**Opening of the Trade.**—But after the trade to China had been thrown open, and the late events in that empire had brought English, French, and American squadrons to the gates, as it were, of Japan, it was not to be expected that its rulers

would be able much longer to maintain the jealous, anti-social policy. The occurrences made them aware of the power, and to some degree, also, of the policy of those with which they had now to deal. In 1853, when the

can squadron under Commodore Perry appeared in their waters, they were fain to allow them to take in water and other stores; and in the following year, when they revisited their shores, they concluded a treaty with them (called, from the place where it was signed, the treaty of Kanagawa), in the 21st Art. of which it is stipulated that citizens of the United States resorting to the ports of Japan opened to them by the treaty, and bringing with them gold and silver coins and goods, were to be permitted to exchange them for other goods under such regulations as the Japanese Government might think fit to establish. Soon after this treaty had been negotiated, Sir James Stirling, who then commanded the English naval forces in these parts, entered into a similar, though less liberal, arrangement with the Government of Japan. The concessions that had thus been made, coupled with the circumstances connected with the late proceedings of the English, French, and other foreigners in China, paved the way for others of a still more extensive character. And, at length, in 1858, the system of exclusion was wholly abandoned, and a free commercial policy established in its stead. This great change was effected by the British plenipotentiary, the Earl of Elgin. Having negotiated a new and comparatively liberal commercial treaty with China, and there completed his mission, by inducing the Japanese Government to enter into the well-considered treaty, an abstract of which is subjoined. Similar treaties have since been concluded with the Americans and the Dutch. It is to be hoped that these remarkable events may be as advantageous to those whose markets are now open to the products of this and other countries as they can hardly fail to be to ourselves. But much circumspection will be necessary. And we would fain hope that the pioneers at least of British enterprise in this new and peculiar region may be distinguished by their good faith, and by their respect for the prejudices of the very singular and suspicious people with whom they will have to transact business.

We regret to observe that the importation of opium is prohibited by the new treaty. The taste for it is understood to have made considerable progress in Japan, and, if so, the prohibition will serve no good purpose, and will merely give a stimulus to smuggling.

The annexed tables exhibit the nature and extent of the trade carried on with the Japanese lands. Considerable quantities of silk and tea were exported from Japan, but our share in this part of the trade, which had fallen off between 1853 and 1867, is again increasing. The islanders export various textile fabrics. As is constantly the case when a new trade is opened with any country, particularly with a country where previous isolation was so singular, the probable extent of the trade have been exaggerated.

Some of the difficulties of Japanese trade are, derived from the testimonies of Mr. Fortune and Mr. R. Alcock, caused by the political system which prevails in the island. The empire of Japan has two sovereigns; one is the Mikado, who is supposed to be descended from the gods, who, in former times, was, for some centuries, the sole and the emperor, has, for some centuries, been deprived of all real authority. The other is the Yaeon, who occupies much the same place as the mayors of the palace did to the ancient emperors of France. Even he, however, is entirely restrained in the exercise of his political powers, and the council, selected from the chief nobles or insular princes, is practically the government of the country. These daimios, however,

are, besides being a House of Peers or privy councillors, resident compulsorily for a certain portion of the year in Yedo, a body of chieftains, who exercise an influence very like that of the feudal princes of mediæval France and Germany, and are haughty, contemptuous to foreigners, and suspicious of change. These daimios support great crowds of retainers, who are ready for every deed of violence. Below them are the merchants (held by the daimios and their dependants in great contempt), and the artisans and craftsmen. Partly from habit, and partly from a fear that the intercourse with foreigners would lead to serious political and social innovations, the daimios have been hitherto, as a rule, unfriendly to foreign trade. It appears, however, that latterly wiser counsels have prevailed, and some of the chief princes have been sending Japanese youths to Europe for the benefit of a foreign education and foreign experience.

Again, it does not appear that there is any great variety of products which the Japanese could offer for trade with the Old World. Silk and tea wax are exported. Though our trade with Japan as a whole does not seem to increase very rapidly, the value of our exports to Japan very recently rose from 108,897*l.* in 1863 to 1,576,794*l.* in 1865, and that of our total exports exceeded a million and a half in each of the years 1866 and 1867.

According to Sir R. Alcock, the commercial character of the Japanese merchants is very low. They are, says this authority, the most dishonest and tricky of Easterns, and are continually attempting frauds. Thus they will sell bales of silk, the inner worthless or very inferior; or, the inner seem to be full of good quality, the outer turns apparently full of camphor, but are half full of rice, with a thin layer of the drug on the surface; water, and similarly fraudulent actions. They have, in short, hardly learnt the first principles of honesty in trade.

*Summary of the Treaty between her Britannic Majesty and the Emperor of Japan. Signed at Yedo, August 26, 1858.*

Art. I. Stipulates for peace and friendship.  
Art. II. Stipulates for the reciprocal right to appoint a diplomatic agent at Yedo and London, and consular agents at the open ports. The British diplomatic agent and consul-general may travel to any part of Japan, and the Japanese diplomatic agent and consul-general to any part of Great Britain.  
Art. III. The ports and towns of Hakodadi, Kanagawa, and Nagasaki to be open to British subjects on July 1, 1859. Nec-e-gata, or, if that is unsuitable as a harbour, some other port on the west coast of Nipon, on January 1, 1860. Hiogo on January 1, 1863. In all these places British subjects may permanently reside, and may lease ground and purchase and erect buildings, but confined by any wall or gate, and their free ingress and egress not to be impeded. The limits within which British subjects may travel are defined. The general limit is ten *ri* (each *ri* being 4,275 yards) in any direction. After January 1, 1862, British subjects may reside at Yedo, and from January 1, 1863, in Osaka, for purposes of trade only. In each of these cities a suitable district for their residence, and the distance to which they may go, shall be arranged by the British diplomatic agent for the Japanese Government.  
Art. IV. All questions arising between British

subjects in the Japanese dominions shall be under the jurisdiction of the British authorities.

Art. V. Japanese guilty of any criminal act towards British subjects shall be punished by the Japanese authorities. British subjects who may commit any crime against Japanese, or other foreigners, shall be punished by the British authorities, according to British law.

Art. VI. Mode of settling complaints of British against Japanese, or of Japanese against British.

Art. VII. The authorities on either side are to do their best to enforce recovery of debts due by their own people to those of the other nation, without, however, being responsible for payment.

Art. VIII. The Japanese Government will place no restriction upon the lawful employment of Japanese by British subjects.

Art. IX. British subjects to have free exercise of their religion in Japan, and may erect places of worship.

Art. X. Foreign coin to be current in Japan; the value to be determined by weight. Coin (except Japanese copper coin), and foreign gold and silver, may be exported.

Art. XI. Supplies for the British navy may be landed and stored at Kanagawa, Hakodadi, and Nagasaki, free from duty; but, if any are sold, the purchaser must pay the proper duty.

Art. XII. If any British vessel be wrecked on the coast of Japan, the Japanese authorities shall render assistance to vessel and crew, and send the latter, if necessary, to the nearest consular station.

Art. XIII. British merchant-vessels may employ a pilot to take them in or out of port.

Art. XIV. At each of the open ports, British subjects may import and export, directly or indirectly, any lawful merchandise, paying the duties prescribed by the treaty. With the exception of munitions of war, which shall be sold to the Japanese Government alone, they may freely buy from, and sell to, Japanese any articles they may have for sale; and Japanese may buy and use the same.

Art. XV. Mode of determining the value of goods imported.

Art. XVI. All goods imported into Japan by British subjects, which have paid the import duty, may be transported by the Japanese to any part of the empire without any further duty.

Art. XVII. British merchants who have imported merchandise, and paid the duty, shall be entitled to a certificate of the payment, and may then re-export it, and land it in any other port without any additional duty.

Art. XVIII. The Japanese authorities at each port shall adopt proper means to prevent smuggling.

Art. XIX. All penalties and confiscations made under the treaty shall belong to the Tycoon of Japan.

Art. XX. The articles for regulation of trade appended to the treaty are to be considered as part of it, and equally binding. The British diplomatic agent, in conjunction with the Japanese Government, may make such rules as may be necessary for carrying out both treaty and articles.

Art. XXI. The treaty being signed in English, Japanese, and Dutch, the Dutch text shall be considered the original. All official communications from British diplomatic and consular agents to be written in English, but, for a period of five years, to be accompanied by a Dutch or Japanese translation.

Art. XXII. Either party may demand a revision of the treaty on or after July 1, 1872.

Art. XXIII. The British Government and British subjects shall be entitled to equal participation in all advantages granted, or hereafter granted, in Japan to the Government and subjects of any other nation.

Art. XXIV. Ratifications to be exchanged within a year.

#### Regulations for British Trade.

Regulation I. The captain of a vessel is to exhibit to the Japanese authorities, within 48 hours of his arrival (Sunday excepted), proof that he has deposited his ship's papers at the British consulate, and shall then make entry of his ship's writing, and deposit a written manifest of his cargo, stating who are the consignees, and adding a list of his stores. Any error may be corrected within 24 hours without fee; afterwards 15 dollars must be paid. Any goods not entered in a manifest will pay double duty. Any captain neglecting to enter his ship within the time prescribed shall pay a penalty of 60 dollars a day.

Reg. II. Japanese custom-house officers may be placed on board any ship in port, except ships of war. No goods to be unladen between sunset and sunrise. Hatches may be secured by the Japanese officers, and any person breaking the fastenings shall pay a fine of 60 dollars for each offence. Any goods discharged from a ship without having been duly entered, shall be liable to confiscation. Packages with goods of value fraudulently concealed, and not mentioned in the invoice, shall be forfeited. If any British ship is engaged in smuggling, she shall pay a fine of 1,000 dollars and the goods shall be forfeited. Vessels needing repairs may land their cargo without payment of duty, under supervision of the Japanese authorities. If any part be sold, duty to be paid thereon. Cargo may be transhipped from one vessel to another, under supervision, and on proof of the true nature of the transaction, importation of opium being prohibited, if any British vessel more than 3 cattie weight on board, the same quantity may be seized and destroyed, and any person smuggling opium shall be liable to a fine of 15 dollars a catty.

Reg. III. Mode of entering goods by the importer or consignee. The entry is to state the name of the enterer, and of the ship, the marks, contents, and value of each package. The original invoice to be presented to the Japanese custom-house. The Japanese officers may examine the packages, but without expense or unreasonable delay. The importer or owner should find that his packages have been damaged on the voyage, he may apply to the custom-house, and have the damage appraised, so as to make a deduction from the value of the goods. All goods intended for export must be entered at the Japanese custom-house before being shipped. Any goods shipped without having been so entered, and all packages containing prohibited articles, shall be forfeited. No cargo shall be required for supplies for ships, their passengers and crews, nor for passengers' clothing &c.

Reg. IV. Ships wishing to clear must give 24 hours' notice at the custom-house. If cleared, they may be refused, the captain or consignee, or the British consul, must be informed of the refusal. British ships of war shall not be required to clear, nor shall they be visited by customs or police. Mail steamers may be cleared on the same day, and shall not be required to deliver a manifest, except on passage to

goods to be landed in Japan. While ships touching for supplies, and ships in distress, shall not be required to deliver a manifest, unless they wish to trade.

Reg. V. Any person signing a false declaration or certificate, with intent to defraud the revenue of Japan, shall pay a fine of 125 dollars for each offence.

Reg. VI. No tonnage duties shall be levied on British ships in the ports of Japan, but the following fees shall be paid to the Japanese custom-house authorities: For the entry of a ship, 15 dollars; for the clearance of a ship, 7 dollars; for each permit, 1½ dollar; for each bill of health, 1½ dollar; for any other document, 1½ dollar.

Reg. VII. Duties shall be paid to the Japanese Government, on all goods landed in the country, according to the following tariff:—

Class 1. All articles in this class shall be free of duty: gold and silver, coined or uncoined; wearing apparel, in actual use; household furniture and printed books, not intended for sale, but the property of persons who come to reside in Japan.

Class 2. A duty of 5 per cent. shall be paid on the following articles: all articles used for the purpose of building, rigging, repairing, or fitting out of ships; whaling gear of all kinds; salted provisions of all kinds; bread and bread stuffs; living animals of all kinds; coals; timber for building houses; rice; paddy; steam machinery; fine, lead, tin, raw silk, cotton and woollen manufactures; and liquors.

Class 3. A duty of 35 per cent. shall be paid on all intoxicating liquors.

Class 4. All goods not included in any of the preceding classes, shall pay a duty of 20 per cent. All articles of Japanese production, which are exported as cargo, shall pay a duty of 5 per cent., with the exception of gold and silver coin, and copper in bars. Rice and wheat, the produce of Japan, shall not be exported from Japan as cargo; but all British subjects resident in Japan, and

British ships for their crews and passengers, shall be furnished with sufficient supplies of the same.

Foreign grain brought into any open port of Japan in a British ship, if no part thereof has been landed, may be re-exported without hindrance to time, at public auction, any surplus quantity of copper that may be produced. Five years after the opening of Kanagawa, the import and export duties shall be subject to revision, if either the British or Japanese Government desire it.

The currency of Japan (*Parliamentary Report*, August 10, 1866) is in a very singular position. It consisted, before the admission of foreigners, of gold, silver, and copper. When the treaty was signed, the gold was a coin called kobang; this, from an assay made at our Mint, contained 505.1 parts of gold, 420.8 parts of silver, and 1.1 of copper in the 1,000. Its intrinsic worth was about 18s. The silver coin was called itzeboe or ichibu, and contained 1.5 gold, 87.40 silver, 125.5 copper in the 1,000 parts. The copper coin contained 81 parts of this metal, 9 of tin, and 10 of lead. It was called tempo, and its intrinsic worth was about  $\frac{1}{10}$  of a halfpenny.

The itzeboe was reckoned as worth one-fourth only 1s. 4d. worth of silver, but it contained more than three times its true value, and the proportion of gold to silver, instead of being, as it is with the rest of the world, about 17 parts to 1, was less than 5 to 1. It is plain that these coins were merely tokens. The all coin, except copper cash, might be exported, and that, pending the reorganisation of the currency, the Japanese Government would give equal weights of their coins for all foreign coin imported.

For a full account of the negotiations on the subject, and an exact description of the coins in circulation, we would refer to the very clear and elaborate *Report* of Mr. Sidney Locoock of January 10, 1867, *On the Weights, Measures, and Currency of Japan*. (*Reports of Secretaries of Legation*, No. 5, of 1867.)

After several changes, productive of considerable inconvenience and derangement of money prices, the Japanese currency stood thus, previous to January 1, 1868:—

The reduced gold kobang = 5 d.  
The ichibu, or fourth of the above = 1 d.  
Iron cash = 1,500 to the itzeboe

In consequence of further negotiations, it was arranged that a new Japanese coinage should be issued on January 1, 1868, and French machinery has been provided, that the minting may be carried out after the European fashion. It is understood that a new circular silver coin will be issued equal to 4 ichibus, and it will replace the disappeared. (*Reports of Secretaries of Legation*, No. 5, of 1867.)

The following shipping entered the port of Nagasaki, in the years 1863, 1865, 1866, and 1867:—

Year	Entered				Cleared			
	1863	1865	1866	1867	1863	1865	1866	1867
Tonnage	561	302	216	291	233	187	190	265
Value	80,412	69,059	67,267	105,213	74,617	65,975	59,153	95,531

Of these by far the largest portion was of British origin.

Value of Exports and Imports in 1865, 1866, and 1867.

	1865	1866	1867
Exports	£123,811	£148,018	£339,779
Imports	233,466	499,250	1,181,022

Tables I.—IV. give an account of the general trade of Nagasaki in the year 1867, and of the trade between Japan and the United Kingdom in the 4 years ending with 1867. Nos. I. and II. are extracted from more detailed statements in Mr. Consul Flower's *Report* of April 15, 1868. The value of our total exports to Japan in

1867 was 1,661,347l., and of our imports from it 317,853l.

Mr. Consul Myburgh, in his *Report* of April 3, 1867, states his inability to give accounts of the trade of the ports of Kanagawa and Yokohama, as the Records were destroyed in the great fire of Nov. 26, 1844. However Mr. Consul Fletcher entered Kanagawa, of which vessels of 174,030 tons entered Kanagawa, of which the British contributed 137 of 7,039 tons.

We borrow from Mr. Locoock's *Report* the following statement as to Japanese weights and measures.

There is but one table of weights in Japan. It is a compound of the Chinese monetary and com-

mercral weights, the smaller weights being borrowed from the former, and the larger from the latter. It has been possible to effect this combination without confusion, in consequence of there being in the two Chinese scales a weight common

to both, namely, the liang or tael, equal to Japanese me or nomme. Table V. shows the weights expressed in their panese and Chinese names, with their corresponding values in English avoirdupois and troy weights.

The two lines in red in the above table represent the quantities of the principal articles imported into Japan in the year 1867, exclusive of ships sold to the Japanese.

The two lines in red in the above table represent the quantities of the principal articles exported from Japan in the year 1867.

The two lines in red in the above table represent the quantities of the principal articles imported into the Kingdom from Japan in each of the 4 years ending with 1867.

The two lines in red in the above table represent the quantities of the principal articles imported into the Kingdom from Japan in each of the 4 years ending with 1867.

The Japanese occasionally make use of the mats as a mode of measurement; the mats are invariably of the same size, viz. six shaku (feet) long by three shaku wide. A Japanese house is generally so constructed that the floor of each room can be exactly covered by a larger or smaller number of these mats which serve as a carpet.

*Solid or Liquid Measure.*—The names and proportions of the various divisions of this measure

10 sai	= 1 shiyaku (choh)	= 1.075 cubic inches
10 shiyaku	= 1 ngooi (koh)	= 11.075 " "
10 ngooi	= 1 shoo (shing)	= 110.75 " "
10 shoo	= 1 to (tan)	= 1,107.5 " "
10 to	= 1 koku	= 6,409 cubic feet

The Japanese standard measures, as well as those in common use, are rectangular, the bases being square. The exact size of the shoo which is the unit of the scale is sung 4.9 x 4.9 x 2.7. Reckoning the sung at 1.1954 inch, the shoo contains 1.1075 cubic inch, as above.

**NAILS** (Ger. *nigel*, spiker; Dutch, *spykens*; Fr. *clous*; Ital. *chiodi*, *chiovi*, *aguti*; Span. *clavos*; Russ. *gwosdi*). Small spikes of iron, brass &c., which, being driven into wood, serve to bind several pieces together, or to fasten something upon them. Nails are made in many towns and villages throughout Great Britain; but the principal seats of this useful branch of the iron manufacture are at Birmingham, Bilston, Wolverhampton, Dudley, and a small district in Derbyshire. The consumption of nails is immense; and the aggregate value of those annually produced is very large. In 1867, of iron nails, screws, and rivets, we exported 15,111 tons of the value of 329,711.

**NANKEEN** or **NANKIN** (Ger. *nanking*; Dutch, *nankings* linnen; Fr. *toile de nankin*; Ital. *nanchino*; Span. *nanquin*). A species of cotton cloth in extensive use in this country. It takes its name from Nanking, in China, a European corruption of Kyang-ning, the capital of the extensive province of Kyang-nan, where it is principally produced, and which also furnishes the greater part of the green teas. In the East, the manufacture is wholly confined to China. It was stated in the first edition of this work, on authority which should not have been trusted to, that the manufacture of nankeen was carried to great perfection in the East Indies; but, in point of fact, the manufacture is wholly unknown everywhere in the East except China. The cloth is usually of a yellowish, though occasionally it is of a blue colour, and of different degrees of fineness; the broad pieces called 'the Company's nankeens,' are generally of a better quality than the narrow ones, and are most esteemed. We produce imitation nankeens at Manchester and other places, but it must be admitted that they are inferior to the Chinese; neither lasting so long, nor holding their colour so well. The colour, whether yellow or blue, is given to the cloth by dyeing; for though yellow cotton wool be raised in the East, the cloth made from it is too glaring. The nankeens brought to England come under the general denomination of pieces goods. They are mostly made into trousers and waistcoats for gentlemen's wear during summer, ladies' pelisses &c. In some of the more southern parts of Europe, the warmer parts of Asia and America, and the British settlements in Africa, nankeen is worn by both sexes all the year round, and constitutes the principal article of attire. Latterly, however, it has become unfashionable in this country, and its importation has, in consequence, all but ceased.

**NANTES.** A large commercial city and seaport of France, on the Loire, about 84 miles from its mouth, lat. 47° 13' 6" N., long. 1° 32' 44" W. Po-

are almost entirely derived from the Chinese. Their values, however, vary, nearly in the proportion of 10:6; while the smallest Japanese measure contains 1,000 grains of millet, the corresponding Chinese measure contains but 600 grains.

The following table gives all the Japanese measures of capacity with their corresponding Chinese names and their respective values in English cubic and imperial liquid measurement:—

10 sai	= 1 shiyaku (choh)	= 1.075 cubic inches
10 shiyaku	= 1 ngooi (koh)	= 11.075 " "
10 ngooi	= 1 shoo (shing)	= 110.75 " "
10 shoo	= 1 to (tan)	= 1,107.5 " "
10 to	= 1 koku	= 6,409 cubic feet

or .5195 pints  
" " 2.195  
" " 23.918 gallons  
" " 49928 bushels

ulation, in 1862, 113,625. Vessels drawing 18 to 19 feet water come up to Paimbœuf, about 24 miles lower down the river; but no vessel, drawing more than 11 or 12 feet, can come up to the city, unless at high water a day or two before full and change.

*Entrance to the Loire.*—There are three entrances to the Loire. The first and most generally frequented is between the bank called *Le Four* and *Point Croisic*; there is a second between *Le Four* and the bank called *La Banché*; and a third, which in southerly winds is much resorted to, between the latter and the bank called *La Couronne*. The navigation, which is naturally rather difficult, has been much facilitated by the erection of lighthouses and buoys. The depth of water on the bar at the month of the river varies from 2 to 2½ fathoms. At spring tides it rises 14, and at neaps 7 feet. High water is at full and change 3½ hours.

The following is the system of lighthouses in the Loire. One erected on the *Tate* at lat. 47° 10' 38" N., long. 2° 27' 15" W., and is visible for ten miles. A second on the summit of *Point l'Arc*, lat. 47° 14' 30" N., long. 2° 16' 10" W., also red. One on *Aiguillon tower*, lat. 47° 14' 31" N., long. 2° 15' 52" W., called *d'aval*. A fourth, called *Feu d'amont*, on the *Commerce tower*, lat. 47° 15' 27" N., long. 2° 13' 50" W. This gives a flash every 2 minutes. A fifth, on *Ville-es-Martin*, lat. 47° 15' 22", long. 2° 13' 50" W., revolving every half minute, and red. A sixth, on *St. Nazaire* near north head, lat. 47° 16' 17" N., long. 2° 11' 54" W. (The last four are on the side of the river.) A seventh on *Paimbœuf*, at the extremity of the mole, lat. 47° 17' 20" N., long. 2° 2' 2" W. Besides these, three new ones are proposed; one on the *Pierre à l'œil*, and one (red) on *St. Nicolas Ile*; a third on *Mindin* point.

*Trade &c.*—Her situation renders Nantes an emporium of all the rich and extensive commerce traversed by the Loire, so that she has a considerable import and export trade, especially with the West Indies. The exports consist of various sorts of French produce, but principally of wine and vinegar, silk, woollen and linen, refined sugar, wheat, rye, and other kinds of biscuits &c. The principal imports are coffee, and other colonial products, cotton, timber, hemp &c. Nantes is a considerable port for the commerce of salt, large quantities being made in the department, principally at *Notre-Dame* and *Croisic*. It is the chief grain port of France, for in 1865-6 an average of 145,000 kilos were exported. During the time the slave trade was carried on, Nantes was more extensively engaged in it than any other French port.

The customs duties of Nantes exceed those on salt, produced in 1851 10,817,000 francs, and in 1857, 29,676,000 francs, showing an increase of trade than any other port in France. There belonged to the port, ex river craft, 100 and steamers, on December 31, 1865, 745; the aggregate burden of 134,962 tons. Nantes is the second port in France for commercial

The following were the imports of British iron into Nantes :-

Year	Wrought	Cast
1865	5,616,000	9,571,000
1861	4,381,563	8,638,016
1865	5,829,101	10,316,126
1866	4,051,938	7,695,711

His chief vessel of wrought iron is Sweden. **Pilotage.**—Vessels under 80 tons (if French or assimilated by treaty) are not obliged to take a pilot at sea, but must have one for the river. The rates, which are fixed by law, are paid by the *foot* from the sea to Paimboeuf, and *thence* to Nantes for all vessels under 80 tons. Above 80 tons, they are per ton. The master of a vessel bound to Paimboeuf or Nantes has merely to give a note to the pilot, stating where the pilot boarded him, where he left him, the name and draught of water of his vessel in *English* feet. The note will be deposited at the pilot's office, and the pilotage be received from the ship's broker. No foreign vessel (however small) can be removed from one anchorage to another, or to or from a quay, but by a pilot.

**Quarantine.**—Every vessel is boarded at St. Nazaire, and if she has a foul bill of health, or disease on board, is instructed where to go.

**River Dues** on vessels ascending from Paimboeuf to Nantes are about 1½d. per ton. At Paimboeuf, and below it, none are levied.

**Averages in the River.**—If a vessel under sail causes damage to another that is properly moored, she must pay all the expenses of repairs; if to a vessel at single anchor (unless intentionally done) or under sail, the expense of the repairs of both are added together, and each pays a moiety. The same rule is enforced if damage be caused by one vessel properly moored driving on board another in the same situation; but if either were riding at single anchor, the one properly moored is indemnified; if both were at single anchor, both bear the loss alike.

The salt trade of Nantes consists chiefly in exports to Norway, 1,426,228 kilos having been sent thither in 1866 at 15 francs the 1,000 kilos free on board. In favourable seasons, the production of salt in the department of the river Loire amounts to more than 80,000,000 kilos. Another important industry of Nantes is that of sugar-refining, nearly all the sugar produced in the island of Réunion being sent to Nantes. In 1866, 38,169,243 kilos of sugar were shipped to Nantes from the French colonies of Réunion, Guadeloupe, Martinique and Mayotte, besides 22,291,745 kilos from Spanish and British colonies. But the refinement of beetroot sugar is also on the increase, 11,688,823 kilos having been imported, carried by land to this city, making a total of 67,649,311 kilos of unrefined sugar. The largest consumers of Nantes refined sugar are the English and Italians.

The following are the importations of coffee:—

Year	kilos	Year	kilos
1863	3,719,231	1865	3,221,897
1864	2,000,767	1866	3,011,985

The chief sources of this product are the Indian possessions of England and of Spain.

The following are the importations of British lead into Nantes:—

Year	kilos	Year	kilos
1863	346,010,400	1865	240,210,400
1864	19,516,468	1866	269,751,093

**Exports.**—The following table will show the principal exportations from Nantes, St. Nazaire, and Paimboeuf, during the year 1866, with the comparative figures of the preceding year:—

*Money, Weights, and Measures* same as the rest of France. [BORDEAUX.]

*Tariff.* [TREATIES, COMMERCIAL (FRANCE).] *Taxes.*—2½ per cent. on coffee in bags; real on ditto in hhds., casks &c.; 6 per cent. on cottons; real on indigo; 17 per cent. on Brazil muscovado sugar, 12 per cent. on Martinique and Guadaloupe ditto, 13 per cent. on ditto clayel.

**NAPLES.** A large city and seaport in the south of the kingdom of Italy, and formerly the capital of the kingdom of the same name. Population in 1862, 418,968. Naples is well situated for commerce.

*Harbour.*—The bay of Naples is spacious, and is celebrated for its picturesque views. The harbour is formed by a mole, built nearly in the form of the letter L. Within the mole there are from 3 to 4 fathoms water, the ground being soft. The water in the bay is deep, and there is no bar; it is, however, a good deal exposed to the south-westerly winds; and to guard against their effects, vessels lying in the bay moor with open haws in that direction. The new breakwater now (1868) being built to the west of the harbour, will add to its security. There is no obligation to take a pilot on board, but it is usual to take one the first time that a ship anchors within the mole. There are three lights and a light vessel in the bay; one at the extremity of the mole, lat. 40° 50' 19" N., long. 14° 15' 36" E.; another on the elbow of the mole, which is revolving every two minutes, and visible for 20 miles; a third on Porto Militaire east, at the extremity of the new mole, lat. 40° 50' 2" N., long. 14° 15' 36" E. The light vessel carries green lights. The light system of the gulf of Naples is very complete.

The decimal system of coins, weights, and measures has been introduced into Naples as in the rest of the kingdom of Italy.

*Exports and Imports.*—The exports principally consist of the products of the adjacent countries. Of these, silk is the most important. Olive oil also a most important article; but it is principally supplied by Gallipoli, a town in the Terra d'Otranto, whence it is commonly called Gallipoli oil. The entire exports of oil from the kingdom of Naples have been estimated at about 200,000 salme, or 36,333 tuns a-year, which, taking the mean value when exported at 21l. per tun, equivalent to the annual sum of 762,933l. [OIL OIL.] The other articles of export are wine, brandy, dried fruits, red and white argillaceous, liquorice, gloves, madder, hemp, linseed, cream of tartar, bones, lamb and kid skins, and chestnut staves, rags, saffron &c. There is great variety in the Neapolitan wines. The most esteemed is the *lacryma Christi*, a red lucid wine, better known in England by name than reality, the first growths being confined to a small quantity only, which is chiefly reserved for royal cellars. There are, however, large quantities of second-rate wines produced in the vicinity of Naples, such as those of Pozzuoli, Ischia, &c., which are sold under the name of *lacryma Christi*, and are largely exported. Several provinces of Calabria produce sweet wines of superior quality. (Henderson's *Ancient and Modern Wines*, p. 239.) The price of wine at Naples depends entirely on the abundance of the vintage; only a small quantity comes to England. Imports consist principally of English cotton and cotton twist, hardware, iron and tin, wool,

*Account of the Principal Articles of Domestic Produce and Manufacture Exported from the Kingdom to the Two Sicilies, during each of the 3 Years ending with 1867.*

sugar, coffee, indigo, spices &c. Naples is a good market for pilchards, and it requires a large supply of dried and barreled cod.

We also exported to the Two Sicilies in the same period foreign and colonial produce of an average amount of 270,190l.

The value of our total exports to the Two Sicilies in 1867 was 2,039,427l., and of our imports, 1,607,295l. In 1866 the value of the imports into Naples was 4,807,806l., and of her exports 1,401,769l.

Stamp - - - - -	0 14
Bill of health - - - - -	2 40
Police - - - - -	0 20
Port officers - - - - -	0 60
Registering papers - - - - -	0 20
Tonnage duty at 40 gr. per ton 1800 0	1800 0
(Equal to about 21l. 17s. 4d. sterling)	151 14

**Custom-house Regulations.**—Masters of merchant-ships are bound, within 24 hours of their arrival, to furnish the custom-house with a general manifest of their cargoes, provisions, and passengers; and the master, when consignee, or the consignee, are bound, within 48 hours after the arrival of the ship, to send in a declaration or manifest in detail, of all goods on board. Should consignees omit to render the manifest in detail within 48 hours, they are subjected to a fine of 50 per cent. upon the non-specified articles. This declaration or manifest cannot be corrected after the 48 hours are elapsed; and the master or consignee is liable to a fine of 30 ducats for every article erroneously declared. This, however, is only remitted, unless there be suspicion of fraud, upon application to the director-general of the customs. The importation of gunpowder, saltpetre, and salt, though they may be for the private use, is strictly prohibited. When such articles are on board, the exact quantity of each must be specified in the manifest; and on arrival, the vessel receiving *pratique* they are taken to the custom-house, and kept till her departure, when they are restored to her. The slightest deviation from the rules with respect to these articles subjects them, and sometimes the vessel also, to detention, and the master to a heavy fine.

**Quarantine Regulations.**—The free admission, reception, or absolute refusal of a vessel arriving at the port is determined by the nature or unwholesome character of the place from which she comes. The place may be, 1. Safe. 2. Suspicious. 3. Endangered. Or, 4. Infected. In the first case, the vessel is refused admission; in the 2nd, she is admitted on a long quarantine; in the 3rd, she is received on a short quarantine; in the 4th, she is allowed free admission. If the vessel be a ship of war, her quarantine is performed in the Bay of Naples; in all other cases, her passage being allowed in the Bay of Nisita, an island about 6 miles from the city. It commences from the day of her arrival, if in ballast, or loaded with unsusceptible cargo; if otherwise, from the day of the discharge of her cargo. Vessels from Great Britain or the N. of Europe are subject to a quarantine of 8 days; but if they touch by the

way at any port in Spain or Barbary, the quarantine is lengthened to 14 days; provided, however, they have clean bills of health, they may wholly avoid the quarantine by touching at some Italian port, or at Malta, the latter being in free *pratique* with Naples. Vessels from the Ionian Islands are subject to a quarantine of 20 days. No foul lazaretto exists at Naples; but at Nisita there is a lazaretto of expurgation for vessels from suspicious or endangered districts or territories. Vessels from infected places usually go to Leghorn or Genoa, where they may unload in a lazaretto *porco*. The fees charged on ships performing quarantine are heavy. No distinction is made between national and foreign bottoms.

**Brokers, Commission &c.**—No person can legally act as a broker unless authorised by Government. All patented brokers are obliged, by way of security, to hold funded property producing 500 ducats of 'rente,' or a dividend of 83l. 6s. 8d. sterling. Many persons, however, act as brokers without being patented, but no contract made by them is admitted in a court of law. Any person may set up as a merchant, by giving due notice to the *Camera di Commercio*.

**Rates of Commission and Charges established by the Merchants at Naples.**

Commission on sales of fish - - - - -	per cent.
manufactures of all kinds - - - - -	3
all other goods - - - - -	2
goods purchased - - - - -	2
receiving and forwarding - - - - -	1

Cocoa, " - - - - -	3 do. 2 ad. 5 per cent.
in casks - - - - -	for dust, real tare
Cassia lignea, cochineal, and bark - - - - -	real tare

**Insurance.**—There are 4 or 5 companies for the insurance of ships, and 1 for lives. Their terms are generally higher than those of similar establishments in London. Houses are never insured at Naples, their construction rendering fires very rare. The companies are established by royal authority, the shareholders being only liable for the amount of their shares.

**Banking.**—The principal merchants of Naples are all, more or less, bankers, inasmuch as they advance money on letters of credit, and deal in foreign exchanges, and other financial operations. But the only banking establishment at present in existence is the Bank of the Two Sicilies, founded by Government, and guaranteed by the possession of landed property. It is not a bank for the issue of notes on credit, like the Bank of England, but for their issue on deposits, somewhat on the principle of the Bank of Hamburg. Government makes all its payments by means of notes or orders on the bank; and they are issued to individuals

for whatever sums they desire, on their paying an equivalent sum of money to the bank. These notes or orders form a considerable part of the circulating medium of Naples; they are paid in cash on demand.

Government has also established a discount office, where bills, indorsed by 2 persons of good credit, and not at more than 3 months' date, are discounted at 4 per cent.

So large a city as Naples, and so advantageously situated for the commerce with the Black Sea, the Levant, Greece, Spain, Northern Italy, Northern Africa &c., would, had it been allowed to avail itself of its natural advantages, have become a most important entrepôt. But in consequence of injudicious regulations no goods have been carried to it except those destined for home consumption. In this respect, however, a considerable change may now be anticipated.

**Credit &c.**—Goods are universally sold at long credits, mostly from 4 to 8 months; and for manufactured goods, sometimes longer. On sales of indigo, from 12 to 18 months' credit is given. Discount for ready money is at the rate of 6 per cent. per annum. Merchants are arranged by the Chamber of Commerce into 5 different classes; and a 6 months' credit is given at the customhouse for duties, to the extent of 60,000, 40,000, 30,000, 20,000, and 15,000 ducats, to individuals, according to the class in which they happen to be enrolled. But this is of little importance. Unless the transactions of a merchant be very limited indeed, the duties he has to pay amount to much more than the credit he is allowed.

**NAVAL COURTS.** Tribunals established on occasion may require, either on the high seas or in foreign parts, for enquiring into and dealing with various matters pertaining to maritime affairs. They were originally constituted by the 13 & 14 Vict. c. 93; but their constitution, duties, and procedure are now regulated by the clauses relating thereto in the Mercantile Shipping Act of 1854, the 17 & 18 Vict. c. 104, which are as follow, viz.:

**Naval Courts may be summoned for hearing Complaints &c.**—Any officer in command of any ship of H.M. on any foreign station, or, in the absence of such officer, any consular officer, may summon a Court, to be termed a 'Naval Court,' in the following cases, viz.:

(1.) Whenever a complaint which appears to such officer to require immediate investigation is made to him by the master of any British ship, or by any certificated mate, or by one or more of the seamen belonging to any such ship.

(2.) Whenever the interest of the owner of any British ship or of the cargo of any such ship appears to such officer to require it.

(3.) Whenever any British ship is wrecked or abandoned or otherwise lost at or near the place where such officer may be, or whenever the crew or part of the crew of any British ship which has been wrecked, abandoned, or lost abroad, arrives at such place. (Sec. 260.)

**Constitution of such Courts.**—Every such naval court as aforesaid shall consist of not more than 5 and not less than 3 members, of whom, if possible, one shall be an officer in the naval service of H.M. not below the rank of lieutenant, one a consular officer, and one a master of a British merchant ship, and the rest shall be either officers in the naval service of H.M., masters of British merchant ships, or British merchants; and such court may include the naval or consular officer summoning the same, but shall not include the master or consignee of the ship to which the parties complaining or complained against may belong; and the naval or consular officer in such court, if

there is only one such officer in the court, or, there is more than one, the naval or consular officer who, according to any regulations settling their respective ranks for the time being in force, is of the highest rank, shall be the president of such court. (Sec. 261.)

**General Functions and Mode of Action of such Courts.**—Every such naval court shall hear and investigate the complaint brought before it, the cause of the wreck or abandonment (as the case may be), and may for that purpose summon and compel the attendance of parties and witnesses, and administer oaths, and order the production of documents, and shall conduct the investigation in such manner as to give any person against whom any charge is made an opportunity of making a defence. (Sec. 262.)

**Powers of such Courts.**—Every such naval court, after hearing the case, exercise the following powers, viz.:

(1.) It may, if unanimous that the safety of the ship or crew, or the interest of the owner, absolutely requires it, supersede the master, and may appoint another person to act in his stead; but no such appointment shall be made without the consent of the consignee of the ship, if there be at the place.

(2.) It may discharge any seaman from his service.

(3.) It may order the wages of any seaman discharged or any part of such wages to be forfeited, and may direct the same either to be retained by way of compensation to the owner to be paid into the receipt of H.M.'s exchange in the same manner as other penalties and forfeitures under this Act.

(4.) It may decide any questions as to wages or fines, or forfeitures, arising between any of the parties to the proceedings.

(5.) It may direct that all or any of the expenses incurred by the master or owner of any ship in procuring the imprisonment of any seaman or apprentice in a foreign port, or in his maintenance whilst so imprisoned, shall be paid out of or deducted from the wages of such seaman or apprentice, whether then or subsequently earned.

(6.) It may exercise the same powers as regard to persons charged before it with the commission of offences at sea or abroad as are by this Act given to British consular officers.

(7.) It may order the cost of the proceedings before it (if any), or any portion thereof, paid by any of the parties thereto, and may allow any person making a frivolous or vexatious complaint to pay compensation for any loss or caused thereby; and any cost or compensation ordered shall be paid by such person account, and may be recovered in the same manner in the wages of seamen as recoverable, or, if the case admits, be deducted from his wages.

And all orders duly made by any such court under the powers hereby given to it shall be subject to subsequent legal proceedings be deemed decisive as to the rights of the parties. (Sec. 263.)

**Orders to be entered in Official Log.**—All orders made by any such naval court shall, when practicable, be entered in the official log of the ship to which the parties to the proceedings before it belong, and shall be signed by the president of the court. (Sec. 264.)

**Report to be made of Proceedings of such Courts.**—Every such naval court shall, after the termination of its proceedings, make a report to the Board of Trade, containing the following particulars, viz.:

(1.) A statement of the proceedings, with the order made by the court, and a report of the evidence.

(2.) An account of the wages of any seaman

appearance  
such court.  
(3.) If a

(3.) If summoned in order to enquire into a case of wreck or abandonment, a statement of the opinion of the court as to the cause of such wreck or abandonment, with such remarks on the conduct of the master and crew as the circumstances require.

And every such report shall be signed by the president of the court; and every document purporting to be such a report and to be so signed as aforesaid shall, if produced out of the custody of some officer of the Board of Trade, be deemed to be such report, unless the contrary is proved, and shall be received in evidence, subject to all just exceptions. (Sec. 265.)

**Penalty for preventing Complaint &c.**—Any person who willfully and without due cause prevents or obstructs the making of any such complaint as last aforesaid, or the conduct of any enquiry or investigation by any naval court, shall for each such offence incur a penalty not exceeding 50*l.*, or be liable to imprisonment with or without hard labour for any period not exceeding 12 weeks. (Sec. 266.) [ADMIRALTY COURT.]

The Admiralty Court Act of 1861 (24 Vict. c. 10) gives the High Court of Admiralty jurisdiction over claims as to building, equipping &c. of ships, claims for necessities, for damage to cargo or ship, wages, disbursements by master, and for salvage of ship &c.

The Vice-Admiralty Courts Acts of 1863 and 1867 (26 Vict. c. 24 and 30 & 31 Vict. c. 45) were passed to facilitate the appointment of Vice-Admiralty Courts abroad, and to extend their jurisdiction over claims to wages, pilotage, salvage, tonnage, necessaries, damage done by ships, and to bottomry and respondentia bonds. And the 31 & 32 Vict. c. 71 extends Admiralty jurisdiction on the country events in England over claims of certain amounts for salvage, tonnage, necessaries, wages, damage to cargo or by collision &c.

**NAVIGATION LAWS.** These laws form an important branch of Maritime Law. In this country they are understood to comprise the various Acts that have been passed, defining British ships, the way in which such ships are to be registered, the peculiar privileges enjoyed by them, and the conditions under which foreign ships shall be allowed to engage in the trade of the country, either as importers or exporters of commodities, or as carriers of commodities from one part of the country to another.

**Sketch of the History and Principles of the Navigation Laws.**—The origin of the Navigation Laws of England may be traced to the reign of Richard II., or perhaps to a still more remote period. But, as no intelligible account of the existing and contradictory enactments framed at a distant epoch could be compressed within any reasonable space, it is sufficient to observe, that in the reign of Henry VII., two of the leading principles of the navigation law were distinctly recognised, in the prohibition of the importation of certain commodities, unless imported in ships belonging to English owners, and manned by English seamen. In the early part of the reign of Elizabeth (5 Eliz. c. 5), foreign ships were excluded from our fisheries and coasting trade. The republican Parliament gave a great extension to the navigation laws, by the Act of 1650, which prohibited all ships, of all foreign nations whatsoever, from trading with the plantations in America, without having previously obtained a license. These Acts were, however, rather intended to regulate the trade between the different ports and dependencies of the empire, than to regulate our

intercourse with foreigners. But in the following year (9th of October, 1651) the republican Parliament passed the famous *Act of Navigation*. This Act had a double object. It was intended not only to promote our own navigation, but also to strike a decisive blow at the naval power of the Dutch, who then engrossed almost the whole *carrying trade* of the world, and against whom various circumstances had conspired to incense the English. The Act in question decreed, that no goods or commodities whatever, of the growth, production, or manufacture of Asia, Africa, or America, should be imported either into England or Ireland, or any of the plantations, except in ships belonging to English subjects, and of which the master and the greater number of the crew were also English. Having thus secured the import trade of Asia, Africa, and America, to the English ship-owners, the Act went on to secure to them, as far as that was possible, the import trade of Europe. For this purpose, it further enacted that no goods of the growth, production, or manufacture of any country in Europe, should be imported into Great Britain, except in British ships, or in such ships as were the real property of the people of the country or place in which the goods were produced, or from which they could only be, or most usually were, exported. The latter part of the clause was entirely levelled against the Dutch, who had but little native produce to export, and whose ships were principally employed in carrying the produce of other countries to foreign markets. Such were the leading provisions of this famous Act. They were adopted by the regal Government which succeeded Cromwell, and form the basis of the Act 12 Ch. II. c. 18, which continued, to a very recent period, to be the rule by which our naval intercourse with other countries was mainly regulated, and which has been pompously designated the *Charta Maritima* of England!

In the statute 12 Ch. II. c. 18 the clause against importing foreign commodities, except in British ships, or in ships belonging to the country or place where the goods were produced, or from which they were exported, was so far modified, that the prohibition was made to apply only to the goods of Russia and Turkey, and to certain articles since well known in commerce by the name of *enumerated* articles, leave being at the same time given to import all other articles in ships of any description. But this modification was of very little importance; inasmuch as the enumerated articles comprised all those that were of most importance in commerce, as timber, grain, tar, hemp and flax, potash, wines, spirits, sugar &c. Parliament seems, however, to have very speedily come round to the opinion that too much had been done in the way of relaxation; and in the 14th of Charles II. a supplemental statute was passed, avowedly with the intention of obviating some evasions of the statute of the preceding year, which it was affirmed had been practised by the Hollanders and Germans. This, however, seems to have been a mere pretence, to excuse the desire to follow up the blow aimed, by the former statute, at the carrying trade of Holland. And such was our jealousy of the naval and commercial greatness of the Dutch, that, in order to cripple it we did not hesitate totally to proscribe all trade with them; and to prevent the possibility of fraud or of clandestine or indirect intercourse with Holland, we went so far as to include the commerce with the Netherlands and Germany in the same proscription. The statute of the 14th Ch. II. prohibited all importation from these countries of a long list of enumerated commodities under any

circumstances, or in any vessels, whether British or foreign, under the penalty of seizure and confiscation of the ships and goods. So far as it depended on us, Holland, the Netherlands, and Germany were virtually placed without the pale of the commercial world! And though the extreme rigour of this statute was subsequently modified, its principal provisions remained in full force until the late alterations.

The policy, if not the motives, which dictated these statutes has met with very general eulogy. It has been said, and by no less an authority than Adam Smith, 'When the Act of Navigation was made, though England and Holland were not actually at war, the most violent animosity subsisted between the two nations. It had begun during the government of the Long Parliament, which first framed this Act, and it broke out soon after in the Dutch wars during that of the Protector and of Charles II. It is not impossible, therefore, that some of the regulations of this famous Act may have proceeded from national animosity. They are as wise, however, as if they had all been dictated by the most deliberate wisdom. National animosity at that particular time aimed at the very same object which the most deliberate wisdom would have recommended—the diminution of the naval power of Holland, the only naval power which could endanger the security of England. The Act of Navigation is not favourable to foreign commerce, or to the growth of that opulence which can arise from it. The interest of a nation in its commercial relations to foreign nations is, like that of a merchant with regard to the different people with whom he deals, to buy as cheap and to sell as dear as possible. But the Act of Navigation, by diminishing the number of sellers, must necessarily diminish that of buyers; and we are thus likely not only to buy foreign goods dearer, but to sell our own cheaper, than if there was a more perfect freedom of trade. As defence, however, is of much more importance than opulence, the Act of Navigation is, perhaps, the wisest of all the commercial regulations of England.' (Smith's *Wealth of Nations*, p. 204.)

It may, however, be very fairly doubted, whether, in point of fact, the navigation law had the effects here ascribed to it, of weakening the naval power of the Dutch, and of increasing that of this kingdom. The Dutch were very powerful at sea for a long period after the passing of this Act; and it seems natural to conclude, that the decline of their maritime preponderance was owing rather to the gradual increase of commerce and navigation in other countries, and to the disasters and burdens occasional by the ruinous contests the Republic had to sustain with Cromwell, Charles II., and Louis XIV., than to the mere exclusion of their merchant vessels from the ports of England. It is not meant to say that this exclusion was altogether without effect. The efforts of the Dutch to procure a repeal of the English navigation law show that, in their apprehension, it operated injuriously on their commerce. In the treaty of Breda, agreed upon in 1667, between the States-General and Charles II., the latter undertook to procure the repeal of the navigation law. But the subject was never agitated in either House of Parliament. It is certain, however, that its influence in this respect has been greatly overrated in this country. *Excessive taxation*, and not our navigation law, was the principal cause of the fall of profits, and of the decline of manufactures, commerce, and navigation in Holland. 'Les guerres,' says the well-informed author of the *Commerce de la Hollande*, 'terminées par les

traités de Nimègue, de Ryswick, d'Utrecht, enfin la dernière par le traité d'Aix-la-Chapelle ont successivement obligé la république de faire usage d'un grand crédit, et de faire des emprunts énormes pour en soutenir les frais. Les dettes ont surchargé l'État d'une somme immense d'intérêts, qui ne pouvoient être payés que par une augmentation excessive d'impôts, dont il a fallu faire porter la plus forte partie par les consommations dans un pays qui n'a qu'un territoire extrêmement borné, et par conséquent par l'industrie. Il a donc fallu faire encliner la main-d'œuvre. Cette cherté de la main-d'œuvre a ne seulement restreint presque toute sorte de fabrique et d'industrie à la consommation intérieure, mais elle a encore porté un coup bien sensible au commerce de frêt, partie accessoire et la plus précieuse du commerce d'économie: car cette cherté a rendu la construction plus chère, et augmenté le prix de tous les ouvrages qui tiennent à la navigation, même de tous les ouvrages des ports et des magasins. Il n'étoit pas possible que l'augmentation du prix de la main-d'œuvre ne donnât, malgré tous les efforts de l'économie hollandaise, un avantage sensible aux autres nations qui voudroient se livrer au commerce d'économie et celui de frêt.' (Tome ii. p. 211.)

This extract, which might, were it necessary, be corroborated by others to the same effect, is all the best Dutch writers, shows that it is not our navigation laws, nor to the restrictive regulations of other foreign Powers, but to the abuse of the funding system, and the excess of taxes, that the decline of the commercial greatness maritime power of Holland was really owing. Neither does it appear that the opinion maintained by Dr. Smith and others, that the navigation law had a powerful influence in augmenting the power of this country, rests on any better foundation. The taste of the nation for naval enterprises been awakened, the navy had become exceedingly formidable, and Blake had achieved his victory before the enactment of this famous law. So indeed, is it from being certain that the Navigation Act had, in this respect, the effect commonly ascribed to it, that there are good grounds for thinking it had a precisely opposite effect, that it operated rather to diminish than to increase our mercantile navy. It is stated in Roger O'Connell's *Treatise on Trade*, published in 1671 (p. 36), that this Act, by lessening the resort of strangers to our ports, had a most injurious effect on our commerce; and he further states, that we had within two years of the passing of the Act of the greater part of the Baltic and Greenland trades (p. 48). Sir Josiah Child, whose *Discourse* was published in 1691, corroborates Coke's sentiment; for while he decided, in favour of the navigation law, he admits that the English shipping employed in the Eastland and Baltic had decreased at least *two-thirds* since its enactment, and that the foreign shipping employed in these trades had proportionally increased. (See *Treatise on Trade*, p. 89, Glasgow edit.) Excluded of these contemporary authorities, it is worth while to mention that Mr. Richard Dimsdale, an extensive and extremely well-informed merchant, condemns the whole principle of the Navigation Act; and contends, that instead of increasing shipping and seamen, it had diminished both; and that, by rendering the freight higher than it would otherwise have been, it entailed a heavy burden on the public, and was one of the main causes that had prevented carrying on the fishery so successfully as in the Dutch. (*Essay on the Causes of the Decline of the Foreign Trade*, p. 60, ed. 1736.)

There do not seem to be any very good grounds on which to question these statements; and they are all events sufficient to show, that the assertions of those who contend that the navigation laws had a prodigious effect in increasing the number of our ships and sailors, must be received with very great modification. But suppose that all that has been said by the apologists of these laws were true to the letter; suppose it were conceded, that, when first framed, the Act of Navigation was extremely politic and proper; that it would afford but a very slender presumption in favour of the policy of supporting it in the present day. Human institutions are not made for immortality; they must be accommodated to the varying circumstances and exigencies of society. But the situation of Great Britain and the other countries of Europe has totally changed since 1650. The envied wealth and commercial progress of Holland have passed away; we have no longer anything to fear from her hostility: she must be, indeed, strangely influenced by ungenerous prejudices and bygone apprehensions, who can entertain any of that jealousy from which the severity of this law principally originated. London has become, what Amsterdam formerly was, the grand emporium of the commercial world—*universa orbis terrarum emporium*: and the small question which now presents itself for consideration is, not what are the best means by which we may rise to naval greatness? but—what are the best means of preserving that unobscured pre-eminence in maritime affairs to which we are attained?

Now, it does not really seem that there can be any great difficulty in deciding this question. Navigation and naval power are the children, not the parents—the effect, not the cause—of commerce. If the latter be increased, the increase of the former will follow as a matter of course. More ships and more sailors become necessary according to the commerce between different and distant countries is extended. A country in the condition of Great Britain in the reign of Charles II., when shipping was comparatively limited, might justly be warranted in endeavouring to increase its numbers, by excluding foreign ships from her ports. But it is almost superfluous to add, that it is not by any such regulations, but solely by the aid of a flourishing and widely extended commerce, that the immense mercantile navy we now accumulated can be supported.

It may be easily shown, that to have continued, in the present state of the world, to enforce the provisions of the old navigation law, would have been amongst the most efficient means that could have been devised for the destruction of our commerce. The wealth and power to which Britain has attained, have inspired other nations with the feelings of envy and jealousy that the success of Holland formerly generated in our minds. Instead of ascribing our commercial and manufacturing superiority to its true causes, and to the comparative freedom of our constitution, we have been allured by the oppressive feudal privileges, the monopoly of property, and the fairness of our laws of taxation, our foreign rivals have contended to have been entirely owing to our exclusive trade, and appealed to our example to stimulate their respective Governments to adopt retaliatory measures, and to protect them against British competition. These representations had the most pernicious operation. In 1817, the American Legislature passed an Act, copied to the very letter into our statute book, with the avowed intention of operating as a retaliatory measure against Great-Britain. The Northern Powers threatened

to act on the same principle; and would have carried their threats into effect but for timely concessions on our part. The same engines which we laboured to destroy the trade of Holland, were thus about to be brought, by what we could not regard as an unjust retribution, to operate against ourselves. Nor can there be a doubt that, had we continued to maintain our exclusive system, and refused to set a better example to others, and to teach them the advantage of recurring to more liberal principles, we should have run a very great risk of falling a victim to the vindictive spirit which such short-sighted and selfish policy would have generated.

These statements are sufficient to show that a considerable relaxation of our navigation laws had become indispensable; and this was partly effected in 1821 and 1825, but principally in the latter, by the measures introduced with that view into Parliament by Mr. Wallace (afterwards Lord Wallace) and Mr. Huskisson. The effect of these tries at amity with the United Kingdom on the same footing. The memorials of our former ancient neighbouring states, being thus abolished, the same law has since continued to regulate our commerce with the Continent. This uniformity, besides giving greater scope to mercantile operations, and facilitating our traffic with some of our most opulent neighbours, removed a prolific source of embarrasment and litigation, at the same time that it detracted considerably from that selfish character which had been believed on the Continent, and not without considerable reason, to be the animating principle of our commercial policy.

The changes that were also made in 1821 and 1825, in regard to the importation of enumerated goods (these changes are specified in the former editions of this work), and of articles, the produce of Asia, Africa, and America, though of considerable importance, were very far from obviating the hardships arising out of the previous rules. The importation of European goods continued to be practicable only in British ships, or in ships of the country of which the goods were the produce, or of the country from which they were shipped, the Danes, or any other people, from becoming the carriers of the produce of other nations to our ports. But while this result was not very likely to occur, the rule imposed a serious hardship on foreigners, and also on ourselves. Suppose that a Dutch ship took in part of a cargo of Dutch produce, such as cheese, butter, and Geneva at Rotterdam for England: what could be more vexatious in the event of her not being able to complete her cargo with Dutch goods suitable for our markets, than to hinder her from making it up with the foreign goods suitable for them warehoused at Rotterdam, such as the wines and brandies of France, the corn of Poland, the hemp and tallow of Russia &c. ? But its vexatious character was not the only thing to be objected to in a regulation of this sort. It really increased the cost of the butter, cheese &c. sent to us; for as these had to bear the whole charge on account of freight which, but for the regulation, would have been proportionally enhanced, at the same time that the Dutch were tempted to resort to retaliatory measures. And how injurious soever in other respects, it is sufficiently plain that this regulation could never, as has been alleged, occasion an increased demand for British shipping. It no doubt compelled the foreigners to sort their cargoes less advantageously than they might otherwise have

done. But the burden of this fell upon the employers of the carriers and not on the carriers themselves; that is, it fell upon us and not on the foreigners; while in the event of their retaliating, our trade was subjected to the same difficulties. It is visionary to pretend that a system so prejudicial to commerce could be advantageous to shipping and navigation.

The measures introduced in 1825 left also untouched the regulation by which goods, the produce of Asia, Africa, and America, were prohibited from being imported from any European port (the only exception to this rule were articles from Asiatic and African Turkey imported from the Levant, and bullion), and could not be imported on foreign bottoms, except when they were imported direct in ships of the country of which the goods were the produce. It was proposed in 1821 to authorise British ships to import all non-prohibited articles from wherever they might find them; and though nothing apparently could be more reasonable than such a regulation, it was objected to, on the pretence that foreign ships being more cheaply navigated than ours, would take advantage of this circumstance to import Asiatic, African, and American products into the contiguous continental ports, and would thus confine the employment of our ships to their carriage thence! And upon this futile pretence, for which there was not so much as the shadow of a foundation in fact, the old rule was maintained; and in consequence, though the ports along the English Channel might have been glutted with the corn and cotton of America, the sugar of Brazil and Cuba, the coffee of Java, and the tea of China, and though all or some of these articles might at the time have been deficient here, not one of them could be imported in a foreign ship, unless, as was sometimes the case, it were carried back to the country whence it had been originally shipped, nor even in a British ship, unless it were first carried from Europe to some other continent! It is hardly possible to imagine any rule or regulation more extravagantly oppressive and absurd, and it is really astonishing that it should have been able to keep its place on the statute book for about two centuries. Luckily, however, this preposterous system, as well as the regulations affecting importation from Europe, ceased on January 1, 1850. The Act for their repeal, the 12 & 13 Vict. c. 29, went far to complete the free-trade measures adopted in 1812 and 1846, and had the most favourable influence over the commerce and navigation of the empire.

It did not, however, interfere with the monopoly of the coasting trade, which continued to be secured to British ships. But this last shred of the protective system has, also, been swept away by the Act of 1854, the 17 Vict. c. 5. [COASTING TRADE.] Probably, however, few foreign ships will engage in this department; but their being at liberty to do so will insure freights being kept at their fair level.

The relaxations made in 1825 and 1826 in the regulations embodied in our old navigation laws in regard to the colonial trade, were perhaps the most valuable portion of the changes introduced by Mr. Huskisson. But though they did much to obviate the hardships growing out of the previous rules, and to give freedom to the colonial trade, they did not entirely effect that object; and some regulations were subsequently continued in force which, though irritating and mischievous in their bearing on the colonies, were of no real advantage to ourselves. These, however, wholly ceased on January 1, 1850. All varieties of goods may now be imported into the colonies

from all countries at peace with Great Britain and exported from the colonies to them, whether in British, colonial, or foreign shipping. The complaints of the colonists, in regard to the injuries they have sustained from the rules enforced by our navigation laws, are thus completely obviated, and on that ground, at all events, they have no further claim to prohibitory duties.

Besides the restrictive regulations already alluded to, it was a part of our former policy to encourage the employment of British shipping by imposing higher duties on commodities imported in foreign vessels than were imposed on those when imported in British vessels; and it was also customary to charge foreign vessels with higher port and lighthouse duties &c. The practice was always loudly complained of by foreigners; but we had little difficulty in maintaining it, so long as we could afford to disregard the retaliatory measures of other Powers. But the extraordinary increase that took place, since the commencement of the war terminated in 1815, in our manufactures for foreign consumption, and the necessity under which we were, in consequence, placed, of conciliating our customers abroad, led to the adoption of the reciprocity system. This latter was first introduced into the trade with the United States. After the North American colonies had succeeded in establishing their independence they set about framing rules for their navigation on the model of those of this country. Among other regulations of a restrictive character, it enacted that all foreign vessels trading to the United States should pay 44 cents, which afterwards raised to 94 cents (nearly a dollar), ton duty, beyond what was paid by American ships; and further, that goods imported in foreign vessels should pay a duty of 10 per cent, over and above the duty payable on them when imported in American vessels.

This law was avowedly directed against the shipping of this country, though, as it was framed on the same principles as our navigation laws, we could not openly complain of its operation. Under these circumstances, it would have been sound policy to have at once proposed accommodation; and, instead of attempting to meet retaliation by retaliation, to have offered to modify our navigation law, in so far as American shipping was concerned, on the Americans making reciprocal modifications in their favour. A different course was, however, followed. Various devices were fallen upon to counteract the operation of the system of the Americans, without in any degree relaxing our own; but they all failed of the object; and at length it became obvious to one that we had engaged in an unequal struggle, and that the real effect of our policy was, to place a bounty on the importation of the manufactures and goods of other countries into the United States, and thus gradually to exclude both our manufactures and ships from the ports of the republic. In consequence, a conviction of the necessity of making concessions gained ground progressively, and it was ultimately fixed, by the commercial treaty agreed upon between Great Britain and the United States, in 1815, that in future no charges should be imposed on the ships of one country in the ports of the other, and that the duties should be laid upon all articles, the produce of the one country imported into the ports of the other, whether such importation were effected in the ships of the one or the other.

Brazil and the other States of South America were naturally anxious to establish a commercial marine; and, to forward their views in this respect, they contemplated enacting navigation

But this intention was frustrated by the interference of the British Government, who, without consulting for any particular advantage, wisely refused to admit their ships into our ports on a principle of reciprocity, or on their paying the same charges as our own ships, on condition of their admitting British ships into their ports on a similar footing. Commercial treaties, framed on the sound principle, were afterwards entered into with most of these States.

The reciprocity system having been thus established as the basis of the intercourse with the United States, whose commercial marine was second only to that of Great Britain, it was not possible to refuse adopting it in the case of such European countries as might choose to admit our ships into their ports on a footing of equality. The Act of the 6 Geo. IV. c. 1 it was enacted, by His Majesty's might, by an order in council, that the ships of foreign states into our ports, on the same of the like duties that are charged on British vessels provided that British ships are admitted into the ports of such foreign states on the same of the like duties that are charged on British vessels. The first demand of this sort was made on the part of the Prussian Government, which on June 20, 1822, issued an order in council imposing large additions to the port dues previously exacted on all ships belonging to those nations which did not admit Prussian ships on a principle of reciprocity. The real object of this order was to impede the navigation of this country; and it was speedily found that it had the desired effect, that its operation on British shipping was ruinous.

Under these circumstances, the British merchants and shipowners applied to our Government for relief.

"We were assailed," said Mr. Huskisson, "with representations from all quarters connected with the shipping and trade of the country, against the charges imposed upon British ships in the ports of Prussia. In such circumstances, what was to be our duty, in the first instance, to refuse to admit the Prussian minister in this country, and our minister at Berlin was, I believe, requested to confer with the Prussian Government on the subject. I myself had a conference with the Prussian minister at this court, and I recollect the substance of his reply to me. He said, 'set us the example, by your port and light charges, and your discriminating duties on Prussian ships; and we have not gone beyond the limits of that example. Hitherto, we have not increased our port and tonnage duties on British ships only; but it is the intention of our Government next year' (and of this he showed me a written proof) 'to imitate you still more by imposing discriminating duties on the ships of other countries. Our object is, a just return to our own navigation; and so long as we are protected does not exceed that afforded in your ports to British ships, we are not with what reason you can complain.'" "What such a reply what remonstrance could we make to the Prussian Government? We might have addressed ourselves, it may be thought, to the friendly feelings of that Government—we might have pleaded long usage and our discriminating duties;—we might have urged the advantages which Prussia derives from her trade with England. Appeals were not forgotten in the discussion, but were of little avail against the fact stated in a general at Dantzic—that "the Prussian ports were all going to ruin."

"Ifly others it may be said, "your duty was to retaliate by increasing your own port charges and discriminating duties, on Prussian shipping." I have already stated generally my reasons against the policy of this latter course. We were not prepared to begin a system of commercial hostility, which, if followed up on both sides to its legitimate consequences, could only tend to reciprocal prohibition. In this state of things, more prudently, as I contend, we entered upon an amicable negotiation with the Prussian Government, upon the principle of our treaty with the United States,—that of abolishing, on both sides, all discriminating duties on the ships and goods of the respective countries in the ports of the other.

"Having concluded an arrangement with Prussia upon this basis, we soon found it necessary to do the same with some other of the northern states. Similar conventions were accordingly entered into with Denmark and Sweden. Reciprocity is the foundation of all those conventions; but it is only fair to add, that they contain other stipulations for giving facility to trade, and from which the commerce of this country, I am confident, will, in the result, derive considerable advantage." (*Huskisson's Speech, May 12, 1826, on the State of the Shipping Interest.*)

This statement shows that the establishment of the reciprocity system, with respect to which so violent a clamour was afterwards raised, was not a measure of choice but of necessity. We could not afford to hazard the exclusion of our manufactures from countries into which they were annually imported to a large amount. So long as the Prussians, Swedes, Danes, and other nations chose to submit, without attempting to retaliate, to our system of discriminating duties on foreign ships, and on the goods imported in them, it was no business of ours to tell them that that system was illiberal and unjust. But when they discovered that such was really the case, and declared that unless we modified our restrictions, they would retaliate on our commerce, and either entirely exclude our commodities from their markets, or load those that were imported in British ships with prohibitory duties, should we have been justified in refusing to come to an accommodation? Were we to sacrifice the substance to the shadow? To turn away some of our best customers because they chose to stipulate that the intercourse between them and us should be conducted either in their ships or in ours, as the merchants might think best? Government had only a choice of difficulties; and they wisely preferred adopting a system which has preserved the access to foreign markets for English goods, and has further secured an equal chance to English ships, with those of foreigners, of being employed in the trade with other countries. More could not have been obtained; nor would it have been really desirable. Had we endeavoured to enforce in the nineteenth century the rules and regulations that had been justly objected to and regarded as oppressive in the sixteenth and seventeenth centuries, we should have provoked a spirit of hostility and retaliation that must eventually, and at no distant period, have crippled alike the manufactures, the trade, and the navigation of the empire.

The reciprocity system is still wisely maintained, and is, indeed, embodied in the Act 12 & 13 Vict. c. 29. But we do not make its previously agreeing to this system a condition of a foreign country being entitled to participate in the advantages conferred by this Act. Such preliminary arrangements would have occasioned much embarrassment and difficulty, and we, therefore,

have contented ourselves with reserving power to her Majesty in council, in the event of her thinking it expedient to interfere, to impose such prohibitions, restrictions, and discriminating duties on the ships of any foreign power frequenting our ports, as may be required to countervail any peculiar prohibitions, restrictions, or duties laid upon British ships in the ports of such foreign power.

Much difference of opinion has existed as to the practical effect on our shipping and navigation of the changes in the navigation law introduced by Mr. Huskisson. But there is really no ground for any such difference. This will be apparent from the following comparison between the shipping belonging to the empire in 1825, when Mr. Huskisson's reforms began, and in 1849 and 1867:

Account of the Ships, their Tonnage, and their Crews, belonging to the British Empire in 1825, 1848, and 1867.

Year	United Kingdom and Possessions in Europe		Colonies		Total		Crews
	Ships	Tons	Ships	Tons	Ships	Tons	
1825	30,701	8,708,807	3,579	3,579	34,280	9,553,689	166,185
1848	35,658	5,400,809	8,034	6,513,551	35,672	4,609,160	376,993
Excess in 1848	4,957	1,979,002	4,455	456,176	9,592	1,498,478	67,808
1867	38,773	5,735,973	12,132	1,478,698	40,905	7,259,671	341,751
Excess in 1867	8,072	3,182,166	8,553	1,365,823	16,225	4,679,999	179,948

It is plain from this statement, that the number of our ships, the amount of their tonnage, and the number of our sailors, have all been vastly increased since 1825. And if this be not, we should like to know what can be, a conclusive proof of the wisdom of the changes effected in 1825. They have, in fact, been successful to a degree which the most sanguine could not previously have supposed possible.

Although, however, the fact of a vast increase of our mercantile navy having taken place since 1825, be too well established to admit of any doubt, it is contended by the apologists of the old restrictive system, that the share which foreigners have in the trade of the United Kingdom is notwithstanding greater now than in 1825. But this greater preponderance of foreign vessels in our trade, if such really be the case (which is doubtful), is admitted to be but inconsiderable; though, were it incomparably greater than it is alleged to be, it would afford no room or ground for objecting to the measures of 1825 and 1849. The shipping and foreign trade of most continental states were all but wholly destroyed during the war terminated in 1815, while our shipping and trade were then proportionally increased; and the influence of this depression on the one side, and of the unnatural stimulus on the other, was far from being exhausted in 1825. But in the lengthened interval that has since elapsed, the mercantile navies of the continental states have attained to their ordinary state. And while we have no longer had any peculiar advantages on our side, we have had to contend with them, and with the rapidly increasing marine of the United States. As respects the latter, we may observe, that while in 1825 our imports of cotton, principally from America, amounted to about 222,500,000 lbs.; at the same time that the imports of corn and flour from the United States, in the latter year, bore a still greater proportion to their amount in the former. Our imports of cotton in 1867 reached 1,262,536,912 lbs. Again, our intercourse with Holland, France, the Elbe &c., which was all but wholly suppressed during the war (ended 1815), is now become very extensive; and are we, under such circumstances, to be surprised that the proportion of foreign shipping frequenting our ports has increased? Had such increase been ten times greater, it could not have surprised any reasonable person; and the fair presumption is, that but for the reforms effected in 1825, such would have been the case. And experience has shown that the further reforms effected in 1849, which, like those of 1825, were imperatively required by

the exigencies of the case, have been equally beneficial.

It may be said, perhaps, that the rapid extension of our mercantile navy during the last 12 years, and the extraordinary rise of freights, of the profits of the ship-owners, were mainly a sequence of the gold discoveries in California, Australia, and of the prodigious impulse given to emigration and to the trade of the world. But, though the circumstances alluded to undoubtedly had a very powerful influence, there is no room or ground for thinking that, under circumstances, our ship-owners would not be able to maintain a successful competition with the America, or any other country. The wages of seamen in the United States are usually higher than here, which is a principal cause why our sailors engage so extensively as they are known to do in the American service. In most respects, the ship-owners of the two countries are nearly on a level. The rapid increase of population in the United States, the vast extent of their sea-coast, and the gigantic magnitude of their rivers and lakes by which the Union is intersected or bounded, by affording proper means for the employment of shipping, will, it is little doubt, speedily render her commerce greater than that of this or any other nation. But there are no good grounds for supposing that in those departments which are equally open to the enterprise and ships of other nations, the British have anything to fear from the competition of the Americans. And that the only people to whom, in a matter of this kind, it is necessary to allude.

Till very recently our shipping interests were subjected to sundry burdens and restrictions which their energies were weighed down and retarded. These, however, are now either abolished, or greatly modified. Formerly our ships could not enjoy the peculiar privileges of a free ship, unless she were of the build of the United Kingdom or of the colonies, and unless she had on board three-fourths of the crew were British subjects. But these restrictions have been removed by the former by the 12 & 13 Vict. c. 29, and the latter by the 16 & 17 Vict. c. 131. In consequence of these judicious alterations, all the ports, harbours, and all the seamen of the world are now made subservient to the wants and the interests of our merchants and ship-owners. It is no longer, from our superior facilities for the building of ships, especially those of iron, which are now being largely introduced, and from the comparative density of our population, that our foreign ships nor foreign seamen will be

facilities for the  
those of iron, w  
luced, and from  
population, that  
seamen will be

ively introduced into our service. The prohibition  
against the registration of foreign-built ships was  
enacted in 1849; and in 1850, 1851, and 1852,  
acts 57, 26, and 28 such ships were registered.  
But in consequence of the greatly increased demand  
for shipping, the number of foreign registrations  
for a time increased considerably. In 1854, they  
amounted to 267 ships of 97,641 tons burden, but  
in 1867 the number had fallen to 73 of 22,913 tons.  
But the fact that foreign seamen and foreign-built  
ships may be, and no doubt will always be to some  
extent introduced, is of immense importance; and  
will do more than anything else to give new energy  
to our ship-builders, and to improve the conduct  
and discipline of our seamen. The insubordination  
and desertion of the latter, especially in foreign  
ports, have often been attended with ruinous re-  
sults. Now, however, that their place may be sup-  
plied by any description of foreign sailors, it may  
be fairly presumed that there will be a material  
improvement in this respect. The sailors will find  
that they will consult their own no less than their  
employer's interest, by paying more attention than  
heretofore to their engagements, and by their good  
conduct, and ready obedience to the reasonable  
commands of their superiors.  
In addition to these important reforms, others  
of a subordinate but still very valuable description  
have been effected. The incompetence and igno-  
rance of the masters, which was a most serious evil,  
has already partly been, and eventually will be all  
but wholly obviated by the examination to which  
they are now obliged to submit, and by the better  
education which it renders necessary. [MARTIN.]  
The oppressive charges and proceedings which  
were sometimes made and carried on by the officers  
of ships of war on account of salvage have also been  
in a great measure modified, though, perhaps, they ought  
to be wholly abolished. The same may be said of  
the privilege, which has recently been regulated,  
granted by ships of war of taking men from on  
board merchant ships on distant voyages. The  
charges for lights and pilotage have also been en-  
tered into, and will, most likely, be speedily re-  
formed and placed on a less objectionable footing  
than at present. It is obvious, therefore, that a  
great improvement has already been made, and  
that other changes for the better are in progress,  
in the situation of our mercantile marine. And  
taking their influence into account, and the many  
advantages we enjoy in our situation, the extent  
of our manufactures, and the character of our  
commerce, we run little risk in predicting a lengthened  
period of increase and prosperity to our mercantile  
marine.  
The peculiar burdens, disadvantages, and draw-  
backs which recently affected our shipping, were  
set forth in a clear light in the treatise on 'Our Navi-  
gation Laws and Mercantile Marine,' by W. S.  
Widdowson, Esq., late M.P. for Sunderland. His  
personal acquaintance with the subject made his  
observations of more than ordinary value, and  
deserved for them an extra degree of attention.  
The existing law with regard to British ship-  
ping has been consolidated and embodied in the  
Mercantile Shipping Act of 1854, the 17 & 18  
Vic. c. 104. It is divided into parts, which will  
be best distributed under their proper titles in  
this work. The distinguishing characteristics of  
British shipping, as described in this Act, may be  
briefly stated as follows:—  
1. No ship can be a British ship unless she be  
owned as such.  
2. All ships of whatever build, and however  
employed, may be registered as British ships, pro-  
vided they be really and bonâ fide the property  
of British subjects.

The clauses in the Act having reference to this  
matter are as follows, viz. :—

*Description and Ownership of British Ships.*—  
No ship shall be deemed to be a British ship un-  
less she belongs wholly to owners of the following  
description; viz. :—

1. Natural-born British subjects.  
Provided that no natural-born subject who has  
taken the oath of allegiance to any foreign sove-  
reign or state shall be entitled to be such owner  
as aforesaid, unless he has, subsequently to taking  
such last-mentioned oath, taken the oath of allegi-  
ance to her Majesty, and is and continues to be  
during the whole period of his so being an owner  
resident in some place within her Majesty's do-  
minions, or if not so resident, member of a British  
factory, or partner in a house actually carrying on  
business in the United Kingdom or in some other  
place within her Majesty's dominions :

2. Persons made denizens by letter of deniza-  
tion, or naturalised by or pursuant to any Act of  
the Imperial Legislature, or by or pursuant to any  
Act or ordinance of the proper legislative authority  
in any British possession.

Provided that such persons are and continue to  
be during the whole period of their so being owners  
resident in some place within her Majesty's do-  
minions, or if not so resident, members of a British  
factory, or partners in a house actually carrying  
on business in the United Kingdom or in some  
other place within her Majesty's dominions, and  
have taken the oath of allegiance to her Majesty  
subsequently to the period of their being so made  
denizens or naturalised.

3. Bodies corporate established under, subject  
to the laws of, and having their principal place  
of business in the United Kingdom or some  
British possession. (Sec. 18.)

*British Ships, with certain Exceptions, must be  
registered.*—Every British ship must be registered  
in manner hereinafter mentioned, except—

1. Ships duly registered before this Act comes  
into operation :

2. Ships not exceeding 15 tons burden employed  
solely in navigation on the rivers or coasts of the  
United Kingdom, or on the rivers or coasts of some  
British possession within which the managing  
owners of such ships are resident :

3. Ships not exceeding 30 tons burden, and not  
having a whole or fixed deck, and employed solely  
in fishing or trading coastwise on the shores of  
Newfoundland or parts adjacent thereto, or in the  
Gulf of St. Lawrence, or on such portions of the  
coast of Canada, Nova Scotia, or New Brunswick  
as lie bordering on such Gulf :

And no ship hereby required to be registered  
shall, unless registered, be recognised as a British  
ship; and no officer of customs shall grant a  
clearance or transire to any ship hereby required  
to be registered for the purpose of enabling her to  
proceed to sea as a British ship, unless the master  
of such ship, upon being required so to do, pro-  
duces to him such certificate of registry, as is  
after mentioned [REGISTRY]; and if such ship  
attempts to proceed to sea as a British ship with-  
out a clearance or transire, such officer may de-  
tain such ship until such certificate is produced  
to him. (Sec. 19.)

In another part the Act imposes the following  
penalties on the masters and owners of ships un-  
duly assuming a British character, viz. :—

1. If any person uses the British flag and as-  
sumes the British national character on board  
any ship owned in whole or in part by any person  
not entitled by law to own British ships, for the  
purpose of making such ship appear to be a  
British ship, such ship shall be forfeited to her

Majesty, unless such assumption has been made for the purpose of escaping capture by an enemy or by a foreign ship of war in exercise of some belligerent right; and in any proceeding for enforcing any such forfeiture the burden of proving a title to use the British flag, and assume the British national character shall lie upon the person using and assuming the same.

2. If the master or owner of any British ship does or permits to be done any matter or thing, or carries or permits to be carried any papers or documents, with intent to conceal the British character of such ship from any person entitled by British law to enquire into the same, or to assume foreign character, or with intent to deceive any such person as lastly hereinbefore mentioned, such ship shall be forfeited to her Majesty; and the master, if he commits or is privy to the commission of the offence, shall be guilty of a misdemeanor.

3. If any unqualified person, except in the case of such transmitted interests as are hereinbefore mentioned, acquires as owner any interest, either legal or beneficial, in a ship using a British flag, and assuming the British character, such interest shall be forfeited to her Majesty.

4. If any person, on behalf of himself or any other person or body of persons, wilfully makes a false declaration touching the qualification of himself or such other person or body of persons to own British ships or any shares therein, the declarant shall be guilty of a misdemeanor; and the ship or share in respect of which such declaration is made, if the same has not been forfeited under the foregoing provision, shall, to the extent of the interest therein of the person making the declaration, and, unless it is shown that he had no authority to make the same, of the parties on behalf of whom such declaration is made, be forfeited to her Majesty.

And in order that the above provisions as to forfeitures may be carried into effect, it shall be lawful for any commissioned officer on full pay in the military or naval service of her Majesty, or any British officer of customs, or any British consular officer, to seize and detain any ship which has, either wholly or as to any share therein, become subject to forfeiture as aforesaid, and to bring her for adjudication before the High Court of Admiralty in England or Ireland, or any court having Admiralty jurisdiction in her Majesty's dominions; and such court may thereupon make such order in the case as it may think fit, and may award to the officer bringing in the same for adjudication such portion of the proceeds of the sale of any forfeited ship or share as it may think right. (Sec. 103.)

*Penalty for carrying improper Colours.*—If any colours usually worn by her Majesty's ships, or any colours resembling those of her Majesty, or any distinctive national colours, except the red ensign usually worn by merchant ships, or except the union jack with a white border, or if the pendant usually carried by her Majesty's ships or any pendant in anywise resembling such pendant, are or is hoisted on board any ship or boat belonging to any subject of her Majesty, without warrant for so doing from her Majesty, or from the Admiralty, the master of such ship or boat, or the owner thereof, if on board the same, and every other person hoisting, or joining or assisting in hoisting the same, shall for every such offence incur a penalty not exceeding 500*l.*; and it shall be lawful for any officer on full pay in the military or naval service of her Majesty, or any British officer of the customs, or any British consular officer, to board any such ship or boat, and

to take away any such jack, colours, or pendant and such jack, colours, or pendant shall be forfeited to her Majesty. (Sec. 105.)

The monopoly of our coasting trade has been abolished by the 17 Vict. c. 5, the last amendment of the navigation laws was extinguished the following notice in pursuance of 30 Vict. (1867) cap. 15:—

On and after August 1, 1867, all exemptions from harbour rates and dues, which have hitherto been allowed in the United Kingdom on account of any one or more of the reasons specified below, will, in pursuance of 'The Shipping Dues Exemption Act, 1867,' 30 Vict. c. 15, cease, and such exemptions will on and after that date be allowed:—

1. On account of any ship being registered or belonging to any particular country, port, or place, or trading between particular parts or places;
2. On account of any ship or goods being the property of, or being consigned by, any particular person or body corporate;
3. On account of any goods being destined for any particular town, place, or market;
4. On account of any ship or goods being to or from, or anchoring or mooring at, or being laden or unladen at any particular place in any port, or in the neighbourhood of any port, except where a ship is going to or from, or anchoring or mooring at, or being laden or unladen at a place, derives from the expenditure of a class of dues in question no benefit greater than ships going to or from, or anchoring or mooring at, or being laden or unladen at, another place in the port;
5. On account of any goods being the property of, or being destined for use at any particular manufactory, place, or district, or any particular class of manufactories; provided nothing in this Act contained shall exempt from dues which have been granted by an Act of Parliament the owner or occupier of some particular manufactory, or place, as compensation for obstruction to his water frontage or to his premises, or other injury caused him by the works authorised by such Act.

Any person desirous of claiming compensation in respect of the abolition of any such exemption may make application in the manner directed by the above-named Act; particulars of which may be obtained of the receiver of dues, or of the labour or other local authority of the port or place.

**NEUTRALITY** (Fr. *neutralité*). In this term is employed to indicate the status of nations who, when a war is being carried on, take no part in the contest, and evince no partiality for, or enmity to, any of the belligerent powers.

**NEUTRAL SHIPS.** In Commerce, the term is applied to neutral states, which are engaged in the trade with the ports of belligerents.

Inasmuch as the rights and duties of neutrals vary to a certain extent with the circumstances peculiar to each contest, they do not admit of being exactly defined. But they are generally considered as being especially favourable to either of the parties engaged in hostilities.

The questions that occur with regard to the proceedings of neutrals on land, seldom present much difficulty; but it is otherwise with those that sometimes grow out of their proceedings.

84, and to these we mean to confine the following remarks.

**I. Articles contraband of war.** When two nations are engaged in war, if there be any foreign articles or articles necessary for the defence or subsistence of either of them, and without which it would be difficult for it to carry on the contest, the other may legitimately exert every means in its power to prevent its opponent being supplied with such article or articles. All writers of authority on international law admit this principle; and lay it down, that a nation which should furnish a belligerent with articles *contraband of war*—that is, with supplies of warlike stores or of any article required for the prosecution of the war—would forfeit her neutral character, and that the other belligerent would be warranted in preventing such succours from being sent, and confiscating them as lawful prize. And besides being consistent with the most obvious principles, approved by jurists, and enforced in every contest, this doctrine has been sanctioned by repeated treaties. The only difficulty, indeed, that has ever arisen in regard to it, has been in respect to the articles which should be reckoned contraband of war; and in the view of obviating such difficulty, these articles have sometimes been specified in treaties and conventions. (See the references in Lampré, *Del Commercio de' Popoli Neutrali*, sec. 9.) But this classification has not always been repeated during hostilities. And it is sufficiently evident that an article which may not be contraband at one time, or under certain circumstances, may become contraband at another time, or under different circumstances. It is admitted on all hands, even by Hubner, the great advocate for the freedom of neutral commerce (*De la Saisie des Bâtimens neutres*, tom. i. p. 193), that everything that may be made directly available for hostile purposes is contraband, as arms, ammunition, horses, timber for ship-building, and all sorts of naval stores. The greatest difficulty has occurred in deciding as to provisions (*munitions de bouche*), which have sometimes been held to be contraband, and sometimes not. Lord Stowell has shown that the character of the port for which the provisions are destined, is a principal circumstance to be attended to in deciding whether they are to be looked upon as contraband. A cargo of provisions intended for an enemy's port, in which it was known that a warlike armament was in preparation, would be liable to arrest and confiscation; while, if the same cargo were intended for a port where none but merchantmen were fitted out, the most that could be done, according to his lordship, would be to detain it, paying the neutral the same price for it he would have got from the enemy.

A good deal has lately been said as to whether such should or should not be reckoned contraband. But it is evident, inasmuch as steam is now largely employed in the propulsion of ships of war, that the coal by which it is generated must be reckoned among the articles described as *munitions de guerre*. This does not seem to be a conclusion about which there is any real room for doubt or hesitation; and it shows very clearly how an article that has not been contraband, may, by a change of circumstances, become entitled to that character.

By the ancient law of Europe, a ship conveying any contraband article was liable to confiscation as well as the article. But in modern practice a milder rule has been adopted, and the carriage of contraband articles is attended only with loss of freight and expenses unless when the ship belongs to the owner of the contraband cargo, or when the simple misconduct of conveying such cargo has

been connected with other malignant and aggravating circumstances. Of these, a false destination and false papers are justly held to be the worst.

It appears pretty evident that the principle on which the doctrine of goods contraband of war has been established may justify, or rather require, its extension to various important articles not hitherto or usually reckoned as contraband. The right of belligerents to hinder neutrals from supplying their enemies with articles necessary to enable them to carry on the contest is alike clear and undoubted. But a foreign article which is indispensable or highly useful to a nation engaged in war, may not be of the class called *munitions de guerre*, and may not be directly available in the prosecution of hostilities. That, however, is really immaterial. It is enough to warrant the prevention of its importation, that without it the importers would be unable to continue the contest, or that the inconveniences resulting from the want of it would be so very considerable as to dispose them to sue for peace, or to accept reasonable terms if offered. The distinctive peculiarity of articles contraband of war is not that they belong to one class of products or another, but that *the want of them would inflict serious injury on the party by whom they are imported*.

Considered in this, its true light, the term 'contraband of war' becomes of the highest importance; and there are but few products which may not be fairly brought, at one period or another, within the list of contraband articles. Thus, supposing that we had the misfortune to be engaged in a contest either with a single power or a combination of powers, which had means to intercept, cut off, or materially obstruct our supplies of corn, cotton, and tea: can anyone doubt that our enemies would be justified, or that they would hesitate, in availing themselves of so powerful a means of annoyance? Neutrals might protest against such a proceeding, on the ground that the articles referred to had not hitherto been reckoned contraband of war, and they might also allege that their trade would be seriously prejudiced by so unusual and so illegal a proceeding. But these representations, supposing them to be made, would not go for much. Our enemies would say, that in defining contraband of war, everything depended on circumstances; and that as the want of the articles referred to would lay us under very considerable difficulties, they were, from that very circumstance, properly included in the prohibited list. They would no doubt express at the same time their regret that this conduct of theirs should be productive of injury or inconvenience to neutrals. That was not its purpose. They had resorted to it in the exercise of their undoubted rights as belligerents; and it was only indirectly and by accident that it affected neutrals. Une puissance belligérante ne peut voir avec indifférence que son ennemi se renforce par des marchandises qui servent directement et indubitablement à faire la guerre; et elle ne blesse pas le droit des gens si elle empêche que ses marchandises ne parviennent à l'ennemi en les détenant, soit pour en payer la valeur au propriétaire, soit pour les restituer quand le danger sera passé. On peut même imaginer des cas, où les circonstances extraordinaires justifieraient une telle détention à l'égard des marchandises qui ne servent pas exclusivement à l'usage de la guerre, et sur lesquelles elle ne peut, dans la règle, s'arrogir aucune disposition. (Martens, *Précis du Droit public*, lib. viii. cap. 7, sec. 315.) Heineccius says, 'Dans une guerre il ne s'agit pas même de demander s'il peut être permis à quelqu'un de porter à notre ennemi ce qui peut lui être nécessaire, puisque

nous avons le droit de prendre les armes contre quiconque s'opposerait à notre défense ou la rendrait difficile ou incertaine.' (Quoted by Lamprédi, p. 47, Paris 1802; see also Vattel, book iii. cap. 7, sec. 113, and a host of other authorities.) When great nations are at war, such contingencies can seldom be avoided; and when they occur, they should be ascribed to the necessity of the case, and afford no reasonable ground of complaint.

A wish to obviate the disputes that have so frequently arisen in regard to contraband articles and other matters having reference to the proceedings of neutrals, gave birth to the following very important document.

*Declaration respecting Maritime Law, signed by the Plenipotentiaries of Great Britain, Austria, France, Prussia, Russia, Sardinia, and Turkey, assembled in Congress at Paris, April 16, 1856.*

'The Plenipotentiaries who signed the Treaty of Paris of March 30, 1856, assembled in conference—

'Considering:

'That Maritime law, in time of war, has long been the subject of deplorable disputes;

'That the uncertainty of the law, and of the duties in such a matter, gives rise to differences of opinion between neutrals and belligerents which may occasion serious difficulties, and even conflicts;

'That it is consequently advantageous to establish a uniform doctrine on so important a point;

'That the Plenipotentiaries assembled in congress at Paris cannot better respond to the intentions by which their Governments are animated, than by seeking to introduce into international relations fixed principles in this respect;

'The above-mentioned Plenipotentiaries, being duly authorised, resolved to concert among themselves as to the means of attaining this object; and, having come to an agreement, have adopted the following solemn Declaration:—

'1. Privateering is, and remains, abolished;

'2. The neutral flag covers enemy's goods, with the exception of contraband of war.

'3. Neutral goods, with the exception of contraband of war, are not liable to capture under enemy's flag.

'4. Blockades, in order to be binding, must be effective; that is to say, maintained by a force sufficient really to prevent access to the coast of the enemy.

'The Governments of the undersigned Plenipotentiaries engage to bring the present Declaration to the knowledge of the States which have not taken part in the Congress of Paris, and to invite them to accede to it.

'Convinced that the maxims which they now proclaim cannot but be received with gratitude by the whole world, the undersigned Plenipotentiaries doubt not that the efforts of their Governments to obtain the general adoption thereof will be crowned with full success.

'The present Declaration is not and shall not be binding, except between those Powers who have acceded, or shall accede, to it.

'Done at Paris, April 16, 1856.'

But the 'uncertainty' complained of in the above Declaration is not of a kind that can be got rid of. It is inherent in the subject. Maritime laws of the class now under consideration do not rest on any fixed or immutable principles. They necessarily vary with the varying condition and exigencies of society. And those rules and regulations that may in the estimation of one country appear to be alike just and expedient, may in that

of another be held, on quite as good grounds, to have exactly the opposite qualities. The above Declaration expressly excepts articles contraband of war from the privileges conceded to goods of bonni neutral ships; but it does not specify the articles which are to be considered contraband. And it was quite as well that this vexed, rather insoluble question was left open; for it is most probable that the plenipotentiaries who subscribed the Declaration would not have agreed on any definition. And supposing they had submitted a list of contraband articles to the Declaration, it would very speedily have ceased to be of any weight. Whether an article should or should not be deemed contraband depends on circumstances which it is impossible to foresee or appreciate beforehand. And such being the case, it is futile to attempt to prevent further disputes by making out lists of contraband articles. We have seen that this has been frequently attempted, and it has frequently failed. Such lists may be respected for a while; but as soon as any contracting party or great Power conceives that it would for her interest or advantage to exclude some articles from, and to include others in, the list there is an end of its influence and authority.

The principle that free ships make free goods, or that the flag covers the cargo (*que le pavil couvre la marchandise*), and that consequently enemies' goods, not contraband of war, may safely conveyed in neutral bottoms, after being long resisted by this and most maritime states, has been assented to in the above Declaration.

The wisdom of this concession, even though it depends on the interpretation of the phrase 'contraband of war.' If it were restricted, as it usually been the case, to warlike stores (*munitions de guerre*), or articles directly available for warlike purposes, it would be in many respects justifiable. For it is plain, that under the limitation now supposed, the trade of a belligerent Power, with its colonies or other countries beyond sea, might be prosecuted in neutral ships nearly to the same extent, and with as much security, during war as during peace. But it is not easy to imagine that a principle having such consequences should be acted upon by any Power having a preponderating naval force, in the event of her engaging in hostilities. Such Power must then do one of two things; she must either consent to relinquish some of the most important advantages to be derived from her naval ascendancy, or she must reject the principle in question. And there is little doubt that she would adopt the latter alternative; and she might do this directly by resorting to her natural and indefeasible right to seize enemies' goods wherever they are to be met with; or indirectly, by extending the list of contraband articles, so as to make it include those of any importance carried by sea into the enemy's ports. Either way we should answer the purpose; and we may be pretty well assured, that, under the supposed circumstances, one or other of them would be followed.

11. *Blockade, Influence of.*—But it may perhaps be said, that though the right to carry enemy's goods not contraband of war, be conceded to neutrals by the Declaration of Paris, that right is restricted and confined within proper limits by the maintenance of the system of blockade. But it is difficult to doubt whether this restriction is good for much. It is distinctly laid down in the Declaration, that to be binding or effective, a blockade must be effective; that is, it must be maintained by a force sufficient really to prevent access to the coast of the enemy.' But the blockade of one or of a few ports may per-

we should abite

be made effective, it is abundantly certain that no such blockade can ever be made to apply to an extensive coast. Though our navy were doubled or trebled, it would not suffice to make an effective blockade of the coasts of France, of Spain, or of the United States. And why should a country with a powerful naval force bind herself to employ it only in one way? Why should she employ it in any way, whatever it may be, which happens to be at the time most conducive to her ends she has in view?

But supposing that an impossibility may be supposed, or that an extensive coast may be effectually blockaded, the circumstance would be of such less consequence now than formerly, or than it is generally imagined. Suppose, for example, that we are at war with France, and that we effectually blockade every portion of her coast, whether on the ocean or the Mediterranean; the result would be, that the oversea produce suitable for her wants would be imported into the contiguous ports of Belgium, Spain, and Piedmont, and that it would be carried from them by rivers and otherwise to every part of France; and that the produce she has to export would be disposed of in the same way.

It is plain, therefore, that these are not matters which much dependence can be placed on the success of blockades. These may be advantageously resorted to when the object is to reduce a port, to obstruct the trade of a port or a river, to prevent the sailing of a squadron, and so forth; but such measures directed against the trade of any great country, they must be nearly, if not wholly, ineffectual. In the case of France, it is quite clear that the strictest possible blockade would not prevent half the injury on her that its maintenance would entail upon ourselves. If the trade of a country in war is to be influenced by nothing but the blockade, it may be held to be practically free from all obstruction. But it cannot be supposed that when the evil day comes it will be without. When the existence of nations is at stake, they will not be withheld by declarations of neutrality above from availing themselves of every opportunity by which they may hope either to promote their own security or to injure their enemies.

*III. Influence of the new System over the Trade of the Continent.*—It is further obvious, were the blockade laid down in the Declaration of 1856 to be carried into effect without large additions being made to the list of contraband articles, that it would engross almost the entire oversea trade of countries engaged in war. Comparison of the articles which we export come under the description of warlike stores; and it is probable that we were engaged in hostilities, our ships which did not take on board contraband articles would navigate with perfect safety, while our ships would be exposed to the risk of capture. The magnitude of this risk would depend on various contingencies, and it might be measured by the higher premium of insurance that would have to be paid on them for the articles embarked in them. But considering the close competition to which our ship-owners are already exposed, the additional premium they would have to pay, even though it were not very considerable, would most probably turn the scale against the neutrals; and if they were once exposed and employed for any considerable period, it might not be an easy matter for our ship-owners to regain the ground they had lost, or to recover their former position, on hostilities being terminated. But in whatever way it may be defeated or eluded, it is not to be supposed that we should abide, in periods of war and

difficulty, by a rule that would tie up our hands and consign the entire oversea trade of the empire to foreigners. This would be a degree of liberality to which we can hardly be expected ever to arrive, and which, were it realised, would be more injurious to our best interests than the most intense selfishness.

*IV. Project for exempting Private Property at sea from Attack during War.*—Some of the more recent opponents of the old system of maritime law do not deny these statements. But they allege that they are founded on false principles. Private property, say they, is now respected in all contests carried on by land; and it would be for the advantage of all nations, whether belligerent or neutral, were the same humane and generous policy extended to private property at sea. But this sort of reasoning is more specious than solid. On a little examination it will be found that the cases have no real analogy. Private property on land, and the treasures of art and learning, are respected so far, that they are sometimes unconditionally, but frequently also on the payment of a contribution or ransom, exempted from injury. This is done because experience has shown that, while the destruction of the articles referred to may be productive of much misery and loss, it has little or no influence over the decision of the contest. But we are not hence to infer that the destruction of private property at sea will be equally ineffectual. In our unfortunate contest with the United States in 1814, the destruction of the Capitol at Washington was an act disgraceful to our arms, and which had no effect except to inflame the hostile feelings of the Americans. But the severe check which the contest gave to the trade of the Union made the citizens generally averse to the war; and was, indeed, the main cause of its being so speedily terminated. No such result could, however, have happened had American merchant ships been exempted from capture or molestation.

Suppose we are at war, and that our enemy, having succeeded in landing a force in some part of the kingdom, such as Kent or Connaught, inflicts on the peasantry outrages similar to those which the troops of Louis XIV. inflicted on the defenceless inhabitants of the Palatinate; such proceedings, by not sensibly affecting either our wealth, or the sources of our power, would in no wise accelerate the termination of hostilities. On the contrary, they would tend to their prolongation, by inspiring us with a strong desire to avenge such wanton and unnecessary cruelty. But it would be quite another matter were our enemy able seriously to obstruct our trade, to prevent our exports, or to sink, burn, and destroy the ships that were conveying to us supplies of necessary articles. Such proceedings might lay us under the greatest difficulties, and would be the most likely means to make us listen to proposals for an accommodation.

Everybody knows that the unpopularity of the French rule in Germany and other parts of the Continent, in the latter part of the war against Napoleon, was in great measure occasioned by the destruction of their trade, which, on the one hand rendered their corn and other disposable produce a mere drug, while, on the other, it added enormously to the prices of cotton, sugar, coffee, and most foreign articles. But had the rules and regulations embodied in the Declaration of 1856 been then in force, no such result would have happened. We should have had the singular combination of maritime peace with territorial war. And the trade of Prussia, Holland, and the other countries subject to France, and

indeed, of France herself, would have been as securely and cheaply carried on in neutral bottoms as it would have been in a period of universal tranquillity. Nothing, therefore, can be more contradictory and illogical than to contend that we are bound to extend the same immunity during war to private property at sea that is extended to private property on land. The cases are in no degree parallel. In the one, private property is respected because its destruction is seldom injurious except to the individuals immediately interested, and has little or no general influence; in the other case, private property is seized or destroyed because those from whom it is taken, being the carriers or purveyors of necessary articles for the community, their loss must seriously affect the latter, and may reduce them to the greatest straits.

V. *Abolition of Privateering.*—The abolition of privateering by the Declaration of Paris is of the highest importance, and should give general satisfaction. This practice appears to be a remnant of that system of private war which is universally waged by individuals in early or barbarous ages, but which gradually disappears as society advances. Privateers rarely attack ships of war. They do not act in concert, or with any object in view other than their own private gains. They are, in truth, a sort of legalised robbers, and while they occasion much individual suffering, they have little or no influence over the result of the war. (*L'armateur, indifférent au sort de la guerre et souvent de sa patrie, n'a d'autre amour que l'avidité du gain, d'autre récompense que ses prises et les prix attachés par l'État à ses pirateries privilégiées.* (Martens, *Essai sur les Armateurs*, c. i. s. 8.) This essay, which was translated into English, and published in 1801, contains the fullest details in regard to privateering. Valin, who defends and even eulogises privateering, admits that it is very apt *dégénérer en abus et en brigandage.* (*Traité des Prises*, i. c. 1, s. 7.) But their employment is principally objectionable from its having been found that, despite every precaution, it is not possible to hinder them from committing the greatest excesses. The desire to amass plunder is the ruling passion by which they are actuated; and being so, it would be childish to suppose that they should be scrupulous in their proceedings, or that they should endeavour to keep within the pale of the law when they think that their objects will be likely to be promoted by overstepping its limits. And hence their injurious treatment of the ships of neutral and friendly Powers. A system of this sort may perhaps be useful to a nation which has little trade, and may hope to acquire riches by fitting out privateers, without being exposed to the risk of retaliation. But except under very peculiar circumstances, it is difficult to suppose that it should be advantageous to a nation with an extensive overseas trade. A notion has, indeed, been long entertained, that while the interests of humanity would be promoted, the rights of belligerents would not be injuriously affected by the abolition of privateering. It was stipulated, for instance, in the treaty between Sweden and the United Provinces in 1675, that neither party should in any future war grant letters of marque against the other; and stipulations to the like effect have since been embodied in various treaties. These, however, being only isolated efforts, were insufficient materially to abate the nuisance, which could not be put down without an agreement to that effect by the great Powers, such as has been announced in the Declaration of 1856.

The United States, however, though possessed of a most extensive mercantile marine, has refused to consent to the abolition of privateering. But they have not done this capriciously; nor is it to be denied that there is a great deal of weight in the reasons given by the American Government for their refusal. (Letters of Marcy to the Count de Sarriges, July 28, 1856.) They grow out of circumstances peculiar to the United States—that is, of their warlike bearing but a very small proportion to the mercantile navy, which was at that time the largest in the world. And they contend, were they to abolish privateering, their merchant ships would be captured in vast numbers by numerous cruisers of their enemies; while merchant ships of the latter, owing to the fewness of their own ships of war, would be comparatively little affected; and that to restore the balance and place themselves on a level with their opponents, they have no resource but to appeal to patriotism (selfishness) of their citizens by sending privateers.

The Americans have, however, intimated a willingness to assent to the abolition of privateering, provided the other Powers agree to attack or molest private ships at sea during such an agreement would, no doubt, be much for their advantage; but we have seen that it is not one to which we can assent without at the same time, and by the same consenting to forego the use of some of the powerful of our means of defence and attack. This, however, is about the very last thing we either should or will do. No British man will ever agree to an arrangement which would diminish our powers and paralyse our energies at the very moment when, perhaps, independence and security may depend on being exerted to the utmost.

VI. *Right of Search.*—Nothing is said in the Declaration of 1856 in regard to the right of visitation and search, probably because it is obviously inherent in belligerents; for it would be contradictory to allow that they had no right to prevent the conveyance of contraband to an enemy, and to deny them the use of the means by which such right can be made effectual. The object of the search is twofold—to ascertain whether the ship is neutral, or an enemy, for everybody knows that the stance of its hoisting a neutral flag affords no security that it is really such; and, secondly, to ascertain whether it has contraband on board, or an enemy's property on board. All neutral ships that would navigate securely during war, consequently heave-to when summoned by the cruisers of either belligerent, and be searched with passports from their Government. In all the papers or documents necessary for the property of the ship and cargo; and the neutral states in general in international law, and perhaps also belligerent property, and hence it has been generally admitted that a merchant ship which seeks to avoid a crowding sail or by open force, may be captured and confiscated.

One of the most difficult questions in international law is the right of search has reference to neutral sailing under convoy. Is the allegation of an officer commanding the vessel of war against the merchantmen, that the latter have contraband articles or belligerent property on board, to be held to be sufficient to nullify the right of search? or may the exercise of the right notwithstanding insisted upon?

however, intimated the abolition of Powers agree ships at sea during would, no doubt, be to which we can do, and by the same use of some of the of defence and the very last thing do. No British to an arrangement powers and partly moment when, perhaps, it may depend on almost.

Nothing is said in regard to the, probably because belligerents; for to show that they had licence of contraband them the use of right can be made the search is twofold the ship is neutral knows that they a neutral flag ally such: and, secondly, has contraband on board. All neutral securely during war when summoned belligerent, and be their Government, arguments necessary ship and cargo; and of any contraband belligerent property, in generally admitted seeks to avoid an open force, may be difficult questions in as reference to mean. Is the allegation the vessel of war at the latter have belligerent property on board to nullify the exercise of that power? Is it not occurred in the

1798, when a fleet of merchantmen belonging to Sweden, a neutral Power, and sailing under convoy of a frigate, were detained by a British squadron. The Swedish captain, on the question being put to him, answered that the ships were destined for different ports of the Mediterranean, and that they were laden with hemp, iron, pitch, and tar. These articles were the produce of Sweden. Articles which form a considerable part of the produce of a country, though contraband of war, have sometimes been allowed to be conveyed in neutral ships. But even in that case belligerents have been accustomed to detain them, not for confiscation, but for pre-emption. (Robinson's *Admiralty Reports*, i. 244.) But as they have most commonly been reckoned contraband of war, and as France and her allies had many ports on the Mediterranean, there can be little or no doubt that we were warranted, despite the threatened but unattempted opposition of the Swedish captain, in detaining the ships. But besides being detained, they were condemned with their cargo as lawful prize; a proceeding which gave rise to a great deal of discussion at the time, and which it is not easy to justify. For an account of this famous case, see Robinson's *Admiralty Reports*, i. 340-373. In an elaborate argument Sir William Scott (afterwards Lord Stowell) states, with his usual ability, but with too sensible a bias, the reasons for his judgment. Its legality was questioned in a tract by Mr. J. F. W. Schlegel, professor at Copenhagen, translated into English, and published in London in 1801. Schlegel was answered by Dr. Croke in a tract entitled *Remarks on Mr. Schlegel's Work on the Visitation of Neutral Vessels under Convoy*, published in the course of the same year.

In the event of the captain of a ship of war conveying neutral merchantmen distinctly declaring that they have no contraband articles or enemies' property on board, their detention or search would be a very strong measure. It would, in truth, be an insult to the flag and honour of the neutral Power. And unless the presumptions that the captain had emitted a false declaration were exceedingly strong, to question the rectitude would be an act contrary to the humanity of nations, and one that a high-spirited people would be sure to resent. But except in the case of a limited number of vessels sailing to specified ports under convoy, and when there is clear and explicit declaration by the officer in command that they have neither contraband articles nor belligerent property on board, the right of search, supposing it to be exercised without any unnecessary violence, is one that is essential to belligerents, and cannot be justly objected to.

*Foreign Enlistment Act.*—It will be observed that in treating of this subject we have referred only to those general principles that prevail in international law. The laws of individual states in regard to neutrality harmonise in the most part with the public law respecting it. The only British statute to which it is necessary to refer is the Foreign Enlistment Act, 34 Geo. III. c. 69. It prohibits the employment of British ships, without license, in the service of any foreign prince or state, and their employment as transports or store-ships by states with which we are not at war. But it is believed that all, or nearly all, that this Act prohibits may be done directly, may be done indirectly with difficulty. Inasmuch, however, as it can hardly fail, if maintained, to give rise to troublesome questions with foreign Governments, it were better were it repealed, and our merchants and owners left to deal, as they think fit, with

the ordinary risks that attach to those that carry contraband articles. The circumstances in which the Act originated have long since passed away (the struggle between Spain and her revolted colonies in South America); and as it can no longer be of any use, and may, or rather must, occasion difficulties, its abolition would be a judicious measure.

Unfortunately much correspondence and discussion arose during and after the close of the American Civil War between this country and the United States, as to our conduct as neutrals and the efficiency of our neutrality laws. One of the results was the issue, in July 1867, of a Royal Commission of Enquiry, and in May 1868 the Commissioners presented a Report, containing the following recommendations, viz. :—

I. That it is expedient to amend the Foreign Enlistment Act, by adding to its provisions a prohibition against the preparing or fitting out in any part of her Majesty's dominions of any naval or military expedition, to proceed thence against the territory or dominions of any foreign state with whom her Majesty shall not then be at war.

II. That the first paragraph of sec. 7 of the Foreign Enlistment Act should be amended, to the following effect :—

If any person shall within the limits of her Majesty's dominions—

- a. Fit out, arm, despatch, or cause to be despatched, any ship with intent or knowledge that the same shall or will be employed in the military or naval service of any foreign Power in any war then being waged by such Power against the subjects or property of any foreign belligerent Power with whom her Majesty shall not then be at war :
- b. Or shall within her Majesty's dominions build or equip any ship with the intent that the same shall, after being fitted out and armed either within or beyond her Majesty's dominions, be employed as aforesaid :
- c. Or shall commence or attempt to do, or shall aid in doing, any of the acts aforesaid,—every person so offending shall be deemed guilty of a misdemeanor.

III. That in order to enable the executive Government more effectually to restrain and prevent attempted offences against sec. 7 of the Foreign Enlistment Act, additional provisions to the following effect should be inserted in the statute.

- a. That if a Secretary of State shall be satisfied that there is a reasonable and probable cause for believing that a ship which is within the limits of her Majesty's dominions has been or is being built, equipped, fitted out, or armed contrary to the enactment, and is about to be taken beyond the limits, or that the ship is about to be despatched contrary to the enactment, such Secretary of State shall have power to issue a warrant, stating that there is such a reasonable and probable cause for believing as above aforesaid, and upon such warrant the Commissioners of Customs, or any other person or persons named in the warrant, shall have power to arrest and search such ship, and to detain the same, until it shall be either condemned or released by process of law, or in manner hereinafter mentioned.

- b. That the power hereinbefore given to a Secretary of State may, in parts of her Majesty's dominions beyond the seas, be exercised by the governor or other person having chief authority.
- c. That power be given to the owner of the ship or his agent to apply to the Court of Admiralty of the place where the ship is detained, or, if there be no such Court there, to the nearest Court of Admiralty, for its release.
- d. That the Court shall put the matter of such detention in course of trial between the applicant and the Crown, with usual Admiralty appeal to the Privy Council.
- e. That if the owner shall establish to the satisfaction of the Court that the ship was not and is not being built, equipped, fitted out, or armed, or intended to be despatched, contrary to the enactment, the ship shall be released and restored.
- f. That if the owner shall fail to establish to the satisfaction of the Court that the ship was not and is not being built, equipped, fitted out, or armed, or intended to be despatched, contrary to the enactment, then the ship shall be detained till released by order of the Secretary of State; nevertheless the Court may, if it shall think fit, order its release, provided the owner shall give security to the satisfaction of the Court that the ship shall not be employed contrary to the enactment, and providing that no proceedings are pending for its condemnation.
- g. That if the Court shall be of opinion that there was not reasonable and probable cause for the detention, and if no such cause shall appear in the course of the proceedings, the Court shall have power to declare that the owner ought to be indemnified by the payment of costs and damages, which in that case shall be payable out of any moneys legally applicable by the Commissioners of the Treasury for that purpose.
- h. That any warrant of the Secretary of State shall be laid before Parliament.
- i. That the proceedings herein provided shall not affect the power of the Crown to proceed, if it thinks fit, to condemnation of the ship.
- k. That the following exceptions be made from this Resolution:
1. Any foreign commissioned ship;
  2. Any foreign non-commissioned ship despatched from this country after having come within it under stress of weather or in the course of a peaceful voyage, and upon which ship no fitting out or equipping of a warlike character shall have taken place in this country.
- IV. That it is expedient to make the act of hiring, engaging, or procuring any person within her Majesty's dominions to go on board any ship, or to embark from any part of her Majesty's dominions by means of false representations as to the service in which such persons are intended to be employed, with intent on the part of the person so hiring, engaging, or procuring as aforesaid, that the persons so hired, engaged, or procured as aforesaid shall be employed in any land

or sea service prohibited by sec. 2 of the Foreign Enlistment Act, a misdemeanor, punishable like other misdemeanors under the same section.

V. That the forms of pleading in information and indictments under the Foreign Enlistment Act should be simplified.

VI. That if, during the continuance of a war in which her Majesty shall be neutral, any prize not being entitled to recognition as a commissioned ship of war, shall be brought within the jurisdiction of the Crown by any person acting on behalf of or under the authority of any belligerent Government, which prize shall have been captured by any vessel fitted out during the war for the service of such Government, whether as a public or a private vessel of war, in violation of the laws for the protection of the neutrality of this realm, or if any such prize shall be brought within the jurisdiction as aforesaid by any subject of the Crown, or of such belligerent Government, having come into possession of such prize with notice of the unlawful fitting out of the capturing vessel, such prize should upon proof in the Admiralty Courts, at the suit of the original owner of such prize or his agent, or any person authorised in that behalf by the Government of the state to which such prize belongs, be restored.

VII. That in time of war no vessel employed in the military or naval service of any belligerent Government, which shall have been built, equipped, fitted out, or despatched contrary to the enactment, should be admitted into any port of her Majesty's dominions.

NEUTRALITY, WARRANT OF. [See ENACTMENT.]

NEWCHWANG or YINGTZE. This is the most northerly of the Chinese treaty ports, on the river Lias, and from November 15 to the 1st of March the river is closed by ice.

The exports of the town consist chiefly of opium, tea, silk, and cotton. The imports, of opium, sugar, and cotton goods. In 1864 and 1865 the imports were worth 709,738 and 1,086,178 taels respectively, and the exports 1,710,398 and 2,167,314 taels.

In the analysis of Chinese commerce for the year 1867, appended to the Foreign Commerce Report published in 1868, the value of the total trade of this treaty port is set down for 1866 at 4,455,764 taels. 327 vessels of 110,418 tons entered the port in 1867, of which 112, of 43,267 tons were British.

NEW ORLEANS. The capital of Louisiana, one of the United States, on the eastern bank of the Mississippi, about 105 miles from its mouth. lat. 29° 57' 45" N., long. 90° 9' W. Population, 1860, 168,675. The new-built streets are mostly of brick, and intersect each other at right angles. The houses are mostly of brick. It is the emporium of all the vast tracts traversed by the Mississippi, the Missouri, and their tributaries, enjoying a greater command of the navigation than any other city either of the Old or New World. Civilisation has hitherto found its roots, and begun to flourish, only in comparatively small portions of the territories of which New Orleans is the centre, and yet its progress has been rapid beyond precedent. It appears, from the accounts published by order of Congress, that during the year ending June 30, 1858, the value of the native produce exported from this city amounted to 88,270,224 dollars, while the value of that imported from New York was 89,039,741. With respect to imports, the case is materially different

NEW ORLEANS

value of those of New Orleans, in the year just  
mentioned, being only 19,586,033 dols., whereas  
those of New York amounted to 178,475,736. It  
is believed by many, seeing how rapidly settle-  
ments are forming in the 'West,' that New  
Orleans must, at no very distant period, exceed  
every other city of America, as well in the  
magnitude of its imports as of its exports; and,  
considering the boundless extent and extraordi-  
nary fertility of the uncultivated and unoccupied  
lands of the Mississippi and Missouri, the  
Orleans is destined to become the greatest em-  
porium, not of America only, but of the world,  
will not appear very unreasonable. Steam  
navigation has been of incalculable service to  
this port, and, indeed, to the whole of central  
America. The voyage up the Mississippi, formerly  
so difficult and tedious, is now performed in  
expeditious steam packets with ease, celerity,  
and comfort. 'There have been counted,' says  
the Pilot, 'in the harbour, 1,500 flat boats at a  
time. Steam boats are arriving and departing  
every hour; and it is not uncommon to see 50  
lying together in the harbour. A forest of masts  
is constantly seen along the levee, except in the  
winter months. There are often 5,000 or 6,000  
vessels from the upper country here at a time;  
and we have known thirty vessels advertised  
for Liverpool and Havre. The inter-  
course with the Havannah and Vera Cruz is  
great and constantly increasing.' (*Geography and  
History of the Western States*, vol. i. p. 557.)  
This being the case, New Orleans was third in the  
rank of the largest ports in the United States,  
behind New York and Boston. Vessels of the largest  
tonnage may navigate the river several hundred  
miles above the city. The aggregate burden of  
the shipping belonging to the port on June 30,  
1862, amounted to 210,411 tons: of which 70,072  
were employed in steam navigation. But the  
commercial importance of the city was completely  
checked by the civil war, and cannot recover  
for a considerable time. In 1861, the year  
of the outbreak of war, only 130 vessels of 76,935  
tonnage, chiefly American, cleared from the port.  
The depth of water in the river opposite to New  
Orleans is, at a medium, about 70 feet; and it  
contains soundings of 30 feet till within a mile  
of its confluence with the sea. Besides 3 or 4  
navigable passes or outlets, the Mississippi has 4  
secondary passes or outlets. In the south-east,  
the river passes at Balize, the water on the bar  
at ordinary tides does not exceed 12 feet; and  
at spring tides in the Gulf of Mexico is not  
more than 2 or 2½ feet, vessels drawing much  
more cannot make their way from the ocean  
to New Orleans. (*Darby's View of the United  
States*, p. 467.)

filled up; and large tracts of swampy ground  
contiguous to the town have been drained. And  
as such works will no doubt be prosecuted on a  
still larger scale, according to the increase of  
commerce and population, it is to be hoped that  
the ravages of fever may be materially abated,  
though the situation of the city excludes any  
very strong expectation of its ever being rendered  
quite free from this dreadful scourge. During the  
sanitary precautions adopted in the first instance  
occupation of New Orleans by the northern army,  
on behalf of the soldiers, had a marked beneficial  
effect on the general health of the town.  
It has been proposed to bring earth from the  
upper parts of the Mississippi, and to employ it  
in forming a site for a new city raised some feet  
above the level of the river. It is believed that  
this would be the most likely means to guard  
against fever; and the object in view is of such  
paramount importance that the expense of the  
scheme should be reckoned a very inferior matter.

Account of the Quantities of the Principal Arti-  
cles Imported from the Interior to New Orleans  
during the 3 Years ending August 31, 1866.

150 tons and upwards,	1 dollar 25 cents per ton.	

All vessels from bar to quarantine, and from quarantine to city, half of the above rates.

All vessels below Fort Jackson to be charged the same as from bar.

All vessels of 100 tons and upwards from Fort Jackson to city, 1 dol. per ton.

Vessels of 75 and under	tons	cents
50	75	90
40	50	70

All vessels under 40 tons as per contract. All vessels between quarantine and English Turn to city will be charged the same as from quarantine.

All vessels from English Turn to city, over 100 tons, 50 cents per ton.

All vessels from English Turn to city, under 100 tons, as per contracts.

All vessels requiring two boats on the bar 500 tons and upwards, will be charged 100 dols. for first trial and 75 dols. for each trial after. Under 500 tons, 100 dols. for first trial, and 50 dols. for each trial after.

Dock accommodations.—There are two now in use, and another under construction. One is a take a vessel of 1,500 tons drawing 15 feet. The other under construction is equally large, smaller dock for vessels drawing 7 or 8 feet. The expenses of repairs are enormous, in consequence of combinations amongst the labourers.

State of bar at mouth of river.—The Mississippi has two principal passes; viz:—

The south-west pass, which has usually a depth of from 15 to 16 feet.

Pass à l'ouest, which has a depth of from 14 to 15 feet.

Both these passes have a greater depth in particular winds. The other two passes, the north-east and the south pass, have a depth from 5 to 6 feet of water on them, and are filling up.

Steps are being taken, an appropriation has been made by Congress for the purpose, to dig out the south-west pass and pass à l'ouest to give a greater depth of water.

the above be really advantageous engines for advertising. It has sometimes been tried, with a view to lessen the expense of advertisements, to combine certain descriptions of them, such, for example, as notices of books, to some one journal or class of journals. But the experiment has had no great degree of success.

The London newspapers have become remarkable for the great mass and variety of matter which they contain, the ability of their leading articles, the rapidity with which they are printed and circulated, and the accuracy and copiousness of their reports of debates. These results are obtained by a large expenditure and considerable division of labour. The reports of parliamentary proceedings are obtained by a succession of able and intelligent reporters, who relieve each other at intervals of  $\frac{1}{3}$  of an hour, or occasionally less. A newspaper cannot aim at copious and correct reports with less than 10 reporters for the House of Commons; and the expense of that particular part of a morning newspaper establishment exceeds  $\$8,000$  per annum.

**Regulations as to Newspapers.**—The Act 6 & 7 Wm. IV. c. 76 introduced several new regulations with regard to newspapers. Among other things, it imposed a duty of 1d. on every sheet of paper printed as a newspaper, provided its superficies did not exceed 1,530 square inches; of 1 $\frac{1}{2}$ d. if it exceeded 1,530 square inches, and did not exceed 2,295 square inches; and of 2d. if it exceeded 2,295 square inches. When supplements were published with newspapers, they were each charged with a duty of  $\frac{1}{4}$ d., provided their superficies did not exceed 785 square inches.

This was neither more nor less than a device to limit the size of newspapers by imposing a peculiar duty on those publishers who might be disposed, by increasing the size of their journals, to lay the most tempting supply of information or amusement before their readers. But this ingenious scheme for limiting a small be substituted for a large measure of intelligence has since been, if not abolished, at least materially modified. The Stamp Act of 1836, 5 Wm. IV. c. 63, has the following provisions, viz:—

**As to Duties on Newspapers and Supplements.**—A higher stamp duty than 1d. shall be chargeable on any newspaper printed on one sheet of paper containing superficies not exceeding 2,295 square inches.

A supplement published with any newspaper stamped with the duty of 1d., such supplement being printed on one sheet of paper only, together with such newspaper containing in aggregate a superficies not exceeding 2,295 square inches, shall be free from stamp duty.

Any other supplement to any such duly stamped newspaper shall not be chargeable with any stamp duty than  $\frac{1}{4}$ d., provided it does not exceed a superficies exceeding 1,148 inches.

Any two supplements to any such duly stamped newspaper shall not be chargeable with a higher stamp duty than  $\frac{1}{4}$ d. on each, provided each of such supplements be printed and published on one sheet of paper only, and that they contain together a superficies not exceeding in the aggregate 1,148 inches.

The superficies in all the cases aforesaid to be one only of the sheet of paper, and exclusive of the margin of the letter-press.

The Act 6 & 7 Wm. IV. c. 76 exempts from duties on newspapers 'any paper called *Police Gazette* or *Hue and Cry*,' published in Great Britain by authority of the Secretary of State, or in Ireland by the authority of the Lord Lieutenant and three Government *Gazettes* published in

London, Edinburgh, and Dublin, ceased in 1868 to bear stamps; daily accounts or bills of goods imported and exported, or warrants or certificates for the delivery of goods, and the weekly bills of mortality; and also papers containing any list of price current, or of the state of the markets, or any account of the arrival, sailing, or other circumstances relating to merchant ships or vessels, or any other matter wholly of a commercial nature: provided such bills, lists, or accounts do not contain any other matter than what hath been usually comprised therein.

And the same Act lays down the following rules; viz. a discount of 25 per cent. is to be allowed on the above duties on newspapers printed in Ireland. (Sec. 2.)

In order to prevent fraud in the returns as to newspapers, it is enacted that from December 31, 1836, a separate or distinctive stamp or die shall be used for each newspaper. (Sec. 3.)

No person is to print or publish a newspaper until after a declaration has been made and lodged at the Stamp Office, containing certain particulars (specified in the Act), as to the names and addresses of the printer, and certain of the proprietors of such paper &c., under a penalty of 50*l.* Persons wilfully making a false or defective declaration are, upon conviction, to be deemed guilty of a misdemeanor. (Secs. 6, 7.)

There are a number of regulations intended to provide for the discovery and liability of the printer and proprietors, the security of the duties, and the prevention of the sale of unstamped papers. A penalty of 20*l.* is imposed on any person printing, publishing, selling &c. newspapers not duly stamped; and it is declared to be lawful for any officer of stamps, or any person authorised by the commissioners in that behalf, to seize any such offender, and take him before any justice having jurisdiction where the offence is committed, who shall summarily determine the matter, and upon conviction and default of payment, shall commit such offender to prison for some term not exceeding 3 calendar months, nor less than 1 calendar month. (Sec. 17.)

Penalty for sending abroad newspapers not duly stamped, 50*l.* (Sec. 18.)

Justices may grant warrants to search for unstamped newspapers, and to seize presses &c. used in printing the same; and on refusal of admittance, officers may break open doors &c. Persons resisting officers, liable to a penalty of 20*l.* (Secs. 22, 23.)

**Influence of the Reduction of the Duty in 1836.**—The reduction of the price of newspapers from 7d. to 5d. occasioned a great increase in the demand for the old or established papers; and a considerable number of new weekly papers also started into existence after the reduction of the duty in the metropolis and throughout the country. Down to 1855, however, with one exception, no new daily paper was established in the metropolis.

**Newspaper Act of 1855.**—But a still further and most important change in the regulations as to newspapers was effected by the Act of 1855, 18 Vict. c. 27. It exempts newspapers or periodical publications, not transmitted by post, from all charge for duty; but the existing duty, and the other arrangements referred to above, are still kept up in the case of newspapers sent by post. Inasmuch, however, as newspapers may be readily transmitted between the principal places in the United Kingdom through private channels, it is probable that the post will be but little resorted to in time to come, except in the case of newspapers sent to the country, or to places out of the way of

the great lines of communication. And hence, no doubt, the abolition of the duty on the great majority of newspapers will be the principal immediate effect of the new system. We beg to annex the following abstract of the Act referred to.

**Not compulsory to print Newspapers on Stamps.**—From and after 14 days from the passing of this Act, it shall not be compulsory (except for the purpose of free transmission by the post) to print any newspaper on paper stamped for denoting the duties imposed by law on newspapers, and no person shall be subject or liable to any penalty or forfeiture for printing, publishing, selling, or having in his possession any unstamped newspaper. (Sec. 1.)

**Periodical Publications printed on Stamps to be transmitted by Post free of Postage.**—Every periodical publication hereinafter mentioned which shall be printed within the United Kingdom on paper stamped for denoting the rate of duty now imposed by law on newspapers, shall be entitled to the like privileges of transmission and re-transmission by the post between places in the United Kingdom, either postage-free or otherwise, on the same terms and conditions and under and subject to the like rules and regulations, as newspapers duly stamped are now entitled and subject to under any Act or Acts in force, but under and subject nevertheless to the terms and conditions contained in this Act. (Sec. 2.)

**Periodical Publications entitled to free Transmission by Post to be printed under specified Limitations and Conditions.**—Every periodical publication, to be entitled to any such privilege as aforesaid, shall be printed and published at intervals not exceeding 31 days between any two consecutive parts or numbers of such publication, and shall be subject to the same limitations and restrictions with respect to the number of sheets or pieces of paper whereon the same shall be printed, and with respect to the superficies or dimensions of the letter-press thereof, as by any Act or Acts now in force are enacted or imposed with respect to newspapers and supplements thereto; and every such periodical publication shall be entitled to such privilege only on the terms and conditions following; viz. one of the sheets or pieces of paper on which the same shall be printed, shall be stamped with an appropriate die, denoting the stamp duty imposed by law on a newspaper printed on the like number of sheets or pieces of paper and of the like dimensions with respect to the superficies of the letter-press thereof; and on the top of every page of such publication shall be printed the title thereof, and the date of publishing the same, and such periodical publication, at the time when the same shall be posted, shall be folded in such manner that the whole of the stamp denoting the said duty shall be exposed to view, and be distinctly visible on the outside thereof; also such periodical publication shall not be printed on pasteboard or cardboard, or on two or more pieces or thicknesses of paper pasted together, nor shall any pasteboard, cardboard, or such pasted paper be transmitted by post with any such periodical publication either as a back cover thereto, or otherwise. (Sec. 3.)

**Paper to be stamped for such Periodical Publications &c.**—It shall be lawful for the proprietor or printer of any such periodical publication to send to the Commissioners of Inland Revenue, or to such officer as they shall appoint or direct in that behalf, any quantity of paper to be stamped with an appropriate die, to be provided in the manner directed by the Act 6 & 7 Wm. IV. c. 76 s. 3, for denoting the rate of stamp duty chargeable

on newspapers; and upon payment to the proper officer of the full amount of the stamps required to be impressed on such paper, the said Commissioners shall cause the same to be stamped accordingly; provided always, that there shall be allowed in Ireland, in respect of such appropriated stamps as aforesaid for any periodical publications which shall be printed and published only in Ireland, the same rate of discount as by the said Act is directed to be allowed on the purchase of stamps for the printing of newspapers in Ireland. (Sec. 4.)

**Periodical Publications to be posted within 15 Days after Publication.**—Every periodical publication posted in the United Kingdom, to be entitled to the privilege of transmission by the post between places in the United Kingdom, under the provisions of this Act, shall be put into a post office within 15 days next after the day on which the same shall be published; the day of publication to be determined by the date of such publication. (Sec. 5.)

**Questions as to Periodical Publications, how to be determined.**—In all cases in which a question shall arise whether a printed paper is entitled to the privilege of a periodical publication, so far as respects the transmission thereof by the post, under the provisions of this Act, the question shall be referred to the determination of the Postmaster-General, whose decision, with the consent of the Commissioners of the Treasury, shall be final. (Sec. 6.)

**Newspapers may be registered at the General Post Office.**—Upon the Postmaster-General being satisfied that any printed publication is a newspaper, or entitled to the privileges of a newspaper within the meaning of the treaties and arrangements with foreign powers and colonial governments, it shall be lawful for the proprietor or printer of such newspaper or publication, if he think fit, to register the same at the General Post Office in London, in such form and with such particulars relating to the same, and subject to the payment of such fees, not exceeding five shillings respectively, as well on registration as afterwards periodically for being continued on the register, as the Postmaster-General, with the consent of the Treasury, shall from time to time direct or determine in that behalf; and thereupon such newspaper or publication, being printed on paper duly stamped with an appropriate die under the provisions of this Act, shall be entitled to all the privileges and advantages secured to newspapers by such treaties and arrangements. (Sec. 7.)

**Transmission by Post of printed Papers to Foreign Countries.**—It shall be lawful for the Treasury, by warrant under their hands, to cause any printed newspaper (British, colonial, or foreign) to be transmitted by the post to any place in the United Kingdom and colonial or foreign countries, or between any ports or places beyond the sea (whether through the United Kingdom or not), either free of postage or at such rates of postage not exceeding 2d. for every newspaper, irrespective of any foreign or colonial postage, as the Treasury, or Postmaster-General, with their consent, shall from time to time direct or determine; and as a condition to any British newspaper being transmitted by the post to any place in the United Kingdom, the same shall be printed on paper duly stamped with an appropriate die under the provisions of this Act, and the Treasury or Postmaster-General may require such newspaper to be registered at the General Post Office in London, in the form and with the particulars and subject to the payment of the fees mentioned in last section. (Sec. 8.)

**Power to the Postmaster-General and Treasury to make Regulations for carrying the Act into effect.**

It shall be lawful for the Postmaster-General, with the consent of the Treasury, at any time or times hereafter to make and issue such orders, regulations, conditions, and restrictions as he shall deem to be necessary or expedient for the purpose of regulating the receipt, transmission, and delivery by post of periodical publications under the provisions of this Act, or for preventing or detecting frauds or abuses in relation thereto, and for giving effect to the purposes of this Act; and it shall also be lawful for the said Postmaster-General, with the like consent, from time to time to rescind or revoke all or any such orders, regulations, conditions, and restrictions, and to make and issue any new ones in lieu thereof. (Sec. 9.)

**Periodical Publications sent by Post not in conformity with this Act to be charged Letter Rates of Postage.**—Periodical publications sent by post otherwise than in conformity with the terms, conditions, and regulations established under the authority of this Act, may be detained by the Postmaster-General, and any officer of the Post Office; and after being opened, the same shall be either returned to the senders thereof, or forwarded to the place of their destination, charged with the like rates of postage as if the same were letters transmitted by the post: provided always, that it shall be lawful for the Treasury, by warrant under their hands, to authorise the Postmaster-General to charge, in any such case, any such less rate of postage as to him shall seem fit.

**(Sec. 10.)**

**London Gazette to be Evidence of the issuing of Warrants or Orders.**—Any printed copy of the London Gazette in which any warrant or order issued or made under or by virtue of this Act, or purporting so to be, shall be published, shall be admitted as evidence by all courts, judges, justices, and others, of such warrant or order, and of the date making and issuing thereof, and of the contents thereof, without any further or other proof of such warrant or order, or of the matters therein contained. (Sec. 11.)

**Interpretation of Terms.**—The term "periodical publication" used in this Act, shall be construed to mean and include a newspaper as defined by the Acts in force relating to the stamp duties on newspapers, and every printed literary work or tract, printed and published periodically, or in parts or numbers, at intervals not exceeding 31 days between any two consecutive papers, parts, or numbers of such literary work or paper; and all the purposes of this Act the islands of Guernsey, Jersey, Alderney, Sark, and the Isle of Man shall respectively be deemed to be parts of the United Kingdom. (Sec. 12.)

It would be premature to speculate with much confidence in regard to the results of this important measure. But we doubt whether it will have the beneficial influence which many have anticipated. It was contended in 1836, when the duty on newspapers was reduced from 3d. to 1d., that the advantages would result from this reduction; that the clandestine circulation of cheap newspapers advocating dangerous doctrines would be checked; and that the stigma attached to low-priced journals in the public estimation being removed, men of ability and attainments would be induced to write in the higher-priced journals. These expectations have not been realised; and we much doubt whether the circulation of low-priced political journals can ever be of advantage. Such is the case, speaking generally, addressed to the

lower and poorer classes of the community; and their writers usually find it more for their advantage to flatter the prejudices entertained by their readers, and to espouse their peculiar views, how inconsistent soever these may be with the interests of society in general, than to inculcate sounder though less popular principles. Hence the questionable character of the greater number of the low-priced papers, or, at least, of such of them as are read by the lower orders. This, perhaps, may be a necessary evil in a highly advanced country like this; but whether it be so or not, there can be no doubt of its existence, and of its magnitude.

It has sometimes been thought singular that that division of subjects which has been introduced into most other things has not been introduced amongst newspapers. Instead of having all sorts of matter crammed into the same journal, it might be presumed that the better plan would be to have all topics of considerable interest separately treated in papers appropriated to them only, and conducted by persons fully conversant with their principles and details. Under the present omnivorous system, individuals who care nothing for the theatre, are, notwithstanding, unable to procure a paper in which it does not occupy a prominent place; and those who cannot distinguish one tune from another have daily served up to them long dissertations on concerts, operas, oratorios, and so forth. But, how desirable soever, in some respects, the plan of appropriating particular papers to particular subjects does not appear to be at all suited to the public taste. In a well-conducted daily paper, like the *Times*, ably written articles on all subjects of interest are brought together under the reader's notice, who may read them all, or such only as he pleases. This is incomparably more convenient than to have to hunt for different articles among a variety of journals; and is, in fact, the only plan calculated to meet the wants and exigencies of the public.

**Impolicy of imposing a Postage on Newspapers.**

The duties now substantially repealed, produced, in 1853, 412,220*l.* nett, no inconsiderable sum in a period of war. In point of fact, however, they could hardly be called duties, and ought rather to have been regarded as a payment for the trouble and expense attending the conveyance and distribution of newspapers by post. But supposing such to be the case, it was argued that the duty should be so limited, that is, that it should only be imposed on papers carried by the post. Matters of this sort are not, however, to be decided by mere logical considerations. The effect of the new plan is to confine, in a greater or less degree, according to circumstances, the circulation of newspapers to the districts within which they are published; and this certainly is not a desirable object. Hitherto the *Times* and other London journals displaying the greatest talent, and embracing the most varied information, had been distributed all over the country at about the same price as the local and inferior journals. But under the new plan the charge for conveyance, or it may be postage, being added to the price, of the metropolitan journals, they become dearer than the local papers, and people in many, or rather perhaps in the majority of instances, will be disposed to prefer the low-priced though inferior journal published at their door, to the superior but higher priced journal of the capital. If this should turn out to be the case, it will be a serious disadvantage; and by depreciating the quality of the journals circulating over the country, and fostering local prejudices, will far more than neutralise the advantages which it is presumed will result, under

the new plan, from the establishment of low-priced papers. These advantages are, indeed, of a very doubtful description. It is true that many of the inferior papers formerly to be met with inculcated pernicious doctrines. But it is by no means clear that their influence will be in any degree lessened by the new system. On the contrary, it may not improbably be increased. The late duty affected them to the same extent that it affected other descriptions of papers; and as they circulated when charged with this burden, it appears reasonable to suppose that they will circulate still more extensively when relieved from it. On the whole, therefore, we anticipate little or no advantage from the new plan. But we are, at the same time, ready to admit that no system of this sort can be safely judged *a priori*; and that the results of experience may differ very widely from those of theory.

In the Post Office returns, the free and chargeable newspapers are mixed with book packets, the number of each not being distinguished, but the whole numbering in 1867, 102,273,301.

**Piracy in Newspapers.**—The great difficulty under which the leading journals are at present placed, is the want of any available copyright in the news or in the articles which they supply. The important information collected by the agents for the *Times* in all parts of the world, and the able disquisitions in that and other journals, may be (and no doubt will be) published, in an hour or two after their first edition in London, in low-priced journals in Manchester, Liverpool, Glasgow, and so forth. This is a gross abuse. And though it be difficult to deal with, it seems pretty evident that if it be not put down, it can hardly fail, by robbing the metropolitan journals of great part of the advantages derived from their extensive connections and vast expenditure, to make them less anxious to cater for their readers, and so to degrade the quality as well as the character of the press.

**Notices of Newspapers.**—The history of news-

papers, and of periodical literature in general, remains to be written; and were the task executed by an individual of competent ability, and with due care, it would be a most interesting and important work. It appears, from the researches of Mr. Chalmers, that the first newspaper published in modern Europe, made its appearance at Venice in 1536; but the jealousy of the Government would not allow of its being printed; so that, for many years, it was circulated in manuscript! It was called *Gazetta*, from a small Venetian coin of that name, for which it was usually exchanged. (Camusat, *Histoire des Journaux*, i. 119.) Newspapers were first issued in England by authority during the alarm occasions, by the approach of the Armada to our shores; in order, as was stated, by giving real information, to allay the general anxiety, and to hinder the dissemination of false and exaggerated statements. From this era, newspapers of one sort or other have, with a few intermissions, generally appeared in London; sometimes at regular, and sometimes at irregular intervals. During the civil war both parties had their newspapers. A newspaper was published in Scotland, under the auspices of Cromwell, in 1652. The *Caledonian Mercury* was, however, the earliest of the Scotch newspapers of native manufacture; it first appeared at Edinburgh, under the title of *Mercurius Caledonius*, 1660; but its publication was soon afterwards interrupted. In 1715, a newspaper was, for the first time, attempted in Glasgow.

The *Daily Courant*, the first of the daily newspapers published in Great Britain, made its appearance in London in the early part of the reign of Queen Anne. (*Life of Ruddiman*, 102-21.)

From the Stamp Office accounts, it appears that the number of newspapers sold annually in England, during the three years ending with 1733, was 7,411,757; in 1760, 9,464,790; in 1790, 14,033,300; in 1792, 15,003,760.

American Newspapers.—The increase of newspapers in the United States has been a good deal more rapid than in England; a consequence, partly, no doubt, of the greater increase of population in the Union, but more, probably, of their freedom from taxation, and of the violence of party contests.

The whole number of newspapers and periodical publications in the United States on June 1, 1850, amounted, according to the official returns, to about 2,800. Of these 2,494 were fully reported upon, while the particulars with respect to the others were in part estimated.

From these returns &c. it appears that the aggregate circulation of papers and other publications was about 5,000,000; and that the entire number of copies printed annually in the United States, amounted to about 422,600,000. The following table shows the number of daily, weekly, monthly, and other issues, with the aggregate circulation of each class:—

	No.	Circulation	No. of Copies printed annually
Daily Journals	350	750,000	235,000,000
Tri-weekly	150	75,000	11,700,000
Semi-weekly	125	30,000	8,320,000
Weekly	2,000	2,575,000	149,500,000
Semi-monthly	50	300,000	7,300,000
Monthly	100	900,000	10,800,000
Quarterly	25	20,000	80,000
Total	2,800	5,000,000	422,600,000

No official statement of the number of journals in 1860 has yet been published, but there is reason to believe that the total did not much exceed that of 1850. Had the circulation increased *pari passu* with the population, we should, taking the rate of 21·81 copies to each person (the average of 1850), and taking the population of 1868 at 37,000,000, have an aggregate number of copies annually printed in the United States of nearly 807,000,000.

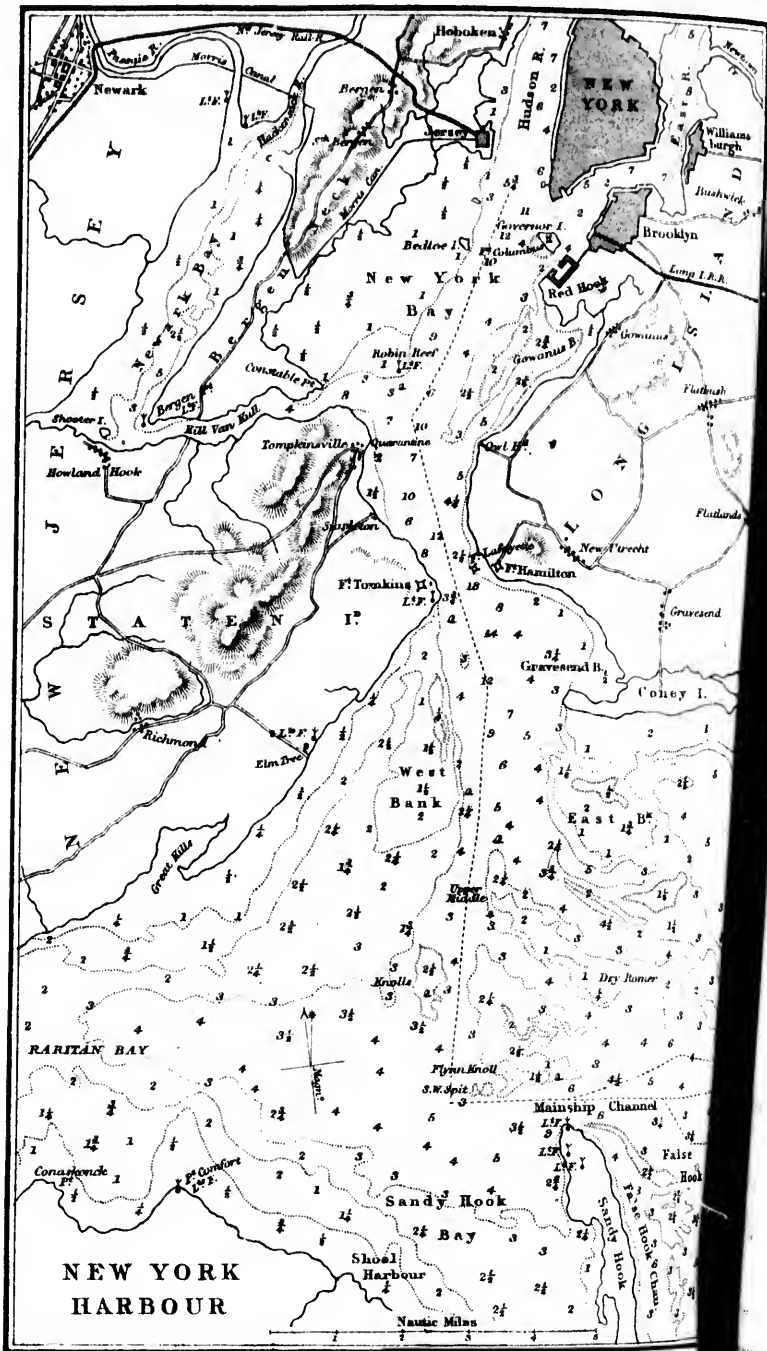

We are not, however, to estimate the influence of newspaper literature by its quantity only, but must have regard also to its quality. The latter is, indeed, the principal thing to be attended to, and in whatever degree the Americans exceed us in the number, they certainly are below us in the quality, of their newspapers. Speaking generally, we do not hesitate to say that the newspaper press is discreditable to the Union. The journals indulge, with comparatively few exceptions, in offensive personalities, and, in examining the principles of the news brought forward, they assail the character and misrepresent the motives of those by whom they are introduced. It is impossible, we believe, to name an individual who has attained to any office in the United States, or to considered Congress, who has not been libelled, traduced, and calumniated by a large portion of the press. In a degree that can hardly be imagined, the magnitude of the evil will, probably, lead to its correction. No people, with any pretensions to instruction and morality, can patronise a press whose principal features are misrepresentation, exaggeration, and abuse.

NEW YORK. The capital of the State that name, the commercial metropolis of the United States, and one of the greatest of modern times, on the southern extremity of Manhattan Island, at the point of confluence of the Hudson River, which separates New Jersey from New Jersey, with East River, which separates it from Long Island, lat. 40° 42' N., long. 74° 00' W. New York bay, or inner harbour, is one of the finest and most capacious in the world, and is completely land-locked, and affords the most secure anchorage. The entrance to the bay is through the Narrows, is extremely beautiful. On the eastern shore, though wooded down to the water's edge, is thickly studded with farms, vineyards, and orchards.

to estimate the influence of its quantity only, but to its *quality*. The latter is the thing to be attended to. For the Americans, however, they certainly are not the quality, of their newspapers do not hesitate to say that the press is discreditable to the country, with comparative impunity, with comparative impunity. In the principles of the newspaper, the assault the character of those by whom it is conducted is impossible, we believe, to have attained to any degree, or to consider that it has been libelled, traduced, or that a portion of the press is to be imagined. The newspapers probably, lead to the pretensions to instruct, to chronicle a press whose representation, exaggeration, the capita of the commercial metropolis, one of the greatest of the southern extreme, at the point of contact which separates the East River, which is situated at 40° 42' N., long 74° 10' W. Its inner harbour, is one of the most beautiful in the world, and affords a safe anchorage to the bay. The bay is very beautiful. On the shore, wooded down to the water, and dotted with farms, etc.

At the upper end are seen the bold banks of the Hudson. From New York the bar between Sandy Hook Point and the Island (the division between the outer harbour and the Atlantic) is about 17 miles. Fortifications have been erected at the Governor's Island, and other places, for the defence of the city and shipping. The following plan represents the city and bay of New York, and the surrounding country.

The Hudson river was first explored by the famous English navigator whose name it bears, in the service of the West India Company of Holland. In 1612, New Amsterdam, now New York, was founded by the Dutch, as a station for the fur trade. In 1664, it was taken by the English. The Dutch again regained possession of it in 1673; but it was restored to the English in the following year, and remained in their occupation till the termination of the Revolutionary war.

New York has increased faster than any other city in the United States. In 1699 it contained 1,000 inhabitants. In 1774, previously to the commencement of the War of Independence, the population amounted to 22,750. During the war it continued stationary; but since the peace there has been quite extraordinary increase. The population amounted to 33,131 in 1789; in 1820, to 123,706; in 1830, to 200,000; in 1840, to 312,710; and in 1850, to 473,971. This, however, was exclusive of the population of Brooklyn, which, in 1850, amounted to 248,000, and is as much a part of New York as the city proper was in 1860.

In 1860 the population of the city proper was 805,551, and of Brooklyn 266,667. At present (1869) the population of New York and its suburbs is said to be little less than 1,300,000. Originally the houses were built of wood, and the streets narrow and crooked. In these particulars, however, great improvement has taken place during the last century, most of the old houses having been pulled down and rebuilt with brick. The streets, which are broad, and intersect each other at right angles, are well paved and lighted. The principal street, is one of the finest in the world. Many of the buildings are commodious and elegant. The houses that were formerly abundant in the vicinity, have been completely filled up, and there has been done much to improve the city.

In respect of the water supply, however, New York, though much improved, is still rather deficient. Formerly the water was drawn from a sink or cistern in the whole city; the night-soil was collected in pits, of which there was a great number, and being conveyed to the water, were thrown into the water; and the streets were covered with projections, and the water was retained about them, in hot weather, an abominable stench. The deficiency of water, under which the city has long suffered, has been completely remedied by the construction of the Croton aqueduct, 28 miles in length, a work worthy of the most noblest of the old world. It is carried over the Haarlem bridge of stone of 14 arches, and is 100 feet in length. The yellow fever, by which the city has sometimes been visited, uniformly attacks the lower and dirtiest part of the

city; and seldom, indeed, extends to the new town; and seldom, indeed, extends to the new and more elevated streets. It is now much less prevalent than formerly; and the general opinion seems to be, that were stone substituted for timber in the quays, sewers generally constructed, and proper regulations enforced as to cleanliness, the scourge would entirely disappear.

New York is indebted, for her wonderful increase, to her admirable situation, which has rendered her the greatest emporium of the New World. The rise of the tide is about 6 feet; and even at ebb, there is 21 feet water on the bar; and the water in the outer and inner bays, and in the river, is so deep, that ships of the largest burden lie close to the quays, and may proceed to a great distance up the river. The navigation of the bay is rarely impeded by ice. The great strength of the tide, and the vicinity of the ocean, and the Delaware bays are frozen over. The influence of the tides is felt in the Hudson as far as Troy, 160 miles above New York, affording peculiar facilities for its navigation. These natural advantages have been vastly extended by a system of canals, which has connected the Hudson not merely with Lake Ontario and Lake Erie, but with the Ohio river, and consequently with the Mississippi and the Gulf of Mexico. So prodigious a command of internal navigation is not enjoyed by any other city, with the exception of New Orleans; but the readier access to the port and her situation in the most industrious part of the Union, where slavery is abolished, give her most probable, will secure her continued preponderance.

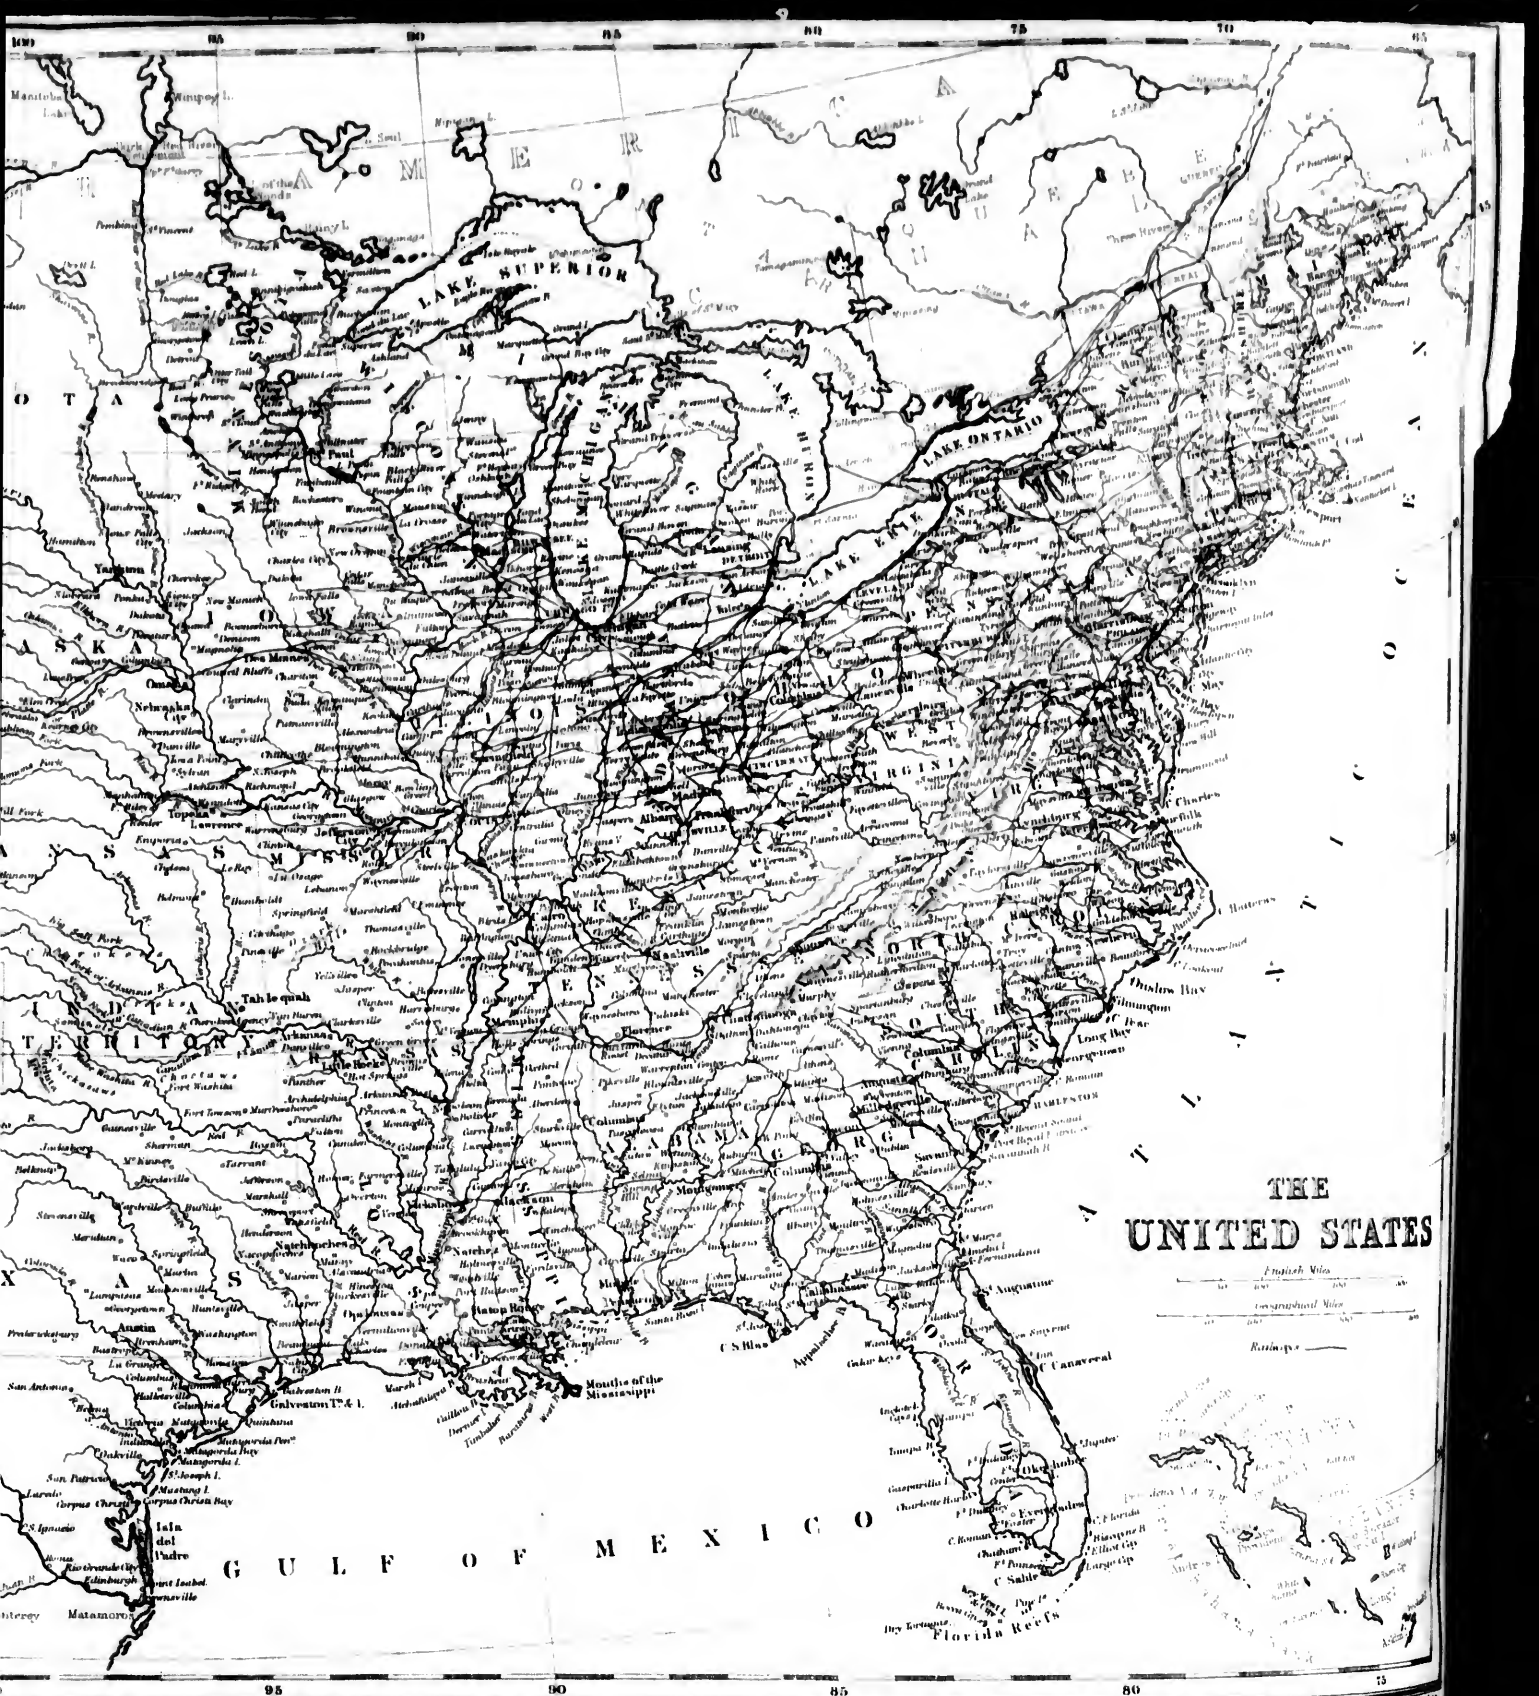

**Entrance to Harbour, Lighthouses &c.**—The course in entering the harbour of New York is nearly due west from the outermost white buoy on the bar, till the buoy on the south-west point of the east bank be passed, and then nearly due north. The navigation is extremely easy. Pilots, otherwise, they are only entitled to half fees. Were it not for fear of vitiating insurances, their services would seldom be required. (*States of Pilotage, post.*)

The lights and lighthouses in New York Bay are as follow: first, the Sandy Hook light vessel, 6 miles from Sandy Hook, having a fog bell and horn, lat.  $40^{\circ} 27' 39''$  N., long.  $73^{\circ} 52'$  W. Then south of Sandy Hook are the 2 Navesink lighthouses, standing 76 yards apart, each 258 feet above high water, and visible, in clear weather, for 25 miles. Next, on Sandy Hook, at the south point of the entrance to New York Bay, lat.  $40^{\circ} 27' 39''$  N., long.  $73^{\circ} 59' 49''$  W., is a white tower, exhibiting, at 90 feet above the sea, a fixed white light, visible 15 miles. Here is also a fog bell, which strikes seven times a minute. On Sandy Hook, northward of the lighthouse, are 2 white beacons, exhibiting fixed white lights, each 35 feet above the sea, and visible for 10 miles. There are 2 more beacon lights; one near the beach, and one on Chapel Hill, in the main channel; another,  $\frac{3}{4}$  mile south-eastward of Point Comfort; near Elm Tree Station on Staten Island, and another at New Dorp,  $\frac{1}{2}$  mile N.W. of it; another on Staten Island; another, which flashes every two minutes, near the south-east end of Staten Island; another on Staten Island, west side of the Narrows; and lastly, one on Robbin's reef. Here is also a fog bell.

**Trade &c.**—The commerce of New York is of vast extent. The value of the merchandise

# THE UNITED STATES

English Miles  
Geographical Miles  
Ratios

annually loaded and unloaded in the port is estimated at from 450 to 500 millions of dollars; and in the busy season the number of vessels in it varies from 1,000 to 1,500, exclusive of about 250 steamers. The number of arrivals from foreign ports amounted, in 1858, to 8,957, and the coasting arrivals exceed 8,000. The total value of the imports into the United States in the year ending June 30, 1858, amounted to 282,613,150 dols. of which no less than 178,476,736 dols. were imported into New York. The total imports for 1866 amounted to the large sum of 306,000,000 dols., at the gold value. If the freight and duty be added to this, and the whole be then converted into United States paper currency, the total will fall very little short of 600,000,000 dols. This amount of imports is without precedent in the history of any port. The imports comprise an infinite variety of articles. The principal are cottons, woolens, linens, iron, hardware and cutlery, earthenware, brass, and copper manufactures, salt &c. from Great Britain;

silk, wine, brandy &c. from France and Spain; sugar and coffee from the Havannah and Brazil; tea from China; with spices, indigo, cochineal, dye woods &c. The value of the exports from the State of New York, and mostly from this city, in the year ending June 30, 1858, amounted to 108,310,924 dols., being one-third of the total exports from New York was 192,329,554 dols. The exports principally consist of wheat and wheat flour, corn, rice and cotton; bullion; beef, pork, butter, dried fish, and all sorts of provisions; furs, tobacco, lard, petroleum, coarse cottons, and other manufactured goods, lumber &c. The great excess of imports into New York over the exports is accounted for by the fact, that while by far the larger portion of the articles of export from the Western states are sent down the Mississippi, to be shipped at New Orleans, the greater part of the more valuable articles brought from abroad, and destined for the consumption of the same states, is imported into New York.

Statement Classifying the Imports at New York from 1863 to 1867.

The total value of the exports from New York to foreign ports (ex specie) in 1867 was 186,790,025 dollars.

The shipping of New York is far greater than that of any other port, London not excepted. The total tonnage belonging to the port on September 30, 1838, amounted to 400,971 tons; and on June 30, 1844, it had increased to 2,328,884 tons, being about 1/4 of the entire tonnage of the United States, and incomparably the greatest amount of shipping that has ever belonged to any single port. Subjoined are some statements respecting the navigation &c. of New York, in some recent years:—

Return showing the Value in Dollars of Imports and Exports from New York in American and Foreign Vessels respectively for 5 Years, to 1866 inclusive.

Year	Imports		Exports	
	American Vessels	Foreign Vessels	American Vessels	Foreign Vessels
1862	69,199,101	115,615,659	79,130,179	120,235,873
1863	38,115,376	115,902,981	43,387,878	171,869,325
1864	51,777,569	177,591,822	42,239,046	227,099,561
1865	55,850,088	215,690,884	53,398,524	159,895,470
1866	55,985,903	247,469,613	58,965,553	190,089,001

N.B.—The Customs returns do not show the value of imports and exports in the vessels of the respective foreign nations.

The imports are valued in gold dollars, the exports in currency dollars, from which should be deducted the average premium of the year on gold, in order to reduce them to their equivalent in gold dollars.

Table exhibiting the Values of Exports from New York to Foreign Ports, exclusive of Specie, from 1864 to 1867.

Quarter	1864	1865	1866	1867
First	41,429,756	46,710,118	60,972,531	49,376,379

Third	79,519,131	40,221,493	38,381,202	38,928,665
Fourth	25,146,966	67,178,721	46,309,153	52,211,922
<b>Total</b>	<b>214,532,539</b>	<b>178,326,899</b>	<b>192,329,072</b>	<b>186,790,025</b>

In 1868 the total exports of specie from New

York to foreign ports was 70,793,594 dollars worth. These exports are mostly at their counted or true value, but shipments of merchandise are reckoned their market price in depreciated paper currency.

Comparative Statement of the Increase of British Trade and Shipping at the Port of New York for 5 Years, from 1862 to 1866 inclusive.

Year	Entered			Cleared	
	Number of Vessels	Tonnage	Crews	Number of Vessels	Tonnage
1862	1,962	636,712	27,572	1,018	647,013
1863	1,560	851,806	34,761	2,554	1,914,049
1864	2,111	950,151	38,410	3,291	1,938,998
1865	2,713	1,012,998	42,514	2,690	1,941,666
1866	2,426	1,205,511	45,751	2,461	1,205,605

In 1867, 4,676 foreign vessels, 2,653 British, including 350 steamers, entered the port of New York; and in 1868, 4,861 arrived, of which 2,032 were British.

The Receipts for Cash Duties at the port of New York for 1857, were 10,000,000 dollars less than for the previous year, owing to the change in tariff, and the great falling off in the quantity of goods thrown upon the market—for, while the total value of foreign goods imported in (exclusive of specie) was about 218,000,000, value of those that were sold was only a 185,000,000 dollars. In 1858, the sales exceed the imports; but as these were comparatively small, the duties were about 9,000,000 dollars less than in 1857. In 1863 the Customs receipts were 58,886,054, and in 1867 about 114,000,000 dollars. In 1856 and 1867 the customs receipts not increase in the same proportion as the imports, for the duties collected applied only to the goods thrown on the market, and not those which remained in the Government warehouse: were transferred to the interior in house.

Coastwise Arrivals and Clearances.—Inasmuch as vessels engaged in this trade are not obliged to record their entry or clearance, except they carry foreign goods or spirits on board, the entries and clearances afford no test, and are not from indicating the actual amount of the trade. But as the coasting vessels which leave

Yield have board than official clear the entries amounted to ing trade of in their v inc. Keith from the C Commissione gregeate busin ing June 30, clusive of apothecaries, cines and tow

York have much more frequently foreign goods on board than those by which it is entered, the official clearances are much more numerous than the entries. Altogether the arrivals coastwise amounted to upwards of 8,900 in 1867. The coasting trade of New York is, in fact, immense.

