings, flannels &c.; and the latter, or those called mungo, consisting of the wool of hard goods, that is of the different descriptions of cloth. The latter is more valuable than the former, the price of shoddy averaging about 2½d. per lb., whereas the mean price of mungo is about 5d. per lb. The old cloths or rags having been collected, and subjected to various processes, are torn to pieces by the aid of powerful machinery, and reduced to their original state of wool; and this wool, being respun, either with or without an admixture of fresh wool, is again made into cloth. Formerly this sort of cloth was used only for padding and such like purposes; but now it is made into

blankets, flus-hings, druggets, carpets and table covers, cloth for pilot and Petersham great coats &c. The clothing of the army, and the greater proportion of that of the navy, consist in part of the same material, which in fact is occasionally worn by everybody. Large quantities of shoddy cloth are exported. Great improvements have been effected of late years, not only in the fabric of the cloth, but also in the dyes: this is especially seen in the cloth for soldiers' uniforms, which is no longer of a brick-dust colour, but makes a much nearer approach to scarlet. The beautiful woollen table covers are made wholly of old wool, being printed by *aqua fortis* from designs drawn in London and Manchester, and cut on holly and other blocks on the spot.

It must, however, be observed that, though the cloth made from old, may look as well as that made from new wool, it has neither the strength nor tenacity of the latter. It is seldom that old wool is used singly; generally it is mixed up with new wool in proportions varying from 10 to 50 or 60 per cent., according to the purposes to which it is to be applied; and if the old wool be not in excess, the capacity of the cloth for wear is but little affected.

No honest manufacturer will, of course, substitute old for new wool in the manufacture of any sort of goods without apprising his customers of the fact. But this is all that he is required to do; and there cannot be a doubt that, speaking generally, the substitution of old for new wool is, in very many cases, highly advantageous.

The analogy between this manufacture and that of paper is so striking, that it must force itself on the attention of every one; the vilest and most worthless materials being converted in both into the most beautiful and useful fabrics. The shoddy trade is, in fact, one of the triumphs of art and civilisation.

'The manufacture,' says Mr. Baines, 'has forced its way, and made Batley, Dewsbury, and the neighbourhood the most prosperous parts of the woollen district. There are now in Batley alone 50 rag machines in 35 mills, producing no less than 12,000,000 lb. of rag-wool per annum; and I am assured, on good authority, that 3 times this quantity is made in the district. The rags are gathered from all parts of the kingdom, as well as imported regularly from the Continent, America, and Australia. There is now, also, a considerable manufacture of the shoddy, or rag-wool, in Germany, and it is believed that no less than 9 or 10 million lb. weight were imported last year.'

WRECK. In Navigation, is usually understood to mean any ship or goods driven ashore, or found floating at sea in a deserted or unmanageable condition. But in the legal sense of the word in England, *wreck* must have come to land; when at sea, it is distinguished by the barbarous appellations of *flotsam, jetsam, and lagan*. [FLOTSAM.]

In nothing, perhaps, has the beneficial influence of the advance of society in civilisation been more apparent than in the regulations with respect to the persons and property of shipwrecked individuals. In most rude and uncivilised countries their treatment has been cruel in the extreme. Amongst the early Greeks and Romans, strangers and enemies were regarded in the same point of view. (Hostis apud antiquos, peregrinus dicebatur. Pomp. Festus; see also *Civero de Offic. lib. i. c. 12.*) Where such inhospitable sentiments prevailed, the conduct observed towards those who were shipwrecked could not be otherwise than barbarous; and in fact they were, in most in-

 inhospitable sentiments  
 served towards those  
 d not be otherwise than  
 ey were, in most in-

stances, either put to death or sold as slaves. But as law and good order grew up, and com-  
 merce and navigation were extended, those who  
 escaped from the perils of the sea were treated  
 in a way less repugnant to the dictates of hu-  
 manity; and at length the Roman law made it  
 a capital offence to destroy persons shipwrecked,  
 or to prevent their saving the ship; and the  
 stealing even of a plank from a vessel ship-  
 wrecked or in distress made the party liable to  
 answer for the whole ship and cargo. (*Pand.* 47,  
 9, 3.)

During the gloomy period which followed the  
 subversion of the Roman empire, and the estab-  
 lishment of the northern nations in the southern  
 parts of Europe, the ancient barbarous practices  
 with respect to shipwreck were everywhere re-  
 newed. Those who survived were in most coun-  
 tries reduced to servitude; and their goods were  
 everywhere confiscated for the use of the lord on  
 whose manor they had been thrown. (Robertson's  
*Charles V.*, l. note 29.) But nothing, perhaps,  
 can so strongly evince the prevalence and nature  
 of the enormities, as the efforts that were made,  
 as soon as governments began to acquire au-  
 thority, for their suppression. The regulations as  
 to shipwreck in the Laws of Oleron are, in this  
 respect, most remarkable. The 35th and 38th  
 articles state, that 'pilots, in order to ingratiate  
 themselves with their lords, did, like faithless and  
 treacherous villains, sometimes willingly run the  
 ship upon the rocks &c.;' for which offence they  
 are held to be accused and excommunicated, and  
 punished as thieves and robbers. The fate of the  
 lord is still more severe. 'He is to be appre-  
 hended, his goods confiscated and sold, and him-  
 self fastened to a post or stake in the midst of his  
 own mansion-house, which being fired at the four  
 corners, all shall be burned together: the walls  
 thereof be demolished; the stones pulled down;  
 and the site converted into a market place, for the  
 sale only of hogs and swine, to all posterity.'  
 The 31st article recites, that when a vessel was  
 lost by running on shore, and the mariners had  
 landed, they often, instead of meeting with help,  
 'were attacked by people more barbarous, cruel,  
 and inhuman than mad dogs; who, to gain their  
 moneys, apparel, and other goods, did sometimes  
 murder and destroy these poor distressed seamen.  
 In this case, the lord of the country is to execute  
 justice by punishing them in their persons and  
 their estates; and is commanded to plunge them  
 in the sea till they be half dead, and then to have  
 them drawn forth out of the sea and stoned to  
 death.'

Such were the dreadful severities by which it  
 was attempted to put a stop to the crimes against  
 which they were directed! The violence of the  
 remedy shows better than anything else how  
 inveterate the disease had become.

But the fact that divines did not scruple to  
 prostitute religious worship by praying that the  
 adjacent coasts might be enriched with ship-  
 wrecks, affords, perhaps, the most striking proof  
 of the barbarism of the times referred to. And  
 incredible as it may seem, this practice was con-  
 tinued down to a comparatively recent epoch.  
 'Dependant il y a encore en Allemagne des pays  
 où la coutume de confisquer les biens naufragés  
 n'est point encore abolie. Il y a même des en-  
 droits où les ministres prédicateurs ne font pas  
 difficulté de prier Dieu en chaire qu'il se fasse  
 bien des naufragés sur leurs côtes. Et ces püres  
 Thomasius a entrepris sérieusement de les justifier;  
 mais par des raisons si singulières, qu'elles ne  
 valaient pas la peine que Barbeyrac a prise de les  
 réfuter.' (Valin, *Commentaire sur l'Ordonnance*

*de 1681*, ii, 586. See also Puffendorf, '*Droit de la  
 Nature et des Gens*,' par Barbeyrac, ii, 706.)

The law of England, like that of other modern  
 countries, adjudged wrecks to belong to the king.  
 But the rigour and injustice of this law were mo-  
 dified so early as the reign of Henry I., when it  
 was ruled that if any person escaped alive out of  
 the ship, it should be no wreck. And after various  
 modifications, it was decided, in the reign of  
 Henry III., that if goods were cast on shore,  
 having any marks by which they could be identi-  
 fied, they were to revert to the owners, if claimed  
 any time within a year and a day. By the  
 statute 27 Ed. III. c. 13, if a ship be lost and the  
 goods come to land, they are to be delivered to  
 the merchants, paying only a reasonable reward  
 or SALVAGE to those who saved or preserved  
 them. But these ancient statutes, owing to the  
 confusion and disorder of the times, were  
 very ill enforced; and the disgraceful practices  
 previously alluded to continued to the middle of  
 last century.

A statute of Anne (12 Anne st. 2 c. 18), con-  
 firmed by the 4 Geo. I. c. 12, in the view of  
 putting a stop to the atrocities in question, orders  
 all head officers and others of the towns near the  
 sea, upon application made to them, to summon  
 as many hands as are necessary, and send them  
 to the relief of any ship in distress, on forfeiture  
 of 100*l.*; and in case of any assistance given,  
 salvage is to be assessed by 3 justices, and paid  
 by the owners. Persons secreting any goods cast  
 ashore are to forfeit treble their value; and if they  
 wilfully do any act by which the ship is lost or  
 destroyed, they are guilty of felony without  
 benefit of clergy. But even this statute seems  
 not to have been sufficient to accomplish the end  
 in view; and in 1753 a new statute (26 Geo. II.  
 c. 19) was enacted, the preamble of which is as  
 follows: 'Whereas, notwithstanding the good  
 and salutary laws now in being against plun-  
 dering and destroying vessels in distress, and against  
 taking away shipwrecked, lost, or stranded goods,  
 many wicked enormities have been committed,  
 to the disgrace of the nation, and the grievous  
 damage of merchants and mariners of our own  
 and other countries, be it' &c.; and it is then  
 enacted, that the preventing of the escape of any  
 person endeavouring to save his life, or wounding  
 him with intent to destroy him, or putting out  
 false lights in order to bring any vessel into  
 danger, shall be capital felony. By the same  
 statute, the pilfering of any goods cast ashore is  
 made petty larceny.

We regret, however, to have to state that the  
 plunder of shipwrecked property is still by no  
 means uncommon on the British coasts. The  
 Committee on Shipwrecks in 1843 stated that  
 'there is on many parts of the coast a want of  
 that moral principle which should inculcate a just  
 regard for the rights of such property. It is  
 looked upon as a chance gift, which every one  
 has a right to scramble for as he can, notwith-  
 standing the laws which have been passed, from  
 the earliest period, to prevent or punish such de-  
 preditions. The plunder of shipwrecked property  
 on the coasts has been carried on to an enormous  
 extent, and this seems to have arisen from there  
 having been no persons on the spot, when a wreck  
 had taken place, to look after the property.' The  
 Committee state that the establishment of the  
 coast-guard has done much to repress these  
 abuses. The latter, however, cannot legally  
 interfere, except when the cast-away articles are  
 subject to Customs' duties; and the Committee  
 suggest that all abandoned property should be  
 vested in the Government in trust for those to

whom it may belong, as is done in France and Holland. (*Report of Committee of 1843*, p. viii.)

Since this report was published the law in regard to shipwreck and salvage has been twice consolidated and embodied; first in the Act 9 & 10 Vict. c. 99, and more recently in the Mercantile Shipping Act of 1853, the 17 & 18 Vict. c. 104, the latter being slightly modified by the 49th sec. of 25 & 26 Vict. c. 63. The reader will find in the art. SALVAGE a full account of the rules and regulations laid down in the 3 last-mentioned statutes in regard to that important subject; and we now beg to subjoin those which have reference to the conduct to be pursued in regard to wrecks.

*Inquiries to be instituted in Cases of Wreck and Casualty.*—In any of the cases following, viz:—

Whenever any ship is lost, abandoned, or materially damaged on or near the coasts of the United Kingdom:

Whenever any ship causes loss or material damage to any other ship on or near such coasts:

Whenever by reason of any casualty happening to or on board of any ship on or near such coasts loss of life ensues:

Whenever any such loss, abandonment, damage, or casualty happens elsewhere, and any competent witnesses thereof arrive or are found at any place in the United Kingdom:

It shall be lawful for the inspecting officer of the coast-guard or the principal officer of Customs residing at or near the place where such loss, abandonment, damage, or casualty occurred, if the same occurred on or near the coasts of the United Kingdom, but if elsewhere at or near the place where such witnesses as aforesaid arrive or are found or can be conveniently examined, or for any other person appointed for the purpose by the Board of Trade, to make inquiry respecting such loss, abandonment, damage, or casualty; and he shall for that purpose have all the powers given by this Act to inspectors appointed by the said Board. (Sec. 432.)

*Formal Investigation before Justices.*—If it appear to such officer or person as aforesaid, either upon or without any such preliminary inquiry, that a formal investigation is necessary or expedient, or if the Board of Trade so directs, he shall apply to any 2 justices or to a stipendiary magistrate to hear the case; and such justices or magistrate shall thereupon proceed to hear and try the same, and shall for that purpose, so far as relates to the summoning of parties, compelling the attendance of witnesses, and the regulation of the proceedings, have the same powers as if the same were a proceeding relating to an offence or cause of complaint upon which they or he have power to make a summary conviction or order, or as near thereto as circumstances permit; and it shall be the duty of such officer or person to superintend the management of the case, and to render such assistance to the said justices or magistrate as is in his power; and, upon the conclusion of the case, the said justices or magistrate shall send a report to the Board of Trade, containing a full statement of the case and of their or his opinion thereon, accompanied by such report of or extracts from the evidence, and such observations (if any) as they or he may think fit. (Sec. 433.)

*Power to appoint Nautical Assessor.*—In cases where nautical skill and knowledge are required, the Board of Trade shall have the power, either at the request of such justices or magistrate, or at its own discretion, to appoint some person of nautical skill and knowledge to act as assessor to such justices or magistrate; and such assessor

shall, upon the conclusion of the case, either signify his concurrence in their report by signing the same, or if he dissent therefrom shall signify such dissent and his reasons therefor to the Board of Trade. (Sec. 434.)

*Stipendiary Magistrate to be Member of Local Marine Board, and to be paid.*—In places where there is a Local Marine Board, and where a stipendiary magistrate is a member of such Board, all such investigations shall, whenever he happens to be present, be made before such magistrate; and there shall be paid to such magistrate in respect of his services under this Act such remuneration, whether by way of annual increase of salary or otherwise, as her Majesty's Secretary of State for the Home Department, with the consent of the Board of Trade, may direct; and such remuneration shall be paid out of the Mercantile Marine Fund. (Sec. 435.)

*Costs of such Investigations.*—The said justices or magistrate may make such order with respect to the costs of any such investigation or any portion thereof as they or he may deem just, and such costs shall be paid accordingly, and shall be recoverable in the same manner as other costs incurred in summary proceedings before them or him; and the Board of Trade may, if in any case it thinks fit so to do, pay the expense of any such investigation, and may pay to such assessor such remuneration as it thinks fit. (Sec. 436.)

*Investigations in Scotland.*—In the case of any such investigation being held in Scotland, the Board of Trade may remit the same to the Lord Advocate to be prosecuted in such manner as he may direct, and in case he so requires, with the assistance of such persons of nautical skill and knowledge as the Board of Trade may appoint for the purpose. (Sec. 437.)

*Master or Mate may be required to deliver Certificate &c.*—Such justices or magistrate as aforesaid may, or in Scotland such person or persons as is or are directed by the Lord Advocate to conduct the investigation may, if they or he think fit, require any master or mate possessing a certificate of competency or service whose conduct is called in question or appears to them or him likely to be called in question in the course of such investigation, to deliver such certificate to them or him, and they or he shall hold the certificate so delivered until the conclusion of the investigation, and shall then either return the same to such master or mate, or, if their report is such as to enable the Board of Trade to cancel or suspend such certificate under the powers given to such Board by this Act, shall forward the same to the Board of Trade, to be dealt with as such Board thinks fit; and if any master or mate fail so to deliver his certificate when so required, he shall incur a penalty not exceeding 50*l.* (Sec. 438.)

*Board of Trade Superintendents of Wreck, with power to appoint Receivers.*—The Board of Trade shall throughout the United Kingdom have the general superintendence of all matters relating to wreck; and it may, with the consent of the Commissioners of her Majesty's Treasury, appoint any officer of Customs, or of the coast-guard, or of the inland revenue, or, when it appears to such Board to be more convenient, any other person, to be a receiver of wreck in any district, and to perform such duties as are herein mentioned, and shall give due notice of every such appointment. (Sec. 439.)

*Admiral not to interfere with Wreck.*—No admiral, vice-admiral, or other person, under whatever denomination, exercising admiralty jurisdiction, shall as such, by himself or his

n of the case, either their report by signing thereon shall signify reasons therefor to the

*to be Member of Local Board.*—In places where a member of such Board, whenever he happens before such magistrate; to such magistrate in order this Act such re-ay of annual increase her Majesty's Secretary Department, with the Trade, may direct; and paid out of the Mer-

*ons.*—The said justices in order with respect investigation or any he may deem just, and accordingly, and shall in manner as other costs in- edging before them or ade may, if in any case he expense of any such y to such assessor such fit. (Sec. 436.)

*nd.*—In the case of any held in Scotland, the t the same to the Lord l in such manner as he e so requires, with the s of nautical skill and f Trade may appoint for

*be required to deliver* tices or magistrate as outland such person or d by the Lord Advocate ion may, if they or he er or mate possessing a r service whose conduct pears to them or him iver in the course of iver such certificate to he shall hold the certi- on the conclusion of the in- either return the same, if their report is such of Trade to cancel or nder the powers given shall forward the same e dealt with as such ny master or mate fail e when so required, he exceeding 50*l.* (Sec.