In their very useful publication, Messrs. Belding, Keith and Co., of 80 Lombard Street, give, from the Congressional Report of the Special Commissioner of Revenue, the value of the aggregate business of New York, in the year ending June 30, 1867, as 3,313,618,000 dollars, exclusive of sales by cattle-brokers, butchers, apothecaries, plumbers &c.; and of other large cities and towns of the Union, as follows:—

dollars	Providence	-	91,376,000		
Philadelphia	-	81,350,000	Buffalo	-	80,939,000
New Haven	-	77,583,000	Pittsburg	-	69,478,000
Chicago	-	67,727,000	Mobile	-	55,302,000
Baltimore	-	46,769,000	Brockton	-	36,125,000
Camden	-	33,000,000	Detroit	-	33,000,000
St. Louis	-	33,000,000	Cleveland	-	33,000,000
San Francisco	-	33,000,000	Charleston	-	33,000,000
San Pedro	-	33,000,000	Newark	-	33,000,000
San Diego	-	33,000,000			
Albany	-	33,000,000			
Albany	-	33,000,000			

The sales by cattle-brokers, apothecaries, butchers, plumbers &c., in the whole country, in the year named, were as follow:—

dollars	
By Cattle-brokers	- 336,894,150
Butchers	- 196,341,750
Apothecaries	- 69,309,275
Confessioners	- 11,334,537
Plumbers, Gas-fitters &c.	- 16,273,618
	630,755,160

The aggregate business in the United States, exclusive of sales of gold, stock, securities &c., amounted to the large sum of 12,486,546,975 doits.

Immigrants.—Of the vast number of immigrants that arrive in the United States, fully  $\frac{3}{4}$  land at New York; and they constitute the most valuable by far of all the imports into that city.

The following statement shows the number of immigrants who arrived in different years:—

Year	Immigrants	Year	Immigrants
1810	55,503	1848	191,909
1811	60,511	1849	220,603
1812	57,215	1850	212,796
1813	39,981	1851	229,041
1814	48,152	1852	229,504
1815	62,727	1853	224,915
1816	37,237	1854	119,225
1817	74,919	1855	156,235
1818	46,502	1856	141,672
1819	61,022	1857	185,126
1820	82,969	1858	200,031
1821	115,250	1859	236,611
1822	166,110	1860	212,089

**Regulations as to Passengers arriving at New York.**

On the arrival of passengers, an entry must be made at the Custom-house, of their names, ages, professions, trades, implements of trade or profession (all of which are exempt from duty), and an oath taken respecting them; the form of which, and the entry, may be had at the office gratis. Cabin passengers make this entry themselves, and pay 20 cents each for a permit; on exhibiting which to the officer on board, they are allowed to remove their baggage after it has been inspected. Only one entry and permit is necessary for a family, and 20 cents demanded, whatever may be the number of the family. Remains of sea stores, such as sugar, foreign spirits and wines, are liable to duty; but unless these are of great quantity, they are generally allowed to pass free.

An entry is usually made by the master of the vessel of stowage passengers and their baggage; he pays each 20 cents for a permit. When entry is made by any person not the owner, he gives a receipt for payment of the duties, if any; and if an entry is made at the Custom-house, and the baggage taken, any article is found belonging to a passenger, liable to pay duty, not specified in the entry,

it is forfeited, and the person in whose baggage the article is found subjected in treble the value.

Besides making entry at the Custom-house, it is provided by a law of the State, that every master of a vessel arriving from a foreign country, or from any other port of the United States, 'shall within 24 hours after entering his vessel at the Custom-house, make a report in writing, on oath to the mayor, and in case of his sickness or absence, to the recorder of the said city, of the name, age, and occupation of every person who shall have been brought as passenger in such ship or vessel on her last voyage, upon pain of forfeiting, for every neglect or omission to make such report, the sum of 75 dollars for every alien, and the sum of 50 dollars for every other person neglected to be so reported as aforesaid.'

The stamp duty or tax on passage tickets is, not exceeding 35 dollars, 50 cents, exceeding 35 and under 50 dollars, 1 dollar, and for every additional dollar or fraction of a dollar, 1 cent.

Masters of ships bringing passengers to New York must also pay a dollar on account of each passenger to the corporation, as commutation money, or give bond that none of them shall become chargeable on the city poor rates for the space of two years. They almost uniformly prefer paying the commutation.

**Lines of Packets.**—The establishment of regular lines of packets from New York to the principal foreign and domestic ports produced a new era in the commerce of the city, and has redounded equally to the benefit of the enterprising individuals by whom they were projected, and the public. They consist chiefly of steam ships, and belong sometimes to the merchants of New York and sometimes to those of the ports with which she is connected. Her principal intercourse is carried on with Liverpool; but, as the reader will find ample information with respect to it in the article on Liverpool in this work (ante, DOCKS, LIVERPOOL), its repetition here would be worse than useless. New York is also connected by lines of packet ships with London, Southampton, Havre, Hamburg, Bremen, Marseilles, and other European ports; with Rio de Janeiro and Bahia in South America; and with Boston, Philadelphia, New Orleans, and all the principal ports of the United States. And in addition to the regular traders, the ships of New York, which are mostly admirably built and fitted out, are to be found in every port and on every sea—wherever, in fact, it is possible for skill and enterprise to obtain a footing. In this respect, at all events, the Americans have not degenerated. They continue to manifest, in a great degree, all the perseverance, sagacity, and hardihood, in mercantile and naval matters, which have so long and so honourably distinguished their ancestors.

**The Banks of New York** (300 in 1863) were almost all organised on the security system; that is, they were obliged to deposit security in the hands of a Government officer, proportioned to the amount of the notes they were empowered to issue. At first sight this plan appears to be well-fitted to prevent over-issue and abuse: but such is not really the case, and nowhere in the Union has the abuse of banking been carried to a greater extent or been more injurious than in this city. Some salutary regulations as to the inspection and audit of the books of these banks have lately been introduced under a new system. This, however, is a subject that has been fully discussed in its proper place in this work. (See Banks in the United States, art. BANKING.)

by auction, is of long standing in New York, and is carried to a very great extent. Auctioneers are appointed by the Senate, on the nomination of the governor.

*Abstract of the principal Provisions of the Law, concerning Auctions.*

- The duties are—
1. On wines and ardent spirits, foreign or domestic, 2 per cent.
  2. On goods imported from beyond the Cape of Good Hope, and sold in packages, bales &c., as imported, 1 per cent.
  3. On all other articles, subject to duties, 1½ per cent.

- The following articles are not subject to duties:—
1. Ships and vessels.
  2. Utensils of husbandry, horses, neat cattle, hogs, and sheep.
  3. Articles grown, produced, or manufactured in this state, except distilled spirits.
  4. All fabrics of cotton, wool, hemp, and flax, manufactured within the jurisdiction of the United States.

- Goods are exempted from auction duties—
1. When they belong to the United States, or this state.
  2. When sold by the authority of a court, or when seized by a public officer on account of any forfeiture or penalty, or under a distress for rent.
  3. The effects of a deceased person sold by executors or administrators, or by a person authorised by a surrogate.
  4. The effects of a bankrupt or insolvent sold by his assignees, appointed pursuant to law, or by a general assignment for the benefit of all his creditors.
  5. Goods damaged at sea and sold within 20 days after being landed, for the owners or insurers.

Any citizen of this state may sell at auction (except in the city of New York) all such goods as are not subject to duties. But in the city of New York, or where the goods pay duties, the sale must be by an authorised auctioneer, his partner, or clerk. And any person selling contrary to the said provisions is guilty of a misdemeanor.

When an auctioneer cannot attend an auction by sickness, by duty as a fireman, by military orders, or necessary attendance in a court of justice, or when he is temporarily absent from the place for which he is appointed, he may employ a partner to attend in his behalf.

He must give bond to the people of this state, with 2 freehold sureties, conditioned in the penalty of 5,000 dollars, for the payment of the duties imposed by law and accruing on the sales. The penalty of selling without the bond is 125 dollars for each article offered for sale.

No auctioneer in any city shall at the same time have more than 1 house or store for holding his auctions, and shall, before entering on his office, designate in a writing, to be filed with the clerk of the city, such house or store, and his partner or partners. But goods sold in the packages in which they were imported, furniture, and such bulky articles as have usually been sold in warehouses, in the streets, or on the wharfs, need not be sold in the house or store designated in such writing, if such sales be advertised at least 2 days previously, in 1 or more newspapers.

Auctioneers are to receive 2½ per cent. on the amount of all sales, unless by previous agreement in writing; and for demanding and receiving an unlawful commission, shall forfeit 250 dollars, and refund the moneys so received.

No auctioneer, on the same day and at the same place where his public auction shall be held, nor any other person at the same time and place shall sell at private sale any goods liable to auction duties, under penalty of forfeiting the price.

Every auctioneer shall make out in writing quarterly account dated on April 1, July, October 1, and January 1, in the year for which it is appointed, stating minutely—

1. The sum for which any goods shall have been sold at every auction held by or for him from the time of his giving bond, or from the date of his last quarterly account.
2. The days on which sales were so made, and the amount of each day's sale, designating the sales made by himself, or in his presence, and those made in his absence, by his partner or clerk, and the causes of his absence.
3. The amount of all private sales made by himself or his partner, and the times thereof.
4. The amount of duties chargeable on all sales made.

Every such account shall, within 20 days after its date, be exhibited, by auctioneers for a county to the mayor or recorder; and if by an auctioneer for a county, to a county judge, and verified by oath. Every partner of an auctioneer and every clerk who has made any sales, shall also swear to his belief in the truth and justice of every particular of such account.

The State duties (together with the addition of 2½ per cent. on the whole amount of them) shall be paid within 10 days after exhibiting such account.

Any deceit or fraud in violating any provision of the law respecting auctioneers, is made a misdemeanor, and subjects the offending party to the payment of treble damages to the party injured.

**COINS.—Gold eagle.**—This, with its subdivisions, is the only American gold coin. By the regulations of the United States, the eagle, is the equivalent of 10 dollars, contained previously to July 31, 1834, 270 grains of standard gold, viz. 246 grains pure, and 24 grains alloy. But, by an Act of Congress, which came into operation at the above date, the weight of the eagle was reduced to 258 grains, of which 232 are pure and 26 grains alloy. In consequence of this alteration, the sovereign that was formerly worth 10 dollars 57 cents, is now worth 4 dollars 87 cents and is received by the Americans at this rate.

We do not know whether it was the object of the American Government, in enacting this law, to substitute a gold in the place of a silver currency; but it has, concurrently with the establishment of the Californian gold-fields, had that effect. Under the former system, silver was overvalued in the American mint as compared with the British, and, as it consequently became everywhere the most desirable to pay his debts in silver rather than in gold, the latter was nearly banished from circulation, precisely in the same way that the over-valuation of gold in the British mint banished silver coins of full weight from that country. Under the present American system, gold is sold to the mint banished gold. (Ante, Coins.) Under the present American system, gold is sold to the individual who has to pay a debt of 100%, and employs metallic money for that purpose, to save from 25s. to 30s. by using gold rather than silver.

**Value of Foreign Gold Coins in the Currency of the United States.**—It was ordered by an Act of Congress, passed at the same time

the No. as more weight, from an ounce of not less than 10 cents per ounce of weight; from 10 to 25 cents per ounce of weight; from 25 to 50 cents per ounce of weight; from 50 to 100 cents per ounce of weight; from 100 to 150 cents per ounce of weight; from 150 to 200 cents per ounce of weight; from 200 to 250 cents per ounce of weight; from 250 to 300 cents per ounce of weight; from 300 to 350 cents per ounce of weight; from 350 to 400 cents per ounce of weight; from 400 to 450 cents per ounce of weight; from 450 to 500 cents per ounce of weight; from 500 to 550 cents per ounce of weight; from 550 to 600 cents per ounce of weight; from 600 to 650 cents per ounce of weight; from 650 to 700 cents per ounce of weight; from 700 to 750 cents per ounce of weight; from 750 to 800 cents per ounce of weight; from 800 to 850 cents per ounce of weight; from 850 to 900 cents per ounce of weight; from 900 to 950 cents per ounce of weight; from 950 to 1000 cents per ounce of weight.

Various	100

Previously to 1834 the weight of the eagle was 270 grains, and its value was 10 dollars. Since 1834 the weight of the eagle is 258 grains, and its value is 10 dollars. The difference between the two is 12 grains, or 4 cents.

the New Mint Act, that there shall pass current as money, and be receivable in all payments, by weight, for the payment of all debts and demands, from and after July 31, 1834, viz. 1. The gold coins of Great Britain, Portugal, and Brazil, of less than 22 carats fine, and the gold coins of cents per pennyweight; 2. The gold coins of France, of less than 900 parts per pennyweight; and 3. The gold coins of Spain, of less than 20 carats 3/4 grains, at the rate of the following table has been calculated:—

**Gold Coins of Great Britain, Portugal, and Brazil, 22 Carats fine.**

Great Britain, Portugal, and Brazil	Weight	Content in pure gold	Value in United States 94.8-10 cts. per gr.	Value estimated by the quantity of pure gold compared with the scale of 23.25 grs.
Great Britain, 1/2 crown	59 39-89	118 6	5 11 0	5 11 2
Portugal, 1/2 milree	5 3 171-623	113	4 86 9	4 87 0
Brazil, 1/2 milree	34 12	759	32 70	6 32 17 9
Brazil, 1/4 milree	18 6	401 5	17 30	11 30 6
Brazil, 1/8 milree	9 3	200 7	8 65	6 64 2
Brazil, 1/16 milree	4 12	100 3	4 32 6	3 32 1
Brazil, 1/32 milree	2 6	50 1	2 16 3	1 66 0
Brazil, 1/64 milree	1 3	25 0	1 8 1	0 78 0
Brazil, 1/128 milree	0 6	12 5	0 40 0	0 39 0
Brazil, 1/256 milree	0 3	6 2	0 20 0	0 19 0

\* To insure the most perfect accuracy, it may be observed that the quantity of pure gold in the sovereign is 113 18-11, 214 grains, and 20 parts of alloy, 87 7 100. This is also the true par of exchange between the United States and London, and is equal to a premium of 1 1/2 per cent, as near as can be calculated, on the nominal par of 100 for 100.

the full weight would latterly remain in circulation. To obviate the inconveniences thence arising, Congress, in 1853, issued half dollars thence arising, containing 192 grains standard silver, being a reduction of very near 7 per cent., and 1/2 and 1/4 dollars in the same proportion. But as these coins are legal tender to the extent of only 5 dollars, and as the weight of the dollar itself has not been diminished, there is no degradation of the standard. And provided the Treasury do not issue the new coins in excess, they will most likely remain in circulation, and serve as a subsidiary currency.

**Silver Coins, 1853.**

Half dollar	val. 50 cts.	wt. 113 18-11 grs.	stand. silver = 4 5/16 sterling.
Quarter	25 "	56 9-11 "	" = 2 1/4 "
Dime	10 cts.	22 6-11 "	" = 0 94 "
			" = 0 34 "

**Gold Coins of France, 9/10 fine.**

Weight	Content in pure gold	Value in United States currency, at 94.8-10 cts. per gr.	Value estimated by the quantity of pure gold compared with the scale of 23.25 grs.
Double louis, coined since 1788 (single in proportion)	9 0	212 6	9 15 4
Double napoleon (single in proportion)	8 7	179 8	7 71 8
New louis	4 3 1-2	82 5	3 85 7

Note.—The double louis, louis, and demi-louis, coined before 1788, are not included in the table, because they are not legal tenders. Neither are the double and single napoleon, or the new louis exactly 9/10ths fine, but the deficiency is so very small that it is believed it is covered by what is called the remedy of the mint.

Previously to 1837 standard silver in the United States was 1485 parts pure to 179 parts alloy. But it was then determined to make the standard of silver as well as of gold 9 parts pure to 1 part alloy in the dollar 3/4 grains, making its weight 412 1/2 instead of 416 grains, making its fineness of the over-valuation of gold with respect to silver previously referred to, no silver coins of

The following tables, showing the weight and fineness of the principal gold and silver coins of foreign countries, and their values in the existing metallic currency of the United States, are computed by the highest authority. They have been prepared by Mr. Snowden, the intelligent director of the Mint of the United States, and were issued on November 9, 1858. Silver is taken in them at 121 cents per oz., instead of 122 1/2 cents per oz., at which it was formerly estimated.

**Table of the Names, Weight, Fineness, and Value in Federal Metallic Currency of the Principal Foreign Gold Coins.**

Whiting, in bbls., per ton	37 1/2

On articles on which the rate is fixed by weight, it is understood to be on the gross weight; and on liquors, oil &c. on which the rate refers to gallons, it is understood to be on the whole capacity of the casks, whether full or not. The proprietor of goods to be at the expense of putting them in store, stowing away, and turning out of store. All goods taken on storage, to be subject to 1 month's storage; if taken out within 15 days after the expiration of the month, to pay 1/2 a

month's storage; if after 15 days, a whole month's storage.

**Harbour Master.**—The office of harbour master was created in 1808, by legislative enactment with power to regulate and station all vessels the harbour, or at the wharfs, to accommodate vessels wishing to discharge their cargoes, and decide promptly all disputes connected with the foregoing subjects. Resisting his authority subjects to a fine of 50 dollars and costs, for the benefit of the New York hospital.

**Fees.**—There is a fee payable to the harbour master of from 3 to 24 dollars, according to the size of the vessels. For adjusting any difference respecting cargo, 2 dollars.

**Pilotage.**—Pilots must register their names, and places of abode, in his office; and are obliged to put to sea whenever ordered by him. The penalty for refusing is 5 dollars and loss of license.

Pilot boats are numbered and designated by square burgee with white centre and blue border, the number being in the centre.

Wardens of the Port.

Vessels and goods arriving in a damaged condition and required to be sold by auction for the benefit of underwriters out of the city of New York, must be under the inspection of the wardens, who will be required to certify the cause of the damage and amount of sale and charges.

**Fees.**—1/2 per cent. on gross amount of sale, and for each survey on board of any vessel, store, or along the dock, or wharf; 3 dollars for damaged goods; each survey on hulls, rigging &c., 50 cents; each certificate, 1 dollar; ditto of distress of said vessel, 2 dollars; and same services for vessels paying duties and tonnage, double.

QUANTITY OF GOODS TO COMPOSE A TON

Determined by the New York Chamber of Commerce.

- 1,568 lb. of coffee in casks, 1,840 ditto in bags.
- 1,120 lb. cocoa in casks, 1,307 ditto in bags.
- 952 lbs. of pimento in casks, 1,110 ditto in bags.
- 8 barrels of flour of 196 lb. each.
- 6 barrels of beef, pork, tallow, pickled fish, tar, and turpentine.
- 20 cwt. of pig and bar iron, punchons.
- logwood, fustic, Niagara wood, and all dye woods, rice, honey, copper ore, and all heavy goods.
- 16 cwt. of coffee, cocoa, and dried goods.
- bulks, and 12 cwt. of dried codfish in casks of 100 lb. each.
- 6 cwt. ship bread in casks, 7 cwt. in barrels, in bulk.
- 200 gallons (wine measure), reckoning contents of the casks, of oil, wine, brandy, and other liquors.
- 22 bushels of grain, peas, or beans, in casks.
- 36 bushels of ditto in bulk.
- 36 bushels of European salt.
- 31 bushels of salt from the West Indies.
- 29 bushels of sea-coal.
- 40 feet (cubic measure) of mahogany, timber, oak plank, pine, and other boards.
- furs, peltry, bees-wax, cotton, wool, &c.
- goods of all kinds.
- 1 hoghead of tobacco, and 10 cwt. in barrels.
- 8 cwt. of China raw silk, 10 cwt. in casks, and 8 cwt. green tea.

and the first day of November, exclusive of the time in said subdivision mentioned; all vessels from a foreign port, on board of which during the voyage, or while at the port of departure, any person shall have been sick, or from any place in the ordinary passage from which they pass south of Cape Hatteras, arriving between the thirty-first day of May and the sixteenth day of October; and all vessels from any place (including islands) in Asia, Africa, or the Mediterranean, or from any of the West India, Bahama, Bermuda, or Western Islands, or from any place in America, in the ordinary passage from which they pass south of Georgia, arriving between the first day of April and the first day of November, shall be subject to such quarantine and other regulations as the health officer shall prescribe.

Sec. 3. It shall be the duty of the health officer to board every vessel subject to quarantine or visitation by him immediately on her arrival; to enquire as to the health of all persons on board, and the condition of the vessel and cargo, by inspection of the bill of health, manifest, log book, or otherwise; to examine on oath as many and such persons on board of vessels suspected of coming from a sickly port, or having had sickness on board during the voyage, as he may judge expedient, and to report the facts and his conclusions to the mayor and commissioners of health in writing.

Sec. 4. The health officer shall have power—  
1. To remove from the quarantine anchorage ground any vessel he may think unsafe, to any place south of the quarantine buoys, and inside of Sandy Hook.

2. To cause any vessel under quarantine, when he shall judge it necessary for the purification of the vessel or her cargo, to discharge her cargo at the quarantine grounds, or some other suitable place out of the city.

3. To cause any such vessel, her cargo, bedding, and the clothing of persons on board, to be ventilated, cleansed, and purified in such manner and during such time as he shall direct; and if he shall judge it necessary to prevent infection or contagion, to destroy any portion of such cargo, bedding, or clothing which he may deem incapable of purification.

4. To prohibit and prevent all persons arriving in vessels subject to quarantine, from leaving quarantine until 15 days after the sailing of their vessel from the port of her departure, and 15 days after the last case of pestilential or infectious fever that shall have occurred on board, and 10 days after her arrival at quarantine, unless sooner discharged by him.

5. To permit the cargo of any vessel under quarantine, or any portion thereof, whenever he shall judge the same free from infection and contagion, to be conveyed to the city of New York, or such place as may be designated by the mayor and commissioners of health, after having reported in writing to the mayor and commissioners of health of said city the condition of said cargo, and his intention to grant such permission; such permission, however, to be inoperative without the written approval of the mayor and commissioners of health.

Sec. 5. The health officer, the board of health, or the mayor and commissioners of health may, if in their opinion it will not be dangerous to the public health, permit the cargo of any vessel under quarantine, or any part thereof, to be shipped for exportation by sea, or transportation up the North or East rivers; but if the vessel receiving the same shall approach nearer than three hundred yards to the wharfs of this city, such cargo may

be seized and sold by the commissioners of health for the use of the Marine Hospital.

Sec. 6. Every vessel during her quarantine shall be designated by colours, to be fixed in a conspicuous part of her main shrouds.

Sec. 7. No vessel or boat shall pass through the range of vessels lying at quarantine, or land at the quarantine ground after sunset, without the permission of the health officer.

Sec. 8. No lighters shall be employed to load or unload vessels at quarantine without permission of the health officer, and subject to such restrictions as he shall impose.

Sec. 9. All passengers under quarantine who shall be unable to maintain themselves, shall be provided for by the master of the vessel in which they shall have arrived; and if the master shall omit to provide for them, they shall be maintained on shore at the expense of such vessel, and such vessel shall not be permitted to leave the quarantine until such expense shall have been repaid.

Sec. 10. The health officer, upon the application of the master of any vessel under quarantine, may confine in any suitable place on shore, any person on board of such vessel charged with having committed an offence punishable by the laws of this State, or the United States, and who cannot be secured on board such vessel, and such confinement may continue during the quarantine of such person, or until he shall be proceeded against in due course of law, and the expense thereof shall be charged and collected, as in the last preceding section.

Sec. 11. All vessels and persons remaining under quarantine on the first day of October, shall hereafter be subject to such quarantine and restrictions as vessels and persons arriving on and after that day.

Sec. 12. The board of health, or the board of commissioners of health, whenever in their judgment the public health shall require it, may order any vessel at the wharfs of the city, or in the vicinity, to the quarantine ground, or other place of safety, and may require all persons, articles, or things introduced into the city from such vessel to be seized, returned on board, or removed to the quarantine ground. In case the master, owner, or consignee of the vessel cannot be found, shall refuse or neglect to obey the order removal, the board of health, or the mayor and commissioners of health, shall have power to cause such removal at the expense of such master, owner, or consignee; and such vessel or person shall not return to the city without the written permission of the board of health, or the mayor and commissioners of health.

Sec. 13. If any vessel arriving at the quarantine ground, subject to quarantine, shall be brought to some port east of the city of New York, the health officer, after having duly visited and examined her, may permit her to pass on her voyage through the Sound; but no such vessel shall be brought to anchor off the city, or shall any of the crew or passengers land, or hold any communication with, the city, or any person therefrom.

Sec. 14. No vessel, found on examination by the health officer to be infected with the yellow fever, or to have been so infected after sailing from her port of departure, shall be permitted to approach within 300 yards of the city of New York, between the first day of May and the first day of October in the same year. But the health officer, with the permission of the board of health of the cities of New York and Brooklyn, may permit any vessel arriving at the wharfs of New York to proceed to some wharf east

 with, the city, or  
 und on examination  
 infected with the ves-  
 so infected after sail-  
 ure, shall be permit-  
 ards of the city of N  
 day of May and  
 the same year. But  
 permission of the bo-  
 of New York and Bro-  
 sel arriving at the  
 d to some short dis-

ated by the board of health of either of the cities of New York or Brooklyn, and discharge his cargo; provided satisfactory proof be given to the health officer that the port or ports from which said vessel sailed was free from contagious or infectious disease at the time of her sailing therefrom, and that no sickness of a contagious or infectious type had existed on board the vessel during her entire voyage.

Sec. 15. The master of every vessel released from quarantine, and arriving at the city of New York, shall, within 24 hours after such arrival, deliver the permit of the health officer at the office of the mayor and commissioners of health, or to such person as they shall direct, but such vessel shall not approach within 300 yards of the city of New York, without the written permission of the mayor and commissioners of health.

Sec. 16. Every vessel having had during the voyage a case of small-pox, or infectious or contagious disease, and every vessel from a foreign port having passengers, and not heretofore declared subject to quarantine, shall, on her arrival at the quarantine ground, be subject to visitation by the health officer, but shall not be detained beyond the time requisite for due examination, unless she shall have had on board during the voyage some case of small-pox, or infectious or contagious disease, in which case she shall be subject to such quarantine as the health officer shall prescribe; and it shall be the duty of the health officer, whenever he thinks it is necessary for the preservation of the public health, to cause the persons on board of any vessel to be vaccinated.

Sec. 17. Nothing in this Act contained shall prevent any vessel arriving at the quarantine ground again going to sea before breaking bulk.

Sec. 18. The commissioners of health shall admit into the Marine Hospital any passenger who shall have paid hospital moneys, during any temporary sickness, within one year after such payment. The mayor of the city of New York, the resident physician, and the commissioners of

health of said city, shall constitute a board of appeal from any direction or regulation of the health officer, with power to grant such and so much relief as may appear to the board thus constituted, or a majority of them, expedient and proper; the decision of the board of health, however, to be paramount.

Sec. 19. Every appeal from a decision of the health officer shall be made by serving upon him a written notice of such appeal, within 12 hours after such decision (Sundays excepted), and the health officer shall make a return in writing, including the facts on which the decision is founded, within 12 hours after the receipt of such notice (Sundays excepted), to the mayor, who shall immediately call a meeting of the board of appeal, and shall be president of said board, and said appeal shall be heard and decided within 24 hours thereafter (Sundays excepted), and the execution of the decision appealed from shall be suspended until the determination of the appeal.

Sec. 20. Every master of a vessel subject to quarantine or visitation, arriving in the port of New York, who shall refuse or neglect either—

1. To proceed with and anchor his vessel at the place assigned for quarantine, at the time of his arrival;

2. To submit his vessel, cargo, and passengers to the examination of the health officer, and to furnish all necessary information to enable that officer to determine to what length of quarantine and other regulations they ought respectively to be subject; or,

3. To remain with his vessel at quarantine during the period assigned for her quarantine; and while at quarantine, to comply with the directions and regulations prescribed by law, and with such as any of the officers of health, by virtue of the authority given to them by law, shall prescribe in relation to his vessel, his cargo, himself, or his crew;

Shall be guilty of a misdemeanor, and be punished by a fine not exceeding 2,000 dollars, or by imprisonment not exceeding 12 months, or by both such fine and imprisonment.

Sec. 21. Every master of a vessel hailed by a pilot, who shall either—

1. Give false information to such pilot relative to the condition of his vessel, crew, passengers, or cargo, or the health of the place or places whence he came, or refuse to give such information as shall be lawfully required;

2. Or land any person from his vessel, or permit any person except a pilot to come on board his vessel, or unlade or tranship any portion of his cargo, before his vessel shall have been visited and examined by the health officer;

3. Or shall approach with his vessel nearer the city of New York than the place of quarantine to which he shall be directed;

Shall be guilty of the like offence, and be subject to the like punishment. And every person who shall land from any such vessel, or unlade or tranship any portion of her cargo, under like circumstances, shall be guilty of the like offence, and be subject to the like punishment.

Sec. 22. Every person who shall violate any provision of this Act, or neglect or refuse to comply with the directions and regulations which any of the officers of health may prescribe, shall be guilty of the like offence, and be subject, for each offence, to the like punishment.

Sec. 23. Every person who shall oppose or obstruct the health officer in performing the duties required of him, shall be guilty of the like offence, and be punished by fine not exceeding 500 dollars, or by imprisonment not exceeding 3 months, or by both such fine and imprisonment.

Sec. 24. Every person who, without authority of the health officer, commissioners of health, or board of health, shall go within the enclosure of the quarantine ground, shall be guilty of the like offence, and be punished by fine not exceeding 100 dollars, or by imprisonment not exceeding 30 days, or by both such fine and imprisonment.

Sec. 25. Every person who shall go on board of, or have any communication, intercourse, or dealing with any vessel at quarantine, without the permission of the health officer, shall be guilty of the like offence, and be subject to the like punishment. And such offender shall be detained at quarantine so long as the health officer shall direct, not exceeding 20 days, unless he shall be taken sick of some pestilential or infectious disease.

Sec. 26. Every person who shall violate the provisions of the 5th article of title 2nd of chapter 14th of part 1st of the Revised Statutes, by refusing or neglecting to obey or comply with any order, prohibition, or regulation made by the board of health, in the exercise of the powers therein conferred, shall be guilty of a misdemeanor, punishable by fine and imprisonment, at the discretion of the court by which the offender shall be tried.

Sec. 27. Articles 1st, 3rd, 4th, and 6th, of title 2nd of chapter 14th of part 1st of the Revised Statutes; an Act entitled, 'An Act to amend title 2nd, chapter 14th, part 1st, of the Revised Statutes, relating to the Quarantine Regulations of the Port of New York,' passed May 2, 1836; an Act entitled, 'An Act relative to the Quarantine Laws, passed May 7, 1839; an Act entitled, 'An Act to amend the Revised Statutes relating to the Public Health,' passed April 12, 1842, and all other laws inconsistent with this Act, are hereby repealed.

We have derived these statements from the *New York Annual Register*; *The Picture of New York*; *Hunt's Commercial Magazine*; the latest *Consular Reports* and *official accounts*; and valuable *private communications*.

The following is an account of the registered, enrolled and licensed tonnage of the United States from 1818:—

Year	Registered Tonnage	Enrolled and Licensed Tonnage	Total Tonnage
1818	606,098	609,095	1,215,193

TARIFF OF THE UNITED STATES.—Notwith-

standing the unprecedented progress of the United States in wealth and population, their foreign trade was nearly stationary for the 10 years ending with 1830. And yet, considering the spirit of commercial enterprise by which the people, particularly in the New England States and New York, are animated, and their skill in navigation, it might have been fairly presumed that the growth of their foreign trade would, at least, have kept pace with the development of the internal resources of the country. That it did not do so, is wholly owing to the policy of Government. Not satisfied with the extraordinary advances which their competitors had made in numbers and wealth, Congress seems to have believed that their career might be accelerated by means of custom-house regulations—by giving an artificial direction to a portion of the public capital and industry, and bringing it into channels into which it would not naturally flow.

No one who has the slightest acquaintance with the condition of America—who knows that she is possessed of boundless tracts of fertile and unappropriated land—that her population is comparatively thin, and wages high—can doubt for a moment that agriculture *must*, for a long series of years, be the most profitable species of employment in which her citizens can engage. There can be no question, indeed, that such branches of manufacture as are naturally adapted to her peculiar situation will gradually grow up and flourish in America, without any artificial encouragement, according as her population becomes denser, and as the advantage which now exists on the side of agriculture becomes less decided. And the imposition of moderate duties on foreign articles for the sake of revenue would certainly give these branches all the protection which they are justly entitled to, or more. But to impose duties and prohibitions, not intended for the sake of revenue, but of protecting the premature growth of manufactures, is to force a portion of the industry and capital of the country into businesses in which it will be least productive.

Such, however, was for a lengthened period the policy of the American Legislature. The exclusive selfishness of the mercantile system, though denounced by every statesman in Europe, acquired a dangerous influence in Congress, and were put forth with as much confidence as if their soundness had been no more a question. From 1816 down to 1816, the policy of the American Legislature was, for the most part, to foster up a manufacturing interest, by imposing oppressive duties on most manufactured articles imported from abroad. Now, it is obvious, even if the articles produced in America through the agency of this plan had been nearly as cheap as those imported by it; for, to whatever extent the importation of foreign articles might be diminished, there must have been a corresponding diminution in the exportation of native American products; and that the only result would have been the raising of one species of industry at the expense of another species entitled to an equality of protection. Instead of the goods manufactured in the States being as cheap as similar ones manufactured in Europe, they were admitted at an average, from 30 to 50 or 60 per cent. more. The extent of the pecuniary sacrifice thus imposed on the Union by the tariff modified in 1816 has been variously estimated by American writers; and we have been assured by those

who have the best means of knowing, that it may be taken as amounting to from 50,000,000 to 60,000,000 dollars, or from about 11,000,000, to 13,000,000, a-year. And this immense burden—a burden more than twice as great as the whole public expenditure of the United States at that period—was incurred for no purpose but mischief. The whole effect of the scheme was to divert a certain amount of the national capital from the production of cotton, wheat, rice, tobacco &c., the equivalents sent to foreigners in payment of manufactured goods, to the direct production of those goods themselves. And as the latter species of industry is less suitable for America, a tax of 13,000,000, a-year was imposed on the Union, that the manufacturers might be enabled to continue a losing business. We leave it to others to determine whether the absurdity of the system, or its costliness, was its more prominent feature. That its influence was gluing more injurious is solely owing to the smuggling it occasioned. With a frontier like that of America, it would be worse than absurd to suppose that an oppressive tariff could be carried into full effect. But it had enough of influence to render it highly prejudicial—to occasion a great rise in the price of many important articles—to cripple the trade and navigation of the country—and to throw a considerable part of it into the hands of smugglers, who carried it on in defiance of the law.

It is difficult, however, to say how long the system of imposing high duties on most foreign products might have been maintained without so much as a check, but for its political effects. It was principally patronised by the Northern States; and though it would be difficult to show that they derived any benefit from it, it is, at all to the Southern States. Their staple products are cotton, tobacco, and rice, of which by far the largest portion is exported to foreign countries; and the planters speedily found that every restriction on importation from abroad occasioned a corresponding difficulty of exportation. This led to a disunion of interests and to strong remonstrances against the tariff by the Southern States. These, however, were disregarded. Provoked at this treatment, South Carolina took the decisive step of refusing to enforce the customs acts; and threatened, if coercion were attempted, to repel force by force, and to recede from the Union. This was a death-blow to the high duties of the old tariff. Congress then saw, what all sensible men had seen long before, that it was necessary to recede; that, in fact, either the tariff must be modified, or the integrity of the Union be brought into jeopardy. A law, commonly called the 'Compromise Act,' was in consequence passed on July 14, 1832, which provided that certain then existing duties on most descriptions of foreign goods, at certain specified periods between 1833 and 1842, when they were, in most instances, to be reduced to 20 per cent. ad valorem.

This Act was allowed to take effect for a few years; but as the reduction specified in it began to come into practical operation, the manufacturers, also, began to set up fresh claims for additional protection. Probably, however, the latter might not have been able to carry their point had not the Southern States been apprehensive that if they made any resolute stand against the proposal to increase the duties, and still more if they threatened to secede from the Union in the event of its being carried, they might be brought into serious difficulties by the

agitation of the question as to the emancipation of their slaves. The latter, therefore, having to choose between two evils, preferred, of course, that which they believed to be the lesser; and purchased a truce for the emancipation question by agreeing to the Tariff Act passed in 1842, by which comparatively high duties were again imposed on most descriptions of imported articles.

This system, however, was not so permanent as was expected. The Western and Southern States, being those most directly interested in a low tariff, had for some years before the civil war a majority in Congress; and the apprehensions with regard to negro emancipation, excited by the proceedings in our islands, having subsided, sounder opinions, with regard to commercial matters, began again to prevail in Congress. Perhaps, however, the majority now referred to, or the party of Mr. Polk, might not have endeavoured to act on these principles without the example set by England; but the great commercial reforms effected in this country during the administration of Sir Robert Peel, and more especially the last and greatest of all, the change in the corn laws, had a powerful influence in the United States; and Mr. Polk's Government having profited by these and other circumstances, which it is needless to specify, succeeded in carrying a comparatively liberal tariff, which took effect from December 1, 1846.

And this tariff kept its ground till 1857, when it was superseded by a still more liberal one. But the downfall of the party by which it was carried was quickly followed by a reimposition of high duties by Act of Congress of March 2, 1861, and this again by the outbreak of the Civil War. But the bulk of the American people have never been supposed to be blind or indifferent to their own interests; and these, they may be assured, will be best promoted by reverting to as soon as possible, and maintaining, a system which enables them to sell in the dearest and to buy in the cheapest markets. If they retain high duties, they will fall wholly on themselves, and on no one else; and the less they buy from foreigners, the less will they be able to export to them.

In addition to the duties noted below, a discriminating duty of 10 per cent. ad valorem is levied on all imports under flags that have no reciprocal treaties with the United States.

On all goods, wares, and merchandise of the growth or produce of countries east of the Cape of Good Hope, when imported from places this side of the Cape, a duty of 10 per cent. ad valorem is levied, in addition to the duties imposed on any such articles when imported indirectly from the place or places of their growth or production raw cotton and raw silk excepted.

The annexed is the tariff in a condensed shape.

*Abridged United States Tariff, or Rates of Duties imposed by the Act of Congress of March 2, 1861, with Addenda of August 5, 1861, December 24, 1861, July 14, 1862, March 3, 1863, June 30, 1863, March 3, 1865, March 14, 1866, May 16, 1866, July 28, 1866, and March 2, 1867, with relative clauses.*

Abeyneth, 50¢ and under, 2d. 50c. per gal.  
 Abeyneth, under 50¢ in strength, and costing over 5 dol. per gal. 40 per cent. ad val. oil of, or wormwood, 50 per cent.  
 Acarations, 30 per cent.  
 Acid, chromic, 15 per cent.  
 Acetate of lead, or sugar of lead, 20c. per lb. potash, 75c. per lb. borax, 40c. per lb. iron, strontian, zinc, magnesia, soda, 50c. per lb.  
 Lime, 25 per cent.  
 Acid, acetic, acetons or concentrated vinegar, or pyroigneous, exceeding the specific gravity of 10.60; 30c. per lb. not over 10.60, called No. 3, 25c. per lb.  
 Acid, benzoic, 10 per cent.  
 Boracic, 3c. per lb.  
 Citric, white or yellow, 10c. per lb.  
 Gallic (med.), 1d. 50c. per lb.  
 Malartic, nitric, or nitric fort, 10 per cent. oxalic, 4c. per lb.  
 Tannic, 2 dol. per lb.  
 Tartaric, in crystals or powder, 20c. per lb. sulphuric, or oil of vitriol, 1c. per lb.  
 Acids used in the fine arts, not otherwise provided for, 10c. per lb.  
 Acorns, 7c. per lb.  
 Acorn coffee and dandelion root, raw or prepared, and other articles for similar use, not provided for, 5c. per lb.  
 Adhesive plaster, calve, 40 per cent.  
 Adzes, 45 per cent.  
 Agaric (sapink), 10 per cent.  
 Aigates, 10 per cent.  
 Bookbinders', 20 per cent.  
 Alabaster, in sheets, 35 per cent.  
 Alabaster and spar ornaments, 30 p.c.  
 Alabmen, prepared white of an egg, 25 p.c.  
 Ale, in bottles, 35c. per gal. otherwise than in bottles, 20c. per gal.  
 Aluminum, a crude metal, 20 per cent.  
 Almonds, 6c. per lb. shelled, 10c. per lb. paste, 50 per cent.  
 Aloes, 6c. per lb.  
 Alum, potent, and subulate, 60c. per 100 lb.  
 Alumina, sulphate of, 60c. per lb.  
 Alumina cake, 60c. per lb.  
 Aluarine (extract of muds), 10 per cent.  
 Amber, gum, 20 per cent.  
 Beads, 50 per cent.  
 Amylic alcohol, 2 dol. per gal.  
 Anethol, 10 per cent.  
 Ammonia, 20 per cent.  
 Ammonio, sulphate of, carbonate of, or refined, 20 per cent.  
 acetate, or pyroigneate of, 70c. per lb. salts, and muriate of, 10 per cent.  
 Aniline, 20 per cent.  
 Anchovies, in oil or salt, 50 per cent.  
 Animals, all alive, 20 per cent.  
 Annatto, extract or seed, 20 per cent.  
 Anise seed, 5c. per lb. star, 10c. per lb.

Anise seed, oil of, 50c. per lb.  
 Antios, oil of, 50 per cent.  
 Antimony, crude or recrystallized, 10 per cent.  
 Antique oil, 50 per cent.  
 Apothecaries' vials and bottles exceeding the capacity of 6, and not exceeding the capacity of 16 oz. each, not cut, 55 p.c. cut, 40 per cent.  
 Apparatus, philosophical, or Instruments, 45 per cent.  
 philosophical, not specially imported, 10 p.c.  
 Apples, 10 per cent.  
 Apple butter, 35 per cent.  
 Aqua fortis, 10 per cent.  
 Argemone, 20 per cent.  
 Arretine, 50¢, 2d. 50c. per gal. under 50¢ in strength and costing over 5 dol. per gal., 30 per cent.  
 Arsenic, or of arsenic of antimony, 20 p.c.  
 Arms, fire or side, 55 per cent.  
 Arrow root, 10 per cent.  
 Arsenic, and sulphate of, 20 per cent.  
 Articles not in a crude state, used in dyeing or tanning, not otherwise provided for, 20 p.c.  
 Articles all manufactures of, and not subject to any other rate of duty, 20 per cent.  
 Article - raw or unmanufactured, not provided for, 10 per cent.  
 Asbestos, a crude mineral substance, 25 p.c.  
 Asphaltum, 25 per cent.  
 Asafetida, 20 per cent.  
 Asses' skin or parchment, and imitation of, 50 per cent.  
 Ava root, 20 per cent.  
 Augers, 45 per cent.  
 Awns, 45 per cent.  
 Axes, 45 per cent.  
 Axes, iron, 10 per cent.  
 Bacon, 2c. per lb.  
 Bags, or of hemp, 50 per cent.  
 Gunny. (See Cotton Bagging.)  
 Balises, 20c. per sq. yd. and 35 per cent.  
 Balls, billiard, 35 per cent.  
 Balmora's, composed wholly or in part of worsted, the hair of the Alpaca goat, or other lan animal, value not over 40 cts. per lb., 20c. per lb. and 35 per cent. value over 40 cts. and not over 60 cts. per lb., 20c. per lb. and 35 per cent. value over 50c., and not over 80c. per lb., 40c. per lb. and 35 per cent. value over 80c. per lb., 50c. per lb. and 35 per cent.  
 composed wholly or in part of wool, 50c. per lb. and 35 per cent.  
 Balmoral kilns and skinirings, and goods of similar description, or used for like purposes, composed wholly or in part of wool, worsted, the hair of the Alpaca goat, or other like animals, made up or manufactured wholly or in part by the tailor, seamstress or manufacturer, except knit goods, 50c. per lb. and 40 per cent.  
 Balm of Gilead, 10 per cent.

Balsam, copaiva, 20c. per lb.  
 of Tulu, 20c. per lb.  
 Balsam, copaiva, 20c. per lb.  
 medicinal, not otherwise provided for, 50 per cent.  
 Balsam of acacia, 50 per cent.  
 Bamboos, unmanufactured, 10 per cent.  
 Bananas, 20 per cent.  
 Bark of oak trees, unmanufactured, 50 p.c. Peruvian, 10 per cent.  
 flat cararaya (Peruvian), and all medicinal, 10 per cent.  
 Bailey, 15c. per lb.  
 peal, 10 or hulled, 1c. per lb.  
 Barites, sulphate of, crude or refined, 3c. per lb.  
 and acid contained, 3c. per lb.  
 Bars (the inner bark of a tree), 20 per cent.  
 Basoons, 50 per cent.  
 Baskets, wood or osier, palm leaf, grass or wickerwork, 55 per cent.  
 Battering, 45 per cent.  
 Bay rum, essence of, 2 dol. per oz. ditto, of which spirits is a component of chief value, to pay duty as spirits, 1d. 50c. per gal.  
 Bay water, or rum, distilled from the 1d. 50c. per gal.  
 Bay wax, or myrtle wax, 20 per cent.  
 Bismuth, 45 per cent.  
 Bilethium, crude or refined (seam), 50 p.c.  
 Binds, of precious stones or gold and silver, and not otherwise enumerated, 50 per cent.  
 Bind ornaments, 50 per cent.  
 Beans for seed, 50 per cent.  
 Beans, 20 per cent.  
 Beans, 20 per cent.  
 tonqua, 40 per cent.  
 vanilla, 3 dol. per lb.  
 all other not specially mentioned, 10 per cent.  
 Bean knives, 45 per cent.  
 Bearings, scale, 25 per cent.  
 Bed footers, 20 per cent.  
 caps, 35 per cent.  
 acrows, 24c. per lb.  
 Bells, as carpeting. (See Mats.)  
 Beef, 1c. per lb.  
 Beer, in bottles, 55c. per gal. otherwise than in bottles, 20c. per gal.  
 Bellows pipes, 35c.  
 Bell cranks, or levers, or pulleys of iron, 50 p.c.  
 Belts, sword leather, 35c.  
 Benzine, or benzole oil, refined, 80c. per lb.  
 Benzoin, 30 per cent.  
 Berber stones, 10 per cent.  
 Belts, leather, 20 per cent.  
 Best aprons, or covers, made of the waste ends of printed calicos, serges, &c., 55 per cent.  
 Bell metal, manufactured, 35 per cent.  
 Belts, silver or gold, 10 per cent.  
 Berlin Alize, 45 per cent.  
 Berries, not otherwise provided for, 10 per cent.  
 Beriber stones, 10 per cent.  
 Bicarbonate of potash or soda, 10 p.c.  
 Bick iron, 35 per cent.  
 Binding, cotton, 5 per cent.

*[Marginal notes and additional text from an adjacent page are partially visible on the right edge.]*

Cotton, as above, valued over 10c. per sq. yd., 4c. per sq. yd.  
 Cotton caps, gloves, leggins, mitts, socks, stockings, made on frames, bleached or colored, 35 per cent.  
 Cotton hose, unbleached, 35 per cent.

 Glass, paintings, not otherwise specified, all articles not specified, covered by this article, 40 per cent.  
 plain or moulded, weighing under 8 ounces, 35 per cent.  
 cut ornaments for chandeliers, candelabras, articles, plain and moulded, 35 per cent.  
 watch or watch crystals, 40 per cent.  
 pressed, 35 per cent.  
 coloured, engraved, painted, printed, stained, silvered, Bohemian, or spectacles, pebbles for spectacles, and all manufactures of, or of which glass is the chief material, not otherwise specified, 40 per cent.  
 bottles and jars, filled with preserves, the articles not specified, covered by other materials so as to prevent breakage, 10 per cent.  
 Glass, 20 per cent.  
 Gloves, angors, were an frames of linen, 35 per cent.  
 unmanufactured, 35 per cent.  
 women's leather habit, or children's of dent length, 30 per cent.  
 Gilt, 20 per cent.  
 Goat's skins, raw, 10 per cent.  
 angors, raw, 20 per cent.  
 finished, 10 per cent.  
 Gold, all articles composed wholly or in part of gold, 35 per cent.  
 Gold, beaten, 7 months, or 8 mo., 10 p.c.  
 Gold embrodderies, 35 per cent.  
 or silver lace, even of 6 in. fin., 35 per cent.  
 head, 1d. 50c. per yard of 30 lines.  
 or of gold and mixture of (both) 35 per cent.  
 ornaments made by spreading gold in very thin paper, and gold paint in strips, or other forms, 40 per cent.  
 size, 20 per cent.  
 shell, for painting, 35 per cent.  
 or gilt bracelets and studs, 35 per cent.  
 Golo shoes or clasp, wood, 35 per cent.

United States in the said district, the verification hereby required shall be made by the consul or commercial agent of the United States at the nearest point, or at the port from which the goods are shipped, in which case the oath shall be administered by some public officer, duly authorized to administer oaths, and transmitted, with a copy of the invoice, to the consul or commercial agent for his authentication; and this Act shall be construed only to modify, and not repeal, the Act of March 1, 1823, entitled "An Act supplementary to, and to amend an Act entitled "An Act to regulate the Collection of Duties on Imports and Tonnage," passed March 2, 1799, and for other Purposes; and the forms of the oaths therein set forth shall be modified accordingly. And there shall be paid to the said consul, vice-consul, or commercial agent, by the person or persons by or in behalf of whom the said invoices are presented and deposited, one dollar for each and every invoice verified, which shall be accounted for by the officers receiving the same, in such manner as is now required by the laws regulating the fees and salaries of consuls and commercial agents. And provided, further, That the provisions of this section shall not apply to invoices of goods, wares, and merchandise, imported into the United States from beyond Cape

Horn and the Cape of Good Hope, until April 1, 1863. And provided further, That the provisions of this section shall not apply to countries where there is no consul, vice-consul, or commercial agent of the United States.

TRADE OF THE UNITED KINGDOM WITH THE UNITED STATES.

Account of the Declared Value of the Total Exports of British Produce and Manufactures to the United States of America, during each of the 35 Years ending with 1867.

Height of the various lakes to be passed, and the elevation of land:—

	Above Atlantic ft. in.	Above Pacific ft. in.
Height of Lake Nicaragua	117 9	123 3
Managua	176 5	156 11
Highest point of land to be passed	251 11	212 5

But great doubts are entertained whether this or any other route by the Lake of Nicaragua can be made practicable for moderate-sized vessels, that is, for vessels of from 400 to 500 tons and upwards. The river San Juan runs from end to end through a dense and unhealthy jungle. No labourers are to be had in the country, and it affords nothing for the subsistence of those who may be imported from a distance. And though, one should think, it would be no very difficult matter to clear it of the obstructions made to oppose the buccaneers, it is plain from the difference of level between the Lake of Nicaragua and the Atlantic, that others of a much more formidable character must be in the way, and that a great deal of lockage would be required to enable vessels of any considerable burden to reach the lake; and after it has been reached, many difficulties have to be surmounted. That they may be surmounted, and a navigable channel formed between the two oceans, is not, certainly, impracticable; but we are persuaded that it is visionary to imagine that ships of 1,000 or 1,200 tons should ever, as has been stated, get across the Continent by its means; and on whatever scale it may be made, the anticipations of advantage to result from it will, we apprehend, be found to be greatly exaggerated.

The communication hitherto effected is as follows.

The Central American Transit Company commencing at San Juan del Norte, conveying by river and lake navigation, and by steam to Virgin Bay; thence by land carriage for about 14 miles to San Juan del Sur. Here Californian steamers convey to San Francisco; while, on the other side, New York steamers convey from San Juan del Norte.

On April 19, 1850, the British and American Governments entered into a treaty, binding themselves to promote the construction of a ship canal between the Caribbean Sea and the Pacific Ocean, by way of the Lake of Nicaragua; and renouncing at the same time any exclusive right to or control over such canal.

The port of REALEJO, on the Pacific, lat. 12° 34' N., long. 87° 4' W., to which it is proposed to bring the canal from Lake Leon, is said to be one of the best that is anywhere to be met with. It is protected by a long narrow island, which forms a natural breakwater. We borrow from the *Times* the following notice of this harbour, derived from a former resident there:—

‘I may confidently say that the port of Realejo is, at least, as good a port as any in the known world. I have seen Portsmouth, Rio de Janeiro, Port Jackson, Talcahuana, Callao, and Guayaquil, and to all these I consider it decidedly superior. It is a salt-water creek, into which several small streams of water empty themselves. The entrance is protected by an island about two miles long, which leaves at each end a channel where ships can enter the harbour, but extending opposite the mainland, forming the port in such a manner as to protect it entirely from any wind that could possibly blow, and also entirely breaking the swell which enters the outer bay of Couchagua from the ocean. The north entrance is about a quarter of a mile wide, and that at the south of the island rather narrower, both being entirely

free from rocks or hidden dangers, and having in no part less than five fathoms depth of water. At one of these openings vessels can at all times enter with a landing wind, from whatever quarter it may blow. The inside consists of a noble basin of water, nowhere less than four fathoms deep, with a bottom of mud, where two hundred ships of the line might lie at all times in the most perfect security. One of the branches of the creek extends inland to within three leagues of the Lake of Leon or Managua. The intermediate country is a gentle slope, where undoubtedly should enter one of the ends of the canal to connect the Pacific and Atlantic Oceans. The difficulties to be encountered in crossing the chain of hills between the Lake of Nicaragua and San Juan del Sur would be entirely avoided by bringing the canal through the Lake of Leon (connected as it is with that of Nicaragua by a river that might be rendered navigable at a moderate cost) to the above-named branch of the Realejo harbour, thus securing the great advantage of an excellent harbour at each end of the canal, besides many others which are certainly not to be met with either at Panama, Tehuantepec, or any other place.

The town of Realejo is about two leagues distant from the part of the creek where vessels lie, but there is sufficient depth for small vessels to come within a mile of the town, and a very little labour would make it accessible to large ships, but an enlightened Government would probably prefer moving the town to the opposite side of the reach, where vessels lie, where there is a site extremely suitable for the purpose, and where a quay might easily be erected capable of accommodating any number of ships. In the time of the Spanish Government several vessels, some of 300 to 400 tons, were built at Realejo, where the wood is very superior and durable.

The port of San Juan del Sur, to which place was proposed to bring the canal, seems inferior to Realejo in most respects. The Gulf of Papagayo where the port is situated, is very difficult to enter for a sailing vessel for five months in the year.

Port charges, 10 cents per ton; lighterage, 50 cents dollar per ton; pilotage, 1½ dollar per foot.

Pilotage is charged both in and out.  
NICARAGUA or PEACH WOOD (Ger. Nicaraguaholz, blutholz; Dutch, bloedhout; Span. bois de sang, bois de Nicaragua; Ital. leg. sanguigno; Span. palo de sangre; Port. sanguinho). A tree of the same genus (*Cesalpinia*) as the Brazil and sapan wood; but the species has not been exactly ascertained. It grows principally in the vicinity of the Lake of Nicaragua, whence its name.

It is said by Dr. Bancroft to be almost as soft and heavy as the true Brazil wood, but it does not commonly afford more than a third part, quantity, of the colour of the latter; and even this is rather less durable and less beautiful though dyed with the same mordants. Nicaragua or peach woods differ greatly in their quality as well as price; one sort being so deficient in colouring matter, that 6 pounds of it will only dye as much wool or cloth as 1 pound of Brazil wood; whilst another variety of it will produce nearly half the effect of an equal quantity of Brazil wood, and will sell proportionally dearer. (Bancroft *On Colours*, vol. ii. p. 382.)

The London dealers distinguish Nicaragua wood into three sorts, viz. *large, middling, small*; the price of the 1st sort being from 13l. per ton; of the 2nd, from 7l. to 10l. do.; and of the 3rd, from 6l. to 7l. per do. duty, after being reduced in 1831 from 15s. to 10s. per ton, and in 1842 to 2s. per do., was which

gers, and having in depth of water. At can at all times enter a quarter it may of a noble basin of fathoms deep, with hundred ships of the in the most perfect of the creek or leagues of the Lake intermediate country is dly should enter on nect the Pacific and enties to be secur- of hills between the Juan del Sur walling the canal through ad as it with that t might be rendered cost) into the above lejo harbour, thus ce of an excellent har- al, besides many others be met with either any other place.

distinguish Niang- iz. large, middling- 1st sort being from 2nd, from 7l. to 10l. in Gl. to 7l. per do. in 1831 from 15l. to 2s. per do., was who

lished in 1844. The imports of Nicaragua wood amounted in 1865 to 342 tons, and in 1867 to 411 tons, valued at 6,769l.

**NICKEL.** A scarce metal, which occurs always in combination with other metals, from which it is exceedingly difficult to separate it. When pure, it is of a fine white color, resembling silver. It is rather softer than iron; its specific gravity, when cast, is 8.279; when hammered, 8.32. It is malleable, and may without difficulty be hammered into plates not exceeding  $\frac{1}{16}$  inch in thickness. It is attracted by the magnet; and is not altered by exposure to the air, nor by being kept under water. It is employed in potteries, and in the manufacture of porcelain. (Thomson's *Chemistry*; Watt's *Dictionary of Chemistry*.)

This metal is the foundation of 'German silver,' and is also employed, either pure or in combination with copper, as a form of currency. Coins containing 20 parts of nickel, and 80 of copper, are circulated in Belgium. The weight of a nickel Belgian penny is little more than a dram. In 1867 nickel in the metallic form, or in that of refined oxide, was imported into the United Kingdom to the value of 1,970l.

**NINGPO**, one of the five ports thrown open to commerce by the treaty of Nankin, is situated in the province of Che-Kiang, on the river Yung, lat. 29° 55' 12" N., long. 121° 22' E. The port of Ningpo commences at the river's mouth; three islands, called the Triangles or Yew Islands, forming three passages to the river. The port is 11 miles up the stream, which is about 600 yards wide at this point, with depths varying from 5 to 2 fathoms. Vessels of 17 feet draught can proceed to the city at half tide or springs. European ships procured at Chin Hai. The rates of pilotage are 3 dol. from and to Square Island, and 10 dol. from and to Chusan Island.

**Lighthouses.**—The access to the river Yung was facilitated by the construction of two lighthouses on the islands off its mouth. The first is built on Square Island, and is 186 feet above the sea level. Lat. 29° 59' 22" N., long. 121° 45' 6" E. The second lighthouse, 154 feet above the sea level, is on Tiger's Island, about half a mile from the entrance of the river, lat. 29° 57' 43" N., long. 121° 47' 51" E.

The chief exports of Ningpo are tea, silk, and cotton; the imports, textile fabrics, opium, and rice. The export of tea from Ningpo has increased from 4846,254 lb. in 1863, to 15,444,816 lb., valued at 1,312,110l., in 1867; and Mr. Consul Fitch states that Ningpo is now asserting her natural right to be the tea depot of the province of Che-Kiang.

In 1867, vessels of in all 185,082 tons entered the port; while, in 1866, 654 vessels of 191,083 tons; and in 1865, 910 vessels of 258,247 tons, entered.

	1861	1865	1866	1867
Imports - tons	10,264,616	6,481,599	5,408,091	6,965,359
Exports "	6,550,306	5,085,255	6,155,818	7,280,103

Ningpo was seriously injured by the Taeping rebellion, and its commercial importance has declined since Shanghai has risen to the eminence of a great commercial city. (Consular Reports; &c.)

**SITRE.** [SALTPETRE.]  
**NOTE, PROMISSORY.** [BANK—BANKING.]  
**NUT or HAZEL NUT** (Ger. haselnüsse; Fr. noisettes; avellanes; Ital. nocciuole, avellane; Span. avellanas; Port. avellãs; Lat. avellane). The kernels have a mild, farinaceous, oily taste, agreeable to most palates. A kind of chocolate

has been prepared from them; and they have sometimes been made into bread. The expressed oil of hazel nuts is little inferior to that of almonds. Besides those raised at home, we import nuts from different parts of France, Portugal, and Spain, but principally from the latter. The Spanish nuts in the highest estimation, though sold under the name of Barcelona nuts, are not really shipped at that city, but at Tarragona, a little more to the south. The annual average export of nuts from Tarragona is from 25,000 to 30,000 bags; of 4 to the ton. The average price here in 1867 was 15s. per bushel. In 1867, 279,991 bushels of hazel nuts, valued at 196,998l., were imported. The duty, which was reduced in 1853 to 1s. per bushel, was abolished in 1862.

**NUTS (GROUND)** (*Arachis hypogaea*), known in French commerce as *arachides*, in America as *pea-nuts*, and in Africa as *mandabin*, the fruit of a papilionaceous plant, rising to the height of about 15 inches, being very like the field pea, with yellow flowers. The branches after flowering bend down till they touch the ground, into which they work themselves, and upon them grow the pods that contain the nuts. When the nuts are ripe, the plant dies. It is then pulled up, and the nuts which adhere to the twigs are collected. The pods, which are of an elongated figure, about  $\frac{3}{4}$  inch in length, and  $\frac{1}{2}$  inch in circumference, and brittle, usually contain 2 nuts, but sometimes only 1, and very rarely 3. They are elliptical at one end and flattened at the other.

Ground nuts are grown in light sandy soils in most tropical countries. They have been used as food from time immemorial in Africa, India, Brazil, and other parts both of South and North America. The best are raised on the banks of the river Gambia, where they are extensively grown in large fields, the ground being prepared for their reception by the natives after the usual fashion of the country. The plant is very prolific; it is also said to be highly exhaustive of the soil, though this is, perhaps, questionable.

Ground nuts yield large quantities of oil; and since 1840 they have been grown in Africa as an article of commerce, and are now largely exported for crushing. A mill for expressing oil from them was constructed in London in 1835. But the French Government having a few years after imposed high duties on most descriptions of oil seeds, the oil crushers of Marseilles and other towns endeavoured to find out seeds not included in the tariff, or less heavily taxed than the others. They were thus led to import *arachides* or ground nuts, which they found to answer extremely well. France has, in consequence, become the great market for this peculiar product. The exports from the Gambia, which in 1835 did not exceed 47 tons, had increased in 1851 to not less than about 12,000 tons. Of this quantity about 800 tons went to the United States (where they are eaten at dessert, roasted, as are chestnuts elsewhere), 700 to England, and the rest to France, principally to Marseilles. In the year 1866, 1,309,097 bushels of ground nuts, valued at 130,910l., were exported from the Gambia; of these by far the largest portion (1,067,716 bushels) was shipped to France, 143,227 to the United Kingdom, and 77,839 to the United States. The ground nuts of the Gambia are now (1868) subject to an export duty of  $\frac{3}{4}$ d. per bushel. The total imports of *arachides* into France in 1863 amounted, according to the official returns, to 41,713,486 kilogrammes or 44,668 tons, while our imports of ground nuts in 1867 were 1,620 tons, valued at 26,446l., and we also received other nuts and

kernels, commonly used for expressing oil, to the extent of 9,570 tons, valued at 121,019*l.*

Nuts are also exported from the Rio Grande, Madras, the Rio Nanez, and from Sierra Leone, and the adjoining rivers. And though there are no accounts of the exact quantities sent from each, it is believed that their aggregate amount is fully equal to the exports from the Gambia. Within the last 3 or 4 years considerable quantities have been shipped from the Senegal river.

The oil expressed from the nuts differs in quality and price according to the care with which it is refined. That made in London is equal to fine olive oil. In France the oil is principally used in the manufacture of soap; and being inferior to that made here, is worth from 45*l.* to 48*l.* per tun.

Besides being used for the like purposes as other oil in food, in the woollen manufacture, and in lumps, the oil of ground nuts is said to be especially well fitted for lubricating heavy machinery, including the locomotive engines on railways. The Belgians use it for this latter purpose in preference to all other oils.

Ground nuts were worth upwards of 16*l.* per tun in London in 1867. (*Parliamentary Papers, and private information.*) [COCOA NUTS.]

NUTMEG (Ger. muskatennüsse; Dutch, muskaat; Fr. muscades; noix muscades; Ital. noce moscada; Span. moscada; Arab. jowzkalteib; Sansc. jūtiphala; Malay, buah-pala). The fruit of the genuine nutmeg tree (*Myristica moschata*), a native of the Moluccas, but which has been transplanted to Sumatra, Penang &c. An inferior and long-shaped nutmeg is common in Borneo; but the fruit nowhere attains to the same perfection as in the Moluccas.

Of the several varieties of the tree, that denominated the queen nutmeg, which bears a small round fruit, is the best. The kernel, or proper nutmeg, is of a roundish oval form, marked on the outside with reticulated furrows, internally greyish red, with dark brownish veins, and of a fleshy farinaceous substance. Nutmegs are frequently punctured and boiled, in order to obtain the essential oil; the orifice being afterwards closed; but the fraud is easily detected by the lightness of the nutmeg. (*British Pharmacopœia; Thomson's Dispensatory; Ainslie's Materia Indica.*)

In 1867, 370,193 lb. of nutmegs, valued at 23,417*l.*, were imported into the United Kingdom. Of these the largest quantity was derived from the Straits Settlements, the quality of the Singapore nuts being superior to that of the Java and Madras produce. Nutmegs exported from Java are liable to duties. 9½ gulden (15*s.* 10*d.*) are levied on the picul when the export is in Dutch vessels and to Holland; 19 gulden (31*s.* 8*d.*) on the same quantity, exported direct to foreign countries or to Holland in foreign vessels. For the 3 years 1861-3, the average amount received by the Dutch Custom-houses in the above-named colonies was 73,797 gulden, i.e. 6,149*l.* 13*s.* The full export duty amounts to 25 per cent. of the gross value; and it seems unlikely that the Dutch colonies will long preserve their ascendancy in the nutmeg trade in the face of so exorbitant a tax.

Nutmegs should be chosen large, round, heavy, and firm, of a lightish grey colour on the outside, and the inside beautifully marbled, of a strong fragrant smell, warm aromatic taste, and a flat oily body. They are very subject to be worm-eaten. The best preservative is said to be, leaving them in their natural shells. The Dutch lime them, but the practice is said to injure their flavour. The oblong kind, and the smaller ones, should be rejected. 15 cwt. are allowed to a ton. (*Milburn's Orient. Com.*)

The dried produce of a nutmeg tree consists of NUTMEG, MACE, and shell. Supposing the whole produce to be divided into 100 parts, there are 13½ of mace, 33½ of shell, and 53½ of nutmeg. In the ancient commerce, and down to the establishment of the Dutch monopoly, nutmegs were always sold and exported in the shell. The natives, whenever the commerce is left to their management, continue the practice, which is strongly recommended by Mr. Crawford. (*Eastern Archipelago, vol. iii. p. 396.*)

The jealous policy of the Dutch has reduced the trade in nutmegs to a mere trifle, compared to what it would otherwise have been. They have in so far at least as it was possible, exerted themselves to exterminate the nutmeg plants everywhere except in Banda. The aboriginal inhabitants of this island have been expatriated, and the land parcelled among settlers from Holland, under the name *park keepers*. These persons have about 2,000 slaves, who cultivate and prepare the nutmeg. The prices paid by the cultivator are all fixed by Government: and it deserves to be mentioned, as affording one of the most striking illustrations of the ruinous effects of monopoly, that the price which the Government is now obliged to pay for nutmegs is FIVE times greater than the price at which they bought them when the trade was free. We cannot conceive how so enlightened and liberal a Government as that of Holland should continue to tolerate such scandalous abuses, more especially since it has established a free system at Amboyna, Java, and its other possessions.

M. Temminck estimates the produce of the Banda Islands at about 600,000 lb. of nutmegs and 100,000 lb. of mace. (*Possessions néerlandaises dans l'Inde archipelagique, iii. 283.*)

During the period that the English had possession of the Spice Islands, nutmeg plants were carried to Penang, Bencoolen, and some of the West India islands. In the latter they have altogether failed at least as far as respects any useful purpose: very good nutmegs, and in considerable quantities are now raised at Penang and Bencoolen. Mr. Crawford, however, alleges that the cost of bringing them to market is there so high, that the restoration of a free culture in the native country the nutmeg would instantly destroy this unstable and factitious branch of industry. (*Eastern Archipelago, vol. iii. p. 409.*)

The duty on nutmegs was reduced, in 1810 from 5*s.* 5*d.* to 2*s.* 6*d.* per lb.; and the quantity entered for home consumption have since rapidly increased. In 1837, 181,061 lb. nutmegs were entered for consumption. In 1853 the duty was reduced to 1*s.* per lb., and to 3*d.* and 5*d.* per lb. respectively on wild nutmegs in the shell and in the shell. It was repealed in 1862.

NUTRIA or NEUTRIA. The common names for the skins of *Myopotamus Bonarum* (Commerçon), the *Coppou* of Molina, and *Quoiya* of D'Azara. In France, the skins are called *coocada*; and perhaps still are, sold under the name of *coocada*; but in England they are imported under the name of nutria skins—deriving their appellation, most probably, from some supposed similarity of the animal which produces them, in appearance and habits, to the otter, the Spanish name for which is *nutria*. Indeed, Molina speaks of the *coppou* as a species of water rat, of the size and colour of the otter.

Nutria fur is largely used in the hat manufacture; and has become, within the last 20 years, an article of very considerable commercial importance. The imports fluctuate considerably. In 1841 they amounted to 1,125,212 skins; in some years they are much less; in 1844,

amounted to 242,733. In 1867 they were only 6,110 from Italy and the Argentine Confederation. Those entered for home consumption formerly paid a duty of 1s. per 100 skins. This has been repealed since 1862. [FUR TRADE.]

The *coypou* or *quoyia* is a native of South America, very common in the provinces of Chili, Buenos Ayres, and Tucuman, but more rare in Paraguay. In size it is less than the beaver, which it resembles in many points. The head is large and depressed, the ears small and rounded, the neck stout and short, the muzzle sharper than that of the beaver, and the whiskers very long and stiff. There are, as in the beaver, 2 incisor teeth, and 18 molar, above and below—20 teeth in all. The limbs are short. The fore feet have each 5 fingers not webbed, the thumb being very small: the hind feet have the same number of toes: the great toe and 3 next toes being joined by a web which extends to their ends, and the little toe being free, but edged with a membrane on its inner side. The nails are compressed, long, curved, and sharp. The tail, unlike that of the beaver, is long, round, and hairy; but the hairs are not numerous, and permit the scaly texture of the skin in this part to be seen. The back is of a brownish red, which becomes redder on the flanks: the belly is of a dirty red. The edges of the lips and extremity of the muzzle are white.

Like the beaver, the coypou is furnished with two kinds of fur; viz. the long ruddy hair which gives the tone of colour, and the brownish ash-coloured fur at its base, which, like the down of the beaver,

is of much importance in hat-making, and the cause of the animal's commercial value.

The habits of the coypou are much like those of most of the other aquatic rodent animals. Its principal food, in a state of nature, is vegetable. It affects the neighbourhood of water, swims perfectly well, and burrows in the ground. The female brings forth from 5 to 7 at a time; and the young always accompany her.

The coypou is easily domesticated, and its manners in captivity are very mild.

We are indebted for this account of nutria—the first, we believe, that appeared in any English work—to the late W. J. Broderip, Esq., F.R.S. &c.

**NUX VOMICA** (Fr. noix vomique; Ger. krühenaugen, brechnüsse; Hin. kaehla). The fruit of a species of *Strychnos*, growing in various places in the East Indies.

The fruit is about the size of an orange, covered with a smooth crustaceous yellow bark, and filled with a fleshy pulp, in which are imbedded several orbicular flattened seeds, about  $\frac{3}{4}$  inch in diameter. Nux vomica is inodorous, and its taste, intensely bitter, remains long on the palate. It is known as a very virulent poison, its properties depending on a peculiar alkaloid, called strychnia. A suspicion has, however, been entertained, that it has been used in porter breweries; but its introduction into them is prohibited under heavy penalties. In 1865, 9,033 cwt. were imported, and 1,147 cwt. in 1867. (*British Pharmacopœia*, 1867; &c.)

## O

**OAK** (Ger. eiche; Dutch, eik; Dan. eger; Swed. ek; Fr. chêne; Ital. quercia; Span. roble, carballo; Port. roble, carvalho; Russ. dub; Pol. dąb; Lat. quercus; Arab. baalut). There are several varieties of this valuable tree; but the common English oak (*Quercus robur*) claims pre-eminence of every other. The oak timber imported from America is very inferior to that of this country: the oak from the central parts of Europe is also inferior, especially in compactness and resistance of cleavage. The knotty oak of England, the 'unwedgeable and gualred oak,' as Shakspeare called it, when cut down at a proper age, is the best timber known. Some timber is harder, some more difficult to rend, and some less capable of being broken across, but none contains all the three qualities in so great and equal proportions; and thus, for at once supporting a weight, resisting a strain, and not splintering by a cannon shot, the timber of the oak is superior to every other.

A fine oak is one of the most picturesque of trees; it conveys to the mind associations of great strength, and of all but endless duration. It stands up against the blast, and does not take, like other trees, a twisted form from the action of the winds. Except the cedar of Lebanon, no tree is so remarkable for the storkness of its limbs: they do not exactly spring from the trunk, but divide from it; and thus it is sometimes difficult to know which is stem and which is branch. The twisted branches of the oak, too, add greatly to its beauty; and the horizontal direction of its boughs, spreading over a large surface, completes the idea of its sovereignty over all the trees of the forest. Even a decayed oak, such as that described by

—dry and dead,  
Still clad with collages of its trophies old,  
Lifting to heaven its aged, hoary head,  
Whose foot on earth has got but feeble hold,

is strikingly beautiful.

The oak is raised from acorns, sown either where the oak is to stand, or in a nurery, whence the young trees are transplanted.

The colour of oak wood is a fine brown, and is familiar to everyone; it is of different shades; that inclined to red is the most inferior. The larger transverse septa are in general very distinct, producing beautiful flowers when cut obliquely. Where the septa are small, and not very distinct, the wood is much the strongest. The texture is alternately compact and porous; the compact part of the annual ring being of the darkest colour, and in irregular dots surrounded by open pores, producing beautiful dark veins in some kinds, particularly pollard oaks. Oak timber has a particular smell, and the taste is slightly astringent. It contains gallic acid, and is blackened by contact with iron when it is damp. The young wood of English oak is very tough, often cross-grained, and difficult to work. Foreign wood and that of old trees are more brittle and workable. Oak warps and twists much in drying; and, in seasoning, shrinks about  $\frac{1}{3}$  of its width.

Oak of a good quality is more durable than any other wood that attains a like size. Vitruvius says it is of eternal duration when driven into the earth: it is extremely durable in water; and in a dry state it has been known to last nearly 1,000 years. The more compact it is, and the smaller the pores are, the longer it will last; but the open, porous, and foxy coloured oak, which grows in Lincolnshire and some other places, is not near so durable.

Besides the common British oak (*Quercus robur*), the sessile-fruited bay oak (*Quercus sessiliflora*) is pretty abundant in several parts of England, particularly in the north. The wood of this species is said by Tredgold to be darker, heavier, harder, and more elastic than the common oak; tough and difficult to work; and very subject to warp and split in seasoning. Mr. Tredgold seems disposed to regard this species as superior to the common oak for ship-building. But other, and also very high authorities, are opposed to him on this point; and, on the whole, we should think that it is sufficiently well established, that for all the great practical purposes to which oak timber is applied, and especially for ship-building, the wood of the common oak deserves to be preferred to every other species. A well-informed writer in the *Quarterly Review* has the following remarks on the point in question:—

‘We may here notice a fact long known to botanists, but of which our planters and purveyors of timber appear to have had no suspicion—that there are two distinct species of oak in England—the *Quercus robur*, and the *Quercus sessiliflora*; the former of which affords a close-grained, firm, solid timber, rarely subject to rot; the other more loose and sappy, very liable to rot, and not half so durable. This difference was noted so early as the time of Ray; and Martyn in his *Flora Rustica*, and Sir James Smith in his *Flora Britannica*, have added their testimonies to the fact. The second species is supposed to have been introduced some two or three ages ago, from the Continent, where the oaks are chiefly of this latter species, especially in the German forests, the timber of which is known to be very worthless. But what is of more importance to us is, that de facto the imposture abounds, and is propagated vigorously in the New Forest and other parts of Hampshire; in Norfolk and the northern counties, and about London; and there is but too much reason to believe that the numerous complaints that were heard about our ships being infected with what was called, improperly enough, *dry rot*, were owing to the introduction of this species of oak into the naval dock-yards, where, we understand, the distinction was not even suspected. It may thus be discriminated from the true old English oak: The acorn stalks of the *robur* are long, and its leaves short; whereas the *sessiliflora* has the acorn stalks short, and the leaves long: the acorns of the former grow singly, or seldom 2 on the same footstalk; those of the latter, in clusters of 2 or 3 close to the stem of the branch. We believe the Russian ships of the Baltic, that are not of larch or fir, are built of this species of oak; but if this were not the case, their exposure on the stocks, without cover, to the heat of summer, which, though short, is excessive, and the rifts and chinks which fill up with ice and snow in the long winter, are enough to destroy the stoutest oak, and quite sufficient to account for their short-lived duration.’

A great deal of enquiry and discussion has taken place at different periods as to the supply and consumption of oak timber; but the results have not been very satisfactory. In a *Report of the Commissioners of Land Revenue*, printed in 1812, it is stated that, taking the tonnage of the navy in 1806 at 776,087 tons, it would require, at  $1\frac{1}{2}$  load to a ton, 1,164,085 loads to build such a navy, and supposing the average duration of a ship to be 14 years, the annual quantity of timber required would be 83,149 loads, exclusive of repairs, which they calculate would be about 27,000 loads; making the whole about 110,000 loads; of which, however, the commissioners reckon may be fur-

nished 21,341 loads as the annual average of the prizes; and of the remaining 88,659 loads, they think it not unreasonable to calculate on 28,659 from other sources than British oak. ‘This,’ they observe, ‘leaves 60,000 loads of such oak as the quantity which would be sufficient annually to support, at its present unexampled magnitude, the whole British navy, including ships of war of all sorts; but which may be taken as equivalent together to 20 14-gun ships, each of which, one with another, contains about 2,000 tons, or would require, at the rate of  $7\frac{1}{2}$  loads to the ton, 3,000 loads; making just 60,000 loads for 20 such ships.’

Now, it has been supposed that not more than 40 oak trees can stand on an acre of ground, so as to grow to a full size fit for ships of the line, or to contain each  $1\frac{1}{2}$  load of timber; 50 acres, therefore, would be required to produce a sufficient quantity of timber to build a 74-gun ship, and 1,000 acres for 20 such ships; and as the oak requires at least 100 years to arrive at maturity, 100,000 acres would be required to keep up a successive supply, for maintaining a navy of 200,000 or 800,000 tons. The commissioners further observe, that as there are 20,000,000 acres of waste lands in the kingdom, a 200th part set aside for planting would at once furnish the whole quantity wanted for the use of the navy.

According to Mr. Barrow, this calculation over-rated by about a half. ‘In the first place,’ says he, ‘it supposed a state of perpetual war during which the tonnage of the whole navy considered as more than double of what it actually is: and, in the second place, it reckoned the average duration of the navy at 14 years only, which, from the improvements that have taken place in the construction and preservation of ships of war, with the resources of oak ships built in India, we should not hesitate in assuming at average of twice that number of years; and if the quantity of oak required for the navy were nothing like that which the commissioners have stated.’

‘The fact, however, is certain, that long before the conclusion of the late war, a scarcity began to be felt, especially of the larger kind of timber for ships of the line; and so great was this scarcity that if Sir Robert Seppings had not contrived a means of substituting straight timber for that of different forms and dimensions, before considered to be indispensable, the building of new ships must entirely have ceased.’

‘If, however, the growth of oak for ship timber was greatly diminished during the war, so as to threaten an alarming scarcity, there is little doubt that, from the increased attention paid by individuals to their young plantations, and their extension, as well as from the measure of allowing portions of the royal forests to those who claim on them, and enclosing the remainder to the use of the public, this country will, in future times, be fully adequate to the production of timber equal to the demand for the naval mercantile marine.’ (*Ency. Brit.* art. ‘Navy’)

The bark of the oak tree is very valuable. It is preferred to all other substances for the purpose of tanning, and brings a high price for [BARK.]

Formerly, Prussian oak was much more valued than Canadian, in the proportion of 9 to 6; but of late years the value of Prussian oak has fallen, and Canadian timber is worth much more than Prussian. In 1865, the last year through which the timber duties prevailed, the following imports of oak were fixed at the annexed:—

OATS

Country	Loads	Prices
Russia	4,115	2 s. d.
France	21,062	10 11 9
Prussia	19,811	4 9 10
Denmark	1,466	7 4 15 10
Sweden	8,591	7 9 0
Canada	51,021	4 16 10
Other ports	1,991	5 4 7
Total	109,505	5 8 6

The imports of oak timber have greatly increased of late years. During the 6 years 1836-1841, the imports were only, on an average, 3,583 loads. In 1842 our imports of oak were 67,885 loads, of which Prussia contributed 25,421, and Canada 32,109.

For further details with respect to the importation of oak, its price &c., see TIMBER. See, also, Wedgwood's *Principles of Carpentry*; art. 'Navy,' in the *Encyc. Brit.*; the very interesting work *On Timber Trees and Fruits*, in the Library of Experimental Knowledge; Rees's *Cyclopaedia*; &c. OATS (Ger. hafer; Dutch, haver; Dan. havre; Swed. hafre; Fr. avoine; Ital. venna, avena; Span. avena; Port. avca; Russ. oves; Pol. owies). A species of grain, the *Avena sativa* of botanists.

There are innumerable varieties of this grain, some of which are said to be indigenous to Britain. It is the hardiest of all the cereal grasses, growing luxuriantly in cold northern climates, and in those mountainous districts, where neither wheat nor barley can be advantageously cultivated. It thrives best, and is, indeed, chiefly raised, in latitudes north of Paris; being but little known in the south of France, Spain, or Portugal. It is, however, cultivated in Bengal, so low as the 25th degree of latitude, and, it is said, with considerable success. In Scotland, where it has long formed a principal part of the food of the people, it is far more generally cultivated than any other species of grain. It is also very extensively cultivated in Ireland. In England it is grown principally in the northern counties, and in the fens of Lincoln, Huntingdon, Cambridge, and Norfolk; but the north of Northumberland and Scotland are reckoned among those raised further south.

There are 4 leading varieties of this grain cultivated in England, viz. white, black, grey, and red or oatmeal. The sub-varieties of the white are numerous. That denominated the potato oat is present almost the only one raised on land in a state of cultivation in the north of England and the south of Scotland, and usually brings a higher price in the London market than any other variety. It was accidentally discovered growing in a field of potatoes in Cumberland in 1788; and has since the stock now in general cultivation. Black and grey oats are little cultivated, except in some places in the north of Scotland. The red is chiefly confined to Cheshire, Derbyshire, and Staffordshire. A species of naked oats produced in Cornwall is called *pillur* is raised in Cornwall. See *Encyc. of Agriculture*; Brown's *Rural Economy*, vol. ii. pp. 47-52.)

In 1765, Mr. Charles Smith estimated the number of consumers of oats in England and Wales at 1,000,000. (*Tracts on the Corn Trade*, 2nd edit. 1810.) But at present we believe they are very considerably fewer. The feeding of horses has at various times occasioned the greatest consumption of oats in this part of the kingdom; and as the number of horses kept for business and pleasure has been vastly increased within the last 30 or 40 years, the culture of oats has been considerably extended, notwithstanding the increasing imports from Ireland. Perhaps the produce of no species of grain varies more than that of oats. Where the soil is good and exhausted, not more than 20

ODESSA 909

bushels an acre are obtained; but on rich soils, well managed, 64, 72, and sometimes 80 bushels, and upwards have been reaped. Oats weigh from 35 to 45 lb. per bushel, yielding at an average, 8 lb. of meal for 14 lb. corn; but the proportion of meal increases as the oats become heavier.

In 1867 we imported 9,407,136 cwt. of oats, chiefly from Sweden and Russia, 9,373,625 cwt. were entered for home consumption, valued at 4,319,908*l.*, and paying duty to the extent of 117,493*l.*

For information as to the laws regulating the importation and exportation of oats, their prices, the quantities imported and exported &c., for a series of years, see CORN LAWS AND CORN TRADE.

ODESSA. A seaport of Southern Russia, on the north-west coast of the Black Sea, between the rivers Dneister and Bug, in lat. 46° 28' 54" N., long. 30° 43' 22" E. Population, in 1865, about 120,000. The foundations of Odessa were laid so lately as 1792, by order of the Empress Catharine, after the peace of Jassy. It was intended to serve as an entrepôt for the commerce of the Russian dominions on the Black Sea and the Sea of Azoff. But being on the verge of an arid plain to a very considerable distance from the entrance to the Sea of Azoff, and even from the mouths of the great rivers between which it is situated, we doubt whether much judgment was displayed in its selection. It has, indeed, the important advantage of having an extensive bay or roadstead with deep water and good anchorage. The bay is, however, exposed to the south-easterly wind, which renders it less safe in winter. The port, which is artificial, being formed by two moles, one of which projects to a considerable distance into the sea, is fitted to contain about 300 ships. It has the advantage of deep water, but is said to be gradually filling up. There is a convenient lazaretto, on the model of that of Marseilles. The want of fresh water is a great disadvantage. There are no trees in the vicinity, which has, in consequence, a bleak and arid appearance. Mr. Matthew, formerly consul for the Russian ports on the Black Sea, made the following statement with respect to Odessa:—

'The neglected condition of the city, and of its harbour, and the bad state of the roads leading to the interior, must ultimately affect (unless timely remedies are applied) the commerce it now enjoys, as the natural outlet of the great grain-growing provinces of Russia.

'The town is unpaved, undrained, and inefficiently lighted by a few oil lamps; the mud in the winter, and the clouds of dust created by it in the summer, render the streets almost impassable. The supply of water, which each must buy, is wholly inadequate and bad, although an aqueduct the waters of the Dneister would bring pay for itself in three years by the carriage of Bessarabian produce.

'The harbour is gradually filling up, without any efforts to prevent it, and it is impossible to avoid the conviction that the Government must desire, by the neglect of Odessa, to promote the prosperity of Theodosia, which, for reasons of military policy, has been preferred to Odessa for the terminus of the great Moscow Railway.'

But though this state of things be sufficiently discreditable to the Government and the municipality, there is not, we believe, any ground for the surmise that Odessa is being intentionally neglected. Its position is not, in truth, very favourable; either in a military or commercial point of view; and an emporium at or near the Straits of

Yenikale would be at once more secure from hostile attack, and better situated for the trade of the southern provinces of the empire. Odessa has, since December 1865, been connected by a railway of 200 verstes with Balta in Podolia; there is another between Odessa and Tiraspol; and it is probable that her connection by rail with St. Petersburg may be completed in 1870.

There is a lighthouse on Cape Fontana, about 2 leagues south of the town, lat. 46° 22' 29" N., long. 30° 45' 28" E. It was newly built in 1861. And a second on the end of the Quarantine mole, lat. 46° 29' 23" N., long. 30° 44' 56" E. The latter gives a red flash every minute, and during the day a yellow flag is hoisted.

Not being at the mouth of any great river, nor having any considerable manufactures, Odessa is not a port for the exportation of what may be called articles of native growth; but in consequence of her situation, excellent port, and the privileges she enjoyed down to a late period, she has become the emporium where a large part of the produce of Southern Russia destined for foreign countries is collected for exportation, and where most part of the foreign articles required for home consumption are primarily imported. The shallowness of the water at Taganrog, and the short period during which the Sea of Azoff is navigable, tend to hinder foreign vessels of considerable burden from entering the Strait of Yenikale, and occasion the shipment of a considerable portion of the produce brought down the Don in lighters to Calla and Odessa, especially the latter. All the products brought down the Dniester, the Bug, and the Dnieper, are exported from Odessa; but owing to the difficult navigation of the first and last mentioned rivers, by far the greater part of the corn brought to Odessa from Podolia, Ukraine &c., was, prior to the formation of the railway to Balta, conveyed to the town in carts drawn by oxen. The post roads are very bad; and nothing would contribute so much to increase the commerce of the port, and the prosperity of South Russia, as the opening of improved communications with the interior; whether by removing obstructions in the channels of the rivers, constructing canals, or railways, or good common roads.

*Moneys, Weights, and Measures, and Tariff,* same as at PETERSBURG.

The privilege of a free port conferred upon Odessa in 1817, was permitted to expire in 1856. But the change in the tariff in 1857, and the abolition which has taken place of the quarantine system, might, had they been accompanied by other necessary changes, have compensated or more for the abolition of the peculiar privileges enjoyed by the city. Mr. Consul-General Grenville Murray, in his Report of April 2, 1866, says that 'the administration of the law excites constant, serious, and well-founded complaints.' But he adds that 'it is impossible to avoid remarking the constantly increasing civilisation and general prosperity of this country.' The paving of Odessa with granite progresses, though slowly, the city has been lighted with gas; and a canal is projected between Odessa and the Dnieper. The new tariff, which came into operation in January 1869, though still illiberal, is a decided improvement on its predecessor, and will no doubt give an impetus to the trade of Russia.

*The great Articles of Export* from Odessa consist, as everyone knows, of the raw products of the soil, especially of wheat, and other varieties of corn. But cattle, wool, tallow, hides, and linens are also important articles; and to these have to be added potash, copper, caviare, cordage, wax, sail-cloth, tar, butter furs, isinglass &c.

We subjoin an account of the quantity of the principal articles exported from Odessa in 1864.

Articles	Quantity	Value
Wheat - - - qr.	1,595,331	2,167,620
Rye - - - "	102,841	8,410
Indian corn - - "	5,938,84	27,020

Hides and skins - - "	1,223	1,715
Total - - - "	- - -	4,165,385

Value of imports at the port of Odessa in 1864, 1,827,8667. These consisted principally of coffee, oil, wines, fruit, tobacco, iron and iron plate, cotton, silk, and woollen goods. The exports 1865 were valued at 5,075,4981, and in that year 1,362 vessels, of 583,210 tons, entered the port.

The value of the imports and exports from Great Britain in 1864 was 1,196,4651, or upwards of one-fifth of the whole.

Regular lines of steamers ply between Odessa and Galacz and Constantinople, the latter being of course, connected with all the leading ports of Europe.

The exports of wheat from Odessa in 1864 amounted to 2,016,692 quarters. This immense exportation, the greatest ever previously made any one year from any one port, was a consequence partly of the abundant harvest of the present year, and partly, and perhaps principally, of scarcity and high prices which then prevailed in this country and other parts of West Europe which made every bushel be shipped that possibly be spared. But in 1855, the year before the late war, the exports were still greater, having amounted to 2,160,000 quarters. There here, in truth, the greatest possible variation in the harvests. Everything depends on the season. In proof of this allegation we may refer to a statement by Tegoborski, who says, that in estates of the Duke of Anhalt Koethen, Taurida, in the 10 years from 1832 to 1841, 4 harvests returned 15 times the seed, others but the seed, and that one entirely failed. (*Productions de la Russie*, i. 380.) Nature, all, man little or nothing. Agriculture is in the most backward state imaginable. No effort made to obviate the effect of droughts and rains. And owing to the badness of the roads or ports and the difficulty of river carriage, a considerable portion of the produce of a luxuriant crop is brought to market or warehoused, but is allowed to go to waste. Some improvements have doubt, been effected, and others are in progress; but they are inconceivable compared with what they should have been, and with what they have been were the policy pursued by Great Britain calculated to develop the resources of the rich and fruitful countries of which Odessa is an emporium.

*Observations on the Trade of Odessa in 1864.* 'The exportation of rye from this port has at no time been otherwise than very limited, and is raised for local consumption, being the chief article of food of the people, and not like wheat, which is grown with the sole view of exportation. The quantity of rye shipped last year was 700,000 quarters, the whole of which went to the ports of continental Europe. The price was from 10s. 6d. to 17s. 6d. per imperial quarter. It was the highest quotation that prevailed at the end of the year. Indian corn is become an article of exportation from Odessa only within a few years. It is the produce of Bessarabia, where its cul-

of the quantity of the from Odessa in 1865.

the port of Odessa in 1865 consisted principally of coffee, iron and iron plate, and goods. The exports in 1875, 1898, and in that year 10 tons, entered the port. Imports and exports for 1865 was 1,196,465, or upward of 100,000 tons.

Merchants ply between Odessa and Constantinople, the latter being with all the leading ports of the Black Sea.

Wheat from Odessa in 1865 22 quarters. This immense harvest over previously made by one port, was a consequence of the harvest of the previous year perhaps principally of the wheat which then prevailed in the parts of West Europe.

But in 1855, the year of the exports were still great, 2,160,000 quarters. The greatest possible variation of wheat depends on the season.

It is alleged we may refer to the words of the late Count Kozlovski, who says, that in the year of Anhalt Koethen, years from 1832 to 1841, 15 times the seed, other than one entirely failed. (See *Russie*, i. 380.) Nature is so bountiful. Agriculture is in the most imaginable. No effect of droughts and the badness of the roads or the river carriage, a considerable quantity of a luxuriant crop is stored in the warehouses, and some improvements have been made, and others are in progress, and with what they have accomplished by Government policy pursued by Government, the resources of the port of Odessa are such as to

the Trade of Odessa in 1865 is 1800 tons from this port has been since that very limited. The assumption, being the chief article, and not like wheat, which is the view of exportation.

It is stated that last year was one of the best years of which went to the port of Europe. The prices were 5d. per imperial quarter. The quotation that prevailed in Odessa only within a few days of Bessarabia, where its

price has of late been much extended in consequence of the demand for Ireland. The quantity shipped in the year was 98,252 quarters, all directed to Cork or Falmouth for orders. The prices varied from 13s. 7d. to 17s. 4d. per imperial quarter; and 16s. 2d. was the last quotation. The quantity remaining in granary was, after revision, found to be 32,000 quarters, all in the hands of exporters.

The supplies of barley and oats have as usual been limited to local consumption.

The exportation of linseed is stated in the Custom-house report to be 47,875 quarters; whereas it is found that 51,369 quarters were shipped for England, and 17,001 for continental ports. The crops having been good, and grown on the best steppe lands, a large supply of the new seed has been already brought to market, and the quantity on the spot is estimated to be about 300,000 quarters, all in the hands of shippers. The prices ranged from 28s. 1d. to 35s. 11d. per imperial quarter. Large purchases were made last autumn by the crushers of Hull, for delivery next summer from the Sea of Azoff and this port; and under present circumstances both buyers and sellers are menaced by loss, for in England prices are declining, whilst on this side anticipations of extraordinary abundance have been disappointed.

The tallow trade of these ports has not recovered, nor is it likely to do so for some time, or till the country recovers from the immense loss of cattle carried away of late years by the distemper.

The exportation of wool suffered a considerable decrease, having amounted only to 50,748 cwt. of all kinds, instead of 75,581 cwt. in the preceding year. To England were shipped 14,378 cwt.; to the northern continental ports 18,492 cwt.; and the remainder to the Mediterranean. The sheep stocks have been thinned by consecutive seasons of drought and deficient pasturage; and the trade has of late been more influenced by the demand for the manufactures of Moscow. The prices are kept up at their highest quotations, and they are further affected by the anticipated disturbance of labor in Australia.

The amount of shipping did not much differ from that of 1850; 696 vessels arrived, measuring 126,318 tons, of which 126 were British, burdened 103,331 tons; and 729 vessels measuring 203,842 tons departed, of which 130 were British, burdened 160,800 tons. Of the 242 vessels bound to England with cargoes 110 were British. The preference is still given to our flag, particularly in the boisterous seasons. The Austrian ships of the Adriatic are, however, in great favour, especially for grain cargoes. The rates of freights to England varied from 12. 15s. to 3l. 5s. per ton, or from 5s. 5d. to 10s. per imperial quarter; and the highest rates prevailed during the last three months, offering a fair remuneration to shipowners. The average exchange on London was 6/30rs. for the pound sterling. The money market was generally easy, with limited operations; and credit is at present liberal, though restricted in consequence of the great losses incurred in the grain trade by the Greek houses. It is worthy of remark, that not one of these houses has failed, notwithstanding their severe trials.

A tribunal of commerce was established at Odessa in 1824, whose jurisdiction extends over all disputes connected with trade. There is no appeal from its decisions except to the Senate. There are 12 sworn brokers, approved and licensed by the Tribunal of Commerce, who have deputies appointed by themselves. They register all transactions, and receive 1/2 per cent. from each party

as commission. There is a discount or loan bank, established in 1828, and marine and fire insurance societies. Most articles of provision are cheap; and fish, which costs next to nothing, is excellent. Fuel, however, is scarce and dear.

Within the last 40 years the Merino breed of sheep has been extensively introduced into the governments of Taurida, Cherson, and Ekaterinoslav; so that there has been not only a great increase in the quantity, but also a very decided improvement in the quality, of the wool exported.

**Corn Trade.**—The principal trade of Odessa is with Constantinople, Smyrna, and other towns in the Levant, Naples, Leghorn, Genoa, Marseilles &c. 'It is generally stated,' says Mr. Jacob (*Memoir on the Trade of the Black Sea*, in the Appendix to the 8vo. edition of *Tracts on the Corn Trade*), 'that the supply of Constantinople requires annually 100,000 quarters of Black Sea wheat. The Greek islands scarcely, on the average of years, produce sufficient wheat for their own consumption, and, in some years, require a large supply, which is furnished partly from the neighbouring continent, and partly from the Black Sea.'

The Asiatic coasts of the Turkish Empire, especially in Anatolia, are nearly in the same predicament. At times, the market of Smyrna is very favourable for the sale of the corn of Southern Russia. The islands of Malta and Gozo produce only about half as much corn as the 120,000 inhabitants require.

Sicily, though it has greatly declined from its ancient productiveness, has still a quantity of grain to spare for the less fruitful parts of Italy, in most years; and its wheat enters into competition with that of the Black Sea, in the ports of Naples, Genoa, and Leghorn.'

The warehouse rent of corn at Odessa is from 8 to 10 copecks per chetwert per month. M. de Hagemester supposes that Turkey and the different ports of the Mediterranean require, at an average, an annual supply of 1,400,000 chetwerts, or about 1,050,000 quarters, of which 1,000,000 chetwerts, or 750,000 quarters, are furnished by Southern Russia, and principally shipped from Odessa. Wallachia and Moldavia are both very fertile in corn; and were tranquillity and good order introduced into them, and the free navigation of the Danube secured, Galatz and Brailoff would be two of the principal European grain shipping ports. (See the excellent Report of Hagemester on the Trade of the Black Sea, pp. 96—114, Eng. trans.)

Exclusive of corn, the other articles mentioned as being exported from Odessa find their way to the different markets in the Mediterranean. Those shipped for Turkey are iron, tallow, sail-cloth, cordage, anchors for ships of war, butter &c. The exports to Italy and other European countries are similar.

The importation of foreign articles into the Russian dominions on the Black Sea and the Sea of Azoff is almost confined to Odessa, Theodosia or Kaffa, and Taganrog. The value of the import trade of Russia by these two seas in 1865 was 2,402,053l. It is, however, of inferior importance when compared with the export trade, valued in 1865 at 10,287,651l. The principal articles of import are sugar and coffee, dye woods, wine and brandy, cotton stuffs and yarn, woollen and silk manufactures, spices, cutlery; oranges, lemons, figs, and other fruit; lemon-juice, oil, tin and tin plates, dried fruits, paper, silk, specie &c.

Odessa, in addition to its great and rapidly increasing trade with Constantinople and the

countries on the Mediterranean, has a considerable trade with Redout-kalé at the mouth of the Phasis, and with Trebisond and several ports on the south coast of the Black Sea. Georgian and Armenian merchants are considerable purchasers at the Leipsic and other German fairs; and civilisation is beginning to strike its roots throughout all the extensive countries between the Black Sea and the Caspian. It is probable that, at no very remote period, the Phasis will be frequented by British ships; and that our merchants, without any enchantrées to aid them, and depending only on the superior cheapness and excellence of their goods, will be hospitably received in the ancient Colchis, and bear away a richer prize than fell to the lot of Jason and his compeers.

*Epochs in the Trade of the Black Sea.—Depth of Water.—Difficulty of Navigation &c.*—The trade of the Black or Euxine Sea was of great importance in antiquity. The shores of the Crimea, or Taurica Chersonesus, were settled by Milesian adventurers, who founded Pantiequum and Theodosia. The exports thence to Athens were nearly the same as those which are now sent from Odessa and Taganrog to Constantinople, Leghorn &c.; viz. corn, timber, and naval stores; leather, wax, honey, salt fish, caviare &c., with great numbers of slaves, the best and most serviceable that were anywhere to be met with. The Athenians set a very high value upon this trade, which supplied them annually with about 400,000 medimni of corn; and to preserve it they carefully cultivated the alliance of the Thracian princes, and kept a garrison at Sestus, on the Hellespont. (See the authorities in Anacharsis's *Travels*, c. 55; and in Clarke's *Connection of the Saxon and English Coins*, pp. 54—61.) During the Middle Ages the Genoese acquired an ascendancy on this sea, and laboured with pretty considerable success to monopolise its trade. Their principal establishment was at Caffa, which was the centre of an extensive commerce. But the conquest of Constantinople by the Turks, in 1453, was soon after followed by the conquest of Caffa, and the total exclusion of European vessels from the Black Sea, which became in a great measure unknown. This exclusion was maintained for about 300 years, or till it was opened to the ships of Russia by the treaty of Kainardgi in 1774. The Austrians obtained a similar equality of privileges in 1784; and British, French &c., ships were admitted by the treaty of Amiens. There were, however, some restraints still kept up; but these were abolished by the treaty between the Turks and Russians in 1829; and for commercial purposes, at least, the Black Sea is now as free as the Mediterranean.

Notwithstanding the number of English and other European ships that have visited this sea since the beginning of this century, its geography is still very imperfectly known. A notion seems to have been long prevalent, that it was not only stormy, but also infested with numerous shoals. Polybius, indeed, contends that, owing to the vast quantities of alluvial deposit brought down by the Danube and other large rivers that fall into the Black Sea, it was gradually filling up, and would become, at no very remote period, an immense morass. Dr. Clarke seems to have espoused the same theory. But, how probable soever it may appear, extremely little progress has hitherto been made towards the consummation described by Polybius. Instead of being shallow, the water is for the most part remarkably deep; with a bottom, where soundings have been obtained, of gravel, sand, and shells. A strong

current sets from the Black Sea, through the Bosphorus, or Canal of Constantinople, into the Sea of Marmora, and from the latter, through the Dardanelles, which it requires a fresh breeze stem. This current is said to be sensibly felt the Black Sea, 10 or 12 miles from the Bosphorus; and it may probably carry off some of the mud brought down by the rivers. (Tournefort's *Voyage du Levant*, lett. 15, 16; art. 9 in No. 1 of *Journal of the Geographical Society*; *Macedonian Travels in Turkey*, vol. i. p. 215; *Parliamentary Papers*, &c.)

The navigation of the Black Sea has been represented by most modern and all ancient writers as exceedingly dangerous. We believe, however, that there is very little foundation for the great number of the statements on this subject. It is said to be particularly subject to dense fogs, and to currents; but the former, are prevalent only in particular seasons, and the influence of the latter is not greater than in many other seas which are not reputed dangerous. Tournefort, one of the best and most accurate of travellers, considers navigation of the Black Sea as safe as that of the Mediterranean: 'Il n'y rien de noir, pour ainsi dire, que le nom; les vents n'y soufflent pas avec beaucoup de furie, et les orages ne sont guères plus fréquents que sur les autres mers.' (Tome ii. p. 164, ed.) Dr. Clarke (*Travels*, vol. ii. p. 367, 370, &c.) affects to doubt this: but he assigns no ground for his opinion; and who would think of putting his authority in competition with that of Tournefort? Indeed the accuracy of the statements of the latter has been fully established by the reports of Captain Middleton and the other officers who have navigated this sea. But, though without 'a hidden danger,' any sea would be considered by the Greek and Turkish pilots, by which the Black Sea has been principally navigated, as dangerous to the progress of navigation were to be estimated by its state amongst them, we should have concluded that it had been stationary from the era of the Argonauts. They seldom venture upon sight of the coasts; they have neither chronometers nor quadrants; and hardly even know that the points of the needle turn towards the North (Tournefort in loc. cit.) There is, not certainly much room for wonder at shipwrecks being frequent among vessels so navigated. On leave the Black Sea, the greatest difficulty is in making the Bosphorus. 'The mountains,' says Mr. Gill, 'are all so much alike, that it is difficult to determine which of them is at the entrance until you are within a very few miles of the coast, then, with a fair wind, you are on a lee shore, and a lee current; and if you make a mistake, destruction is almost inevitable. The Turkish two light-houses at the entrance; but unless you see them before sunset, they are of little use in the forests on its borders, great quantities of charcoal are made, and the lights from it bewilder and often mislead the unhappy mariner.' (i. 23.) From the vast quantity of fresh water poured into the Black Sea, the saline particles are much diluted, that, with a slight frost, the surface becomes covered with ice; hence, during a great part of the year, hardly any navigation is attempted. The vessels that resort to Odessa seldom arrive at that port before the latter end of May; and those whose cargoes are not completed before the end of October, are obliged to wait the return of spring, than advent to encounter the dangers of an autumnal or winter voyage.

At Taganrog the frost commences earlier, and continues longer, than at Odessa; so that they are scarcely more than 4 or 5 months in the year

which the Sea of Azoff can be safely navigated.

**OIL** (Fr. huile; Ger. öl; Ital. olio; Lat. oleum; Arab. maslo; Span. aceite). The term *oil* is applied to designate a number of unctuous liquors, which, when dropped upon paper, sink into it and make it semi-transparent, or give it what is called greasy stain. These bodies are very numerous, and have been in common use from time immemorial. Chemists have divided them into two classes: namely, *volatile* and *fixed* oils. We borrow from Dr. Thomas Thomson the following statement with respect to these bodies:—

1. **VOLATILE OILS**, called also *essential oils*, are distinguished by the following properties:—1. Liquid, often almost as liquid as water, sometimes solid; 2. Very combustible; 3. An acrid taste and a strong fragrant odour; 4. Volatilised at a temperature not higher than 212°; 5. Soluble in alcohol, and imperfectly in water; 6. Evaporate without leaving any stain on paper.

By this last test it is easy to discover whether they have been adulterated with any of the fixed oils. Let a drop of the volatile oil fall upon a sheet of writing paper, and then apply a gentle heat to it: if it evaporates without leaving any stain upon the paper, the oil is pure; but if it leaves a stain upon the paper, it has been contaminated with some fixed oil or other.

Volatile oils are almost all obtained from vegetables, and they exist in every part of plants—the root, the bark, the wood, the leaves, the flowers, and even the fruit; though they are never found in the substance of the cotyledons; whereas the fixed oils, on the contrary, are almost always contained in these bodies.

When the volatile oils are contained in great abundance in plants, they are sometimes obtained by simple expression. This is the case with oil of oranges, of lemons, and bergamotte; but in these they can only be obtained by distillation. The part of the plant containing the oil is put in a still with a quantity of water which is distilled off by the application of a moderate heat. The oil comes over along with the water, and swims upon its surface in the receiver. By this process are obtained the oils of peppermint, thyme, lavender, and a great many others, which are prepared and employed by the perfumer: others are secured by the distillation of resinous bodies. This is the case in particular with oil of turpentine, which is obtained by distilling a kind of resinous body, called turpentine, that exudes from the pine-tree.

Volatile oils are exceedingly numerous. They have been long known; but as their use in chemistry is but limited, they have not, hitherto, been subjected to an accurate chemical investigation. They differ greatly in their properties from each other; but it is impossible at present to give a detailed account of each.

The greater number of volatile oils are *liquid*; many, indeed, are as limpid as water, and have none of that appearance which we usually consider as oil. This is the case with the following: namely, of turpentine, oranges, lemons, bergamotte, &c. Others have the oily viscosity. It varies in them in all degrees. This is the case with the oil of mace, cardamom, sassafras, cloves, cinnamon. Others have the property of becoming solid. This is the case with the oils of parsley, fennel, seed, balm. Others crystallise by slow evaporation. This is the case with oil of thyme, pepper, and marjoram. The oil of nutmegs has usually the consistence of butter. This is the case also with the oils of hops and of pepper.

The colour of the volatile oils is as various

as their other properties. A great number are limpid and colourless; as oil of turpentine, lavender, rosemary, savine, aniseed: some are yellow; as spike, bergamotte: some are brown; as thyme, savory, wormwood: others blue; as camomille, motherwort: others green; as milkfoil, pepper, hops, parsley, wormwood, cajuput, juniper, sage, valerian; others, though at first colourless, become yellow or brown by age: as cloves, cinnamon, sassafras.

3. The odours are so various as to defy all description. It is sufficient to say that all the fragrance of the vegetable kingdom resides in volatile oils. Their taste is acrid, hot, and exceedingly unpleasant.

4. Their specific gravity varies very considerably, not only in different oils, but even in the same oil in different circumstances.

When the volatile oils are heated in the open air, they evaporate readily and without alteration diffuse their peculiar odours all around; but there is a considerable difference between the different oils in this respect. When distilled in close vessels, they do not so readily assume the form of vapour. Hence, they lose their odour, become darker in colour, and are partly decomposed. Oils do not seem very susceptible of assuming the gaseous form, unless some other substance, as water, be present.

II. **FIXED OILS** are distinguished by the following characters: 1. Liquid, or easily become so when exposed to a gentle heat; 2. Unctuous to the touch; 3. Very combustible; 4. A mild taste; 5. Boiling point not under 600°; 6. Insoluble in water, and nearly so in alcohol; 7. Leave a greasy stain upon paper.

These oils, which are called fat or expressed oils, are numerous, and are obtained partly from animals, and partly from vegetables, by simple expression. As instances may be mentioned whale oil or train oil obtained from the blubber of the whale and from cod; olive oil, obtained from the fruit of the olive; linseed oil and almond oil, obtained from linseed and almond kernels. Fixed oils may also be extracted from poppy seeds, hemp seeds, beech mast, and many other vegetable substances.

All these oils differ from each other in several particulars, but have also many particulars in common.

1. Fixed oil is usually a liquid with a certain degree of viscosity, adhering to the sides of the glass vessels in which it is contained, and forming streaks. It is never perfectly transparent; has always a certain degree of colour, most usually yellowish or greenish; its taste is sweet, or nearly insipid. When fresh it has little or no smell.

There exist also in the vegetable kingdom a considerable number of bodies which, at the ordinary temperature of the atmosphere, are solid, and have hitherto been considered as fixed oils. Palm oil may be mentioned as an example. The various substances used in India and Africa as substitutes for butter, and as unguents, may likewise be mentioned.

2. All the fixed oils hitherto examined are lighter than water; but they differ greatly from one another in specific gravity. The same difference is observable in different samples of the same oil.

Fixed oil, when in the state of vapour, takes fire on the approach of an ignited body, and burns with a yellowish white flame. It is upon this principle that candles and lamps burn. The tallow or oil is first converted into a state of vapour in the wick; it then takes fire, and supplies a sufficient quantity of heat to convert more oil into

vapour: and this process goes on while any oil remains. The wick is necessary to present a sufficiently small quantity of oil at once for the heat to act upon. If the heat were great enough to keep the whole oil at a temperature of 600°, no wick would be necessary, as is obvious from oil catching fire spontaneously when it has been raised to that temperature. When oil is used in this manner, either in the open air or in contact with oxygen gas, the only new products obtained are water and carbonic acid.

The drying oils are used as the vehicle of paints and varnishes. Linseed, nut, poppy, and hempseed oils belong to this class. These oils in their natural state possess the property of drying oils, but imperfectly. To prepare them for the use of the painter and varnish-maker, they are boiled for some time in an iron pot, and sometimes burnt till they become viscid. When they burn for some time, their unctuous quality is much more completely destroyed than by any method that has been practised. Hence it is followed frequently in preparing the drying oils for varnishes, and always for printer's ink, which requires to be as free as possible from all unctuousity.

Nut oil has been found preferable to all other oils for printer's ink; though the dark colour which it acquires during boiling renders it not so proper for red ink as for black. Linseed oil is considered as next after nut oil in this respect. Other oils cannot be employed, because they cannot be sufficiently freed from their unctuousity. Ink made with them would be apt to come off and smear the paper while in the hands of the book-binder, or even to spread beyond the mark of the types and stain the paper yellow.

The principal oils, in a commercial point of view, with the exception of ground-nut oil [NUTS, GROUND], are enumerated in the following statements. [OLIVE OIL, PETROLEUM.]

OLIBANUM (Fr. encens; Ger. weihrauch; Ital. olibano; Arab. looban). A gum-resin, the produce of a large tree (*Boswellia thurifera*, or *serrata*), growing in Arabia and India. It is imported in chests containing each about 4 cwt., from the Levant and India; the best comes from the former, and is the produce of Arabia. Good olibanum is in semi-transparent tears, of a pink colour, brittle, and adhesive when warm; when burnt, the odour is very agreeable; its taste is bitterish, and somewhat pungent and aromatic; it flames for a long time with a steady, clear light, which is not easily extinguished, leaving behind a black (not, as has been said, a whitish) ash. Olibanum is the frankincense (*thus*) of the ancients; and was extensively used by them in sacrifices. (Plin. *Hist. Nat.* lib. xii. c. 14.) It has also been used in the ceremonies of the Greek and Roman churches. (Pereira's *Mat. Indica*; Thomson's *Chemistry*; Kippingii *Antiq. Rom.* lib. i. c. 11.)

In 1867, 8,537 cwt. of olibanum were imported into England, valued at 25,915*l.*, or 3*l.* 6*s.* 8*d.* per cwt., and chiefly from British India. In the same year 13,103 cwt. were exported, chiefly to Russia and Turkey.

OLIVE, OLIVES (Ger. oliven; Fr. olive; Ital. ulive; Span. aceitunas; Port. azeitonas; Lat. *oliva*). A fruit yielding a large quantity of oil, the produce of the *Olea*, or olive tree. The wild olive is indigenous to Syria, Greece, and Africa, on the lower slopes of Mount Atlas. The species cultivated in Europe grows spontaneously in Syria, and is easily raised in Spain, Italy, and the South of France. It has even been raised in the open air in England, but its fruit is said not to have ripened. The fruit is a smooth oval plum, about  $\frac{3}{4}$  inch in length and  $\frac{1}{2}$  inch in diameter; of a deep violet colour when ripe, whitish and fleshy within, bitter and nauseous, but repete with a bland oil; covering an oblong, pointed, rough nut. Olives intended for preservation are gathered before they are ripe. In pickling, the object is to remove their bitterness, and to preserve them green, by impregnating them with a brine of aromatised sea salt; for this purpose various methods are employed. The wood of the olive tree is beautifully veined, and has an agreeable smell. It is in great esteem with cabinet-makers, on account of the fine quality of which it is susceptible. 17,538 gallons of olive were imported in 1867, valued at 3,368*l.*

OLIVE OIL (Ger. barmöl; Fr. huile d'olive; Ital. olio d'uliva; Span. aceite de aceitunas; Lat. *oleum olivarum*). The olive tree is principally cultivated for the sake of its oil. This is inodorous, pale greenish-yellow coloured, viscid fluid, with a bland oleaginous taste, unctuous to the touch, inflammable, incapable of combining with water, and nearly insoluble in alcohol. It is the lightest of all the fixed oils; and is largely used, particularly in Greece, Italy, Spain, and France, as an article of food, and in medicine and the arts. It is also very extensively used in this country, particularly in the woolen manufacture.

The ripe fruit is gathered in November, and immediately bruised in a mill, the stones of which are set so wide as not to crush the kernel. The pulp is then subjected to the press in bags made of rushes; and by means of a gentle pressure, the best, or virgin oil, flows first; a second, and afterwards a third, quality of oil is obtained moistening the residuum, breaking the kernels, and increasing the pressure. When the fruit is not sufficiently ripe, the recent oil has a bitter taste; and when too ripe, it is fatty. After oil has been drawn, it deposits a white, fibrous and albuminous matter; but when this deposition has taken place, if it be put into clean glass flasks, it undergoes no further alteration; common oil cannot, however, be preserved in casks above 1½ or 2 years. (*British Pharmacopoeia* 1867.)

The finest oils are said to be produced in Tuscany, but occasionally that of Bari is equal to the Tuscan oil. The finest kind of the latter is called 'white sublime oil.' It chiefly comes to France. Tuscany oil is shipped from Leghorn in various measures, from pipes of about 20 gallons to the flask of oil with its straw covering weighing about 14 oz. It is said to be the whole poppy seed oil, and probably with other vegetable oils. A plan for detecting these adulterations has been suggested by Mr. Tomlinson. (*Journal of the Society of Arts*, March 4, 1864.) Olive oil is the principal article of export from the Neapolitan portion of the Italian Kingdom.

libanum were imported, 5,916, or 31.04, &c. from British India. In the same year, chiefly to Russia. Fr. olives; Fr. olives; Port. azetomas; holding a large quantity of the *Olea*, or olive tree, indigenous to Syria, Greece, the slopes of Mount Atlas in Europe grows spontaneously and is easily reared in the south of France. It has open air in England, but it is not so ripe. The fruit is about 3/4 inch in length; of a deep violet color, fleshy within, bitter at first with a bland oil; covering with nut. Olives intended for oil are not ripened before they are ripe, but is to remove their bitter green, by impregnating with sea salt; for the methods are employed. It is beautifully veined, and is in great esteem in account of the fine oil. 17,538 gallons of olive oil, valued at \$3,687. Fr. huile d'olive; aceto de acitunas; the olive tree is principal of its oil. This is a yellowish-yellow colored, viscid, leaginous taste, unctuous, incapable of combining insoluble in alcohol. It is fixed oil; and is largely used in Greece, Italy, Spain, &c. as a food, and in medicine very extensively and especially in the woolen man-

gathered in November, in a mill, the stones of which are used to crush the kernel. It is pressed in the press in bags means of a gentle pressure, the first; a second, and a third, the oil is obtained, breaking the kernels. When the fruit is recent oil has a bitter taste, it is fatty. After it deposits a white, bitter; but when this is removed, it is fit for use, no further alteration; however, be preserved in casks. (*British Pharmacopoeia*)

are said to be produced naturally that of Bari is equal to the finest kind of the *blime* oil. It chiefly oil is shipped from Lecce, from pipes of about 100 lbs. of oil with its straw covered in oz. It is adulterated with probably with other oils, and a plan for detecting these is suggested by Mr. Tomlinson, *Journal of Arts*, March 4, 1864. principal article of export from the Italian Kingdom

[NAPLES.] Apulia and Calabria are the provinces most celebrated for its production. The Apulian is the best, and is preferred by the woollen manufacturers, by whom it is extensively used. It is the largest portion of the olive oil brought to England is in general imported from Italy; principally from Gallipoli, on the east coast of the Gulf of Taranto, whence it is commonly known by the name of Gallipoli oil. But besides Italy, Spain, Portugal, the Ionian Islands &c. send us large quantities.

The duty on olive oil was for a lengthened period most exorbitant. In 1834 it was fixed at 100 lbs. per tun if imported in a Neapolitan, and 100 lbs. if imported in a British or other vessel. But as olive oil is of essential importance in the arts, being extensively used in the manufacture of woollens, in the preparation of the best species of soaps and other departments of industry, this duty was much and justly objected to. In consequence it was reduced, in 1841, to 40 lbs. per tun if imported directly and not in a Neapolitan ship, and in 1842 the duty was further reduced to 20 lbs. and 30 lbs. per tun according to the vessels in which it was imported. 'At present,' therefore, we observed in 1843, 'the amount of the duty cannot be justly objected to, but the differential principle on which it has been and is imposed is most objectionable. It imitates, and (in so far as any thing can do) justifies the worst part of the commercial policy of the Neapolitan Government, and prompts them to keep up high discriminating duties on articles imported into Naples and Sicily in British ships. So wretched an attempt at retaliation is quite unworthy of an enlightened nation, and deserves to be universally scouted. It is, in fact, injurious only to ourselves.'

The justice of this reasoning has been admitted; and the duty on olive oil has been repealed, and its importation freely permitted.

An Account of the Quantities and Value of the Olive Oil Imported into the United Kingdom in 1867, specifying the Countries from which it was imported.

Countries	Imports tuns	Value of Imports £	Price per Tun £ s. d.
France	386	55,449	69 10 0
Portugal	3,496	403,750	53 5 0

The olive is extensively cultivated in Anstria. The value of the oil exported from Ragusa in 1865 was 44,055, but in consequence of the bad harvest of 1866, the value of the exports fell to 15,440. (Mr. Consul Paton's Report of May 1, 1867.)

*Oil Trade of Naples.*—The oils of the kingdom of Naples are produced in Apulia, from Bari to its southern extremity, the Capo di Leuca; a district comprising the territories which export from Gallipoli and Taranto; and in Calabria from Rossano, on the Gulf of Taranto, across to Gioja. The whole coast from Gioja as far as Gaeta is covered with olive trees. They are also abundant in the Abruzzi and the Terra di Lavoro; but Apulia and Calabria furnish by far the greatest quantity of oil. The principal magazines, or carriers, for oil, are at Gallipoli and Gioja. Gallipoli supplies England, Holland, the north

of Europe, and, in short, all those countries that require the most perfectly purified oil. It is clarified to the highest degree by merely keeping it in cisterns hollowed out of the rock on which the town is built. The voyages it has to perform being long, it is put into casks so well constructed, that it frequently arrives at Petersburg in the heat of summer without the least waste or leakage—an advantage attributed to the seasoning of the staves, which, before they are put together, are well soaked in sea-water.

We borrow the following details with respect to the preparation of oil at Gallipoli from a very interesting paper, by an English gentleman who had resided in the town.

'The rock on which the town is built is easily excavated; and in caverns thus constructed oil clarifies sooner, and keeps without rancidity much longer, than in any other place. Hence numerous oil-houses are established at Gallipoli, and a very considerable portion of the rock is cut into cisterns. A Gallipolitan oil warehouse generally occupies the ground floor of a dwelling-house, and has a low arched roof. Some are more extensive, but on an average they are about 30 feet square. In the stone floor you see 4, 6, or more holes, which are circular, about 2 feet in diameter, and like the mouths of wells. Each of these holes gives access to a separate cistern beneath your feet; and when the oil is poured into them care is taken not to mix different qualities, or oils at different stages, in the same reservoir. One cistern is set apart for *oglia mosto*, or oil that is not clarified, another for pure oil of the season, another for old oil, &c. I have seen oil that had thus been preserved for 7 years in a perfect state, or, as the Gallipoli merchants have it, *chiaro, giallo e lampante*—words which, during some months, I have heard at least 100 times a day. I also many times verified the fact: the *mosto*, or oil in its turbid state, which arrived almost as black and thick as pitch, soon became bright and yellow in these excellent reservoirs, without any help from man.

'All the oil, whatever may be its quality, is brought to the magazine in sheep or goat skins, which are generally carried on mules—there being but few *strade rotabili*, or roads fit for wheeled carriages, in these parts. In a good year, and at the proper season, I have counted, in the course of an afternoon's ride, as many as 100 mules returning from Gallipoli, where they had been to deposit their unctuous burdens, to different towns and villages in the Terra d'Otranto, or the more distant province of Bari. The quantity of oil required may be conceived, when I state that at one time (in the year 1816) I saw 9 English, 3 American, 2 French, and 6 Genoese vessels (not to mention some small craft from the Adriatic), all waiting in the port of Gallipoli for entire or partial cargoes of it. When the oil is to be shipped, it is drawn off the cistern into *uteri*, or skins, and so carried on men's shoulders down to a small house on the seashore. In that house there is a large open basin, capable of containing a given quantity, and of measuring the oil; and into that the porters empty their skins as they arrive. A tube communicates from the basin to a large cock at the outside of the house. When the basin is full, well-made casks, of various sizes for the convenience of stowage, are placed under the cock, which is then turned, and the casks are filled. As the casks are closed up by the cooper, the porters roll them down to the brink of the sea, where the sailors secure several of them together with a rope, and taking the end of the cord into the boat, they row off to the vessel,

towing the oil casks through the water after them.

I first became acquainted with the Gallipolitan shortly after the fall of Napoleon, whose system, whatever good parts of it may have done in the rest of Italy, was certainly most ruinous to the provinces of Lecce and Ituri. Unable to export, or find any market for their produce, the proprietors in many parts of those provinces let the olives lie and rot upon the ground. For some years, indeed, the price of oil scarcely paid the cost of its preparation, to say nothing of transport and other necessary expenses. During the Continental system, the best *chiaro giallo e lampante* oil was sold at Gallipoli for 8 Neapolitan ducats the salma; in 1816 and 1817 it found a ready market at from 60 to 70 ducats per salma.

Those who, during the evil time, had penetration enough to foresee better days, and that a system opposed to the general commercial prosperity of Europe could not last; and who had, at the same time, money enough for such objects; by annually making their oil as usual, and buying up the oil of others at the low current prices of the day, realised enormous profits when peace threw open the port of Gallipoli, and ships of all nations flocked thither as before.

The olives of which the Gallipoli oil is made are never gathered, but allowed to drop in their maturity from the tree on the ground, where they are picked up chiefly by women and children, and carried to the mill.

The machinery employed in expressing the oil is of the rudest kind, and, no doubt, numerous improvements might be introduced, not only into this branch, but into that of cultivating the olive tree. The peasantry, however, and, in the kingdom of Naples, those who stand higher in the scale of fortune and rank, are too often but bores in intellect, are obstinate in their attachment to old practices, and are apt, when any of these are reprehended, to stop discussion by saying—"Pacciu come faceva la buon' anima di mio padre, e ciò basta" ("I do as my father of blessed memory before me, and that's enough").

The poor people of the country make culinary uses of the same oil that is exported, and which in England is only used in manufactures, or burnt in lamps; but in the houses of the gentry I have often tasted oil prepared with more care, which was truly delicious, being equal to that of Sorrento, Vico, and Massa, or even to the best oils of Tuscany or Provence.

The oil received into the cisterns in Gallipoli either belongs to the proprietor who buys it of the planter, or is received in deposit on account of some other party who gets a receipt (*biglietto di magazzino*) specifying the quantity of the oil received on his account, its quality &c. Depositors pay at the rate of 20 grani a-year for every salma of oil to the party holding it in deposit, and who is bound to account for it.

The *caricatori* of Bari and Monopoli furnish oils for the consumption of Upper Italy and Germany, through the medium of Venice and Trieste. They also draw supplies from Brindisi and Otranto.

The *caricatori* of Taranto, of Eastern Calabria or Retromarina, and of Western Calabria, the principal of which is Gioja, furnish supplies for Marseilles &c. But the *caricatori* now mentioned, having no conveniences for clarification, produce only the thick oils used for soap-making.

The oils of Sicily, like those of Tunis, are too thin to be used singly in the making of soap; and being used only for mixing, are less valuable than most others.

In 1858 a full crop of oil in the province of Terra d'Otranto was supposed to yield about 300,000 salme, or 41,000 tons. To facilitate transactions, orders or *cedule* are circulated, representing quantities of oil deposited in the provincial *caricatori*. These orders are negotiable, like bills of exchange, and are endorsed by the intermediate holder, who receives their value in cash, without, however, becoming liable for their due satisfaction. The only responsible parties are the drawer and drawee. The latter is obliged to deliver the oil at sight of the order, or to hold it, at the bearer's disposal, till November 10 for those of Calabria, and till December 31 for those of Apulia. If the contract be for time, that is, from one year to another, the oil is usually placed at the purchaser's command on March 1. Purchases for time are effected by means of a contract, wherein the vendor undertakes to deliver the oil by the end of January, on receiving payment of the money; but the oil, as observed above, is not really at the purchaser's disposal before the beginning of March. Hence, in time bargains, the payment of the money precedes the delivery of the oil more than a month: scarce an instance is on record of an engagement of this sort having been broken, and the order is as readily negotiable as any other security.

In purchases of oil at command, payment likewise precedes the delivery of the article; but in this case the advance is confined to the 5 days necessary to transmit the order to the *caricatori*, where the oil is kept for delivery.

The oil remains in the *caricatori* under the care and responsibility of the vendor, to be delivered on demand to the bearer of the order free of all costs and charges whatever for the first year; but for every successive year from 25 to 30 grains per salma are charged for keeping, and for renewal of warranty.

The annexed table will show the quantities and values of the exports of olive oil in two unfavourable years, 1865 and 1866, from 5 of the shipping ports of Naples.

	1865		1866	
	Tons	Value	Tons	Value
Bari	9,419	406,385	7,926	423,399
Castellamare	61	2,631	35	1,400
Gallipoli	4,603	318,733	6,969	372,780
Gioja	7,142	305,379	6,218	283,637
Taranto	2,973	117,000	2,227	109,300
Total	24,208	1,138,239	23,397	1,180,516

The olive harvest of 1867 proved more of failure than either of its two immediate predecessors, and the export of oil from the 5 shipping ports fell from 23,000 tons in 1866 to 13,000 tons in 1867.

We are indebted for these details to very valuable Reports by Mr. Steel, vice-consul at Gallipoli for 1866, and by Consul-General Bonham for 1866 and 1867, and to a brochure of M. Millevoye entitled *Coup d'œil sur le Royaume de Naples*, Naples, 1832.

OMNIUM. A term used at the Stock Exchange to express the aggregate value of the different stocks in which a loan is now usually funded.

Thus, in the loan of 36,000,000l. contracted in June 1815, the omnium consisted of 130l. 3 per cent. reduced annuities, 4l. 3 per cent. consols, and 10l. 4 per cent. annuities, for each 100l. subscribed.

The loan was contracted for on June 14, when the prices of the above stocks were—3 per cent. reduced, 54; 3 per cent. consols, 55; 4 per cent. annuities, 70: hence the parcels of stock given for 100 advanced were worth—

ONION

1867 valued at 54	£	s.	d.
1868 consols, at 55	20	4	0
1869 consols, at 70	21	4	0
1870 per cents., at 70	7	0	0
Together	101	8	0

which would be the value of the omnium, or 17. 8s. per cent. premium, independently of any discount for prompt payment.

ONION (Ger. zwibel; Fr. oignon; Ital. cipolla; Span. cebolla; Russ. luk). A well-known bulbous plant (*Allium cepa*, Linn.), cultivated all over Europe for culinary purposes. The Strasburg, Spanish, and Portuguese varieties are the most esteemed.

The imports of onions are now very considerable. They amounted in 1867 to 815,214 bushels, of which more than four-fifths were from Northern Europe, at 4s. 6d. the bushel; the rest from Southampton, at 2s. 5d.

ONYX (Ger. onyx; Fr. onyx; Ital. onice; Span. onix; Lat. onyx). 'Any stone exhibiting layers of 2 or more colours strongly contrasted is called an onyx; as banded jasper, chalcedony &c., but more particularly the latter, when it is marked with white, and stratified with opaque and translucent lines. But the Oriental onyx is considered a substance consisting of 2 or more layers of bands of distinct and different colours. A sard, or carnelian, having a layer of white upon it, would be called an onyx; and according to the number of layers it would be distinguished as an onyx with 3 or more bands. Some of the antique engravings are upon onyxes of 4 bands.' (Mawe's *Treatise on Diamonds* &c.) The German onyxes are very cheap, but the finest onyxes are brought from India; and the more concentric rings or layers these possess, the more valuable it becomes. (Enamel On Precious Stones). Some Oriental onyxes have sold for as much as 200l.

OPAL (Ger. opal; Fr. opale; Ital. opale; Span. ópalo; Portug. opala; Lat. opalus). A stone of which there are several varieties, found in different parts of Europe, particularly in Hungary, and in the East Indies, Mexico, Honduras, the Faroe Islands &c. When first dug out of the earth it is soft, but it hardens and crystallizes in bulk by exposure to the air. The opal is always amorphous; fracture conchoidal; translucent somewhat transparent. Hardness varies considerably, but less than quartz. Specific gravity from 1.938 to 2.54. The lowness of its specific gravity in some cases is to be ascribed to accidental cavities which the stone contains. These are sometimes filled with drops of water. Some specimens of opal have the property of emitting various coloured rays, with a particular effulgency when placed between the eye and the light. The opals which possess this property are distinguished by lapidaries by the epithet *Oriental*; and often, by mineralogists, by the epithet *nobilis*. This property rendered the stone much esteemed by the ancients. (Thomson's *Chemistry*; see also *Phil. Hist. Nat. lib. xxxvii. c. 6*, where there are some very curious details as to this stone.)

Mr. Emanuel (*Diamonds and Precious Stones*) says of the opal, 'that it is one of the most beautiful gems in existence: when held between the eye and the light, it appears of a pale milky, bluish hue, but when seen by reflected light it displays all the colours of the rainbow, in flakes, lines, and sparks; in fact, all the colours of the most beautiful gems are here united in one. When the colours are in small flakes, distributed over the surface, it is termed by jewellers 'harlequin.' This marvellous play of colours is supposed to be occasioned by nearly invisible fissures, which are always cut en cabochon, on both sides. They are very brittle, and are always much more

OPIUM

brilliant on a warm day. A dealer in precious stones, aware of this peculiarity, invariably holds an opal in his hand before showing it, in order to impart warmth to the gem. Fine stones of large size are seldom found; they rarely exceed an inch in diameter.'

The opal is the only precious stone which defies imitation. It has always been highly prized in the East.

For large fine gems as much as 1,000l. has been paid. Fine ring or brooch stones bring from 40l. to 100l. Smaller stones are worth from 5s. to 20l. They are rarely sold by the carat.

There is a story in Pliny, that Annus, a Roman senator, preferred exile to the loss of an opal, which he valued at 20,000 aesterces. There are two fine opals among the French Crown jewels; but the finest, which is in the Museum of Vienna, was found at Czernowitz, where a mine has been worked nearly 500 years. It is said that 50,000l. has been refused for this specimen.

OPIUM (Ger. molnsaft; Fr. opium; Ital. oppio; Span. and Port. opio; Lat. opium; Arab. ufyon; Hin. ufeen; Turk. madjoon). The concrete juice of the white poppy (*Papaver somniferum*), which is most probably a native of Asia, though now found growing wild in the southern parts of Europe, and even in England. Opium is chiefly prepared in India, Turkey, and Persia; but the white poppy is extensively cultivated in France, and other parts of Europe, on account of its capsules, and of the useful bland oil obtained from its seeds. It has also been cultivated, and opium made, in England; but there is very little probability of its ever being raised here to any considerable extent.

The poppy is an annual plant, with a stalk rising to the height of 3 or 4 feet; its leaves resemble those of the lettuce, and its flower has the appearance of a tulip. When at its full growth, an incision is made in the top of the plant, from which there issues a white milky juice, which soon hardens, and is scraped off the plants, and wrought into cakes. In India, these are covered with the petals of the plant to prevent their sticking together, and in this situation are dried, and packed in chests lined with hides and covered with gunny, each containing 40 cakes, and weighing 2 mands or 149½ lb.; they are exported in this state to the places where the opium is consumed. Turkey opium is in flat pieces, covered with leaves, and the reddish capsules of some species of *rumex*; which is considered an indication of its goodness, as the inferior kinds have none of these capsules adhering to them.

According to Dr. A. T. Thomson, Turkey opium has a peculiar, strong, heavy, narcotic odour, and a bitter taste, accompanied by a sensation of acrid heat, or biting on the tongue and lips, if it be well chewed. Its colour when good is a reddish brown, or fawn colour; its texture compact and uniform. Its specific gravity is 1.336. When soft, it is tenacious; but when long exposed to the air, it becomes hard, breaks with a uniform shining fracture, is pulverulent, and affords a yellowish brown powder.

East Indian opium has a strong empyreumatic smell; but not much of the peculiar narcotic, heavy odour of the Turkey opium; the taste is more bitter, and equally nauseous, but it has less acrimony. It agrees with the Turkey opium in other sensible qualities, except that its colour is blacker, and its texture less plastic, although it is as tenacious. Good Turkey opium has been found to yield nearly 3 times the quantity of *morphia*, or of the peculiar principle of the drug, that is yielded by East Indian opium.

Opium is regarded as bad when it is very soft, greasy, light, friable, of an intensely black colour, or mixed with many impurities. A weak or empyreumatic odour, a slightly bitter or acrid, or a sweetish taste, or the power of marking a brown or black continuous streak when drawn across paper, are all symptoms of inferior opium. (*Dispensatory*.)

The raising of opium is a very hazardous business; the poppy being a delicate plant, peculiarly liable to injury from insects, wind, hail, or unseasonable rain. The produce seldom agrees with the true average, but commonly runs in extremes; while one cultivator is disappointed another reaps immense gain: one season does not pay the labour of the culture; another, peculiarly fortunate, enriches all the cultivators. This circumstance is well suited to allure man, ever confident of good fortune. (Colebrooke's *Husbandry of Bengal*, p. 119.)

In England, opium is principally used as a medicine. It has been said, however, with some show of evidence, that its use as a narcotic stimulant is on the increase. In 1867 we imported 273,522 lb. By far the largest part of our supply is brought from Turkey. Opium from the latter was worth, in the London market, in 1867, from 16s. to 17s. per lb.

*Cultivation of Opium in India—Monopoly &c.*—Opium is produced in Bengal, principally in the provinces of Bahar and Benares, in parts of Bombay, and in Malwa, in Central India. The opium of Bahar is known in commerce by the name of Patna opium. In Bengal the production of opium is a monopoly, no person being allowed to grow the poppy except on account of Government. The latter make advances to the cultivators, who deliver the entire produce into their hands at a fixed price of about 3s. 6d. per lb. It is afterwards sold by the Government for about 11s. per lb., so that the profit of the latter amounts to about 7s. 6d. per lb.

Opium may be grown and manufactured in Bombay; but it is subjected to the same high duty that is imposed on opium imported into the Presidency. The object of this high duty is to 'discourage its production.' Government purchases what little is produced in Bombay, supplying through licensed dealers all that is required for home consumption.

The poppy being extensively cultivated in India, yields a large revenue. Down to 1831 it was produced under a monopoly; but in that year the business was thrown open to the public, and the revenue collected by imposing a duty on the opium when passing through the Company's territories to Bombay. The capture of Scinde, by closing the route for the smuggling of opium through Kurrachee to the Portuguese settlements of Demau &c., enabled a large addition to be made to the transit duty on Malwa opium, which was raised in 1847 to 400 rup. per chest, affording a revenue to Government of about 5s. 8d. per lb. (We have borrowed these authentic details from the Official Papers relative to India, pp. 73-75, published in 1853.)

No one doubts that opium is an excellent subject for taxation; and the higher the rate to which the duty on it can be raised without encouraging smuggling, so much the better. But a great deal has been said for and against the system under which the opium revenue is raised in Bengal and other parts of India; and, perhaps, it might be the better policy to open the culture of the plant to the unfettered competition of the public, imposing a high duty on the drug when grown or when exported. Without, however,

entering on the discussion of this difficult question we may shortly observe that the monopoly does not appear to have the consequences stated by Mr. Colebrooke, who tells us (*Husb. Bengal*, 118) that, except in a few localities peculiarly favourable, its culture is unprofitable; and that the peasants engage in it with reluctance, being tempted thereto only by the advances made by the Government agents. But if such were the case formerly, it would seem that circumstances have changed in the interval; for it appears from the official accounts, that the exports of Bengal opium, which amounted to 18,827 chests of 100 each in 1840-41, had increased to 53,321 chests in 1854-55. The number of chests of Malwa opium (140 lb. each) exported from Bombay during the same period advanced from about 15,000 to 25,000 a-year. The total value of the opium exported from British India in 1866 was 11,122,746*l.* In 1867 there was exported from the United Kingdom 148,519 lb. of opium, valued at 121,291*l.*

*Consumption and Trade of Opium in China.*—Opium is pretty extensively used, both as a medicatory and in smoking, in Turkey and India; but its great consumption is in China and surrounding countries, where the habit of smoking it has become almost universal. The Chinese or seethe the crude opium; and by this process impurities, resinous and gummy matter, separated, and the remaining extract only is served for use. Thus prepared, the drug loses its ordinary strong and offensive aromatic odour, has even a fragrant and agreeable perfume, and a small ball of it, inserted in a large wooden pipe with some combustible matter, is lighted, and the amateur proceeds to inhale four or five whiffs when he lies down and resigns himself to dreams, which are said to have no inconsiderable resemblance to the sensations produced by inhaling the oxide of azote. Those who do not carry indulgence to excess, do not, it is said, experience any bad effects from it.

It is a curious fact that both the poppy and the produce appear to have been unknown till a comparatively recent period, to the Hindoos. As has been conjectured, apparently on good grounds, that the plant, the method of extracting its juice, and its use, were introduced into India and China by Mohammedan traders, probably in the 9th or 10th century. And if such be really the case, the disciples of the Arabian prophet will not only be entitled to the credit, whatever it may be, of having introduced the art of distillation and use of ardent spirits into the Western world, but also of having introduced its favourite luxury into the East. At all events, it is certain that opium had been introduced into China in the early part of the 16th century; a century and a half before the English had anything whatever to do with its cultivation. (See the tract entitled *China and Opium Trade*, p. 14, by the late John Crawford, the most eminent authority to whom reference can be made in a matter of this sort.)

Nine-tenths of the supplies of opium for the consumption of China have always been derived from India, a comparatively small quantity being derived from Turkey. The trade has recently been contraband, the introduction of the drug having been prohibited by the Chinese Government. Until about 1810 the trade did not attract much attention, or become of any great importance, but it has since been greatly extended, and has been since 1839 of great consequence. It was at first carried on from Whampoa, about 15 miles below Canton; and thence to Macao, whence it was driven by the exclusion of the Portuguese; and thereafter in the boats

Year	Value	Quantity
1866	11,122,746	148,519
1867	12,122,746	148,519

It is necessary to be aware of the fact that the introduction of opium into China has been a subject of much controversy, and that the Chinese Government has recently prohibited its importation.

The total value of the opium trade in China is estimated to be about 100,000,000*l.* per annum, and it is a subject of great importance to the British Government.

Here the opium was kept on board ships, commonly called receiving ships, of which there are often 10 or 12 lying together at anchor. Later, however, the opening of the ports on the Yang Tze, and of Chefoo, Tientsin, and Mow Chee, in the North of China, has greatly altered the opium trade at Shanghai. The chief kinds imported are Patna and Malwa. That of Benares will, however, it seems, soon command attention.

The export of opium into the province of Canton is said to be 1,800 piculs (240,000 lb.) a month, of which about 700 piculs pass through the customs, the rest being smuggled. In May 1863, the Government imposed a war tax of 16 taels per picul, and immediately the receipts began to drop, and from 175 to 200 piculs a month. The import of Ningpo was in 1864, 3,307 chests, and in 1866, less re-exports, 4,321 piculs. At Chefoo the consumption is about 100 chests a month. At Kir King 2,100 chests annually.

The sales have been mostly effected by English and American agents, who give orders for the delivery of the opium; which, on producing the order, is handed over to the Chinese smuggler, who comes alongside at night to receive it. Frequently, however, the smuggler purchases the opium on his own account, paying for it on the spot in silver; it being a rule of the trade, never departed from, to receive the money before the drug is delivered.

During the first 10 years of the present century the exports of opium from India to China averaged about 2,500 chests, of 143½ lb. each. But after the introduction of Malwa opium into the markets of Bombay and Calcutta, the exports began rapidly to increase. We subjoin—

As Account of the Quantities and Value of the Exports of Opium from India, from 1851 to 1865.

Year	Chests	Value	Year	Chests	Value
1851	55,009	5,459,135	1859	75,822	10,827,642
1852	61,265	6,515,214	1860	55,581	9,034,734
1853	61,832	7,034,073	1861	65,490	10,118,713
1854	68,175	6,437,098	1862	65,569	10,555,912
1855	77,297	6,311,278	1863	82,216	14,494,138
1856	82,489	6,200,871	1864	70,839	10,756,093
1857	72,381	7,056,630	1865	81,492	9,911,801
1858	74,866	9,106,635	1868	—	11,122,746

It is necessary, however, to observe that the whole of the opium shipped from India does not go to China. That, indeed, is the destination of the largest portion of the exports, but about one-fourth of the total exports goes to the Straits Settlements.

The following is the amount of opium imported into the undermentioned 11 Chinese ports in 1864 and 1865 as given by the foreign Commissioners of Inspection in China.

	Quantities		Value	
	1864	1865	1864	1865
Amoy	piculs	piculs	taels	taels
Canton	50,323	55,850	4,823,079	16,376,089
Ningpo	5,295	3,170	1,604,991	1,755,400
Shanghai	4,490	3,376	1,322,866	1,305,141
Swatow	6,971	5,863	4,747,336	5,306,418
Tientsin	4,390	4,050	2,919,090	2,411,451
Yokohama	4,771	5,245	2,699,074	3,114,290
Other ports	1,029	2,455	1,075,565	1,368,096
Total	2,501	4,490	1,111,340	1,866,865
Amoy	1,389	2,683	840,378	1,621,331
Canton	2,828	3,551	1,571,225	5,359,196
Ningpo	506	1,518	295,156	377,822
Total	61,413	75,517	32,060,845	37,822,913

The total imports (less re-exports) at these and other ports in 1866, as given in the last report of the Commissioners, were 64,516 piculs. The occasional diminution in quantity and value

of the imports of opium into China cannot be ascribed to any other cause than the export and import duties, and the impossibility of preventing smuggling, both out and in.

**Confiscation of Opium in 1839.**— We have already seen [CANTON] that opium has till very lately been prohibited in China, and that consequently its importation has always been looked upon as a smuggling speculation. There would seem, however, to be good grounds for thinking that the prohibition of the importation of opium was all along intended to be more apparent than real. At all events, it is certain that the trade grew gradually up, from a small beginning, to be one of great extent and value; and it is rugatory to suppose that this should have been the case, had it encountered any considerable opposition from the Chinese authorities. But the truth is, that these functionaries, instead of opposing the trade, or even merely conniving at it, were parties to its being openly carried on; and received certain regulated and large fees on all the opium that was imported. It has even been alleged that a part of these fees found its way into the Imperial treasury at Peking, though that is more doubtful. The appetite for the drug increased with the increasing means of gratifying it; and there appeared to be no assignable limits to the quantity that might be disposed of in the empire.

The rapid extension of the trade seems at length to have drawn the attention of the court of Peking to the subject. We doubt, notwithstanding what has been alleged to the contrary, whether a sense of the injurious consequences of the use of the drug had much to do in the matter. The alarm of the Chinese Government was not so much about the health or morals of its subjects, as about their bullion. They are still haunted by the same visionary fears of being drained of a due supply of gold and silver, that formerly haunted the people of this country. The imports of opium having increased so rapidly as to be no longer balanced by the exports of tea and silk, silver began also to be exported. The paternal Government of Peking might have tolerated what are called the demoralising effects of opium with stoical indifference, but the exportation of silver was not a thing to be endured. It is, however, only fair to state that the Chinese statesmen were not all of the school of Mun and Gee; and that some of them appear to have taken an enlightened view of the question, and to have emancipated themselves from the prejudices that influenced the majority of their colleagues. The statesmen in question contended, that whether the use of the drug were injurious or not, the taste for it was too deeply seated and too widely diffused to admit of its effectual prohibition; and they, therefore, proposed that its importation should be legalised, subjecting it, at the same time, to a heavy duty. There cannot be a doubt that this was the proper mode of dealing with the subject. In the end, the Government of Peking, influenced by unfounded theories as to the mischievous effect of the export of the precious metals, came to a different conclusion, and resolved to put a stop to the traffic.

After this resolution had been come to, the Chinese appear to have acted with more than their usual vigour; and having proceeded to extremities, they confiscated and destroyed about 20,000 chests of opium. The reader does not require to be told that this violent conduct on the part of the Chinese led to a war with this country. This contest was terminated in 1842, when the Chinese agreed, among other things, to pay 21,000,000 dolrs. towards the expenses of the war, and as an indemnity to the owners of the con-

denied opium, to whom 1,250,000*l.* was ultimately awarded.

A good deal of discussion took place at the time in regard to the propriety of our conduct in compelling the Chinese to indemnify the opium holders. It was contended, that as the introduction of opium into China was prohibited, the Chinese in destroying it had done nothing but what they were entitled to do, and what we should have done had we been in their place; that the only parties to blame were those who violated the law, and smuggled the opium into the empire; and that we acted unjustly, and abused our power, in obtaining an indemnity for those in whose punishment we should have assisted.

But though specious, these objections are not really entitled to much weight. And though the interest in the subject be now gone by, it may be worth while to show that we had good grounds for what we did.

That the Chinese have the same right to exclude opium from their empire, that we have to prohibit the importation of beef, or ammunition, or to lay a duty on corn, does not admit of any question. But in endeavouring to suppress a trade that had been carried on under the sanction of the authorities at Canton, all of whom had largely participated in its profits, justice required that notice should have been given to the parties concerned of the intentions of Government. It is necessary to bear in mind that the Chinese were in the habit of frequently issuing proclamations against the importation of opium; but as no attempt was ever made to give any real effect to these proclamations, the parties engaged in the trade were naturally led to conclude that such would always be the case. Hence the necessity for a distinct intimation being made, that the laws against the importation of opium were, in future, to be bona fide and truly carried into effect, and for fixing some period after which all parties found engaged in the trade would be subject to certain penalties. No valid objection could have been made to such a course of proceeding. The Chinese are clearly entitled to prohibit the importation of opium; but neither the Chinese nor any other nation are entitled, after having, by long connivance at and participation in a trade, induced foreigners to import a large amount of valuable property into their territories, to pounce upon and seize such property on pretence of its being contraband. The Chinese are a remarkably clever people; and it is impossible that they should not see that, in this instance, their Government was guilty of gross injustice; and that it consequently rendered itself liable for the value of the property it so unwarrantably seized upon and destroyed.

Suppose the British Parliament had, in 1796, passed an Act prohibiting the importation of tea; and suppose, further, that the collector of customs and other authorities in Liverpool had paid no attention whatever to this Act, but that, from 1796 down to the present day, they had openly countenanced the trade; that it had rapidly increased; and that every year scores of Chinese ships laden with tea had arrived in the Mersey, safely unloaded their cargoes, and sailed either with silver or other British produce on board; what, under these circumstances, would the Chinese have said, had the British Government suddenly turned round and declared, 'You are engaged in an illegal trade;' and, without further intimation, have proceeded to seize and destroy all the tea belonging to them in England? Would not the Chinese, the Russians, French, and, in short, the whole world, have declared such an act

to be flagrantly unjust? And would not every honest man in England have said that the Chinese had been swindled; and that the Government of China, did not deserve to be treated with ordinary respect, if it did not endeavour to procure redress for its subjects?

Now, this was precisely the case of England against the Chinese. The morality or immorality of the opium trade was wholly beside the question. Though the use of opium were ten times more injurious than has ever been represented, it would not alter the fact, that the trade in it had been openly countenanced by the Chinese authorities for a period of more than forty years; such being the case, foreigners were certainly entitled to infer that that countenance would suddenly be withdrawn; and that, at all events, their property would be respected. This, in fact, is not a question about which there is any room for doubt, or difference of opinion. The conduct of the Chinese was most unwarrantable, and the Government of this country had not even a well founded claim for redress, but was called upon to enforce it by a just regard for the national honour and the interests of the British subject, whose rights had been so outrageously violated.

But we may further observe, in reference to this matter, that though it be laid down by all writers on public law, that it depends wholly on the will of a nation to carry on commerce with another, not to carry it on, and to regulate the manner in which it shall be carried on (*Fattel*, book 1, s. 10), we incline to think that this rule must be interpreted as applying only to such commercial States as recognise the general principles of public or international law. If a State possessed rich and extensive territory, and abounding in products suited for the use and accommodation of the people of other countries, insulates itself by its institutions, and adopts a system of policy that is plainly inconsistent with the interests of every other nation, it appears to us that such a nation may be justly compelled to adopt a course of policy more consistent with the general feelings of mankind. No doubt, the right of interference, in cases of this sort, is one that should be exercised with extreme caution, and on strong grounds for its vindication. But that right does exist, seems sufficiently clear, and we admit that a slight degree of inconvenience, experienced from one nation refusing to enter into commercial transactions with another, or from insisting that these transactions should be carried on in a troublesome and vexatious manner, would not warrant any interference with its internal affairs; but this, like all other questions of the same kind, is one of degree. Should the inconvenience resulting from such anti-social conduct, become very oppressive on other parties so oppressed would have as good a right to interfere to enforce a change of conduct, as a State that has adopted this anti-social policy had openly attacked the territory of its citizens. A State has a perfect right to such rules and regulations for its internal government and the conduct of its trade as it provides they do not exercise any very injurious influence over others. But should such influence appear in any case—should the domestic or commercial interests of any particular State involve principles or relations that trench on the rights or interests of any other parties, none can justly be supposed to be in a position to justify the interest of other parties, none can be supposed to be in a position to complain, if the injury be of a grave character, and redress be not obtained on complaint being made. It is reasonable doubt can be entertained that an aggrieved party is justified in resorting to force

These principles appear to apply with peculiar force in the case of China. Tea, a peculiar product of that country, has become a necessary article in England; and no one can doubt that a most serious injury would be inflicted on the people of Britain were any considerable impediment thrown in the way of its importation; and the arbitrary policy of the Chinese Government, which is not influenced by the maxims, and is regardless of the forms, that prevail among civilized States, has on various occasions interrupted the trade, and constantly exposed it to great dangers, it certainly appears that this was a case for forcible intervention—*dignus rursus modus*—and that we were entitled to demand that the trade should be placed on a solid footing, that the import and export duties should be rendered intelligible and moderate, and that an end should be put to the extortion and interference of the Chinese authorities. And these desirable results appear to be secured by the treaty of 1868.

The prohibition against the importation of opium into China was not suppressed as it should have been by the treaty of 1842. But since that period the trade has been openly carried on at most places along the coast, and has met with little or no interruption. Since 1841-42, the exports into China have a good deal more than doubled. And, as already seen, the trade has increased to a magnitude that a few years ago was most sanguine would hardly have anticipated. *Repeal of the Prohibition.*—Under the circumstances stated above, combined with the increasing cultivation of the drug in China, the continuance of the prohibition was out of the question. Its repeal was necessitated by the Chinese in 1868; and among the trade regulations stipulated to the treaty of that year, is one legalizing the importation of opium at a duty of 100 taels the picul. It may, however, be doubted whether this duty be not too high to stop the smuggling of the drug; but if so, its reduction will be an easy matter.

*Alleged injurious Influence of Opium.*—The objections that have been made to the trade in opium, because of its supposed injurious influence over those by whom it is used, do not seem to be entitled to much weight. There are no good grounds for thinking that it is at all worse than brandy, gin, wine or other stimulants. All of these are mischievous, as are most things, when used in excess, but not otherwise. We do not understand the growers of barley, or distillers, or the importers of wines or spirits, and why should we adopt a different course in dealing with the cultivators and sellers of opium? The late Sir Benjamin Hoole, P.R.S., than whom there could be no higher authority, contended that the use of opium is not so injurious as indulgence in spirits. 'The effect of opium,' said he, 'when taken into the stomach, is not to stimulate, but to soothe the nervous system. It may be otherwise in some instances, but these are exceptions to the general rule. The opium-taker is in a passive state, satisfied with his own dreamy condition, while under the influence of the drug. He is useless, but not mischievous. It is quite otherwise with alcoholic liquors. When Bishop and his partners murdered the Italian boy that they might sell his body, it appeared in evidence that they prepared themselves by a plentiful libation of gin. The same scene is pursued by housebreakers and others who engage in desperate criminal undertakings. It is worthy of notice, also, that opium is much more destructive to the understanding than gin or brandy. Many opium-takers live to a great age, while brand drinking induces diseases of the liver, and their attendant bodily suffering, ill-temper,

wretchedness, and premature death.' (*Physiological Inquiries.*)

It would be needless or worse to attempt to add anything to this conclusive statement. It disposes satisfactorily of the moral part of this question.

*Opium as a Source of Revenue.*—It is not easy to imagine a more unexceptionable source of revenue than the tax laid by the Government of India on opium when exported. It is no part of their duty to look beyond the interests of their own subjects; but it is evident that in raising the duty on opium to the point at which it will yield the greatest amount of revenue, they are causing, at one and the same time, the best interests of their own people and those of the Chinese. A large amount of revenue is produced for the service of the former by a tax laid on an article consumed by the latter. But as the abuse of opium, which, like the abuse of spirits, would be highly prejudicial, is checked and in part prevented by the duty, it is plain that the well being, as well of the buyers as the sellers of the drug is promoted by its imposition. The tax is, in truth, one of the very best that has ever been imposed; and its productiveness is not one of the least of its good qualities. Of the entire net revenue of India, amounting in 1865-6 to 48,514,740*l.*, no less than 8,618,252*l.* was derived from opium; and in 1866 67, 8,808,418*l.* was received—that is, from a tax paid by the Chinese and Malaya. [CANTON; EAST INDIES.]

*OPONAX.* [BALEAR.]  
*OPPONAX* (Ger. *opponax*; Fr. *oponax*; Ital. *opoponax*; Span. *oponax*; Arab. *jawshcher*). A gum resin obtained from the *Opopanax Chironium*, a species of parsnip. It is a native of the south of Europe and Asia Minor. The stem rises to the height of 6 or 7 feet, with a thick branched yellow coloured root. The roots being wounded, a milky juice flows from them, which, being dried in the sun, is the *opopanax* of the shops. It is in lumps of a reddish yellow colour and white within, smell peculiar. Taste bitter and acrid. Specific gravity 1.322. It is imported from Turkey. Being used only to a small extent in medicine, the consumption is inconsiderable. (Thomson's *Chemistry*; Ainslie's *Materia Indica*; Pereira's *Materia Medica*.)

*OPORTO* or *PORTO*. A large city and seaport of Portugal, on the north bank of the Douro, about 2 miles from its mouth, lat. 41° 10' 30" N., long. 80° 37' 18" W. It is a beautifully situated, well-built city; and contained in 1864, including the suburbs of Villanova and Gaya, on the opposite bank of the river, a population of 89,321.

*Harbour.*—The harbour of Oporto is a bar harbour, and can only be entered, at least by vessels of considerable burden, at high water; and it is seldom at any time practicable for vessels drawing more than 16 feet. On the north side of the entrance is the castle of St. João de Foz, whence a ledge of rocks, some of which are at all times above water, extends in a south-west direction. The outermost of these rocks, named *Filgueira*, which is always visible, is on the left or larboard side on entering. Cabedelo Point, forming the southern extremity of the entrance, is low and sandy. The bar being liable, from the action of the tides, and of sudden freshes in the river, to perpetual alterations, it is exceedingly dangerous for any vessel to attempt crossing it without a pilot. Pilots are always on the alert, and ready to offer their services when a vessel comes in sight, unless the weather be so bad that they cannot go off. On some few occasions of this sort, vessels have been detained for three weeks off the port, without having an opportunity of

entering. The chapel of St. Catherine, in a line with that of St. Michael, leads over the bar. The ordinary rise of spring tides is from 10 to 12 feet, and of neaps from 6 to 8 feet. The Oporto lighthouse on the Nossa Senhora da Luz is fixed, and 218 feet above high-water mark. It is visible for 20 miles, but is described in the Admiralty list as a very bad light.

The swellings of the river, already referred to, most commonly occur in spring, and are caused by heavy rains, and by the melting of the snow on the mountains. The rise of water at such times is frequently as much as 40 feet; and the rapidity and force of the current are so very great that no dependence can be placed on anchors in the stream. Fortunately a fresh never occurs without previous warning; and it is then the practice to moor with a cable made fast to trees, or stone pillars, erected on the shore for that purpose. (For further information as to the harbour of Oporto, see Purday's *Sailing Directions for the Bay of Biscay*.)

*Trade.*—Oporto is the emporium of a large portion of the kingdom of Portugal, and enjoys a pretty considerable foreign commerce. The well-known red wine, denominated Port, from its being exclusively shipped at this city, forms by far the largest article of export. The exports vary in different years, from about 20,000 to above 40,000 pipes. England is much the largest consumer of port. The high discriminating duties on French wine originally introduced port into the British markets, and gave it a preference to which, though an excellent wine, it had no just title: this preference first generated, and its long continuance has since so confirmed, the taste for port among the great bulk of the population, that until 1860 it bade fair to maintain its ascendancy as an after-dinner wine, notwithstanding the equalisation of the duties. At an average of the 7 years ending with 1858, there were shipped from Oporto for England 27,294 pipes a-year. In 1866 we imported of the red wines of Portugal 3,573,744 gals, of which 2,976,817 were entered for consumption. It is remarkable, that while the entries of port for consumption have increased but little since 1851, those of sherry and Rhenish have more than doubled since 1860, and those of French wines have more than trebled in the interval, 1860-67. And though the scarcity and dearth of port consequent on the vine disease may account to a great extent for its decreased consumption, it is not at all likely again to supersede the lighter French and Spanish wines, now that they have so firm and extensive a hold on the public taste in this country.

Next to England, Brazil, Russia, and the north of Europe are the principal consumers of port; but it appears, from the subjoined account, that the total exports to them do not amount to a half of those sent to England. The other exports are oil, oranges and other fruits, wool, refined sugar, cream of tartar, shumac, leather, cork &c. The imports are corn, rice, beef, salt fish, and other articles of provision; sugar, coffee &c. from Brazil; cotton and woollen goods, hardware, tin plates &c. from England; hemp, flax, and deals, from the Baltic &c.

Besides the British manufactured goods imported into Portugal for the use of the natives, a considerable quantity is destined for the consumption of Spain; being smuggled into that country through Braganza and other towns on the frontier.

The vintages in the Upper Douro fluctuate very greatly, but previously to the breaking out of the *oidium* or vine disease, in 1853, they might, at an

average, be taken at from 70,000 to 80,000 pipes, of which about 33,000 were exported. The production and exportation of wine would, however, have been much greater but for the policy adopted by the Oporto Wine Company, to which Government conceded a monopoly of the trade. They divided all wine produced on the Douro into three qualities, viz. 1st, 2nd, 3rd, and refuse. But the merchants engaged in the wine trade affirmed that the distinction between the 1st and 2nd qualities was quite imaginary; and that they were, in fact, 'precisely the same.' (*Report of Commons' Com. on Wine Duties, 1852, part i. p. 65.*) Delusive though it were, the classification was not without an object. No wine, other than the 1st quality, was allowed to be shipped for any port in Europe, and it was charged, on being exported, with a duty of 3*l.* 10*s.* a pipe; whereas what is called the 2nd quality, though it were really as good as the 1st, was only charged, on being shipped for America, or any country out of Europe, with a nominal duty of 6*d.* a pipe. This extraordinary regulation, besides being injurious to the Portuguese, was offensive and unjust to others, and especially to us who are the great consumers of port. It had not, however, all the success which its contrivers anticipated; for it led to an indirect importation of port wine from the United States, which would, no doubt, have continued till the duties on the wines shipped from Oporto had been equalised or abolished.

The British Government did not fail strongly to remonstrate against this system, which, indeed, was in direct contradiction to the engagements of our treaties with Portugal. And in the end the Portuguese authorities appear to have been satisfied that by raising the cost of their wine, limiting their consumption, and substituting other nations as exporters of Portuguese wine, their system was a great deal more injurious to themselves than to any one else.

In consequence a decree was issued on October 13, 1852, which effected some very important reforms. Instead, for example, of being divided into 1st, 2nd, and 3rd qualities, wine was thenceforth to be divided into wine fit and unfit for exportation. The latter was to be retained in the country either for home consumption or conversion into brandy; while the former, or the wine fit for exportation, might be sent to all parts of the world, on paying a reasonable duty of about 1*l.* a pipe. The Douro Wine Company was abolished, and other changes effected.

These were great improvements. Still the trade was far from being free. Power was given to a 'Regulating Commission,' or Committee of Taste, to say how much wine should be exported so as to prevent a glut of the foreign market. It would be but an equivocal compliment to intelligence of the reader were we to dwell on the folly of such a regulation. Neither could there be any legitimate excuse for prohibiting the export of inferior wine. It would either be bought, on a free system, by the foreigner, or it would be sold for home consumption. If it would not be bought, the prohibition is superfluous; and if it would be bought, the prohibition was mischievous, and hindered the Portuguese from sending an important product to the market. On the whole, however, a great change for the better was effected, and it paved the way for others.

It was soon found in practice, that if the Committee of Taste made any difficulty about the export of any wine, a permit or 'billet' could be readily purchased. Our treaty of 1860 with France too had some effect in enlightening the Portuguese Cortes, and at length, in 1865,

passed an Act, declaring the export of port wine, of whatever quality, free and unfettered. One thing is certain—that port wine now reaches us in a much more genuine state than it did under the auspices of the Oporto Wine Company or the Committee of Taste. See a curious discussion on the alleged blending and adulteration of port wines in the Reports of Mr. Secretary of Legation Lytton and Mr. Consul Crawford, presented to Parliament in 1867 and 1868.

Sometimes wine is purchased from the farmer in the wine country. In this case the casks are

sent about 60 miles up the river, in bonts, to be filled. Owing to the miserable state of the roads, the expense of carriage is very considerable; the cartage from and to the river side frequently costing from 1*l.* to 2*l.* per pipe. The freight from the upper country down the river to Oporto is about equal to that from the latter to England. There is also an internal duty on all wine brought down the river. Inasmuch, however, as these charges are perpetually varying, it is not possible to lay before the reader any pro formâ account of the cost of wine bought in the Upper Douro.

Mr. Consul Crawford says, in his Report of January 30, 1867, that the new wine is brought down the river Douro in the early spring months, the river transport costing about 8*s.* 10*d.* for each pipe, and is lodged in the warehouses of the merchants at Oporto. It is here kept till ready for shipment to England, seldom being fit for that purpose for at least 18 months. [WINE.]

The *oedem* or disease, which attacked the vines here and elsewhere, first appeared in Portugal in 1844, and has continued more or less every year since. It has greatly diminished the production. There can indeed be no doubt that the application of sulphur has given it a decided check. But this is an expensive remedy, and unless it be judiciously applied it is apt to spoil the wine.

The port charges, including tonnage duties, on a vessel of 300 tons, amount to about 50 dollars. Vessels sailing without a cargo pay for lights 200 reis per cent, instead of 50 reis, in order to encourage the export trade. Commission 2½ per cent, and *del credere* 2½ per cent.

**PILOT REGULATIONS.**—These were published at Oporto in 1841. They declare that the navigation over the bar of the Douro must be conducted by pilots regularly appointed, and their number shall be nineteen of the first and second classes, besides supernumerary pilots.

The outward and inward pilotage of every vessel over the bar to be confined to the nineteen pilots of the first and second classes; the pilotage in the river by the supernumerary pilots.

Pilots are prohibited to stipulate for the sum to be received when they board vessels in distress, and are bound to give immediate assistance, under pain, in case of the slightest delay, of suspension from their functions; or, in case of misconduct, to more severe punishment.

The pilots are obliged to reside at St. João de Matos, and all vessels except small craft are bound to take over the bar a supernumerary pilot.

When a supernumerary pilot is on board a vessel exercising his functions, and cannot bring into port, he must remain on board such vessel; the master or owner of which to pay him the whole of his due, and a ration per day, until he is landed at Oporto. In case of dispute, the Portuguese consuls are required to make the vessel's master fulfil the above regulation.

The pilotage rates for the entrance or the de-

parture of vessels, in ordinary cases, are fixed as follow:—

	reis.	dols.	cts.
Small craft	—	—	800 = 0 90
Fishing boats	—	—	1,200 = 1 36
Steam vessels	—	—	2,400 = 2 71
Sloop	—	—	3,500 = 3 96
Three-masted schooners and brig	—	—	4,000 = 4 52
Each pilot boat (including the crew)	—	—	2,400 = 2 71
To each supernumerary pilot boat	—	—	1,800 = 1 36
To each pilot, per day, outside the bar	—	—	800 = 0 90

Any extra fee to pilots is optional. The remuneration due in extraordinary cases, to pilot boats outside the bar, to be rated in accordance to the difficulty of the pilotage and the danger incurred.

The first pilot, and in his absence the second, will be charged to hold council with the others as to the possibility of the entrance or departure of the vessels, and decide by the majority of voices. A pilot who, in the execution of the decision of the council, does not conform to such decision, will immediately be suspended from his functions, and be responsible for all indemnifications, and subject also to corporal punishment.

When an accident happens on account of a pilot refusing to conform to the above results, the pilot cannot demand, for his defence, the opposition of the captains or proprietors of vessels to the free exercise of his functions, except this opposition was manifested with violence; in such case the pilot must immediately protest, so as to cover his responsibility.

The first pilot is bound to sound the bar at least every fourteen days, and to make known the result to the intendant of the marine, as well as any change that may take place in the river.

Any pilot losing a vessel in consequence either of intemperance or incapacity will be punished according to the full extent of the law. Every pilot is bound to have by him the regulations of signals appropriated for the service of the Douro. (*Parliamentary Reports already referred to, and valuable private information.*)

**ORANGES** (Ger. pomeranzen; Dutch, orajen; Fr. oranges; Ital. melarancia; Span. naranjas; Russ. pomeranze; Hin. nerunge; Malay, simamans). The fruit of the orange tree. The common or sweet orange (*Citrus sinensis* or *Citrus nobilis*), and the Seville or bitter orange (*Citrus aurantium*), are natives of China: and the Portuguese are entitled to the honour of having trans-

0 to 80,000 pipes, ported. The province would, however, but for the policy company, to which copy of the trade, on the Douro into, and refuse. But wine trade affirmed the 1st and 2nd try; and that they same. (Report of ties, 1852, part i. p. re, the classification No wine, other than d to be shipped for as charged, on being 10*s.* a pipe; whereas ality, though it was was only charged, on or any country out duty of 6*d.* a pipe, ion, besides being as was offensive and un- ly to us who are the t had not, however, all drivers anticipated; for ation of port wine from would, no doubt, have on the wines shipped alised or abolished. did not fall strong system, which, indee- to the engagements of l. ferred the plant to other countries. Particular species of *Citrus* seem to be indigenous to various Eastern countries; but the birth-place of the proper orange may be distinctly traced to China. It is now to be found in our green-houses. Oranges are imported in chests and boxes, packed separately in paper. The best come from the Azores and Spain; very good ones are also brought from Portugal, Italy, Malta, and other places.

The orange trade carried on by this country is of considerable value and importance. Oranges are not much more expensive than most of our superior domestic fruits, while they are, perhaps, the most refreshing and wholesome of those of warmer climates. The entries for home consumption amounted, at an average of the years 1850 and 1851, to 359,142 boxes a-year. The duty produced, at an average of the above years, 73,246*l.* a-year. The number of persons employed in the importation and sale of oranges must be very considerable. The duty was reduced in 1853, from about 2*s.* 8*d.* to 8*d.* the bushel. It was repealed in 1862. In 1867 we imported no fewer than 1,453,566 bushels of oranges and lemons, valued at 744,732*l.* There were imported in the same year, 2,281 pipes of orange and lemon peel in brine, and 22,302 lb. dried or candied, of the total value of 14,217*l.*

ORCHILLA WEED, ORCHELLA, ORCHAL or ARCHIL (Ger. *orselle*; Fr. *orselle*; Ital. *oricello*, *orella*; Span. *orchilla*). A whitish lichen (*Lichen orcella*), found in the Isle of Portland; but that which is used is imported from the Canary and Cape de Verd Islands, Madeira, Barbary, and the Levant. From it is obtained the archil, or orchal, of commerce, which yields a rich purple tincture, fugitive, indeed, but extremely beautiful. The preparation of orchilla was long a secret, known only to the Florentines and Hollanders; but it is now extensively manufactured in this country. Orchal is generally sold in the form of cake, but sometimes in that of moist pulp; it is extensively used by dyers; and in times of scarcity the weed or lichen has sold as high as 1,000*l.* per ton. (Thomson's *Dispensatory*.) The Portuguese orchal was valued at 30*s.*; that from the Eastern coast of Africa at 30*s.* 10*d.*; the imports from New Granada at 39*s.* 6*d.*; and those from Ecuador at 40*s.* 11*d.* per cwt. The entries for consumption amounted, at an average of the 3 years ending with 1842, to 6,050 cwt. 3 qr. 10 lb. The duty, which had been 3*s.* per cwt., was reduced in 1842 to 1*s.* per cwt., and was wholly repealed in 1846. In 1867 the imports amounted to 24,443 cwt. valued at 45,454*l.*, and the exports to 5,608 cwt.

ORGOL. [ARGOL.]

ORPIMENT (Ger. *orpiment*; Fr. *orpiment*; Ital. *orpimento*; Span. *oropimente*; Lat. *auripigmentum*). The name usually given to sulphuret of arsenic.

When artificially prepared, it is in the form of a fine yellow-coloured powder; but it is found native in many parts of the world, particularly in Bohemia, Turkey, China, and Ava. It is exported from the last two in considerable quantities; and is known in the East by the name of hartal. Native orpiment is composed of thin plates of a lively gold colour, intermixed with pieces of a vermilion red, of a shattery foliaceous texture, flexible, soft to the touch like talc, and sparkling when broken. Specific gravity 3.45. The inferior kinds are of a dead yellow, inclining to green, and want the bright appearance of the best specimens. Its principal use is as a colouring drug among painters, bookbinders &c. (Thomson's *Chemistry*; Milburn's *Orient. Com.*) Only 4 cwt., of the value of 16*l.*, were imported in 1867.

OSTRICH FEATHERS (Lat. *plumæ struthionis*; Fr. *plumes d'autruche*). The feathers of the ostrich, but more especially the long feathers of the wings and tail. These feathers have been highly prized from the remotest antiquity; and have been employed, either singly or intermixed with others (those of the swan, heron, peacock &c.), to heighten the magnificence of processions, the splendour of warriors, and the beauty of the fair.

The ostrich, as every one knows, is chiefly found in the sandy deserts of Arabia and Africa. Dr. Livingstone, in his *Travels into the Interior*, the latter, says that, 'notwithstanding the difficulty of their capture, the quantity of feathers collected annually shows that the numbers slain must be considerable, as each bird has only a few in the wings and tail. The male bird is of a black glossy colour, with the single exception of the white feathers, which are objects of trade. Nothing can be finer than the adaptation of the glossy feathers for the climate of the Kalahari, where these birds abound; for they afford a perfect shade to the body, with free ventilation beneath them. The hen-ostrich is of a tawny brownish-grey colour, and so are the half-grown cocks' (p. 155).

The emu, or cassowary, a variety of the ostrich is a native of Malacca, the Islands of the Asiatic Archipelago, and Australia. There is, also, a variety of the ostrich in South America. In the feathers of these varieties have hardly as yet become articles of commerce; and are very inferior to those of the Arabian and African ostriches.

One of the earliest as well as the most celebrated notices of ostrich feathers in modern times refer to those which adorned the helmet of the king of Bohemia, who fell at Cressy in 1346. The motto *Ich dien* (I serve), having been assumed by the Black Prince, whose gallantry greatly contributed to the success of the English, have since formed the insignia of the Princes of Wales, and have been borne by them on several occasions. Henry VIII. is represented with an ostrich plume in his velvet cap, in a portrait by Holbein; and a portrait of his contemporary Francis I. is similarly decorated. In more modern times, these feathers, or substitutes for them, have been, and continue to be, used in the bonnets of the Scottish Highland regiments. At present they are extensively used in the decoration of ladies' bonnets and head-dresses in children's hats, in artificial flower-making, funeral plumes; military plumes, and in various kinds of fancy trimmings and ornaments.

Leghorn, after the decline of its commerce in the Levant, remained the great entrepôt of ostrich feathers, and did business in that article to the amount of about 1,200,000 francs annually. Since the establishment of steam navigation, London has gradually become the principal centre of that branch of trade, and Leghorn now does business to about half the preceding amount. A part of the diminution is, however, owing to the decline which has taken place in prices. Now only the eighth parts of the ostrich feathers which Leghorn receives come from Egypt, and the rest from Tripoli and Aleppo. (Annales du Commerce Extérieur.) The Cape of Good Hope supplies the most valuable feathers, chiefly on account of their white colour. Black feathers come principally from Mogadore and Aleppo. A good black feather comes from the Cape, but in small quantities. White and grey feathers may be dyed to suit the prevailing taste; but black feathers are always dyed to a darker shade before they are made into plumes by the manufacturer. It is estimated that

ERS (Lat. plume str. austrache). The feathers especially the long feathers.

These feathers have been the remotest antiquity; and either singly or intermixed with the swan, heron, peacock, the magnificence of professional fairs, and the beauty of the

every one knows, is chiefly from Arabia and Africa. Travels into the Interior of Africa, notwithstanding the distance, the quantity of feathers shows that the numbers slain, as each bird has only a feather.

The male bird is of a pale green with the single exception of which are objects of trade. It is the adaptation of the climate of the Kalahari; abundant; for they afford a body, with free ventilation. The hen-ostrich is of a dark green, and so are the half-grown

owary, a variety of the ostrich, the Islands of the Asia, Australia. There is, also, rich in South America. Some varieties have hardly any commerce; and are very inferior to the African ostriches.

As well as the most celebrated feathers in modern times were the helmet of the king of Cressy in 1346. The ostrich (I serve), having been Black Prince, whose gallantry led to the success of the English, the insignia of the Princes been borne by them on the VIII. is represented with this velvet cap, in a portrait of his contemporary, richly decorated. In more recent times, or substitutes for the continue to be, used in the Scottish Highland regiments are extensively used in the es' bonnets and head-dresses, in artificial flower-making, military plumes, and in various trimmings and ornaments.

The decline of its commerce was the great entrepôt of ostrich business in that article to 2,000,000 francs annually. The shipment of steam navigation has become the principal trade, and Leghorn now exports about half the preceding amount. It is, however, owing to the taken place in prices. Several ostrich feathers which Leghorn in Egypt, and the rest of the world. (Annales du Commerce de Good Hope supplies the feathers, chiefly on account of the ostrich feathers come principally from Aleppo. A good black feather is obtained from the Cape, but in small quantities. Ostrich feathers may be dyed to suit, but black feathers are always made before they are made by the manufacturer. It is estimated that

at present prices, the value of the annual consumption of the rough undressed article may amount to from 30,000*l.* to 35,000*l.*; of which  $\frac{1}{2}$  may come from the Cape,  $\frac{1}{4}$  from Mogadore, and the remaining  $\frac{1}{4}$  from Egypt and Aleppo, by way of France.

In the estimation of the value of ostrich feathers, dealers, as a rule, consider the *whites* and most perfect to be the best. The best *whites* vary from 15*l.* to 30*l.* per lb. *voidupois*, and the *whites* of all qualities mixed together, from 10*l.* to 17*l.* per lb. *Blacks* vary from 15*s.* to 5*l.* per lb., according to their length and quality, the longest being the most valuable. The ostrich feather is esteemed of the greatest value of all other feathers, if we except the Marabouts or feathers from the White Paddybird, which are worth from 25*s.* to 5*l.* per ounce.

The French have for many years past obtained supplies of Cape feathers and Marabouts from London, and they often purchase Mogadore feathers in the same market. They export to most of the cities in Europe both the manufactured and undressed article.

Since 1850, the fashion of Continental Europe, guided chiefly by the Imperial Court of France, has shown a decided preference for feathers as ornaments for ladies and children's hats and bonnets, and as trimmings for dresses and mantles, not exclusively confined to ostrich feathers. Tropical birds of rare and brilliant plumage contribute a large share to the prevailing fashion, such as the bird of Paradise, the Himalaya or Imphian pheasant, the Argus pheasant, the parrot, the vulture from India, the vulture, the cassowary, various specimens of humming birds, from South America, the emu or Australian ostrich, the silver duck from European Turkey, the golden and silver pheasant, the common pheasant, and the heron from the British Isles. These are the most important among the birds whose plumage is now used for ornament and trimmings, and the value of many of them has greatly increased. The manufacturers of London and Paris supply nearly the whole civilised world with these productions in their finished state, London having the largest share in ostrich feathers, and Paris in those of a fancy character. A leading manufacturer of great experience (Mr. Da Costa Andrade) estimates that in London alone at the present time the number of young women employed must exceed one thousand, whose wages vary from 5*s.* to 20*s.* per week, and that the value of ostrich and other feathers imported into the United Kingdom for this branch of commerce may amount to 215,000*l.* per annum.

Experiments are now being made in South Africa to domesticate the ostrich on large farms. At a meeting of the Colesberg Agricultural Society's Committee on October 8, 1864 (*Grasshoppers Journal*, January 24), a Mr. Von Mallitz stated, from his own experience, 'The opinion I have formed with reference to the extent of ground requisite for their grazing is, that 35 acres can be carried, year in and year out, upon 100 acres of good grazing land, I mean land rather superior to the common run. At the end of last year, I had the wings of the birds plucked where the feathers of commerce grow. In consequence of the youth of the birds, those feathers then obtained were valueless. I now find, by recent examination, that the birds will be fit to pluck again at the end of the present month, verifying the statement made at the last Swellendam show by one of its members, who was, like myself, experimenting in this novel description of farming, that he obtained feathers fully grown from his

ostriches every six months. The general opinion is, that the largest feathers, of which there are 24 on the wing of each male bird, are worth 25*l.* per lb., and that the yield of the whole plucking, the majority of the birds being males, will not fall short of 10*l.* each on the average. The original cost of the young birds was about 5*l.* each.'

As yet no definite results have been published to show the success of these experiments in South Africa. An attempt has been made by the 'Acclimatisation Society' of Paris to obtain feathers from ostriches reared there, but it is found that such feathers are far inferior to those imported, having more of the downy character of the swan, than the rich flue of the ostrich. The imports in 1867 were as under:—

	Quantities	Declared Value
	lb.	£
<b>White.</b>

In the same year we exported 2,247 lb. of white and 2,069 lb. of black feathers. No duty is now paid on feathers.

[We are indebted for this curious and valuable article to Robert Slater, Esq., of Fore Street.]

**OWNERS OF SHIPS.** Property in ships is acquired, like other personal property, by fabricating them, or by inheritance, purchase &c.

No ship is entitled to any of the privileges of a British ship until she be duly registered as such, and all the provisions connected therewith, embodied in the Mercantile Shipping Act of 1854, the 17 & 18 Vict. c. 104, be complied with. [REGISTRY.]

A British ship may belong either to one individual, or to several individuals. It is ordered by the Act just cited, that the property of every vessel of which there are more owners than one, shall be divided into 64th shares; that no person shall be entitled to be registered as an owner who does not, at least, hold one 64th share; but that any number of persons not exceeding five may be registered as joint owners of a share. It is further provided by the same statute, that not more than *thirty-two* persons shall be owners of any one ship at any one time. Companies or associations may hold property in ships on a special declaration in regard to the ownership of such body being made by their secretary or other authorised functionary in the terms prescribed by the statute.

Neither the property of an entire ship, nor any share or shares in such ship, can be transferred from one individual to another, except by bill of sale or other instrument in writing; and before the sale is valid, such bill or instrument must be produced to the registrar of the port at which the ship is registered, who is to enter the names, residences &c., of the seller and buyer, the number of shares sold &c. in the book of registry of such vessel, and to indorse the particulars on

the bill of sale. [Secs. 57 and 58 of statute, art. [REGISTRY.]

But, though compliance with the directions in the statute accomplishes a complete transference of the property when the transaction is not in its nature illegal, it gives no sort of security to a transference that is otherwise bad. The purchaser should in all cases endeavour to get possession of the ship, or of his share in her, as soon as his title to her or it is acquired, by the registration of the particulars of the bill of sale; for though all the formalities of sale have been completed, yet, if the sellers continue as apparent owners in possession of the ship, their creditors may, in the event of their becoming bankrupt, acquire a right to it, to the exclusion of the purchasers. In the case of a sale or agreement for a part only, it is enough if, the sale being completed, the seller ceases to act as a part owner. (Lord Tenterden *On the Law of Shipping*, part i. c. 1.)

Property in ships is sometimes acquired by capture. During war, her Majesty's ships, and private ships having letters of marque, are entitled to make prizes. But before the captors acquire a legal title to such prizes, they must be condemned in the Admiralty or other court constituted for that purpose. When this is done, the captors are considered to be in the same situation, with respect to them, as if they had built or purchased them.

No person having the mortgage of a ship, or a share of a ship, made over to him as a security for a debt, shall be deemed an owner, or part owner, of such ship. And when such mortgage has been duly registered according to the provisions of the Act, the right and interest of the mortgagee are not to be affected by the bankruptcy of the mortgagor, though he be the reputed owner, or part owner, of such ship. [Secs. 70-72 of statute, art. REGISTRY.]

In the article MASTERS OF SHIPS is given an account of the liabilities incurred by the owners of ships for the acts of the masters. But it has been attempted to encourage navigation by limiting the responsibility of the owners, without, however, depriving the freighter of a ship of an adequate security for the faithful performance of the contract. To effect this desirable object, it has been enacted, that the owner or owners shall not be liable to make good any loss or damage happening, *without their fault or privity*, to any goods put on board any ship or vessel belonging to such owner or owners, further than the value of such ship or vessel, with all its appurtenances, and the freight due, or growing due, during the voyage that may be in prosecution, or contracted for, at the time when the loss or damage has taken place. (17 & 18 Vict. c. 104 s. 504.)

This limitation was first introduced into our law by the 7 Geo. II. c. 15. But it had previously been adopted in the law of Holland, and in the justly celebrated French Ordinance of 1681. In the Ordinance of Rotterdam, issued in 1721, it is expressly declared that 'the owners shall not be answerable for any act of the master, done without their order, any further than their part of the ship amounts to.' Independently, however, of this general agreement, the expediency of the limitation appears, for the reasons already stated, sufficiently obvious.

It was also enacted in 1786 (26 Geo. III. c. 60) that neither the master nor owners of any ship or vessel shall be liable to answer for or make good any gold or silver, diamonds, watches, jewels, or precious stones, lost or embezzled during the course of the voyage, unless the shipper thereof insert in his bill of lading, or declare in writing to

the master or owners, the true nature, quality, and value of such articles. This restriction is embodied in the Mercantile Shipping Act (sec. 503); with the further condition that the owners shall not be liable for any damage done to goods on board by fire. We subjoin the clauses in the statute having reference to the liability of the owners.

*Owner not liable in respect of certain Articles.*—No owner of any sea-going ship or share therein shall be liable to make good any loss or damage that may happen without his actual fault or privity of or to any of the following things, viz. :—

1. Of or to any goods, merchandise, or other things whatsoever taken in or put on board any such ship, by reason of any fire happening on board such ship.

2. Of or to any gold, silver, diamonds, watches, jewels, or precious stones taken in or put on board any such ship, by reason of any robbery, embezzlement, making away with or secreting thereof, unless the owner or shipper thereof has, at the time of shipping the same, inserted in his bills of lading, or otherwise declared in writing to the master or owner of such ship, the true nature and value of such articles, to any extent whatever. (17 & 18 Vict. s. 503.)

*Measure of Owner's Liability.*—By the Merchant Shipping Act of 1854 this liability was limited to the value of the ship and freight due, but the 25 & 26 Vict. c. 63 further limited the liability as follows :—

*Ship-owners' Liability limited.*—The owners of any ship, whether British or foreign, shall not be liable in cases where all or any of the following events occur without their actual fault or privity, to the amount of, viz. :—

1. Where any loss of life or personal injury is caused to any person being carried in such ship;

2. Where any damage or loss is caused to any goods, merchandise, or other things whatsoever on board any such ship;

3. Where any loss of life or personal injury is by reason of the improper navigation of such ship as aforesaid caused to any person carried in any other ship or boat;

4. Where any loss or damage is by reason of the improper navigation of such ship as aforesaid caused to any other ship or boat, or to any goods, merchandise, or other things whatsoever on board any other ship or boat;

but the owners shall be answerable in damages in respect of loss of life or personal injury, either alone or together with any other loss or damage to ships, boats, goods, merchandise, or other things, to an aggregate amount exceeding 15*l.* for each ton of their ship's tonnage; nor in respect of loss or damage to ships, boats, goods, merchandise, or other things, when there be in addition loss of life or personal injury, to an aggregate amount exceeding 5*l.* for each ton of the ship's tonnage; such tonnage to be the registered tonnage in the case of sailing ships, and in the case of steam ships the gross tonnage without deduction on account of engine room.

In the case of any foreign ship which has been or can be measured according to British law, the tonnage as ascertained by such measurement shall, for the purposes of this section, be deemed to be the tonnage of such ship.

In the case of any foreign ship which has not been or cannot be measured under British law, the surveyor-general of tonnage in the United Kingdom, and the chief measuring officer in

due nature, quality, and  
This restriction is em-  
shipping Act (sec. 563);  
that the owners shall

t amount exceeding £100.

pp's tonnage; such ton-  
tonnage in the case of sail-  
se of steam ships the ge-  
nction on account of ag-

y foreign ship which has  
according to British law,  
ned by such measurement  
es of this section be de-  
such ship:

y foreign ship which has  
measured under British law,  
l of tonnage in the Unit-  
chief measuring officer in

British possession abroad, shall, on receiving from  
or by direction of the court hearing the case such  
evidence concerning the dimensions of the ship  
as it may be found practicable to furnish, give a  
certificate under his hand, stating what would in  
his opinion have been the tonnage of such ship if  
she had been duly measured according to British  
law, and the tonnage so stated in such certificate  
shall, for the purposes of this section, be deemed  
to be the tonnage of such ship. (25 & 26 Vict.

Limitation of Invalidity of Insurances.—In-  
surances effected against any or all of the events  
enumerated in the section last preceding, and  
occurring without such actual fault or privity  
as therein mentioned, shall not be invalid by  
reason of the nature of the risk. (Sec. 55.)

Proof of Passengers on board lost Ship.—  
In any proceeding under the 506th section of  
the principal Act or any Act amending the same  
in respect of the owner of any ship or share therein  
in respect of loss of life, the master's list or the  
duplicate list of passengers delivered to the proper  
officer of customs under the 16th section of 'The  
Passengers Act, 1855,' shall, in the absence of  
proof to the contrary, be sufficient proof that the  
persons in respect of whose death any such pro-  
secution or proceeding is instituted were passen-  
gers on board such ship at the time of their  
deaths. (Sec. 56.)

Provision for separate Losses.—The owner of  
every sea-going ship or share therein shall be  
liable in respect of every such loss of life, personal  
injury, loss of or damage to goods as aforesaid,  
arising on distinct occasions to the same extent  
as if no other loss, injury, or damage had arisen.  
(17 & 18 Vic. s. 506.)

When several freighters sustain losses exceed-  
ing in the whole the value of the ship and freight,  
they are to receive compensation thereout in pro-  
portion to their respective losses; and any one  
freighter, on behalf of himself and the other  
freighters, or any part owner, on behalf of himself  
and the other part owners, may file a bill in a  
court of equity for the discovery of the total  
amount of the losses, and of the value of the ship,  
and for an equal distribution and payment. If  
the bill be filed by or on behalf of the part owners,  
the plaintiff must make affidavit that he does not  
collude with the defendants, and must offer to pay  
the value of the ship and freight, as the court shall  
direct.

It is usual in most countries, where the part-  
owners of a ship disagree as to her employment,  
to give those possessed of the greater number of  
shares power to bind the whole. But in this  
country, while the majority of the owners in value  
have authority to employ the ship as they please,  
the interests of the minority are secured from  
being prejudiced by having their property en-  
gaged in an adventure of which they disapprove.  
For this purpose it has been the practice of the  
Court of Admiralty to take an obligation from  
those who desire to send the ship on a voyage, in  
sum equal to the value of the shares of those  
who object to it, either to bring back and restore  
to them the ship, or to pay them the value of their  
shares. When this is done, the dissentient part-  
owners bear no portion of the expense of the out-  
fit, and are not entitled to a share in the profits of  
the voyage; the ship sails wholly at the charge  
and risk, and for the profit, of the others. (Abbott,  
part i. c. 3.)

For the statutory enactments as to the sale and  
transfer of ships, see REGISTER.  
OYSTER (*Ostrea edulis*), OYSTERS (Lat.  
name: Fr. huîtres). A well-known and highly

valued shell-fish, found in great abundance and in  
the greatest perfection in many places along our  
shores. In antiquity, as in modern times, the  
oysters of Britain were held in the highest esti-  
mation. Juvenal, in illustration of the fastidious  
taste of the Roman epicures, says:—

*Circius nata ferent, an  
Lacrum ad sanum, Rutupinave \* edita fundo  
Ostrea, calabat primo deprendere morso.*  
(\* Richborough in Kent.) Sat. iv. 110.

Oysters differ in size and quality, according to  
the different nature of the grounds or beds on  
which they are found. They are particularly  
abundant in the creeks and rivers of Essex and  
Kent, and in various parts along the south coast  
and the coast of Wales. Ireland is also well  
supplied with oysters; those of Carlingford being  
the greatest favourites. The beds in the Frith of  
Forth, adjacent to Edinburgh, are very valuable.  
And those of the Channel Islands, especially Jer-  
sey, furnish large supplies.

Oysters are not always carried direct from the  
places where they are found to market, but are  
frequently conveyed to artificial beds, where they  
are fattened, and where their flavour is said to be  
improved. This sort of industry has been long  
practised by the traders who supply the London  
market. The small, ovate, deep-shelled oysters,  
called *natives*, which are here most esteemed, are  
all brought from artificial beds at Whitstable,  
Rochester, Milton, Colechester, Burnham &c.;  
those from Burnham being reckoned the best.  
Inasmuch as the oyster does not breed freely, and  
often not at all on these beds, they would require,  
even though they were not dredged, constant re-  
stocking.

The consumption of oysters in London is im-  
mense; for, notwithstanding their high price, they  
are largely consumed by the middle and lower  
classes. It has been variously estimated, but  
may, perhaps, annually amount to from 25,000 to  
30,000 bushels of natives, and to 100,000 bushels  
of other varieties. The consumption of oysters  
in Edinburgh and Leith has been estimated at  
7,350 a day. The export of oysters from Jersey  
amounted, at an average of the 4 years ending  
with 1822, to 208,023 bushels a-year: of these a  
large portion came to London; but in the accounts  
for 1863-67 the total exports of fish from the  
Channel Islands are given in cwt. without dis-  
tinction of varieties.

Oysters are very abundant on many parts of  
the shores of the United States; and their con-  
sumption in New York and other great cities is  
very large, though some of the statements that  
have been put forth with respect to it appear to be  
extremely exaggerated. Baltimore is the grand  
seat of the American oyster trade. Supplies of  
oysters are sent from the feeding grounds and beds  
belonging to that city to most parts of the Union.  
(For further information with respect to this  
curious and interesting subject, see the excellent  
article on the Oyster in the work of Forbes and  
Hanley *On British Mollusca*, ii. pp. 305-329;  
Eyton *On the Oyster*, passim; Pennant's *British  
Zoology*; *The Oyster, when, how, and where to  
Find* &c. 1863; *Oyster Fishery; the Laws  
which regulate it in Ireland, being chiefly a  
reprint of Articles from various sources*, Dublin  
1864; &c.)

The disposition of the English and French, as of  
all other fishermen, to encroach, in pursuing their  
business, on the grounds belonging to the others,  
gave rise to many disputes and collisions. To  
terminate these a convention was agreed to in  
1839, by which commissioners were appointed to  
ascertain and fix the limits of the fishing grounds

belonging to each nation. These, which were laid down in a chart affixed to the award of the commissioners, were fixed, speaking generally, at 3 miles' distance from low-water mark along the shores of both countries; and the fishing boats of either were prohibited from coming within these limits of the coasts of the other, except from stress of weather, the influence of the tides, or other specified cause. The regulations laid down by the commissioners were carried into effect by the Act 6 & 7 Vict. c. 79, to which they were appended; and it further provided that the oyster fisheries should open on September 1, and close on April 30. It was afterwards enacted by the 18 & 19 Vict. c. 101, that all oysters and dredges found on board fishing vessels between May 1 and August 31 might be seized, and that oysters landed between the above dates might also be seized.

A deficiency in the ordinary supply of oysters, and the risk of their permanent decline, led the Legislature in 1866 (29 & 30 Vict. c. 85) to make provision for the maintenance of oyster and mussel fisheries; and to attain the same end certain rules are laid down in the Sea Fisheries Act of 1868, 31 & 32 Vict. c. 45, which repeals the previous Acts already referred to and confirms the Fishery Convention with France of November 11, 1867.

The following is an abstract of Part III. of the last-mentioned Act, which refers to oysters.

The Board of Trade, on memorial, can make an order for the establishment or improvement, and for the maintenance and regulation of these beds, (Sec. 29.)

If on consideration the Board of Trade approve, the promoters must cause printed copies of the draft of the order to be circulated among all persons having interests in the land adjoining, who may make objections within one month. (Secs. 30, 31.)

After this interval, the Board shall appoint some fit person to act as inspector, who is to hold a sitting or sittings concerning the subject matter of the said order, and receive evidence (sec. 32); the inspector must report (sec. 33), and as soon as convenient the Board of Trade shall settle and make the order (sec. 34), after which it must be published by the promoters (sec. 35), who shall defray all expenses. (Sec. 36.)

The confirmation of the orders must be made by Act of Parliament (sec. 37); if petition be presented against Bill confirming order, the Bill shall be treated as a private one (sec. 38). The Board of Trade may amend the order. (Sec. 39.)

Those who obtain an order shall have the exclusive right of depositing, propagating, dredging, and fishing for and taking oysters and mussels within the limits of their fishery (sec. 40).

The limits of the fishery to be marked. (Sec. 42.)

The portion of the seashore shall be held to be within the county. (Sec. 43.)

No grant can be conferred for more than 60 years. (Sec. 44.)

If the fishery is mismanaged, the grant may be resumed. (Sec. 45.) Consent of the Crown needed when the seashore is adjacent to Crown lands. (Sec. 46.)

Compensation, if needed, to be made to the owners of the shore under the Lands Clauses Consolidation Act. (Sec. 47.) The order must not be made against rights conferred by special Act of Parliament or royal charter, prescription, or immemorial usage, without the consent of the parties interested. (Sec. 48.) Copies of the order and Acts must be kept for sale, under a penalty of 5*l.* and 1*l.* per diem. (Sec. 49.) Annual Report to Parliament to be made by the Board of Trade (sec. 50). The fishery shall be protected against the use of any fishing tackle, other than for floating fish, against dredging, deposit of ballast or rubbish, placing any implement &c. likely to be prejudicial to the beds, under penalties varying from 2*l.* to 10*l.* besides damages. (Sec. 53.) There follow certain additional regulations for protection of oyster beds. The Act does not extend to Ireland or the Channel Islands and Man. The execution of this Act is committed to certain sea fishery officers, viz. commissioned officers of her Majesty's ships on full pay, officers of the coast guard and customs, and persons appointed by the French Government to superintend the fisheries referred to in the convention with France, s. 8. An order in council of February 4, 1869, contains a series of regulations for lettering, numbering, and registering sea fishing boats under the Sea Fisheries Act of 1868. The 31 & 32 Vict. c. 53 continues in force the Act 2 Geo. II. c. 19 for regulating the Oyster Fishery in the Medway.

*Irish Oyster Fisheries.*—Licenses had been granted under 5 & 6 Vict. c. 106, and 13 & 14 Vict. c. 88, for the purpose of establishing oyster beds in Ireland. By 29 & 30 Vict. c. 88, the license is granted by commissioners; the fisheries are protected by the same provisions as are quoted above, and the commissioners may revoke the license, if no proper steps are taken to use the license after the lapse of three years. The power of the Irish Fishery Commissioners, and the process by which the fisheries shall be developed are carried out by another Act of the same session, 29 & 30 Vict. c. 97, the particulars of which, mutatis mutandis, are the same as those of the Act for Great Britain; and by 31 & 32 Vict. c. 45 s. 67, the Irish Fishery Commissioners are authorised to lay before her Majesty in council by-laws for restricting or regulating the dredging in any oyster beds near the Irish coast, but outside the exclusive fishery limits of the British Isles.

## P

**PACKAGE, SCAVAGE, BAILLAGE, AND PORTAGE.** Duties formerly charged in the port of London on the goods imported and exported by aliens, or by denizens being the sons of aliens.

During the dark ages, it was usual to lay higher duties upon goods imported or exported by aliens, whether in British or foreign ships, than were laid on similar goods when imported or ex-

ported by natives. But according as sounder and more enlarged principles prevailed, this illiberal distinction was gradually modified, and was at length wholly abolished, in so far at least as it was of a public character, by the 24 Geo. III. c. 16. This Act, after reciting that the several duties and restrictions imposed by various Acts of Parliament upon merchandise are, by the alterations of the trade now carried on between this

 ally modified, and was  
 ed, in so far at least as  
 ater, by the 24 Geo. III.  
 reciting that the sever-  
 imposed by various Acts  
 rchandise law, by the alter-  
 ow carried on between the

kingdom and foreign States, in some cases become  
 an unnecessary burden upon commerce, without  
 producing any real advantage to the public re-  
 venue, and that it is expedient they should no  
 longer continue," enacts, that the duty commonly  
 called 'the petty customs,' imposed by the 12 Ch.  
 II., and all other additional duties imposed by any  
 Act upon the goods of aliens above those payable  
 by natural-born subjects, should be no longer  
 payable. The Act then goes on to provide, that  
 nothing contained in it shall 'alter the duties due  
 and payable upon goods imported into or exported  
 from this kingdom in any foreign ship, nor the  
 duties of *package* and *seavage*, or any duties  
 granted by charter to the city of London; and  
 then follow provisions to prevent the city being  
 introduced of such duties by false entries of aliens'  
 goods in the name of a British subject. (Chitty's  
*Commercial Law*, vol. i. p. 160.)

The duties thus preserved to the city were not  
 very heavy; but the principle on which they were  
 imposed was exceedingly objectionable, and their  
 collection was attended with a great deal of  
 trouble and inconvenience. Not being levied in  
 other places, they operated to the prejudice of the  
 trade of the metropolis. For these reasons, we  
 observed, in the first edition of this work, that 'if  
 the funds of the corporation will not admit of their  
 following the liberal example of the Legislature,  
 by voluntarily abandoning this vexatious impost,  
 it would be good policy to give them a compensa-  
 tion for relinquishing it.' And this suggestion  
 has since been carried into effect. The Act 3 & 4  
 Wm. IV. c. 66 authorised the Lords of the Treasury  
 to purchase up the duties in question from the  
 city. This was done, at an expense of about  
 £100,000, and the duties were abolished. There  
 is a table of the duties in the first edition of this  
 work.

PACKETS. [DOCKS (SOUTHAMPTON, LIVER-  
 POOL &c.); NEW YORK; PASSENGERS; POST-  
 OFFICE.]

PALERMO (anciently PANORMUS). A large  
 city and seaport, the capital of the noble island of  
 Sicily, on the north coast of which it is situated,  
 the lighthouse being in lat. 38° 8' 16" N., long.  
 13° 22' 50" E. Population, in 1862, 167,625.

The bay of Palermo is about 5 miles in breadth,  
 the city being situated on its south-west shore.  
 A fine mole, fully  $\frac{1}{2}$  mile in length, having a light-  
 house and battery at its extremity, projects in a  
 westerly direction from the arsenal into 9 or 10  
 fathoms water, forming a convenient port, capable  
 of containing a great number of vessels. This  
 immense work cost about 1,000,000 sterling in  
 its construction; the lighthouse was improved in  
 1833. It gives a flash every 2 minutes, and is  
 visible at from 11 to 14 miles. It is 92 feet above  
 high water. There is an inner port, which is re-  
 served for the use of the arsenal. Ships that do  
 not mean to go within the mole may anchor about  
 $\frac{1}{2}$  mile from it, in from 16 to 23 fathoms, the mole  
 light bearing N.W.  $\frac{1}{2}$  W. A heavy sea sometimes  
 rolls into the bay, but no danger need be appre-  
 hended by ships properly found in anchors and  
 chain cables. In going into the bay, it is neces-  
 sary to keep clear of the nets of the tunny fishery,  
 for these are so strong and well moored as to be  
 capable of arresting a ship under sail. (Smyth's  
*Sicily*, p. 70, and Appen. p. 4.)

Money.—Since 1818, the coins of Sicily have  
 been the same as those of Naples, their names  
 only differing. [NAPLES.] The *ducat*, = 3s. 5-2d.  
 sterling, is subdivided into 100 *baocchi* and 10  
*piccioli*; but accounts are still generally kept in  
*oncia, tari, and grani*: 20 grani = 1 taro; 30 tari =  
 1 oncia. The oncia = 3 ducats; and 1 carliou of

Naples = 1 taro of Sicily. The Spanish dollar is  
 current at 12 tari 8 grani. For money of the  
 Kingdom of Italy, see COINS; GENOA; &c.

Weights.—These are the *cantaro grosso*, sub-  
 divided into 100 *rottoli grossi* of 33 oncie, or into  
 110 *rottoli sottili* of 30 oncie; and the *cantaro  
 sottile*, subdivided into 100 *rottoli sottili* of 30  
 oncie, or 250 lb. of 12 oncie. The *rottolo* of 33  
 ounces = 1.93 lb. avoirdupois = 2.34 lb. Troy =  
 8.73 hectogrammes = 1.77 lb. of Amsterdam =  
 1.8 lb. of Hamburg. The *rottolo* of 30 ounces  
 = 1.75 lb. avoirdupois = 2.13 lb. Troy = 7.94 hecto-  
 grammes = 1.6 lb. of Amsterdam = 1.64 lb. of  
 Hamburg.

100 Sicilian pounds of 12 ounces = 70 lb. avoird-  
 upois = 85.11 lb. troy = 31.76 kilog. = 64.23 lb. of  
 Amsterdam = 65.58 lb. of Hamburg.

Measures.—The *salma grossa* = 9.48 Winch.  
 bush.; the *salma generale* = 7.62 Winch. bush.

The principal liquid measure is the *tonna*, di-  
 vided into 4 *barili*, each equivalent to 9 $\frac{1}{2}$  wine  
 gallons. 1 *barile* = 2 quartare; 1 *quartara* = 20  
*quartucci*. The *catillo* of oil = 44 Eng. gallons.

The yard or *canna* = 8 *palmi*; 2 $\frac{1}{2}$  *palms* = 1  
 yard Eng. (Nelkenbrücher; Smyth, p. 62 App.)  
 These local measures are now, however, super-  
 seded in great measure by the adoption of the  
 metrical system, which is legalised throughout  
 the kingdom of Italy.

Taxes.—Coffee, indigo, pepper, and dye woods,  
 2 per cent. and weight of package. Cinnamon, 6  
*rottoli* per seron, with 1 wrapper, or 8 *rottoli*, with  
 2 wrappers; cocoa, 2 per cent., weight of pack-  
 age, and 3 per cent. for dust; cod-fish, 3 per cent.;  
 herrings, 12 per cent.; tin, 13 *rottoli* per barrel;  
 wax, weight of package, and 3 to 4 per cent. extra  
 allowance; Havannah sugars, 16 per cent.; Brazil  
 do., in short cases, 18 per cent., and in long cases,  
 20 per cent.; crushed sugar, weight of cask, and 5  
 per cent., or 13 per cent. in all, at the option of  
 the buyer; East India do. in bags, 8 rot, to 10  
 rot. per bag. 1 *rottolo* taken as weight of bag, for  
 coffee and cocoa in bags.

Charges on Goods.—The regular charges on the  
 sale of goods consigned to Palermo are—com-  
 mission, 3 per cent.; brokerage,  $\frac{1}{2}$  per cent.;  
 warehouse rent,  $\frac{1}{2}$  per cent.; and portorage and  
 boat hire; with 2 per cent. *del credere*—imports  
 being almost always sold on credit. The charges  
 may occasionally vary  $\frac{1}{2}$  to 1 per cent., and imports  
 are frequently sold duty paid; the prices, however,  
 so obtained, fully compensate for the trifling in-  
 crease of charges.

The charges on goods exported are—3 per cent.  
 commission; brokerage, so much per *cantaro*,  
*salma* &c., generally amounting to about  $\frac{1}{2}$  per  
 cent., except on fruit, on which equivalent to from  
 2 to 3 per cent.

Trade of Sicily.—The shipping rose from 7,340  
 vessels, 935,000 tons, in 1865, to 8,970 vessels,  
 1,331,769 tons in 1866; 290,000 tons were British,  
 450,300 tons French, 440,000 tons Italian, in the  
 latter year. In 1867 the number of vessels fell  
 to 8,170, but the tonnage rose to 1,584,179, the  
 British tonnage having decreased, while that of  
 the French, Italians, and Americans increased.

The following is the summary of Sicilian trade  
 in 1867:—

Countries	Imports	Exports	Total
America, United States	£ 33,450	428,130	461,880
Baltic, Belgium, Ger- many	351,075	394,500	745,575
France	398,960	309,160	708,060
Great Britain and Co- lonias	757,819	930,959	1,688,769
Italian States	165,177	244,530	409,707
Other countries	594,950	514,500	909,470
Total	2,997,815	2,821,519	5,118,562

The rate of exchange during the year 1867 was 20.60 livres per pound sterling.

*Imports and Exports.*—During the years 1862—1864 the imports and exports of Sicily were entered at 3,267,659*l.*, and 2,851,954*l.*, 1,733,624*l.*, and 2,702,805*l.*, 2,004,194*l.*, and 2,892,575*l.*

The great articles of export from Sicily are—olive oil, grain, particularly wheat and barley; silk, brimstone, wine and brandy, barilla, lemons and oranges, lemon juice, manna, shumac, linseed, fruit, salted fish and salt; with argol, liquorice, pumice stone, rags, skins, honey, cotton wool, saffron &c. Wheat is largely exported. It is of a mixed quality, hard, and is generally sold from the public magazines, or *caricatori* (post), by measure, without weight. But the best hard wheat grown in the neighbourhood of Palermo is sold by the salma of 272 rottoll=476 lb. Eng.; the difference between weight and measure being made good by the seller or buyer, as the case may be. Wine is principally shipped from Marsala; lemons, oranges, and lemon juice, from Messina; salt, from Trapani; and barilla, from the southern coast. But all the articles to be found on the coast may, for the most part, be had at Palermo; unless, however, the quantity required be small, it is usually best to ship them from the outports, the expense of their conveyance to Palermo being very heavy. The crops of barilla and shumac come to market in August; but brimstone, salt, oil, wine, rags &c. may generally be had all the year round. The first shipments of lemons and oranges may be made in the beginning of November. Purchases of produce are always paid for in cash, generally  $\frac{1}{2}$  on making the purchase, and the other  $\frac{1}{2}$  on delivery, when in Palermo, and on receiving order for delivery on the coast.

The imports consist of cotton stuffs, linens, and woollens; sugar, coffee, cocon, dye stuffs, iron, earthenware, spices, coal, tin, hides, Newfoundland cod, timber for building &c. The best of the old accounts of the trade of Sicily that we have met with is contained in Swinburne's *Travels in the Two Sicilies*, Ato. e. l. vol. ii. pp. 401—413. We have, also, derived much valuable information from the elaborate *Reports* of Mr. Consul Goodwin, one of the most intelligent of that class of functionaries.

The value of the imports into Sicily from the United Kingdom amounted in 1856 to 451,000*l.*, in 1857 to 399,000*l.*, and in 1867, as we see above, to 757,610*l.* The principal articles are cotton stuffs and yarn, linens and woollens, iron, coal, hardware and earthenware, colonial produce &c.

*Remarks on the Trade &c. of Sicily.*—This noble island contains about 10,500 square miles, being the largest in the Mediterranean, and one of the most fertile and best situated in the world. Its population in 1862 was 2,391,802. In ancient times, Sicily was celebrated for the number, magnitude, and opulence of its cities. Notwithstanding that its population was then probably treble its present amount, it obtained, from its furnishing vast supplies of corn and other articles of provision for the use of Rome, the appropriate epithet of 'horreum Romanorum,' and is said by Livy to have been 'Populo Romano, pace ac bello, fidissimum annonæ subsidium.' (Lib. xxvii. cap. 5.) But ('quantum mutatus!') there are now few countries in which agriculture and the arts are in so degraded a state. It does not, however, appear very difficult to account for this melancholy change. After the overthrow of the Roman power, Sicily was occupied successively by the Greeks, Saracens, Normans, and French, till at length it became a dependency, first of the Crown of Spain, and more recently of that of

Naples. It is to this dependence, and to the introduction of the feudal system by the Normans that its backward state is principally to be ascribed. The multiplied abuses which grew up in Spain under the reign of Ferdinand and his successors of the Austrian line, flourished with equal luxuriance in Sicily, and have proved to be destructive of the industry and civilization of its inhabitants than those of Spain. Misgovernment, the abuses of the feudal system, insecurity, an unequal and arbitrary taxes, have here, as every where else, paralysed industry, and impoverished the people.

But the grand curse of Sicilian, as of Sardinian industry, will probably be found in the oppressive restrictions that were for a long time laid on the exportation of corn. Down to a late period corn could be exported without leave being obtained from the *Real Patrónnia*, a body pretended to take an account of the crops, and which determined whether there were to be an exportation; and in the event of its being allowed it issued, or rather sold, licences to a few favoured individuals, authorising them to export certain specified quantities. Even had Sicily been at times more productive than she really is, it is quite impossible that agriculture could have flourished under such discouragements. Luckily these oppressive restraints have been abolished and there are no longer any obstacles to the exportation of corn. Oppressive taxes, the sale of leases of a reasonable length, and of practical periods, are still, perhaps, the greatest obstacles to agriculture.

At the present time (1869) the union of nearly all Italy, with the chief islands adjoining, under one and that a responsible Government, leads to hope that at no very remote date the commercial prosperity of Sicily will progress with social and political liberties. At present, as might be expected, this progress is slow. The development of the kingdom of Italy has been checked at the great cost of the wars undertaken for the purpose of securing Italian unity, by the expense which a popular Government invariably entails, and for some time after its establishment, by the fact that political changes do unsettle and derange trade, and by the delays which timidity and inaction have put in the way of those changes which must be accepted before any great progress possible. These difficulties and hindrances have been felt most fully in the outlying parts of the Italian kingdom. Thus, during the year 1860 there was an insurrection in Sicily; and Mr. Consul Goodwin has been justified in affirming that the industry of Sicily has been checked by the event, as well as by the severe visitation of cholera in that year and 1867.

The property of the island was valued in 1820 when the English garrison and fleet occasioned a great demand, and high prices for produce of all kinds; and this valuation has been continued to this day, as the basis on which the land and house tax (*fondiaría*) is levied. A rate of 7½ per cent. on the valuation was first charged, which was subsequently raised to 12½ per cent., at which it is now fixed. Owing, as is stated, to the fall in the price of agricultural produce since 1811, this tax has been alleged to be more the equivalent to a duty of 25 per cent. on the produce of the soil taken at its present value, and to be a very great obstacle to improvement. We believe, however, that its influence in this respect, though considerable, has been much overrated, and that the backward state of Sicily is principally owing to other and different causes.

Though there be in Sicily a very considerable

number of small proprietors, by far the greater part of the land belongs to the Crown, the Church, and the nobility, some of whom have very extensive and valuable estates. Down to a recent period these were held under a system of strict entail, and their occupiers, as well as those of the estates of the Crown and the Church, usually held under feudal leases, and were in a state of feudal bondage, and subject to numerous exactions on the part of their lords. Under such circumstances, even though there had been no restrictions on exportation nor a land tax, the depressed condition of the peasantry, and the low state of agriculture, need not be wondered at.

But the dawn of a better day had arisen, even before the establishment of the Kingdom of Italy; several important changes having been introduced anterior to the expulsion of the Bourbons. We have already noticed the removal of the restrictions on exportation; and in 1812 and 1818 laws were passed for the abolition of the feudal system, and the complete emancipation of the peasantry. And, notwithstanding the poverty and ignorance of the latter will hinder them from profitably profiting to the extent that might be anticipated from the passing of these laws, this cannot fail, in the end, to be productive of the best effects. It was also enacted in 1819, that in future, on the death of any individual possessed of an estate in land, and having more than one son, the half only of the estate should descend to the eldest son, and that the other half should be divided in equal shares among the other children.

This law, which appears to have been framed on the model of that which regulates the succession to property in France, will probably have nearly similar effects. In both countries, the abuses of entails might have been obviated without running into the opposite extreme, and establishing a system that can hardly fail in the end to occasion the great division of landed property.

Exclusive of wheat and barley, hemp, flax, and cotton are raised without much labour. The culture of the last is said to be extending of late years, especially in the neighbourhood of Mazzara. It is mostly short-stapled, and but little is exported, and that only to Naples and Trieste. It is probable, however, that by attention to its culture and the introduction of improved varieties, its quality might be improved, and it might become an article of some importance. The sugarcane was formerly a staple product of the south shore of Sicily. But owing to the introduction of cheaper sugar from the West Indies and Brazil, the culture of the cane is now restricted to some small plantations near Avola, and will probably at no distant period be wholly abandoned. The culture of wheat is now to a great extent abandoned for that of rice, flax, and cotton.

The district round Marsala is the principal seat of the vine culture; and, thanks to the exertions of some English capitalists established in that city, the production of wine is become an important branch of industry, and it forms a principal article of export. [WINE.] But, except in the English establishments, little care is in general bestowed upon the vintage. Along the north coast, the mountain slopes and valleys are almost wholly covered with olive groves; though elsewhere they are scarce, and do not furnish sufficient oil for the inhabitants. But for the imperfections in the mode of its preparation, the oil of Sicily would be excellent. The olives are permitted to hang on the tree till they come off with shaking, or with light canes; and they are then

kept in vats till they get quite black, so that the oil becomes pungent and rancid, and, though fit for the lamp, is totally unfit for the table. It is only near the capital and in a few other places that a more improved process is followed. Lemons and oranges, which grow luxuriantly, are of excellent quality, well adapted for long voyages, and, when intended for exportation, are collected with more care than any other agricultural product. They are largely exported, and are altogether highly important. Almonds, pistachios, dates, madder, the barilla plant, hazel-nuts, the *Rivinus palma*, or castor oil plant, saffron, tobacco &c., might all be raised in any quantity; but their culture is for the most part neglected, or ill-conducted. The mulberry is grown in the vicinity of Messina, and in the north-east part of the island; but the produce of silk does not exceed 400,000 lb. a-year; and the seasons of 1860 and 1867 have been so unfavourable that it is feared Sicily will become permanently the least productive of the silk districts of the Italian Kingdom. The manna ash is grown near the capital, and, manna not being monopolised by the Government in Sicily, it might be a much more extensive and profitable article of trade than it really is, if there were any public enterprise. Liquorice is found growing wild in several parts of the island, and considerable quantities of juice are exported. The culture of shumae is a good deal attended to, and it forms a principal article of export.

Formerly there were only certain ports from which corn could be exported; a limitation which gave rise to the establishment at these ports of public magazines or *caricatori*, where the corn may be deposited till an opportunity occurs of shipping it off. Provided it be of good quality (*mercantibile* or *recetibile*), and provided it be brought in immediately after harvest, or, at furthest, in August, it is warehoused free of expense; what it gains in bulk after that period (about 5 per cent.) being sufficient to defray all expenses. The receipt of the *caricator*, or keeper of the magazine, is negotiable like a bill of exchange, and is the object of speculative purchases on the exchange at Palermo, Messina &c., according to the expected rise or fall in the price of corn. The depositor of a quantity sells it in such portions as he pleases, the whole being faithfully accounted for. The public magazines, in some parts of the island, are either excavations into calcareous rocks, or holes in the ground shaped like a bottle, walled up, and made waterproof, containing each about 200 salme of corn, or about 1,600 English bushels. The neck of the bottle is hermetically closed with a stone fastened with gypsum. Corn may be thus preserved for an indefinite length of time; at least, it has been found in perfectly good order after the lapse of a century. (Simpson, p. 540; Swinburne, vol. ii. p. 405. For an account of the oil *caricatori* of Naples, see OLIVE OIL.)

The fisheries are chiefly conducted by corporations of fishermen, or moneyed individuals. That at Palermo employs, during the season, from 900 to 1,000 boats, and 3,500 fishermen; and the produce is valued at from 20,000l. to 25,000l. a-year. Tunnies, the fish principally caught on the Sicilian coasts, and which were in great request in antiquity, as well as in modern times, are of large dimensions, being generally from 4 to 8 feet in length, with a nearly equal girth. Their flesh is highly nutritious. The shoals of tunny enter the Mediterranean early in the year. The *tonnare*, or fishing establishments, on the Sicilian coast, are more extensive and valuable than those

of any other part of the Mediterranean. The fishery of the sword-fish is confined chiefly to the Straits of Messina, and the anchovy and pilchard fisheries to Siciliana. Lentini has some trade in *botarga*, made of the roe of the mullet. The coral fishery, near Bona, in Africa, is principally frequented by fishermen from Trapani, at which city the coral is polished, and brought for exportation to Catania, Naples, Leghorn &c.

The minerals of Sicily are important and valuable. Sulphur ranks first; it is found in great quantities imbedded in blue marl, or in gypsum and limestone, over most of the central and south parts of the island. The sulphur mines have been wrought for upwards of 300 years; but it is only since 1820 that any extraordinary quantity has been prepared for exportation. Subsequently to 1833, the trade with this country increased so much that the export of sulphur to the United Kingdom rose from 19,122 tons in the above year, to 38,654 tons in 1838. In this year, however, the Neapolitan Government granted to a French company the monopoly of the trade in sulphur, the production of which was to be limited to 600,000 quintals, to be supplied to the company by the proprietors of the mines at certain fixed prices, on condition of the latter paying to the Government a bonus of 400,000 Neapolitan ducats a-year. It is needless to dwell on the impolicy and absurdity of such a project. Instead of attempting to limit the export of sulphur, Government should have given it every possible facility; and taking the export under a free system at only 1,000,000 quintals, it would have yielded, at the low duty of 2s. per cwt. on export, a larger sum than was to be paid by the company for their monopoly. Luckily, a firm remonstrance by England occasioned the suppression of the monopoly, and the sulphur trade is again restored to its former state. In 1863, 152,762,615 kilos were exported. The total export of sulphur from Italy (almost entirely from Sicily) in 1865 was 145,516,635 kilos. Some sulphur mines are wrought by English speculators, with machinery brought from England, and workmen from Wales, Cornwall, and Scotland; but in most of the other mines the processes are very rude, and, in melting, a great part of the sulphur is allowed to escape in gas, to the destruction of the surrounding vegetation. Sicily furnishes saltpetre of excellent quality in sufficient quantity for her own consumption, but from want of enterprise little if any is produced for exportation. Rock salt, bitumen, gypsum, and marble of different kinds, are found in various places; and good salt is made at Trapani, and other coast towns. There are also ores of copper, lead, mercury, and iron, but very few of these are wrought. There are no iron foundries in the island, and iron and tin goods are principally imported from England, lead from Spain, and steel from Germany.

Had not the bounty of nature towards Sicily been counteracted by vicious laws and institutions, she would undoubtedly have been one of the richest and finest of European countries. All that she requires is security of property and freedom of industry. Let but these be given to her, and a few years will develop her gigantic resources, and elevate Girgenti, Termini, and Sciacca to a very high rank among corn-shipping ports, though so late as 1866 Eastern Sicily was dependent on foreign countries for corn. A railway 58 miles long has been opened between Messina and Catania with good prospects of success.

PALM OIL (Ger. palmöl; Fr. huile de palme, huile du Sénégal; Ital. olio di palma; Span. aceite de palma) is obtained from the fruit of several

species of palms, but especially from that of the *Elais Guineensis*, growing on the west coasts of Africa, south of Fernando Po, for some distance inland, and in Brazil.

The oil palm reaches a height of from 15 to 40 feet. Its fruit consists of a nut or kernel, surrounded by an arillus or pulp, and when fully grown is about the size of a chestnut, the pulp being about  $\frac{1}{3}$  of the whole bulk. The fruit grows in clusters, much after the manner of clusters of grapes, only a great deal larger, some clusters weighing as much as a cwt. When fully ripe, the fruit, which has a very thin skin, is of a beautiful bright orange colour; in taste, the pulp has a slight approach to sweetness, and is both wholesome and agreeable to eat.

The oil season on the west coast of Africa is from February to September. When ripe the fruit is collected in troughs or reservoirs of the most primitive description—occasionally even in holes dug in the ground, paved at the bottom with stones—where it is exposed to the heat of the sun, which in a short while partially separates the pulp from the kernels or nuts, the separation being completed by beating or bruising the fruit with pieces of wood or stones. The kernels and stems having been removed by hand, the pulp is put into earthen pots and boiled; the oil being in this way separated from a fibrous substance which pervades the pulp, and from other impurities. The whole of this process is so rudely performed, that there is necessarily great waste. When the oil has cooled down, it concretes about the consistence of butter, and is then ready for the cask. It retains nearly the same consistence upon importation into this country; it has no particular taste, but has a pleasant aromatic smell, and is of a yellowish to a deep orange colour. The finest oil is generally of the deeper shade. By keeping it loses its bright colour, first into a dirty white, and becomes rancid, in which state it is rejected.

The natives on the coast use it for the same purpose that we use butter. In this country, and on the continent of Europe, it is made into soap, candles &c.; and it is employed, in conjunction with other materials, to lubricate the axles of railway carriages. By far the greatest consumption of palm oil, however, is in soap making, which purpose, as well as for candles, it requires to undergo the somewhat expensive process of bleaching. It is sometimes imitated with bergamot, coloured with turmeric, and scented with Florentine iris root.

Hitherto our supplies of palm oil have been derived almost entirely, if not exclusively, from the Bights of Biafra and Benin, and other parts of the west coast of Africa, of which it is the staple article of export. It is occasionally brought in small quantities from the Cape de Verde Islands, the West Indies, and Brazil; but it is nevertheless the produce of the coast of Africa indirectly imported.

The trade in palm oil, which took its rise about the beginning of the present century, is now of great magnitude and value. In 1806 the oil exported into England was estimated at only 2000 tons, received from the Bight of Biafra; whereas in 1857, the whole importations amounted to 400,000 tons, according to the official returns, to the value of 1,700,000*l.*, and affording employment to a large amount of shipping. Since 1838, and down to 1867, the imports have been nearly stationary at a little over 40,000 tons per annum. The re-exports of palm oil in 1867 were 18,645 tons, valued at 526,168*l.*

and becomes rancid, in which  
the coast use it for the same pur-  
ter. In this country, and in  
Europe, it is made into soap  
is employed, in conjunction  
to lubricate the axles  
By far the greatest consump-  
wever, is in soap making, as  
ell as for candles, it requires  
slight expensive process  
sometimes imitated with  
turmeric, and scented with  
plies of palm oil have been  
rely, if not exclusively, in  
a and Benin, and other parts  
of Africa, of which it is the  
port. It is occasionally brought  
es from the Cape de Verde  
Indies, and Brazil; but it is  
reduce of the coast of Africa.  
oil, which took its rise about  
the present century, is so val-  
nd value. In 1800 the oil was  
and was estimated at only  
the Bight of Biafra; whereas  
e importations amounted to  
ficial returns, to \$2,740,000  
cket price of 40¢ per ton, and  
ording employment to a large  
ng. Since 1838, and down to  
have been nearly stationary,  
40,000 tons per annum.  
oil in 1867 was 13,663 tons

Of late years an oil has to some small extent  
been abstracted from the kernel or nut of the oil  
palm; but it is essentially different in character  
from that known as palm oil, and, probably from  
the unskillful manner in which the natives ex-  
tract it, is of considerably less value. It is hardly  
necessary to observe that the trade in palm oil  
seems to do more than anything to introduce  
a taste for commercial pursuits, and consequently  
the civilisation, among the natives of Africa. [Out.]  
PAMPHLET. A small book, usually printed  
in the octavo form, and stitched, popularly under-  
stood to comprise from 1 to 10 sheets.

It is enacted by 10 Anne c. 19 s. 113, that no  
person shall sell, or expose to sale, any pamphlet  
without the name and place of abode of some  
known person, by and for whom it was printed or  
published, written or printed, thereon, under a  
penalty of 20s. and costs.

It is enacted by the 55 Geo. III. c. 185, that  
every book containing 1 whole sheet, and not  
exceeding 8 sheets in 8vo. or any lesser size; or  
not exceeding 12 sheets in 4to. or 20 sheets in  
8vo. shall be deemed a pamphlet. The same Act  
imposed a duty of 3s. upon each sheet of one copy  
of all pamphlets published. This duty, which was  
at one vexatious and unproductive, hardly ever  
yielding more than 1,000l. a-year, was  
repealed in 1833.

In the 1859 edition of this work was given  
(under Books) an account of the number and  
selling price of the pamphlets published in 1850,  
1851, and 1852. Some pamphlets have a very  
large sale; but, speaking generally, their publi-  
cation is quite as hazardous as that of books.  
The establishment of Quarterly and other Reviews  
has lessened the occasions and the demand for  
pamphlets.

PANAMA. A city and seaport of New Gra-  
mada, on the Pacific, 38 miles S.E. of Chagres, lat.  
9° 36' N., long. 79° 13' 2" W. Population about  
22,000? It stands on a rocky peninsula, pro-  
jecting into the Bay of Panama, and has an  
imposing aspect from the sea. Its streets are  
well ventilated, and it is said to be cleaner than  
most Spanish American cities. It is encircled by  
regular and not very strong fortifications, com-  
menced at different periods. The houses are  
entirely of wood, straw, and other fragile materials;  
but many are substantially built of stone, the larger  
being courtyards, or *patios*, in the old Spanish  
style; and no doubt it has been much improved  
within the last two or three years. Its roadstead  
is one of the finest in the world. There are a number  
of islands a short distance from the main land,  
which afford secure anchorage for ships of any  
size, and from which supplies of provisions,  
including excellent water, may easily be obtained.  
The tides daily rise and fall from 20 to 27 ft., so  
that it is peculiarly well fitted for the repair and  
fitting of ships.

Previously to 1740, when the trade with the  
Pacific first began to be carried on round Cape  
 Horn, Panama was the principal entrepôt of  
the trade between Europe and West America. From  
that period, however, it fell off; and its decay was  
particularly rapid after the independence of South  
 America, and the opening of the other ports of the  
 Pacific. But since the occupation of California by  
 the Americans, and especially since the discovery  
 of the auriferous deposits in that country, it has  
 rapidly increased. And now that a railway  
 has been carried across the isthmus, it will, in all proba-  
 bility, attain to greater commercial distinction than  
 any other port of the Pacific. Great numbers of steamers are now (1869)  
 employed in the trade between Panama and San  
 Francisco, Vancouver's Island &c.

*Passage across the Isthmus of Panama or Darien.*  
—Latterly, or since the discovery of the mineral  
riches of California, the isthmus has become a  
great thoroughfare, vast numbers of individuals  
having crossed from the port of Chagres on the  
Caribbean Sea to Panama on the Pacific Ocean,  
and conversely.

The port of Chagres is within the mouth of  
the river of that name, in lat. 9° 18' 6" N., long.  
79° 59' 2" W. A bar at the mouth of the river  
has only from 10 ft. to 12 ft. water, though with-  
in the bar the river deepens to from 4 to 6  
fathoms. It is probable that the bar might be  
deepened without much difficulty, and a canal  
might be cut from the bottom of the bay of  
Manzanilla to the river, from which it is only 3  
miles distant. A short while ago the town (if  
so it might be called) was a mere cluster of huts,  
unhealthy, and without any accommodation for  
passengers. But having lately become one of  
the starting points in the nearest and shortest  
route from the east to California, it has been  
greatly improved.

A railway from Aspinwall to Panama, a dis-  
tance of upwards of 47 miles (completed in 1864),  
has been constructed by a joint-stock company of  
New York, and reflects great credit on American  
enterprise and perseverance. (See Mr. Bidwell's  
description of it, furnished in M'Culloch's *Geographi-  
cal Dictionary*, ed. 1866.) The difficulties to be  
overcome were of a very formidable description,  
partly from the nature of the ground, which not  
unfrequently consisted of deep marshes, but more  
from the luxuriance and strength of the vegeta-  
tion through which it was necessary to penetrate,  
and the heat, moisture, and unhealthiness of the  
climate. Unluckily, the desire to accomplish  
their task in the shortest time and at the least  
expense, tempted the engineers to execute the  
work in a superficial manner, substituting, in many  
instances, bridges, viaducts, pillars &c., of wood,  
for those of stone, mortar, and iron. In a country  
where the decomposition of vegetable matter is so  
very rapid, this was as false and spurious a species  
of economy as can well be imagined. Already  
many miles of the railway have had to be re-  
paired or rather reconstructed, by the substi-  
tution of *lignum vita* and other hard woods for  
the softer ones that were first used. This, how-  
ever, will do little more than palliate the evil;  
and there can be no doubt that eventually stone  
and iron bridges and viaducts will have to be used  
instead of wooden ones everywhere along the line.

Trains take about 3 hours in passing from sea  
to sea; but supposing (which is not the case)  
that this railway were everything that could be  
desired, still it is plain that the grand desideratum  
is the carrying across the isthmus of a water com-  
munication between the Atlantic and Pacific  
Oceans. We do not mean by this a canal suitable  
only for coasters, or vessels of comparatively  
small burden. Such a channel would be of little  
use, except to the countries contiguous to its ter-  
mini. What is really wanted is a canal that will  
admit ships of the largest burden, and bound on  
the longest voyages. The advantages that would  
result from having the isthmus perforated by  
such a channel cannot be easily exaggerated. No  
other project that appears to be within the limits  
of possibility, perhaps not even the carrying of a  
ship canal across the Isthmus of Suez, would give  
so great a stimulus to commerce and navigation.  
It would remove the barrier which renders the  
navigation between the eastern and western coasts  
of America so tedious and difficult. And, by doing  
this, it would enable ships from Europe to reach  
the latter and the Pacific in less than half the

time they do at present, while it would greatly facilitate the voyage to Australia and China.

A grand project of this sort is on foot. It is proposed to cut a canal that shall admit ships of 1,000 tons burden and upwards, between Porto Escoeces (lat. 8° 5' N., long. 77° 21' W.), near Point Caledonia, in the Gulf of Darien, on the Caribbean Sea, and the Rio Savanna, which falls into the Gulf of San Miguel, on the Pacific. The intervening space (about 38 or 40 miles) is said to be comparatively flat; the ports at each extremity are easy of access, and have deep water; and it is proposed that the canal should be constructed throughout on the same level, and have no locks. The cost of the project is estimated at from 12 to 15 millions sterling. Considering the vast importance of such a work to the United States, to this country, and, indeed, to all maritime nations, this expense, heavy as it may appear, should be reckoned a subordinate matter. Were the country through which it is to pass in the possession of England or the United States, it would, most probably, have been undertaken. But the unsettled state of Central America, and the knotty questions that might eventually arise as to the property and management of the canal, are serious obstacles to its being proceeded with. (See for ample details on this interesting subject the work of Dr. Cullen, entitled *Isthmus of Darien Ship Canal*. The learned doctor is, probably, a little too sanguine in favour of the project, but despite this excusable bias, his work is instructive and valuable.)

**PAPAL DOMINIONS (TRADE WITH).** The *Gazette* of January 6, 1853, contained the following declaration on the part of Great Britain, establishing a system of perfect reciprocity in trade and navigation with the Papal States. The declared value of our exports to these States amounted in 1858 to 409,475*l.*, and in 1867, these States having in the interval been seriously reduced in extent by recent annexations to the Kingdom of Italy, took from us British produce to the extent only of 15,801*l.*

**Declaration.**—The undersigned, her Britannic Majesty's Chargé d'Affaires at the Court of Tuscany, having received from his Eminence the Cardinal Antonelli, Secretary of State to his Holiness Pope Pius IX., the assurance that no other or higher duties or charges are levied in the ports of the Papal States on British vessels than are payable on national vessels, nor on goods imported or exported in British vessels than are payable on the like goods imported or exported in national vessels, has received the commands of her Majesty to declare:

1. That no duties of tonnage, harbour, lighthouse, pilotage, quarantine, or other similar or corresponding duties, of whatever nature or under whatever denomination, levied in the name or for the profit of the Government, public functionaries, corporations, or establishments of whatever kind, shall be imposed in British ports upon Papal vessels, from whatever port or place arriving, which shall not be equally imposed in the like cases on national vessels, and that no duty, charge, restriction, or prohibition shall be imposed upon, nor any drawback, bounty, exemption, or allowance withheld from, goods imported into or exported from British ports in Papal vessels, which shall not be equally imposed upon or withheld from such goods, when so imported or exported in national vessels.

2. That no other or higher duties shall be imposed on the importation into the dominions of her Britannic Majesty of any article the growth, produce, or manufacture of the Papal States, than are or shall be payable on the like article

being the growth, produce, or manufacture of any other foreign country. That no other or higher duties or charges shall be imposed in the British dominions on the exportation of any article to the Papal States, than such as are or may be payable on the exportation of the like article to any other foreign country; and that no prohibition shall be imposed upon the importation of any article the growth, produce, or manufacture of the Papal States into the British dominions, nor upon the exportation of any article from the British dominions to the Papal States, unless such prohibition shall extend to all other nations.

3. That Papal vessels shall be at liberty to import into British ports any article legally importable, and to export from British ports any article legally exportable, on payment of the same duties, and with a right to the same bounties or drawbacks as are or may be payable or allowed in respect of the same articles if imported or exported in national vessels.

4. That all vessels which, according to the laws of the Papal States, are to be deemed Papal vessels, shall, for the purposes of this declaration, be deemed Papal vessels.

5. That the following stipulations shall apply to the coasting trade, which is reserved exclusively to national vessels.

6. That if any ship of war or merchant vessel of the Papal States shall be wrecked on any part of the British dominions, such ship or any parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise which shall be saved therefrom, the produce thereof, if sold, shall be faithfully restored to the owners, upon being claimed by them or by their duly authorised agents. If there are no such owners or agents on the spot, then the said ships or parts of ships, furniture, appurtenances, goods, and merchandise, or proceeds thereof, if sold, as well as all property found on board such wrecked ships or vessels shall be delivered to the Papal consul or consul in whose district the wreck may be taken place, upon being claimed by him; such consul, vice-consul, owners, or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage, or other expenses which would have been payable in like cases of a wreck of a national vessel.

charge for such salvage and other expenses shall be made and settled immediately, subject to the right of appeal on the part of the person paying the same, as may exist in the British dominions. The goods and merchandise saved from the wreck shall not be subject to duties unless cleared for consumption, in which case they shall be liable to the same duties as if they had been imported in a British ship.

7. That the foregoing concessions are granted on condition of a perfect and entire reciprocity in favour of British vessels in the ports of the Papal States. They shall come into operation from the date of the present declaration, and shall remain in force for seven years, and further for the expiration of 12 months after notice shall have been given by the British Government to the Papal Government, for terminating the reciprocal arrangement.

In witness whereof the undersigned has signed the present declaration, destined to be exchanged against a similar declaration, on the part of his Eminence the Cardinal Secretary of State, and affixed thereto the seal of his arms.

Done at Florence, the 17th day of November, 1853.

P. CAMPBELL SCARLETT

The 'similar declaration' of Cardinal Antonelli

is given with the foregoing in the *Gazette*. It is the exact counterpart of that made by Mr. Scarsdale. [CIVITA VECCHIA.]

PAPER (Ger. and Dutch, papier; Fr. papier; Ital. carta; Span. papel; Russ. bumaga; Lat. charta; Arab. kartas; Pers. kaghlas). This highly useful substance is, as everyone knows, thin, flexible of different colours, but most commonly white, being used for writing and printing upon, and for various other purposes. It is manufactured of vegetable matter reduced to a sort of pulp. The term paper is derived from the Greek *πάπυρος* (papyrus, see post), the name of the plant on the inner bark of which (*liber*, βιβλος, whence our word book) the ancients used to write. Paper is made up into sheets, quires, and reams; each quire consisting of 24 sheets, and each ream of 20 quires.

*Historical Sketch of Paper.*—Difference between ancient and Modern Paper.—Some of those sagacious and ingenious persons who have investigated the arts of the ancient world, have expressed their surprise that the Greeks and Romans, though they possessed an immense number of books, and approached very near to printing in the stamping of words and letters, and similar devices, should not have discovered the art; the first rude attempts at typography being sufficiently obvious, though much time and labour have been required to bring the process to its present state of perfection. But they should rather, perhaps, have wondered that the more civilised nations of antiquity did not invent paper: an invention which, it may easily be shown necessarily preceded that of printing.

But this was an exceedingly difficult task; the more so, that the vast importance of paper could not be appreciated, or even imagined, till after it had been generally introduced. At first, the history of important events appears to have been handed down by inscriptions cut on rocks, or on stone or marble, and the walls of edifices; and this primitive usage is still retained by the monks in our churches and cemeteries.

At a later, though still very remote age, men were accustomed to write upon portable surfaces of various kinds. Everybody knows that the Phoenicians wrote upon tables of stone; and the Jews wrote a copy of the law upon the like materials. (Josh. viii. 32.) The Greeks and Romans engraved laws, treaties, contracts, and other important documents, on plates of brass; and it is said that a fire broke out in the reign of Vespasian, consumed

many of these valuable monuments. (*Nouveau Voyage de L'Empire*, i. 451.) But exclusive of plates of brass, which were necessarily inconvenient, costly, and quite unfit for ordinary use, thin and flexible plates of lead and other metals (Job xix. 23, 24), thin pieces of wood, parchment, linen, and a variety of similar substances, were used in writing. Cheaper materials, such as the leaves and bark of trees, palms, &c. were also used from a very remote period for the same purpose; but leaves (*χάρται*, chartæ) were, when dry, apt to split in the direction of the fibres, it was found to be necessary, in preparing them for writing, to glue them together, so that the fibres might cross each other in opposite directions. The texture of the leaf, or bark, if we may so call it, is thus greatly strengthened; and when it has been smoothed, pressed, and fitted for use, it is less inconvenient and better looking than might be supposed.

In fact, is the principle on which the paper of the ancients was formed. This, however, which was called *charta Egyptiaca*, from the place of its manufacture, did not consist of

leaves, but of the inner bark of the famous reed or rush, the *Cyperus papyrus*, found along the banks of the Nile, or rather in the pools and ditches which communicate with the river. The ancients applied this useful plant to an immense variety of purposes; but here we shall only notice that from which it has acquired an immortality of renown. The inner bark having been divided by a needle or other sharp instrument into very thin and broad layers or filaments, portions of these were placed side by side longitudinally, and glued together at the ends; another portion being glued crosswise on the backs of the latter, to give the paper the requisite strength. Pliny and other writers have described the process (*Hist. Nat. lib. xiii. c. 11, 12, 13*), which has been further elucidated by Hardouin and other commentators. But the fullest and ablest discussion of this curious subject is contained in the very learned and elaborate work, the *Nouveau Traité de Diplomatique* (i. pp. 448–521), where the most interesting particulars respecting the history and manufacture of papyrus, as well as of the greatest number of the other writing materials used in antiquity, have been collected and set in the clearest point of view. (*Dictionnaire Diplomatique* de De Vaines, art. 'Papier,' ii. pp. 165–174.) Bruce has given a summary of the authorities in the seventh volume of the 8vo. edition of his *Travels*; and, not satisfied with this, he attempted to make paper from the papyrus, in which, not being very successful, he imputes his failure to errors in the statements of Pliny; not reflecting that, had he endeavoured, trusting to written directions, without experience and traditional art, to make modern paper, or even a pair of shoes, he would, most probably, have been equally infelicitous. Egypt enjoyed for a lengthened period a natural monopoly of this valuable article; and even attempted, in anticipation of a later policy, by prohibiting the growth of the papyrus, except in certain localities, and limiting its supply, to sell its produce at an artificially enhanced price. (Amelion, *Commerce des Egyptiens*, p. 238.) But this policy ceased on the conquest of Egypt by the Romans, who, having imported the plant into Rome, succeeded in preparing from it a very superior article. Pliny enumerates the various kinds of paper, from the coarsest, which was used, like our brown paper, for packing, to the most expensive and finest. The latter, which was made of the innermost filaments, was of a snowy whiteness; and when properly dressed and polished, was easily written upon. The consumption was very considerable; and being, after the foundation of Alexandria, principally made in that city, it formed an important article in her commerce, and furnished employment for many workmen and much capital. Flavius Vopiscus relates, that in the third century, the tyrant Firmus used to say there was so much paper there, and so large a quantity of the glue or size used in its preparation, that he could maintain an army with it: 'Tantum habuisse de chartis, ut publicæ saepe diceret, exercitum so alere posse papyro et glutino.' We may doubt whether the value of the paper at present belonging to any single city would do the like. *Charta Egyptiaca* is very ancient, having, notwithstanding the assertion of Varro and Pliny to the contrary (*Hist. Nat. lib. xiii. cap. 11*), been in common use long before the age of Alexander. This is evident from the statement of Herodotus, who, though he lived about a century before that

conqueror, tells us, that in former times, when papyrus was scarce, the Ionians wrote on the skins of goats and sheep: and that that practice continued to be customary among several barbarous nations. (Lib. v. cap. 58.)

Though white, smooth, durable, and not ill-adapted for writing, ancient paper was not suited for the printer: by reason of the closeness of the grain, it would not have received the ink from types more kindly than shavings of wood, and such like materials; and its texture was so very brittle, that it would have shivered to pieces under the press. It was, in truth, an artificial mass ('viscera nivea virentium herbarum'), no great invention or ingenuity being discovered in its preparation. Modern paper, on the other hand, is wholly artificial; and the contrivances for its manufacture are marvellous alike for the sagacity evinced in their design and their practical efficiency. Like the paper of antiquity, it is formed of the filaments of various sorts of vegetable substances, derived principally from the tearing to pieces or pounding cotton and linen rags, and similar materials, mixed with water. This process is called beating them into pulp; and when examined with a microscope, the floating filaments are found to be well fitted for adhering together, being jagged and rough, and mixed in every possible way. A portion of this mixture or pulp being, when properly prepared, poured upon moulds or sieves of fine woven wire, the water is drained off, and the suspended fibres, falling to the bottom, form a layer or sheet, which, being consolidated by pressure and dried, becomes paper, its strength and goodness depending, of course, in a great measure, on the quality of the rag or other material of which it is made. Paper used to be manufactured by dipping sieves or frames into the pulp; the portion of filaments so lifted up forming the sheet of paper. But the application of rotary motion to the manufacture has effected a total change in the mode in which it was carried on: instead of dipping the sieves or frames into the cistern of pulp, a circular web, or round towel of woven wire, revolves horizontally under the vessel (technically called the vat), receives the deposit, conveys it away, and, by an adjustment of extraordinary delicacy, transfers it uninjured, though as fragile as a wet cobweb, to a similar revolving towel of felt; thus an endless web of paper is spun, as long, at least, as the machine continues to move, and pulp is supplied.

The pervious and spongy texture of paper make it readily imbibe and retain the ink impressed on it by types in printing, and by the pen in writing; its toughness hinders it from being easily torn; and, in a well-bound book, under favourable circumstances, its duration is indefinite, and, for all practical purposes, eternal. It is true that legal documents are sometimes written or printed on parchment, which is less liable to be torn, or injured by rubbing; the luxury of typography occasionally, also, exhibits a few impressions of a splendid work upon vellum; and, it is further true, that these substances were used for writing upon by the ancients; but they are necessarily expensive, and the cost of either far exceeds the means of the great majority of book buyers: so that it would be altogether unprofitable to cast types, to construct presses, and to incur the various and heavy charges of an establishment for printing, unless we possessed a cheaper material on which to print.

Almost all the more ancient and valuable

existing Greek and Latin manuscripts written either on parchment or vellum, are generally on the latter. It is singular, however, that while such is the case, all or almost all very old charters and diplomas are written papyrus. Indeed the learned authors of the *Nouveau Traité de Diplomatique* affirm that parchment charter has been discovered anterior to the 6th century. (i. 479.)

It appears to be sufficiently established that paper, fabricated like that now in use, of cotton and other vegetable materials, and of silk, has been manufactured in China from a very remote epoch. (*Nouveau Traité de Diplomatique*, i. 51.) The Arab historians state that similar paper was manufactured in Mecca about the beginning of the 8th century (Andres, *Origine e Progresso della Letteratura*, i. 202, ed. Rom. 1808, and Gibbon, ix. 379); and most probably the mode of production was then, also, known to the Greeks. It appears to have been soon after introduced into Europe; but it is doubtful whether it were done by the Arabians or Greeks. The mode of fabricating paper from cotton and other vegetable materials being once discovered, fabrication from linen rags was a comparatively easy, and in Europe, where cotton was extremely scarce, an all but necessary step. It is singular, however, that we have no positive information either as to the country where the epoch when, paper from rags began to be manufactured in Europe. 'Mais on ne peut reculer son invention plus tard qu'au treizième siècle, ni son usage ordinaire au-delà du quatorzième.' (*Nouveau Traité* &c. i. 524.) In Egyptian paper, or paper made of papyrus in the manner described above, continued to be partially employed down to the middle of the 11th century, though parchment was then principal material used in writing.

It is curious to observe how shortly the introduction of paper preceded the invention of printing, to which, indeed, as already seen, it is an indispensable preliminary. Muratori attributes the ignorance of the barbarous ages principally to the scarcity and high price of paper, and the superior intelligence of modern times to its abundance and cheapness. (Andres, i. 202.) And whatever opinion may be entertained as to the first part of this statement, there can be no question that the latter is perfectly well founded.

Not only are we in the dark as to the history of modern paper, but we are unable to make a very satisfactory conjectural estimate of the manner in which it was invented. It is, however, almost certain that the invention must have been suggested by accident, or by observing the effect produced by the accidental drying of trifling vegetable matter, or in some such way; and the hint thus afforded was gradually improved upon. It is not possible to imagine that the invention should have been wholly the result of design; for we cannot conceive how any man without any previous knowledge, should have proposed to himself to produce paper by pounding rags, or other vegetable matter, mixing the mass in water, and then pressing and drying the sheet. But, without indulging in unprofitable conjecture, it is at all events certain, that however it was, whomsoever discovered, no invention has been of greater importance. 'Cum charte usu maxime humanitas vitæ constet et memoria.' (Plin. *Nat. lib. xiii. cap. 21.*) The processes by which the most worthless and vilest materials are converted into such admirable substances as paper and glass, are probably the greatest triumphs of human talent and ingenuity. They have

than realised the dreams of the alchemists; and have been incomparably more advantageous than if we had become acquainted with a means of transmuting the inferior metals into gold.

**Manufacture of Paper in England.**—The application of paper to the purposes of writing and printing, and the fact of its being indispensable to the prosecution of the latter, render its manufacture of the highest utility and importance. But, even in a commercial point of view, its value is very considerable. France, Holland, and Genoa had, for a lengthened period, a decided superiority in this department. The finest and best paper being made of linen rags, its quality may be supposed to depend, in a considerable degree, on the sort of linen usually worn in the country where it is manufactured; and this circumstance would account for the greater whiteness of the French and Belgian papers, as compared with those of the French and Italians, and still more the Germans. The rags used in the manufacture of writing paper in Great Britain are collected at home; but those used in the manufacture of the best printing paper are imported, principally, from Italy, Hamburg, and the Austrian States, by way of Trieste. [RAGS.] We believe, however, that it was owing rather to the want of skill, than, as has sometimes been supposed, to the inferior quality of the linen of this country, that the manufacture of paper was not carried on with much success in England till a comparatively recent period. During the 17th century, most part of our supply was imported from the Continent, especially from France. The manufacture is said to have been considerably improved by the French refugees who fled to this country in 1685. But it is distinctly stated in *The British Merchant* (vol. ii. p. 266), that hardly any sort of paper, except brown, was made here previous to the Revolution. In 1690, however, the manufacture of white paper was attempted; and within a few years, six branches were much improved. In 1712, it is supposed that there were about 300,000 reams of paper annually produced in Great Britain, which was equal to about two-thirds of the whole consumption. In 1783, the value of the paper annually manufactured was estimated at 780,000*l.* In 1807, besides making a sufficient quantity of most sorts of paper for our own use, and for exportation, we exported upwards of 600,000*l.* worth of books. The importation of foreign paper for British consumption had nearly ceased prior to the abolition of the paper duty; but since then the importation has gradually increased, and in 1816 we imported (deducting re-exports) 561,959*l.* worth, chiefly printing paper, from Belgium, Germany, and France, while we exported British-made paper of about the same value, 569,438*l.* A small quantity of French paper was used in this country for copper-plate printing till within these few years; but, in this respect, we now surpass the French, and there is no artist of either country who does not consider English paper, manufactured according to the latest improvements, best adapted for prints. The French have, however, always excelled in the manufacture of very thin letter paper; and we obtain from them a small portion of this article, and some paper hangings, and printing paper.

In 1813, Dr. Colquhoun estimated the value of paper annually produced in Great Britain at 1,000,000*l.*; but Mr. Stevenson, an incomparably better authority upon such subjects, estimated it nearly half this sum. From information obtained from those engaged in the trade, we incline to think that the total annual value of the paper manufactured in the United Kingdom, may at

present (1869) amount to about 5,000,000*l.* There were, in 1868, 272 paper-mills in working order in England, and 57 in Scotland. The number in Ireland is but inconsiderable. So that, while the quantity of paper manufacture has greatly increased since the abolition of the paper duty, the number of mills in working order has been reduced. That is, while the large mills have been increased in size and power and employment, the small ones have been very high abolished.

Many of the mills make a variety of papers, but the following statement from the *Paper Mills Directory* for 1869 shows how the different classes of manufacture are divided among the English mills:—

	Mills.
Making Writing Papers, Hand-made	21
" " Machine-made	22
" Printing, News, and Long Elephants or Paper	96
" Hangings	99
" Cartridges	48
" Coarse Papers, White and Coloured	60
" Small Hands and Caps	108
" Browns	108

In 1861, 18,067 individuals were directly engaged in the trade, viz. 13,357 in England, 4,421 in Scotland, and 289 in Ireland; and, besides the workmen employed in the mills, the paper manufacture creates a considerable demand for the labour of millwrights, machinists, smiths, carpenters, iron and brass founders, wire-workers, woollen manufacturers, and others, in the machinery and apparatus of the mills. Some parts of these are very powerful, and subject to severe strain; and other parts are complicated and delicate, and require continual renovation. Owing to this, the manufacture is of much greater importance, as a source of employment, than might at first be supposed, or than it would seem to have been formerly considered by Government, who loaded it, down to a very recent period, with an excise duty amounting to more than *three times as much as the total wages of the workpeople employed.*

It was formerly customary to collect the rags used in the manufacture into large heaps, in order that, by their beating and fermentation, they might be the more easily reduced to filaments. But this injured the rags; and it is now the practice to tear them to pieces, without any such preparation, by powerful machines, constructed for the purpose.

During the present century this manufacture has been signally promoted by the combined influence of science, ingenuity, and mechanical skill. These have been successfully exerted in the preparation of the pulp; the conversion of the pulp into paper; and the provision of materials; and in none has their influence been more remarkable than in the last. This is evident from the fact, that while the manufacture has been more than quadrupled since 1820, the demand for continental rags and other foreign materials has actually been reduced within that time, in consequence of the immense supply we derive from substances previously regarded as worthless, and treated as refuse. The sweepings of cotton and flax mills, owing to the grease and dirt with which they are mixed up, were, until within these few years, of no value whatever, except as manure. But means having been discovered of rendering them clean and white, they are now made into very good paper; and the neighbourhood of Manchester has, in consequence, become a principal seat of the manufacture. The chemical and mechanical processes by which these materials are purified, whitened, and made available for the production of paper, without their strength being impaired, are not only exceedingly interesting in themselves, but are of great national importance; and, by reducing

the cost of paper, have done ten times more to lower the price of books, and diffuse literature, than all the efforts of all the societies that ever existed.

But our paper-makers, after the repeal of the paper duty, found much difficulty in competing with foreign manufacturers, inasmuch as the trade in rags was not free, and the latter had greater facilities for getting them at a cheaper rate. This led our paper-makers to search diligently for good substitutes for rags, and their choice seems to have fallen chiefly on Esparto. In the ten months ended October 31, 1868, we imported no less than 74,618 tons of it, and but 14,096 tons of rags. Esparto is used chiefly in the manufacture of printing and wrapping, and second-class writing papers. [Escarro.]

The first idea of a machine for converting pulp into paper originated in France, the inventor being an ingenious workman of the name of Louis Robert. A model of this machine was brought to England by M. Leger Didot; and though at first it was far from giving an assurance of success, it sufficed to induce English capitalists and engineers, particularly Mr. Donkin, to follow up the scheme; and in the course of a few years they brought it to a high degree of perfection. The late Mr. Dickinson, of Hertfordshire, one of the most intelligent mechanists and extensive paper manufacturers in England, invented a machine of a different construction for the same purpose, and introduced also various subsidiary improvements into the manufacture. One of these consists in the application of air pumps to the process, by the action of which he produces a partial vacuum under a portion of the wire on which the pulp is in the act of settling; and thus very much accelerates its consolidation; in fact, prepares it almost instantaneously for the first mechanical pressure. The result is all but miraculous. By the agency of a great deal of complicated machinery, so admirably contrived as to produce the intended effect with unerring precision and in the very best manner, a process, which in the old system of paper-making occupied about *three weeks*, is performed in as many minutes. A continuous stream of fluid pulp is, within this brief space of time, and the short distance of 30 feet, not only made into paper, but actually dried, polished, and every separate sheet cut round the edges, and rendered completely ready for use. The paper manufactured by this wonderful combination of intelligence and power is, at once, moderate in price, and, for most purposes, superior in quality to what was formerly made by hand. The sample before the reader, though not the finest that is made, will warrant what is now stated. Mr. Dickinson also made an important improvement in the paper manufacture, on the principle of veneering in cabinet work. By making two webs of paper, each by a separate process; and by laying them together while in an early stage, they are rendered inseparable by the pressure to which they are subjected. This paper is used in copper-plate printing; and by adopting a peculiar method of preparing the pulp, and selecting a finer rag for the web which forms the face of the paper, it is much better calculated for taking a fine impression. Its introduction has put a total stop to the importation of that species of French paper, which was formerly used in considerable quantities by copper-plate printers. Probably, however, the most ingenious of the modern inventions in the manufacture is that by which Mr. Dickinson contrived, without increasing the thickness of paper, to embody parallel coloured threads in its fabric. This novel

description of paper is now used in the printing exchequer bills and postage envelopes, for which it is admirably fitted, inasmuch as it cannot be counterfeited, except by employing similar machinery, which it would cost a great deal to construct, and be all but impossible to conceal.

The same gentleman introduced the use of magnets for removing any iron that might be present in the pulp, so as to prevent the appearance of iron mould in the paper.

*Duty on Paper.*—Previously to 1836, all writing coloured, or wrapping papers, cardboards and pasteboards, were denominated first-class paper, and paid 3d. per lb. duty (28s. per cwt.); unless *manufactured wholly of tarred ropes, without tar being previously extracted*, in which case the paper was denominated 2nd class, and paid 1s. per lb. (14s. per cwt.). Millboards and scaleboards, made of the same materials as 2nd class paper, paid 2½d. per lb. (21s. per cwt.) duty.

This duty varied on the different descriptions of 1st class paper from about 25 or 30 per cent. the finest, to about 200 per cent. on the coarsest. A duty so oppressive led to the commission of very great frauds, which all the vigilance of officers, and the endless multiplication of checks and penalties, were unable to prevent; the effect of such devices being to injure the honest manufacturers, and to give those of a different character greater facilities for carrying on the fraudulent schemes. But, laying out of view a moment the oppressiveness of the duty, can anything be more absurd than to interdict the manufacturer of third-class wrapping paper (he is to him that the regulation applied) from using any other material than *tarred ropes*? After the repeal of 1815, and the very general introduction of iron cables, tarred ropes advanced considerably in price; but as the use of *any other material* *whenever* would have occasioned an increase of 20 per cwt. of duty, advantage could not be taken of this circumstance; so that the exchequer regulated without putting one sixpence into the pocket of the Government, obliged the public to pay an increased price for an inferior article. Neither was this its only effect: a good deal of the material thrown out in sorting rags, which might have been used in the manufacture of coarse wrapping paper, was sold by the manufacturers for about 3s. per cwt.; while a good deal that might have been used in the same way, could not be sold at all, but was absolutely lost. It is plain, therefore, that this regulation had a twofold operation: first, in adding to the cost of wrapping paper, by compelling it to be made from a comparatively expensive article; and secondly, in adding to the expense of fine paper, by preventing the re-employment of the rags used in its manufacture from being beneficially employed.

It may, perhaps, be doubted, considering the purposes to which paper is applied, whether it should have been subject to any duty whatever. Printers, stationers, bookbinders, type-founders, artists, copper-plate and lithographic printers, engravers, makers, paper-stainers and paper-hangers, &c. are all affected by a duty on it. And if it be kept within reasonable bounds, it increases the price, and hinders the publication of books; it places a great obstacle in the way of the progress of knowledge, of useful and necessary arts, and of sober, industrious habits. Books carry the impressions of the human mind over the whole world, and may be truly called the raw material of every kind of science and art, and of all social improvement. (Sir H. Parnell *On Financial Reform*, 3rd ed. p. 30.)

But though, in 1836, the exigencies of

public service did not permit the total repeal of the duties on paper, they were then materially lowered. The duty on first-class papers was reduced to the same level as that on papers of the second class, or from 3*d*. per lb. to 1*d*. per lb.; and the manufacturers of the coarser descriptions of paper being at the same time relieved from the restraints under which they had previously laboured, and allowed to use any material in the manufacture which they may judge best. The duty of 1*d*. per square yard laid on paper when printed or stained, over and above the ordinary duty on paper, was then also repealed, and the various Acts relating to paper were combined into a single statute.

The influence of this wise and judicious measure in reducing the price of paper used in printing and writing was decidedly manifested. The abolition of the discriminating duty on stained or printed paper, was also of material importance. The reduction of price it occasioned enabled a much larger class of persons to get their apartments papered; and it was in this way productive, not only of an additional demand for paper and labour, but of an increase of comfort and cleanliness.

This measure also in great part obviated the injustice done to authors and publishers, by compelling them to pay a duty on the paper used in printing books previously to their publication; and, consequently, before it could be known whether the books would sell. When they did not sell, the tax had obviously to be paid out of the capital of the authors or publishers, and the loss arising from an unsuccessful publishing speculation was increased by its amount. [Ante, Books.] It is true that every duty on paper, how limited soever, operates in this way, and is therefore objectionable on principle; but the practical hardship inflicted on authors by the last paper duty was not very material.

As respects revenue, too, the measure was completely successful. In 1835, the net produce of the old duties on paper, in the United Kingdom, amounted to 796,305*l*. In 1840, the reduced duties produced 581,429*l*.; and in 1858 they produced 1,118,433*l*., being 323,128*l*. more than their produce when the rate of charge was doable. This statement, however, gives but an imperfect view of the progress of the manufacture: for, owing to the premium (for so it may be called) which the present postage regulations give on the use of thin and light paper, the increase in its production was, no doubt, a good deal greater than we might infer from the mere increase of weight.

After an unsuccessful attempt in 1860, the paper duty was totally repealed in 1861. In the last year of its existence, the receipts were 1,530,000*l*.

**PAPER HANGINGS.** In 1867, we exported 49,411 cwt. of paper hangings of our own manufacture, valued at 123,042*l*., chiefly to North America and Australia, and we imported 7,753 cwt., chiefly from France, valued at 32,563*l*. [Paper.]

**PARÁ or GRAM PARÁ.** A port of Brazil, situate about 80 miles from the mouth of the Amazon. Population 35,000.

**Shipping.**—In 1865, the total number of ships which entered the port of Pará was 96, with 227,709 tonnage; in 1866, 139, with 52,168 tonnage, and in 1867, 160 of 58,798 tons. There also entered in 1866, 96 vessels of 61,752 tonnage, and in 1867, 80 vessels of 59,927 tons, all engaged in the coasting trade. These were chiefly Brazilian. The trade of Pará is of great and increasing importance, the exports having risen during the

five years 1863-7 from about 525,000*l*., to upwards of 900,000*l*. in value. The principal exports are India rubber, cacao, Brazil nuts, and hides. Of these articles the first is by far the most important, the export in the year 1867 having been 2,324,912 lb., worth about 570,000*l*.. It is collected in large quantities throughout the swamp on the banks of the Amazon. The exports of cacao and Brazil nuts, having declined, are again increasing.

The neighbourhood of Pará also produces annatto, isinglass, sarsaparilla, and a little sugar. The imports of Pará, on an average of the three years 1861-3, amounted in value to 510,000*l*., and in 1867 to 599,416*l*.

**Weights and Measures.**—1 Brazilian lb. = 1.012 lb. avoirdupois; 1 arroba = 32.38 lb.; 1 quintal = 129.517 lb.; 100 alquieres = 1 bushel; 17 canadas = 16 imperial gallons; 1 vara = 1.198 yard; 1 corado = 0.714 yard. The depreciation of the currency of the country consequent on the war with Paraguay has created alarm among capitalists, and caused embarrassment in business transactions.

The rates of freight to England in 1866 were for India-rubber, 30*s*. to 45*s*. per ton; cacao, 50*s*.; Brazil nuts, from 35*s*.

Pará is already a growing town, and will become more important, from its position on the Amazon, and from the fact that it therefore is on the road to the interior and Peru, since the navigation of the Amazon was opened to the shipping of all nations in September 1867. (The above information is chiefly obtained from Mr. Consul Hay's *Reports* of March 9, 1867, and February 1868.)

**PARCEL.** A term indifferently applied to small packages of wares, and to large lots of goods. In this latter sense, 20 hogsheds of sugar or more, if bought at one price, or in a single lot, are denominated a *parcel of sugar*.

**PARCELS, BILL OF.** An account of the items composing a parcel.

**PARCHMENT and VELLUM.** The former consists of the skins of sheep, and the latter of those of calves, prepared in such a manner as to render them suitable for being written upon, for covering books, and other purposes. The consumption of these articles is very considerable. In this and most other countries, it is customary to use them instead of paper in the drawing up of a great variety of deeds and other legal instruments. They are also extensively used, especially in Italy, in the binding of books. The finest copies of the magnificent classics which issued from the Dutch presses, in the 17th century and the early part of the 18th, were all bound in vellum.

Parchment is coarser than vellum, and not so well adapted for writing upon. The qualities of both articles differ very widely; so much so, that the best parchment is preferable to inferior or even middling vellum. The goodness of each depends partly on the quality of the skins of which they are made, and partly, and indeed in a very high degree, on the care and skill with which they are manufactured.

**Historical Notice.**—The history of these articles is involved in some obscurity. Varro and Pliny (*Hist. Nat. lib. xiii. cap. 11*), who have been generally followed, state that they were originally manufactured at Pergamus, in Asia Minor, the capital city of Eumenes II., one of Alexander's successors, but who must not be confounded with Eumenes, the secretary and general of the conqueror, during the reign of that prince; and that parchment owes to this circumstance its classical name of *charta Pergumena*. But there

seems to be little if any foundation for this statement. We have seen, in the preceding article on PAPER, that Herodotus, who flourished rather more than a century before Alexander the Great, states distinctly, that previously to his era, when paper (*charta Egyptiaca*) was scarce, the Ionians were accustomed to write on the skins of sheep and goats, and that that practice was then followed (viz. in his time) by several barbarous nations. (Lib. v. cap. 68.) And it is all but certain, seeing that the practice of writing on skins had been in use for at least 2½ centuries, and probably much more, previously to the era of Eumenes, that their preparation would, in the course of that lengthened period, be so much improved as to render them little different from parchment. It is probable, indeed, that their manufacture may have been improved in Pergamum; but we incline to think that parchment owes its name rather to the extensive demand for it in that city, in consequence of Eumenes having amassed a large and valuable library, than to anything else. He was, in fact, compelled to use parchment and vellum in the copying of books, as his contemporary Ptolemy Philadelphus had prohibited the exportation of paper. (Plin. ubi supra.)

The scarcity of parchment during the middle ages, and in antecedent times, led to the practice of obliterating the writing on old parchments, by rubbing them with pumice stone, immersing them in boiling water, and such like devices; and there can be no manner of doubt that the prevalence of this practice has been most injurious to literature, and that it has most probably occasioned the total destruction of some of the noblest chefs-d'œuvre of antiquity. In the middle ages these were erased, that room might be made for some worthless treatise on scholastic theology or logic. Sometimes, however, it happens that the ancient writing is not so much obliterated, but that it may still be read; and to that circumstance the recent discovery of a portion of Cicero's treatise *De Republicâ* is to be ascribed. It had been effaced to make room for a commentary of St. Augustine on the Psalms. (See the preface of Mai, the ingenious discoverer of this lost treatise.)

Parchments from which the writing has been erased in this way are called *palimpsests* (from *πάλιον*, again, and *ψάω*, to efface or clean), or repeatedly cleaned parchments; because they have been repeatedly cleaned, renewed, or prepared for writing upon. If the learned world is ever to be gratified by the recovery of the lost comedies of Menander, or the lost books of Polybius, Livy, and Tacitus, it will most probably be by finding them under some homily or poem of the middle ages. (*Nouveau Traité de Diplomatique*, i. 482 &c.; *Dom de Vaines*, ii. 177; &c.)

#### PARTIAL LOSS. [INSURANCE (MARINE).]

**PARTNERSHIP.** The association of two or more individuals for carrying on some business or undertaking in common; each deriving a certain share of the profits, and bearing a corresponding share of the loss arising therefrom.

The term *partnership* is usually applied to those smaller associations in which the partners personally conduct their joint affairs: the term *company* being applied to those great associations conducted by the directors and servants appointed by the body of the partners to act for them; the latter having no direct concern in the management of the affairs of the company. [COMPANIES.]

The advantages of partnership are obvious. Many businesses could not be successfully carried on without a larger command of capital than usually belongs to an individual; and most of them require the combination of various species of

talent. An individual may have capital sufficient to undertake a particular business; but he may not be thoroughly versed in any of its details, or he may be familiar with certain parts of it and not with others; so that it might be for his advantage to assume one or more individuals as his partners, supposing them to be without capital, provided they possessed the skill and other qualifications required in prosecuting the business. Associations of this sort enable capital and talent to derive all the assistance that each is capable of lending to the other. And as the gains of each partner usually consist of a certain proportion of the total profits made by the company, each has the most powerful motive to exert himself for the benefit of the concern. It is not, indeed, to be denied, that associations of this sort are occasionally productive of mischievous consequences. The public interest requires that the whole partners in a firm should be bound by the acts of any one of their number; so that the folly or fraud of a single partner may entail very serious consequences upon those associated with him. Generally, however, this is not an evil of frequent occurrence; and there can be no question that both in a private and public point of view, partnerships are highly beneficial.

To enter into anything like a full discussion of the law of partnership would very far exceed our limits. We shall, therefore, merely state a few of those leading principles with which it is of importance that mercantile men, and the public generally, should be well acquainted.

**Formation of Partnerships.**—The mere coming of the partners, fixed and certified by acts or contracts, is quite sufficient to constitute a private copartnership; so that if two or more merchants or other persons, join together in trade, or in any sort of business, with a mutual, though it may be unequal, participation in the profit and loss of the concern, they are in every respect to be considered as partners. No particular form of writing or proceeding is necessary to constitute a partnership. It may be entered into either by an express written agreement, or by a merely verbal one. The former ought in almost all cases to be preferred. The contract of copartnership should be made by the parties to it, the business to be carried on in the space of time the partnership is to continue, the capital each is to bring into the business, the proportion in which the profit and loss are to be divided, the manner in which the business is to be conducted, the mode agreed upon for settling accounts at the dissolution of the partnership, together with the special covenants suggested by the circumstances of each particular case.

To constitute a partnership, there must be participation in uncertain profits and losses: the true criterion to determine, when money is advanced to a trader, whether the individual making the advance is to be looked upon as a partner or not, is to ascertain whether the *profit or profit be certain and defined, or casual, indefinite, and depending upon the accidents of trade*. In the former case he is a lender merely; in the latter he is a partner. The mere participation in the profits of any business or adventure, without a participation in the losses, constitutes a partnership, so far as to render the individual so participating liable to third parties for the engagements of the concern, though as between the partners themselves it may be no partnership. Thus, a clerk or other servant stipulate for a share of the profits of any business as a *reward for his labors*; he becomes responsible to third parties as a partner, and no private arrangement can alter his liability.

have capital sufficient for business; but he may, by any of its details, or certain parts of it, and it might be for his advantage more individuals as his partners, so as to be without capital, or skill and other qualities necessary for conducting the business. Each partner is entitled to a share of the capital and talent, and each is capable of contributing to the gains of each partner. A certain proportion of the company, each has the right to exert himself for the benefit of the firm. It is not, indeed, to be understood that of this sort are occasional and obvious consequences, but that the whole is bound by the acts of each partner; so that the folly of one may entail very serious consequences on the others.

As a partner is associated with him, it is not an evil of frequent occurrence, and can be no question of the public point of view, particularly in a mercantile business.

As a full discussion of this subject would very far exceed the limits of this article, we will merely state a few principles, with which it is of interest to men, and the public are acquainted.

**Partnerships.**—The mere consent of two or more persons to constitute a private partnership, if two or more merchants, together in trade, or in any other business, though it may be in the profit and loss of every respect to be considered, is not sufficient to constitute a partnership, but it is necessary to be expressed either by an express agreement, or by a mere verbal agreement, or by a mere verbal agreement, or by a mere verbal agreement.

In most cases to be proved by a mere verbal agreement, the partnership is to be carried on in a particular business, and the profit and loss are to be shared by the partners. The mere participation in the business, without an express agreement, is not sufficient to constitute a partnership. The mere participation in the business, without an express agreement, is not sufficient to constitute a partnership.

If an individual, by his own act or inadvertence, allow himself to appear to the world as a partner, he is precluded from disputing the fact, even though he have no interest in the profits. A partner who withdraws from a firm is liable on the account of the remaining partners continuing his share in the firm, though without his consent, unless he take the necessary precautions (post) to show that he has ceased to belong to it.

If there be no express stipulation as to the management of partnership property, the majority of the partners are to have the disposition and management of the joint affairs of the firm; or, if there be but two parties in a firm, one may manage the concern as he thinks fit, provided it be within the limits of good faith, and warranted by the circumstances of the case. The general duty of a partner is to keep in view, at all times and in all transactions, the interest and welfare of the partnership, by acting honestly and uprightly, and as a prudent man would conduct his own affairs.

**Rights and Liabilities of Partners among themselves.**—In the absence of evidence to the contrary, partners are taken to be equally interested in the partnership stock and effects. That is, they are presumed to be joint owners, with the important difference expressed in legal language: 'Jus accersendi inter mercatores locum non habet.' Equity, however, which exercises a special jurisdiction over partnerships, interposes here, and distributes the right of each partner in the joint stock. To ascertain what each partner's share in the joint stock is, it is necessary to know what property is included within that denomination.

A partner may risk his whole property in the business of a firm, but it may not thereupon be considered partnership property. The law moulds itself to the intention of the parties, when the intention is ascertained. Again, the most scrupulous fidelity must be observed. Any one partner is not allowed to stipulate for any private advantage to the expense of the rest: if he do, he is considered to occupy the position of a trustee for the benefit of the other partners, if any great breach of faith is committed. Chancery may dissolve the partnership, though it does so reluctantly. The executor does not occupy the place of a dissolved partner, unless there be an express stipulation in the deed of partnership, that the executor, or other person appointed by the will, shall succeed him. When such a clause does not exist, it gives the executor an option whether he will remain, or secure his share, and a reasonable price must be given him in which to inspect the accounts and make up his mind. If he should elect to remain a partner, he will become liable for the person or property to the engagements of the firm, though he merely hold in trust for the partners.

A court of equity decrees a dissolution, it has power to order a sale of the partnership effects, and division of the produce, proportionately to the share of each partner in the joint property, subject to stipulations made in the deed of partnership; and it is a rule in mercantile law, that 'Modus et ratio vincunt legem.' (Smith On Mercantile Law.)

**Liability of Partners as to third Parties.**—It is a general rule, that partners, whether actual, ostensible, or dormant, are bound by the act of their partner, made in the course of the partnership business, and with reference to the partnership business, and the regular course of dealing by the firm; and though the general rule of law be, that no one is liable upon any contract, except such as are privy to, yet this is not contravened by the liability

of partners, as they are supposed virtually present at and sanctioning the proceedings they singly enter into in the course of trade, or as being severally vested with a power enabling them to act at once as principals and as the authorised agents of their copartners. It is for the advantage of partners that they are thus held liable; for the credit of their firm is in consequence greatly enhanced, and facility is given to all their dealings, even when they reside in different parts of the country, or of the world. A due regard to the interest of strangers is at the same time observed; for where an individual deals with one of several partners, he relies upon the credit of the entire firm, and therefore ought to have his remedy against all the individuals who compose it.

Unless the act of one partner relate to and be connected with the partnership trade, and in the course of dealing by the firm, such acting partner only will be bound: for it is only by acting in the course of their particular trade or line of business that an implied authority is delegated by partners to each other; and it is only in such transactions that third parties have a right to rely upon the partnership funds. To bind a partnership, credit must be given to the firm itself, and not to one merely of its partners. One of them may even, in furtherance of the objects of the firm, enter into a contract with some third party; but if such contract be made exclusively and solely upon the credit of the individual partner, it will only bind him, and not the firm. The presumption of the law, however, always is, that a contract with one of the partners in reference to the business of the firm has been entered into upon the credit of the whole; and this presumption is not to be rebutted, except by very clear evidence. One partner cannot, as such, except in bankruptcy, bind another by deed.

The authority of a partner is revocable; and it is now fully established that a disclaimer of the authority of the partners in any particular transaction will preclude him from binding his copartners. Even during the subsistence of the partnership, one partner may to a certain degree limit his responsibility; and if there be any particular speculation or bargain proposed, which he disapproves of, he may, by giving distinct notice to those with whom his partners are about to contract that he will not be concerned in it, relieve himself from all consequences. Such notice would rebut his *prima facie* liability. The partnership would be suspended quoad this transaction. Thus, if a partner draw, accept, or indorse a bill or note, he will, in all ordinary cases, thereby render the firm liable. But, to use the words of Lord Ellenborough, 'it is not essential to a partnership that every partner should have such power; they may stipulate among themselves that it shall not be done; and if a third party, having notice of this, will take such security from one of the partners, he shall not sue the others upon it, in breach of such stipulation, nor in defiance of notice previously given to him by one of them, that he will not be liable for any bill or note signed by the others' (*Galway v. Mathew*, 10 East, 264); and so in other cases.

However small the share a partner may have in a concern, he is liable for the whole of the debts contracted by the firm; and must seek his remedy in a rateable contribution against his partners. Should one party enter into a smuggling or other illegal transaction on the partnership account, the other partners are liable to the duties and the penalty; and the Crown may proceed against the real delinquent alone, or against all the partners.

A bookseller, or newspaper proprietor, is answerable for the acts of his agent or copartner, not only civilly but also criminally.

**Dissolution of Partnerships.**—A partnership may be dissolved by the effluxion or expiration of the time during which it was originally agreed that it should continue. When a partnership is formed for a single dealing or transaction, the moment that is completed, it is at an end. Partnerships may also be dissolved by death, agreement, bankruptcy, outlawry &c. A court of equity will interfere to dissolve a partnership, in cases where a partner so misconducts himself as to be injurious to the firm, or to defeat the object for which the partnership was formed; or when a partner becomes insane, or is in such a state of mind as to render him permanently incapable of transacting the peculiar business of the firm; or where a partnership is formed for an impracticable purpose. Indeed, in all cases, where even a partnership may be dissolved without the interference of a court of equity, it may be most prudent, if the dissolution be opposed by one of the partners, to file a bill, praying a dissolution and account, and an injunction against using the partnership name.

When a partnership is dissolved by agreement, or one of the partners withdraws from it, public notice of the dissolution must be given in the *London Gazette*; and a specific intimation of the circumstance must be sent to ALL individuals accustomed to deal with the firm. Where such intimation has not been sent, the individual withdrawing from the firm may be made liable to third parties after he has ceased to have anything to do with it. A dormant partner, whose name has never been announced, may withdraw from a firm without making the dissolution of partnership publicly known.

When the joint debts of the firm are paid, and the property duly distributed among the partners, the dissolution may be said, in a general sense, to be accomplished. If any one of the firm be guilty of a breach of duty in misapplying the effects before the concern is finally wound up, the proper course is to apply to the Court of Chancery to appoint a manager.

Within a reasonable time after the death of one partner, the survivors must account to the representatives of the deceased; and if not willing to do so, a court of equity will compel them. In taking partnership accounts at the death of a partner, they must commence with the last stated account; or, if there be none such, with the commencement of the partnership; and they must end with the state of the stock at the time of the partner's death, and the proceeds thereof until it be got in.

No notice is necessary to third parties of the death of a partner; the partnership is dissolved, and all liabilities for subsequent acts cease. The surviving parties are to be sued alone for the partnership liabilities and obligations, for which they are liable to the full extent. But they are not liable for the separate debts of the deceased partner, unless, after payment of all the joint debts, they have a surplus of the partnership effects in their hands.

Upon a dissolution by death, if the joint effects be insufficient to pay the partnership debts, the separate estate of the deceased partner, if he have any, is liable for the deficiency.

The Act 28 & 29 Vict. c. 86 sanctions a further alteration in the law of partnership.

Advances by way of loan to a person engaged or about to engage in any trade or undertaking upon a contract in writing with such person that

the lender shall receive a rate of interest varying with the profits, or shall receive a share of profits arising from carrying on such trade or undertaking, shall not of itself constitute the lender partner with the person or persons carrying on such trade or undertaking, or render him responsible as such.

No contract for the remuneration of a servant or agent by a share of profits &c. shall render the servant responsible as a partner, or give him the rights of a partner.

No person being widow or child of the deceased partner, and receiving as such a share of profits shall be deemed a partner.

No person receiving an annuity in consideration of the sale of good will, to be deemed a partner.

In case of bankruptcy or composition, the lender not to be entitled to recover.

The term 'person' to include a partnership firm, a joint-stock company and a corporation.

The statements now made will, probably, be sufficient to give our readers a tolerably distinct notion of the formation of partnerships; and the more important rights, duties, liabilities arising out of such institutions. Those who wish to go deeper into the subject may consult the treatises of Watson and Montague on the Law of Partnership; Chitty's *Commercial Law*, vol. 2, pp. 225—269; Woolrych *On Commercial Law*, pp. 298—317; Smith's *Mercantile Law*, p. 11, sec. 95.

**PARTNERSHIPS WITH LIMITED LIABILITY.** We have previously made some general remarks on this subject, to which we now beg to refer the reader. [COMPANIES.] We there endeavoured to show the extremely objectionable nature of such partnerships, and that there was nothing in the circumstances peculiar to this country which either required or excused their introduction. The opinion of the greater, not the better informed, part of the public has, however, for a while at least, strongly been in favour, they were established by the Act 19 & 20 Vict. c. 47, amended by the 20 & 21 Vict. c. 12, and are now regulated by the Companies' Act of 1862 and 1867, 25 & 26 Vict. c. 89, and 30 & 31 Vict. c. 131.

The two schedules annexed to the Act of 1862 give the following memorandums of association, and comprise a summary of the various proceedings connected with the formation and management of companies with liability limited by shares, and limited by guarantee, of which we beg to annex copies.

*Memorandum of Association of a Company Limited by Shares.*

- 1st. The name of the company is 'The Eastern Steam Packet Company, limited.'
  - 2nd. The registered office of the company shall be situate in England.
  - 3rd. The objects for which the company is established are, 'the conveyance of passengers and goods in ships or boats between such places as the company may from time to time determine, and the doing all such other things as are incidental or conducive to the attainment of the above object.'
  - 4th. The liability of the shareholders shall be 'limited.'
  - 5th. The capital of the company is 2000 £, divided into 1,000 shares of 200 £, each.
- We, the several persons whose names and addresses are subscribed, are desirous of being formed into a company in pursuance of the above memorandum of association, and we respectively agree to take the number of shares in the company

of the company set opposite our respective names.

**Regulations for Management of a Company Limited by Shares.** (See also Act of 1867.)

**Shares.**—1. If several persons are registered as joint holders of any share, any one of such persons may give effectual receipts for any dividend payable in respect of such share.

2. Every member shall, on payment of one shilling, or such less sum as the company in general meeting may prescribe, be entitled to a certificate, under the common seal of the company, specifying the share or shares held by him, and the amount paid up thereon.

3. If such certificate is worn out or lost, it may be renewed, on payment of one shilling, or such less sum as the company in general meeting may prescribe.

**Calls on Shares.**—4. The directors may from time to time make such calls upon the members in respect of all moneys unpaid on their shares as they think fit, provided that 21 days' notice at least is given of each call, and each member shall be liable to pay the amount of calls so made to the persons and at the times and places appointed by the directors.

5. A call shall be deemed to have been made at the time when the resolution of the directors authorising such call was passed.

6. If the call payable in respect of any share is not paid before or on the day appointed for payment thereof, the holder for the time being of such share shall be liable to pay interest for the same at the rate of 5% per cent. per annum from the day appointed for the payment thereof to the time of the actual payment.

7. The directors may, if they think fit, receive from any member willing to advance the same, all or any part of the moneys due upon the shares held by him beyond the sums actually called for; and upon the moneys so paid in advance, or so much thereof as from time to time exceeds the amount of the calls then made upon the shares in respect of which such advance has been made, the company may pay interest at such rate as the member paying such sum in advance and the directors agree upon.

**Transfer of Shares.**—8. The instrument of transfer of any share in the company shall be presented both by the transferor and transferee, and the transferor shall be deemed to remain a holder of such share until the name of the transferee is entered in the register book in respect thereof.

9. Shares in the company shall be transferred in the following form:

I, A.B. of \_\_\_\_\_ in consideration of the pounds paid to me by C.D. do hereby transfer to the said \_\_\_\_\_ the share [or shares] numbered \_\_\_\_\_ standing in my name in the books of the \_\_\_\_\_ company, to hold unto the said C.D., his executors, administrators, and assigns, subject to the several conditions on which I held the same at the time of the execution hereof; and I the said C.D. do hereby agree

to take the said share [or shares] subject to the same conditions. As witness our hands, the \_\_\_\_\_ day of \_\_\_\_\_

10. The company may decline to register any transfer of shares made by a member who is indebted to them.

11. The transfer books shall be closed during the fourteen days immediately preceding the ordinary general meeting in each year.

**Transmission of Shares.**—12. The executors or administrators of a deceased member shall be the only persons recognised by the company as having any title to his share.

13. Any person becoming entitled to a share in consequence of the death, bankruptcy, or insolvency of any member, or in consequence of the marriage of any female member, may be registered as a member upon such evidence being produced as may from time to time be required by the company.

14. Any person who has become entitled to a share in consequence of the death, bankruptcy, or insolvency of any member, or in consequence of the marriage of any female member, may, instead of being registered himself, elect to have some person to be named by him registered as a transferee of such share.

15. The person so becoming entitled shall testify such election by executing to his nominee an instrument of transfer of such share.

16. The instrument of transfer shall be presented to the company, accompanied with such evidence as the directors may require to prove the title of the transferor, and thereupon the company shall register the transferee as a member.

**Forfeiture of Shares.**—17. If any member fails to pay any call on the day appointed for payment thereof, the directors may at any time thereafter, during such time as the call remains unpaid, serve a notice on him, requiring him to pay such call, together with interest and any expenses that may have accrued by reason of such non-payment.

18. The notice shall name a further day, on or before which such call, and all interest and expenses that have accrued by reason of such non-payment, are to be paid. It shall also name the place where payment is to be made (the place so named being either the registered office of the company or some other place at which calls of the company are usually made payable). The notice shall also state, that in the event of non-payment at or before the time and at the place appointed, the shares in respect of which such call was made will be liable to be forfeited.

19. If the requisitions of any such notice as aforesaid are not complied with, any share in respect of which such notice has been given may at any time thereafter, before payment of all calls, interest, and expenses due in respect thereof has been made, be forfeited, by a resolution of the directors to that effect.

20. Any share so forfeited shall be deemed to be the property of the company, and may be disposed of in such manner as the company in general meeting thinks fit.

21. Any member whose shares have been forfeited shall, notwithstanding, be liable to pay to the company all calls owing upon such shares at the time of the forfeiture.

22. A statutory declaration in writing, that the call in respect of a share was made and notice thereof given, and that default in payment of the call was made, and that the forfeiture of the share was made by a resolution of the directors to that effect, shall be sufficient evidence of the facts

therein stated, as against all persons entitled to such share, and such declaration, and the receipt of the company for the price of such share, shall constitute a good title to such share, and a certificate of proprietorship shall be delivered to a purchaser, and thereupon he shall be deemed the owner of such share discharged from all calls due prior to such purchase, and he shall not be bound to see to the application of the purchase money, nor shall his title to such share be affected by any irregularity in the proceedings in reference to such sale.

*Conversion of Shares into Stock.*—23. The directors may, with the sanction of the company previously given in general meeting, convert any paid-up shares into stock.

24. When any shares have been converted into stock, the several holders of such stock may thenceforth transfer their respective interests therein, or any part of such interests, in the same manner and subject to the same regulations as and subject to which any shares in the capital of the company may be transferred, or as near thereto as circumstances admit.

25. The several holders of stock shall be entitled to participate in the dividends and profits of the company according to the amount of their respective interests in such stock; and such interests shall, in proportion to the amount thereof, confer on the holders thereof respectively the same privileges and advantages for the purpose of voting at meetings of the company, and for other purposes, as would have been conferred by shares of equal amount in the capital of the company; but so that none of such privileges or advantages except the participation in the dividends and profits of the company, shall be conferred by any such aliquot part of consolidated stock as would not, if existing in shares, have conferred such privileges or advantages.

*Increase in Capital.*—26. The directors may, with the sanction of a special resolution of the company previously given in general meeting, increase its capital by the issue of new shares, such aggregate increase to be of such amount, and to be divided into shares of such respective amounts, as the company in general meeting directs, or, if no direction is given, as the directors think expedient.

27. Subject to any direction to the contrary that may be given by the meeting that sanctions the increase of capital, all new shares shall be offered to the members in proportion to the existing shares held by them, and such offer shall be made by notice specifying the number of shares to which the member is entitled, and limiting a time within which the offer, if not accepted, will be deemed to be declined, and after the expiration of such time, or on the receipt of an intimation from the member to whom such notice is given that he declines to accept the shares offered, the directors may dispose of the same in such manner as they think most beneficial to the company.

28. Any capital raised by the creation of new shares shall be considered as part of the original capital, and shall be subject to the same provisions with reference to the payment of calls, and the forfeiture of shares on non-payment of calls, or otherwise, as if it had been part of the original capital.

*General Meetings.*—29. By the Act of 1867, a general meeting shall under a heavy penalty be held within 4 months after the registration of the company, and at such place as the directors may determine.

30. Subsequent general meetings shall be held at such time and place as may be prescribed by the company in general meeting; and if no other time or place is prescribed, a general meeting shall be held on the first Monday in February in every year, at such place as may be determined by the directors.

31. The above-mentioned general meetings shall be called ordinary meetings; all other general meetings shall be called extraordinary.

32. The directors may, whenever they think fit, and they shall upon a requisition made in writing by not less than one-fifth in number of the members of the company, convene an extraordinary general meeting.

33. Any requisition made by the members shall express the object of the meeting proposed to be called, and shall be left at the registered office of the company.

34. Upon the receipt of such requisition, the directors shall forthwith proceed to convene an extraordinary general meeting. If they do not proceed to convene the same within twenty-one days from the date of the requisition, the requisitioners, or any other members amounting to the requisite number, may themselves convene an extraordinary general meeting.

*Proceedings at General Meetings.*—35. Seven days' notice at the least, specifying the place, the day, and the hour of meeting, and in case of special business the general nature of such business, shall be given to the members in manner hereinafter mentioned, or in such other manner, if any, as may be prescribed by the company in general meeting; but the non-receipt of such notice by any member shall not invalidate the proceedings at any general meeting.

36. All business shall be deemed to be transacted at an extraordinary meeting, and that is transacted at an ordinary meeting, with the exception of sanctioning a dividend and the consideration of the accounts, balance sheets, and the ordinary report of the directors.

37. No business shall be transacted at a general meeting, except the declaration of a dividend, unless a quorum of members is present the time when the meeting proceeds to business, and such quorum shall be ascertained as follows: that is to say, if the persons who have taken shares in the company at the time of the meeting do not exceed ten in number, the quorum shall be five; if they exceed ten, there shall be added to the above quorum one for every five additional members up to fifty, and one for every ten additional members after fifty, with this limitation, that no quorum shall in any case exceed twenty.

38. If within one hour from the time appointed for the meeting a quorum is not present, the meeting, if convened upon the requisition of members, shall be dissolved: in any other case it shall stand adjourned to the same day in the next week, at the same time and place; and if at such adjourned meeting a quorum is not present, it shall be a quorum *sine die*.

39. The chairman (if any) of the board of directors shall preside as chairman at every general meeting of the company.

40. If there is no such chairman, or if at any meeting he is not present within fifteen minutes after the time appointed for holding the meeting, the members present shall choose one of their number to be chairman.

41. The chairman may, with the consent of the meeting, adjourn any meeting from time to time and from place to place, but no business shall be transacted at any adjourned meeting other than

the business left unfinished at the meeting from which the adjournment took place.

42. At any general meeting, unless a poll is demanded by at least five members, a declaration by the chairman that a resolution has been carried, and an entry to that effect in the book of proceedings of the company, shall be sufficient evidence of the fact, without proof of the number or proportion of the votes recorded in favour of or against such resolution.

43. If a poll is demanded by five or more members, it shall be taken in such manner as the chairman directs, and the result of such poll shall be deemed to be the resolution of the company in general meeting. In the case of an equality of votes at any general meeting, the chairman shall be entitled to a second or casting vote.

**Votes of Members.**—44. Every member shall have one vote for every share up to ten; he shall have an additional vote for every five shares beyond the first ten shares up to one hundred, and an additional vote for every ten shares beyond the first hundred shares.

45. If any member is a lunatic or idiot, he may vote by his committee, curator bonis, or other legal curator.

46. If one or more persons are jointly entitled to a share or shares, the member whose name stands first in the register of members as one of the holders of such share or shares, and no other, shall be entitled to vote in respect of the same.

47. No member shall be entitled to vote at any general meeting unless all calls due from him have been paid, and no member shall be entitled to vote in respect of any share that he has acquired by transfer at any meeting held after the expiration of three months from the registration of the company, unless he has been possessed of the share in respect of which he claims to vote for at least three months previously to the time of holding the meeting at which he proposes to vote.

48. Votes may be given either personally or by proxy.

49. The instrument appointing a proxy shall be in writing, under the hand of the appointor, or if such appointor is a corporation, under their common seal, and shall be attested by one or more witnesses or witnesses; no person shall be appointed a proxy who is not a member of the company.

50. The instrument appointing a proxy shall be deposited at the registered office of the company not less than seventy-two hours before the time for holding the meeting at which the person named in such instrument proposes to vote, but the instrument appointing a proxy shall be valid after the expiration of twelve months from the date of its execution.

51. Any instrument appointing a proxy shall be in the following form:—

Company limited.

I, \_\_\_\_\_ of \_\_\_\_\_ in the county of \_\_\_\_\_ being a member of the company limited, and entitled to \_\_\_\_\_ vote or \_\_\_\_\_ votes, hereby appoint \_\_\_\_\_ of \_\_\_\_\_ as my proxy, to vote for me and on my behalf at the [ordinary or extraordinary, as the case may be] general meeting of the company to be held on the \_\_\_\_\_ day of \_\_\_\_\_, and at any adjournment thereof for, at any meeting of the company that may be held in the year \_\_\_\_\_.

As witness my hand, this  
day of \_\_\_\_\_  
Signed by the said \_\_\_\_\_ in the  
presence of \_\_\_\_\_

**Directors.**—52. The number of the directors, and the names of the first directors, shall be determined by the subscribers of the memorandum of association.

53. Until directors are appointed, the subscribers of the memorandum of association shall be deemed to be directors.

54. The future remuneration of the directors, and their remuneration for services performed previously to the first general meeting, shall be determined by the company in general meeting.

**Powers of Directors.**—55. The business of the company shall be managed by the directors, who may pay all expenses incurred in getting up and registering the company, and may exercise all such powers of the company as are not by the foregoing Act, or by these articles, required to be exercised by the company in general meeting, subject nevertheless to any regulations of these articles, to the provisions of the foregoing Act, and to such regulations, being not inconsistent with the aforesaid regulations or provisions, as may be prescribed by the company in general meeting; but no regulation made by the company in general meeting shall invalidate any prior act of the directors which would have been valid if such regulation had not been made.

56. The continuing directors may act notwithstanding any vacancy in their body.

**Disqualification of Directors.**—57. The office of director shall be vacated:—

If he holds any other office or place of profit under the company;

If he becomes bankrupt or insolvent;

If he is concerned in or participates in the profits of any contract with the company; but the above rules shall be subject to the following exceptions: that no director shall vacate his office by reason of his being a member in any company which has entered into contracts with or done any work for the company of which he is director: nevertheless he shall not vote in respect of such contract or work; and if he does so vote his vote shall not be counted.

**Rotation of Directors.**—58. At the first ordinary meeting after the registration of the company, the whole of the directors shall retire from office; and at the first ordinary meeting in every subsequent year, one-third of the directors for the time being, or if their number is not a multiple of three, then the number nearest to one-third, shall retire from office.

59. The one-third or other nearest number to retire during the first and second years ensuing the first ordinary meeting of the company shall, unless the directors agree among themselves, be determined by ballot; in every subsequent year the one-third or other nearest number who have been longest in office shall retire.

60. A retiring director shall be re-eligible.

61. The company, at the general meeting at which any directors retire in manner aforesaid, shall fill up the vacated offices by electing a like number of persons.

62. If at any meeting at which an election of directors ought to take place, the places of the vacating directors are not filled up, the meeting shall stand adjourned till the same day in the next week, at the same time and place; and if at such adjourned meeting the places of the vacating directors are not filled up, the vacating directors, or such of them as have not had their places filled up, shall continue in office until the ordinary

meeting in the next year, and so on from time to time until their places are filled up.

63. The company may from time to time, in general meeting, increase or reduce the number of directors, and may also determine in what rotation such increased or reduced number is to go out of office.

64. Any casual vacancy occurring in the board of directors may be filled up by the directors, but any person so chosen shall retain his office so long only as the vacating director would have retained the same if no vacancy had occurred.

65. The company, in general meeting, may, by a special resolution, remove any director before the expiration of his period of office, and may by an ordinary resolution appoint another person in his stead; the person so appointed shall hold office during such time only as the director in whose place he is appointed would have held the same if he had not been removed.

*Proceedings of Directors.*—66. The directors may meet together for the despatch of business, adjourn, and otherwise regulate their meetings as they think fit, and determine the quorum necessary for the transaction of business: questions arising at any meeting shall be decided by a majority of votes: in case of an equality of votes, the chairman shall have a second or casting vote: a director may at any time summon a meeting of the directors.

67. The directors may elect a chairman of their meetings, and determine the period for which he is to hold office; but if no such chairman is elected, or if at any meeting the chairman is not present at the time appointed for holding the same, the directors present shall choose some one of their number to be chairman of such meeting.

68. The directors may delegate any of their powers to committees consisting of such member or members of their body as they think fit: any committee so formed shall, in the exercise of the powers so delegated, conform to any regulations that may be imposed on them by the directors.

69. A committee may elect a chairman of their meetings: if no such chairman is elected, or if he is not present at the time appointed for holding the same, the members present shall choose one of their number to be chairman of such meeting.

70. A committee may meet and adjourn as they think proper: questions arising at any meeting shall be determined by a majority of votes of the members present; and in case of an equality of votes, the chairman shall have a second or casting vote.

71. All acts done by any meeting of the directors, or of a committee of directors, or by any person acting as a director, shall, notwithstanding that it be afterwards discovered that there was some defect in the appointment of any such directors or persons acting as aforesaid, or that they or any of them were disqualified, be as valid as if every such person had been duly appointed and was qualified to be a director.

*Dividends.*—72. The directors may, with the sanction of the company in general meeting, declare a dividend to be paid to the members in proportion to their shares.

73. No dividend shall be payable except out of the profits arising from the business of the company.

74. The directors may, before recommending any dividend, set aside out of the profits of the company such sum as they think proper as a reserved fund to meet contingencies, or for equalising dividends, or for repairing, or maintaining, the works connected with the business of the company, or any part thereof; and the directors may invest

the sum so set apart as a reserved fund upon such securities as they may select.

75. The directors may deduct from the dividends payable to any member all such sums of money as may be due from him to the company on account of calls or otherwise.

76. Notice of any dividend that may have been declared shall be given to each member in manner hereinafter mentioned; and all dividends unclaimed for three years, after having been declared, may be forfeited by the directors for the benefit of the company.

77. No dividend shall bear interest as against the company.

*Accounts.*—78. The directors shall cause true accounts to be kept—

Of the stock in trade of the company; Of the sums of money received and expended by the company, and the matters in respect of which such receipt and expenditure takes place; and,

Of the credits and liabilities of the company. The books of account shall be kept at the registered office of the company, and, subject to any reasonable restrictions as to the time and manner of inspecting the same that may be imposed by the company in general meeting, shall be open to the inspection of the members during the hours of business.

79. Once at the least in every year the directors shall lay before the company in general meeting a statement of the income and expenditure for the past year, made up to a date not more than 3 months before such meeting.

80. The statement so made shall show, arranged under the most convenient heads, the amount of gross income, distinguishing the several sources from which it has been derived, and the amount of gross expenditure, distinguishing the expenses of the establishment, salaries, and other like matters: every item of expenditure fairly chargeable against the year's income shall be brought into account, so that a just balance of profit or loss may be laid before the meeting; and in cases where any item of expenditure which may in fairness be distributed over several years has been incurred in any one year, the whole amount of such item shall be stated, with the addition of the reasons why only a portion of such expenditure is charged against the income of the year.

81. A balance sheet shall be made out in every year, and laid before the company in general meeting, and such balance sheet shall contain a summary of the property and liabilities of the company arranged under the heads appearing in the form given in the annexed table, or as modified thereto as circumstances admit.

82. A printed copy of such balance sheet shall be sent seven days previously to such meeting, be served on every member in the manner in which notices are hereinafter directed to be served.

*Audit.*—83. Once at the least in every year the accounts of the company shall be examined, and the correctness of the balance sheet ascertained, by one or more auditors or auditors.

84. The first auditors shall be appointed by the directors: subsequent auditors shall be appointed by the company in general meeting.

85. If one auditor only is appointed, all the provisions herein contained relating to auditors shall apply to him.

86. The auditors may be members of the company; but no person is eligible as an auditor who is interested otherwise than as a member in any transaction of the company; and no director or other officer of the company is eligible during his continuance in office.

57. The election of auditors shall be made by the company at their ordinary meeting in each year.

58. The remuneration of the first auditors shall be fixed by the directors; and of subsequent auditors shall be fixed by the company in general meeting.

59. Any auditor shall be re-eligible on his quitting office.

60. If any casual vacancy occurs in the office of any auditor appointed by the company, the directors shall forthwith call an extraordinary general meeting for the purpose of supplying the same.

61. If no election of auditors is made in manner aforesaid, the Board of Trade may, on the application of not less than five members of the company, appoint an auditor for the current year, and fix the remuneration to be paid to him by the company for his services.

62. Every auditor shall be supplied with a copy of the balance sheet, and it shall be his duty to examine the same, with the accounts and vouchers relating thereto.

63. Every auditor shall have a list delivered to him of all books kept by the company, and shall at all reasonable times have access to the books and accounts of the company; he may, at the expense of the company, employ accountants or other persons to assist him in investigating such accounts, and he may, in relation to such accounts, examine the directors or any other officer of the company.

64. The auditors shall make a report to the

members upon the balance sheet and accounts, and in every such report they shall state whether, in their opinion, the balance sheet is a full and fair balance sheet, containing the particulars required by these regulations, and properly drawn up so as to exhibit a true and correct view of the state of the company's affairs, and in case they have called for explanations or information from the directors, whether such explanations or information have been given by the directors, and whether they have been satisfactory; and such report shall be read, together with the report of the directors, at the ordinary meeting.

65. A notice may be served by the company upon any member either personally, or by sending it through the post in a prepaid letter addressed to such member at his registered place of abode.

66. All notices directed to be given to the members shall, with respect to any share to which persons are jointly entitled, be given to whichever of such persons is named first in the register of members; and notice so given shall be sufficient notice to all the holders of such share.

67. Any notice, if served by post, shall be deemed to have been served at the time when the letter containing the same would be delivered in the ordinary course of the post; and in proving such service it shall be sufficient to prove that the letter containing the notices was properly addressed and put into the post office.

Form of Balance Sheet referred to above.

Dr. Balance Sheet of the Co. made up to 18 . Cr.

Table of Fees to be paid to the Registrar of Joint-Stock Companies by a Company having a Capital divided into Shares.

	£	s.	d.
For registration of a company whose nominal capital does not exceed 2,000.	2	0	0
For registration of a company whose nominal capital exceeds 2,000, the above fee of 2 <i>l.</i> , with the following additional fees, regulated according to the amount of nominal capital (to be set out):—			

For every 1,000 <i>l.</i> of nominal capital, or part of 1,000 <i>l.</i> , after the first 2,000 <i>l.</i> , up to 5,000 <i>l.</i> .	1	0	0
For every 1,000 <i>l.</i> of nominal capital, or part of 1,000 <i>l.</i> , after the first 5,000 <i>l.</i> , and up to 100,000 <i>l.</i> .	0	5	0
For every 1,000 <i>l.</i> of nominal capital, or part of 1,000 <i>l.</i> , after the first 100,000 <i>l.</i> .	0	1	0
For registration of any increase of capital made after the first registration of the company, the same fees per 1,000 <i>l.</i> , or part of 1,000 <i>l.</i> , as would have been payable if such increased capital had formed part of the original capital at the time of registration.			
Provided that no company shall be liable to pay in respect			

of nominal capital, on registration or afterwards, any greater amount of fees than 5 <i>l.</i> , taking into account, in the case of fees payable on an increase of capital after registration, the fees paid on registration.	£ s. d.
For registration of any existing company, except such companies as are by this Act exempted from payment of fees in respect of registration under this Act, the same fee as is charged for registering a new company.	0 5 0
For registering any document hereby required or authorised to be registered, other than the memorandum of association.	0 5 0
For making a record of any fact hereby authorized or required to be recorded by the Registrar of Companies, a fee of	0 5 0

*Table of Fees to be paid to the Registrar of Joint-Stock Companies by a Company not having a Capital divided into Shares.*

For registration of a company whose number of members, as stated in the articles of association, does not exceed 20	£ s. d.
For registration of a company whose number of members, as stated in the articles of association, exceeds 20, but does not exceed 100.	2 0 0
For registration of a company whose number of members, as stated in the articles of association, exceeds 100, but is not stated to be unlimited, the above fee of 2 <i>l.</i> , with an additional 5 <i>s.</i> for every 20 members or less number than 20 members after the first 100.	5 0 0
For registration of a company in which the number of members is stated in the articles of association to be unlimited, a fee of	20 0 0
For registration of any increase on the number of members made after the registration of the company in respect of every 20 members, or less than 20 members, of such increase.	0 5 0
Provided that no one company shall be liable to pay on the whole a greater fee than 20 <i>l.</i> in respect of its number of members, taking into account the fee paid on the first registration of the company.	
For registration of any existing company, except such companies as are by this Act exempted from payment of fees in respect of registration under this Act, the same fee as is charged for registering a new company.	
For registering any document hereby required or authorised to be registered, other than the memorandum of association.	0 5 0

**MEMORANDUM AND ARTICLES OF ASSOCIATION OF A COMPANY LIMITED BY GUARANTEE, AND NOT HAVING A CAPITAL DIVIDED INTO SHARES.**

*Memorandum of Association.*

1. The name of the Company is 'The Mutual London Marine Association, Limited.'
2. The registered office of the company will be situated in England.
3. The objects for which the company is established are, the 'mutual insurance of ships belonging to members of the company, and the doing all such other things as are incidental or conducive to the attainment of the above objects.'
4. Every member of the company undertakes to contribute to the assets of the company in the event of the same being wound up during the time that he is a member, or within one year afterwards, for payment of the debts and liabilities of the company contracted before the time at which he ceases to be a member, and the costs, charges, and expenses of winding up the same, and for the adjustment of the rights of the contributories amongst themselves, such amount as may be required, not exceeding 10*l.*

We, the several persons whose names and addresses are subscribed, are desirous of being formed into a company, in pursuance of this memorandum of association.

*Names, Addresses, and Descriptions of Subscribers.*

**ARTICLES OF ASSOCIATION TO ACCOMPANY PRECEDING MEMORANDUM OF ASSOCIATION.**

1. The company, for the purpose of registration, is declared to consist of 500 members.
2. The directors hereinafter mentioned may,

whenever the business of the association requires it, register an increase of members.

*Definition of Members.*—3. Every person shall be deemed to have agreed to become a member of the company who insures any ship or share in a ship in pursuance of the regulations hereinafter contained.

*General Meetings.*—4. The first general meeting shall be held at such time, not being more than three months after the incorporation of the company, and at such place, as the directors may determine.

5. Subsequent general meetings shall be held at such time and place as may be prescribed by the company in general meeting; and if no other time or place is prescribed, a general meeting shall be held on the first Monday in February in every year, at such place as may be determined by the directors.

6. The above-mentioned general meetings shall be called ordinary meetings; all other general meetings shall be called extraordinary.

7. The directors may, whenever they think fit, and they shall, upon a requisition made in writing by any five or more members, convene an extraordinary general meeting.

8. Any requisition made by the members shall express the object of the meeting proposed to be called, and shall be left at the registered office of the company.

9. Upon the receipt of such requisition the directors shall forthwith proceed to convene a general meeting: if they do not proceed to convene the same within twenty-one days from the date of the requisition, the requisitionists, or any other five members, may themselves convene a meeting.

*Proceedings at General Meetings.*—10. Seven days' notice at the least, specifying the place, the day, and the hour of meeting, and in case of special business the general nature of such business, shall be given to the members in manner hereinafter mentioned, or in such other manner, if any, as may be prescribed by the company in general meeting; but the non-receipt of such notice by any member shall not invalidate the proceedings at any general meeting.

11. All business shall be deemed special that is transacted at an extraordinary meeting, and that is transacted at an ordinary meeting, with the exception of the consideration of the accounts, balance sheets, and the ordinary report of the directors.

12. No business shall be transacted at a meeting, except the declaration of a dividend, unless a quorum of members is present at the commencement of such business, and such quorum shall be ascertained as follows; that is to say, the members of the company at the time of the meeting do not exceed ten in number, the quorum shall be five; if they exceed ten there shall be added to the above quorum one for every five additional members up to fifty, and one for every additional members after fifty, with this limitation, that no quorum shall in any case exceed thirty.

13. If within one hour from the time appointed for the meeting a quorum of members is not present, the meeting, if convened upon the requisition of the members, shall be dissolved: in any other case it shall stand adjourned to the same day in the following week at the same time and place; and if at such adjourned meeting a quorum of members is not present, it shall be adjourned sine die.

14. The chairman (if any) of the directors shall preside as chairman at every general meeting of the company.

15. If there is no such chairman, or if at any meeting he is not present at the time of holding the same, the members present shall choose some one of their number to be chairman of such meeting.

16. The chairman may, with the consent of the meeting, adjourn any meeting from time to time and from place to place, but no business shall be transacted at any adjourned meeting other than the business left unfinished at the meeting from which the adjournment took place.

17. At any general meeting, unless a poll is demanded by at least 5 members, a declaration by the chairman that a resolution has been carried, and an entry to that effect in the book of proceedings of the company, shall be sufficient evidence of the fact, without proof of the number or proportion of the votes recorded in favour of or against such resolution.

18. If a poll is demanded in manner aforesaid the same shall be taken in such manner as the chairman directs, and the result of such poll shall be deemed to be the resolution of the company in general meeting.

**Votes of Members.**—19. Every member shall have one vote and no more.

20. If any member is a lunatic or idiot, he may vote by his committee, curator bonis, or other legal curator.

21. No member shall be entitled to vote at any meeting unless all monies due from him to the company have been paid.

22. Votes may be given either personally or by proxy: a proxy shall be appointed in writing under the hand of the appointor, or, if such appointor is a corporation, under its common seal.

23. No person shall be appointed a proxy who is not a member, and the instrument appointing him shall be deposited at the registered office of the company not less than 48 hours before the time of holding the meeting at which he proposes to vote.

24. Any instrument appointing a proxy shall be in the following form:—

Company, Limited.

I, \_\_\_\_\_ of \_\_\_\_\_ in the county of \_\_\_\_\_ being a member of the \_\_\_\_\_ company, limited, hereby appoint \_\_\_\_\_ of \_\_\_\_\_ as my proxy, to vote for me and on my behalf at the [ordinary or extraordinary, as the case may be] general meeting of the company to be held on the \_\_\_\_\_ day of \_\_\_\_\_, at any adjournment thereof to be held on the \_\_\_\_\_ day of \_\_\_\_\_ next [or at any meeting of the company that may be held in the \_\_\_\_\_ year].

As witness my hand, this \_\_\_\_\_ day of \_\_\_\_\_ Signed by the said \_\_\_\_\_ in the presence \_\_\_\_\_

**Directors.**—25. The number of the directors, and the names of the first directors, shall be determined by the subscribers of the memorandum of association.

26. Until directors are appointed, the subscribers of the memorandum of association shall for all the purposes of this Act be deemed to be directors.

**Powers of Directors.**—27. The business of the company shall be managed by the directors, who may exercise all such powers of the company as are not hereby required to be exercised by the company in general meeting; but no regulation made by the company in general meeting shall invalidate any prior act of the directors which would have been valid if such regulation had not been made.

**Election of Directors.**—28. The directors shall

be elected annually by the company in general meeting.

**Business of Company.** [Here insert Rules as to Mode in which Business of Insurance is to be conducted.]

**Accounts.**—29. The accounts of the company shall be audited by a committee of five members, to be called the audit committee.

30. The first audit committee shall be nominated by the directors out of the body of members.

31. Subsequent audit committees shall be nominated by the members at the ordinary general meeting in each year.

32. The audit committee shall be supplied with a copy of the balance sheet, and it shall be their duty to examine the same with the accounts and vouchers relating thereto.

33. The audit committee shall have a list delivered to them of all books kept by the company, and they shall at all reasonable times have access to the books and accounts of the company: they may, at the expense of the company, employ accountants or other persons to assist them in investigating such accounts, and they may in relation to such accounts examine the directors or any other officer of the company.

34. The audit committee shall make a report to the members upon the balance sheet and accounts, and in every such report they shall state whether in their opinion the balance sheet is a full and fair balance sheet, containing the particulars required by these regulations of the company and properly drawn up, so as to exhibit a true and correct view of the state of the company's affairs, and in case they have called for explanation or information from the directors, whether such explanations or information have been given by the directors, and whether they have been satisfactory, and such report shall be read together with the report of the directors at the ordinary meeting.

**Notices.**—35. A notice may be served by the company upon any member either personally, or by sending it through the post in a prepaid letter addressed to such member at his registered place of abode.

36. Any notice, if served by post, shall be deemed to have been served at the time when the letter containing the same would be delivered in the ordinary course of the post; and in proving such service it shall be sufficient to prove that the letter containing the notice was properly addressed, and put into the post office.

**Winding-up.**—37. The company shall be wound up voluntarily whenever an extraordinary resolution, as defined by the Companies Act 1862, is passed, requiring the company to be wound up voluntarily.

**Names, Addresses, and Descriptions of Subscribers.**

A.B., No. 13, Rute Street, Clerkenwell, Middlesex.

By the Companies Act of 1867 (30 & 31 Vict. c. 131) the liability of the directors or managers, or the managing director of a limited company, may, if so provided by the memorandum of association, be unlimited, sec. 4. And any existing limited company may by special resolution make the liability of the directors unlimited, sec. 8. But these provisions, insufficient as they are, should have been made compulsory, and not left to the option of the limited companies themselves.

N.B.—We have not thought it necessary to lay before the reader any abstract of those parts of

the Companies Acts of 1862 and 1867 which refer to the winding up of companies, and to the legal proceedings connected therewith. Such abstract would we think have been of little or no use for in such cases lawyers must be employed, and not merely the exact words of the statute, but also the interpretation given to them by the courts of law, must be referred to. It is most probably too that the law on this subject will be speedily modified. At present it is in a most discreditable state. It should be rendered not only clearer and more precise, but more in accordance with sound principles.

It may be supposed, perhaps, to be needless after the statements we have already laid before the reader [COMPANIES], to make any further remarks upon this subject. But the system is all respects so objectionable, and has already been and must continue to lead, to such mischievous results, that we may be excused for making it (in the last edition of this work) one or two additional statements with respect to it. The experience of the last 3 years will have doubled the force, and rendered them conclusive.

**Objections to Companies with Limited Liability.**—In countries like France, where the people are mostly in narrow circumstances, and unaccustomed to, and afraid of, speculative enterprises, there may perhaps be some ground for permitting the formation of partnerships *en commandite*. And if they were confined to undertakings that admitted of being carried on according to a system of routine, such as railways, canals, and life insurances, gas-works, and so forth, we do not know that they would be open to much objection. But in a country like this, where capital is abundant, and where all enterprises, however hazardous, that promise anything like a reasonable return, are eagerly undertaken, extraordinary inducements to make capital come forward are unnecessary, and therefore objectionable. We admit, indeed, that in the case of companies of the special class now alluded to, though nothing be gained, there is no great hazard of much being lost by the shareholders being endowed with the privilege of limited liability. Such companies are not easily diverted to improper purposes; and though the capital of the shareholders may be unproductive, yet, as it is most commonly laid out in visible, permanent, and sometimes valuable works, there is a fund on which the creditors in the event of the concern failing, may fall back. But modifying circumstances of this sort are very rarely any place in companies formed for conducting ordinary industrial or commercial businesses. In their case the entire capital of the association may be lost or embezzled, without a farthing being left to the creditors. And moreover, if anything can be, a contradiction and an absurdity to suppose that ordinary industrial pursuits can be so well managed by individuals of any sort, whether the partners be indefinitely responsible or not, as they will be in individuals or small associations. The latter, on their own account, and reap all the advantages of superior skill, attention, and economy, at the same time that they are indefinitely responsible for all the losses they may incur, and for all mistakes into which they may fall, whether by the contrivance or the execution of their projects, however they may be managed.

But though great public companies be not suitable for the conduct of all save routine business, the fair presumption, or rather, we should say, the certainty is, that those in which the responsibility of the partners is limited will be much less unsuitable, and more productive of mischief.

results, than those in which there is no such limitation. It must, indeed, be conceded, that, despite the heavy responsibility under which the partners in ordinary associations or partnerships now act, they too often display an incensurable degree of foolhardiness. It is probable, indeed, that the late experience of the ruin that may result from placing too much confidence in directors will lead to an improvement in this respect, and that the character and conduct of these functionaries will be more carefully enquired into. But without insisting further on considerations of this sort, if parties will every now and then be careless of their interests, and forget or decline to adopt the necessary precautions to guard against these and loss when everything they have is at stake on the result, their carelessness, it is obvious, will be immeasurably increased when they may limit their liability at pleasure, and speculate without any fear of the consequences. No one can doubt that, under such circumstances, wild projects of all sorts have been, and will be, very greatly increased; and that the number of those extensive bankruptcies which are productive of so much misery have been and will be largely augmented.

To suppose the contrary is to suppose what is plainly contradictory. It is equivalent to supposing that a man cares as much for 1,000*l.*, as for 500,000*l.*, or any greater sum; or is as anxious about a small part as about the whole of his fortune, how large soever it may be.

The affairs of not a few of the non-liability companies set on foot in England during the last few years have already, especially since the crisis of 1867, come before the courts of law; and if we look these for samples of the others, we should have to regard them as little better than mere swindling engines. But it would not be fair to conclude from the instances referred to that such was their uniform character. A good many have no doubt been honestly got up; and the greater number of these being for routine purposes, such as the supply of towns with water and gas, it may be assumed that they will be fairly conducted, and will succeed. But there are very many of a totally different character. And it would be childish to suppose that in any case the same consideration will be given either to their formation in the first instance, or to their future management, that would be given were the partners indefinitely liable. Hence, while the system operates to the prejudice even of the best schemes, it holds out every temptation to set on foot projects with the intention of deceiving and victimising the public. The contrivers of the new system tell us that, whatever it may really be, it is at all events popular with the public; and in proof of this, they refer to the great number of companies that have been already formed with limited liability. But such reference was needed to enable anyone to suppose that if a plan were set on foot to enable persons to contract debts without being bound to pay them, it would be eagerly grasped at. Gambling-houses are at present prohibited; but if they were to be licensed, does anyone doubt that numbers of them would be opened in most considerable towns? And we should be told that this is a conclusive proof that the prohibition of gambling was disapproved by the public, and that it required the healthy excitement furnished by the newly opened places of entertainment. But whatever may be the case with this or that institution, one would think that the former facilities of swindling might have sufficed, without giving any further encouragement.

But however powerful the deleterious influence of the non-liability system (for such it is when the

shares are paid up) on the formation and conduct of companies, we were assured that it would be more than counterbalanced by the greater caution it would infuse into those who might deal with them. The names and the number of shares held by the partners in such associations, and the magnitude of their capital, or of the 'fund' to which their creditors have to look, were all to be made known; so that those who transacted business with them would be really aware of what they had to depend upon. But we take leave to say that they have not had, and will not have, any such knowledge. Suppose that a non-liability company had a capital of 50,000*l.*, or 100,000*l.*, and that it was wholly paid up when it was established: it may have been greatly reduced, or wholly lost, in the next or in any subsequent year; and yet, as the public can know nothing, or nothing certain, of its losses, and may, on the contrary, suppose it has been successful, its credit may not be impaired, and it may go on extending its business and adding to its obligations after it is really insolvent. We have had since 1866 very numerous and sad illustrations of this. Ordinary partnerships, unless they consist of parties of very questionable solvency or character, have seldom any considerable difficulty in obtaining large amounts of credit; and companies, it matters not of whom composed, which are reported to have some 10,000*l.*, 20,000*l.*, 50,000*l.*, or 500,000*l.* of paid-up capital, will be sure to obtain loans to a much greater extent and with still greater readiness. In their case we have a kind of authorised guarantee for the possession of wealth. And this, it will be said, precludes all room for distrust; so that, unless we had access to peculiar sources of information, it might be not a little dangerous to question the solidity of such an association. And yet the whole thing may be a snare and a delusion. The assurance, whether official or otherwise, that a certain amount of capital has been paid up, is, as has been proved over and over again, really not worth a farthing. But the chances are, that it will, notwithstanding, serve its purpose with the million. It will make that appear to them to be gold which may not even be copper, and enable parties without a shilling to borrow large sums, and to trade or speculate on the means of others. In such cases the public is helpless. There is nothing on which it can rely; and when the imposture is discovered by the bursting of the bubble, no one is to be responsible for anything.

However it may be accounted for, there is nothing that is so lavishly and inconsiderately bestowed as credit. Frequently, indeed, it is rather thrust upon than given to individuals and firms. And it would be ludicrous to suppose that this is a case in which we can place any dependence on the caution of the public. The only real security is in the discretion, good sense, and, more than all, in the unlimited liability of partners. They know, or may know, what they are worth, and what they are about, which no one else can know. And, in the vast majority of cases, they further know that they will be bankrupts and beggars unless they act prudently and circumspectly. Hence our late legislation is precisely the reverse of what it ought to have been. Instead of diminishing, we should have increased the responsibility of partners by abstaining from all interference with their indefinite liability, and giving additional stringency to the bankruptcy laws.

That increased caution on the part of the public which, it was said, would be a result of the new system, is really, therefore, and has proved to be, no better than moonshine. It can have no practical influence. The only security which in such matters

is worth a pinch of snuff consists in the responsibility of partners. It is not to those who deal with this or that house, but to the houses themselves—to the guaranties under which they have been placed—that we must look for protection against foolhardiness and fraud.

It may therefore be reasonably concluded, that in ordinary businesses—that is, in all businesses for carrying on branches of agriculture, manufacture, or trade—partnerships with limited liabilities can be neither more nor less than unmixed nuisances. If honestly conducted, they must fail in their competition with private parties; and if otherwise, they will only add to the means, which were already sufficiently extensive, of wasting capital and fleecing the public.

In the scheme laid down by Providence for the government of the world, there is no shifting or narrowing of responsibilities, every man being personally answerable for all his actions. But the advocates of limited liability proclaim, in their superior wisdom, that the scheme of Providence may be advantageously modified, and that debts and obligations may be contracted which the debtors, though they have the means, shall not be bound to discharge. Borrow, say they, as much as you please, and pay as little as you like—the less, it would seem, the better. And can it be doubted that the adventurous, the needy, the unprincipled, and the desperate, will be eager to avail themselves of such extraordinary privileges? The reckless speculation, and the consequent bankruptcy and ruin, that have on former occasions overspread the kingdom have been trifling compared with those that resulted in the crisis of 1866, and those future revulsions which may be anticipated, should the new system be allowed to spread its roots and scatter its seeds on all sides. Even the soberest individuals may be tempted to embark in hazardous projects; for, by limiting the risk, they in great measure secure themselves against loss by failure, at the same time that they reap all the advantages of success. Were Parliament to set about devising means for the encouragement of speculation, over-trading, and swindling, what better could it do than to carry out the non-liability system?

We may be told that Parliament has provided, by the Joint-Stock Companies Act, that in the event of the directors of a company declaring and paying a dividend when the company is known by them to be insolvent, they are to repay the same out of their own pockets. This is the statement in the body of the Act; but in the 'regulations for the management of companies' attached to it, and already quoted, we are told that 'no dividend shall be payable, except out of the profits arising from the business of the company.' We of course do not presume to decide whether this or the other statement be the more correct; but their contradictory nature affords a curious illustration of the slovenly, slipshod style in which the most important statutes are often compiled. Perhaps the reader may be inclined to think that those who are disposed to trust to a security of this sort are rather easily satisfied. A body of directors who would, under any circumstances, declare a dividend when they knew that the concern over which they presided was bankrupt, will not be kept in the right path by the threat now referred to. The declaration of dividends when there is nothing to divide is not the way in which dishonest directors would be most likely to defraud their constituents and the public. They would make loans to each other, or, if that be prohibited or apt to excite suspicions, they may do the same thing indirectly by the

intervention of third parties. The capital and credit of the institution may be perverted, abused, and dissipated in a thousand ways before the circumstance becomes known to the public.

Some who are friendly to the principle of limited liability, but who are at the same time aware of the abuses to which it cannot fail to lead if the liability be limited to the mere amount of the shares, say that they would not object to its increase. It has, in consequence, been proposed to fix the liability at double or treble the amount of the shares; so that when a limited company failed, the subscribed capital of which had been fully paid up, the partners would not, as in the case, be relieved of all responsibility, but would be obliged to make a further payment, that were required, equal to the amount of the shares, or to double that amount, as might be decided upon. This plan has been enforced in Canada and in some other countries. And it is undoubtedly a very great improvement upon the system existing here; for, while it raises the character of the partners in limited associations and makes them more careful in regard to the individuals they choose for directors, and more disposed to watch their proceedings, it makes them contribute to the entire or partial relief of the whom they might otherwise have involved in total ruin. If, therefore, the system is to be continued, we should strongly recommend that the liability of the partners should be raised to at least double the amount of their shares. This would add to its solidity, and divert it of some of its worst features.

But, after all, this is only paltering with mitigating an evil which should be cut up by its roots. Every sound principle is outraged when a man who has the means of paying his just debts does not pay them. Whether they are contracted by himself directly, or in company with others of no importance. He is in either case bound to pay them; and to pass laws to protect him from declining to pay them, is to give a legislative sanction to dishonesty and villainy.

It is alleged, however, that these representations are fallacious; that it is a manifest encroachment on the great principle of the freedom of industry to hinder individuals from engaging in partnerships under such conditions as they choose to lay down; that in the event of conditions being publicly declared, and every man made aware of what they are, they cannot justly be objected to; for as it is optional to do or not deal with the association, those who do so do so on the conditions upon which it is established and keep aloof from it. But sophistry of this sort is too transparent to deceive anyone, and might as well be employed to excuse almost any jugglery or delusion. The question is, not whether limited liability be consistent with this abstract principle, but what are its practical results—what its probable influence over the conduct of individuals, to promote which either is or should be the object of all legislation? It is with its respect, and with it only, that we have to deal. Now, if there be one principle which is more than another conducive to the public advantage, and may be said to constitute the foundation of all dealings between man and man, it is the obligation to discharge one's debts and engagements. And it is the bounden duty of Government to enforce the rule of unlimited liability, in all cases, if such there be, when it can be done, made out that the public interest will be promoted by its relaxation or suspension. The case of this sort be satisfactorily established, undoubtedly the rule referred to should be

as far as it is concerned. But we entirely deny that when tried by this test, it either has been or can be shown that partnerships *en commandite* are publicly advantageous. On the contrary, we have seen that they are in the last degree injurious, and that their extensive introduction must necessarily give an immense stimulus to fraud and reckless speculation.

In dealing with ordinary firms or associations, people trust, or believe they may trust, to the reputation for skill and integrity, and to the presumed wealth, of one or more of the partners. Such presumptions are not, indeed, always to be depended upon. In these, as in other matters, people may be misled by appearances, and may place an unmerited degree of confidence in loud though insincere professions and promises. But how deceptive soever, the presumptions or inducements referred to afford not merely the best, but the only guarantees that can really be had for upright conduct. Most people engaged in business, whether carried on, are impressed with the well-founded conviction that their interests will be best promoted by their preserving an unblemished reputation; and when they act under the nearest responsibility, the chances are ten to one that they will behave discreetly and honourably. But we have no such guarantees for the conduct of the partners of a society *en commandite*. Character is, in their case, of little, or rather of no consequence. Instead of being responsible, they are all or may be all, but irresponsible. A., who is worth 50,000*l.* or 100,000*l.*, has not more, perhaps, than some 1,000*l.* or 2,000*l.* vested in the society. Whether he lose or gain by such investments is a matter about which he probably cares very little. Most likely he has joined the association that he might engage, without fear or apprehension, in the boldest speculations. But whether this be or be not his object, it is an insult to common sense to suppose that associations of this description will be as carefully and skillfully conducted as those in which the partners are indefinitely liable for their proceedings.