*rintendents of Wreck, eivers.*—The Board of the United Kingdom endence of all matters may, with the consent er Majesty's Treasury, stoms, or of the coast- venue, or, when it ap- ore convenient, any eiver of wreck in any h duties as are herein e due notice of every 439.)

*ere with Wreck.*—No other person, under exercising admiralty h, by himself or his

ngents, receive, take, or interfere with any wreck except as herein mentioned. (Sec. 440.)

*Duty of Receiver when any Ship is Stranded or in Distress.*—Whenever any ship or boat is stranded or in distress at any place on the shore of the sea or of any tidal water within the limits of the United Kingdom, the receiver of the district within which such place is situate shall, upon being made acquainted with such accident, forthwith proceed to such place, and upon his arrival there he shall take the command of all persons present, and assign such duties to each person, and issue such directions, as he may think fit with a view to the preservation of such ship or boat, and the lives of the persons belonging thereto, and the cargo and apparel thereof; and if any person wilfully disobeys such directions, he shall forfeit a sum not exceeding 50*l.*; but it shall not be lawful for such receiver to interfere between the master of such ship or boat and his crew in matters relating to the management thereof, unless he is requested so to do by such master. (Sec. 441.)

*Powers of Receiver in Case of Accident to any Ship or Boat.*—The receiver may, with a view to such preservation as aforesaid of the ship or boat, persons, cargo, and apparel, do the following things (that is to say):—

1. Summon such number of men as he thinks necessary to assist him;
2. Require the master or other person having the charge of any ship or boat near at hand to give such aid with his men, ship, or boats, as may be in his power;
3. Demand the use of any waggon, cart, or horses that may be near at hand;

And any person refusing without reasonable cause to comply with any summons, requisition, or demand so made, shall for every such refusal incur a penalty not exceeding 100*l.*; but no person shall be liable to pay any duty of assessed taxes in respect of any such waggon, cart, or horses by reason of the user of the same under this section. (Sec. 442.)

*Articles washed on Shore, or to. &c. to be delivered to Receiver.*—All cargo and other articles belonging to such ship or boat, that may be washed on shore, or otherwise be lost or taken from such ship or boat, shall be delivered to the receiver; and any person, whether he is the owner or not, who secretes or keeps possession of any such cargo or article, or refuses to deliver the same to the receiver or to any person authorized by him to demand the same, shall incur a penalty not exceeding 100*l.*; and it shall be lawful for such receiver or other person as aforesaid to take such cargo or article by force from the person so refusing to deliver the same. (Sec. 443.)

*Receiver to suppress Plunder and Disorder by Force.*—Whenever any such accident occurs to any ship or boat, and any person plunders, creates disorder, or obstructs the preservation of such ship, boat, lives, or cargo, it shall be lawful for the receiver to cause such person to be apprehended, and to use force for the suppression of any such plundering, disorder, or obstruction, with power to command all her Majesty's subjects to assist him in the use of such force; and if any person is killed, maimed, or hurt by reason of his resisting the receiver in the execution of the duties hereby committed to him, or any person acting under his orders, such receiver or other person shall be free and fully indemnified as well against the Queen's Majesty, her heirs and successors, as against all persons so killed, maimed, or hurt. (Sec. 444.)

*Certain Officers to exercise Power of Receiver.*—

During the absence of the receiver from the place where any such accident as aforesaid occurs, or in places where no receiver has been appointed under this Act, the following officers in succession, each in the absence of the other, in the order in which they are named, viz. any principal officer of Customs or of the coast-guard, or of inland revenue, and also any sheriff, justice of the peace, commissioned officer on full pay in the naval service of her Majesty, or commissioned officer on full pay in the military service of her Majesty, may do all matters and things hereby authorized to be done by the receiver, with this exception, that with respect to any goods or articles belonging to any such ship or boat, the delivery up of which to the receiver is herein required, any officer so acting shall be considered as the agent of the receiver, and shall place the same in the custody of the receiver; and no person so acting as substitute for any receiver shall be entitled to any fees payable to receivers, or be deprived by reason of his so acting of any right to salvage to which he would otherwise be entitled. (Sec. 445.)

*Power, in Case of a Ship being in Distress, to pass over adjoining Lands with Carriages.*—Whenever any accident as aforesaid occurs to any ship or boat, all persons may, for the purpose of rendering assistance to such ship or boat, or saving the lives of the persons on board the same, or the cargo or apparel thereof, unless there be some public road equally convenient, pass and re-pass either with or without carriages or horses over any adjoining lands, without being subject to interruption by the owner or occupier, so that they do as little damage as possible, and may also, on the like condition, deposit on such lands any cargo or other article recovered from such ship or boat; and all damage that may be sustained by any owner or occupier in consequence of any such passing or re-passing or deposit as aforesaid shall be a charge on the ship, boat, cargo, or articles in respect of or by which such damage was occasioned, and shall, in default of payment, be recoverable in the same manner as salvage is hereby made recoverable; and the amount payable in respect thereof, if disputed, shall be determined in the same manner as the amount of salvage is hereby in case of dispute directed to be determined. (Sec. 446.)

*Penalty on Owners &c. of Land refusing to allow Carriages &c. to pass over their Land.*—If the owner or occupier of any land over which any person is hereby authorised to pass or re-pass for any of the purposes hereinbefore mentioned does any of the following things (that is to say):—

1. Impedes or hinders any such person from so passing or re-passing, with or without carriages, horses, and servants, by locking his gates, refusing, upon request, to open the same, or otherwise however;
2. Impedes or hinders the deposit of any cargo or other article recovered from any such ship or boat as hereinbefore mentioned;
3. Prevents such cargo or other article from remaining so deposited for a reasonable time, until the same can be removed to a safe place of public deposit;

He shall for every such offence incur a penalty not exceeding 100*l.* (Sec. 447.)

*Power of Receiver to institute Examination &c.*—Any receiver, or in his absence any justice of the peace, shall, as soon as conveniently may be, examine upon oath (which oath they are hereby respectively empowered to administer) any person belonging to any ship which may be or may have been in distress on the coasts of the United

Kingdom, or any other person who may be able to give any account thereof or of the cargo or stores thereof, as to the following matters; viz.:

1. The name and description of the ship.
2. The names of the master and of the owners.
3. The names of the owners of the cargo.
4. The ports or places from and to which the ship was bound.
5. The occasion of the distress of the ship.
6. The services rendered.
7. Such other matters or circumstances relating to such ship, or to the cargo on board the same, as the receiver or justice thinks necessary.

And such receiver or justice shall take the examination down in writing, and shall make two copies of the same, of which he shall send one to the Board of Trade, and the other to the Secretary of the Committee of Lloyd's in London, and such last-mentioned copy shall be placed by the said secretary in some conspicuous situation for the inspection of persons desirous of examining the same; and for the purposes of such examination every receiver or justice as aforesaid shall have all the powers given by this Act to inspectors appointed by the Board of Trade. (Sec. 448.)

*Original or certified Copy of Examination to be prima facie Evidence.*—An examination so taken in writing as aforesaid, or a copy thereof, purporting to be certified under the hand of the receiver or justice before whom such examination was taken, shall be admitted in evidence in any court of justice, or before any person having by law or the consent of parties authority to hear, receive, and examine evidence, as prima facie proof of all matters contained in such written examination. (Sec. 449.)

*Rules to be observed by Persons finding Wreck.*—The following rules shall be observed by any person finding or taking possession of wreck within the United Kingdom; viz.:

1. If the person so finding or taking possession of the same is the owner, he shall as soon as possible give notice to the receiver of the district within which such wreck is found, stating that he has so found or taken possession of the same; and he shall describe in such notice the marks by which such wreck is distinguished.

2. If any person not being the owner finds or takes possession of any wreck, he shall as soon as possible deliver the same to such receiver as aforesaid.

And any person making default in obeying the provisions of this section shall incur the following penalties; (that is to say)

3. If he is the owner and makes default in performing the several things, the performance of which is hereby imposed on an owner.

He shall incur a penalty not exceeding 100*l*.

4. If he is not the owner and makes default in performing the several things, the performance of which is hereby imposed on any person not being an owner.

He shall forfeit all claim to salvage.

He shall pay to the owner of such wreck, if the same is claimed, but if the same is unclaimed then to the person entitled to such unclaimed wreck, double the value of such wreck (such value to be recovered in the same way as a penalty of like amount); and

He shall incur a penalty not exceeding 100*l*. (Sec. 450.)

*Receivers to seize concealed Wreck.*—If any receiver suspects or receives information that any wreck is secreted or in the possession of some person who is not the owner thereof, or otherwise improperly dealt with, he may apply to any justice of the peace for a warrant, and such justice shall

have power to grant a warrant, by virtue whereof it shall be lawful for the receiver to enter into any house or other place wherever situate, and also into any ship or boat, and to search for, and to seize and detain any such wreck as aforesaid there found; and if any such seizure is made in consequence of information that may have been given by any person to the receiver, the informer shall be entitled by way of salvage to such sum, not exceeding in any case 5*l*., as the receiver may allow. (Sec. 451.)

*Notice of Wreck to be given by Receiver.*—Every receiver shall within 48 hours after taking possession of any wreck cause to be posted up in the custom-house of the port nearest to the place where such wreck was found or seized a description of the same and of any marks by which it is distinguished, and shall also, if the value of such wreck exceeds 20*l*., but not otherwise, transmit a similar description to the Secretary of Lloyd's aforesaid; and such secretary shall post up the description so sent, or a copy thereof, in some conspicuous place, for the inspection of all persons desirous of examining the same. (Sec. 452.)

*Goods perishable or of small Value may be sold immediately.*—In cases where any wreck in the custody of any receiver is under the value of 5*l*., or is of so perishable a nature or so much damaged that the same cannot, in his opinion, be advantageously kept, or if the value thereof is not sufficient to defray the charge of warehousing, the receiver may sell the same before the expiration of the period after mentioned, and the money raised by such sale, after defraying the expenses thereof, shall be held by the receiver for the same purposes and subject to the same claims for and to which the article sold would have been held and liable if it had remained unsold. (Sec. 453.)

*Where any Lord of the Manor or other Person is entitled to unclaimed Wreck, Receiver to give him Notice.*—In cases where any admiral, vic-admiral, lord of the manor, or other person is entitled for his own use to unclaimed wreck found on any place situate within a district for which a receiver is appointed, such admiral, vic-admiral, lord of the manor, or other person shall deliver to such receiver a statement containing the particulars of his title, and the address to which notices are to be sent; and upon such statement being so delivered, and proof made to the satisfaction of the receiver of the validity of such title, it shall be his duty, whenever he takes possession of any wreck found at any such place, to send within 48 hours thereafter a description of the same and of any marks by which it is distinguished, directed to such address as aforesaid. (Sec. 454.)

*Payments to be made to Receiver.*—There shall be paid to all receivers appointed under this Act the expenses properly incurred by them in the performance of their duties, and also in respect of the several matters specified in the table annexed to this Act, such fees not exceeding the amounts therein mentioned, as may from time to time be directed by the Board of Trade; and the receiver shall have the same lien and be entitled to the same remedies for the recovery of such expenses and fees as a salvor has or is entitled to in respect of salvage due to him; but, save as aforesaid, no receiver appointed under this Act shall, as such, be entitled to any remuneration whatsoever. (Sec. 455.)

*Sums payable to Receiver to be determined by Board of Trade.*—Whenever any dispute arises in any part of the United Kingdom as to the amount payable to any receiver in respect of expenses or fees, such dispute shall be determined

by the Board of Trade, whose decision shall be final. (Sec. 456.)

*Application of Fees.*—All fees received by any receiver appointed under this Act, in respect of any services performed by him as receiver, shall be carried to and form part of the Mercantile Marine Fund, and a separate account thereof shall be kept, and the moneys arising therefrom shall be applied in defraying any expenses duly incurred in carrying into effect the purposes of this Act, and in such manner as the Board of Trade directs. (Sec. 457.)

For the regulations as to salvage see SALVAGE.

*In case of Shipwrecked Property being plundered by a tumultuous Assemblage, Handed to be liable in Damages.*—Whenever any ship or boat is stranded or otherwise in distress on or near the shore of any sea or tidal water in the United Kingdom, and such ship or boat, or any part of the cargo or apparel thereof, is plundered, damaged, or destroyed by any persons riotously and tumultuously assembled together, whether on shore or afloat, full compensation shall be made to the owner of such ship, boat, cargo, or apparel, as follows:—

In England, by the inhabitants of the hundred, wapentake, ward, or district in the nature of a hundred, by whatever name denominated, in or nearest to which the said offence is committed, in manner provided by the 7 & 8 Geo. IV. c. 31, in case of the destruction of churches and other buildings by a riotous assemblage, or as near thereto as circumstances permit;

In Ireland, by the inhabitants of the county, county of a city or town, barony, town or towns, parish or parishes, in or nearest to which such offence is committed, in manner provided by the 3 & 4 Wm. IV. c. 37 s. 72, for the recovery of satisfaction and amends for the malicious demolition of or injury to churches, chapels, and other buildings used for religious worship, according to the usage of the United Church of England and Ireland, or as near thereto as circumstances permit.

In Scotland, by the inhabitants of the county, city, or borough in or nearest to which such offence is committed, in manner provided by the 1 Geo. I. st. 2, c. 5 with respect to prosecutions for repairing the damages of any churches and other buildings, or as near thereto as circumstances permit.

*Penalty for plundering in Cases of Shipwreck &c.*—Every person who does any of the following acts, viz.:

1. Wrongfully carries away or removes any part of any ship or boat stranded or in danger of being stranded or otherwise in distress on or near the shore of any sea or tidal water, or any part of the cargo, or apparel thereof, or any wreck; or

2. Endeavours in any way to impede or hinder the saving of such ship, boat, cargo, apparel, or wreck; or

3. Secretes any wreck, or obliterates or defaces any marks thereon;

Shall, in addition to any other penalty or punishment he may be subject to under this or any other Act or law, for each such offence incur a penalty not exceeding 50*l.*; and every person, not being a receiver or a person hereinbefore authorised to take the command in cases of ships being stranded or in distress, or not acting under the orders of such receiver or person, who, without the leave of the master, endeavours to board any such ship or boat as aforesaid, shall for each offence incur a penalty not exceeding 50*l.*; and it shall be lawful for the master of such ship or boat to repel by force any such person so attempting to board the same. (Sec. 478.)

*Penalty for selling Wreck in Foreign Ports.*—

If any person takes into any foreign port or place any ship or boat stranded, derelict, or otherwise in distress on or near the shore of the sea or of any tidal water situate within the limits of the United Kingdom, or any part of the cargo or apparel thereof, or anything belonging thereto, or any wreck found within such limits as aforesaid, and there sells the same, he shall be guilty of felony, and be subject to penal servitude for a term not exceeding 4 years. (Sec. 479.)

*Regulations to be observed by Dealers in Marine Stores.*—Every person dealing in buying and selling anchors, cables, sails, or old junk, old iron, or marine stores of any description, shall conform to the following regulations, viz.:

1. He shall have his name, together with the words 'Dealer in Marine Stores,' painted distinctly in letters of not less than 6 inches in length on every warehouse or other place of deposit belonging to him.

If he does not, he shall incur a penalty not exceeding 20*l.*

2. He shall keep a book or books fairly written, and shall enter therein an account of all such marine stores as he may from time to time become possessed of, stating, in respect of each article, the time at which and the person from whom he purchased or received the same, adding, in the case of every such last-mentioned person, a description of his business and place of abode.

If he does not, he shall incur for the first offence a penalty not exceeding 20*l.*, and for every subsequent offence a penalty not exceeding 50*l.*

3. He shall not, by himself or his agents, purchase marine stores of any description from any person apparently under the age of sixteen years.

If he does so, he shall incur for the first offence a penalty not exceeding 5*l.*, and for every subsequent offence a penalty not exceeding 20*l.*

4. He shall not cut up any cable, or any similar article, exceeding 5 fathoms in length, or unlay the same into twine or paper stuff, on any pretence whatever, without obtaining such permit and publishing such notice of his having so obtained the same as is after mentioned.

If he does so, he shall incur for the first offence a penalty not exceeding 20*l.*, and for every subsequent offence a penalty not exceeding 50*l.*

*Manner of obtaining Permit to cut up Cables.*—In order to obtain such permit as aforesaid, a dealer in marine stores shall make a declaration before some justice of the peace having jurisdiction over the place where such dealer resides containing the following particulars, viz.:

1. A statement of the quality and description of the cable or other like article about to be cut up or unlay.

2. A statement that he purchased or otherwise acquired the same bona fide and without fraud, and without any knowledge or suspicion that the same had been come by dishonestly.

3. A statement of the name and description of the person from whom he purchased or received the same.

And it shall be lawful for the justice before whom any such declaration is made, or for the receiver of the district in which such dealer in marine stores resides, upon the production of any such declaration as aforesaid, to grant a permit authorising him to cut up or unlay such cable or other like article. (Sec. 481.)