It would be the easiest thing imaginable, were it at all necessary, to corroborate the previous statements by illustrations drawn from the United States, where the principle of limited liability has been long established. But these must be familiar to almost all our readers. Everybody knows that, notwithstanding the peculiarly favourable circumstances under which the Americans are placed, from their free institutions, their enterprising character, and the boundless extent of their fertile and unoccupied lands, bankruptcy is ten times more prevalent among them than in England. The revulsions by which we are sometimes visited, though sufficiently severe, are made in the extreme compared with those that periodically devastate the United States. In various instances, every banking company in the Kingdom has stopped payment, while great numbers have been totally destroyed. And it is the same with associations of all sorts. A spirit of overtrading, or a determination, at all hazards, to 'go ahead,' is universally prevalent, and bears there, as here, its legitimate harvest of bankruptcy and disaster. So much so, indeed, is this the case, and such and so violent are the convulsions referred to, that it is no exaggeration to affirm that the wrecked fortunes and personal property are more secure in Austria and Russia than in the United States. The national character has suffered through this miserable system. Those repudiations which have so justly damaged the credit of the Americans, originated in their attempting to limit their responsibilities in their public as

well as in their private capacity. And it could hardly, indeed, be expected that people who may contract debts to their neighbours which they are not bound to pay, should be disposed to make an exception in the case of their foreign creditors.

We sometimes hear the rather unwarrantable assertion, that, unless their liability be limited, neither the poorer nor the richer classes are generally disposed to engage in extensive partnerships. But if it really had the effect of tempting the poorer classes to engage in them, that alone would be a very sufficient reason why all associations with limited liability should be suppressed. The condition of these classes will never be improved by withdrawing their attention from the business to which they have been bred, and in which they are engaged, to fix it on joint-stock adventures. The spirit of gambling and speculation is already quite enough diffused, without seeking to spread its baneful influence among the lower classes. Nothing should be done which it is possible to avoid, to divert their attention from the pursuits of sober, persevering industry. Their surplus earnings may be far more beneficially invested in savings-banks, in loans, and in contributions to friendly societies, than in joint stock adventures.

And while, on the one hand, it would be very wrong to tempt by immunities of any sort the labouring classes to engage in such schemes, it is, on the other, quite superfluous in the case of their richer brethren. They are already much too prone to embark in them. Even in those businesses, the hazard of which is extreme, there is no good reason for exempting those by whom they are carried on from the fullest responsibility. If the demand for gunpowder were doubled, the supply would very shortly be increased in an equal degree. Wherever there is extra risk, it is compensated by extra profits; and, practically, it is not found that the cost of gunpowder, or of any like article, is in any degree increased from capitalists being disinclined to face the hazard of its production.

Cautious men are content with moderate profits, and encounter only moderate risks; while those who are sanguine and adventurous, whether they be rich or poor, eagerly grasp at the highest profits, and to realise them do not hesitate to run the greatest hazards. Now, there is nothing surely to object to or amend in this. And yet the whole doctrine of limited responsibility proceeds on the contrary assumption—on the principle, if we may so call it, that profit and risk shall be divorced from each other; that speculators may undertake adventures, having, on the one hand, the chance of making unlimited profits if they turn out well, and on the other, of escaping, though they may ruin others, with a comparatively trifling loss if they turn out ill. In that peculiar class of cases in which it would seem, at the first blush of the matter, that limited responsibility would be least objectionable, it will be found to be most pernicious; for it will give an unnatural stimulus to what certainly does not require it, that is, to hazardous enterprises and desperate adventures.

On the whole, nothing but mischief can be legitimately anticipated from the establishment of partnerships with limited liability, or *en commandite*. It was not by the aid of the principles which they involve—by shirking responsibility, and evading the risks inseparable from all undertakings—that we have attained to our pre-eminence in character, in wealth, and in manufacturing and commercial industry. But are we well assured that the adoption of a contrary system will not mark the era of our decline?

*Application of Limited Liability to Banking.*—

The limited liability system was not applied in the outset to the business of banking. But this exemption was of short continuance, a statute having been passed in the course of 1858, 21 & 22 Vict. c. 91, followed by that of 1862, 25 & 26 Vict. c. 89, which authorised banking companies, not issuing notes, to be established with limited liability. It was alleged in defence of these measures, that there should be no exception to the general rule; and that Parliament, having introduced the system of limited liability into other businesses, was bound, in consistency, to extend it to banking. But if this sort of reasoning is to have any influence in such matters, it would not justify merely, but require, that the system should be extended to all companies, however small the number of partners, and even to all individuals. Why is a privilege to be conceded to 10 or 12 persons, and denied to 6, to 4, or to 1? Where, may we ask, is the justice of such a proceeding? Why should not Mr. A. be permitted to limit his liability; to declare, à priori, that whatever debts he may contract, he shall be liable only to the extent of some 500*l.* or 1,000*l.*; and that it is to this 'fund,' and not to his estates, his factories, or his consols, that his creditors have exclusively to look? But everybody knows, or ought to know, that there is something more than mere logical sequence to be attended to in public affairs. When a law has been enacted which affects certain businesses or certain individuals, the question, whether it should be extended to others, depends in no degree on hypothetical notions about the symmetry of legislation, but on the fact whether it is a beneficial law, and whether it is fitted to promote the interests of those to whom it is proposed to extend its operation. Now as limited liability has not a single good quality to recommend it, the sphere of its operation, instead of being extended, should be contracted as much as possible. In so far, however, as banks are concerned, we incline to think that its extension to them will not have much influence either one way or other; for we cannot believe it possible, if an ordinary bank limit its liability, that half-a-dozen individuals will be found foolishly enough to entrust their money to its keeping. If they do, they will well deserve the fate which may be expected to await them—that is, to lose their entire deposits. If such bank attempt, as it will probably do, to allure loans by the offer of a comparatively high rate of interest, that will make its ruin more certain and immediate, and is a bait that will be swallowed by those only whose ignorance is even greater than their voracity. We therefore have little doubt that the device of limited liability will be rejected by such banking companies as have any pretensions to character, or that have any wish to possess and deserve any portion of the public confidence. We subjoin the Act, 25 & 26 Vict., so far as it refers to Banking Companies.

**On registration with Limited Liability Notice to be given to Customers.**—Provided that every company so registering itself again as a limited company, and every existing banking company which shall register itself as a limited banking company, shall, at least 30 days previous to obtaining a certificate of registration with limited liability, give notice that it is intended so to register the same to every person and partnership firm who shall have a banking account with the company, and such notice shall be given either by delivering the same to such person or firm, or leaving the same or putting the same into the post addressed to him or them at such address as shall

have been last communicated or otherwise become known as his or their address to or by the company; and in case the company shall omit to give any such notice as is hereinbefore required to be given, then as between the company and the person or persons only who are for the time being interested in the account in respect of which such notice ought to have been given, and so far as respects such account and all variations thereof down to the time at which such notice shall be given, but not further or otherwise, the certificate of registration with limited liability shall have no operation. (Sec. 188.)

**Banking Company to publish a Statement periodically.**—Every limited banking company shall, before it commences business, and also in February and August, in every year during which it carries on business, make a statement in the form contained in the schedule hereto annexed, or near thereto as circumstances will admit, and a copy of such statement shall be put up in a conspicuous place in the registered office of the company, and in every branch office or place where the banking business of the company is carried on; and if default is made in due compliance with the provisions of this section, the company shall be liable to a penalty not exceeding 5*l.* every day during which such default continues, and every director and manager who shall knowingly permit such default shall incur the like penalty. Every member and creditor of any such company shall be entitled to a copy of the statement, on payment of a sum not exceeding 5*l.* (Sec. 41.)

**Form of Statement to be published by a Limited Banking Company, referred to in Part III. of the Act 25 & 26 Vict. c. 89.**

The capital of the company is divided into shares of	£	100
The number of shares issued is	1000	
Calls to the amount of <i>l.</i> per share have been made, under the sum of	1000	
The liabilities of the company on the first day of January or the		
were—		
On Judgment	-	-
On specialty	-	-
On notes or bills	-	-
On simple contracts	-	-
On estimated liabilities	-	-
Total	-	-
The assets of the company on that day were—		
Government securities (stating them)	-	-
Bills of exchange	-	-
Promissory notes	-	-
Cash at the bankers	-	-
Other securities	-	-
Total	-	-

By the 30 & 31 Vict. c. 29, joint-stock banking companies are bound to show their list of shareholders to any registered shareholder between the hours of 10 and 4.

**PASSENGERS.** In Commercial Navigation individuals conveyed for hire from one place to another on board ship. Passage ships are peculiarly appropriated to the conveyance of passengers.

Passage ships are generally placed under certain regulations; and the extent to which emigration is now carried renders it of the utmost importance that these regulations should be carefully compiled and properly carried out.

By far the largest proportion of these emigrants especially of late years, has consisted of natives of Ireland. The scarcity, or rather the want, of labour in 1846-47, gave an extraordinary stimulus to emigration; and it has since been continuing, partly by the depressed condition of the peasantry, and partly by the wish of the bulk of the landless population to diminish the number of petty holdings on the estates, and partly also by the enticements more effectually still by the large sums of money

which have been sent to Ireland by parties who have emigrated, to encourage and assist the emigration of others. But there is no reason to fear that this emigration, however promoted, will be carried to excess. The rise of wages consequent on the diminution of the population will effectually hinder this result. It has latterly, indeed, declined considerably; and there can be no manner of doubt that emigration from Ireland might be carried to a much greater extent than it has yet been carried, without its being otherwise than advantageous to that island and to the United Kingdom generally.

Emigration from the United Kingdom during the 53 Years, from 1815 to 1867 inclusive.

Year	North American Colonies	United States	Australian Colonies and New Zealand	All other Places	Total

Emigration from the United Kingdom:—  
From 1815 to 1867 - 118,912  
For the 10 years ending 1867 - 161,915

The Customs Returns do not record any Emigration to Australia during these 10 years, but it appears from other sources that there were in 1841, 2012; in 1842, 275; in 1843, 25; in 1844, 25; in 1845, 280; and in 1845, 458 passengers. The numbers have not been included in the above of this table.

It is seen from the above account, that in 1852 no fewer than 668,764, and in 1854, 323,429 voluntary emigrants left the United Kingdom; and such being the vast extent to which emigration is now carried, the propriety, or rather necessity, of enacting some general regulations, with respect to the conveyance of emigrants to their destination, must be obvious to everyone at all acquainted with the subject. The greater number of emigrants are in humble life; few among them know anything of ships, or of the precautions necessary to insure a safe and comfortable voyage; they are, for the most part, poor, and exceedingly anxious to economise, so that they seldom hesitate to embark in any ship, however unfit for the

conveyance of passengers, or inadequately furnished with provisions, if it be cheap. Unprincipled masters and owners have not been slow to take advantage of this; and in order to prevent the frauds that would otherwise be practised on the unwary, it has been found indispensable to lay down some general regulations as to the number of passengers to be taken on board ships as compared with their tonnage, the quantity of water and provisions as compared with the passengers &c. But this is no very easy task. If the limitations be too strict, that is, if comparatively few passengers may be carried, or if the stock of provisions to be put on board be either unnecessarily large or expensive, the cost of emigration is proportionally enhanced; and an artificial and serious impediment is thrown in the way of what should be made as easy as possible, consistent with security. But, on the other hand, if too many passengers be allowed, their health is liable to suffer; and should the supply of provisions be inadequate, or the quality bad, the most serious consequences may ensue. The Act 6 Geo. IV. c. 116 obliged too great a quantity of expensive provisions to be put on board, and was in consequence objected to by emigrants as well as shippers. The Act 9 Geo. IV. c. 21 avoided this error; but it was defective, inasmuch as it made no provision with respect to the sufficiency of the ship, the having a surgeon, or other properly qualified medical person on board ships carrying a certain number of passengers, and in other particulars. These deficiencies were in part supplied by the Act 5 & 6 Wm. IV. c. 53, and subsequent statutes, including the 15 & 16 Vict. c. 41. But the provisions in these Acts having been found to be in several respects inadequate, they have been repealed, and the following regulations, embodied in the 18 & 19 Vict. c. 119 and 26 & 27 Vict. c. 51, have been substituted. We doubt, however, whether these will be much longer lived than those by which they have been preceded. They seem to be singularly deficient in the precision and clearness so very necessary in such matters, and to be encumbered with a host of details altogether foreign to the real business of the statute.

ACT OF 1855, THE 18 & 19 VICT. CAP. 119, FOR REGULATING THE CARRIAGE OF PASSENGERS BY SEA, AMENDED BY THE ACT OF 1863, 26 & 27 VICT. CAP. 51, AND RELATIVE ORDERS IN COUNCIL.

The sections referred to are those of the Act of 1855, unless that of 1863 be cited.

Commencement of this Act, and repeal of former Act &c.—'The Passengers Act 1852' shall be repealed; except so far as the said Act repeals any former Act or enactment; and except as to existing passage brokers' licenses, which shall continue in force as mentioned in sec. 68 of this Act, and except as to any ship which shall have cleared out from any colonial port under the said Act, and before this Act shall have come into operation in such colony; and except so far as may be necessary for supporting or continuing any proceeding taken or to be taken upon any bond given under the said Act, or upon any other civil process; and except as to the recovery and application of any penalty for any offence committed against the said Act; and except also as to an order in council made by her Majesty on October 16, 1852, in pursuance of the powers given by sec. 55 of the said Act, which said order in council shall remain in force until altered or revoked by any order in council to be made under the provisions of this Act. (Sec. 1.)

Section 2 directs that in reciting this Act in other Acts of Parliament, or in any instrument, document, or proceeding, it shall be sufficient to use the expression 'The Passengers Act 1855.'

Section 3 lays down the definition of terms used in this Act. The description of 'passenger ship' is repealed in the Act of 1863, and the term is intended to signify every description of seagoing vessel, whether British or foreign, carrying, upon any voyage to which the Act of 1855 extends, more than 50 passengers, or a greater number of passengers than in the proportion of one statute adult to every 33 tons of the registered tonnage of such ships if propelled by sails, or than one statute adult to every 20 tons if propelled by steam.

**To what Vessels and Voyages this Act extends.**—This Act shall extend to every 'passenger ship' proceeding on any voyage from the United Kingdom, to any place out of Europe, and not being within the Mediterranean Sea, and on every colonial voyage as after described, and in the particulars mentioned or referred to in secs. 100, 101, and 102, to every ship bringing passengers into the United Kingdom from any place out of Europe, and not being within the Mediterranean Sea; but shall not extend to any of her Majesty's ships of war, nor to any ships in the service of the lords of the Admiralty of the United Kingdom, nor to any ship of war or transport in the service of the East India Company, nor to any steam vessel regularly employed in the conveyance of mails under an existing contract with the Government of the state or colony to which such steam vessel may belong, provided the master thereof shall, on demand, produce to the emigration officer at the port of clearance or port of departure a certificate of exemption in the form given in schedule (A) hereto annexed, under the hand of the postmaster-general of the United Kingdom, or of some person deputed by him for the purpose, or in the case of a colony, under the hand of the governor thereof, or in the case of a foreign state, under the hand of the postmaster-general or other competent government officer, whose signature shall be authenticated by the signature of a British consular officer in such foreign state. (Sec. 4.) But by the provisions of the Act of 1863, steam vessels carrying mails, if they carry other than cabin passengers in sufficient numbers to bring the vessel within the definition of a 'passenger ship,' are brought within the Act.

**Penalty on fraudulently using Certificates or using Fraudulent Certificates.**—Such certificate of exemption shall be issuable at the discretion of the officer authorised to grant the same as herein mentioned, and shall remain in force for the period specified therein, unless sooner revoked, or unless the vessel for which it shall have been issued shall sooner cease to be employed in carrying the public mails; and if any person shall make or attempt to make any fraudulent use of any such certificate, or shall forge, counterfeit, alter, or erase the whole or any part thereof, or shall use or attempt to use any spurious or fraudulent certificate, the person so offending, and every person aiding and abetting in such offence, shall be liable to a penalty not exceeding 500*l.*, and the vessel for which the exemption is claimed shall not be cleared out until all the requirements of this Act have been complied with. (Sec. 5.)

Clause 6 enacts that the commissioners of emigration shall carry this Act into execution.

Clause 7 enacts that the emigration commissioners may sue and be sued in the name of their Secretary &c.

Clause 8 enacts that the emigration officers and

assistants are to act under the commissioners of emigration, and that existing appointments are to continue until revoked.

Clause 9 enacts that the duties of emigration officer may be performed by his assistant or by the chief officer of customs.

**Facilities to be given for the Inspection of all Ships fitting for Passengers.**—The master of every ship, whether a 'passenger ship' or otherwise, fitting or intended for the carriage of passengers, or which shall carry passengers upon any voyage to which this Act extends, shall afford to the emigration officer at any port or place in her Majesty's dominions, and, in the case of British ships, to her Majesty's consular officer at any foreign port or place at which such ship shall be or arrive, every facility for inspecting such ships, and for communicating with the passengers, and for ascertaining that the provisions of this Act, so far as the same may be applicable to such ships, have been duly complied with; the master of any ship who shall omit or fail to comply with any of the requirements of this section, shall be liable to a penalty not exceeding 50*l.* (Sec. 10.)

**No Passenger Ship to clear without Certificate from Emigration Officer &c.**—No ship fitted or intended for the carriage of passengers as a 'passenger ship,' shall clear out or proceed to sea until the master thereof shall have obtained from the emigration officer at the port of clearance a certificate of clearance under his hand that all the requirements of this Act, so far as the same may be complied with, before the departure of such ship, have been duly complied with, and that such ship is, in his opinion, seaworthy, in safe trim, and in all respects fit for her intended voyage, and that her passengers and crew are in a fit state to proceed, nor until the master shall have joined and executed such bond to the Crown as required by sec. 63 of this Act: provided, that if such emigration officer shall refuse to grant such certificate, and the owner or charterer of such ship shall appeal in writing to the emigration commissioners, such commissioners shall appoint any 2 other emigration officers, or any 2 competent persons, at the expense of the appellant, to examine into the matter, and if the persons so appointed shall grant a certificate under their joint hands to the purport hereinbefore required, such certificate shall be held to be of the same effect as if granted by the emigration officer at the port of clearance. (Sec. 11.)

**Where Passengers may be carried.**—No ship shall carry passengers or cabin passengers on more than 2 decks: provided, that cabin passengers in a proportion not exceeding 1 cabin passenger for every 100 tons of the ship's tonnage, and sick persons placed in a hospital, as after provided, may be carried in a poop or deck house, notwithstanding that passengers are carried on 2 other decks, and if passengers are carried under the poop or in any round house or deck house, such poop or round house, or deck house shall be properly lighted and secured, to the satisfaction of the emigration officer at the port of clearance: for any breach of this enactment the master of the ship shall be liable to a penalty not exceeding 500*l.*, nor less than 20*l.* sterling. (Sec. 12.)

**Rule for determining the Number of Passengers to be carried.**—For determining the number of passengers to be carried in any 'passenger ship' the following rules shall be observed:—

1. No ship shall carry under the poop, or in the round house or deck house, or on the upper passenger deck, a greater number of passengers than in the proportion of 1 statute adult to every 100 clear superficial feet of deck allotted to their use.

3. No ship shall carry on her lower passenger deck a greater number of passengers than in the proportion of 1 statute adult to every 18 clear superficial feet of deck allotted to their use: provided nevertheless, that if the height between such lower passenger deck and the deck immediately above it shall be less than 7 feet, or if the apertures (exclusive of side scuttles) through which light and air shall be admitted to the lower passenger deck shall be less in size than in the proportion of 3 square feet to every 100 superficial feet of the lower passenger deck, no greater number of passengers shall be carried on such deck than in the proportion of 1 statute adult to every 25 clear superficial feet thereof:

4. No ship, whatever be her tonnage or superficial space of 'passenger decks,' shall carry a greater number of passengers on the whole than in the proportion of 1 statute adult to every 5 superficial feet, clear for exercise, on the upper deck or poop, or (if secured and fitted on the top with a railing or guard to the satisfaction of the emigration officer at the port of clearance) on any second house or deck house:

5. In the measurement of the passenger decks, poop, second house, or deck house, the space for the hospital and that occupied by such portion of the personal luggage of the passengers as the emigration officer may permit to be carried there shall be included.

Two clauses which limited the number of passengers by the registered tonnage and laid penalties on the violation of this rule, were repealed by the Act of 1863.

Not to repeal 16 & 17 Vict. c. 84.—Provided, nevertheless, that nothing in this Act shall repeal the Act 16 & 17 Vict. c. 84, intitled 'An Act to Amend the Passengers Act 1852, so far as it relates to the Passages of Natives of Asia, Africa, and also Passages between the Island of Ceylon and certain Parts of the East Indies.' (See 15.) The Indian Act No. 13 of 1864 regulates the emigration from British India.

**Passengers' Lists to be delivered in Duplicate by the Master before Clearance.**—The master of every ship, whether a 'passenger ship' or otherwise, carrying passengers on any voyage to which this Act extends, shall, before demanding a clearance for such ship, sign 2 lists, made out according to the form contained in schedule (B.) hereto annexed, correctly setting forth in the manner therein directed, the name and other particulars of every passenger on board thereof:

The said lists, when countersigned by the emigration officer, where there is one at the port, shall be delivered by the master to the officer of the customs from whom a clearance of the said ship shall be demanded, and such officer shall thereupon also countersign and return to the said master 1 of such lists, called 'The Master's List;' and the said master shall note in writing on such list, and on any additional lists to be made out as next provided, the date and supposed cause of death of any passenger who may die, and the date of birth and sex of any child who may be born on the voyage, and shall extend such list, with any additions which may from time to time be made thereto, to the chief officer of customs at any port or place in her Majesty's possessions, or to her Majesty's consul or officer at any foreign port at which the said passengers or any of them shall be landed, and they shall deposit the same with such chief officer of customs or such consular officer, as the case may be, at the final port or place of discharge, and the officer of customs or consular officer shall thereupon forthwith transmit the particulars re-

specting any passenger who may die, or of any child who may be born on the voyage, to the registrar-general of births, deaths, and marriages in England, who shall file the same, and enter a copy thereof in the 'marine register book,' which entry shall be dealt with and be of the same value as any other entry made in such book under the provisions of the 6 & 7 Wm. IV. c. 86: in case of non-compliance with any of the requirements of this section on the part of the master, or if such lists shall be wilfully false, the master shall for each offence be liable to a penalty of not more than 100*l.*, nor less than 5*l.* (Sec. 16.)

**Lists of Passengers embarked after Clearance to be delivered by Master.**—If at any time after such lists have been signed and delivered, any additional passenger shall be taken on board, in such case the master shall add to 'the master's list' the names and other particulars of every such additional passenger, and shall also sign a separate list, made out according to the aforesaid form, containing the names and other particulars of every such additional passenger, and such last-mentioned list, when countersigned by the emigration officer, where there is one at the port, shall, with 'the master's list' to which such addition has been made, be delivered to the chief officer of customs, and thereupon such officer shall countersign 'the master's list,' and shall return the same to the said master, and shall refrain the separate list, and so on in like manner whenever any additional passenger or passengers may be taken on board; or if no officer of customs be stationed at the port or place where such additional passenger or passengers may be taken on board, the said lists shall be delivered to the officer of customs at the next port or place at which such vessel shall touch or arrive and where any such officer shall be stationed, to be dealt with as before mentioned: provided, that when any additional passengers are taken on board, the master shall obtain a fresh certificate from the emigration officer of the port that all the requirements of this Act have been duly complied with before the ship proceeded to sea: in case of non-compliance with any of the requirements of this section, the master of such ship shall for each offence be liable to a penalty of not more than 50*l.*, nor less than 5*l.* (Sec. 17.) By the Act of 1863, the regulations of the 16th and 17th secs. are extended to cabin passengers, who are to be distinguished as under and over 12.

**Penalty on Persons found on board Ships without Consent of Owners &c.**—If any person be found on board any 'passenger ship' with intent to obtain a passage therein without the consent of the owner, charterer, or master thereof, such person and every person aiding and abetting him in such fraudulent intent, shall respectively be liable to a penalty not exceeding 5*l.*, and in default of payment to imprisonment, with or without hard labour, for not exceeding 3 calendar months; and such person so found on board may be taken before any justice of the peace, without warrant, and such justice may summarily hear the case, and on proof of the offence, convict such offender as aforesaid. (Sec. 18.) By the Act of 1863 the penalty is extended to 20*l.*

**All Passenger Ships to be surveyed before clearing out.**—No 'passenger ship' shall clear out or proceed to sea unless she has been surveyed, under the direction of the emigration officer at the port of clearance, but at the expense of the owner or charterer thereof, by 2 or more competent surveyors, to be appointed by the said emigration commissioners for each port at which there may be an emigration officer, and for other ports by the

deck allotted to their use.

commissioners of customs, nor unless it shall be reported by such surveyors that such 'passenger ship' is in their opinion seaworthy, and fit for her intended voyage. The survey shall be made before any part of the cargo is taken on board, except so much as may be necessary for ballasting the ship, and such portion of cargo if laden on board shall be shifted, if required by the emigration officer or surveyors, so as to expose to view successively every part of the frame of the ship. In case of non-compliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty not exceeding 100*l*. nor less than 5*l*.: provided always, that in case any 'passenger ship' be reported by such surveyors not to be seaworthy, or not fit for her said intended voyage, the owner or charterer, if he think fit, may require, by writing under his hand, the emigration officer, or in his absence the chief officer of customs, to appoint 3 other competent surveyors, of whom 2 at least shall be shipwrights, to survey the said ship, at the expense of the said owner or charterer; and the said officer shall thereupon appoint such surveyors, who shall survey the said ship, and if they shall, by an unanimous report under their hands (but not otherwise), declare the said ship to be seaworthy, and fit for her intended voyage, the said ship shall then, for the purposes of this Act, be deemed seaworthy for such voyage. (Sec. 19.)

**As to the Construction of Beams and Decks.**—In every 'passenger ship' the beams supporting the 'passenger decks' shall form part of the permanent structure of the ship: they shall be of adequate strength, in the judgment of the emigration officer at the port of clearance, and shall be firmly secured to the ship to his satisfaction. The 'passenger decks' shall be at least 1½ in. in thickness, and shall be laid and firmly fastened upon the beams continuously from side to side of the compartment in which the passengers are berthed. The height between that part of any deck on which passengers are carried and the deck immediately above it shall not be less than 6 ft. In case of non-compliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty of not more than 50*l*. nor less than 5*l*. (Sec. 20.)

**Arrangement and Size of Berths.**—There shall not be more than 2 tiers of berths on any 1 deck in any 'passenger ship,' and the interval between the floor of the berths and the deck immediately beneath them shall not be less than 6 in., nor the interval between each tier of berths and between the uppermost tier and the deck above it less than 2½ ft.: the berths shall be securely constructed, and of dimensions not less than 5 ft. in length and 18 in. in width for each statute adult, and shall be sufficient in number for the proper accommodation of all the passengers contained in the lists of passengers hereinbefore required to be delivered by the master of the ship. No part of any berth shall be placed within 9 in. of any water-closet, erected in the between-decks. In case of non-compliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty not exceeding 50*l*. nor less than 5*l*. (Sec. 21.)

**Single Men to be berthed in a Separate Compartment.**—In every 'passenger ship' all the male passengers of the age of 14 years and upwards who do not occupy berths with their wives shall, to the satisfaction of the emigration officer at the port of clearance, be berthed in the fore part of the ship,

in a compartment divided off from the space appropriated to the other passengers by a substantial and well secured bulk-head, without opening into, or communication with, any adjoining passenger berth, or in separate rooms the ship be fitted with enclosed berths. Not more than 1 passenger, unless husband and wife, or females or children under 12 years of age, shall be placed in or occupy the same berth. In case of non-compliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty of not more than 50*l*. nor less than 5*l*. (Sec. 22.)

**Berths not to be removed till Passengers are landed.**—No berths in a 'passenger ship' occupied by passengers during the voyage shall be taken down until 48 hours after the arrival of such ship at the port of final discharge, unless all the passengers shall have voluntarily quitted the ship before the expiration of that time. In case of non-compliance with any of the requirements of this section, the master of such ship shall be liable for each offence to a penalty not exceeding 50*l*. nor less than 5*l*. (Sec. 23.)

**Space to be allotted as an Hospital.**—In every 'passenger ship' there shall be a sufficient space properly divided off to the satisfaction of the emigration officer at the port of clearance, to be used exclusively as an hospital or hospitals for the passengers: this space shall be under the poop, in the round house, or in any deck house which shall be properly built and secured to the satisfaction of such emigration officer, or on the passenger deck, and not elsewhere, and shall in case be less than 18 clear superficial feet for every 50 passengers which the ship shall carry. Such hospitals shall be fitted with bed-places, and supplied with proper beds, bedding, and steens to the satisfaction of the emigration officer at the port of clearance, and throughout the voyage be so fitted and supplied. In case of non-compliance with any of the requirements of this section, the owner, charterer, or master of the ship shall for each offence be liable to a penalty not exceeding 50*l*. nor less than 5*l*. (Sec. 24.)

**Regulation as to the Construction of Privies.**—Every 'passenger ship' shall clear out or proceed to unless fitted, to the satisfaction of the emigration officer at the port of clearance, with at least 2 privies, and with 2 additional privies on deck every 100 passengers on board, and in all ships carrying as many as 50 female passengers, with at least 2 water-closets under the poop, or elsewhere on the upper deck, to the satisfaction of the emigration officer, for the exclusive use of women and young children; all of which privies and water-closets shall be firmly constructed and maintained in a serviceable and cleanly condition throughout the voyage, and shall not be taken down until the expiration of 48 hours after the arrival of the ship at the port of final discharge, unless all the passengers sooner quit the ship; provided that such privies shall be placed in numbers on each side of the ship, and need in any case exceed 12 in number. In case of non-compliance with any of the requirements of this section, the master shall be liable to a penalty for each offence of not more than 50*l*. nor less than 5*l*. (Sec. 25.)

**As to Light and Ventilation.**—No 'passenger ship' shall clear out or proceed to sea without such provisions for affording light and air to the passenger decks as the circumstances of the case may, in the judgment of the emigration officer at the port of clearance, require; nor if there are more than 100 passengers on board, without having

an adequate and proper ventilating apparatus, to be approved by such emigration officer and fitted to his satisfaction; the passengers shall, moreover, have the free and unimpeded use of the whole of each hatchway situated over the space appropriated to their use, and over each such hatchway there shall be erected such a boobyhatch or other substantial covering as shall, in the opinion of such emigration officer, afford the greatest amount of light and air, and of protection from wet, as the case will admit. In case of non-compliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty not exceeding 50*l.* nor less than 5*l.* (Sec. 26.)

**Regulations as to the Carrying of Boats.**—Every passenger ship shall carry throughout the voyage a number of boats according to the following scale: viz.:

- 1 boat for every ship of less than 200 tons;
- 2 boats for every ship of 200 and less than 400 tons;
- 3 boats for every ship of 400 and less than 600 tons;
- 4 boats for every ship of 600 and less than 1,000 tons;
- 5 boats for every ship of 1,000 and less than 1,500 tons;
- 6 boats for every ship of 1,500 tons and upwards;

provided that no 'passenger ship' shall be required to carry a greater number of boats than are sufficient, in the judgment of the emigration officer at the port of clearance, to carry all the persons on board of such ship:

(One of such boats shall in all cases be a long boat, and one shall be a properly fitted life boat, which shall be carried in such a manner as to be, in the opinion of the emigration officer, most available for immediate service: each of such boats shall be of a suitable size and description, to be approved by the emigration officer at the port of clearance, and shall be seaworthy, and properly supplied with all requisites, and kept clear at all times for immediate use at sea: there shall likewise be on board each 'passenger ship,' if proceeding to any place to the southward of the equator, at least 2 chronometers, and if to any place to the northward of the equator, at least 1 chronometer, and on board of all 'passenger ships' at least 3 steering and 1 azimuth compass, 4 properly fitted life buoys, kept ready at all times for immediate use, and some adequate means, to be approved by the emigration officer at the port of clearance, of making signals by night and in day; also a fire engine, in proper working order, and of such description and power and either with or without such other apparatus for extinguishing fire as such officer may approve; and not less than 2 lower anchors of such weight, and with cables of such length, size, and material, as in the judgment of such emigration officer shall be sufficient for the size of the ship. In case of non-compliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty of not more than 50*l.* nor less than 5*l.* (Sec. 27.)

**Regulations as to Carrying an Efficient Crew.**—Every passenger ship shall be manned with an efficient crew for her intended voyage, to the satisfaction of the emigration officer from whom a clearance of such ship may be demanded, and the strength of the crew shall not be diminished, nor any of the men changed when once passed by the emigration officer, without his consent in writing, or that of the shipping master of the port of clearance, as required by the laws then in force

regulating the shipping of seamen on board merchant vessels. Where the consent of the shipping master is obtained, it shall, within 24 hours thereafter, be lodged with such emigration officer. In case of non-compliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l.*; provided, that if the emigration officer shall consider the crew inefficient, and the owner or charterer of the ship shall thereupon appeal in writing to the said emigration commissioners, such commissioners shall, at the expense of the appellant, appoint 2 other emigration officers or 2 competent persons to examine into the matter, and the unanimous opinion of the persons so appointed, expressed under their hands, shall be conclusive on the point. (Sec. 28.)

**Certain Articles prohibited as Cargo and Ballast.**—No 'passenger ship' shall clear out or proceed to sea if there shall be on board as cargo, horses, cattle, gunpowder, vitriol, lucifer matches, guano, or green hides, nor if there shall be on board any other article or number of articles, whether as cargo or ballast, which by reason of the nature or quantity or mode of stowage thereof shall, either singly or collectively, be deemed by the emigration officer at the port of clearance likely to endanger the health or lives of the passengers or the safety of the ship; no part of the cargo, or of the passengers' luggage, or of the provisions, water, or stores, whether for the use of the passengers or of the crew, shall be carried on the upper deck, or on the 'passenger decks,' unless, in the opinion of such emigration officer, it shall be so placed as not to impede light or ventilation, nor interfere with the comfort of the passengers; nor unless the same be stowed and secured to the satisfaction of such emigration officer, and the space occupied thereby or rendered, in the opinion of such officer, unavailable for the accommodation of the passengers, shall (unless occupied by passengers' luggage) be deducted in calculating the space by which, under the provisions of this Act, the number of passengers is regulated. In case of non-compliance with any of the requirements of this section, the owner, charterer, or master, or any of them, shall for each offence be liable to a penalty not exceeding 300*l.* nor less than 5*l.* (Sec. 29.)

By the Act of 1863, horses and cattle may be carried in 'passenger ships' under these conditions:—

1. The animals not to be carried on any deck below that in which passengers are berthed, nor in any compartment in which passengers are berthed, nor in any adjoining compartment; except in a ship built of iron, and of which the compartments are divided off by water-tight bulkheads extending to the upper deck.
2. Clear space on the spar or weather deck to be left at 10 superficial feet for each adult.
3. In 'passenger ships' of less than 500 tons registered passage, not more than two head of large cattle to be carried, nor in larger ships more than one additional head for each 200 tons, nor in any ship more than ten head. Large cattle to be oxen or cows, deer, horses, and asses. Four sheep of either sex, and four female goats, to be equal to one large cattle.
4. Emigration officer to be satisfied as to housing, maintenance, and cleanliness of animals, and stowage of fodder.
5. Not more than six dogs, and no pigs or male goats, to be carried in any 'passenger ship.'

Penalty for violating these rules, in case of owner, charterer, or master of ship, 5*l.* to 300*l.*

**Computation of Voyages.**—For the purposes of this Act, the length of the voyage for a 'pas-

senger ship' proceeding from the United Kingdom to the under-mentioned places respectively, shall be determined by the following scale; viz.— (See first table, annexed).

For the like purposes, the said emigration commissioners, acting by and under the authority of one of her Majesty's principal secretaries of state, from time to time, by any notice in writing issued under the hands of any 2 such commissioners, and published in the *London Gazette*, may nevertheless decline what shall be deemed to be the length of the voyage from the United Kingdom to any of the before-mentioned places, or to any other port or place whatsoever, and may fix such different lengths of voyage as they may think reasonable for such different descriptions of vessels as aforesaid. (Sec. 30.)

**Before Clearance, Provisions and Water to be surveyed.**—Before any 'passenger ship' be cleared out, the emigration officer at the port of clearance shall survey, or cause to be surveyed, by some competent person, the provisions and water required by this Act to be on board for the consumption of the passengers, and shall satisfy himself that the same are of a good and wholesome

quality, and in a sweet and good condition, and are in quantities sufficient to secure throughout the voyage the issues herein prescribed: in addition to the allowance of pure water for the use of each passenger, there shall be shipped for cooking purposes an additional supply of pure water, after the rate of at least 10 gallons for every day of the prescribed length of voyage for every 100 statute adults on board; and also for the use of the crew and all other persons on board an ample supply of wholesome provisions and pure water, which shall not be inferior in quality to the supply of the same articles provided for the consumption of the passengers: all such water, provisions, and stores shall be provided and properly stowed away in accordance with the requirements of the 29th section of this Act, by and at the expense of the owner, charterer, or master of the ship: and if a clearance be obtained for any 'passenger ship' which is not then stored with the requisite quantities of such water, provisions, and stores as are required by this Act, the owner, charterer, or master of such ship, or any of them, shall for each offence be liable to a penalty not exceeding 300*l.* (Sec. 31.)

	If the ship be propelled by sails alone, or by steam power not sufficient without the aid of sails to propel the ship after the rate of 5 miles an hour.	If the ship be propelled wholly or in aid of sails by steam engines of not less power than sufficient, without the aid of sails, to propel the ship after the rate of 10 miles an hour.

\* For Steamers 52 days.

† For Steamers 57 days.

**Power to Emigration Officer to reject and mark Bad Provisions &c.**—If such emigration officer shall consider that any of the provisions or stores or water are not of a good and wholesome quality, or are not in a sweet and good condition, it shall be lawful for him to reject and mark the same, or the packages or vessels in which they are contained, and to direct the same to be landed or emptied; and if such rejected provisions or stores or water be not thereupon forthwith landed or emptied, or if, after being landed, the same or any part thereof shall be reshipped in such ship, the owner, charterer, or master thereof, or any of them, or if reshipped into any other 'passenger ship,' the person causing the same to be reshipped, shall for each offence be liable to a penalty not exceeding 100*l.* (Sec. 32.)

**Water Tanks or Casks to be approved by Emigration Officer.**—In every 'passenger ship' the water to be laden on board, as herein required, shall be carried in tanks or in casks, to be approved by the emigration officer at the port of clearance. When casks are used, they shall be sweet and tight, of sufficient strength, and if of wood properly charred inside, and shall not be capable severally of containing more than 300 gallons each: the staves of the water casks shall not be made of fir, pine, or soft wood. In case of non-compliance with any of the requirements of this section, the owner,

charterer, or master of such ship, or any of them, shall for each offence be liable to a penalty not more than 50*l.* (Sec. 33.)

By orders in council of May 5, 1857, and December 5, 1865, steamers and sailing vessels which carry an approved apparatus for distilling fresh from salt water of not less than one gallon per diem for each person on board, need not carry in tanks or casks one-half the water prescribed by the Act.

**Provision for touching at intermediate Ports and fill up Water.**—If any 'passenger ship' be intended to call at any intermediate port or place during the voyage, for the purpose of taking in water, and if an engagement to that effect be inserted in the bond mentioned in the 63rd section of this Act, then it shall be sufficient to place on board at the port of clearance such supply of water as may be requisite, according to the rate hereinafter mentioned, for the voyage of the said ship to such intermediate port or place, subject to the following conditions; viz. :—

1. That the emigration officer signify his approval in writing of the arrangement, to be carried amongst the papers of the ship, and exhibited to the chief officer of customs, or to her Majesty's consular officer, as the case may be, at such intermediate port or place, and to be delivered to the chief officer of customs, or to be

Majesty's consular officer, as the case may be, on the arrival of the said ship at the final port or place of discharge:

2. That if the length of either portion of the voyage, whether to such intermediate port or place, or from such intermediate port or place, to the final port or place of discharge, be not prescribed in or under the provisions of this Act, the emigration officer at the port of clearance shall in every such case declare the same in writing, to be carried amongst the papers of the ship:

3. That the ship shall have on board at the time a clearance is demanded, tanks or water casks, of the description hereinbefore mentioned, sufficient for stowing the quantity of water required for the longest of such portions of the voyage as aforesaid. (Sec. 34.)

**Diary Scales of Provisions.**—The master of

every 'passenger ship' shall, during the voyage, including the time of detention at any place before the termination thereof, issue to each passenger, or where the passengers are divided into messes, to the head man for the time being of each mess, on behalf and for the use of all the members thereof, an allowance of pure water and sweet and wholesome provisions, of good quality, according to the following dietary scale; viz. if the length of the voyage, computed as before mentioned, shall not exceed 84 days for ships propelled by sails only, or 50 days for ships propelled by steam, or steam in aid of sails, then according to the dietary scale marked 'A.;' but if the length of the voyage, computed as aforesaid, shall exceed 84 days for ships propelled by sails only, or 50 days for ships propelled by steam, or steam in aid of sails, then according to the dietary scale marked 'B.'

**WATER.**

Three Quarts of Water daily to each Statute Adult, exclusive of the quantity before specified as necessary for cooking the articles herein required to be issued in a cooked state.

**PROVISIONS.**

Weekly per Statute Adult:

\* By the Act of 1865, the issue of lime juice is confined to the period during which the ship is in the Tropics; during other portions of the voyage, the issue shall be at the discretion of the medical officer, or in case no such person be on board, at that of the master.

**Substitutions.**—Substitutions at the following rates may, at the option of the master of any 'passenger ship,' be made in the above dietary scales, that is to say:—

- 1 lb. of preserved meat, for 1 lb. of salt pork or beef.
- 1 lb. of flour or of bread or biscuit, or 1/2 lb. of beef or of pork, for 1 1/2 lb. of oatmeal, or 1 lb. of rice, or 1 lb. of peas.
- 1 lb. of rice, for 1 1/2 lb. of oatmeal, or vice versa.
- 1 lb. of preserved potatoes, for 1 lb. of potatoes.
- 10 oz. of currants, for 8 oz. of raisins.
- 1/2 oz. of cocoa, or of coffee, roasted and ground, for 3 oz. of tea.
- 1/2 lb. of treacle, for 1/2 lb. of sugar.
- 1 gill of mixed pickles, for 1 gill of vinegar.
- 1/2 lb. of soft bread (Act of 1863) may be issued instead of 1 lb. of flour, biscuit, rice, and peas, or of 1 1/2 lb. of oatmeal.

Provided, that the substituted articles be set forth in the contract tickets of the passengers. In case of non-compliance with any of the requirements of this section, the master of the ship shall be liable for each offence to a penalty not exceeding 50l. (Sec. 35.)

**Size of Messes.**—The messes into which the passengers in any 'passenger ship' may be divided shall not consist of more than 10 statute adults in each mess, and members of the same family, whereof 1 at least is a male adult, shall be allowed to form a separate mess. The provisions according to the above scale shall be issued, such of them as require to be cooked, in a properly cooked state, daily before 2 o'clock in the afternoon, to the head person for the time being of each mess, on behalf and for the use of the members thereof. The first of such issues shall

be made before 2 o'clock in the afternoon of the day of embarkation or for such passengers as shall be then on board. In case of non-compliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50l. (Sec. 36.)

**Power to Emigration Commissioners to authorise an alternative Dietary Scale.**—The emigration commissioners for the time being, acting under the authority of 1 of the principal secretaries of state, may from time to time, by any notice for that purpose, issued under the hands of any 2 of such commissioners, and published in the *London Gazette*, authorise the issue of provisions in any 'passenger ship' according to such other dietary scale (besides that before prescribed) as shall in their opinion contain in the whole an equivalent amount of wholesome nutriment; and after the publication of such notice it shall be lawful for the master of any 'passenger ship' to issue provisions to his passengers either according to the scale by this Act prescribed, or according to the scale authorised by the said commissioners, whichever may have been set forth in the contract tickets of the passengers: provided always, that the said commissioners, acting under such authority and by such notice as aforesaid, may revoke or alter any such dietary scale authorised by them, as occasion may require. (Sec. 37.)

**As to Passengers' Stewards.**—Every 'passenger ship' carrying as many as 100 passengers shall have on board a seafaring person, who shall be rated in the ship's articles as passengers' steward, and who shall be approved by the emigration officer at the port of clearance, and who shall be employed in messing and serving out the pro-

... good condition, and to secure throughout a prescribed: in addition water for the use of be shipped for cooking only of pure water, after allions for every day of voyage for every 100 and also for the use of ns on board an ample ons and pure water, rior in quality to the s provided for the con- s: all such water, pro- s provided and properly e with the requirements his Act, by and at the rterer, or master of the e obtained for any pas- t then stored with the h water, provisions, and his Act, the owner, char- ship, or any of them, liable to a penalty not

In case of non-compliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l.*, nor less than 5*l.* (Sec. 38.)

*As to Passenger Cooks and Cooking Apparatus.*—Every 'passenger ship' carrying as many as 100 passengers, shall also have on board a seafaring man, or if carrying more than 300 'statute adults,' 2 seafaring men, to be rated and approved as in the case of passengers' stewards, who shall be employed in cooking the food of the passengers: a convenient place for cooking shall also be set apart on deck; and a sufficient cooking apparatus, properly covered in and arranged, shall be provided, to the satisfaction of the said emigration officer, together with a proper supply of fuel adequate, in his opinion, for the intended voyage. In case of non-compliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l.*, nor less than 5*l.* (Sec. 39.)

*In what Cases Interpreters to be carried.*—In every foreign 'passenger ship' in which as many as half the passengers are British subjects, unless the master and officers, or not less than 3 of them, shall understand and speak intelligibly the English language, there shall be carried, where the number of passengers does not exceed 250, 1 person, and where it exceeds 250, 2 persons, who understand and speak intelligibly the language spoken by the master and crew and also the English language, and such persons shall act as interpreters, and be employed exclusively in attendance on the passengers, and not in the working of the ship; and no such ship shall clear out or proceed to sea without having such interpreter or interpreters on board; and the master of any such foreign ship clearing out or proceeding to sea without having such interpreter or interpreters on board as aforesaid, shall for each offence be liable to a penalty not exceeding 50*l.*, nor less than 5*l.* (Sec. 40.)

*In what Cases a Medical Man must be carried.*—Every 'passenger ship' shall in the following cases carry a duly qualified medical practitioner, who shall be rated on the ship's articles:—

1. When the duration of the intended voyage, as before computed, exceeds 80 days in the case of ships propelled by sails, and 45 days in the case of ships propelled by steam, and the number of passengers on board exceeds 50:
2. Whenever the number of persons on board (including cabin passengers, officers, and crew) exceeds 300:

By order of council of August 9, 1866, issued under sec. 69 of the Act, every 'passenger ship' carrying more than 50 passengers on any voyage to which the Act extends, whatever be the duration of the voyage, must carry a duly qualified medical man.

In case of non-compliance with any of the requirements of this section, the master shall for each offence be liable to a penalty not exceeding 100*l.*, nor less than 20*l.* (Sec. 41.)

*Qualification of Medical Man.*—No medical practitioner shall be considered to be duly qualified for the purposes of this Act unless authorised by law to practise in some part of her Majesty's dominions, or, in the case of a foreign ship, in the country to which such ship may belong, as a physician, surgeon, or apothecary, nor unless his name shall have been notified to the emigration

officer at the port of clearance, and shall not be objected to by him, nor unless he shall be provided with proper surgical instruments to the satisfaction of such officer: provided nevertheless, that where the majority of the passengers in any 'passenger ship,' or as many as 300, are foreigners, any medical practitioner who may be approved by such emigration officer may be carried therein. In case any person shall proceed or attempt to proceed as medical practitioner in any 'passenger ship' without being duly qualified as aforesaid, or contrary to any of the requirements of this section, such person, and all persons aiding or abetting therein, shall for each offence be liable to a penalty not exceeding 100*l.*, nor less than 10*l.* (Sec. 42.)

*Medicines and Medical Comforts.*—The owner or charterer of every 'passenger ship' shall provide for the use of the passengers a supply of medicines, medical comforts, instruments, and other things proper and necessary for diseases and accidents incident to sea voyages, and for the medical treatment of the passengers during the voyage, including an adequate supply of disinfecting fluid or agent, together with pointed or written directions for the use of the same respectively; and such medicines, medical comforts, instruments, and other things shall, in the judgment of the emigration officer at the port of clearance, be good in quality, and sufficient in quantity, for the probable exigencies of the intended voyage, and shall be properly packed and placed under the charge of the medical practitioner, when there is one on board, to be used at his discretion. In case of non-compliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l.*, nor less than 10*l.* (Sec. 43.)

*Medical Inspection of Passengers and Medicines &c.*—No 'passenger ship,' except as after provided, shall clear out or proceed to sea until some medical practitioner, to be appointed by the emigration officer at the port of clearance, shall have inspected such medicines, medical comforts, and other articles as are required to be supplied by the last section, and also all the passengers on crew about to proceed in the ship, and shall have certified to the said emigration officer that the said ship contains a sufficient supply of medicines, medical comforts, disinfecting fluid or agent, instruments, and other things requisite for the medical treatment of the passengers during the intended voyage, nor until such medical practitioner shall have certified, and the said emigration officer shall be satisfied, that none of the passengers or crew appear, by reason of any bodily or mental disease, unfit to proceed, or likely to endanger the health or safety of the other persons about to proceed in such vessel. Such medical inspection of the passengers shall take place either on board the vessel, or, at the discretion of the said emigration officer, at such convenient place on shore before embarkation as he may appoint; and the master, owner, or charterer of the ship shall pay to such emigration officer a sum at the rate of 1*l.* for every 100 persons so examined: provided also, that in case the emigration officer on any particular occasion shall be unable to obtain the attendance of a medical practitioner, it shall be lawful for the master of any such ship to clear out and proceed to sea, on receiving from the said emigration officer written permission for that purpose. In case any 'passenger ship' shall clear out or proceed to sea without having complied with all the requirements of this section, the master of such ship shall for each offence be

liable to a penalty not exceeding 100*l.*, nor less than 5*l.* (Sec. 41.)

**Reland of Passengers on account of Sickness or for purifying Ships.**—If the emigration officer at any port shall be satisfied that any person on board or about to proceed in any 'passenger ship' is by reason of sickness unfit to proceed, or is for that or for any other reason likely to endanger the health or safety of the other persons on board, the said emigration officer shall prohibit the embarkation of such person, or if embarked shall require him to be re-landed; and if such emigration officer shall be satisfied that it is necessary, for the purification of the ship or otherwise, that all or any of the passengers or persons on board should be re-landed, the said emigration officer may require the master of the ship to re-land all such passengers or persons, and the master shall thereupon re-land such passengers or persons, with so much of their effects and with such members of their families as cannot, in the judgment of such emigration officer, be properly separated from them; and in case of non-compliance with any of the requirements of this section, the master, owner, or charterer of the ship shall for each offence be liable to a penalty not exceeding 200*l.* nor less than 10*l.*; and any passenger or person embarking after such prohibition, or refusing or neglecting to leave the ship when so directed to be re-landed, shall be liable to be summarily removed, and to a penalty not exceeding 2*l.* for each day which he shall remain on board after the giving of such prohibition or direction. (Sec. 45.)

**Return of Passage Money to Passengers re-landed on account of Sickness &c.**—Any passenger so re-landed on account of the sickness of himself or of any member of his family, who may not be re-embarked and finally sail in such ship, or any emigration officer on his behalf, shall be entitled to recover, by summary process, the whole of the moneys which may have been paid by or on account of such passenger for his passage, and that of the moneys of his family so re-landed, from the party to whom the same may have been paid, or from the owner, charterer, or master of such ship, or any of them, at the option of such passenger or emigration officer. (Sec. 46.) The same regulation now applies to cabin passengers. But they can recover only half of their passage money.

**Subsistence Money to be paid to Passengers re-landed.**—The master of any 'passenger ship,' from which the whole or any part of the passengers shall be re-landed on account of any of the reasons mentioned in sec. 45, shall pay to each passenger so re-landed (or if he shall be lodged and maintained in any hulk or establishment under the superintendence of the said emigration commissioners, then to the emigration officer at the port) subsistence money at the rate of 1*s.* 6*d.* a day for each statute adult until he shall be re-embarked, or decline or neglect to proceed, or until his passage money, if recoverable under sec. 45 of this Act, be returned to him. (Sec. 47.)

**Return of Passage Money &c.**—If any person by whom or on whose behalf any contract shall have been made for a passage in any ship proceeding on any voyage to which this Act extends, shall be at the place of embarkation before 6 o'clock in the afternoon of the day of embarkation appointed in such contract, and shall, if required, pay the stipulated passage money, or the unpaid balance thereof, and if from any cause whatever, other than his own refusal, neglect, or default, or the prohibition of an emigration officer, as before mentioned, or the requirements of any order in respect of such passenger, such passenger shall not be received on board before that hour, or if from any such cause

as aforesaid any passenger who shall have been received on board shall not either obtain a passage in such ship to the port at which he may have contracted to land, or, together with all the immediate members of his family who may be included in such contract, obtain a passage to the same port in some other equally eligible ship, to sail within 10 days from the expiration of the said day of embarkation, and in the meantime be paid subsistence money from the time and at the rate after mentioned, such passenger, or any emigration officer on his behalf, shall be entitled to recover either from the party to whom or on whose account the same may have been paid, or (in case such contract shall have been made with the owner, charterer, or master of such ship or with any person acting on behalf or by the authority of any of them respectively) from such owner, charterer, or master of such ship, or any of them, at the option of such passenger or emigration officer, all moneys which shall have been paid by or on account of such passengers for such passage, and also such further sum, not exceeding 10*l.*, in respect of each such passage, as shall, in the opinion of the justices of the peace who shall adjudicate on the complaint, be a reasonable compensation for the loss or inconvenience occasioned to such passenger by the loss of such passage. (Sec. 48.)

**Subsistence in case of Detention.**—If any ship, whether a 'passenger ship' or otherwise, shall not actually put to sea, and proceed on her intended voyage before 3 o'clock in the afternoon of the day next after the said day of embarkation, the owner, charterer, or master of such ship, or his or their agent, or any of them, at the option of such passenger or emigration officer, shall pay to every passenger entitled to a passage (or if such passenger shall be lodged and maintained in any establishment under the superintendence of the said emigration commissioners, then to the emigration officer at the port of embarkation), subsistence money after the rate of 1*s.* 6*d.* for each statute adult in respect of each day of delay for the first 10 days, and afterwards 3*s.* a day for each statute adult, until the final departure of such ship on such voyage, and the same may be recovered in manner after mentioned: provided that, if the passengers be maintained on board in the same manner as if the voyage had commenced, no such subsistence money shall be payable for the first 2 days next after the said day of embarkation, nor if they shall be maintained shall such subsistence money be payable if the ship be unavoidably detained by wind or weather, or by any cause not attributable, in the opinion of the emigration officer, to the act or default of the owner, charterer, or master. (Sec. 49.)

**Ships putting back to replenish Provisions &c.**—If any 'passenger ship' shall, after clearance, be detained in port for more than 7 days, or shall put into or touch at any port or place in the United Kingdom, she shall not put to sea again until there shall have been laden on board, at the expense of the owner, charterer, or master of such ship, such further supply of pure water, wholesome provisions of the requisite kinds and qualities, and medical comforts and stores, as may be necessary to make up the full quantities of those articles before required to be laden on board for the intended voyage, nor until any damage she may have sustained shall have been effectually repaired, nor until the master of the said ship shall have obtained from the emigration officer or his assistant, or, where there is no such officer, or in his absence, from the officer of customs at such port or place, a certificate to the same effect as the certificate

before required to enable the ship to be cleared out; and in case of any default herein, the said master shall be liable, on conviction, as hereinafter mentioned, to a penalty not exceeding 100*l.* nor less than 50*l.* And if the master of any 'passenger ship' so putting into or touching at any port or place as aforesaid, shall not within 12 hours thereafter report, in writing, his arrival, and the cause of his putting back, and the condition of his ship, and of her stores and provisions, to the emigration officer, or, as the case may be, to the officer of customs at the port, and shall not produce to such officer the official or 'master's list' of passengers, such master shall for each offence be liable to a penalty not exceeding 20*l.* nor less than 2*l.* (Sec. 50.)

*Secretary of State &c. may pay Expenses of taking off Passengers at Sea.*—If the passengers or cabin passengers of any 'passenger ship' shall be taken off from any such 'passenger ship,' or shall be picked up at sea from any boat, raft, or otherwise, it shall be lawful, if the port or place to which they shall be conveyed shall be in the United Kingdom, for one of the principal secretaries of state, or if in any colonial possession, for the governor of such colony, or for any person authorised by him for the purpose, or if in any foreign country, for her Majesty's consular officer, at such port or place therein, to defray all or any part of the expenses thereby incurred. (Sec. 52.)

In place of the 12th, 51st, 53rd, & 54th clauses of the Act of 1855, the following are substituted in the Act of 1863 (26 & 27 Vict. c. 51):—

If any 'passenger ship' shall clear out or proceed to sea, without the master having first obtained a certificate of clearance, or without his having joined in executing such bond to the Crown as by the said Passengers Act of 1855 are required, or if such ship, after having put to sea, shall put into any place or port of the United Kingdom in a damaged state, or shall leave, or attempt to leave, such port or place with passengers on board, without the master having first obtained such certificate of clearance as is required by sec. 58 of the said Passengers Act of 1855, such ship shall be forfeited to the use of her Majesty, and may be seized by any officer of customs, if found within 2 years from the commission of the offence in any port or place of her Majesty's dominions, and such ship shall thereupon be dealt with in the same manner as if she had been seized as forfeited for an offence, incurring forfeiture under any of the laws relating to the customs. (26 & 27 Vict. c. 51 s. 13.)

If any 'passenger ship' be wrecked, or otherwise rendered unfit to proceed on her intended voyage, while in any port of the United Kingdom or after the commencement of the voyage, and if any of the passengers be brought back to the United Kingdom, or if any passenger ship shall put into any port or place in the United Kingdom in a damaged state, the master, charterer, or owner shall, within 48 hours, give the nearest emigration officer, or, in the absence of such officer, the chief officer of customs, a written undertaking to the effect: 1. Transfer of passengers, if necessary, to some other ship, to sail within 6 weeks for the port or place for which their passages had been taken. 2. Maintenance or payment at the rate of 1*s.* 6*d.* a day to each statute adult. If these conditions are not complied with, passengers may recover passage money by summary process. Passengers may be removed from damaged ships, if emigration officer requires, under a penalty of 40*s.* or imprisonment for 1 calendar month if any passenger refuse to leave. (Sec. 14.)

Governors or consuls may forward passengers,

left without fault of their own, unless master of ship gives, within 48 hours of passengers' arrival, a written undertaking to forward the passengers within 6 weeks. (Sec. 15.)

Expenses under this and preceding section and those of sec. 52 of the Passengers Act to be a debt to the Crown. But passengers forwarded by the governor or consul are not entitled to the return of passage money. Not more than twice the total amount of passage money to be recoverable against the charterer, master &c. (Sec. 16.)

In all particulars the Act of 1863 and the Passengers Act of 1855 shall be construed together as one Act. (Sec. 18.)

*Insurance of Passage Money not to be void on account of the nature of the Risk.*—No policy of assurance effected in respect of any passages, or of any passage or compensation money, by any person by this Act made liable, in the event aforesaid, to provide such passages or to pay such moneys, or in respect of any other risk under this Act, shall be deemed to be invalid by reason of the nature of the risk or interest sought to be covered by such policy of assurance. (18 & 19 Vict. c. 119 s. 55.)

*Penalty on wrongfully landing Passengers.*—any passenger in any ship, whether a 'passenger ship' or otherwise, shall be landed at any port place other than the port or place at which he may have contracted to land, unless with his previous consent, or unless such landing shall be rendered necessary by perils of the sea, or other unavoidable accident, the master shall for each offence be liable to a penalty not exceeding 50*l.* nor less than 10*l.* (Sec. 56.)

*Passengers to be maintained for 48 Hours after Arrival.*—Every passenger in a 'passenger ship' shall be entitled, for at least 48 hours next after his arrival at the end of his voyage, to sleep in the ship, and to be provided for and maintained on board thereof, in the same manner as during the voyage, unless within that period the ship shall quit such port or place in the further prosecution of her voyage. In case of non-compliance with any of the requirements of this section, the master shall for each offence be liable to a penalty not exceeding 5*l.* (Sec. 57.)

*Passengers' Right of Action preserved.*—Nothing herein contained shall take away or abridge the right of action which may accrue to any passenger in any ship, or to any other person, in respect of the breach or non-performance of any contract made or entered into between or on behalf of such passenger or other person, and the master, charterer, or owner of any such ship, or his agent, or any passage broker. (Sec. 58.)

*Her Majesty's Orders in Council, power to make Rules for Purposes herein described.*—It shall be lawful for her Majesty, by any order in Council to prescribe such rules and regulations as to her Majesty may seem fit, for the following purposes, viz.:

1. For preserving order, promoting health, and securing cleanliness and ventilation on board 'passenger ships' proceeding from the United Kingdom to any port or place in her Majesty's possessions abroad.
2. For permitting the use on board of 'passenger ships' of an apparatus for distilling water, and for defining in such case the quantity of water to be carried in tanks or casks for the passengers.
3. For prohibiting emigration from any ports at any time when choleraic or any epidemic disease may be generally prevalent in the United Kingdom or any part thereof, or for reducing the number of passengers allowed to be carried

'passenger ships' generally, or from any particular parts under the provisions of this Act.

4. For requiring duly qualified medical practitioners to be carried in 'passenger ships' in cases where they would not be required to be carried under the provisions of this Act.

Any such order in council may from time to time in like manner be altered, amended, and revoked, as occasion may require. Any copy of such order in council contained in the *London Gazette*, or purporting to be printed by the Queen's printer, shall throughout her Majesty's dominions be received in all legal proceedings as good and sufficient evidence of the making and contents of any such order in council. (Sec. 59.)

*Navigation or Master to exact Obedience to Rules and Regulations.*—In every such 'passenger ship' the medical practitioner on board, aided by the master thereof, or, in the absence of such medical practitioner, the master of such ship, is hereby empowered to exact obedience to all rules and regulations which may be prescribed by any such order in council to be observed on board 'passenger ships' as aforesaid; and any person on board who shall neglect or refuse to obey any such rule or regulation, or who shall obstruct the medical practitioner or master of such ship in the execution of any duty imposed upon him by any such rule or regulation, or who shall offend against any of the provisions of this Act, or who shall be guilty of riotous or insubordinate conduct, shall be liable for each offence to a penalty not exceeding 2*l.*, and in addition thereto, to be confined in the common goal for any period not exceeding 1 month, at the discretion of the justice who shall adjudicate on the complaint. (Sec. 61.)

*Emigration Commissioners to prepare an Abstract of Act and Orders in Council.*—The said emigration commissioners shall from time to time prepare such abstracts as they may think proper of the whole or any part of this Act, and of any such order in council as aforesaid; and four copies of such abstracts, together with a copy of this Act, shall on demand, be supplied by the principal officer of customs at the port of clearance to the master of every 'passenger ship' proceeding from the United Kingdom to any port or place in her Majesty's possessions abroad; and such master shall, on request made to him, produce a copy of this Act to any passenger on board, for his perusal, and, further, shall post, previous to the embarkation of the passengers, and shall keep posted so long as any passenger shall be entitled to remain in the ship, in at least two conspicuous places between the decks on which passengers are to be carried, copies of such abstracts; and such master shall be liable to a penalty not exceeding 5*l.* for every day during any part of which by his neglect or default such abstracts shall fail to be so posted; and any person displacing or defacing such abstracts so posted shall be liable to a penalty not exceeding 2*l.* (Sec. 61.)

*Sale of Spirits prohibited on board 'Passenger Ships.'*—If in any 'passenger ship' any person shall during the voyage, directly or indirectly, or cause to be sold any spirits or strong liquors to any passenger, he shall be liable for every such offence to a penalty not exceeding 20*l.* (Sec. 62.)

*Bond to be given by Masters of British and Foreign 'Passenger Ships.'*—Before any 'passenger ship' shall clear out or proceed to sea, the master, charterer with the owner or charterer of the ship, or, in the event of the absence of such owner or charterer, or if the master be the owner or charterer, some other good and sufficient person, to be ap-

proved by the chief officer of customs at the port of clearance, shall enter into a joint and several bond, in the sum of 2,000*l.*, to her Majesty, her heirs and successors, according to the form contained in schedule annexed to the Act. Such bond shall not be liable to stamp duty, and shall be executed in duplicate. (Sec. 63.) By the Act of 1863 (sec. 17), the amount of the bond is raised to 5,000*l.*

Clause 64 enacts that a counterpart of the bond referred to shall be certified, and sent to the colony to which the ship is bound, and be received in evidence without proof of execution.

*In the Absence of Agreement to the contrary, the Owner to be responsible in respect of Default.*—In the absence of any agreement to the contrary, the owner shall be the party ultimately responsible, as between himself and the other persons hereby made liable in respect of any default in complying with the requirements of this Act; and if any such last-mentioned person shall pay any moneys hereby made payable to or on behalf of any such passengers as aforesaid, the person so paying the same shall be entitled, in the absence of any such agreement as aforesaid, to sue for and recover from the owner the amount so paid, together with costs of suit. (Sec. 65.)

*No Person to act as a Passage Broker without a License.*—No person whatever shall directly or indirectly act as a passage broker in respect of passages from the United Kingdom to any place out of Europe, and not being within the Mediterranean Sea, or shall sell or let, or agree to sell or let, or be in anywise concerned in the sale or letting of passages in any ship, whether a 'passenger ship' or otherwise, proceeding from the United Kingdom to any such place as aforesaid, unless such person, with 2 good and sufficient sureties to be approved by the emigration officer at the port nearest to the place of business of such person, shall have previously entered into a joint and several bond, in the sum of 1,000*l.*, to her Majesty, her heirs and successors, which bond shall be renewed on each occasion of obtaining such license as after mentioned, and shall be in duplicate, without stamps, and one part thereof shall be deposited at the office in London of the said emigration commissioners, and the other part thereof with the emigration officer at the port nearest to the place of business of such person; nor unless such person shall have obtained a license, as after mentioned, to let or sell passages, nor unless such license shall then be in force; and if any person shall offend in any particular against this enactment, every person so offending shall for each offence be liable to a penalty not exceeding 50*l.* nor less than 20*l.*, to be sued for and recovered as after mentioned: provided that such bond shall not be required of any person who shall be one of the sworn brokers of the city of London: provided also, that there shall be excepted from the operation of this section the said emigration commissioners, and any persons contracting with them, or acting under their authority, and also any person acting as the agent of any passage broker in pursuance of an appointment signed by such passage broker, and countersigned by such emigration officer as aforesaid: provided further, that the acts and defaults of any person acting under the authority or as agent of any passage broker shall, for the purposes of this Act, be deemed to be also the acts and defaults of such passage broker: provided also that nothing before contained shall be held or construed to prevent the said emigration officer from accepting the bond of a guarantee society, such bond and such guarantee

society as shall have been approved by the commissioners of her Majesty's treasury, in lieu of the bond of 2 good and sufficient securities as aforesaid. (Sec. 66.)

Clause 67 directs how passage brokers are to obtain licenses.

Clause 68 limits the duration of the then existing licenses.

Clause 69 enacts that passage brokers shall employ no agents except those expressly appointed by them.

*Penalty on Persons fraudulently inducing others to engage Passage.*—If any person shall by false representation as to the size of a ship, or otherwise, or by any false pretence or fraud whatsoever, induce any person to engage a passage in any ship, the person so offending shall for each offence be liable to a penalty not exceeding 20*l.* nor less than 5*l.* (Sec. 70.)

*Contract Tickets for Cabin and other Passengers.*—Every person whatever, except the said emigration commissioners and persons acting for them and under their direct authority, who shall receive money from any person for or in respect of a passage in any ship, or of a cabin passage in any 'passenger ship' proceeding from the United Kingdom to any place out of Europe, and not being within the Mediterranean Sea, shall give to the person paying such money a contract ticket, signed by the owner, charterer, or master of the ship or 'passenger ship' (as the case may be) in which the passage is to be provided, or by some person in their or his name, and on their or his behalf: such contract ticket shall be made out in plain and legible characters on a printed form, which in the case of cabin passengers shall be according to the form contained in schedule annexed to the Act, and in the case of all other passengers in the form contained in schedule L. hereto annexed, or according to such other form as in either case may from time to time be prescribed by the said emigration commissioners in any notice issued under their hands, or the hands of any two of them, and published in the *London Gazette*:—and any directions contained on the face of such form of contract ticket shall be obeyed in the same manner as is herein set forth. In case of non-compliance with any of the requirements of this section, or of any of the directions on such form of contract ticket not inconsistent with this Act, the person so offending shall for each offence be liable to a penalty not exceeding 50*l.* nor less than 5*l.*: provided always, that such contract tickets shall not be liable to any stamp duty. (Sec. 71.)

Clauses 72 to 94 inclusive relate to matters of detail and to legal procedure.

*Colonial Voyages defined.*—And whereas it is expedient to provide in certain cases for the carriage of passengers by sea from her Majesty's possessions abroad: Be it therefore enacted as follows:

For the purposes of this Act, the term *colonial voyages* shall signify any voyage from any place within any of such possessions (except the territories (then) under the government of the East India Company and the island of Hong Kong) to any place whatever where the distance between such places shall exceed 400 miles, or the duration of the voyage, to be prescribed as hereinafter mentioned, shall exceed 3 days. (Sec. 95.)

*This Act shall apply to all Colonial Voyages, except as relates to Matters herein named.*—This Act shall apply, so far as the same is applicable, to all ships carrying passengers on any such 'colonial voyage,' except as to such parts of the Act as relate to the following matters; viz.:—

1. To passage brokers and their licenses:

2. To passengers' contract tickets:

3. To emigrant runners:

4. To the giving bond to her Majesty:

5. To the keeping on board a copy of this Act:

6. To orders in council regulating emigration from the United Kingdom, or prescribing rules for promoting health, cleanliness, order, and ventilation:

Provided that if the prescribed duration of any 'colonial voyage' be less than three weeks, then in addition to the matters lastly herebefore excepted, the provisions of this Act shall not extend or apply, so far as they relate to the following subjects; viz.:—

The construction or thickness of the decks:

The berths and berthing:

The height between decks:

Privies:

Hospitals:

Light and ventilation:

Manning:

Passengers' stewards:

Passengers' cooks, and cooking apparatus:

The surgeon, and medicine chest:

The maintenance of passengers for 48 hours after arrival:

Provided also, that in the case of such 'colonial voyages' whereof the prescribed duration is less than 3 weeks, the requirements of this Act respecting the issue of provisions shall not, except to the issue of water, be applicable to any passenger who may have contracted to furnish his own provisions. (Sec. 96.)

Clause 97 empowers the governors of colonial India in council, to declare length of voyage and prescribe scale of diet, medicines, and medical comforts.

Clause 99 authorises the Governor-General of India in council, by any Act to be passed for that purpose, to adopt this Act for India, and make rules respecting food, passengers, surgeons, &c.

*List of Passengers brought into the United Kingdom &c.*—The master of every ship bringing passengers into the United Kingdom from any place out of Europe, and not within the Mediterranean Sea, shall, within 24 hours after arrival, deliver to the emigration officer or his assistant, or in their absence to the chief officer of customs at the port of arrival, a correct list, signed by such master, and specifying the names, ages, and callings of all the passengers embarked, and the port or ports at which they respectively have embarked, and showing which, if any of them, may have died, with the supposed cause of death, or been born on the voyage; and if the master shall fail so to deliver such list, or if same shall be wilfully false, he shall, on conviction, as before mentioned, be liable to a penalty not exceeding 50*l.* Such emigration customs officer shall, upon receipt of such list, transmit the particulars respecting any passengers named therein who may have died, with the supposed cause of death, or been born on the voyage, to the registrar-general of births, deaths, and marriages, who shall file the same, and send a copy thereof under his hand in the 'Marriage Register Book,' which entry shall be deemed to be of the same value as evidence as any other entry made in such book under the provisions of the 6 & 7 Wm. IV. c. 86. (Sec. 100.)

*Penalty on Masters for having on Board a greater Number of Persons than prescribed by this Act.*—If any ship bringing passengers into the United Kingdom from any place out of Europe shall have on board a greater number of passengers

persons than in the proportions respectively prescribed in sec. 14 of this Act for ships carrying passengers from the United Kingdom, the master of such ship shall be liable, on such conviction as before mentioned, to a penalty not exceeding 10*l*. nor less than 5*l*. for each such person or statute adult constituting any such excess. (Sec. 101.)

*Provisions and Water to be issued to Passengers brought into the United Kingdom &c.*—The master of every 'passenger ship' bringing passengers into the United Kingdom from any place out of Europe, shall make to each statute adult during the voyage, including the time of detention, if any, at any port or place before the termination thereof, issues of pure water and of good and wholesome provisions in a sweet condition, in quantities not less in amount than is prescribed in sec. 35 of this Act for passengers proceeding from the United Kingdom; and in case of non-compliance with any of the requirements of this section, the master of such ship shall, on such conviction as hereinbefore mentioned, be liable for each offence to a penalty not exceeding 50*l*. (Sec. 102.)

The United States, in imitation of the policy followed in the United Kingdom, have passed several Acts in regard to the conveyance of passengers in ships belonging to the different ports of the Union. The last of these Acts is as follows:—

**AN ACT TO REGULATE THE CARRIAGE OF PASSENGERS IN STEAM SHIPS AND OTHER VESSELS, APPROVED MARCH 3, 1855.**

N.B.—A bill to amend this Act was introduced into Congress in January 1865.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that no master of any vessel owned in whole or in part by a citizen of the United States, or by a citizen of any foreign country, shall take on board such vessel, at any foreign port or place other than foreign contiguous territory of the United States, a greater number of passengers than in proportion of 1 to every 2 tons of such vessel, not including children under the age of 1 year in the computation, and computing 2 children over 1 and under 8 years of age as 1 passenger. That the spaces appropriated for the use of such passengers, and which shall not be occupied by stores or other goods nor the personal baggage of such passengers, shall be in the following proportions, viz.—on the main and poop decks or platforms and in the deck-houses, if there be any, 1 passenger for each 16 clear superficial feet of deck, if the height or distance between the decks or platform shall not be less than 6 feet; and on the lower deck (not being an orlop deck), if any, 1 passenger for 18 such clear superficial feet, if the height or distance between the decks or platforms shall not be less than 6 feet, but so as that no passenger shall be carried on any deck or platform nor upon any deck where the height or distance between the decks is less than 6 feet, with intent to bring such passenger to the United States, and shall leave such port or place and bring the same, or any number thereof, within the jurisdiction of the United States; or if any such master of any vessel shall take on board his vessel, or at any port or place within the jurisdiction of the United States, any greater number of passengers than in the proportion aforesaid, to the space aforesaid, or to the tonnage aforesaid, with intent to carry the same to any foreign port or place other than foreign contiguous territory as aforesaid, every such master shall be deemed guilty of a misdemeanor, and upon conviction thereof, before any circuit or district court of the United States, shall, for each

passenger taken on board beyond the limit aforesaid, or the space aforesaid, be fined in the sum of 50 dollars, and may also be imprisoned, at the discretion of the judge before whom the penalty shall be recovered, not exceeding six months; but should it be necessary for the safety or convenience of the vessel that any portion of her cargo, or any other articles or article, should be placed on or stored in any of the decks, cabins, or other places appropriated to the use of passengers, the same may be placed in lockers or inclosures prepared for the purpose, on an exterior surface impervious to the wave, capable of being clensed in like manner as the decks or platforms of the vessel. In no case, however, shall the places thus provided be deemed to be a part of the space allowable for the use of passengers, but the same shall be deducted therefrom, and in all cases where prepared or used, the upper surface of said lockers or inclosed spaces shall be deemed and taken to be the deck or platform from which measurement shall be made for all the purposes of this Act. It is also provided that one hospital in the space appropriated to passengers, and separated therefrom by an appropriate partition, and furnished as its purposes require, may be prepared, and when used, may be included in the space allowable for passengers, but the same shall not occupy more than 100 superficial feet of deck or platform; provided, that on board two deck ships, where the height between the decks is 7½ feet or more, 14 clear superficial feet of deck shall be the proportion required for each passenger. (Sec. 1.)

And no such vessel shall have more than two tiers of berths, and the interval between the lower part thereof and the deck or platform beneath shall not be less than 9 inches, and the berths shall be well constructed, parallel with the side of the vessel, and separated from each other by partitions, as berths ordinarily are separated, and shall be at least 6 feet in length and at least 2 feet in width, and each berth shall be occupied by no more than 1 passenger; but double berths twice the above width may be constructed, each berth to be occupied by no more, and by no other than 2 women, or by 1 woman and 2 children under the age of 8 years, or by husband and wife, or by a man and 2 of his own children under the age of 8 years, or by 2 men, members of the same family; and if there shall be any violation of this section in any of its provisions, then the master of the vessel and owners thereof shall severally forfeit and pay the sum of 5 dollars for each passenger on board of said vessel on such voyage, where such vessel may arrive or depart. (Sec. 2.)

And all vessels, whether of the United States or any foreign country, having sufficient capacity of space, according to law, for 50 or more passengers (other than cabin passengers), shall, when employed in transporting such passengers between the United States and Europe, have, on the upper deck, for the use of such passengers, a house or passage-way leading to the apartments allotted to such passengers below deck, firmly secured to the deck or combings of the hatch with 2 doors the sills of which shall be at least 1 foot above the deck, so constructed that one door be left open in such house may at all times be left open for ventilation; and all vessels so employed, and having the capacity to carry 150 such passengers, or more, shall have 2 such houses; and the main or ladder leading down to the aforesaid apartments shall be furnished with a hand-rail of wood or strong rope; but booby hatches may be substituted for such houses. (Sec. 3.)

And every such vessel so employed, and having

the legal capacity for more than 100 such passengers, shall have at least 2 ventilators to purify the apartment or apartments occupied by such passengers; 1 of which shall be inserted in the after part of the apartment or apartments, and the other shall be placed in the forward portion of the apartment or apartments, and one of them shall have an exhausting cap to carry off the foul air, and the other a receiving cap to carry down the fresh air; which said ventilators shall have a capacity proportioned to the size of the apartment or apartments to be purified; namely, if the apartment or apartments will lawfully authorize the reception of 200 such passengers, the capacity of such ventilators shall each be equal to a cube of 12 inches diameter in the clear, and in proportion for larger or smaller apartments; and all said ventilators shall rise at least 4 feet 6 inches above the upper deck of any such vessel, and be of the most approved form and construction: but if it shall appear, from the report to be made and approved, as hereinafter provided, that such vessel is equally well ventilated by any other means, such other means of ventilation shall be deemed and held to be a compliance with the provisions of this section. (Sec. 4.)

And every vessel carrying more than 50 such passengers shall have for their use on deck, housed and conveniently arranged, at least one caboose or cooking range, the dimensions of which shall be equal to 4 feet long and 1 foot 6 inches wide for every 50 passengers; and provision shall be made in the manner aforesaid, in this ratio, for a greater or less number of passengers; but nothing herein contained shall take away the right to make such arrangements for cooking between decks, if that shall be deemed desirable. (Sec. 5.)

And all vessels employed as aforesaid shall have on board, for the use of such passengers, at the time of leaving the last port whence such vessel shall sail, well secured under deck, for each passenger, at least 20 pounds of good navy bread, 15 pounds of rice, 15 pounds of oatmeal, 10 pounds of wheat flour, 15 pounds of peas and beans, 20 pounds of potatoes, 1 pint of vinegar, 60 gallons of fresh water, 10 pounds of salted pork, and 10 pounds of salt beef, free of bone, all to be of good quality; but at places where either rice, oatmeal, wheat flour, or peas and beans, cannot be procured, of good quality, and on reasonable terms, the quantity of either or any of the last-named articles may be increased and substituted therefor; and in case potatoes cannot be procured on reasonable terms, 1 pound of either of said articles may be substituted in lieu of 5 pounds of potatoes; and the captains of such vessels shall deliver to each passenger at least one-tenth part of the aforesaid provisions weekly, commencing on the day of sailing, and at least 3 quarts of water daily; and if the passengers on board of any such vessel in which the provisions and water herein required shall not have been provided as aforesaid, shall at any time be put on short allowance during any voyage, the master or owner of any such vessel shall pay to each and every passenger who shall have been put on short allowance, the sum of 3 dollars for each and every day they may have been put on short allowance, to be recovered in the circuit or district court of the United States; and it shall be the duty of the captain or master of every such ship or vessel to cause the food and provisions of all the passengers to be well and properly cooked daily, and to be served out and distributed to them at regular and stated hours, by messes, or in such other manner as shall be deemed best and most conducive to the health and comfort of such passengers, of which hours

and manner of distribution due and sufficient notice shall be given. If the captain or master of any such ship or vessel shall wilfully fail to furnish and distribute such provisions, cooked as aforesaid, he shall be deemed guilty of a misdemeanor, and upon conviction thereof before any circuit or district court of the United States, shall be fined not more than 1,000 dollars, and shall be imprisoned for a term not exceeding 1 year, provided that the enforcement of this penalty shall not affect the civil responsibility of the captain or master and owners to such passengers as may have suffered from said default. (Sec. 6.)

And the captain of any such vessel so employed is hereby authorized to maintain good discipline and such habits of cleanliness among such passengers as will tend to the preservation and promotion of health; and to that end he shall cause such regulations as he may adopt for this purpose to be posted up before sailing on board such vessel, in a place accessible to such passengers, and shall keep the same so posted up during the voyage; and it is hereby made the duty of said captain to cause the apartments occupied by such passengers to be kept at all times in a clean, healthy state, and the owners of every such vessel so employed are required to construct the decks, and all parts of said apartment, so that it can be thoroughly cleaned; and they shall also provide a safe, convenient privy or water-closet for the exclusive use of every 100 such passengers. And when the weather is such that said passengers cannot be mustered on deck with their bedding, it shall be the duty of the captain of every such vessel to cause the deck occupied by such passengers to be cleaned with chloride of lime, or some other equally efficient disinfecting agent, and also at such other times as said captain may deem necessary. (Sec. 7.)

And the master and owner or owners of any such vessel so employed, which shall not be provided with the house or houses over the passageways, as prescribed in the third section of this chapter, or with ventilators, as prescribed in the fourth section of this chapter, or with the cabooses or cooking ranges, with the houses over them, as prescribed in the fifth section of this chapter, shall severally forfeit and pay to the United States the sum of 200 dollars for each and every violation of or neglect to conform to the provisions of each of said sections; and 50 dollars for each and every neglect or violation of any of the provisions of the seventh section of this chapter, to be recovered by suit in any circuit or district court of the United States, within the jurisdiction of which the said vessel may arrive, or from which she may be about to depart, or at any place within the jurisdiction of such courts, wherever the owner or owners, or captain of such vessel may be found. (Sec. 8.)

And the collector of the customs at any port of the United States at which any vessel so employed shall arrive, or from which any such vessel shall be about to depart, shall appoint and direct one or more of the inspectors of the customs for each port to examine such vessel, and report in writing, to such collector, whether the requirements of law have been complied with in respect to such vessel; and if such report shall state such compliance, and shall be approved by such collector, it shall be deemed and held as *prima facie* evidence thereof. (Sec. 9.)

And the provisions, requisitions, penalties, and liens of this Act, relating to the space in vessels appropriated to the use of passengers, are hereby extended and made applicable to all spaces appropriated to the use of steerage passengers in

vessels propelled, in whole or in part, by steam, and navigating from, to, and between the ports and in manner as in this Act named, and to such vessels and to the masters thereof, and so much of the Act entitled "An Act to amend an Act entitled "An Act to provide for the better Security of the Lives of Passengers on board of Vessels propelled in whole or in part by Steam, and for other Purposes," approved August 30, 1852, as conflicts with this Act, is hereby repealed; and the space appropriated to the use of steerage passengers in the vessels so as above propelled and navigated is hereby subjected to the supervision and inspection of the collector of the customs at any port of the United States at which any such vessel shall arrive, or from which she shall be about to depart; and the same shall be examined and reported in the same manner and by the same officers, by the next preceding section directed to examine and report. (Sec. 10.)

And the vessels bound from any port in the United States to any port or place in the Pacific Ocean, or on its tributaries, or from any such port or place to any port in the United States on the Atlantic or its tributaries, shall be subject to the foregoing provisions regulating the carriage of passengers in merchant vessels, except so much as relates to provisions and water; but the owners and masters of all such vessels shall in all such cases furnish to each passenger the daily supply of water therein mentioned; and they shall furnish a sufficient supply of good and wholesome food, properly cooked; and in case they shall fail so to do, or shall provide unwholesome or unsuitable provisions, they shall be subject to the penalties provided in the sixth section of this chapter, in case the passengers are put on short allowance of water or provisions. (Sec. 11.)

And the captain or master of any ship or vessel arriving in the United States, or any of the territories thereof, from any foreign place whatever, at the same time that he delivers a manifest of the cargo, and if there be no cargo, then at the time of making report or entry of the ship or vessel, pursuant to law, shall also deliver and report to the collector of the district in which such ship or vessel shall arrive, a list or manifest of all the passengers taken on board of the said ship or vessel at any foreign port or place, in which list or manifest it shall be the duty of the said master to designate, particularly, the age, sex, and occupation of the said passengers respectively, the part of the vessel occupied by each during the voyage, the country to which they severally belong, and that of which it is their intention to become inhabitant; and shall further set forth whether any, and what number, have died on the voyage; which list or manifest shall be sworn to by the said master, in the same manner as directed by law in relation to the manifest of the cargo, and the refusal or neglect of the master aforesaid to comply with the provisions of this section, or any part thereof, shall incur the same penalties, disabilities, and forfeitures as are provided for a refusal or neglect to report and deliver a manifest of the cargo aforesaid. (Sec. 12.)

And each and every collector of the customs to whom such manifest or list of passengers as aforesaid shall be delivered, shall quarterly return copies thereof to the Secretary of State of the United States, by whom statements of the same shall be laid before Congress at each and every session. (Sec. 13.)

And in case there shall have occurred on board any ship or vessel arriving at any port or place within the United States or its territories, any

death or deaths among the passengers (other than cabin passengers), the master or captain, or owner or consignee of such ship or vessel shall, within twenty-four hours after the time within which the report and list of manifest of passengers mentioned in section 12 of this Act is required to be delivered to the collector of the customs, pay to the said collector the sum of 10 dols. for each and every passenger above the age of 8 years who shall have died on the voyage by natural disease; and the said collector shall pay the money so received at such times, and in such manner as the Secretary of the Treasury by general rules shall direct, to any board or commission appointed by, and acting under the authority of, the state within which the port where such ship or vessel arrived is situated, for the care and protection of sick, indigent, or destitute emigrants, to be applied to the objects of their appointment; and if there be more than one board or commission who shall claim such payment, the Secretary of the Treasury for the time being shall determine which is entitled to receive the same, and his decision in the premises shall be final and without appeal: provided that the payment shall in no case be awarded or made to any board, or commission, or association, formed for the protection or advancement of any particular class of emigrants, or emigrants of any particular nation or creed; and if the master, captain, owner, or consignee of any ship or vessel, refuse or neglect to pay the collector the sum and sums of money required, and within the time prescribed by this section, he or they shall severally forfeit and pay the sum of 50 dols., in addition to such sum of 10 dols. for each and every passenger upon whose death the same has become payable, to be recovered by the United States in any circuit or district court of the United States where such vessel may arrive, or such master, captain, owner, or consignee may reside; and when recovered, the said money shall be disposed of in the same manner as is directed with respect to the sum and sums required to be paid to the collector of customs. (Sec. 14.)

And the amount of the several penalties imposed by the foregoing provisions, regulating the carriage of passengers in merchant vessels, shall be liens on the vessel or vessels violating those provisions, and such vessel or vessels shall be liable therefor in any circuit or district court of the United States where such vessel or vessels shall arrive. (Sec. 15.)

And all and every vessel or vessels which shall or may be employed by the American Colonisation Society, or the colonisation society of any state to transport, and which shall actually transport from any port or ports of the United States any colony or colonies on the west coast of Africa, coloured emigrants to reside there, shall be, and the same are hereby, subjected to the operation of the foregoing provisions regulating the carriage of passengers in merchant vessels. (Sec. 16.)

And the collector of the customs shall examine such emigrant ship or vessel on its arrival at any port, and ascertain and report to the Secretary of the Treasury, at the time of sailing, the length of the voyage, the ventilation, the number of passengers, their space on board, their food, native country of the emigrants, the number of deaths, the age and sex of those who died during the voyage, together with his opinion of the cause of the mortality, if any, on board, and if none, what precautionary measures, arrangements, or habits, are supposed to have been used, and what agency in causing the exemption. (Sec. 17.)

And this Act shall take effect, with respect to vessels sailing from ports in the United States, on the eastern side of the continent, within 30 days from the time of its approval; and with respect to vessels sailing from ports to the United States, on the western side of the continent, and from ports in Europe, within 60 days from the time of its approval; and with respect to vessels sailing from ports in other parts of the world, within 6 months from the time of its approval: And it is hereby made the duty of the Secretary of State to give notice in the ports of Europe and elsewhere of this Act, in such manner as he shall deem proper. (Sec. 18.)

And from and after the time that this Act shall take effect with respect to any vessels, in respect to such vessels, the Act of March 2, 1819, entitled 'An Act regulating Passenger Ships and Vessels,' the Act of February 22, 1817, entitled 'An Act to regulate the Carriage of Passengers in Merchant Vessels,' the Act of March 2, 1817, entitled 'An Act to amend an Act entitled "An Act to regulate the Carriage of Passengers in Merchant Vessels," and to determine the time when said Act shall take effect,' the Act of January 31, 1848, entitled 'An Act exempting Vessels employed by the American Colonisation Society in transporting Coloured Emigrants from the United States to the coast of Africa from the provisions of the Acts of February 22 and March 2, 1817, regulating the Carriage of Passengers in Merchant Vessels,' the Act of May 17, 1818, entitled 'An Act to provide for the Ventilation of Passenger Vessels, and for other Purposes,' and the Act of March 3, 1849, entitled 'An Act to extend the Provisions of all Laws now in force relating to the Carriage of Passengers in Merchant Vessels and the regulation thereof,' are hereby repealed: But nothing in this Act contained shall in anywise obstruct or prevent the prosecution, recovery, distribution or remission of any fines, penalties, or forfeitures which may have been incurred in respect to such vessels prior to the day this Act goes into effect, in respect to such vessels under the laws hereby repealed, for which purpose the said laws shall continue in force.

But the Secretary of the Treasury may, in his discretion, and upon such conditions as he shall think proper, discontinue any such prosecution, or remit or modify such penalties. (Sec. 19.)

**Passenger Ships in Australia.**—By 24 & 25 Vict. c. 32, the governor in each of the Australian colonies may, by any proclamation to be by him issued, furnish such rules as he shall think proper for determining the number of passengers to be carried in any passenger ship from any such colony to any other of her Majesty's possessions in Australasia, with other regulations, and prescribe penalties for infraction and non-observance of the rules laid down.

While the proclamation is in force, the rules and enactments of the Passenger Act of 1855 shall not apply to intercolonial voyages.

The requirements of these proclamations shall be valid as law in all her Majesty's dominions, as though they formed part of the Passenger Act of 1855.

**Chinese Passenger Ships.**—Our readers are aware that there is at present (1869), and that there has been for some considerable time past, an extensive emigration from China to California and Australia. This emigration (especially that to Australia) has been principally carried on in British ships; and the abuses connected therewith have been such as to attract the attention of Parliament, which has been induced, in the view of putting them down, to enact the following trade:—

**ACT FOR THE PREVENTION OF ABUSE IN CHINESE PASSENGER SHIPS, AND THEIR REGULATION. 18 & 19 VICT. c. 101.**

Clause 1 defines the terms used in the Act. Clause 2 authorises the Legislature of Hong Kong to make regulations respecting passenger ships, providing that until such regulations be made, those contained in the annexed schedule A. shall be in force: provided always, that no ordinance shall come into operation until her Majesty's confirmation of the same shall have been proclaimed in Hong Kong by the governor thereof.

**Governor of Hong Kong to declare Length of Voyages.**—It shall be lawful for the governor of Hong Kong to declare by proclamation, for the purposes of this Act and of the said regulations, what shall be deemed to be the duration of the voyage of any Chinese passenger ship, and by such proclamation to alter the scales of dietary, medicines, and medical comforts contained in the annexed schedule A. (Sec. 3.)

**No Chinese Passenger Ship to clear out on Voyage of more than 7 Days without &c.**—No Chinese passenger ship shall clear out or proceed to sea on any voyage of more than 7 days' duration until the master thereof have received from an emigration officer a copy of the aforesaid regulations, and a certificate in the form contained in the annexed schedule B. or in such other form as may be prescribed by the Legislature, which copy and certificate, with any documents to be attached thereto (herein designated as emigration papers), shall be signed by the said emigration officer, nor until the master shall, with two sufficient sureties, to be approved by the said emigration officer, have entered into a joint and several bond in the sum of 1,000*l.* to her Majesty, her heirs and successors, in such form as may be prescribed by the said Legislature. (Sec. 4.)

**Penalty of Bond, when recoverable.**—The said penal sum of 1,000*l.* shall be due and recoverable notwithstanding any penalty or forfeiture imposed by this Act or by the aforesaid regulations, and whether such penalties or forfeitures shall have been sued for and recovered or not. (Sec. 5.)

Clause 6 authorises the commanders of ships of war &c. to search ships, require production of papers &c.

**Penalty for neglect to comply with Regulations &c.**—In case of any neglect or refusal to comply with any of the provisions of this Act or any of the regulations aforesaid, or to perform any stipulation in any of the contracts made with passengers, the master of the ship and any other person who may have been guilty of or have aided or abetted such neglect or refusal, shall each be deemed for each offence guilty of a misdemeanor. (Sec. 7.)

**Ship to be forfeited for clearing without Emigration Papers &c.**—If any Chinese passenger ship clears out or proceeds to sea on any voyage exceeding 7 days in duration without such emigration papers as aforesaid, or if the emigration papers of any Chinese passenger ship are forged or fraudulently altered, such ship shall, if she is a British ship, or if, not being a British ship, the offence is committed and the ship is seized in her Majesty's dominions, be forfeited to her Majesty. (Sec. 8.)

**Penalties in addition to Forfeiture.**—Every person who commits, or aids, or abets in committing any act or default by which any Chinese passenger ship may become liable to forfeiture, shall be liable to a penalty not exceeding 100*l.* for each offence. (Sec. 9.)

The following clauses refer to the mode of enforcing and applying forfeitures.

## SCHEDULE A.

## REGULATIONS RESPECTING CHINESE PASSENGER SHIPS.

Note.—The wilful and fraudulent breach of any of these regulations by the person in charge of any Chinese passenger ship is punishable by forfeiture of the ship, and every person concerned in such breach is liable to a fine of 100*l.* for such offence.

I. No Chinese passenger ship shall clear out or proceed to sea on any voyage of more than 7 days' duration without a certificate from an emigration officer; and such certificate shall be in the annexed form.

II. No emigration officer shall be bound to give such certificate in respect of any Chinese passenger ship till 7 days after receiving notice that the ship is to carry passengers, and of her destination, and of her proposed day of sailing, nor unless there are on board a surgeon and an interpreter approved by such emigration officer.

III. After receiving such notice, the emigration officer shall be at liberty at all times to enter and inspect the ship, and the fittings, provisions, and stores therein, and any person impeding him in such entry or inspection, or refusing to allow of the same, shall be liable to a fine of not more than 100*l.* for each offence.

IV. The emigration officer shall not give his certificate unless he be satisfied—

(1.) That the ship is seaworthy, and properly manned, equipped, fitted, and ventilated; and has not on board any cargo likely from its quality, quantity, or mode of stowage, to prejudice the health or safety of the passengers.

(2.) That the space appropriated to the passengers in the between decks contains at the least 12 superficial and 72 cubical feet of space for every adult on board; that is to say, for every passenger above 12 years of age, and for every two passengers between the ages of 1 year and 12 years.

(3.) That a space of 5 superficial feet per adult is left clear on the upper deck for the use of the passengers.

(4.) That provisions, fuel, and water have been placed on board, of good quality, properly packed, and sufficient to supply the passengers on board during the declared duration of the intended voyage, according to the following scale:—

## Dietary Scale.

	per diem
Rice	1 lb. 1 1/2
Salted provisions	2 "
Wholly pork, or 1/2 pork and 1/2 fish, or 1/2 pork, 1/2 beef, and 1/2 fish	4 "
Salted vegetables or pickles	3 "
Water	imp. quart 5
Firewood	2 "
Tea	oz. 1/2

(5.) That medicines and medical comforts have been placed on board according to the following scale:—

For every 100 passengers, and in like proportion for any greater or less number.

Calomel	5 oz.
Blue pill	2 "
Rhubarb powder	2 "
Compound jalap powder	12 "
Ipecacuanha powder	2 "
Opium	2 "
Dover's powder	2 "
Magnesia	2 "
Epsom salts	6 lb.
Chloride of lime	20 "
Tartar emetic	4 drams
Quinine	2 oz.
Antimonial powder	0 1/2 "
Extract of colocynth, compound	1 "
Carbonate of ammonia	1 "
Asafoetida	1 "
Camphor	15 "
Camphorated tincture	2 "
Caccha	2 "
Prepared chalk	2 "
Tincture of opium	16 "
Turpentine	2 "
Senna leaves	8 "

Blistering plaster	4 sq.
Sulphur, sublimed ointment	16 "
Lined flour	12 "
Country soap	4 lb.
Caster oil	24 oz.
Oil of peppermint	6 bottles
Adhesive plaster, spread	4 sq.
Simple ointment	2 oz.
Blister ointment	16 oz.
Jergin's opiate	16 "
Aromatic spirits of hartshorn	1 "
Cholera pills in pill	12 drams
Cuba powder	4 lb.
Sweet spirits of nitre	16 oz.
Copaiba	16 "
Sulphate of copper	16 "
Sulphate of zinc	1 "
Lunar caustic	4 drams
Lime juice	26 quarts
Rum or brandy	26 "

## INSTRUMENTS &amp;c.

1 Set of amputating and other surgical instruments (if there be any person on board competent to use them).

1 One-ounce glass measure.

1 Minim glass measure.

1 Pestle and mortar (Wedgwood).

1 Set of weights and scales (grains in box).

1 Set of common splints.

1 Set of bleeding lancets.

1 Silver catheter.

1 Spatula.

1 Dressing scissors.

1 Infusion box.

1 Quire of country paper.

1 Penknife.

2 Metal bed pans.

2 Trusses for hernia, right and left.

2 Small syringes.

4 Ounces prepared lint.

2 Pieces cloth for bandages.

V. The master of any Chinese passenger ship being a British ship and proceeding on a voyage of more than 7 days' duration, shall, during the whole of the intended voyage, make issues of provisions, fuel, and water, according to the aforesaid dietary scale, and shall not make any alteration, except for the manifest advantage of the passengers, in respect of the space allotted to them as aforesaid, or in respect of the means of ventilation, and shall not ill-use the passengers or require them (except in case of necessity) to help in working the vessel; and shall issue medicines and medical comforts, as shall be requisite, to the best of his judgment, and shall call at such ports as may be mentioned in the emigration officer's clearing certificate for fresh water and other necessaries; and shall employ them without unnecessary delay to the destination to which they have contracted to proceed.

VI. The emigration officer shall not give his certificate until he has mustered the passengers and ascertained, to the best of his power, that they understand whither they are going, and comprehend the nature of any contracts of service which they have made; he shall also take care that a copy of the form of such contracts, or an abstract of their substance, signed by himself, is appended to the said certificate: if any of the passengers are in bad health, or indisposed, he shall provide, by clothing, or if the contract be unfair, or if there is reason to suspect that fraud or violence has been practised in their collection, or embarkation, he may detain the ship, and he shall think fit, may order all or any of the passengers to be re-landed.

## SCHEDULE B.

EMIGRATION OFFICER'S CERTIFICATE &c.

I hereby authorise the Chinese passenger ship to proceed to sea for the port of  
and I certify that the said ship can legally carry adults, and that there are

on board passengers, making in all adults, viz. men, women, male children, and female children, such children being between the ages of 1 and 12 years; that the space set apart and to be kept clear for the use of such emigrants is as follows: On the upper deck, superficial feet, being [here describe the space], and in the between-decks superficial feet, being [here describe the space]; that the ship is properly manned and fitted, and that the means of ventilating the part of the between decks appropriated to passengers are as follows [here describe the means of ventilation]; that the ship is furnished with a proper quantity of good provisions, fuel, and water for days' use to the passengers according to the annexed dietary scale, and with a proper quantity of medicines, instruments, and medical comforts according to the annexed scale of medical necessities; that I have inspected the contracts between the emigrants and their intended employers (the terms of which are annexed to this certificate), and consider them reasonable; that no fraud appears to have been practised in collecting the emigrants; and that there are on board a surgeon † [and interpreter] approved by me, and designated [respectively and] ‡ [The master of the ship is to put into and for water and fresh vegetables.]

(Signed)  
Dated this day of 18 .

† The scales must be those prescribed by the regulations in Schedule A.  
‡ If in use the ship has been authorised to proceed without an interpreter, omit the part between brackets, and add "and that the ship has been authorised to proceed without an interpreter."  
§ The part between brackets is to be inserted or not, as may be required.

**Indian Emigration Act.**

Emigration from British India is regulated by the Indian Act of March 18, 1864, No. 13 of that year.

This Act, which came into operation on July 1, 1864, repeals and consolidates, with amendments, 16 Acts, and a portion of another Act, passed between 1869 and 1863, on the subject of emigration. The following are some of its main provisions.

1. **Ports of Emigration.**—Emigration is prohibited from any port of India except Calcutta, Madras, and Bombay. (Sec. 7.)

2. **What Labour Contracts, and to what Places Emigration, legal.**—Contracts for labour, out of India, are declared to be unlawful, except when made under the provisions of the Act, and for such places as the Governor-General in council may notify in the *Gazette of India*, in addition to Mauritius, the Seychelles, Jamaica, British Guiana, Trinidad, St. Lucia, Grenada, St. Vincent, St. Kitt's, Natal, and the Danish colony of St. Croix. (Secs. 3, 4, 5, and 6.)

3. **Emigration may be prohibited.**—The Governor-General in council may, by notification in the *Gazette of India*, prohibit emigration to any place to which it has been sanctioned, if he has reason to believe that proper measures have not been taken for the protection of emigrants, or for their safe return to India when they are entitled to a return passage. This prohibition may, however, in like manner be removed when the Governor-General is satisfied that such measures have been adopted. (Secs. 64 and 67.)

4. **Emigration Agents.**—The Governments of the various places to which emigration is allowed may appoint emigration agents in Calcutta, Madras, and Bombay (subject to the approval of the

Presidency Government) to collect emigrants and act for them. (Sec. 10.) The remuneration, however, of these agents is not to be regulated by the number of emigrants sent off, but is to be in the nature of a fixed annual salary. (Sec. 12.)

5. **Recruiters.**—The Protector of Emigrants, an officer appointed by the Presidency Government, is empowered (but only on the application of an emigration agent of a colony) to license annually as many recruiters as he may think necessary for that particular colony; and no person can act as a recruiter without such license, under a penalty of 500 rupees. (Secs. 13, 24, 25, 26, and 70.) The fee for the license is 10 rupees. (Sec. 27.)

6. **Recruitment and Registration of Emigrants.**—Natives in the country engaging with a recruiter to emigrate are not to leave their district without appearing, with the recruiter, before the magistrate of the district, who must register, in a book for the purpose, the name and particulars of the emigrant, unless he finds that the emigrant does not understand the nature of his engagement, or has been induced to enter into it by fraud or misrepresentation. The fee for registration is one rupee. A copy of this registration is to be given to the emigrant. (Secs. 30 and 31.) The registration of emigrants recruited in the three Presidency towns of Calcutta, Madras, and Bombay, is to be effected under similar conditions, by the protector of emigrants, instead of by magistrates. (Secs. 30 and 34.) The emigration agent of any colony may, with the consent of the protector, set aside any contract of his recruiter; but if he sets it aside without such consent, he must pay to the protector a sum sufficient to enable the emigrant to return to the place where he was registered. (Sec. 41.)

7. **Emigration Season.**—The emigration season for steamers going anywhere, and for sailing vessels to any place east of the Cape of Good Hope, is the whole year; but for sailing vessels to any place west of the Cape it is confined to the period between July 31 and March 16. (Sec. 45.)

8. **Length of Voyage.**—The declared length of voyage from Calcutta to the West Indies is 20 weeks, from Madras and Bombay 19 weeks. To Natal 12 and 10 weeks respectively. To the Mauritius, from 5 to 10 weeks, according to the time of the year and the Presidency from which the voyage is made. (Sec. 8.)

9. **Shipping Arrangements.**—The vessels must obtain a license from the Presidency Government (sec. 46), must have a height of not less than 5½ feet between decks, and must not carry more than one adult for every 10 superficial feet on deck (by Order of the Indian Government, February 24, 1868, the superficial space per adult has been increased from 10 to 12 feet), and for every cubic space of 72 feet. Every emigrant above 10 years, and two children from 1 to 10, are to count as one adult. Women and children must occupy a distinct compartment from the single men (sec. 47). Vessels fitted with any water-distilling apparatus approved by the protector of emigrants is to be allowed a reduction of one-third of the quantity of water (seven gallons for every emigrant for each week of the computed voyage) required by the Act to be shipped in tanks or casks (sec. 48). Vessels sailing from Calcutta are to be towed to sea by steamers (sec. 60) under a penalty not exceeding 1,000 rupees. (Sec. 78.)

10. **Governor-General may make Rules.**—The Governor-General is empowered to make, from time to time, rules (which must be published in the *Gazette of India*) not inconsistent with the Act, on the following subjects, viz.: 1, the proportion of women to be taken, and the age at

which children are not to be taken; 2, the dietary and clothing of emigrants on the voyage; 3, the medical care, medicines, and medical journals &c., of the emigrants; 4, ventilation and cleanliness, and boats for the voyage; and 5, the security, well-being, and protection generally of the emigrants.

11. *Exemption of French Colonies.*—With the exception of sections 19 to 41, both inclusive, which relate to the recruitment of native labourers, the Act is not to apply to emigration to the French colonies. (Sec. 83.)

Emigration to the French colonies is regulated by sections 19 to 41 of the Act of 1864, and by Act No. 46 of 1860, which Act was passed to give effect to two conventions entered into between the English and the French Governments, dated Paris, July 25, 1860, as regards Reunion, and July 1, 1861, as regards the West India Colonies of France.

The passenger trade between India and Ceylon is regulated by sections 19 to 41, both inclusive, of the Indian Act, No. 13 of 1864, and by the Acts No. 25 of 1859, No. 7 of 1862, and by the Ceylon Ordinances, No. 1 of 1860, and No. 10 of 1862.

*Abstract of Order in Council (Jan. 7, 1864) for promoting Order and Health, &c. in Passenger Ships to any of her Majesty's Possessions abroad. (59 sec. Pass. Act.)*

1. Every passenger to rise at 7 A.M., unless otherwise permitted by the surgeon; or if no surgeon, by the master.

2. Breakfast from 8 to 9 A.M., dinner at 1 P.M., supper at 6 P.M.

3. The passengers to be in their beds at 10 P.M., except under permission of the surgeon, or, if no surgeon, of the master.

4. Fires to be lighted by the passengers' cook at 7 A.M., and kept alight by him till 7 P.M.; then to be extinguished unless otherwise directed by the master, or required for the use of the sick.

5. The master to determine the order in which each passenger or family of passengers shall be entitled to the use of the fires. The cook to take care that this order is preserved.

6. On each passenger deck three safety lamps to be lit at dusk, and kept burning all night, and such further number as shall allow one to be placed at each of the hatchways used by the passengers.

7. No naked light between deck or in the hold to be allowed at any time or on any account.

8. The passengers, when dressed, to roll up their beds, to sweep the decks (including the space under the bottom of the berths), and to throw the dirt overboard.

9. Breakfast not to commence till this is done.

10. The sweepers for the day to be taken in rotation from the males above 14, in the proportion of 5 for every 100 passengers.

11. Duties of the sweepers to be to clean the ladders, hospitals, round houses, and water-closets, to pump water into the cisterns or tanks for the supply of the water-closets, to sweep the decks after every meal, and to dry holy-stone and scrape them after breakfast.

12. But the occupant of each berth to see that his or her own berth is well brushed out; and single women are to keep their own compartment clean in ships where a separate compartment is allotted to them.

13. The beds to be well shaken and aired on deck, and the bottom boards, if not fixtures, to be removed, and dry-scrubbed and taken on deck, at least twice a week.

14. Two days in the week to be appointed by the master as washing days, but no clothes or any account to be washed or dried between decks.

15. The coppers and cooking vessels to be cleaned every day, and the cisterns kept full with water.

16. The scuttles and stern ports, if any, to be kept open (weather permitting) from 7 A.M. to 7 P.M., and the hatches at all hours.

17. On Sunday the passengers to be mustered at 10 A.M., when they will be expected to appear in clean and decent apparel. The day to be observed as religiously as circumstances will admit.

18. No spirits or gunpowder to be taken aboard by any passenger. Any that may be discovered to be taken into the custody of the master till the expiration of the voyage.

19. No loose hay or straw to be allowed below deck.

20. No smoking to be allowed between decks.

21. All immoral or indecent acts or conduct, improper liberties or familiarities with the female passengers, blasphemous, obscene, or indecent language, or language tending to a breach of peace, swearing, gambling, drunkenness, fighting disorderly, riotous, quarrelsome, or insubordinate conduct, and also all deposits of filth or offensive acts of uncleanness in the between decks, are strictly prohibited.

22. Fire-arms, swords, and other offensive weapons, as soon as the passengers embark, to be placed in the custody of the master.

23. No sailors to remain on the passenger deck among the passengers, except on duty.

24. No passenger to go to the ship's cockpit without special permission from the master, or to remain in the fore-castle among the sailors on any account.

*Offences at Sea Punishable in the Colonies.*

Formerly offences at sea might, under the 11 & 12 Wm. III. c. 7, be tried in any colony and were to be dealt with according to the law, and the method and rules of the Admiralty, and subsequently (under the 46 Geo. III. c. 54), according to the common course of the law of this realm, applicable to like offences committed on land. But now, by the 12 & 13 Wm. IV. c. 96 (1849), these offences, when dealt with in a colony, are to be tried according to the law of the colony, but punished according to the law of England.

The Act of Victoria which was passed in August 1849 for the prosecution and trial in colonies of offences committed within the jurisdiction of the Admiralty, provides that all persons charged in any colony with piracy, felony, murder, or other offence, of what nature or soever, committed on the sea, or within the Admiral's jurisdiction, may be brought to trial in the same manner, according to the laws of the colony as if the offence had been committed on land within the local jurisdiction of the criminal law of the colony, and upon conviction shall suffer the same punishments as they would have been liable to had the offence been committed, tried, and judged in England.

Where death ensues in a colony from an offence inflicted at sea, the offence, whether murder, manslaughter, or accessory before or after the fact, is to be dealt with in the colony as if it had been committed there; but in the converse case, of death ensuing at sea from an injury inflicted in the colony, the offence shall be held to have been wholly committed upon the sea.

The jurisdiction of the Supreme Courts of New South Wales and Tasmania, as established by Geo. IV. c. 83, is left intact.

Exclusive of the statutes and regulations

refer to, and in cases to which they may not apply, the relation between masters of ships and passengers is governed by the general rules of maritime law. 'Whatever,' says Lord Tenterden, 'is necessary for the security of the vessel, the discipline of the crew, the safety of all on board, the master may lawfully require, not only of the ship's company who have expressly contracted to obey him, but of those also whom he has engaged to carry to their destination on the implied condition of their submission to his rule.' *Law of Shipping*, part ii. c. 8, p. 180, Stat. ed. 1834. Hence in certain cases, such as those of imminent peril, from whatever cause arising, passengers are to be considered as a portion of the crew, and may be called upon to contribute by their exertions to the safety of the ship and cargo. And in the event of their refusing so to act, they make themselves amenable to such reasonable punishment as the captain may choose to inflict. A passenger is not, however, bound to remain on board ship in the hour of danger, but may quit it if he have an opportunity; and he is not required to take upon himself any responsibility as to the *conduct* of the ship. If he incur any responsibility, and perform extraordinary services in relieving a vessel in distress, he is entitled to a corresponding reward. The goods of passengers contribute to general average; and their conduct should in all cases be such as may be consistent with the good order and discipline of the ship. They are not to set a bad example to the crew, or excite a spirit of insubordination, but to assist in maintaining the just and proper authority of the captain. The latter, however, in repressing disorder and improper conduct on the part of passengers, should act with much circumspection, and exercise his authority within the limits required by the exigencies of the case. His conduct in regard to passengers is always viewed with considerable jealousy; and though the courts of law will support him in the exercise of his authority when circumstances require it, they will not go beyond what is necessary; much less support him in any wanton or oppressive exercise of his authority. (Tenterden, in loco cit.; Holt's *Maritime Laws*, 2d ed. p. 425 &c.)

PASSPORT (Fr. and Ger., *pasport*; Ital., *passaporto*; Spanish, *pasaporte*). The use of passports or safe-conducts is of great antiquity, and no doubt originated during periods of war and civil commotion.

In its modern acceptance a passport is a document issued by the Foreign Minister of any State, requesting that the holder may receive at the hands of foreign Powers such 'assistance and protection' as he may require, during his travels in their territories.

In the United States of America and in England, the internal passport system has no existence; but on the Continent, though now (1863) much modified, it was, until recently, peculiarly strict and unchangeable. Annexed are our Foreign Office regulations respecting passports.

1. Applications for Foreign Office passports must be made in writing, and inclosed in a cover addressed to 'The Chief Clerk, Foreign Office, London,' with the word 'Passport' conspicuously written on the cover.

2. The charge on the issue of a passport, whatever number of persons may be named in it, is 2s.

3. If it is desired that the passport should be sent by post, that sum must be forwarded with the application for the passport by a post-office order, made payable at the post office, Charing Cross, London, to the chief clerk of the Foreign

Office, Francis B. Alston, Esq. Postage stamps will not be received in payment.

3. Foreign Office passports are granted only to British-born subjects, or to such foreigners as have become naturalised either by Act of Parliament or by a certificate of naturalisation granted by the Secretary of State for the Home Department. When the party is a 'naturalised British subject,' he will be so designated in his passport; and if his certificate of naturalisation be dated subsequently to August 24, 1850, and previously to August 1, 1858, his passport will be marked as good for one year only; or should the certificate be dated subsequently to August 1, 1858, his passport will in that case be marked as good for six months only, except in cases where a license for a longer period of residence abroad has been granted by the Secretary of State for the Home Department; but this regulation will not preclude any person whom it affects from obtaining at the Foreign Office, at any future time, on his producing his old passport, a fresh passport in exchange for it for a further limited period, without being required to pay a fresh charge. A Foreign Office passport granted to a British-born subject or to a 'naturalised British subject' who has been naturalised by Act of Parliament, or whose certificate of naturalisation is dated previously to August 24, 1850, is not limited in point of time, but is available for any time, or for any number of journeys to the Continent.

4. Passports are granted to all persons either known to the Secretary of State or recommended to him by some person who is known to him; or upon the application of any *Banking Firm* established in London or in any part of the United Kingdom; or upon the production of a *Certificate of Identity* signed by any mayor, magistrate, justice of the peace, minister of religion, physician, surgeon, solicitor, or notary, resident in the United Kingdom.

5. If the applicant for a passport be a naturalised British subject, his certificate of naturalisation, with his signature subscribed to the oath printed on the third page of it, must be forwarded to the Foreign Office with the certificate of identity granted on his behalf; and his certificate of naturalisation will be returned with the passport to the person who may have granted the certificate of identity, in order that he may cause such naturalised British subject to sign the passport in his presence. The agents at the outports are not authorised to grant passports to naturalised British subjects; and such persons, if resident in London or in the suburbs, should apply *personally* for their passports at the Foreign Office.

6. Passports are issued at the Foreign Office between the hours of 11 and 4 on the day following that on which the application for the passport has been received at the Foreign Office; but the passports will be issued at the outports immediately on application, accompanied by the production of a certificate of identity, within such hours as may be fixed with regard to the convenience of persons desirous of embarking for the Continent.

7. A passport cannot be sent by the Foreign Office, or by an agent at an outport, to a person already abroad: such person, being a British-born subject, should apply for one to the nearest British mission or consulate. A passport cannot be issued abroad to a naturalised British subject except for a direct journey to England, or in the case of a colonial naturalised subject for a journey back to the colony where he has been naturalised. Neither can a passport granted at the Foreign Office to a naturalised British subject for a limited period

he renewed by her Majesty's diplomatic or consular agents in foreign countries; but only at the Foreign Office.

8. The bearer of every passport granted by the Foreign Office should sign his passport as soon as he receives it; without such signature, either the *visa* may be refused, or the validity of the passport questioned abroad. Travellers about to proceed to Russia, Turkey, and Portugal can have their passports *visé* at the under-mentioned places respectively: for Russia, at the Russian consulate, 32 Great Winchester street; for Turkey, at the Turkish embassy, 1 Bryanston square; and for Portugal, at the Portuguese consulate, 5 Jeffrey's square. Travellers about to proceed to Austria, Bavaria, Belgium, Denmark, The Netherlands, France, Italy, Prussia, Saxony, Spain, Sweden and Norway, or Wurtemberg, need not obtain the *visa* of the diplomatic or consular agents of those countries respectively resident in the United Kingdom.

N.B.—Travellers who may have any intention of visiting the Russian empire at any time in the course of their travels, are particularly and earnestly advised not to quit England without having had their passports *visé* at the Russian consulate in London.

*Model form of Certificate of Identity to be written out in full, signed and sealed by the person giving it; and also by the person in whose behalf it is granted.*

(Date of Place, and Day of Month.)

The undersigned, Mayor of (Magistrate, Justice of the Peace, Minister, Physician, Surgeon, Solicitor or Notary, as the case may be), residing at \_\_\_\_\_

hereby certifies that *A. B.* (Christian and surname to be written at length), whose signature is written at foot, is a British subject, \_\_\_\_\_ and a naturalised British subject, \_\_\_\_\_

quires a passport to enable him \_\_\_\_\_ to proceed to \_\_\_\_\_ to travel on the

Continent (accompanied, as the case may be, by his

wife and children, with their tutor, named *C. D.* (Christian and surname to be written at length), a British subject, \_\_\_\_\_ and

a naturalised British subject, \_\_\_\_\_ and governess, \_\_\_\_\_ and maid servant [or servants], and man servant [or servants], named *E. F.*, a British subject [or subjects], and a courier, named *G. H.*, a naturalised British subject.

(Signed)

(With the usual signature.)

(Seal.)

Signature of the above-named \_\_\_\_\_

Foreign Office, December 1867.

There are Foreign Office passport agents at Bath, Belfast, Birmingham, Dover, Dublin, Folkestone, Great Grimsby, Harwich, Hull, Liverpool, Londonderry, Lowestoft, Manchester, Newcastle-on-Tyne, Newhaven, Queenstown (Cork), Southampton, Swansea, and Weymouth.

The impolicy of the passport system, as impeding the free intercourse of nations for commercial and other purposes, is self-evident, and its abolition would be a great advantage. It is proverbial that those alone of deservedly suspicious character have their passports invariably *en règle*.

The passport duty was reduced in 1858 from 5s. to 6d.

**PATENT.** A privilege from the Crown granted by letters patent (whence the name), conveying to the individual or individuals

specified therein the sole right to make, use, dispose of some new invention or discovery, for certain specified period.

The power to grant patents seems to exist in common law; but it is limited and defined by the famous statute 21 Jas. I. c. 3, which enacts, "The any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of 14 years or under, thereafter to be made, of the sole working or making any manner of new manufactures within the realm, to the true and first inventor and inventor of such manufactures, which others at the time making such letters patent and grants shall use, so as also they be not contrary to the law nor mischievous to the State, by raising prices of commodities at home, or hurt of trade, or generally inconvenient." The said 14 years to be accounted from the date of the first letters patent or grant of such privilege thereafter to be made; but that the same shall be of such force as should be if that Act had never been made, and none other."

*Policy of Patents.*—The law with respect to patents is unavoidably encumbered with several difficulties. The expediency of granting patents has been disputed; though, as it would seem without sufficient reason. Were they refused the inducement to make discoveries would, in many cases, be very much weakened; at the same time that it would plainly be for the interest of every one who made a discovery to endeavor, if possible, to conceal it. And notwithstanding the difficulties in the way of concealment, they are not insuperable; and it is believed that several important inventions have been lost, from the secret dying with their authors. On the other hand, it is not easy to decide as to the cases for which the patent, or exclusive privilege, should be granted. Some have proposed that it should be made perpetual; but this would be a very great obstacle to the progress of improvement, and would lead to the most pernicious results. Perhaps the term of 14 years, to which the duration of a patent is limited in England, as proper a one as could be suggested. It may be too short for some inventions, and too long for others; but, on the whole, it seems a pretty average.

*Specification.*—Previously to the reign of Queen Anne, it was customary to grant patents without any condition, except that they should be really new inventions. But a condition was introduced into all patents, and is still retained, declaring that if the inventor did not, by instrument under his hand and seal, denominated a specification, particularly describe and ascertain the nature of his invention, and in what manner the same is to be performed, and also cause the same to be enrolled in Chancery within a certain time (generally a month), the letters patent, all liberties and advantages whatever therein granted, should utterly cease and become void. This was a very judicious regulation. However the invention from being lost; and the moment the patent expired, every one was in a situation to profit by it. The deliverance of the specification is now made precedent to granting letters patent; and they will not be granted unless it be distinct and explicit.

*Letters patent* were formerly obtained by petition and affidavit to the Crown, setting forth that the petitioner had, after great labour and expense, made a certain discovery, which he believed, would be of great public utility; that he was the first inventor. The petition was then referred to the Attorney and Solicitor

and of 257 other foreign vessels 17,826 tons. The principal exports are currants, oil, valonia, wax &c. Of these, currants are by far the most important. The fruit is larger, and freer from sand and gravel, than that of the Ionian Islands. They are shipped in casks of various sizes; but the weight of the cask is included in that of the fruit, it is said to be, for the most part, heavier and stronger than necessary. Morea currants are preferred in most countries, except England; but here the currants of Zante are held in equal, or perhaps greater, estimation. The export of currants from Patras may, in good seasons, average from 150,000 to 200,000 cwt. a year. hitherto the produce of the crop has varied extremely in different seasons. But within the last few years it has been found that, through the judicious application of sulphur in the cultivation of the plant, the attacks of blight are obviated, and the security of the crop greatly increased. The entire annual produce of currants in Greece may be estimated on the average at about 50,000 tons; but though the shipments of currants from the Morea in 1867 reached 48,650 tons, being 7,647 tons in excess of those

of the previous year, the price was so low that the value of the exports in 1867 was only 744,172*l.*, while that of the exports in 1866 was 720,885*l.* In 1867 we imported 1,002,366 cwt. currants, of which 970,681 cwt. came from Greece. The crops of oil are even more fluctuating than those of currants formerly were. 5,000 tons of valonia, valued at 50,000*l.*, were exported from Patras in 1867; and the silk crop having proved good, about 65,000 okes (178,750 lb.) of cocoons were exported; her total exports in that year being valued at 538,880*l.* The imports at Patras (valued at 52,900*l.* in 1867), as at the other Greek ports, consist principally of sugar, coffee, and other colonial products; plain and printed cotton stuffs, woollen goods, salted fish, iron, tin plates, hardware, coal, cordage, hemp, deals &c. Imported articles are brought principally from the Ionian Islands, Malta, Venice, Leghorn, Marseilles, and Trieste; but, from the want of authentic details, it is quite impossible to form any perfectly accurate estimate of their amount, either as respects Patras, or any other Greek port.

We subjoin an account of the trade between the United Kingdom and Greece for the years 1864—1867.

Between 1859-63, the trade of Greece was as follows:-

Year	Imports		Exports	
	value	quantity	value	quantity
1859	£1,784,268	2,996,069	1,088,122	1,158,280
1860	2,038,951	3,113,980	1,158,280	1,158,280
1861	1,913,369	2,753,917	1,158,280	1,158,280
1862	2,750,280	3,935,605	1,158,280	1,158,280

One-half of the exports of Greece are shipped to the United Kingdom. The import trade is shared between Great Britain, Turkey, France, Austria, and Russia.

Money, Weights and Measures.—The following are the British equivalents of the Greek moneys, &c.:-

100 lepta	equal to	1 drachma
2412 drachmas	"	1 £ sterling
2,128 Venetian lb.	"	1 ton
400 drams	"	1 oke
1 oke	"	22 lb.
1 klio	"	1 bushel
1 pik	"	2 1/2 inches
1 dia. for cloth	"	27 inches
33 stremma	"	1 acre

The paper circulation of the Greek National Bank on Dec. 31, 1867 (Old Style), was 20,127,435 drachmas. The specie in the coffers of the bank

and its branches, was 9,505,722 drachmas, and the debt due to it by the Government 9,521,943 drachmas.

**Tariff.**—In February 1867, the duty on all articles of export was abolished, except on valonia, raisins (including currants), and figs, and it was to cease on these also on Oct. 5, 1867.

On the other hand, the duties on almost every article of import have been increased. The basis of the tariff, supposed to be 10 per cent. ad valorem, is in reality on many articles a great deal higher. Thus:—

		per cent.
Manufactured goods pay about	- -	15 to 30
Bottled wine of ordinary quality	- -	30 " 40
Scented soap	- -	60 " 100
Gloves	- -	15 " 20

In addition to this there is about  $\frac{1}{2}$  per cent. town dues, and  $\frac{1}{2}$  per cent. mole dues. (Mr. Consul Ongley's and Mr. Consul Martin's Reports of April 24 and June 9, 1868.)

#### PORT CHARGES IN THE KINGDOM OF GREECE.

##### Tonnage.

*In the Ports of Patras, Syra, Nauplia, Piræus, Marathonensis, Pylos, Calamata, and Navarino.*

On vessels under 5 tons	- -	- free
of 20 " "	- -	- 9 lep.
above 20 " "	- -	- 12 lep.

##### *In the other Ports.*

On vessels under 5 tons	- -	- free
of 20 " "	- -	- 6 lep.
above 20 " "	- -	- 9 lep.

##### Permit of Departure.

On vessels under 5 tons	- -	- free
of from 5 to 20 tons	- -	- 50 lep.
21 to 50 " "	- -	- 1 dr.
51 to 100 " "	- -	- 2 drs.
101 to 200 " "	- -	- 3 drs.
201 to 300 " "	- -	- 4 drs.
301 tons and above	- -	- 5 drs.

##### Lighthouse (only where there is one).

On vessels under 5 tons	- -	- free
of from 5 to 20 tons	- -	- 50 lep.
21 to 50 " "	- -	- 1 dr.
51 to 101 " "	- -	- 2 drs.
101 to 200 " "	- -	- 5 drs.
201 to 300 " "	- -	- 8 drs.
301 tons and above	- -	- 9 drs.
When gunpowder remains on board, for every 2½ lb. per month of 30 days	- -	- 2 lep.
When it is placed in the public magazine, for the same quantity and time	- -	- 3 lep.

**Observations on the Tonnage Duty.**—1. Vessels arriving from abroad loaded, and which discharge their cargoes, and depart loaded, pay the whole duty.

2. Vessels arriving from abroad loaded, and which depart in ballast, pay two-thirds of the duty, which is also exacted if they arrive in ballast and depart loaded.

3. Vessels arriving from abroad in ballast, and departing without lading, or arriving and departing with cargo, and not discharging any of it, pay one-third of the duty.

4. Vessels arriving from and going to another port of the kingdom pay but one-half of the duty.

5. A vessel is considered as loaded, whether she be so fully or partially.

**Exceptions.**—1. Every vessel forced to enter a port, either by a storm or in consequence of damage, is exempted from all charges during 8 days.

2. Every vessel entering a port, from whatever cause, and destined to another port, and the master of which shall immediately make a declaration to the captain of the port, that he has no intention either of loading or discharging his goods, may remain 5 days without paying any duty except the lighthouse duty. He is permitted also to receive or to deliver letters or

money, unless otherwise provided for by special ordinances.

In 1867 a new tax, called *mole dues*, of 10 leptas ( $\frac{1}{2}$  shilling, per ton) was imposed on all vessels entering the port.

**Quarantine.**—From the Board of Trade notice of Sept. 3, in the *London Gazette* of Sept. 4, 1868, it appears that a steamboat or merchant vessel, whatever its nationality or port of departure, is not required, on entering a Greek port, to have a bill of health visé by a Greek or other consul, unless cholera or other infectious disease is prevalent on the Mediterranean coast. If cholera be prevalent, and there is no Greek or any foreign consul at the port of departure, the Greek authorities will ascertain the sanitary condition of that port, and take such steps with regard to quarantine as seem to them best calculated to promote the public health. The certificate of a merchant (Greek or foreign, at the port of departure, would influence, though it would not bind, the quarantine authorities.

**Commerce, Shipping &c.**—The Greeks have particularly distinguished themselves by their energy and success with which they have engaged in naval and mercantile enterprises. Their commerce, next to their freedom, was the grand source of the prosperity of Athens, Corinth, and other Greek cities of antiquity. "C'est, au reste, à cet esprit de commerce, qui s'empara de la plus grande partie des habitans de la Grèce, que ces peuples ont été redevables de ce degré de puissance et de considération dont ils ont joui pendant quelques siècles. Une nation commerçante est, en général, une nation active et industrielle. Le trafic maritime surtout exige beaucoup de travail, de hardiesse et de sagacité. Ces qualités influent nécessairement sur les mœurs, et rendent les esprits plus propres aux grandes entreprises." (Coguet, *De l'Origine des Loix* etc. iii. 155.) And in these respects the modern Greeks have been no unsuccessful imitators of their illustrious progenitors. The great articles of export from Greece consist of currants, silk, figs, wool, olive oil, valonia, wine, sponge, wax, tobacco &c.; the principal imports being manufactured cotton and woollen goods, corn, with a great variety of subordinate articles, principally from England, but partly, also, from France and Germany. The mercantile navy of Greece was in 1865 estimated at 4,422 vessels, of the aggregate burden of 262,531 tons, employing 24,672 seamen. The Greeks have, in fact, attained to the distinction of being the carriers, factors, and traders of the Levant.

We borrow from Mr. Consul Merlin's last report the annexed table, showing the trade at Piræus in 1866 and 1867:—

Entered	Total No. of all Vessels, including Coasting Trade	Total Tonnage	Total Value of Cargoes
1866	5,768	390,876	£ 13,130,000
1867	5,442	392,127	13,000,000
Cleared			
1866	5,516	390,874	13,130,000
1867	5,330	387,128	13,000,000

It is expected that the railway from the Piræus to Athens will be completed this year, 1868.

We avail ourselves of this opportunity to observe that the prejudices entertained in the country against the Greeks are alike unreasonable and ill-founded. It was not to be expected that they should be trodden under foot, and subjected for centuries to the brutal tyranny of the Turks without contracting many of the vices incident to so degraded a state. But their enterprises

urgency, and activity have not been impaired; and the bad habits that were forced upon them in their enslaved condition are gradually disappearing. Whatever there is of industry or improvement in Turkey, is wholly owing to the Greeks, or, if not to them, to some Christian tribe. The Turks have not made, and we believe we may safely affirm never will make, the smallest advance. Their character and their religion are insuperable obstacles to their progress; and their expulsion from Europe would be more for the advantage of this quarter of the world than any thing else that appears possible. Neither have we any doubt that eventually they will be expelled. The Greeks are gaining every day upon the Turks; and, as the antipathy between the races is strong, deep-rooted, and all but irreconcilable, the presumption is, that as soon as the Christians gain the ascendancy, the Turks will themselves withdraw to Asia. The selfishness of some of the Christian Powers, and the insupportable jealousies of others, may retard for a time this desirable consummation. But in whatever way it may be brought about, whether with or without Russian assistance, it will be most beneficial; and we hardly think that it is likely to be long delayed.

It is deeply to be regretted that Candia, or Crete, was not either added to the new kingdom of Greece, or made independent. We cannot help regarding it as disgraceful to the Christian nations of Europe, that this famous island, where European civilisation first struck its roots, should be assigned to the barbarians by whom it is now laid waste. It is as well entitled to the favourable consideration of England, France, and Russia, as any part of Continental Greece; and we do hope that measures may yet be devised for rescuing it from the atrocious despotism by which it has been so long weighed down.

**PATTERNS.** Specimens or samples of commodities transmitted by manufacturers to their correspondents, or carried from town to town by travellers, in search of orders.

**PAWNBROKERS AND PAWNBROKING.** A pawnbroker is a species of banker, who advances money, at a certain rate of interest, upon security of goods deposited in his hands; having power to sell the goods, if the principal sum and the interest thereon be not paid within a specified time.

**1. Advantages and Disadvantages of Pawnbroking.**—The practice of impledging or pawning goods in order to raise loans, is one that must necessarily always exist in civilised societies, and in many cases, productive of advantage to the parties. But it is a practice that is extremely liable to abuse. By far the largest proportion of the bona fide borrowers of money on pawn consist of the lowest and most indigent classes; and were the lenders not subjected to any species of regulation, advantage might be taken (as, indeed, it is occasionally taken, in despite of every precaution) of their necessities, to subject them to the most grievous extortion. But, besides those whose wants compel them to resort to pawnbrokers, there is another class, who have recourse to them in order to get rid of the property they have unlawfully acquired. Not only, therefore, are pawnbrokers instrumental in relieving the pressing urgent necessities of the poor, but they may, even without intending it, become the most efficient allies of thieves and swindlers, by holding them ready and convenient outlets for the disposal of their ill-gotten gains. The policy of giving legislative protection to a business so liable to abuse, has been doubted by many. But

though it were suppressed by law, it would always really exist. An individual possessed of property which he may neither be able nor willing to dispose of, may be reduced to a state of extreme difficulty; and in such case, what can be more convenient or advantageous for him than to get a loan upon a deposit of such property, under condition that if he repay the loan, and the interest upon it, within a certain period, the property will be returned? It is said, indeed, that the facilities of raising money in this way foster habits of imprudence; that the first resort for aid to a pawnbroker almost always leads to a second, and that it is impossible so to regulate the business, as to prevent the ignorant and the necessitous from being plundered. That this statement, though exaggerated, is, to a certain extent, true, no one can deny. On the other hand, however, the capacity of obtaining supplies on deposits of goods, by affording the means of meeting pressing exigencies, in so far tends to prevent crime, and to promote the security of property; and it would seem as if the desire to redeem property in pawn would be one of the most powerful motives to industry and economy. At the same time, too, it must be borne in mind, that it is not possible, do what you will, to prevent those who are poor and uninstructed from borrowing; and that they must, in all cases, obtain loans at a great sacrifice, and be liable to be imposed upon. But the fair presumption is, that there is less chance of any improper advantage being taken of them by a licensed pawnbroker, than by a private and irresponsible individual. Although, however, the business had all the inconveniences, without any portion whatever of the good which really belongs to it, it would be no purpose to attempt its suppression. It is visionary to imagine that those who have property will submit to be reduced to the extremity of want, without endeavouring to raise money upon it. Any attempt to put down pawnbroking would merely drive respectable persons from the trade, and throw it entirely into the hands of those who have neither property nor character to lose. And hence the object of a wise Legislature ought not to be to abolish what must always exist, but to endeavour, so far at least as is possible, to free it from abuse, by enacting such regulations as may appear to be best calculated to protect the ignorant and the unwary from becoming the prey of swindlers, and to facilitate the discovery of stolen property.

**2. Obligations under which Pawnbrokers should be placed.**—For this purpose it seems indispensable that the interest charged by pawnbrokers should be limited; that they should be obliged to give a receipt for the articles pledged, and to retain them for a reasonable time before selling them; that the sale, when it does take place, should be by public auction, or in such a way as may give the articles the best chance for being sold at a fair price; and that the excess of price, if there be any, after deducting the amount advanced, and the interest and expenses of sale, should be paid over to the original owner of the goods. To prevent pawnbrokers from becoming the receivers of stolen goods, they should be liable to penalties for making advances to any individual unable to give a satisfactory account of the mode in which he became possessed of the property he is desirous to pawn; the officers of justice should at all times have free access to their premises; and they should be obliged carefully to describe and advertise the property they offer for sale.

**3. Law as to Pawnbrokers.**—It may appear singular that pawnbrokers should hardly have

been named in any legislative enactment till after the middle of last century. It was enacted by the 30 Geo. II, c. 24 that a *duplicate* or receipt should be given for goods pawned; and that such as were pawned for any sum less than 10*l.* might be recovered any time within two years, on payment of the principal and interest; but the rate of interest was not fixed. This defect was supplied by the 25 Geo. III, c. 48; but the Act 39 & 40 Geo. III, c. 99 (though slightly modified by subsequent Acts) contains the latest and most complete regulations on the subject.

Every person exercising the trade of a pawnbroker must take out a license, renewable annually, 10 days at least before the end of the year, for which he shall pay, within the cities of London and Westminster and the limits of the twopenny post, 15*l.*, and everywhere else, 7*l.* 10*s.* No person shall keep more than 1 house by virtue of 1 license; but persons in partnership need only take out 1 license for 1 house. All persons receiving goods by way of pawn or pledge for the repayment of money lent thereon, at a higher rate of interest than 5 per cent., to be deemed pawnbrokers.

Upon every pledge on which there shall have been lent not exceeding 2*s.* 6*d.*, interest may be charged at the rate of  $\frac{1}{4}$ *l.* per month.

<i>£</i>	<i>s.</i>	<i>d.</i>	<i>d.</i>	per month.

0 and not exceeding 22*s.* 8

And for every sum exceeding 40*s.* and not exceeding 10*l.*, at the rate of 3*l.* in the pound by the calendar month, including the current month; and so in proportion for any fractional sum.

Pawnbrokers are to give farthings in exchange.

Persons applying to redeem goods pawned within 7 days after the first calendar month after the same shall have been pledged, may redeem the same without paying anything for the first 7 days; and, upon applying before the expiration of 14 days of the second calendar month, shall be at liberty to redeem such goods, upon paying the profit payable for 1 calendar month and the half of another; and in all cases where the parties so entitled, and applying as aforesaid, after the expiration of the first 14 days, and before the expiration of the second month, the pawnbroker is allowed to take the interest of the whole second month; and the same regulations and restrictions shall take place in every subsequent month.

When goods are pawned for more than 5*s.*, the pawnbroker, before advancing the money, shall immediately enter in his books a description of the pawn, the money lent thereon, the day of the month and year, the name of the person pawning, and the name of the street, and number of the house, if numbered, where such person resides, and use of the letter L, if the person be a lodger, and the letters H K, if a housekeeper; and also the name and abode of the owner of the party offering such pledge; and if the money lent shall not exceed 5*s.*, such entry shall be made within 4 hours after the goods shall have been pawned; and the pawnbroker shall, at the time of taking the pawn, give to the person so pawning a duplicate, corresponding with the entry in the book, which the party pawning shall take in all cases; and the pawnbroker shall not receive any pledge, unless the party so pawning shall receive such duplicate.

\* (25 Vict. c. 21. A pawnbroker may take  $\frac{1}{4}$ *l.* on 1*l.* or 1*l.* on 1*l.* memorandum, when the sum is below 10*s.*)

The duplicate to be produced to the pawnbroker before he shall be compelled to deliver the respective goods and chattels, except as hereinafter excepted.

The amount of profits on duplicates shall be added on pledges redeemed, and such duplicate shall be kept by the pawnbroker for 1 year.

Persons pawning other people's goods without their consent may be apprehended by the warrant of 1 justice, and convicted in a penalty not exceeding 5*l.* nor less than 20*s.*, and the full value of the goods pawned; and if the forfeiture be not immediately paid, the justice shall commit the party to the house of correction, to be kept to hard labour for 3 calendar months; and if within 3 days before the expiration of the commitment the forfeiture shall not be paid, the justice may order the person to be publicly whipped, and the forfeitures shall be applied towards making satisfaction to the party injured, and defraying the costs; but if the party injured shall decline to accept such satisfaction and cost, or if there be any surplus, such forfeitures or surplus shall be paid to the poor of the parish.

Persons forging or counterfeiting duplicates may be seized and delivered to a constable, who shall convey them before a justice; and, upon conviction, such person shall be committed to the house of correction for any time not exceeding 3 calendar months.

Persons offering pledges, not giving a satisfactory account of themselves, or the means by which they became possessed of such goods, wilfully giving any false information, or if they shall be reason to suspect that such goods are stolen, or illegally obtained, or if any person so entitled to redeem goods in pawn shall endeavor to redeem the same, they may be seized and delivered to a constable, to be carried before a justice; and if there should appear ground for a second examination, they shall be committed to the common goal or house of correction, to be dealt with according to law; or where such proceedings are not authorised by the nature of the offence, the party shall be committed to any time not exceeding 3 calendar months.

Persons buying or taking in pledge unfinished goods, linen, or apparel, intrusted to others to wash or mend, shall forfeit double the sum lent, and restore the goods.

Peace officers are empowered to search for unfinished goods which shall be come by unlawfully.

When goods are unlawfully pawned, the pawnbroker is to restore them; and their house may be searched during the hours of business by a warrant from a magistrate, for the discovery of such property.

Persons producing notes or memorandums to be deemed the owners of the property.

Where duplicates are lost, the pawnbroker, upon affidavit made by the owner of such loss before a magistrate, shall deliver another duplicate.

Goods pawned are deemed forfeited at the end of a year; but on notice from persons having goods in pledge, 3 months further are to be allowed beyond the year for redemption; and notice to be given before the twelvemonth expired.

All goods pawned may be sold at the expiration

tion of one whole year; and all goods so forfeited, on which above 10s. and not exceeding 10l. shall have been lent, shall be sold by public auction, and not otherwise; notice of such sale being twice given at least 3 days before the auction, in a public newspaper, upon pain of forfeiting to the owner of the goods not more than 5l. nor less than 2l.

All pictures, prints, books, bronzes, statues, busts, carvings in ivory and marble, encaustic, etchings, musical, mathematical and philosophical instruments, and china, shall be sold by themselves, and without other goods, 4 times only in every year; viz. on the first Monday in January, April, July, and October, in every year.

Pawnbrokers are not to purchase goods while in their custody, nor take in pledges from persons under 12 years of age, or intoxicated; nor take in any goods before 8 in the forenoon or after 7 in the evening between Michaelmas-day and Lady-day, or before 7 in the forenoon or after 8 in the evening during the remainder of the year, excepting only until 11 on the evenings of Saturday, and the evenings preceding Good Friday and Christmas-day, and every fast or thanksgiving day.

An account of the sale of pledges on which advances of more than 10s. have been made, is to be entered by pawnbrokers in a book, and the surplus is to be paid to the owner of the goods pawned, if demanded within three years of the sale, under penalty of 10l. and treble the sum lent.

Pawnbrokers are to place in view the table of goods and their name and business is to be placed over the door, on penalty of 10l.

Pawnbrokers injuring goods, or selling them before the time specified, shall, upon application to a magistrate, be compelled to make satisfaction for the same; and if the satisfaction awarded shall be equal to or exceed the principal and profits, the pawnbroker shall deliver the goods pledged to the owners without being paid anything for principal or profit.

Pawnbrokers shall produce their books before a magistrate; or, refusing so to do, shall forfeit a sum not exceeding 10l. nor less than 5l.

Pawnbrokers offending against this Act, shall forfeit for every offence not less than 40s. nor more than 10l.

It has been held by the Court of King's Bench, that a pawnbroker has no right to sell unredeemed pledges, after the expiration of a year from the time the goods were pledged, if, while they are in his possession, the original owner tender him the principal and interest due. (Waller v. Smith, January 22, 1820.) On a motion for a new trial, Lord Tenterden said, 'I am of opinion, that if the pledge be not redeemed on the expiration of a year and a day (and no notice given that 3 months further are to be allowed for its redemption), the pawnbroker has a right to expose it to sale so soon as he can, consistently with the provisions of the Act: but if at any time before the sale has actually taken place, the owner of the goods tender the principal and interest, and expenses incurred, he has a right to his goods, and the pawnbroker is not injured; for the power of sale is allowed him merely to secure to him the money which he has advanced, together with the high rate of interest which the law allows to him in his character of pawnbroker.'

By 22 & 23 Vict. c. 14, the provisions of 2 & 3 Geo. c. 71 ss. 32-35 are applied to pawnbrokers. The provisions give magistrates power to award amends against frivolous informations

to the extent of 5l., and any penalties to the extent of 10l. on common informers in compounding informations; with power to lessen the share of informers, and to mitigate penalties. The word magistrato must be taken to include stipendiary magistrates or justices of the peace.

Such is the present state of the law with respect to pawnbrokers. On the whole, the regulations seem to be judiciously devised. Perhaps, however, the rate of interest on small deposits might be advantageously lowered. The law allows interest at the rate of 1/4 per month to be charged on loans of 2s. 6d., which is at the rate of 20 per cent.; but the same sum of 1/4 per month is exigible from all smaller loans; and a very many do not exceed 1s. 6d., and even 6d., the interest on them is exceedingly oppressive. No doubt there is a great deal of trouble with respect to such loans, and the pawnbrokers allege that they form the least profitable part of their business; but still, considering the vast number of advances under 2s. 6d., it would seem that the interest on them might be somewhat reduced. Perhaps, too, it might be advisable, still better to secure compliance with the statute, to enact that no one should be licensed as a pawnbroker without producing sufficient security for a certain sum, to be forfeited in the event of his knowingly or wilfully breaking or evading any of its provisions. This would prevent (what Colquhoun says is not an uncommon practice) swindlers from becoming pawnbrokers, in order to get the means of selling stolen goods. (*Treatise on the Police of the Metropolis*, 2nd ed. p. 156; and *private information*.)

It would be a useful regulation to oblige pawnbrokers to insure against losses by fire. Much mischief has been occasioned by the neglect of this precaution.

The duties on pawnbrokers' licenses produced, in the United Kingdom in 1867, 32,107l.

4. *Notices of Pawnbroking in Italy, France &c.*

—The practice of advancing money to the poor, either with or without interest, seems to have been occasionally followed in antiquity. (Beckmann, vol. iii. p. 14, 1st Eng. ed.) But the first public establishments of this sort were founded in Italy, under the name of *Monti di Pietà*, in the 14th and 15th centuries. As it was soon found to be impossible to procure the means of supporting such establishments from voluntary contributions, a bull for allowing interest to be charged upon the loans made to the poor was issued by Leo X. in 1521. These establishments, though differing in many respects, have universally for their object to protect the needy from the risk of being plundered by the irresponsible individuals to whom their necessities might oblige them to resort, by accommodating them with loans on comparatively reasonable terms. And though their practice has not, in all instances, corresponded with the professions they have made, there seems no reason to doubt that they have been, speaking generally, of essential service to the poor.

From Italy these establishments have gradually spread over the Continent. The *Mont de Piété* in Paris, was established by a royal ordinance in 1777; and after being destroyed by the Revolution, was again opened in 1797. In 1804, it obtained a monopoly of the business of pawnbroking in the capital. Loans are made, by this establishment, upon deposits of such goods as can be preserved, to the amount of two-thirds of the estimated value of all goods other than gold and silver, and to four-fifths of the value of the latter. No loan is for less than 3 francs (2s. 6d.). The advances are made for a year, but the borrower may renew

the engagement. Interest is fixed at the rate of one per cent. per month.

The *Mont de Piété* has generally in deposit from 600,000 to 650,000 articles, worth from 12,000,000 to 13,000,000 francs. The expense of management amounts to from 60 to 65 centimes for each article, so that a loan of 3 francs never defrays the expenses it occasions, and the profits are wholly derived from those that exceed 5 francs. At an average the profits amount to about 280,000 francs, of which only about 155,000 are derived from loans upon deposit, about 125,000 being the produce of other funds at the disposal of the company.

In some respects, particularly the lowness of interest upon small loans, and the greater vigilance exercised with respect to the reception of stolen goods, the *Mont de Piété* has an advantage over the pawnbroking establishments in this country. It may be doubted, however, whether it is, on the whole, so well fitted to attain its objects. The limitation of the loans to 3 francs would be felt to be a serious grievance here, and it can hardly be otherwise in France; nor is it to be supposed, that the servants of a great public establishment will be so ready to assist poor persons, having none but inferior articles to offer in security, as private individuals anxious to get business. And such, in point of fact, is found to be the case, not in Paris only, but in all those parts of the Continent where the business of pawnbroking is confined to a few establishments. And hence, though the question be not free from difficulty, it would seem that, were the modifications already suggested adopted, our system would be the best of any.

For further information with respect to this curious and interesting subject, the reader is referred to the *Traité de la Bienfaisance publique* of Degerando, iii. 1-55; besides giving a succinct historical notice of *Monts de Piété*, the learned author has discussed, with equal sagacity and ability, most part of the knotty questions connected with the proper organisation of these establishments, and with their influence on society.

#### PEARL-ASH. [POTASH.]

PEARLS (Dutch, *paarlen*; Fr. *perles*; Ger. *perlen*; Ital. *perle*; Lat. *margaritæ*; Russ. *shemtschug*; *perli*; Span. *perlas*; Arab. *looloo*; Cing. *mootoo*; Hin. *mootie*). Well-known globular concretions found in several species of shell-fish, but particularly the mother-of-pearl oyster (*Concha margaritifera*, Linn.). Pearls should be chosen round, of a bright translucent silvery whiteness, free from stains and roughness. Having these qualities, the largest are of course the most valuable. The larger ones have frequently the shape of a pear; and when these are otherwise perfect, they are in great demand for earrings. Ceylon pearls are most esteemed in England.

*Value &c. of Pearls.*—Pearls were in the highest possible estimation in ancient Rome, and bore an enormous price. ('Principium culmenque omnium rerum pretii, margaritæ tenent.' Plin. *Hist. Nat.* lib. x. c. 35.) Their price in modern times has very much declined; partly, no doubt, from changes of manners and fashions; but, more probably, from the admirable imitations of pearls that may be obtained at a very low price. According to Mr. Milburn, a handsome necklace of Ceylon pearls, smaller than a large pea, costs from 170*l.* to 300*l.*; but one of pearls about the size of peppercorns may be had for 15*l.*; the pearls in the former sell at a guinea each, and those in the latter at about 1*s.* 6*d.* When the pearls dwindle to the size of small shot, they are denominated *seed* pearls, and are of little value. They are mostly sent to China. One of the most remarkable pearls of

which we have any authentic account was bought by Tavernier, at Catifa, in Arabia, a fishery famous in the days of Pliny, for the enormous sum of 110,000*l.* It was pear-shaped, regular, and without blemish. The diameter was 63 inch at the largest part, and the length from 2 to 3 inches.

Mr. Emanuel says, in 1865 (*Diamonds and Precious Stones*), that 'a perfect white drop pearl of 80 to 100 grains, is worth from 7*l.* to 11*l.* per grain; those of 50 to 80 grains from 4*l.* to 7*l.*; those from 30 to 50 grains from 3*l.* to 6*l.*; smaller sizes bringing from 20*s.* to 60*s.* per grain. Misshapen pearls, called *barrok* pearls, are worth from 10*l.* to 200*l.* per ounce, depending on quality, colour, and size. Pink pearls are worth from 3*s.* to 40*s.* the grain. Black and lead-coloured pearls bring a large price, when they are of a fine shape and good colour. Unboiled pearls are called *virgins*, worn ones *widows*. Boring is done best in India, for the Indian borers make the hole smaller and straighter than the English. In drilling, a bow and steel are used with a very fine drill, the pearl being held between two pieces of wood. It is said that the finest pearl necklaces in existence are, that possessed by the Empress of the French, and that presented to the Queen by the East India Company. The Duke of Abercorn possesses a matchless drop pearl of great size.

Much difference of opinion has existed among naturalists with respect to the production of pearls in the oyster; but it seems now to be generally believed that it is the result of disease, and is formed in the same manner as bezoar [*Bezoar*] pearls, like it, consisting of successive coats spread with perfect regularity round a foreign nucleus. In fact, the Chinese throw into a species of shell fish (*Mytilus cygneus*, or swan muscle), when it opens, 5 or 6 very minute mother-of-pearl beads strung on a thread; and in the course of a year they are found covered with a pearly crust, which perfectly resembles the real pearl. (Milburn's *Orient. Com.*; Ainslie's *Mat. India*; &c.)

*Pearl Fisheries.*—The pearl oyster is fished in various parts of the world, particularly on the west coast of Ceylon, though of late years the fishery here has not been productive; at Tuticoreen, in the province of Tinnevely, on the coast of Coromandel; at the Bahrein Islands, in the Gulf of Persia; at the Sooloo Islands; off the coast of Algiers; off St. Margarita, or Pearl Islands in the West Indies, and other places on the coast of Colombia; and in the Bay of Panama, in the South Sea. Pearls have sometimes been found on the Scotch coast, in Scotch rivers, and in various other places in Europe.

The pearl fishery of Tuticoreen is monopolized by the Indian, and that of Ceylon by the Colonial Government. But these monopolies are of no value; as in neither case does the sum for which the fishery is let equal the expenses incurred in guarding, surveying, and managing the banks. It is, therefore, sufficiently obvious that this system ought to be abolished, and everyone allowed to fish on paying a moderate license duty. The fear of exhausting the banks is quite ludicrous. The fishery would be abandoned as unprofitable long before the breed of oysters had been seriously diminished; and in a few years it would be as productive as ever. Besides giving more life to the fishery, the abolition of the monopolies would put an end to some very oppressive regulations, enacted by the Dutch more than a century ago.

*Persian Gulf.*—The most extensive pearl fisheries are those on the several banks not far distant from the island of Bahrein, on the west side of the Persian Gulf, in 1*st.* 26° 30' N., long

account was bought  
Arabia, a fishery

Dutch more than a cen-

se most extensive pearl  
the several banks not far  
of Bahrain, on the West  
ulf, in lat. 26° 30' N., lon-

110° E.; but pearl oysters are found along the  
whole of the Arabian coast, and round almost all  
the islands of the Gulf. Such as are fished in the  
sea, near the Islands of Karrak and Corgo, contain  
pearls said to be of a superior colour and descrip-  
tion. They are formed of 8 layers or folds, whilst  
others have only 5, but the water is too deep to  
make fishing for them either very profitable or easy.  
Besides, the entire monopoly of the fishery is in the  
hands of the sheik of Bushire, who seems to con-  
sider these islands as his immediate property.

The fishing season is divided into two portions  
—the one called the short and cold, the other the  
long and hot. In the cooler weather of the month  
of June, diving is practised along the coast in  
shallow water; but it is not until the intensely  
hot months of July, August, and September, that  
the Bahrein banks are much frequented. The  
water on them is about 7 fathoms deep, and the  
divers are much inconvenienced when it is cold;  
warm, they can do little when it is not as warm  
as the air, and it frequently becomes even more so  
at the hottest months of the summer. When  
they dive, they compress the nostrils tightly with  
a small piece of horn, which keeps the water out,  
and stuff their ears with beeswax for the same  
purpose. They attach a net to their waist, to  
contain the oysters; and aid their descent by  
means of a stone, which they hold by a rope  
attached to a boat, and shake it when they wish  
to be drawn up. From what I could learn, 2  
minutes may be considered as rather above the  
average time of their remaining under water. Al-  
though severe labour, and very exhausting at the  
time, diving is not considered particularly in-  
jurious to the constitution; even old men practise  
it. A person usually dives 12 to 15 times a day  
in favourable weather, but when otherwise, 3 or 4  
times only. The work is performed on an empty  
stomach. When the diver becomes fatigued, he  
goes to sleep, and does not eat until he has slept  
some time.

At Bahrein alone, the annual amount produced  
by the pearl fishery may be reckoned at from  
200,000*l.* to 240,000*l.* If to this, the purchases  
made by the Bahrein merchants or agents at  
Abouthebe Sharga, Ras-ul Khymack &c. be  
added, which may amount to half as much more,  
there will be a total of about 300,000*l.* or 360,000*l.*,  
but this is calculated to include the whole pearl  
trade of the Gulf; for it is believed that all the  
principal merchants of India, Arabia, and Persia,  
who deal in pearls, make their purchases, through  
agents, at Bahrein. I have not admitted in the  
above estimate much more than one-sixth of the  
amount some native merchants have stated it to  
be, as a good deal seemed to be matter of guess  
or opinion, and it is difficult to get at facts. My  
own estimate is in some measure checked by the  
estimated profits of the small boats. But even  
the sum which I have estimated is an enormous  
annual value for an article found in other parts  
of the world as well as here, and which is  
never used in its best and most valuable state,  
except as an ornament. Large quantities of  
the seed pearls are used throughout Asia, in  
the composition of majoons or electuaries, to form  
which all kinds of precious stones are occasionally  
mixed, after being pounded, excepting, indeed,  
diamonds; these being considered, from their  
bitterness, as utterly indigestible. The majoon, in  
which there is a large quantity of pearls, is much  
sought for and valued, on account of its supposed  
stimulating and restorative qualities.

The Bahrein pearl fishery boats are reckoned  
amount to about 1,500, and the trade is in the  
hands of merchants, some of whom possess con-

siderable capital. They bear hard on the pro-  
ducers or fishers, and even those who make the  
greatest exertions in diving hardly have food to  
eat. The merchant advances some money to the  
fishermen at cent. per cent., and a portion of dates,  
rice, and other necessary articles, all at the sup-  
plier's own price; he also lets a boat to them,  
for which he gets one share of the gross profits of  
all that is fished; and, finally, he purchases the  
pearls nearly at his own price, for the unhappy  
fishermen are generally in his debt, and therefore  
at his mercy. (*Manuscript Notes communicated*  
*by Major D. Wilson, late Political Resident at*  
*Bushire.*)

The total number of towns, villages and hamlets  
which send boats to the pearl fishery is about 140,  
including those of Bahrein, while the mean num-  
ber of boats furnished by each is about 40. The  
sum of fishing vessels would therefore equal 5,600  
in all. Each boat owner has to pay for every boat  
that he mans for the pearl season, a sum amount-  
ing to about 30s. of English money, besides a  
small percentage on the produce seldom exceed-  
ing a rial and a half, i.e. about 8s.; this added  
to the boat tax gives 38s. (*Palgrave's Arabia*.)

The fishery at Algiers was farmed by an Eng-  
lish association in 1826, but we are ignorant as  
to the success of this undertaking.

The pearl fisheries on the coast of Colombia  
were at one time of very great value. In 1587,  
upwards of 637 lb. of pearls are said to have been  
imported into Seville. Philip II. had one from St.  
Margarita, which weighed 250 carats, and was  
valued at 150,000 dollars. But, for many years  
past, the Colombian pearl fisheries have been of  
comparatively little importance. During the  
mania for joint-stock companies, in 1825, two  
were formed—one, on a large scale, for prosecuting  
the pearl fishery on the coast of Colombia; and  
another, on a smaller scale, for prosecuting it in  
the Bay of Panama and the Pacific. Both were  
abandoned in 1826.

The best fishery ground is said to be in from 6  
to 8 fathoms water. The divers continue under  
water from a minute to a minute and a half, or  
at most 2 minutes. They have a sack or bag  
fastened to the neck, in which they bring up the  
oysters. The exertion is extremely violent; and,  
contrary to Major Wilson's opinion, it is believed  
that the divers are unhealthy and short-lived.

In 1866, we imported pearls of the value of  
51,816*l.*, chiefly from Egypt, and in 1867, 38,096*l.*  
worth, chiefly from St. Thomas.

PEARL SHELLS, commonly called *Mother-of-pearl shells*, are imported from various parts of the  
East, and consist principally of the shells of the  
pearl oyster from the Gulf of Persia and other places,  
particularly the Sooloo Islands, situate between  
Borneo and the Philippines, the shores of which af-  
ford the largest and finest shells hitherto discovered.  
On the inside, the shell is beautifully polished,  
and of the whiteness and water of pearl itself;  
it has the same lustre on the outside, after the  
external laminae have been removed. Mother-  
of-pearl shells are extensively used in the arts,  
particularly in inlaid work, and in the manufacture  
of handles for knives, buttons, toys, snuff-boxes  
&c. The Chinese manufacture them into beads,  
fish, counters, spoons &c.; giving them a finish to  
which European artists have not been able to  
attain. Shells for the European market should  
be chosen of the largest size, of a beautiful pearly  
lustre, thick and even, and free from stains.  
Reject such as are small, cracked, or broken, or  
have lumps on them. When stowed loose as  
dunnage, they are sometimes allowed to pass free  
of freight. (*Milburn's Orient. Com.*)

In 1867, 36,175 cwt. were imported, valued at 70,426*l*. They are used largely in lacker and in-laid work at Birmingham. [HARDWARE INDUSTRIES.]

PEAS (Ger. erbsen; Fr. pois; Ital. piselli; pisi; Span. pesoles, guisantes; Russ. goroch). The pea is one of the most esteemed of the leguminous or pulse plants. It is supposed to be indigenous to the south of Europe, and was cultivated by the Greeks and Romans, the latter of whom probably introduced it into Britain. There are many varieties; but the common garden pea (*Pisum sativum*) and the common grey or field pea (*Pisum arvense*) are the most generally cultivated; being reared in large quantities in all parts of the country, particularly in Kent. But since the introduction of the drill husbandry the culture of the pea as a field crop has been to a considerable extent superseded by the bean. Sometimes, however, it is drilled along with the latter; for, being a climbing plant, it attaches itself to the bean, so as to admit the ground being hoed; at the same time that the free admission of air about its roots promotes its growth. It is not possible to frame any estimate of the consumption of peas. The field pea is now hardly ever manufactured into meal for the purpose of being made into bread, as was formerly the case in many parts of the country; but there is reason to think that the garden pea is now more extensively used than ever. In 1868, the total acreage in the United Kingdom devoted to the cultivation of peas was 297,612, and the crop of 1866 occupied 323,184, and that of 1867, 320,697 acres. (Loudon's *Encyc. of Agriculture*; Brown *On Rural Affairs*, vol. ii. p. 72; *Agricultural Returns*, 1867 and 1868. For an account of the laws regulating the importation &c. of peas, see CORN LAWS AND CORN TRADE.) Leguminous crops are very extensively cultivated in India. In 1867 we imported 1,586,129 cwt. of peas, chiefly from Prussia and North America, of the value of 721,604*l*.

PECK. A dry measure for grain, pulse &c. The standard or Imperial peck contains 2 gallons, or 55*l* 5*l* 5 cubic inches. Four pecks make a bushel, and 4 bushels a coomb. [WEIGHTS AND MEASURES.]

PELLITORY. The root of a perennial plant (*Anthemis pyrethrum*), a native of the Levant, Barbary, and the south of Europe. The root is long, tapering, about the length and thickness of the little finger, with a brownish cuticle. It is imported packed in bales, sometimes mixed with other roots, from which, however, it is easily distinguished. It is inodorous. When chewed, it seems at first to be insipid, but after a few seconds it excites a glowing heat, and a pricking sensation on the tongue and lips, which remains for 10 or 12 minutes. The pieces break with a short resinous fracture; the transverse section presenting a thick brown bark, studded with black shining points, and a pale yellow radiated inside. It is used in medicine as a stimulant. (Thomson's *Dispensatory*; *British Pharmacopœia*, 1867.)

PENANG. [SINGAPORE.]

PENCILS (Ger. pinsel; Dutch penseelen; Fr. pinceaux; Ital. pennelli; Span. pinceles). The instruments used by painters in laying on their colours. They are of various kinds, and made of various materials; some being formed of the bristles of the boar, and others of camel's hair, the down of swans &c.

PENCILS, BLACK LEAD. [BLACK LEAD PENCILS.]

PENKNIVES (Ger. federmesser; Fr. canifs; Ital. temperini; Span. cortaplumas). Small knives, too well known to need any particular

description, used in making and mending pens. The best and most highly ornamented penknives are manufactured in London and Sheffield. [CUTLERY.]

PENNY. Formerly a silver, but now a copper coin. This was the first silver coin struck in England by our Saxon ancestors, being the 240th part of their pound; so that its weight was about 223 grains troy. [COINS.]

PENNYWEIGHT. A troy weight, being the 20th part of an ounce, containing 21 grains. [WEIGHTS AND MEASURES.]

PENS (Fr. plumes à écrire; Ger. schreibfedern; Ital. penne da scrivere; Russ. pera stwoli). Well-known instruments for writing, usually formed of the quills of the goose, swan, or some other bird. Metallic pens have been occasionally employed for a lengthened period; but it is only within the last quarter of a century that they have been extensively introduced. They are now, however, manufactured in vast quantities, and of an immense variety of forms. But though they have superseded, to a very considerable extent, the use of quills, and have some peculiar advantages, it does not appear possible to give them the elasticity of the quill, nor to fit them so well for quick and easy writing on common descriptions of paper.