*Permit to be advertised before Dealer proceeds to cut them.*—No dealer in marine stores who has obtained permit as aforesaid shall proceed to cut up or unlay any cable or other like article until

ant, by virtue whereof receiver to enter into wherever situate, and and to search for, and each wreck as aforesaid which seizure is made in that may have been receiver, the Informer salvage to such sum, l., as the receiver may

on by Receiver.—Every rs after taking posses- in be posted up in the nearest to the place and or seized a descrip- marks by which it is so, if the value of such otherwise, transmit a Secretary of Lloyd's may shall post up the copy thereof, in some inspection of all persons same. (Sec. 452.)

*Small Value may be sold* any wreck in the under the value of 5*l.*, nature or so much not, in his opinion, be the value thereof is not charge of warehousing, time before the expira- tionated, and the money defraying the expenses receiver for the same the same claims for and would have been held and unsold. (Sec. 453.)

*Manner or other Person Wreck, Receiver to give* ere any admiral, vice- or, or other person is e to unclaimed wreck te within a district ed, such admiral, vice- , or other person shall t statement containing e, and the address to ent; and upon such ed, and proof made to iver of the validity of ty, whenever he takes and at any such place, hereafter a description rks by which it is dis- h address as aforesaid.

*Receiver.*—There shall ounted under this Act urred by them in the s, and also in respect of ed in the table annexed exceeding the amounts y from time to time be rade; and the receiver and be entitled to the ivery of such expenses is entitled to in respect t, save as aforesaid, no his Act shall, as such, uration whatsoever.

er to be determined by ver any dispute arises ver Kingdom as to the receiver in respect of ute shall be determined

he has for the space of one week at the least before doing any such act published in some newspaper published nearest to the place where he resides one or more advertisements notifying the fact of his having obtained a permit, and specifying the nature of the cable or other article mentioned in the permit, and the place where the same is deposited, and the time at which the same is intended to be cut up or unladen; and if any person suspects or believes that such cable or other article is his property, he may apply to any justice of the peace for a warrant; and such justice of the peace may, on the applicant making oath, or, if a person entitled to make an affirmation, making an affirmation in support of such his suspicion or belief, grant a warrant by virtue whereof the applicant shall be entitled to require the production by such dealer as aforesaid of the cable or other article mentioned in the permit, and also of the book of entries before directed to be kept by every dealer in marine stores; and, upon such cable or other article and book of entries being produced, to inspect and examine the same; and if any dealer in marine stores makes default in complying with any of the provisions of this section, he shall for the first offence incur a penalty not exceeding 20*l.*, and for every subsequent offence a penalty not exceeding 50*l.* (Sec. 482.)

**Manufacturers to place Marks on Anchors.**—Every manufacturer of anchors shall, in case of each anchor which he manufactures, mark in legible characters on the crown and also on the shank under the stock his name or initials, with the addition of a progressive number and the weight of such anchor; and if he makes default in doing so, he shall for each offence incur a penalty not exceeding 5*l.* (Sec. 483.) [ANCHORS.]

**Foreign Goods found derelict to be subject to the same Duties as on Importation.**—All wreck, being foreign goods brought or coming into the United Kingdom, or the Isle of Man, shall be subject to the same duties as if the same were imported into the United Kingdom or the Isle of Man respectively; and if any question arises as to the origin of such goods, they shall be deemed to be the produce of such country as the Commissioners of Customs may upon investigation determine. (Sec. 499.)

**Goods saved from Ships wrecked to be forwarded to their original Destination.**—The Commissioners of Customs and Excise shall permit all goods, wares, and merchandise saved from any ship stranded or wrecked on its homeward voyage to be forwarded to the port of its original destination, and all goods, wares, and merchandise saved from any ship stranded or wrecked on its outward voyage to be returned to the port at which the same were shipped; but such commissioners are to take security for the due protection of the revenue in respect of such goods, wares, and merchandise. (Sec. 500.)

**Number of Shipwrecks.**—The loss of property by shipwreck is very great. It appears from an examination of *Lloyd's List* from 1793 to 1829, that the losses in the British mercantile navy only, amounted, at an average of that period, to about 577 vessels a-year, of the aggregate burden of about 66,000 tons, or to above  $\frac{1}{30}$  of its entire amount in ships and tonnage. The following accounts contain notices of late disasters:—

The abstract published by the Government furnishes the following details with regard to losses at sea in some late years. During the 5 years ending with 1867, the wrecks and casualties were:—

Years	Wrecks	Collisions	Total	Total Lives Lost
1863	1,661	331	2,001	620
1864	1,599	351	1,714	516
1865	1,656	354	2,012	608
1866	1,264	122	2,090	296
1867	1,076	111	2,090	1,533

The number of casualties in each month of 1867

WRECKS:—	vessels.	Brought forward	vessels.
January	518	August	49
February	464	September	130
March	291	October	292
April	137	November	253
May	102	December	190
June	59	Total	2,515
July	61		
	1,599		

Representing 461,232 tons, and employing 19,974 hands, of whom 1,333 perished.

In 1867 the wrecks and casualties were:—

	vessels.
Totally wrecked	656
Partially damaged, more or less seriously	1,045
Total	1,676

The number of 1,676 wrecks, other than collisions, is in excess of the wrecks and casualties of any former year, and is at the rate of more than 4 per diem.

The number of wrecks in each month of 1866 is thus given:—

	vessels.	Brought forward	vessels.
January	382	August	1,161
February	295	September	61
March	413	October	159
April	92	November	113
May	60	December	215
June	68	December	211
July	51	Total	1,850
	1,161		

In this year 896 hands perished.

In 1858 there were 1,170 wrecks, of which 104, including 50 sunk by collision, were total losses, happily only 340 lives were lost.

Estimating the vessels totally lost, with those that have been abandoned and broken up, at 600 a-year, and 200 tons burden at an average, and their value, including that of their cargoes, at 20*l.* a ton, the entire loss would amount to 2,400,000*l.*, to which a further and considerable sum must be added to repair the damage done to those ships which have escaped with less, though still serious injury. Hence, apart from the loss of life, which varies from about 500 to 800 and 1,200 hands a-year, the avoidance or diminution of wrecks is a matter of no little importance.

This result might, in some degree, be effected by building better and stronger ships, supplying them with improved compasses &c., and by opening harbours of refuge on the parts of the coast where these disasters mostly occur. No doubt, however, the abuse of insurance, with the carelessness, ignorance, and drunkenness of the masters and crews, are the great sources of loss; and nothing will do so much to obviate these as the plan now adopted of making the grant of a certificate of fitness, after undergoing an examination by a public board, indispensable to enable any individual to be appointed to the command of a ship (ante: MASTER). Provided always that the examination be properly conducted; if not, it will be worse than useless.

During the last war with France, 32 ships of the line went to the bottom, beside 7 fifty-gun ships, 86 frigates, and a vast number of smaller vessels. And the losses sustained by the navies of France, Spain, Holland, Denmark &c., must have very greatly exceeded those of ours. Hence, as Sir Charles Lyell has observed, it is probable that a greater number of monuments of the skill and industry of man will, in the course of ages, be collected together in the bed of the ocean, than will be seen at one time on the surface of the continents. (*Principles of Geology*, 7th ed. p. 728.)

## Y

**YARD.** A long measure used in England, of 3 feet, or 36 inches. [WEIGHTS AND MEASURES.]

**YARN** (Ger. garn; Dutch, garen; Fr. fil; Ital.

filato; Span. hilo; Port. fio; Russ. prashia), Wool, cotton, flax, &c., spun into thread. We export very large quantities of yarn. [COTTON; LAXEN; &c.]

## Z

**ZAFFER** or **ZAFRE.** After the sulphur, arsenic, and other volatile parts of cobalt, have been expelled by calcination, the residuum is sold, mixed or unmixed with fine sand, under the above name. When the residuum is melted with siliceous earth and potash, it forms a kind of blue glass, known by the name of smaltz [SMALTZ], of great importance in the arts. When smaltz is ground very fine, it receives in commerce the name of *powder blue.* Zaffer, like smaltz, is employed in the manufacture of earthenware and china, for paluting the surface of the pieces a blue colour. It suffers no change from the most violent fire. It is also employed to tinge the crystal glasses, made in imitation of opaque and transparent precious stones, of a blue colour. It is almost wholly brought from Germany. In 1867 the imports of zaffer amounted to 221 cwt., the exports being only 13 cwt. A duty of 1s. per cwt. on its being imported was repealed in 1846.

**ZEA, INDIAN CORN or MAIZE.** [MAIZE.]

**ZEALAND, NEW.** [AUCKLAND; COLONIES.]

**ZEDDARY** (Ger. zittwer; Fr. zédoaire; Ital. zedoria; Span. celouria; Arab. judwar; Hin. nirhisi). The root of a plant which grows in Malabar, Ceylon, Cochin-China &c., of which there are three distinct species. It is brought home in pieces of various sizes, externally wrinkled, and of an ash colour, but internally of a brownish red. Those roots which are heavy and free from worms are to be chosen; rejecting those which are decayed and broken. The odour of zedoury is fragrant, and somewhat like that of camphor; the taste biting, aromatic, and bitterish, with some degree of acrimony. It was formerly employed in medicine, but is scarcely ever used by modern practitioners. (Milburn's *Orient. Com.*)

**ZINC** or **SPELTER** (Ger. zink; Fr. zinc; Span. zincó, cinco; Russ. schpintser; Lat. zincum). A metal of a brilliant white colour, with a shade of blue, composed of a number of thin plates adhering together. When this metal is rubbed for some time between the fingers, they acquire a peculiar taste, and emit a very perceptible smell. It is rather soft; tinging the fingers, when rubbed upon them, with a black colour. The specific gravity of melted zinc varies from 6.861 to 7.1, the lightest being esteemed the purest. When hammered, it becomes as high as 7.1908. This metal forms, as it were, the limit between the brittle and the malleable metals. Its malleability is by no means to be compared with that of copper, lead, or tin; yet it is not brittle, like antimony or arsenic. When struck with a hammer, it does not break, but yields, and becomes somewhat flatter; and by a cautious and equal pressure, it may be reduced to pretty thin plates, which are supple and elastic, but cannot be folded without breaking. When

heated to about 400°, it becomes so brittle that it may be reduced to powder in a mortar. It possesses a certain degree of ductility, and may, with care, be drawn out into wire. Its tenacity is such that a wire whose diameter is equal to  $\frac{1}{16}$  inch is capable of supporting a weight of about 26 lb. Zinc has never been found in a state of purity. The word zinc occurs for the first time in the writings of Paracelsus, who died in 1541; but the method of extracting it from its ores was not known till the early part of last century. (Thomson's *Chemistry*; see also *Lie's Dictionary* by Hunt.) The compounds of zinc and copper are of great importance. [BRASS.]

**Manufacture of Zinc &c.**—The material used by the English manufacturer is blende, or black jack (sulphuret of zinc); it is commonly found with lead, and is procured of the best quality in Flintshire and the Isle of Man. Besides its employment in the manufacture of brass, bell metal, and other important compounds, zinc has of late years been formed into plates, and applied to many purposes for which lead was formerly used, such as the roofing of buildings, the manufacture of water-spouts, dairy pans &c. Foreign zinc, being less brittle, is better fitted for rolling than that of England.

The duties on spelter, which were formerly prohibitory, were reduced in 1832 to 2l. per ton on that formed into plates or cakes, and to 10s. on what is crude. The duty on the latter, after being further reduced in 1842 to 1s. per ton, was repealed in 1845. In consequence of these reductions, considerable quantities are now imported, partly for home use, and partly for re-exportation to India and other countries. Foreign zinc is principally made in Upper Silesia, whence it is conveyed by internal navigation to Dantzic, Stettin, and Hamburg. The freight from the latter to Hull and London is nominal merely; the wool-ships being glad to take it as ballast. Hainault, near Namur, has also some part of the spelter trade. A good deal of spelter is shipped from Hamburg for France and America.

Zinc is produced in the province of Yunnan in China; and previously to 1820 large quantities of it were exported from that empire to India, the Malay Archipelago &c. But about that time the free traders began to convey European spelter (principally German) to India; and being, though less pure, decidedly cheaper than the Chinese article, it has entirely supplanted the latter in the Calcutta market. In 1867 the exports of foreign and native spelter from this country for India amounted respectively to 421 and 4,910 tons; in addition to which considerable quantities were exported from Amsterdam, Rotterdam &c.

In 1867 we imported 24,332 tons crude, and 9,186 tons rolled spelter. By far the largest portion was brought from Prussia by the channel

of the Hanse Towns, and partly also from Belgium. The exports during the same year amounted to 6,782 tons, principally to the East Indies.

ZOLLVEREIN (literally Customs' Union). As a compound word, it means the association of a number of states for the establishment of a common customs law and customs-line with regard to foreign countries, and the suppression of both for the intercourse of the states with each other within the border line. The compound word, however, has gained the meaning of a proper name for the German Customs' League; this customs' union having obtained a great political importance through its having been for many years the only tie holding together the scattered parts of the Fatherland.

Next to the efforts of the Prussian Government to diffuse the blessings of education, their efforts to introduce a free commercial system into Germany constitute their best claim to the gratitude and esteem of their own subjects and of the world. Germany, as everyone knows, is divided into a vast number of independent, and mostly petty, states. Until a very recent period, every one of these states had its own custom-houses, and its own tariff and revenue laws; which frequently differed very widely indeed from those of its neighbours. The internal trade of the country was, in consequence, subjected to all those vexatious and ruinous restrictions that are usually laid on the intercourse between distant and independent states. Each petty state endeavoured either to procure a revenue for itself, or to advance its own industry, by taxing or prohibiting the productions of those by which it was surrounded; and customs officers and lines of custom-houses were spread all over the country. Instead of being reciprocal and dependent, everything was separate, independent, and hostile: the commodities admitted into Hesse were prohibited in Baden, and those prohibited in Wirtemberg were admitted into Bavaria. It is admitted on all hands that nothing has contributed so much to the growth of industry and wealth in Great Britain as the perfect freedom of internal industry we have so long enjoyed, and that intimate correspondence among the various parts of the empire which has rendered each the best market for the products of the other. How different would have been our present condition had each county been an independent state, jealous of those around it, and anxious to exalt itself at their expense! But, until within these few years, this was the exact condition of Germany; and, considering the extraordinary obstacles such a state of things opposes to the progress of manufactures, commerce, and civilisation, the wonder is, not that they are comparatively backward in that country; but that they should be so far advanced as they really are.

But, thanks to the intelligence and perseverance of Prussia, this anti-social system has been well nigh suppressed, and the most perfect freedom of commerce established among the great bulk of the Germanic nations. The disadvantages of the old system had long been seen and deplored by well-informed men; but so many interests had grown up under its protection, and so many deep-rooted prejudices were enlisted in its favour, that its overthrow seemed to be hopeless, or, at all events, exceedingly distant. The address and resolution of the Prussian Government, however, triumphed over every obstacle. Being fully impressed with a strong sense of the many advantages that would result to Prussia and Germany from the introduction of a free system

of internal intercourse, they pursued the measures necessary to bring it about with an earnestness that produced conviction, and with a determination, *coûte qui coûte*, to carry their point.

The first treaties in furtherance of this object were negotiated by Prussia with the principalities of Schwarzburg-Sondershausen and Schwarzburg-Rudolstadt, in 1818 and 1819, on the principle that there should be a perfect freedom of commerce between these countries and Prussia; that the duties on importation, exportation, and transit, in Prussia and the principalities, should be identical; that these should be charged along the frontier of the dominions of the contracting parties; and that each should participate in the produce of such duties, in proportion to its population. All the treaties subsequently entered into have been founded on this fair and equitable principle; the only exceptions to the perfect freedom of trade in all the countries comprised within the league or tariff alliance being confined, 1st, to articles constituting state monopolies, as salt and cards, in Prussia; 2nd, to articles of native produce, burdened with a different rate of duty on consumption in one state from what they pay in another; and, 3rd, to articles produced under patents conferring on the patentees certain privileges in the dominions of the states granting the patents. With these exceptions, which are not very important, the most perfect freedom of commerce exists among the allied states.

Since 1818, when the foundations of the alliance were laid, it has progressively extended, till it now comprises more than three-fourths of the Germanic states, exclusive of Austria. Ducal Hesse joined the alliance in 1828, and Electoral Hesse in 1831; the kingdoms of Bavaria, Saxony, and Wirtemberg joined it afterwards, as have Baden, Nassau, and almost all the smaller states which have since been annexed to or are still nominally independent of Prussia, with the exception of Mecklenburg-Schwerin and Mecklenburg-Strelitz.

In 1865 the Zollverein or tariff alliance comprised—

	German sq. miles	Population in 1864
Prussia	5,188	19,612,034
Bavaria	1,306	4,813,056
Saxony	274	2,315,094
Hanover	..	1,915,512
Wirtemberg	781	1,783,518
Baden (Duchy of)	226	1,166,218
Hesse (Electoral)	205	716,889
Hesse (Duchy)	134	871,839
The Thuringian States	237	1,105,754
Brunswick (Duchy of)	63	268,325
Oldenburg	..	311,107
Nassau	85	408,711
Frankfurt	2	92,211
Luxemburg	17	202,057
Total	8,507	55,847,022

Throughout the whole extent of this immense country, from Aix-la-Chapelle on the eastern confines of the Netherlands, eastward to Tilsit on the confines of Russia, and from Stettin and Dantzic southwards to Switzerland and Bohemia, there is nothing to interrupt the freedom of commerce. A commodity, whether for consumption or transit, that has once passed the frontier of the league, may be subsequently conveyed, without let or hindrance, throughout its whole extent. Instead of being confined within the narrow precincts of their own territories, the products of each separate country of the alliance may be sent to every one else; so that each may apply itself in preference to those departments in which it has some natural or acquired advantage; and each has to depend for its success, not on the miserable resource of customs regulations, but on its skill

and industry. The competition thence arising is most salutary; and, should the peace of Europe be preserved, we run little risk in saying that all sorts of industry will make more progress among the states comprised within the tariff alliance, during the next ten years, than they did during the half century previous to its being organised.

An assembly of representatives from the allied states meets annually, to hear complaints, adjust difficulties, and make such new enactments as may seem to be required. The Prussian tariff has been adopted, with certain modifications. The duties are received into a common treasury, and are apportioned according to the population of each of the allied states. In addition to its other advantages, the new system has reduced the cost of collecting the duties to a mere trifle, compared with its former amount; and has enabled hundreds of custom-houses, and thousands of customs officers, to be employed in the different departments of industry.

The discrepancy in weights and measures used in different parts of Germany occasioned considerable inconvenience; and it is important that the equalisation of weights and measures, and their reduction to a common standard in all the allied states, is declared to be one of the objects of the League.

It is also expressly provided that the tolls, or other charges in lieu thereof, shall, in all cases, whether they belong to the public or to private individuals, be limited to the sums required to keep the roads in a proper state of repair; and that the tolls existing in Prussia shall be considered as the highest that are to be levied, and shall not in any case be exceeded.

It was at first supposed by many persons in this country, and the opinion is not yet entirely abandoned, that the Prussian league was in some degree directed against us, and that, at all events, it threatened to be very injurious to our trade with Germany: we do not, however, believe that there is any foundation whatever for either of these opinions. The alliance was planned, and brought to its present advanced state, in the view, and with the intention, of putting down the galling and innumerable restraints by which the intercourse of the German states with each other was formerly interrupted; and not with the intention of throwing any obstacles in the way of the trade of the alliance with foreign countries: it is, indeed, quite absurd to suppose that it should have this effect. The freedom of internal commerce will do ten times more to promote the industry and prosperity of the allied states than any other measure, or system of measures, that their governments could have adopted; and, as population increases, and the inhabitants become more industrious and wealthy, there will, no doubt, be an augmented demand for foreign products. The league is now no new thing. It originated half a century ago, and has been progressively augmented; but, hitherto, it has not had the slightest influence in diminishing our intercourse with Germany; our exports to it, including Holland and Belgium, having been greater on an average of the last five years than at any former period. [IMPORTS AND EXPORTS.] Generally speaking, the duties on imports are reasonable—at least, on all the finer goods. It never, in fact, can be the policy of the alliance to make them oppressive; for, though certain states may erroneously suppose that their interests would be promoted by such means, others would undoubtedly be of a different opinion, and would resist any attempt to carry them beyond a reasonable amount. It is a mistake to suppose that

in such matters Prussia has such an overwhelming influence. She must conciliate the other states, and carry them along with her; and this can only be done by acting on fair principles, and with a view to the common interests of the alliance.

Besides, if any of the existing duties be exorbitant, or if any of them, that are at present moderate, should be subsequently raised to an exorbitant pitch, does any one suppose that the over-taxed articles would not be immediately smuggled into all parts of the league? We, who occupy an island, and have revenue cruisers and coast guards on all the seas and shores most accessible to the smuggler, know from experience that it is not possible to hinder over-taxed commodities from making their way into our markets. But the facilities for smuggling into the territories of the league are incomparably greater. It has a land frontier of several thousand miles; and though the whole Prussian army were employed for that purpose, it would be found that it was utterly impotent to protect the territories of the league from being deluged with such over-taxed commodities as were in demand by the inhabitants.

We are glad to be able to strengthen our view of the influence and objects of the Prussian commercial league by laying before the reader the following extract from a work printed by order of the House of Representatives of the American States. 'Prussia,' it is there said, 'has evidently taken the lead in this wise and important measure, to which the smaller states have gradually acceded. The whole commercial policy of this enlightened power has been distinguished for its liberality, being founded on the desire of placing her intercourse with all nations on the basis of reciprocity. The commercial league of Germany is intended to carry out this principle, and not to be directed, as has been supposed, against any particular nation, as it is well known that Prussia, in her treaties with maritime powers, has invariably adopted the system of reciprocity, to whatever extent those with whom she negotiates are willing to carry it. The establishment of this community of commercial interests forms a part of the fundamental compact, by which the new Germanic Confederation was created, after the dissolution of the Confederation of the Rhine; to be subsequently adopted, however, at the option of such of the co-states as should choose to accede to it. Its effects cannot fail to promote commerce, and every other branch of industry, as it removes all those vexatious and endless difficulties which previously obstructed the freedom of intercourse. Navigable rivers and highways are now opened to the unfettered use of the German people; the customs and toll-houses, with their officers and barriers, have been withdrawn from the interior, and the whole intercourse resembles that of the subjects of any one of the states within its own territories. To these benefits may be added the assured prospect of improvement in the finances of the great and smaller sovereignties composing the league. This advantage will grow out of the simplicity or unity of the new system, a saving in the cost of collection, and from the increased consumption which renovated industry and progressive prosperity so invariably cause.' (Digest of Customs Laws, vol. iii, p. 227.)

Prussian Duty on Cottons.—The duty on cotton goods being that in which we are most interested, we took (prior to the late alterations in the Zollverein tariff) some pains to ascertain its real influence. This duty amounted to 50 rix-dollars per Prussian quintal on all cotton goods, without respect to quality or price; and, taking the quin-

tal at 113 lb. avoirdupois, and the six-dollar at 3s., it was equal to 7l. 10s. per 113 lb. Now we learn from statements obligingly furnished to us by a large wholesale house in the City—

1. That a quintal (113 lb.) of *coarse shirting*, worth 4*l.* per yard, contained 497 yards; it consequently cost 8*l.* 6s., and the Prussian or tariff alliance duty of 7*l.* 10s., on it was, therefore, equivalent to an ad valorem duty of 90 per cent.

2. That a quintal of *superior shirting*, worth 1*s.* per yard, contained 457.65 yards; it consequently cost 2*l.* 17*s.* 7*d.*, making the Prussian duty on such goods 32½ per cent.

3. That a quintal of *printed cottons*, worth 1*s.* 6*d.* per yard, contained 633 yards; it consequently cost 4*l.* 9s., making the Prussian duty on such goods 15¾ per cent.

4. That a quintal of *fine printed cottons*, worth 2*s.* 6*d.* per yard, contained 678 yards; it consequently cost 8*l.* 15s., making the Prussian duty on such goods 8¾ per cent.

It is plain, therefore, that, except on the coarsest and cheapest species of goods, the Prussian or tariff alliance duty was very far from being oppressive; and, as the value of coarse goods is principally dependent on the cost of the raw cotton and the wages of labour, being but little influenced by superiority of machinery, it is not very probable that we should export them largely to Prussia, even were the duty materially reduced. No doubt, however, it would conduce greatly to the interests of the people comprised within the league, though we do not know that it would sensibly affect us, were the duty assessed on an ad valorem principle, and made 20 or 30 per cent. on all goods; and we should think that this might be done without any material difficulty.

The subjoined translation of the more important clauses of the Customs Treaty of March 22, 1833, sets the principles on which the alliance is founded in a clear point of view.

*Customs Treaty, concluded March 22, 1833, between the Kings of Bavaria and Wirtemberg, on the one part; and the King of Prussia, the Prince Electoral Co-Regent of Hesse, and the Grand Duke of Hesse on the other part.*

I. The existing Customs' Union between the states above named shall henceforth constitute a General Union, united by a common system of customs and commerce, embracing all the countries comprised therein.

II. In this general re-union are also comprised the states which have already adhered, either for the whole of their territory or for a part, to the system of customs and commerce of one or other of the contracting states, having regard to their special relations, founded upon the conventions of adhesion concluded with the states which have intervened.

III. But there will remain excluded from the general re-union the parts separated from the countries of the contracting states which, because of their situation, are not yet included either in the re-union of the Bavarian or Wirtemberg customs, nor in those of Prussia and Hesse. Nevertheless, the regulations now in force to facilitate the commerce of these territories with the principal country will be maintained. Other favours of this kind cannot be accorded without the unanimous consent of the contracting states.

IV. In the contracting states there shall be established uniform laws for the duties of import, of export, and of transit, except such modifications as, without injury to the common object, result necessarily from the particular legislation of each contracting state, or from local interests.

Thus, exceptions and modifications to the common tariff may take place, as to rates of duties of entry, of export, and of transit (according as the direction of the routes of commerce may require) established upon articles recognised as of minor consequence in extensive commerce; provided always that these modifications be preferred by separate states, and that they shall not be disadvantageous to the general interests of the Association.

The administration of the duties of import, export, and transit, as well as the organisation of the authorities which are engaged therein, in all the states of the Association, shall be established upon a uniform footing, having regard, however, to the particular relations existing in those countries. The laws and ordinances which, according to those principles, ought to be uniform in the contracting states, and which are to constitute the law of the tariff and the regulations of the customs, shall be considered as an integral part of the present treaty, and shall be published at the same time.

V. There can neither be alterations, nor additions, nor exceptions, to the Acts above mentioned (Art. IV.), but by the unanimous consent of all the contracting parties, and in the form required for the making (*confection*) of the laws.

The preceding applies equally to all the ordinances which would establish, for the administration of the customs, dispositions entirely different.

VI. Liberty of commerce, and community of the receipts of customs, as regulated by the following article, will commence simultaneously with the operation of the present treaty.

VII. Dating from this epoch, all duties of import, of export, and of transit shall cease on the common frontier of the Bavaro-Wirtemberg and Prusso-Hessian customs re-unions. All articles of free commerce in one of those territories may be imported freely and without duty into all the others, except only as follows:—

A. Articles monopolised by the states (playing cards and salt) conformable to Articles IX. and X.

B. Indigenous articles, now subject in the interior of the contracting states to different duties, or excepted from all duty in one state, and imported into another, and which according to Article II. ought consequently to be subject to a duty of compensation.

Finally, C. Articles which, without prejudice to patent rights or conceded privileges in one of the contracting states, cannot be imitated or imported, and ought consequently to be excluded during the existence of the patents and privileges from importation into the state which has granted them.

VIII. Notwithstanding the freedom of commerce, and the exemption from duties, established by Article VII., the transport of articles of commerce, subject by the common tariff to duties of import or export on the frontiers of the Association, cannot take place between the states of Bavaria and Wirtemberg, and the states of Prussia, of Electoral Hesse, or of Grand Ducal Hesse, and reciprocally, except by the public roads, military routes, and navigable rivers. For this purpose there shall be established on the interior frontiers common bureaux of verification, to which the conductors of merchandise must, on exhibiting their licenses, declare what are the articles which they are employed to transport from one territory to another.

This disposition will not be applicable to retail commerce in raw materials, nor to the petty commerce of the frontiers or the fairs, nor to the effects of travellers. Process for the verification of merchandise will go no further than is required

for security of the duties of compensation. (See Art. VII. B.)

XIII. The contracting parties reciprocally renew their adhesion to the principle that the tolls, or other charges in lieu thereof, shall only be sufficient to defray the expense of maintenance and repairs of the roads; whether the tax be for the state or for private rights. It was thus that has been approved the supplement to the duty of customs, created in Bavaria and Wirtemberg, to replace the duty of tolls, paving, causeways, bridges, and generally of all analogous taxes.

The tolls &c. now existing in Prussia, according to the general tariff of 1828, shall be considered as the *highest rates*, and shall not be exceeded in any of the contracting states.

In accordance with the principle thus announced, the individual duty for closing the gates of cities shall be abolished; as also the duty of paving of causeways, where it still exists; and all paved roads will be considered as causeways of a description liable only to the duty on causeways established by the general tariff.

XIV. The contracting Governments agree to unite their efforts to introduce into the states a uniform system of coins, weights, and measures, to commence immediately after the requisite negotiations for this purpose; and, subsequently, to direct their efforts towards the adoption of uniform custom-house weights.

The contracting states, in the impossibility of establishing this uniformity before this treaty goes into operation, agree, for facilitating the forwarding of merchandise where it has not already been done, to revise their tariff as to weights and measures, assuming for a basis the tariffs of the other contracting states. They will cause such modifications to be published, for the government of the public and of their custom-house bureaus.

The common tariff (Art. IV.) shall be divided into two principal divisions, according to the system of weights, measures, and moneys of Bavaria, and that of Prussia.

The declaration of the weights and measures of articles subject to duty shall, in Prussia, be according to Prussian weights and measures; in Bavaria and Wirtemberg, according to those of Bavaria; and in the two Hesses, according to the weights and measures there legally established.

In expediting custom-house Acts, the quantity of merchandise must be expressed according to the two principal divisions of the common tariff.

Until the contracting states agree upon a system of common money, the payment of duties in each state shall be made in the same currency as in use for payment of its other taxes.

But from the present time, the gold and silver coins of all the contracting states, with the exception of small money (*schiedemünze*), shall be received in all the bureaus of receipt of the Association; and for this purpose tables of value shall be published.

XV. The duties of navigation upon the rivers, comprising therein those which apply to vessels, shall always be mutually acquitted according to the Acts of the Congress of Vienna, or of special conventions, upon all the rivers to which these regulations apply, unless other determinations be adopted in this respect.

The contracting states agree to enter, without delay, into negotiations for that which particularly regards the navigation upon the Rhine and the neighbouring streams, in order to effect an arrangement by which the import, export, and transit of the productions of all the states of the Union upon said streams shall be, if not absolutely free, at least relieved as far as possible

from duties of navigation, under the reserve of charges of reconnaissance.

All the advantages granted by one state of the Union to its subjects, in the exercise of the navigation upon said streams, shall extend equally to the navigation of the other associated states.

Upon the other streams to which neither the Acts of the Congress of Vienna nor any other treaties apply, the duties of navigation shall be according to the special regulations of the Governments interested. Nevertheless the subjects of the contracting states, their merchandise and vessels, shall throughout be treated on those streams with perfect equality.

XVI. Dating from the day on which the general custom-house regulations of the Union shall come into operation, the duties of public stores (*étapes*) and of transhipments (*umschlagrechte*), which still exist in the territories belonging to the Association, shall cease, and no one shall be liable to forced delay, nor to the discharging and storage of his merchandise, except in cases authorised by the common regulations of the customs or navigation.

XVII. No duties shall be claimed for canals, locks, bridges, ferries, cranes, weighing and storage; and the establishments destined to facilitate commerce shall not be allowed rent, except when actually used. Charges cannot be increased; and the subjects of the other contracting states shall be on a perfect equality with the subjects of the countries having those establishments.

If the establishments for weighing and cranes are only used by the custom-houses, no charge shall be made, if the articles have been previously weighed at a custom-house.

XVIII. The contracting states engage to continue their common efforts for the encouragement of industry by the adoption of uniform regulations, so that the subjects of each state may enjoy, as extensively as possible, the privilege of seeking work and occupation in every other state.

From the coming into operation of the present treaty, the subjects of any one of the contracting states, trading or seeking employ in the territory of any other of those states, shall not be subject to any impost which does not equally affect the native similarly employed. Manufacturers and merchants who are only making purchases for their trade, or travellers who have not goods with them, but simply patterns for the purpose of soliciting commissions, shall not, when thus employed, have any duty to pay in another state, if authorised to carry on such commerce in the state where they have their domicile; or if employed in the service of native manufacturers or merchants.

When trading in the markets and fairs, or when they are selling the produce of the soil and fabrics, in any one of the states of the Association, the subjects of the other contracting states shall be treated in all respects as subjects of the same state.

XIX. The seaports of Prussia shall be open for commerce to all the subjects of the states of the Union, on payment of the same duties as are paid by Prussian subjects, and the consuls of the several states in the seaports or places of foreign commerce shall be bound, in cases of need, to assist with their advice and support the subjects of the other contracting states.

XX. To protect against contraband their common custom-house system, and to insure the regular payment of the duty of consumption in the interior, the contracting states have concluded a reciprocal cartel, which shall be enforced as soon as possible, but, at the furthest, at the same time with the present treaty.