PEPPER (Fr. poivre; Ger. pfeffer; Dutch, peper; Ital. pepe; Span. pimienta; Russ. perez; Lat. piper). The berry or fruit of different species of plants, having an aromatic, extremely hot, pungent taste, used in seasoning &c. The following sorts of pepper are met with in commerce:—

1. BLACK PEPPER (Fr. poivre; Ger. schwarzer pfeffer; Ital. pepe negro; Span. pimienta; Sansc. mercha; Hin. col-mirch; Malay, lada; Jav. marika). The fruit of a creeping plant (*Piper nigrum*), one of the pepper genus, of which there are upwards of 80 species. It is cultivated extensively in India, Siam, the Eastern islands &c. It requires the support of other trees, to which it readily adheres. It climbs to the height of 20 feet; but is said to bear best when restrained to the height of 12 feet. It begins to produce at about the 3rd year, and is in perfection at the 7th; continues in this state for 3 or 4 years; and declines for about as many more, until it ceases to be worth keeping. The fruit grows abundantly from all the branches, in long small clusters of from 20 to 50 grains; when ripe, it is of a bright red colour. After being gathered, it is spread on mats in the sun, when it loses its red colour, and becomes black and shrivelled as we see it. The grains are separated from the stalks by hand rubbing. That which has been gathered at the proper period shrivels the least; but if plucked too soon, it will become broken and dusty in its removal from place to place. The vine produces two crops in the year; but the seasons are subject to great irregularities.

Pepper should be chosen of a pungent aromatic odour, an extremely hot and acrid taste, in large grains, firm, sound, tegument brownish black, and with few wrinkles—for these it always has some. Reject that which is shrivelled, or small grained, or which on being rubbed will break to pieces.

In point of quality, the pepper of Malabar is usually reckoned the best; but there is no material difference between it and that of Sumatra, and the other islands. In the market of Bengal, where they meet on equal terms, the produce of Malabar is generally about 2 per cent. higher than the other. In Europe, there is generally a difference of 4*d*. per lb. in favour of Malabar; but in China they are held in equal estimation.

## PEPPER

Black pepper sold ground is said to be often adulterated with burnt crust of bread.

II. WHITE PEPPER is made by blanching the finest grains of the common black pepper by steeping them for a while in water, and then gently rubbing them, so as to remove the dark outer coat. It is milder than the other, and is much prized by the Chinese; but very little is imported into England.

III. CAYENNE PEPPER is the produce of several varieties of the *Capsicum*, an annual plant, a native of both the Indies. The best, which is brought home from the West Indies ready prepared, is made from the *Capsicum baccatum* (bird pepper). It has an aromatic, extremely pungent, acrimonious taste, setting the mouth, as it were, on fire, and the impression remaining long on the palate. It is sometimes adulterated with muriate of soda; and sometimes with a very deleterious substance, the red oxide of lead; but this fraud may be detected by its weight, and by chemical tests. [CUCULIÆ.]

IV. LONG PEPPER.—This species is the produce of a perennial (*Piper longum*), a native of Malabar and Bengal. The fruit is hottest in its immature state; and is therefore gathered while green, and dried in the sun. It is imported in entire spikes, which are about 1½ inch long. It has a weak aromatic odour, an intensely fiery pungent taste, and a dark grey odour. The root of long pepper is a favourite medicine among the Hindus.

The quantities of the last 3 species of pepper imported are quite inconsiderable, compared with the quantity of black pepper. (Milburn's *Orient. Com.*: Asiatic *Mat. Indica*; Thomson's *Dispensary*: *British Pharmacopœia*, 1867; &c.)

*Trade in Pepper. Consumption of, and Duties on, in England.*—Pepper is extensively used, all over Europe and the East, as a condiment. It was originally imported into this country by way of the Levant (ante, EAST INDIA COMPANY); and for many years after the establishment of the East India Company, it formed the most important article of their imports. In nothing has the beneficial effect of opening the Indian trade been so unequivocally displayed as in the instance of pepper. The private traders have resorted to new markets, and discovered new sources of supply, which had previously been wholly unexplored; so that there has been not only a very great increase in the quantity of pepper brought to Europe, but also a very great fall in its price, which does not now exceed a third part of what it amounted to in 1814.

Pepper for a lengthened period was one of the most grossly over-taxed articles in the British tariff. Until 1823, the duty was 2s. 6d. per lb.—a duty so exorbitant, that one would be inclined to think it had been imposed to put a total stop to the use of the article. In 1826, the duty on pepper from a British possession was reduced to 1s. per lb.; but even this duty, as compared with the price of the article (3d. to 5d. per lb.), was quite oppressive, amounting to no less than from 240 to 300 per cent.; so that it was further and most properly reduced, in 1837, to 6d. per lb.

And in consequence principally of these reductions, the entries of pepper for home consumption, which, previously to 1826, had not amounted to 1,450,000 lb. in any one year, amounted in 1846 to 3,303,365 lb. Still, however, the duty, as compared with the price of pepper, was decidedly too high; and should not have exceeded 1d., or at most 2d. per lb. And in proof of this statement it is enough to mention that from 1846 down to 1866 the entries for consumption did not sensibly increase; in 1857 they amounted to only 3,656,445

## PERIODICAL PUBLICATIONS 1047

lb. The duty of 6s. 6d. per lb. produced, in 1865, 124,400l. In 1866 it was repealed. By the abolition of the duty, pepper has become accessible to the lower classes, to whom its free use will be of much importance; and the probability is, that the consumption will, in no very lengthened period, be doubled or more.

Years	Imports	Exports

*Supply of Pepper.*—The following instructive details with respect to pepper are taken from the *Singapore Chronicle*, to which they were contributed by the late John Crawford, Esq.—than whom there could be no more competent authority as to such subjects.

Of all the products of the Eastern islands, and of the countries immediately in their neighbourhood, in demand among strangers, black pepper is the most important, both in value and quantity.

The pepper countries extend from about the longitude of 96° to that of 115° E., beyond which no pepper is to be found; and they reach from 5° S. latitude to about 12° N., where it again ceases. Within these limits we have Sumatra, Borneo, the Malayan peninsula, and certain countries lying on the east coast of the Gulf of Siam.

The pepper ports on the north-east coast of Sumatra are Lankat and Delli, with Sardang. The cultivation is carried on by the Batta nation in the interior.

The ports and pepper districts on the southwest coast, are as follow: port and district of Trumah, districts of Pulo Dua and Cluat, coast from Tampat Tuan to Susu, port of Susu, Kuala Batta, Analabu, and districts to the north of Analabu.

Here it is of importance to remark that the culture and production are extremely fluctuating.

On the east coast of the Malayan peninsula, the production of pepper is very considerable, the ports being Patani and Calantan—chiefly the latter. A portion of this, and of the produce of the islands at the mouth of the straits of Malacca and Singapore, is brought to Singapore and Penang; but we believe the greater proportion goes direct to China in junks.

The east coast of the Gulf of Siam, from the latitude of 10½° to that of 12½° N., affords an extensive crop of pepper. The principal ports here are Chantibun, Lungyai, Pongsom, and Kampong; the first two being under the dominion of Siam, and the latter under that of Kamboja. The produce of Borneo is also considerable.

Mr. Crawford more recently supplied the subjoined revised estimate of the production of pepper, viz. :—

	lb.
Sumatra (west coast)	20,000,000
Do. (east do.)	8,000,000
Islands in the Straits of Malacca	5,000,000
Malay peninsula	5,735,333
Borneo	2,686,667
Siam	4,000,000
Malabar	4,080,000
Total	50,000,000

PERCH. A long measure, 16½ feet in length. [WEIGHTS AND MEASURES.]

PERIODICAL PUBLICATIONS. These, as the name implies, are publications which appear at fixed periods or stated intervals, and consequently include newspapers, monthly and other

magazines, quarterly reviews, and journals, and all such books as appear at monthly or other intervals. But the term *periodical publications* is usually understood in a more confined sense, or as comprising only magazines and such political, literary, and scientific journals as appear at regular intervals, without including newspapers or works published in parts.

Even when thus restricted, this is a very extensive and important department of literature. No doubt a vast deal of trash gets into print by the agency of magazines that might not otherwise see the light; but most part of these publications contain at the same time some superior articles; and a few are ably conducted and embrace a wide range of topics. Since the establishment of the *Edinburgh Review* in 1802, the quarterly journals, especially those that embrace politics and literature, have risen to great eminence, and have had a powerful influence over the public mind. At present, however, and for some time past, the influence of this class of journals has been declining. An ably conducted daily paper is, at this moment, by far the most powerful engine the press can bring into the field.

From a mercantile point of view, periodical literature is of more importance than most persons would probably be at first disposed to admit. We have enquired with some care into the subject, and we are inclined to think that the following estimate of its extent and value in 1868 may be considered as near the mark as such an estimate can be made.

*Monthly Magazines.*—These in the United Kingdom amounted, in 1868, including all descriptions, to about 367; and taking their average price at 8*d.*, and their average sale at 2,000 copies, their produce will be 24,467*l.* a month, and 293,604*l.* a year.

*Quarterly Journals.*—There are 74 of these; and taking the average price of each at 2*s. 9*d.**, and their average sale at 2,000 copies, they will produce 20,350*l.* a quarter, and 81,400*l.* a year. Hence, supposing these estimates to be nearly accurate, the annual produce of the sale of periodical publications (exclusive of what they yield by advertisements) will amount to about 375,000*l.*

**PERMIT.** A license or instrument, granted by the officers of excise, certifying that the excise duties on certain goods have been paid, and permitting their removal from some specified place to another.

The Acts relative to permits were consolidated by the stat. 2 Wm. IV. c. 16. The Commissioners of Inland Revenue provide moulds or frames for making the paper used in the printing of permits, which have the water mark 'Excise Office' visible in its substance; and the counterfeiting of such frames or paper, or the having the latter in one's possession without being able satisfactorily to account for it, is a felony punishable by transportation. Permits are not delivered except on the receipt of 'request notes,' specifying the places from and to which the goods are to be conveyed. A penalty of 500*l.* is to be imposed on all persons counterfeiting 'request notes,' or fraudulently procuring or misapplying permits; and all goods, for the removal of which permits are necessary, if they be removed without them, are to be forfeited, and the various parties engaged in their removal are to be each amerced in a penalty of 20*l.* It is needless to dwell on the extreme inconvenience that would result from such regulations were permits in extensive use. But such is not the case, and they are now wholly dispensed with, except in the case of a very few articles.

**PERNAMBUCO.** A city and seaport in the empire of Brazil, inferior only to Rio Janeiro and Bahia in commercial importance; capital of the province of the same name, distant from Bahia 410 miles, from Rio 1,130. The harbour light-house is in lat. 8° 3' 20" S., long 34° 46' 40" W. Light revolving with three changes; two white, one following after the other is invisible, then red. Time of revolution, 5' 15"; each light showing 1' 45". Light visible 20 miles in clear weather.

Pernambuco is situated near the most easterly point of the South American continent, nearly in the track of vessels proceeding to India, China, Australia, New Zealand, and the west coast of South America; and is advantageously placed for calling for orders, seeking freight, provisions, or refitting. Distance by mail from England and France, 19 days; Lisbon or Gibraltar, 14 days; New York, 22 days.

There is good anchorage in the roads, for draught, about 2 miles distant from, and in front of, the harbour. Water supplied in the roads at 70 milreis per 1,200 gallons, in pipes. There is no charge of any kind on vessels calling for orders, water, or provisions. Steamers requiring coals can enter in distress (*por força maior*), without paying anchorage dues.

The harbour is formed by the united mouths of the rivers Capibaribe and Berberibe, and is perfectly safe and easy of access in all weathers. It is protected from the ocean swell by a natural breakwater or reef of soft calcareous or siliceous stone, varying from 15 to 30 feet in breadth at the top, almost perpendicular inside, and sloping rapidly off outside to a great depth. 'No vessel drawing more than 14½ feet can enter at neap-tide, nor more than 18½ feet at springs.' (Cowell Hunt's Report, 1864.) There are from 30 to 50 feet of water at parts of the anchorage. The regular traders of the port are sailing vessels of 300 tons and under, and steamers of 500 tons. In December 1867, a vessel of 1,413 tons anchored in the harbour, having entered in ballast, and drawing 17 feet.

Various projects have been submitted from time to time to the Imperial Government for the improvement and enlargement of the port. Meanwhile, it would be possible to effect a great deal at little cost by dredging the bar, and deepening the water in the harbour, so as to admit vessels of greater tonnage. If, in addition, the quays were secured, and the water near them deepened, so as to admit of vessels coming up and lying alongside, every commercial necessity which could be demanded for the next fifty years would be supplied. At the head of the harbour, there is a vast natural basin, at present dry at every low tide, but capable, when dredged out, of forming one of the finest natural docks in the world.

Water is supplied within the harbour, by canoes or covered barges, at 50 milreis the whole or 25 milreis the half canoe; the latter being sufficient to water any trading ship. Smaller quantities, at 500 reis per pipe, are to be had at the fountains on the quay. There is a small wharf in front of the custom-house, alongside which vessels can lie, but its accommodation is so limited as not to be generally available. Steamers prefer to go alongside this wharf.

Vessels generally discharge into, and carry load from, lighters. (See *Table of Lighters* below.) These lighters can be employed only in the presence of a custom-house officer or guard, on board the vessels using them. The hours fixed by the regulations are from daylight—say 5.30 A.M. to 8 A.M. In order to economise time, the

sum of 10 milreis per diem is paid to an officer to go on board before the hour fixed by the regulations, every day that the ship's discharge may last.

All visits to vessels discharging in the port must be made under a license, the stamp of which costs 200 reis (3/4 at par). The commander of a vessel lying in the harbour cannot go on board the nearest ship, unless furnished with this permission, under a penalty of 50 milreis and the forfeiture of the boat. These licenses are obtainable on demand at the custom-house.

By the custom of the port, though it is not obligatory, every British vessel pays 240 reis per ton to the British Hospital, and can have its crew examined and medicinally treated there, free of any extra expense.

The anchorage dues are the same in the harbour and roads; vessels loading or discharging in the latter will be under the item *franja*. To take cargo in the roads, a license from the President of the province is necessary. It is easily obtained.

There is a quarantine hospital at the head of the harbour; about a mile from the city there are barracks, with apparatus for careening and masting vessels.

Goods may be warehoused in bond for re-exportation.

Ballast slightly varies in price, but may be stated as costing 1,500 reis for sand, and 3 milreis for stone per ton alongside the ship.

All port charges are by the Brazilian measurement ton, an advance of 40 to 45 per cent. on British register tons. Vessels are manned by the custom-house officials on their first voyage to the port. Tables of all dues will be found below, also practical examples of their working in the ships' disbursements account, and pro forma invoices of sugar and cotton shipments. It may be stated that the charges on a ship entering and being out loaded average roughly from 20s. to 25s. per British register ton.

Owing to the high price of cotton, the entries of ships, exports and imports, at Pernambuco represent a far larger amount of business than ordinary.

Exports pay the duties of the general tariff, and in addition those imposed by the Provincial Assembly, which has no power to tax imports. These duties of importation are assessed by a weekly table of average values, prepared by the customs. The rates were in December 1867 as follows:—

Articles	General Duty	Provincial Duty
Cotton	9 per cent.	5 per cent. and 3 per cent. on the 5 per cent.
Sugar		50 reis per arroba and 3 per cent. on the 50.
Indigo		8 per cent. and 3 per cent. on the 8 per cent.
Wool		20 reis per medida and 3 per cent. on the 20.
Others		7 per cent. and 3 per cent. on the 7 per cent.

The capital of the province of Pernambuco is the city of RECIFE (of the reef), situated at the confluence and mouth of the rivers Capibaribe and Beberibe, which unite within the city, and through it in the form of the letter Z, forming two isthmuses parallel to the mainland, one being in front of the other. The harbour is at the outer or seaward side of the outer isthmus, which is united to the second isthmus by two bridges, and this again to the mainland by two bridges.

The city is partially surface-drained, but not paved; it is paved, and lighted with gas, and supplied with excellent water.

The greatest extent of the city, from east to west, is about three miles, and from north to south about two miles. In 1862 it contained about 10,000 separate properties, in 230 streets and 15 squares; and it has increased since that time. The population is estimated at about 120,000. The city proper has four parishes: Recife proper, or S. Pedro Gonçalves, where the principal Government and merchants' offices &c. are; S. Antonio; S. José; Boa Vista. There is a street railway, 5 miles long, from the suburbs to the city.

The exchange is a new building, one of the finest and largest in Brazil. There are branches of two British banks in the city, besides native institutions. Mr. Secretary of Legation Pakenham, in his Report of February 13, 1867, stated the capital of the Bank of Pernambuco at 120,000.

The postal service is very defective. There is one daily delivery only in the city, one weekly to the country and interior towns. There is a poste-restante to which letters should be addressed, with the superscription 'Para ficar no Correio.'

Communication out of the province, monthly; neighbouring provinces, twice monthly; the whole coast, from Para to Rio de Janeiro, twice monthly; Bahia and Rio de Janeiro, six monthly; River Plate, three monthly; United States: New York via S. Thomas, once monthly; Europe: Lisbon, Bordeaux, Southampton, Marseilles and Gibraltar, twice monthly.

In January 1868 there were 80 wholesale import houses in Pernambuco, of the following nationalities: Brazilian 27, Dutch 1, English 17, French 2, German 6, Portuguese 21, Spanish 1, United States 2.

There are foundries and engine works, capable of repairing trading steamers' engines, and two private steam-driven hydraulic cotton-pressing establishments. There are also two daily newspapers.

*Province of Pernambuco.*—This region, to which the town is the capital, is situated between 7° 12' 1" and 9° 11' 30" S. lat., and between 37° 22' and 41° 8' W. long. The area is 4,467 square leagues of 20 to a degree. It has 22 leagues of sea-coast, from the river Abiahy to the Iersinnuga, and is protected by the remarkable reef, which extends, more or less continuously, from Maranhão to Sergipe, at a variable distance from the shore.

Population estimated at 1,220,000. The natives are of every shade of colour, and of every possible admixture of blood, between European, Indian, and Negro. There is hardly any prejudice of colour.

The climate varies. Near the coast it is warm and moist, with a constant breeze. Temperature 85° mean maximum, 70° mean minimum. The hottest months are December and January, the coolest June and July.

The rivers do not take their rise far into the country; but several are navigable for some leagues above their mouths. The province is healthy, except on the low grounds and river banks, on which intermittent fever is occasionally prevalent. Of late years the sanitary condition of the province has improved.

The surface of the soil is very varied, the only level land being the sea-coast. In the interior there are mountainous ranges, dividing large and somewhat arid plains. Brazilians exaggerate the fertility of the soil; but the country is very liable to drought and to the ravages of insects. The soil near the coast is very suitable for sugar, that of the inland region for cotton. But unless

cotton reaches a high price, its production, owing to the deficiency of roads, is unprofitable. Cotton is generally cultivated by free labour. There are about 700 sugar plantations, but this branch of industry is declining. The number of slaves (about 50,000) is diminishing, and since the abandonment of the trade, the price of slaves has trebled. Senhor Luiz de Carvalho, Deputy Collector of Customs at Pernambuco, states that two-thirds of the plantations are mortgaged at interests varying from 18 to 20 per cent. Many of the slaves have been exported to Rio, though the duties and charges amount to 117 milreis per head.

There are only four roads in the province, three of which extend about 34 miles, the fourth 50 miles, from the capital. On these roads bullock carts are used; but much of the transit is on pack-horses, each of which carries from 300 lb. to 345 lb., and travels 25 miles a day in the dry season. In the wet season the tracks are impassable, and the roads not much better.

The Recife and San Francisco Railway is an English enterprise. It is a single line, 77½ miles long, and 5 ft. 3 in. gauge, running into the country at an angle of about 35° with the coastline. It is intended to continue the line to about 400 miles. The administration and locomotive drivers are English, the train and station staff

Brazilian. A single telegraphic wire extends along the line, and is available for the public at a moderate tariff. The number of cubic yards of earthwork and excavation per mile is about half what is used in England.

The province sends 6 senators and 13 deputies to the general Parliament at Rio de Janeiro. It is governed by a President, appointed by the general Government, and has an Assembly of 25 members, which legislates and taxes for purely provincial matters.

No one is permitted to quit the province and empire without previously advertising his departure for three consecutive days in the local journals, and obtaining a passport from the authorities at the cost of 21 milreis. This rule does not apply to passengers landing for a few days, and proceeding on their journey.

The products of the province are cotton, sugar, hides, rum, and molasses. Farinha, or the conversion of the manioc root, takes the place of bread, wheaten flour being rarely consumed, except in the shape of hard biscuit, similar to those used on shipboard.

For the soundings we are indebted to Messrs. Law and Blount; and to G. O. Mann, Esq., superintendent of the Pacific and San Francisco Railway Company, for the following—

Account of the Traffic for 3 Years ending 1866, on the Pacific and San Francisco Railway (77½ miles) first opened throughout in 1862.

41 pounds of bristles, singlas, leather, and wax; 5 dozen of deals; 3,500 hare skins; 8 chevrets of wheat or linseed; and 60 pieces of sail-cloth.

The following regulations for the importation of foreign goods are strictly enforced:—

All goods imported must be accompanied by the following documents:—

1. The declaration of the captain, according to the form ordered by the custom-house.

2. An attestation from the Russian consul, and, where there is no consul, from the custom-house of the place, of the quantity and quality of the goods, and a declaration that they are not the produce, manufacture, or property of an enemy's country.

3. Bills of lading of all goods, in which the weight, measure, or quantity of each package must be specified. In case the bills of lading are not exactly after this regulation, the goods pay double duty as a fine. In case more is found than specified in the bill of lading, the surplus is confiscated; if less is found, the duty must be paid on the quantity specified. Of wine, it is not sufficient to specify the number of pipes or hogsheds only, but also their contents in gallons &c. Of lemons, the number in each box must be specified. Of manufactured goods, the measure of each piece must be specified, and the number of pieces in each bale. It is indifferent whether the gross or the nett weight be specified. If the packages be all of the same weight, measure, or contents, a general specification will do; as, for example, 100 casks alum, of 17 lb pound each. Of dye woods, the weight of the whole need only be mentioned. Of goods of small bulk, as pepper &c., it is sufficient to state the weight of every 5 or 10 bales, but with specification of the numbers. There must not be any erasures or blots in the bill of lading. All goods not accompanied by these documents, or where the documents are not according to the above regulations, will be sent back.

Bills of lading may be made out either to some house, or to order.

The following charges have been fixed by the merchants of Petersburg:—

	per cent.
Commission on sales and purchases	2
Extra charges on all goods	1
Commission and extra charges for goods delivered up	1
Brokerage on sales and purchases	1
Ditto on bills	1
Ditto on freight, per ton, 60 copecks	1
Stamps	1
Charges on duty, paid inwards	4
Ditto, paid outwards	4
Commission for collecting freight, or average inwards	3
Commission for procuring freight outwards	2
For clearances, 40 roubles.	
Dues to be paid to the church, 10 roubles each vessel.	
Clearing of ships, if or under	
45 lasts each	40 roubles each vessel

50 " 75 "	80 "
75 " 100 "	100 "
100 " 150 "	150 "
150 or above	200 "

**Tare on Goods Exported, as fixed by the Custom-house.**

	per cent.
Dry goods.	
In barrels or chests	10
In sacks	2
In mats, or sacks made of mats	17
Except Matzocoy leather, of which is deducted	5
Moist goods.	
Pressed caviare	13
Snap	7
Meat and salt fish	20
Tallow	17
Honey	17
Treacle	10
All other moist goods	17

**Tare on Goods Imported.**

	per cent.
Dry goods.	
In barrels or chests	10
In vessels of glass or earthenware	20
In sacks	2
In double sacks	4
In mats	3
In casks and mats together	5
In baskets	5

**Moist Goods Imported.**—The following are some of the tares specified in the tariff:—

Olive oil in casks		17 per cent.
of Italy, in flasks and straw		10 "
of France, in flasks and earthenware		10 "
Salt fish in barrels		16 "
And generally on all moist goods in barrels		17 "
in glass and earthenware		20 "
Miscellaneous goods.		
Cotton twist in bales		6 "
in chests and barrels		15 "
Cochineal must be weighed in the sacks, every thing taken from the casks; for every sack of from 1 to 7 pounds		2 lb.
sacks of from 7 to 25 pounds		1 "
Indigo in serons; every seron of from 25 to 7 pounds		1 "
in 3 serons, 25 to 1 1/2 sacks		20 "
of Guatemala		20 per cent.
in boxes		20 "

It should be stated, however, that some of the customary charges for the statement of freight, between the consignees and masters of vessels are constantly complained of. Among these are: 1. The commission of 3 per cent. for the collection of freight, which is payable whether the cargo belongs to the consignee or is only addressed to him, and is payable notwithstanding any stipulation to the contrary in the charterparty. 2. A charge which certain German merchants, dealing principally in coals, have recently endeavoured to impose, under the title of 'discount for cash.' It appears that the legal remedies against fraud and contention are not complete as yet. (See Mr. Consul Michel's Report for 1867.)

Bills drawn in Russia, and payable after date, are allowed 10 days' grace; but if payable at sight, 3 days only: Sundays and holidays are included in both cases. The Julian calendar, or Old Style, is still retained throughout Russia. This is 12 days later than the New Style; and in leap years, 13 days, after the month of February.

**Port Charges.**—The regular charges which British ships have to pay at the ports of Petersburg and Cronstadt comprise the following fixed dues and expenses, viz. lastage, passes, cleaning at Cronstadt, address money, Petersburg and Cronstadt church money, Cronstadt expedition and allowance to the Russia Company's agent, for all which a charge is made in the ship's account in one sum, proportionally to the ship's register tonnage, according to the following scale, viz.:

For	61 ton register	silver roubles
62 to 81		45 0
82 to 101		55 0
102 to 121		65 25
122 to 141		75 0
142 to 161		85 0
162 to 181		95 25

442 to 461		235 0
462 to 481		245 0
482 to 501		255 25
502 to 521		265 0
522 to 541		275 0
542 to 561		285 0
562 to 581		295 0
582 to 600		305 25

In 1866, the differential duty of 16 copecks per food, in favour of certain Russian harbours in the Baltic, was abolished.

**Trade &c.**—Petersburg has the most extensive foreign trade of any city in the north of Europe. This arises from its being the only great maritime outlet on the Gulf of Finland, and from its vast and various communications with the interior of the country. Few countries have such an extent of internal navigation as Russia. By means

partly of rivers, and partly of canals, Petersburg is connected with the Caspian Sea. Goods are conveyed from the latter to the capital, through a distance of 1,434 miles, without once landing them. The iron and furs of Siberia, and the teas of China, though not to the same extent as formerly, are received at Petersburg in the same way; but owing to the great distance of those countries, and the short period of the year during which the rivers and canals are navigable, they take 3 years in their transit. Immense quantities of goods are also conveyed during winter upon the ice, in sledges, to the different ports, and to the nearest *pristans*, or places in the interior where barks are built for river or canal navigation. They are put on board in anticipation of the period of sailing, that the barks may be ready to take advantage of the high water, by floating down with the current as soon as the snow and ice begin to melt. The cargoes carried up the river into the interior during summer are principally conveyed to their ultimate destinations by the sledge roads during winter. The conveyance by the latter is generally the most expeditious; and it, as well as the internal conveyance by water, is performed at a very moderate expense.

The barks that come from the interior are mostly of a very rude construction, flat-bottomed, and seldom drawing more than 20 or 30 inches water. When they arrive at their destination they are sold or broken up for fire-wood. Those that leave the ports for the interior are of a superior description, and are comparatively few in number; the commodities imported being, on an average, of much greater value, relatively to their bulk and weight, than those that are exported.

The following is an account showing the total tonnage of the shipping that entered Cronstadt and St. Petersburg, in each year, from 1856 to 1866, and the portion thereof that was British:—

Year	Total Tonnage	British	
		Tonnage	Per Cent. of Total
1856	599,001	218,412	42
1857	436,548	309,708	45
1858	453,802	221,012	48
1859	514,470	253,726	49

1866	684,920	421,202	61
Total	5,396,074	3,039,168	—
Per cent.	—	56	Average

**Tariff**—A new tariff of Russian custom duties came into operation on January 1 (13), 1869, when ceased to be levied the additional charge of 5 per cent. on the duties established by ukases of March 14, 1858, and Dec. 30, 1861. We borrow the following remarks and tables from a review of the tariff given in the *Times* of Jan. 5, 1869, and from the tariff itself the rates of duty:—

An English edition of it (the new tariff) has just been published by Mr. Michell in parallel columns, showing the English equivalents for the Russian rates. The following are its principal features.

The number of paragraphs or positions has been reduced from 367 to 253, of which 42 refer to goods admitted duty free, and 12 to those of which the importation is prohibited, leaving 197 groups or classes of duties leviable, with two exceptions, on specific weights or certain units. The two ad valorem rates of 85 per cent. on ready-made clothes, and 80 per cent. on linen, cambric,

and lawn, mark, as it were, the highest limits of the protection which the new tariff was intended to bestow on native manufactures. A reference, however, to the memoranda which Mr. Michell submitted to the Tariff Commission will clearly show that even some of the reduced specific rates range up to 100 per cent. and more on the value of the goods imposed. The reductions are evidently not based on any system or general plan, either for protective or fiscal purposes. Compared with the customs duties levied in other countries, the new Russian rates present the most extraordinary deviation from the general European basis, and look, indeed, what they in reality are, the result of compromises between the interests of powerful manufacturers and those of 70,000,000 consumers, as represented at the Council of the Empire. Fortunately for the maritime trade of Russia, the recommendation of the Minister of Finance for the abolition of the differential duties was adopted by the Council except in the case of tools, which are still to be favoured with a reduction of duty when imported overland (i.e. 11d. per cwt. by land, instead of 7s. 10d. per cwt. by sea), with the object of protecting the manufacture of tools at St. Petersburg, it being all the while notorious that the Russian markets are glutted with cheap German tools bearing counterfeited Sheffield trade-marks. The official remonstrances of Sir Andrew Buchanan, the British Ambassador, against this injustice to British trade appear to have been unheeded, and the influential manufacturer at St. Petersburg has obtained the premium which will enable him to impose inferior tools on the Russian workman. Next to the abolition of differential duties we notice with satisfaction the disappearance of the 10 per cent. additional duties and the special bridge tax of 2 per cent. levied at the port of St. Petersburg, "which taxes," says M. de Kestner, "have complicated the accounts of the Customs, while the bridge-tax was not unfrequently avoided by clearing goods destined for St. Petersburg and Moscow at custom-houses on the land frontier."

Apart from these improvements in the Russian Tariff, the following reductions may be mentioned as bearing more particularly on the export and carrying trade from Great Britain to Russia:—

\* These reductions are calculated on the rates previously charged at napurs.

Against these reductions must, however, be set off a slight increase of several duties (those on calcined and caustic soda, white lead, hemp, flax, and woollen yarn, silk twist, silk stuffs &c.), and a new duty on machinery, except agricultural, spinning, weaving, paper-making, and letter-pressing machinery, which is to continue free of taxation. The duty on machinery (7s. 6d. per cwt. on locomotives, and copper and brass fittings, and 2s. 11½d. per cwt. on locomobiles and other machines and fittings) was yielded at the last moment by the Council of the Empire, owing to the organised agitation which was set up by the leading Protectionists.

But, favourable even as it appears, and although averaging 41 per cent. in 88 classes, the above list of reductions conveys a very erroneous impression of the new Russian tariff, which still remains one of the least liberal in Europe, Portugal excepted.

This will be seen from the following comparison of the tariffs of Austria and Russia:—

Compared, therefore, with the most modern protective tariff of Europe, that of Russia appears to be four or five times higher in all the principal groups of merchandise.

We must conclude this review by expressing hope that the vast difference apparent in the tariffs does not in reality give the measure of the relative industrial and financial condition of Russia. From the many documents now published on this question it is to be inferred that the Russian Government is far in advance of the political intellect of the country, but that its capabilities for doing good are to a great extent neutralised by a fear of the old Russian party.

Customs at St. Petersburg. —The amount of duties collected at the custom-house at St. Petersburg in 1866 was as follows: Duties on

imports, 10,820,370 roubles; on exports, 139,308 roubles; total, 10,960,178 roubles=1,370,125*t*. The total amount collected in 1865 having been 8,296,816 roubles, the increase in 1866 was 2,663,362 roubles, or 32 per cent.

**Principal Articles of Export.**—The principal articles of export are tallow, hemp, and flax; grain, particularly wheat; linseed, timber, copper; hides, potashes, bristles, hempsed oil, furs, leather; fox, hare, and squirrel skins; canvas and coarse linen, cordage, caviare, wax, isinglass, spalls, &c. Tallow, both for candles and soap, is more largely exported from this than from any other port in the Baltic or elsewhere, and is an article of great commercial importance.

[TALLOW.] Hemp is of good quality, though inferior to that of Riga: it is assorted, according to its quality, into *clean*, or *first*; *outshot*, or *seconds*; and *half-clean*, or *thirds*. The first sort should be quite clean, and free from spalls; the second is less so; and the third, or *half-clean*, contains a still greater portion of spalls, and is, besides, of mixed qualities and colours. Russian flax is much esteemed for the length of its fibre; it is naturally brownish, but becomes very white after the first bleaching. Three qualities are distinguished; viz. 12 head, 9 head, and 6 head. [LINEN.] Iron of good quality, and preferable to that from the other Russian ports, is of two kinds, old and new sables, the former being the best. It used to be exported in considerable quantities; but the shipments are now much reduced. M. de Tegoborski observes in regard to the exportation of iron from Russia:

« Bien des personnes croient que puisque la Russie exporte du fer, c'est une preuve qu'elle en produit plus que ne porte les besoins de la consommation intérieure. C'est une manière de juger très-superficielle. D'abord, cette exportation n'a jamais été très-considérable; elle ne s'élève plus qu'à environ 700,000 ou 800,000 poods, représentant un valeur d'à peu près 1 million de roubles d'argent.

Puis cette exportation, qui ne se soutient que par la bonne qualité de quelques espèces de nos fers, très-recherchées pour certains usages, n'est nullement une preuve que les besoins de la consommation intérieure soient satisfaits, car si le fer en Russie est à meilleur marché, on pourrait conclure qu'on en produit plus du double de la production actuelle. » (i. 304.)

The grain trade between this country and Petersburg is of very considerable importance; and Russia has become one of the principal sources of our foreign supplies.

But by far the larger portion of the wheat and all the Indian corn which come to us from Russia are brought from ODESSA, TAGANROG, and other ports on the Black Sea and the Sea of Azoff. The oats come principally from Archangel, but the exports from Petersburg are also very considerable. The Russian wheat (so called to distinguish it from the *azemina*, or soft wheat, and the *kobanka*, or hard wheat) is the lowest description of wheat shipped from Petersburg. It is small-grained, and dingy coloured; being, though good, unfit for the manufacture of fine bread. The *azemina* is of a larger, though still not a large grain, and better colour, and has of late years extensively imported into England. The *kobanka* is a large semi-transparent grain. Its hardness has nothing of the flinty character of the Spanish hard wheat, which it most resembles. When first brought to London, the millers objected to it, on account of the difficulty experienced in grinding it; but it is now much esteemed. All the Russian wheats are well calculated for keeping, either in granary or when made into bread: but the *kobanka* has this quality in a peculiar degree,

and is in great demand for mixing with other wheats that are old, stale, or out of condition. A shipment of 100 chetverts of wheat in Petersburg is found, when delivered here, to yield about 72 imperial quarters.

M. de Tegoborski, in his elaborate and excellent treatise on the *Forces Productives de la Russie* (i. 350), gives the following—

*Account of the Gross Quantities and Values of all Sorts of Corn (Wheat, Barley, Rye, and Oats, except Indian Corn) Exported from Russia in Triennial Periods from 1821-26 to 1845-7, both included.*

Years	Corn of all Sorts	Value in Sil. Roubles
1821-26	chet. 3,398,197	11,915,200
1827-29	7,486,012	24,111,500
1830-32	11,524,831	59,107,000
1833-35	9,214,266	40,337,000
1836-38	7,510,229	31,825,200
1839-41	8,963,561	37,755,000
1842-44	8,685,907	40,131,000
1845-47	14,319,986	115,485,700

And in 1866 (according to Mr. Consul Michell's Report), 2,510,241 chetverts of breadstuffs were exported from St. Petersburg alone.

We extract from the same Consular Report the subjoined statement, showing the total shipments of linseed from St. Petersburg in each decennial period from 1771 to 1866:—

Years	Total Shipped	Years	Total Shipped
1771 to 1780	chetverts 109,456	1821 to 1830	845,616
1781 " 1790	229,160	1831 " 1840	2,151,915
1791 " 1800	467,758	1841 " 1850	2,906,555
1801 " 1810	589,770	1851 " 1860	* 3,278,827
1811 " 1820	558,411	1861 " 1866	* 4,722,631

\* Eight years' shipments, as there was war in 1854 and 1855. † Six years only. For ten years, at the same rate, the quantities would be, respectively, total chetverts, 3,950,000; of which to Hull, 2,709,356.

Estimated supply for 1867, about 650,000 chetverts, equal to 455,000 imperial quarters.

Price of No. 1 for August, on Feb. 25 (March 9), 45*s*. 10*d*. to 47*s*.

**Imports.**—The principal imports are sugar, especially from the Havannah; coffee; madder, indigo, cochineal, and dye woods; cotton wool, cotton stuffs and yarn; machinery and mill work; woollen fabrics and woollen yarn; linen and linen yarn; silk goods; coals and salt, our exports of the former to Russia in 1857 being 277,866 tons, and of the latter 79,826 tons; iron, lead, and shot; hardware and cutlery; wines, especially champagne; spices; fruits; tobacco; tea via Kiachta; with a great variety of other articles.

**Commercial Policy.**—The policy of Russia, previously to 1857, in regard to commerce, was of a mixed character, with, however, a large predominance of illiberality. Machinery and mill-work, including ships with their tackle, steamers &c., were admitted duty free; as were most other articles necessary to the prosecution of art and science. But most articles of consumption, and some even of those most necessary in production, were either excluded or loaded with oppressive duties. Those on iron, for example, were so very heavy that they went far to prohibit its importation, which did not exceed 10,000 or 12,000 tons a-year. And as the whole, or almost the whole of the iron made in Russia is smelted by means of wood, it cannot be furnished except at a very high price.

The Government authorities admitted that such was the case. Thus it is stated in the *Supplément au Journal de l'Intérieur* (p. 27), March 4, 1853, that 'L'emploi exclusif de bois dans nos usines entrave d'une manière invincible le développement ultérieur de l'industrie de fer.' And it is further

with the most modern prope, that of Russia appears higher in all the princip

this review by expressing ference apparent in Letvity give the measure of the financial condition of Russa. The reports now published are ferred that the Russian Government has nothing of the Spanish hard wheat, which it most resembles. When first brought to London, the millers objected to it, on account of the difficulty experienced in grinding it; but it is now much esteemed. All the Russian wheats are well calculated for keeping, either in granary or when made into bread: but the *kobanka* has this quality in a peculiar degree,

eters:—The amount of the custom-house at St was as follows: Duties of

stated in the same article that such, in many parts of the empire, is the scarcity and high price of iron, that the peasants are all but ignorant of its use, and neither employ it in their implements, nor even in shoeing their horses, whose feet are left without any protection. It may be supposed, perhaps, that this can be true only of the more remote and backward districts; but such is not the case. And nothing is more common in the immediate vicinity of Petersburg and Moscow than for horses to be unshod, and spades, ploughshares, harrows, and such like implements, to consist wholly of wood. See a remarkable and conclusive paragraph to the same effect in the work of Tegoborski, referred to above, i, 238.

It is really astonishing that any Government, and especially one so generally intelligent as that of Russia, does not eagerly adopt every possible means of putting an end to such a state of things, and of adding to the efficacy of the labour of its subjects. And to introduce a better system, all that is required is to admit foreign iron and ironware free of duty; that is, to allow the people freely to exchange their corn, tallow &c., for the iron and iron implements of England and the Netherlands. The extraordinary magnitude of the exports of corn from the empire, even with its present barbarous husbandry, shows what they might amount to were agriculture a little improved, and means of communication opened from the interior to the seaports. Under such circumstances there can be little doubt that the exportation of corn, tallow, flax, bristles &c., would speedily be doubled or trebled; and the population and the Government would be enriched by abandoning a system which confers no kind of advantage on anyone, except, perhaps (for even that is very doubtful), a mere handful of forest proprietors.

But a better system commenced with the tariff introduced in 1867, which, though in many respects most objectionable, effected sundry beneficial changes, and was a very great improvement on that by which it was preceded. It repealed various prohibitions, and effected large reductions in the duties on some important articles. Pig iron, bars, and rails, that were formerly prohibited, were admitted at reasonable duties; the duty on cotton twist was reduced from 5 roubles per pood to 3½ do.; while cotton, linen, woollen, and silk fabrics, earthenware, sugar, salt &c., might all be imported at considerably lower rates of duty than formerly. It is true that many of these duties were still much too high. But in matters of this sort it is a great thing to have laid the foundations of a better system. And as the reductions that have been made in the rates of duty did not occasion any reduction of revenue, and have given a great stimulus to commerce, it would seem, from the issue of the still more liberal tariff of 1869, that their prospective reduction from time to time may be anticipated. There can be no question that it will be at once the readiest and most effective means of developing the productive capacities of this vast empire.

Notwithstanding its reduction, the duty on raw sugar imported by sea now (1869) rather exceeds 3d. per lb. English, which, for a country like Russia, is a great deal too high. But it has been imposed not so much for the sake of revenue, as to encourage the production of beet-root sugar, the duty on which is under 1d. per lb. Tegoborski has shown the pernicious influence of this system over the trade and revenue of the empire, and the interests of the consumers. And this immense sacrifice is incurred for no better purpose than to divert a portion of the scanty capital and labour of

the country to a business of which the eventual success, even with this extraordinary encouragement, is, if not problematical, not worth the cost.

Speaking generally, the duties were formerly a good deal higher (frequently as much as a third part) on goods imported by sea than on the same goods when imported by land. This was a most unwise distinction, and in the tariff of 1869 it applies only to sugar and tools. It matters not through what channel an article finds its way to the consumers. Its cost is the only thing to which they attend. And if they can get it cheaper by sea than by land, why force them to resort to the dearer mode of conveyance? If this distinction be resorted to as a means of raising revenue, it is, perhaps, the very worst that can be devised. The business of Government is to impose reasonable duties on commodities, leaving it to their subjects to import, or procure them through the cheapest channels.

According to Tegoborski (iii, 37), and Mr. Consul Michell, the imports of raw cotton and cotton yarn into the empire at different dates from 1824-26 to 1866 have been as under, viz. :—

Years	Raw Cotton	Cotton Thread	Years	Raw Cotton	Cotton Thread
	poods	poods		poods	poods
1824-26 av.	74,268	537,901	1813-17 av.	750,149	591,774
1827-29 "	98,100	410,582	1818-50 "	1,739,031	781,360
1830-32 "	115,996	553,630	1851 "	1,160,715	1,071,171
1833-35 "	171,189	840,309	1852 "	1,748,316	1,127,571
1836-38 "	283,270	620,713	1853 "	756,303	588,875
1839-41 "	355,774	512,125	1856 "	1,313,614	750,171
1842-44 "	521,511	592,193			

It is seen from this table that the annual imports of raw cotton increased between 1824-26 and 1852 from a mere trifle to about 63,000,000 lb., while the imports of yarn appear to have declined during the same period to about 1/3 of their amount at its commencement. But we can not help regarding the extension of the cotton manufacture as a serious loss to Russia; for to suppose that a country without coal, without improved means of communication, with iron at an exorbitant price, and whose inhabitants, thinly scattered over the surface, are but just emerging from a state of preclial slavery, should succeed in manufacturing industry, is to suppose what is contradictory and absurd. It may be fairly presumed that under a free commercial system the progress of Russia in agriculture and in the rudest and coarser species of manufacture would be surpassed by few other countries. But she has no aptitude or means for the successful prosecution of the finer description of manufactures. And it is mere self-deceit policy to make her, as has been done, neglect the former by forcing the cultivation of the latter.

In addition to those on imports, some of the most important articles of native growth were formerly subjected to duties on their being exported; the effect of these being to increase their price and narrow their sale in the foreign market. But these have, for the most part, been either repealed or reduced, and the tariff of 1869 imposes duties on but 5 items of export; viz. bone, not worked except burned or ground, 1s. per cwt.; leather, 2s. 10d. per lb.; silkworm eggs, 7s. per lb.; rags, from 1s. 1½d. to 4s. 5d. per cwt.; and calamine or zinc ore, 3½d. per cwt. It is a common, though, perhaps, an exaggerated complaint that the customs authorities are extremely corrupt; and the procedure in contested cases slow, cumbersome, and expensive.

We may further observe that the accuracy of the official returns of the trade of the empire is not always to be relied on. They frequently involve very grave errors. And though the

were as accurate as they might be made, they would necessarily be very defective, inasmuch as they take no account of the smuggling which is extensively carried on.

The charge sometimes made against the Russians of designedly underrating the exports to England is wholly groundless. It arises from the circumstance of many of the ships destined for England clearing out for the Sound. And these being classed, in the official returns, under the head of cleared for 'other countries,' it is proportionally though unintentionally exaggerated, while the clearances for England are proportionally and unintentionally diminished.

**Inspection of Goods.**—At Petersburg, Riga, and other Baltic ports, when goods are brought from the interior to be shipped, they are inspected and classified according to their qualities, by officers (*brackery*) appointed by Government for that purpose, and sworn to the faithful performance of their duty. All sorts of timber, linen and canvas, fax and hemp, linned and hempseed, ashes, wax &c. are subject to such inspection. They are generally divided into three qualities: *Krohu* (brown), or superior; *Brack*, or middling; and *Brack-Brack*, or inferior. This classification is said to be, in most cases, made with considerable fairness. A factor or commission agent in Russia is instructed to buy, on account of his correspondent in England or Holland, a specified quantity of any description of produce subject to the official visit, is not liable to any action in the event of the article being found upon delivery to be of inferior quality, provided he produce a certificate to show that it had been officially inspected, or *bracked*. But a factor is at liberty, should any article delivered to him be manifestly defective, to name it or other *brackers* to decide whether the article be merchantable or not.

**Native and Foreign Merchants &c.**—Every Russian carrying on trade must be a burgher, and have his name registered in the burghers' book. All whose names are in this book are either townsmen who have property within the city, or members of a guild. There are three guilds. Those who belong to the first must possess 10,000 silver roubles; they may engage in all sorts of commercial transactions, may establish banks, fit out privateers in case of war, and drive about the city in carriages drawn by two horses. Those belonging to the second guild declare themselves possessed of 6,000 roubles; they are not confined to inland trade, but they can only import foreign goods worth 50,000 roubles. A capital of 2,400 roubles entitles its owner to admission into the third guild, which comprises shopkeepers and petty dealers. The rates paid by the members of these guilds amount to 1 per cent. upon their declared capital, the 'statement of which is left to the conscience of every individual.' Burghers are not obliged to serve in the army, but may procure a substitute, or pay a fine. The *guests*, or foreign merchants, who enrol themselves in the city register on account of their commercial affairs, enjoy privileges nearly similar to those enjoyed by members of the first guild.

Tegoborski gives (iii. 319) the following account of the number of merchants inscribed in the different guilds, viz.:

Years	1st Guild	2nd Guild	3rd Guild	Total
1811-13 av.	57	1,874	35,516	36,301
1811-15 "	303	1,941	35,877	36,796
1815-16 "	871	2,152	36,671	39,671
1817-18 "	862	2,293	37,774	40,929
1819-22 "	921	2,591	42,527	45,642

Tegoborski supposes that the capital belonging

to each of the merchants of the first guild may amount, at an average, to 100,000 silver roubles; to the second, to 40,000 roubles; and to the third, to 1,000 roubles. In addition to the above there are about 4,500 small dealers with certificates.

It is useless to enlarge on the impolicy of these distinctions. They prevent men of limited capital, but of enterprise and intelligence, from engaging in those branches in which they would be most likely to succeed. The duties on *guests*, or foreign merchants, may, at an average, amount to about 180*l.* or 190*l.* a-year.

None but native Russians are allowed to engage in the internal trade of the country; and hence a foreigner who imports goods into Russia, must sell them to Russians only, and at the port where they arrive. A few foreigners, indeed, settled in Russia, and having connections with the natives, do carry on a trade with the interior; but it is contrary to law, and the goods are liable to be seized.

The merchants engaged in foreign trade are mostly foreigners, of whom the English are the principal. The peculiar privileges formerly enjoyed by the latter are now nearly obsolete; and their rights, in common with those of other foreigners, are merely those of *guests*. The English factory is, at present, little more than a society formed of some of the principal English merchants, several of whom, however, do not belong to it: its power extends to little else than the management of certain funds under its control.

**Purchase and Sale of Commodities &c.**—Owing to the scarcity of capital in Russia, goods, the produce of the country, are frequently paid for in advance; and foreign goods are most commonly sold upon credit. From the month of November to the shipping season in May, the Russians who trade in flax, hemp, tallow, bristles, iron &c., either come themselves to Petersburg, or employ agents to sell their goods to foreigners, to be delivered, according to agreement, in May, June, July, or August. The payments are made according to the circumstances of the sellers and buyers: sometimes the buyer pays the whole amount, in the winter months, for the goods which are to be delivered in the summer or autumn; and sometimes he pays a part on concluding the contract, and the remainder on delivery of the goods. The manufacturers and dealers in linen usually come to Petersburg in March, and sell their goods for ready money.

Foreign goods were formerly almost entirely sold at a twelve-month's credit, and some at a still longer term; but of late years several articles, as coffee and sugar, are sold for ready money; still, however, the great bulk of foreign goods for the supply of the interior is sold on credit. Most part of the Russians who buy goods on credit of foreigners, for the use of the interior, have no other connection or trade with Petersburg; than merely coming there once or twice a-year to make purchases; which having accomplished, they set off with the goods, and the foreigner neither sees nor hears of them again till the bill becomes due.

It is obvious from this statement, that experience and sagacity are nowhere more requisite in a merchant than here. He has nothing, in fact, but his own knowledge of the native dealers to depend upon; and it is highly creditable to the Russians, that foreigners do not hesitate to trust them with immense sums on such a guarantee. A foreign merchant, carrying on business in Russia, must also be acquainted with the customary forms and obligations of contracts; the mode of making payments; the many formalities that encumber,

and sometimes turn aside, the course of justice; the spirit, still more than the letter, of the tariff and the Custom-house regulations; the privileges claimed by the Crown, and the different orders; with a variety of other particulars, which attentive, able men may learn on the spot, and nowhere else.

Another circumstance connected with the British trade is too curious to be passed in silence. Every mercantile house in Petersburg employs certain men, called in the language of the country *artelschicks*, who are the counting-house men, and employed by every merchant to collect payment on bills, and to receive money, as well as, in many instances, to pay it in very considerable sums. This is an important part of their trust. There being no bankers in Russia, every mercantile house keeps its own cash; and as the payments between merchants, and for bills of exchange, are made entirely in bank notes of no higher value than 5, 10, 25, 50, and 100 roubles—most of them in so tattered a state as to require several hours to count over a sum of 2,000, or 3,000. —this business is performed by *artelschicks*; and very few instances have occurred of loss by their inattention, either in miscounting the notes, in taking false notes, or, where they are much torn, in receiving parts of different bank notes.

These *artelschicks* are also employed to superintend the loading and unloading the different cargoes; they receive the most valuable into the warehouse, where they are left solely under their care; and in these warehouses, not merely merchandise, but often large quantities of dollars, are deposited. These Russians are mostly natives of Archangel, and the adjacent governments, of the lowest class: are often slaves, generally of the Crown; and the only security of the

merchant arises in some degree from the natural reluctance of the Russian to betray confidence reposed in him; but in a much greater from their association, which is called an *artel*.

An *artel* consists of a certain number of labourers, who voluntarily become responsible, as a body, for the honesty of each individual. The separate earnings of each man are put into the common stock; a monthly allowance is made for his support; and at the end of the year the surplus is equally divided. The number varies in different associations from 50 to 100; and so advantageous is it considered to belong to one of these societies, that 500 and even 1,000 roubles are paid for admission. These societies are not bound by any law of the empire, or even written agreement; nor does the merchant restrain them under any legal obligation; yet there has been no instance of their objecting to any just claim, or of protecting an individual whose conduct had brought a demand on the society.' (Cox's *Travels in Russia*, vol. iii, p. 315.)

*Marine Insurance.*—The usual rates of marine insurance at St. Petersburg are 1 to 6 per cent. in the case of sailing vessels, and  $\frac{1}{2}$  to 3 per cent. in the case of steamers, according to the time of the year, the premiums rising about the month of August. Marine insurances are generally effected in London or Amsterdam. An insurance company against fire has been established in Petersburg, and enjoys several privileges. It is a joint-stock company, divided into actions or shares. It has been very successful; and its shares are at a high premium. No insurance on houses or goods in Russia, made in a foreign country, can be legally recovered; no official documents of being allowed to be furnished for such a purpose. A life insurance company has also been established.

TRADE OF THE UNITED KINGDOM WITH RUSSIA.

I.—Account of the Quantities and Values of the Principal Articles Imported from the Northern Ports of Russia into the United Kingdom in 1865-67.

The following were the Average Rates of Exchange on London, at the Port of Petersburg, between the Years 1857 and 1866.

Quotations	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866
Exchange	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..
Lowest	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..
Average	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..
Rate of full average	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..	.. ..

The shipping season commenced in 1866 with the breaking up of the ice on April 21 (May 3), and closed on November 10 (22), having been later by two days than in 1865.

The following tables (VII. and VIII.) give some very interesting and important particulars in respect of the Russian corn and linseed trade; the area over which corn is produced, the yield, and the gross estimated amount of the harvest being stated.

VI.—Table showing the Medium Rouble Price and the corresponding Sterling Cost, free on board at Cronstadt, at the average Rates of Exchange, of the Principal Articles of Export from St. Petersburg between 1857 and 1866.

	1857	1858	1859	1860	1861	1862	1863	1864	1865	1866

Before the tariff reforms of 1857, the value of the exports given above (Table XIII), was only a little more than 1,000,000 sterling. It is most likely, indeed, as already observed, that the increase may have been in some degree occasioned by a decrease of clandestine importation. But, independently of

this indirect effect, there can be no manner of doubt that there has been a large increase of consumption. It may be observed with reference to our trade with Russia, that a large proportion of the British ships and produce destined for Odessa and other ports on the Black Sea, and the Sea of Azov, clear out for Constantinople, and are included among the clearances and exports for Turkey.

XIII.—Table showing the Principal Items of Export from St. Petersburg to Countries in Europe during the Year 1866.

Goods	Quantity	As compared with 1865			
		Increase	Per cent.	Decrease	Per cent.
Hemp - poods	1,738,778	..	..	205,247	12
Flax - - - - - "	921,116	..	..	260,427	28
Tallow - - - - - "	2,356,972	197,518	8	..	..
Hides, raw - - - - - "	69,921	27,693	63	..	..
Leather, yuffs - - - - - "	12,199	..	..	610	5
Iron - - - - - "	401,451	277,123	217	..	..

Potashes - poods	53,551	..	..	..	..
Mats and bags, pieces	218,600	30,706	16	..	..
Rags - poods	91,007	24,096	125	..	..
Miscellaneous value in roubles - - - - - "	18,294,859	1,777,976	102	..	..
Total value in roubles - - - - - "	55,885,600	6,151,728	171	..	..
	26,972,000	..	..	..	..

Note.—In 1866 the exportation of gold and silver from Petersburg exceeded the importation by 16,615,800 roubles (1,823,000 £).

Average Annual Exportation of Wool from Russia

From 1800 to 1813 - - - - -	poods.	In 1819 - - - - -	poods.
1814	19,813	1855	358,000
1815	35,713	1856	1,000,000
1816	111,616	1857	1,000,000
1817	300,100	1858	1,000,000
1818	375,980	1859	1,000,000
In 1841 - - - - -	436,181	1860	1,000,000
1845 - - - - -	783,283	1861	1,000,000

Year	Value	Year	Value
1861	\$1,200,000	1865	\$7,000,000
1862	10,000,000	1866	91,100,000
1863	70,000,000		

The largest shipments were to Antwerp, Bremen, London, Havre, and Marseilles, these five ports receiving 912,914 barrels out of 1,462,049 exported from the 4 American ports just mentioned. But there is scarcely a port of any consequence in Europe to which consignments of this oil are not made.

The price of the oil at the wells, in 1866, according to Mr. Consul Cortwright, was only 2 dols. (currency), 6s. 7d. per barrel, whereas the carriage to Philadelphia and New York amounted to 4 dols. (13s. 2d.) per barrel. To remedy this state of things, it has been proposed to lay down a vast oil pipe from the wells to the sea-coast. 'So important is petroleum,' adds the Consul, 'as a substitute for fuel, that, odd as the project is, it is not impossible that it may be realised.' See also the work on Petroleum of Messrs. Daddon and Bannan, of Poltville, United States, 1866.

In 1867, exclusive of 1,166 tons of unrefined, valued at 13,451L, we imported, chiefly from the United States, 5,374,532 gallons of refined petroleum, valued at 354,271L. [PHILADELPHIA.]

In consequence of its inflammable nature two Acts were passed (in 1862 and 1868) to regulate the storing and testing of this and kindred substances. After February 1, 1869, 'no petroleum shall be kept otherwise than for private use within 50 yards of a dwelling house, or of a building in which goods are stored, except by license.'

PEWTER (Ger. zinn, zinngiesserzinn; Fr. étain; Ital. stugno; Span. estaño, peltre; Russ. olovo). A factitious metal used in making plates, dishes, and other domestic utensils. It is a compound, the basis of which is tin. The best sort consists of tin alloyed with about  $\frac{1}{5}$  or less of copper, or other metallic bodies, as the experience of the workmen has shown to be most conducive to the improvement of its hardness and colour, such as lead, zinc, bismuth, and antimony. There are 3 sorts of pewter, distinguished by the names of *plate*, *trifle*, and *ley-pewter*. The 1st was formerly much used for plates and dishes; of the 2nd are made the pints, quarts, and other measures for beer; and of the *ley-pewter*, wine measures and large measures. (Ure.)

PHILADELPHIA. A large city and seaport of the United States, in Pennsylvania, near the confluence of the rivers Delaware and Schuylkill, lat. 39° 57' N., long. 75° 10' 59" W. It was founded by William Penn in 1682. Population in 1860, 562,522.

Harbour, Lighthouses, Pilotage &c.—Vessels of the largest burthen ascend the river as far as Newcastle, but those drawing above 18 or 20 feet water cannot reach Philadelphia, on account of a bar a little below the city. The entrance to the magnificent bay formed by the embouchure of the Delaware has Cape May on its north, and Cape Henlopen on its south side. The former, in lat. 38° 55' 50" N., long. 75° 57' 16" W., is a sandy headland, rising about 12 feet above the level of the sea. It is surmounted by a lighthouse 152 feet in height. The light revolves every half minute. It is seen, in clear weather, 19 miles off. Cape Henlopen, marking the southern boundary of the bay, is in lat. 36° 46' 38" N., long. 75° 4' 45" W. A little south from it is a hill, elevated about 60 feet above the level of the sea; and on it is erected a lighthouse, 72 feet in height, furnished with a powerful *fixed* light, visible, in clear weather, 20 miles off. To the north of this principal light, and close to the extremity of the Cape, a second

lighthouse has been constructed, 45 feet above the level of the sea, which is also furnished with a *fixed* light, which may be seen about 9 miles off. The channel for large ships is between Cape Henlopen and the banks called the Overfalls. The navigation is, however, a little difficult, and it is compulsory on ships to take pilots. The latter frequently board them at sea; but if not, as soon as a ship comes between the Capes she must hoist the signal for a pilot, and heave to as soon as one offers to come on board. (Concise *Navig. in Phares*, 2nd ed. See post, for regulations as to pilotage.)

Trade.—The trade of Philadelphia is pretty extensive. She communicates by various canals (one of which, 3954 miles in length, unites her with Pittsburg, on the Ohio) and by railways with the interior, and is the grand depot for the coal and petroleum of the Union, the increase of the trade in which has been quite unprecedented. Previous to 1825 no coal had been sent down the Schuylkill, and in that year only 5,306 tons were brought by that channel to Philadelphia; whereas in 1857 the quantity amounted to 3,042,378 tons, exclusive of about twice as much supplied by other channels. Large quantities of this coal are sent coastwise to other parts of the Union. Exclusive of coal, petroleum, and iron, the exports principally consist of wheat and wheat flour, Indian corn, and other agricultural products: Philadelphia is, however, becoming as much a manufacturing as a trading city.

The exports of petroleum from Philadelphia in the 5 years 1863-67 were, in quantities and values, as follow, viz. :—

Years	Quantity	Value
1863	4,200,708 gals.	1,300,000 dols.
1864	7,200,000 "	2,300,000 "
1865	12,000,000 "	6,111,000 "
1866	26,500,000 "	11,774,000 "
1867	38,500,000 "	9,600,000 "

The principal imports are cotton, woollen, and silk goods; sugar, coffee, and tea; iron and hardware; wines, brandies, spices, dye-stuffs &c. In point of shipping, Philadelphia is the fourth port in the Union, being, in this respect, inferior only to New York, Boston, and New Orleans. The registered, enrolled, and licensed tonnage belonging to the port on June 30, 1858, amounted to 219,852 tons, of which more than two-thirds (151,615 tons) were engaged in the coasting trade, which was very large. In 1805, 531 vessels of 159,579 tons entered the port. The total value of the articles imported into Pennsylvania from foreign countries in 1866 amounted to 14,115,000 dols., and that of the exports to 17,913,901 dols. The coasting trade of the port is, however, more extensive and of greater importance than its foreign trade.

Account of the Value of Foreign Imports into and Exports from Philadelphia in the 10 Years ending with 1866.

Years	Value of Exports	Value of Imports
1857	dols. 7,135,156	dols. 12,850,000
1858	5,987,251	11,900,000
1859	5,299,095	12,000,000
1860	7,939,286	14,500,000
1861	10,227,034	8,600,000
1862	11,518,070	8,500,000
1863	19,628,964	8,000,000
1864	15,661,962	8,100,000
1865	12,984,152	8,800,000
1866	17,913,901	14,115,000

There are numerous banks in Philadelphia, but they stand no higher in point of character than those in most other parts of the Union, and have over and over again suspended payments. The Bank of the United States had its head-office

here. Besides banks, there are numerous insurance companies and joint-stock associations. The exports of flour, wheat, corn &c., or of bread-stuffs, as they are called by the Americans, from Philadelphia to foreign countries, have been as follow—

Year	Flour	Corn Meal	Rye Flour	Wheat	Corn
1850	bbls. 191,380	bbls. 73,800	bbls. 21,227	bbls. 37,831	bbls. 17,117
1851	287,271	89,186	36,171	280,017	76,719
1852	193,535	108,822	39,665	50,371	80,256
1853	181,806	67,884	22,530	47,933	83,772
1854	128,517	106,184	22,503	32,235	71,613

1867	346,256	91,830	15,015	613,850	1,791,255
1868	198,560	47,571	8,351	201,010	605,226

Account of the Quantity of Grain produced in the State of Pennsylvania in 1866.

Articles	Bushels	Value
Indian Corn	55,831,827	\$2,007,008
Wheat	10,319,600	29,087,192
Rye	6,509,690	7,606,557
Oats	51,851,569	27,127,290
Barley	621,371	677,515
Produce	9,718,728	9,329,979

Shipping and Navigation.—In 1861 there entered the port of Philadelphia 276 foreign ships, and 342 American; and 192 American and 313 foreign cleared the port.

In Pennsylvania, the dollar is worth 7s. 6d. currency; so that 1l. sterling = 1l. 13s. 4d. currency. [NEW YORK.]

Weights and Measures same as those of England.

Account of the Trade with Philadelphia in British Vessels, 1861—1866.

1863	..	34,996	1866	..	35,060

Regulations of the Port.—If any master or captain of any ship or vessel, or other person, shall refuse or neglect to comply with the directions of the harbour master, in matters within the jurisdiction of his office, such person shall, for each and every such offence, severally forfeit and pay any sum not exceeding 100 dollars. And the said harbour master shall, in full compensation for his services, be entitled to have, recover, and receive from the master, captain, owner, or consignee of each and every ship or vessel arriving at the port of Philadelphia (coasting

vessels not exceeding the burden of 75 tons excepted) the sum of 1 dollar for each and every voyage by such ship or vessel performed, and no more.

Every ship or vessel that may arrive in this harbour, and that shall come to anchor in the stream anywhere between Almond and Vine Streets, having previously caused her gunpowder, if any she had on board, to be landed as the law directs, may remain in that situation 2½ hours, and no longer, taking care to lie as near to the island or sand-bar as may be consistent with her safety. But if, from the circumstance of a vessel having servants on board, or from any other cause, it may be thought necessary or convenient to lie a longer time in the stream, then, and in every such case, the owner, master, pilot, or other person having the charge or direction of such vessel, shall remove her from opposite the city, and shall moor her, or cause her to be moored, to the northward of Vine Street with 1 anchor and cable up and 1 anchor and cable down the stream; and in both the above-mentioned situations, the regulation contained in the next succeeding article to be duly attended to.

If any vessel properly moored in the stream shall have her anchor or cable overlaid by any other vessel in anchoring or mooring, the master

suspended payments. The  
States had its head-office

or person having the care or direction of such last-mentioned vessel shall immediately, or as soon as may be after application made to him by the party aggrieved, cause the said anchor or cable so overlaying to be taken up and cleared. When a ship or vessel shall be hauled in to any wharf or dock, or alongside of another vessel that may be lying at such wharf or dock, the owner, master, pilot, or whoever may have the command, care, or direction of her, shall have her securely made fast; and if outside of another vessel, shall get one good fast from each end of the vessel to the shore, with sufficient fenders between them and the inside vessel; and shall cause the flukes of their anchors to be taken on board; and, within 24 hours thereafter, cause her jib boom, spritsail yard, main boom, spanker and ringtail booms, if any they have, to be rigged in, and their lower yards topped up, in such a manner as least to interfere with vessels passing.

If the fasts of vessels when moored at a wharf shall extend across a dock, so as to obstruct the passing or repassing of shallops, lighters, or other craft or vessel, the master or other person having the command of such ship or vessel shall, upon the first application, immediately cause such fast or fasts to be cast off or slackened down.

No outward bound vessel, putting off from wharf, shall lie longer in the stream, between Vine Street and Almond, in the district of Southwark, above mentioned, than 24 hours.

And if vessels lying at the end of wharves so much interlock with each other as to prevent vessels hauling in and out of docks, the master, owner, pilot, or other person having the charge of the same, shall, immediately on application from any person so wanting to haul his vessel in or out of docks aforesaid, have the vessel or vessels so interfering, moved in such a manner as to accommodate the one applied for; in which case the vessel making room for another to haul in or out shall have liberty to make her warps fast to the most convenient place adjacent, for a reasonable time; and all sea vessels, when transporting or wanting to haul into a wharf or dock, or to make sail in order to proceed to sea, shall have the same privilege.

When any ship or vessel may be lying alongside any wharf, and not taking in or discharging, she shall make way for and permit any vessel that wants to unload or load, to come inside, next the wharf, until she discharges or loads her cargo; and the said vessel, when so discharged or loaded, shall haul outside and give way to the vessel that first occupied the wharf; provided that, from the 10th of December to the 1st of March, no vessel shall be compelled to move from her berth (only those at Gloucester Point piers), excepting to let vessels in and out of docks.

RATES OF PILOTAGE.

The table marked A contains the fees levied upon vessels as they towed by steamers to Philadelphia.

The table marked B contains the fees which are charged in case where no steerman has been employed to tow the vessel from one berth to another.

No ship or vessel loading or discharging hemp at any wharf, or within any dock, shall be allowed to have any fire on board; neither shall any vessel lying outside or near her be permitted to have fire on board, while it may be considered dangerous. And no tar, turpentine, resin, or pitch shall be heated on the wharf, or on board any vessel lying at any wharf within the limits of the city.

There are 4 classes of pilots. 1. Those capable of piloting vessels of any practicable depth of water. 2. Those capable of piloting vessels drawing 22 feet of water or under. 3. Those capable of piloting vessels drawing 9 feet of water or under.

Every vessel arriving from, or bound to a foreign port, is required by law to receive a pilot, or to pay half pilotage in the warden's office, where the master of every such vessel is required, under a penalty of 10 dollars, to make report within 36 hours after his arrival, and again before his departure, signing his name to said report in the warden's book.

Every vessel of 75 tons and upwards arriving from, or bound to, any port within the United States, and the masters of all such vessels, are bound as above.

The pilot of every vessel is required to inform the master of his having to report at the warden's office.

All vessels obliged to receive a pilot are required to pay 10 dollars in addition, as winter pilotage, from November 20 to March 10, both days inclusive.

Foreign vessels, i.e. Spanish, Portuguese, Neapolitan, Danish, Russian, South American, and Haytian, to pay 2 dollars 67 cents in addition to other pilotage.

Every pilot detained more than 24 hours by any master, owner, or consignee, is entitled to 1 dollar per day for every day he is so detained.

Every pilot detained more than 48 hours by the ice, after he has conducted his vessel to a place of safety, is entitled to 3 dollars per day for every day he is so detained.

Every pilot compelled to perform quarantine is entitled to 2 dollars per day, for every day he is so detained.

about 6 cwt., and the salt about 3½ cwt.; but the weight of the hogshend when cured and pressed is reduced to about 4½ cwt., including the weight of the cask, from 20 to 24 lb. We subjoin—

1866	4,017	2,583	928	5,490	5,203	14,294	

Of the fish cured in 1866, 2,944 hhds. were caught eastward of Lizard; 5,700 in Mount's Bay; 5,650 in St. Ives and north of St. Ives. Total, 14,294 hogsheds.

N.B.—Of the quantity sent to the Adriatic, full 3 have been sold in Venice, and the remainder chiefly in Ancona.

The export of pilchards has been rather declining of late years. This has been ascribed to various causes, such as the withdrawal of the bounty of 8s. 6d. per hogshend formerly paid on their export, the relaxed observance of Lent in the countries to which they are principally exported, and the imposition of a heavy duty on their importation into Naples. The falling off in the demand of the latter has, however, been in great measure compensated by the increased demand at Venice.

Pilchards are not used in England, except in Cornwall and Devon, where from 4,000 to 5,000 hhds. a-year may at present be consumed.

The sea fishery employs about 1,500 hands regularly throughout the season, and a vast number more when any considerable shoals are enclosed. There are at present (1865) about 260 seans afloat, of which above 180 belong to St. Ives. The first cost of a sean on the south coast is about 450l.; but a St. Ives sean does not cost above 300l. The drift fishery employs, during the season, from 900 to 1,000 men, and about 230 boats; the cost of each boat and nets amounting to about 250l. The labour in the cure of the fish may be taken at about 5s. per hogshend. The total capital embarked in the fishery has been estimated by those engaged in it at from 200,000l. to 250,000l.

The drift fishermen employ themselves, when not engaged in the pilchard fishery, in the mackerel, herring, and hook-line fisheries. The sean fishermen consist principally of agricultural labourers, miners &c. attracted to the business in the expectation (in which, however, they are not unfrequently disappointed) of making a comparatively large sum by a few weeks' exertion. But at St. Ives only able-bodied and expert fishermen are employed. In all sean boats 3 or 4 individuals of the crew are regularly bred, expert fishermen.

Four-fifths of the persons employed on shore in the salting, curing, packing &c. of the fish are women.

The wages of those employed in the fishery are made sometimes to depend on the number of fish taken; but in other instances they are independent of any such contingency.

The fishery at St. Ives is carried on under a particular Act of Parliament, passed in 1811. The

exaction of a title of the fish is a very serious burden on the fishery; sometimes it is taken in kind, but is more generally compounded for. (Dr. Paris's *Guide to Mount's Bay and the Land's End*, 2nd ed. pp. 146-156; *Beauties of England and Wales*, vol. ii. p. 471; but we are principally indebted to private information obtained from the most authentic sources, and obligingly communicated, by Mr. Conlson, of Penzance.)

PILOTS AND PILOTAGE. The name of pilot or steersman is applied either to a particular officer, serving on board a ship during the course of a voyage, and having charge of the helm and the ship's route; or to a person taken on board at any particular place for the purpose of conducting a ship through a river, road, or channel, or from or into a port.

It is to the latter description of persons that the term pilot is now usually applied; and pilots of this sort are established in various parts of the country by ancient charters of incorporation, or by particular statutes. The most important of these corporations are those of the Trinity House, Deptford Strond, with which the fellowship of the pilots of Dover, Deal, and the Isle of Thanet, commonly called the *Cinque Port Pilots*, is now consolidated; and the Trinity Houses of Hull and Newcastle. The 5 Geo. IV. c. 73 established a corporation for the regulation and licensing of pilots in Liverpool.

*Principles of the Law as to Pilots.*—These are sufficiently obvious, and differ but little in most maritime codes. When a master is obliged by law to employ a pilot, and does so accordingly, the vessel having ceased to be under the command of their servants, the owners are no longer responsible for such loss or damage as may be occasioned by her mismanagement (17 & 18 Vict. c. 104 s. 388) unless it be made to appear that it arose from the neglect or misconduct of the master or crew in obeying or carrying out the orders of the pilot. It is, therefore, a very serious matter for a master or captain to interfere with or supersede a pilot in the exercise of his peculiar functions. But still there are cases, and those, too, not of rare occurrence, of such a nature as to make interference indispensable. Pilots are anything but infallible; and whenever it becomes evident to a master, or to the authorities on board, that the pilot is acting inconsiderately, or that he is drunk or incompetent, it is not the right only, but the bounden duty of the master to provide for the safety of the ship by resuming his authority; and taking the command upon himself. On this

such pilotage authority, their wives, widows, or children) entitled to participate in the benefits of such existing or future funds, and the terms and conditions upon which they are to be so entitled:

8. To repeal or alter any by-law made in exercise of the above powers, and to make a new by-law or new by-laws in lieu thereof: And every by-law duly made by any pilotage authority in exercise of the powers hereby given to it, shall be valid and effectual, notwithstanding any Act of Parliament, rule, law, or custom to the contrary, 17 & 18 Vict. c. 104 (sec. 333). In cases where the pilotage is not compulsory, and where there is no restriction on the power of duly qualified persons to obtain licenses as pilots, the Board of Trade has power by provisional order to enable the existing authorities to grant licenses and to fix, raise, and facilitate the recovery of, pilotage rates, and also to give facilities to qualified persons to obtain licenses as pilots, 25 & 26 Vict. c. 63 s. 39.

**Publication of By-laws.**—Every by-law proposed to be enacted by any pilotage authority in pursuance of the foregoing powers shall, before it is submitted to her Majesty in council for her assent, be published in such manner as may from time to time be prescribed by the Board of Trade, 17 & 18 Vict. c. 104. (Sec. 334.)

**By-laws to be laid before Parliament.**—Every order in council made in pursuance of the provisions of this Act shall be laid before both Houses of Parliament as soon as possible after the making thereof. (Sec. 335.)

**Power of Appeal to Board of Trade.**—If the greater part in number of the qualified pilots belonging to any port, or the Local Marine Board, where there is one, or at any port where there is no Local Marine Board, if any masters, owners, or insurers of ships, being not less than six in number, consider themselves aggrieved by any regulation or by-law in force when this Act comes into operation or hereafter made under some authority other than the provisions of this Act, or by any defect or omission therein, they may appeal to the Board of Trade, and the said Board may thereupon revoke or alter any such regulation or by-law or may make additions thereto in such manner as, having regard to the interests of the persons concerned, may appear to be just and expedient; and every order so made shall be conclusive in the matter. (Sec. 336.)

#### Returns by Pilotage Authorities (general).

**Pilotage authorities to make Returns to Board of Trade.**—Every pilotage authority shall deliver periodically to the Board of Trade, in such form and at such times as such Board requires, returns of the following particulars with regard to pilotage within the port or district under the jurisdiction of such authority, viz. :—

1. All by-laws, regulations, orders, or ordinances relating to pilots or pilotage for the time being in force:

2. The names and ages of all pilots or apprentices licensed or authorised to act by such authority, and of all pilots or apprentices acting either mediately or immediately under such authority, whether so licensed or authorised or not:

3. The service for which each pilot or apprentice is licensed:

4. The rates of pilotage for the time being in force, including therein the rates and descriptions of all charges upon shipping made for or in respect of pilots or pilotage:

5. The total amount received for pilotage, distinguishing the several amounts received from

British ships and from foreign ships respectively and the several amounts received in respect of different classes of ships paying different rates of pilotage, according to the scale of such rates for the time being, and the several amounts received for the several classes of service rendered by pilots; and also the amount paid by such ships (if any) as have, before reaching the outer limits of pilotage water if outward-bound, or their port of destination if inward-bound, to take or pay for two or more pilots, whether licensed by the same or by different pilotage authorities; together with the numbers of the ships of each of the several classes paying such several amounts as aforesaid:

6. The receipt and expenditure of all moneys received by or on behalf of such authority, or by or on behalf of any sub-commissioners appointed by them, in respect of pilots or pilotage:

And shall allow the Board of Trade, or any persons appointed by such Board for the purpose, to inspect any books or documents in its possession relating to the several matters herein required to be returned to the Board of Trade. (Sec. 337.)

**The Jurisdiction of local Authorities failing to give the required Returns, to be transferred to Trinity House.**—If any of such pilotage authorities as aforesaid (other than the Trinity House, or sub-commissioners of pilotage appointed by it) fail to deliver to the Board of Trade the periodical returns above required within 1 year of such time as may be fixed by such Board for the purpose, or if any of such authorities do not allow the said Board, or any persons who may be appointed by it for the purpose, to inspect any books or documents in their possession relating to the matters herein required to be returned by them, it shall be lawful for her Majesty, by and with the advice of her Privy Council, to direct that all the rights and powers of such authorities in respect of pilotage shall cease or be suspended during such time as her Majesty directs; and thereupon the Trinity House shall thereafter, or during such time as such suspension may continue, have and exercise the same powers of appointing sub-commissioners of pilotage, and of licensing pilots, and of establishing and altering rates of pilotage within the district within which the authority aforesaid has previously appointed or licensed pilots, as it is by this Act authorised to exercise in any district for which no particular provision is made by any Act of Parliament or charter for the appointment of pilots, and shall, also, during such time as aforesaid, have and exercise the same rights, title, and powers to and in respect of any pilotage funds or other pilotage property which the said pilotage authorities would have had or exercised if not so suspended as aforesaid. (Sec. 338.)

**Returns to be laid before Parliament.**—The Board of Trade shall without delay cause the several returns hereinbefore required to be made to such Board to be laid before both Houses of Parliament. (Sec. 339.)

#### Licensing of Masters and Mates (general).

**Master or Mate, if examined and passed, receive a Pilotage Certificate.**—The master or mate of any ship may, upon giving due notice, and consenting to pay the usual expenses, apply to any pilotage authority to be examined as to his capacity to pilot the ship of which he is master or mate, or any one or more ships belonging to the same owner, within any part of the district over which such pilotage authority has jurisdiction; and such master or mate shall, if such authority thinks fit, thereupon be examined; and if found

competent, a pilotage certificate shall be granted to him, containing his name, a specification of the ship or ships in respect of which he has been examined, and a description of the limits within which he is to pilot the same, such limits to be within such jurisdiction as aforesaid; and such certificate shall enable the person therein named to pilot the ship or any of the ships therein specified, of which he is acting as master or mate at the time, but no other, within the limits therein described, without incurring any penalties for the non-employment of a qualified pilot. (Sec. 340.)

**Renewal of Pilotage Certificate.**—The pilotage certificate so granted shall not be in force for more than 1 year, unless the same is renewed, which may from time to time be done by an indorsement under the hand of the secretary or other proper officer of the authority by whom such certificate was granted. (Sec. 341.)

**Board of Trade examine and grant Pilotage Certificates.**—If upon complaint to the Board of Trade it appear to such Board that any such authority as aforesaid has without reasonable cause refused or neglected to examine any master or mate who has applied to them for the purpose, or, after he has passed the examination, has without reasonable cause refused or neglected to grant him a pilotage certificate, or that the examination of any such master or mate has been unfairly or improperly conducted, or that any terms imposed or sought to be imposed by such authority are unfair or improper, or that any pilotage certificate granted by such authority has been improperly withdrawn, the Board of Trade may, if in its judgment the circumstances appear to require it, appoint persons to examine such master or mate, and if he is found competent may grant him a pilotage certificate, containing the same particulars as would have been inserted in any certificate granted by such pilotage authorities as aforesaid, upon such terms and conditions, and subject to such regulations, as such Board may think fit; and such certificate shall have the same effect as if it had been granted by such pilotage authority as aforesaid; and such certificate shall be in force for 1 year, and may be renewed from year to year, either by the said authorities in manner hereinbefore mentioned, or by the Board of Trade, if such Board thinks fit, such renewal to be indorsed on the said certificate, either by such person as the Board of Trade may appoint for the purpose, or in manner hereinbefore provided as to certificates granted by any pilotage authority. (Sec. 342.)

**Fees paid upon Certificates and Renewals thereof.**—All masters or mates to or for whom any such pilotage certificates are granted or renewed by any pilotage authority shall pay to such authority, or as it directs, such fees upon their respective certificates and upon the renewals thereof as are from time to time fixed for that purpose by such authority, with the consent of the Board of Trade; and all masters and mates to or for whom any such certificates are granted or renewed by the Board of Trade shall pay to such Board, or as it directs, such fees upon their certificates and upon the renewals thereof as may be fixed by such Board, notwithstanding that in the case of pilotage certificates granted or renewed by the Board of Trade, such fees shall in no case be less than the fees payable by the qualified pilots in the same district upon their licenses and the renewal thereof; and such fees shall, in the case of certificates and renewals granted by pilotage authorities, be applicable either to paying the expense of the examinations, or any other general expenses con-

nected with pilotage incurred by such authorities, or to the Pilots' Superannuation Fund of the district (if any), or otherwise for the benefit of the pilots appointed by such authorities, as such authorities think fit; and such fees shall in the case of pilotage certificates granted or renewed by the Board of Trade be applicable to the expense of the examinations, and the surplus (if any) shall be applied for the benefit of the qualified pilots of the port or district to which such certificates apply, in such manner as such Board thinks fit. (Sec. 343.)

**Power to withdraw Pilotage Certificates.**—If at any time it appear to the Board of Trade or to any pilotage authority, that any master or mate to whom a pilotage certificate has been granted by such Board or authority has been guilty of misconduct, or has shown himself incompetent to pilot his ship, such Board or such authority (as the case may be) may thereupon withdraw his certificate, and such certificate shall thenceforth cease to be of any effect whatever. (Sec. 344.)

#### *Pilot Boat (general).*

**Pilot Boats how to be provided.**—All boats and ships regularly employed in the pilotage service of any district shall be approved and licensed by the pilotage authorities of such district, who may, at their discretion, appoint and remove the masters of such boats and ships. (Sec. 345.)

**Characteristics of Pilot Boats.**—Every pilot boat or ship shall be distinguished by the following characteristics, viz.:—

1. A black colour painted or tarred outside, with the exception of the names and numbers hereinafter mentioned; or such other distinguishing colour or colours as the pilotage authority of the district, with the consent of the Board of Trade, directs:

2. On her stern the name of the owner and of the port to which she belongs painted in white letters at least 1 inch broad and 3 inches long, and on each bow the number of the license of such boat or ship:

3. When afloat, a flag at the mast-head or on a sprit or staff, or in some other equally conspicuous situation; such flag to be of large dimensions compared with the size of the boat or ship carrying the same, and to be of two colours, the upper horizontal half white, and the lower horizontal half red:

And it shall be the duty of the master of such boat or ship to attend to the following particulars: First, that the boat or ship possess all the above characteristics; secondly, that the aforesaid flag is kept clean and distinct, so as to be easily discerned at a proper distance; and, lastly, that the names and numbers before mentioned are not at any time concealed; and if default is made in any of the above particulars, he shall incur a penalty not exceeding 20*l.* for each default. (Sec. 346.)

**Qualified Pilot to display Flag though not in Pilot Boat.**—Whenever any qualified pilot is carried off in a boat or ship not in the pilotage service, he shall exhibit a flag of the above description, in order to show that such boat or ship has a qualified pilot on board; and if he fail to do so without reasonable cause, he shall incur a penalty not exceeding 50*l.* (Sec. 347.)

**Penalty on ordinary Boat displaying Pilot Flag.**—If any boat or ship, not having a licensed pilot on board, display a flag of the above-mentioned description, there shall be incurred for every such offence a penalty not exceeding 50*l.*, to be recovered from the owner or from the master of such boat or ship. (Sec. 348.)

*Pilot License (general).*

**Registry of Pilot License.**—Every qualified pilot on his appointment shall receive a license, containing his name and usual place of abode, together with a description of his person, and a specification of the limits within which he is qualified to act; and it shall be the duty of the principal officer of customs at the place at or nearest to which any qualified pilot may reside, upon his request, to register his license; and no qualified pilot shall be entitled to act as such until his license is so registered; and any qualified pilot acting beyond the limits for which he is qualified by his license shall be considered as an unqualified pilot. (Sec. 349.)

**Regulations to be furnished to qualified Pilot, and produced by him.**—Every qualified pilot shall, upon receiving his license, be furnished with a copy of such part of this Act as relates to pilotage, together with a copy of the rates, by-laws, and regulations established within the district for which he is licensed; and he shall produce such copies to the master of any ship, or other person employing him, when required to do so, under a penalty in case of default not exceeding 50l. (Sec. 350.)

**Qualified Pilot to produce License to Employer.**—Every qualified pilot, while acting in that capacity, shall be provided with his license, and produce the same to every person by whom he is employed, or to whom he tenders his services as pilot; and if he refuse to do so at the request of such person, he shall incur for each offence a penalty not exceeding 10l., and shall be subject to suspension or dismissal by the pilotage authority by whom he is licensed. (Sec. 351.)

**Licenses to be delivered up when required &c.**—Every qualified pilot, when required by the pilotage authority who appointed him, shall produce or deliver up his license; and on the death of any qualified pilot the person into whose hands his license happens to fall shall without delay transmit the same to the pilotage authority who appointed the deceased pilot; and any pilot or person failing to comply with the provisions of this section shall incur a penalty not exceeding 10l. (Sec. 352.)

*Compulsory Pilotage (general).*

**Compulsory Pilotage, how enforced.**—Subject to any alteration to be made by any pilotage authority in pursuance of the powers in that behalf given, the employment of pilots shall continue to be compulsory in all districts in which the same was by law compulsory immediately before the time when this Act comes into operation; and all exemptions from compulsory pilotage then existing within such districts shall also continue in force; and every master of any unexempted ship navigating within any such district who, after a qualified pilot has offered to take charge of such ship or has made a signal for that purpose, either himself pilots such ship without possessing a pilotage certificate enabling him so to do, or employs or continues to employ an unqualified person to pilot her, and every master of any exempted ship navigating within any such district who, after a qualified pilot has offered to take charge of such ship or has made a signal for that purpose, employs or continues to employ an unqualified pilot to pilot her, shall, for every such offence, incur a penalty of double the amount of pilotage demandable for the conduct of such ship. (Sec. 353.)

**Home Trade Passenger Ships to employ qualified Pilots, unless &c.**—The master of every ship carry-

ing passengers between any places situate in the United Kingdom, or the Islands of Guernsey, Jersey, Sark, Alderney, and Man, and any other place so situate, when navigating upon any waters situate within the limits of any district for which pilots are licensed by any pilotage authority under the provisions of this or any other Act, or upon any part thereof so situate; shall, unless he or his mate has a pilotage certificate enabling such master or mate to pilot the said ship within such district, employ a qualified pilot to pilot his ship; and if he fail so to do, he shall for every offence incur a penalty not exceeding 100l. (Sec. 354.)

**Certificates, how to be granted to Masters and Mates.**—Any master or mate of a ship which by the preceding section is made subject to compulsory pilotage may apply to the Board of Trade for a certificate, and the Board of Trade shall thereupon, on satisfactory proof of his having continuously piloted any ship within the limits of any pilotage district or of any part or parts thereof for two years prior to the commencement of this Act, or upon satisfactory proof by examination of his competency, or otherwise as it may deem expedient, cause to be granted to him, or to be indorsed on any certificate of competency or service obtained by him under this Act, a certificate to the effect that he is authorised to pilot any ship or ships belonging to the same owner, and of a draught of water no greater than such draught as may be specified in the certificate within the limits aforesaid; and the said certificate shall remain in force for such time as the Board of Trade directs, and shall enable the master or mate therein named to conduct the ship or ships therein specified within the limits therein described to the same extent as if the preceding section had not been passed, but not farther or otherwise; and every such master or mate shall upon applying for such certificate or for any renewal thereof, pay to the Board of Trade or as it directs such fees not exceeding the fees payable on an examination for a master's certificate of competency under this Act as the Board of Trade directs; and such fees shall be applied in the same manner in which the fees payable on such last-mentioned examination are made applicable. (Sec. 355.)

*Rights, Privileges, and Remuneration of Pilots (general).*

**Qualified Pilot unable to board when entitled to Pilotage.**—If any boat or ship, having a qualified pilot on board, leads any ship which has not a qualified pilot on board when such last-mentioned ship cannot from particular circumstances be boarded, the pilot so leading such last-mentioned ship shall be entitled to the full pilotage for the distance run as if he had actually been on board and had charge of such ship. (Sec. 356.)

**Allowance to qualified Pilot taken out of his District.**—No pilot, except under circumstances of unavoidable necessity, shall without his consent be taken to sea or beyond the limits for which he is licensed in any ship whatever; and every pilot so taken under circumstances of unavoidable necessity or without his consent shall be entitled over and above his pilotage, to the sum of 10s. for a day, to be computed from and inclusive of the day on which such ship passes the limit to which he was engaged to pilot her, up to and inclusive of the day of his being returned in the said ship to the place where he was taken on board, or up to and inclusive of such day as will allow him, if discharged from the ship, sufficient

time to return thereto; and in such last-mentioned case he shall be entitled to his reasonable travelling expenses. (Sec. 357.)

**Penalty on Pilot receiving or Master offering improper Rate.**—Any qualified pilot demanding or receiving, and also any master offering or paying to any pilot, any other rate in respect of pilotage services, whether greater or less, than the rate for the time being demandable by law, shall for each offence incur a penalty not exceeding 10*l*. (Sec. 358.)

**Penalty on making a Declaration as to Draught of Ship &c.**—If any master, on being requested by any qualified pilot having the charge of his ship to declare her draught of water, refuse to do so, or himself makes or is privy to any other person making a false declaration to such pilot as to such draught, he shall incur a penalty for every such offence not exceeding double the amount of pilotage which would have been payable to the pilot making such request; and if any master or other person interested in a ship make or is privy to any other person making any fraudulent alteration in the marks on the stern or stem post of such ship denoting her draught of water, the offender shall incur a penalty not exceeding 50*l*. (Sec. 359.)

**Qualified Pilot to supersede an unqualified Pilot.**—A qualified pilot may supersede an unqualified pilot, but it shall be lawful for the master to pay to such unqualified pilot a proportionate sum for his services, and to deduct the same from the charge of the qualified pilot. and in case of dispute the pilotage authority by whom the qualified pilot is licensed shall determine the proportionate sums to which each party is entitled. (Sec. 360.)

**Penalty on unqualified Person acting as Pilot.**—An unqualified pilot assuming or continuing in the charge of any ship after a qualified pilot has offered to take charge of her, or using a license which he is not entitled to use for the purpose of making himself appear to be a qualified pilot, shall for each offence incur a penalty not exceeding 10*l*. (Sec. 361.)

**Persons on which unlicensed Persons may act as Pilots.**—An unqualified pilot may, within any pilotage district, without subjecting himself or his employer to any penalty, take charge of a ship as pilot under the following circumstances, viz. :—

1. When no qualified pilot has offered to take charge of such ship, or made a signal for that purpose; or,

2. When a ship is in distress or under circumstances making it necessary for the master to avail himself of the best assistance which can be procured at the time; or,

3. For the purpose of changing the moorings of any ship in port, or of taking her into or out of any dock, in cases where such act can be done by an unqualified pilot without infringing the regulations of the port or any orders which the harbour master is legally empowered to give. (Sec. 362.)

**Liability for and Recovery of Pilotage Dues.**—The following persons shall be liable to pay pilotage dues for any ship for which the services of a qualified pilot are obtained, viz., the owner or charterer, or such consignee or agents thereof as are paid or made themselves liable to pay any charge on account of such ship in the port of arrival or discharge, as to pilotage inwards, and in the port from which she clears out as to pilotage outwards; and in default of payment of such pilotage dues may be recovered in the same manner as penalties of the like amount may be recovered by virtue of this Act; but such recovery shall not take place until a previous demand

thereof has been made in writing, and the dues so demanded have remained unpaid for 7 days after the time of such demand being made. (Sec. 363.)

**Power of Consignees to retain Pilotage Dues paid by them.**—Every consignee and agent (not being the owner or master) hereby made liable for the payment of pilotage dues in respect of any ship may, out of any moneys in his hands received on account of such ship or belonging to the owner thereof, retain the amount of all dues so paid by him, together with any reasonable expenses he may have incurred by reason of such payment or liability. (Sec. 364.)

#### OFFENCES OF PILOTS (GENERAL).

**Penalties on qualified Pilots.**—If any qualified pilot commits any of the following offences, viz. :—

1. Keeps himself, or is interested in keeping by any agent, servant, or other person, any public house or place of public entertainment, or sells or is interested in selling any wine, spirituous liquors, tobacco, or tea;

2. Commits any fraud or other offence against the revenues of Customs or Excise or the laws relating thereto;

3. Is in any way directly or indirectly concerned in any corrupt practices relating to ships, their tackle, furniture, cargoes, crews, or passengers, or to persons in distress at sea or by shipwreck, or to their moneys, goods, or chattels;

4. Lends his license;

5. Acts as pilot whilst suspended;

6. Acts as pilot when in a state of intoxication;

7. Employs or causes to be employed on board any ship of which he has the charge any boat, anchor, cable, or other store, matter, or thing beyond what is necessary for the service of such ship, with the intent to enhance the expenses of pilotage for his own gain or for the gain of any other person;

8. Refuses or wilfully delays, when not prevented by illness or other reasonable cause, to take charge of any ship within the limits of his license upon the signal for a pilot being made by such ship, or upon being required to do so by the master, owner, agent, or consignee thereof, or by any officer of the pilotage authority by whom such pilot is licensed, or by any principal officer of customs;

9. Unnecessarily cuts or slips or causes to be cut or slipped any cable belonging to any ship;

10. Refuses, on the request of the master, to conduct the ship of which he has the charge into any port or place into which he is qualified to conduct the same, except on reasonable ground of danger to the ship;

11. Quits the ship of which he has the charge, without the consent of the master, before the service for which he was hired has been performed: He shall for each such offence, in addition to any liability for damages at the suit of the person aggrieved, incur a penalty not exceeding 100*l*, and be liable to suspension or dismissal by the pilotage authority by whom he is licensed; and every person who procures, abets, or connives at the commission of any such offence shall likewise, in addition to any such liability for damages as aforesaid, incur a penalty not exceeding 100*l*, and, if a qualified pilot, shall be liable to suspension or dismissal by the pilotage authority by whom he is licensed. (Sec. 365.)

**Penalty on Pilot endangering Ship, Life, or Limb.**—If any pilot, when in charge of any ship, by wilful breach of duty, or by neglect of duty, or by reason of drunkenness, does any act tending to the immediate loss, destruction, or serious

damage of such ship, or tending immediately to endanger the life or limb of any person on board such ship; or if any pilot, by wilful breach of duty or by neglect of duty, or by reason of drunkenness, refuse or omit to do any lawful act proper and requisite to be done by him for preserving such ship from loss, destruction, or serious damage, or for preserving any person belonging to or on board of such ship from danger to life or limb; the pilot so offending shall for each such offence be deemed guilty of a misdemeanor, and if a qualified pilot, also be liable to suspension and dismissal by the authority by which he is licensed. (Sec. 366.)

*Penalty on Pilot in Charge of a Ship doing her wilful Injury.*—If any person, by wilful misrepresentation of circumstances upon which the safety of a ship may depend, obtains or endeavours to obtain the charge of such ship, such person, and every other person procuring, abetting, or conniving at the commission of such offence, shall, in addition to any liability for damages at the suit of the party aggrieved, incur a penalty not exceeding 100*l.*; and, if the offender be a qualified pilot, he shall also be liable to suspension or dismissal by the pilotage authority by which he is licensed. (Sec. 367.)

#### *General Power of Trinity House.*

*Power of Trinity House to alter Regulations.*—The Trinity House may, in exercise of the general power hereinbefore given to all pilotage authorities of doing certain things in relation to pilotage matters, alter such of the provisions hereinafter contained as are expressed to be subject to alteration by them, in the same manner and to the same extent as they might have altered the same if such provisions had been contained in any previous Act of Parliament instead of in this Act. (Sec. 368.)

#### *Sub-Commissioners and Pilots (Trinity House).*

*Power of Trinity House to appoint Sub-Commissioners.*—The Trinity House shall continue to appoint sub-commissioners, not being more than 5 nor less than 3 in number, for the purpose of examining pilots in all districts in which they have been used to make such appointments, and may, with the consent of her Majesty in council, but not otherwise, appoint like sub-commissioners for any other district in which no particular provision is made by any Act of Parliament or charter for the appointment of pilots; but no pilotage district already under the authority of any sub-commissioners, appointed by the Trinity House, shall be extended, except with such consent as aforesaid, and no sub-commissioners so appointed shall be deemed to be pilotage authorities within the meaning of this Act. (Sec. 369.)

*Trinity House to license Pilots to act within certain Limits.*—The Trinity House shall continue, after due examination by themselves or their sub-commissioners, to appoint and license under their common seal pilots for the purpose of conducting ships within the limits following or any portion of such limits: that is to say:—

1. 'The London District,' comprising the waters of the Thames and Medway as high as London Bridge and Rochester Bridge respectively, and also the seas and channels leading thereto or therefrom as far as Orfordness to the North and Dungeness to the South; so nevertheless that no pilot shall be hereafter licensed to conduct ships both above and below Gravesend:

2. 'The English Channel District,' comprising the seas between Dungeness and the Isle of Wight:

3. 'The Trinity House Outport Districts,' comprising any pilotage district for the appointment of pilots within which no particular provision is made by any Act of Parliament or charter. (Sec. 370.)

*Publication of Notices of Licenses of Pilots by Trinity House.*—Subject to any alteration to be made by the Trinity House, the name of all pilots licensed by the Trinity House shall be published in manner following, viz.:—

1. The Trinity House shall at their House in London fix up a notice specifying the name and usual place of abode of every pilot so licensed, and the limits within which he is licensed to act:

2. The Trinity House shall transmit a copy of such notice to the Commissioners of Customs in London, and to the principal officers of customs resident at all ports within the limits for which such pilot is licensed; and such notice shall be posted up by the commissioners at the Custom-house in London, and by such officers at the custom-houses of the ports at which they are respectively resident. (Sec. 371.)

*Bonds to be given.*—Subject to any alteration to be made by the Trinity House, every Trinity House pilot on his appointment shall execute a bond for 100*l.* conditioned for the due observance on his part of the regulations and by-laws of the Trinity House, such bond to be free from stamp duty, and from any other charge except the actual expense for preparing the same. (Sec. 372.)

*Liability limited.*—No qualified pilot who has executed such bond as is hereinbefore mentioned shall be liable for neglect or want of skill beyond its penalty and the amount of pilotage payable to him in respect of the voyage on which he is engaged. (Sec. 373.)

*Continuance and Renewal of Licenses.*—Subject to any alteration to be made by the Trinity House, no license granted by them shall continue in force beyond the 31st day of January next ensuing the date of such license; but the same may, upon the application of the pilot holding such license, be renewed on such 31st day of January in every year, or any subsequent day, by instrument under the hand of the Secretary of the Trinity House, or such other person as may be appointed by them for that purpose. (Sec. 374.)

*Power to revoke and suspend Licenses.*—The Trinity House shall have power to revoke or suspend the license of any pilot appointed to them, in such manner and at such time as they think fit. (Sec. 375.)

#### *Compulsory Pilotage (Trinity House).*

*Penalty on Masters employing unlicensed Pilots.*—Subject to any alteration to be made by the Trinity House, and to the exemptions hereinafter contained, the pilotage districts of the Trinity House within which the employment of pilots compulsory are the London district, and the Trinity House outport districts, as hereinbefore defined, and the master of every ship navigating within any part of such district or districts, who, after a qualified pilot has offered to take charge of such ship, or has made a signal for that purpose, employs himself pilots such ship without possessing a certificate enabling him so to do, or employs or continues to employ an unqualified person to do so, shall for every such offence, in addition to the penalty hereinbefore specified, if the Trinity House certify in writing under their common seal that the prosecutor is to be at liberty to sue for the recovery of such additional penalty, incur an additional penalty not exceeding 5*l.* for every 50 tons burden of such ship. (Sec. 376.)

*Trinity House to insure constant Supply of qualified Pilots at Dungeness.*—Subject to any alteration

utport Districts,' com-  
for the appointment of  
ular provision is made  
or charter. (Sec. 370.)  
Licenses of Pilots by

Pilotage (Trinity House).  
ers employing unlicensed Pilots  
alteration to be made by  
to the exemptions hereinafter  
otage districts of the Trinity  
ch the employment of pilots  
London district, and the Trinity  
istricts, as hereinbefore defined  
f every ship navigating within  
istrict or districts, who, when  
ffered to take charge of a  
ct to which they belong;  
a signal for that purpose, and  
ch ship without possessing  
g him so to do, or employing  
y an unqualified person to  
ry such offence, in addition  
y before specified, if the Trinity  
riting under their common  
r is to be at liberty to pro-  
f such additional penalty, the  
e 5*l.* for every  
such ship. (Sec. 376.)  
to insure constant Supply of  
ngeness.—Subject to any alter-

tion to be made by the Trinity House, a sufficient  
number of qualified pilots shall always be ready  
to take charge of ships coming from the westward  
part Dungeness; and the Trinity House shall  
make such regulations with respect to the pilots  
under their control as may be necessary to provide  
for an unintermitted supply of qualified pilots for  
such ships, and to insure their constant attend-  
ance upon and due performance of their duty both  
by night and day, whether by cruising between  
the South Foreland and Dungeness, or by going off  
from shore upon signals made for the purpose, or  
by both such means, or by any other means, and  
whether in rotation or otherwise, as the Trinity  
House think fit. (Sec. 377.)

Ship coming past Dungeness without Pilot to take  
the first qualified Pilot who offers.—Subject to any  
alteration to be made by the Trinity House, every  
master of any ship coming from the westward,  
and bound to any place in the rivers Thames and  
Medway (unless she has a qualified pilot on board  
or is exempted from compulsory pilotage), shall,  
on the arrival of such ship off Dungeness, and  
thenceforth until she has passed the South Buoy  
of the Brake, or a line to be drawn from Sandown  
Castle to the said buoy, or until a qualified pilot  
has come on board, display and keep flying the  
usual signal for a pilot; and if any qualified pilot  
is within hail, or is approaching and within  $\frac{1}{2}$  mile,  
and has the proper distinguishing flag flying in  
his boat, such master shall, by heaving to in pro-  
per time or shortening sail, or by any practicable  
means consistent with the safety of his ship, facilitate  
such pilot getting on board, and shall give  
the charge of piloting his ship to such pilot; or if  
there are two or more of such pilots offering at  
the same time, to such one of them as may, ac-  
cording to the regulations for the time being in  
force, be entitled or required to take such charge;  
and if any such master fail to display or keep  
flying the usual signal for a pilot in manner  
hereinbefore required, or to facilitate any such  
qualified pilot as aforesaid getting on board  
as hereinbefore required, or to give the charge  
of piloting his ship to such pilot as before men-  
tioned, he shall incur a penalty not exceeding  
double the sum which might have been de-  
manded for the pilotage of his ship, such penalty  
to be paid to the Trinity House, and to be carried  
to the account of the Trinity House Pilot Fund.  
(Sec. 378.)

Exemptions from compulsory Pilotage.—The fol-  
lowing ships, when not carrying passengers, shall  
be exempted from compulsory pilotage in the  
London district, and in the Trinity House out-  
er districts; viz. :—

1. Ships employed in the coasting trade of the  
United Kingdom :
2. Ships of not more than 60 tons burden :
3. Ships trading to Boulogne or to any place  
in Europe north of Boulogne :
4. Ships from Guernsey, Jersey, Alderney, Sark,  
Man, which are wholly laden with stone being  
the produce of those islands :
5. Ships navigating within the limits of the  
district to which they belong :
6. Ships passing through the limits of any  
pilotage district on their voyages between two  
ports both situate out of such limits, and not  
bound to any place within such limits, nor  
stopping therein. (Sec. 379.)

#### Rates of Pilotage (Trinity House).

Rates of Pilotage.—Subject to any alteration to  
be made by the Trinity House, there shall con-  
tinue to be paid to all Trinity House pilots, in  
respect of their pilotage services, such dues as are

immediately before the time when this Act comes  
into operation payable to them in respect of such  
services. (Sec. 380.)

Certificate of Payment of Pilotage to be given.—  
Subject to any alteration to be made by the  
Trinity House, the collector of customs shall, on  
receiving any pilotage dues in respect of foreign  
ships, give to the person paying the same a receipt  
in writing; and no officer of customs in the port  
of London shall grant a clearance or transire for  
any such foreign ship as aforesaid without the  
production of such receipt; and if any such ship  
attempts to go to sea without such clearance or  
transire, any such officer may detain her until the  
said receipt is produced. (Sec. 382.)

Application of such Moneys by Trinity House.—  
Subject to any alteration to be made by the  
Trinity House, the said collector shall pay over  
to the Trinity House the pilotage dues received  
by him in respect of any foreign ship; and the  
Trinity House shall apply the same in manner  
following:—

1st, in paying to any pilot who may bring  
sufficient proof of his having had the charge of  
such ship such dues as would have been payable  
to him for such pilotage service if the ship had  
been a British ship, after deducting therefrom the  
poundage due to the Trinity House :

2nd, in paying to any unlicensed person who  
may bring sufficient proof of his having, in the  
absence of a licensed pilot, had the charge of such  
ship, such amount as the Trinity House may  
think proper, not exceeding the amount which  
would under similar circumstances have been  
payable to a licensed pilot, after deducting  
poundage :—

And 3rd, shall pay over to the Trinity House  
Pilot Fund the residue, together with all pound-  
age deducted as aforesaid. (Sec. 383.)

Settlement of Difference as to Draught of  
Ship.—Whenever any differences arise between  
the master and the qualified pilot of any ship  
trading to or from the port of London as to her  
draught of water, the Trinity House shall, upon  
application by either party, made, in case of a  
ship inward-bound, within 12 hours after her  
arrival or at some time before she begins to dis-  
charge her cargo, and in the case of a ship out-  
ward-bound before she quits her moorings, appoint  
some proper officer who shall measure the ship,  
and settle the difference accordingly; and there  
shall be paid to the officer measuring such ship,  
by the party against whom he decides, the follow-  
ing sums, viz. 1*l.* 1*s.* if the ship be below and  
10*s.* 6*d.* if the ship be above the entrance of the  
London Docks at Wapping. (Sec. 384.)

#### Pilot Fund (Trinity House).

Payments to be made to the Pilot Fund.—Subject  
to any alteration to be made by the Trinity House,  
there shall continue to be paid to them, and  
carried over to the Trinity House Pilot Fund, the  
sums of money following, viz. :—

(1.) A poundage of 6*d.* in the pound upon the  
pilotage earnings of all pilots licensed by the  
Trinity House :

(2.) A sum of 3*l.* 3*s.* to be paid on January 1  
in every year by every person licensed by the  
Trinity House to act as pilot in any district not  
under the superintendance of sub-commissioners,  
or in any part of such district :

And any qualified pilot giving a false account of  
his earnings, or making default in payment of  
any sum due from him under this section, shall  
forfeit double the amount payable, and shall  
further be liable, at the discretion of the Trinity  
House, to suspension or dismissal. (Sec. 385.)

**Application of Fund.**—Subject to any prior charges subsisting thereon, the Trinity House Pilot Fund shall be chargeable in the first instance with such expenses as the Trinity House may duly incur in performing their duties in respect of pilots and pilotage, and after payment thereof shall be administered by the Trinity House for the benefit of such pilots licensed by them after October 1, 1853, as are incapacitated for the performance of their duty by reason of age, infirmity, or accident, or of the widows and children of pilots so licensed, or of such incapacitated pilots only. (Sec. 386.)

**Appointment of Sub-Commissioners by Trinity Houses of Hull and Newcastle.**

Section 387 authorises the corporations of the Trinity Houses of Hull and Newcastle to appoint sub-commissioners for the purpose of examining pilots in all districts in which they have been used to make such appointments.

**Saving of Owners' and Masters' Rights.**

**Limitations of Liability of Owner where Pilotage is compulsory.**—No owner or master of any ship shall be answerable to any person whatever for any loss or damage occasioned by the fault or incapacity of any qualified pilot acting in charge of such ship within any district where the employment of such pilot is compulsory by law. (Sec. 388.)

**Account of the Rates charged for the Pilotage of Vessels, and of the other Charges affecting them in the undermentioned Ports.**

**ABERDEEN.**

**Tonnage Duty.**

- Class 1.—For all vessels to or from any place between Flamborough Head on the southward, and Cape Wrath on the north, excepting vessels passing through the Cabotage and Forth and Clyde Canals, but including the Orkney and Shetland Isles, per register ton 0 2
- Class 2.—To or from all other ports or places in Great Britain and Ireland 0 4
- Class 3.—To or from all parts of Europe to the northward (Gibraltar, including the Canaries, Western Islands, Madeira, Azores, Barbary, Jersey, Alderney, Porto, the Faeroe Isles and Iceland, also the whole of the Baltic and White Seas 0 9
- Class 4.—All parts on the eastern coast of North America, including Greenland and Davis' Straits fisheries, all parts within the Straits of Gibraltar and W. coast of Africa, as far S. as the Tropic of Cancer 1 0
- Class 5.—The West Indies, and all parts within the Tropics of Capricorn and Cancer 1 6
- Class 6.—All vessels navigating to the southward of the Tropic of Capricorn, and all other parts of the world 2 0

**Leading Lights, Tides, Pier Light, and Flag Dues.**

**Ballast.**—All ships or vessels furnished with ballast by the Aberdeen Harbour Commissioners pay 1s. per ton.

Ballast put on board 1s. per ton, discharged 6d., and 4d. per hour for each man attending the lighter.

Vessels to pay half dues on first voyage, if sail-

ing in ballast; but if landing goods, to pay full dues.

Vessels entering the harbour for safety, or windbound, and not breaking bulk, to pay half dues; but if they break bulk, or take in goods (stores for their own use excepted), to pay full dues.

One arrival and one sailing to constitute a voyage.

Vessels remaining in the harbour after 3 calendar months (and 14 days allowed for loading and discharging) to pay 1d. per register ton per calendar month, and for each part of a month, in advance.

It shall be in the option of the trustees to charge either the dues on the voyage, inwards or outwards, at the rates specified in the foregoing table, according to the distance; and if the charge be made on the voyage outwards, there shall be deducted from it the amount of dues that may have been previously paid on the voyage inwards; but if such vessels sail in ballast, they shall be charged with dues on the inward voyage only.

Exemptions for shipping, not including loading, lights &c. or pilotage—

All open boats under the burden of 10 tons to be exempted from dues.

All ships, steamers, or vessels having made 50 voyages in any one year, from January to December inclusive, shall pay no more harbour dues for any additional voyages made by them within the same year.

Vessels sailing from the harbour and put back by stress of weather, or other cause, without having accomplished the voyage, shall not be liable in additional dues for such returns.

All ships or vessels belonging to, or exclusively employed in the service of, her Majesty, the Customs, Excise, or Post-office, or of the Commissioners of the Northern Lighthouses, or of the Corporation of the Trinity House of Deptford Strand, to be exempted from dues.

Vessels bona fide employed in the white fishery to be exempted from the payment of harbour dues, provided they have no cargo on board but the fish caught, and their stores and fishery implements.

**AYR.**

**Tonnage Dues.**

**Pilotage.**

	£ s. d.
Outside the Black Head, or outside the buoy of the Brigs, to the Whitehouse Roads:—	
Vessels of 300 tons and upwards	2 3 0
above 100 and under 300 tons	1 11 6
not exceeding 100 tons	1 0 0
Outside the Grey Point, or outside Kilnot Point, to the Whitehouse Roads:—	
Vessels of 300 tons and upwards	1 1 0
above 100 and under 300 tons	0 15 0
not exceeding 100 tons	0 10 0

These charges are for out-pilots, stationed by the corporation at Groomsport, Donaghadee, Carrickfergus, and Island Magee, for the accommodation of strangers to the port, but it is optional with the masters of vessels to employ them or not.

**Mooring Buoys.**

At Garmoye, vessels under 300 tons, per week	0 10 0
At Garmoye, vessels 300 and not exceeding 500 tons, per week	1 0 0
At Garmoye, vessels 500 tons and upwards, per week	0 15 0
At the quays, per ton	0 0 1
In the old channel, per ton	0 0 1

**Sand Ballast.**

For every ton delivered at any place between the Pool of Garmoye and Belfast Bridge	0 1 4
For every ton delivered in the Pool of Garmoye, or below it towards the sea	0 2 0
Foreign vessels to be charged one-third part more.	
For every ton delivered at any vessel at the ballast wharf	0 1 6

**Stone Ballast.**

Common stone ballast, per ton	0 2 6
Small sea stone for cotton vessels, per ton	0 3 0
An extra charge of <i>6d.</i> per ton if sent from the quays to Garmoye.	

**Quayage at the Corporation Quays.**

	£ s. d.
On vessels from foreign ports, per ton	0 5 0
On vessels coastways, per ton	0 5 0
On all vessels loading outwards, per ton	0 5 0
On lighters loading or discharging, each	7 0

Vessels discharging from one to the other pay half quayage.

Vessels are charged half quayage when loaded to the beams only; if above the beams, whole quayage.

Steamers to pay per special agreement.

**Local Lights or Beacons.**—No charge.

**Note.**—Foreign vessels belonging to countries having treaties of reciprocity with Great Britain are charged with the like rates as are paid by British vessels to this corporation.

**BENWICK.**

**Tonnage Dues.**

Every vessel trading between Benwick and any place between Sandeford and that port and Fifema	1d. per ton
Between the Humber and Aberdeen	1½ "
Between the N. Foreland and Shetland	2d. "
Any other place in Great Britain, or any place in Ireland	2d. "
Any place on the coast of Europe between Dunkirk and the North Cape	2d. "
Any place in the Baltic S. S., or on the coast of Europe between Dunkirk and the Straits of Gibraltar	3d. "

Porthead, Kingroad, Hungroad, or Broad Pill, the sums following, viz.—for a tow-boat, 6s.; for a yawl, 3s.

And he shall receive for every boat used in towing, unmooring, and mooring any ship or vessel from either of the following places to any part of such places, viz.—Porthead, Kingroad, Pill, or Hungroad; or for unmooring, new berthing, and again mooring any ship or vessel in either of the said last-mentioned places, the sum following, viz.: for every yawl, 2s. 6d.

And every man who shall be engaged or be discharged at Hungroad or Pill, without being employed to assist in mooring or unmooring, shall be entitled to, for his fee or wages, 2s. 9d.; and the pilot shall be entitled, for the boats not employed in so mooring and unmooring, for a tow-boat, 4s.; and for a yawl, 2s. 6d., and no more.

The pilot of all vessels above 800 tons shall be allowed for an assistant pilot in the river pilotage, the sum of 10s.—such an assistant being a licensed pilot; in default whereof only 3s. 9d. shall be paid for such assistant.

There shall be allowed for each horse used in towing any ship or vessel a sum not exceeding 6s., and to the driver 1s.

If under 100 tons register burden . . . . . 1s.  
If 100 tons and under 200 . . . . . 2s.  
If 200 tons and upwards . . . . . 3s.

And that such sums shall be added to the pilotage note and paid therewith by the master and commander, merchant, or owner of such ship or vessel.

In case any ship or vessel shall be in distress, either in the outward or homeward bound voyage, and any pilot or men shall run an imminent risk or hazard in going to the relief of such ship or vessel, the pilot or men assisting shall have reasonable satisfaction for the assistance so given, according to such assistance, and the risk and hazard run; and in case of a difference of opinion as to the amount of such satisfaction, the same to be ascertained by two of her Majesty's justices of the peace acting for the city and county of Bristol.

If any licensed pilot shall proceed with any ship or vessel as far as Minehead, Combe, or Lundy Island, and shall be forced by stress of weather to return to Kingroad or Porthead, he shall be allowed one-third part of the channel pilotage, according to the distance such vessel may have reached before she shall have put back.

Each pilot shall, within two days after his return from a voyage to the westward, return to the haven; after the number of the skiff so returned from the westward, the time of her sailing, the time of her return, the distance she has been, and the names of the persons employed in navigating her, and all the material particulars of the voyage; and each pilot who shall neglect to make such return, or shall make a false return, shall for each offence forfeit and pay any sum not exceeding 40s.

ADDENDA TO PILOTAGE.

From Lundy Island to Swansea.—A uniform charge of 4l. 4s.

From Lundy Island to Bridgewater.

If such vessel be under 100 tons register . . . . . £ s. d.  
If 100 tons and under 200 . . . . . 2 15 0  
If 200 . . . . . 3 10 0  
If 300 . . . . . 4 7 6  
If 300 tons and upwards . . . . . 5 5 0

From Lundy Island to Cardiff.—The same rates as to Bridgewater.

From Lundy Island to Newport.—The same rates as to Kingroad.

CARDIFF.—See DOCKS, CARDIFF.

N.B.—Steam vessels do not at present come within 1½ mile of the quays. No distinction between coasting and foreign trade as to tonnage duty.

*Tonnage Duty.*—Sailing vessels, 6d. per ton registered tonnage.

Steam vessels, 1½d. per ton registered tonnage.

*Ballast.*—British vessels, 1s. 2d. per ton, on quantity delivered on board.

*Vessels taking Refuge.*—British and foreign, under 50 tons registry, 5s. per vessel, British and foreign, 50 and under 100 tons registry, 10s. per vessel.

British and foreign, above 100 tons registry, 20s. per vessel.

## DUNDEE.

## Tonnage Rates and Duties.

	per register ton
For all vessels navigating to the southward of the Tropic of Capricorn	£. d.
Between the Equator and the Tropic of Capricorn	1 6
Between the Tropic of Cancer and the Equator	1 5
To and from any port in North America, Greenland, Davis's Straits fisheries, and all within the Straits of Gibraltar	0 8
To and from any port in Europe to the north of Drontheim in Norway, and to or from the Azores, Madaga, or Feroe Islands, and the west coast of Africa, between the Tropic of Cancer and the Straits of Gibraltar	0 7
To and from any port on the coast of Europe, between Gibraltar and Drontheim in Norway, including both these ports, and all ports in the Baltic	0 5
To or from any port in Great Britain or Ireland, including the islands of Guernsey, Jersey, Alderney, Sark, Man, the Shetland Islands, and Orkney	0 3
All vessels loaded with coals, lime, or manure only, from any port in Great Britain &c., excepting Scotland	0 2
All vessels loaded with coals, lime, or manure only, from any port in Scotland	0 1 6
All vessels employed in the river Tay, carrying goods and entering the precincts of the port or harbour of Dundee	0 1 6
All steam vessels from any port in Great Britain or Ireland, including the islands of Guernsey, Jersey, Alderney, Sark, Man, the Shetland Islands, and Orkney, carrying passengers and their baggage exclusively	0 2
All steam vessels (from any port in Great Britain) employed on the river Tay, carrying passengers and their baggage exclusively, and vessels trading from the harbour, or carrying passengers to any port within the precincts	0 1
Vessels sailing outwards and coming under the first two classes pay 1s. instead of 1s. 6d. and 1s. 3d.	

All steam vessels carrying goods and passengers to pay the same rates as sailing vessels.

All vessels from any part of the river Tay, not exceeding 30 tons register, withstones, and having no other goods on board, and delivering their cargoes in the precincts of the said harbour, to pay 2s. each voyage in name of tonnage dues, and 1s. for every 20 tons, or part of 20 tons, additional.

All vessels from any part of the river Tay, with sand, and having no other goods on board, to pay 1s. for each trip in name of tonnage dues.

It shall be in the option of the trustees to charge either the tonnage dues on the voyage inwards, or on the voyage outwards, at the rates specified in the above schedule; and if the charge be made on the voyage outwards, there shall be deducted from it the amount of the dues that may have been previously paid on the voyage inwards; but if such vessels sail in ballast, they shall be charged with dues on the inward voyage only.

All vessels launched within the harbour of Dundee, or precincts thereof, to pay half dues on the voyage outwards, if sailing in ballast; but if loaded in whole or in part, or taking passengers, to pay full dues.

All vessels to be permitted to enter the harbour of Dundee for safety, by payment of one-half of the tonnage dues; but if such vessels shall remain in the harbour, or any of the docks, beyond the space of 21 days, or shall take goods on board (stores for their own use excepted), or break bulk, they shall be liable in the full tonnage dues.

All vessels remaining in harbour to pay, after 2 months, 1d. per register ton per month, in advance, when they are lying in any of the tide-harbours, and 1½d. per ton when lying in any of the docks.

Each vessel, with the exception after-mentioned, entering the harbour and loading or unloading

goods or ballast within the same, or performing both operations, before leaving the harbour to pay, in name of plank-money (whether a plank be used or not), as follows:—

Vessels not exceeding 10 tons	£. d.
exceeding 10 tons and not exceeding 50	1 0
50	1 6
100	2 0
150	2 6
200	3 0
250	3 6
300	4 0
350	4 6
400 tons and upwards	5 0

All vessels loaded with lime, coals, or manure only, and discharging their cargoes within the precincts of the harbour, to the eastward of the Road Yards, or to the westward of the Magdalen Yard, to pay one-half of the dues in the above schedule.

Vessels with fish of any kind for curing, per ton register, or admeasurement, 2d.

## Exemptions.

All vessels leaving the harbour for the purpose of taking on board ballast in any part of the river Tay, and returning to the said harbour, or precincts thereof, with ballast, shall not be liable in shore dues for such return.

Any vessel sailing from the port of Dundee, and put back by stress of weather, or any other cause, without having accomplished her voyage, shall not be liable in additional dues for such return.

Vessels partly loaded with coals, lime, or manure, or in ballast, but having dunage deals or storewood on board, which have been used as such, and are intended to be unloaded; or having goods on board, which are neither to be landed, nor re-shipped into any other vessel within the harbour or precincts, shall be charged the same dues as vessels wholly loaded with coals, lime, or manure.

All vessels arriving in ballast for the purpose of being repaired in the graving-dock, or on the patent slip, and departing in ballast, shall be exempted from tonnage dues, provided such vessels enter for the dock or slip immediately on arrival, and sail within 1 month after leaving such graving-dock or patent slip; otherwise to be charged 1d. per register ton per month in advance when they are lying in any of the tide harbours, and 1½d. per ton when lying in any of the docks.

Vessels with cargoes, arriving for the express purpose of being repaired in the graving-dock or on the patent slip, shall not be liable in shore dues, provided they neither take goods on board (stores for their own use excepted) nor break bulk, except to lighten for getting into the dock, or upon the slip, and that they shall again reload all the goods so landed.

All vessels loading or unloading goods within the precincts of the harbour of Dundee, to the eastward of the Road Yards, and the westward of the Magdalen Yard, shall be exempted from payment of plank-money.

All vessels not carrying passengers arriving in the harbour in ballast, and departing again in ballast, shall be subject only in half dues; but if such vessels, after arriving in ballast, shall take in cargoes, or parts of cargoes, before their departure, they shall be liable in full dues.

## Table of Rates for Pilots licensed by the Trustees of the Harbour of Dundee.

For vessels to or from foreign ports, boarded at the distance of not more than 3 miles outward of the Fairway Buoy of Tay, or at any point between that distance and the said buoy, and from thence to and including the harbour of Dundee, 3s. 6d. per foot, according to the draught of water.

EXETER.

For vessels to or from foreign, boarded between the Fairway Buoy of Tay and the buoy on the Elbow-end, marked No. 3, and thence to and including the Buoy of Dundee, 2s. 6d. per foot.

For vessels to or from foreign, boarded between the Elbow-end buoy, No. 3, and Broughty Castle, and from thence to and including the harbour of Dundee, 1s. 8d. per foot.

All coasting vessels boarded at the respective distances above mentioned to pay as follows, viz.— vessels boarded not more than 3 miles outward of the Fairway Buoy of Tay, to pay 1s. per foot; between the Fairway Buoy of Tay and the Elbow-end Buoy No. 3, 2s. per foot; and between the Elbow-end Buoy and Broughty Castle, to and including the harbour, 1s. per foot.

All vessels, whether foreign or coasting, boarded above Broughty Castle, to and including the harbour, 1s. per foot.

In the event of having to stop in Carolina Roads for want of water in the harbour, or otherwise, the master of the vessel shall have it in his option either to dispense with the services of the pilot, or detain him on board till the vessel can enter the harbour. In the former case the pilot shall be entitled to full pilotage dues; in the latter, the pilot shall be entitled, besides these dues, to 5s. for each day, or part of a day, in name of river fees.

When pilots enter the river on board vessels bound for places above Dundee, the river or sea pilotage, including the harbour, shall be payable in full by such vessels when moored or off Carolina Roads.

All vessels boarded between 3 miles and 6 miles beyond the Buoy of Tay to pay 10s. 6d. additional for distance money; and vessels boarded 6 miles beyond said Buoy of Tay to pay 15s. of distance money.

In case of dispute, the distance to be ascertained by the beatings of the different headlands when the vessel was boarded.

Tay Light Duties (local).

The 'Fraternity of Masters and Seamen of Dundee, incorporated by Royal Charter,' possess the right, by charter, to levy, inter alia, the following dues on vessels arriving within the Firth of Tay, being the whole charges presently made in respect of said right; and those for and in name of the expense an erection and maintenance of 4 light-houses owned exclusively by said fraternity, 2 of which are situated on the north side and 2 on the south side of said Firth; and of certain buoys placed in the Fairway thereof:—

On every British ship coming within the entrance of the Firth of Tay, whether with cargo on board or in ballast, or driven therewithin by stress of weather or otherwise, at the rate of 1s. for every 10 tons register; under 10 tons, charged at the same rate.

On every foreign ship, privileged, the same rate of dues when in either of the above situations; but the Trinity House makes good an equal amount to the said incorporation, in consequence of the half charge being only made on foreign vessels so privileged.

On every foreign ship, unprivileged, situated as above, the rate of charge is 2s. for every 10 tons register; under 10 tons charged at this rate.

No dues are levied on British ships, nor on foreign vessels privileged or otherwise, leaving the Tay on their outward voyage, whether laden or in ballast, excepting in the case of new ships, built within the ports of Dundee and Perth respectively, which pay the above dues on British shipping when leaving on their first voyage, whether foreign or coasting.

Buoyage.—½d. per register ton.

Harbour Dues.—1s. 2d. per vessel: the same charge at the creeks.

Canal Dues.—Vessels under 110 tons register, 4d. per ton; 110 tons and over, 6d.; and besides 2½d. per register ton for horse trackage.

Ballast.—4d. per ton, payable to the lord of the manor.

Pilotage.—As per annexed rate, established under Act 6 Geo. IV. c. 125, but amended under sanction of the Trinity Board of July 1864.

Vessels coasting, or in the foreign trade, are liable to the same charges, except pilotage.

Vessels taking shelter only, are not liable to any charges beyond pilotage.

Definition of Limits.—From Lyme to Bob's Nose, and vice versa, and to and from mud and mud out of all ports and places within those limits.

The following are the rates of pilotage for ships in and over Exmouth Bar, to the moorings in the Bight at Exmouth, and out again over the Bar:—

TEIGNMOUTH.

Harbour Dues.—1d. per ton for every vessel.

Canal Dues.—Nil.

Ballast Dues.—Nil.

Pilotage.—As per annexed rate, established under Act 6 Geo. IV. c. 125, but amended under sanction of the Trinity Board of Nov. 1862.

Vessels coasting, or in the foreign trade, are liable to the same charges, except pilotage.

Vessels taking shelter only are not liable to any charge beyond pilotage.

Masters of ships taking a pilot off the Bill of Portland or the Start (which is optional to the mate) are to pay, beyond the pilotage, from Bob's Nose, or Lyme, as follows, viz.:—

Coasters and coasters	s.	d.
Ships from foreign parts	3	3
And proportionally for intermediate distances.

	Payable each voyage on passing Hamgate, except on coasting vessels, which pay once a year, under the authority of 31 Geo. III. c. 74.								

**GALWAY.**

*Dues payable to the Harbour Commissioners on all Vessels, whether British or Foreign, entering the Harbour, whether for Refuge or to Discharge their Cargoes in whole or in part, or in Ballast.*

Vessels, Coasting or Foreign, delivering whole or part of Cargo	Vessels taking Refuge	Lights	Ballast	Authority
6d. per ton register	No charge, except in using the docks and quays; in such case 6d. per ton register	No charge	No charge	1) Geo. IV. nos. 1830

Class 3 of harbour rates table, and passing to or re-passing from Glasgow with passengers only, are chargeable at the rate of 1s. 6d. per ton per trip, or 2s. 6d. per ton per voyage.

Class 3A. All steamers plying to or from ports or places, as per Class 4 of harbour rates table, when with passengers only, are chargeable at the rate of 1s. 6d. per ton per trip, or 2s. 6d. per ton per voyage, and so on for steamers plying to or from ports or places, as per Classes 5 and 6 of harbour rates, according to the table.

All British steamers entering the harbours to take in their machinery, or for repairs of the same, shall pay 8d. per ton for harbour dues.

The rates in the foregoing table are exclusive of the harbour police rates on shipping, and of the town dues for anchorage.

Harbour Police Rates		Per reg. ton
In.	Out.

		Two-thirds of the above.		

Harbour Dues.

On all vessels of 30 tons or upwards entering the harbour by sea 1d. per register ton, except vessels in ballast, fishing vessels, and yachts, 1d. per ton. Ten payments in one year, unless in cases of steamers and river barges, clear from further payments in that year.

HULL.

Dock and Harbour Dues payable to the Dock Company at Kingston-upon-Hull.

For every ship or vessel coming to or going between the port of Kingston-upon-Hull and any port to the westward of Yarmouth, in Norfolk, or any port to the southward of Holy Island, for every ton	s. d.	0 2
For every ship or vessel coming to or going between the port of Kingston-upon-Hull and any port or place between the North Foreland and Shetland, on the east side of England, except as above, for every ton, the sum of	0 3	
For every ship or vessel trading between the said port of Kingston-upon-Hull and any other port or place in Great Britain, not before described, for every ton, the sum of	0 5	
For every ship or vessel trading between the said port of Kingston-upon-Hull and any port or place in the Baltic Seas, and all other ports or places above the Sound, for every ton, the sum of	1 0	
For every ship or vessel trading between the said port of Kingston-upon-Hull, and any port or place in Denmark, Sweden, or Norway, below Elsinore, or any port or place in Germany, Holland, Flanders, France to the eastward of Ushant, Ireland, the islands of Guernsey and Jersey, for every ton, the sum of	0 6	
For every ship or vessel trading between the said port of Kingston-upon-Hull and any island or port or place of Europe to the westward of Ushant, without the Straits of Gibraltar, for every ton, the sum of	1 0	
For every ship or vessel trading between the said port of Kingston-upon-Hull and any port or place in the West Indies,		

North or South America, Africa, Greenland, or any place to the eastward of the North Cape of Norway, all places within the Straits of Gibraltar, and all islands and places in the ocean to the southward of Cape St. Vincent, not hereinbefore named, for every ton, the sum of

For every foreign ship or vessel coming to or going (with merchandise) from any of the above-named ports or places, double the rates, tonnage, or duties above-mentioned, unless the said ship belong to British owners.

For every ship or vessel sailing coastwise or otherwise, or coming into the said haven in ballast to be laid up, for every ton (trossing duty included), the sum of

N.B.—River craft using the docks and harbours at Hull are not charged any tonnage dues, except in cases where they come from and go to other ports.

Mem.—It is important to note that the duties here given include any period of time during which a vessel may lie in the docks. It may also be stated that there is no transhipping duty on goods at Hull. There is no general dock-rate on goods; but for merchandise landed on the quay, wharfage is charged. The importer, however, may remove goods by lighters &c, without placing them on the quays; and the quays are perfectly open to the merchant's labourers, if he choose to land them there, so that the charge of the company may, if the merchant and shipowner so desire, be strictly limited to the tonnage rates on the vessel, as stated in the above table.

An Account of Charges levied on Shipping by the Corporation of Hull for Buoyage and Beaconage.

Vessels under 40 tons	s. d.	1 0
And for every additional 10 tons	0 6	

A Scale of Ancient and Usual Dues payable to the Corporation of Hull, upon Ships and Vessels Entering Inwards and Clearing Outwards, Foreign and Coastwise.

LONDONDERRY.

**Tonnage.**—Collected under 2 & 3 Wm. IV.

All ships from foreign parts, 3d. per ton; coasters, 2d. per ton; vessels in distress, or taking refuge from stormy weather, free; vessels in ballast, free; vessels under 20 tons, free; no deduction on vessels delivering their cargo in part.

**Pilotage.**—Collected under 2 & 3 Wm. IV. and reduced by by-laws to the following rates, for ships of every description, or steamboats, viz.:

**INWARDS.**—(Per foot, and inches in proportion.)

7 feet and under to pay 1s.	2	0
Above 7 feet and under 8 to pay at the rate of	2	0
8	2	2
9	2	4
10	2	8
11	2	8
12	3	0
13	3	4
14	3	8
15 feet and upwards at the rate of	4	0

**OUTWARDS.**—(Per foot, and inches in proportion.)

7 feet and under to pay 10s. 6d.	1	6
Above 7 feet and under 8 to pay at the rate of	1	6
8	2	0
9	2	8
10	2	8
11	2	8
12	2	8
13	3	0
14	3	4
15 feet and upwards at the rate of	3	6

Vessels of 80 tons burden, per register, and under, shall pay 10s. inward pilotage, and 6s. outward pilotage; above 80 tons and not exceeding 40 tons, if bound coastwise, and sailing in ballast, only 8s. outward. Boats which have discharged potatoes, under 20 tons, 3s. 6d. outward pilotage, if British. Wind-bound vessels half pilotage in and half pilotage out, to or from Moville or Quigley's Point. Vessels towed by stenners ½ off, if demanded by the master or owner, or by any person for them, on producing a proper order.

All vessels laden with bark, under 120 tons, to pay 6d. per foot extra; 120 tons and not exceeding 150 tons, 9d.; exceeding 150 tons, 1s. per

foot extra. All ships from foreign parts, or, if bound to foreign ports, having on board half their registered tonnage of cargo, or with passengers, to pay 8d. per foot extra, in addition to the above charges.

Vessels which have cleared the Lough, and by stress of weather obliged to return:—It is hereby directed, that as these vessels have paid the full amount of pilotage, they shall pay but ½ in, and ½ out, of the amount of their outward pilotage, to be ascertained by the master's account from the collector of pilotage.

Pilots detained on board vessels, the sum of 2s. 6d. per day; when the measurement exceeds 150 tons, 3s. 6d. per day; detaining them unnecessarily in Derry, the like amount.

**Ballast.**—Collected under the 2 & 3 Wm. IV. Masters of vessels may procure their own ballast in the best and cheapest manner; but those who may wish to be supplied by the ballast office pay, for gravel, 1s. 3d. per ton; sand or sufficient ballast, 1s. per ton.

**Anchorage.**—Collected from time immemorial. Vessels with one mast, 1s. 6d.; vessels with 2 masts or more, 2s. 6d. Vessels unless they come to the ship quays, are not charged.

**Merchants' Quays.**—Vessels arriving or sailing with a cargo are free; and the owners of the goods pay the wharfage.

Vessels arriving in ballast for the purpose of repairing, pay 2d. per ton on the register tonnage, for the berth and use of the quays.

Vessels coming to the quays for the purpose of discharging or taking in ballast, pay 2d. per ton on the quantity discharged or taken in.

Vessels arriving in ballast for the purpose of taking passengers, pay 2d. per ton on the register tonnage, for the berth and use of the quays, and the passengers' luggage is free.

Vessels that have discharged their cargoes, and take in ballast for the purpose of taking passengers, pay 2d. per ton on their register tonnage; the ballast and the luggage are free.

LYNN.

Town dues, foreign and coasting vessels, are as follows:—

Revenue, per ton delivered	s. d.
Keelage, ditto	0 1
Anchorage, per vessel	0 6
Ballast, per vessel, to foreign parts and not belonging to Lynn	3 4
Ballast, for every 3 tons delivered. (vide Ballast.)	0 4

These dues are not payable from vessels taking refuge or discharging their cargoes for the purpose of repairs, and are under the superintendence of the corporation.

Mooring Dues.

1d. per ton delivered; unprivileged vessels double.

Not chargeable upon vessels taking refuge &c. Under the control of the commissioners under the Pilot Act.

Pilotage.

To 16 feet draught of water	s. d.
Exceeding 10 feet to 12 feet	1 9
12 14 ft. 6 in.	2 0
14 ft. 6 in. to 16 ft.	2 6

The rate is the same whether loaded or in ballast, and is chargeable each time up and away, as well as on vessels taking refuge or in distress. The Company of Pilots is under the control of the commissioners under the Pilot Act.

Ballast.—Ballast is supplied to vessels by private individuals at 1s. 3d. per ton. This charge is independent of that of ballast, under the head of town dues, which is payable from all vessels not belonging to freemen of the borough of King's Lynn.

MONTROSE.

The dues and charges levied under the 1st Vict. c. 99 are the following:—

- Vessels from Foreign Parts.*
1. For all vessels sailing to the southward of the Tropic of Capricorn, per register ton - 1 5
  2. Between the Equator and the Tropic of Capricorn - 1 5
  3. Between the Tropic of Cancer and the Equator - 1 0
  4. To and from any port in North America, Greenland, Davis's Straits Fisheries, and all within the Straits of Gibraltar - 0 8
  5. To and from any port to the north of Drontheim in Norway, or from Azores, Madeira, or Tenerife Islands - 0 7
  6. To and from any port between Gibraltar and Dunbarton, including Gibraltar, and from any port in the Baltic, per register ton - 0 5

On Coasting Vessels.

1. To and from any port in Great Britain or Ireland, including the islands of Guernsey, Jersey, Alderney, Sark, Man, the Shetland Islands, and Orkney - 0 3
2. All vessels laden with coals or lime only, from any port in Great Britain &c., excepting Scotland - 0 2
3. All vessels laden with coals or lime only, from any port in Scotland, and all vessels engaged in the herring trade - 0 2
4. All steam-vessels from any port in Great Britain, or places enumerated in No. 1, carrying passengers and their luggage actually on board - 0 2
5. All steam-vessels carrying goods and passengers to pay the same rates as sailing vessels.

It is the option of the harbour trustees to charge either the tonnage dues on the voyage inwards, or on the voyage outwards, at the rates specified in the above schedule, according to the distance; and if the charge be made on the voyage outwards, there shall be deducted from it the amount of the dues that may have been previously paid on the voyage inwards; but if such vessels sail in ballast, they shall be charged with dues on the inward voyage only.

All vessels with cargoes are permitted to enter this harbour for safety or convenience by payment of one-half of the tonnage dues; but if they shall take goods on board (stores for their own use excepted), or break bulk, they shall pay full tonnage dues.

All vessels remaining in harbour pay, after

2 months, 1d. per register ton per month in advance.

Plankage.—Each vessel entering the harbour, loading or unloading goods or ballast within the same, or performing both operations before leaving the harbour, to pay, in name of plank-money (whether a plank be used or not), as follows, viz:—

On vessels amounting to and not exceeding 20 tons	s. d.
exceeding 20 tons	1 0
100 "	1 5
200 "	2 0
300 "	2 5
400 "	3 0
500 "	3 5
600 tons and upwards	4 0

Local Lights and Beacons.—The harbour trustees are empowered by the before-mentioned Act to charge at the rate of 3d. per ton on vessels, for the support of the harbour lights and beacons; but, finding that a less rate would cover the expenditure, they reduced it to 2d. per ton.

Pilotage.—By virtue of the powers conferred on the harbour trustees, the following rates of pilotage were fixed by them, viz:—

Tons Register	First Boat		Second Boat	
	Inwards	Outwards	Inwards	Outwards
All under 40 tons	£ 0 6 0	£ 0 4 6	£ 0 5 0	£ 0 4 0
40 and under 50 "	0 7 0	0 5 0	0 6 0	0 5 0
50 " 60 "	0 8 0	0 6 0	0 7 0	0 6 0
60 " 70 "	0 9 0	0 7 0	0 8 0	0 7 0
70 " 80 "	0 10 0	0 8 0	0 9 0	0 8 0
80 " 90 "	0 11 0	0 9 0	1 0 0	0 9 0
90 " 100 "	0 12 0	0 10 0	1 1 0	1 0 0
100 " 120 "	0 13 0	0 11 3	1 2 0	1 1 0
120 " 150 "	0 14 0	0 12 6	1 3 0	1 2 0
150 " 175 "	0 15 0	0 13 9	1 4 0	1 3 0
175 " 200 "	0 16 0	0 14 6	1 5 0	1 4 0
200 " 250 "	0 17 0	0 15 6	1 6 0	1 5 0
250 " 300 "	0 18 0	0 16 6	1 7 0	1 6 0
300 tons and upwards	0 19 0	0 17 6	1 8 0	1 7 0

The third boat is paid the same as the second, and the pilot-master's charge is 6d. per mast on each vessel entering the harbour.

Ballast.—Put on board, 9d.; discharge, 3d.

NEWCASTLE.

Tonnage Dues.

200 " to 300 "	0	0	0
300 " to 400 "	0	0	0
400 tons and upwards	0	0	0

There is a charge made for what is called a keelage, of 1d. per ton upon the number of tons of goods shipped or landed, paid by consignees and under the authority of the merchants. This is paid by the masters of vessels on clearing, and we believe is very generally charged to the ship.  
 The following ballast charges are levied by harbour commissioners under Act 8 Wm. IV. c. 68—  
 Ballast discharged in dock, 1s. per ton; additional 5d. for water by night.  
 Vessels coming in in ballast pay only on the outward cargo.  
 The dues levied on vessels for discharging their ballast on the side of the river are 1/4d. per ton register on vessels coming from any place westward of the Holms Islands, and 1/4d. per ton on those places eastward of the Holms.

All ships drawing less than 8 ft. of water are to pay the same amount of pilotage as if they were of that draught.

The several pilotage rates herein specified are subject to a reduction of one-fourth part in respect of vessels propelled by steam, and vessels towed by steam vessels.

N.B.—Ships returning by distress or weather to pay half the common pilotage.

**Distance Pilotage.**—For every league without a line drawn from the Ram Head to the Mewstone, one-fourth part of the rate of pilotage chargeable on the vessel from sea to the Sound.

The foregoing rates are levied by authority of the Trinity Board, under 6 Geo. IV. c. 125, and were sanctioned November 1862.

There are no charges levied for local lights or beacons at this port.

There is no regulated charge for ballast, nor any Board appointed for its supply; the parties obtain it on the best terms they can from different quarters, the quarries here abounding with matter fit for the purpose.

**PORTSMOUTH.**

Harbour dues payable to the Corporation of the borough of Portsmouth, per Act 3 Vict., in respect of all ships or other vessels arriving and casting anchor, or making fast, in the harbour of Portsmouth, for each and every time such ship or other vessel shall enter or come into the harbour—

Below Duncannon, and nearer than Folkisirt or Bag and Bun Head	0 10	1 0	1 6	2 8	2 7	3 10

Every vessel of the above class entering said harbour between September 25 and March 25 pays for every foot of her draught as follows:

Every vessel entering said harbour between March 25 and September 25, which shall draw more than 6 feet and less than 12 feet water, shall pay as follows, viz.:

Every vessel of the above class entering said harbour between September 25 and March 25 shall pay for every foot of her draught the following rates, viz.:

Vessels taking refuge in this harbour are subject to no other charge than pilotage, at the above-named rates.

Vessels not exceeding 50 tons register, arriving from or sailing to any port in Ireland, are not required to take pilots or pay tonnage duty.

Vessels laden, two-thirds laden, or having 20 tons potatoes, without any other goods on board, arriving at the port of Waterford, and retailing same at the quay, are not charged any of the aforesaid rates and duties.

**Tonnage Duty.**

On British vessels with goods or ballast	3d. per reg. ton
coal laden	2d. "
50 tons register and upwards, from any port in Ireland	1d. "

**Water Bailiff's Fees.**

	late Currency
Tonnage Dues on British and foreign vessels, per ton	0 1
Anchorage for vessels not exceeding 20 tons register, each vessel	1 8
Ditto, exceeding 20 and not exceeding 50 tons register	2 6
Ditto, exceeding 50 tons register, and upwards	5 0

Colliers requiring the use of beams, scales, and weights, are supplied with same at the following rates, viz.:

For every vessel not exceeding 50 tons register, for use of each set of beams, scales, and weights	5s.
Ditto, exceeding 50 and not exceeding 100 tons register, ditto	4s.

For every vessel exceeding 100 and not exceeding 150 tons register, use of each set of beams, scales, and weights

150	200	250	"
350 tons and upwards	"	"	"

**WESTPORT.**

**Pilotage.**

From Clare Island to Dornick, being about 9 miles, and called the Out Pilotage, per vessel

From Dornick to the quay, vessels are conducted up and down by a river pilot, the charge per foot up, and the same down

**Harbour Dues, Quayage.**

Vessels taking in or delivering cargoes, pay per ton

Vessels coming in ballast and departing with cargo, per ton

N.B.—There is no charge for anchorage in any of the lower roads or harbour.

**Ballast.**—Delivered to vessels, at 1s. per ton. No charge on discharging from the vessel, the master paying the labourers himself, as per agreement.

**Lighterage.**

When large vessels stow their loading down the river, per ton of goods delivered

The foregoing charges, with the exception ballast discharged and lighterage, are levied prescription under the harbour commissioners Westport.

**WEXFORD.**

Dues and Charges	Tonnage	Ballast	Pilotage
For every vessel which shall enter within the limits of said harbour, and be entitled to the privileges of a British ship, upon every ton such vessel shall measure	5d. per ton		
For every vessel not so entitled	1s. "		
For every ton of ballast taken in by any vessel (though the Act levied 1s. 5d. per ton), there is however at present only levied		10d. per ton	
For every ton of ballast discharged from any vessel		2d. "	
For every vessel discharging and receiving cargo, upon every ton such vessel shall measure			5d. per ton
For every vessel that shall enter into the harbour or leave the same in ballast, or shall discharge her cargo, or any part thereof, without taking in any new cargo, or shall, without discharging her cargo or any part thereof, take in new cargo, then, in any of those cases, for every ton such vessel shall measure			6d. "
For every vessel taking refuge in the harbour			5d. "

Steam vessels liable only to one-half the aforesaid rates of pilotage.

were abolished by 24 & 25 Vict. c. 47; and all local exemptions (compensation being provided for) were abolished by 30 Vict. c. 15.

**PIMENTO, ALLSPICE, or JAMAICA PEPPER** (Fr. *poivre de Jamaïque*; Span. *pimiento de la Jamaica*; Ger. *nelkenpfeffer*; Ital. *pimento*). Nat. order *Myrtaceae*. The fruit of the *Eugenia pimenta*, a beautiful tree which grows in great plenty on the hills on the north side of Jamaica. The berries are spherical, and, when ripe, of a black or dark purple colour. But, as the pulp is in this state moist and glutinous, the berries are plucked when green; and being exposed in the sun to dry, they lose their green colour, and become of a reddish brown. They are packed in bags and hogheads for the European market. The more fragrant and smaller they are, the better are they accounted. They have an aromatic, agreeable odour, resembling that of a mixture of cinnamon, cloves, and nutmegs, with the warm, pungent taste of the clove. Pimento is used in medicine; but its principal use is in the seasoning of soups and other dishes. (*British Pharmacopœia*, 1867.)

'The returns,' says Mr. Bryan Edwards, 'from a pimento walk in a favourable season are prodigious. A single tree has been known to yield 150 lb. of the raw fruit, or 100 lb. of the dried spice; there being commonly a loss in weight of  $\frac{1}{4}$  in curing; but this, like many other of the minor productions, is exceedingly uncertain, and perhaps a very plenteous crop occurs but once in 5 years.' (Vol. ii. p. 372, ed. 1819.) The price of pimento in bond, in the London market, has varied of late years from 4*d.* to 5*d.* per lb.

At the period when Edwards's work was published, the annual imports of pimento from Jamaica, which supplies more than  $\frac{10}{100}$  of the pimento brought to England, amounted to about 672,000 lb.; the annual imports in 1833 amounted to 4,844,973 lb.; in 1841, they were only 1,013,400 lb. They have much exceeded this amount of late years. The imports into the United Kingdom during each of the 7 years ending with 1867 were:—

Years	cwt.	Years	cwt.
1861	30,455	1865	43,743
1862	30,192	1866	39,192
1863	26,299	1867	47,129
1864	44,915		

The duty on pimento was reduced in 1836 from 5*d.* to 3*d.* per lb., and in 1842 to 5*s.* per cwt. The duty was repealed in 1866. In 1867 its price averaged in the London market from 18*s.* 5*d.* to 18*s.* 10*d.* per cwt.

**PINCHBECK** (Ger. *tombak*; Dutch, *tombak*; Fr. *tambac*, *similor*; Ital. *tombacco*; Span. *tambac*, *tumbaga*). A name given to one of the many imitations of gold. By melting zinc in various proportions with copper or brass, some alloys result, the colours of which approach more or less to that of gold. This composition is frequently employed as a substitute for gold, in the formation of watch-cases, and various other articles of a like description. Pinchbeck is sometimes called *tambac*, and sometimes *similor*, and *petit-or*.

**PINE or FIR**. A species of forest tree, next, if not superior, to the oak, in point of utility and value. There are above 20 species of pine. They do not bear flat leaves, but a species of spines, which, however, are real leaves. They are mostly, though not all, evergreens; but the appearance of the tree, as well as the quality of the timber, varies with the species, and also with the situation in which it grows. Generally speaking, the timber is hardest and best in exposed, cold situations, and where its growth is slow. We shall

only notice those species the timber of which is most in use in this country.

1. **SCOTCH PINE** (*Pinus sylvestris*) is a native of the Scotch mountains, and of most northern parts of Europe; being common in Russia, Denmark, Sweden, Norway, and Lapland. It is straight, abruptly branched, rising in favourable situations to the height of 80 or 90 feet, and being from 3 to 4 feet in diameter. It is at perfection when 70 or 80 years old. The colour of the wood differs considerably; it is generally of a reddish yellow, or of a honey yellow, of various degrees of brightness. It has no larger transverse septa, and it has a strong resinous odour and taste. In the best timber, the annual rings are thin, not exceeding  $\frac{1}{16}$  inch in thickness; the dark parts of the rings of a bright reddish colour; the wood hard and dry to the feel, neither leaving a woolly surface after the saw, nor filling its teeth with resin. The best Norway is the finest of this kind, and the best Riga and Memel are not much inferior. The inferior sorts have thick annual rings; in some, the dark parts of the ring are of a honey yellow, the wood heavy, and filled with a soft resinous matter, which is clammy, and chokes the saw. Timber of this kind is not durable, nor fit for bearing strains. In some inferior species the wood is spongy, contains less resinous matter, and presents a woolly surface after the saw. Swedish timber is often of this kind.

Scotch fir is the most durable of the pine species. It was the opinion of the celebrated Mr. Brindley, 'that red Riga deal, or pine wood, would endure as long as oak in all situations.' Its lightness and stiffness render it superior to any other material for beams, girders, joists, rafters &c. It is much used in joiners' work, as it is more easily wrought, stands better, is much cheaper, and is nearly, if not quite, as durable as oak.

Scotch fir is exported from Norway and Sweden, under the name of *redwood*. Norway exports no trees above 18 inches diameter, consequently there is much sawwood; but the heart wood is both stronger and more durable than that of larger trees from other situations. Riga exports a considerable quantity under the name of masts and spars: pieces from 18 to 25 inches diameter are called *masts*, and are usually 70 or 80 feet in length; those of less than 18 inches diameter are called *spars*. [RIGA.] Yellow deals and planks are imported from various parts of Norway, Sweden, Prussia, Russia &c. Tar, pitch and turpentine are obtained from the Scotch fir. When the tree has attained to a proper age, it is not injured by the extraction of these products.

2. **SPRUCE PINE**.—Of this there are 3 species: the Norway spruce, or *Pinus abies*; white spruce, or *Pinus alba*; and black spruce, or *Pinus nigra*. These are noble trees, rising in straight stems from 150 to 200 feet in height. They yield the timber known by the name of *white fir*, or *deal*, from its always being imported in deals or planks.

Deals imported from Christiania are in the highest estimation. [CHRISTIANIA.] The trees are usually cut into 3 lengths, generally of about 12 feet each; and are afterwards cut into deals by saw-mills, each length yielding 3 deals. The Norway spruce thrives very well in Britain, and produces timber little inferior to the foreign; it is somewhat softer, and the knots are extremely hard.

The white spruce, or *Pinus alba*, is brought from British North America. The wood is not so resinous as the Norway spruce; it is tougher, lighter, and more liable to twist in drying.

The black spruce, or *Pinus nigra*, is also

American tree; but it is not much imported into this country. The black and white spruce derive their names from the colour of the bark; the wood of both being of the same colour.

The colour of spruce fir, or white deal, is yellowish or brownish white; the hard part of the annual ring a darker shade of the same colour; it often has a silky lustre, especially in the American and British grown kinds. Each annual ring consists of two parts; the one hard, the other softer. The knots are generally very hard. The clear and straight-grained kinds are often tough, but not very difficult to work, and stand extremely well when properly seasoned. White deal, as imported, shrinks about  $\frac{1}{10}$  in becoming quite dry.

3. WEYMOUTH PINE, or WHITE PINE (*Pinus strobus*), is a native of North America, and is imported in large logs, often more than 2 feet square and 30 feet in length. It is one of the largest and most useful of the American trees, and makes excellent masts; but it is not durable, nor fit for large timbers, being very subject to dry rot. It has a peculiar odour.

4. SILVER FIR (*Pinus peicea*) is a native of the mountains of Siberia, Germany, and Switzerland, and is common in British plantations. It is a large tree, and yields the Strasburg turpentine. The wood is of good quality, and much used on the Continent both for carpentry and ship building. The harder fibres are of a yellow colour, compact, and resinous; the softer nearly white. Like the other kinds of fir, it is light and stiff, and does not bend much under a considerable load; consequently, floors constructed of it remain permanently level. It is subject to the worm. It has been said to last longer in the air than in the water; and, therefore, to be fitter for the upper parts of bridges than for piles and piers.

5. LARCH (*Pinus larix*). There are 3 species of this valuable tree; 1 European, and 2 American. The variety from the Italian Alps is the most esteemed, and has lately been extensively introduced into plantations in Great Britain. It is a straight and lofty tree, of rapid growth. A tree 75 years of age was cut down at Blair Athol, in 1817, which contained 252 cubic feet of timber; and one of 80 years of age, at Dunkeld, measured 300 cubic feet. The mean size of the trunk of the larch may be taken at 45 feet in length, and 35 inches diameter. The wood of the European larch is generally of a honey yellow colour, the hard part of the annual rings of a redder cast; sometimes it is brownish white. In common with the other species of pine, each annual ring consists of a hard and a soft part. It generally has a silky lustre; its colour is browner than that of the Scotch pine, and it is much tougher. It is more difficult to work than Riga or Memel timber; but the surface is better when once it is obtained. It bears driving bolts and nails better than any other species of resinous wood. When perfectly dry, it stands well; but it warps much in seasoning. It is in all situations extremely durable. It is useful for every purpose of building, whether external or internal: it makes excellent ship timber, masts, boats, posts, rails, and furniture. It is peculiarly adapted for flooring-boards, in situations where there is much wear, and for staircases: in the latter, its fine colour, when polished with oil, is much preferable to that of the black oaken staircases to be seen in some old mansions. It is well adapted for doors, shutters, and the like; and, from the beautiful colour of its wood when varnished, painting is not necessary. We have extracted these particulars from Mr.

Tredgold's excellent work, *The Principles of Carpentry*, pp. 209-217.)

PINE-APPLE or ANANAS. Though a tropical fruit, it is now extensively cultivated in hothouses in this country, and is well known to everyone. When of a good sort and healthy, it is the most luscious, and perhaps, the best fruit that this country produces; and when carefully cultivated, is superior in point of quality to that produced in the West Indies. A pine-apple raised at Stackpool Court, Pembroke-shire, and served up at the coronation dinner of George IV., weighed 10 lb. 8 oz. (*Vegetable Substances*, p. 379.)

PINT. A measure used chiefly in the measuring of liquids. The word is High Dutch, and signifies a little measure of wine. The English pint used to be of 2 sorts; the one for wine, the other for beer and ale. Two pints make a quart; 2 quarts a pottle; 2 pottles a gallon &c. The pint, imperial liquid measure, contains 34.659 cubic inches.

PIPE. A wine measure, usually containing 105 (very nearly) imperial, or 126 wine gallons. Two pipes, or 210 imperial gallons, make a tun. But, in practice, the size of the pipe varies according to the description of wine it contains. Thus, a pipe of port contains 138 wine gallons, of sherry 130, of Lisbon and Bucellas 140, of Madeira 110, and of Vidonia 120. The pipe of port, it is to be observed, is seldom accurately 138 gallons, and it is usual to charge what the vessel actually contains.

PIPE-CLAY. A species of clay abounding in Devonshire, and other parts of England, employed in the manufacture of various sorts of earthenware, and in bleaching &c.

PIRACY consists in committing upon the seas those acts of robbery and violence which, if committed upon land, would amount to felony.

Pirates hold no commission or delegated authority from any sovereign or State, empowering them to attack others. They can, therefore, be only regarded in the light of robbers or assassins. They are, as Cicero has truly stated, the common enemies of all (*communes hostes omnium*); and the law of nations gives to every one the right to pursue and exterminate them without any previous declaration of war; but it is not allowed to kill them without trial, except in battle. Those who surrender, or are taken prisoners, must be brought before the proper magistrates, and dealt with according to law.

By the ancient common law of England, piracy, if committed by a *subject*, was held to be a species of treason, being contrary to his natural allegiance; and, by an *alien*, to be felony only: but since the Statute of Treasons (25 Edw. III. c. 2) it is held to be only felony in a subject. Formerly this offence was only cognisable by the Admiralty Courts, which proceed by the rules of the civil law; but it being inconsistent with the liberties of the nation that any man's life should be taken away unless by the judgment of his peers, the statute 28 Hen. VIII. c. 15 established a new jurisdiction for this purpose, which proceeds according to the course of common law.

It was formerly a question whether the Algerines, and other African states, should be considered pirates; but, however exceptional their conduct might have been on many occasions, and however hostile their policy might be to the interests of humanity, still, as they had been subjected to what may be called regular Governments, and had been admitted to enter into treaties with other Powers, they could not be treated as pirates.

Pirates having no right to make conquests, or

to seize upon what belongs to others, capture by them does not divest the owner of his property. At a very early period of our history, a law was made for the restitution of property taken by pirates, if found within the realm, whether belonging to strangers or Englishmen: but any foreigner suing upon this statute must prove that, at the time of the capture, his own sovereign and the sovereign of the captor were in mutual amity; for it is held that piracy cannot be committed by the subjects of states at war with each other.

Piracy was almost universally practised in the heroic ages. Instead of being esteemed infamous, it was supposed to be honourable. ('*Latrocinium maris gloriæ habebatur.*—Justin. lib. xliii. c. 3.) Menelaus, in the *Odyssey*, does not hesitate to inform his guests, who admired his riches, that they were the fruit of his piratical expeditions (lib. iv. ver. 90); and such, indeed, was the way in which most of the Greek princes amassed great wealth. (Goguet, *Origin of Law*, vol. i. p. 383, Eng. trans.)

The prevalence of this piratical spirit in these early ages may, perhaps, be explained by the infinite number of small independent states into which the country was divided, and the violent animosity constantly subsisting amongst them. In this way ferocious and predatory habits were universally diffused and kept alive; and it is not to be supposed that those who were at all times liable to be attacked by hosts of enemies, should very accurately examine the grounds upon which they attacked others. As, however, a more improved system of government grew up in Greece, and a few states, as Athens, Corinth &c., had attained to distinction by their naval power, piracy was made a capital offence; but though repressed, it was never entirely put down. Cilicia was at all times the great stronghold of the pirates of antiquity: and in consequence of the decline of the maritime forces of Athens, Rhodes &c., which had kept them in check, they increased so much in numbers and audacity as to insult the majesty of Rome herself; so that it became necessary to send Pompey against them, with a large fleet and army, and more extensive powers than had been ever previously conferred on any Roman general.

During the anarchy of the Middle Ages, when every baron considered himself a sort of independent prince, entitled to make war on others, piracy was universally practised. The famous Hanseatic League was formed chiefly for the purpose of protecting the ships of the confederated cities from the attacks of the pirates by which the Baltic was then infested. The nuisance was not finally abated in Europe till the feudal system had been subverted, and the ascendancy of the law everywhere secured. In more modern times, some of the smaller West India Islands and Central America have been the great resort of pirates: latterly, however, they have been driven from most of their haunts in that quarter. They are still not infrequently met with in the Indian seas east of Sumatra.

Besides those acts of robbery and depredation upon the high seas, which, at common law, constitute piracy, some other offences have been included under that term. Thus, by the stat. 11 & 12 Wm. IV. c. 7, if any natural-born subject commits any act of hostility upon the high seas against others of his Majesty's subjects, under colour of a commission from any foreign Power, this, though it would only be an act of war in an alien, shall be construed piracy in a subject. And further, any commander or other sea-faring person betraying his trust, and running away with any ship, boat, ordnance, ammunition, or goods, or

yielding them up voluntarily to a pirate, or conspiring to do these acts; or any person assaulting the commander of a vessel, to hinder him from fighting in defence of his ship, or confining him, or causing or endeavouring to cause a revolt on board, shall for each of these offences be adjudged a pirate, felon, and robber, and shall suffer death, whether he be principal, or merely accessory by setting forth such pirates, or abetting them before the fact, or receiving them, or concealing them or their goods after it: and the stat. 4 Geo. I. c. 2 expressly excludes the principals from the benefit of clergy. By the stat. 8 Geo. I. c. 24, the trafficking with known pirates, or furnishing them with stores or ammunition, or fitting out any vessel for that purpose, or in any wise consulting, combining, confederating, or corresponding with them; or the forcibly boarding any merchant vessel, though without seizing or carrying her off, and destroying or throwing any of the goods overboard, shall be deemed piracy; and such accessories to piracy as are described by the statute of King William are declared to be principal pirates, and all pirates convicted by virtue of this Act are made felons without benefit of clergy. To encourage the defence of merchant vessels against pirates, the commanders and seamen wounded, and the widows of such seamen as are slain in any engagement with pirates, are entitled to a bounty, to be divided among them, not exceeding the one fiftieth part of the value of the cargo saved; and the wounded seamen are entitled to the pension of Greenwich Hospital. (11 & 12 Wm. III. c. 7; 8 Geo. I. c. 24.) The first of these statutes also enacts, that if any mariner or inferior officer of any English ship decline or refuse to fight when commanded by the master, or shall utter any words to discourage the other mariners from defending the same, he shall lose all the wages due to him, together with such goods as he hath in the ship, and be imprisoned and kept to hard labour for 6 months.

The 6 Geo. IV. c. 49 enacts that a bounty shall be paid to the officers and crews of such of his Majesty's ships of war as may be engaged in the actual taking, sinking, burning, or otherwise destroying any vessel or boat manned by pirates, or 20*l.* for each pirate taken or killed during the attack, and of 5*l.* for every other man of the crew taken or killed, who shall have been alive on board the said piratical vessel at the attack thereof.

The same statute (sec. 3) enacts that vessels and other property taken from pirates, proved to have belonged to any of his Majesty's subjects, are to be delivered up to them, on their paying sum of money as salvage, equal to  $\frac{1}{3}$  of the value of the same.

PIRÆUS. [PATRAS.]  
PISTACHIA OR PISTACHIO NUTS (Ger. pistazien; Dutch, pistaches; Fr. pistaches; It. pistacchi, fastuechi; Span. alfoncigos; Lat. pistacia). The fruit of the *Pistachia vera*, a kind of turpentine tree. It grows naturally in Arabia, Persia, and Syria; also in Sicily, whence the nuts are annually brought to us. They are oblong and pointed, about the size and shape of a filbert, including a kernel of a pale-greenish colour, covered with a yellowish or reddish skin. They have a pleasant, sweetish, unctuous taste, resembling that of sweet almonds; their principal difference from which consists in their having a greater degree of sweetness, accompanied with a light grateful flavour, and in being more oily. Pistachios imported from the East are superior to those raised in Europe. (Lewis's *Mat. Med.*)

PITCH (Ger. pech; Fr. poix, brai; Ital. pece; Span. pez; Russ. smola gustaja). The residuum

which remains on inspissating tar, or boiling it down to dryness. It is extensively used in ship-building, and for other purposes. Large quantities are manufactured in Great Britain; but exclusive of these, 13,284 cwt. imported from foreign countries were entered for consumption in 1841. The duty, which was then 10*d.* per cwt., after being reduced in 1842 to *6d.*, was finally abolished in 1853. In 1867, 42,814 cwt. were imported, valued at 18,603*l.* [BURGUNDY PITCH.]

An allowance is to be made for tare on pitch, of 93 lb. each on Archangel casks, 36 lb. each on Swedish do., and 56 lb. each on American do.

PLANE. A forest tree, of which there are 2 species—the Oriental plane (*Platanus Orientalis*), and the Occidental plane (*Platanus Occidentalis*). The Oriental plane is a native of the Levant and other Eastern countries, and is considered one of the finest of trees. It grows to about 60 feet in height, and has been known to exceed 8 feet in diameter. Its wood is much like beech, but more figured, and is used for furniture and suchlike articles. The Occidental plane is a native of North America, and is one of the largest of the American trees, being sometimes more than 12 feet in diameter. The wood of the Occidental plane is harder than that of the Oriental. It is very durable in water.

The tree known by the name of plane in England is the sycamore, or great maple (*Acer pseudo-platanus*). It is a large tree, grows quickly, and stands the sea-spray better than most trees. The timber is very close and compact, easily wrought, and not liable either to splinter or warp. It is generally of a brownish-white or yellowish-white colour, and sometimes it is very beautifully curled and mottled. In this state it takes a fine polish, and bears varnishing well. It is chiefly used in the manufacture of saddletrees, wooden dishes, and a variety of articles of furniture and machinery. When kept dry, and protected from worms, it is pretty durable; but it is quite as liable as beech to be attacked by them. (Tredgold, p. 186.)

PLANKS (Ger. and Dutch, planken; Dan. planker; Swed. plankor; Fr. planches, bordages; Russ. Толстые доски). Thick strong boards, cut from various kinds of wood, especially oak and pine. Planks are usually of the thickness of from 1 inch to 4. They are imported in large quantities from the northern parts of Europe, particularly from the ports of Christiania, Dantzic, Archangel, Petersburg, Narva, Revel, Riga, and Memel, as well as from several parts of North America. [TINSE.]

PLANTAIN or BANANA. The pulpy fruit of the *Musa paradisiaca*, an herbaceous plant, extensively cultivated in most intertropical countries, but especially in Mexico. It is not, like most other fruits, used merely as an occasional luxury, but is rather an established article of subsistence. Having been long and extensively cultivated, it has diverged into numerous varieties, the fruit of which differs materially in size, flavour, and colour. That of some is not above 2 or 3 inches long, while that of others is not much short of a foot; some sorts are sweet, and of a yellow colour, not unlike nor inferior to that of a good marrow pear; but the larger kinds are, for the most part, coarse and farinaceous. The latter are either used fresh or dried in the sun, in which latter state they are occasionally ground into meal and made into bread. In Mexico, the sweeter sorts are frequently pressed and dried, as figs are in Europe; and, while they are not very inferior to the last-mentioned fruit, they are infinitely cheaper.

'I donbt,' says M. Humboldt, 'whether there be any other plant that produces so great a quantity of nutritive substance in so small a space. Eight or nine months after the sucker is planted, it begins to develop its cluster. The fruit may be gathered in the 10th or 11th month. When the stalk is cut, there is always found, among the numerous shoots that have taken root, a sprout (*pimpollo*), which, being  $\frac{1}{4}$  the height of its parent plant, bears fruit 3 months later. Thus a plantation of bananas perpetuates itself, without requiring any care on the part of man, further than to cut the stalks when the fruit has ripened, and to stir the earth gently once or twice a year about the roots. A piece of ground of 100 square metres of surface will contain from 30 to 40 plants. During the course of a year this same piece of ground, reckoning the weight of the cluster at from 15 to 20 kilog. only, will yield 2,000 kilog., or more than 4,000 lb., of nutritive substance. What a difference between this product and that of the cereal grasses in most parts of Europe! The same extent of land planted with wheat would not produce above 30 lb., and not more than 90 lb. of potatoes. Hence the product of the banana is to that of wheat as 133 to 1, and to that of potatoes as 44 to 1.' (*Essai sur la Nouvelle-Espagne*, tom. ii. p. 388, 2nd ed.)

The banana forms a principal part of the food of the people of Mexico; and the apathy and indolence of the natives in the *tierras calientes*, or hot regions, have been ascribed, and probably with good reason, to the facility with which it supplies them with subsistence. It is by no means in such extensive use in tropical Asia, and in that part of the globe comes nowhere into competition with corn as an article of food.

PLATE. The denomination usually given to gold and silver wrought into articles of household furniture.

Partly in order to prevent fraud, and partly for the purpose of collecting a revenue, the manufacture of plate is placed under certain regulations. Those who carry it on are obliged to take out a license, renewable annually on July 31. Assay offices are established in different places; and any one selling any article previously to its having been assayed and marked forfeits 50*l.* (24 Geo. III. c. 53.) Gold plate, with the exception of gold watch-cases, is to pay a duty of 17*s.* per oz., and silver plate since March 7, 1860 a duty of 1*s.* 6*d.*; but watch-cases, chains, tipplings, mountings, collars, bottle tickets, teaspoons &c. are exempted. The 25 Geo. III. c. 143 made the counterfeiting, or the transference from one piece of plate to another, of the marks, stamps &c. impressed on plate by the assayers, felony without the benefit of clergy. But the offence is now punishable by transportation or imprisonment only. (1 Wm. IV. c. 66.)

In 1867, we imported 58,598 oz. of silver plate, valued at 14,674*l.*, of which 54,445 oz. were entered for consumption.

By 30 & 31 Vict. c. 90, manufacturers of gold and silver plate pay a license duty of 2*l.* 6*s.* for a manufacture of 2 dwts. and under 2 oz. of gold, above 5 dwts. and under 30 oz. of silver, and 5*l.* 15*s.* if the manufacture is above those amounts. Pawnbrokers in gold and silver and refiners pay the same amount. Plate licenses expire on July 5.

The subjoined account (from Porter's *Progress of the Nation*, iii. 25) gives a very complete view of the plate manufacture for half a century from 1800 downwards. It should be borne in mind that this account refers only to articles of standard silver and gold, and that the great consumption of the precious metals consists in plated or electroplated and gilt articles, which are now made of a

very superior quality. Owing also to the fact of old plate being held in the greatest estimation, but little of it is melted down to be remanufactured, so that the principal consumption is by new families. The returns for the year 1826, in the annexed table, afford a striking proof of this. During a considerable portion of that year a crowd of speculators, most of whom were preciously worth little or nothing, believed they had made large fortunes, and launched out, with the proverbial ostentation of *parvenus*, into all sorts of lavish expenditure. Hence the wonderful increase in the demand for plate in the course of that year. No doubt, also, the consumption of plate appears less than it really is, from the facility with which the duties are evaded. We subjoin—

Account of the Number of Ounces of Gold and Silver Plate upon which Duty was paid, and for which Drawback was allowed, showing the Quantity retained for Home Use in each Year, in the undermentioned Years, from 1800 to 1850.

1850	7,375	755,465	3	76,759	7,370	678,706

It is not easy to account for the nearly stationary demand for plate as exhibited in this return. Most probably it has been mainly occasioned by the greater use of plated articles, which have, to a great extent, been substituted for those made of silver. Perhaps, also, it may be in part accounted for by the fact of the cost of gold and silver having increased from 1809 down to 1849 or 1850. But a large increase in the consumption of the precious metals may now be expected to result from their increasing supply and diminishing value. (See Mr. Cayley's *Report on Gold and Silver Plate*, in connection with the Paris Exhibition of 1867, for some remarks on its classification.)

PLATINA—a metal which, in respect of scarcity, beauty, ductility, and indestructibility, is hardly inferior to gold—was unknown in Europe till about the middle of last century, when it began to be imported in small quantities from South America. It has since been discovered in Estremadura in Spain, and, more recently, in the Ural Mountains in Asiatic Russia, where it is now raised in very considerable quantities.

Platina is of a white colour, like silver, but not so bright, and has no taste or smell. Its hardness is intermediate between copper and iron. Its specific gravity is about 21.5, that of gold being

19.3; so that it is the heaviest body with which we are acquainted. It is exceedingly ductile and malleable; it may be hammered out into very thin plates, and drawn into wires not exceeding  $\frac{1}{1000}$  inch in diameter. In these properties it is probably inferior to gold, but it seems to surpass all the other metals. Its tenacity is such, that a wire of platina 0.678 inch in diameter is capable of supporting a weight of 27.31 lb. avoirdupois without breaking. It is one of the most infusible of all metals, but pieces of it may be welded together without difficulty when heated to whiteness. It is not in the smallest degree altered by the action of air or water. (Thomson's *Chemistry*.)

The late Dr. Wollaston discovered a method of welding platina, and consequently of rendering it easily available in the arts. The Russians issued platina coins of the value of 3, 6, and 20 silver roubles some years since. They have now been recalled. Platina first began to be an object of attention in Russia in 1824, when 1 pood 53 lb. were collected. In 1836 the produce amounted to 138 poods 42 lb. In 1831 a piece of native platina was discovered at Demidoff's gold mines, weighing 29 lb. 2½ zolt. (*Official Statements* published by the Russian Government.) In 1867 17,877 oz. were imported into the United Kingdom, the value of which was 19,660 l. It is chiefly used for sulphuric acid retorts.

PLATING. Slips of bant, cane, straw &c. woven or plaited for making into hats &c. [HATS, STRAW.]

PLUMBAGO. [BLACK LEAD.]

PLUMS, the fruit of the *Prunus domestica*, are too well known to require any description. They were introduced into England in the 15th century, and are cultivated in all parts of the country. There are said to be nearly 300 varieties of plums. In 1867, exclusive of 15,855 cwt. of prunes, valued at 18,377 l., we imported 6,445 cwt. French plums and pruneloes valued at 38,333 l. and 741 cwt. dried plums, (worth 1,702 l.) preserved otherwise than in sugar. On the 2nd inst. mentioned a duty of 7s. per cwt. has been levied since December 10, 1856. [PRUNES.]

POMEGRANATE, POMEGRANATES (Ger. granatäpfel; Fr. grenades; Ital. granati, melograni; Span. granadas). The fruit of the pomegranate tree (*Punica granatum*). This tree, which grows to the height of 15 or 20 feet, appears to be a native of Persia, whence it has been conveyed, on the one side, to Southern Europe, and on the other to the tropical parts of Asia, and eventually to the New World. The fruit is a pulpy many-seeded berry, the size of an orange, covered with a thick brown coriaceous rind. The pulp has a reddish colour, and a pleasant subacid taste. The value of the fruit depends on the smallness of the seed and the largeness of the pulp. The finest, called by the Persians *badana*, or seedless, is imported into India from Cabul and Candahar, where the pomegranate grows in perfection. The tree thrives all the way to the equator; but, within the tropics, the fruit is hardly fit for use. The pomegranates brought to England from the South of Europe and the West Indies are very inferior to those of Persia. (*Private information*.)

POPLAR (Ger. pappel, pappelbaum; Dutch. populier; Ital. pioppa; Span. alamo; Lat. populus). Of the poplar (*Populus* of botanists) there are about 15 species described; of these, 5 are common in England, viz. the common or *White*, the *Black*, the *Aspen* or trembling poplar, the *Abele* or great white poplar, and the Lombardy poplar. In favourable situations, the white poplar grows with great rapidity, sometimes sending forth shoots 16 feet long in a

**PORCELAIN or CHINA-WARE.** A very fine species of earthenware. The first specimens of this fabric were brought to Europe from China and Japan. The best Chinese porcelain is of a very fine texture, white, semitransparent, and sometimes beautifully colored and gilt; is insensible, and not subject to break by the sudden application of heat or cold. The Chinese term for the article is *tsu-ri*. But the Portuguese, by whom it was first brought in considerable quantities into Europe, bestowed on it the name of porcelain, from *porcella*, a cup.

Common earthenware, sometimes of a very good quality, is manufactured in Canton, Fokien, and several other provinces of China. But it is a curious fact, that the beautiful porcelain imported into Europe is made only in the town of Kingteing, in the province of Kyangsi. Its manufacture is fully described by Dnhalde, in his account of China, under the head 'Porcelain and china-ware.' The porcelain of Japan is decidedly inferior to that of China; very little is imported, and it is valued only as a curiosity.

After porcelain began to be imported, its beauty soon brought it into great request, notwithstanding its high price, as an ornament for the houses and tables of the rich and the great. The emulation of European artists was in consequence excited. Very little information was, however, obtained as to the mode of manufacturing porcelain till the early part of last century, when the process was developed in a letter from a French Jesuit in China, who had found means to make himself pretty well acquainted with the subject. The knowledge that thus transpired and the investigations of Reaumur and other chemists prepared the way for the esta-

ishment of the manufacture in Europe. It was first commenced at Dresden, which has been famous ever since for the beauty of its productions; but the finest and most magnificent specimens of European china have been produced at Sevres, in France, in the factory carried on at the expense of the French Government.

*British Porcelain Manufacture.*—This, though unable to boast of such fine specimens of costly workmanship as have been produced at Sevres and Dresden, is of much greater national importance. Instead of exclusively applying themselves to the manufacture of articles fitted only for the use of the rich, the artists of England have exerted themselves, in preference, to produce china-ware suitable for the middle classes; and have succeeded in producing articles at once excellent in quality, elegant in form, and cheap. We are principally indebted for the improvements made in this important manufacture to the genius and enterprise of the late Mr. Josiah Wedgwood. This extraordinary man owed none of his success to fortuitous circumstances. Devoting his mind to patient investigation, and sparing neither pains nor expense in accomplishing his aims, he gathered round him artists of talent from different countries, and drew upon the stores of science for aid in pursuing the objects of his praiseworthy ambition. The early and signal prosperity that attended his efforts served only as an incentive to urge him forward to new exertions, and as means for calling forth and encouraging talent in others, in a manner calculated to promote the welfare of his country. Previously to his time, the potteries of Staffordshire produced only inferior fabrics, flimsy as to their materials, and void of taste in their forms and ornaments; the best among them being only wretched imitations of the grotesque and unmeaning scenes and figures portrayed on the porcelain of China. But such have been the effects resulting from the exertions and example of this one individual, that the wares of that district are now not only brought into general use in this country, to the exclusion of all foreign goods, which had been largely imported, but English pottery has since been sought for and celebrated throughout the civilised world, and adopted even in places where the art was previously practised. An intelligent foreigner, M. Faujas de St. Fond, writing on this subject, says: 'Its excellent workmanship, its solidity, the advantage which it possesses of sustaining the action of fire, its fine glaze impenetrable to acids, the beauty and convenience of its form, and the cheapness of its price, have given rise to a commerce so active and so universal, that, in travelling from Paris to Petersburg, from Amsterdam to the farthest part of Sweden, and from Dunkirk to the extremity of the South of France, one is served at every inn upon English ware. Spain, Portugal, and Italy are supplied with it; and vessels are loaded with it for both the Indies and the continent of America.'

See the quotation in the '*Account of the Porcelain Manufacture*' (p. 16), in Lardner's *Cyclopædia*; for the statistical details with respect to the manufacture, see the article *EARTHENWARE*, in this work. For much common information on this subject the reader is referred to Birch's *Ancient Pottery*, Marryat's *Pottery and Porcelain*, *Life of Wedgwood*, and M. Arnoux's Report on Pottery in connection with the Paris Exhibition of 1867.

The British porcelain manufacture is principally carried on at the Potteries in Staffordshire, and at Worcester, Derby, Colebrookdale, and other places.

*Murrhine Cups.*—It was long a prevalent opinion among modern critics, that the *vasa murrhina*, so famous in Roman history, were formed of porcelain. Pompey was the first who brought them to Rome from the East, about 64 years before the Christian era. They were used as drinking-cups, and fetched enormous prices; Nero having given, according to the common method of interpreting, 58,000*l.* for a single cup. The extravagance of the purchaser may, in this instance, be supposed to have increased the price; so that the degree of estimation in which these cups were held may be more accurately inferred from the fact that, of all the rich spoils of Alexandria, Augustus was content to select one for his share. (Sueton. lib. ii. c. 71.) Pliny (lib. xxxvii. c. 2) says they were made in Persia, particularly in Karamania. But those who contend they were china-ware chiefly depend on the following line of Propertius:—

Murrhæque in Parthis pecula cœra seen.  
Lib. iv. Eleg. 3, lin. 10.

In despite, however, of this apparently decisive authority, Le Haud and Larcher have, in two very learned dissertations (*Mémoires de l'Académie des Inscriptions*, tom. xliii.), which Robertson has declared are quite satisfactory, endeavoured to prove that the *vasa murrhina* were formed of transparent stone, dug out of the earth in some Eastern provinces, and that they were initiated in vessels of coloured glass. (Robertson's *Disquisition on India*, note 33.) Dr. Vincent (*Commerce and Navigation of the Ancients*, vol. ii. p. 723) inclines to the opposite opinion; but the weight of authority is evidently on the other side. At all events, it is plain that if the murrhine cups were really porcelain, it had been exceedingly scarce at Rome, as their price would otherwise have been comparatively moderate. But it is most probable that the ancients were wholly unacquainted with this article, which indeed was little known in Europe till after the discovery of the route to India by the Cape of Good Hope. (For some further details on this question, see Kipping's *Antiq. Rom.* lib. iii. c. 3.)

In 1867 we imported 19,854 cwt. of china or porcelain ware, chiefly from France and Germany, valued at 179,391*l.*

**PORK, BACON, AND HAMS** consist of the first of the fresh or uncured flesh of the hog, the second of the sides and belly when cured or salted, and the third of the hind-legs when cured.

These form important articles of food in the quarter of the world and in America. But they are rejected by many nations, and among others by the Jews and Mohammedans, partly from superstitious motives, but in part also from sanitary considerations. (See the profound work of Michaëlis, *On the Laws of Moses*, lib. 230, Eng. trans.)

Previously to 1842, the duty on bacon and hams being 28*s.* per cwt., was in effect prohibitory; of the former, and little or none was imported. It was then, however, reduced to 14*s.* per cwt. In 1844 the duty on bacon was entirely repealed, and that on hams reduced to 7*s.* per cwt., the latter being also repealed in 1853. There has been, in consequence of the abolition of the duty, a great increase in the demand for foreign bacon—the imports which amounted in 1852 to 13,952 cwt., having increased, in 1866, to 578,272 cwt., valued at 1,699,301*l.*; the exports of foreign bacon and hams in the same year being only 66,769 cwt. The imports of hams in 1866 were 57,510 cwt. We subjoin—

An Account of the Quantities of Bacon, Hams, and Pork Imported into the United Kingdom in 1867, specifying the Countries whence they were brought, and the Quantities brought from each.

Countries	Bacon	Hams	Pork
	cwt.	cwt.	cwt.
Dominica	80,174	4,079	90,910
Jamaica	165,374	4,257	55,171

Trinidad	99,263	80,759	55,019
United States	1,838	1,375	410
Other parts	14,804	8,121	19,531
Total	493,867	45,487	150,983

PORT. [OPORTO; WINE.]

PORT-AU-PRINCE. The capital of Hayti, or St. Domingo. Population in 1865 from 30,000 to 35,000.

The lighthouse on Lamentin Point is visible for 9 miles in lat. 18° 43' 35" N., long. 72° 25' 12" W. It is situated on the west coast of the island, at the bottom of a large and deep gulf. It was founded in 1749, since which, with few intervals, it has been the capital of French St. Domingo. It is partially fortified, the harbour being protected by a battery on a small island at a little distance from the shore. The country round is low and marshy; and the heat in the summer months being excessive, the climate is then exceedingly unhealthy. The buildings are principally of wood, and seldom exceed 2 storeys in height.

Harbour.—The entrance to the harbour is between White Island and the southern shore. The depth of water varies from about 18 feet at ebb to about 21 feet at full tide. It is customary, but not compulsory, to employ a pilot in entering the harbour. Pilots are always on the look-out. Ships moor head and stern, at from 100 to 500 yards from shore; loading and unloading by means of boats, as there are neither docks nor quays to assist these operations. The harbour is perfectly safe except during hurricanes, which may be expected from August to November. The bay of Port-au-Prince is welligh blocked up to the northward by numerous shoals and islets, which protect the anchorage.

Hayti is, next to Cuba, the largest of the West India islands. It was discovered by Columbus, on December 5, 1492. Its greatest length may be about 400 miles, and its greatest breadth 155. Its superficial area is estimated at about 29,500 square miles. Three principal chains of mountains (from which emanate smaller mountain arms) run from the central group of Cibao. The whole of these are described as fertile and susceptible of cultivation, even to their summits; affording great variety of climate, which, contrary to what is the case in the plains, is remarkably healthy. The soil of the plains is, in general, a very rich vegetable mould, exceedingly fertile, and well watered. There are several large rivers, and an immense number of smaller streams, some tributary and others independent. The ports are numerous and good. The harbour of Cape St. Nicholas, the fortifications of which are now in ruins, is one of the finest in the West Indies, being inferior only to the Havannah. Timber of the finest description is most abundant, and mines of gold, silver, copper, tin, iron, and rocksalt, besides other natural productions, are said not to be wanting. The French were therefore fully justified in designating this magnificent island *La Reine des Antilles*. The principal towns, besides Port-au-Prince, are Cap Haitien, formerly Cap François, on the north coast, St. Domingo on the south, Les Cayes, and Jacmel.

Previously to the revolt of the blacks, Hayti was divided in unequal portions between the French

and Spaniards; the former possessing the west, and the latter the eastern and larger portion of the island. The revolution began in 1789, and terminated, after the most dreadful massacres and the destruction of a vast deal of property, in the total abolition of slavery, and the establishment of an independent black republic. The Spanish part of the island and the French, after being consolidated in 1824, were again separated in 1844; since which time the former has been, speaking generally, a mock empire, and the latter a mock republic. But in both disorder and revolution have been recurring at short intervals.

Population.—In 1789 the French part of Hayti was by far the most valuable and flourishing colony in the West Indies. The population was estimated at 521,000; of which 31,000 were white, 27,500 people of colour, and 465,500 slaves. The Spanish part of the island was much less densely peopled, the number in 1785 being estimated at 152,640; of which 122,640 were from people of all colours, mostly mulattoes, and the rest slaves. The population of the entire island, in 1827, was estimated by Humboldt at 820,000, of whom 30,000 were whites; but there are good grounds for thinking that that estimate was exaggerated, and that the present population does not exceed 700,000 or 750,000.

Exports.—There has been an extraordinary falling-off in the trade of Hayti since the Revolution. The exports of sugar, for example, which amounted to above 141,000,000 lb. in 1789, have wholly disappeared. The cultivation of the cane has not, however, been entirely relinquished; but its produce is now wholly converted into rum, an inferior description of rum, of which the blacks are excessively fond. The produce of coffee has also fallen off; and its export, which may amount to about 60,000,000 lb., is in great part derived from the old coffee plantations of the French, which are now almost wild. The remaining articles of export consist principally of mahogany, logwood, and other dyce and fancy woods, which merely require to be cut down; with small quantities of cotton, cacao, tortoiseshell, honey, wax &c. But so inconsiderable is their amount, that the entire value of the exports in 1863 did not exceed 2,458,000*l.*, not certainly  $\frac{1}{10}$  of what it would amount to were the island occupied by a reasonably intelligent and industrious population. The greater part of its foreign trade is with the United States; and that with England is next in importance. In 1867 the value of our exports to Hayti and St. Domingo amounted to only 91,623*l.*, principally consisting of cottons (163,099*l.*) and linens. It is an instructive fact that they took from us no machinery, and only 2,497*l.* worth of iron. At present (1869) they are suffering all the horrors of civil war; anarchy prevails, and commerce is paralysed.

Besides its imports from England, it imports flour, rice, mess and cargo beef, fish &c., and timber, from the United States; wines, satins, liquors, jewellery, toys, haberdashery &c. from France; and linens, canvas, gin &c. from Holland and Germany; but the amounts of the latter are inconsiderable.

The greater part of this extraordinary falling-off is to be accounted for by the change in the condition of the inhabitants. The blacks, being no longer compelled to labour, and regarding with abhorrence the culture of sugar and the other occupations in which they had been principally engaged, sank into a state of idleness and apathy. The condition of all the great branches of industry formerly carried on became, in consequence, most deplorable, and the commerce

of Hayti was reduced within the narrowest limits. Its successive rulers have endeavoured, though with little success, to bring about a revival of industry. The *Code rural*, enacted for this purpose by Boyer in 1826, was exceedingly stringent, its principal provisions being, in fact, copied from the regulations as to slaves embodied in the *Code noir*. But even this code had little influence; and as a proof of the low state of industry in the island, it is enough to refer to the previous statements. And this result is, after all, only what should have been anticipated. To expect that half-civilised Africans, under a burning sun, and without the wants or desires of Europeans, should be equally industrious, is to expect what is contradictory and all but absurd.

**Port Charges.**—The charges on a native and foreign ship of 300 tons are the same, and as follows:—

Tonnage duty	..	..	..	dols. cts.
Administrateur	..	..	..	300 0
Commandant de place	..	..	..	12 0
Commissaire de guerre	..	..	..	12 0
Commandant de port	..	..	..	12 0
Director of customs	..	..	..	12 0
Interpreter	..	..	..	12 0
Treasurer	..	..	..	12 0
Doctor	..	..	..	12 0
Stamps for entry and clearing	..	..	..	16 50
Portain tax	..	..	..	20 0
Pilotage	..	..	..	2 0
Total, currency	..	..	..	454 50

**Custom-house Regulations.**—On arrival, the master of the vessel proceeds to the Custom-house with the interpreter, where he makes his declaration whether he discharges his cargo in the port. If he discharge, his invoices are translated, and the goods verified in the presence of the consignee, who is allowed to land and store them. On clearing outwards, the merchant pays the duties on the cargoes both ways, and exhibits a receipt at the office of the commissaire de guerre, commandant de place, and commandant de port, who sign a certificate that the vessel may depart.

**Warehousing.**—The warehousing and bonding system is established by law, but there are at present no buildings appropriated to the reception of bonded goods. Until very recently, goods were permitted to be bonded under this law in the merchants' stores; a late order has, however, suspended that indulgence. The rate is 1 per cent. per year, and no allowance made for waste or loss. Goods exported in the same vessel they arrive in pay, if landed,  $\frac{1}{2}$  per cent. and wharfage fees.

**Money.**—The weight of the dollar is 216 grains, the  $\frac{1}{2}$  and  $\frac{1}{4}$  dollar being in proportion. But nearly  $\frac{1}{2}$  the weight of the coin consists of tin or other alloy, so that the value of the dollar does not exceed 1s. 6d. sterling.

**Weights in Hayti** are divided as in avoirdupois and apothecaries' weight; but they are about 8 per cent. heavier than British weights.

**Measures.**—Same as these used in France.

**Regulations as to Trade.**—It is enacted that all persons exercising any trade or profession, excepting that of cultivating the soil, must be provided with a patent or licence to carry on such trade or profession; that all strangers admitted as merchants into the republic must, in the first place, procure the permission of the president to take out a patent, which, when obtained, only authorises them, under heavy penalties, to carry on a wholesale business, not with each other but with the Haytians, in the open ports, which are Port-au-Prince, Gonaives, Cap Haïtien, Port-à-Plate, Santo Domingo, Jacmel, Les Cayes, and Jérémie. The minimum quantities of goods that may be sold are fixed by the same law. The

Haytian consignee may be also a retailer, on taking out a corresponding patent.

A charge of 2,000 dollars is made for each patent to a foreigner trading to Port-au-Prince; 1,800 for Les Cayes, Cap Haïtien, and Jacmel; and 1,600 for each of the remaining ports.

**Duties.**—The duties on all imported commodities consigned to foreign merchants are 17 $\frac{1}{2}$  per cent. on an established tariff, whether they be brought in native or foreign ships, with the exception of those from the United States, which pay an additional 10 per cent. on the amount of the duties. Goods consigned to native merchants pay only 16 $\frac{1}{2}$  per cent.

The coasting trade is entirely confined to Haytian citizens.

The commerce of Port-au-Prince is carried on by various classes of persons. The imports from Europe and America are principally consigned to European and North American commission houses, besides a few Haytian establishments.

We have derived these details with respect to Hayti partly from the published *Notes of Charles Mackenzie, Esq.*, late consul in that island, and partly from consular and other Returns.

#### PORT LOUIS or NORTH-WEST PORT

The capital of the Mauritius, at the bottom of a triangular bay, the entrance to which is rather difficult, in lat. 20° 9' 56" S., long. 57° 28' 41" E. Every vessel approaching the harbour must hoist her flag and fire 2 guns; if in the night, light must be shown, when a pilot comes on board, and steers the ship to the entrance of the port. Though not very extensive, the anchorage in Port Louis is generally quite safe, and the dangers to which ships in it were sometimes exposed during the hurricane season have been in great measure obviated by the formation of docks. It used to be reckoned a convenient port for the careening and repair of vessels; but owing to the greatly increased magnitude of the ships and steamers which now navigate the Indian seas, increased means of accommodation in this respect became highly desirable, and have been supplied by the formation of a dock capable of admitting the largest ships. The houses are low, and principally built of wood. The town and harbour are pretty strongly fortified. Almost all the foreign trade of the island is carried on here.

The Mauritius was so called by the Dutch in honour of Prince Maurice; but it was first settled by the French in 1720, and is indebted for most part of its prosperity to the able management of its governor, the famous M. de Bourdonnais. It was taken by the English in 1810, and was definitively ceded to us in 1814.

**Exports and Imports &c.**—Mauritius is very fertile, a considerable part of the surface being, however, occupied by mountains. Its shape is circular, being about 150 miles in circumference. The climate is healthy, but subject to hurricanes. The principal product is sugar, which is cultivated to the almost total neglect of everything else, and the island may, indeed, be said to have become an immense sugar-factory. It also produces excellent coffee, indigo, and cocoa. The blackwood or ebony of the Mauritius is abundant, and of superior quality. Very little corn or grain of any kind is raised, most of provision being imported. Previously to the sugar and other articles brought to Great Britain from the Mauritius were charged the same duties as the like articles from Madagascar, but in the above-mentioned year this distinction was done away, and it was enacted (6 Geo. 4. c. 111 s. 44) that all goods of the Mauritius should

on being imported into the United Kingdom, be subject to the same duties and regulations as the like goods from the British West Indies, and that the trade with the Mauritius should be placed as nearly as possible on the same footing as that of the West India Islands.

This was a great boon to the Mauritius, but it is not to it that the increase of its sugar cultivation is to be ascribed. The emancipation of the slaves was as injurious to the planters here as to those in the West Indies; but, owing to its more convenient situation, vast numbers of hill-coolies and other labourers from India, and some also from Madagascar, have been introduced into the Mauritius, and it is to the supply of labour which has thus been obtained that the prosperity of the island is wholly owing. All the best insular authorities admit that but for the immigration it would have retrograded; the emancipated negroes would not have engaged in any sort of severe labour; and it is in part by the example of the immigrants, but more through necessity, that the blacks have been stimulated to exert themselves.

This prosperity, however, has, unfortunately, not been continuous. The rapid increase in the cultivation of beetroot sugar, the excess of immigration into the Mauritius, and the almost entire dependence of the colony on importations of food, have seriously impaired its prosperity. (Lieut. Governor Barkly's Report, 1866.) In 1866, the number of Indian immigrants was 5,596, and of Indian emigrants 3,815.

The imports of sugar into the United Kingdom from the Mauritius increased from 516,076 cwt. in 1840, to 1,006,237 cwt. in 1866, but fell in 1867 to 596,741 cwt. Yet this statement does not give a fair view of the real increase of production, inasmuch as a far greater quantity of sugar is now sent to France, the Cape of Good Hope, and Australia, than formerly. Thus, of the total shipments from the island, amounting in 1866 to 2,483,618 lb., only 75,886,276 lb. were for the United Kingdom; 1,840,756 lb. being for France, 1,137,899 lb. for the Cape of Good Hope, 99,111,415 lb. for Australia, and 51,009,554 lb. for Continental India. With the exception of rum, molasses, and honey, the other exports are too trifling to deserve notice. Sugar pays an export duty of 3d. per 100 lb. net French weight.

The principal imports consist of provisions, particularly grain and flour; the supply required for the use of the island being almost entirely derived from the Cape of Good Hope, Madagascar, India, Reunion &c. Cotton stuffs; iron, hardware, and cutlery; machinery, copper, linens, wine, &c. &c. are also largely imported. Guano has of late years been extensively imported, and has been found to be of the greatest service in the raising of sugar. The total declared value of the exports from the United Kingdom to the Mauritius, in 1866, amounted to 583,403l., and in 1867 to 429,982l., chiefly cotton and iron.

**Money, Weights, and Measures.**—According to the regulations of Government, the franc is deemed equal to 10d., and the Spanish dollar to 4s. 4d. Government accounts are kept in sterling money; but merchants, shopkeepers &c. keep their accounts in dollars and cents, and dollars, livres, &c.

The measures and weights are those of France, introduced by the Revolution. 100 lb. French = 142 lb. English; the French foot is to the English as 100 to 93.93, but in practice they are supposed to be as 16 to 15. The velle = 1 gallon 7.8 lb. English, but in commercial transactions it always taken at 2 gallons.

**Lighthouses.**—On May 24, 1867, the *Harbour Lights* at the entrance of Port Louis were done away with, and a floating light-vessel, painted white, has been substituted. It is moored a little to the north-west of the well-known Bell Buoy, and shows a flashing white light from sunset to sunrise, visible 9 miles off.

There is a *revolving catoptric light*, of the first order, on the south-west Flat Island, lat. 19° 53' 26" S., long. 57° 41' 12" E. It is 366 feet above the level of the sea, and is visible in clear weather 25 miles off.

There is a *fixed catoptric light*, also of the first order, on Caunonier Point, lat. 20° 0' 35" S., long. 57° 35' 24" E. It is 39 feet above the level of the sea, and can be seen for about ten miles. It indicates the position of a dangerous shoal nearly one mile from the shore, and keeps vessels clear of the coral-reefs to the north-east and south-west of the point.

There is a lighthouse built on a small island called 'Ile aux Fouquets,' lat. 20° 24' 20" S., long. 57° 45' 9" E. It marks the southern entrance to Grand Port, and is 880 yards to the E.N.E. of Ile de Passe, which bounds Grand Port entrance to the northward. The apparatus is a dioptric of the first order, showing a *fixed white light* from sunset to sunrise, visible in every direction from seaward. It is 108½ feet above the sea, and in clear weather can be seen at a distance of 16 miles.

There is a Government pilot stationed at the lighthouse, who will board ships bound to Mahébourg, on their making the usual signal.

No vessel bound into Grand Port ought to approach it *at night*; she should heave-to well to the southward of the light, as, the drift being to the northward, she might find herself to leeward in the morning, and lose much time in working up. (November 3, 1863.)

**Lighthouse on Little Basses Rock, Ceylon.**—Ordinance No. 22 of 1865 provides that there shall be levied and paid in this colony as dues in respect of the light-vessel upon Little Basses Rock, Ceylon, 1d. per ton of the burden of such ship as may have derived benefit therefrom.

**Lighthouses on Coast of Mauritius.**—Extract from Ordinance No. 22 of 1855. Art. 1. There shall be levied by the harbour master, on all vessels excepting coasters employed on the coast of Mauritius, entering the harbour, or discharging, or shipping cargo or immigrants in the roadstead of Port Louis, 2d. per ton.

Art. 2. The above due shall not be levied more than twice within 12 calendar months on any one vessel, and the whole amount collected shall be appropriated to defraying the cost of maintaining lighthouses and lights on the coast of the Mauritius.

The following are the numbers and tonnage of vessels that entered with cargoes and ballast into ports of this colony in the years 1864-65.

	1864		1865	
	Vessels	Tons	Vessels	Tons
Total	658	978,368	715	301,650
British	252	146,343	446	139,563
Colonial	300	74,212	310	78,541

	1864		1865	
	Vessels	Tons	Vessels	Tons
Total	688	880,199	707	301,485
British	360	196,050	447	138,067
Colonial	300	77,589	224	82,255

Tonnage of vessels entered and cleared in 1866, about 800,000.

For Immigration, see COLONIES.  
Population estimated in 1866 at 840,664. Population of Seybelles Islands and other dependencies of Mauritius in 1861, 9,055.

Years	Revenue	Expenditure
1860	585,519	500,855
1861	497,798	484,919
1862	497,372	581,195
1863	554,818	598,568
1864	634,967	679,379
1865	644,793	667,718
1866	659,378	710,116

Total Debt in 1866, 1,000,000.

The revenue in 1866 was, including railway traffic receipts, 689,576*l.*, and the expenditure, including the sinking fund and interest on railway loan, 700,048*l.*

**Brokerage, Commission, and Fees of Brokers and Exchange Brokers.**

- For sale and purchase of goods, merchandises and movables, payable half by the seller and half by the purchaser, 1 per cent.
- Same and purchase of immovables, payable half by the seller and half by the purchaser, 1 per cent.
- Same and purchase of cattle out of the town, payable half by the seller and half by the purchaser, 1 per cent.
- Procuring advances on cargoes of sugar for Europe or elsewhere, 1 per cent, payable half by the party making the advance and half by the party who receives it.
- Estimation of goods of merchandise and all other articles, verification of the state of damaged merchandise and other operations of a like nature, for each attendance of a broker not exceeding three hours (i.e., for each hour beyond the first), 1*l.*
- Negotiating notes of hand (whatever may be the date of payment) payable by the receiver, 1 per cent.
- Negotiating bills of exchange, 1 per cent, payable 1/2 by holder and 1/2 by the receiver.
- Negotiating contracts and battery bonds, payable by the consignee, 1 per cent.
- Procuring freight and passengers, payable by the persons employing the vessel, 1 per cent.
- Hire of labourers, workmen, immovable property, on the whole amount of hire, if the contract or lease does not exceed nine years, and on the amount of hire for each attendance of a broker not exceeding three hours (i.e., for each hour beyond the first) by the person hiring, half by the party.
- Each signature on certificate or *provis* &c.
- Lighterage Charges.—The lighterage charges at the port have been fixed at the following rates:—  
Landing or shipping of goods in inner harbour, 50c. per ton.  
Hire of workmen, 1*l.* 50c. per diem.  
Do cargo boat per ton, 1*l.* per diem.  
Landing or shipping of bricks and coals, guano and shipping sand, 75c. per ton.  
Do wood, 75c. per ton.  
Do for guano and fish in logs, 1*l.* 50c.  
Do iron, copper or zinc sheathing, and lead in cases, casks or rolls, 75c. per ton.  
Do sugar pans, 3*l.* each.  
Do steam engines, per horse power, 10*l.* each.  
Do anchors under 1,000 lb. weight, 3*l.* each.  
Do above 1,000 lb., 5*l.* each.  
Do above 1,500 lb., 7*l.* 50c. each.  
Supplying water, 1*l.* 50c. per ton.  
Do bell buoy, 3*l.* per ton.  
Landing or shipping of chain cables of 5 to 10 lines each, 5*l.* per ton.  
Do 11 to 16 lines each, 10*l.* per ton.  
Do 16 to 18 lines each, 15*l.* per ton.  
Landing oars or rows, 1*l.* each.  
Do bell buoy, 4*l.* each.  
Do cables, 6*l.* each.  
Do horses or mules, 4*l.* each.  
Do bell buoy, 4*l.* each.  
Do oxen and donkeys, 1*l.* each.  
Do bell buoy, 3*l.* each.  
Do turtles complete, 5*l.* each.  
Transportation from one vessel to another, 1*l.* per ton.  
Landing or shipping of (tanks, full), 4*l.* each.  
Do empty, 1*l.* each.  
Do of goods lying at men-of-war's moorings, 1*l.* per vessel.  
Do from outside men-of-war's moorings to bell buoy, 3*l.* per vessel.  
Do of carriages, two wheels, 2*l.* 50c. per carriage.  
Do of carriages, four wheels, 4*l.* per carriage.  
Do of coolies in the harbour, 1*l.* each.  
Do bell buoy, 5*l.* each.  
Tonnage (lb. to the ton).—Bran, 1,000 lb.; oats, 1,500 lb.; dhol, 2,000 lb.; rice, 2,000 lb.; coffee, 1,500 lb.; pepper, 1,400 lb.; clove, 750 lb.; cloves, 750 lb.; Europe cordage, 1,400 lb.; cotton in balls, 750 lb.; butter, 9,000 lb.; sugar, 2,000 lb.; tallow, 2,000 lb.; lead in pigs, 2,000 lb.; iron and ironmongery, 2,000 lb.; molasses, 2,000 lb.; 3/4 cent rose, 1,000 lb.; dried fish in bulk, 1,000 lb.; mustard seeds, 1,500 lb.; linseed and others, 1,000 lb.; potatoes, 1,100 lb.; bark, 800 lb.; resin in casks, 61 cwt or thereabouts, 41 salt provisions in casks, 51 flour in barrels, 51 bottled beer in casks of 6 dec., 41 beef and pork in tins, 31 wine in hog-heads, full or empty, 41 coconuts in shell, 311 do without shell, 5011 horns, 50111 porcelains, 10011 demijohns full, 5011 do, 2111 plants 1 to 10 ft., 3011 do to the top, 4211 pieces of Tatanam and other wood, 3011 cubic ft., 11 Malagascar hides, 511 India do, 8011 Vacas bags, 50011 brandy in pipes, 211 empty barrels, 511 earthen dishes and bowls, 10011 gunny bags, 50011 soap in bales, 70.

**Statement of Commercial Commissions (from Mauritius Civil Service Almanach).**

- On sale of goods imported of all descriptions, on the net amount if sold by auction, and on the gross amount of all other sales, 5 per cent.
- On sales of colonial sugar and other colonial produce, 11 per cent.
- Purchase of goods:—  
On purchases effected when the agent is in funds, 11 per cent.  
On purchases of do. when funds are provided by the agent, 8 per cent.
- On the sale of specie and bills of exchange, 1 per cent.
- On remittance proceeds of the sales of goods, specie, bills of exchange &c., 1 per cent.
- On goods consigned and afterwards withdrawn on invoice value, 1 per cent.
- On goods landed on account of damage incurred by the vessel and re-shipment of the same, 11 per cent.
- On freight or passage money procured, 8 per cent.
- On the collection of freight or passage money, 11 per cent.
- On ship's disbursement when the agent is in funds, 11 per cent.
- On do. when consignee furnishes funds, 8 per cent.
- On disbursements for vessels under charter, 1 per cent.
- On disbursements for vessels under charter, 1 per cent.
- On letters of credit and advances of funds from which no other commission is derived, 11 per cent.
- On effecting insurances, 1 per cent.
- On sale or purchase of houses, or other immovable property, under power of attorney, 1 per cent.
- On sale or purchase of vessels, whether abandoned or otherwise purchased or sold under power of attorney, 1 per cent.
- For recovery of rents, 1 per cent.
- On affairs in court, 1 per cent.
- On affairs in dispute and withdrawn before brought to a settlement, upon the actual value of the claim, 11 per cent.
- On protested bills returned for recovery, 11 per cent. on the amount received.
- On negotiation of battery bonds, 1 per cent.
- On commission received, 10 per cent.
- On guarantee of sales where the term does not exceed 1 month, 11 per cent. and 1 per cent. additional on each month beyond 6 months.
- Endorsement of bills of exchange or local bills, 11 per cent.
- For the delivery of goods on cargo when the freight has been paid beforehand, 11 per cent.

N.B.—Brokerage and auction dues are a separate charge.  
The following charges are leviable, by Ordinances Nos. 6 & 82 of 1852, on all vessels entering or clearing from Port Louis:—

- For Pilotage.**—Vessels remaining at the bell buoy, per foot 0 1/2  
Vessels entering the harbour:  
Flying inwards and outwards, per foot . . . . . 0 1/2  
Hire of pilots and tug-boats, per foot . . . . . 0 1/2  
Vessels under 100 tons burden entering the harbour shall not be required to take a pilot.  
For the use of the Harbour, viz:—Inwards, for each vessel of 100 tons burden and above . . . . . 3 0 0  
Ditto, if the port office steamer be employed . . . . . 1 0 0  
Outwards . . . . . 1 0 0  
For the use of Boats without Warps.—For each lanch (manned) per day  
Anchorage Dues.—Vessels trading with Madagascar or the dependencies of Mauritius, per ton of register . . . . . 0 4 0  
Such vessels shall not be charged anchorage dues more than for one year.  
Vessels entering the harbour in distress, or for repairs, provided that they do not receive cargo, nor break bulk, or that they discharge cargo for the purpose of repairs, and that the whole of the same be reloaded (excepting any part condemned as damaged).  
Vessels entering the harbour, but not breaking bulk nor receiving cargo, per ton of register . . . . . 0 4 0  
All other vessels breaking bulk or receiving cargo, per ton of register . . . . . 0 9 0  
The anchorage dues leviable under Ordinance No. 8 of 1852, were reduced as follows by Ordinance No. 31 of 1857, Art. 1. On vessels entering the harbour from any port, shall in no case exceed the following amounts, whatever may be their tonnage, viz:—  
On vessels breaking bulk or receiving cargo . . . . . 3 0 0  
On vessels not breaking bulk nor receiving cargo . . . . . 1 0 0  
Art. 2. All steam vessels touching at this port on their way to some other port, other than those receiving a contribution from this colony, for the carriage of mails between this colony and England and India, shall be exempt from anchorage dues and from all other harbour charges leviable exclusively for the use of the Government.  
**Port and Police Clearance.**—On vessels trading with Madagascar and dependencies of Mauritius, each . . . . . 0 1 0  
For the Dredging Service.—An additional proportional charge for the use of the steamer and for remaining so long upon the warps, levied upon all vessels, except those which remain at the bell buoy, viz:—  
On vessels under 150 tons, per register, 10 per cent.  
Of 150 tons or upwards, per register, 15 per cent.  
For tugging vessels by the port office steamer lanch or outboard, viz:—  
For vessels under 100 tons, each . . . . . 1 0 0  
from 100 to 150 tons . . . . . 2 0 0  
150 . . . . . 3 0 0  
200 400 per ton, each . . . . . 4 0 0  
above 400 tons, each additional 100 tons . . . . . 1 0 0

This island is, as every body knows, the scene of St. Pierre's inimitable tale of Paul and Virginia. The wreck of the St. Geran, so strikingly affecting an incident in the story, is a real event which took place on August 18, 1744.

&c. are raised in the island. The pasture lands in the north and east are superior to any in the West Indies for breeding and fattening cattle.

Previously to 1815, Porto Rico, being excluded from all direct intercourse with other countries excepting Old Spain, was either stationary or but slowly progressive, the entire value of the exports in that year having amounted to only 65,274 dollars. But at that epoch a royal decree appeared, which exempted the trade between Spain and the Spanish colonies and Porto Rico from all duties for 15 years; and she was then, likewise, permitted to carry on a free trade, under reasonable duties, with other countries. In consequence principally of these wise and liberal measures, but partly, also, of a considerable immigration of rich Spanish colonists from South America, Porto Rico has latterly made an extraordinary progress. Great improvements have been effected in the police and internal administration, and roads have been constructed in all parts of the island.

The island of Porto Rico, though exceedingly rich, suffers, according to the Report of Mr. Consul Cowper (*Consular Reports*, 1867), from the maladministration of the Spanish employés, and especially from the state of the currency. American money is current, but not legal; and home merchants are obliged, in order to pay their dues, to purchase Spanish money at a premium of 3 or 4 per cent., while the loss on bills is no less than 8 to 12 per cent., owing to this and similar causes.

Vessels under the Spanish flag have a protective privilege in a 6 per cent. abatement of duties, and the payment of half tonnage dues.

Vessels calling should not enter the port, or they are charged all the port dues, whereas if they send a boat for information they pay only 74 dollars.

*Shipping Dues &c., on a 3-masted Vessel.*—Anchorage dues, 2 piast. o. c.; Tonnage &c. dues, 189 piast. o. c.; captain of port, medical officer, and military and civil authorities 26 p. 75 c.; stamped paper for entry and clearance 9 p. 25 c.

Every vessel in cargo or ballast must be provided with 2 manifests and a bill of health, certified by the Spanish Consul, or in default by two merchants at the port of departure.

Merchandise imported direct is allowed a discount of 6 per cent. on the amount of the duties. In case a vessel shall have touched at an intermediate port, she must be furnished with a Spanish consular certificate, stating she has taken no landing.

The value of the total imports into Porto Rico in 1866 was 1,541,020L., and of her exports to the United Kingdom in 1866 was 308,659L., and of her exports to this country 496,172L.

PORT PHILLIP. [MELBOURNE.]

POSTAGE AND POST-OFFICE.

Postage is the duty or charge imposed on letters or parcels conveyed by post; the Post-office being the establishment by which such letters or parcels are conveyed.

1. *Establishment of Post-offices.*—Regular post-offices or couriers were instituted at a very early period, for the safe, regular, and speedy transmission of public intelligence. Herodotus informs us (lib. viii. c. 98) that in Persia, men and horses, in the service of the monarch, were kept at certain stations along the public roads; and that the despatches, being given to the first courier, were by him carried to the second, and so on, with an expedition which neither snow, nor rain, nor heat, nor darkness could check. A similar institution, under the name of *cursus publicus*, was established at Rome by Augustus, and was extended and

might be passed in travelling without his being able to deliver all the letters which the Post-office forwards to him in a single evening. The labour of a few individuals, devoted exclusively to the forwarding of letters, produces results which all the exertions of all the inhabitants of Europe could not effect, each person acting singly.' (Senior *On Political Economy.*)

**Rates of Postage.**—Previously to the introduction of the new system of a uniform penny rate of postage in 1839, under the provisions of the Act 2 & 3 Vict. c. 52, the following rates of postage, increasing progressively according to the distance, were charged on all letters (not privileged) conveyed by post from place to place in Great Britain and in Ireland, and from places in Great Britain to places in Ireland, and conversely:—

Great Britain.		Postage of a Single Letter
From any post-office in Great Britain to any place not exceeding 8 miles from such office		
For any distance above 8 miles, and not exceeding 15 miles		
15	..	3
30	..	4
50	..	5
70	..	6
80	..	7
100	..	8
150	..	10
170	..	11
250	..	12

And so on in proportion, the postage increasing progressively 1d. for a single letter for every 100 miles.

Letters containing one enclosure charged with 2 single rates. Letters containing more than one enclosure, and not exceeding 1 ounce, charged with three single rates. Letters exceeding 1 ounce, whatever the contents may be, were charged with 4 single rates; and for every 4 ounce above that weight, an additional single rate was chargeable.

**Ireland.**

From any post-office in Ireland to any place within the same, not exceeding 7 Irish miles from such office	Postage of a Single Letter
Exceeding 7 and not exceeding 15 Irish miles	3
15	4
25	5

900	0	20	1	17	1	0	1	17
1000	0	21	1	18	1	0	1	18

Exclusive of an additional charge for the packets plying between the two countries.

On comparing the number of non-privileged letters conveyed by the general post with the gross amount of postage, it appears that under the old system they paid an average rate of about 7d. or 7½d. each.

Exclusive, however, of these rates of postage, letters posted in London and other large towns for delivery in such towns, were charged 2d. each in London, and 1d. each in the other towns in which such local posts were established.

In addition, too, to the letters on which postage was charged, all the principal officers of Government, and the members of both Houses of Parliament, enjoyed (either to a greater or less extent) the privilege of 'franking,' or of sending and receiving letters by the post free of postage, and this privilege was very extensively exercised.

**Post-office Revenue.**—The gross produce, deducting overcharges, of the Post-office revenue of Great Britain, exclusive of Ireland, in the under-mentioned years, was—

Years	Duty	Years	Duty
1722	1,201,704	1850	2,053,780
1755	210,663	1855	2,107,677
1775	545,321	1877	2,103,994
1798	745,278	1838	2,116,738
1800	1,083,950	1839	2,168,913
1811	1,675,076	1840	1,239,248
1814	2,005,087	1841	1,566,174
1820	1,995,085	1842	1,439,162
1825	2,160,390		

The progress of the Scotch branch of the Post-office revenue has been quite extraordinary. In 1698, Sir Robert Sinclair, of Stevenson, had grants from William III. of its entire produce, with an extra allowance of 300l. a-year, on condition of his keeping up the post; but, after trial, he abandoned the undertaking as disadvantageous. In 1709 the Scotch Post-office revenue was under 2,000l.; whereas its amount in 1838 was 255,000l. gross, and 211,541l. net—having increased more than a hundredfold in little more than a century. In 1781 the Glasgow post-office produced only 4,341l. 1s. 9d., while in 1839 it produced 47,350l. (Stark's *Picture of Edinburgh*, p. 144; *Glasgow Statistics of Glasgow*; *Finance Book for 1838 and 1839*; &c.)

The expenses of collecting the Post-office revenue amounted, under the old system, to from 24 to 30 per cent. on the gross receipts. In 1842, however, they amounted, for the United Kingdom, to 966,759l., being no less than 60 per cent. on the gross revenue.

**Introduction of the New System.**—The increase of the Post-office revenue, as evinced by the foregoing statements, has been very remarkable. It is, mostly, no doubt, to be ascribed to the increase of population, the diffusion of education, and the growing intercourse among all classes of the community; though a good deal must also be ascribed to the efforts made in the early part of the present

the postage increasing

less than 60 per cent. on the

The New System.—The increase  
revenue, as evinced by the fact  
has been very remarkable. It  
to be ascribed to the increase of  
diffusion of education, and the  
also among all classes of the com-  
a good deal must also be ascribed  
in the early part of the present

of George III. to suppress some of the grosser  
abuses that had grown out of the privilege of  
franking, and still more to the additions that were  
repeatedly made to the rates of postage. Unfor-  
tunately, however, the latter were, in the end,  
carried far beyond their proper limits, imposing  
a heavy burden on the public, without any corre-  
sponding advantage to the revenue. This is ob-  
vious from the fact of the post-office revenue  
having continued stationary for the 20 years end-  
ing with 1838; though, from the great increase of  
population and commerce during that period, it is  
obvious, had the rates of postage not been so high  
as to force recourse to other channels, the revenue  
must have rapidly increased from the termination  
of the war downwards. When the rates of postage  
are moderate, the greater despatch and security of  
their conveyance by post prevent any considerable  
number of letters being sent through other chan-  
nels. But when the rates become oppressive—  
when, for example, a postage (as under the Into  
system) of 11d. is charged on the conveyance of a  
single letter between London and York, of 13d.  
between London and Edinburgh, and so on—a  
serious interruption is given to that facility of  
intercourse which is so important, at the same  
time that a very large proportion of the corre-  
spondence which is carried on is unavoidably  
forced into private channels. It was, no doubt,  
attempted to prevent the transfer of letters from  
the post, by forbidding, under heavy penalties,  
their conveyance by private parties. But, as  
might have been anticipated, this prohibition  
could not be enforced, and had little or no effect.  
Considering, indeed, the facilities which have long  
existed for the transmission of letters in parcels  
between different parts of the country, and the  
oppressive rates of postage, the wonder is, not  
that the post-office revenue was nearly stationary  
previously to 1839, but that it did not fall off.  
Although, however, the rates of postage then  
existing—amounting, as already stated, to an  
average charge of about 7d. or 7 1/2d. on all single  
letters conveyed by the general post—were very  
decidedly too high, it did not therefore follow  
that an invariable charge of 1d. whether a letter  
were conveyed 1 mile or 1,000 miles, or singly  
with 10,000 others, was the precise charge that  
should have been imposed. But, notwithstanding  
this was rushing blindfold from one extreme, or  
rather absurdity, to another, and endangering a  
large amount of revenue without any equivalent  
advantage, the ingenious project, brought forward  
by Mr. Rowland Hill, for a uniform penny postage,  
was paid in advance, was eagerly adopted. It  
must be admitted, too, that it had various recom-  
mendations in its favour. Being calculated to  
prevent trouble and save expense to the public, it  
could not fail to be generally acceptable (what re-  
action of taxation is not?), especially to mercan-  
tile men and others having an extensive correspon-  
dence. No doubt, however, the scheme was far  
more indebted for its popularity to the oppressive-  
ness of the old rates of postage, than to any in-  
trinsic merits of its own. Had these rates been  
properly reduced in 1837 or 1838—that is, had the  
postage of letters of 1/2 oz. weight passing between  
England and Ireland and London been reduced to  
6d., and other letters in proportion, and  
penny circulars, advertisements, and notices  
sales &c. been allowed to pass under covers open  
at the ends at 1d. or 2d. each—we venture to say  
that the clamour for a uniform penny postage would  
never have made any way. But Government,  
though hostile to the project, took no step calcu-  
lated to stop the agitation in its favour. They  
rather reduced the old rates of postage, nor at-

tempted to give any increased facilities for the  
conveyance of letters by post. And it happened  
on this, as it all but invariably happens on similar  
occasions, that those who decline making reason-  
able and necessary concessions at the outset, are,  
in the end, compelled to concede a great deal more  
than would have at first been satisfactory. Such, at  
all events, was the case in this instance. The clam-  
our for a uniform penny rate became too power-  
ful to be resisted; and Parliament, whether it were  
so inclined or not, was obliged to lend its sanction  
to the measure. The Act 2 & 3 Vict. c. 52, for  
regulating the duty on postage, did not indeed  
enact that the charge for conveying letters of a  
given weight should in all cases be reduced to  
1d.; but it was introduced for the avowed purpose  
of enabling the Treasury to take the necessary  
steps to bring the change about with the least in-  
convenience to all parties. In this view it gave  
the Treasury power to alter and reduce the rates  
of postage, without reference to the distance which  
letters may be conveyed, according to the weight  
of the letters, and not to the number or description  
of their enclosures; it also gave them power to  
adopt such regulations as they might think ex-  
pedient as to stamped covers or envelopes, to sus-  
pend parliamentary franking &c.

In virtue of the powers so conveyed, regulations  
were issued (sanctioned by the Act 3 & 4 Vict.  
c. 196) and since slightly modified, by which all En-  
glish letters, without regard to the number of en-  
closures or the distance conveyed, provided they  
be paid when posted or despatched, are:—

If not exceeding 1/2 oz. weight, charged 1d., 1  
oz. 2d., 1 1/2 oz. 3d., and so on, 1d. being added for  
every additional 1/2 oz. At the outset of the system  
all packets that weighed more than 16 oz.  
were sent to the Dead Letter Office, except—

1. Parliamentary petitions and addresses to her Majesty.
2. Parliamentary proceedings.
3. Letters and packets addressed to or received from places beyond sea.
4. Letters and packets to and from public departments.
5. Deeds, if sent open, or in covers open at the sides. They may be tied with string and sealed, in order to prevent inspection of the contents; but they must be open at the sides, that it may be seen they are entitled to the privilege.
6. Bankers' parcels despatched from London, and specially delivered at the General Post Office, under certain regulations.

But now (1869) there are no limits to the weight, but merely to the bulk of the parcels sent by post.

All letters not paid when they are posted or despatched are charged double the above rates; and if the payment in advance be insufficient, double the deficiency is charged.

All parliamentary and official franking has been put an end to; but members of either House of Parliament are entitled to receive petitions and addresses to her Majesty, and petitions to Parliament, free of charge, provided such petitions and addresses be sent in covers open at the ends, and do not exceed 32 oz. weight.

The punctual delivery of letters may be insured by getting them registered when posted. A fee of 1d., in the shape of additional stamps of that amount, is charged for the registration of each letter over and above the rate of postage to which it may be liable.

To facilitate the working of the plan, Govern-  
ment furnish adhesive stamps of 1d. &c. each,  
which being pasted on letters, they are of course

delivered to those to whom they are addressed free of any further charge for postage; and it also furnishes stamped envelopes at the low rate of 24 for 2s. 8d., the 3d. being for the paper and manufacture. Hence, as any quantity of stamps or stamped envelopes may, in most parts of the country, be procured beforehand, the necessity that must otherwise have existed of paying the postage at the moment when letters are posted, has been pretty generally obviated.

Such are the more prominent features of the new system; and no doubt it has the recommendations of simplicity (if we may apply such a phrase to a uniform charge for services costing widely different sums) and cheapness in its favour, and has greatly facilitated correspondence. But it may, notwithstanding, be easily shown that its adoption was most unwise. It is, no doubt, very convenient for merchants, bankers, middlemen, retail dealers, and indeed for most persons, to get letters for 1d. that previously cost them 7d. or 7½d.; but their satisfaction is not the only thing to be attended to in forming a fair estimate of the measure. The public exigencies require that a sum of about 70 millions a year should be raised, one way or other; and so long as we are pressed by an unreasoning necessity of this sort, it is not much to say in favour of the repeal or diminution of any tax, that those on whom it fell with the greatest severity are delighted with the reduction. Sugar has, in England, become a necessary of life; and its consumption, to say the least, is quite as indispensable to the bulk of the people, and especially to the labouring classes, as the writing of letters. But would it, therefore, be a wise measure to repeal the duty on sugar, or to reduce it to 1s. per cwt.? It has been alleged, indeed, that taxes on the transmission of letters are objectionable on principle, and should therefore be repealed, independently altogether of financial considerations. But it is easier to make an allegation of this sort than to prove it. All taxes, however imposed, if they be carried (as was the case with the old rates of postage) beyond their proper limits, are objectionable; but, provided these be not exceeded, we have yet to learn why a tax on a letter should be more objectionable than a tax on the food of the writer, or on fifty other things.

It was contended, when the plan was under discussion, that there would be no loss of revenue, and that the increase of correspondence growing out of the reduction of the postage would be so vast as fully to balance the reduced rate of charge. But, though there has been a great increase in the number of letters, it has fallen far short of this. Notwithstanding all that has been said about the *furor scribendi*, letter-writing is generally looked upon as a duty rather than a pleasure; and it does not follow, when the expense of postage is reduced, that the occasions for writing letters are proportionally increased.

The annexed table gives the total amount of the gross and nett revenue from the Post-office, and the total cost of management, in each of the years ending December 31, 1862, 1863, and 1864:

Years	Gross Revenue (after deducting for Returned and Mis-sent Letters, Overcharges &c.)	Cost of Management	Nett Revenue (including the Postage charged on the Public Departments)
1862	£ 3,633,589	£ 2,074,573*	£ 1,559,016
1863	3,571,929	2,098,453*	1,473,476
1864	4,109,926	2,136,574*	1,973,352

\* These sums are exclusive of the cost of the packet service, which amounted to 844,961l. in 1862; 948,147l. in 1863, and 968,917l. in 1864.

The following is the amount, from the several sources, of the gross revenue from the Post-office

in Great Britain and Ireland, distinguishing the deductions for returned letters, overcharges &c., in each of the years ending December 31, 1862, 1863, and 1864:—

Source of Revenue	1862	1863	1864
Sale of postage stamps by postmasters, receivers, and window-men	2,303,084	2,444,683	2,656,426
Ditto Ireland Revenue Department	705,330	747,475	767,742
Money for postage taken by country postmasters	195,844	187,530	125,287
Do. metropolitan postmasters	114,783	102,597	107,791
Commission received on money orders	136,251	144,826	151,979
Miscellaneous receipts	14,781	19,356	17,457
Postage charged against public departments	162,567	182,935	185,832
Postage collected by postmasters and agents in the colonies, and foreign countries not forming treaties with Great Britain	142,318	166,285	178,546
Postage collected in Great Britain for credit of colonial offices not under the control of the Imperial post office	40,737	40,099	40,554
Balance for United Kingdom	101,581	126,166	153,011
Postage collected under postal treaties by foreign post offices for Great Britain	187,253	218,891	219,963
Ditto by Great Britain for foreign post offices	201,893	228,441	241,411
Balance against U. Kingdom	14,630	11,547	31,431
Total receipts	5,550,468	5,886,711	6,132,291
Deductions for letters returned, mis-sent, and redirected, and for overcharges and returns	16,897	19,443	13,361
Total gross revenue	5,633,589	5,874,299	6,109,696

We subjoin a detailed statement of the post office expenditure in 1866 and 1867:—

#### Force and Expenditure.

	1866	1867
<b>FORCE.</b>		
<i>Effetive</i> .—Staff officers, postmasters, clerks, sorters, stampers, messengers, guards, letter carriers	25,594	25,602
<i>Non-Effetive</i> .—Retainers	1,425	1,559
<b>COST OF COLLECTION AND DELIVERY, OF MAMMUKHATS, AND OF MONEY ORDER BUSINESS.</b>		
Salaries, wages, pensions, travelling allowances, postage on sale of stamps, commission on money order business, cost of uniform clothing, medical expenses, and cost of substitutes during annual holidays or absences of officers and men, official postage, law charges, and incidental expenses	£ 1,368,157	£ 1,401,531
Manufacture of postage stamps, i.e. printing, paper, and miscellaneous charges	23,251	25,681
Stationery	34,989	35,003
Buildings and repairs, rent, rates, taxes, fuel, and light	182,627	206,594
Total cost of collection, delivery, and management, and of money order business	1,609,007	1,715,165
<b>COST OF CONVEYANCE OF MAILS.</b>		
Conveyance by coaches, carts, and omnibuses	139,838	110,009
Conveyance by railways	586,085	539,575
Cost of supply and repair of mail bags and boxes, tolls, and ferryage, cost of apparatus for exchange of bags conveyed by railway, and miscellaneous expenses	21,256	22,451
Conveyance of mails by private ships and by packets under contract with admiralty or post office	817,167	785,815
Conveyance of mails over Isthmus of Suez and Isthmus of Panama and in other foreign parts, and salaries of admiralty agents and other officers in charge of foreign and colonial mails	27,898	25,764
Total cost of conveyance	1,592,671	1,531,687
Total cost of post office service	3,201,678	3,246,852

The total gross receipt of the post-office revenue of the United Kingdom, deducting overcharges and returned letters, amounted in 1838 (before the changes began) to 2,346,278l., while the expenses of the establishment for the same year amounted to 686,768l., leaving a nett revenue of 1,659,510l. In 1867, however, 29 years after the new system had been in full operation, and the Post-office had been converted into a great carry-

ing establishment for the conveyance of books, &c., its gross revenue amounted to only 4,668,214*l.*, while the expenses of the establishment for the same year amounted to 3,246,850*l.*, leaving a nett revenue of only 1,421,364*l.*, being no less than 23*l.* 14*s.* 6*d.* under its amount in 1838.

Account of the Gross and Nett Post-Office Revenue, 1856-1867, from the 14th Report of the Postmaster-General.

Years	Total Postal Revenue	Total Cost of Post Office Services	Nett Revenue
1856	5,035,954	3,438,732	597,222
1857	5,195,713	3,570,901	624,812
1858	5,141,553	3,494,418	647,135
1859	5,461,914	3,907,160	554,754
1860	5,531,165	3,831,137	700,028
1861	5,685,198	3,914,171	803,717
1862	5,741,004	3,939,095	831,909
1863	5,999,455	3,968,451	1,037,404
1864	4,231,258	3,078,297	1,152,961
1865	4,435,608	2,941,096	1,494,512
1866	4,599,667	3,201,681	1,397,986
1867	4,668,214	3,246,850	1,421,364

It is plain, therefore, that the adoption of the new post-office system for a long time occasioned the sacrifice of from 238,146*l.* to 600,000*l.* a year of revenue, as compared with the revenues of 1838. And, considering the extraordinary progress of the country in the interval, and especially the increase of population and commerce, the loss will immediately be seen to be very much greater—perhaps more than double that amount. And though it be true that a sacrifice of this amount might not, under other circumstances, have been of much consequence, it is to be borne in mind that it was incurred when the revenue was already inadequate to meet the expenditure, and when, consequently, the deficiency had to be otherwise provided for, though probably in some more onerous way. We should not, however, have thought the loss of revenue, nor even the introduction of a uniform penny rate, a valid objection to the new plan, had there been no means other than its adoption of getting rid of the inconveniences attached to the old system. But such was not the case. All its defects might have been effectually obviated without any, or with but a very inconsiderable, loss of revenue. Had franking been abolished, and the old rates of postage so reduced that the average charge might have been about 2*d.* or 3*d.* a letter, the revenue would probably not have lost anything, while every really advantageous object effected by the present system would have been secured. Indeed, we see no good reason why the present rates of postage should not, and very many why they should, be doubled, or increased to 2*d.* for a letter weighing  $\frac{1}{2}$  oz., 4*d.* for one weighing 1 oz., and so on. We are well convinced that, were this done, and the troublesome practice of forcing the prepayment of letters abandoned, the revenue would be nearly doubled, with little or no inconvenience to the public.

It redounds nothing to the credit of the new system that the post-office revenue increases while it is maintained; for this must necessarily follow from the increasing population, wealth, commerce, and education of the country. The revenue would increase quite as fast under any reasonably well-contrived system; all taxes on articles in general use are sure, provided they be not excessive, to increase with every increase of population and wealth.

The abolition of franking—which, however, is in nowise connected with a penny rate of postage—was by far the least exceptional of the alterations introduced in 1837. Franked letters were in most

instances addressed to those who could best afford to pay the expense of postage, and who in this way escaped a burden that fell with its full weight on their less opulent and less known neighbours.

**Money Orders.**—The granting of money orders at the different post-offices, for the payment of sums of 10*l.* and under, is a very great accommodation to the public, and is very extensively resorted to. Such orders cost 3*d.* if for 2*l.* or under, 6*d.* for sums between 2*l.* and 5*l.*, 9*d.* for those from 5*l.* to 7*l.*, and 1*s.* for those from 7*l.* to 10*l.* As orders are not paid unless the parties in whose favour they are drawn, or other parties well known to the postmaster by whom they are payable, appear to receive payment, there is no risk of the money getting into improper hands.

**Despatching of Letters.**—Full details as to the posting of letters in London and elsewhere may be found in the *Postal Guide*, published quarterly—a useful and valuable publication, to which we beg to refer. It is sufficient here to state that, speaking generally, letters may be put into the receiving-boxes of the different post-offices throughout the country at all hours of the day, and mostly, also, of the night. The mails for particular places are made up at certain specified hours, of which public intimation is given in the *Postal Guide*, and letters put in after those hours are not of course despatched till next mail.

We abridge from the *Postal Guide* the following statements, viz. :—

**Inland Letters.**—The rates of postage on inland letters depend on weight only, and are as follows, if paid in advance :—

Letter weighing not more than $\frac{1}{2}$ oz.	1 <i>d.</i>
more than $\frac{1}{2}$ oz. and not exceeding 1 oz.	2 <i>d.</i>
more than 1 oz. and not exceeding $\frac{1}{2}$ lb.	3 <i>d.</i>

and so on; 1*d.* being charged for every additional ounce, or fraction of  $\frac{1}{2}$  ounce.

As a general rule, the postage, if not paid in advance, is doubled; and if the payments in advance be insufficient, double the deficiency is charged.

Petitions and addresses to her Majesty, forwarded direct, are exempted from postage; and such petitions and addresses, and petitions to either House of Parliament, if sent to a member, are likewise exempted, provided they do not weigh more than 2 lb., and are without covers, or are in covers open at the ends.

**Newspapers and other periodical Publications bearing the Newspaper Stamp.**—Although the exclusive privilege of the post-office extends only to letters, all periodical publications, including newspapers, published in the United Kingdom, at intervals not exceeding 31 days, and which bear a stamp or stamps denoting the stamp duty, may be transmitted and re-transmitted through the post within the United Kingdom free of postage under the following rules :—

Stamps Impressed on the Publication	Greatest Number of Sheets	Greatest Superficial Extent of Letterpress on One Side
One penny -	Two -	3,450 inches
Three-haipence -	Three -	3,415 "
Two-pence -	Four -	4,590 "

No publication, or portion thereof, can pass through the post unless the stamp which it bears be of the value of 1*d.* at least.

The title and date of the publication must be printed at the top of every page.

It must be folded in such a manner that the whole of the stamp or stamps shall be exposed to view, and be distinctly visible on the outside.

It must not be printed on pasteboard or cardboard.

t of the post-office revenue, deducting overcharges mounted in 1838 (before 2,946,278*l.*, while the experiment for the same year leaving a nett revenue of 1,421,364*l.*), however, 29 years after the full operation, and the converted into a great carry-

It must be posted within 15 days from the date of issue.

If these rules be infringed, the publication will be charged double, as an unpaid book-packet.

It must have either no cover or be open at the ends.

It must not contain any enclosure.

It must have no writing or other mark thereon but the name and address of the person to whom it is sent; nor anything on the cover but such name and address, the printed title of the publication, and the printed name and address of the publisher or vendor who sends it.

If the publication be addressed to any person in the place where it is posted, it is liable to a postage of 1d. prepaid, or 2d. if not prepaid.

Stamped publications can also be forwarded per book post, but then the impressed stamp does not count.

Newspapers may also be sent abroad by the post-office. But the regulations and postage to which they are liable vary so often, that it would be useless to mention them here.

**Parliamentary Proceedings.**—Printed proceedings of Parliament, without covers, or in covers open at the ends, circulate within the United Kingdom, 1d. being charged for every  $\frac{1}{4}$  lb. or fraction of  $\frac{1}{4}$  lb.

The words Parliamentary Proceedings must be written or printed on the cover of the packet; otherwise it is liable to the letter-rate of postage.

Prepayment when the circulation is within the United Kingdom is optional; and if it be made in part, the difference only is charged.

Parliamentary proceedings may be sent as books to all the colonies, and to those foreign states between which and this country there is a book post.

**Book Post, including Newspapers and other periodical Publications, and also Parliamentary Proceedings.**—The postage is 1d. for every  $\frac{1}{4}$  lb. or fraction of  $\frac{1}{4}$  lb.

The postage must be prepaid in full, by means of postage stamps.

Every packet must be sent either without a cover, or in a cover open at the ends or sides.

A book-packet may contain any number of separate books or other publications (including printed or lithographed letters), photographs, unglazed prints, or maps, and any quantity of paper, parchment, or vellum. And the books &c. may be bound or unbound &c.

No book-packet to contain anything sealed or otherwise closed against inspection; nor any letter, nor any communication of the nature of a letter (beyond the name of the sender), unless such letter or communication be printed.

No book-packet must exceed 2 feet in length, or 1 foot in width or depth; and if any packet of greater dimensions be presented at a post-office, it will not be received.

Any packet not open at the ends or sides, or which has any written letter or any communication of the nature of a letter written in it, or upon its cover, will be charged with the 'unpaid' letter postage.

Except that the rates of postage are higher, books can be sent to all British colonies and to the various foreign countries enumerated in the *Postal Guide*.

**Pattern and Sample Post.**—Patterns and samples may be transmitted by the inland, colonial, and foreign posts, subject to regulations similar to those affecting the book post.

**Registration.**—By the prepayment of a fee of 4d., paid in stamps, any letter, newspaper, book, or other packet on which the postage has

been prepaid in stamps, may be registered to any place in the United Kingdom. The registration of a packet makes its transmission more accurate, by rendering it practicable to trace it, when inland, from its receipt to its delivery; and when colonial, if not to its delivery, at least to the port of despatch. The post-office does not guarantee the safe delivery of the letter.

For the rules and rates of registration of foreign letters, see table of colonial and foreign postage in the *Postal Guide*.

**Money Orders.**—Applicants for money orders should use printed 'Application Forms,' which save time, and afford greater security than verbal messages, against mistakes. These forms are supplied gratuitously at all money order offices.

The commission on a money order not exceeding 2l. is 3d.; 2l. to 5l., 6d.; 5l. to 7l., 9d.; and 7l. to 10l., 1s.

No order is allowed to contain a fractional part of a penny.

With few exceptions, no money order is issued unless the applicant furnish, in full, the surname and at least the initial of one Christian name both of the remitter who sends the order, and the payee (or person to whom the money is to be paid) together with the remitter's address.

An order once issued cannot be cancelled.

Money orders do not require a receipt stamp.

Payment of an order must be obtained before the end of the second calendar month after that in which it was issued (for instance, if issued in January it must be paid before the end of March); otherwise the order becomes lapsed, and a new order will be necessary, for which a second commission will be charged. Persons presenting lapsed orders are furnished with copies of a printed notice headed 'Lapsed Money Orders,' containing directions how to proceed. If the order be not paid before the end of the twelfth calendar month after that in which it was issued (for instance, if issued in January, and not paid before the end of next January), all claim to the money is lost.

No application is entertained for compensation for alleged injury from the non-payment of a money order at the expected time; and after once paying a money order, by whomsoever presented, the office is not liable to any further claim.

Money orders are issued at all money order offices in the United Kingdom on money order offices in Alexandria, Bahin, Buenos Ayres, Constantinople, Gibraltar, Hong Kong, Malta, Monte Video, Pernambuco, Rio Janeiro, Shanghai, Suez, and Yokohama, at a charge equal to threefold the commission on inland money orders; and orders on money order offices in our West Indian, North American, Australian, and West and South African colonies, the Falkland Islands, and St. Helena, at a charge equal to fourfold such commission.

All necessary information with regard to the sailing of packets, the postage to foreign countries &c., may be found in the *Postal Guide*, in Kelly's *Post-office Directory*, and other publications.

**Local Postal Guides**, price one penny, containing information special to the locality, are issued at the post-offices at Birmingham, Belfast, Bristol, Cork, Dublin, Edinburgh, Glasgow, Leeds, Liverpool, Manchester, and Sheffield.

**Offences against the Post-office.**—The laws relative to offences against the post-office were consolidated by the Act 1 Vict. c. 36, of the more important parts of which we subjoin an abstract.

**Contravening the Privilege of Post-office.**—Every person who shall convey otherwise than by the post a letter not exempted from the exclusive

Account of the Number of Letters, and of Books, Newspapers, and Patterns, delivered by the Post-offices throughout the United Kingdom, and Amount of Money Orders paid, in 1865-1867. Extracted from 14th Report (1868) of the Postmaster-General.

privilege of the postmaster-general shall for every letter forfeit 5*l.*, and every person who shall be in the practice of so conveying letters not so exempted shall, for every week during which the practice shall be continued, forfeit 100*l.*; and every person who shall perform otherwise than by the post any services incidental to conveying letters from place to place, whether by receiving, taking up, collecting, ordering, despatching, carrying, re-carriage, or delivering a letter not exempted from the exclusive privilege of the postmaster-general, shall forfeit for every letter 5*l.*; and every person who shall be in the practice of so performing any such incidental services shall, for every week during which the practice shall be continued, forfeit 100*l.*; and every person who shall send a letter not exempted from the exclusive privilege of the postmaster-general otherwise than by the post, or shall cause a letter not so exempted to be sent or conveyed other than by post, or shall tender or deliver a letter not so exempted in order to be sent otherwise than by post, shall forfeit for every letter 5*l.*; and every person who shall be in the practice of committing any of the acts last mentioned shall, for every week during which the practice shall be continued, forfeit 100*l.*; and every person who shall make a collection of exempted letters for the purpose of conveying or sending them otherwise than by the post, or by the post, shall forfeit for every letter 5*l.*; and every person who shall be in the practice of making a collection of exempted letters for either of these purposes, shall forfeit, for every week during which the practice shall be continued, 100*l.* And be it declared, that the term post shall herein include all post communications by land or by water (except by outward-bound vessels not employed by the post-office or the Admiralty to carry post letters); and the above penalties shall be incurred whether the letter be sent singly or with anything else, or such incidental service be performed in respect to a letter either sent or to be sent singly or together with some other letter or thing; and in any prosecution for the recovery of any such penalty the onus shall lie upon the party prosecuted to prove that the act, in respect of which the penalty is alleged to have been incurred, was done in conformity to the post-office laws. (Sec. 2.)

**Ship Letters retained after delivering of Letters to Post-office.**—Every person, being either the master of a vessel inward-bound, or one of the officers, or one of the crew, or a passenger thereof, who shall knowingly have any letter in his possession not exempted from the privilege of the postmaster-general, after the master shall have sent any part of his ship's letters to the post-office, shall forfeit for every letter 5*l.*; and every such person who shall detain any such letter after demand made, either by the officer of the customs or by a person authorised by the postmaster-general to demand ship's letters, shall forfeit for every letter 10*l.* Sec. 3.)

**Penalties on Masters of Ships not taking Letter Bags.**—Every master of a vessel bound to Ceylon, the Mauritius, the East Indies, or the Cape of Good Hope, who shall refuse to take a post letter bag delivered or tendered to him by an officer of the post-office for conveyance, shall forfeit 200*l.*; the 3 & 4 Vict. c. 96 extends this penalty to the master of every vessel outward bound, and who shall refuse to take a post letter bag delivered or tendered to him for conveyance. And every master of a vessel who shall open a sealed letter bag, with which he shall be intrusted for conveyance, shall forfeit 200*l.*; and every master of a vessel who shall take out of a letter bag with which he shall have been intrusted for conveyance a letter or any other thing shall forfeit 200*l.*; and every master of a vessel who shall not duly deliver a letter bag with the contents at the post-office on his arrival in port, without wilful or unavoidable delay on his arrival, shall forfeit 200*l.*; and every person to whom letters may have been intrusted by the master of a vessel to bring on shore who shall break the seal, or in any manner wilfully open the same, shall forfeit 20*l.*; and every master of a vessel who shall refuse or wilfully neglect to make declaration of having delivered his ship's letters to the post-office, shall forfeit 50*l.*; and every collector, comptroller, or officer of the customs who is required by the Act 1 Vict. c. 34 to prohibit any vessel reporting until the requisites of such Act shall have been complied with, who shall permit such vessel to report before the requisites of such Act shall have been complied with, shall forfeit 50*l.*; and every master of a vessel (not having been able to send his letters ashore previous to his arrival at the port where the vessel is to report) who shall break bulk or make entry before all letters on board shall be sent to the post-office shall forfeit 20*l.*; and every master of a vessel, or any other person on board any ship liable to the performance of quarantine, who shall neglect or refuse to deliver to the person or persons appointed to superintend the quarantine all letters in his possession, shall forfeit 20*l.* (Sec. 6.)

**Penalties on the Carelessness of Persons engaged or employed in carrying, conveying &c. Letters.**—Every person employed to convey or deliver a post letter bag or a post letter, who shall, whilst so employed, or whilst the same shall be in his custody, care, or possession, leave a post letter bag or a post letter, or suffer any person, not being the guard or person employed for that purpose, to ride in the place appointed for the guard in or upon any carriage used for the conveyance of a post letter bag or post letter, or to ride in or upon a carriage so used and not licensed to carry passengers, or upon a horse used for the conveyance on horseback of a post letter bag or a post letter, or if any such person shall be guilty of any act of drunkenness, or of carelessness, negligence, or other misconduct, whereby the safety of a post letter bag or a post letter shall be endangered, or who shall collect or receive, or

be registered to any m. The registration admission more secure, to trace it, when in a delivery; and when any, at least to the port does not guarantee er.

 the Post-office.—The laws re- against the post-office were e Act 1 Vict. c. 36, of the more which we subjoin an abstract. e Privilege of Post-office.— shall convey otherwise than by t exempted from the exclusi

convey or deliver, a letter otherwise than in the ordinary course of the post, or who shall give any false information of an assault or attempt at robbery upon him, or who shall loiter on the road or passage, or wilfully mispend his time so as to retard or delay the progress or arrival of a post letter bag or a post letter, or who shall not use due and proper care and diligence safely to convey a post letter bag or a post letter at the rate of speed appointed by and according to the regulations of the post-office for the time being, being thereof convicted, shall forfeit 20*l.* (Sec. 7.)

Clauses 8 to 24 inclusive impose penalties on hackney carriages plying for hire opposite the general post-office in London or Dublin; exempt mail coaches from toll; and direct how penalties shall be sued for.

*Opening or delaying Post Letters a Misdemeanor.*—Every person employed by or under the post-office who shall, contrary to his duty, open or procure or suffer to be opened a post letter, or shall wilfully detain or delay, or procure or suffer to be detained or delayed, a post letter, shall in England and Ireland be guilty of a misdemeanor, and in Scotland of a crime and offence, and being convicted thereof shall suffer such punishment, by fine or imprisonment, or by both, as to the court shall seem meet: provided always, that nothing herein contained shall extend to the opening or detaining or delaying of a letter returned for want of a true direction, or of a letter returned by reason that the person to whom the same is directed is dead or cannot be found, or shall have refused the same, or shall have refused or neglected to pay the postage thereof; nor to the opening or detaining or delaying of a post letter in obedience to an express warrant in writing under the hand (in Great Britain) of one of the principal secretaries of state, and in Ireland under the hand and seal of the lord-lieutenant of Ireland.

*Embezzlement &c. of any Letter or Packet, Felony.*—Every person employed under the post-office who shall steal, or shall for any purpose whatever embezzle, secrete, or destroy a post letter, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and shall, at the discretion of the court, either be transported beyond the seas for the term of 7 years, or be imprisoned for any term not exceeding 3 years; and if any such post letter so stolen or embezzled, secreted or destroyed, shall contain therein any chattel or money whatsoever, or any valuable security, every such offender shall be transported beyond the seas for life. (Sec. 26.)

*Stealing Money &c. from or out of Letters, Felony.*—Every person who shall steal from or out of a post letter any chattel or money or valuable security, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and shall be transported beyond the seas for life.

*Persons stealing Post Letter Bags &c. to be transported for Life.*—Every person who shall steal a post letter bag, or a post letter from a post letter bag, or shall steal a post letter from a post-office, or from an officer of the post-office or from a mail, or shall stop a mail with intent to rob or search the same, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and shall be transported beyond the seas for life.

*Persons stealing Post Letter Bags or Post Letters to be transported for 14 Years.*—Every person who shall steal or unlawfully take away a post letter bag sent by a post-office packet, or who shall steal or unlawfully take a letter out of any

such bag, or who shall unlawfully open any such bag, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and shall be transported beyond the seas for any term not exceeding 14 years.

*Receivers of Property sent by the Post, and stolen or embezzled, guilty of Felony.*—Every person who shall receive any post letter or post letter bag, or any chattel or money or valuable security, the stealing or taking or embezzling or secreting whereof shall amount to a felony under the Post-office Acts, knowing the same to have been feloniously stolen, taken, embezzled, or secreted, and to have been sent or intended to be sent by the post, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and may be indicted and convicted either as an accessory after the fact or for a substantive felony, and, in the latter case, whether the principal felon shall or shall not have been previously convicted, or shall or shall not be amenable to justice; and every such receiver, howsoever convicted, shall be liable to be transported beyond the seas for life.

*Fraudulently retaining, after Delivery thereof &c.*—Every person who shall fraudulently retain, or shall wilfully secrete or keep or detain, or being required to deliver up by an officer of the post-office, shall neglect or refuse to deliver up a post letter which ought to have been delivered to any other person, or a post letter bag or post letter which shall have been sent, whether the same shall have been found by the person secreting, keeping, or detaining, or neglecting or refusing to deliver up the same, or by any other person, shall in England and Ireland be guilty of a misdemeanor, and in Scotland of a crime and offence, and on conviction shall be liable to be punished by fine and imprisonment.

*Stealing &c. printed Votes or Proceedings in Parliament &c.*—Every person employed in the post-office who shall steal, or shall for any purpose embezzle, secrete, or destroy, or shall wilfully detain or delay in course of conveyance or delivery thereof by the post, any printed votes or proceedings in parliament, or any printed newspaper, or any other printed paper whatever, sent by the post without covers, or in covers open at the sides, shall in England and Ireland be guilty of a misdemeanor, and in Scotland of a crime and offence, and on conviction shall suffer such punishment by fine or imprisonment, or both, as the court shall direct.

*Forging the Handwriting of the Receiver-General in England or Ireland, Felony.*—Every person who shall knowingly and wilfully forge or counterfeit, or cause or procure to be forged or counterfeited, the name or handwriting of the receiver-general for the time being of the general post-office in England or Ireland, or of any person employed by or under him, to any draft, instrument, or writing whatsoever, for or in order to the receiving or obtaining of any money in the hands or custody of the governor and company of the bank of England or Ireland on account of the receiver-general of the post-office, or shall forge or alter, or shall offer, utter, dispose of, or print off, knowing the same to be forged or altered, any draft, warrant; or order of such receiver-general, or of any person employed by or under him, for money or for payment of money, with intent to defraud any person whomsoever, shall be guilty of felony, and on conviction shall be transported beyond the seas for life.

The remaining clauses relate to the punishment of accessories, determine the mode in which the postage duties shall be sued for, define terms &c.

**Irish Post-office.**—The most gross and scandalous abuses were long prevalent in every department of the Irish post-office. The Commissioners of Revenue Inquiry exerted themselves to abate the nuisance; but, as it would appear from the evidence of the Duke of Richmond before the committee of the House of Commons on public salaries, without much effect. His Grace, however, and subsequent postmasters, have laboured with laudable activity and zeal to introduce something like honesty, order, and responsibility into this department.

**UNITED STATES.**—We subjoin an account of the rates of postage in the United States, under Act of Congress of March 3, 1863.

**Rates of Domestic Postage on Letters.**

Standard weight of single rate 4 oz. avoirdupois.	
Postage on single-rate letter, throughout the United States	3 cents.
For each additional 1 oz. or fraction	3 "
Postage on "drop" letters for local delivery, for 1/2 oz.	2 "
For each additional 1/2 oz. or fraction	2 "
Postage on all domestic letters must be prepaid by stamps.	

**Rates of Newspaper Postage (Domestic).**

Postage on papers to subscribers, when prepaid quarterly or yearly:—

Daily (1 time a week)	35 cents per quarter.
" " " "	30 "
Tri-weekly	15 "
Semi-weekly	10 "
Weekly	5 "

Weekly newspapers (one copy only) sent by the publisher to actual subscribers within the county where printed and published, free.

Standard weight for a single rate, 4 oz. avoirdupois. For each additional weight of 4 oz. or fraction thereof, an additional rate is charged.

Postage per quarter on newspapers and periodicals issued less frequently than once a week, sent to actual subscribers in any part of the United States:—

Semi-monthly, not over 4 oz.	6 cents per quarter.
over 4 oz. and not over 8 oz.	12 "
over 8 oz. and not over 12 oz.	18 "
Monthly, not over 4 oz.	3 "
over 4 oz. and not over 8 oz.	6 "
over 8 oz. and not over 12 oz.	9 "
Quarterly, not over 4 oz.	1 "
over 4 oz. and not over 8 oz.	3 "
over 8 oz. and not over 12 oz.	5 "

Postage as above must be paid quarterly or yearly in advance, either at the office of mailing or delivery.

**POST ENTRY.** When goods are weighed or measured, and the merchant has got an account thereof at the Custom-house, and finds his entry, already made, too small, he must make a *post* or additional entry for the surplussage, in the same manner as the first was done. As a merchant is always in time, prior to the clearing of the vessel, to make his post, he should take care not to over-enter, to avoid as well the advance, as the trouble of getting back the overplus. However, if this be the case, and an over-entry has been made, and more paid or bonded for customs than the goods really landed amount to, the customs officer must signify the same, upon oath made, and subscribed by the person so over-entered, that neither he, nor any other person, to his knowledge, had any of the said goods over-entered on board the said ship, or anywhere landed the same without payment of custom; which oath must be attested by the collector or deputy, who then computes the duties, and sets down on the back of the certificate, first in words at length, and then in figures, the several sums to be paid. Post entries are now almost wholly confined to cargoes of grain.

**POTASH** (Dan. potaske; Fr. potasse; Ger. potasche; Ital. sale alcali; Span. potasa; Russ. masch). If vegetables be burned, the ashes are levigated, and the solution boiled to dryness in iron vessels, the mass left behind is the *potash* of

commerce—the impure carbonate of potass of chemists.

It is intensely alkaline, solid, and coloured brown by the admixture of a small portion of vegetable inflammable matter, which generally becomes moist. When potash is calcined in a reverberatory furnace, the colouring matter is destroyed, it assumes a spongy texture, and a whitish pearly lustre; whence it is denominated *pearl-ash*. The latter generally contains from 60 to 83 or 84 per cent. of pure carbonate of potass.

The ashes of those vegetables only which grow at a distance from the sea are employed in the manufacture of potash. Herbaceous plants yield the largest portion, and shrubs more than trees. It is principally manufactured in America, Russia, and Poland, the vast forests of which furnish an inexhaustible supply of ashes.

In the year 1865, exclusive of nitrate &c. of potash, 143,779 cwt. of pearl and potash were imported into the United Kingdom. Of these 113,916 cwt. were the produce of British North America; the remainder of the United States and France. The highest price was realised on the colonial produce. The potash imported in 1867 consisted of 178,619 cwt. of muriate, chiefly from Hamburg, 3,042 cwt. of prussiate, 33,214 cwt. of sulphate, and 108 cwt. of bichromate of potash.

Ashes from Canada have always been duty free; but those from Russia and the United States used to pay a duty of 6s. per cwt., which, after being reduced in 1842 to 6d., was finally repealed in 1845.

**POTATOES** (Ger. kartoffel; Dutch, aardappelen; Fr. pommes de terre; Ital. patate, pomi di terra; Span. patatas manchegas; Russ. jabloki semleniye). The roots of the *Solanum tuberosum*, of innumerable varieties, and too well known to require any description.

1. **Historical Notice.**—The potato, which is at present to be met with everywhere in Europe, and forms a principal part of the food of a considerable proportion of its inhabitants, was entirely unknown in this quarter of the world till the latter part of the 16th century. It is a native of America, but whether of both divisions of that continent is doubtful. (Humboldt, *Nouvelle Espagne*, liv. iv. c. 9.) Some authors affirm that it was first introduced into Europe by Sir John Hawkins, in 1545; others, that it was introduced by Sir Francis Drake, in 1573; and others, again, that it was for the first time brought to England from Virginia, by Sir Walter Raleigh, in 1586. But this discrepancy seems to have arisen from confounding the common, or Virginian potato (the *Solanum tuberosum* of Linnæus), with the sweet potato (*Convolvulus battatus*). The latter was introduced into Europe long before the former, and it seems most probable that it was the species brought from New Granada by Hawkins. Sweet potatoes require a warm climate, and do not succeed in this country; they were, however, imported in considerable quantities, during the 16th century, from Spain and the Canaries, and were supposed to have some rather peculiar properties. The kissing comfits of Falstaff, and suchlike confections, were principally made of battatus and eringo roots. (See Collins' elaborate note to *Troilus and Cressida*, act v. scene 2.) On the whole, we are inclined to think that we are really indebted for the potato (as well as for tobacco) to Sir Walter Raleigh, or the colonists planted by him in Virginia. Gerard, an old English botanist, mentions, in his *Herbal*, published in 1597, that he had planted the potato in his garden at London about 1590; and that it succeeded there as well as in its native soil, Virginia, whence he had received it. Potatoes were at

first cultivated by a very few, and were looked upon as a great deliency. In a manuscript account of the household expenses of Queen Anne, wife of James I., who died in 1618, and which is supposed to have been written in 1613, the purchase of a very small quantity of potatoes is mentioned at the price of 2s. per pound. The Royal Society, in 1663, recommended the extension of their cultivation, as a means of preventing famine. Previously, however, to 1684, they were raised only in the gardens of the nobility and gentry; but in that year they were planted, for the first time, in the open fields in Lancashire, a county in which they have long been very extensively cultivated.

Potatoes, it is commonly thought, were not introduced into Ireland till 1610, when a small quantity was sent by Sir Walter Raleigh to be planted in a garden on his estate in the vicinity of Youghal. Their cultivation extended far more rapidly than in England, and has long furnished from three-fifths to four-fifths of the entire food of the people of Ireland.

Potatoes were not raised in Scotland, except in gardens, till 1728, when they were planted in the open fields by a person of the name of Prentice, a day-labourer at Kilsyth, who died at Edinburgh in 1792.

The extension of the potato cultivation has been particularly rapid during the present century. The quantity that is now raised in Scotland is supposed to be from 10 to 12 times as great as the quantity raised in it at the end of the American war; and though the increase in England has not been nearly so great as in Scotland, it has been greater than during any previous period of equal duration. The increase on the Continent has been similar. Potatoes are now very largely cultivated in France, Prussia, and Austria; there having been devoted to their cultivation in France, 3,087,017 English acres, in 1862; Prussia, 3,418,610 acres, in 1867; and Austria (ex Galicia), 1,308,148 acres, in 1866. They were introduced into India towards the end of last century; and are now successfully cultivated in Bengal, and have been introduced into the Madras provinces, Java, the Philippines, and China. But the common potato does not thrive within the tropics unless it be raised 3,000 or 4,000 feet above the level of the sea, so that it can never come into very general use in these regions. This, however, is not the case with the sweet potato, which has also been introduced into tropical Asia; and with such success, that it already forms a considerable portion of the food of the people of Java and some other countries. So rapid an extension of the taste for, and the cultivation of, an exotic, has no parallel in the history of industry; it has had, and will continue to have, the most powerful influence over the condition of mankind. (For further details with respect to the history of the potato, see Sir F. M. Eden *On the State of the Poor*, vol. i. p. 508; Humboldt, *Essai sur la Nouvelle Espagne*, iii. 460-465, 2nd ed.; Sir Joseph Banks *On the Introduction of the Potato*; Phillips's *History of Cultivated Vegetables*, vol. ii. art. 'Potato.')

2. *Influence of the Cultivation of the Potato on the Number and Condition of the People.*—There is a considerable discrepancy in the statements of the best authors as to the number of individuals that might be supported on an acre of land planted with potatoes, as compared with those that might be supported on an acre sown with wheat; some stating the proportion as high as six to one, and others at only two to one. According to Mr. Arthur Young, 1 lb. of wheat is about equal in

nutritive power to 5 lb. of potatoes. But Mr. Newenham, who has carefully investigated this subject, states that '3 lb. of good mealy potatoes are, undoubtedly, more than equivalent to 1 lb. of bread' (*Newenham On the Population of Ireland*, p. 340); and his estimate is rather above Mr. Wakefield's. Supposing, however, that 1 lb. of wheat is fully equal to four lb. of potatoes, still the difference in favour of the superior quantity of food derived from a given quantity of land planted with the latter is very great. According to Mr. Young, the average produce of potatoes in Ireland may be taken at 82 barrels the Irish acre; which, at 20 stone the barrel, is equal to 22,960 lb.; and this being divided by four, to bring it to the same standard, in point of nutritive power, as wheat, gives 5,740 lb. Mr. Young further estimates the average produce of wheat, by the Irish acre, at 4 quarters; which, supposing the quarter to weigh 480 lb., gives in all 1,920 lb., or about  $\frac{1}{4}$  part of the solid nourishment afforded by an acre of potatoes. (*Tour in Ireland*, Appen. pp. 12, 24 & 4to. ed.) This estimate must, however, be somewhat modified, when applied to Great Britain; the soil of which, while it is better adapted to the growth of wheat, is generally supposed not to be quite so suitable for the potato as that of Ireland. But it notwithstanding admits of demonstration, that even here, 'an acre of potatoes will feed double the number of individuals that can be fed from an acre of wheat.' (*General Report of Scotland*, vol. i. p. 571.)

It is clear, therefore, on the most moderate estimate, that the population of a potato-feeding country may become, other things being about equal, from 2 to 3 times as dense as it would be were the inhabitants fed wholly on corn. But it is exceedingly doubtful whether an increase of population, brought about by the substitution of the potato for wheat, be desirable. Its use as a subordinate or subsidiary species of food is attended with the best effects—producing both an increase of comfort and security; but there are certain circumstances inseparable from it, which would seem to oppose the most formidable obstacles to its advantageous use as a *prime* article of subsistence. The discussion of this subject can hardly be said properly to belong to a work of this sort; but its importance may, perhaps, excuse us for making a few observations with respect to it.

It is admitted on all hands, that the rate of wages is principally determined by the species of food made use of in a country. Now, as potatoes form that species which is produced at the very least expense, it may be fairly presumed, on general grounds, that wages will be reduced to a minimum wherever the labouring classes are mainly dependent on potatoes; and the example of Ireland shows that this conclusion is as consistent with fact as with principle. It is clear, however, that when the crop of potatoes happens to be deficient in a country thus situated, the condition of its inhabitants must be in the last degree unfortunate. During a period of scarcity, men cannot go from a low to a high level; if they would elude its pressure, they must leave the dearer and resort to cheaper species of food. But to those who subsist on potatoes this is not possible; they have already reached the lowest point in the descending scale. Their wages being determined by the price of the least expensive sort of food, they cannot, when it fails, buy that which is dearer; so that it is hardly possible for them to avoid falling a sacrifice to absolute want. The history of Ireland abounds, unfortunately, in examples of this sort. Nothing is more common than to see the price of potatoes in Dublin, Limerick &c. rise, and

of potatoes. But Mr. [unclear] investigated this of good mealy potatoes in equivalent to 1 lb. of [unclear] Population of Ireland, [unclear] is rather above Mr. [unclear] however, that 1 lb. of [unclear] 4 lb. of potatoes, still the superior quantity of [unclear] quantity of land planted [unclear] eat. According to Mr. [unclear] of potatoes in Ireland is the Irish acre; which, equal to 22,960 lb.; and [unclear] r, to bring it to the same [unclear] tritive power, as wheat. [unclear] further estimates the [unclear] at, by the Irish acre, at [unclear] the quarter to weigh [unclear] 30 lb., or about 1 part of [unclear] afforded by an acre of [unclear] nd, Appen. pp. 12, 21 &c. [unclear] must, however, be some- [unclear] applied to Great Britain; [unclear] it is better adapted to the [unclear] generally supposed not to be [unclear] potato as that of Ireland. [unclear] admits of demonstration. [unclear] acre of potatoes will feed [unclear] individuals that can be fed [unclear] (General Report of Soc.

[unclear] on the most moderate [unclear] of a potato-feeding [unclear] other things being about [unclear] as dense as it would be [unclear] wholly on corn. But it [unclear] fulfil whether an increase [unclear] about by the substitution of [unclear] t, be desirable. Its use as a [unclear] diary species of food is at- [unclear] effects—producing both an [unclear] and security; but there are [unclear] inseparable from it, which [unclear] the most formidable obsta- [unclear] use as a *prime* article of [unclear] discussion of this subject can [unclear] ly to belong to a work of this [unclear] nce may, perhaps, excuse us [unclear] servations with respect to it. [unclear] n all hands, that the rate of [unclear] determined by the species of [unclear] a country. Now, as potatoes [unclear] which is produced at the very [unclear] be fairly presumed, on general [unclear] will be reduced to a minimum [unclear] ing classes are mainly depend- [unclear] and the example of Ireland [unclear] elusion is as consistent with [unclear] le. It is clear, however, that [unclear] atatoes happens to be deficient [unclear] situated, the condition of the [unclear] e in the last degree unfavour- [unclear] od of scarcity, men cannot [unclear] gh level: if they would else- [unclear] ust leave the dealer and reser- [unclear] of food. But to those who [unclear] this is not possible; they have [unclear] lowest point in the descending [unclear] es being determined by the [unclear] pensive sort of food, they can [unclear] buy that which is dearer; or [unclear] ssible for them to avoid falling [unclear] ate want. The history of Ire- [unclear] rtunately, in examples of the [unclear] more common than to see the [unclear] n Dublin, Limerick &c. rise, be-

cause of a scarcity, to 5 or 6 times their ordinary price, and the people to be involved in the extreme of suffering; and yet it rarely happens, upon such occasions, that the price of corn is materially affected, or that any less quantity than usual is exported to England.

It may be said, perhaps, that had potatoes not been introduced, wheat, or barley, or oats would have been the lowest species of food; and that, whenever they happened to fail, the population would have been as destitute as if they had been subsisting on potatoes. It must, however, be observed, that the proportion which the price of wheat, or any species of grain, bears to the price of butchers' meat, ten, beer &c., is always decidedly greater than the proportion which the price of potatoes bears to these articles; and it therefore follows, that a people who have adopted wheat, or any species of corn, for the principal part of their food, are much better able to make occasional purchases of butchers' meat &c.; and will, consequently, be more likely to have their habits elevated, so as to consider the consumption of a certain quantity of animal food &c. as indispensable to existence. And hence it appears reasonable to conclude, that a people who chiefly subsist on corn would, in most cases, subsist partially on butchers' meat, and would enjoy a greater or less quantity of other articles; so that it would be possible for them, in a period of scarcity, to make such retrenchments as would enable them to elude the severity of its pressure.

But, though the population in corn-feeding countries were dependent on the cheapest species of grain, not for a part only, but for the whole of their food, their situation would, notwithstanding, be less hazardous than that of a population subsisting wholly on potatoes.

In the first place, owing to the impossibility, as to all practical purposes at least, of preserving potatoes, the surplus produce of a luxuriant crop cannot be stored up or reserved as a stock to meet any subsequent scarcity. The whole crop must necessarily be exhausted in a single year; so that, when the inhabitants have the misfortune to be overtaken by a scarcity, its pressure cannot be alleviated, as is almost uniformly the case in corn-feeding countries, by bringing the reserves of former harvests to market. Every year is thus left to provide subsistence for itself. When, on the one hand, the crop is luxuriant, the surplus is of comparatively little use, and is wasted unprofitably; and when, on the other hand, it is deficient, famine and disease necessarily prevail.

In the second place, the general opinion seems to be, that the variations in the quantities of produce obtained from land planted with potatoes are greater than the variations in the quantities of produce obtained from land on which wheat, or any other species of grain, is raised.

And lastly, owing to the great bulk and weight of potatoes and the difficulty of preserving them on shipboard, the expense of conveying them from one country to another is so very great, that a scarcity can never be materially relieved by importing them from abroad. In consequence, those who chiefly depend on potatoes are practically excluded from participating in the benevolent provision made by nature for equalising the variations in the harvest of particular countries by means of commerce, and are thrown almost wholly on their own resources.

We should, therefore, be warranted in concluding, even though we were not possessed of any direct evidence on the subject, from the circumstance of the potato being a crop that cannot be kept

on hand, from its natural declension, and from the incapacity of importing it when sufficient, or of exporting it when in excess, that the oscillations in its price must be greater than in the price of wheat; and such, in point of fact, is the case. The oscillation in wheat is thought great when its price is doubled; but in a scarce year the potato is not unfrequently six times as dear as in a plentiful one. (*Minutes of Evidence taken before the Agricultural Committee of 1821*, p. 212.) And the comparatively frequent recurrence of scarcities in Ireland, and the destitution and misery in which they involve the population, afford but too convincing proofs of the accuracy of what has now been stated.

It is, therefore, of the utmost consequence to the well-being of every people, and to their protection in years of scarcity, that they should not subsist principally on the potato. In this country, the pressure of a scarcity is evaded by resorting to inferior species of food, such as potatoes, and a lower standard of comfort; but if our people were habitually fed on the potato, this would be impracticable. The chances of famine would thus be vastly increased; while, owing to the low value of the potato as compared with most other things, the labourers would have less chance of preserving or acquiring a taste for animal food, or other necessaries and luxuries; and, consequently, of changing at any future period their actual condition for a better.

It is not easy to form any very accurate estimate of the profit and loss attending the cultivation of potatoes to the farmer, as compared with other crops. This is a point as to which the statements of those best qualified to give an opinion differ very considerably. Mr. Loudon says, 'They require a great deal of manure from the farmer; while, generally speaking, little is returned by them; they are a bulky, unhandy article, troublesome in the lifting and carrying processes, and interfering with the seed season of wheat—the most important one to the farmer. After all, from particular circumstances, they cannot be vended unless when raised in the vicinity of large towns; hence they are, in most respects, an unprofitable article to the agriculturist. To him, the real criterion is the profit which potatoes will return in feeding beasts; and here we apprehend the result will be altogether in favour of turnips and rutabaga, as the most profitable articles for that purpose.'

It seems difficult to reconcile this statement with the rapid progress of the potato cultivation; but those who assent to what has been previously advanced with respect to the mischievous consequences that arise from the mass of the population becoming dependent on the potato as a principal article of food, will not regret though it should turn out to be accurate.

Dr. Colquhoun estimated the entire value of the potatoes annually consumed in Great Britain and Ireland, at the close of the war (ended 1815), at sixteen millions sterling. But it is needless to say that there are no materials by which to form an estimate of this sort with any pretensions to accuracy. The one in question has been suspected, like most of those put forth by the same learned person, of exaggeration: and we incline to think that, had he estimated the value of the yearly produce of potatoes in the empire at twelve millions, he would have been nearer the mark. But on a point of this sort it is not possible to speak with anything like confidence.

In 1867, we imported 1,374,223 cwt. of potatoes, chiefly from France and Holland, valued at

897,144, and exported 719 cwt.], while in the same year, according to the parliamentary returns, there were in the United Kingdom 1,500,024 acres devoted to potatoes, of which the share of Ireland was 1,001,545. In 1808 the latter had 1,034,863 acres devoted to that crop.

**POTTERY.** [**EARTHENWARE**; **PORCELAIN**.]

**PRATIQUE.** [**BILLS OF HEALTH**; **QUARANTINE**.]

**PRECIOUS METALS.** A designation frequently applied to gold and silver. We have given, under the articles **GOLD** and **SILVER**, a short account of each metal; and we now propose laying before the reader some details with respect to their supply and consumption.

To enter fully into this interesting and difficult subject would require a long essay, or rather a large volume. Mr. Jacob published, in 1831, an *Historical Inquiry into the Production and Consumption of the Precious Metals*, in which he takes up the subject at the earliest period, and continues it to the above epoch. And, though far from being so learned, complete, or satisfactory as might have been expected, this work contains a good deal of valuable information, and deserves the attention of those who take an interest in such enquiries. But within the last eight or ten years the subject has acquired an interest and importance with which it was not previously invested.

*Supply of the Precious Metals.*—Since the discovery of America by far the greater part of the supplies of gold and silver have been derived from that continent. Previously to the publication of Humboldt's great work, *Essai politique sur la Nouvelle-Espagne*, several estimates, some of them framed by individuals of great intelligence, were in circulation, of the quantities of gold and silver imported from America. They, however, differed widely from each other, and were all framed from comparatively limited sources of information. Humboldt (*Essai sur la Nouvelle-Espagne*, tome iii. p. 412) brought these estimates together as follows:—

Political Divisions	Gold		Silver		Value of the Gold and Silver in Dollars
	Marcos of Castile	Kilogs.	Marcos of Castile	Kilogs.	
Viceroyalty of New Spain	7,000	1,600	8,598,200	537,512	13,000,000
Viceroyalty of Peru	5,000	782	611,000	110,478	6,000,000
Captain-Generalship of Chili	13,212	3,807	39,700	6,827	2,000,000
Viceroyalty of Buenos Ayres	2,000	506	491,200	110,761	4,800,000
Viceroyalty of New Granada	30,505	4,711	—	—	2,000,000
Brazil	90,000	6,575	—	—	45,000,000
Total	158,217	17,291	9,660,810	765,581	65,800,000

Taking the dollar at 4s. 6d., this would give 9,666,000*l.* as the total annual produce of the American mines. Humboldt further estimated the annual produce of the European mines of Hungary, Saxony &c., and those of Northern Asia, at the same period at about 1,000,000*l.* more, making in round numbers their entire produce nearly 11,000,000*l.*

The quantity of gold produced in America at the beginning of the century was to the quantity of silver as 1 to 46; in Europe the proportions were as 1 to 40. The value of equal quantities of gold and silver was then in the proportion of 15 or 15½ to 1.

Authors	Epochs	Dollars
Ustark	1499-1794	5,358,000,000
Polozzani	1499-1678	1,000,000,000
Monroda	1499-1708	2,000,000,000
Paragon	1519-1647	1,500,000,000
Hassal	1499-1789	5,104,000,000
Hobson	1499-1775	8,000,000,000
Necker	1703-1777	500,000,000
Corbous	1724-1800	1,600,000,000
The author of <i>Les Recherches sur le Commerce, Anst. 1179.</i>	1499-1775	5,073,000,000

But these have been wholly superseded by the more extensive and laborious investigations of Humboldt himself. This illustrious traveller, besides being acquainted with all that had been written on the subject, and having ready access to official sources of information unknown to the writers already alluded to, was well versed in the theory and practice of mining, and critically examined several of the most celebrated mines. He was, therefore, incomparably better qualified for forming correct conclusions as to the past and present productiveness of the mines than any of those who had hitherto speculated on the subject. His statements have, indeed, been accused of exaggeration; and we incline to think that there are grounds for believing that this charge is, in some measure, well founded, particularly as respects the accounts of the profits made by mining, and of the extent to which the supplies of the precious metals may be increased. But this criticism applies, if at all, in a very inferior degree, to the accounts Humboldt has given of the total produce of the mines, and the exports to Europe. And making every allowance for the imperfection inseparable from such investigations, it is still true that the statements in question, and the enquiries on which they are founded, are among the most valuable contributions that have been made to statistical science.

According to Humboldt (*Essai sur la Nouvelle-Espagne*, iii. 428, 2nd ed.) the annual average supplies of the precious metals derived from America have been as follow:—

	Dollars a Year as an Average
From 1499 to 1500	150,000
1500	1545
1545	1600
1600	1700
1700	1750
1750	1800

The following is Humboldt's estimate of the annual produce of the mines of the New World at the beginning of the present century:—

From 1800 to 1810 the yield of the American mines continued to increase; and their produce and that of the European and Russian mines were then probably rather above than below 11,000,000*l.* But in the last-mentioned year the contest began which terminated in the dissolution of the connection between Spain and her American colonies. The convulsions and insecurity arising out of this struggle—the proscription of the old Spanish families, to whom the mines principally belonged, who repaired, with the wrecks of their fortunes, some to Cuba, some to Spain, and some to Bordeaux and the south of France—caused the abandonment of several of the mines, and

outh of France—caused the  
veral of the mines, and

PRECIOUS METALS

extraordinary falling off in the amount of their  
produce. There are no means of estimating the  
precise extent of this decline but according to  
Jacoby who collected and compared all the  
existing information on the subject, the total  
average produce of the American mines, inclusive  
of Brazil, during the 20 years ending with 1829,  
may be estimated at 4,035,838½ a year; being  
less than ¼ their produce at the beginning of the  
century. (Jacoby, ii, 267.)

It has, however, been supposed that Jacoby  
rather exaggerated the falling off. And, at all  
events, the supplies of bullion obtained from  
Mexico and South America began to increase soon  
after the publication of his work (1831).

It appears from the *Retours* sent home by the  
British consuls, that the coinage of gold and  
silver in the Mexican mints amounted in 1847  
to 16,923,948 dol., in 1848 to 19,506,754 dol.;  
and, according to Mr. Secretary of Legation  
Middleton, it amounted, in the first 3 months of  
1867, to 3,916,070 dol. (See his valuable *Re-  
port* of July 10, 1868.) That it is well known  
that considerable quantities of these metals are  
raised and exported from Mexico without being  
brought to the mints to be coined. Taking  
this item into account, we shall not, perhaps,  
be very wide of the mark if we estimate the  
entire produce of the Mexican mines in 1847  
and 1848 at about 19 and 21½ million dollars,  
of which from 17 to 20½ millions were in silver.  
And, notwithstanding the anarchy that has con-  
tinued to prevail in the country, there has on

the average been a considerable increase in the  
interval.

In 1850 the produce of the Peruvian mines  
was estimated at about 6,000,000 dol., and it is  
not supposed to have varied much in the inter-  
vening period.

The produce of the Bolivian mines is usually  
estimated at about ¼ of the produce of those of  
Peru.

In 1857 the value of the gold and silver in coin,  
bars, and ore, exported from Chili, amounted,  
according to the Custom-house returns, to  
4,185,284 dol.; and we believe we shall not be  
far wrong if we estimate the total produce of the  
Chilian mines at 5,000,000 dol.

The elaborate estimates of Birkmyre, Chevalier  
(*Monnaie*, p. 228), and other authorities, in  
regard to the produce of the mines of Brazil and  
other parts of America, differ very widely; and  
there is, in truth, little besides conjecture on  
which to form an estimate. Probably, however,  
it may amount (ex California) to about 4,000,000  
dol. The above results, when brought together,  
give for

	dollars		dollars
Mexico	25,000,000	Chili	5,000,000
Peru	6,000,000	All other parts	5,000,000
Bolivia	1,500,000	Total	40,500,000

Birkmyre's estimate of the production of the  
precious metals in 1846 and 1850, one of the  
most elaborate and valuable hitherto published,  
appeared in the *Times* of May 19, 1851. We  
subjoin some of its principal portions.

Comparative Table, showing the Annual Produce (approximate Calculation) in Value of Fine Gold and Silver for 1846 and 1850, the first being Two Years before the Discovery of the Rich Deposits of Gold in California; the latter, Two Years after the Discovery.

\* Exclusive of China and Japan, which produce large quantities of gold and silver, the amount of which is quite unknown to Europeans.

The quantities of gold and silver produced at the under-mentioned epochs were:—

In 1801 the quantity of pure gold produced in America was 46,331 lb.; in Europe and Northern Asia (exclusive of China and Japan), 4,916 lb.; total produce, 51,247 lb.=56,910 lb. British standard gold=2,612,200.

In 1846 the quantity of pure gold produced in America was 25,503 lb.; in Europe, Africa, and Asia (exclusive of China and Japan), 89,171 lb.; total produce, 114,674 lb.=125,108 lb. British standard gold=5,846,772.

In 1850 the quantity of pure gold produced in

America was 261,731 lb.; in Europe, Africa, and Asia (exclusive of China and Japan), 104,219 lb.; total produce, 365,950 lb.=399,247 lb. British standard gold=18,654,322.

The above quantities are probably less than the actual production. The duties on gold in Russia on the produce of the private mines are heavy, varying from 12 to 24 per cent.; in Austria they amount to 10 per cent.; in Brazil to 5 per cent., and are understood to lend to a great deal of smuggling. In other countries, such as the United States, where there are no duties, the gold and silver stated in the table are only the

quantities brought to the mints to be coined, there being no means of determining the quantity used in jewellery and other arts and manufacture.' The fixed duties on silver in Mexico were (in 1867) above 17½ per cent.

It is, perhaps, unnecessary to observe that all investigations into matters of this sort are liable to be affected by so many sources of error, that even when they are most skillfully and cautiously conducted their results are not always to be depended on. But speaking generally, we are disposed to think that the foregoing estimates are rather within than beyond the mark. And it is worthy of notice that they do not differ much from Humboldt's estimate (43,500,000 dols.) of the produce of the American mines at the beginning of this century.

*Russian Mines.*—Small supplies of the precious metals have for a lengthened period been obtained from Russia. But since 1850, and more especially since 1840, the produce of the Russian mines and washings, but principally the latter, has been

rapidly and largely increased. Thus the produce of gold from the Siberian washings and the mines of the Ural, which amounted (according to the official returns) to 3,875 kilog., in 1826, had increased in 1840 to 8,736 kilog., and in 1847 to 27,362 kilog. Since then, however, the produce has rather fallen off; and during the 3 years ending with 1854 their average yield amounted to only 22,768 kilog. a-year. (Otreschkoff, *De l'Or et de l'Argent* &c. i. 179.) The author was a councillor of state in the service of the Czar. Formerly the value of the silver supplied by Russia greatly exceeded that of the gold; but since 1830 this has not been the case; for while the produce of gold has been so very greatly increased, that of silver has varied but little (from 17,000 to 18,000 kilog. a-year), so that the value of the former is now about twenty times that of the latter. The following table, extracted from the work of M. Otreschkoff, is founded on official returns, and gives a view of the production of the precious metals in Russia down to 1855:—

*Account of the Quantity and Value of the Precious Metals produced in Russia from 1810 to 1855.*

Years	Gold		Silver		Annual Average of Total Produce
	kilog.	francs	kilog.	francs	
1810 to 1825	16,185	51,830,318	189,189	42,067,480	6,658,826
1825 to 1848	231,543	722,445,780	415,262	98,565,008	3,869,918
1848 to 1851	75,547	232,631,380	57,959	11,298,348	8,600,388
1851 to 1855	92,085	307,206,156	68,426	15,215,200	80,603,350
Totals -	415,610	1,586,516,764	761,836	167,814,036	

The Russian authorities have ascribed the falling off in the produce of the mines and washings since 1847 to the exhaustion of the deposits and the unskilfulness of those engaged in the business. But though this be most probably the case to some extent, it is believed that it has been in part also occasioned by the heavy taxes imposed on the gold raised by private parties. These vary in amount, according to the productiveness of the mines and washings, from about 12 to 24 or 25 per cent., and are most oppressive.

While, however, it may be fairly assumed that these heavy duties have tended to lessen the produce of gold, there can be little doubt that their principal effect has been to defeat themselves by tempting the parties concerned to adopt every means for their evasion, which the notorious corruption of the revenue officers renders an easy matter. And in addition to the influence of these circumstances over the private mines, the depreciations and carelessness of the parties employed to work the crown mines tell quite as much on their produce; so that we need not be surprised that it has been doubted whether from a third to a half, or more, of the gold furnished by the Russian mines and washings be not omitted in the official returns. But, taking the deficit at a fourth part only, and supposing the official produce of the washings and mines to amount at present (1869) to about 70,000,000 fr. a-year, the real produce would be equal to 87,500,000 fr., or 700,000,000 sterling. It is said that the Russian Government intend to throw open the crown mines and washings to the public, and at the same time to make a large reduction in the duties on the produce obtained from the private mines. This would be sound policy; and if it be adopted, a considerable increase in the supplies of gold and silver may be anticipated.

*Produce of Gold and Silver in other parts of Europe.*—It might have been supposed that the late extraordinary influx of the precious metals from California and Australia would have given a serious check to their production in Europe: such, however, has not been the case, but on the contrary

it has considerably increased within the last ten or twelve years.

Lead ore always contains a greater or less quantity of silver; and when the value of the latter is sufficient to repay the expense, it is usual to extract it by means of the process of 'refining.' This process has lately been much improved, and is now profitably applied to ores to which it was formerly unsuitable. And as silver in Europe is mostly obtained from lead, this has been a principal source of its late increase.

In 1845 some rich mines of argentiferous lead were discovered in the provinces of Murcia and Granada in Spain, not far from Alicante; the yield of silver from which, and the mines in other parts of the peninsula, is believed to amount to 500,000, or 600,000, a-year. The produce of the Austrian and German gold and silver mines has also increased; those of Austria alone, in 1856, being valued at upwards of 6,100,000 florins, of which Hungary and Transylvania contributed 98 per cent., and small quantities are furnished by Italy, France, Sweden, and other parts of the Continent.

The reader may perhaps be surprised to learn that, in consequence principally of the improved process of refining already referred to, no less than 805,394 oz. of silver, worth 215,400, were obtained from lead in the United Kingdom in 1866. During 1866 we imported 5,495 tons silver ore, mostly from Chili, which were valued at 275,500, and in 1867, 3,393 tons. This, however, is to be reckoned in the produce of Chili rather than of England.

The total production of the precious metals in Europe, exclusive of Russia, may be roughly estimated to have amounted in 1866 to 1,400,000, or 1,500,000.

On the whole, therefore, it may reasonably be concluded that the aggregate production of the precious metals (excluding the produce of the Californian and Australian gold fields) in America, Asiatic Russia, and Europe in 1866, amounted to about 15,000,000, viz. :—

PRECIOUS METALS

1125

America	410,000,000
Asiatic Russia	3,500,000
Europe	1,500,000
Total	415,000,000

And deducting from this sum the total estimated produce of the same countries in 1809, when the American mines had attained the maximum of their productiveness previously to the revolutionary disturbances (12,500,000*l.*), there is an increase of 2,600,000*l.*

In addition to the supplies of the precious metals already specified, further quantities are supplied by China and other parts of Asia, Japan, the Eastern Archipelago &c., and also by various parts of Africa. There is, however, no authentic information in regard to this produce; and excepting small supplies of gold dust brought from some parts of the African coast, the billion of the countries referred to has but little influence in the markets of the civilised world. M. Otreschek estimates, or rather conjectures, that the produce of gold and silver in Asia (exclusive of Russia), the Eastern Archipelago, Oceania &c. amounted, at an average of the four years ending with 1854, to 114,527,820 fr. (4,581,000*l.*) a-year, and that of Africa to 13,360,672 fr. (500,000*l.*) a-year. (*De l'Or et de l'Argent et c.* i. 287, 293.)

*Supplies of Gold from California and Australia.*

The gold in these regions is found in the débris of the quartz rocks in which it has been embedded, and in the rocks themselves. In the former case it is found in the hollows to which it has been carried down by rains or streams, at different depths, sometimes in grains or *flakes*, and sometimes in lumps or *nuggets* of varying but occasionally very considerable magnitude. Gold may be sought or dug for (hence *diggings*) either by single or associated individuals; but when quartz rock is crushed to obtain gold, expensive machinery is usually employed, and the work is for the most part carried on by companies. The business of the diggings has very much of the character of a lottery, with many blanks and a few large prizes; but in the crushing of quartz the returns are less irregular, and the business partakes more of the character of an ordinary branch of industry.

The Californian deposits were discovered late in May or early in June 1848; and notwithstanding the remoteness of the country, and the fact of its being almost destitute of inhabitants, above 5,000 persons were attracted to the spot by the end of the season, who are said to have realised above 1,000,000*l.* sterling. The news of the discovery and of the unexampled richness of the gold-fields having spread on all sides with electrical rapidity, occasioned an extraordinary influx of immigrants from most parts of the world into California. The supplies of gold attained to an unexampled magnitude; cities rose in the wilderness as if by enchantment; the great bay of San Francisco, which had hitherto been entirely deserted, was crowded with ships and steamers from the most distant countries; and California speedily became one of the States of the Union, and had in 1860 a population of 305,439.

But here, as elsewhere, we have to regret the want of accurate information in regard to the production of gold. It appears, however, from Mr. Consul Booker's Report, that during the years 1866 and 1867 treasure of the value of 8,402,830*l.* and 8,335,250*l.* was shipped from San Francisco. Again, Mr. Booker states that the receipts of gold and silver from the interior of California and the neighbouring State of Nevada amounted to 8,773,000*l.*, and by sea from the northern parts of California, Oregon, and Territories of Washing-

ton and Idaho, to 4,888,100*l.* In 1867 the receipt of gold and silver the produce of California and the adjoining States of Oregon and Nevada, and the Territories of Washington, Idaho, and Montana, amounted to 10,313,500*l.* exclusive of 793,860*l.* worth received from British Columbia and Mexico. The portion received from Nevada, valued at 3,600,000*l.*, consisted mainly of the produce of the silver-bearing lodes of that State. (Mr. Consul Booker's Reports for 1866 and 1867.) And, in addition to these quantities, large amounts, of which no account is taken, are conveyed away by parties returning to Mexico, to the Eastern States, Europe, and China. Of these various estimates have been made; but the prevalent opinion in the best informed quarters seems to be that, when they are included, and allowance is also made for the quantity retained at home, the total yield of gold in California in 1866 and 1867 may be moderately reckoned at 60,000,000 dols., or 12,000,000*l.* at an average.

But vast as it certainly is, this production has been equalled and sometimes surpassed by that of Australia. The deposits in the latter were not discovered till 1851, and they were so very rich, and the influx of immigrants so extraordinary, that the gold fields of Victoria only are estimated to have produced in 1852 no fewer than 4,247,152 oz.; which, at the then price of 70s. per oz., gives a gross amount of 14,866,799*l.* This, however, has been the maximum amount of production hitherto attained. In 1858 the same gold fields furnished only 2,421,461 oz. According to the carefully compiled and valuable returns of Mr. Knill of Melbourne, the yield of gold in Victoria from 1852 to 1858 was as follows, viz. :—

Years	Ascertained Ounces	Unrecorded Ounces	Total Ounces	Price per Ounce	Value
1852	3,153,322	1,098,325	4,251,647	70	11,866,799
1853	2,271,152	816,159	3,087,311	75	11,588,782
1854	1,831,334	361,364	2,192,698	80	8,770,791
1855	2,231,296	729,864	2,961,160	80	11,856,296
1856	2,530,583	1,063,149	3,593,732	80	14,151,102
1857	2,531,117	369,893	2,901,010	80	10,403,168
1858	2,253,117	1,68,311	2,421,461	80	9,685,840

The following table, from the *Emigration Circular* of 1868, shows the quantity of gold obtained in Victoria from 1859 to June 30, 1866 :—

Years	Per Escort	Exported	Value at 80s. per oz.
1859	66.	oz.	£
1860	2,202,412	2,280,950	9,125,800
1861	2,098,815	2,136,000	8,536,000
1862	1,832,887	1,367,020	7,861,680
1863	1,520,518	1,658,207	6,632,208
1864*	1,120,202	1,606,872	6,407,188
1865	—	1,541,691	6,178,776
1866	—	1,543,801	6,175,201
		1,479,191	5,916,776

\* The escorts from Castlemaine, Sandhurst, and Ballarat were discontinued on March 31, 1864, and since that date the only escorts arriving in Melbourne are those from the Beechworth and Wood's Points Districts; therefore, the returns being incomplete are omitted.

In addition to the gold obtained from Victoria, a supply which in 1852 amounted to 3,600,000*l.* was obtained from the Sydney or New South Wales district. The produce from this source, however, declined for several years. The annual value of the exports from New South Wales averaged in the 4 years ending with 1867, 2,500,000*l.*, while the value of the exports from New Zealand exceeded 2,000,000*l.* in each of 1862 and 1863, the 2 years immediately following the discovery of the Otago mines.

The following is an estimate of the production of gold and silver throughout the world in 1866, extracted from Ross and Browne's Reports to Congress on the Mineral Resources of the United States :—

ed. Thus the produce washings and the mines (according to the kilog, in 1826, had in kilog, and in 1817 to however, the produce during the 3 years average yield amounted year. (Otreschok, *De* 179. The author was a service of the (zar.) e silver supplied by Russia of the gold; but since the case; for while the so very greatly increased, but little (from 17,000 to that the value of the far- times that of the latter. tracted from the work of on official returns, and production of the precious 1855 :—

*Russia from 1810 to 1855.*

Years	Annual Average of Total Produce
1810	6,500,000
1815	8,000,000
1820	10,000,000
1825	12,000,000
1830	15,000,000
1835	18,000,000
1840	22,000,000
1845	28,000,000
1850	35,000,000
1855	45,000,000

increased within the last ten years contains a greater or less and when the value of it to repay the expense, it by means of the process process has latterly been is now profitably applied is formerly unsuitable. And mostly obtained from lead, principal source of its late

mines of argentiferous lead the provinces of Murcia and far from Alicante; the yield, and the mines in other ita, is believed to amount to a-year. The produce of the n gold and silver mines has e of Austria alone, in 1864, wards of 6,100,000 florins, and Transylvania contributed all quantities are furnished eden, and other parts of the

perhaps be surprised to learn, principally of the improved already referred to, no fewer silver, worth 215,400*l.*, were the United Kingdom in 1867. ported 5,495 tons silver ore, hich were valued at 275,000*l.* ons. This, however, is to be duce of Chili rather than of

ion of the precious metals in f Russia, may be roughly estimated in 1866 to 1,400,000*l.*

Therefore, it may reasonably be aggregate production of the xcluding the produce of the (Italian gold fields) in America, Europe in 1866, amounted to viz. :—

	Gold	Silver	Total
	dols.	dols.	dols.
United States -	60,000,000	20,000,000	80,000,000
Mexico and South America -	5,000,000	35,000,000	40,000,000
Australia -	60,000,000	1,000,000	61,000,000
British America -	5,000,000	500,000	5,500,000
Siberia -	15,000,000	1,500,000	16,500,000
Elsewhere -	5,000,000	2,000,000	7,000,000
	150,000,000	60,000,000	210,000,000

We incline to think that the produce of America, Australia, and Siberia is over-estimated in this statement, and would offer the following as a more approximate estimate of the entire produce of the precious metals in different parts of the civilised world in 1868, viz. —

America, excluding California -	£10,000,000
Asiatic Russia -	5,000,000
Europe -	2,000,000
California -	12,000,000
Australia -	12,000,000
Asia and Africa -	1,000,000
Total -	£42,000,000

The question in regard to the probable continuation, increase, or diminution of this supply is of the greatest interest. Unfortunately, however, nothing but the vaguest conjectures can be offered with respect to it. Those who think that the supplies of the precious metals are likely to increase may allege that, being very widely diffused, fresh deposits will be successively brought to light; that the processes followed in the diggings, in the crushing of quartz rocks, and in the smelting and refining of the metals, will be further improved; and that the increase of population will make a still greater amount of labour be devoted to the search after these metals. But while we admit that there is a good deal of probability in these statements, still we question whether the result which they point at will be realised. Though gold be very generally distributed, it is extremely doubtful whether there be many places in which the deposits are so rich and so extensive as in California and Australia; and even in these the produce, as already seen, is either stationary or has begun to decline. The myriads of adventurers that are attracted to prolific diggings being all animated by the *auri sacra fames*, and putting forth their entire energies, can hardly fail, in no very lengthened period, to rifle the richest beds. And when this is done—when the excitement inspired by the original discovery is worn off, and the great prizes in the gigantic lottery recur only at distant intervals—then, unless new and equally promising discoveries should be made, a serious check will be given to the gold-seeking mania. The process of quartz-crushing is believed to produce only moderate profits, and is not of a kind to collect crowds of competitors. The few fortunes that have been realised in California and Australia have not been made by the miners, but by the merchants and others who have supplied their real or imaginary wants, and bought their gold-dust and nuggets on advantageous terms. Of those engaged on their own account in the search for gold, very few have retired from the pursuit with anything like a competence. The great majority have hardly realised the wages current in the districts before the deposits were discovered; and the conviction seems to be everywhere gaining ground that more is to be made by cultivating the surface of the earth than by digging in its bowels or crushing its rocks.

*Consumption of the Precious Metals.*—In order to form a reasonable conjecture in regard to the probable influence of this vast supply of the precious metals, it is necessary to enquire into their uses and probable consumption. And this enquiry, we regret to say, is still more difficult, and more

likely to be infected with errors, than the enquiry in regard to their production.

The precious metals are used as coin or currency to facilitate exchanges; as wealth which may be conveniently kept or hoarded; and they are used in the arts in the shape of plate, and in gilding, and so on.

The quantities employed in these functions are very large indeed. They vary, however, in different countries and periods with the circumstances peculiar to each; such, for example, as the greater or less abundance of paper money, and the degree in which the use of coins is lessened by the various devices resorted to for economising currency; the fashion as to plate and furniture; the feeling of security at the time; and a number of other circumstances, all liable to great and sometimes sudden changes.

The gold and silver employed in this country as currency, and in the customary reserves in the hands of the bankers, is supposed to amount to from 70,000,000*l.* to 75,000,000*l.* It has been estimated as high as 90,000,000*l.*; but the best authorities look upon this estimate as greatly beyond the mark. In France, the precious metals employed in the same way probably amount to nearly double the sum now mentioned, or to 130,000,000*l.* or 140,000,000*l.* It has been estimated by Levasseur (p. 106) and others at no less than 160,000,000*l.* But this includes a portion of the coins that have been hoarded, and which can no longer be reckoned in the currency. And we believe that we may safely estimate the entire sum employed as currency in Europe, America (North and South), Australia, the Cape of Good Hope, and Algeria, at from 490,000,000*l.* to 510,000,000*l.*, or 500,000,000*l.* as a medium. It would be inconsistent with the objects of this article, and with the limits within which it must be confined, to engage in a discussion of the numerous and often conflicting statements and details on which this estimate has been founded. Some information with respect to it may be found in Chevalier's valuable treatise *De la Monnaie* (p. 326 &c.), Paris 1850; in Stirling's *Gold Discoveries*, p. 182; in the learned and excellent tract of Tegoborski, *Essai de la Découverte des Gîtes aurifères en Californie et en Australie* &c. p. 65; Levasseur, *De la Question de l'Or*, n. 106; in the work of Otreschkoff, *De l'Or et de l'Argent*; and a host of other publications. The precious metals in circulation in Russia in the early part of 1851 were estimated in the *Petersburg Gazette* (October 12, 1852) at 326,000,000 roubles, equal, at 40*l.* per rouble, to 53,800,000*l.* The greater part (190,000,000 roubles) of this currency consisted of gold. Now, supposing this sum to be employed as above stated, as currency, we have first to enquire into its probable wear and tear and loss, and then into the probable rate of its increase. And taking into account the extraordinary extension of navigation and emigration, and the proportional risk of loss from shipwreck and other casualties, we are disposed to think that the annual wear and tear and loss of coin may be estimated at about 1½ per cent. of the entire mass of the currency; which, taking the latter at 500,000,000*l.*, would amount to 7,500,000*l.* a-year.

It is difficult to form any probable estimate of the rate at which the bullion used as currency may be likely to increase, supposing its value not to fall off. The extremely rapid increase of refinement and population in most parts of the civilised world, and especially in America and Australia, is known to everyone. And it seems pretty certain that some important countries which have hitherto made comparatively little progress, are about to enter on a new career of industry and enterprise

y rapid increase of refinement  
most parts of the civilised  
y in America and Australia is  
e. And it seems pretty certain  
t countries which have hitherto  
y little progress, are about to  
er of industry and enterprise

In Russia, for example, the measures that are in progress for the construction of railways and the emancipation of the peasantry can hardly fail to awaken the dormant energies of the latter, and give new vigour to their exertions. And the capacities of that country are so very great, that it is not easy to imagine, were its resources at all developed, to what an extent its wealth and population might be increased.

Again, some of the finest, best situated, most extensive, and of old the most populous and flourishing countries in the world, at present groan under the deadly influence of the superannuated but destructive despotism of the Turks. It is difficult, however, to suppose, despite the efforts that may be made to bolster it up, that this miserable fabric of superstition and tyranny should hold together much longer. And were it overthrown, and anything like an efficient government established in its stead, a fruitful and all but boundless field would be laid open to industry and enterprise.

But without insisting on such prospective considerations, and looking only to the advances that are now being made, we do not think that we shall exaggerate if we estimate the increase of currency that is now going on at 2 per cent. on its gross amount (500,000,000*l.*), or at 10,000,000*l.* a-year.

It is impossible, however, supposing this estimate not to be very wide of the mark at present, to conjecture how long the currency will go on increasing in this ratio. It may, as we have seen, be safely taken for granted that the sphere of civilisation and commerce is destined rapidly to extend. But its expansion will no doubt be accompanied with various contrivances for economising the use of metallic money; so that the quantity of it in circulation may not increase for any very lengthened period at the rate above stated. If it did, it would absorb an immense supply of gold. In barbarous countries, and in those which are entering on the career of civilisation, the coins afloat may increase at the rate of 3 or 5 per cent., or more; but in countries which are more advanced, their increase may be nothing, or less perhaps than even 1 per cent.

It is equally difficult to acquire any satisfactory information in regard to the quantity of bullion consumed in the arts. Jacob estimated its amount in Europe and America in 1830 at about 5,900,000*l.* a-year. But it has since been repeatedly shown by various intelligent writers that this estimate was in many respects wide of the mark, and that on the whole it was a good deal underrated. And, supposing the consumption of the precious metals in the arts to have amounted to 6,500,000*l.* or 7,000,000*l.* in 1830, it must now be very much greater. Everywhere, indeed, but more especially in England, America, Germany, and Russia, there has been an extraordinary increase of population and wealth during the last eight-and-thirty years. Plate and plated articles for use and ornamental purposes are now in extensive demand among all but the very lowest orders. Vastly more persons are raising themselves from poverty to competence and affluence than at any former period; and these are universally large buyers of plate and other costly articles. A taste for gilded saloons, magnificent glasses, and the gorgeous furniture of the age of Louis XIV., is at present all but universally diffused, and must have added greatly to the consumption of gold, which has been still further augmented by its increased outlay on the gilding of earthenware and china, harness, books &c. At the first blush of the matter, some of these items may not appear to the careless observer to be of much importance; but those who reflect little on the subject, and who consider the im-

mense and rapidly increasing demand for the articles referred to in this country and Europe generally, and in America and Australia, will be satisfied that the total consumption of the precious metals, and especially of gold, in the way now mentioned, must be quite immense. Estimates indeed have been made of the expenditure upon some of these items, but the data on which they are founded are too vague to entitle them to much attention.

We incline to think that the value of the precious metals in Great Britain in 1869 in the shape of plate, watches, jewels, and trinkets of all descriptions, may be safely estimated at about  $\frac{1}{2}$  to each individual of the entire population, making in the aggregate a sum of about 100,000,000*l.*, to which if we add 12,000,000*l.* for Ireland, the whole will amount to 112,000,000*l.* And vast as this sum may appear, we believe it is inside the mark. Silver spoons and forks, silver tea-services, with trays &c. are now universally met with throughout the middle as well as the upper classes; while most families, of any antiquity or consideration of any kind, possess large quantities of ornamental as well as useful plate. In the Continent and the United States the bullion invested in the way now stated is very great indeed. In Italy and Spain and some other countries the lower classes, especially the women, though not generally so well off as in England, spend more money upon massive rings, chains, brooches, and such like articles, which they regard much as girls in England do their deposits in the savings bank, as a reserve fund or capital.

We are aware that Jacob says, that 'in the present day in this country, the quantity of gold and silver in actual existence, including utensils, ornaments, jewellery, trinkets, and watches, is three or four times as great as the value of those metals which exists in the form of money.' (*Historical Inquiry*, i. 210.) And as the value of the precious metals in Great Britain, in the shape of coin, is certainly not less at present (1869) than 70,000,000*l.* or 75,000,000*l.*, the value of the bullion in plate, jewellery &c. ought, on this hypothesis, to amount to at least 210,000,000*l.* or 280,000,000*l.* Yet there can be no manner of doubt that the lowest of these sums would be far beyond the mark. Tegoborski, indeed (*Gîtes aurifères etc.* p. 66), who is supported by Humboldt (*Essai sur la Nouvelle-Espagne*, iii. p. 465, ed. 1827), estimates the value of the bullion vested in plate, watches, jewellery &c. at only half the amount vested in coin. This estimate, though not perhaps very far wrong if applied to the poorer countries of Europe, would undoubtedly, if applied to Great Britain, be as much under as that of Jacob is above the mark.

But, without pretending to an accuracy which, on such subjects, is unattainable, we run little risk in concluding that the expenditure of bullion in the arts—i.e. in plate, jewellery, gilding &c.—in Europe, America, and Australia, cannot at present (1869) be under, if it do not exceed, 15,000,000*l.* or 16,000,000*l.* a-year. Now of this a portion, estimated at about  $\frac{1}{2}$  or 20 per cent., is supposed to be obtained from the fusion of old plate, the burning of gold and silver lace &c. And hence, if we deduct from the 15,000,000*l.* used in the arts 20 per cent. for the old bullion, we have 12,000,000*l.* for the total quantity of the supplies from the mines annually disposed of in this way; a considerable portion of which, including that used in the gilding of rooms, earthenware, books, harness, buttons &c., cannot be again recovered or applied to any useful purpose.

And however great it may appear to be, this

amount will be largely increased with the increase of population and the spread of refinement in the arts, and still more by anything like a considerable fall in the value of bullion.

Hence it would appear, putting these items together, that the annual consumption of bullion as currency, and in the arts, amounts to about 29,500,000*l.* viz. :—

Wear and tear and loss of coin	-	-	£7,500,000
Increase of currency	-	-	10,000,000
Used in the arts	-	-	12,000,000
Total	-	-	£29,500,000

It will be difficult to show that these estimates are beyond the mark; and supposing them to be nearly correct, it follows, deducting the above sum from the previously estimated produce of the mines (10,000,000*l.*—29,500,000*l.*), that we have a surplus of 10,500,000*l.* to defray the sums required for hoarding, for exportation to the East &c. And there certainly seems to be little reason for thinking that a supply of this amount will do much more than meet the demands upon it.

It may be said, perhaps, that we must have exaggerated the consumption of the precious metals, inasmuch as the sum which we suppose is annually consumed considerably exceeds the entire produce of the mines previously to the supplies from California and Australia. But, while we admit the fact to be as stated, we deny the inference which is attempted to be drawn from it. The truth is, that while the discovery of the Californian and Australian deposits has added in so great a degree to the supply of bullion, it has also added very largely to its consumption. It has given an unparalleled stimulus to emigration and commerce. The population of California and Victoria has increased in a ratio hitherto unheard of, or from next to nothing 20 years ago, the former to 379,994 in 1860, and the latter to 653,744 on September 30, 1867. But despite this increase, wages, owing to the general desire to speculate on one's own account, continue to be extravagantly high. In California in 1867 miners readily obtained from 10*s.* to 14*s.* a day, according to their skill and capacity for enduring fatigue; common labourers from 6*s.* to 8*s.* a day, and house servants from 4*l.* to 10*l.* a month. (Mr. Consul Booker's *Report for 1867*.) For a while most articles were proportionally high, so that these extravagant wages were not so advantageous to the parties receiving them as might have been supposed. But there has latterly been a great fall in the price of manufactured goods and colonial produce; while, owing to the progress of agriculture, provisions have also been greatly reduced. Lodgings are still very dear, but not so exorbitant as formerly. In Australia the state of things for a while after the discovery of the gold fields was not very dissimilar; wages, however, though still very high, are a good deal lower than in California; while in other respects there is but little difference between the two. And if, in addition to these unprecedented circumstances, we take into account the unsettled character of the population, with the absorbing pursuit of wealth on the one hand, and the utter recklessness of expenditure on the other, we must be satisfied that the currency of these countries cannot be otherwise than excessive as compared with their population.

Still the powerful influence of the late gold discoveries is not confined to California and Australia. The emigration to these countries, and the new and rapidly increasing markets which they afford, have told effectually here, and indeed in every commercial country. In England the rise of wages cannot be estimated at less than

from 10 to 30 per cent., while in Ireland it has been a good deal more. And though the rise of wages in the latter be in part ascribable to the famine of 1846-47, and in a still greater degree to the emigration to the United States, yet, as this emigration has been powerfully promoted by the efflux of emigrants from the Atlantic States to California, it is clear that the gold of the latter has been at bottom a prominent cause of the improvement in the condition of the Irish peasantry. The same may be said of the emigration from Germany, which has latterly become of first-rate importance. At an average of the seven years ended with 1852, it amounted to 103,591 individuals a year; the numbers in 1851 and 1852 being respectively 120,708 and 155,730, of which by far the greater portion was destined for the United States. (*Report of Emig. Com. for 1853*, p. 104.) The number of emigrants from Bremen alone, in 1866, was 62,254, nine-tenths of whom were destined for the United States (Mr. Vice-Consul Schwoon's *Report for 1866*); and the emigrants from this country to the United States in 1867 numbered 159,275.

The rise of wages consequent on these extraordinary mutations, and the increased exports of produce which they have occasioned, have exercised a powerful influence in the United States as well as in Europe. And there, consequently, as well as here, a greater supply of bullion will be required to serve as currency. Again, while this influence is operating on the one hand, on the other the swarms of *parvenus* who are every day rising to opulence contribute to swell the demand for all sorts of things, but especially for plate and plated goods, jewellery, and such like articles. What is probably of still greater importance, the metallic basis of the currency is everywhere being enlarged; and the conviction is rapidly gaining ground in the United States as well as in Europe, that no paper currency can be safe unless effectual measures be taken to maintain such a supply of the precious metals in the countries in which it circulates as may be necessary to ensure its immediate conversion into coin.

*Burying of Gold and Silver.*—It is singular that, in estimating the consumption of gold and silver, Jacob did not make any allusion to the practice, which has uniformly prevailed in all countries harassed by intestine commotions or exposed to foreign invasion, of burying treasure in the earth. Of the sums so deposited a very considerable proportion has been altogether lost; and this has no doubt been one of the principal means by which the stock of the precious metals has been kept down to its present level. Every one is aware that during the middle ages treasure trove, or money dug from the ground, formed no inconsiderable part of the revenue of this and most other countries. (Blackstone, *Com. b. l. c. 8, s. 13*.) And though the burying of money has long ceased in Great Britain, such has not been the case among our neighbours. Wakefield tells us that down to 1812 the practice was common in Ireland (*Account of Ireland*, i. p. 593); and though much fallen off in the interval, it continues to this day to be occasionally resorted to in that part of the kingdom. It has always prevailed, sometimes to a less and sometimes to a greater extent, in almost every part of the Continent. (Storch, *Économie politique*, i. p. 222, 1722.) The anarchy and brigandage that accompanied the Revolution of 1789 made the practice to be carried to an extraordinary extent in France; and there, owing to various causes which are too obvious to require being pointed out, it still maintains a considerable footing.

So much was this the case after 1818, that a distinguished authority says, 'En France nous enfonçons notre argent dans nos coffres, ou nous le cachons dans les murs de nos maisons de les sillons de nos champs, selon les vieilles coutumes de l'Orient. Il y a peut-être un milliard (soixant millions sterling) de notre numéraire rendu ainsi stérile.' Dupuynode, *De la Monnaie, du Crédit* etc. i. p. 182, Paris 1853; and one of the best of the late French publications on the important subjects of the burying of treasure be at present as prevalent in France as in many parts of Germany and in Hungary, Russia, Italy, Spain, and European Turkey. The feeling of insecurity that has prevailed in all these countries, especially since 1818, has given a stimulus to this practice which nothing can countervail. Of the many millions that were distributed among the countries round the Black Sea during the Crimean War, the greater portion is believed to be as much withdrawn from circulation as if it had never been dug from the mine. But the burying of treasure in Europe is trifling compared to what it is in the East. There the practice has prevailed from the remotest antiquity down to the present time, and has been and is carried to an enormous extent. Heriier, indeed, and all the most intelligent travellers and enquirers who have visited India, Persia, China, and the East, generally concur in thinking that this burying of the precious metals is a main cause of their continued drain to India &c., where they never seem to become more abundant. But as we have already noticed this part of our subject at considerable length (ante, EAST INDIA COMPANY, *Exportation of the Precious Metals to India &c.*), it is needless to dwell further upon it.

It is impossible, of course, to form any estimate of the sums thus annually placed, as it were, in mortmain. They vary from year to year, and are always greatest when wars or revolutionary disturbances are in progress, or when their occurrence is anticipated, or but little confidence is placed in the permanence of existing institutions. There can, at all events, be no question that the sums which have been disposed of in the way now stated in the different Continental and Oriental countries of late years have been quite enormous, and have far exceeded those absorbed by any of the other channels of expenditure.

*Exportation of Gold and Silver to the East.*—Humboldt estimated that, of the entire produce of the American mines at the beginning of this century, amounting, as already seen, to 43,500,000 dollars, no less than 25,500,000 were sent to Asia, 17,500,000 by the Cape of Good Hope, 4,000,000 by the Levant, and 4,000,000 through the Russian frontier. Probably, however, this estimate was a good deal beyond the mark. 'Humboldt, cela n'est plus douteux, estimait trop haut la valeur de l'or et de l'argent, qui s'écoulaient au commencement de ce siècle d'Europe en Asie, et portaient trop bas la déperdition qu'ils éprouvaient, dans le même temps, par le frottement et leur conversion en objets d'orfèvrerie et de bijouterie.' (Dupuynode, *De la Monnaie* etc. l. p. 185.) There is no longer, we believe, any doubt in regard to the accuracy of the latter part of this statement; and it is pretty generally supposed that the first part is also well founded. But some years ago this immense drain began to diminish, and in 1832 and 1833 it actually set in the opposite direction. Then for a time it fluctuated, sometimes inclining to the one side and sometimes to the other. With the exception, however, of the bullion received in payment of

the 21,000,000 dollars due to us by China, under the treaty of 1812, there was not for some years any very decided movement of bullion from Europe to the East, or from the East to Europe, though, on the whole, the imports into the latter appear to have exceeded the exports; at least, this was certainly the case during the 5 years from 1844-45 to 1848-49, both inclusive. But more recently, or since 1850, the drain for bullion for the East set in with renewed force; and for 7 years down to the crisis of 1866 the average was only 10,000,000. This is evident from the following statements:—

Total Exports of Bullion from Great Britain to the East.

Years	Gold	Silver
	£	£
1859	615,895	16,004,028
1860	1,701,596	8,121,230
1861	796,195	7,091,872
1862	1,019,621	10,710,209
1863	7,571,906	8,200,842
1864	2,058,731	6,308,368
1865	580,262	5,808,260
1866	457,911	2,537,930
1867	241,919	617,415

It is to be borne in mind that although India did not, for several years prior to 1850, derive any considerable supply of bullion from Europe, she drew during that period large supplies from China. This was a consequence of the vast increase of the importations of opium into the latter. With the exception of tea and silk, China has few native products, other than the precious metals, fit for foreign markets. And the exports of the former being for some years not much more than sufficient to pay for the products sent to her from Europe and America, a very considerable part of the cotton and opium she imported from India was paid for in bullion, the increased exports of which were said to have latterly brought her into serious difficulties. But the circumstances are now (1869) entirely changed. The demand for the silks, teas &c. of China, in this and other western countries, has latterly become so immense, and has so far exceeded the value of the produce exported by them to China, that the balance in bullion received by the latter on her trade with them, has enabled her to meet with little or no difficulty the drain for bullion occasioned by the increased imports of opium from India. The following statements set these results in a sufficiently clear point of view:—

Account of the Total Value of the Exports from India to China, and of those from China to India, in each of the 6 Years ending with 1866, showing the Excess of the former over the latter.

Years	Exports from India to China	Exports from China to India	Excess of Indian Exports
	£	£	£
1861	11,489,966	8,590,565	8,899,601
1862	10,467,229	4,396,068	6,071,161
1863	12,127,527	4,567,803	7,559,724
1864	10,535,835	7,919,901	6,175,224
1865	10,071,552	4,275,963	6,589,687
1866	11,739,565	4,845,238	2,885,527

\* Including Japan.

Comparison between the Balance due by China to India, and by the United Kingdom to China.

1867	£ 2,671,101	£ 9,525,776	£ 6,854,675

Account of the Total Value of the Exports from the United Kingdom to India, and of those from India to the United Kingdom, in each of the 7 Years ending with 1867, showing the Excess of the latter.

Years	Exports from United Kingdom to India	Exports from India to United Kingdom	Excess of Indian Exports
	£	£	
1861	£ 17,053,555	£ 21,968,759	£ 4,915,207
1862	£ 15,316,136	£ 18,593,492	£ 3,277,356
1863	£ 20,817,409	£ 23,855,694	£ 3,038,285
1864	£ 20,753,804	£ 22,662,863	£ 1,909,059
1865	£ 18,833,191	£ 21,949,253	£ 3,116,062
1866	£ 20,671,519	£ 23,343,152	£ 2,671,633
1867	£ 22,862,595	£ 25,533,696	£ 2,671,101

It is plain from these statements:—

I. That, taking India and China together, the imports from them into this country have greatly exceeded the exports, leaving a heavy balance to be discharged by shipments of bullion.

II. In regard to China, the imports from which so greatly exceed the exports, except in 1866 and 1867, which, in consequence of the commercial crisis, have been exceptional, it is difficult to form any anticipation of what may take place in future. There can, indeed, be little or no doubt that, great as the imports of silk and tea now are, they will become much greater in future. The real question is, Will the demand for British products in China extend in the same, in a less, or in a greater proportion? And though the question be by no means free from difficulty, we incline to think that the influence of the late treaty, and the greater facilities it affords for the importation of foreign products into China, will increase the amount of the imports. But we have no idea that they will, if ever, at least for many years to come, be equal to the exports; or that the balance between China and England will cease to be largely against the latter.

III. It is equally difficult to cast the horoscope of the future trade between India and China. The importation of opium into the latter is now legalised, and an increase of imports may, in consequence, be expected. But, on the other hand, opium is beginning to be extensively grown in China; and, if its home culture succeed, it is next to certain that the importation from India will be lessened. These, however, are matters which

must be left to time and experience to clear up and decide.

IV. On the whole, however, it appears to be sufficiently plain, in whatever way bullion may be distributed among the Eastern countries, that they will continue, as hitherto, to import large supplies from the Western world. In truth it is much cheaper here than in the East; and, being so, it is advantageous to export it. There is therefore every prospect that the drain of bullion from the West to the East will go on, with occasional oscillations, for the time to come, in some times more; and that it will continue to absorb a very large proportion of the produce of the mines, perhaps as much as 5 or 6 millions a year. Though a considerable reduction in the amounts of late years might be anticipated, were we to become less indebted to India for supplies of cotton,

It is seen from the previous statements that silver forms by far the larger portion of the bullion exported to the East. This depends on peculiar circumstances; and it is by no means certain, nor indeed very likely, that silver will permanently continue, as heretofore, to be sent to India and China in preference to gold. On the contrary, it seems to be extremely probable, provided there be any material or indeed sensible decline in the value of gold, as compared with silver, that it will begin to be largely exported to these countries. It is extensively used in Hindostan for ornaments, and is preferred by many, both in India and China, to silver, as being more portable and better suited for hoarding. In the event, too, of these great countries becoming, as it is all but certain they will do, richer and more commercial, gold will no doubt be employed, whether legal tender or not, to a less or greater extent, in the settlement of pecuniary transactions. And, on the whole, we should be inclined to anticipate that anything like a considerable fall in the value of gold would make it go on gradually to supersede silver in shipments to the East, and open for it in that quarter an all but boundless market.

In all speculations in regard to the probable future supply of gold, it should be carefully borne in mind that any considerable fall in its value would unavoidably check its production, and, consequently, tend to lessen or prevent its further fall. It is plain, for example, that a decline of 10 per cent. in the value of gold would, *ceteris paribus*, occasion the abandonment of all those mines, diggings, washings &c. which only yield a net profit of that amount. We are aware, that owing to the production of gold, as at present carried on, having more of a gambling character than pertains to most branches of industry, the principle now stated would not operate so speedily as might, perhaps, be anticipated. But of its ultimate operation there can be no question. And it may, therefore, be laid down that any reduction in the value of gold, which is not accompanied by a corresponding improvement in the methods of

selves to the reader, it would be good policy to re-introduce a gold currency. It is contrary to all principle, and indeed to the plainest dictates of common sense, to exclude it by forcible means from a field where it would otherwise be largely used, the more especially as by doing this we create an unnatural demand for silver at the very time when it is supposed to be rising in value as compared with gold.

A further substitution of gold for silver may probably be effected by using gold coins of less value than formerly. In the United Kingdom, for instance, gold might be advantageously coined into 5s. pieces. The French have set us the example by coining gold 5 franc pieces. It would be inconvenient, perhaps, to have gold coins worth less than this; but of this value their employment is beneficial, as well by economising the use of silver, as by their being more convenient and easily carried about.

Supposing that the substitution of gold for silver now referred to were fully effected, and that the production of gold as compared with silver were to go on as it has done since the discovery of the Californian and Australian gold-fields, the value of silver, measured in gold, could hardly fail to rise. This, however, will in great measure depend on the demand for silver for the East continuing at about its late average amount, or on its not falling off, which it would be sure to do were gold again made legal tender. And there are, besides, but slender grounds for thinking that gold and silver will continue for any considerable period to be produced in the same proportions that they have been during the last 20 years. The presumption, indeed, appears to be rather in favour of the future increase of silver than of gold.

We may, perhaps, before proceeding further, notice in this place the following estimate, which the Bank of England laid before the Committee of the House of Commons on Banks in 1857-58:—

Years	Imports from Producing Countries		Exports to the East from Great Britain and the Mediterranean	
	Gold	Silver	Gold	Silver
	£	£	£	£
1851	8,654,000	4,076,000	102,000	1,216,000
1852	15,191,000	4,712,000	992,000	2,650,000
1853	22,455,000	4,355,000	974,000	5,590,000
1854	22,077,000	4,199,000	1,222,000	4,985,000
1855	19,875,000	3,717,000	1,192,000	7,254,000
1856	21,275,000	4,261,000	473,000	14,108,000
1857	21,566,000	4,050,000	529,000	20,146,000
Total	150,876,000	29,870,000	5,120,000	46,676,000

#### Gold.

The total import of gold in seven years to 1866 has been, say	£	121,000,000
The exports of gold bullion and British gold coin to India, China, Australia, the Cape, Brazil, the West Indies, United States &c. may be taken at	-	18,000,000
Which would leave as the increase to the European stock of gold	-	106,000,000

#### Silver.

The exports of silver to India and China have been	£	10,000,000
The imports from the producing countries	412,000,000	
Making the amount of silver added to the European stock	-	4,000,000
And the estimated increase in the European stock of bullion	-	110,000,000

In some respects this estimate might be advantageously modified. But supposing it to be, as it may be presumed it is, nearly accurate, still it is obvious that, to get the total addition made to the stock of European bullion during the 7 years ending with 1866, we must add the bullion produced in Europe during the above period. And the latter being taken at 1,500,000*l.*, a-year, makes an aggregate sum of 10,500,000*l.*, which

added to the above balance of 110,000,000*l.*, makes the total increase amount to 120,500,000*l.*

But, though immense, the demands which this fund has had to sustain have been equally immense. We have already seen that the coinage of gold in France during the 8 years ending with 1857 amounted to no less than 109,987,710*l.*; and during the 7 years ending with 1857, the period referred to in the Bank of England estimate, it amounted to 87,085,201*l.* A portion of this gigantic sum was derived from Dutch, English, and other European coin imported into France, and very considerable portions were exported, partly to the Crimea, and thence to the adjacent Asiatic countries, for supplies for the French forces in that quarter, and partly to the East by way of Egypt, Smyrna &c. Still, however, we feel satisfied that we shall be far within the mark if we assume that France has absorbed 35,000,000*l.* of new gold, during the period in question, in the shape of coin, which is partly employed as currency and partly hoarded. (See, in confirmation of the statement now made, *Levasseur, La Question de l'Or* p. 106.) And if we be nearly right in this assumption, it follows that only 56,550,000*l.*, or 8,080,000*l.*, a-year, remains to supply all Europe,—1st, with new coins (ex France), and to make good the wear and loss of the old coins; 2nd, to supply the sums required for use in the arts; and 3rd, to supply those that are hoarded and carried away in the pockets of emigrants &c. &c. A very considerable addition has been made to the metallic currency of the United Kingdom during the 10 years ending with 1866, viz. 51,865,783*l.* of gold, and 3,714,160*l.* of silver; total, 55,579,943*l.* Owing, however, to our gold coins being exempted from seigniorage, they have no greater value than an equal weight of standard bullion, and are exported indifferently with the latter. Hence the accounts of the sums coined throw, if taken by themselves, little or no light on the increase or diminution of the currency.

The item of coins carried away by emigrants is of much more importance than is generally supposed. Taking the entire number of emigrants from Europe to the United States, Australia, and all other places at 400,000 a-year, it is pretty certain that they do not take with them, at an average, less than 2*l.* to 3*l.* in coin, besides plate, watches, rings &c. Some estimates make the exports of bullion by emigrants much greater than this; but even on this very moderate hypothesis it will amount to 1,000,000*l.*, a-year in coin only.

Hence, as compared with the outgoings, the supply of bullion in Europe during the last seven or eight years, far from being in excess, has been scanty rather than otherwise. And without a diminution of the former, or an increase of the latter, most people amongst us will be little sensible of the influence of Californian and Australian gold.

*Past and probable future influence of the increased supply of bullion on prices and on its value.*—The previous statements seem to be sufficient to show that the present supply of the precious metals is not more than adequate to meet the average existing demand, and that therefore there is no ground for anticipating a fall in their value unless the supply should be increased and the demand diminished.

It is now (1869) 21 years since the increased supplies of gold from California, and 18 since those from Australia, have been poured into the markets of Europe and America; and yet there has not, during that period, been anything like a general rise of prices. On the contrary, the price

of the majority of articles are as low at this moment as they were at the same time in 1850, while several are lower. And of those that have risen in price since the latter epoch, there is not one of which the rise may not be satisfactorily explained by something peculiar to itself, and affecting either its demand or the conditions of its supply, or both. Thus, the rise that has taken place in the rate of wages in Great Britain and in Ireland is ascribable, partly to the greater demand for labour, partly to the extent to which emigration has been carried, and partly to the potato rot and the consequent famine in Ireland, and may be fully accounted for in this way. There is, in truth, nothing whatever, in comparing the prices of to-day with those of 20 years ago, to entitle any one to affirm that the value of gold and silver has undergone any appreciable change in the interval.

That there is but little probability that prices will be raised by a continuance of the present supplies of gold and silver, may be inferred from what took place after the discovery of America in 1492. It appears from the researches of Adam Smith (*Wealth of Nations*, 1 vol. 8vo. p. 88), and other authorities, that the influx of the precious metals had exerted its full effect upon prices previously to or about 1640; and yet this influx was much greater then and subsequently than it had been at any previous period. According to the best information attainable, the average annual importation of the precious metals from America into Europe, from 1492 down to 1810, may be estimated as follows:—

	£
From 1492 to 1590	51,300 a-year
1590 1615	611,000 "
1615 1690	7,389,200 "
1690 1790	8,173,200 "
1790 1810	4,887,050 "
1790 1803	7,667,160 "
1803 1810	3,016,920 "
Annual average of the entire period (1492-1810)	4,105,191l.