XXI. The community of receipts of the contracting states, stipulated by the present treaty, shall comprehend the product of duties of entry, of export, and of transit, in the Prussian states, the Kingdoms of Bavaria and Wirtemberg, the Electorate, and the Grand Duchy of Hesse, comprising therein those countries which have down to the present time acceded to the custom-house system of the contracting states.

The following are excluded from the community of receipts, and remain reserved for the particular benefit of the respective Governments:—

1. The imposts collected in the interior of each state on indigenous products, comprising therein the compensatory duties reserved in Article XI.

2. The toll on rivers, to which are applicable the regulations of the Acts of the Congress of Vienna, or special conventions. (Article XV.)

3. Duties of paving, of causeways, of bridges, of ferries, of canals, of locks and ports, charges of weighing and storage, as well as similar receipts, whatever may be their name.

4. The fines and confiscations which, beyond the part allowed to informers, remain the property of each Government throughout its territory.

XXII. The produce of the duties received into the common treasury shall be divided among the states of the Association, in proportion to the population which may be found in the Union, subject to deduction, 1st, of the expenses specified in Article XXX.; 2nd, of the restitution of erroneous receipts; 3rd, of the restoration of duties and diminutions made in consequence of special common conventions.

The population of every state which has entered or may enter into the Association, by treaty with one or other of the contracting states, under the engagement made by the latter, to make an annual contribution, for the participation of the former to the common revenue of the customs, shall be added to the population of the states which make this contribution.

There shall be made every 3 years, dating from a period to be hereafter fixed, an exact enumeration of the population of the associated states: the states shall reciprocally communicate the results thereof.

XXIII. All restitutions of duties not authorised by the legislation of the customs shall remain charged to the treasury of the Government which shall have granted it.

Conventions, hereafter to be concluded, will regulate in what cases similar restitution may be accorded.

XXIV. In conformity with the object of this Association of Customs tending to facilitate a freer and more natural commercial intercourse, the favours accorded for the payment of custom-house duties at certain places in which fairs are held, especially the privileges of abatement (*abat privilegien*), cannot be extended to those states of the Association where they do not exist; on the contrary, they shall be restricted and abolished as far as possible, regard being had to the means of subsistence of the places heretofore favoured, and to the commercial relations which they have with foreigners; but others can on no account be granted without the general consent of the contracting parties.

XXXIII. There shall every year, on June 1, be an assembly of plenipotentiaries of the Governments of the Union empowered generally to deliberate; and each state may send thither a duly authorised representative.

The plenipotentiaries will choose from among

themselves a president, who, however, shall have no pre-eminence over the other members.

The first assembly shall be held at Munich. At the close of each annual assembly, the place of next meeting will be determined, having reference to the nature of those subjects which will then come under discussion.

XXXIV. The assembly of plenipotentiaries will have under its consideration in the following subjects:—

A. To consider the complaints which may have arisen in any of the states of the Association concerning the execution of the general treaty, of special conventions, of the law, and of custom-house regulations; also of the tariff, when these shall not have been adjusted during the year by correspondence between the different ministers.

B. The definitive reparation among the states of the Union of the total common receipts, based upon the observations made by the superior authorities, and verified by the central bureau, as may be rendered necessary by the common interest.

C. To deliberate upon propositions and suggestions made by the Governments for the perfection of the administration.

D. Discussions upon alterations, demanded by any of the contracting states, in the laws, tariffs, and custom-house regulations, as well as in the organisation of the administration, and in general upon the development and perfection of the general system of customs and commerce.

XXXV. If, in the course of the year, when the plenipotentiaries are not in session, extraordinary incidents should occur, which require prompt decision on the part of the states of the Union, the contracting parties will consult upon these through their diplomatic agents, or they will order an extra sitting of their plenipotentiaries.

*Recent Changes in the German Customs' Union.*—The discussions in the assemblies of the League were, especially of late years, a good deal influenced by political considerations. A league denominated the *Steuerverein* had been formed in opposition to, or in rivalry with, the Prussian league, by Hanover, Oldenburg, and Brunswick. It was evident, however, inasmuch as the interests of these and the other German states were identical, that it would be a great public advantage were these associations merged into one. But owing to political, commercial, and financial jealousies, this desirable object was of very difficult attainment. At length these difficulties were surmounted; and a treaty negotiated between Hanover and Prussia, on September 7, 1851, provided for the incorporation, from January 1, 1854, of the former, and the other states included in the *Steuerverein*, with the Prussian Union. Some modifications were introduced by the treaty into the basis of the League, but they are of little importance, except to the parties immediately interested.

*Treaties with Austria.*—More recently a great deal of discussion took place between Prussia and the subordinate German states on the one hand, and Austria on the other, in regard to the formation of a Customs' Association which should include the latter; and in order to pave the way for this desirable consummation, Austria issued a new tariff on November 25, 1851, in which she made many important modifications in the prohibitive system on which she had previously acted, at the same time that she established a free commercial intercourse between Hungary (which had previously a separate customs establishment) and the other states of the empire. And though this wise and liberal measure has not yet led to

who, however, shall have the other members.

It will be held at Munich. The annual assembly, the place of which is not yet determined, having reference to those subjects which will be discussed.

The plenipotentiaries considered in the following

complaints which may have been made by the states of the Association on the general treaty, of the law, and of custom of the tariff, when these were discussed during the year by the different ministers.

There is a variation among the states in the common receipts, based on the duties made by the superior authority by the central bureau, and necessary by the common

propositions and suggestions of the Governments for the perfection of the tariff.

Alterations, demanded by the states, in the laws, tariffs, and regulations, as well as in the administration, and in general and the perfection of the general commerce.

At the close of the year, when the session, extraordinary or ordinary, which require prompt action on the part of the states of the Union, will consult upon these matters, or they will be referred to their plenipotentiaries.

The *German Customs' Union*, which was formed in the year 1834, has, in the last few years, a good deal of importance. A league of states had been formed in rivalry with the Prussian Union, and Brunswick, and Hesse-Darmstadt, and inasmuch as the interests of the German states were not to be a great public advancement merged into one, commercial, and financial object was of very difficult nature.

These difficulties were surmounted by the plenipotentiaries negotiated between Hanover and Prussia, provided on January 1, 1854, of the states included in the Steiermark Union. Some modifications by the treaty into the but they are of little importance to the parties immediately

concerned.—More recently a great place between Prussia and the states on the one hand, and in regard to the formation of the association which should include in order to pave the way for the annexation, Austria issued a law on the 25th, 1851, in which she made modifications in the provisions which she had previously established that she established a free trade between Hungary (which had a separate establishment) of the empire. And though the measure has not yet led to

the incorporation of Austria into the Customs' Union, it has led to the conclusion by her of several important commercial treaties: the first of these, with Prussia, was dated February 19, 1853.

The contracting parties engaged to suppress, with a few specified exceptions, all prohibitions against importing the products of the one into the territories of the other; they next established a complete freedom of trade between the two countries in all articles of raw produce; and they

further stipulated that the duties to be imposed on manufactured products should be moderate and reasonable. It had a variety of other clauses, all of a liberal character. The duration of the treaty was limited to 12 years, so that it had expired and was renewed before hostilities broke out between Prussia and Austria. The war of 1866 affected the trade of Germany most injuriously, and by way of illustration we subjoin a statement referring to 1865 and 1866.

An Account showing the Proportion of the Revenues of the German Customs' Union Raised in the different States in 1865 and 1866, and the Distribution thereof, according to their Population, from Mr. Secretary of Legation Lowther's Report of July 28, 1866, and July 29, 1867.

*Renewal of the Zollverein.*—The German States lying to the south of the river Meine having preserved their independence after the war of 1866, were not under any obligation to unite themselves either politically or commercially with Prussia, or even to renew the Zollverein which the war had dissolved. However, a sense of their own interest subsequently induced the Southern States not only to enter into military conventions with the Prussian Crown, but to continue members of the Zollverein upon an enlarged basis. On July 8, 1867, a new Zollverein treaty for a further term of years was concluded between the states of the North German Confederation and the South German States, viz.—Hanover, Württemberg, Baden, and Hesse-Darmstadt—the scope of which extends to the whole of Germany, except Austria, inasmuch as the two Mecklenburgs, and the three Hanse Towns, as members of the Northern Confederation, are parties to the last-mentioned treaty, and are represented in the Zollverein councils. Under the old system, questions were settled in the Zollverein conferences, in which unanimity was required; whereas, under the new treaty, the legislative power is given to a federal council of 58 members, in conjunction with a Customs Parliament. In the council, Prussia has 17 votes, and a veto upon all alterations of existing laws; in other cases the majority of the council decides, Prussia having a casting vote. The Customs Parliament (which met for the first time in Berlin on April 27, 1868) is chosen upon the principle of universal suffrage by the people of the Southern States, as well as of the States of the North German Confederation, and in it all resolutions are passed by an absolute majority. There is, therefore, every reason to believe that Prussia and the commercial States of the North will enjoy their due influence in the council of the new Customs' Union, and that the public opinion of the nation will be fully and fairly represented in the Customs Parliament.

A difficulty in the way of the accession of the two Mecklenburgs to the Zollverein system was found to exist in their treaty of 1865 with France, by the 18th Article of which the Mecklenburgs had engaged not to raise their customs duties above the

rate of 1 dollar per centner, and not to introduce any new duties whatever. This difficulty has been removed. Prussia has consented to a reduction of the customs tariff on French wines, and some other articles; and the two Mecklenburgs are left at liberty to enter the customs frontier of the North German Confederation, and to fulfil all their engagements as members of that alliance. The arrangements for that purpose are expected to be soon completed by the Federal Council, and the early admission of the two Mecklenburgs within the customs line may now be anticipated.

Schleswig and Holstein retained their old tariff for some time after their annexation to the Prussian Monarchy, but towards the end of April 1867 a royal ordinance put the Zollverein tariff into force within both Duchies; and on November 15 they were formally included within the limits of the Zollverein itself. The town of Altona was, however, excepted, and has been allowed for the present to remain a free port, with similar privileges to those enjoyed by the neighbouring territory of Hamburg. The transit duties formerly levied on goods passing through these Duchies are now entirely abolished.

The tariff and regulations of the Zollverein were likewise applied to the Duchy of Lauenburg as a part of the Prussian Monarchy on January 5, 1868, and the transit duties long charged on the passage of goods through that Duchy were then abolished. By these several extensions the Zollverein frontier has been brought down to the Elbe, subject to the exemptions temporarily granted to Hamburg and Altona as ports of free importation.

*Commercial Treaties.*—Among the commercial treaties lately concluded by the Zollverein, that with Austria, dated March 9, 1868, stands prominent on account of the reductions of duties and the increased facilities of traffic, for which it stipulates. The provisions of the former commercial treaty between the same parties of April 11, 1865, are much enlarged; and in return for numerous reductions to be made by Austria the Zollverein pledges itself to lower its customs tariff as regards the importation of pig iron, linen yarn, wine, horses, and various other articles. The export duties (with 2 or 3 exceptions), as well as the

transit duties, are on both sides abolished. Of the advantages of the last treaty with the Zollverein, the United Kingdom will partake in consequence of the 'most favoured nation clause' in our treaty with Austria. [TREATIES (AUSTRIA).] A treaty of navigation with Italy had been previously concluded on October 14, 1867; and more recently, March 30, 1868, a treaty of commerce and navigation with Spain has been announced, whereby the Zollverein has the right of trading on the most favoured footing with the European portion of the Spanish monarchy, and has conceded reciprocal privileges to Spain in the states of the Union. The differential duties which have hitherto existed in Spain in favour of certain articles of French produce and manufacture have likewise been abolished in favour of the Zollverein.

In consequence of these and other changes, the

duties in the tariff of the German Customs' Union have undergone many modifications. But except on coarse and heavy goods, they continue, speaking generally, to be moderate. A declaration of April 1, 1869, for the admission duty free into Great Britain and the Zollverein of patterns and samples imported by commercial travellers, has been published in the *London Gazette*.

The overtures made to Russia on behalf of the Zollverein have hitherto been unsuccessful. (*Report of Mr. Ward, minister resident at Hamburg, of May 15, 1868.*)

We have little doubt, should peace be preserved, that the advantages of which the Zollverein must be productive will be so many and so great, that it will lay the foundations of a lasting intercourse, of which we can neither foresee the extent nor the beneficial influence.

## SUPPLEMENT.

### ADMIRALTY COURT JURISDICTION, [COUNTY COURTS.]

**ALE AND BEER.** By the Wine and Beer-house Act of 1869, 32 & 33 Vict. c. 27, the licensing of refreshment houses in England, and of the retailing of beer, cider, and wine, is transferred from the excise to the justices assembled at the general annual licensing meeting, and the provisions of 9 Geo. IV. c. 61 are declared to be applicable to grants of certificates under the new Act; stipulating, however, that such certificates are not, except under extraordinary circumstances, to be refused where the liquors are not to be consumed on the premises.

The 32 & 33 Vict. c. 11 substitutes for the customs' duties chargeable on beer and ale in the tariff, on importation into the United Kingdom, the following duties after June 1, 1869, viz. :—

Beer and ale, namely—	£	s.	d.
Main, the barrel of thirty-six gallons	1	1	0
Spruce, the worts of which were, before fermentation, of a specific gravity not exceeding one thousand and six-tive degrees, the barrel of thirty-six gallons	1	1	0
Exceeding one thousand and ninety degrees, the barrel of thirty-six gallons	1	4	0
Other sorts, viz.—			
Beer, the worts of which were, before fermentation, of a specific gravity not exceeding one thousand and six-tive degrees, the barrel of thirty-six gallons	0	8	6
Exceeding one thousand and six-tive degrees, and not exceeding one thousand and ninety degrees, the barrel of thirty-six gallons	0	11	0
Exceeding one thousand and ninety degrees, the barrel of thirty-six gallons	0	16	0

And in charging the above rates of duty upon the importation of beer, the specific gravity of the worts from which the same was made shall be ascertained and determined in the manner prescribed by 19 & 20 Vict. c. 34 s. 16, for ascertaining and determining the rates of drawback on the exportation of beer.

### ALEXANDRIA. [SEZAR CANAL.]

**ALICANTE.** The values of imports and exports in BRITISH VESSELS at Alicante in 1867 and 1868 were :—

Years	Ships	Tons	Value of Imports	Value of Exports
1867	108	21,039	31,853	45,514
1868	86	21,869	81,631	47,051

The increase in the value of imports was caused by the arrival of some British vessels with wheat from the Black Sea. During 1868 the trade at this port did not increase, but the duties on goods imported, and port duties, which in 1867 amounted to 70,752*l.*, were, in 1868, 88,283*l.*, exclusive of railway material and fuel, imported free.

The exportation of esparto grass, chiefly to England, has largely increased, 10,425 tons having been shipped in 1868 against 2,513 in 1867. The system is now generally adopted of pressing the esparto to reduce its bulk. The average price of this article, free on board, has

been 4*l.* per ton. (Report by Mr. Consul Barrie of March 16, 1869.) [SPAIN.]

**AMSTERDAM.** The following statistics in relation to the trade of this port and of the Netherlands are extracted, the first table from the Report of Mr. Consul Newnham of May 27, 1869, and the last two from that of January 7, 1869, by Mr. Thurlow, second secretary to our Legation at the Hague :—

### I.—Account of the Arrivals and Departures of Netherlands and Foreign Vessels at Amsterdam during 1867 and 1868.

	Arrivals			
	1867		1868	
	Vessels	Tons	Vessels	Tons
Netherlands	770	199,159	727	206,535
Foreign	696	195,825	758	221,261
Totals	1,466	394,975	1,485	427,796
Departures				
Netherlands	827	208,055	759	207,426
Foreign	755	196,061	719	211,110
Totals	1,582	404,116	1,478	418,536

Of the 738 foreign arrivals in 1868, 200 were steamers of 78,000 tons, and of these 189 were British of 71,965 tons.

### II.—Table showing General Imports and Exports of the Netherlands from 1861 to 1867.

Years	General Importation	Import for Consumption	General Exportation	Duty-free Exports	In Transit
	florins	florins	florins	florins	florins
1861	37,155,775	280,376,261	153,116,570	311,162,216	89,231,571
1865	506,598,778	105,535,281	138,391,127	514,810,050	91,210,677
1866	528,071,709	42,119,121	136,299,752	5,857,266	98,035,456
1867	522,081,735	62,025,079	119,417,611	5,008,201	109,150,207

Referring to the convention for the free navigation of the Rhine entered into in 1868 by the Netherlands, Prussia, France, Bavaria, Baden &c., Mr. Thurlow gives the following among other particulars, showing the extent of commerce passing Lobith, on the Dutch portion of the Rhine, at different periods from 1832 downwards, and in the 3 years ending with 1867.

### III.

Years	Up Rhine	Down Rhine	Total
	cwt.	cwt.	cwt.
1832 to 1834	1,605,304	5,455,435	7,060,739
1835	2,018,608	6,965,169	8,983,777
1840	3,227,391	5,881,550	9,108,941
1845	4,171,375	6,661,750	10,833,125
1850	5,010,028	6,267,210	11,277,238
1855	6,074,513	10,358,169	16,432,682
1860	6,082,868	18,027,248	24,110,116
1865	5,792,221	21,915,681	27,707,902
1866	5,988,715	36,007,304	41,996,019
1867	6,618,657	39,091,410	45,710,067

**ARCHANGEL.** The following table, taken from Mr. Consul Renny's Report of March 31, 1869, exhibits the values of the exports from Archangel in each of the five years ending with

1868, and the proportion of these to Great Britain:—

*Values of Exports.*

	1861	1865	1866	1867	1868
Total	£ 948,358	£ 1,029,002	£ 1,306,641	£ 1,240,952	£ 1,501,211
To Great Britain	£ 581,818	£ 669,701	£ 857,129	£ 745,608	£ 960,958

ARROWROOT. Customs' duty on, repealed, 1869.

AUSTRIA. See article TRIESTE in Dictionary, edition 1869.

BALTIMORE. In illustration of the rapid growth of this port, Mr. Consul Rainalds, in his Report of April 10, 1869, mentions that the population, which was 212,000 in 1860, had increased to 352,000 in 1868. The following table exhibits the increase of our trade with Baltimore since 1866:—

*British Shipping.*

Years	Entered			Cleared		
	Number of Vessels	Tons	Value of Cargoes	Number of Vessels	Tons	Value of Cargoes
1866	188	48,423	2,478,000	191	49,781	805,500
1867	210	60,158	2,308,110	209	60,501	2,019,562
1868	261	63,631	2,957,000	257	61,119	2,725,741

BANGKOK. The following is an abridgment of a table given by Mr. Knox, our Consul-General for Siam, in his Report of March 25, 1869:—

*Account of British and Foreign Shipping Entered and Cleared at the Port of Bangkok in 1868, and of the Values of their Cargoes.*

Nationality of Vessels	Entered			Cleared		
	Vessels	Tons	Value of Cargoes	Vessels	Tons	Value of Cargoes
British	107	47,237	61,266	96	41,560	293,411
French	7	2,913	5,500	5	1,621	12,112
American	11	9,805	7,851	13	8,711	43,110
North German	63	23,591	59,137	60	24,735	156,913

Siamese	126	47,017	550,501	114	45,479	397,778
Junks to China	..	..	..	..	..	50,000
Total	346	142,375	772,898	317	135,655	999,817

It would appear from the same Report that since 1867 the export of rice, formerly our principal trade from this port, had ceased in great measure, but that new markets have been found, and that in 1868 sixty-nine vessels cleared their ce with full cargoes for Europe, and others sailed for Mauritius, California, and Australia.

BANK OF ENGLAND. An Act (32 & 33 Vict. c. 104) for facilitating the payments of dividends on the public stocks, passed in 1869, makes the following regulations with respect thereto, viz:—

2. *Power to send dividend warrants by post.*—It shall be lawful for the governor and company of the Bank of England, hereinafter called the Bank, from time to time, with the sanction of the Commissioners of the Treasury, to make arrangements for payment of dividends on any stocks by sending warrants through the post. Every such warrant shall be deemed to be a cheque on the said governor and company within the intent and meaning of the statute of 21 & 22 Vict. c. 79.

3. *Effect of posting a warrant.*—Every stockholder desirous of having his dividend warrants sent to him by post shall make a request accord-

ingly in writing to the Bank, such writing to be signed by him, and to be in a form approved by the Bank and by the said commissioners, and shall give to the Bank an address in the United Kingdom to which the letters containing such warrants are from time to time to be sent, and the posting by the Bank of any letter addressed to a stockholder at his request at the address given by him to the Bank, and containing a dividend warrant, shall, as respects the liability of the Bank, be equivalent to the delivery of such warrant to the stockholder himself.

4. *Change of day on which dividends on stocks fall due.*—The half-yearly dividends due on any public stocks which at the time of the passing of this Act fall due on October 10 in each year, shall from and after the passing of this Act become due on October 5, instead of October 10.

5. *Audit of dividends.*—The Treasury may from time to time make regulations as to the mode in which the audit of the accounts relating to dividends on public stocks is to be held by the commissioners for auditing the public accounts, and may, if they think fit, dispense with such audit altogether.

6. *Definition of terms.*—In this Act 'public stocks' shall mean and include any stock forming part of the national debt, and transferable in the books of the Bank:

'Stockholder' shall mean the proprietor of any share in the public stocks;

'Person' shall include corporation;

'United Kingdom' shall include the Channel Islands, the Isle of Man, and any other islands adjacent to any part of the United Kingdom;

'Warrant' shall include draft, order, cheque, or any other document used as a medium for payment of dividends.

BANKRUPTCY. In the articles BANKRUPT AND BANKRUPTCY, and INSOLVENCY AND BANKRUPTCY, in this Dictionary, the history and policy of the laws affecting bankrupts in the United Kingdom, and the progress of opinion and legislation on the subject, have been shortly traced, down to the session of 1868. We have now, by way of supplement, to give a short abstract of the more important clauses of the Bankruptcy Act of 1869 (32 & 33 Vict. c. 71), entitled An Act to consolidate and amend the Law of Bankruptcy.

The Act is divided into a preliminary and eight other parts.

In the preliminary portion the 2nd clause declares it inapplicable to Scotland or Ireland, except when expressly provided.

The 3rd dates its operation from January 1, 1870.

The 4th defines various terms used in its provisions; and

The 5th excludes from its operation companies or partnerships registered under the Companies Act of 1862.

In Part I., relating to the adjudication and vesting of property, clause 6 provides for the adjudication of a bankrupt owing 50*l.* to one or more creditors, and defines six acts of bankruptcy, on any one of which that may have occurred within the previous six months, his or their petition must be founded.

7-9 refer to the proceedings on debtors' summons and petition, proof of debt and of trading when necessary, and act of bankruptcy, and to contested debts.

10 to the advertisement of adjudication.

12 binds creditors not holding securities.

18 empowers the court to restrain suits and appoint receiver.

14, 17, and 18 provide for the appointment, by

bank, such writing to be in a form approved by the commissioners, and address in the United Kingdom, and containing such particulars as to the time to be sent, and of any letter addressed to the address, and containing a dividerspect the liability of the trustee to the delivery of such or himself.

which dividends on stocks dividends due on any time of the passing of October 10 in each year, passing of this Act be- instead of October 10.

—The Treasury may regulations as to the of the accounts relating to be held by the public accounts, dispense with such

—In this Act 'public include any stock form-debt, and transferable in

the creditors or by their committee of inspection, not exceeding five in number, of a trustee (paid or unpaid, but giving security) to manage the bankrupt's property, and that the registrar of the court shall act as trustee till the appointment be made.

15 describes the property of a bankrupt divisible among his creditors, and specially exempts—1st, property held in trust; and 2nd, tools of trade, and family wearing apparel and bedding, to the value in all of 20l.

16 lays down regulations as to the first meeting of creditors.

In Part II., regulating the administration of the property, clause 19 relates to the conduct of the bankrupt in aiding or impeding its realisation, and his punishment in the latter case.

20 lays down rules for the conduct of the trustee.

21 regulates general meetings of creditors after the first.

22-24 vest the property in the trustee, and enable him to disclaim that which is onerous.

25-29 define his powers; *inter alia*, authorising him, if the creditors approve, to receive and decide on proof of debts, and to administer oaths.

To carry on bankrupt's business, and to employ him to superintend it.

To sell the property, or mortgage or pledge any part of it.

To bring or defend suits, refer disputes to arbitration, compromise debts or claims.

To divide property which cannot be sold among the creditors, and to accept composition, or general scheme of arrangement offered by the bankrupt.

30 binds the trustee, under penalties, to pay sums into the Bank of England, or other bank chosen by creditors.

31-40 describe debts, distinguishing as preferential, certain local rates, assessed and other taxes, and wages of clerks and servants, and deal with allowance to debtors, set off and secured debts.

41-50 apply to the distribution of dividends, appropriation of the surplus, if any, by the bankrupt after payment of creditors and costs, the close of the bankruptcy, discharge of the bankrupt (mainly depending on the payment of 10s. in the pound), and effect of the discharge.

51-53 relate to the release of the trustee and its effects.

54 explains the status of an undischarged bankrupt.

55-58 provide for the appointment of a comptroller or auditor of trustee's accounts, and define his duties and powers.

Part III.—Clauses 59-72 constitute the Court of Bankruptcy and Court of Appeal, and specify their general powers.

73-77 provide for the enforcement of warrants and orders of the court, and enjoin that the Bankruptcy Courts in England, Scotland, and Ireland, and every British court elsewhere, shall be auxiliary to each other in bankruptcy cases.

78, 79 empower the Lord Chancellor to revoke or alter rules of court, and to effect change of jurisdiction in county courts.

In Part IV., consisting of supplemental provisions, clause 80 makes additional regulations as to proceedings in bankruptcy.

81, 82 state the consequences of annulling of adjudication.

83, 84 lay down rules as to the trustee and committee of inspection.

85, 86 relate to the power over the bankrupt.

87-95 to the property devolving on the trustee, 96-99 to the discovery and seizure of the bankrupt's property.

100-105 refer to joint and separate estates. 106-109 specify the nature of the evidence necessary in proceedings in bankruptcy.

110-119 are of a miscellaneous kind, 118 enacting that no person not being a trader shall be adjudged a bankrupt in respect of a debt contracted prior to the Bankruptcy Act of 1861.

In Part V., relating to persons having privilege of Parliament, 120-124 enact that this privilege is not to prevent adjudication on bankruptcy; that the seat of a bankrupt member of the House of Commons shall be vacated; and that the Speaker shall issue a new writ.

Part VI.—Clause 125 makes regulations for the liquidation by arrangement of the affairs of the debtor.

Part VII.—Clauses 126, 127 contain regulations for the payment by a debtor to his creditors of a composition, without any proceedings in bankruptcy.

Part VIII.—Clauses 128-136 make temporary provision for transfer of officers from old to new Court of Bankruptcy, the abolition of the County District Courts, compensation to, and reappointment of officers &c.

Schedule 1 appended to the Act gives the following list of, and description of Traders:—

Alum makers, apothecaries, auctioneers, bankers, bleachers, brokers, brickmakers, builders, calendarers, carpenters, carriers, cattle or sheep salesmen, coach proprietors, cowkeepers, dyers, fullers, keepers of inns, taverns, hotels, or coffee houses, lime-burners, livery stable keepers, market gardeners, millers, packers, printers, sharebrokers, shipowners, shipwrights, stockbrokers, stock-jobbers, victuallers, warehousemen, wharfingers, persons using the trade or profession of a scrivener, receiving other men's moneys or estates into their trust or custody, persons insuring ships or their freight or other matters against perils of the sea, persons using the trade of merchandise by way of bargaining, exchange, bartering, commission, consignment, or otherwise, in gross or by retail, and persons who, either for themselves or as agents or factors for others, seek their living by buying and selling or buying and letting for hire goods or commodities, or by the workmanship or the conversion of goods or commodities; but a farmer, grazier, common labourer, or workman for hire shall not, nor shall a member of any partnership, association, or company which cannot be adjudged bankrupt under this Act, be deemed as such a trader for the purposes of this Act.

In the article BANKRUPT AND BANKRUPTCY in this Dictionary the author expressed an opinion on the impolicy of imprisonment for debt where the debtor had acted honestly and had done all that should be required of him. By Act 32 & 33 Vict. c. 62 the Legislature have adopted this view, and may be said to have abolished imprisonment for debt in England, except for the punishment of fraudulent debtors and of contempt of court.

The 32 & 33 Vict. c. 83 provides for the winding up of the business of the late Insolvent Debtors' Court in England, and repeals a number of enactments relating to insolvency, bankruptcy, imprisonment for debt &c.

BARLEY AND BARLEY MEAL, and BARLEY PEARLED. Import duty on, repealed, 1869.

BEANS AND BEAN MEAL. Customs' duty on, repealed, 1869.

BEAR or BIGG. Customs' duty on, repealed, 1869.

BEER. [ALE AND BEER.] BELGIUM. See article on AXTWERP in the Dictionary, edition 1869.

**BIGG.** [BEAR.]  
**BIRDS.** [SEA BIRDS.]  
**BISCUIT AND BREAD.** Customs' duty on, repealed, 1869.

**BOSTON.** The rocks called Touser and Corwin in the main channel near Fort Warren, which caused much trouble to the shipping, have been removed to the depth of twenty-three feet at low water, and these and other operations for widening and deepening the approaches to this harbour have rendered it one of the most secure on the coast, and will soon make it one of the most accessible.—Consul Lonsada's Report of February 8, 1869.

**BRAZIL.** [SLAVES AND SLAVE TRADE.]  
 In the Dictionary of 1869 will be found articles on the undermentioned Brazilian ports; viz. BAHIA, PARA, PERNAMBUCO, and RIO DE JANEIRO.

**BRISTOL.** For an account of the harbour, docks &c., of this port, see the article Docks in the Dictionary, edition of 1869; sub-head *Bristol Docks, Shipping, &c.*

**BUCKWHEAT AND MEAL.** Customs' duty on, repealed, 1869.

**CANADA. COLONIES; HUDSON'S BAY COMPANY.** in this Supplement. See also articles HALIFAX and QUEBEC, in the Dictionary, ed. 1869.  
**CANAL.** [SUEZ CANAL.]

**CARDIFF.** For an account of this port and its docks, see the article Docks in the Dictionary, edition 1869. Sub-head *Cardiff.*

**CARRIAGES.** The 32 & 33 Viet. c. 11 abolishes (from January 1, 1870): 1. The duties upon licenses to keep, use, and let to hire hackney carriages in the metropolis, and the weekly duties payable in respect of them; and 2, the duties upon licenses to keep, use, and employ stage carriages in Great Britain, and also the milnage duty in respect of the same, and imposes the following duties:—

For every carriage	£	s.	d.
For every mule or servant	0	15	0
If such carriage shall have four or more wheels, and shall be of the weight of four hundredweight or upwards.	2	2	0
If such carriage shall have less than four wheels, or, having four or more wheels, shall be of a less weight than four hundredweight.	0	15	0

For every horse or mule	£	s.	d.
For annual licence—	0	10	6
If such annual licence shall be painted, marked, or affixed on or to any carriage	2	2	0
If such annual licence shall not be so painted, marked, or affixed, but shall be otherwise worn or used	1	1	0
For every horse dealer	12	10	0

[HACKNEY CARRIAGES.]

**CASSAVA POWDER.** Customs' duty on, repealed, 1869.

**CATTLE.** An Act passed in 1869 (32 & 33 Viet. c. 70) consolidates, amends, and makes perpetual the Acts for preventing the introduction or spreading of contagious or infectious diseases among cattle and other animals in Great Britain. It is divided into 10 parts: the 1st preliminary, the 2nd referring to local authorities, the 3rd to the import of foreign animals, the 4th to the discovery and prevention of disease, the 5th to slaughter of cattle &c. in cattle plague, and compensation to be awarded to the owners, the 6th to Orders in Council &c., the 7th to the acquisition &c. of land for the burying or slaughtering of animals &c., the 8th to the expenses of local authorities, the 9th to offences and legal proceedings, and the 10th to Scotland; and appended to the Act are 9 Schedules, chiefly containing regulations; the 5th stating the maximum tolls, dues, and payments in the Metropolitan market after the opening of the Foreign Cattle market; viz.

Sheep	4	per head
Beasts	6	"
Calves	5	"
Pigs	11	"

An Order in Council of August 10, 1869, applicable to the Metropolis, revokes all previous orders on the subject of contagious and infectious diseases of cattle, and regulates the import of cattle into the port of London, the moving of cattle, and their sale, exhibition, slaughter &c.

**CHILE.** See VALPARAISO in Dictionary, edition 1869.

**CHINA.** The following tables, and that given under Shanghai, are extracted from the *Annals of Trade* printed at the Customs' Press of Shanghai in 1869. See also articles AMOY, CANTON, FOOCHOW, HONG KONG, MACAO, NINGPO, SHANGHAI &c. in the Dictionary, edition 1869.

*Shipping at Chinese Ports in the following Years.*

## CHOCOLATE. [LICENSES; TEA.]

CHRISTIANIA. In Consul-General Crowe's Report of March 31, 1869, on the Spring Herring Fishery on the South-West Coast of Norway, he gives the annexed table, showing the catch for the last six years ending with 1869, and the exports for the five years ended 1868:—

Years	Catch	Exported
1861	687,000	559,000
1865	785,000	631,500
1866	742,000	598,000
1867	599,000	479,100
1868	612,000	485,000
1869	681,000	..

The above figures merely refer to the spring herring fishery, and not to what is caught during the season to the north, and exported from the northern provinces.

## CIDER. [ALE AND BEER.]

COASTING TRADE. The Merchant Shipping (Colonial) Act of 1869 (32 Vict. c. 11) places, on certain conditions, the regulation of the coasting trade of our colonial possessions under their respective Legislatures, and empowers them to grant, after due examination, certificates of qualification to persons intending to act as masters, mates, or engineers on board British ships.