In 1640 or 1650, when the bullion of America had produced its full effect on prices in Europe, its annual influx amounted to about 3,000,000*l.* And yet, though its influx was nearly trebled between that epoch and 1803, it is admitted on all hands, that down to the last-mentioned year, there was no general rise of prices. The increased demand of Europe was fully sufficient to take off this great increase of supply without any fall taking place in the value of silver. Indeed, it is contended by some high authorities that, instead of falling, it rose in value during the period referred to. Prices rose in this country subsequently to 1793; but this was entirely owing to the difficulties which the war then commenced threw in the way of importation, the waste of capital and the shock given to industrial undertakings which it occasioned, and the disorders of all sorts incident to national struggles.

There can be no manner of doubt, not merely that the quantity of the precious metals employed in Europe and America is incomparably greater now than in the seventeenth and eighteenth centuries, but that the demand for additional quantities is also incomparably greater. And when it is seen that their value continued stationary from 1650 to 1800, despite the immense additional supplies that were thrown upon the market, there is, it is plain, little ground for wonder that their value, great as it has been, has not affected their value, or for anticipating that it will materially decline in the course of the next half-century.

*A fall in the value of the precious metals would, on the whole, be advantageous.*—Should it turn out that we are mistaken in these conclusions, and that a considerable fall in the value of the precious

metals is about to commence, it is satisfactory to know that there are no really tenable grounds for supposing that such fall will be publicly injurious. It is indeed impossible for any change to take place in the measure of value without its exercising an injurious influence over a greater or less number of individuals. But if the loss it may inflict on A, B, and C, be counterbalanced by the advantages which it confers on X, Y, and Z, its effect in a public point of view may not be perceptible. It is easy to see that, in the case now under consideration, the inconveniences resulting from a fall in the value of gold and silver would be a good deal more than compensated by the advantages of which it would be productive.

1. In the first place, we may observe that the mischievous influence resulting from a fall in the value of the precious metals depends in great measure on the rapidity with which it is brought about. If it were to take effect suddenly, and without giving any distinct warning of its approach, it would be much more injurious than if it took effect slowly and gradually; for, in the former case, it is difficult to take any measures by which to mitigate or avert the impending evil, whereas, in the latter, abundant opportunities are afforded for that being done; and though these were not taken advantage of, a change that is brought about by a slow and all but insensible progress is but little felt, at least when compared with one that takes place suddenly or rapidly. Now it is sufficiently certain, supposing the value of the precious metals to be in the end reduced, that that reduction will be a very slow process; and that anyone likely to be injuriously affected by its occurrence will have ample time to concert measures to secure himself, as far as may be practicable, against its operation. That we are warranted in coming to this conclusion is obvious. When an unprecedented influx of bullion has been going on for twenty years without having had any appreciable influence over its value, it would be contradictory to suppose that it is at all likely to be speedily and seriously affected by a continuance of the influx.

2. But supposing that these anticipations should not be realised, and that the supplies of the precious metals should be largely and rapidly increased, and their value reduced, the results are not of a kind that should be deprecated. 'In every kingdom,' says Hume, 'into which money begins to pour in greater abundance than formerly, everything takes a new face: labour and industry gain life, the merchant becomes more enterprising, the manufacturer more diligent and skilful, and even the farmer follows his plough with greater alacrity and attention. But when gold and silver are diminishing, the workman has not the same employment from the manufacturer and merchant, though he pays the same price for everything in the market; the farmer cannot dispose of his corn and cattle, though he must pay the same rent to the landlord: the poverty, beggary, and sloth that must ensue are easily foreseen.' (*Essay on Money*.)

Hume appears to have supposed that the stimulus he has so well described, which is given by an influx of money to industry, is occasioned by the additional money coming first into the hands of capitalists, and enabling them to extend their businesses and employ more work-people. But though this would have some influence, the philosophical historian seems to have overlooked the mode in which an increase in the quantity, and a fall in the value of money, principally contribute to excite industry and enterprise. Such fall proportionally diminishes the many fixed money

of 110,000,000*l.*, makes to 120,500,000*l.*, the demands which this have been equally immense, at the coinage of gold in years ending with 1857 than 109,387,700*l.*; and with 1857, the period of England estimate, it is 11. A portion of this gold from Dutch, English, and transported into France, and was exported, partly to the East by way of Egypt. However, we feel satisfied that in the mark if we assume 35,000,000*l.* of new gold, in the shape of coin, used as currency and partly in confirmation of the statement in *La Question de l'Or*, p. 106, right in this assumption, it is 50,000*l.*, or 8,000,000*l.* a-year, Europe,—1st, with new coin to make good the wear and loss of 4, to supply the sums required, and 3rd, to supply those that are carried away in the pockets of a very considerable addition to the metallic currency of the 10 years ending with 1857, of gold, and 3,714,100*l.* of 19,892*l.* Owing, however, to being exempted from seigniorage, it is worth more than an equal weight of silver, and are exported indifferently to the accounts of the sums taken by themselves, little or increase or diminution of the sums carried away by emigrants of importance than is generally the entire number of emigrants to the United States, Australia, and 400,000 a-year, it is pretty do not take with them, at a 2*l.* to 3*l.* in coin, besides plate, &c. Some estimates make the sum by emigrants much greater than on this very moderate account to 1,000,000*l.* a-year in comparison with the outgoings, the in Europe during the last years from being in excess, has been otherwise. And without a so former, or an increase of the le amongst us will be but little influence of Californian and Aus-  
  
able future influence of the in- of bullion on prices and on the tions statements seem to be suffi- that the present supply of the is not more than adequate to meet- sting demand, and that there- and for anticipating a fall in their supply should be increased as- nished.  
(9) 21 years since the increase al from California, and 18 into- a, have been poured into the- ope and America; and yet there- that period, been anything like- rices. On the contrary, the price

payments that are borne by the industrious classes. The prices of commodities vary with variations in the value of money; whereas taxes, rents, mortgages, and other pecuniary burdens, continue stationary for longer or shorter periods. The latter are rated or specified in certain amounts of money—those to whom these are due being obliged to receive them in payment, though the value of money should have fallen 5 to 10, or even 50 per cent, since the date of the contract or engagement in which the payments originate; while those by whom they are due are bound to pay them, however much the value of money may have risen. Hence the powerful influence of variations in its value over the different classes of society. When it declines, the debtor portion, or those who have fixed money payments to make, are benefited at the expense of the creditor portion, or those who have such payments to receive; and conversely when it rises. Landholders, annuitants of all sorts, landowners during the currency of the leases of their estates, mortgagers, the army and navy, civil service &c., suffer according to the diminution in the value of money; for, though their incomes and claims continue nominally the same, their value is really reduced, and they no longer have their former command over necessaries and conveniences. But while the farmer pays the same rent for his farm, and the same taxes to Government, he sells his produce for a price increased proportionally to the reduced value of money. And while merchants, manufacturers, and tradesmen pay the same duties on their goods, the same port and market dues, the same tolls, the same rent for shops and warehouses, the same rate of interest for capital borrowed, and so on, they obtain increased prices for whatever they have to sell. In other words, the condition of those classes is improved at the expense of their landlords and creditors, and of annuitants, and other receivers of incomes which are either temporarily or permanently reduced through the fall in the value of money. The greater the fall, the more advantageous for them; and conversely.

Now, as fixed or stationary payments include the interest of the public debt, as well as the many outgoings of Government which do not readily accommodate themselves to changes in the value of money, with the rents of farms and houses let on lease, or under equivalent agreements, feu-duties, the interest of mortgages, and other stationary loans, the payments to private annuitants and clergymen, the fees of lawyers, physicians &c., it is obvious that, in a country like this, they must amount in the aggregate to a vast sum. No doubt it sometimes, and indeed not unfrequently happens, that individuals belong to both classes, or that they have fixed payments to receive as well as to make, and that therefore neither the gain to the one party, nor the loss to the other, from fluctuations in the value of money, is so great as might be at first supposed. Still, however, there is no room for doubting that the greater proportion by far of fixed payments is made to the classes not engaged in business or in industrial undertakings by those who are; and hence the advantage which any considerable fall in the value of money confers on the latter—that is, on those whose well-being, and that of the public, are commonly supposed to be identical. Such fall, by lightening the burden of taxation and of all fixed charges, increases universally the productiveness of industry and the rate of profit. And it is hardly necessary to add that this increased profit operates as a spur to production, that it quickens all the operations of trade, and occasions an increased demand for labour.

The opposite effects follow when, instead of falling, the currency becomes more valuable. Taxes and fixed charges being then augmented in an equal degree, the profits of those by whom they are principally borne are proportionally reduced, industry is depressed, and the situation of the productive classes changed for the worse. But though there cannot, as it appears to us, be a doubt that a fall in the value of money, however injurious to large classes, is on the whole advantageous, we hope it will not be thence inferred that we are disposed to approve in any degree of an intentional reduction of its value. Money being the standard or measure of value, to interfere with it, whether in the way of increase or diminution, would be an act of extreme injustice. Government is bound to protect, in as far as possible, the rights and interests of all classes of its subjects; and it cannot, without trampling on its most sacred duty, adopt, to benefit one part of them, any measure which might be injurious to another part. But a fall in the value of the precious metals caused by the greater facility of their production, or by the discovery of new sources of supply, is a wholly different matter. It depends in no degree on the theories of philosophers or the decisions of statesmen or legislators, but is the result of circumstances that are beyond human control. And though, like a fall of rain after a long course of dry weather, it may be prejudicial to certain classes, it is beneficial to an incomparably greater number, including all who are actively engaged in industrial pursuits; and is, speaking generally, of great public or national advantage.

On the whole, therefore, we are warranted in concluding—1. That there has been no fall in the value of the precious metals, and more especially in that of gold, during the 20 years ending with 1868; 2. That there do not appear to be any good grounds for anticipating a speedy or considerable fall in the value either of gold or silver; and 3. That supposing a fall in the value of gold were to take place, its advantages would much more than countervail its disadvantageous influence.

#### PREMIUM. [INSURANCE.]

PRICES. By the price of a commodity is meant its value estimated in money, or, simply, the quantity of money for which it will exchange. The price of a commodity rises when it fetches more, and falls when it fetches less money.

1. *Price of freely produced Commodities.*—The exchangeable value of commodities—that is, their power of exchanging for or buying other commodities—depends, at any given period, partly on the comparative facility of their production, and partly on the relation of the supply and demand. If any two or more commodities respectively required the same outlay of capital and labour to bring them to market, and if the supply of each were adjusted exactly according to the effectual demand—that is, were they all in sufficient abundance, and no more, to supply the wants of those able and willing to pay the outlay upon them, and the ordinary rate of profit at the time—they would each fetch the same price, or exchange for the same quantity of any other commodity. But if any single commodity should happen to require less or more capital and labour for its production, while the quantity required to produce the others continued stationary, its value, as compared with them, would, in the first case, fall, and in the second, rise; and, supposing the cost of its production not to vary, its value might be increased by a falling off in the supply, or by an increase of demand, and conversely.

But it is of importance to bear in mind that all

variations of price arising from any disproportion in the supply and demand of such commodities as may be *freely produced in indefinite quantities*, are temporary only; while those that are occasioned by changes in the cost of their production are permanent, at least as much so as the cause in which they originate. A general mourning occasions a transient rise in the price of black cloth; but supposing that the fashion of wearing black were to continue, its price would not permanently vary; for those who previously manufactured blue and brown cloths &c. would henceforth manufacture only black cloth; and the supply being in this way increased to the same extent as the demand, the price would settle at its old level. Hence the importance of distinguishing between a variation of price originating in a change of fashion or other accidental circumstance—such, for example, as a deficient harvest—and a variation occasioned by some change in the cost of production. In the former case, prices will, at no distant period, revert to their old level; in the latter, the variation will be lasting.

When the price of a freely produced commodity rises or falls, such variation may evidently be occasioned either by something affecting its value, or by something affecting the value of money. But when the generality of commodities rise or fall, the fair presumption is that the change is not in them, but in the money with which they are compared. This conclusion does not, however, apply in all cases; and we believe that most part of that fall in the price of commodities, which has taken place since the peace of 1815, and which has been so generally ascribed to a rise in the value of money, occasioned by a decline in the productiveness of the mines, has been caused by the increased productiveness of industry, arising from the abolition of oppressive restraints on commerce, the opening of new and more abundant sources of supply, and the discovery of new means and improved methods of production. [PRECIOUS METALS.]

2. *Price of monopolised Commodities.*—Exclusive, however, of the commodities now alluded to, there is a considerable class whose producers or holders enjoy either an *absolute* or a *partial* monopoly of the supply. When such is the case, prices depend entirely or principally on the proportion between the supply and demand, and are not liable to be influenced, or only in a secondary degree, by changes in the cost of production. Antique statues and gems; the pictures of the great masters; wines of a peculiar flavour, produced in small quantities, in particular situations; and a few other articles, exist under what may be called absolute monopolies;—their supply cannot be increased; and their price must, therefore, depend entirely on the competition of those who may wish to buy them, without being in the slightest degree influenced by the cost of their production.

Monopolies are sometimes established by law; as when the power to supply the market with a particular article is made over to one individual or society of individuals, without any limitation of the price at which it may be sold; which, of course, enables those possessed of the monopoly to exact the highest price for it that the competition of the buyers will afford, though such price may exceed the cost of production in any conceivable degree. Monopolies of this sort used to be common in England, particularly in the reign of Elizabeth; but they were finally abolished by the famous Act of the 21 Jas. I. c. 3—an Act which, by establishing the freedom of competition in all businesses carried on at home, has been

productive of the greatest advantage. [MONOPOLY.]

The corn laws established a partial monopoly of the supply of Great Britain with corn in favour of the agriculturists; but, as competition was carried to as great an extent in agriculture as in any other business, this monopoly did not enable them to obtain a higher price for their produce than was sufficient to pay the expenses of its production, though, owing to the peculiar circumstances under which this country is placed, this price was higher than the price in the surrounding countries. Hence it resulted that the monopoly was injurious to the public, without being of any advantage to those engaged in the business of agriculture. Neither, indeed, could it be truly said to be advantageous to the landlords. [CORN LAWS AND CORN TRADE (*Principles of the Corn Laws*).]

The rights conveyed by patents sometimes establish a valuable monopoly; for they enable the inventors of improved methods of production to maintain, during the continuance of the patent, the price of the article at a level which may be much higher than is required to afford them the ordinary rate of profit. This advantage, however, by stimulating invention, and exciting to new discoveries, of which it is the natural and appropriate reward, instead of being injurious, is beneficial to the public. [PATENTS.]

There are also partial monopolies, depending upon situation, connection, fashion &c. These, and other inappreciable circumstances, sometimes occasion a difference of 30 per cent. or more in the price of the same article in shops not very distant from each other.

Generally speaking, the supply of monopolised commodities is less liable to vary than the supply of those which are freely produced; and their prices are commonly more steady. But there are various exceptions to this rule, and of these the corn monopoly is one. The great variations in the harvests of particular countries, and their average equality throughout the world, expose a nation which shuts foreign corn out of its ports to destructive vicissitudes of price, from which it would enjoy a comparative exemption were the ports open. [CORN LAWS AND CORN TRADE, &c.] Sometimes the expiration of a monopoly—a patent, for example—has occasioned a sudden and extraordinary increase of supply, and consequent fall of price; entailing, of course, a serious loss on the holders of large stocks of goods produced under the monopoly.

3. *New Sources of Supply.*—The effects on prices produced by the opening of new markets, or new sources of supply, are familiar to every one. The fall that has taken place in the price of pepper, and of most sorts of commodities brought from the East, since the opening of the trade in 1814, is a conspicuous proof of what is now stated.

4. *Influence of War on Prices.*—The effect of war in obstructing the ordinary channels of commercial intercourse, and occasioning extreme fluctuations in the supply and price of commodities, is well known. In this respect, however, the latter part of the war ended 1815 is, perhaps, entitled to a pre-eminence. We had then to deal with an enemy who had extended his sway over most part of the Continent; and who endeavoured, by every means in his power, to shut us out of the Continental markets. Mr. Tooke has given, in his elaborate and valuable work on *High and Low Prices*, a variety of details which strikingly illustrate the effect that the regulations then adopted by the belligerent powers had on prices. 'Among the means,' says Mr. Tooke, 'devised by the ingenuity and enterprise of adventurers to elude

or overcome the obstacles presented by the decrees of the enemy, one in particular, which was resorted to on an extensive scale, deserves mention, as illustrating in a striking manner the degree in which those obstacles were calculated to increase the cost to the consumer. Several vessels laden with sugar, coffee, tobacco, cotton twist, and other valuable commodities, were despatched from England, at very high rates of freight and insurance, to Salonica, where the goods were landed, and thence conveyed on mules and horses through Servia and Hungary to Vienna, for the purpose of being distributed over Germany, and, possibly, into France. Thus it might happen that the inhabitants of that part of the Continent most contiguous to this country could not receive their supplies from us without an expense of conveyance equivalent to what it would be if they were removed to the distance of a sea voyage twice round the globe, but not subject to fiscal and political regulations. And in consequence of these, and other causes of the same sort, Mr. Tooke mentions that the price of sugar in France, and other parts of the Continent, during the latter years of the war already referred to, was as high as 5s. and 6s. a pound; that coffee rose to 7s., indigo to 18s., and so on.

But the sums charged for freight and insurance were the most extraordinary. Mr. Tooke states that he has known instances in which the license, freight, and other charges on account of a vessel of about 100 tons burden, making a voyage from Calais to London and back, have amounted to the almost incredible sum of 50,000*l.* A ship, of which the whole cost and outfit did not amount to 4,000*l.*, earned during the latter period of this war a gross freight of 80,000*l.* on a voyage from Bordeaux to London and back. The freight of indigo from London to the Continent does not at present exceed 1*d.* a pound; whereas it amounted, at the period referred to, to about 4s. 6*d.* (*High and Low Prices*, 2nd ed. p. 212.)

5. *Influence of Taxes on Prices.*—It is unnecessary to dilate on a topic so familiar to every one. When a tax is laid on a commodity, its price necessarily rises in a corresponding proportion: for otherwise the producers would not obtain the ordinary rate of profit, and would, of course, withdraw from the business. The rise in the price of several of the articles in the annexed table is principally to be ascribed to the temporary increase of taxation.

These statements will probably suffice to give our readers a general idea of the principles which determine the value of commodities. To go deeper into the subject would involve us in discussions that belong to political economy, and are among the most intricate in that science. The influence of speculation on prices must not, however, be passed over in a work of this sort.

6. *Influence of Speculation on Prices.*—It very rarely happens that either the actual supply of any species of produce in extensive demand, or the intensity of that demand, can be exactly measured. Every transaction in which an individual buys produce in order to sell it again, is, in fact, a speculation. The buyer anticipates that the demand for the article he has purchased will be such, at some future period, either more or less distant, that he will be able to dispose of it with a profit; and the success of the speculation depends, it is evident, on the skill with which he has estimated the circumstances that must determine the future price of the commodity. It follows, therefore, that in all highly commercial countries, where merchants are possessed of large capitals, and where they are left to be guided in the use of

them by their own discretion and foresight, the prices of commodities will frequently be very much influenced, not merely by the actual occurrence of changes in the accustomed relation of the supply and demand, but by the anticipation of such changes. It is the business of the merchant to acquaint himself with every circumstance affecting the particular description of commodities in which he deals. He endeavours to obtain, by means of an extensive correspondence, the earliest and most authentic information with respect to everything that may affect their supply or demand, or the cost of their production; and if he learned that the supply of an article had failed, or that, owing to changes of fashion, or to the opening of new channels of commerce, the demand for it had been increased, he would most likely be disposed to become a buyer, in anticipation of profiting by the rise of price, which, under the circumstances of the case, could hardly fail of taking place; or, if he were a holder of the article, he would refuse to part with it unless for a higher price than he would previously have accepted. If the intelligence received by the merchant had been of a contrary description—if, for example, he had learned that the article was now produced with greater facility, or that there was a falling off in the demand for it, caused by a change of fashion, or by the shutting up of some of the markets to which it had previously been admitted—he would have acted differently: in this case he would have anticipated a fall of price, and would either have declined purchasing the article, except at a reduced rate, or have endeavoured to get rid of it, supposing him to be a holder, by offering it at a lower price. In consequence of these operations, the prices of commodities, in different places and periods, are brought comparatively near to equality. All abrupt transitions from scarcity to abundance, and from abundance to scarcity, are avoided; an excess in one case is made to balance a deficiency in another, and the supply is distributed with a degree of steadiness and regularity that could hardly have been deemed attainable.

It is obvious, from what has now been stated, that those who indiscriminately condemn all sorts of speculative engagements, have never reflected on the circumstances incident to the prosecution of every undertaking. In truth and reality, they are all speculations. Their undertakers must look forward to periods more or less distant; and their success depends entirely on the sagacity with which they have estimated the probability of certain events occurring, and the influence which they have ascribed to them. Speculation is therefore, really only another name for foresight; and though fortunes have sometimes been made by a lucky hit, the character of a successful speculator is, in the vast majority of instances, due to him only who has skillfully devised the means of effecting the end he had in view, and who has outstripped his competitors in the judgment with which he has looked into futurity, and appreciated the operation of causes producing distant effects. Even in the securest businesses, such as agriculture and manufactures, there is, and must be, a great deal of speculation. An unlooked-for change of season frequently disappoints the apparently reasonable expectations of those who undertake the former; while the equally capricious variations of fashion have to be encountered by those engaged in the latter; and each is, besides, liable to be affected by legislative enactments, by new discoveries in the arts, and by an endless variety of circumstances which is always very difficult, and sometimes quite

impossible, to foresee. On the whole, indeed, the gains of the undertakers are so adjusted, that those who carry them on obtain, at an average, the common and ordinary rate of profit. But the inequality in the gains of individuals is most commonly very great; and while the superior tact, industry, or good fortune of some enables them to realise large fortunes, the want of discernment, the less vigilant attention, or the bad fortune of others frequently reduces them from the situation of capitalists to that of labourers.

The great cotton speculation of 1825 took its rise partly and chiefly from a supposed deficiency in the supply of cotton, partly from an idea that there was a greatly increased demand for raw cotton in this country and the Continent, and partly from a belief that the stocks on hand were unusually low. Now it is obvious that the success of those who embarked in this speculation depended entirely on two circumstances; viz. first, that they were right in the fundamental supposition on which the whole speculation rested, that the supply of cotton was no longer commensurate with the demand; and second, that their competition did not raise the price so high as to diminish the consumption by the manufacturers in too great a degree to enable them to take off the quantity to be actually brought to market. If the merchants had been well founded in their suppositions, and if their competition had not raised the price of cotton too high, the speculation would certainly have been successful. But, instead of being well founded, the hypothesis on which the whole thing rested was perfectly visionary. There was no deficiency in the supply of cotton, but, on the contrary, a great superabundance; and though there had been such a deficiency, the excess to which the price was carried must have checked consumption so much as to occasion a serious decline. The falling off in the imports of cotton from America in 1824 seems to have been the source of the delusion. It was supposed that this falling off was not accidental, but that it was a consequence of the price of cotton having been for a series of years so low as to be inadequate to defray the expenses of its cultivation. The result showed that this calculation was most erroneous. And besides, in entering on the speculation, no attention was paid to Egypt and Italy—countries from which only about 1,100,000 lb. of cotton were obtained in 1824, but from which no less than 23,800,000 lb. were obtained in 1825. This unlooked-for importation was of itself almost enough to overturn the combination of the speculators; and, coupled with the increased importation from America and other countries, actually occasioned a heavy glut of the market.

The risk to which merchants are exposed when they either sell off any commodity at a reduced price in anticipation of a fall, or buy at an advanced price in anticipation of a future rise, is a consequence principally of the extreme difficulty of ascertaining the true state of the fact with respect to the grounds on which an abundant or a deficient supply, or an increasing or decreasing demand, may be expected. Rules can here be of no service; everything depends upon the talent, tact, and knowledge of the party. The questions to be solved are all practical ones, varying in every case from each other; the skill of the merchant being evinced by the mode in which he conducts his business under such circumstances, or by his sagacity in discovering promising events, and appreciating their character and the extent of their influence. Priority, but, here all, accuracy of intelligence, is, in such

cases, of the utmost consequence. Without well-authenticated data to go upon, every step taken may only lead to error. The instances, indeed, in which speculations, apparently contrived with the greatest judgment, have ended in bankruptcy and ruin, from a deficiency in this essential requisite, are so very numerous, that every one must be acquainted with them. Hence the importance of selecting acute and cautious correspondents; and hence, also, the necessity of maturely weighing their reports, and of endeavouring, by the aid of information gleaned from every authentic accessible source, to ascertain how far they may be depended upon.

When a few leading merchants purchase in anticipation of an advance, or sell in anticipation of a fall, the speculation is often pushed beyond all reasonable limits by the operations of those who are influenced by imitation only, and who have never, perhaps, reflected for a moment on the grounds on which a variation of price is anticipated. In speculation, as in most other things, one individual derives confidence from another. Such a one purchases or sells, not because he has any really accurate information as to the state of the demand and supply, but because some one else has done so before him. The original impulse is thus rapidly extended; and even those who are satisfied that a speculation, in anticipation of a rise of prices, is unsafe, and that there will be a recoil, not unfrequently adventure, in the expectation that they will be able to withdraw before the recoil has begun.

It may, we believe, speaking generally, be laid down as a sound practical rule, to avoid having anything to do with a speculation in which many have already engaged. The competition of the speculators seldom fails speedily to render an adventure that might have been originally safe, extremely hazardous. If a commodity happen to be at an unusually reduced price in any particular market, it will rise the moment that different buyers appear in the field; and supposing, on the other hand, that it is fetching an unusually high price, it will fall, perhaps far below the cost of production, as soon as supplies begin to be poured in by different merchants. Whatever, therefore, may be the success of those who originate a speculation, those who enter into it at an advanced period are almost sure to lose. To have been preceded by others ought not, in such matters, to inspire confidence; on the contrary, it ought, unless there be something special in the case, to induce every considerate person to decline interfering with it.

The maintenance of the freedom of intercourse between different countries, and the more general diffusion of sound instruction, seem to be the only means by which those miscalculations, that are often productive of great national as well as private loss, can be either obviated or mitigated. The effects consequent on such improvident speculations being always far more injurious to the parties engaged in them than to any other class, the presumption is that they will diminish, both in frequency and force, according as the true principles of commerce come to be better understood. But, whatever inconvenience may occasionally flow from them, it is abundantly plain, that instead of being lessened, it would be very much increased, were any restraints imposed on the freedom of adventure. When the attention of many individuals is directed to the same line of speculation; when they prosecute it as a business, and are responsible in their own private fortunes for any errors they may commit; they acquire a knowledge of the various circumstances

letter-press, or when the letter-press was merely descriptive of the prints or maps, then they were to be charged with duty by tale, as prints or maps. (*Min. Com. Cas.* September 5, 1829.) But if satisfactory proof was adduced that prints or maps, though imported separately, really formed part of a work, they might be charged with the book duty by weight; but in other cases they were to be charged with duty by tale. (*Treas. Order*, June 2, 1830.)

Pictures, sketches, and drawings, brought from the Continent, and accompanied by the proprietor, were to be admitted to enter free of duty, upon proof, by oath of the proprietor, that the same were wholly executed by him for his amusement, and not intended for sale in this country. (*Treas. Order*, August 5, 1817.) All duties on imported prints have been abolished. The importation of prints and photographs is considerable, amounting in 1867 to 2,847,973, of the value of 62,825*l*.

PRISAGE or BUTLERAGE was a right of taking 2 tuns of wine from every ship importing into England 20 tuns or more; which was changed by Edward I. into a duty of 2*s*. for every tun imported by merchant strangers, and called butlerage, because paid to the king's butler. The term is now fallen into disuse. (Blackstone.)

PRIVATEERS. Ships of war fitted out by private individuals, to annoy and plunder the public enemy. But before commencing their operations, it is indispensable that they obtain letters of marque and reprisal from the Government whose subjects they are, authorising them to commit hostilities, and that they conform strictly to the rules laid down for the regulation of their conduct. All private individuals attacking others at sea, unless empowered by letters of marque, are to be considered pirates; and may be treated as such, either by those they attack, or by their own Government.

1. *Policy of Privateering.*—The policy of this system is very questionable. It seems to be a remnant of that species of private war which is exercised by all individuals in early ages, but which gradually disappears as society advances. And though by injuring individuals, it aggravates the suffering inseparable from national struggles, it has little or no tendency to accelerate their termination. Privateers rarely attack ships of war. Their object is merely to plunder and destroy merchantmen. And experience has shown that it is not possible, whatever precautions may be adopted, to prevent them from attacking neutrals and perpetrating all sorts of abuses. The wish to amass plunder is the only principle by which they are actuated; and such being the case, it would be idle to suppose that they should be very scrupulous about abstaining from excesses. A system of this sort, if it be ever useful, can be so only to nations that have little trade, and that may expect to enrich themselves during war by fitting out privateers to plunder the merchant ships of their enemies. In all other cases it seems to be productive only of mischief; though it is, of course, most injurious to those states that have the greatest mercantile navy. Instead, therefore, of encouraging the practice of privateering, a due regard to the rights and interests of humanity has lately suggested to the great Powers the expediency of abolishing it altogether. A few efforts had, indeed, been already made towards this desirable object. Thus it was stipulated in the treaty between Sweden and the United Provinces, in 1675, that neither party should, in any future war, grant letters of marque against the other. In 1767 Russia abstained from licensing privateers; and in the treaty between the United States and

Prussia, in 1785, a stipulation was inserted as to privateers, similar to that in the treaty between Sweden and the United Provinces in 1675. (Martens, *Essai concernant les Armateurs*, 1794.) But it required some such convention and agreement among the great Powers as that which was happily come to at Paris in 1856, to effect its general abolition. [NEUTRALITY.] Inasmuch, however, as the United States have not subscribed the declaration of 1856 against privateering, it is not possible to say what might be the effect were a quarrel to occur, if these continue the practice; and hence the following statements may be allowed to keep their place:—

2. *Appointment of Privateers.*—The captain of a privateer is nominated by the owners, who may dismiss him at pleasure. The commission or letters of marque given to the owners authorise them to attack and seize the ships of the Power or Powers specified therein; but they are not to look upon them as their property, or to appropriate them, or any part of them, to their own use, *if they have been legally condemned*. Besides the stimulus afforded by the hope of booty, Government has been in the habit of allowing them 3*l*. for every man they may capture on board such enemy's ships of war or privateers. (33 Geo. III. c. 66.) A privateer cruising under letters of marque against one state may, on obtaining authentic information of hostilities being commenced by her Government against another, capture its ships with full advantage to herself. The king has in all cases the right to release any prize previously to its condemnation; this being an implied exception in the grant of prizes by the Crown. (*Chitty on Commercial Law*, vol. i. c. 8.)

In some privateering adventures, the crew are engaged on the terms no prize no pay; and in such cases, the produce of whatsoever prizes may be taken goes half to the ship (for the owners, and half to the men, divided among them according to the articles of agreement; but when the men sail for wages, the captures belong entirely to the owners, except a small share, which is commonly stipulated to be given to the crew, over and above their wages, in order to stimulate their enterprise. Both ways of arming are regulated by the articles entered into between the owners and crews.

Privateers are forbidden from doing anything contrary to the law of nations, as to assault an enemy in a port or haven, under the protection of any prince or republic, be he friend, ally, or neutral; for the peace of such place must be preserved inviolable. (Molloy, *de Jure Maritimo*, book i. c. 3.)

When letters of marque are granted, it is usual, in most countries, to exact security that the regulations with respect to the conduct of privateers shall be observed. In Great Britain, a bond must be given, as explained in Art. XV. of the annexed regulations.

If privateers wilfully commit any spoil, depredation, or other injury, on friendly or neutral ships, or on the ships or goods of their fellow subjects, they are to be punished, according to the crime either with death or otherwise; and the vessels are subject to forfeiture.

Whether or not a ship taken be lawful prize, shall be tried in the Admiralty Court; and no ship or cargo, or part of a ship or part of a cargo, is to be sold, or disposed of in any way, till after judgment has been obtained.

If two ships with letters of marque accidentally meet with a prize at sea, though only one attacks and take her, yet the other, being in sight, shall have an equal share of the prize, though he

population was inserted as to that in the treaty between the 13 Provinces in 1675. (*Mar- les Armateurs*, 1794.) But convention and agreement were as that which was hap- in 1856, to effect its general [ART.] Inasmuch, however, have not subscribed the gainst privateering, it is not might be the effect were a these continue the practice; ing statements may be al- :-

a ship taken be lawful prin- the Admiralty Court; and no art of a ship or part of a cargo, posed of in any way, till after n obtained.

h letters of marque accidentally at sea, though only one attack the other, being in sight, shall hare of the prize, though be

afforded no assistance in the capture; because his presence may be presumed to have struck terror into the enemy, and made him yield; which per- haps he would not have done, had his conqueror been single: so that all ships that are in sight, though they cannot come up to assist in the en- gagement, are entitled by the *common law* to a distribution of the spoil. (*Beawes, Lex Mercatoria*, art. 'Privateers'.)

If those to whom letters of marque are granted, should, instead of taking the ship and goods ap- pertaining to that nation against which the said letters are awarded, *wiffully* take or spoil the goods of another nation in amity with us, this would amount to *piracy*; and the persons so of- fending would, for such fault, forfeit their vessel, and the penalties in which their securities are, according to custom, bound on taking out such letters. But such penalties would not follow unless the capture were made in a piratical man- ner. For if the circumstances incident to the captured vessel were such as to afford a strong presumption that she really belonged to the coun- try against which the letters were granted, the captors would not be liable to punishment, though they might be to damages. 'It being possible,' says Beawes, 'always to determine an affair of this sort at sea, it is allowable to bring a dubious capture into port, in order to more nice and just scrutiny and inspection; otherwise the goods of an enemy would often escape. However, to guard against unlawful seizures, the Government have wisely directed sufficient caution to be given (as before mentioned) for the due observance of the letters according to law, before they permit their issuing; and when there is a breach com- mitted, the penalties are inflicted.' (*Lex Merca- toria*, art. 'Privateers'.)

3. *Regulations for the Government of Privateers* &c.—The following instructions to privateers were issued under an order in council, at the commencement of the last war with France, May 16, 1803:—

Art. 1. *Against what, and where, Letters of Marque may act Hostilely.*—It shall be lawful for the commanders of ships authorised by letters of marque and reprisals for private men-of-war, to set upon by force of arms, and subdue and take, the men-of-war, ships and vessels, goods, wares, and merchandises, belonging to the French re- public, or to any persons being subjects to the French republic, or inhabitants within any of the territories of the French republic; but so that no hostility be committed, nor prize attacked, seized, or taken within the harbours of princes or states in amity with us, or in their rivers or roads, within the shot of their cannon, unless by per- mission of such princes or states, or their com- manders or governors in chief of such places.

Art. II. *Captures to be brought into Port.*—The commanders of the ships and vessels so autho- rised as aforesaid shall bring all ships, vessels, and goods, which they shall seize and take, into such port of *England*, or some other port of our dominions, as shall be most convenient for them, in order to have the same legally adjudged by our High Court of Admiralty of *England*, or before the judge of any other admiralty court, lawfully authorised, within our dominions.

Art. III. *Conduct of the Captors after the Cap- ture is brought into Port.*—After such ships, ves- sels, and goods shall be taken and brought into any port, the taker, or one of his chief officers, or some other person present at the capture, shall be obliged to bring or send, as soon as possibly may be, 3 or 4 of the principal of the company (where- of the master, supercargo, mate, or boatswain, to

be always 2) of every ship or vessel so brought in- to port, before the judge of our High Court of Ad- miralty of *England*, or his surrogate, or before the judge of such other admiralty court as within our dominions, lawfully authorised aforesaid, or such as shall be lawfully commissioned in that behalf; to be sworn and examined upon such in- terrogatories as shall tend to the discovery of the truth, concerning the interest or property of such ship or ships, vessel or vessels, and of the goods, merchandises, and other effects found therein; and the taker shall be further obliged, at the time he produceth the company to be examined, and before any monition shall be issued, to bring in and deliver into the hands of the judge of the High Court of Admiralty of *England*, his surro- gate, or the judge of such other admiralty court within our dominions, lawfully authorised, or others commissioned as aforesaid, all such papers, passes, sea-briefs, charterparties, bills of lading, cockets, letters, and other documents and writ- ings, as shall be delivered up or found on board any ship: the taker, or one of his chief officers, or some other person who shall be present at the capture, and saw the said papers and writings de- livered up, or otherwise found on board at the time of the capture, making oath that the said papers and writings are brought and delivered in as they were received and taken, without any fraud, addition, abduction, or embezzlement what- ever, or otherwise to account for the same upon oath to the satisfaction of the court.

Art. IV. *Not to break Bulk before Judgment.*—The ships, vessels, goods, wares, merchandises, and effects taken by virtue of letters of marque and reprisals as aforesaid, shall be kept and pre- served, and no part of them shall be sold, spoiled, wasted, or diminished, and the bulk thereof shall not be broken, before judgment be given in the High Court of Admiralty of *England*, or some other court of admiralty, lawfully authorised in that behalf; that the ships, goods, or merchandises are lawful prize.

Art. V. *Privateers to assist Ships in Distress.*—If any ship or vessel belonging to us, or our sub- jects, shall be found in distress by being in sight set upon or taken by the enemy, or by reason of any other accident, the commanders, officers, and company of such merchant ships or vessels as shall have letters of marque and reprisals as aforesaid, shall use their best endeavours to give aid and succour to all such ship and ships, and shall, to the utmost of their power, labour to free the same from the enemy, or any other distress.

Art. VI. *Application to the Admiralty for Letters of Marque.*—The commanders or owners of such ships and vessels, before the taking out letters of marque and reprisals, shall make applica- tion in writing, subscribed with their hands, to our high admiral of *Great Britain*, or our com- missioners for executing that office for the time being, or the lieutenant or judge of the said High Court of Admiralty, or his surrogate, and shall therein set forth a particular, true, and exact de- scription of the ship or vessel for which such letter of marque and reprisal is requested, spec- ifying the burden of such ship or vessel, and the number and nature of the guns, and what other warlike furniture and ammunition are on board the same, to what place the ship belongs, and the name or names of the principal owner or owners of such ship or vessel, and the number of men intended to be put on board the same, and for what time they are victualled; also the names of the commanders and officers.

Art. VII. *Correspondence with the Admiralty.*—The commanders of ships and vessels having

letters of marque and reprisals as aforesaid shall hold and keep, and are hereby enjoined to hold and keep, a correspondence, by all conveniences and upon all occasions, with our high admiral of Great Britain, or our commissioners for executing that office for the time being, or their secretary, so as from time to time to render or give him or them, not only an account or intelligence of their captures and proceedings by virtue of such commission, but also of whatever else shall seem unto them, or be discovered and declared to them, or found out by them, or by examination of, or conference with, any mariners or passengers of or in the ships or vessels taken, or by any other ways or means whatsoever, touching or concerning the designs of the enemy, or any of their fleets, ships, vessels, or parties, and of the stations, seaports, and places, and of their intents therein; and what ships or vessels of the enemy bound out or home, or where cruising, as they shall hear of; and of what else material in these cases may arrive at their knowledge; to the end such course may be thereon taken, and such orders given, as may be requisite.

**Art. VIII. What Colours a Privateer is to wear.**—No commander of any ship or vessel having a letter of marque and reprisal as aforesaid shall presume, as they will answer it at their peril, to wear any jack, pendant, or other ensign or colours usually borne by our ships; but, beside the colours usually borne by merchants' ships, they shall wear a red jack, with the union jack described in the canton, at the upper corner thereof near the staff.

**Art. IX. Not to ransom any Capture.**—No commander of any ship or vessel having a letter of marque and reprisal as aforesaid, shall ransom, or agree to ransom, or quit or set at liberty, any ship or vessel, or their cargoes, which shall be seized and taken.

**Art. X. To deliver their Prisoners to the proper Commissioners.**—All captains or commanding officers of ships having letters of marque and reprisals shall send an account of, and deliver over, what prisoners shall be taken on board any prizes, to the commissioners appointed, or to be appointed, for the exchange of prisoners of war, or the persons appointed in the seaport towns to take charge of prisoners; and such prisoners shall be subject only to the orders, regulations, and directions of the said commissioners: and no commander or other officer of any ship, having a letter of marque or reprisal as aforesaid, shall presume, upon any pretence whatsoever, to ransom any prisoner.

**Art. XI. Commission forfeited for acting contrary hereto.**—In case the commander of any ship, having a letter of marque and reprisal as aforesaid, shall act contrary to these instructions, or any such further instructions of which he shall have due notice, he shall forfeit his commission to all intents and purposes, and shall, together with his bail, be proceeded against according to law, and be condemned to costs and damages.

**Art. XII. Copies of Journals.**—All commanders of ships and vessels having letters of marque and reprisals shall, by every opportunity, send exact copies of their journals to the Secretary of the Admiralty, and proceed to the condemnation of the prizes as soon as may be, and without delay.

**Art. XIII. To observe all Orders.**—Commanders of ships and vessels having letters of marque and reprisals shall, upon due notice being given to them, observe all such other instructions and orders as we shall think fit to direct from time to time for the better carrying on this service.

**Art. XIV. Violating these Instructions.**—All persons who shall violate these or any other of our instructions shall be severely punished, and also required to make full reparation to persons injured contrary to our instructions, for all damages they shall sustain by any capture, embezzlement, demurrage, or otherwise.

**Art. XV. Bail to be given.**—Before any letter of marque or reprisal for the purpose aforesaid shall issue under seal, bail shall be given with sureties, before the lieutenant and judge of our High Court of Admiralty of England, or his surrogate, in the sum of 3,000*l.* sterling, if the ship carries above 150 men; and if a less number, in the sum of 1,500*l.* sterling; which bail shall be to the effect and in the form following:—

Which day, time, and place, personally appeared

and who submitting themselves to the jurisdiction of the High Court of Admiralty of England, obliged themselves, their heirs, executors, and administrators, unto our Sovereign Lord the King, in the sum of

of lawful money of Great Britain to this effect, that is to say, that whereas

is duly authorised by letters of marque and reprisals, with the ship called the

of the burden of about tons, where-

of he the said goeth master, by force of arms to attack, surprise, seize, and take all ships and vessels, goods, wares, and merchandises, chattels and effects, belonging to the French republic, or to any persons being subjects of the French republic, or inhabiting within any of the territories of the French republic; excepting only within the harbours or roads within shot of the cannon of prizes and states in amity with his Majesty. And whereas he the said

hath a copy of certain instructions, approved of and passed by his Majesty in council, as by the tenor of the said letters of marque and reprisals, and instructions thereto relating, more at large appeareth: if, therefore, nothing be done by the said

or any of his officers, mariners, or company, contrary to the true meaning of the said instructions, and of all other instructions which may be issued in like manner hereafter, and whereof due notice shall be given him; but that such letters of marque and reprisals as aforesaid, and the said instructions, shall in all particulars be well and duly observed and performed, as they shall the said ship, master, and company, in any way concern; and if they shall give full satisfaction for any damage or injury which shall be done by them or any of them to any of his Majesty's subjects, or of foreign states in amity with his Majesty, and also shall duly and truly pay, or cause to be paid, to his Majesty, or his customers or officers appointed to receive the same for his Majesty, the usual customs due to his Majesty, of and for all ships and goods so as aforesaid taken and adjudged as prize; and moreover if the said

shall not take any ship or vessel, or any goods or merchandise, belonging to the enemy, or otherwise liable to confiscation, through consent or clandestinely, or by collusion, by virtue, colour, or pretence of his said letters of marque and reprisals, that then this bail shall be void and of none effect; and unless they shall so do they do all hereby severally consent that execution issue forth against them, their heirs, executors, and administrators, goods and chattels wheresoever the same may be found, to the value of the sum of

pounds before mentioned; and in test

PROMISSORY NOTES. [BANKS AND BANKING; EXCHANGE, BILLS OF.]

PROTECTION. In Commercial Legislation, means the protecting or bolstering up of certain branches of domestic industry by prohibiting the exportation of the produce of such branches from abroad, or loading it when imported with heavy duties. This policy was at one time universally prevalent. But its extremely injurious influence having been demonstrated over and over again, it has been abandoned by all intelligent statesmen. And notwithstanding the powerful interests by which it was supported, it has nearly, if not entirely, disappeared from our legislation; and it will, no doubt, eventually disappear from the legislation of all countries.

In Mercantile Navigation, protection is a privilege granted to certain descriptions of seamen, by which they are secured against impressment.

[IMPRESSMENT.]

PROVISIONS. Under this term, taken in its most extensive sense, in reference to man, may be comprised all those articles used as food by the inhabitants of this and other countries; but among British merchants and in parliamentary language it is understood to comprise only fresh and salted butchers' meat, hams and bacon, butter and cheese, eggs, and a few other articles. We shall, however, include with these, in the following statement, an account of the imports of cattle.

Our readers are aware that previously to July 9, 1812, the importation of cattle, sheep, and hogs, and of all sorts of fresh butchers' meat, was prohibited; and that a duty of 12s. per cwt. was im-

PRUSSIAN BLUE

posed on all foreign salt meat when entered for consumption, and of 28s. per cwt. on bacon and hams. But in the Tariff Act of 1812, which came into operation at the above date, the prohibition of importing foreign cattle, sheep, hogs, and fresh meat was repealed, and their entry for home consumption admitted under reasonable duties; the duty on salted meat being, at the same time, reduced from 12s. to 8s., and that on bacon and hams from 28s. to 14s. per cwt. We published at the time a short tract (*Memorandum on the proposed Introduction of Foreign Beef and Cattle*), in which we endeavoured to show, by comparing the prices of cattle in the adjoining countries and in England, that this wise and liberal measure would not have the effects that were anticipated in reducing the price of stock in this country. Experience showed that we were right in this anticipation, the imports of cattle and sheep being comparatively inconsiderable. Sir Robert Peel, profiting by this experience, repealed, in 1846, the duties imposed in 1812 on the importation of cattle, sheep &c. And the result has more than justified the soundness of the principles on which that great minister proceeded in taking this step. The imports of stock have been considerably, but not greatly, increased in the interval. And, far from being injured by his liberal proceedings, the grazing farmers have gained immensely; and it is admitted, on all hands, that cattle and sheep have paid better of late years (except during the cattle plague) than ever they did at any antecedent period. It is, in truth, much easier to import supplies of corn than of beef or mutton; and the probability seems to be that our farmers will in time to come apply themselves rather to the production of the latter than of the former. The taxes on butter, cheese, and eggs were repealed in 1860.

It is impossible to say in how great a degree these importations may be increased in time to come; but it is most probable that they will be gradually augmented according as foreigners become better acquainted with the qualities suitable for our markets. But we have no idea that they will ever amount to any considerable proportion of our supply. The cheapness of cattle and provisions in foreign markets, of which we used to hear so much, was in great part imaginary; and where it did occur, it depended more on the difficulty of conveying them to other markets, or on their inferiority, than on anything else. The imports of fat cattle, though they were trebled, would not do our graziers the smallest injury; and the importation of lean cattle, far from being injurious, would be highly for their interest. The great existing desideratum in our agriculture at this moment is, in truth, the want of markets whither we might import lean or half-fed stock. The demand in this country for all sorts of butchers' meat is quite immense; and the land suitable to the rearing of cattle is too circumscribed

to afford a sufficient supply. Hence the high price of beef and mutton as compared with corn. [BREAD; FISH; FRUIT; VEGETABLES.]

PRUNES AND PRUNELLOES. A species of dried plums, of which there are many varieties. The finest are imported from France, in the south of which this fruit is very abundant. The best prunes are packed in hampers or baskets made of white osiers, weighing from 6 to 10 lb. each; the second quality in quarters, and the third in puncheons. The duty on prunes, which was previously fixed at the extravagant rate of 27s. 6d. per cwt., was most properly reduced in 1834 to 7s. per cwt., the present rate. This reduced duty produced, in 1867, 6,878l., showing that 19,647 cwt. had been entered for consumption. Previously to the reduction of the duty, the entries seldom exceeded 6,000 cwt.

PRUSSIA. [KÖNIGSBERG; MEMEL; STETTIN; ZOLLVEREIN; &c.]

PRUSSIAN BLUE or PRUSSIAN OF IRON (Ger. Berlinerblau; Fr. bleu de Prusse; Ital. azzurro prussiano; Span. azul de Prusia;

Russ. lasor Hexlinskaja). A beautiful deep blue powder, accidentally discovered at Berlin in 1710. It is of considerable importance in the arts, being extensively used by painters: it is manufactured in this country. Many attempts have been made to render Prussian blue available for the dyeing of broad cloths, but without much success. The difficulty is to diffuse the colour equally over the surface; for, from its extraordinary vivacity and lustre, the slightest inequalities strike and offend the eye. Prussian blue resists the air and sun extremely well; but it cannot be used in the dyeing of cottons, or any sort of stuff that is to be washed with soap, as the alkali contained in the soap readily dissolves and separates the colouring matter. (Bancroft *On Colours*, vol. ii. pp. 60—94.)

Blue is a favourite colour with the Chinese, and in 1810—11 the imports of Prussian blue into Canton from England amounted to 1,899 piculs, or 253,200 lb. But for some years past the Chinese have not imported a single pound weight. The cause of the cessation of the trade deserves to be mentioned. A common Chinese sailor who came to England in an East Indiaman, having frequented a manufactory where the drug was prepared, learned the art of making it; and on his return to China he established a similar work there, with such success that the whole empire is now amply supplied with native Prussian blue. The West has derived many important arts from the East; but we incline to think that this is the first well-authenticated instance of any art having ever been carried from the West to the East, by a native of the latter. But, in all that respects industry, ingenuity, and invention, the Chinese are incomparably superior to every other people to the east of the Indus.

#### PRUSSIAN OR GERMAN COMMERCIAL UNION. [ZOLLVEREIN.]

**PUBLICANS.** Persons authorised by license to retail beer, spirits, or wines. Under the term publicans are comprised inn keepers, hotel keepers, alehouse keepers, keepers of wine vaults &c. An inn differs from an alehouse in this—that the former is a place intended for the lodging as well as the entertainment of guests, whereas the latter is intended for their entertainment only. If, however, ale or beer be commonly sold in an inn, as is almost invariably the case, it also is an alehouse; and if travellers be furnished with beds, lodged, and entertained in an alehouse, it also is an inn. It is not material to the character of an innkeeper that he should have any sign over his door; it is sufficient that he makes it his business to entertain passengers and travellers, providing them with lodgings and other accommodations.

1. *Licensing of Publicans.*—The provisions with respect to the licensing of public houses are embodied in the 9 Geo. IV. c. 61, of which we subjoin an abstract.

*General Meetings.*—There shall be annually holden in county divisions, cities, and towns, a special session of justices, to be called the 'General Annual Licensing Meeting,' for the purpose of granting licenses to persons keeping or about to keep inns, alehouses &c.; such meetings to be held, in Middlesex and Surrey, within the first 10 days of the month of March; and in every other place between August 20 and September 14, both inclusive.

*Notice of General Meeting.*—Within every division, 21 days before the annual licensing meeting, a petty session of justices to be held, a majority of whom shall fix the day and hour for holding the general annual meeting; and shall direct a precept to the high constable, requiring him, within 5 days after the receipt thereof, to

order the petty constables to affix on the door of the church, chapel, or other public place, a notice of such annual meeting, and give or leave at the dwelling-house of each justice acting for the division, and of each person keeping an inn, or who shall have given notice of his intention to apply for a license to keep an inn, a copy of such notice. (Sec. 2.)

The annual meeting may be adjourned, but the adjourned meeting is not to be held on any of the 5 days immediately following the adjournment, and every adjournment to be held in the month of March in Middlesex and Surrey, and in August or September in every other county. (Sec. 3.)

*Sessions for Transfer of Licenses.*—At the annual meeting, justices to appoint not less than 4 nor more than 8 special sessions, to be held as near as possible at equidistant periods, for the purpose of transferring licenses. (Sec. 4.)

Notice of holding any adjourned meetings, or of any special session for the transfer of licenses, to be given in the same manner and to the same parties as mentioned above. (Sec. 5.)

*Justices disqualified.*—No justice who is a common brewer, distiller, maker of malt for sale, or retailer of malt or any excisable liquor, shall act or be present at any annual licensing meeting, or adjournment, or special session for transferring licenses, or take part in the adjudication upon any application for a license, or upon an appeal, nor in the case of licensing any house, of which he is owner, or agent of the owner, or of any house belonging to any common brewer, maker of malt &c. to whom he shall be, either by blood or marriage, the father, son, or brother, or with whom he shall be partner in any other trade; in any of these cases knowingly or wilfully to act, subjects to a penalty of 100*l.* But disqualification does not arise, where a justice, having no beneficial interest in a house licensed or about to be licensed, holds only the legal estate therein as trustee or for a charitable or public use. (Sec. 6.)

When in any liberty, city, or town, 2 qualified justices do not attend, the county justices may act. (Sec. 7.)

The power given to county justices not to extend to the Cinque Ports. (Sec. 8.)

Questions respecting licenses to be determined, and licenses to be signed, by a majority of the justices present. (Sec. 9.)

*Application for a License.*—Persons intending to apply for a license to a house not before licensed to affix a notice on the door of such house, and on the door of the church or chapel of the parish, and, where there shall be no church or chapel, on some other conspicuous place within the parish, on three several Sundays, between January 1 and the last day of February in the counties of Middlesex and Surrey, and elsewhere between June 1 and the last day of July, at some time between the hours of 10 in the forenoon and 4 in the afternoon, and shall serve a copy of such notice upon one of the overseers of the poor, and upon one of the constables or peace-officers of the parish, within the month of February in the counties of Middlesex and Surrey, and elsewhere within the month of July, prior to the annual meeting; such notice to be in a legible hand, or printed and signed by the applicant. The application must state the Christian and surname of the party, with the place of his residence, and his trade or calling during the 6 months previous to the serving of the notice. (Sec. 10.)

*Notice to transfer License.*—Persons desirous of transferring a license, and intending to apply to the next special sessions, must, 5 days previously

serve a notice upon one of the overseers and one of the constables of the parish. Persons hindered, by sickness or other reasonable cause, from attending any licensing meeting, on proof thereof adduced on oath, may thence another person attend for them. (Sec. 12.)

Licenses to be in force, in Middlesex and Surrey, from April 5; elsewhere from October 10, for one whole year. (Sec. 13.)

**Provision for Death or other Contingency.**—If any person licensed shall die, or become incapable, or a bankrupt or insolvent, or if he or his heirs, executors, or assigns, shall remove or neglect to apply for a continuation of his license, the justices at special session may grant a license to the heirs, executors, or assigns of such party, or to any new tenant; or if any man's house should be, or be about to be, pulled down for a public purpose, or rendered, by fire, tempest, or other unforeseen calamity, unfit for the purposes of an inn, license may be granted to the occupier, if he intend to open another house as an inn. Such transferred licenses shall continue only in force to the end of the year; and in case of removal to another house, notice must be given on some Sunday, within 6 weeks before the special session, in the manner and form before described. (Sec. 14.)

**Fees for Licenses.**—The clerk of the justices may lawfully receive from every person to whom a license is granted, for trouble and all expenses, the following sums:—

For constable or officer serving notices	4	d.
For clerk of justices for license	1	0
For receipt to the high constable, and notices to be delivered by the petty constable	5	0
	1	6

Clerks demanding or receiving more than these fees to forfeit 5*l.* (Sec. 15.)

No sheriff's officer, or officer executing the process of any court of justice, qualified to hold or use any license under this Act. (Sec. 16.)

**Excise Licenses.**—No license for the sale of any exciseable liquors, to be consumed on the premises, shall be granted by the excise to any person, unless such person be previously licensed under this Act. (Sec. 17.)

**Penalties.**—Any person without a license selling or exchanging, or for valuable consideration disposing of any exciseable liquor by retail, to be consumed on his premises; or with a license, and so selling on premises other than those specified in his license, shall for every offence, on conviction before one justice, forfeit not exceeding 20*l.* nor less than 5*l.* with costs; but the penalty not to attach in case of death or insolvency, and sale by the heir or assigns, prior to the next special sessions. (Sec. 18.)

Every licensed person shall, if required, sell all liquors by retail (except in quantities less than  $\frac{1}{2}$  pint) by the gallon, quart, pint, or  $\frac{1}{2}$  pint, sized according to the standard; in default thereof to forfeit the illegal measure, and pay not exceeding 40*s.* with costs, to be recovered within 30 days before 1 justice. (Sec. 19.)

In cases of riot, or probability of riot, houses licensed in the neighbourhood may be closed by the order of 2 justices. (Sec. 20.)

Any person convicted of a first offence, before 2 justices, against the tenor of his license, to forfeit not exceeding 5*l.* with costs; guilty of a second offence within 3 years of the first, to forfeit not exceeding 10*l.* with costs; and guilty of a third offence within 3 years, to forfeit not exceeding 50*l.* with costs; or the case in the last instance may be adjourned to the petty sessions, or the annual meeting, or the general quarter sessions; and if the offender is found guilty by a

jury, he may be fined 100*l.*, or adjudged to forfeit his license, or both, and rendered incapable of selling any exciseable liquor in any inn kept by him for 3 years. (Sec. 21.)

Proceedings at the session in certain cases may be directed by the justices to be carried on by the constable, and the expences defrayed out of the county treasury. (Sec. 22.)

Witnesses refusing to attend without lawful excuse may be fined not more than 10*l.* (Sec. 23.)

Penalties against justices may be sued for in any court of Westminster; a moiety to the king and a moiety to the party suing. (Sec. 24.)

Penalties adjudged by justices may be recovered by distress or the party imprisoned, 1, 3, or 6 calendar months. (Sec. 25.)

The next sections relate to the mode of prosecuting actions.

The last section of the Act enacts that the word 'inn' shall include any inn, alehouse, or victualling house, in which is sold by retail any exciseable liquor, to be drunk or consumed on the premises; and the words exciseable liquor are to include all such fermented or spirituous liquors as may now or hereafter be charged with any custom or excise duty. (Sec. 37.)

The Act does not affect the Universities, nor the privileges of the Vintners' Company, except those freemen who have obtained their freedom by redemption; and it does not alter the time of granting licenses in the city of London.

Innkeepers are bound by the tenor of their license to keep order in their houses, to prevent drunkenness and disorderly conduct, and gambling. If they fail in these respects, they forfeit their license, and subject themselves to the penalties mentioned before. Allowing seditious or immoral books to be read in an inn also forfeits the license, and subjects to penalties. (39 Geo. III. c. 79 s. 31.)

So far as Scotland is concerned, this Act has been amended by the 16 & 17 Vict. c. 67, and 25 & 26 Vict. c. 35.

The closing of public houses in England is regulated on Sundays by 18 & 19 Vict. c. 118, and on other days by the Public House Closing Acts of 1864 and 1865.

**2. Duties of Innkeepers.**—Innkeepers are bound by law to receive 3 guests coming to their inns, and they are also bound to protect their property when there. They have no option to reject or refuse a guest, unless their house be already full, or they are able to assign some other reasonable and sufficient cause. Neither can they impose unreasonable terms on such as frequent their houses; if they do, they may be fined, and their inns indicted and suppressed. An innkeeper who has stables attached to his premises may be compelled to receive a horse, although the owner does not reside in his house; but he cannot, under such circumstances, be compelled to receive a trunk or other dead thing. By the annual Mutiny Act, constables, or, in their default, justices of the peace, may quarter soldiers in inns, livery-stables, ale-houses &c., under the conditions and regulations set forth in the statute.

**3. Responsibility of Innkeepers.**—An innkeeper is bound to keep safely whatever things his guests deposit in his inn, or in his custody as innkeeper, and until 1863 he was civilly liable for all losses except those arising from irresistible force, or what is usually termed the act of God and the king's enemies. The law on this subject, however, was altered by the 26 & 27 Vict. c. 41. It provides that the innkeeper shall not be liable beyond 30*l.* for loss or injury to goods or property brought to the inn, except—1st, when the goods or property shall be stolen, lost, or injured, through the wilful

act or neglect of the innkeeper or his servant; and, 2nd, where such goods or property shall have been deposited expressly for safe custody with such innkeeper. 'It has long been holden,' says Sir William Jones, 'that an innkeeper is bound to restitution, if the trunks or parcels of his guests, committed to him either personally or through one of his agents, be damaged at his inn, or stolen out of it by any person whatever (except the servant or companion of the guest); nor shall he discharge himself of this responsibility by a refusal to take care of the goods, because there are suspected persons in the house, for whose conduct he cannot be answerable: it is otherwise, indeed, if he refuse admission to a traveller because he really has no room for him, and the traveller, nevertheless, insist upon entering, and place his baggage in a chamber without the keeper's consent. Add to this, that if he fail to provide honest servants and honest inmates, according to the confidence reposed in him by the public, his negligence in that respect is highly culpable, and he ought to answer civilly for their acts, even if they should rob the guests that sleep in their chambers. Rigorous as this law may seem, and hard as it may actually be in one or two particular instances, it is founded on the great principle of public utility, to which all private considerations ought to yield; for travellers, who must be numerous in a rich and commercial country, are obliged to rely almost implicitly on the good faith of innholders, whose education and morals are usually none of the best, and who might have frequent opportunities of associating with ruffians, or pilferers, while the injured guest could never obtain legal proof of such combinations, or even of their negligence, if no actual fraud had been committed by them. Hence the praetor declared, according to Pomponius, his desire of securing the public from the dishonesty of such men; and by his edict gave an action against them, if the goods of travellers or passengers were lost or hurt by any means except by inevitable accident (*damno fatali*): and Ulpian intimates that even this severity could not restrain them from knavish practices or suspicious neglect.' (*Essay on the Law of Bailments*, 2nd ed. pp. 95, 96.)

Even if an innkeeper bid the guest take the key of his chamber and lock the door, telling him that he cannot undertake the charge of the goods, still, if they be stolen, he is held to be responsible. In all such cases it is not competent to the innkeeper to plead that he took ordinary care, or that the force which occasioned the loss was truly irresistible. A guest is not bound to deliver the goods in special custody to the innkeeper, nor, indeed, to acquaint him that he has any. If he have property with him, or about his person, the innkeeper must be responsible for it to the extent of 30*l.* without communication. But the innkeeper may require that the property of his guest be delivered into his hands, in order that it may be put into a secure place; and if the guest refuse, the innkeeper is not liable for its safety. The guest exonerates the innkeeper from liability when he takes upon himself the exclusive custody of the goods, so as to deprive the innkeeper of having any care over them; thus, if a guest demand and have exclusive possession of a room, for the purpose of a shop or warehouse, he exonerates the landlord from any loss he may sustain in the property which he keeps in that apartment: but it is otherwise if he have not the exclusive possession of the room. The innkeeper cannot oblige the guest to take charge of his own goods; for this, in effect, would be a refusal to admit them into the inn. And it is no excuse for an innkeeper to say that he delivered

the key of the chamber whence the property was stolen to the guest, who left the door open. A case of this sort occurred a few years ago at Brighton. A lady having left the door of her bedroom, of which she had the key, open for a few minutes, 50*l.* were abstracted from her reticule. The innkeeper contended that the plaintiff, by selecting particular apartments, and taking the key, had exonerated him from his liability. The jury found for the plaintiff; and upon a motion for a new trial, Lord Tenterden said, 'By the common law of this country, and also by the civil law, the principle of the liability of innkeepers was founded on two reasons: first, to compel the landlord to take care that no improper company was admitted into his house; and secondly, to prevent collusion. The principle, as stated in the civil law, was this—'Ne quisquam putet graviter hoc in eos constitutum esse; nam est in ipsorum arbitrio nequem recipient; et nisi hoc esset statutum, materia daretur eum furibus, adversus eos quos recipient, coeundi: cum ne nunc quidem abstineat hujusmodi frandibus.' It was true that, in the present state of society, it was very difficult to prevent the intrusion of improper company into inns. But still the principle was such as he had stated it to be, and it would be dangerous to relax it; and he did not think that the taking round in this way was sufficient to discharge the landlord. Then, as to the objection that the cases did not extend to money, it was clear that money was as much within the principle as goods, and that no substantial distinction could be made. He was therefore of opinion that the verdict was right.—Rule refused.

A landlord may exempt himself from liability if he can show that the loss was occasioned by the misconduct of the guest; as, if his goods are stolen by his own servant or companion.

It has been decided that a man is a guest at an inn, if he leave his horse at it, though he has not gone into it himself. If a man come to an inn, and make a contract for lodging for a set time, and do not eat or drink there, he is no guest, but a lodger, and, as such, not under the innkeeper's protection; but if he eat and drink, or pay for his diet there, it is otherwise. Any innkeeper or alehouse keeper, knowingly receiving and harbouring any person convicted of an offence against the revenue laws, for which he has been in prison, or for which he has fled, shall forfeit 100*l.* and have no license for the future.

4. *Remedy of an Innkeeper against his Guest.*—An innkeeper may, without any agreement to that effect, detain the person of a guest who has eaten in his house, until payment; and he may do the same by the horses in his stable.

An innkeeper is not entitled to recover for spirits supplied to his guests, of the value of 2*s.* and upwards, unless supplied or contracted for at one time. (23 Geo. II. c. 40.)

By the custom of London and Exeter, if a man commit a horse to an hostler, and the expense of his keep become equivalent to his price, the hostler may appropriate the horse to himself upon the appraisement of four of his neighbours, or may have him sold. But innkeepers in other parts of the country have no power to sell horses detained by them.

A horse committed to an innkeeper cannot be detained as a security for the board of his master.

It is enacted by 11 & 12 Wm. III. c. 15 that innkeepers, alehouse keepers &c. refusing to specify in an account the number of pints or quarts for which demand is made, or selling in unmarked measures, shall have no power to detain any goods or other things belonging to the person

from whom demand is made, but shall be left to their action for recovery of the same.

**PUMICE STONE** (Ger. *binstein*; Fr. *pierreponce*; Ital. *pietra pomice*; Span. *pedra pomez*; Lat. *pumex*). A light, spongy, vitreous stone, found usually in the neighbourhood of volcanoes. It is used for polishing metals and marble, and smoothing the surface of wood and pasteboard. It is said to form a good glaze for pottery. The lighter pumice stones swim on water, their specific gravity not exceeding 9.14. The island of Lipari, in the Mediterranean, is chiefly formed of pumice stone, and may be said to be the magazine whence all Europe is supplied with this useful article.

There are several species of pumice stones; but those only that are light and spongy are exported. In 1867 we imported 525 tons of pumice stone, valued at 2,364*l*.

**PUTCHOCK**. An article of this name is imported in considerable quantities from the north-west coast of India into China, and is regularly quoted in the Canton price currents. It is the root of a plant that grows abundantly in Sindh. When burned, it yields a fine smoke, and a grateful and diffusive smell. The Chinese beat it into a fine powder, which they burn as incense in the temples of their gods. (Hamilton's *New Account of the East Indies*, vol. i. p. 126.)

**QUARANTINE**. A regulation by which all communication with individuals, ships, or goods, arriving from places infected with the plague, or other contagious disease, or supposed to be peculiarly liable to such infection, is interdicted for a certain definite period. The term is derived from the Italian *quaranta*, forty; it being generally supposed that if no infectious disease break out within 40 days, or 6 weeks, no danger need be apprehended from the free admission of the individuals under quarantine. During this period, too, all the goods, clothes &c. that might be supposed capable of retaining the infection, are subjected to a process of purification. This last operation, which is a most important part of the quarantine system, is performed either on board ship, or in establishments denominated *lazarettos*. (See post.)

**Policy of Quarantine**.—The regulations as to quarantine are entirely precautionary; they have their origin in the belief that various diseases, but especially the plague, are contagious; and supposing such to be the case, the propriety of subjecting those coming from an infected or suspected place to a probation is obvious. Indeed, no Government could, until the belief in question be proved to be ill founded, abstain from enforcing precautionary measures, without rendering itself liable to the charge of having culpably neglected one of its most important duties—that of providing, by every means in its power, for the safety of its subjects. Latterly, however, it has been contended that the plague is never imported; that it is always indigenous; originating in some peculiar state of the atmosphere, or in something peculiar in the condition of the people; and that, consequently, quarantine regulations merely impose a heavy burden on commerce, without being of any real utility. But though there does not seem to be any reason for doubting that infectious diseases have originated in the way described, the fact that they have, in innumerable instances, been carried from one place to another, seems to be established beyond all question. Even if the evidence as to the importation of infectious diseases were less decisive than it is, or the opinions of medical men more divided, it would not warrant the repeal of the restraints on the intercourse with suspected ports. This is not a matter in which innovations should be rashly introduced; wherever there is doubt, it is proper to incline to the side of security. In some cases, perhaps, quarantine regulations have been carried to a needless extent; but they have more frequently, we believe, been unwisely relaxed.

**Institution of Quarantine**.—The notion that the plague was imported from the East into Europe

seems to have prevailed in all ages. But it would appear that the Venetians were the first who endeavoured to guard against its introduction from abroad, by obliging ships and individuals from suspected places to perform quarantine. The regulations upon this subject were, it is most probable, issued for the first time in 1481. (Beckmann, *Hist. of Invent.* vol. ii. art. 'Quarantine.') They have since been gradually adopted in every other country. Their introduction into England was comparatively late. Various preventive regulations had been previously enacted; but quarantine was not systematically enforced till after the alarm occasioned by the dreadful plague at Marseilles in 1720. The regulations then adopted were made conformably to the suggestions of the celebrated Dr. Mead, in his famous *Discourse concerning Pestilential Contagion*.

**Lazarettos** or *Pest-houses* are establishments constructed to facilitate the performance of quarantine, and particularly the purification of goods. They have usually a port in which ships from a suspected place may anchor; and, when perfect, are provided with lodgings for the crews and passengers, where the sick may be separated from the healthy; and with warehouses, where the goods may be deposited; all intercourse between the lazaretto and the surrounding country being, of course, interdicted, except by permission of the authorities. The lazarettos at Leghorn, Genoa, and Marseilles are the most complete of any in Europe. The facilities they afford to navigation are very great; for, as ships from suspected places may discharge their cargoes in the lazaretto, they are not detained longer than they would be were there no quarantine regulations. The goods deposited in the lazaretto, being inspected by the proper officers, and purified, are then admitted into the market.

Compared with these, the quarantine establishments in this country are exceedingly defective. There is not, even in the Thames, a lazaretto where a ship from a suspected place may discharge her cargo and reef; so that she is detained, frequently at an enormous expense, during the whole period of quarantine; while, if she have perishable goods on board, they may be very materially injured. It is singular that nothing should hitherto have been done to obviate such grievances. The complaints as to the oppressiveness of quarantine regulations are almost wholly occasioned by the want of proper facilities for its performance. Were these afforded, the burdens it imposes would be rendered comparatively light; and we do not know that many more important services could be rendered to the commerce of the

country than by constructing a proper quarantine establishment on the Thames.

*Bills of Health.*—The period of quarantine varies, as respects ships coming from the same place, according to the nature of their bills of health. These are documents, or certificates, signed by the consul or other competent authority in the place which the ship has left, describing its state of health at the time of her clearing out. A *clean bill* imports that, at the time of her sailing, no infectious disorder was known to exist. A *suspected*, or, as it is more commonly called, a *touchet bill*, imports that rumours were afloat of an infectious disorder, but that it had not actually appeared. A *foul bill*, or the *absence of clean bills*, imports that the place was infected when the vessel sailed. [BILLS OF HEALTH.] The duration of the quarantine is regulated by the nature of these instruments. They seem to have been first issued in the Mediterranean ports in 1665, and are obviously of great importance.

*Quarantine Regulations.*—The existing quarantine regulations are embodied in the Act 6 Geo. IV. c. 78, and the different orders in council issued under its authority. These orders specify what vessels are liable to perform quarantine; the places at which it is to be performed; and the various formalities and regulations to be complied with. The publication in the *Gazette* of any order in council with respect to quarantine is deemed sufficient notice to all concerned; and no excuse of ignorance is admitted for any infringement of the regulations. To obviate, as far as possible, any foundation for such plea, it is ordered that vessels clearing out for any port or place which is to be subjected to quarantine, are to be furnished with an abstract of the quarantine regulations; and are to furnish themselves with quarantine signal flags and lanterns, and with materials and instruments for fumigating and immersing goods. The following are the clauses in the Act as to signals:—

Every commander, master, or other person having the charge of any vessel liable to quarantine, shall, at all times, when such vessel shall meet with any other vessel at sea, or shall be within 2 leagues of the coast of the United Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man, hoist a signal to denote that his vessel is liable to quarantine; which signal shall in the day time, if the vessel shall have a clean bill of health, be a large yellow flag, of 6 breadths of bunting, at the main-topmast-head; and if such vessel shall not have a clean bill of health, then a like yellow flag, with a circular mark or ball, entirely black, in the middle thereof, whose diameter shall be equal to 2 breadths of bunting; and in the night time, the signal shall in both cases be a large signal lantern with a light therein (such as is used on board his Majesty's ships of war), at the same mast-head: and such commander, master, or other person, shall keep such signals hoisted during such time as the said vessel shall continue within sight of such other vessel, or within 2 leagues of the said coast or islands, and while so in sight, or within such distance, until such vessel so liable to quarantine shall have arrived at the port where it is to perform quarantine, and until it shall have been legally discharged from the performance thereof; on failure whereof such commander, master, or other person shall forfeit 100*l.* (Sec. 8.)

Every commander, master, or other person having the charge of any vessel on board whereof the plague or other infectious disease highly dangerous to the health of his Majesty's subjects shall

actually be, shall at all times, when such vessel shall meet with any other vessel at sea, or shall be within 2 leagues of the coast of the United Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man, hoist a signal, to denote that a vessel has the plague or other infectious disease; which signal shall be in the day time a flag of yellow and black, borne quarterly, or 8 breadths of bunting, at the main-topmast-head; and in the night time, the signal shall be 2 large signal lanterns, commonly used on board ships of war, one over the other, at the same mast-head: and such commander, master, or other person shall keep such signal hoisted during such time as the said vessel shall continue within sight of such other vessel, or within 2 leagues of the coasts or islands aforesaid, while so in sight, or within such distance, until such vessel shall have arrived at the port where it is to perform quarantine, and until it shall have been legally discharged from the performance thereof; on failure whereof such commander, master, or other person shall forfeit 100*l.* (Sec. 9.)

If any commander, master, or other person, knowing that the same is not liable to the performance of quarantine, shall hoist such signal, by day or night, such commander or other person shall forfeit 50*l.* (Sec. 10.)

But, instead of printing the Act, and the various orders in council that have grown out of it, it will be sufficient to lay the following abstract of them before the reader. This abstract has been prepared by the Custom-house, and contains a distinct summary of the various rules and regulations to be complied with.

#### ABSTRACT OF QUARANTINE REGULATIONS.

It is in the first place to be observed that all persons are presumed to know, and are bound to take notice, not only of the quarantine regulations established by Act of Parliament (as they are of any other public Act), but likewise of every order in council made for the performance of quarantine, and published in the *London Gazette*; and as it is easily in their power to inform themselves of such regulations, and particular care is taken by this and other means to promulgate such of them as apply to their respective situations, *previously to their being actually put under quarantine*, when they will receive directions for their guidance from the quarantine officers, no plea of ignorance will be admitted as an excuse for any neglect, breach, or violation thereof; but, for the sake of example, and for the security of the public health, the pains, penalties, and punishments of the law will be enforced with the utmost severity.

#### Duty of Commanders and Masters of Vessels.

Upon arrival off the coast of the United Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man,

To deliver to the pilot who shall go on board a written paper, containing a true account of the name of the place at which his ship loaded, and of all the places at which he touched on the homeward voyage. Neglecting or refusing to deliver such papers, or making any false representation or wilful omission therein, subjects him to a penalty of 100*l.*

Upon entering, or attempting to enter any port, and being spoke by any quarantine officers, To give a true answer in writing or otherwise, and upon oath or not upon oath (according as he shall be required), to the preliminary questions put to him by such quarantine officer, for the purpose of ascertaining whether his vessel is or is not liable to quarantine. Neglecting or refusing

place in the United Kingdom or the islands aforesaid.

And every such commander and master is likewise to provide and take on board 1 at least of each of the proper quarantine signal flags and lanterns, and likewise materials and instruments for fumigation and immersion, and to keep the same on board, to be used upon his return to the United Kingdom or the islands aforesaid.

#### *Duty of Pilots.*

Pilots are strictly to observe the following directions:—

To receive an account in writing from every commander or master of any vessel coming from foreign parts, of the places at which his vessel loaded, and at which he touched on his said homeward voyage.

To give notice to such commander or master of any proclamation, or order in council, made after the departure of such vessel from the United Kingdom or the islands aforesaid, and then in force, by which vessels coming from any place mentioned in such account shall be liable to quarantine. Neglecting or omitting to give such notice subjects them to a penalty of 100*l*.

To give a like notice of any proclamation then in force, by which vessels having on board any of the articles mentioned in the master's account shall be liable to quarantine. Neglecting or omitting to give such notice subjects them to a penalty of 100*l*.

To remain on board in the same manner as any of the officers, crew, or passengers, and not to quit the said vessel before or after the arrival, either by going on shore, or by going on board any other vessel or boat with intent to go on shore, until she is regularly discharged from quarantine; and they may be compelled by any persons whatsoever, and by any kind of necessary force, to return on board the same. If they offend herein, they incur a penalty of 300*l*. and 6 months' imprisonment.

Not to bring any such vessel into any port or place other than the port or place appointed for the reception of vessels so liable to quarantine as stated in the Appendix, unless compelled by stress of weather, adverse winds, or accidents of the seas, of which the pilot, as well as the commander or master of the vessel, is to give satisfactory proof upon oath. If they offend herein, they incur a penalty of 200*l*.

To bring the ship to, as soon as it can be done with safety, in obedience to the requisition of the quarantine officer. Failing herein subjects them to a penalty of 100*l*.

#### *Duty of other Persons.*

When any infectious disease actually appears on board any vessel, all persons on board are to obey the direction of the privy council, under a penalty of 100*l*.

Not to quit such vessel, either by going on shore, or by going on board any other vessel or boat with intent to go on shore, until regularly discharged from quarantine; and if they quit the ship, they may be compelled by any persons whatsoever, and by any kind of necessary force, to return on board the same; and are also liable to a penalty of 300*l*. and 6 months' imprisonment.

Whether liable to quarantine, or actually performing quarantine, or having had any intercourse or communication with any such persons so liable to or under quarantine, all persons are to obey all such orders as they shall receive from the quarantine officer, and to repair to the lazaret, vessel, or place appointed for the

performance of quarantine. Wilfully refusing or neglecting to repair forthwith, when required so to do by such officers, or escaping from or out of such lazaret, vessel, or place, may be compelled to repair or return thereto by any kind of necessary force, and are subject to a penalty of 200*l*.

Landing or unshipping, or moving in order to the landing or unshipping, of any goods, packets, packages, baggage, wearing apparel, books, letters, or any other articles whatever, from vessels liable to quarantine, are liable to a penalty of 500*l*.

Clandestinely conveying, or secreting or concealing for the purpose of conveying, any goods, letters, or other articles as aforesaid, from any vessel actually performing quarantine, or from the lazaret or other place where such goods or other articles shall be performing quarantine, are liable to a penalty of 100*l*.

Having quitted or come on shore from any vessel liable to or under quarantine, or having escaped from any lazaret or other place appointed in that behalf, may be seized and apprehended by any constable or other peace officer, or by any other person whatever, and carried before a justice of the peace, who may grant his warrant for conveying such person to the vessel, lazaret, or other place from which he shall have escaped, or for confining him in any place of safe custody (not being a public gaol) until directions can be obtained from the privy council.

Knowingly and wilfully forging or counterfeiting, interlining, erasing, or altering, or procuring to be forged &c., any certificate directed by any order in council touching quarantine, or publishing the same as true, or uttering any such certificate with intent to obtain the effect of a true certificate, knowing its contents to be false, are guilty of felony.

#### *What Vessels are liable to Quarantine.*

All vessels (as well ships of war as all others) with or without clean bills of health, coming—

From or having touched at any place in the Mediterranean, or the West Barbary on the Atlantic Ocean.

From any other place from which his Majesty shall from time to time adjudge it probable (and shall so declare by proclamation or order in council) that the plague, or any other infectious disease or distemper highly dangerous to the health of his Majesty's subjects, may be brought.

*Note.*—They are considered as liable to quarantine from the time of their leaving any of the said places.

All vessels having communication with any of the before-mentioned ships or vessels, or receiving—

Any person whatever from or out of such vessel, whether such person shall have come from any of the said places, or shall have gone on board of such vessel, either in the course of her voyage, or upon her arrival off the coast of the United Kingdom &c.—Or

Any goods, wares, or merchandises, packages, baggage, wearing apparel, goods, letters, or any other articles whatever, from or out of such ship or vessel.

*Note.*—They are liable to quarantine from the time of their receiving any such persons or goods.

All vessels coming from any port or place in Europe without the Straits of Gibraltar, or in the continent of America, and having on board—

Any of the articles enumerated (a list of which articles see in the Appendix);

And not producing a declaration upon oath, made by the owner, proprietor, shipper, or consignee

QUARANTINE PORTS.

For Vessels liable to Quarantine not coming from any Place actually infected, nor having any Infection actually on Board.

Without Clean Bills of Health.

All vessels, ships of war &c. as hereinafter specified, to perform quarantine at *Standgate Creek* or *Milford Haven*.

Ships of war, transport, or other ships in the actual service of Government, under the command of a commissioned officer in the service of his Majesty's navy, whithersoever bound, to perform quarantine at the *Motherbank*, near *Portsmouth*, at a place marked out by yellow buoys.

With Clean Bills of Health.

All ships and vessels bound to the following places, to perform quarantine at *Standgate Creek* :—

London, Rochester, Faversham, or any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Whitebooth Road*, between *Hull* and *Grimshy* :—

Leigh	Yarmouth	Bridlington
Maldon	Blakeney and Cley	Scarborough
Colchester	Wells	Whitby
Horwich	Lynn	Stockton
Ipwich	Widnesch	Sunderland
Woodbridge	Boston	Newcastle
Aliborough	Grimshy	Berwick
Southwold	Hull	

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Bambor's Pool* near *Liverpool*, or *Milford Haven* :—

Carlisle	Preston	Deumaris
Whitehaven	Liverpool	Isle of Man
Lancaster	Chester	

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at the *Motherbank*, near *Portsmouth* :—

Sandwich	Newhaven	Portsmouth
Dial	Shoreham	Southampton
Dover	Arundel	Cowes
Rye	Chichester	

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *St. Just's Pool*, within the mouth of the harbour of *Fulmouth* :—

Poole	Plymouth	Pennryn
Weymouth	Looe	Truro
Lynne	Fowey	Penance
Exeter	Falmouth	Nelly
Dartmouth	Geock	

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *King Road* and *Portsmouth Pill* :—

Bridgwater	Gloucester	Cardiff
Milhead	Chepstow	Swansea
Bristol		

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Milford Haven* :—

St. Ives	Ilfracombe	Milford
Pudlow	Ilanilly	Coedigan
Hildeford	Pembroke	Aberystwith
Larnstaple		

stating either that such articles are not the growth, produce, or manufacture of Turkey, or of any place in Africa within the Straits of Gibraltar, or in the West Barbary on the Atlantic Ocean, or stating of what place they are the growth, produce, or manufacture.

All vessels and boats receiving—  
Any of the said goods, wares, and merchandise, or other articles enumerated.

Signals.

For vessels with the plague or other highly infectious disease actually on board—

In the day time—A flag of yellow and black, borne quarterly, of 8 breadths of bunting, at the main-topmast-head.

In the night time—Two large signal lanterns, with a light therein, such as are commonly used on board his Majesty's ships of war, one over the other, at the same mast-head.

For vessels with clean bills of health—

In the day time—A large yellow flag, of 6 breadths of bunting, at the main-topmast-head.

In the night time—A large signal lantern, with a light therein, such as is commonly used on board his Majesty's ships of war, at the same mast-head.

For vessels without clean bills of health—

In the day time—A large yellow flag, with a circular mark or ball, entirely black, in the middle thereof, whose diameter shall be equal to 2 breadths of bunting, at the main-topmast-head.

In the night time—Same as for vessels with clean bills of health.

Note.—Every commander or master of a vessel about to sail for the Mediterranean, or for any place respecting which an order in council shall be in force, subjecting vessels coming from thence to quarantine, to be provided with the quarantine signals above mentioned, and to keep the same on board, to be used on his return to the United Kingdom.

Any commander or master hoisting either of the said quarantine signals, by day or night, knowing that his vessel is not liable to quarantine, incurs a penalty of 50*l*.

APPENDIX.

A List of Articles enumerated, considered as most liable to Infection.

Apparel of all kinds	Lute strings, bathings or hair strings
Artificial flowers	Maps
Bags, or any articles made thereof	Mattresses
Beads, bracelets, or necklaces, in strings	Matrs and matting
Belt and bed ticks	Mohair yarn
Books	Nets, new or old
Boxes of all kinds	Paper
Brushes of all sorts	Packthread
Buckles	Parchment
Buttons	Velts
Canvas	Plattling of bast, chip, cane, straw, or horse hair
Carmine wood	Quills
Carpets	Rags
Curtains, not tarred	Sail and sail cloths
Curry wool	Silk, viz.—crapes and tiffanets, bucks and knubs, raw silk, thrown and organzine silk, waste silk, raw silk
Curry yarn	Skins, hides, and furs, and parts or pieces of skins, hides, and furs, whether undressed or in part or wholly tanned, tawed, or dressed
Curry thread	Sponges
All articles wholly made of or mixed with cotton, silk, wool, thread, or yarn	Straw, or any article made or mixed with straw
Curry	Stockings of all sorts
Curry waste	Thresh, tow, vellum, whisks, wool, whether raw or anywise wrought
Curry hair	Yarn of all sorts
Curry or wires on thread, cotton, silk, wool, or silk, or any other substance hereinbefore mentioned	And all other goods whatsoever, if they shall have arrived in or with packages consisting wholly or in part, of any of the said articles
Curry caps, or bonnets of straw, cane, or any other material	
Curry	
Curry and hair tips	
Curry of all sorts	
Curry	

Willfully refusing or with, which required so escaping from or out of ce, may be compelled to y any kind of necessary penalty of 20*l*.  
g, or moving in order to g, of any goods, packets, ng apparel, books, letters, tever, from vessels liable to a penalty of 50*l*.  
ng, or secreting or con- ng, of conveying, any goods, s as aforesaid, from any ng quarantine, or from th- where such goods or other ming quarantine, are liable  
come on shore from any nder quarantine, or havin- ret or other place appointed ce seized and apprehend- other peace officer, or by atever, and carried before a who may grant his warrant person to the vessel, la, &c., which he shall have escap- in any place of safe custody gaol) until directions can be rivy council.  
willfully forging or counter- erasing, or altering, or p- al &c., any certificate direct- uncial touching quarantine, o as true, or uttering any such tent to obtain the effect of a owing its contents to be false, &c.  
s are liable to Quarantine.

Or any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at the *Motherbank*, near *Portsmouth*, or *St. Just's Pool*, within the mouth of the harbour of *Falmouth* :—

Jersey	Sark
Guernsey	Alderney

Or either of them, or any part of them, or either of them.

All ships and vessels bound to the following places, to perform quarantine at *Inverkeithing Bay* :—

The eastern coast of Scotland, comprehending the ports of Leith	Anstruther Prestonpans Dundee Perth Montrose Aberdeen The northern ports of Scotland, some	prehending the ports of Inverness Zelland Orkney Caithness Sutherland
---	--	---

Or any member, creek, or other place belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Holy Loch*, in the *Frith of Clyde* :—

The western coast of Scotland, comprehending the ports of Glasgow Greenock	Irvine Campbell Town Oban Rothesay Fort William	Ayr Port Patrick Stranraer Wigtown
---	---	---

The south-west ports of Scotland, comprehending the ports of Dumfries and Kirkcudbright, or any member, creek, or other place belonging to or within any or either of the above ports.

#### Preliminary Questions.

1. What is the name of the vessel, and the name of the commander or master?
2. Are you the commander or master? Where does she belong?
3. From whence do you come?
4. To what place are you bound?
5. At what ports have you touched since you left the port of your lading on your homeward voyage?
6. What vessels have you had intercourse or communication with on your passage, and from whence did they come?
7. Did the plague or any other infectious disease or distemper prevail in any degree at the place whence you sailed on your homeward voyage or at any of the places at which you have touched? If at any, say at which, and when. Are any persons on board your ship suffering under any infectious disease? or have any persons died or been ill of a disease of that nature on the homeward passage? and if any, what number? And if any have died or been ill of such disease, were their bedding and clothes destroyed?

[If the vessel shall have sailed from any port in Europe without the Straits, or on the continent of America.]

8. Have you on board any goods enumerated in this list?

[Handing up a list of articles enumerated.]

If you have, specify the same, and whether they are of the growth, produce, or manufacture of Turkey, or of any place in Africa within the Straits of Gibraltar, or in the West Barbary on the Atlantic Ocean, or of what other place? Have you any declaration to prove of what place they are the growth, produce, or manufacture?

[If the vessel comes from the Mediterranean, or from any other place respecting which there is any order in council in force concerning quarantine.]

9. Have you any, and what, bill of health?

10. What number of officers, mariners, and passengers have you on board?

[And in cases of vessels coming from or having touched at any port or place on the continent of America, or the islands adjacent thereto, or coming from or having touched at any ports in the West Indies, the following questions are to be put, in addition to the aforesaid questions:]

11. In the course of your voyage have any persons on board suffered from sickness of any kind? What was the nature of such sickness? and when did it prevail? How many persons were affected by it? and have any of them died in the course of the voyage?

12. How long after sailing from your port of lading, or having touched at any port on the continent of America or the islands adjacent thereto, or any of the ports in the West Indies, was the first appearance of disease observed?

13. How had the persons attacked been employed before they came on board?

14. Had they been employed in loading or unloading the vessel before they left the port?

15. Had the place which they inhabited, before they sailed, the reputation of being healthy? or was it subject particularly to the fever incident to the country?

16. Had the fever been frequent in the place before the vessel sailed?

17. Did the persons who were ill on board your vessel fall sick nearly about the same time, or within a few days of each other? Or, did the disorder spread successively from one to another, and increase considerably? Or, did it abate gradually, and cease to multiply as the distance from the ports you sailed from or touched at as aforesaid increased?

18. What was the greatest number of persons ill at the most sickly period of your voyage?

19. What was the whole number of persons on board your vessel when you sailed?

20. What is the whole number of persons now ill on board your vessel?

21. Can you state what were the symptoms of illness with which your crew were first attacked; and what was the daily succession and change in them till their death?

22. Whether any and what medicines have been used? and what methods have been adopted to prevent its spreading among the crew?

23. Whether attention has been paid to cleanliness and ventilation on board your vessel?

24. When did you sail from the port or place whence you took on board your outward cargo? and at what place did you touch before you arrived at the port or place where you took in your present cargo?

25. Did you carry any bill of health with you to the port or place where you took in the cargo you have now on board? From what place? Were the said bills of health clean, unclean, or suspected?

#### Quarantine Questions.

1. What is the name of the vessel, and the name of her commander or master?

2. Are you the commander or master?

3. To what port or place does she belong?

4. When did you sail from the port or place whence you took on board your outward cargo? and at what places did you touch before you arrived at the port or place where you took in your present cargo?

5. Did you carry any bill or bills of health with you to the port or place where you took in the cargo you have now on board? From what

places? Were the said bills of health clean, unclean, or suspected?

6. From what port or place does she now come? When did you sail from such port or place? and at what place or places have you touched in the course of the voyage?

7. Have you any bill or bills of health on board? From what place or places? Are the same clean, unclean, or suspected? Produce them.

[If the vessel shall have sailed from any port or place in Europe without the Straits, or on the continent of America.]

8. Of what articles does your cargo consist? Have you on board any goods enumerated in this list?

[Handing up a list of articles enumerated.]

If you have, specify the same, and whether they are of the growth, produce, or manufacture of Turkey, or of any place in Africa, within the Straits of Gibraltar, or in the West Barbary on the Atlantic Ocean, or of what other place. Have you any declaration to prove of what place they are the growth, produce, or manufacture?

9. At what place or places was the cargo or any part thereof taken on board? On what day did you arrive at the place or places where you took in the whole, or any and what part of the cargo? And on what day did you sail from such place or places? And what part of your cargo was taken in at each place, and when?

10. Did the plague or any other infectious disease or distemper prevail in any degree at the places whence you sailed, or at any of the places at which your cargo was taken on board, or at which you touched? If at any, say at which, and when.

11. Did you hear of any report, or are you aware of any suspicion having existed, at the time of your sailing, that the plague or any other infectious disease prevailed at the place whence you sailed, or at any other place in the Mediterranean (or in America or the West Indies, as the case may be)?

12. What number of officers, mariners, passengers, or other persons have you on board? Describe the number of each.

13. At what port did you take on board your passengers?

14. Were they residents at the place, or had they been embarked as passengers on board any other vessel from any other places? and from what places and at what time?

15. Do the said officers, mariners, passengers, and other persons consist of the same individuals as were on board at the port from which you sailed upon your homeward voyage? If any other persons have been taken on board, or if any of your officers, crew, or passengers have quitted your vessel since you sailed from such port, or before your arrival at this place, or if any other alterations in that respect have taken place, specify the same, the causes, and the time or times, of such alterations.

16. What number of persons (if any) have died on board during the voyage outwards and homewards, or at any port at which you have touched? When, and in what part of the voyage, did such persons or persons die? Of what disease or distemper?

17. Have any of your officers, mariners, or other persons of your crew, who sailed with you on your outward voyage, died or left the vessel?

18. In the course of your voyage outwards or homewards, or at any port at which you have touched, have any persons on board suffered from sickness of any kind? What was the nature of such sickness? When did it prevail? How many

persons were affected by it? Are there any convalescents on board? Or, are all persons on board at present in good health?

19. Were any of those who died, or who have been sick in the course of the voyage, or any port at which you have touched, affected, or suspected to have been affected, by any infectious disease or distemper? Were the bedding and clothes of such diseased and sick persons destroyed? If so, when and in what manner were any of the persons immediately employed about the sick afterwards taken ill? If so, of what disease? and in how many days after having been so employed?

20. At what precise time did such deaths happen? In how many days after being indisposed did the sick die? What were the most obvious appearances of the disease?

21. Have you spoken to or otherwise had any communication with any vessels at sea during the voyage? What were the names of such vessels? and to what country, port, or place did they belong? From what ports or places were they coming, or at what ports or places had they touched on their voyage? and to what country, ports, or places were they bound? What was the nature of the communication held? What do you know respecting the state of health on board such vessels?

22. Have there been any letters, parcels, or other articles delivered out of or received into your vessel, from any vessel or boat met with on the voyage, or before or since your arrival at this place? And what were such letters, parcels, or articles? And where were the same delivered or received? and into or out of what vessel or boat?

23. Have you any packages or parcels which you have taken charge of? If so, what are their contents? and when and where did you take them on board?

24. What pilots or other persons from the shores of the United Kingdom, or from the islands of Scilly, Guernsey, Jersey, Alderney, Sark, or Man, have been, or are now, on board your vessel, or have had any communication whatever with the ship's company, or any of the passengers, during the voyage homewards, or before or since your arrival at this place? If any such pilots or other persons have come on board, and have afterwards quitted your vessel, specify the names of such persons, and the time, manner, and circumstances of their so quitting your vessel.

25. Did you leave any British vessels at any of the ports you sailed from? If you did, mention their names and the names of their commanders.

26. Were such vessels loading? were they near their departure? and whither were they bound?

27. Did you meet with any British vessels at any of the places you touched at? If you did, say when, where, and what were the names and destinations of such vessels; and to what ports or places did they belong?

28. Do you know whether any foreign vessels loading at the port from which you sailed were bound beyond the Straits of Gibraltar? And if so, what were they? and whither were they bound?

29. Do you know whether any person whatever employed in loading your vessel, or in bringing any articles into it, or having any communication on board thereof, was taken ill during such employment or communication? or whether, by the absence of such person or persons in the course of such employment, any suspicion was entertained of their having been ill? If so, of what disease?

30. Do you know whether or not your cargo, or any part thereof, had been long in warehouse before its being taken on board? If you do, say how long. Have you any knowledge of its being packed or handled on shore, or conveyed from shore, or stowed on board, by persons affected with the plague or any other infectious disease or distemper?

The Public Health Act (29 & 30 Vict. c. 99 s. 52) enacts that 'Every vessel having on board any person affected with a dangerous or infectious disorder, shall be deemed to be within the provisions of the Act 6 Geo. IV. c. 78, although such vessel has not commenced her voyage or has come from any port or place in the United Kingdom or is bound for some place in the United Kingdom.' On account of the prevalence of yellow fever in the West Indies, several orders in council were issued in 1866 and 1867, but these were revoked by order of February 23, 1869.

The protection of the coasts of the Baltic against the introduction of the plague is entrusted to the Swedish quarantine establishment at Kinsö in the Cattegat. See regulations in Board of Trade notice of January 18, 1865, published in the *London Gazette*. See also Quarantine Regulations &c., treated of under heads of various ports.

For quarantine regulations consequent on the cattle plague, see CATTLE and SHEEP. Further legislation on this branch of the subject is looked for during the session of 1869.

QUASSIA (Ger. quassienholz; Fr. bois de quassie; Span. leño de casia). A beautiful tall tree (*Quassia amara*), growing in North and South America, and the West Indies. The wood is dense, tough, of a pale yellow colour, and insidiously odorous. Taste intensely and purely bitter. (*British Pharmacopœia*, 1867.)

It is pretty extensively employed in the materia medica; and it is said by Dr. Cullen that 'it will do all that any pure and simple bitter can do.' (Rees's *Cyclopædia*, art. 'Quassia.') It has been alleged that it is sometimes used by the brewers of pale and other ales, instead of or along with hops; but the use of it for this purpose is prohibited under severe penalties. [ALE AND BEER.] When imported it is in billets, which, previously to their being infused, are reduced to chips, or rasped by the druggists. Its price in bond varies from 20s. to 30s. per cwt. A prohibitory duty of 8*l.* 17*s.* 6*d.* per cwt. was imposed on quassia down to 1842, when it was reduced by Sir Robert Peel to 10*s.* 6*d.* (10*s.* + 5 per cent.); and after being reduced in 1853 to 1*s.* per cwt., it was abolished in 1860. In 1867 the imports and exports of the article amounted respectively to 1,055 and 715 cwt., valued at 296*l.* and 200*l.*

QUEBEC. The capital of Quebec, formerly Canada East, or Lower Canada, on the north-west bank of the river St. Lawrence, about 340 miles from its mouth, in lat. 46° 49' 1" N., long. 71° 13' W. Population in 1861, 51,109.

Quebec is situated on a ridge, or promontory, formed by the St. Lawrence on the S. and W., and the river St. Charles on the E. The extremity of this headland, called Cape Diamond, is about 345 feet above the level of the water, and on it the citadel is built. The town extends from the citadel, principally in a north-east direction, down to the water; and is, from the difference of elevation, divided into the upper and lower towns. The fortifications, which are very strong, extend across the peninsula; the circuit within them being about 2½ miles. From their situation many of the streets are uneven; they are also, for the most part, narrow; but they are either well-paved or macadamised. The greater number of the

houses are built of stone, with shingle roofs. Some of the public buildings are elegant, and well adapted for their purposes. The harbour, or basin, lies between the town and the island of Orleans. It is safe and commodious; the water is about 28 fathoms deep, with a tide rising from 17 to 18 feet; and at springs from 23 to 25. Quebec was founded by the French in 1608. In 1629 it was taken by the English, but was restored in 1632. It was again taken by the English under General Wolfe, who fell in the engagement, in 1759; and was finally ceded to us by the treaty of Paris in 1763.

The rapid increase of population in, and of emigration to, Upper Canada has occasioned a proportional increase of intercourse between Quebec and Montreal, and the Canadian ports on Lakes Ontario, Erie &c. The first steamboat that plied on the St. Lawrence was launched in 1812; but there are now a great many steamers, some of them of large burden, employed in the conveyance of goods and passengers between Quebec and Montreal, and in the trade between Quebec and Halifax in Nova Scotia. It now possesses, too, the advantages of railroads. And by means of the Rideau and Welland Canals, an uninterrupted line of steam communication is formed between the Atlantic and Amherstburg, one of the remote settlements of Upper Canada, a distance of more than 1,500 miles; which is now extended through Lake Huron to the western extremity of Lake Superior, about 700 miles beyond Amherstburg, giving to Quebec a command of internal navigation inferior only to that of New Orleans. The navigation at Quebec closes at the end of November or beginning of December, and opens in April. Below Quebec the river is seldom frozen over; but the masses of floating ice, kept in constant agitation by the flux and reflux of the tide, render navigation impracticable. The waters of the St. Lawrence are very pure; and in point of depth and magnitude it is one of the noblest rivers in the world. (Bouchette's *British Dominions in America*, vol. i. p. 272.) Quebec is a free warehousing port.

The trade of Quebec is very extensive. It engrosses, with Montreal, almost the entire trade of the province with the mother country, the West Indies &c. It has a regular intercourse, by means of steamers, with Montreal and other ports higher up the St. Lawrence, and with Halifax and other ports on the Atlantic. Still, it must not be forgotten, that, in so far as the United Kingdom is concerned, the trade with Canada and Quebec is, in some degree, forced and factitious, and has not been a source of profit, but the reverse. In former years it was, in fact, mainly a consequence of the discriminating duties laid in our ports on timber from the North of Europe; and but for this proposterous arrangement, the trade between Great Britain and Quebec would have been extremely unimportant. Now, however, some branches of the trade appear to have acquired a solid footing; notwithstanding the reduction of the discriminating duties in favour of Baltic timber, and the subsequent abolition of the timber duties in 1856, the imports from Canada and other parts of British America of red pine, and of pine and spruce planks, especially the latter, have of late very largely increased. Corn, furs, butter, and ashes are the most important articles sent from Canada, excepting timber. A considerable part of the corn and flour exported from Quebec is to the United States. The principal articles of import into Canada consist of cottons, woollens, silk, and other manufactures; goods; glass ware, spirits and wines, iron, and

hardware, sugar and tea &c. The total value of the exports from the United Kingdom to Canada in 1867 amounted to 4,243,5527. When the imports exceed the exports to this country the excess is principally paid for by the Treasury at home, and should be regarded as the means

sent out by England to pay the troops and meet the other heavy expenses she has to incur in the preservation of this great but unprofitable colony.

Reciprocity Treaty with United States.—It must be obvious to anyone who takes up a map of North America, and observes the long continuous frontier of Canada and the United States, and the magnificent lakes, or great inland seas, by which they are in part divided, that the trade between them can hardly fail to be most extensive. And such is the case. Down, indeed, to a comparatively late period, the intercourse between the two countries was subjected to various regulations and duties, contrived for the most part in

a petty and jealous spirit, by which its development was cramped and impeded. But in 1851 the Reciprocity Treaty introduced a better and more liberal system, but this, since its termination by notice from the United States, has not been renewed. It admitted the free transit of several most important articles from the United States into Canada and the other provinces of British North America, and, conversely, and the reciprocal use of their seas, rivers, and canals. This judicious and well-considered measure led to a vast extension of the trade between the United States and what is now called the Dominion of Canada, or British North America, and has been of signal advantage to both. We subjoin a list of the articles which passed freely across the frontier: Grain, flour, and bread stuffs of all kinds; animals of all kinds; fresh, smoked, and salted meats; cotton wool, seeds, and vegetables; undried fruits, dried fruits; fish of all kinds; products of fish and of all other creatures living in the water; poultry; eggs; hides, furs, skins or tails undressed; stone or marble in its crude or unwrought state; slate; butter, cheese, tallow; lard, horns, manures; ores of metals of all kinds; coal; pitch, tar, turpentine; ashes; timber and lumber of all kinds, round, hewed, or sawed, unmanufactured in whole or in part; firewood; plants, shrubs, and trees; pelts, wool; fish-oil; rice, broom corn, and bark; gypsum, ground or unground; hewn or wrought or unwrought burr or grindstones; dye stuffs; flax, hemp, and tow unmanufactured; unmanufactured tobacco; rags.

The following table shows the rapid increase of the trade between Canada and the United States under the Reciprocity Act.

Imports from United States into Canada.

Years	Total
1851	7,929,110 dollars

Quebec is a principal port for the importation of immigrants, 20,863 having been landed there in 1856, and 31,281 in 1857, and the total number landed in Canada in 1867 was 30,757, most of them re-emigrating to the United States. In 1867 there were 15,503 emigrants from this country to our North American colonies, the great majority of whom landed at Quebec.

**Table of Prohibitions.**—The following articles are prohibited to be imported under a penalty of 50l. together with the forfeiture of the parcel or package of goods in which the same may be found: books and drawings, paintings or prints of an immoral or indecent character; coin, base or counterfeit.

**Money.**—Previously to 1859 accounts were kept in what was usually called currency, the 1l. sterling being reckoned at 1l. 4s. 4d. But in the course of that year a new description of currency was issued on the decimal plan. The 1l. currency, on which it is raised, contains 101321 grs. standard gold, or 92877 grs. pure gold. The 1l. sterling contains 123274 gr. standard gold, and 113001 gr. pure gold. Hence, 1l. 4s. 4d. : 1l. :: 123274 : 101321, and 1l. 4s. 4d. : 1 : : 113001 : 92877. The pound is divided into 100 centimes; and the new gold coins are for 100 and 50 centimes, with silver coins for 20, 10, and 5 ditto. The value of these coins agrees pretty closely, but not quite, with the values of the corresponding American coins. And it is supposed by some that it would have been better, seeing the intimate connection between the two countries, that the value of the Canadian coins should have been made to coincide exactly with that of the coins of the United States.

List of Banks in Canada, with Statement of authorised and paid-up Capital of each, on August 31, 1868.

**Weights** same as in England.  
**Measures.**—Standard wine gallon, liquid measure of the province. The Canada pint for all

grain &c. except where specially agreed upon to the contrary; and this measure is about 4 larger than the Winchester bushel. The English Winchester bushel, when specially agreed for. The Paris foot, for all measures of lands granted previous to the conquest, and all measures of length, except an agr. ment is made to the contrary. The English foot, for measure of lands granted since the conquest, and wherever specially agreed upon. The standard English yard for measuring all cloths or stuffs sold by the yard or measure of length. The English ell, when specially agreed upon.

MONTREAL is situated on the south side of an island of the same name, in the St. Lawrence, about 180 miles above Quebec, in lat. 45° 31' N. long. 73° 55' W. Population, in 1861, 91,000, being very considerably greater than that of Quebec, or of any other town in British America. The harbour is not large, but it is safe and commodious; the facilities for navigation afforded by the noble river on which it is situated being such, that vessels of 600 tons burden may ascend thus far without difficulty. The North American fur trade principally centres in Montreal, which also enjoys the principal share of the commerce between Canada and the United States. It is increasing faster than Quebec, or than any city in the Dominion of Canada. The imports into Montreal in 1866-7 were valued at 28,132,200 dollars, and the exports at 8,104,622 dollars.

QUEENSLAND. [BRISBANE; COLONIAL QUERCITRON BARK. The bark of a species of oak growing in many parts of New America. It is used in dyeing yellow colours [BARK.]

QUICKSILVER. [MERCURY.]  
 QUILLS (Fr. plumes à écrire; Ger. post federn, kiele; Ital. penna da scrivere; Russ. ovoli; Span. cañones para escribir). The bar and strong feather of the wings of geese, ostriches, swans, turkeys, crows &c. used in writing. They are classified according to the order in which they are fixed in the wing. The first is a pin, now totally unused (at one time millions were annually imported), the second and third are the best and in general use. Crow quills are chiefly used for drawing, and turkey quills for engraving. The goodness of quills is judged partly by the size and thickness of the barrels, in the unmanufactured state by the weight: hence the denomination of quills of 14, 15 &c. 'toths per mille, and

mille consisting of 1,000 quills. The old duty on goose quills of 2s. 6d. per 1,000, after being reduced to 6d. in 1842, was wholly repealed in 1844.

In 1867, 14,619,200 goose, and 45,500 swan, quills were imported, valued at 15,004l., and of these 2,970,000 goose quills were re-exported.

Quills are principally imported from Riga, St. Petersburg, and Hamburg. The best are from Riga; their strength and durability render them preferable to any others from the Baltic ports. Those imported by the Hudson's Bay Company and sold at their sales are for strength superior to all others.

We subjoin an account of the prices of the various descriptions of unmanufactured quills in the London markets in August 1868:—

	£	s.	d.	£	s.	d.
Undressed goose quills, imported from the Baltic and assorted into laths	0	1	6	3	0	0
Swan quills, imported from the Baltic and assorted into laths	0	3	0	1	2	0
Goose quills, mixed, imported by the Hudson's Bay Company and sold at their annual sale	0	8	6	5	0	0
Mixed swan quills, by the same	3	0	0	7	0	0
Irish goose quills, mixed	0	0	6	0	1	0
Turkey quills, mixed	0	4	0	0	7	0
English crow "	"	"	0	7	0	"
English duck "	0	2	6	0	4	0

[PENS.]

R

RAGS (Dutch, lompén, wadden; Fr. chiffes, chiffons, drapaux, drilles; Ger. lumpen; Ital. stracci; Russ. trepje; Span. trapos, harapos). Strips or fragments of worn linen, woollen, or cotton cloth. Though commonly held in little estimation, rags are of great importance in the arts, being used for various purposes, but especially in the manufacture of paper, most of which is entirely prepared from them. As the mode in which British rags are collected must be well known to everyone, the following statements apply only to the trade in foreign rags.

**Woollen Rags.**—Woollen rags are imported in considerable quantities from the continent of Europe, and from Sicily. They are chiefly used for manure, especially in the culture of hops; but rags of loose texture, and not too much worn or decayed, are unravelled and mixed up with fresh wool in the making of shoddy; a practice more favourable to the cheapness than to the strength and durability of the fabrics into which this old wool is introduced. Woollen rags are also used for making locks or stuffing for beds &c.; this process is performed chiefly by the aid of the same kind of engines that prepare pulp for paper; these wash the rags thoroughly, at the same time that they grind and tear them out into separate threads and fibres. The chief importation of woollen rags is from Hamburg and Bremen; and there are some got from Rostock, but the quantity is trifling. The price ranges from 3l. 10s. to 4l. per ton for such as are used for manure; and from 14l. 12s. to 26l. for woollen rags.

**Linen Rags** are principally imported from Russia, Hamburg, France, Russia, and Austria. The imports amounted in 1867 to 13,509 tons, worth, at an average, from 21l. to 22l. 4s. per ton, freight included. Exclusive of the very large quantity collected at home, all the rags imported were, until very recently, employed in the manufacture of paper; but the Americans, who have for some years been large exporters from the Mediterranean and Hamburg, occasionally come into the London market, and purchase large quantities. The duty on rags was abolished in 1845.

The imported rags are different in appearance from the English; but, being almost exclusively linen, they are stronger, and bear a price proportioned to the apparent difference in quality: a disproportion has been materially augmented by the introduction of the process of boiling rags in ley, and afterwards bleaching them with chlorine, has rendered foreign rags fit for making fine paper, and indeed, in some respects,

preferable for that purpose, by their affording greater strength of texture combined with equal whiteness of colour.

There is considerable variety in the appearance of rags from different ports; but, in general, those from the north of Europe are darker and stronger than those from the Mediterranean ports. The latter are chiefly the remains of outer garments, and have become whitened by exposure to the sun and air; but since the improvements in bleaching, this does not enhance their value in the British market.

Considerable quantities of rags are imported from Turkey, Egypt, India, Australia, and Japan, generally consisting of cotton and linen mixed. The Japan rags are mostly strong blue cotton prints, very serviceable for paper-making. (Dr. Bristowe's *Reports on Enquiries whether the Rag Trade is of Influence in Spreading Infectious Disease.*)

It is a remarkable circumstance, that though the increase in the manufacture of paper within the last 50 years is more than fourfold, the price of fine rags has fallen from 95s. to 23s. per cwt. in consequence of the extensive use made of esparto (Spanish grass), straw, wood, and other fibrous products in the manufacture of ordinary paper. [PAPER.]

Freight.

Paid from France, about 50s. per ton.  
Trieste and Mediterranean, 50s. per ton.  
Baltic, 50s. per ton.

RAILROAD, TRAM or WAGGON ROAD.

A species of road having tracks or ways formed of iron, stone, or other solid material, on which the wheels of the carriages passing along it run. The object in constructing such roads is, by diminishing the friction, to make a less amount of power adequate either to impel a carriage with a greater velocity, or to urge forward a greater load. For conveying passengers along railways the locomotive engine is now the power universally used.

**Construction of Railroads.**—The friction on a perfectly level railroad, properly constructed, is estimated to amount to from  $\frac{1}{10}$  to  $\frac{1}{4}$  only of the friction on an ordinary level road; so that, supposing the same force to be applied in both cases, it would move a weight from 10 to 7 times as great on the former as on the latter. But if there be a very moderate ascent, such as 1 foot in 50, which in an ordinary road would hardly be perceived, a great increase of power on the railroad is required to overcome the resistance that is thus occasioned. The reason is, that the ordinary load

where specially agreed upon and this measure is about 1/4 chester bushel. The English when specially agreed for, all measures of lands granted, request, and all measures of request is made to the English foot, for measure of lands request, and wherever specially request, and the standard English yard for lbs. or stiffs sold by the yard length. The English ell, which is 1/4 of a yard.

situated on the south side of the same name, in the St. Lawrence, above Quebec, in lat. 45° 21' N. Population, in 1861, 91,000, considerably greater than that of any other town in British America. Not large, but it is safe and facilities for navigation afforded on which it is situated being of 600 tons burden may ascend difficulty. The North American principal centres in Montreal, which principal share of the commerce and the United States. It is than Quebec, or than any city in Canada. The imports into 1867 were valued at 28,130,200 exports at 8,104,622 dollars.

BRISBANE; COLONIAL EXPORTS; TAFFIES, COLONIAL BARK. The bark of a species used in many parts of India used in dyeing yellow colors.

QUILLS. [MERCURY.]

Quills, plumes à écrire; Ger. Feder, Ital. penna da scrivere; Russ. перо, Span. pluma para escribir. The feathers of the wings of geese, ostriches, crows &c. used in writing. The quills according to the order in which they are used in the wing. The first is a pin (used at one time millions were used), the second and third are the general use. Crow quills are cheap, and turkey quills for engraving, and quills is judged partly by the smoothness of the barrels, in the quantity by the weight; hence the denominated of 14, 15 &c. tobs per mille.

on a level railroad is about seven times as great as on a common turnpike road; so that when the force of gravity is brought into operation by an ascending plane, its opposing power, being proportioned to the load, is 7 times as great as on a common road. Hence the vast importance of having railroads either level or as nearly so as possible.

It is also of great importance that railroads should be straight and level, or, at least, free from any abrupt curves or acclivities. Carriages being kept on the road by flanges on the wheels, it is obvious that where the curves are quick, the friction on the sides of the rails, and consequent retardation, must be very great. In the Manchester and Liverpool Railroad, the curves form segments of a circle which, if extended, would embrace a circumference of 15 miles.

Iron railroads, the kind now generally used, are of two descriptions. The flat rail, or tram road, consists of cast-iron plates about 3 feet long, 4 inches broad, and  $\frac{1}{2}$  inch or 1 inch thick, with a flange, or turned up edge, on the inside, to guide the wheels of the carriage. The plates rest at each end on sleepers of stone or wood, sunk into the earth, and they are joined to each other so as to form a continuous horizontal pathway. They are, of course, double; and the distance between the opposite rails is from 3 to  $4\frac{1}{2}$  feet, according to the breadth of the carriage or waggon to be employed. The edge rail, which is found to be superior to the tram rail, is made either of wrought or cast iron: if the latter be used, the rails are about 3 feet long, 3 or 4 inches broad, and from 1 to 2 inches thick, being joined at the ends by cast metal sockets attached to the sleepers. The upper edge of the rail is generally made with a convex surface, to which the wheel of the carriage is attached by a groove made somewhat wider. When wrought iron is used, which is in many respects preferable, the bars are made of a smaller size, of a wedge shape, and from 12 to 18 feet long; but they are supported by sleepers at the distance of every 3 feet. In the Liverpool Railroad the bars are 15 feet long, and weigh 55 lb. per lineal yard. The waggons in common use run upon 4 wheels of from 2 to 3 feet in diameter. Railroads are usually made double, one for going and one for returning; and when single they are made with sidings, where the carriages may pass each other. (See the able and original *Essays on Railroads*, by Charles Maclaren, Esq., in the *Scotsman* for 1824; see also Mr. Booth's pamphlet *On the Liverpool and Manchester Railroad*; the articles on Railways in the *Encyc. Britannica*, the *Penny Cyclopaedia*; Brande and Cox's *Dictionary of Science*; &c.)

*Speed of Carriages on Railroads &c.*—The effect of railroads in diminishing friction is familiar to every one; and they have long been used in various places of this and other countries, particularly in the vicinity of mines, for facilitating the transport of heavy loads. But it is only since the application of locomotive engines as a moving power that they began powerfully to attract the public attention, and that their value has been fully appreciated. These engines were first brought into use on the Darlington and Stockton Railroad, opened on December 27, 1825; but it was not till the opening of the railway between Manchester and Liverpool that the vast importance of this novel means of intercourse was fully perceived. This splendid work, though now far surpassed in magnitude by other railroads, cost nearly a million sterling. It has the advantage of being nearly level; for, with the exception of a short distance at Rainhill, where it

is inclined at the rate of 1 foot in 96, there is no greater inclination than in the ratio of 1 foot in 880. The length of the railway is about 31 miles, and it was usual, from its opening, to perform this journey in handsome carriages attached to the locomotive engines, in  $1\frac{1}{2}$  hour, or less. So far, indeed, as respects the facility of passing from the one to the other, this railway has brought Manchester and Liverpool as near to each other as the western part of London is to the eastern part.

The opening of this railway having more than verified the most sanguine anticipations as to the success of such undertakings, and gone far, in fact, to strike time and space out of the calculations of the traveller, gave an unprecedented stimulus to similar undertakings in all parts of the country; and, in no long period, there were hardly any two considerable places in Great Britain, how distant soever, which it was not proposed to connect by railways. An immense number of companies were formed, and a very large amount of capital subscribed, for carrying on these undertakings; and though, as was to be anticipated, not a few of them appear to have been commenced without due consideration, and hold out very indifferent prospects to the subscribers, there can be no doubt that the country has profited very greatly by the extraordinary facilities of intercourse which have been afforded by the railway system, which is now in action in all parts of the civilised world.

Among the greater lines of railway now (1865) existing in this country, may be specified that from London to Manchester, Liverpool, and Glasgow; which, taking it as it at present stands, is one of the greatest public works ever executed in any country, and is a striking result of the wealth, science, and civilisation of modern times. The Great Western Railway from London to Bath, Bristol, and Exeter is also a magnificent work, and is in some respects superior to any other in the kingdom. Among the other leading railways may be specified the Direct or Great Northern line from London to Edinburgh; the lines from London to Southampton, Brighton, and Dover; the line from Chester to Holyhead, with the tubular bridge over the Menai Straits; the Great Eastern and the railways from Edinburgh to Glasgow and Ayr, and from Edinburgh to Aberdeen and Inverness.

The whole of these, except the Great Western, are on what is called the narrow gauge, having the rails 4 feet 8 $\frac{1}{2}$  inches asunder. The Great Western now (1865) uses this as well as the broad gauge of 7 feet.

*Railway Legislation.*—But, notwithstanding the vast advantages which the opening of so many new and improved lines of communication has conferred on the country, we cannot help thinking that these advantages might have been made much greater, and that, in the instance of railway legislation, the public interests have been overlooked to a degree that is not very excusable. It is, we admit, no easy matter to decide how the interference of Government should be carried in matters of this sort; but, at all events, it is much is obvious, that when Parliament is called upon to pass an Act authorising private parties to execute a railway or other public work, it is bound to provide, in as far as practicable, that the public interests shall not be prejudiced by the Act, and that it should be framed so that it should not, either when passed or at any future period, stand in the way of the public advantage. We believe, however, that a little consideration will serve to satisfy most persons that this has

portant principle has, in the case of railways, and indeed of most descriptions of public works, been, in this country, all but wholly neglected.

The practice is for a railway Act to authorise the company in whose favour it is granted to appropriate a certain line of road, and to charge certain specified rates of toll on the passengers and goods to be conveyed by such road, not for 15, 20, or even 50 years, but *in all time to come*. Now, as it appears to us, this is a singularly injudicious arrangement on the part of the public. There is, between any two or more places that may be named, a certain railway line that is preferable to any other which can be pointed out. The probability is that this line will in all cases be the first to be selected; and the Act that gives it up to a company confers on the latter a virtual and substantial monopoly. The rates of charge imposed by the Act are calculated to remunerate the projectors, supposing everything to remain on its present footing; but the probability is that manufactures and population, in the places communicating by most lines of railway, will continue to increase in time to come as they have done in time past; and it is all but certain that great improvements will be effected in the construction of roads and engines. Whatever, therefore, may be the chances of success at the outset, the fair presumption is that most great lines of road will in the end be exceedingly productive. But, if we continue to abide by the present system, the public will be effectually excluded from all participation in these prospective advantages; and a few private associations will be able to make enormous profits by monopolising improvements, and keeping up the expense of transit at an exorbitantly high level. It is idle to trust to competition to remedy a grievance of this sort. There may only be one practicable line of railway between two places; and if so, no other can, of course, come into competition with it. But though this were not the case, a company in possession of the best line might, if an opposition were threatened, reduce its rates till the opposition was defeated, and then raise them to the old level. Supposing, however, that a second road is made, its managers would most likely come to an understanding with the first, so that the tolls, instead of being reduced by the instrumentality of the new road, may be raised; and were it otherwise, the question is, was the second road really necessary? Could not the first road have sufficed for the whole traffic to be carried on by both lines? If this be the case, it is clear the second road has been merely resorted to as a device for reducing the tolls charged on the first; as a means, in fact, for doing that, by an outlay of some hundreds of thousands, or, it may be, millions of pounds, which might have been quite as effectually done by limiting the duration of the Act authorising the first road, or by inserting a clause in it providing for the periodical revision of the tolls.

We are clear, indeed, that no Act authorising a private association to construct a railway or canal, to lay down gas pipes, to convey water into a town, or for any such purpose, should ever be passed without reserving to Parliament power periodically to revise the tolls granted under it. Such revision would secure to the public a participation in future improvements, not in the contemplation of the parties when the project was entered upon; and it would do this without in any degree clogging the spirit of enterprise. Undertakings of this sort are not engaged in because there is a vague expectation, or even a considerable probability,

of their yielding 20 or 30 per cent. profit some 30 or 40 years hence, but because it is believed that they will immediately, or in the course of a few years, yield a reasonable profit; that is, a return of 8, 10, or 12 per cent. The chances of realising more than this at the distance of 20 or 25 years are rarely taken into account, and are worth very little indeed. This, however, is all that would be taken away by the revision in question; and while a reservation of this sort would not stand in the way of any legitimate enterprise, the history of several of our existing companies shows that it may come to be of essential service to the public. Had this principle been formerly acted upon in the formation of companies for the execution of public works, the charges on some of the principal lines of canal might, long since, have been reduced to less than half their present amount. The water brought into the city of London by the New River Company might have been sold for less than one-fourth part what it now costs; and so in a vast number of cases.

It has been objected to the proposal now made, that the reserving to the public of power to revise the charges on railways, and other public works, would be of no use, inasmuch as the parties would contrive so to swell their charges as to make their revenue appear not more than a fair return on their outlay. And such, most probably, would be the case, were the statements of the parties to be taken without examination. But who ever proposed that this should be done? If charges are to be revised, Government must be authorised to appoint parties to enquire carefully into the management of all concerns with which it is proposed to interfere: and it would be the duty of such parties to proscribe every useless expense, and to ascertain how the railway could be carried on, supposing it were wrought under a system of open competition, and at the least expense, and to frame their report accordingly.

And this principle, we are glad to say, was sanctioned in 1844 by the 7 & 8 Vict. c. 85, which gives to Government the option of purchasing, on certain conditions, at the expiration of 21 years from their construction, all railways formed subsequently to the passing of the Act. This statute also provides for the publication of railway accounts, for the running of cheap trains &c.

*Regulations for the Prevention of Accidents.*—Considering the immense extent of railways in this country, and the vast number of passengers conveyed by them, the fewness of accidents is most remarkable. Indeed their greater security appears to be nowise inferior to their greater speed. Still, however, this is a matter in which as little as possible should be left to accident or individual discretion; and considering the number of persons frequently conveyed by a single train, and the tremendous consequences that might ensue from a collision or other chance, all that it is possible to do should be done with a view to secure the safety of travellers by railways. And, should an accident occur, either through the neglect of regulations for their guidance or from not complying with their provisions, the offending parties should be subjected to penalties of a severe and stringent description. A Government which neglects enforcing precautions of this sort neglects one of its most important functions, and allows the lives of those whom it is bound to protect to be endangered or sacrificed by the cupidity, ignorance, or carelessness of the managers and servants (how incompetent soever they may be) of every railway association in the kingdom.

*Railway Mania of 1845.*—The summer and autumn of 1845 and the earlier portion of 1846 witnessed the rise and development of a most gigantic railway speculation or mania. Various circumstances conspired to bring this about. The advantages which railways conferred on the country generally, and especially on the districts through which they passed, recommended them to the public patronage and support. Most branches of industry were also, in 1845, in a more than ordinarily prosperous condition; and large dividends (whether really derived from profits is questionable) being paid by some of the principal lines, their stock rapidly rose to a high price. These circumstances inflamed the cupidity of the public, who began to imagine that speculation in railway shares afforded the shortest and easiest means of acquiring wealth. Hence an extraordinary stimulus was given to all sorts of projects, which were multiplied with an almost inconceivable rapidity. Of these a few were well devised and judicious, and were patronised by gentlemen of wealth, respectability, and experience. But the great majority were of a totally opposite description, being got up by parties anxious only to profit by the credulity of the public, and founded on plans which could not be executed, or which, if executed, would be ruinous. And yet such was the disposition of the public to take *omne ignotum pro magifico*, that shares in these swindling devices—for such was their real character—were greedily bought up at high premiums, which, of course, went into the pockets of the members of Parliament, attorneys, and engineers, by whom the traps had been set and the hooks baited. It is difficult, indeed, to imagine any more disgraceful exhibition of fraud and quackery on the one part, and of folly and voracity on the other, than was displayed during the autumn of 1845 and the spring of 1846 by the manufacturers and buyers of railway shares. Some 700 or 800 new projects, requiring, it was stated, a capital of about as many hundred millions, were spawned during this gambling saturnalia; and of these it would be a high estimate to say there were 100 which held out any legitimate prospect of remunerating their projectors. The great majority of the others were never, indeed, intended to do more than to transfer the money of the unwary dupes who bought shares into the pockets of the crafty directors by whom they were issued; and thus far some of them answered the views of their projectors. Luckily, however, this was not the case with others; not a few of

those who dug the pit-falls having themselves fallen into them.

But despite the number of schemes that were abandoned, it is nevertheless true that in 1845 and 1846 no fewer than 347 Acts were carried through Parliament, authorising the construction of 7,654 miles of railway, at an estimated cost of 190,344,087*l.* sterling.

Under any circumstances, such gigantic, and generally ill-advised, undertakings must have involved the parties in vast loss. In this case the depressing influence of the heavy railway calls on the money market, having been increased by the failure of the potato crop of 1846, occasioned the greatest difficulty in obtaining pecuniary accommodation, and led to the crisis of 1847. In consequence many of the projects for which Acts had been obtained sunk into oblivion, while others have been very imperfectly carried out. An extraordinary fall has also taken place in the value of the stock even of the best lines. And this is not to be wondered at. The vast expenses which many companies have incurred in overcoming the opposition to their undertakings, and in the construction of their lines, occasioned an outlay which, if it were to be met at all, could only be met by enforcing the severest economy in the management of the lines. This, however, even when there is a desire to enforce it, is carried out with difficulty. And in the case of railways, the interests of the engineers and others concerned in their management are usually opposed to those of the companies; so that it would be idle to expect that the affairs of the latter should generally exhibit any considerable portion of the care, vigilance, and economy manifested in private undertakings.

The recklessness, too, with which the directors of the great or leading railways have engaged in subsidiary undertakings, or in the construction or purchase of branch lines many of which have been attended with heavy losses, has had a powerful influence in depressing the value of their property. For a while, too, all railway companies suffered more or less from the discredit and suspicion which, however undeservedly, have attached to railway boards. It was found that some leading directors, in whose sagacity and honesty the public reposed all but unlimited confidence had been, in fact, nothing but gigantic swindlers; their sole object (in which it is to be hoped they have been disappointed) having been to enrich themselves by defrauding and robbing their constituents and the public. And these disclosures

also showed that, if the boards of directors associated with the parties now referred to did not actively assist them in their fraudulent schemes, they, at all events, opposed no effectual obstacle to their development. Hence the just discredit that has attached to most railway companies. Some of them put forward detailed statements of their affairs; but these, how accurate soever, obtained very little confidence. This ignorance was alike prejudicial to the public interests, and to those of all really well managed companies, and was at once an incentive to and a

cloak for all sorts of nefarious practices. This state of things is now, however, considerably improved. But a vast deal still remains to be done before the constitution of railway companies and the management of railways be placed on a satisfactory footing.

At present (March 1869) the shares of by far the greater number of railways are at a heavy discount; and at an average, the dividends derived from them are not supposed to amount to 3 per cent.

Account, showing the Number and Description of Persons Killed and Injured on all the Railways open for Public Traffic in the United Kingdom during the Years 1866 and 1867.

Miscellaneous	..	..	1	1
Total	216	651	409	795
Total number of passengers conveyed	271,033,825		287,807,903	

The number of miles of railway open in the United Kingdom on December 31, 1867, amounted to 9,116; the number open on December 31, 1866, was 13,851; and on December 31, 1867, 14,217.

The total capital (in shares and loans) raised and paid up to December 31, 1867, amounted to 502,262,287.

A duty is paid to Government, by railway companies, of 5 per cent. on all sums received by them for the conveyance of passengers at fares above 1d. per mile; the receipts derived from passengers by cheap trains, or from fares not exceeding 1d. per mile, being exempted from the duty. In the year ended March 31, 1868, the railway tax produced 485,136l. This, however, is insufficient to indemnify the companies for

the expenses of conveying the mails; the charge for this service having amounted, in 1867, to no less than 559,575l. When the Post-office and a railway company differ as to the sum to be paid to the latter for conveying the mail, the matter is referred to arbitration.

Continental Railways.—The railway system has made great progress on the Continent and in the United States. Paris, Rouen, and Havre have long been united by railway. Lines have also been constructed from Paris to Orleans, Tours and Bordeaux, and from Paris to Lyons,

-falls having themselves  
ber of schemes that were  
theless true that in 1845  
an 847 Acts were carried  
thorising the construction

y made no return of working expenses for  
urn to the Board of Trade of their working

and thence to Marseilles. This last has been of peculiar importance to this country, from its influence in facilitating the correspondence with the East. A large amount of English capital has been invested in the European railways, and many of them have been constructed by English engineers.

Belgium, as everybody knows, has numerous railways; and they have been extended in Germany, Italy, Russia, Norway and Sweden, and even Spain, to a degree that one could hardly have anticipated. At present, some very extensive railways are being constructed in Russia.

The railways open in India extended to 3,452 miles in 1866, and most of our colonies have adopted them, more or less.

The railways of the United States are exceedingly numerous, and some of them are of great length. But, speaking generally, they are not so substantially executed, and have not been nearly so expensive, as those of this country. Many of them consist only of a single pair of rails, with double pairs at certain intervals to admit of the trains passing.

The following statement, which we have compiled from the most authentic sources accessible, shows the length of railroad constructed and in operation at the end of 1866 in each country into which they have been introduced, and their relation to the extent and population of the countries respectively. We believe it to be as nearly accurate as it is possible to make such a summary.

RAISINS (Fr. raisins secs, on passés; Rus. raisin; Ital. uvo passse; Port. passas; Russ. issun; Span. pasas). The dried fruit of the vine. They are produced from various species of vines; deriving their names partly from the place where they grow, as Smyrnas, Valencins &c.; and partly from the species of grape used, as muscatels, blooms, sultanas &c. Their quality appears, however, to depend more on the method of their cure than on anything else. The finest raisins are cured in two methods: either by cutting the stalk of the bunches half through, when the grapes are nearly ripe, and leaving them suspended on the vine till the watery part be evaporated, and the sun dries and candies them; or by gathering the grapes when they are fully ripe, and dipping them in a ley made of the ashes of the burnt tendrils; after which they are exposed to the sun to dry. Those cured in the first way are most esteemed, and are denominated raisins of the sun. The inferior sorts are very often dried in ovens, (Thomson's *Dispensatory*; Brande and Cox's *Dictionary*.)

Raisins are imported in casks, barrels, boxes, and jars. The finest come in jars and 1/2 boxes weighing about 25 lb. Some of the inferior sorts are brought to us in mats.

Malaga raisins are in the highest estimation. The muscatels from Malaga fetch fully a third more than any other description of raisins; and the Smyrnas black is the cheapest variety. The price depends much on the season, and the period of the year. [MALAGA.]

The duty on raisins, which formerly amounted to 20s. per cwt. on the inferior sorts, and to 42s. 6d. on the finest, was reduced in 1834 to 15s. per cwt. in all classes. We took occasion in a former edition of this work to remark on this measure as follows: 'This reduction has occasioned a very considerable increase of consumption; but the truth is that the duty is still quite exorbitant, being no less than 100 per cent. ad valorem (and sometimes more) on the price of most descriptions. Raisins are a luxury that can at present be enjoyed only by the richer classes. But were the duty reduced as it should be to 10s. per cwt., we are well assured that they would be very largely consumed by the middle and even lower classes. Nothing

but the magnitude of the duties prevents them from becoming of very considerable importance as an article of food; and it is really quite monstrous that the public should be debared from the use of a desirable article on the pretence of its being necessary, in order to keep up the revenue, that it should be loaded with an oppressive duty. We admit the importance of keeping up the revenue; but so far from exorbitant duties having such an effect, they contribute more than anything else to its reduction. They invariably limit the consumption of the articles on which they are laid to the richest classes, or cause them to be clandestinely supplied, or force recourse to other articles; reducing the revenue as well as the consumption far below the level to which it would attain were the duties moderate. But it is needless to reason speculatively on such a point. Have we not seen the revenue derived from spirits increased by reducing the duty from 5s. 6d. per gallon to 2s. 6d.? and the revenue derived from coffee quadrupled by reducing the duty from 1s. 7d. per lb. to 6d.? And, as most qualities of raisins are but little less overtaxed, have we not every reason to expect that a like effect would be produced by an adequate reduction of the duties by which they are burdened?'

This view of the matter was taken by Mr. Gladstone, who, in 1853, reduced the duty on raisins from 15s. 9d. (15s. + 5 per cent.) to 10s. per cwt.; and in 1860 to 7s., the present rate.

Exclusive of raisins, a considerable quantity of undried grapes is annually imported from Spain and Portugal in jars packed in sawdust. The duty on these grapes, which produced, in 1857, 78l., is 2d. per bushel.

Since 1862 the imports of raisins have been as follows, viz.:—1862, 278,710 cwt.; 1863, 421,796 cwt.; 1864, 327,051 cwt.; 1865, 368,106 cwt.; 1866, 359,216 cwt.; 1867, 392,222 cwt.

Of the imports in 1867, no fewer than 290,163 cwt. were brought from Spain, 93,949 cwt. from Turkey. Computed value of the imports 563,709l., varying from 1l. 2s. 4d. to 1l. 8s. 10d. per cwt. Entries for consumption 312,543 cwt.

RANGOON. A commercial port and town of British Burmah, about 25 miles from the sea, on the left bank of the eastern branch of the river Irrawaddy, in lat. 16° 46' N., long. 96° 17' E.

The town and suburbs extend lengthwise about 1 mile along the bank of the river, running about  $\frac{1}{4}$  of a mile inland; but the houses are very unequally scattered over this area. The town, with the rest of Pegu, was taken by the British from the Burman empire in 1852. It appears, from a census taken a short time previously to the commencement of the war in 1824, that the population was 18,000; it is now (1869) estimated at 25,000.

Rangoon is the chief port of foreign trade in British Burmah. This province, constituted in 1862, extends from  $20^{\circ} 50'$  N. to  $10^{\circ} 50'$  S. lat., containing an area of about 90,000 square miles, with a population of 2,330,453. The situation of Rangoon is extremely convenient for commercial purposes. Though distant from the sea, it is easy of access, and commands the navigation of the Irrawaddy, which extends to Ava, a distance of nearly 500 miles. Rangoon is accessible to ships of even 1,200 tons burden; and the navigation, while somewhat intricate, being safe and practicable with the assistance of the ordinary native pilots. A lighthouse has been erected on Algwada reef, near the centre of the river.

The town has many advantages for ship building. At neaps the tide rises and falls about 18 feet, and at springs from 25 to 30 feet. The principal teak forests are, at the same time, at a comparatively short distance, and there is a water conveyance for the timber nearly the whole way. Ship-building has, in fact, been carried on at Rangoon since 1786, and in the 38 years which preceded our capture of it, there had been built 111 square-rigged vessels of European construction, the total burden of which amounted to above 35,000 tons. Several of these were of from 800 to 1,000 tons. Under the direction of European masters, the Burmese were found to make dexterous and laborious artisans, in this respect greatly surpassing the natives of our other Indian provinces.

There are two considerable markets, where the ordinary necessities of life, according to Burmese usage, are cheap and abundant: these are rice, excellent fish, and poultry.

**Money.**—Before its annexation to British India the currency here, as in the Birman empire generally, consisted, for small payments, of lead; for larger ones, of gold and silver, but chiefly of the latter. There were no coins. At every payment the metal had to be weighed, and very generally assayed—a rude and very inconvenient state of things. The weights used in the weighing of money were the same as those used on ordinary occasions; the kyat or tical, and the paiktha or vis, being by far the most frequent. Silver might be considered as the standard. Gold was generally held to be about 17 times more valuable than silver. The weighing and assaying of the metals used as currency gave employment to a class of persons as brokers, money changers, and assayers. Every new assay cost the owner, if the metal were silver,  $2\frac{1}{2}$  per cent.,  $1\frac{1}{2}$  per cent. being the established commission of the assayers, while 1 per cent. was lost, or supposed to be lost, in the operation. If repeated 40 times, it follows that the original amount was wholly absorbed—a fact which shows the enormous waste of metal arising out of this rude substitute for coin.

Now that Rangoon forms part of the new province of British Burmah, its silver and copper coinage is that fixed by the Act No. XIII. of 1862, viz. the Government rupee and its fractional parts, and the double pice, pice,  $\frac{1}{2}$  pice, and pio or  $\frac{1}{4}$  pice. [CALCUTTA.]

**Weights.**—The weights in use at Rangoon, besides the British Indian [CALCUTTA], are as follow:

9 Small Ruds (red beans)	= 1 Large Rud.
4 Large ds.	= 1 Hal.
2 Hal.	= 1 Mu.
2 Mu.	= 1 Marh.
4 Marh.	= 1 Kyat, or 1 Tical.
100 Kyats	= 1 Paiktha, or 1 Vis = 5.65 lbs avo.

Mensures of capacity are as follow:—

2 Lamytes	= 1 Lamd.	2 Pils	= 1 Sarr.
2 Lams	= 1 Nade.	2 Sarrs	= 1 Sarr.
4 Nades	= 1 Pyl.	4 Sarrs	= 1 Tam.

This last measure is what is usually called by us 'a basket,' and ought to weigh 16 vis of clean rice, or 58.4 lb. avoirdupois: it has commonly been reckoned at  $\frac{1}{2}$  a cwt. All grains, pulses, certain fruits, nutron, salt, and lime are bought and sold by measure, other commodities by weight.

The Customs Tariff is that of 1861, given in detail under CALCUTTA.

**Commerce.**—A considerable intercourse is carried on between the Burmese and Chinese dominions by an annual caravan, of which the merchants are all Chinese. The imports from China consist of manufactured articles, the chief export from Burmah being cotton wool. The trade seaward is carried on with the ports of Chittagong, Dacca, and Calcutta in Bengal; Madras, and Masulipatam on the Coromandel coast; the Nicobar Islands, in the Bay of Bengal; Penang, in the Straits of Malacca; and occasionally with the Persian and Arabian Gulfs. The largest trade is with Calcutta, owing to the great consumption of teak timber in the latter, and the facility with which she supplies the demand of the Burmese for Indian and British cotton goods. The articles exported from Rangoon are the following: Teak wood, terra japonica, or catechu, stick lac, bees' wax, raw cotton, orpiment, commonly called in India burral, gold, silver, rubies, sapphires, elephants' teeth and horses, or rather the small, hard teeth of the country, which are much esteemed. The principal exports to Madras. By far the most important Burmese commodities is teak timber; the quantity of this wood annually exported is said to be equal to 7,500 full-sized trees, which, for the most part, consist of what Indian ship-builders call *shishin*, which are planks hewn out of the log with the adze at an immense waste. The teak forests of Pegu are by far the most abundant in India. The teak is nowhere to be found in the low alluvial lands to which the tide reaches, but abounds in the high lands beyond its influence. It seems to be very generally disseminated throughout the Burmese dominions. In the territory ceded to the British in Martaban, there are some fine forests, the timber of which is cut down for exportation, and where saw-mills have recently been established by some European settlers. The most accessible and extensive forests of teak in the Burmese dominions are in the province of Sarawadi, about 150 miles to the north of Rangoon, with which there is a water communication. The principal imports into Burmah are cotton piece goods from India and Britain, British woollens, iron, steel, quicksilver, copper, cordage, boxes, sulphur, gunpowder, saltpetre, fire-arms, coarse porcelain, English glass ware, opium, tobacco, cocoa and areca nuts, sugar, and spirits. Of these, by far the most important is cotton piece goods. The Burmese have few cotton manufactures of their own, and appear, from very early times, to have been furnished with the principal part of their supply from the Coromandel coast. To these were afterwards added the cheaper fabrics of Bengal: and both are now, in a great measure, superseded by British manufactures, the use of which has spread very rapidly since the opening of the trade in 1814, and especially since the capture of Rangoon in 1852. In 1826-7 the exports and imports of the

Table, showing the Value in Rupees of the Exports and Imports of British Burmah by Sea for the Year 1866-7, compared with 1865-6.

Decrease	..	181	1,20,994			

port of Rangoon were estimated each at the rate of 200,000.

The exports from British Burmah in 1865-6 and 1866-7 by sea, included the following articles, the values of which are given in pounds sterling.

Articles	1865-6	1866-7
Rice	2,437,433	1,861,986
Timber	899,272	426,427
Cotton, raw	172,112	98,757
Pepper	16,507	6,379
Opium	47,263	36,932

Values of the Principal Imports of Cotton and Silk Piece Goods, during the Years 1865-6 and 1866-7, in Pounds Sterling.

Articles	1865-6	1866-7
Piece goods, cotton	588,059	467,617
silk	885,980	138,670
woolen	149,261	116,411
Cotton twist and yarn	231,484	298,441
Raw silk	67,249	67,509

From the above it will be seen that there has been a considerable falling off in the trade through Thayetmyo; even if allowance be made for the month of April, the total decrease in the value of import and export trade through Thayetmyo would be about 92,000. The rebellion was the chief cause of this falling off, and the depression in trade has continued ever since.

It is a curious fact that the late Mr. John Crawford, who supplied us with materials which he gathered on the spot, for the account of Rangoon in previous editions of this work, does not even allude to rice as an article of export. But, such has been the change in the interval, that it is now the principal article shipped from the town, and while in the earlier part of this century the exports of rice were little or nothing, they amounted to 58,563 tons in 1866, and the value of

the exports of rice from British Burmah (chiefly from Rangoon), in the year 1865-6, was 2,437,433. [MAULMAIN; RICE.]

**RAPE.** A biennial plant of the turnip kind (*Brassica napus*, Linn.), but with a woody fusiform root scarcely fit to be eaten. It is indigenous, flowers in May, and ripens its seed in July. It is cultivated in many parts of England, particularly in Lincoln and Cambridge; partly on account of its seed, which is crushed for oil, and partly for its leaves as food for sheep. The culture of rape for seed has been much objected to by some, on account of its supposed great exhaustion of the land; but Mr. Loudon says that, where the soil and preparation are suitable, the after-culture properly attended to, and the straw well off, instead of being burnt, as is the common practice converted to the purposes of feeding and littering cattle, it may, in many instances, be the most proper and advantageous crop that can be employed by the farmer. The produce, when the plant succeeds well, and the season is favourable for securing the seed, amounts to from 40 to 50 bushels an acre. The seed is sold by the last of 10 quarters; and is crushed in mills constructed for that purpose. (London's Encyc. of Agriculture.)

In 1867 we imported 620,782 qrs. rape-seed, of the estimated value of 1,597,289. The imports from India were 429,134 qrs., being much more than half the supply. The residuo was principally supplied by Denmark, Russia, and Wallachia. The exports during the same year amounted to 222,842 qrs.

The duties on rape-seed and rape-seed oil were repealed in 1845.

**RAPE CAKE** is the adhering masses of the husks of rape-seed, after the oil has been expressed. They are reduced to powder by a malt-mill or other machine; and are used either as a top-dressing

for crops of different kinds, or are drilled along with turnip seed. 5,057 tons were imported in 1867.

**RATTANS** or **CANES**. The long slender shoots of a prickly bush (*Calamus rotang*, Linn.), one of the most useful plants of the Malay peninsula and the Eastern islands. They are exported to Bengal, to Europe, and above all to China, where they are consumed in immense quantities. For cane work they should be chosen long, of a bright pale yellow colour, well glazed, and of a small size, not brittle, or subject to break. They are purchased by the bundle, which ought to contain 100 rattans, having their ends bent together, and tied in the middle. In China they are sold by the picul, which contains from 9 to 12 bundles. Such as are black or dark coloured, snap short, or from which the glazing flies off on their being bent, should be rejected. When stowed as damage, they are generally allowed to pass free of freight. (Milburn's *Orient Com.*; &c.)

In 1867 we imported 15,262,295 canes, whereof 7,294,251 were from British India, Singapore, and the Straits Settlements. The exports are inconsiderable.

'The rattan,' says Mr. Crawford, 'is the spon-taneous product of all the forests of the Archipelago; but exists in great perfection in those of the islands of Borneo, Sumatra, and of the Malayan peninsula. The finest are produced in the country of the *Bataks* of Sumatra. The wood-cutter who is inclined to deal in this article proceeds into the forest without any other instrument than his *parang* or cleaver, and cuts as much as he is able to carry away. The mode of performing the operation is this: he makes a notch in the tree at the root of which the rattan is growing, and cutting the latter, strips off a small portion of the outer bark, and inserts the part that is peeled into the notch. The rattan now being pulled through, as long as it continues of an equal size, is by this operation neatly and readily freed from its *epidermis*. When the wood-cutter has obtained by this means from 300 to 400 rattans—being as many as an individual can conveniently carry in their moist and undried state—he sits down, and ties them up in bundles of 100, each rattan being doubled before being thus tied up. After drying, they are fit for the market without further preparation. From this account of the small labour expended in bringing them to market, they can be sold at a very cheap rate. The Chinese junks obtain them in Borneo at the low rate of 5 Spanish dollars per 100 bundles, or 5 cents for each 100 rattans, or 27 for 1*d.* The natives always vend them by tale; but the European residents and the Chinese sell them by weight, counting by piculs, according to their quantity, and the relative state of supply and demand, the European merchants dispose of them at from 1½ to 2½ dollars the picul. In China the price is usually about 3½ dollars per picul, or 75 per cent. above the average prime cost. In Bengal they are sold by tale, each bundle of about 100 rattans bringing about 20½*d.*' (*Indian Archipelago*, vol. iii. p. 423.)

**REAL**. In the Spanish monetary system, a real is of two sorts; viz, a *real of plate*, and a *real vellon*. The former is a silver coin, varying in value from about 6½*d.* to 5*d.* [Coins.] A real vellon is a money of account, worth about 2½*d.*

**REAM**. A quantity of paper. The ream of writing paper consists of 20 quires, each of 24 sheets; but the ream of printing paper, or, as it is sometimes called, the *printer's ream*, extends to 2½ quires, or 516 sheets. Two reams of paper make a *bundle*.

**RECEIPT**. An acknowledgment in writing of having received a sum of money, or other valuable consideration. It is a voucher either of an obligation or debt discharged, or of one incurred.

In 1795 duties were imposed on all notes, memorandums, or writings, given in acknowledgment of the receipt of money in payment of debt. And parties writing receipts on unstamped paper, or giving receipts for smaller sums than those actually received, were subjected to penalties. These duties have undergone various mutations. They usually varied according to the amount received; but they were not fair ad valorem duties, the sums charged on receipts for small amounts being proportionally much greater than those charged on receipts for larger amounts. Thus, while a receipt for 10*l.* was charged with a duty of 3*d.*, a receipt for 1,000*l.* was charged with a duty of 10*s.*, whereas had the fair ad valorem principle been properly carried out, it should have been charged with a duty of 2*s.*

In 1852 the receipt duty produced 180,497*l.*, including 143,467*l.* for England, 16,103*l.* for Scotland, and 20,921*l.* for Ireland.

A good deal of dissatisfaction having been long prevalent with the receipt duty, and being also very extensively evaded, it was changed in 1853 to a duty of 1*d.* on all receipts for sums of 2*l.* and upwards. A new duty of 1*d.* was at the same time, and by the same Act, 16 & 17 Viet. c. 59, imposed on all drafts or orders payable to order on demand. Such duty did not, however, apply to drafts or orders payable at sight, nor to checks or drafts payable to bearer, drawn within 15 miles of the bank at which they were to be paid, but by 21 Viet. c. 20 the duty was extended to all checks. In the year ending March 31, 1856, these duties produced 418,619*l.* nett, being 300,000*l.* for Great Britain, and 28,000*l.* for Ireland. The nett revenue of the United Kingdom from receipt, draft, and other 1*d.* inland revenue stamps, in the year ended March 31, 1868, was 562,547*l.*

By the 16 & 17 Viet. c. 59 the following shall be deemed drafts or orders for the payment of money within the intent and meaning of this Act, and of any Act or Acts relating to the same duties on bills of exchange, drafts, or orders, and shall be chargeable accordingly with the stamp duties imposed by this Act, or any such Act or Acts; viz. :—

'All documents or writings usually termed letters of credit, or whereby any person to whom any such document or writing is or is intended to be delivered or sent shall be entitled, or be intended to be entitled, to have credit with, or in account with, or to draw upon any other person, or to receive from such other person any sum of money therein mentioned.'

The Act also grants the following exemptions from the duty on receipts, viz. : 'Receipts given for money deposited in any bank, or in the hands of any banker, to be accounted for, whether with interest or not: provided the same be not expressed to be received of or by the hands of any other than the person to whom the same is to be accounted for: provided always that this exemption shall not extend to receipts or acknowledgments for sums paid or deposited for or in respect of calls upon any scrip or shares of or in any joint-stock or other company, or proposed or intended company, which said last-mentioned receipts or acknowledgments, by whomsoever given, shall be liable to the duty by this Act charged on receipts.'

*Stamps denoting the Duty of 1d. on Receipts and Drafts may be impressed or affixed.—The duties*

of 1*l.* by this Act granted on receipts and on drafts or orders for the payment of money respectively may be denoted either by a stamp impressed upon the paper whereon any such instrument is written, or by an adhesive stamp affixed thereto, and the Commissioners of Inland Revenue shall provide stamps of both descriptions for the purposes of denoting the said duties. (16 & 17 Vict. c. 59 s. 3.)

*Where adhesive Stamps are used to denote the Duties on Receipts &c.*—In any case where an adhesive stamp shall be used for the purpose aforesaid on any receipt or upon any draft or order respectively chargeable with the duty of 1*l.* by this Act, the person by whom such receipt shall be given or such draft or order signed or made shall, before the instrument shall be delivered out of his hands, custody, or power, cancel or obliterate the stamp so used, by writing thereon his name or the initial letters of his name so and in such a manner as to show clearly and distinctly that such stamp has been made use of, and so that the same may not be again used; and if any person who shall write or give any such receipt or discharge or make or sign any such draft or order with any adhesive stamp thereon, shall not bona fide in manner aforesaid effectually cancel or obliterate such stamp, he shall forfeit the sum of 10*l.* (Sec. 3.)

*Penalty for committing Frauds in the Use of Stamps.*—If any person shall fraudulently get off or remove, or cause or procure to be gotten off or removed, from any paper whereon any receipt or any draft or order shall be written, any adhesive stamp, or if any person shall affix or use any such stamp which shall have been gotten off or removed from any paper whereon any receipt or any draft or order shall have been written, to or for any receipt, draft, or order, or any paper whereon any such receipt, draft, or order, shall be or be intended to be written; or if any person shall do or practise or be concerned in any fraudulent act, contrivance, or device whatever, not specially provided for by this or some other Act of Parliament, with intent or design to defraud her Majesty of any duty by this Act granted upon receipts or upon drafts or orders, every person so offending in any of the said several cases shall forfeit the sum of 20*l.* (Sec. 5.)

**REGISTRY.** In Commercial Navigation, the registration or enrolment of ships at the Custom-house, so as to entitle them to be classed among, and to enjoy the privileges of, British-built ships.

The registry of ships appears to have been first introduced into this country by the Navigation Act (12 Ch. II. c. 18, anno 1660). Several provisions were made with respect to it by the 7 & 8 Wm. III. c. 22; and the whole was reduced into a system by the 27 Geo. III. c. 13, but this has since been materially altered. To be admitted to registry, and consequently to enjoy the privileges and advantages that exclusively belong to a British ship, all that is now required is, that such ship be bona fide the property of one or more of her Majesty's subjects in the United Kingdom or some of its dependencies.

The great, and, perhaps, the only original object of the registration of ships was to facilitate the exclusion of foreign ships from those departments in which they were prohibited from engaging by the navigation laws, by affording a ready means of distinguishing such as were really British. It has also been considered advantageous to individuals, by preventing the fraudulent assignment of property in ships. Lord Tenterden, however, has observed in reference to this supposed advantage, that 'the instances in which fair

and honest transactions are rendered unavailable through a negligent want of compliance with the forms directed by these and other statutes requiring a public register of conveyances, make the expediency of all such regulations, considered with reference to private benefit only, a matter of question and controversy.' (*Law of Shipping*, part i. c. 2.) But these results are ascribable rather to the mode of registration than to the registry itself. The latter appears to be necessary to give certainty of title; a national and distinctive character to shipping; and for the establishment of a uniform system of admeasurement, the charges on shipping being almost always dependent on the registered tonnage.

The existing regulations as to the registry of ships are embodied in the Mercantile Shipping Act of 1853, the 17 & 18 Vict. c. 104 (modified by the 18 & 19 Vict. c. 91, 25 & 26 Vict. c. 63, and 31 & 32 Vict. c. 129), as follows, viz.:

*Registrars of British Ships.*—The following persons are required to register British ships, and shall be deemed registrars for the purposes of this Act, viz.:

1. At any port or other place in the United Kingdom or Isle of Man approved by the commissioners of customs for the registry of ships, the collector, comptroller, or other principal officer of customs for the time being.

2. In the islands of Guernsey and Jersey, the principal officers of her Majesty's customs, together with the governor, lieutenant-governor, or other person administering the government of such islands respectively.

3. In Malta, Gibraltar, and Heligoland, the governor, lieutenant-governor, or other person administering the government of such places respectively.

4. At any port or place so approved, as aforesaid, within the limits of the charter but not under the government of the East India Company, and at which no custom-house is established, the collector of duties, together with the governor, lieutenant-governor, or other person administering the government.

5. At the ports of Calcutta, Madras, and Bombay, the master attendants, and at any other port or place so approved as aforesaid within the limits of the charter and under the government of the East India Company, the collector of duties, or any other person of six years' standing in the civil service of the said company who is appointed by any of the governments of the said company to act for this purpose.

6. At every other port or place so approved as aforesaid within her Majesty's dominions abroad, the collector, comptroller, or other principal officer of customs or of navigation laws, or if there is no such officer resident at such port or place, the governor, lieutenant-governor, or other person administering the government of the possessor in which such port or place is situate. (Sec. 30.)

*Substitution of Governor abroad for Commissioners of Customs &c.*—The governor, lieutenant-governor, or other person administering the government in any British possession where any ship is registered under the authority of this Act shall, with regard to the performance of any act or thing relating to the registry of a ship or of any interest therein, be considered in all respects as occupying the place of the commissioners of customs; and any British consular officer shall, in any place where there is no justice of the peace, be authorised to take any declaration hereby required or permitted to be made in the presence of a justice of the peace. (Sec. 31.) The governor

or officer administering the government in any British possession is authorised by 31 & 32 Vict. c. 129 to grant 6 months terminable certificates of registry to vessels under 60 tons and to appoint surveyors of crew spaces. (Secs. 1, 2, & 3.)

**Registrar to keep Register Books.**—Every registrar shall keep a book, to be called 'the register book,' and enter therein the particulars herein-after required to be registered. (17 & 18 Vict. c. 104 s. 32.)

**Port of Registry of Ship.**—The port or place at which any British ship is registered for the time being shall be considered her port of registry, or the port to which she belongs. (Sec. 33.)

**Name of Ship.**—The following rules shall be observed with respect to the names of British registered ships (that is to say):

1. Before registry the name of each ship, and of the port to which she belongs, shall be painted on a conspicuous part of her stern, on a dark ground, in white or yellow letters of a length not less than 4 inches.

2. No change shall be made in the name of any registered ship.

3. No concealment, absence, or avoidable obliteration of the above names shall be permitted, except for the purpose of escaping capture by an enemy.

4. The ship shall not be described, by or with the knowledge of the owner or master, by any name other than the one by which she is registered.

And for every breach of the above rules, or any of them, the owner and master shall each incur a penalty not exceeding 100*l.* (Sec. 34.)

**Application for Registry, by whom to be made.**—Every application for the registry of a ship shall in the case of individuals be made by the person in the case of individuals as owner, or by some requiring to be registered as owner, or by some one or more of such persons if more than one, or by his or their duly authorised agent, and in the case of bodies corporate by their duly authorised agent; the authority of such agent, if appointed by individuals, to be testified by some writing under the hands of the appointors, and if appointed by a body corporate, by some instrument under the common seal of such body corporate. (Sec. 35.)

**Survey of Ship.**—Before registry, the ship shall be surveyed by a person duly appointed under this Act; and such surveyor shall grant a certificate specifying her tonnage, build, and such other particulars descriptive of the identity of the ship as may from time to time be required by the Board of Trade; and such certificate shall be delivered to the registrar before registry. (Sec. 36.)

**Rules as to Entries in Register Book.**—The following rules shall be observed with respect to entries in the register book (that is to say):

1. The property in a ship shall be divided into 61 shares.

2. Subject to the provisions with respect to joint owners or owners by transmission herein-after contained, not more than 32 individuals shall be entitled to be registered at the same time as owners of any one ship; but this rule shall not affect the beneficial title of any number of persons or of any company represented by or claiming under or through any registered owner or joint owner.

3. No person shall be entitled to be registered as owner of any fractional part of a share in a ship; but any number of persons not exceeding 5 may be registered as joint owners of a ship, or of a share or shares therein.

4. Joint owners shall be considered as constituting one person only as regards the foregoing rule relating to the number of persons entitled to be registered as owners, and shall not be entitled to

dispose in severalty of any interest in any ship or in any share or shares therein in respect of which they are registered.

5. A body corporate may be registered as owner by its corporate name. (Sec. 37.)

**Declaration of Ownership by individual Owner.**

—No person shall be entitled to be registered as owner of a ship or any share therein until he has made and subscribed a declaration in the form marked B. in the schedule annexed to this Act, referring to the ship as described in the certificate of the surveyor, and containing the following particulars (that is to say):

1. A statement of his qualification to be an owner of a share in a British ship.

2. A statement of the time when and the place where such ship was built, or (if the ship is foreign-built, and the time and place of building not known) a statement that she is foreign-built, and that he does not know the time or place of her building; and in addition thereto, in the case of a foreign ship, a statement of her foreign name, or (in the case of a ship condemned) a statement of the time, place, and court at and by which she was condemned.

3. A statement of the name of the master.

4. A statement of the number of shares in such ship of which he is entitled to be registered as owner.

5. A denial that, to the best of his knowledge and belief, any unqualified person or body of persons is entitled as owner to any legal or beneficial interest in such ship or any share therein.

The above declaration of ownership shall be made and subscribed in the presence of the registrar if the declarant reside within 5 miles of the custom-house of the port of registry, but if beyond that distance, in the presence of any registrar or of any justice of the peace. (Sec. 38.)

**Declaration of Ownership by Body Corporate.**—No body corporate shall be entitled to be registered as owner of a ship or of any share therein until the secretary or other duly appointed public officer of such body corporate has made and subscribed in the presence of the registrar of the port of registry a declaration in the form marked C. in the schedule annexed to this Act referring to the ship as described in the certificate of the surveyor, and containing the following particulars:—

1. A statement of such circumstances of the constitution and business of such body corporate as prove it to be qualified to own a British ship.

2. A statement of the time when and the place where such ship was built, or (if the ship is foreign-built, and the time and place of building unknown) a statement that she is foreign-built, and that he does not know the time or place of her building; and in addition thereto, in the case of a foreign ship, a statement of her foreign name, or (in the case of a ship condemned) a statement of the time, place, and court at and by which she was condemned.

3. A statement of the name of the master.

4. A statement of the number of shares in such ship of which such body corporate is owner.

5. A denial that, to the best of his knowledge and belief, any unqualified person or body of persons is entitled as owner to any legal or beneficial interest in such ship or any share therein. (Sec. 39.)

**Evidence to be produced on Registry.**—Upon the first registry of a ship there shall, in addition to the declaration of ownership, be produced the following evidence; viz.:—

1. In the case of a British-built ship, a

certificate (which the builder is hereby required to grant under his hand) containing a true account of the proper denomination and of the tonnage of such ship, as estimated by him, and of the time when and of the place where such ship was built, together with the name of the party (if any) on whose account he has built the same, and, if any sale or sales have taken place, the bill or bills of sale under which the ship or share therein has become vested in the party requiring to be registered as owner.

2. In the case of a foreign-built ship, the same evidence as in the case of a British-built ship, unless the person requiring to be registered as owner, or, in the case of a body corporate, the duly-appointed officer, declares that the time or place of her building is unknown, or that the builder's certificate cannot be procured, in which case there shall be required only the bill or bills of sale under which the ship or share therein became vested in the party requiring to be registered as owner thereof.

3. In the case of a ship condemned by any competent court, an official copy of the condemnation of such ship. (Sec. 40.)

**Penalty on Builder for false Certificate.**—If any builder wilfully makes a false statement in any certificate hereby required to be granted by him, he shall for every such offence incur a penalty not exceeding 100*l.* (Sec. 41.)

**Particulars of Entry in Register Book.**—As soon as the foregoing requisites to the due registry of a ship have been complied with, the registrar shall enter in the register book the following particulars relating to such ship; viz. :—

1. The name of the ship, and of the port to which she belongs.

2. The details as to her tonnage, build, and description comprised in the certificate hereinbefore directed to be given by the surveyor.

3. The several particulars as to her origin stated in the declaration or declarations of ownership.

4. The names and descriptions of her registered owner or owners, and if there is more than one such owner, the proportions in which they are interested in such ship. (Sec. 42.)

**No Notice taken of Trusts.**—No notice of any trust, express, implied, or constructive, shall be entered in the register book, or receivable by the registrar; and, subject to any rights and powers appearing by the register book to be vested in any other party, the registered owner of any ship or share therein shall have power absolutely to dispose in manner hereinafter mentioned of such ship or share, and to give effectual receipts for any money paid or advanced by way of consideration. (Sec. 43.) See also sec. 3 of 25 & 26 Viet. c. 63.

**Certificate of Registry to be granted.**—Upon the completion of the registry of any ship, the registrar shall grant a certificate of registry in the form marked D. in the schedule to the Act (annexed to this article), comprising the following particulars, viz. :—

1. The name of the ship and of the port to which she belongs.

2. The details as to her tonnage, build, and description comprised in the certificate hereinbefore directed to be given by the surveyor.

3. The name of her master.

4. The several particulars as to her origin stated in the declaration or declarations of ownership.

5. The names and descriptions of her registered owner or owners, and if there is more than one such owner, the proportions in which they are

respectively interested, indorsed upon such certificate. (17 & 18 Viet. c. 104 s. 44.)

**Change of Owners to be indorsed on Certificate of Registry.**—Whenever any change takes place in the registered ownership of any ship, then, if such change occurs at a time when the ship is at her port of registry, the master shall forthwith deliver the certificate of registry to the registrar, and he shall indorse thereon a memorandum of such change; but if such change occurs during the absence of the ship from her port of registry, then upon her first return to such port the master shall deliver the certificate of registry to the registrar, and he shall indorse thereon a like memorandum of the change; or if she previously arrives at any port where there is a British registrar, such registrar shall, upon being advised by the registrar of her port of registry of the change having taken place, indorse a like memorandum thereof on the certificate of registry, and may for that purpose require the certificate to be delivered to him, so that the ship be not thereby detained; and any master who fails to deliver to the registrar the certificates of registry a hereinbefore required shall incur a penalty not exceeding 100*l.* (Sec. 45.)