## COCOA NUTS. [LICENSES; TEA.]

## COFFEE. [LICENSES; TEA.]

COINS. By Order in Council of August 7, 1869, gold coins made at the branch mint of Melbourne, Victoria, are declared legal tender in all parts of the empire.

Considerable discussion has been excited by the proposal of Mr. Lowe (Chancellor of the Exchequer) to levy seigniorage on our gold coinage by giving in return for every 123.274 grains of bullion delivered at the Mint a sovereign of the reduced weight of 122.274 grains. As the views of the author of the Commercial Dictionary on the subject of seigniorage are given in the article on COINS, p. 332, edition 1869, they need not be repeated here.

COLLISION. The County Courts Admiralty jurisdiction is extended by 32 & 33 Vict. c. 51 to all claims not exceeding 300*l.* each on account of damage to ships, whether by collision or otherwise.

COLONIES. The Canada Rupert's Land Loan Act of 1869 guarantees a loan of 300,000*l.* by the Canadian Government for payment to the Hudson's Bay Company of the price of the

surrender of Rupert's Land to the Canadian Dominion.

The Merchant Shipping Colonial Act of 1869 gives power to Colonial Legislatures to regulate their coasting trade, and to grant, after examination, certificates of qualification to persons intending to act as masters, mates, or engineers in British ships.

196,325 persons emigrated from the United Kingdom in 1868, of whom 155,632 went to the United States, 21,206 to our North American colonies, and 12,899 to the Australian colonies and New Zealand.

COMPANIES. The 32 & 33 Vict. c. 19, passed 1869, regulates partnerships for working mines in the stannaries of Devon and Cornwall. [PARTNERSHIPS; RAILWAYS; STOCKS.]

CORK. See account of its dock in article Docks in the Dictionary, edition 1869, sub-head Cork.

CORN LAWS AND CORN TRADE. Mr. Lowe (Chancellor of the Exchequer) carried out his intention referred to under WHEAT TARIFF &c. in this Dictionary, and on June 1, 1869, by 32 & 33 Vict. c. 14, the customs' duties ceased on the import of corn, grain, meal and flour, and articles of the like character, viz.,

Wheat, barley, oats, rye, pease, beans, maize or Indian corn, buck wheat, bear or bigg, wheat meal and flour, barley meal, oat meal and grouts, rye meal and flour, pea meal, bean meal, maize or Indian corn meal, buckwheat meal, meal not otherwise enumerated or described, arrowroot, barley, pearled, biscuit and bread, cassava powder, macaroni, mandioca flour, manna croup, potato flour, powder, viz. hair, powder perfumed, powder not otherwise enumerated or described, that will serve the same purpose as starch, rice dust and meal, sago, semolina, starch, starch gun of, torrifed or calcined, tapioca, vermicelli.

COUNTY COURTS. The Admiralty jurisdiction of the county courts is extended by 32 & 33 Vict. c. 51 to any claims not exceeding 300*l.* each, relating to the use or hire of any ship, or the carriage of goods in any ship, or any claim in tort in respect of goods carried in any ship, and to all claims for damage to ships whether by collision or otherwise, and also, if the parties agree, to claims of higher amount referring to all the above claims except those for damage. It provides, too, that the judge may be assisted by two mercantile assessors. (See also BANKRUPTCY in this Supplement.)

**CUSTOMS.** The 32 & 33 Vict. c. 161 empowers the commissioners of customs to dispense with the attendance of the master of a vessel at the Custom-house to verify the contents of his ship, and to accept a like declaration from any person authorised by the master in writing under his hand, to make it on his behalf. See **TARIFF** for list of duties abolished and altered.

**DEBENTURES.** [STOCKS.]

**DEBT, imprisonment for,** is abolished in England by 32 & 33 Vict. c. 62, except in the case of fraud or contempt of court.

See also 32 & 33 Vict. c. 83 for winding up the business of the late Insolvent Debtors' Court.

**DEBTS.** The Act 32 & 33 Vict. c. 45 abolishes the distinction between specialty and simple contract debts of a deceased person in England and Ireland. We quote the enactment:

*'All specialty and simple contract debts of deceased persons to stand in equal degree after January 1, 1870.—In the administration of the estate of every person who shall die on or after the first day of January, one thousand eight hundred and seventy, no debt or liability of such person shall be entitled to any priority or preference by reason merely that the same is secured by or arises under a bond, deed, or other instrument under seal, or is otherwise made or constituted a specialty debt; but all the creditors of such person, as well specially as simple contract, shall be treated as standing in equal degree, and be paid accordingly out of the assets of such deceased person, whether such assets are legal or equitable, any statute or other law to the contrary notwithstanding: Provided always, that this Act shall not prejudice or affect any lien, charge, or other security which any creditor may hold or be entitled to for the payment of his debt.'*

*Extent of Act.*—This Act shall not extend to Scotland.

**DENMARK.** See **COPENHAGEN** and **ELSINEUR** in Dictionary, edition 1869.

**DIVIDENDS.** [BANK OF ENGLAND; FUNDS.]

**DUNDEE.** For account of this port in the Dictionary, edition 1869, see **DOCKS**, sub-head *Dundee*.

**EAST INDIES.** Two Acts, passed in 1869, affect the government of India; the first (32 & 33 Vict. c. 97) enacts that vacancies in the Council of India shall be filled up by the Secretary of State; that members are in future to be appointed for 10 years, being eligible for an additional term of 5 years, and may have retiring pensions of 500*l.* a year after 10 years' service; and the appointments of ordinary members of the Governor General's Council and of the Councils of the Presidencies are to be made by royal warrant without the consent of the Council of India. The 32 & 33 Vict. c. 98 gives the Governor General in Council power to make laws for native subjects beyond as well as within our Indian territories.

**EAU DE COLOGNE.** The duty of customs upon all Cologne water brought into the United Kingdom is, by 32 & 33 Vict. c. 14 s. 3, fixed at 1*s.* per gallon, whether imported in flasks or otherwise. [WAREHOUSING.]

**ECUADOR.** See article **GUAYAQUIL** in Dictionary, edition 1869.

**ENGINEERS.** Colonial Legislatures have power, under 32 Vict. c. 11, to grant, after examination, certificates of qualification to persons intending to act as masters, mates, or engineers on board British ships.

**EXCISE.** See **LICENSES; TARIFF; WAREHOUSING.**

**FIRE INSURANCE.** Stamp duty on, abolished, 1869. [INSURANCE.]

**FISHL.** [OYSTERS; SALMON.]

The 32 & 33 Vict. c. 92, the Fisheries (Ireland) Act, gives the inspectors of Irish fisheries power to make by-laws as to these fisheries, and regulations as to voluntary agreements between owners of fishing vessels and their crews, and provides for the recovery of fishing boats and gear picked up at sea.

**FLOUR.** [CORN.]

**FRANCE.** The following statement of the total values of the import and export trade of France in each of the eight years ending with 1868 is extracted from the Report, dated July 1, 1869, of Mr. West, secretary of the British Embassy at Paris:—

Years	Imports	Exports
1861	97,675,130	77,050,400
1862	87,942,090	90,707,310
1863	97,055,160	105,702,580
1864	101,226,090	116,966,790
1865	105,672,240	125,535,000
1866	111,259,560	137,021,560
1867	121,660,261	135,036,400
1868	125,012,900	116,277,600

In the Dictionary, edition 1869, will be found articles on the following French ports, viz. **BORDEAUX, HAVRE, MARSEILLES, and NANTES.**

**FREGATE.** [SHIPS.]

**FUNDS.** By the 32 & 33 Vict. c. 104, holders of stock may now have their dividend warrants sent through the post. See clauses of the Act quoted under **BANK OF ENGLAND**.

**GALATZ.** New regulations of the European commission of the Danube, modifying the dues for river pilotage, and concerning towage between Isakchia and the Sulina Mouth, the anchorage in the port of Sulina, and the Seamen's Hospital there, have, with a prefatory notice of the Board of Trade of July 8, 1869, been published in the *London Gazette*.

**GLASGOW.** For an account of her docks and shipping, see article **DOCKS**, sub-head *Glasgow*, in the Dictionary, edition 1869.

**GLYCERINE** is produced through the saponification of fat oils, and is obtained in large quantities, especially from palm oil, in soap and candle manufactories. It is used in the arts by modellers, printers &c., also for preserving fruit, food &c., and in pharmaceutical preparations, both for internal use and for ointments. It is made into glycerine soap, and is also used for greasing delicate machinery.

Glycerine when treated with nitric acid becomes nitro-glycerine or glonoine oil, a highly inflammable substance, discovered by M. Sobrero in 1847, and more recently used for blasting. The carriage of this explosive material has been attended with so much danger that the Legislature have, by 32 & 33 Vict. c. 113 s. 3, prohibited, under heavy penalties, the importation and exportation of it, or of any substance having nitro-glycerine in any form as one of its component parts. Sec. 4 provides that the manufacture, sale, and carriage of it in the United Kingdom are to be regulated by license by one of her Majesty's Secretaries of State; sec. 5 provides that persons having any in their possession at the passing of the Act must give notice to the Secretary of State; and sec. 6 enacts that nitro-glycerine may be searched for in the same way as gunpowder, under 25 & 24 Vict. c. 139.

For a fuller notice of glycerine, and nitro-glycerine, reference is made to *Ure's Dictionary of Manufactures* by Hunt.

**WHEAT TRADE.** Mr. (exchequer) carried out WHEAT TARIFF &c. June 1, 1869, by 32 & duties ceased on the and flour, and articles

pease, beans, maize or ar or bigg, wheat meal meal and groats, rye bean meal, maize or wheat meal, meal not described, arrowroot, l bread, cassava powder, manna croup, air, powder perfumed, mended or described, purpose as starch, rice ma, starch, starch gum locca, vermicelli.

The Admiralty jurisdiction is extended by 32 & is not exceeding 300*l.* hire of any ship, or ship, or any claim in ed in any ship, and to ships whether by collision if the parties agree, to referring to all the for damage. It pro- may be assisted by two also BANKRUPTCY in

**GREAT GRIMSBY.** For an account of this port see article *Docks*, sub-head *Grimsby*, in the Dictionary, edition 1869.

**GREECE.** See articles *IONIAN ISLANDS*, *PATRAS*, and *SYRA* in the Dictionary, edition 1869.

**GROATS.** [*OATS AND OATMEAL.*]

**HACKNEY CARRIAGES.** The 32 & 33 Vict. c. 14 s. 17 (to operate from January 1, 1870) repealed the duties on licenses to keep, use, and let hackney carriages within the limits of the metropolitan district and the City of London, and also the weekly duties payable in respect of such hackney carriages; the duties on licenses to keep, use, and employ stage carriages in Great Britain, and also the mileage duty payable in respect of such stage carriages. [*CARRIAGES; HORSES.*]

**HAIR POWDER.** [*POWDER.*]

**HAYTI.** [*PORT AU PRINCE* in Dictionary.]

**HOLLAND.** [*See AMSTERDAM* in this Supplement, and *AMSTERDAM; BATAVIA; ROTTERDAM*; in the Dictionary, edition 1869.]

**HORSES.** The duties on licenses to be taken out by persons who shall let horses for hire in Great Britain, and the duties on licenses to let to hire horses for travelling post by the mile, or from stage to stage, in Ireland, were repealed, from January 1, 1870, by 32 & 33 Vict. c. 11 s. 17; and the same Act imposes a license duty of 10s. 6d. after that date for every horse or mule kept in Great Britain and used for draught or riding.

**HUDSON'S BAY COMPANY.** The Canada Rupert's Land Loan Act, 32 & 33 Vict. c. 101, guarantees a loan to be raised by the Government of Canada for payment of 300,000*l.* to the Hudson's Bay Company for the surrender of Rupert's Land to the Dominion of Canada.

**HULL.** For an account of her docks, shipping, &c., see article *Docks*, sub-head *Hull*, in the Dictionary, edition 1869.

**IMPORTS AND EXPORTS.** (See pp. 9, 10, and 11 of this Supplement.)

**INDIA.** [*EAST INDIES.*]

**INDIAN CORN.** [*MAIZE.*]

**INSURANCE.** On June 25, 1869, the stamp duty at the rate of 1s. 6d. per cent. per annum on insurances against loss or damage by fire ceased in terms of sec. 12 of 32 & 33 Vict. c. 11.

**ITALY.** Embodied in the Report of January 30, 1869, by Mr. Herries, our Secretary of Legation at Florence, is the following table, showing the extent of the navigation for 1867 in each of the maritime districts into which the coasts of the kingdom of Italy are divided:—

Maritime Districts	Entered inwards		Cleared outwards	
	Foreign Trade		Coasting Trade	
	Ships	Tons	Ships	Tons
Genoa	5,663	1,299,905	18,657	1,557,577
Messina	4,219	953,165	15,837	1,025,600
Leghorn	2,811	615,661	17,211	1,257,219

Imperia	1,567	816,670	6,118	125,821
Laeta	92	8,593	3,557	108,212
Total	12,657	6,926,211	169,219	9,361,089

See articles *CIVITA VECCHIA*, *GALLIPOLI*, *GENOA*,

*LEGHORN*, *MESSINA*, *NAPLES*, *PALEOMO*, and *VENICE*, in Dictionary, edition 1869.

**LEITH.** For an account of this port see article *Docks* in the Dictionary, edition 1869, sub-head *Leith*.

**LICENSES.** The 32 & 33 Vict. c. 11 s. 17 (to operate from January 1, 1870) repealed—

The duties on licenses to keep, use, and let hackney carriages within the limits of the Metropolitan district and the City of London, and also the weekly duties payable in respect of such hackney carriages.

The duties on licenses to keep, use, and employ stage carriages in Great Britain, and also the mileage duty payable in respect of such stage carriages. [*CARRIAGES; HORSES.*]

The excise licenses for selling tea, coffee, cocoa nuts, chocolate, or pepper.

The duties on licenses to be taken out by persons who shall let horses for hire in Great Britain; and the duties on licenses to let to hire horses for the purpose of travelling post by the mile, or from stage to stage, in Ireland; and the same Act imposes a license duty of 10s. 6d. after that date for every horse or mule kept in Great Britain and used for draught or riding, as well as other license duties for male servants, carriages, and armorial bearings.

**LIGHTHOUSE.** The 32 & 33 Vict. c. 77 provides for the erection of a lighthouse on the Great Basses Rock in Ceylon.

**LIQUEURS, BRITISH.** [*WAREHOUSING.*]

**LIVERPOOL.** For an account of her port, docks &c., see article *Docks*, sub-head *Liverpool*, in Dictionary, edition 1869.

**LONDON.** For a description of the various docks on the Thames, see article *Docks* in the Dictionary.

**MACCARONI.** Customs' duty on, repealed, 1869.

**MAIZE or INDIAN CORN, and MEAL.** Customs' duty on, repealed, 1869.

**MALT.** Extracts and essences or other concentrations of malt may now be imported into the United Kingdom, in transit or to be warehoused for exportation only, under 32 & 33 Vict. c. 11 s. 3. [*ALE AND BEER.*]

**MANDIOCA FLOUR.** Customs' duty on, repealed, 1869.

**MANILLA.** The Board of Trade gave notice (July 5, 1869) in the *London Gazette*, that the Spanish Government has issued two decrees, of which translations are published, the one reforming the customs' duties in the Philippines, and the other relating to the introduction and repairs of vessels in those islands.

**MANNA CROUP.** Customs' duty on, repealed, 1869.

**MASTERS.** Colonial Legislatures have, under 32 Vict. c. 11, power to grant, after examination, certificates of qualification to persons intending to act as masters, mates, or engineers, on board British ships.

**MATES.** [*MASTERS.*]

**MEAL, of all kinds.** Customs' duty on, repealed, 1869.

**MECKLENBURG.** See article *Rostock*, in Dictionary, edition 1869.

**METHYLATED SPIRIT.** The 32 & 33 Vict. c. 103 explains the 18 & 19 Vict. c. 33 as to the excess or deficiency in the stocks of makers of this spirit which would be forfeited or charged with duty under this Act.

**MEXICO.** See articles *ACAPULCO*, and *VERA CRUZ*, in Dictionary, edition 1869.

**MOROCCO.** See article **MOGADORE**, in Dictionary, edition 1869.

**MUM.** [**ALE AND BEER.**]

**NEWCASTLE.** For an account of this port see the article **Docks** in the Dictionary, sub-head *Newcastle*.

**NITRO-GLYCERINE.** On account of its dangerously explosive nature, its importation and exportation have been forbidden by 32 & 33 Vict. c. 113 s. 3. [**GLYCERINE.**]

**NORWAY.** See articles **BERGEN** and **CHRISTIANIA**, in the Dictionary, edition 1869.

**OATS** and **OATMEAL**, and **GROATS.** Customs' duty on, repealed, 1869.

**OYSTERS.** Power to make oyster beds, on written license of the inspectors of Irish fisheries, is granted to certain persons by 32 & 33 Vict. c. 92.

**PARTNERSHIPS.** The 32 & 33 Vict. c. 39, passed 1869, is for regulating the proceedings of companies for working mines in the stannaries of Devon or Cornwall, and refers to the calls, accounts &c. connected with them.

**PEASE**, and **PEA MEAL.** Customs' duty on, repealed, 1869.

**PEPPER.** [**LICENSES; TEA.**]

**PORTUGAL.** See separate articles in the Dictionary, edition 1869, on **LISSON**, **MACAO**, and **OPOTRO**.

**POTATO FLOUR.** Customs' duty on, repealed, 1869.

**POWDER.** Hair, powder perfumed, and any powder suitable for starch, Customs' duty on import of and assessed tax on the use of both, abolished, 1869.

**PRUSSIA.** See separate articles in the Dictionary, edition 1869, on the undermentioned Prussian ports, viz. **DANTZIG**, **KÖNIGS-BERG**, **MEMEL**, and **STETTIN**.

**RAILWAYS.** The 32 & 33 Vict. c. 6 (Railways Companies Meetings Act 1869) repeals so much of the Regulation of Railways Act of 1868 as relates to the approval, by meeting of incorporated Railway Companies, of bills and certificates for conferring further powers on those companies. The Railways Abandonment Act of 1869 (32 & 33 Vict. c. 111) makes special provision for the abandonment of Railways and the dissolution of Railway Companies.

By the Telegraphs Act of 1869 it would appear that the estimated cost to the public of buying the interest of our Railway Companies in telegraphic business will not exceed 700,000*l.* The interest of the Telegraph Companies will cost a much larger sum.

According to the *Railway News*, the traffic receipts of the railways of the United Kingdom on a mileage of 13,544 amount to 815,736*l.*, or 60*l.* 5*s.* per mile for the week ended October 29, 1869; and for the corresponding week of 1868 the receipts were 789,968*l.* on 13,335 miles, or 59*l.* 5*s.* per mile.

**RICE.** [**BANGKOK.**]

**RICE DUST** and **MEAL.** Customs' duty on, repealed, 1869.

**REPERF'S LAND.** [**COLONIES; HUDSON'S BAY COMPANY.**]

**RUSSIA.** See separate articles **ARCHANGEL**, **ODESSA**, **PETERSBURG**, **RIGA**, **TAGANROG**, in the Dictionary, edition 1869.

**RYE** and **RYE MEAL**, and **FLOUR.** Duty on, repealed, 1869.

**SAGO.** Customs' duty on, repealed, 1869.

**SALMON.** The appointment by the Lord Lieutenant of 2 inspectors of salmon fisheries in

Ireland is sanctioned by the 32 Vict. c. 9, and certain powers are conferred on them by 32 & 33 Vict. c. 92.

**SALT.** [**SPAIN.**]

**SALVADOR.** [**TALLOW.**]

**SEA BIRDS.** An Act, 32 & 33 Vict. c. 17, has been passed for the preservation of sea birds during the breeding season, April 1 to August 1.

**SEAMEN.** The Seamen's Clothing Act of 32 & 33 Vict. c. 57, for the protection of seamen's clothing and property, refers exclusively to seamen belonging to her Majesty's navy, or borne on the books of any of her Majesty's ships in commission, or any hired vessels in her Majesty's service in time of war.

**SEEDS.** In consequence of the growing practice of adulterating seeds, the Government have, by 32 & 33 Vict. c. 112 (coming into force on May 1, 1870), imposed penalties, not exceeding 5*l.* for the first, and 50*l.* for any subsequent offence, on every person who, with intent to defraud, or to enable another person to defraud—

1. 'Kills or causes to be killed any seeds' (destroying by artificial means their vitality or germinating power);

2. 'Dyes or causes to be dyed any seeds' (giving to them, by any process of colouring, dyeing, sulphur-smoking, or other artificial means, the appearance of seeds of another kind);

3. Sells or causes to be sold any killed or dyed seeds.

**SEIGNORAGE.** [**CORNS.**]

**SEMOLINA.** Customs' duty on, repealed, 1869.

**SHANGHAI.** (See Table, p. 13 of this supplement.)

**SHIPS, SHIPPING.** The Merchant Shipping Colonial Act of 1869 places the regulation of our colonial coasting trade under the Colonial Legislatures, and empowers them to grant, after due examination, certificates of qualification to persons intending to act as masters, mates, or engineers on board British ships.

By 32 and 33 Vict. c. 51, the Admiralty jurisdiction of the County Courts is extended to any claims not exceeding 300*l.* each, relating to the use or hire of any ship, or the carriage of goods in any ship, or any claim in tort in respect of goods carried in any ship, and to all claims for damage to ships whether by collision or otherwise, and also, if the parties agree, to claims of higher amount referring to all the above claims except those for damage. It provides, too, that the judge may be assisted by two mercantile assessors.

**SIAM.** [**BANGKOK.**]

**SLAVES** and **SLAVE TRADE.** The good feeling that formerly existed between Brazil and this country having been sensibly weakened by our mode of carrying out, under 8 & 9 Vict. c. 122, a convention between the two countries for the final abolition of the African Slave Trade, this Act has been repealed by the 32 Vict. c. 2, on the ground that the circumstances which led to the passing of the first-mentioned Act no longer exist, by reason of the cessation of the importation of slaves into Brazil from Africa. See **ZANZIBAR** for notice of jurisdiction in slave trade cases given by 32 & 33 Vict. c. 75 to British consul there.

**SOUTHAMPTON.** See, for account of this port, article **Docks**, sub-head *Southampton*, in Dictionary, edition 1869.

**SOUTH SHIELDS.** See article **Docks** in Dictionary, edition 1869.

**SPAIN.** As intimated by Board of Trade notices of July 28 and August 25, 1869, the Spanish Government have abolished their mo-

y the 32 Viet. c. 9, and  
rred on them by 32 & 33

EXPORATION TARIFF.

Lumps of cork, or cork sheets from the province of Sierra

Old rags of linen, cotton, or hemp, and other second hand articles of the same materials

Galena (sulphate of lead)

Argentiferous lead ores

litharge

napoly of salt after January 1, 1870. A new Spanish Customs Tariff of import duties &c. came into operation on August 1, 1869; and the prefixed are its chief features. (See pp. 13-15 of this Supplement.) [ALICANTE; MANILLA.]

SPIRITS. [EAU DE COLOGNE; METHYLATED SPIRIT; WAREHOUSING.]

SPRUCE. [ALE AND BEER.]

STARCH, and GUM OF, TORRIFIED OR CALCINED. Customs' duty on, repealed, 1863.

STOCKS. The Com. Law's Clauses Amendment

Act of 1869 removes certain limitations on the interest to be paid on debenture stock, and gives facilities for borrowing money to meet debentures falling due, and for issuing shares or stock at discount. See also BANK OF ENGLAND, for facilities now given to holders of Government stock for receipt of their dividends.

SUEZ CANAL. M. de Lesseps having brought his great work well nigh to completion, the canal was formally opened on Wednesday, November 17, 1869, and fleets from the Mediterranean and the Gulf of Suez met and saluted on Lake Timsah. The length of the canal from Port Said on the Mediterranean to Suez is about 87 miles, the major part lying within the Menzaleh, Ballah, Timsah, and Bitter Lakes.

The surface or waterline width of the maritime canal is for the most part 328 feet, a reduced width of 196 feet being adopted for cuttings where the channel traverses certain elevations. The depth of water will be 26 feet.

Until it be in thorough working order and completely at the service of commerce, and has stood the test of use by practical seamen for a year or two, it would be premature to pronounce the canal a complete success, or to attempt any precise calculation of the saving to be effected by the adoption of this route to India in lieu of that by the Cape. But when it is recollected that the length of voyage from this country to Bombay via Suez is little more than 6,000 miles, while that by the Cape is nearly 10,000, the economy in navigation to be effected by an efficient canal, with moderate tolls, between Port Said and Suez, must be very great.

The passing tolls, as fixed for the present, seem to be moderate for passengers at ten francs per head, and somewhat heavy on shipping at ten francs per ton measurement. This charge is exclusive, 1. Of pilotage, which varies with the ships' draft of water; 2. Of towage, which is two francs per ton, and is exclusive also of port charges if a vessel passing through chances to touch at any of the three ports, viz. Port Said, Ismailia, in Lake Timsah, or opposite the new embankment near Suez. The charge for berthing and anchoring at any of these after twenty-four hours' stay is five centimes per ton per day.

For a history and description of the canal, and of the operations requisite to complete it, we beg to refer to two articles by Captain Clerk in the numbers of the *Fortnightly Review* for January and February 1869; the 20th number of *Engineering*, November 25, 1869; and the Notice to Mariners in the *London Gazette*, December 17, 1869. The last, embodying the information received from Commander G. S. Nares, of H. M. surveying vessel *Newport*, which passed through at the opening of the canal, describes shortly the outer anchorage, approach to, lights, and harbour of Port Said; the current off the coast, and in the canal at the north end; the depth of water at various points (18 ft. being the minimum, and 29 the maximum); the lights at the entrance of Suez Lagoon; the Suez dock; the tidal influence at the Suez end of the canal; the effect of sand drifts, &c. Commander Nares states that a single ship could pass through in from 14 to 16 hours, but that it is impossible to carry a train of large ships through in one day.

SWEDEN. See articles GOTTEBURG and STOCKHOLM, in Dictionary, edition 1869.

TALLOW. By Board of Trade notice of July 5, 1869, it would appear that the Government of Salvador has abolished the duty of 20 per cent. hitherto levied upon leaf and cake tallow.

**TAPIOCA.** Customs' duty on, repealed, 1869.  
**TARIFF.** The 32 & 33 Vict. c. 14 abolishes the Customs' duties on corn, grain, meal and flour, and articles of the like character (for list of them see Conn.). It provides that the Customs' duty on Eau de Cologne shall be 14s. per gallon, whether imported in flasks or otherwise. It admits extracts and essences of malt in transit or to be warehoused for exportation only, and alters the Customs' duties on beer and ale. [ALE.]

The same Act abolishes the excise licenses for selling tea, coffee, chocolate &c., and for letting horses and hackney carriages for hire, the stamp duty of 1s. 6d. per cent. per annum on the insurance, and assessed tax for hair powder, and substitutes licenses for assessed taxes on male servants, carriages, horses and mules, and armorial bearings. [SPAIN.]

**TEA.** The duty on licenses for trading in or selling tea, coffee, cocoa nuts, chocolate, or pepper, abolished from July 5, 1869, by 32 & 33 Vict. c. 14.

**TELEGRAPHS.** The Telegraph Act of 1868 has been amended by the 32 & 33 Vict. c. 73, which, after defining a *telegraph* as 'any apparatus for transmitting messages or other communications by means of electric signals,' and a *telegram* as 'any message or other communication transmitted or intended for transmission by a telegraph,' gives the Postmaster General the exclusive privilege, with certain exceptions, of sending messages; with power to purchase undertakings of telegraph companies within the United Kingdom; to transmit and make arrangements for foreign messages, and to raise 7,000,000, on terminable annuities. Annual accounts, and copies of all regulations, in relation to the Government Telegraphic system, are to be laid before Parliament, and messages are to be deemed post letters in the meaning of the Act 1 Vict. c. 36. [RAILWAYS.]

**TIMBER.** An export duty of 1 cent per cubic foot has been imposed by the Costa Rican Government on timber the natural production of Limon on the Atlantic. See Board of Trade notice of June 17, 1869.

*Estimated Import of Wood into the United Kingdom in 1869, from Messrs. Churchill & Sim's Circular of January 4, 1870.*

	Loads
Colonial Sawm Wood (Deals, Battens &c.)	735,000
Heven " (Timber and Hardwoods)	457,000
Foreign Sawm " (Deals, Battens, Boards &c.)	1,516,000
Heven " (Timber and Hardwoods)	780,000
Colonial and Foreign Staves	62,000
Total	3,566,000

**TRADERS.** See, for definition of a trader, the article BANKRUPTCY in this Supplement.

**TREATIES.** In this article in the Dictionary, edition 1869, under the sub-head *Japan*, it should have been stated that a summary of our treaty with the Emperor of Japan of August 26, 1858, would be found embodied in the article on NAGASAKI.

**TURKEY.** See articles in Dictionary, edition 1869, viz. CONSTANTINOPLE, SALONICA, SMYRNA, and TRENIZOND.

**TYNE.** See article DOCKS, in Dictionary, edition 1869.

**VERMICELLI.** Customs' duty on, repealed, 1869.

**WAREHOUSING.** The Customs and Excise Warehousing Act of 1869 (32 & 33 Vict. c. 103) after explaining the terms 'foreign spirits,' 'wine,' and 'British spirits,' and distinguishing 'Excise warehouses' from 'Customs warehouses' provides, by clause 4, for the warehousing of foreign spirits, and wine in bond in Excise warehouses, and for the moving the same from one Customs or Excise warehouse to another, or for exportation or for ships' stores, or on payment of customs for home consumption.

The following is a new scale of charges on delivery of goods for home consumption, the old scale having been repealed, viz. :—

*Scale of Charges on Delivery of Goods for Home Consumption from Customs and Excise Warehouses.*—There shall be charged upon the goods hereinafter mentioned upon the delivery of the same for home consumption from any customs or excise warehouse, in addition to the duties of customs or excise payable in respect of such goods, and any other charges thereon, the rate following for every full sum of one hundred pounds, and in proportion for any fractional part of one hundred pounds of the amount of such duties, namely :—

*For Goods liable to Duties of Customs.*

In respect of tobacco	£ s. d.
In respect of other goods	0 2 6
	0 5 0

*For Goods liable to Duties of Excise.*

In respect of British compounded spirits	£ s. d.
	0 5 0

and such rates shall be deemed to be duties of customs or excise according as the same become payable in respect of goods delivered from a customs or excise warehouse.

Clause 13 makes special provision for the warehousing and testing of British liquors, whereof the strength cannot be ascertained by the hydrometer.

**WHEAT.** Duty on, repealed, 1869.  
**WINE.** The Wine and Beerhouse Act of 1869 transfers the granting or renewing of licenses for the sale, by retail, of beer, cider, or wine, and the regulation of refreshment houses, from the Excise to the justices at their licensing meetings. [ALE AND BEER.]

See also, under WAREHOUSING, the provisions of the Customs and Excise Warehousing Act of 1869, for the warehousing of foreign wine in Customs or Excise warehouses, and moving the same from one to the other, for exportation, or as ships' stores, or for home consumption.

**ZANZIBAR.** By the Slave Trade Jurisdiction (Zanzibar) Act of 1869, the British consul at Zanzibar is granted such jurisdiction as ordinarily belongs to our Colonial Vice-Admiralty Courts in regard to vessels captured on suspicion of being engaged in or equipped for the slave trade, in the following cases, viz. :—

1. When a Zanzibar vessel shall have been captured, in pursuance of any treaty with the Sultan of Zanzibar, either within or beyond the dominions of Zanzibar; and

2. When the vessel captured shall not be entitled to claim the protection of the flag of any state or nation.

ZANZIBAR

ACT. The Customs and Excise Act of 1869 (32 & 33 Vict. c. 103), the terms 'foreign spirits,' 'British spirits,' and distinguishing 'duties' from 'Customs warehouses,' and section 4, for the warehousing of foreign goods in bond in Excise warehouses, and the same from one Customs or Excise warehouse to another, or for exportation, or on payment of customs for home consumption.

As a new scale of charges on goods for home consumption, the old scale is repealed, viz. :—

*On Delivery of Goods for Home Consumption from Customs and Excise Warehouses.*

There shall be charged upon the goods when delivered upon the delivery of the goods from any customs or Excise warehouse, in addition to the duties of customs payable in respect of such goods, other charges thereon, the rates of which shall be the full sum of one hundred shillings for any fractional part exceeding one shilling of the amount of such goods.

*Table to Duties of Customs.*

per cwt.	£	s.	d.
0	0	2	6
100	0	5	0

*Table to Duties of Excise.*

per gallon of compounded spirits	£	s.	d.
	0	5	0

shall be deemed to be duties of customs according as the same become duties of goods delivered from a customs warehouse.

There is a special provision for the testing of British liquors, the amount of which cannot be ascertained by analysis.

Act, repealed, 1869.

The Licensing and Beerhouse Act of 1869 (32 & 33 Vict. c. 103) relating to the issuing or renewing of licenses for the sale of beer, cider, or wine, and the licensing of houses, from the Excise, and their licensing meetings. [Act.]

WAREHOUSING, the provisions of the Customs and Excise Warehousing Act of 1869 (32 & 33 Vict. c. 103) relating to the warehousing of foreign wine in bond in Excise warehouses, and moving the same from one warehouse to another, for exportation, or for home consumption.

By the Slave Trade Jurisdiction Act of 1869, the British consul at Zanzibar shall have such jurisdiction as ordinarily belongs to the consular Vice-Admiralty Courts in relation to vessels captured on suspicion of being employed for the slave trade, in the same manner as if they were British vessels.

Any vessel shall have been captured under the provisions of any treaty with the Sultan of Zanzibar within or beyond the dominions of the Sultan.

No vessel captured shall not be entitled to the protection of the flag of any state or