**Change of Master to be indorsed on Certificate of Registry.**—Whenever the master of any British registered ship is changed, the following persons, viz. if such change is made in consequence of the sentence of any naval court, the presiding officer of such court, but if the change takes place from any other cause, the registrar, or if there is no registrar, the British consular officer resident at the port where such change takes place, shall indorse on the certificate of registry a memorandum of such change, and subscribe his name to such indorsement, and forthwith report the change of master to the Commissioner of Customs in London; and the officers of customs at any port situate within her Majesty's dominions may refuse to admit any person to do any act at such port as master of any British ship, unless his name is inserted in or indorsed upon the certificate of registry of such ship as the last appointed master thereof. (Sec. 46.)

**Power to grant new Certificate.**—The registrar may, with the sanction of the Commissioner of Customs, upon the delivery up to him of the former certificate of registry, grant a new certificate in the place of the one so delivered up. (Sec. 47.)

**Provision in case of Loss of Certificate.**—In the event of the certificate of registry of any ship being mislaid, lost, or destroyed, if such event occurs at any port in the United Kingdom, or the ship being registered in the United Kingdom, or at any port in any British possession, the ship being registered in the same British possession, then the registrar of the report of registry shall grant a new certificate of registry in lieu of and as a substitute for her original certificate of registry; but if such event occurs elsewhere, the master, or some other person having knowledge of the circumstances, shall make a declaration before the registrar of any port having a British registrar at which such ship is at the time or first arrives after such mislaying, loss, or destruction; and such declaration shall state the facts of the case, and the names and descriptions of the registered owners of such ship, to the best of the declarant's knowledge and belief; and the registrar shall thereupon grant a provisional certificate as near to the form appointed by this Act as circumstances permit, and shall insert therein a statement of the circumstances under which such provisional certificate is granted. (Sec. 48.)

*Provisional Certificate to be delivered up.*—Every such provisional certificate shall, within 10 days after the first subsequent arrival of the ship at her port of discharge in the United Kingdom, if registered therein, or if registered elsewhere, at her port of discharge in the British possession within which her port of registry is situate, be delivered up to the registrar thereof, who shall thereupon grant a new one, as near to the form appointed by this Act as circumstances permit; and if the master neglects to deliver up such certificate within such time he shall incur a penalty not exceeding 50*l.* (Sec. 49.)

*Custody of Certificate.*—The certificate of registry shall be used only for the lawful navigation of the ship, and shall not be subject to detention by reason of any title, lien, charge, or interest whatsoever which any owner, mortgagee, or other person may have or claim to have on or in the ship described in such certificate: and if any person whatever, whether interested or not in the ship, refuses on request to deliver up such certificate when in his possession or under his control to the person for the time being entitled to the custody thereof for the purposes of such lawful navigation as aforesaid, or to any registrar, officer of the customs, or other person legally entitled to require such delivery, it shall be lawful for any justice, by warrant under his hand and seal, or for any court capable of taking cognisance of such matter, to cause the person so refusing to appear before him and to be examined touching such refusal; and unless it is proved to the satisfaction of such justice or court that there was reasonable cause for such refusal, the offender shall incur a penalty not exceeding 100*l.*; but if it is made to appear to such justice or court that the certificate is lost, the party complained of shall be discharged, and such justice or court shall thereupon certify that the certificate of registry is lost. (Sec. 50.)

*Mode of proceeding if detainer Party abscond.*—If the person charged with such detainer or refusal is proved to have absconded, so that the warrant of the justice or process of the court cannot be served upon him, or if he persists in his refusal to deliver the certificate, such justice or court shall certify the fact, and the same proceedings may then be taken as in the case of a certificate of registry mislaid, lost, or destroyed, or as near thereto as circumstances permit. (Sec. 51.)

*Penalty for using improper Certificate.*—If the master or owner of any ship uses or attempts to use for the navigation of such ship a certificate of registry not legally granted in respect of such ship, he shall be guilty of a misdemeanor, and it shall be lawful for any commissioned officer on full pay in the military or naval service of her Majesty, or any British officer of customs, or any British consular officer, to seize and detain such ship, and to bring her for adjudication before the High Court of Admiralty in England or Ireland or any court having admiralty jurisdiction in her Majesty's dominions; and if such court is of opinion that such use or attempt at use has taken place, it shall pronounce such ship, with her tackle, apparel, and furniture, to be forfeited to her Majesty, and may award such portion of the proceeds arising from the sale of such ship as it may think just to the officer so bringing in the same for adjudication. (Sec. 52.)

*Certificate of Ship lost or ceasing to be British to be delivered up.*—If any registered ship is either actively or constructively lost, taken by the enemy, burnt, or broken up, or if by reason of a transfer to any persons not qualified to be owners of British ships, or of any other matter or thing, any such

ship as aforesaid ceases to be a British ship, every person who at the time of the occurrence of any of the aforesaid events owns such ship or any share therein shall, immediately upon obtaining knowledge of any such occurrence, if no notice thereof has already been given to the registrar at the port of registry of such ship, give such notice to him, and he shall make an entry thereof in his register book; and, except in cases where the certificate of registry is lost or destroyed, the master of every ship so circumstanced as aforesaid shall immediately, if such event occurs in port, but if the same occurs elsewhere, then within 10 days after his arrival in port, deliver the certificate of registry of such ship to the registrar, or, if there be no registrar, to the British consular officer at such port, and such registrar, if he is not himself the registrar of her port of registry, or such British consular officer, shall forthwith forward the certificate so delivered to him to the registrar of the port of registry of the ship; and every owner and master who, without reasonable cause, makes default in obeying the provisions of this section shall for each offence incur a penalty not exceeding 100*l.* (Sec. 53.)

*Provisional Certificate for Ship becoming vested in British Owners at Foreign Port.*—If any ship becomes the property of persons qualified to be owners of British ships at any foreign port, the British consular officer resident at such port may grant the master of such ship, upon his application, a provisional certificate, stating—

The name of the ship;  
The time and place of her purchase, and the names of her purchasers;  
The name of her master;

The best particulars as to her tonnage, build, and description that he is able to obtain:

And he shall forward a copy of such certificate, at the first convenient opportunity, to the Commissioners of Customs in London: the certificate so granted shall possess the same force as a certificate of registry until the expiration of 6 months, or until such earlier time as the ship arrives at some port where there is a British registrar; but upon the expiration of such period, or upon arrival at such port, shall be void to all intents. (Sec. 54.)

#### *Transfers and Transmissions.*

*Transfer of Ships or Shares therein.*—A registered ship or any share therein, when disposed of to persons qualified to be owners of British ships, shall be transferred by bill of sale; and such bill of sale shall contain such description of the ship as is contained in the certificate of the surveyor, or such other description as may be sufficient to identify the ship to the satisfaction of the registrar, and shall be according to the form marked E. subjoined to this Act, or as near thereto as circumstances permit, and shall be executed by the transferee in the presence of and be attested by one or more witnesses. (Sec. 55.)

*Declaration to be made by Transferee.*—No individual shall be entitled to be registered as transferee of a ship or any share therein until he has made a declaration stating his qualification to be registered as owner of a share in a British ship, and containing a denial similar to the denial before required to be contained in a declaration of ownership by an original owner; and no body corporate shall be entitled to be registered as transferee of a ship or any share therein until the secretary or other duly appointed public officer of such body corporate has made a declaration, stating the name of such body corporate, and such circumstances of its constitution and business as may prove it to be qualified to own a British ship, and

*Entry of transmitted Mortgage.*—The registrar, upon the receipt of such declaration and the production of such evidence as aforesaid, shall enter the name of the person or persons entitled under such transmission in the register book as mortgagee or mortgagees of the ship or share in respect of which such transmission has taken place. (Sec. 75.)

*Certificates of Mortgage and Sale.*

*Powers of Mortgage and Sale conferred by Certificate.*—Any registered owner, if desirous of disposing by way of mortgage or sale of the ship or share in respect of which he is registered at any place out of the country or possession in which the port of registry of such ship is situate, may apply to the registrar, who shall thereupon enable him to do so by granting such certificates as are after mentioned, to be called respectively certificates of mortgage or certificates of sale, according as they purport to give a power to mortgage or a power to sell. (Sec. 76.)

*Requisites for Certificates of Mortgage and Sale.*—Previously to any certificate of mortgage or sale being granted, the applicant shall state to the registrar, to be by him entered in the register book, the following particulars; viz. :—

1. The names of the persons by whom the power mentioned in such certificate is to be exercised, and in the case of a mortgage, the maximum amount of charge to be created, if it is intended to fix any such maximum, and in the case of a sale, the minimum price at which a sale is to be made, if it is intended to fix any such minimum.

2. The specific place or places where such power is to be exercised, or if no place be specified, then that it may be exercised anywhere, subject to the provisions hereinafter contained.

3. The limit of time within which such power may be exercised. (Sec. 77.)

*Restrictions on Certificates of Mortgage and Sale.*—No certificate of mortgage or sale shall be granted so as to authorise any mortgage or sale to be made—

At any place within the United Kingdom, if the port of registry of the ship be situate in the United Kingdom; or at any place within the same British possession if the port of registry is situate within a British possession; or

By any person not named in the certificate. (Sec. 78.)

*Forms of Certificates of Mortgage and Sale.*—Certificates of mortgage and sale shall contain a statement of the several particulars hereinbefore directed to be entered in the register book, and in addition thereto an enumeration of any registered mortgages or certificates of mortgage or sale affecting the ships or shares in respect of which such certificates are given. (Sec. 79.)

*Rules as to Certificates of Mortgage.*—The following rules shall be observed as to certificates of mortgage, viz. :—

1. The power shall be exercised in conformity with the directions contained in the certificate.

2. A record of every mortgage made thereunder shall be indorsed thereon by a registrar or British consular officer.

3. No mortgage *bonâ fide* made thereunder shall be impeached by reason of the person by whom the power was given dying before the making of such mortgage.

4. Whenever the certificate contains a specification of the place or places at which, and a limit of time not exceeding twelve months within which, the power is to be exercised, no mortgage *bonâ fide* made to a mortgagee without notice shall

be impeached by reason of the bankruptcy or insolvency of the person by whom the power was given.

5. Every mortgage which is so registered as aforesaid on the certificate shall have priority over all mortgages of the same ship or share created subsequently to the date of the entry of the certificate in the register book; and if there be more mortgages than one so indorsed, the respective mortgagees claiming thereunder shall, notwithstanding any express, implied, or constructive notice, be entitled one before the other according to the date at which a record of each instrument is indorsed on the certificate, and not according to the date of the instrument creating the mortgage.

6. Subject to the foregoing rules, every mortgage whose mortgage is registered on the certificate shall have the same rights and powers and be subject to the same liabilities as he would have had and been subject to if his mortgage had been registered in the register book instead of on the certificate.

7. The discharge of any mortgage so registered on the certificate may be indorsed thereon by any registrar or British consular officer, upon the production of such evidence as is hereby required to be produced to the registrar on the entry of the discharge of a mortgage in the register book; and upon such indorsement being made, the estate, if any, which passed to the mortgagee shall vest in the same person or persons in whom the same would, having regard to intervening acts and circumstances, if any, have vested if no such mortgage had been made.

8. Upon the delivery of any certificate of mortgage to the registrar by whom it was granted, he shall, after recording in the register book in such manner as to preserve its priority any unsatisfied mortgage registered thereon, cancel such certificate, and enter the fact of such cancellation in the register book; and every certificate so cancelled shall be void to all intents. (Sec. 80.)

*Rules as to Certificates of Sale.*—The following rules shall be observed as to certificates of sale, viz. :—

1. No such certificate shall be granted except for the sale of an entire ship.

2. The power shall be exercised in conformity with the directions contained in the certificate.

3. No sale *bonâ fide* made to a purchaser for valuable consideration shall be impeached by reason of the person by whom the power was given dying before the making of such sale.

4. Whenever the certificate contains a specification of the place or places at which, and a limit of time not exceeding twelve months within which, the power is to be exercised, no sale *bonâ fide* made to a purchaser for valuable consideration without notice shall be impeached by reason of the bankruptcy or insolvency of the person by whom the power was given.

5. Any transfer made to a person qualified to be the owner of British ships shall be by bill of sale in the form hereinbefore mentioned, or as near thereto as circumstances permit.

6. If the ship is sold to a party qualified to hold British ships, the ship shall be registered anew; but notice of all mortgages enumerated on the certificate of sale shall be entered in the register book.

7. Previously to such registry anew there shall be produced to the registrar required to make the same the bill of sale by which the ship is transferred, the certificate of sale, and the certificate of registry of such ship.

8. Such last-mentioned registrar shall retain the

certificates of sale and registry; and after having indorsed on both of such instruments an entry of the fact of a sale having taken place, shall forward the said certificates to the registrar of the port appearing on such certificates to be the former port of registry of the ship, and such last-mentioned registrar shall thereupon make a memorandum of the sale in his register book, and the registry of the ship in such book shall be considered as closed, except as far as relates to any unsatisfied mortgages or existing certificates of mortgage entered therein.

9. On such registry anew, the description of the ship contained in her original certificate of registry may be transferred to the new register book without her being re-surveyed, and the declaration to be made by the purchaser shall be the same as would be required to be made by an ordinary transferee.

10. If the ship is sold to a party not qualified to be the owner of a British ship, the bill of sale by which the ship is transferred, the certificate of sale, and the certificate of registry shall be produced to some registrar or consular officer, who shall retain the certificates of sale and registry, and, having indorsed thereon the fact of such ship having been sold to persons not qualified to be owners of British ships, shall forward such certificates to the registrar of the port appearing on the certificate of registry to be the port of registry of such ship; and such last-mentioned registrar shall thereupon make a memorandum of the sale in his register book, and the registry of the ship in such book shall be considered as closed, except so far as relates to any unsatisfied mortgages or existing certificates of mortgage entered therein.

11. If, upon a sale being made to an unqualified person, default is made in the production of such certificates as are mentioned in the last rule, such unqualified person shall be considered by the law as having acquired no title to or interest in the ship; and further, the party upon whose application such certificate was granted, and the persons exercising the power, shall each incur a penalty not exceeding 100l.

12. If no sale is made in conformity with the certificate of sale, such certificate shall be delivered to the registrar by whom the same was granted; and such registrar shall thereupon cancel it, and enter the fact of such cancellation in the register book; and every certificate so cancelled shall be void to all intents. (Sec. 81.)

*Power of Commissioners of Customs in case of Loss of Certificate of Mortgage or Sale.*—Upon proof at any time to the satisfaction of the Commissioners of Customs that any certificate of mortgage or sale is lost or so obliterated as to be useless, and that the powers thereby given have never been exercised, or if they have been exercised, then, upon proof of the several matters and things that have been done thereunder, it shall be lawful for the registrar, with the sanction of the said commissioners, as circumstances may require, either to issue a new certificate, or to direct such entries to be made in the register book, or such other matter or thing to be done, as might have been made or done if no such loss or obliteration had taken place. (Sec. 82.)

*Revocation of Certificates of Mortgage and Sale.*—The registered owner for the time being of any ship or share therein in respect of which a certificate of mortgage or sale has been granted, specifying the place or places where the power thereby given is to be exercised, may, by an instrument under his hand, authorise the registrar by whom such certificate was granted to give notice to the registrar or consular officer, registrars

or consular officers, at such place or places, that such certificate is revoked; and notice shall be given accordingly; and all registrars or consular officers receiving such notices shall record the same, and shall exhibit the same to all persons who may apply to them for the purpose of effecting or obtaining a mortgage or transfer under the said certificate of mortgage or sale: and after such notice has been so recorded, the said certificate shall, so far as concerns any mortgage or sale to be thereafter made at such place, be deemed to be revoked and of no effect; and every registrar or consular officer recording any such notice shall thereupon state to the registrar by whom the certificate was granted whether any previous exercise of the power to which such certificate refers has taken place. (Sec. 83.)

*Registry anew, and Transfer of Registry.*

*Alteration in Ship to be registered.*—Whenever any registered ship is so altered as not to correspond with the particulars relating to her tonnage or description contained in the register book, then, if such alteration is made at a port where there is a registrar, the registrar of such port, but if made elsewhere, the registrar of the first port having a registrar at which the ship arrives after her alteration, shall, on application made to him, and on the receipt of a certificate from the proper surveyor specifying the nature of such alteration, either retain the old certificate of registry and grant a new certificate of registry containing a description of the ship as altered, or indorse on the existing certificate a memorandum of such alteration, and subscribe his name to such indorsement; and the registrar to whom such application as aforesaid is made, if he is the registrar of the port of registry of the ship, shall himself enter in his register book the particulars of the alteration so made, and the fact of such new certificate having been granted or indorsement having been made on the existing certificate; but if he is not such last-mentioned registrar, he shall forthwith report such particulars and facts as aforesaid, accompanied by the old certificate of registry in cases where a new one has been granted, to the registrar of the port of registry of the ship, who shall retain such old certificate (if any), and enter such particulars and facts in his register book accordingly. (Sec. 84.)

*On Alteration, Registry anew may be required.*—When the registrar to whom application is made in respect of any such alteration as aforesaid is the registrar of the port of registry, he may, if he think fit, instead of registering such alteration, require such ship to be registered anew in manner hereinbefore directed on the first registry of a ship; and if he is not such registrar as lastly hereinbefore mentioned, he may nevertheless require such ship to be registered anew; but he shall, in such last-mentioned case, grant a provisional certificate or make a provisional indorsement of the alteration made in manner hereinbefore directed in cases where no registry anew is required, taking care to add to such certificate or indorsement a statement that the same is made provisionally, and to insert in his report to the registrar of the port of registry of the ship a like statement. (Sec. 85.)

*Grant of Provisional Certificate in respect of Alteration.*—Every such provisional certificate, or certificate provisionally indorsed, shall, within 10 days after the first subsequent arrival of the ship at her port of discharge in the United Kingdom if registered in the United Kingdom, or, if registered elsewhere, at her port of discharge in the British possession within which her port of registry is situate, be delivered up to the registrar thereof, who shall thereupon cause such ship to be regis-

tered anew in the same manner in all respects as hereinbefore required on the first registry of any ship. (Sec. 86.)

*Consequence of Omission to Register anew.*—On failure of such registry anew of any ship or registry of alteration of any ship so altered as aforesaid, such ship shall be deemed not duly registered, and shall no longer be recognised as a British ship. (Sec. 87.)

*On Change of Owners, Registry anew may be granted.*—If upon any change of ownership in any ship the owner or owners desire to have such ship registered anew, although such registry anew is not required by this Act, it shall be lawful for the registrar of the port at which such ship is already registered, on the delivery up to him of the existing certificate of registry, and on the other requisites to registry, or such of them as the registrar thinks material, being duly complied with, to make such registry anew, and grant a certificate thereof. (Sec. 88.)

*Registry may be transferred from Port to Port.*—The registry of any ship may be transferred from one port to another upon the application of all parties appearing on the register to be interested in such ship, whether as owners or mortgagees; such application to be expressed by a declaration in writing made and subscribed, if the party so required to make and subscribe the same resides at or within 5 miles of the custom-house of the port from which such ship is to be transferred, in the presence of the registrar of such port, but if beyond that distance, in the presence of any registrar or of any justice of the peace. (Sec. 89.)

*Manner of Transfer of Registry.*—Upon such application being made as is hereinbefore mentioned, and upon the delivery to him of the certificate of registry, the registrar of the port at which such ship is already registered shall transmit to the registrar of the port at which such ship is intended to be registered notice of such application having been made to him, together with a true copy of all particulars relating to such ship, and the names of all the parties appearing by his book to be interested as owners or mortgagees in such ship; and such last-mentioned registrar shall, upon the receipt of such notice, enter all such particulars and names in his book of registry, and grant a fresh certificate of registry, and thenceforth such ship shall be considered as registered at and belonging to such last-mentioned port, and the name of such last-mentioned port shall be substituted on the stern of such ship in lieu of the name of the port previously appearing thereon. (Sec. 90.)

*Transfer of Registry not to affect Rights of Owners.*—The transfer of the registry of any ship in manner aforesaid shall not in any way affect the rights of the several persons interested either as owners or mortgagees in such ship, but such rights shall in all respects be maintained and continue in the same manner as if no such transfer had been effected. (Sec. 91.)

#### *Registry, Miscellaneous.*

*Inspection of Register Books.*—Every person may, upon payment of a fee to be fixed by the Commissioners of Customs, not exceeding 1s., have access to the register book for the purpose of inspection at any reasonable time during the hours of official attendance of the registrar. (Sec. 92.)

*Indemnity to Registrar.*—No registrar shall be liable to damages or otherwise for any loss accruing to any person by reason of any act done or default made by him in his character of

registrar, unless the same has happened through his neglect or wilful act. (Sec. 93.)

*Return to be made by Registrars to Commissioners of Customs.*—Every registrar in the United Kingdom shall at the expiration of every month, and every other registrar shall without delay, or at such stated times as may be fixed by the Commissioners of Customs, transmit to the Custom-house in London a full return in such form as they may direct of all registries, transfers, transmissions, mortgages, and other dealings with ships which have been registered by or communicated to them in their character of registrars, and the names of the persons who have been concerned in the same, and such other particulars as may be directed by the said Commissioners. (Sec. 94.)

Clause 95 directs the mode in which registration fees are to be applied; and clauses 96 to 99 inclusive give power to Commissioners of Customs, registrars &c. to act in certain specified circumstances.

*Liabilities of Owners.*—Whenever any person is beneficially interested, otherwise than by way of mortgage, in any ship or share therein registered in the name of some other person as owner, the person so interested shall, as well as the registered owner, be subject to all pecuniary penalties imposed by this or by any other Act on owners of ships or shares therein, so nevertheless that proceedings may be taken for the enforcement of any such pecuniary penalties against both or either of the aforesaid parties, with or without joining the other of them. (Sec. 100.)

#### *Forgery.*

*Punishment for Forgery.*—Any person who forges, assists in forging, or procures to be forged, fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any register book, certificate of surveyor, certificate of registry, declaration of ownership, bill of sale, instrument of mortgage, certificate of mortgage or sale, or any entry or indorsement required by this Act to be made in or on any of the above documents, shall for every such offence be deemed to be guilty of felony. (Sec. 101.)

#### *National Character.*

*National Character of Ship to be declared before Clearance.*—No officer of customs shall grant a clearance or transire for any ship until the master of such ship has declared to such officer the name of the nation to which she claims that she belongs, and such officer shall thereupon inscribe such name on the clearance or transire; and if any ship attempts to proceed to sea without such clearance or transire, any such officer may detain her until such declaration is made. (Sec. 102.)

*Penalties.*—The offences hereinafter mentioned shall be punishable as follows: (that is to say)

1. If any person uses the British flag and assumes the British national character on board any ship owned in whole or in part by any persons not entitled by law to own British ships, for the purpose of making such ship appear to be a British ship, such ship shall be forfeited to Her Majesty, unless such assumption has been made for the purpose of escaping capture by an enemy or by a foreign ship of war in exercise of some belligerent right; and in any proceeding for enforcing any such forfeiture, the burden of proving a title to use the British flag and assume the British national character shall lie upon the person using and assuming the same.

2. If the master or owner of any British ship

Dated at \_\_\_\_\_ the \_\_\_\_\_ day of \_\_\_\_\_ 18\_\_\_\_

Notice.—A certificate of registry granted under the Merchant Shipping Act, 1854, is not a document of title. It does not necessarily contain notice of all changes of ownership; and in no case does it contain an official record of any mortgages affecting the ship.

does or permits to be done any matter or thing, or carries or permits to be carried any papers or documents, with intent to conceal the British character of such ship from any person entitled by British law to enquire into the same, or to assume a foreign character, or with intent to deceive any such person as lastly hereinbefore mentioned, such ship shall be forfeited to her Majesty; and the master, if he commits or is privy to the commission of the offence, shall be guilty of a misdemeanor.

3. If any unqualified person, except in the case of such transmitted interests as are hereinbefore mentioned, acquires as owner any interest, either legal or beneficial, in a ship using a British flag and assuming the British character, such interest shall be forfeited to her Majesty.

4. If any person, on behalf of himself or any other person or body of persons, wilfully makes a false declaration touching the qualification of himself or such other person or body of persons to own British ships or any shares therein, the warrant shall be guilty of a misdemeanor; and

the ship or share in respect of which such declaration is made, if the same has not been forfeited under the foregoing provision, shall, to the extent of the interest therein of the person making the declaration, and unless it is shown that he had no authority to make the same, of the parties on behalf of whom such declaration is made, be forfeited to her Majesty.

And in order that the above provisions as to forfeitures may be carried into effect, it shall be lawful for any commissioned officer on full pay in the military or naval service of her Majesty, or any British officer of customs, or any British consular officer, to seize and detain any ship which has, either wholly or as to any share therein, become subject to forfeiture as aforesaid, and to bring her for adjudication before the High Court of Admiralty in England or Ireland, or any court having admiralty jurisdiction in her Majesty's dominions; and such court may thereupon make such order in the case as it may think fit, and may award to the officer bringing in the same for adjudication such portion of the

has happened through (Sec. 93.)

 ship of war in exercise of some  
 ight; and in any proceeding for  
 y such forfeiture, the burden of  
 e to use the British flag and assume  
 tional character shall lie upon the  
 and assuming the same.  
 master or owner of any British ship

proceeds of the sale of any forfeited ship or share as it may think right. (Sec. 103.)

*Officer not liable for any Seizure made on reasonable Grounds.*—No such officer as aforesaid shall be responsible, either civilly or criminally, to any person whomsoever, in respect of the seizure or detention of any ship that has been seized or detained by him in pursuance of the provisions herein contained, notwithstanding that such ship is not brought in for adjudication, or, if so brought in, is declared not to be liable to forfeiture, if it be shown, to the satisfaction of the judge or court before whom any trial relating to such ship or such seizure or detention is held, that there were reasonable grounds for such seizure or detention; but if no such grounds are shown, such judge or court may award payment of costs and damages to any party aggrieved, and make such other order in the premises as it think just. (Sec. 104.)

*Penalty for carrying improper Colours.*—If any colours usually worn by her Majesty's ships, or any colours resembling those of her Majesty, or any distinctive national colours, except the red ensign usually worn by merchant ships, or except the union jack with a white border, or if the pendant usually carried by her Majesty's ships, or any pendant in anywise resembling such pendant, are or is hoisted on board any ship or boat belonging to any subject of her Majesty without warrant for so doing from her Majesty or from the Admiralty, the master of such ship or boat, or the owner thereof, if on board the same, and every other person hoisting or joining or assisting in hoisting the same, shall for every such offence incur a penalty not exceeding 500*l.*; and it shall be lawful for any officer on full pay in the military or naval service of her Majesty, or any British officer of the customs, or any British consular officer, to board any such ship or boat, and to take away any such jack, colours, or pendant; and such jack, colours, or pendant shall be forfeited to her Majesty. (Sec. 105.)

*Effect of Declaration that a Ship shall not be recognised as a British Ship.*—Whenever it is

declared by this Act that a ship belonging to any person or body corporate, qualified according to this Act to be owners of British ships, shall not be recognised as a British ship, such ship shall not be entitled to any benefits, privileges, advantages, or protection usually enjoyed by British ships, and shall not be entitled to use the British flag or assume the British national character; but, so far as regards the payment of dues, the liability to pains and penalties, and the punishment of offences committed on board such ship or by any person belonging to her, such ship shall be dealt with in the same manner in all respects as if she were a recognised British ship. (Sec. 106.)

*REPORT.* In Commercial Navigation, a paper delivered by the masters of all ships arriving from parts beyond seas to the custom-house, containing an account of the cargo on board, &c. (16 & 17 Vict. c. 107 ss. 50-54; ante, IMPORTATION AND EXPORTATION.)

*REPRISALS.* Where the people of one nation have unlawfully seized and detained property belonging to another state, the subjects of the latter are authorised, by the law of nations, to indemnify themselves by seizing the property of the subjects of the state aggressing. This is termed making reprisals; and commissions to this effect are issued from the Admiralty. [PATENTERS.]

*RESPONDENTIA.* [LOTTOBY AND RESPONDENTIA.]

*REVENUE AND EXPENDITURE.* Though not properly belonging to a work of this sort, we believe we shall do an acceptable service to our readers by laying before them a Table of the Revenue and Expenditure of the United Kingdom.

Subjoined is an account of the gross public income of the United Kingdom of Great Britain and Ireland, in the year ended the 31st day of March 1868, and of the actual issues within the same period, exclusive of sums applied to the redemption of funded or paying off unfunded debt, and of the advances and repayments for local works, &c.

Total				11,537,660	17	5							

\* Including 50,000*l.* of the money raised for fortifications.

† No balance remaining of the money raised for fortifications.

A more comprehensive and instructive table than that marked No. I. was framed according to the suggestion, and printed for several years upon the motion, of Mr. Pusey; and there are not very many Members who can refer to so useful a memorial of their Parliamentary career. This was continued by Mr. W. Williams, but dropped on his death. Annexed is a

Statement, showing the Estimated or Actual Revenue and Expenditure of several Foreign Countries at different recent Periods. (Extracted from Reports of Secretaries of Legations on Finance.)

Countries	Years	Revenue	Expenditure
Austria - estimated	1867	40,729,700	43,289,600

RHUBARB (Dutch, rabarber; Fr. rhubarbe; Ital. rabarbaro, reobarbaro; Span. ruibarbo; Russ. hewen; Arab. rawend; Chin. ta-hwang). The root of a plant, a native of China and Tartary. Three varieties of rhubarb are known in the shops; viz. Russian, Turkey, and East Indian or Chinese rhubarb. The first two resemble each other in every respect. They are, in fact, the same article, being both derived from Tartary. The portion designed for the Petersburg market being selected and sorted at Kiachta, acquires the name of Russian rhubarb; while the portion that is sent from Tartary to Smyrna and other places in Turkey is called Turkey rhubarb. The best pieces only are sent to Petersburg; and according to the contract with the Government, on whose account it is bought, all that is rejected must be burnt; and that which is approved undergoes a second cleaning before being finally packed up for

Petersburg. The best pieces of Russian and Turkey rhubarb are roundish, and perforated with a large hole, of a reddish or yellow colour on the outside, and when cut or broken exhibit a mottled texture, and alternate streaks of red and grey. Its odour is peculiar. It is finely gritty under the teeth, and its taste bitter, faintly astringent, and aromatic. It should not be porous, but rather compact and heavy. East Indian or Chinese rhubarb is in oblong flat pieces, seldom perforated; has a stronger odour and is more nauseous to the taste than the other; it is heavier, more compact, breaks smoother, and affords a powder of a redder shade. (Thomson's Dispensatory; Ainslie's Mat. India; British Pharmacopœia, 1867; &c.)

In 1867 the imports of rhubarb amounted to 227,663 lb. valued at 61,906*l.*, chiefly from France, and the exports to 211,221 lb. It was formerly charged with a duty, which, after being reduced in 1842, was repealed in 1845.

RICE (Fr. riz; Ital. riso; Arab. aruz; Hin. chaw). One of the most valuable of the cereal grasses, the *Oryza sativa* of botanists. It is raised in immense quantities in India and China, and most Eastern countries; in the West Indies, Central America, and the United States; and in some of the southern countries of Europe. It, in fact, occupies the same place in most intertropical regions as wheat in the warmer parts of Europe, and oats and rye in those more to the north. Forming, as it does, the principal part of the food of the most civilised and populous Eastern nations, it is more extensively consumed than any other species of grain. It is light and wholesome, but it is said to contain less of the nutritive principle than wheat. When rough, or in its natural state in the husk, it is called *paddy*. There is an immense variety in the qualities of rice. That which is principally exported from Bengal has received the name of *cargo rice*. It is of a coarse reddish cast, but is sweet and large-grained, and is preferred by the natives to every other sort. It is not kiln-dried, but is parboiled in earthen pots or caldrons, partly to destroy the vegetative prin-

ciple, so that it may keep better, and partly to facilitate the process of husking. Patna rice is more esteemed in Europe than any other sort of rice imported from the East. It is small-grained, rather long and wiry, and remarkably white. But the rice raised on the low marshy grounds of South Carolina is unquestionably very superior to any brought from any part of India. It may, perhaps, be worth mentioning, that rice, like wheat, oats, and barley, is not indigenous to America. It was first raised in South Carolina from seeds brought from Madagascar near the end of the 17th century. Its culture increased so rapidly that in 1721 no fewer than 18,000 tierces, or barrels, were exported. (Pitkin's *American Statistics*, 1835, p. 100.) According to the returns under the census of 1840, the total annual produce of rice in the United States was estimated at 80,841,422 lb., whereas under the census of 1850 it was estimated at 215,312,710 lb., or above 96,000 tons, of which 159,930,613 lb. were raised in South Carolina. However, this crop seems to have been diminished by the Civil War, and the value of the exports of rice from the United States amounted, in 1865, to 63,430 dois.

The produce of lands naturally or artificially irrigated is, as far as rice is concerned, from 5 to 10 times greater than that of dry land having no command of water; and hence the vast importance of irrigation in all countries where this grain is cultivated. But it is worthy of remark, that, owing to the not unfrequent occurrence of severe droughts, there is a greater variation in the crops of rice than in those of many other species of grain. Those who, like the Hindoos, depend almost entirely on it for subsistence, are consequently placed in a very precarious situation. There can be no doubt that famines are at once more frequent and severe in Hindostan than in any other country, Ireland excepted.

The exports of rice from India have greatly increased since 1861.

Table, showing the Value of Exports of Rice from India in the 10 Years ending with 1866.

	£	1862	£
1857	2,501,182	1862	3,355,075
1858	3,149,172	1863	3,378,196
1859	2,435,145	1864	3,975,565
1860	2,276,206	1865	3,275,537
1861	2,962,197	1866	4,909,562

For a considerable number of years our supplies of cleaned rice were principally derived from Bengal; but now we get much the larger proportion from Pegu. We subjoin—

An Account of the Imports of Rice into the United Kingdom in 1867, specifying the Quantities brought from each Country.

Total	2,778,754

During the same year 44,943 qrs. of rough rice were imported, of which  $\frac{2}{3}$  came from India. We make these imports from being in possession of a method of detaching the husk, which throws out the grain clean and unbroken. Carolina rice sells in London at from 35s. 8d. per cwt. when Bengal rice sells at from 14s. 7d. per do.

The duty on foreign rice was formerly quite excessive, having amounted, previously to 1842, to 15s. per cwt., while that charged on rice from a British possession was only 1s. In 1842 Sir Robert Peel reduced the former to 6s. 3d. and the

latter to 6s. 3d.; and in 1846 he further reduced the duty on foreign rice to 1s., and that on colonial do. to 6d. per cwt. In 1853 Mr. Gladstone equalised the duties at 4d. per cwt. A like course was followed with the duty on rough rice, which in 1842 amounted to 20s. per qr. on that from a foreign country, and to only 1d. per do. on that from a colony. Sir Robert Peel reduced the former in 1842 to 7s. 4d., and in 1846 to 1s.: it was afterwards fixed at 9d. per qr. without reference to its origin. The duties on both were abolished in 1860.

In consequence of the reduction and eventual abolition of the duties, the consumption of rice has been greatly increased; formerly it rarely exceeded (except in 1847, when it was largely imported into Ireland) 550,000 cwt., whereas it amounted, at an average of 1866 and 1867, to 2,523,210 cwt. a-year, exclusive of 44,263 qrs. of rice in the husk.

**RIGA.** A city of European Russia, the capital of Livonia, on the Dvina, about 9 miles from the sea, lat. 56° 57' N., long. 21° 6' 5" E. Population in 1863, excluding garrison, 77,468.

**Harbour.**—A lighthouse has been erected on Fort Comet, on the western side of the mouth of the river. It has 2 lights: the first, elevated about 104 feet (English) above the level of the sea, may be seen under favourable circumstances at the distance of 4 leagues; and the second, lighted in 1863, may be seen at the distance of 5 miles. The bar at the mouth of the river has usually from 12 to 13 feet water; and vessels drawing more than this frequently load and unload part of their cargoes by means of lighters at Bolderaa, a small town on the west side of the river, near its mouth. There is a fairway beacou without the bar, in 5 fathoms water; and within the channel is buoyed with black and white buoys: the black being left on the right or starboard side when entering, and the white on the larboard. Vessels bound for Riga take pilots at Bolderaa, who carry them to their anchorage. No ballast is allowed to be discharged except at Poderague. Regulations as to clearing &c. similar to those at Petersburg. (Coulter *Sur les Phares*, 2nd ed.; *Regulations of Russian Authorities*; *Admiralty List*, 1869.)

**Trade.**—Owing to its advantageous situation near the mouth of a great navigable river, the trade of Riga is very extensive; being, of the Russian towns on the Baltic, in this respect second only to Petersburg. The trade is chiefly carried on by foreign merchants, particularly by the English. The principal exports are flax and hemp, linseed and hemp-seed, timber, corn, tobacco, hides, wool, tallow &c.; the imports are salt, sugar, coffee, and groceries of all sorts, herrings, indigo, dye-woods, cotton and cotton twist, silks, hardware, iron, coals, wines &c.

The mast trade is extensive. The burghers of Riga send persons who are called mast brokers into the provinces to mark the trees, which are purchased standing. They grow mostly in the districts which border on the Dnieper, are sent up that river to a landing-place, transported 80 versts to the Duna, when, being formed into rafts of from 50 to 200 pieces, they descend the stream to Riga. The tree which produces the largest masts is the Scotch fir. Those pieces which are from 18 to 25 inches in diameter are called masts; under those dimensions, spars; or, in English, Norway masts, because Norway exports no trees more than 18 inches in diameter. Great skill is required in distinguishing those masts that are sound from those which are in the least internally decayed. They are usually from 70 to 80 feet in length.

846 he further reduced 1a., and that on colonial 53 Mr. Gialstone equal- per cwt. A like course city on rough rice, which . per qr. on that from a only 1d. per do, on that ert. Peel reduced the for- and in 1816 to 1a.: it was per qr. without referen s on both were abolished

These pieces which are ches in diameter are called masts: mensions, spars; or, in English, because Norway exports no trees inches in diameter. Great skill is distinguishing those masts that are se which are in the least internally y are usually from 70 to 80 feet in

The best kind of flax shipped from Riga is grown in White Russia, and is called Drunna rakitzer; its colour is very white, and the threads long, fine, and loose, but it has sometimes black spots; the next quality, coming from the province of Troekie in Lithuania, is called Lithuanian rakitzer, and is very little inferior to Drunna, but its colour is a little brown; of this kind the best sort is Thiesenhausen. The best kind of Courland flax shipped from Riga is Marienburg; that grown in Livonia is inferior. There are two kinds of linseed: that of the last crop, which is used for sowing; and that of former years, for crushing. To prevent deception, the year of its growth is stamped on the barrel by sworn inspectors (*brachers*). Hemp-seed is mostly shipped for Holland. Riga wheat is inferior to that of Dantzic. Two descriptions are shipped—one the growth of Russia, the other of Courland; the last is the best, being larger-bodied and of a brighter colour than the Russian; still, however, it makes but indifferent flour. Oats are of a good quality, and are largely exported; peas are also occasionally exported.

In shipping masts, the rest of the cargo generally consists of deals and waincot logs: the latter are much exported to England, and are very superior.

Money.—For the moneys of Riga, see PETERSBURG.

*Weights and Measures.*—The commercial pound is divided into 2 marcs, or 32 loths; and also into halves, quarters &c. It contains 6,452 English grains. Hence 100 lb. of Riga = 92.17 lb. avoirdupois = 41.8 kilog. = 86.32 lb. of Hamburg = 846 lb. of Amsterdam. The lispond = 20 lb.; the shippound = 20 lisponds.

The loof is the measure for grain: 48 loofs = 1 last of wheat, barley, or linseed; 45 loofs = 1 last of rye; and 60 loofs = 1 last of oats, malt,

and beans. According to Kelly, the loof = 1.9375 Winchester bushel; and consequently the last of wheat = 11.625 quarters. Neikenbrecher does not value the last quite so high as Kelly.

The fuder, the measure for liquids, is divided into 4 ahms, 24 ankers, 120 quarts, or 720 stoofs. The anker = 10 English wine gallons.

The foot of Riga = 10.79 English inches. The ell = 2 feet; the clafter = 6 feet.

The number of British vessels of all classes arriving at this port during the years from 1861 to 1867 inclusive was as follows:—

Years	Vessels	Tonnage	Crews
1861	350	65,607	2,851
1862	361	70,132	3,013
1863	303	74,845	3,111
1864	583	113,590	4,780
1865	495	105,278	4,340
1866	473	106,615	4,215
1867	431	101,782	—

The number of vessels of all nations arriving at this port during the years from 1861 to 1867 inclusive has been as follows:—

Years	Vessels	Tonnage
1861	1,870	285,990
1862	1,761	290,592
1863	1,711	285,385
1864	1,950	338,348
1865	2,508	432,808
1866	2,387	429,575
1867	2,069	375,792

*Value of Export Trade of Riga 1861-67.*

Year	Value	Year	Value
1861	31,303,300 silv. roub.	1865	31,466,250
1862	35,907,410	1866	36,477,890
1863	42,457,965	1867	47,249,700
1864	25,395,000		

The total import trade of Riga during the year 1867 shows a marked increase as compared with 1866, the figures being respectively 7,673,600 silver roubles in 1866, and 12,958,800 silver roubles in 1867.

The quality of timber denominated 'crown fir timber' has lately become very scarce, so that the greater part of the Riga exports consists of the second quality, or what is called 'Verschiffungs brack timber'. There is no essential difference in the quality of crown timber and timber of the second quality, except that the latter is knottier than the former.

By decision of the Council of the Empire, of April 10 (22), 1867:—

I. Seven descriptions of taxes borne by the commerce and navigation of Riga were abolished.

II. On account of the tax for the benefit of the city of Riga, only  $\frac{1}{2}$  per cent. to be levied from January 1, 1868, on all goods imported and exported, the town taking upon itself to keep up the mercantile courts and police of Riga; to increase the police and fire brigade as may be necessary.

III. The commerce and navigation of Riga will continue to pay the following taxes:—

1. For the Benefit of the Crown.—(1) A lastage duty of 5 copecks per last on all vessels

measuring 10 lasts and upwards; (2) A tax of 90 copecks for the stamped paper used for ship's pass, and 15 copecks on the declaration of the captain; (3) A tax of  $\frac{1}{2}$  per cent. on the value of merchandise descending the Duna by river carriage.

2. Taxes levied to be administered by the Exchange Committee.—(1) The second  $\frac{1}{2}$  per cent. on the value of imports and exports, on the condition that the ministers of the interior and finance shall watch that the amount received shall be especially applied to the payment of the interest, and to extinguish the loans raised by the body of merchants for the construction of the Winter Harbour, the building and furnishing of the Exchange, or for other expenses directly beneficial to commerce and navigation; (2) The third and fourth taxes of  $\frac{1}{2}$  per cent., as well as that of  $\frac{1}{2}$  per cent. on the value of imports and exports, under the condition that the local authorities shall report to the minister of the interior relative to the possibility of suppressing these three taxes, so soon

2. That part of the provisions of April 26, July 20, and November 15, 1844, which has not been altered by decree continues in force.

**Money, Weights, and Measures.**—Payments are made in paper money, which has been over-issued, and is excessively depreciated. But the average rate of exchange may be assumed at about 2s. 3d. sterling per milreis. A new copper coinage was introduced in 1868.

**Weights and Measures.**

The Libra	= 1.012 lb. avoird.
Arroba	= 32.76 "
Quintal	= 139.54 "
Alquilete (of Rio)	= 1 Imp. bush.
" or Cantar	= 1.82 Imp. gal.

1862	317,051,720	1861-		1862-

Brazilians are great eaters of sugar, and it is wasted in the interior. Hence the magnitude of the exports is not influenced merely by the state of the crops, but also by the prices in the United States. When they are high a larger proportion of the produce is exported.

The Bank of Brazil has its head-quarters in Rio, and it has power to issue notes; and all disputed property belonging to dead or absent parties is

entrusted to its keeping. It charges 2 per cent. for its trouble.

The principal article of import consists of cotton goods, the value of which amounts to about a third part of the total value of the imports. Next to cottons are woollen, linen, and silk manufactures, wines, jewellery, and ironmongery; flour, meat, fish, butter, and other articles of provision; spirits, salt, earthenware, paper, and a host of other articles.

The exports have increased materially within the last few years; notwithstanding labour has become scarcer and dearer, in consequence of the greatly increased difficulties thrown in the way of the importation of slaves. The exports of cotton were, for a lengthened period, nearly stationary. They are now, however, pretty extensive, and supplied us in 1866 with 611,808 cwt. Hides are a very important article of export.

**Value of Imports (including Bullion and Specie) into Brazil from various Countries, in each of the Years 1863-4, 1864-5, and 1865-6.**

**Port Regulations.**—The captain of every ship entering Rio, or any other port of Brazil, is ordered by a law enacted in 1836—

1. To go directly with his vessel from the entrance of the harbour to the anchorage ground in Franquia; and if, on account of the tide, contrary wind, or any other just cause, he should be

compelled to come to anchor, and shall remain anchored for 12 hours after said hindrances are removed (except in case of being quarantined), he shall pay a fine of 100,000 reis, and shall be compelled, by the fort, or by a Government vessel of war, whichever may be nearest, to proceed immediately to the Franquia anchoring ground.

2. He shall not suffer any kind of vessel to board him, nor any person to come on board or leave his vessel, before he has been visited from the custom-house, excepting only the pilot, health officer, the head officer at the entrance, when there is one, and in the case of shipwreck, or for the saving of lives.

3. Even after the custom-house visit on arrival, and until the vessel is discharged, he shall allow no person to come on board without a written permission from the inspector of the customs; and this permission shall be given in the following cases, viz. —

(a) To allow the buyers of goods to go on board to examine the cargo they wish to purchase, when sufficient specimens cannot be seen on shore.

(b) To workmen or labourers necessary to put the cargo in order, taking care to have them examined when they go on board and return. In case of the infraction of the above regulations, a fine shall be imposed on him from 100,000 to 200,000 reis for every vessel he allows to board him, and of 500,000 for each person who shall enter or leave his vessel without license, unless he be a passenger or belonging to the crew; and every other person who goes on board or leaves the vessel shall pay 100,000 reis fine, and be kept in custody until payment is made. The one-third part of these fines shall be divided amongst the watchmen or military who shall have taken up the offender.

4. He shall deliver to the *guarda-mor* (chief customs officer), when he makes his visit on arrival, his passport and cargo-book.

5. He shall deliver to the commander of the guard boat without the port, if he be there, or at the Franquia, if he be there, the manifest as described below.

6. He shall enter at the custom-house, within 24 hours after the *guarda-mor* has been on board, not counting the days on which the custom-house is shut, and present himself to the inspector, and swear, or affirm, that he has not on board of his vessel any merchandise other than what is described in the manifest he has delivered, and that he has no further declaration to make; and if he do not enter within the 24 hours, he shall pay 100,000 reis for each day's delay additional.

7. If he shall detain his vessel at either of the anchorages more than 24 hours, when he shall be directed by the *guarda-mor*, or his representative, to remove thence, he shall pay 100,000 reis for every day he delays.

8. He shall discharge no part of his cargo but by an order in writing from the inspector; and if he land any without such order, he shall pay 100,000 reis for each package so landed.

9. He shall give notice to the officer attending the discharge of the vessel, as soon as his cargo is discharged, that he has nothing remaining on board. If he omit to do this on the same day, so that the vessel may be immediately examined, he shall be fined 100,000 reis.

10. The master of every vessel going with a cargo to any part of the empire, must have two manifests of the cargo, exact copies of each other, exhibiting the name, class, and tonnage of the vessel; the name of the captain, whose signature must follow the date; the name of the port where the articles stated in the manifest were taken on

board; the name of the port or ports for which the vessel is destined; the marks or counter marks and numbers of the packages, and their description, as bales, cases, pipes, half-pipes, barrels, &c.; a declaration of the quantity and quality of merchandise of each package, or several similes of the same mark, and also of what is board in bulk; the names of the consignees, in order; all to be written in length, except numbers of the packages.

11. When the vessel has taken in her cargo more than one port, there must be two manifests from each port.

12. At the end of the manifest, the captain shall declare the number of passengers, whether in cabin or steerage, and the baggage for the use of each, and in addition any declaration necessary for his security; and in good faith he shall declare whether he has any package to add to the manifest, or whether any are deficient, with the cause of it, as no after declaration will relieve him of his responsibility, for he will not be exempted from the vague declarations frequently made, which do not account for deficiencies or differences.

13. The captain of any vessel bound to Brazil when he has completed his cargo in the port, shall declare the number of passengers, whether in cabin or steerage, and the baggage for the use of each, and in addition any declaration necessary for his security; and in good faith he shall declare whether he has any package to add to the manifest, or whether any are deficient, with the cause of it, as no after declaration will relieve him of his responsibility, for he will not be exempted from the vague declarations frequently made, which do not account for deficiencies or differences.

14. In those ports where there is no Brazilian consul or substitute, the manifests shall be certified by two Brazilian resident merchants; or, if there be none, by two merchants of the place; in either case, the signature to be authenticated by legal authority.

15. Should any greater quantity of goods be found on board than are stated in the manifest, or the declaration of the captain, the overplus shall be seized and divided amongst those who seize them, after paying the duties, and the captain shall pay a fine of half the value of the goods.

16. If there are any goods missing of those stated in the manifest or declaration of the captain, they shall be reputed to be concealed or smuggled, and he shall pay the value thereof to those who have discovered the deficiency, and half the value to the national treasury. These condemnations shall take place on the simple fact of there being an overplus or deficiency of goods, without further proof being required.

17. For each difference in the quality or marks of the passage, the captain shall pay 2,000 reis, although in every other respect the goods discharged may agree with the manifest.

18. The captain whose manifests are not conformable to these regulations, shall be fined from 100,000 reis to one *conto de reis*, at the will of the collector, according to the degree of culpability that shall appear, and he cannot discharge until the fine is paid.

19. In case the captain brings no manifests, he may still be allowed to discharge, by paying 5 per cent. on the value of the cargo, in addition to the usual duties.

*Franquia.*—Vessels proceeding to Brazil when it is wished to dispose of their cargoes at different ports, must clear out for 'Brazil and other ports,' or for 'Pernambuco, Bahia, Rio de Janeiro and other ports.' They are then entitled to the privilege of *Franquia*, and may land a part of their cargoes at one port, paying duties on the remainder to other ports, and proceed with the remainder to other ports. But if they clear out at one port only, they are compelled to make a complete entry, and discharge the whole of the cargo

to 7,221,731, but in 1867 to only 5,694,557. There can, however, be little doubt that they will continue progressively to augment with the increase of population and the diffusion of civilisation.

The commercial policy of Brazil is, on the whole, decidedly liberal. The duties on imports and exports have been mostly moderate, and have not been imposed more for the sake of revenue than for protection. She has made a large reduction in the tonnage duties on the foreign shipping frequenting her ports, has repealed a duty of 15 per cent. imposed in some provinces on the exportation of hides, and has evinced a desire to adopt generally a free commercial system. The repeal of the discriminating duty formerly imposed in this country on slave-grown sugar, and the equalisation of the duties on foreign and colonial sugar and coffee, while it was advantageous to ourselves, has been a great boon to Brazil, and has considerably extended her trade with the United Kingdom.

The trade of Brazil was formerly much injured by the wretched state of her currency and her finances; and though the former remains in a very unsatisfactory condition, it has latterly been, good deal improved, while her finances have been, down to the Paraguayan war, comparatively flourishing.

**Financial Condition of Brazil.**—The finances as well as the trade of the empire have been for some years past in an improving condition, and contrast most favourably with those of other South American states. For several years previous to the commencement of the long and un- satisfactory war in which she and her allies were engaged with Paraguay, there was an almost continuous increase in the revenue. In 1837 it amounted to 1,495,282*l.*, while the amount for 1868-9 is estimated at about 5,900,000*l.* This has resulted, not from any increase of taxation, but from the growing civilisation of the country, and the progressive development of its resources under a free commercial system.

It is, also, highly creditable to the Brazilian Government that they have regularly paid the interest due on the public debt of the empire, and made besides, effectual provision for its redemption. But the entire debt of the empire, which

amounted to about 12,000,000*l.* sterling in 1838, was in 1867 estimated at 47,595,318*l.*

**ROADS.** Pathways formed through the country, with more or less art and care, for facilitating the transit of individuals, carriages, &c. between different places. They are of every variety of form—from rude, narrow, rugged, and unimproved paths, carried over mountains, interrupted by every petty rivulet, and almost impracticable to any but foot passengers, to smooth, broad, and level ways, formed of solid materials, winding round or cut through mountains, and carried over swamps and rivers at an immense expense, and admitting of the easy passage of carriages of all sorts of goods.

The laying out of improved roads, and their construction, forms an important part of what is denominated the science of civil engineering. It is as it would be quite foreign to our purpose to enter into any details as to the formation of roads, we shall satisfy ourselves with laying before the reader the following statements as to their importance in a commercial point of view.

**Importance and Utility of improved Roads.** Next to the introduction of money, and weights and measures, the formation of good roads and bridges gives the greatest facility to commerce, and contributes more powerfully, perhaps, than anything else to the progress of improvement. They have been denominated national veins and arteries; and the latter are not more indispensable to the existence of individuals, than improvements in communications are to a healthy state of a nation's economy. It were vain to attempt to present in detail the various advantages derived from the easy means of communication that exist in Great Britain. There is not a single district that is indebted to others for a large part of its supplies even of some of the bulkiest commodities, besides the coals, metals, minerals, timber, &c. conveyed from one part of the empire to another by sea, immense quantities are conveyed by place to place in the interior, by roads, and every improvement effected in the means of conveyance has obviously the same effect on the cost of commodities that have to be conveyed, as an improvement in the methods which they are raised or manufactured.

Produce Exported from  
 with 1867.

about 12,000,000 sterling in 1858, estimated at 47,595,318l.

pathways formed through the country, or less art and care, for facilitating individuals, carriages, &c. between cities. They are of every variety of width, narrow, rugged, and unfenced, and almost impracticable in some places, and over mountains, interrupted by rivulets, and almost impracticable for passengers, to smooth, broad, and formed of solid materials, raised through mountains, and carried over rivers at an immense expense, and the easy passage of carriages and goods.

ing out of improved roads, and the forms an important part of what the science of civil engineering. It is quite foreign to our purpose to give any details as to the formation of roads, or satisfy ourselves with laying before the following statements as to their general commercial point of view.

**Benefit and Utility of improved Roads.**—The introduction of money, and weight, the formation of good roads, and the greatest facility to commerce, contributes more powerfully, perhaps, than any other cause, to the progress of improvement, and the latter are not more indispensable to the assistance of individuals, than the assistance of a healthy state of the country, it were vain to attempt to point out the various advantages derived from the various modes of communication that exist in the country.

There is not a single district that is not benefited by a large part of its supply of the most valuable commodities, and some of the bulkiest commodities, such as coals, metals, minerals, timber, &c. are transported from one part of the empire to another in immense quantities are conveyed to the interior, by roads, and the improvement effected in the mode of conveyance has obviously the same effect as an improvement in the method by which they are produced and manufactured.

Wherever the means of internal communication are deficient in a country, the inhabitants must unavoidably disperse themselves over the surface. Cities were originally founded by individuals congregating more, perhaps, for the sake of mutual defence and protection, than for any other cause. But in countries where good government is established, and property is secure, men resort to cities only from a sense of the advantages they afford. The scale on which business is conducted in them presents facilities that cannot be elsewhere afforded for making a fortune; and the extent to which the sub-division of employments is carried opens a field for the exercise of all sorts of talent, at the same time that it improves and perfects all sorts of arts, whether subservient to industries or scientific pursuits or to those of pleasure and dissipation. It is this that attracts the aspiring, the industrious, the gay, and the prodigal, to cities—that fills them with the best and the worst part of the species. The competition that takes place in a great town, the excitement that is constantly kept up, the collision of so many minds brought into immediate contact, and all endeavouring to outstrip each other in their respective departments, develops all the resources of the human mind, and renders a great city a perpetually radiating focus of intelligence and invention. There are, however, considerable clogs upon the continued increase of cities. The food and fuel made use of by the inhabitants, and the raw products on which their industry is to be exerted, must all come from the country; and according as the size of a city increases, the distances from which its supplies have to be brought become so much the greater, that ultimately the cost of their conveyance may be so great as to balance or exceed the peculiar advantages resulting from a residence in town. Hence the impossibility of a large or even a considerable city existing anywhere without possessing extensive means of communication either with the surrounding country, or with other countries; and hence, too, the explanation of the apparently singular fact, of almost all large cities having been founded on or near the sea, or a navigable river. In London being an inland town, 50 miles from the shore, it is abundantly certain that it could not have attained to one-third part of its present size; but the facilities afforded, by its admirable situation on the Thames, for the transportation of all sorts of produce from abroad, as well as from other parts of England, will enable her, should her commerce continue to prosper, to add to her colossal magnitude for centuries to come.

But all towns cannot be founded on the sea, or the banks of navigable rivers; and the number of those in inland situations must, in all cases, depend on their means of communicating with the surrounding country. Without our improved roads, the great inland manufacturing towns with which England is studded, such as Manchester, Leeds, Birmingham, Sheffield, Bolton, Preston &c., could not exist. They enable inhabitants to obtain the rude products of the mines almost as cheap as if they were in country villages. There is thus nothing, either to nothing, to detract from the advantage which the inventive and enterprising artisan may expect to realise from resorting to great hives of industry. And, owing to the gigantic scale on which all sorts of industry are conducted in them, the scope afforded for the employment of the most powerful machines, and the appropriation of particular sets of work to every separate process, however minute,

manufacturing industry is carried to a degree of perfection that almost exceeds belief.

The influence which the growth of a large town exercises upon agriculture is great and striking. 'In the neighbourhood,' says Paley, 'of trading towns, and in those districts which carry on a communication with the markets of trading towns, the husbandmen are busy and skilful, the peasantry laborious; the land is managed to the best advantage, and double the quantity of corn or herbage (articles which are ultimately converted into human provision) raised from it, of what the same soil yields in remoter and more neglected parts of the country. Wherever a thriving manufactory finds means to establish itself, a new vegetation springs up around it. I believe it is true, that agriculture never arrives at any considerable, much less at its highest, degree of perfection, when it is not connected with trade; that is, when the demand for the produce is not increased by the consumption of trading cities.' (*Moral Philosophy*, book vi. c. 11.)

But the fact of their being mainly conducive to the growth of cities, is not the only advantage which improved roads confer upon agriculture. Without their aid it would be impossible to carry to distant places sufficient supplies of such bulky and heavy articles as lime, manure, shells, and other manures necessary to give luxuriance to the crops of rich soils, and to render those that are poor productive. Not only, too, would inferior roads lessen the market for farm produce, and consequently the quantity raised, but a larger proportional number of horses or other cattle would be required to convey the diminished produce to market. It is plain, therefore, that good roads are both directly and indirectly a prime source of agricultural improvement; directly, by increasing the quantity and reducing the cost of manure, and by increasing the quantity and reducing the cost of conveying farm produce to market; and indirectly, by providing for the growth and indefinite extension of cities and towns, that is, of the markets for agricultural produce.

Increased speed of conveyance is one of the principal advantages that have resulted from the formation of good roads, the invention of steam packets &c. Suppose that it takes 2 days to travel by an uneven, ill-made road between any 2 places; and that, by improving the road, the journey may be accomplished in 1 day; the effect is the same as if the distance were reduced one half; and there is not only a great saving of time to travellers, but also a great saving of cost from the more speedy conveyance of commodities. This latter is a point of much more importance than is commonly supposed. It is not possible to form any correct estimate of the value of the products that are constantly in the act of being carried from place to place in Great Britain and Ireland. It is certain, however, that it is very great; and every additional facility of conveyance, by bringing such products more rapidly to their destination, and enabling them to be sooner applied to the purposes for which they are intended, renders large quantities of capital available for industrious purposes, that would otherwise be locked up.

**Mode of defraying Costs of Roads.**—Roads of one sort or other must, of course, exist in every country emerged from barbarism—but in England, the statute of the 28th of Philip and Mary, which is still in force, is the first legislative enactment in which a regular provision was made for the repair of the roads. The preamble to this statute declares, that the roads were tedious and noisome to travel on, and dangerous to passengers

and carriages: and therefore it enacts, that in every parish 2 surveyors of the highways shall be annually chosen, and the inhabitants of all parishes obliged, according to their respective ability, to provide labourers, carriages, tools &c. for four days each year, to work upon the roads, under the direction of the surveyors. This system, though in many respects exceedingly defective, was at the time justly considered a great improvement, and answered pretty well till the reign of Charles II., when, owing to the increase of carriages, particularly about London, it became necessary to adopt more efficient measures for the formation and repair of roads; and the plan of imposing tolls upon those who made use of them began then to be adopted. But this system was not carried into full effect, and placed upon a solid footing, till about 1767, when it was extended to the great roads to all parts of the country; the contributions of labour under the Act of Philip and Mary being then appropriated entirely to the cross or country roads. A money payment is now, however, very frequently made, in the case of the latter, instead of a contribution in labour.

When the plan for extending turnpike roads from the metropolis to distant parts of the country was in agitation, the counties in the neighbourhood of London petitioned Parliament against it, alleging that the remoter counties would be able, from the comparative cheapness of labour in them, to sell their produce in London at a lower rate than they could do; and that their rents would be reduced, and cultivation ruined, by the measure. Luckily this interested opposition proved ineffectual; and instead of being injurious to the counties adjoining the metropolis, the improvement of the roads has been quite as beneficial to them as to those at a distance, inasmuch as, by providing for the indefinite extension of the city, it has rendered it a far better market for their peculiar productions, than it would have been had its growth been checked; which must have been the case long ago, had the improvements in question not been made.

The plan of making and repairing roads by contributions of labour is not peculiar to England, but was at one period general all over Europe. By an Act of the Scotch Parliament, passed in 1669, all persons engaged in husbandry were obliged to labour six days each year, before or after harvest, upon the public roads: the farmers and landlords being, at the same time, obliged to furnish horses, carts &c. according to the extent of land occupied by them. The inconveniences of such a system are many and obvious. Those who get no pay for their work, and who perform it against their will, waste their time and industry; and there is, besides, a great loss incurred by the interruption of the regular pursuits of the labourer. A sense of these disadvantages led, in the early part of the reign of George III., to a commutation of the labour contribution for a money tax on land, rated according to its valuation in the cess books. This measure has been productive of the best effects. Previously to its taking place, the roads, even in the best-cultivated districts of Scotland, were in the worst possible state, whereas they are now about the very best in Europe.

A similar system has been followed on the Continent. When Turgot entered on his administration, he sent a circular letter to the road surveyors and engineers of the different provinces of France, desiring them to transmit estimates, framed on the most liberal scale, of the sums of money for which the usual repairs might be made on the old roads, and the ordinary extent of new ones constructed. The average of the estimates showed that a money

contribution of about 10,000,000 livres a-year would suffice for these objects; whereas Turgot showed, that the execution of these repairs and constructions, by contributions of forced labour, or *corvées*, cost not less than 40,000,000 livres. (Art. 'Taxation,' *Ency. Brit.*)

There is still, however, a great deal of labour performed on the cross and country roads of England under the system established by the Act of Philip and Mary. Its continuance is most probably to be ascribed to the want of any ready means for its commutation.

It is the duty of Government to furnish assistance towards the formation of roads and bridges, in parts of the country where they are necessary, and where the funds required for their formation cannot otherwise be obtained. But it is in such cases extremely desirable, in order to prevent Government from being deceived by interested representations, that those more immediately concerned in the undertaking should be bound to contribute a considerable portion of its expense. This has been done in the case of the Highland roads. Down to a very recent period, large tracts in the Highlands were quite inaccessible, and were, consequently, in a great measure shut out from all improvement; while the rugged nature of the country and the poverty of the inhabitants rendered any attempt to construct improved roads, an undertaking beyond their means. Under these circumstances, Government came forward and engaged to advance half the expense of making roads and bridges in certain districts, on condition that the landlords and others interested should advance the other half, and that the work should be executed under the direction of parliamentary commissioners and engineers. This arrangement has been highly beneficial. Through its means above 600 miles of excellent roads have been constructed; and, in consequence of the easy means of communication they afford, a spirit of improvement has been excited even in the wildest and least-frequented districts.

Adam Smith seems to have inclined to the opinion, that the roads of a country would be better attended to, and more economically managed, were they placed under the control of Government, than when they are left to be planned and superintended by private individuals. But this opinion does not seem to rest on any good foundation. It is, perhaps, true that a few of the great roads between the principal towns of a country might be better laid out by government surveyors, than by surveyors appointed by the gentlemen of the different counties through which they pass. But these great roads bear but a very small proportion to the total extent of cross and other roads with which every country either is, or should be, intersected; and, besides, it is abundantly certain, that when the formation of the great roads is left, as in Great Britain, to the care of those who, either by themselves or their tenants, have to defray the greater part of the expense of their construction and repair, they will be managed, if not with greater skill, at least with far more economy, than if they were entrusted to the agents of Government. M. Dupin has set this matter in the clearest point of view, in his remarks on the administration of the roads in France and England. In the former they are entirely under the control of Government; and the consequence is, that while there is a useless expenditure upon a few great roads, the cross roads are almost entirely neglected, and the facilities of internal intercourse are incomparably inferior to ours.

Sir Henry Parnell, who published the best treatise on road-making in the English language,

while he approves of the system of local trusts, proposes that measures should be taken for increasing the responsibility of the trustees, and that every trust should be obliged to submit its accounts to the inspection of some public board. We have no doubt that this plan would be in several respects advantageous. Perhaps, however, the object in view, in obliging trustees to submit their accounts to a public board, might be attained by the creation of local tribunals for their inspection. We should be extremely jealous of any plan, how advantageous soever in other respects, that might lead to the employment of government surveyors generally in the laying out of roads, or to any

material abridgment of the powers of the private trusts.

*Length of Roads, Cost &c.*—The total length of the different paved streets and turnpike roads in England and Wales amounts to about 20,000 miles. The expenditure by the trustees, on account of these roads, in 1866, amounted to 1,071,773*l.*; the revenue for the same year being 1,053,094*l.*; of the total expenditure, 112,078*l.* went to defray interest of debt. The length of the various cross roads and other highways, exclusive of turnpikes, is estimated at about 95,000 miles. In 1866, the expenditure on turnpike roads in Scotland was 204,907*l.*, and the revenue 213,280*l.*

*Statement extracted from the 17th General Report on the Turnpike Trusts of England and North Wales, showing the Comparative Condition of the Trusts in England and North Wales in the Year 1837, when the Highest Amount of Revenue from Tolls was received, and in 1849, 1861, and 1866 respectively.*

Years		1837	1849	1861	1866
RECEIPTS.		£	£	£	£
Tolls	-	1,509,985	1,097,482	1,038,980	945,158
Parish aid	-	44,562	27,711	30,610	51,214

Bonded debt	-	7,011,080	6,382,617	7,332,805	5,556,575
Unpaid interest	-	1,019,368	1,387,010	710,919	383,104

*Tolls.*—In fixing the rate of tolls, great care should be taken to keep them as low as possible. When they are either too much multiplied, or too high, they have a very pernicious influence. They then operate as a most oppressive and unequal tax on commerce; and obstruct that intercourse they are intended to promote. The same remark is applicable to all sorts of dock and harbour dues, lighthouse dues &c. When confined within due bounds, they cannot justly be objected to; for nothing can be fairer than that those who benefit by such increased facilities and security in the prosecution of their business should pay for them. But whenever they exceed the proper limits, they tempt the navigator to resort to ports where the charges are lower, and to direct his course through more insecure but less costly channels.

*Improvement of Roads.*—It is not easy for those accustomed to travel along the smooth and level roads by which every part of this country is now intersected, to form any accurate idea of the difficulties the traveller had to encounter a century ago. Roads were then hardly formed; and, in summer, not infrequently consisted of the bottoms of rivalets. Down to the middle of last century, most part of the goods conveyed from place to place in Scotland, at least where the distances were not very great, were carried, not by carts or wagons, but on horseback. Oatmeal, coals, turf, and even straw and hay, were conveyed in this way. At that period, and for a long time previously, single-horse traffickers (cadgers) regularly plied between different places, supplying the inhabitants with such articles as were then most in demand, as salt, fish, poultry, eggs, earthenware &c.: these were usually conveyed in sacks or baskets, suspended one on each side the horse. But in carrying goods between distant places, it was necessary to employ a cart, as all that a horse could carry on his back was not sufficient to defray the cost of a long journey. The time the carriers (of such was the name given to those who used carts)

usually required to perform their journeys seems now almost incredible. The common carrier from Selkirk to Edinburgh, *thirty-eight* miles distant, required a *fortnight* for his journey between the two places, going and returning. The road originally was among the most perilous in the whole country; a considerable extent of it lay in the bottom of that district called Gala-water, from the name of the principal stream, the channel of the water being, when not flooded, the track chosen as the most level, and easiest to travel in.

Even between the largest cities, the means of travelling were but little superior. In 1678, an agreement was made to run a coach between Edinburgh and Glasgow, a distance of 44 miles, which was to be drawn by six horses, and to perform the journey from Glasgow to Edinburgh and back again in six days. Even so late as the middle of last century, it took 1½ day for the stage coach to travel from Edinburgh to Glasgow—a journey which is now accomplished in 4½ or 5 hours.

So late as 1763, there was but one stage coach from Edinburgh to London, and it set out only once a month, taking from 12 to 14 days to perform the journey. Before the opening of the railways, by which they have been in a great measure superseded, there were, exclusive of steam packets, smacks &c., 3 or 4 coaches which set out each day from Edinburgh for London, and conversely, performing the journey in from 45 to 48 hours. (Robertson's *Rural Recol.* pp. 33—44.)

The effects of this extraordinary improvement in the means of travelling, especially since the introduction of railways, have been as striking on the manners as on the industry of all classes. The remark of Smith, that 'man is the least transportable species of luggage,' is no longer true as applied to Great Britain. During spring, the metropolis is crowded with visitors of all ranks and orders from the remotest provinces; and during summer and autumn vast numbers of the citizens are

t 10,000,000 livres a-year  
se objects; whereas Turgot  
ution of these repairs and  
ributions of forced labour, or  
than 49,000,000 livres. (Art.  
it.)  
ever, a great deal of labour  
se and country roads of Eng-  
m established by the Act of  
s continuance is most prob-  
the want of any ready means

government to furnish as-  
timation of roads and bridges  
ry where they are necessary.  
required for their formation  
obtained. But it is in such  
sirable, in order to prevent  
being deceived by interested  
those more immediately con-  
tracting should be bound to  
rable portion of its expense.  
In the case of the Highland  
very recent period, large tracts  
were quite inaccessible, and  
in a great measure shut out  
nt; while the rugged nature  
the poverty of the inhabitants  
to construct improved roads  
and their means. Under these  
nment came forward and en-  
d the expense of making roads  
in districts, on condition that  
thers interested should advance  
that the work should be ex-  
ecution of parliamentary con-  
miceers. This arrangement has  
al. Through its means above  
nt roads have been constructed;  
e of the easy means of commu-  
d, a spirit of improvement has  
in the wildest and least-fre-

ems to have inclined to the  
roads of a country would be  
and more economically man-  
aced under the control of Go-  
en they are left to be planned  
y private individuals. But  
not seem to rest on any good  
perhaps, true that a few of the  
n the principal towns of a coun-  
y laid out by government sur-  
veyors appointed by the gen-  
eral counties through which  
ese great roads bear but a very  
e total extent of cross and  
which every country either is  
ected; and, besides, it is abun-  
nt when the formation of the  
as in Great Britain, to the care  
y themselves or their tenants.  
greater part of the expense of  
and repair, they will be man-  
greater skill, at least with far  
n if they were entrusted to the  
ment. M. Dupin has set this  
rest point of view, in his re-  
istration of the roads in France

the former they are entirely  
of Government; and the conse-  
e there is a useless expenditure  
oads, the cross roads are almost  
and the facilities of internal  
mparably inferior to ours.  
nell, who published the best  
aking in the English language

spread over the country. Hence it is, that manners, as well as prices, are reduced nearly to the same standard. A respectable family in Penzance or Inverness live very much in the same way as a respectable family in London. Peculiarities of all sorts have disappeared; everything is, as it were, brought to a level; the fashions and opinions of the metropolis are immediately diffused over every part of the country, while those which originate in the latter powerfully influence the former.

ROPE consists of hemp, hair &c. spun into thick yarn, of which several strings are twisted together by means of a wheel. When made very small, it is called a cord; and when very thick, a cable. All the different kinds of this manufacture, from a fishing-line, or whip-cord, to the cable of a first-rate ship of war, go by the general name of cordage. [CABLE.]

ROSES (OIL, ESSENCE, or ATTAR OF). An oil obtained by distilling the leaves of damask roses. It is limpid, of a light orange colour, and has an extremely grateful and powerful perfume. This, which is the most expensive article of Oriental luxury, used to be principally made at Tunis and Ghazipore in India. But though it be still very extensively produced at these places, and more especially at the latter, what may be called the foreign demand for the oil is now almost wholly supplied by the districts of Eski Zara and Hassanlik in Bulgaria. There the culture of roses is carried on upon a very large scale. Inasmuch, however, as it is said to require about 300,000 roses to yield an ounce of oil, the quantity produced does not exceed 4,500 lb. in a good and 3,000 lb. in an ordinary year. The genuine article fetches an enormous price; and is in consequence very generally, or rather, we should say, uniformly adulterated. When the adulteration is effected by means of the oil of geraniums and other fine volatile oils, the fraud is not easily detected except by connoisseurs, unless the foreign matter be in excess. Sometimes it is alleged that attar of roses has been sold as genuine when above 80 per cent. of other oils was mixed up with it. That which is hawked about the streets of Constantinople and Smyrna is seldom anything better than olive oil scented with roses. Some of the more expert dealers in the article will tell within 2 per cent. the foreign oil in any parcel given them to examine. The value of the exports of this curious product from Turkey has been estimated at from 400,000 to 500,000 dollars a-year. (Blanqui, *Voyage en Bulgarie*, p. 230; Hunt's *Commercial Magazine*.)

ROSEWOOD (Ger. rosenholz; Fr. bois de rose, de Rhode; Ital. legno di rosa; Span. leño de rosa; Port. pau de rosa) is produced in Brazil; the Canary Islands; in Siam, whence it is pretty largely exported by the Chinese; and in other places. It is in the highest esteem as a fancy wood. The width of the log imported into this country averages about 22 inches, so that it must be the produce of a large tree. Rosewood has a slightly bitterish, somewhat pungent, balsamic taste, and fragrant smell, whence its name. It should be chosen sound, heavy, of the deepest colour, in the largest pieces that can be procured, and of the most irregular knotty grain. The small, light-coloured and large shivered pieces should be rejected. The more distinct the darker parts are from the purple red, which forms the ground, the more is the wood esteemed. It is usually cut into veneers of nine to an inch. (Milburn's *Orient. Com.*; &c.)

Rosewood, which is one of the dearest as well as most beautiful of the fancy woods, is principally

used in veneering. Its consumption has increased from about 277 tons in 1822, to 558 in 1867. This increase is principally owing to the abolition of the duties. These, after being reduced in 1826 from 10*l.* to 6*l.* per ton, and in 1842 to 1*l.*, were repealed in 1846. But 1*s.* per ton having been imposed on its import in 1860, this tax was abolished in 1866. The price varies from 9*l.* 17*s.* 6*d.* to 10*l.* 12*s.* 6*d.* per ton.

ROSIN. This substance is obtained from different species of fir; as the *Pinus abies*, *sylvestris*, *larix*, *balsamea*. It is well known that a resinous juice exudes from the *Pinus sylvestris*, or common Scotch fir, which hardens into tears. The same exudation appears in the *Pinus abies*, or spruce fir. These tears constitute the substance called *thus*, or frankincense. When a portion of the bark is stripped off these trees, a liquid juice flows out, which gradually hardens. The juice has obtained different names, according to the plant from which it comes. The *Pinus sylvestris* yields common turpentine; the *larix*, Venice turpentine [TURPENTINE]; the *balsamea*, balsam of Canada [BALSAM] &c. All these juices, which are commonly distinguished by the name of turpentine, are considered as composed of two ingredients; namely, oil of turpentine, and rosin. When the turpentine is distilled, the oil comes over, and the rosin remains behind. When the distillation is continued to dryness, the residuum is known by the name of common rosin or *colophonium*; but when water is mixed with it while yet fluid, and incorporated by violent agitation, the mass is called *yellow rosin*. During winter, the wounds made in the fir trees become incrustated with a white brittle substance, called *barras* or *galipot*, consisting of rosin united to a small portion of oil. The yellow rosin, made by melting and agitating this substance in water, is preferred for most purposes, because it is more ductile, owing, probably, to its still containing some oil. The uses of rosin are numerous and well known. (Thomson's *Chemistry*.)

In 1867 we imported, chiefly from the United States and France, 696,117 cwt. of rosin valued at 371,770*l.*; the average prices being from 10*l.* to 11*s.* per cwt.

ROSTOCK. Long one of the Hanse towns and now the principal commercial city of the Grand Duchy of Mecklenburg-Schwerin, on the Warnow, about 9 miles above where it falls into the Baltic, lat. 54° N., long. 12° 12' E. Population, in 1864, 26,396. A large fair for merchandise is annually held at Whitsuntide; and there are wool fairs at other seasons of the year.

The outport of Rostock is at Warnemünde, at the mouth of the Warnow. The depth of water at the latter varies from 10½ to 12 feet; but at the end of the west pier it varies from 12 to 14 feet. In the river from Warnemünde up to Rostock there is usually from 8 to 9 feet; so that vessel drawing more than this must be lightened to get up the latter. Rostock has a good harbour and commodious quays.

*Money*.—Rostock and all Mecklenburg reckon by six-dollars new, two-thirds of 48 schillings. The six-dollar contains 199·1 grains pure silver, and is worth nearly 2*s.* 4*d.* (2*s.* 3*8d.*) sterling.

*Weights*.—The commercial weights are the same as those of HAMBURG. There are, however, other weights, introduced in 1757, which are 5 per cent. heavier than the above. They are principally used in the trade with Russia.

*Measures*.—The Rostock foot = 11·38 Eng. inches. The ell = 2 feet. The last contains 56 scheffels; the last used in the measuring of oats = 14½ imp. quarters = 42 hectolitres; the last

used in the measuring of other grain = 14 imp. quarters or 37.3 hectolitres. (Kelly's *Cambiat.*) We antijoin an account of the quantities and

values of the principal articles imported from Meeklenburg Schwerin into the United Kingdom during each of the 4 years ending with 1867.

Principal and other Articles	Quantities				Computed Real Value			
	1864	1865	1866	1867	1864	1865	1866	1867
Bones of animals and fish (except whalebone) - tons	95	95	..	196	£ 419	£ 392	£ ..	£ 387
Corn wheat - cwt.	669,791	617,685	733,571	651,884	331,936	337,413	459,810	490,279
Barley - ..	1,760	4,610	4,689	..	350	830	1,433	..
Other kinds of corn and grain - cwt.	4,465	5,450	2,183	29,833	1,714	1,371	959	13,156
Oil-seed cake - tons	516	321	961	185	4,993	2,199	1,810	1,480
Seeds, rape - qrs.	..	..	9,455	..	..	..	6,521	..
All other articles - value	..	..	..	..	4,428	2,775	961	2,687
Total - ..	..	..	..	..	310,198	315,109	165,666	308,510

The value of the total direct exports from this country to Meeklenburg, though increasing, is much less considerable, having been in 1867 90,858*l.*

**Imports.**—The principal articles of import are refined sugar, coffee, and other colonial products; cottons, woollens; with iron and hardware, coal, earthenware, salt, horses &c. from England; hemp, flax, tallow, oil, sail-cloth &c. from Russia; alum, deals, timber, lime, tar &c. from Sweden; herrings and fish oil from Norway; wine, brandy, molasses, drugs &c. from France; with rice, rum, groceries &c. from Copenhagen and Hamburg. The total value of the imports by sea may be estimated at about 300,000*l.*

**Exports.**—These consist chiefly of very good red wheat, with smaller quantities of barley, peas, rapeseed, and oats; wool, rags of a superior quality, oil cake, rape oil, bones &c. At an average the value of the exports may be estimated at 600,000*l.*

**Shipping.**—The port of Rostock had, in January 1868, 390 ships, 376 of which measured 43,775 lasts or 149,320 tons. These trade with most European nations, the United States, and Brazil. At the beginning of the same year Wismar had 57 ships, of which 53 measured 6,502 lasts or 12,506 tons.

**Port Charges.**—These on a vessel of 100 tons burden are as follow, viz. :—

	Privileged		Not Privileged	
	rix dol.	sch.	rix-dol.	sch.
Inward with cargo -	10	2	10	2
Outward ditto -	25	4	2	6
Inward in ballast -	12	6	12	6
Outward ditto -	12	6	21	10
Ditto without either -	17	32	25	42

**Duties.**—Previous to the annexation of Meeklenburg to the Prussian Customs Union, these were extremely moderate. On most imported articles they amounted to only 3 per cent. ad valorem. An export duty of about 5*d.* per quarter was charged on corn, and of about 4*s.* 8*d.* per bushel on wine. Wool was not subject to any duty on export. Goods imported in vessels not privileged paid 50 per cent. additional on the above duties; that is, they paid 4½ ins. end of 3 per cent. ad valorem. For existing duties see ZOLLVEREIN.

**Wisnar**, the second sea-port town of Meeklenburg, at the confluence of the river Stor with the sea, in lat. 53° 53' 5" N., long. 11° 27' 7" E. Population 13,133 in 1864. The harbour of Wisnar is commodious and safe, being nearly landlocked by the islands of Poel and Walfisch. Close to the town there is from 8 to 8½ feet water; in the inner roads there is from 12 to 13 feet; and in the outer from 13 to 20 feet. The port charges on a native or privileged vessel of 100 tons amount to about 30 rix-dollars. The articles of import and export are the same at Wisnar as at Ros-

tock; but owing to the proximity of Lubeck, from which Wismar is not more than 27 miles distant, her foreign trade is comparatively limited.

**General Remarks on the Trade of the Duchies.**—Meeklenburg is essentially an agricultural, wool-growing, grazing, and breeding country. In some places it is sandy and barren; but it is for the most part fertile, and the crops and pastures are both luxuriant. Having few manufactures, her imports necessarily consist principally, as already stated, of manufactured goods, and her exports of raw produce. Owing to the circumstance of the south-western part of the province being bounded by the Elbe, and approaching to within 30 miles of Hamburg, most of the manufactured goods, as well as a large proportion of the colonial products used by the population (560,123 in 1867), are imported by way of Hamburg. Hence, in Meeklenburg, as in Prussia, the direct foreign trade carried on by the sea frontier forms but a limited part of the entire trade of the country. It is impossible, however, to form any precise estimate of what the latter may amount to. Probably there was no European country so little fettered by customs regulations as Meeklenburg, down to its incorporation in the Zollverein. The duties on articles imported by sea amounted only, as already stated, to about 3 per cent. ad valorem; and those entering by the land frontier were subject merely to a trifling charge, on account of toll, of which we have not seen any account. It is impossible, indeed, that any commercial system could be bottomed on more liberal principles; and this enlightened policy, and her situation near the mouth of the Elbe, and on the western frontier of the Prussian League or Zollverein, gave to Meeklenburg far greater importance, as a commercial state, than was indicated by the amount of her population, or her internal consumption.

**ROTTERDAM**, on the north bank of the Maese, in lat. 51° 55' 19" N., long. 4° 29' 14" E. Population, December 31, 1863, 112,728. Rotterdam is the second commercial city of Holland. It is more advantageously situated than Amsterdam; being nearer the sea, and the canals which intersect it are so deep as to admit of the largest vessels coming up to the quays and warehouses of the merchants. Its commerce, during the last 25 years, has increased more rapidly than that of any town in Holland. The exports and imports are similar to those of Amsterdam. The white Zealand wheat shipped here is of a peculiarly fine quality; and it is the best market for madder and geneva. Our imports of madder from Holland in 1867 amounted to 20,244 cwt., most part of which came from Rotterdam. [Madder.] Geneva is sold by the aam; but it used, for the convenience of smuggling to England, to be divided into ankers and ½ ankers. The legitimate imports of

he Rostock foot = 11-38 Eng. = 2 feet. The last contains 95 t used in the measuring of oats rters = 42 hectolitres: the last

geneva from Holland in 1867 amounted to 237,505 gallons. Rotterdam has a regular and frequent intercourse, by means of steamers, with London, Liverpool, Hull, Leith, Havre, Hamburg &c.

N.B.—The channel from the sea to Rotterdam is exhibited in the chart of the Dutch coast in the map of Europe in this work.

The works to improve the sea entrance for Rotterdam, carried out on Government account, were started in 1853. They are estimated to cost 6,300,000 flor. since 1853, 2,700,000 flor. have been spent. The works are to be finished this year (1869).

*Monies, Weights, and Measures.*—See the article AMSTERDAM, for an account of the current monies, weights, and measures of Holland.

Two different commercial lbs. were formerly used at Rotterdam: one was the Amsterdam weight, 100 lb. of which = 108.93 lb. avoirdupois; the other, used by retailers, was 5 per cent. lighter, 100 lb. of it being = 103.48 lb. avoirdupois.

The Rotterdam last of corn = 10.642 Winchester bushels.

The nam = 40 English wine gallons very nearly. A hogshead of flax-seed contains from  $\frac{7}{8}$  to 8 Winchester bushels. Rock salt is sold per great hundred of 404 maaten, containing from 21 to 22 tons. Coals per load =  $\frac{1}{2}$  a chaldron of Newcastle.

The liquid measures were divided in the same manner as at Amsterdam, but were larger; thus, 100 stoops of Rotterdam were = 67  $\frac{1}{2}$  English wine gallons. Brandies were sold per 30 vtiels; whale oil per 90 stoops; vegetable oils per 300 stoops.

The ell is the same as at Amsterdam. 100 feet of Rotterdam = 109  $\frac{1}{2}$  feet of Amsterdam, or 102 English feet.

We borrow from Sir R. F. Turing's *Consular Report* of April 29, 1868, the following account of the imports and stock of the principal articles of commerce at Rotterdam during the years 1865, 1866, and 1867.

With the exception of the shipping interest, the trade of Rotterdam, and of Holland generally, is now, on the average of years, in a comparatively flourishing state. The judicious management of the Netherlands Bank, the only establishment in the country authorised to issue notes, and the prudent conduct of the merchants, caused her to be comparatively little affected by the crises of 1857 and 1866, though she suffered in 1866 and 1867 by the stagnation consequent on the war in Germany and the commercial crisis. The depressed state of the shipping interest in particular is a consequence partly of the extremely injudicious encouragement given by Government to the trading company, but far more to that mania for

ship-building which prevailed for some years in Holland, as it did here and in the United States; hence there is everywhere a glut of shipping; and it is idle to seek, in want of reciprocity, or anything else than this, a reason for the low rate of freight, and the inadequate demand for shipping, so universal during the last two or three years. On January 1, 1867, the total Netherlands mercantile marine comprised 2,178 ships of 270,042 tons (*Report* of Mr. Secretary of Legation Ward, of February 15, 1867). It may be worth while to mention that the iron steamers built here and at Amsterdam are said to be quite equal to the best of those built on the Clyde and the Thames. For a detailed account of the trade of the United Kingdom with Holland down to 1865, see AMSTERDAM.

By way of supplement we add a statement of the value of our imports from and total exports to Holland in 1866 and 1867:—

	Imports	Exports
1866	£11,768,915	£14,877,755
1867	10,522,328	15,918,891

In the first ten months of 1868, Holland imported from Java 84,261,000 pounds of raw sugar, 52,213,000 pounds of coffee, 12,103,000 pounds of rice, and 1,586,000 pounds of tobacco, showing a decrease in her supplies from that colony in all these items, except sugar and rice.

RUBY. A precious stone, very highly esteemed; but under this name a variety of minerals have not unfrequently been sold, which differ essentially in their characters.

The *Oriental Ruby* is, in fact, a red variety of the sapphire. When perfect, its colour is a cochineal red, presenting a richness of hue the most

wine gallons very nearly, and contains from 7½ to 8 oz of salt is sold per great cask containing from 21 to 22 cwt a chaldron of New-

prevailed for some years in the United States, everywhere a glut of shipping; but, in want of reciprocity, or this, a reason for the low rate inadequate demand for shipping the last two or three years, 1, 1867, the total Netherlands comprised 2,178 ships of 270,012 tons. Secretary of Legation Ward, U.S. It may be worth while to know steamers built here and sent to be quite equal to the best of the Clyde and the Thames. The decline of the trade of the United Kingdom down to 1865, see

ment we add a statement of exports from and total exports and 1867—

Imports	Exports
£11,768,913	£14,725,133
10,822,328	11,018,251

months of 1868, Holland imported 4,261,000 pounds of raw sugar, coffee, 12,103,000 pounds of rice, and tobacco, showing a decrease from that colony in all these articles and rice.

is stone, very highly esteemed; and a variety of minerals have been sold, which differ essentially

by is, in fact, a red variety of iron perfect, its colour is a cochineal richness of hue the most

exquisite and unrivalled; it is, however, in general, more or less pale. The blue variety, or sapphire, is frequently met with; but the most valuable is that in particular shade called by the jewellers the pigeon's blood, which is a pure deep rich red, without any admixture of blue or yellow. A ruby of 4 carats is worth from 4000. to 4500. It is harder than any other mineral, except the diamond. Easily frangible. Specific gravity from 3.916 to 4.283. Infusible before the blowpipe. Oriental rubies of 10 carats are extremely rare and valuable. One of 22 grains has been sold for 1500. Rubies in lots, Indian cut, or small sizes, and of different qualities, are at all times to be had, and sell at from 15s. to 65s. a carat; but a perfect stone of a carat, or 6 grains, may be deemed rare, and falls little short of the value of the diamond; nay, in some cases, rubies of 2, 3, or 4 carats, if very fine, are much scarcer, and even more valuable, than diamonds of equal weight. The finest ruby in England, or perhaps in Europe, was in the collection of the late Mr. Hope, the author of 'Amastalus.'

There are two other stones resembling the ruby, called the *Spinel* and *Baltis* rubies, but Mr. Emanuel states that they are stones of an entirely different nature and form of crystallisation. He adds that the terms ruby and carbuncle were in ancient times applied indiscriminately to all red stones. Its colour is a fine full carmine or rose red, but it never presents that rich mellow tinge attending the Oriental ruby. It is also inferior to the latter in hardness and specific gravity. Stones of 3 carats and upwards are rare and valuable.

The so-called *Baltis Ruby* is a pale variety of the *Spinel*. It varies in colour from light red to yellowish red. Though not so rare as the *Spinel*, it is by no means common. It is much admired for its agreeable tinge of colour; and, when pure and perfect, fetches a high price, though considerably less than the other varieties.

Rubies are not found in any considerable quantity except in Ava, and the very finest are Burmese. Hence, one of the titles of the King of Barmah is Lord of the Rubies. [SAPPHIRE.] (Mawe On Diamonds, 2nd ed., pp. 90, 101; Emanuel On Precious Stones, pp. 104-7; Thomson's Chemistry.)

RUM. A well known and highly esteemed spirituous liquor imported from the West Indies, of which it forms one of the staple products. It is obtained by means of fermentation and distillation, from molasses, the refuse of the cane juice, and portions of the cane, after the sugar has been extracted. The flavour and taste peculiar to rum are derived from the essential oils carried over in distillation. When the distillation has been carefully performed, the spirit contains so large a quantity of the grosser and less volatile part of the oil as to be unfit for use till it has attained a considerable age. When it is well rectified, it mellows much sooner. Rum of a brownish transparent colour, smooth oily taste, strong body and consistence, good age, and well kept, is the best. That which is clear and limpid, and has a hot pungent taste, is either too new, or mixed with other spirits. Jamaica rum is the first in point of quality; the Leeward Island rum, as it is called, being always inferior to it, in flavour, strength, and value. The price of the latter is usually 20 per cent. below that of the former. We import almost all our rum in puncheons, containing from 81 to 90 gallons each. It is customary, in some of the West India islands, to put sliced pine-apples in puncheons of rum; this gives the spirit the

flavour of the fruit; and hence the designation, *pine-apple rum*.

Rum is also produced in and imported from the Mauritius and the East Indies. But that of the latter is more nearly allied to arrack than to genuine rum.

Rum is said to be much adulterated by the retail dealers in England, sometimes with corn spirit; but if done with molasses spirit, the tastes of both are so nearly allied, that the cheat is not easily discovered.

*Consumption of, and Duties upon, Rum &c.*—The following tables show the quantities of rum consumed in the United Kingdom at different periods since 1824, the rates of duty charged upon it, and the produce of the duties.

*Account, stated in Imperial Proof Gallons, of the Rum annually entered for Home Consumption in the United Kingdom, from 1824 to 1842 and 1850 to 1867 both inclusive, with the Rates of Duty payable thereon, and the Produce of the Duties.*

Though rum has not been so much over-taxed as brandy, geneva, and wine, still it is pretty obvious that, even in its case, taxation was carried beyond its proper limits. During the 3 years ending with 1802, when the duty in Great Britain was about 9s. per gallon, and in Ireland 6s. 8½d., the consumption of the United Kingdom amounted to 3,150,000 gallons a-year; while, notwithstanding the great increase of population, during the 3 years ending with 1823, when the duty in Great Britain was 13s. 11½d. per gallon, and in Ireland 12s. 8½d., the annual consumption amounted to only 2,307,000 gallons. The reduction of the duty in 1826 to 8s. 6d. increased the consumption from about 2,500,000 to about 3,500,000 gallons.

The falling off in the consumption in 1839 and the immediately subsequent years was not owing to the trifling addition of 4d. per gallon then made to the duty, but to the scarcity and high price of rum itself.

From 1800 down to 1813, the duties on rum in Ireland were much lower than in Britain, and the

consumption in the former appears then to have been much greater than afterwards, when the duties were raised in Ireland to the same level as here. But though there can be no manner of doubt that the increase of duty in Ireland tended to reduce its consumption, we have no idea that it did so to anything like the extent which appears on the face of the account. The truth is, that while the duty was lower in Ireland than in Britain, rum was extensively smuggled from the former into the latter; and this smuggling having ceased when the duties were equalised, the apparent, though not the real, consumption of rum in Ireland, was proportionally diminished.

In 1847 Government was induced, in compliance with the representations of the West Indians, to assimilate the duties on colonial rum to the duties on home-made spirits, which varied in the different divisions of the United Kingdom. But the facility with which clandestine distillation may be carried on in Scotland and Ireland was

the only excuse (and its validity was very doubtful) for the duty on spirits having been less than in England. No such pretence can be put forward for varying the duties on rum; and it would be in all respects quite as reasonable to reduce the duties on the brandy, tea, and sugar used in Scotland and Ireland below the English level as the duty on rum. The scheme, in fact, was neither more nor less than a clumsy, unadvised device to compensate the West Indians without appearing to do so, for some small portion of the injustice of which they have been the victims. We are glad, therefore, to have to add that from April 21, 1855, the duty on rum in Scotland was raised to the level of that in England, or 8s. 2d. per gallon; and in 1858 (from April 1) the duty on rum in Ireland was, also, raised to the same level; so that, both in respect of home and of colonial and foreign spirits, the duties are now (1869), though increased in the interval, the same in all parts of the United Kingdom. W. subjoin—

An Account of the Quantities of Rum Imported into the United Kingdom, Exported as Merchandise delivered from Ships' Stores, and for the use of the Navy or Army, with the Quantities retained for Home Consumption, the Rates of Duty chargeable thereon, and Nett Amount of Duty received, in each Year from 1813 to 1867, both inclusive.

The following were the prices of rum in bond in London, in Sept. 1868:—

Rum in bond (duty 10s. 2d. per gal.)	£ s. d.
Domestics, very fine	10 0 0
30 to 36 per ct. o. p.	9 5 0
21 28	8 10 0
Demerara proof	8 10 0
Leeward Islands, proof	7 10 0
East India, proof	7 10 0
Foreign, 6 to 10 per ct. o. p.	7 10 0
pr	7 10 0
4 under	7 10 0

Rum may not be imported unless in ships of 20 tons burden at least, and in casks or other vessels capable of containing liquids, each of such casks or other vessels being of the size or content of 20 gallons at the least, and duly reported, or in glass bottles or stone bottles not exceeding the size of three-pint bottles, and being really part of the cargo of the importing ship; and duly reported. (16 & 17 Vict. c. 107 s. 14.)

Before any rum shall be entered as being the

## S

**SABLE** (Ger. zobel; Fr. zibeline; Ital. zibellino; Russ. sohol). An animal of the weasel tribe, found in the northern parts of Asiatic Russia and America, hunted for the sake of its fur. Its colour is generally of a deep glossy brown, and sometimes of a fine glossy black, which is most esteemed. Sable skins have sometimes, though very rarely, been found yellow, and white. The finer sorts of the fur of sables are very scarce and dear; 5,159 skins, valued at 6,495*l.*, were imported into the United Kingdom in 1867, chiefly from Hamburg and Holland. [FUR TRADE.]

**SADDLES** (Fr. selles; Ger. sättei; Ital. selle; Russ. sädla; Span. sillas). Seats adapted to the horse's back, for the convenience of the rider. Those made in England are reckoned the best. Sherborne and Lynn used to be remarkable for this manufacture; but it is now principally carried on in London.

In 1867 we exported saddlery and harness (chiefly to Australia, India, and South America), valued at 219,802*l.*

**SAFFLOWER** or **BASTARD SAFFRON** (Ger. saflor, saflor; Dutch, saffloer, basterd safran; Fr. safran bâtard; Ital. zaffrone; Span. alazor, azafran bastardo; Russ. polerroi, prostoi schafra). The flower of an annual plant (*Carthamus tinctorius*, Linn.) growing in India, Egypt, America, and some of the warmer parts of Europe. It is not easily distinguished from saffron by the eye, but it has nothing of its smell or taste.

The flowers which are sometimes sold under the name of *saffranon* are the only parts employed in dyeing. They yield two sorts of colouring matter: one soluble in water, and producing a yellow of but little beauty; the other is *resinous*, and best dissolved by the fixed alkalis: it is the last which alone renders safflower valuable in dyeing; as it affords a red colour exceeding in delicacy and beauty, as it does in costliness, and which can be obtained even from cochineal, though much inferior to the latter in durability. The colour of safflower will not bear the action of soap, nor even that of the sun and air for a long time; and being very costly, it is principally employed for imitating upon silk the fine scarlet (*ponceau* of the French) and rose colours dyed with cochineal upon woollen cloth.

The fine rose colour of safflower, extracted by crystallised soda, precipitated by citric acid, then slowly dried, and ground with the purest tale, produces the beautiful *rouge* known by the name of *rouge végétale*.

Safflower should be chosen in flakes of a bright pink colour, and of a small somewhat resembling tobacco. That which is in powder, dark coloured, or oily, ought to be rejected. (Hasselquist's *Voyages*, Eng. ed. p. 352; Bancroft's *Permanent Colours*, vol. i. pp. 286-289; Milburn's *Orient. Com.*)

In 1867, 9,319 cwt. of safflower, valued at 54,469*l.*, were imported into the United Kingdom, and 6,956 cwt. exported. The duty of 1*s.* per cwt. formerly charged on its importation was repealed in 1845.

**SAFFRON** (Ger. safran; Dutch, saffraan; Ital. zafferano; Span. azafran; Fr. safran; Russ. schafra). A sort of cake, prepared from the

stigmas, with a proportion of the style, of a perennial bulbous plant (*Crocus sativus*, Linn.) cultivated to a small extent in Cambridgeshire.

It is also imported from France, Spain, and Italy; but the English, as being fresher, more genuine, and better cured, is always preferred. When good, saffron has a sweetish, powerful aromatic odour; a warm, pungent, bitterish taste; and a rich, deep orange yellow colour. It should be chosen fresh, in close, tough, compact cakes, moderately moist, and possessing in an obvious degree all the above-mentioned qualities. The being of a whitish-yellow or blackish colour indicates that it is bad, or too old. Saffron is used in medicine, and in the arts; but in this country the consumption seems to be diminishing. It is employed to colour butter and cheese, and also by painters and dyers. (*British Pharmacopæia*, 1867; Thomson's *Dispensatory*; London's *Encyc. of Agriculture*.)

In 1867 we imported 9,401 lb. of saffron, valued at 47,963*l.*, and exported 5,290 lb.

**SAGAFENUM** (Arab. sugbenij). A concrete gum resin, the produce of an unknown Persian plant. It is imported from Alexandria, Smyrna &c. It has an odour of garlic, and a hot, acid, bitterish taste. It is in agglutinated drops or masses, of an olive or brownish-yellow colour, slightly translucent, and breaking with a horny fracture. It softens and is tenacious between the fingers, melts at a low heat, and burns with a crackling noise and white flame, giving out abundance of smoke, and leaving behind a light spongy charcoal. It is used only in medicine. (Thomson's *Dispensatory*.)

**SAGO** (Malay, sagu; Jav. sagu). A species of meal, the produce of a palm (*Metroxylon sagu*) indigenous to and abundant in such of the Eastern islands as produce spices, where it supplies a principal part of the farinaceous food of the inhabitants.

The tree, when at maturity, is about 30 feet high, and from 18 to 22 inches in diameter. Before the formation of the fruit, the stem consists of an external wall about 2 inches thick, the whole interior being filled up with a sort of spongy medullary matter. When the tree attains to maturity, and the fruit is formed, the stem is quite hollow. Being cut down at a proper period, the medullary part is extracted from the trunk, and reduced to a powder like sawdust. The filaments are next separated by washing. The meal is then laid to dry; and being made into cakes and baked, is eaten by the islanders. For exportation, the finest sago meal is mixed with water, and the paste rubbed into small grains of the size and form of coriander seeds. This is the species principally brought to England, for which market it should be chosen of a reddish hue and readily dissolving in hot water into a fine jelly. A process has been invented by the Chinese for refining sago, so as to give it a fine pearly lustre; and the sago so cured is in the highest estimation in all the European markets. It is a light, wholesome, nutritious food. It is sent from the islands where it is grown to Singapore, where it is granulated and bleached by the Chinese. The export trade to Europe and India is now principally

confined to that settlement. The sago palm seems to thrive on the northern coast of Sarawak. (Ainslie's *Mat. Indica*; Crawford's *East. Archip.* vol. ii. pp. 383-393, vol. iii. p. 348; Bell's *Review of the Commerce of Bengal*; *Parl. Returns*; *Consular Reports of 1864*; &c.)

Account of the Quantities of Sago Imported into and Re-exported from the United Kingdom during each Year from 1845 to 1867.

Years	Total Imports	Re-exports from United Kingdom	Quantities retained for Consumption
	cwt.	cwt.	cwt.
1845	45,213	1,278	45,908
1846	38,595	631	45,938
1847	55,165	2,705	41,129
1848	67,601	5,412	67,296
1849	83,711	5,317	72,979
1850	89,881	3,862	81,624
1851	95,565	6,006	80,918
1852	85,258	5,168	95,110
1853	91,705	2,225	81,108
1854	108,789	8,575	124,110
1855	92,800	4,512	108,499
1856	137,068	4,580	139,096
1857	139,016	10,706	134,066
1858	174,545	7,959	138,805
1859	168,805	16,272	151,810
1860	179,825	15,154	161,627
1861	159,162	7,316	172,721
1862	181,582	8,517	137,779
1863	146,081	10,016	160,334
1864	145,801	11,537	129,138
1865	118,582	7,107	157,524
1866	164,993	7,276	139,710
1867	165,122	18,472	189,407

Previously to March 10, 1845, the duty was 1s. per cwt., plus 5 per cent.; since that date to 1853 it was 6d. per cwt., and since that date 1d. per cwt.

It is seen from this table that the consumption of sago has much increased since 1845; and the increase will appear still greater if we go a little further back; for, at an average of 1820 and 1821, the consumption amounted to only about 1,800 cwt. a-year. This extraordinary increase is in part to be ascribed to the effectual reduction of the heavy duties with which sago was formerly burdened; but more, perhaps, to its being found to be a desirable article of food. It is said to be employed to some extent in the adulteration of sugar. The price of common sago varies from 8s. to 15s., while pearl sago fetches from 16s. to 16s. 10d. per cwt.; but the price is liable to great fluctuation.

**SAILS.** Coarse linen or canvas sheets attached to the masts and yards of ships, the blades of windmills &c., to intercept the wind and occasion their movement.

Sails when formerly imported, were charged with an ad valorem duty of 10 per cent. But this duty was repealed in 1853, and their importation is now free. The duty on cordage was then, also, repealed.

**SALEP.** A species of powder prepared from the dried roots of a plant of the orchis kind (*Orechis mascula*, Linn.). That which is imported from India is in white oval pieces, hard, clear, and pellucid, without smell, and tasting like tragacanth. As an article of diet, it is said to be light, bland, and nutritious. The plant thrives in England, but it is not cultivated to any extent; and very little is exported. (Ainslie's *Mat. Indica*; Milburn's *orient. Com.*)

**SALMON** (Ger. salm; Fr. saumon; Ital. salmone, sormone; Span. salmon; Russ. limga). This excellent fish is too well known to require any description. It is found only in northern seas, being unknown in the Mediterranean and other warm regions. In this country it is an article of much value and importance. It is said to be exceedingly abundant in Japan and Kamtschatka.

Salmon fisheries, Marshall observes, 'are copious and constant sources of human food; they are next to agriculture. They have, indeed, one

advantage over every other internal produce—their increase does not lessen other articles of human subsistence. The salmon does not pry on the produce of the soil, nor does it owe its size and nutritive qualities to the destruction of its compatriot tribes. It leaves its native river at an early state of growth; and going, even naturalists know not where, returns of ample size, and rich in human nourishment; exposing itself in the narrowest streams, as if nature intended it as a special boon to man. In every stage of savageness and civilisation, the salmon must have been considered as a valuable benefaction to this country.'

Such salmon as are taken in estuaries or rivers are, of course, the property of those to whom the estuaries or rivers belong, the fisheries in them frequently letting for very large sums; but of late very considerable quantities of salmon have been taken in bays and in the open sea, where the fishing is free to any one who chooses to engage in it. The London market, where the consumption is immense, has been, since 1790, principally supplied from the Scotch rivers. The Tweed fishery is the first in point of magnitude of any in the kingdom; the take is sometimes quite astonishing, several hundreds having been frequently taken by a single sweep of the net. Salmon are despatched in steamers or fast sailing vessels from the Spey, the Tay, the Tweed, and other Scotch rivers, for London, packed in ice, by which means they are preserved quite fresh. When the season is at its height, and the catch greater than can be taken off fresh, it is salted, pickled, or dried for winter consumption at home, and for foreign markets. Formerly, such part of the Scotch salmon as was not consumed at home, was pickled and kitted after being boiled, and was in this state sent up to London under the name of Newcastle salmon; but the present method of disposing of the fish has so raised its value, as to have nearly deprived all but the richer inhabitants in the environs of the fishery of the use of salmon. Within the memory of many, now living, salted salmon formed a material article of household economy in all the farm-houses in the vale of the Tweed; in-somuch that in-door servants used to stipulate that they should not be obliged to take more than two weekly meals of salmon. Its ordinary price was then 2s. per stone of 19 lb.; but it is now never below 12s., often 36s., and sometimes 42s. per stone. This rise in the price of the fish has produced a corresponding rise in the value of the salmon fisheries, some of which are very valuable. There are considerable fisheries in some of the Irish and English rivers; but inferior to those of Scotland. (*General Report of Scotland*, vol. iii. p. 327.) The Scotch salmon fisheries seem to have attained their maximum value towards the end of the last war, when the fisheries in the Tweed were let for from 15,000l. to 18,000l. a-year; and those of the Tay, Dee, Spey &c. were proportionally valuable. But the value of the Scotch salmon fisheries has, speaking generally, declined greatly of late years; in consequence, partly and principally, of a diminished supply of fish in the rivers, but in some degree, also, from the greater facility of the communication between London and Liverpool, and the consequent importation of Irish salmon into the London markets.

*Decrease of the Supply of Salmon, Pouching &c.*—The decrease of salmon in the English and Scotch rivers, particularly of late years, is a fact as to which there can be no manner of doubt. (*Report of Committee of House of Commons on Scotch Salmon Fishery in 1843.*) Much unsatisfactory discussion took place as to its causes, which were,

Statement of the Quantities of Salmon received in London (boxes of say 1 cwt. each) from 1863 to 1868, the Sources whence derived, and its Price per lb.

Years	Scotch	Irish	Dutch	Norwegian	Welsh	Total	Gross per lb.
1863	21,279	6,183	1,927	180	663	31,550	4 1/2

Grand Total	792,428	156,521	18,266	8,250	11,125	986,938	4 1/2
Annual average for 35 years	22,641	4,475	530	236	318	28,198	4 1/2

probably, of a very diversified character. A good deal has been ascribed to the increase of water machinery on the banks of the different rivers; but we hardly think that this could have much influence, except, perhaps, in the case of the smaller class of rivers. *Weirs*, or salmon traps, have also been much objected to; though, as we have been assured, with still less reason. On the whole, we are inclined to think that the falling off in the supply of this valuable fish is principally to be ascribed to the temptation to over-fish the rivers, caused by the high price of salmon; to the prevalence of poaching; and more than all, to the too limited duration of the *close time*. In 1828, after a great deal of discussion and enquiry, an Act was passed (9 Geo. IV. c. 39), which has done a good deal to remedy these defects—in so far, at least, as respects the Scotch fisheries. The rivers were shut up from September 14 to February 1; and every person catching or attempting to catch fish during that period forfeited not less than 1*l.* and not more than 10*l.* for every offence, besides the fish, if he caught any, and such boats, nets, or other implements, as he might have made use of. Pecuniary penalties were also inflicted upon poachers and trespassers, and provision made for the watching of the rivers. This Act had a very good effect; though it is believed that it would be better were the *close time* extended from September 1 to the middle of February.

After public attention had long been turned to the question, inspectors of English salmon fisheries were appointed under the Act 24 & 25 Vict. c. 109, and they have already done much to put down poaching and other practices destructive of the fish.

The close season in England and Wales, so far as net fishing was concerned, was fixed by that Act from September 1 to February 1 following.

Similar Acts were passed for Scotland, viz. 25 & 26 Vict. c. 97; 26 & 27 Vict. c. 50; 27 and 28 Vict. c. 118, and 28 & 29 Vict. c. 119, the Act of 31 & 32 Vict. c. 123 being the latest.

By the 26 & 27 Vict. c. 10 the exportation of salmon caught in close time is prohibited.

In Mr. Buckland's *Report* of March 14, 1868, it would appear that 3,790 men were then employed in the salmon fisheries of England and Wales; and in the previous year 254 prosecutions had been instituted for breaches of the laws for protection of the fish.

In Mr. Walpole's *Report* of March 14, 1868, the average wholesale prices obtained for salmon by one of the dealers in Billingsgate in the following months of 1867 were:—

February	2 3/4	per lb.
March	2 1/4	"
April	2 0/4	"
May	1 8/4	"
June	1 5/4	"
July	0 11	"
August	1 1	"

Previously to 1812 the importation of foreign salmon was prohibited; but among the important and beneficial changes effected by the Tariff Act of that year, the repeal of this prohibition, and the admission of foreign salmon to our markets on payment of a duty of 10*s. 6d.* (including the 5 per cent.) per cwt., was one of the foremost. The importation has not, however, been nearly so great as was anticipated.

In 1852 the imports of salmon of foreign taking amounted to only 326 cwt. The imports during the same year of salmon of British taking were 2,298 cwt. In 1853 the duty on the former was repealed; and salmon, however taken, may now, like any other fish, be imported duty free. Foreign salmon is principally brought from Holland, Norway, and Denmark. These supplies have increased very much, for we find that in 1867 we imported 138,604 cwt. of fresh fish not of British taking, and valued at 156,460*l.*, a considerable portion of which was salmon.

**SALONICA.** A large city and seaport of European Turkey, at the north-east extremity of the gulf of the same name, lat. 40° 38' 47" N., long. 22° 57' 13" E. Population estimated at 70,000 in 1860. (*Abmanuch de Gotha*.)

This city, originally called Therna and afterwards Thessalonica, is celebrated both in sacred and profane history. It was visited by St. Paul, who has addressed two of his epistles to the Thessalonians. In the days of its prosperity it had an amphitheatre, an extensive hippodrome, numerous temples and triumphal arches, the ruins of which sufficiently attest its ancient splendor. (Clarke's *Travels*, vii. 411—478, 8vo. ed.)

Being the principal emporium of Macedonia, Salonica has always had a considerable trade; and to this circumstance may be ascribed its continued and comparatively prosperous existence notwithstanding the many vicissitudes it has undergone.

There is no port at Salonica, but there is excellent anchorage in the roads opposite to the town. The access to them is by no means difficult, and pilots are seldom employed. The exports principally consist of wheat, of which large quantities are sometimes shipped (the price per quarter, free on board, being 35*s.* in 1866), barley, wheat, Indian corn, raw cotton, wool, raw silk, tobacco, olives, and olive oil &c. The imports are sugar, coffee, dyewoods, indigo, muslins, calicoes, cotton twist, iron, coal, lead, tin, watches &c.

The following is a statement of the average price (free on board) of grain and of some articles of raw produce, at the port of Salonica, during 1866:—

Wheat	per quarter	35 0
Barley	"	27 0
Olive	"	10 0
Cotton	"	10 0
Wool	"	10 0
Silk	"	4 0

of their containing villages inhabited by colonies of miners who never saw the light, are altogether without foundation. These mines have been wrought for more than 600 years. (Coxe's *Travels in the North of Europe*, vol. i. 149, 8vo. ed.; Mr. Secretary Middleton's *Report on the Salt-producing Districts of Mexico* of December 31, 1867.)

The salt mines in the neighbourhood of North-wich in Cheshire are very extensive. They have been wrought since 1670; and the quantity of salt obtained from them is greater, probably, than is obtained from any other salt mines in the world. In its solid form, when dug from the mine, Cheshire salt is not sufficiently pure for use. To purify it, it is dissolved in sea water, from which it is afterwards separated by evaporation and crystallisation. The greater part of this salt is exported. There were sent from Cheshire down the river Weaver, in the year ended March 31, 1868, 918,438 tons, being considerably above the average quantity, while Worcestershire produced 225,250 tons. (Hunt's *Mineral Statistics*, 1867.)

Salt springs are met with in several countries. Those in Cheshire and Worcestershire furnish a large proportion of the salt made use of in Great Britain. The brine, being pumped up from very deep wells, is evaporated in wrought-iron pans from 20 to 30 feet square and 10 or 12 inches deep, placed over a furnace.

Most of the salt used in Scotland, previous to the repeal of the duty, was obtained by the evaporation of sea water nearly in the way now mentioned; but most part of the Scotch salt

works have since been relinquished. 15,707 tons of Irish salt were exported from Belfast in 1867.

In warm countries salt is obtained by the evaporation of sea-water by the heat of the sun; and the crystals of salt made in this way are more perfect, and purer, from the greater slowness of the process. French salt is manufactured in this mode, and it has always been in considerable demand in this and other countries; but the principal imports of foreign salt into Great Britain at present are from Portugal. In 1867 the total import was 16,149 tons, valued at 16,149*l*.

*Consumption of Salt.*—The consumption of salt in this country is immense. No clear estimate of the consumption in those provinces of France which had purchased an exemption from the *gabelle* (*pays francs redimés*) at about 1*l*. 1*s*. (Eng.) for each individual. (*Administration des Finances*, tome ii, p. 12.) From all that we have been able to learn on the subject, we believe that the consumption of the people of this country may be estimated a little higher, or at 2*l*. for the difference in our food and habits, as compared with the French, fully accounting for the increased allowance. On this supposition, taking the population at 30,000,000, the consumption will amount to 66,000,000 *lb*. upwards of 234,600 tons.

Exclusive of this immense home consumption, we annually export very large quantities, the export in 1867 having been 721,343 tons, of the value of 415,044*l*.

The cheapness of this important necessary of life is not less remarkable than its diffusion. Its present cost may be estimated, at a medium, at from 12*s*. to 14*s*. per ton.

*Duties on Salt.*—In ancient Rome, salt was subjected to a duty (*vectigal salinarum*; see Burman, *Dissertatio de Vectigalibus Pop. Rom. c. 6*); and it has been heavily taxed in most modern States. The *gabelle*, or code of salt laws, formerly established in France, was most oppressive. From 4,000 to 5,000 persons are calculated to have been sent annually to prison and the galleys for offences connected with these laws, the severity of which had no inconsiderable share in bringing about the Revolution. (Young's *Travels in France*, vol. i. p. 598.) In this country, duties upon salt were imposed in the reign of William III. In 1798 they amounted to 6*s*. per bushel; but were subsequently increased to 15*s*. per bushel, or about *thirty times* the cost of the salt. So exorbitant a duty was productive of the worst effects, and occasioned, by its magnitude, and the regulations for allowing salt, duty

free, to the fisheries, a vast deal of smuggling. The opinion of the public and of the House of Commons having been strongly pronounced against the tax, it was finally repealed in 1825.

That the repeal of so exorbitant a duty has been productive of great advantage, no one can doubt; but seeing that a large revenue must be raised, we question whether Government acted wisely in totally relinquishing the tax. Had the duty been reduced to 2*s*. or 2*s*. 6*d*. per bushel, and no duty-free salt allowed for the fisheries, but a drawback given on the fish exported, a revenue of 1,000,000*l*. a year might have been derived from this source with but little injury. It was not the nature of the salt tax, but the absurd extent to which it had been carried, that rendered it justly odious. When at the highest, it produced about 1,500,000*l*. a year.

SALTPETRE or NITRATE OF POTASH (Ger. salpeter; Fr. nitre, salpêtre; Ital. nitro, salnitro; Span. nitro, salitre; Russ. senitra; Lat. nitrum; Arab. ubikr; Hin. shorah). A salt well known in commerce, and of very great im-

been relinquished. 15,757  
e exported from Belfast in

eries, a vast deal of smuggling  
the public and of the House of  
ing been strongly pronounced,  
it was finally repealed in 1824,  
heat of so exorbitant a duty has  
e of great advantage, no one can  
tion that a large revenue must  
whether Government acted  
y relinquishing the tax. Had the  
eed to 2s. or 2s. 6d. per bushel, and  
it allowed for the fisheries, but a  
e on the fish exported, a revenue of  
ar might have been derived from  
it but little injury. It was not the  
salt tax, but the absurd extent to  
een carried, that rendered it just  
at the highest, it produced about  
ear.

LE or NITRATE OF POTASH  
Fr. nitre, salpêtre; Ital. nitro,  
nitro, salitre; Russ. sentra; Lat.  
nubik; Hin. shorah). A salt  
commerce, and of very great im-

portance. It may be regarded both as a natural  
and an artificial production; being found on the  
surface of the soil in many parts of India, Egypt,  
Italy &c.; but in these and other places all that  
is known in commerce is obtained by an artificial  
process, or by lixiviating earth that has been  
formed into nitre beds. The saltpetre consumed  
in England is brought from Bengal in an impure  
state, but crystallised, in bags, each containing  
100 lb. Saltpetre forms the principal ingredient  
in the manufacture of gunpowder, and is used in  
various arts. It is also of great utility in the  
commerce of India, from its furnishing a large  
amount of dead weight for the shipping engaged  
in it. Saltpetre possesses considerable antiseptic  
power. That which is of the best quality and  
well refined is in long transparent crystals; its  
taste is sharp, bitterish, and cooling; it flames  
much when thrown upon burning coals; is very  
brittle; specific gravity 1.933. It is not altered  
by exposure to the air.

Beckmann contends, in a long and elaborate  
dissertation (*Hist. of Invent.* vol. iv. pp. 525—586,  
Eng. ed.), that the ancients were unacquainted  
with saltpetre, and that their *nitrum* was really an  
alkaline salt. But as saltpetre is produced natu-  
rally in considerable quantities in Egypt, it is  
difficult to suppose that they could be entirely  
ignorant of it; though it would appear that they  
confounded it with other things. It has been  
known in the East from a very early period.  
Beckmann concurs in opinion with those who  
believe that gunpowder was invented in India,  
and brought by the Saracens from Africa to the  
Europeans, who improved its manufacture, and  
made it available for warlike purposes. (Vol. iv.  
p. 571.)

The consumption of saltpetre during periods of  
war is very great. Its price is consequently  
liable to extreme fluctuation. In remarking on  
the varieties in the price of saltpetre, Mr. Tooke  
observes, 'It reached its greatest height in 1795,  
viz. 170s. per cwt.; in 1796 it fell at one time to  
55s. and rose again to 96s. It seems to have  
been affected considerably by the scale of hos-  
tilities on the Continent. But in consequence of  
the discoveries in chemistry, by which the French  
were enabled to dispense with a foreign supply,  
and by the increased importation from India to  
this country, by which we were enabled to supply  
the rest of the Continent at a reduced cost, the  
price declined permanently after 1798—9, when it  
had reached 145s.; and never after was so high  
as 100s., except during the short interval of  
speculation in export, during the peace of 1814,  
and again upon the breaking out of the war  
terminated by the battle of Waterloo.' The  
price of rough saltpetre in the London market  
varied, in 1867, from 12s. 9d. to 18s. 8d. per cwt.

During 1867 we imported 214,604 cwt. saltpetre,  
of which 199,105 were from India. The exports  
from the United Kingdom during the same year  
amounted to 81,758 cwt.

Exclusive of saltpetre, we import considerable  
quantities of nitre, or nitrate of soda, consisting of  
nitric acid and soda, whereas saltpetre consists of  
nitric acid and potash. Like saltpetre, it is found  
native in various countries, but especially in the  
deserts of Tarapaca, in Chili, and Atacama, along  
the coast of Southern Peru. The deserts in ques-  
tion consist of a vast sandy plain, extending be-  
tween the shore and the foot of the Andes for  
between 400 and 500 miles. This plain is more  
than 3,000 feet above the level of the sea; no rain  
falls upon it; and except along the banks of a  
few streams by which it is intersected, it is quite  
barren. In most parts, however, it abounds with

nitrate of soda, which sometimes appears on the  
surface, but is more commonly covered with a  
stratum of clay and sand, with which the salt is  
frequently mixed. The principal mines are  
within about 24 miles of the Peruvian port of  
Iquique, in 21° 50' S. lat. and 71° 42' W. long.  
After being dug up, the salt is pulverised,  
dissolved in boiling water, and allowed to  
crystallise in shallow wooden troughs. Its price,  
free on board, including an export duty of  
about 4 per cent., varies from 2½ or 3 dols.  
the quintal of 100 lb. Having a tendency to  
attract moisture, it is not so suitable as saltpetre  
for the manufacture of gunpowder; but it is  
extremely serviceable in various departments of  
the arts, and is particularly valuable in a com-  
mercial point of view, from its affording a return  
cargo for ships which might otherwise have had  
to come home in ballast.

During 1867 the imports and exports of nitre  
(cubic nitrate of soda or cubic saltpetre) amounted  
respectively to 1,217,752 cwt., valued at 667,356*l.*,  
and 21,902 cwt. The price during the same year  
was about 11s. per cwt. The duty formerly  
charged on saltpetre and nitre was suppressed in  
1845. (*Watt's Dictionary of Chemistry*.)

SALVAGE, as the term is now understood,  
is an allowance or compensation made to those by  
whose exertions ships or goods have been saved  
from the dangers of the seas, fire, pirates, or  
enemies.

The propriety and justice of making such an  
allowance must be obvious to everyone. It was  
allowed by the laws of Rhodes, Oleron, and  
Wisby; and in this respect they have been  
followed by all modern maritime states. At  
common law, the party who has saved the goods  
of another from loss or any imminent peril has a  
*lien* upon them, and may retain them in his pos-  
session till payment of a reasonable salvage.

*Salvage upon Losses by Perils of the Sea.*—  
In fixing the rate of salvage, regard is usually  
had, not only to the labour and peril incurred by  
the salvors, but also to the situation in which  
they may happen to stand in respect of the  
property saved, to the promptitude and alacrity  
manifested by them, and to the value of the ship  
and cargo, as well as the degree of danger from  
which they were rescued. In some cases as much  
as a *half* of the property saved has been allowed  
as salvage; and in others not more than a *tenth*  
part.

The crew of a ship are not entitled to salvage,  
or any unusual remuneration for the extraordinary  
efforts they may have made in saving her; it  
being their duty, as well as interest, to contribute  
their utmost upon such occasion, the whole of  
their possible services being pledged to the  
master and owners. Neither are passengers en-  
titled to claim anything for the *ordinary assistance*  
they may be able to afford to a vessel in distress.  
But a passenger is not bound to remain on board  
a ship in the hour of danger, provided he can  
leave her; and if he perform any *extraordinary*  
*services*, he is entitled to a proportional recom-  
pense.

All cases with respect to proceedings for salvage  
may be brought either in the first instance, or by  
appeal, before the Court of Admiralty, provided,  
in the last case, the sum in dispute exceeds 50*l.*  
But the delays and expenses attending the pro-  
ceedings of this court are such, that they have  
occasionally much dissatisfaction among commer-  
cial men. To obviate them, efforts which had  
been previously made were renewed and extended  
in 1846 by the 9 & 10 Vict. c. 98. This statute  
authorised salvage claims, for sums under 200*l.*,

principal secretaries of state, or in *Ireland* for the Lord Lieutenant or other chief governor or governors, to appoint out of the justices for any borough or county a rota of justices by whom jurisdiction in salvage cases shall be exercised:

1. When no such rota is appointed, it shall be lawful for the salvors, by writing addressed to the justice's clerk, to name one justice, and for the owner of the property saved in like manner to name the other;
2. If either party fails to name a justice within a reasonable time, the case may be tried by two or more justices at petty sessions;
3. It shall be competent for any stipendiary magistrate, and also in *England* for any county court judge, in *Scotland* for the sheriff or sheriff substitute of any county, and in *Ireland* for the recorder of any borough in which there is a recorder, or for the chairman of quarter sessions in any county, to exercise the same jurisdiction in salvage cases as is given to two justices;
4. It shall be lawful for one of her Majesty's principal secretaries of state to determine a scale of costs to be awarded in salvage cases by any such justices or court as aforesaid;
5. All the provisions of the principal Act relating to summary proceedings in salvage cases, and to the prevention of unnecessary appeals in such cases, shall, except so far as the same are altered by this Act, extend and apply to all such proceedings, whether under the principal Act or this Act, or both of such Acts.

*Manner in which Justices may decide Disputes.*

—Whenever, in pursuance of this Act, any dispute as to salvage is referred to the arbitration of two justices, they may either themselves determine the same, with the power to call to their assistance any person conversant with maritime affairs as assessor, or they may, if a difference of opinion arise between them, or without such difference, if they think fit, appoint some person conversant with maritime affairs as umpire to decide the point in dispute; and such justices or their umpire shall make an award as to the amount of salvage payable, within the following times, that is to say, the said justices within 48 hours after such dispute has been referred to them, and the said umpire within 48 hours after his appointment, with power nevertheless for such justices or umpire by writing under their or his hands or hand to extend the time within which they and he are hereby respectively directed to make their or his award. (17 & 18 Vict. c. 104 s. 461.)

*Costs of Arbitration.*—There shall be paid to every assessor and umpire who may be so appointed as aforesaid, in respect of his services, such sum, not exceeding 5*l.*, as the Board of Trade may from time to time direct; and all the costs of such arbitration, including any such payments as aforesaid, shall be paid by the parties to the dispute, in such manner and in such proportions as the said justices or umpire may direct by their or his award. (Sec. 462.)

Clause 463 authorises justices or their umpire to call for documents, and administer oaths.

*Receiver may appoint a Valuer in Salvage Cases.*—Whenever any salvage question arises, the receiver of wreck for the district may, upon application from either of the parties, appoint a valuer to value the property in respect of which a salvage claim is made, and shall, when the claim has been returned to him, give a copy of the valuation to both parties; and any copy of

such valuation, purporting to be signed by the valuer, and to be attested by the receiver, shall be received in evidence in any subsequent proceeding; and there shall be paid in respect of such valuation, by the party applying for the same, such fee as the Board of Trade may direct.

*Appeal to Courts of Admiralty.*—If any person is aggrieved by the award made by such justices or umpire, he may in *England* appeal to the High Court of Admiralty of *England*, in *Ireland* to the High Court of Admiralty of *Ireland*, and in *Scotland* to the Court of Session; but no such appeal shall be allowed unless the sum in dispute exceed 50*l.*, nor unless within 10 days after the date of the award the appellant gives notice to the justices of his intention to appeal, nor unless the appellant proceeds to take out a motion, or to take such other proceeding as according to the practice of the court of appeal is necessary for the institution of an appeal, within 20 days from the date of the award. (17 & 18 Vict. c. 104 s. 464.)

*Extending 17 & 18 Vict. c. 104, as to Claims for Salvage of Life.*—All the provisions of 'the Merchant Shipping Act 1851,' in regard to salvage of life from any ship or boat within the limits of the United Kingdom, shall be extended to the salvage of life from any *British* ship or boat, wheresoever the services may have been rendered, and from any foreign ship or boat, where the services have been rendered either wholly or in part in *British* waters.

*Jurisdiction of Court of Session in Salvage Cases.*—The words 'Court of Session' in the 468th section of the principal Act shall be deemed to mean and include either division of the Court of Session or the lord ordinary officiating on the bills during vacation.

Clause 465 of 17 & 18 Vict. c. 104 directs the justices to transmit copy of proceedings and certificate of value to court of appeal.

*Payment of Salvage, to whom made in case of Dispute.*—Whenever the aggregate amount of salvage payable for salvage services rendered in the United Kingdom has been finally ascertained either by agreement or by the award of such justices or their umpire, but a dispute arises as to the appointment thereof amongst several claimants, then, if the amount does not exceed 200*l.*, it shall be lawful for the party liable to pay the amount to apply to the receiver of the district for liberty to pay the amount to him; and he shall, if he think fit, receive the same accordingly, and grant a certificate under his hand, stating the fact of such payment and the services for which it is made; and such certificate shall be a full discharge and indemnity to the person or persons to whom it is given, and to their ship, boats, cargo, apparel, and effects, against the claims of all persons whomsoever in respect of the services therein mentioned; but if the amount exceeds 200*l.*, it shall be apportioned in manner after mentioned. (Sec. 466.)

*Apportionment of Salvage.*—Upon the receipt of any such amount as aforesaid, the receiver shall with all convenient speed proceed to distribute the same among the several persons entitled thereto, upon such evidence and in such shares and proportions as he thinks fit, with power to retain any moneys that may appear to him to be payable to any absent parties; but any distribution made in pursuance of this section shall be final and conclusive against the rights of all persons claiming to be entitled to any portion of the moneys so distributed. (Sec. 467.)

*Manner of enforcing Payment of Salvage.*—Whenever any salvage is due to any person

under this Act, the receiver shall act as follows:—

1. If the same is due in respect of services rendered in assisting any ship or boat, or in saving the lives of persons belonging to the same, or the cargo or apparel thereof,

He shall detain such ship or boat and the cargo and apparel belonging thereto until payment is made, or process has been issued by some competent court for the detention of such ship, boat, cargo, or apparel.

2. If the same is due in respect of the saving of any wreck, and such wreck is not sold as unclaimed in pursuance of the provisions herein-after contained,

He shall detain such wreck until payment is made, or process has been issued in manner aforesaid.

But it shall be lawful for the receiver, if at any time previously to the issue of such process security is given to his satisfaction for the amount of salvage due, to release from his custody any ship, boat, cargo, apparel, or wreck detained by him; and in cases where the claim for salvage exceeds 200*l.* it shall be lawful in England for the High Court of Admiralty of England, in Ireland for the High Court of Admiralty of Ireland, and in Scotland for the Court of Session, to determine any question that may arise concerning the amount of the security to be given or the sufficiency of the sureties; and in all cases where bond or other security is given to the receiver for an amount exceeding 200*l.*, it shall be lawful for the salvor or for the owner of the property salvaged, or their respective agents, to institute proceedings in such last-mentioned courts for the purpose of having the questions arising between them adjudicated upon, and the said courts may enforce payment of the said bond or other security, in the same manner as if bail had been given in the said courts. (Sec. 468.)

**Power of Receiver to sell Property salvaged.**—Whenever any ship, boat, cargo, apparel, or wreck is detained by any receiver for non-payment of any sums so due as aforesaid, and the parties liable to pay the same are aware of such detention, then, in the following cases; viz. :—

1. In cases where the amount is not disputed, and payment thereof is not made within 20 days after the same has become due:

2. In cases where the amount is disputed, but no appeal lies from the first tribunal to which the dispute is referred, and payment thereof is not made within 20 days after the decision of such first tribunal:

3. In cases where the amount is disputed, and an appeal lies from the decision of the first tribunal to some other tribunal, and payment thereof is not made within such 20 days as last aforesaid, or such motion as hereinbefore mentioned is not taken out within such 20 days, or such other proceedings as are according to the practice of such other tribunal necessary for the prosecution of an appeal are not instituted within such 20 days,

The receiver may forthwith sell such ship, boat, cargo, apparel, or wreck, or a sufficient part thereof, and out of the proceeds of the sale, after payment of all expenses thereof, defray all sums of money due in respect of expenses, fees, and salvage, paying the surplus, if any, to the owners of the property sold, or other the parties entitled to receive the same. (Sec. 469.)

**Subject to Payment of Expenses &c., Owner entitled to Wreck.**—Subject to the payment of such expenses, fees, and salvage as aforesaid, the owner of any wreck who establishes his claim

thereto to the satisfaction of the receiver within 1 year from the date at which such wreck has come into the possession of the receiver, shall be entitled to have the same delivered up to him. (17 & 18 Vict. c. 104 s. 470.)

**Delivery of Wreck by Receiver not to prejudice Title.**—Upon delivery of wreck or of the proceeds of wreck by any receiver to any person in pursuance of the provisions of the eighth part of the principal Act, such receiver shall be discharged from all liability in respect thereof, but such delivery shall not be deemed to prejudice or affect any question concerning the right or title to the said wreck which may be raised by third parties, nor shall any such delivery prejudice or affect any question concerning the title to the soil on which the wreck may have been found.

None of the previously mentioned clauses have any force within the Cinque Ports; but the Lord Warden is directed by stat. 1 & 2 Geo. IV. c. 76 to appoint three or more substantial persons in each of these towns, who are authorised to decide upon all claims for services of any sort or description rendered to any vessel, or for saving or preserving, within the jurisdiction, any goods or merchandise wrecked, stranded, or cast away, or bringing anchors or cables ashore &c. No commissioner can act for any other place than that in which, or within a mile of which, he is resident. Either party may, within 8 days of the award, declare his intention of bringing the matter before some competent Court of Admiralty; selecting, as he may judge best, the Admiralty of England, or that of the Cinque Ports. The provisions in this statute have been enlarged by Lord Tenterden for the cheap and easy means they afford for settling such questions.

**Salvage by Ships of War.**—A good deal of discussion has taken place in regard to the claims preferred by ships of war for salvage. In periods of war, when British merchantmen that have been captured by enemy's ships are re-captured by British ships of war, the latter are allowed a salvage of one-eighth part of the re-captured ship and cargoes. (Stat. 43 Geo. III. c. 160.) The same statute allows a salvage of one-sixth part of their value on ships re-captured by privateers. We subjoin the clause of the Act:—

"If any ship or vessel taken as prize, or any goods therein, shall appear, in the Court of Admiralty, to have belonged to any of his Majesty's subjects, which were before taken by any of his Majesty's enemies, and at any time afterwards retaken by any of his Majesty's ships or any privateer, or other ship or vessel under his Majesty's protection, such ships, vessels, and goods shall, in all cases (save as hereafter excepted), be adjudged to be restored, and shall be accordingly restored, to such former owner or owners, he or they paying for salvage, if retaken by any of his Majesty's ships, one-eighth part of the true value thereof, to the flag officers, captains &c., to be divided as the same Act directs; and if retaken by any privateer, or other ship or vessel, one-sixth part of the true value of such ships and goods, to be paid to the owners, officers, and seamen of such privateer or other vessel, without any deduction; and if retaken by the joint operation of one or more of his Majesty's ships, and one or more private ships of war, the judge of the Court of Admiralty, or other court having cognisance thereof, shall order such salvage, and in such proportions, to be paid to the captors by the owners, as he shall, under the circumstances of the case, deem fit and reasonable; but if such recaptured ship or vessel shall appear to have

of the receiver within 1 which such wreck has come of the receiver, shall be same delivered up to him, 470.)

**Receiver not to prejudice** of wreck or of the proceeds to any person in pursuance of the eighth part of the receiver shall be discharged respect thereof, but such deemed to prejudice or affecting the right or title to the y be raised by third parties, livery prejudice or affect any the title to the soil on which been found.

ously mentioned clauses have Cinque Ports; but the Lord by stat. 1 & 2 Geo. IV. c. 76 ore substantial persons in each are authorised to decide upon es of any sort or description, or for saving or preservation, any goods or merchandise, or cast away, or cables ashore &c. No comor for any other place than that in a mile of which he is party may, within 8 days of his intention of bringing the competent Court of Admiralty he may judge best, the land, or that of the Cinque Ports in this statute have been Tenterden for the chap and afford for settling such ques-

**Ships of War.**—A good deal of en place in regard to the claims of war for salvage. In periods British merchantmen that have enemy's ships are re-captured by war, the latter are allowed a fifth part of the re-captured ships at 43 Geo. III. c. 160. The vs a salvage of one-sixth part of ships re-captured by privateers, cause of the Act:—

er vessel taken as prize, or any hull appear, in the Court of have belonged to any of his- s, which were before taken by ty's enemies, and at any time n by any of his Majesty's ships, or other ship or vessel under is- tion, such ships, vessels, and ll cases (save as hereafter ex- gered, to such former owner or ey paying for salvage, if retaken ty's ships, one-eighth part of f, of, to the flag officers, captains l as the same Act directs; and if rivateer, or other ship or vessel, the true value of such ships and id to the owners, officers, and rivateer or other vessel, without and if retaken by the joint, or more of his Majesty's ships, rivatee ships of war, the judge, Admiralty, or other court having of, shall order such salvage, and ns, to be paid to the captors by he shall, under the circumstances n fit and reasonable; but if such or vessel shall appear to have

been set forth by the enemy as a ship or vessel of war, the said ship or vessel shall not be restored to the former owners, but shall in all cases, whether retaken by any of his Majesty's ships or any privateer, be adjudged lawful prize for the benefit of the captors.

Now, it is contended that if salvage from perils of the sea be allowed to Queen's ships, it should not in any case exceed this amount. But it is argued by others, that salvage to Queen's ships, even to this extent, is objectionable; that they are employed by the public for their security and protection; and that when they are assisting in saving lives or property from shipwreck or other casualty, they are merely doing their duty, and are not entitled to any peculiar gratuity or reward. And on general principles we are inclined to think that this is the correct view of the matter; and that it is the bounden duty of Queen's ships to render gratuitously every assistance in their power to merchantmen in distress.

This, however, is a practical rather than a theoretical question. And the zeal of sailors in the discharge of a perilous duty may, perhaps, be sharpened by their being aware that by its successful performance they will entitle themselves, not merely to the public thanks, but to a considerable pecuniary reward. But it could not surely be meant that officers and men belonging to the royal navy were to be allowed equal claims for salvage as private parties, or that they were to be enriched at the expense of those whose property they had done their duty in helping to save. And yet cases have occurred which it is very difficult to explain on any other principle than this. It is not, therefore, surprising that the claims for salvage put forward by Queen's ships should, of late years, have been much canvassed and objected to. We subjoin the regulations which the Merchant Shipping Act of 1851 has laid down in regard to the making up and prosecution of such claims. But though it has amended some of the abuses complained of, it will not suffice for their eradication. Nothing would be so effectual for this purpose as to limit the *maximum* claim for salvage put forward by Queen's ships to one-eighth part of the value of the property saved, as in cases of re-capture. It is difficult to see what greater merit can attach to saving property from shipwreck than to recovering it from an enemy.

**Salvage by her Majesty's Ships.**—In cases where salvage services are rendered by any ship belonging to her Majesty or by the commander or crew thereof, no claim shall be made or allowed for any loss, damage, or risk thereby caused to such ship, or to the stores, tackle, or furniture thereof, or for the use of any stores or other articles belonging to her Majesty supplied in order to effect such services, or for any other expense or loss sustained by her Majesty by reason of such services. (Sec. 481.)

**Claims for Salvage by her Majesty's Officers not to be determined without Consent of Admiralty.**—No claim on account of any salvage services rendered to any ship or cargo or to any appurtenances of any ship by the commander or crew or part of the crew of any of her Majesty's ships shall be finally adjudicated upon unless the consent of the Admiralty has first been obtained, such consent to be signified by writing under the hand of the secretary to the Admiralty; and if any person who has originated proceedings in respect of any such claim fails to prove such consent to the satisfaction of the court, his suit shall stand dismissed, and he shall pay all the costs of such proceedings; provided that any

document purporting to give such consent and to be signed by the secretary to the Admiralty shall be *prima facie* evidence of such consent having been given. (Sec. 485.)

**Steps to be taken when Salvage Services have been rendered &c.**—Whenever services for which salvage is claimed are rendered to any ship or cargo, or to any part of them, or to any appurtenances of any ship, at any place out of the United Kingdom and the four seas adjoining thereto, by the commander or crew or part of the crew of any of her Majesty's ships, the property alleged to be salvaged shall, if the salvor is justified by the circumstances of the case in detaining it at all, be taken to some port where there is either a consular officer or a vice-admiralty court; and within 24 hours after arriving at such port, the said salvor and the master or other person in charge of the property alleged to be salvaged shall deliver to the consular officer or vice-admiralty judge there, a statement verified on oath, specifying, so far as they respectively can, and so far as the particulars required apply to the case,

1. The place, condition, and circumstances in which the said ship, cargo, or property was at the time when the services were rendered for which salvage is claimed,

2. The nature and duration of the services rendered.

And the salvor shall add to his statement,

3. The proportion of the value of said ship, cargo, and property, and the freight which he claims for salvage, of the values at which he estimates the said ship, freight, cargo, and property respectively, and the several amounts that he claims for salvage in respect of the same.

4. Any other circumstances he thinks relevant to the said claim.

And the said master or other person in charge of the said ship, cargo, or property, shall add to his statement,

3. A copy of the certificate of registry of the said ship, and of the indorsements thereon, stating any change which (to his knowledge or belief) has occurred in the particulars contained in such certificate; and stating also, to the best of his knowledge and belief, the state of the title to the ship for the time being, and of the incumbrances and certificates of mortgage or sale, if any, affecting the same, and the names and places of business of the owners and incumbrancers.

4. The name and place of business or residence of the freighter (if any) of the said ship, and the freight to be paid for the voyage she is then on.

5. A general account of the quantity and nature of the cargo at the time the salvage services were rendered.

6. The name and place of business or residence of the owner of such cargo and of the consignee thereof.

7. The value at which the said master estimates the said ship, cargo, and property, and the freight respectively, or, if he thinks fit, in lieu of such estimated value of the cargo, a copy of the ship's manifest.

8. The amounts which the master thinks should be paid as salvage for the services rendered.

9. An accurate list of the property saved, in cases where the ship is not saved.

10. An account of the proceeds of the sale of the said ship, cargo, or property in cases where the same or any of them are sold at such port as aforesaid.

11. The number, capacities, and condition of the crew of the said ship at the time the said services were rendered.

12. Any other circumstances he thinks relevant to the matters in question.

13. A statement of his willingness to execute a bond, in the form in the table marked W. in the schedule to this Act, in such amount as the said consular officer or vice-admiralty judge may fix. (Sec. 486.)

*Consular Officer or Judge to fix Amount for which a Bond is to be given.*—The said consular officer or judge, as the case may be, shall, within 4 days after receiving the aforesaid statements, fix the amount to be inserted in the said bond at such sum as he thinks sufficient to answer the demand for the salvage services rendered; but such sum shall not exceed one-half of the value which in his estimation the said ship, freight, and cargo, or any parts thereof in respect of which salvage is claimed, are worth; and the said officer or judge may, if either of the aforesaid statements is not delivered to him within the time hereby required, proceed ex-parte, but he shall in no case under this Act require the cargo to be unladen; and the said consular officer may, in any proceeding under this Act relating to salvage, take affidavits and receive affirmations. (Sec. 487.)

*On Master executing Bond, the Right of Detention to cease.*—The said consular officer or judge shall send notice of the sum which he has fixed as aforesaid to the said salvor and the said master; and upon such master executing a bond in form as aforesaid, with the said sum inserted therein, in the presence of the said officer or judge (who shall attest the same), and delivering the same to the said salvor, the right of the said salvor to detain or retain possession of the said ship, cargo, or property, or any of them, in respect of the said salvage claim, shall cease. (Sec. 488.)

*Provision for additional Security in Case of Ships owned by Persons out of her Majesty's Dominions.*—If the ship, cargo, or property in respect of which the claim for salvage is made is not owned by persons domiciled in her Majesty's dominions, the right of the salvor to detain or retain possession thereof shall not cease unless the master procures, in addition to the said bond, such security for the due performance of its conditions as the said officer or judge considers sufficient for the purpose, and places the same in the possession or custody of the said officer or judge, or, if the salvor so desires, in the possession or custody of the said officer or judge jointly with any other person whom he appoints for the purpose. (Sec. 489.)

*Documents to be sent to England.*—The said consular officer or judge shall at the earliest opportunity transmit the said statements and documents so sent to him, and a notice of the sum he has fixed as aforesaid, to the High Court of Admiralty of England, or if the said salvor and the said master or other person in charge as aforesaid agree that the said bond shall be adjudicated upon by any vice-admiralty court, to such court. (Sec. 490.)

*Whom the Bond shall bind.*—The said bond shall bind the respective owners of the said ship, freight, and cargo, and their respective heirs, executors, and administrators, for the salvage adjudged to be payable in respect of the said ship, freight, and cargo. (Sec. 491.)

Clause 492 specifies the court in which such bonds are to be adjudicated on.

Clause 493 gives power to the High Court of Admiralty to enforce bonds.

*Saving Clause.*—Any salvor of any ship, cargo, or property who elects not to proceed under this Act shall have no power to detain the said ship, cargo, or property, but may proceed otherwise for the enforcement of his salvage claim as if this Act

had not been passed; and nothing in this Act contained shall abridge or affect the rights of salvors, except in the cases by it provided for. (Sec. 494.)

*Documents free from Duty.*—All bonds, statements, agreements, and other documents made or executed in pursuance of the eighth part of this Act [WRECK AND SALVAGE], shall, if so made or executed out of the United Kingdom, be exempt from stamp duty. (Sec. 495.)

*Punishment for Forgery and false Representations.*—Every person who, in any proceeding under the provisions contained in this Act relating to salvage by her Majesty's ships, forges, assists in forging, or procures to be forged, or fraudulently altered, any document, and every person who in any such proceeding puts off or makes use of any such forged or altered document, knowing the same to be so forged or altered, or who gives or makes, or assists in giving or making, or procures to be given or made, any false evidence or representation, knowing the same to be false, shall be punishable with imprisonment, with or without hard labour, for any period not exceeding 2 years, or, if summarily prosecuted and convicted, by imprisonment, with or without hard labour, for any period not exceeding 6 months. (Sec. 496.)

*Voluntary Agreement may be made which shall have the same Effect as the Bond above mentioned.*—Whenever services for which salvage is claimed are rendered either by the commander or crew or part of the crew of any of her Majesty's ships or of any other ship, and the salvor voluntarily agrees to abandon his lien upon the ship, cargo, and property alleged to be salvaged, upon the master or other person in charge thereof entering into a written agreement attested by two witnesses to abide the decision of the said High Court of Admiralty or of any vice-admiralty court, and thereby giving security in that behalf to such amount as may be agreed on by the parties to the said agreement, such agreement shall bind the said ship and the said cargo and the freight payable therefor respectively, and the respective owners of the said ship, freight, and cargo for the time being, and their respective heirs, executors, and administrators, for the salvage which may be adjudged to be payable in respect of the said ship, cargo, and freight respectively to the extent of the security so given as aforesaid, and may be adjudicated upon and enforced in the same manner as the bonds previously provided for in the case of detention for salvage services rendered by her Majesty's ships; and upon such agreement being made, the salvor and the master or other person in charge as aforesaid shall respectively make such statements as before required to be made by them in case of a bond being given, except that such statements need not be made upon oath; and the salvor shall, as soon as practicable, transmit the said agreement and the said statements to the court in which the said agreement is to be adjudicated upon. (Sec. 497.)

*Powers for Courts to apportion Salvage.*—Whenever the aggregate amount of salvage payable in respect of salvage services rendered in the United Kingdom has been finally ascertained, and exceeds 200*l.*, and whenever the aggregate amount of salvage payable in respect of salvage services rendered elsewhere has been finally ascertained, whatever such amount may be, then if any delay or dispute arises as to the apportionment thereof, any court having admiralty jurisdiction may cause the same to be apportioned amongst the persons entitled thereto in such manner as it thinks just; and may for that purpose, if it think fit, appoint any person to carry such apportionment into effect.

sed; and nothing in this Act shall affect the rights of the cases by it provided for.

**from Duty.**—All bonds, statements, and other documents made or issued in pursuance of the eighth part of this Act (SALVAGE), shall, if so made or issued in the United Kingdom, be exempt from duty. (Sec. 495.)

**Forgery and false Representations.**—Who, in any proceeding under this Act relating to salvage services, forges, assists in forging, or fraudulently altered, or causes to be altered, every person who in any such proceeding, or makes use of any such document, knowing the same to be forged, or who gives or makes, or causes to be made, or procures to be given, any false evidence or representation, shall be liable to be punished, with or without hard labour, for a term not exceeding 2 years, or, if summoned and convicted, by imprisonment with hard labour, for any period not exceeding 6 months. (Sec. 496.)

**Agreement may be made which shall affect as the Bond above mentioned.**—Where, in any case in which salvage is claimed or recovered by the commander or crew or any of her Majesty's ships or of any vessel, and the salvor voluntarily agrees upon the ship, cargo, and proceeds to be salvaged, upon the master or charterer thereof entering into a written agreement, attested by two witnesses to the satisfaction of the said High Court of Admiralty or any vice-admiralty court, and the security in that behalf to be given by the parties to the said agreement shall bind the said ship, cargo, and the freight payable thereon, and the respective owners of the ship, cargo, and the time being, and the heirs, executors, and administrators, which may be adjudged to be the property of the said ship, cargo, and freight to the extent of the security given, and may be adjudged in the same manner as the bonds given in the case of detention rendered by her Majesty's ships, and no agreement being made, the salvor or other person in charge as above mentioned may make such statements as may be made by them in case of a seizure, except that such statements shall be made upon oath; and the salvor shall, in any such case, transmit the said agreement to the court in which the case is to be adjudicated upon.

**Provision as to apportionment of Salvage.**—Where the amount of salvage payable for salvage services rendered in any case has been finally ascertained, and whenever the aggregate amount of salvage in respect of salvage services rendered in any case has been finally ascertained, the amount may be, then if any delay as to the apportionment thereof, the Admiralty jurisdiction may cause to be apportioned amongst the persons in such manner as it thinks just; and for that purpose, if it think fit, appoint such apportionment into effect,

and may compel any person in whose hands or under whose control such amount may be, to distribute the same, or to bring the same into court, to be there dealt with as the court may direct, and may for the purposes aforesaid issue such writs, orders, or other processes as it thinks fit. (17 & 18 Vict. c. 104 s. 498.)

The agent for her Majesty's ship or his sub-agent is authorised to take steps and proceedings on the part of the officers and crew in case of salvage services rendered to any ship or cargo, or otherwise, within the meaning of the enactments for the time being in force relating to merchant shipping. (27 & 28 Vict. c. 24 s. 12.)

#### Distribution of Salvage, Bounty, Prize, and other Money.

**Taxation and Payment of Costs of Officers and Crew, Agents &c.**—Where, in any of the several cases aforesaid, any money is distributable among the officers and crew of any of her Majesty's ships of war, the costs, charges, and expenses of the officers and crew and of the ship's agent, and all other (if any) costs, charges, or expenses properly chargeable against that money, shall be paid thereout before distribution thereof, all such costs, charges, and expenses being first taxed and allowed by the proper officer of the court having jurisdiction in the case, and if there is no such court, then by the Registrar of the High Court of Admiralty.

**Salvage, Bounty, Prize, and other Money to be distributed according to Order in Council &c.**—In the several cases aforesaid, money distributable among the officers and crew of any of her Majesty's ships of war, so far as full provision respecting the distribution thereof is not made by or under any Act of Parliament other than this Act, shall be distributed under the direction of the Lords of the Admiralty in the shares in that behalf specified in any royal proclamation or order in council.

#### Prize Salvage.

**Salvage to Re-captors of British Ship or Goods from Enemy.**—Where any ship or goods belonging to any of her Majesty's subjects, after being taken as prize by the enemy, is or are retaken from the enemy by any of her Majesty's ships of war, the same shall be restored by decree of a prize court to the owner, on his paying as prize salvage one-eighth part of the value of the prize to be decreed and ascertained by the court, or such sum, not exceeding one-eighth part of the estimated value of the prize, as may be agreed on between the owner and the re-captors, and approved by order of the court; provided that where the re-capture is made under circumstances of special difficulty or danger, the prize court may, if it think fit, award to the re-captors as prize salvage a larger part than one-eighth part, but not exceeding in any case one-fourth part, of the value of the prize.

Provided also, that where a ship after being so taken is set forth or used by any of her Majesty's enemies as a ship of war, this provision for restitution shall not apply, and the ship shall be adjudicated on as in other cases of prize.

**Permission to re-captured Ship to proceed on Voyage.**—Where a ship belonging to any of her Majesty's subjects, after being taken as prize by the enemy, is retaken from the enemy by any of her Majesty's ships of war, she may, with the consent of the re-captors, prosecute her voyage, and it shall not be necessary for the re-captors to proceed to adjudication till her return to a port of the United Kingdom.

The master or owner, or his agent, may, with

the consent of the re-captors, unload and dispose of the goods on board the ship before adjudication.

In case the ship does not within six months return to a port of the United Kingdom, the re-captors may nevertheless institute proceedings against the ship or goods in the High Court of Admiralty, and the court may thereupon award prize salvage as aforesaid to the re-captors, and may enforce payment thereof, either by warrant of arrest against the ship or goods, or by motion and attachment against the owner.

In the case of neutral ships captured by an enemy and retaken by British men-of-war or privateers, the Courts of Admiralty have a discretionary power of allowing such salvage, and in such proportions, as, under the circumstances of each particular case, may appear just; but there is no positive law or binding regulation to which parties may appeal, for ascertaining the rate of such salvage. 'The maritime law of England,' says Lord Stowell, 'having adopted a most liberal rule of restitution on salvage, with respect to the re-captured property of its own subjects, gives the benefit of that rule to its allies, till it appears that they act towards British property on a less liberal principle; in such case it adopts their rule, and treats them according to their own measure of justice.' (Rob. Adm. Rep. 54.)

Salvage is one of those charges which are usually provided against by insurance: When, however, the salvage is very high, and the object of the voyage so far defeated, the insured is, by the laws of this and all other maritime nations, allowed to abandon, and to call upon the insurer as for a total loss. [ABANDONMENT.]

For further information with respect to salvage, see Abbott *On the Law of Shipping*, part iii. c. 10, and Maule and Pollock on *Do.*, c. 10.

**SAMPLE.** A small quantity of a commodity exhibited at public or private sales, as a specimen. Sugars, spirits, wine, coffee, and, indeed, most species of merchandise, are sold by sample. If an article be not, at an average, equal to the sample by which it is sold, the buyer may cancel the contract, and return the article to the seller.

Subjoined is a list of most articles that may be warehoused, and of the quantities that may be taken out as samples. (*Customs Min.*, Oct. 11, 1827.)

Arrowroot	-	-	3 lb. per package.
Coffee	-	-	2 oz. per bag.
Currants	-	-	1 lb. per package.
Raisins	-	-	4 lb. each mark.
Sago	-	-	2 lb. per pile.
Spirits	-	-	3 gills from each cask.
Sugar, foreign	-	-	1 oz. per box not exceeding 5 cwt.
	-	-	18 oz. per box or chest exceeding 5 cwt.
	-	-	14 lb. per hoghead.
	-	-	14 lb. per tierce.
Ditto, British plantation	-	-	1 lb. per chest.
	-	-	12 oz. per barrel.
	-	-	3 lb. molasses per hind. or cask.
Teapots	-	-	1 oz. per package.
Tees	-	-	3 oz. of each description and quality.

But in London samples are allowed according to the scale following, viz:—

From 10 chests or	20 small catty boxes	-	1b. 0z.
20 "	40 "	-	0 6
40 "	80 "	-	0 12
80 "	160 "	-	1 2
160 "	320 "	-	1 8
320 and upwards, or 10 and upwards		-	2 0

But other regulations exist, founded on the requirements of the trade.

Wine - 3 gills per each cask.  
Vermicelli - 1 lb. per package.  
Note.—Samples of spirits and of wine are of 3 gills each; but additional samples are allowed duty free, as the goods are required—bottle consumption, removal under bond, or exportation.

**SANDAL WOOD.** The wood of a tree (*Santalum album*, Linn.) having somewhat of the appearance of a large myrtle. It is of a deep yellow colour, and yields an agreeable perfume. The tree, when cut down, is usually about 9 inches in diameter at the root, but sometimes considerably more. After

being felled, it is barked, cut into billets, and buried in a dry place for about a couple of months, during which time the white nuts eat off the outer wood, without touching the heart, which is the sandal. It is then taken up and sorted, according to the size of the billets. The deeper the colour, and the nearer the root, the higher is the perfume. Reject such pieces as are of a pale colour, small, decayed, or have white wood about them; and take especial care that it be not mixed with wood resembling sandal, but without its perfume (Milburn's *Orient. Com.*)

Sandal wood is extensively employed by the Hindoos as a perfume, in their funeral ceremonies. But the Chinese are its principal consumers. They manufacture it into fans, and small articles of furniture, and use it, when ground into powder, as a cosmetic. During the year ended Dec. 31, 1848, there were imported by British vessels into Canton 20,732 piculs of sandal wood, valued at 207,400 dollars (see ante, *CANTON*); and the imports in some years are more than twice this amount. The average importation into Calcutta is about 200 tons a-year. It grows principally in Malabar, in the mountainous country at a little distance from the low sea coast; in Timor; and in the Feeje Islands in the South Sea. Calcutta is principally supplied from Malabar, while China derives the larger portion of her supplies from Timor and the other islands. It is seldom brought to Europe, except by individuals for their own use, or as presents for their friends. (Bell's *External Com. of Bengal*, pp. 49 and 85; Crawford's *Indian Archipelago*, vol. iii. p. 121 &c.)

There is also a red sandal wood which is used for dyeing, of which we imported 1,191 tons in 1867, valued at 5,870*l.*

**SANDARACH.** A resinous substance, commonly met with in loose granules a little larger than a pea, of a whitish yellow colour, brittle, inflammable, of a resinous smell, and acrid aromatic taste. It exudes, it is said, in warm climates, from cracks and incisions in the common juniper bush. It is used as a varnish, dissolved in spirits of wine, and the powder is used under the name of pounce, to give writing paper a surface after crasure. (Ainslie's *Mat. India*; Brande and Cox's *Dictionary of Science*.)

**SANDWICH ISLANDS.** This remote but interesting group is situated in the midst of the Pacific Ocean, between 18° 50' and 22° 20' N. lat., and 155° and 160° W. long. It comprises 8 inhabited and 4 uninhabited islands; Owhyhee, where Captain Cook was killed, being the most considerable. They are of volcanic formation, and mountainous, some of the peaks rising in Owhyhee to between 13,000 and 14,000 feet in height. By census of 1861 the total population was 69,800, of whom 67,024 were natives. It is a curious fact that the native population has been rapidly decreasing for some years past. The islanders are honourably distinguished among the Polynesian nations by the advances they have made in civilisation, and particularly by their progress in manufactures, navigation, and commerce. Christianity was introduced by the American missionaries in 1820, and is now the religion of the state; schools have been established, churches have been built, and the forms of religion are pretty well observed. European usages have become fashionable; and the costume of the better classes, women as well as men, closely resembles that of the Americans. The chief products of the islands are sugar, wool, cotton, coffee, oranges &c.

The principal port is Honolulu or Honorou, on the south side of the island of Wouho, in lat.

21° 30' N., long. 158° W. Population estimated at 14,000 in 1863, Americans, and other foreigners. The harbour, to which the place owes all its importance, has a narrow entrance, but it is easy access at all times of the tide to vessels not drawing more than 18 or 19 feet water. The Hawaiian Government completed in 1866 the erection of the most excellent wharf suitable for steamers. The bar at its mouth, on which there is a depth of 21 feet, being narrow and composed of soft coral, it might easily be made accessible even for line-of-battle ships. Coal could be had here in 1866 at from 41*s.* to 56*s.* per ton.

The Sandwich Islands have been visited for a considerable number of years past by the whaling ships and traders in the Pacific. Since the settlement of Oregon and California, and the discovery of the gold fields in the latter, they have acquired great additional importance, from their peculiar aptitude to serve as a station for the ships and steamers engaged in the trade between these countries, Australia, and China. In consequence, the town of Honolulu has increased so that the ground around the harbour is entirely occupied with houses and warehouses. The produce of the islands has also risen rapidly in value from its being in great demand for the provisioning of ships; and in the view of increasing its supply and of making up for the deficiency of the native population, it has been proposed to introduce Chinese labourers into the islands. The frequency of desertion among their crews has been the principal obstacle in the way of ships touching at Honolulu; but this, no doubt, will only be a temporary evil, and will end with the cessation of the peculiar circumstances to which it owes its origin. A considerable number of ships belong to the port, owned partly by natives, but principally by foreigners.

From the *Report* for 1866 of the British Consul-General resident at Honolulu, it would appear that the trade with the United States is steadily increasing, and that both the exports and imports for 1866 were greater than those of 1865, the exports of cotton, in particular, having doubled.

The actual expense of producing sugar on an old plantation, free from encumbrance, probably does not exceed 3 cents (equal to 1*½d.*) per lb. for all grades manufactured.

According to a table published in the 'Commercial Advertiser' of Honolulu, 33 sugar plantations are in operation or getting ready, 30 of which report 10,266 acres planted with cane, and the monthly expenses 49,917 dollars, equalling in English money about 9,861*l.*

The capital invested, including two estates not reported in the above, is over 2,000,000 dollars, or in English money 400,000*l.* (Mr. Consul-General Wodehouse's *Report*.)

A newspaper in the English language is published in the town, in which we have noticed advertisements of ladies' shoes from Paris, eau de Cologne, ices &c. The sovereignty of these islands was ceded, in February 1843, to the British; but the cession was declined by the admiral commanding in chief in the Pacific, King Kamehameha V. at present (1869) reigns over them. (*Geographical Dictionary*, art. 'Polynesia'; Simpson's *Sandwich Islands*; *Consular Report*.)

**SAN FRANCISCO.** A city and seaport of the United States, in California, on the south promontory, dividing the great bay of San Francisco from the Pacific, inside the bay, and a short way to the south of its entrance. The latter, now called the Golden Gate, little more

W. Population estimated at Americans, and other foreigners, which the place owes all its inflow entrance, but it is easy of the tide to vessels not drawing 19 feet water. The Hawaiian, erected in 1866 the erection of a pier suitable for steamers. The one in which there is a depth of 21 and composed of soft coral. It is accessible even for line-of-steamers could be had here in 1866 per ton.

Islands have been visited for a number of years past by the whaling vessels in the Pacific. Since the settlement of California, and the discovery of the latter, they have acquired importance, from their peculiar position as a station for the ships and in the trade between these countries and China. In consequence, the number has increased so that the ground now is entirely occupied with houses. The produce of the whaling is rapidly in value from its demand for the provisioning of the view of increasing its supply for the deficiency of the natives has been proposed to introduce into the islands. The frequency of their crews has been the in the way of ships touching this, no doubt, will only be a and will end with the cessant circumstances to which it is. A considerable number of ships, owned partly by natives, but by emigrants.

For 1866 of the British Consul at Honolulu, it would appear that both the exports and imports are greater than those of 1865, cotton, in particular, having

an increase of producing sugar on an old ground encumbrance, probably decreasing (equal to 1 1/4 d.) per lb. for all the year.

Table published in the 'Compendium' of Honolulu, 33 sugar plantations or getting ready, 30 of 6 acres planted with cane, and worth 49,917 dollars, equalling in value 9,861.

Estimated, including two estates not valued, is over 2,000,000 dollars, or 400,000. (Mr. Consul-General's report.)

The English language is published, in which we have noticed 'ladies' shoes from Paris can be seen. The sovereignty of these islands, in February 1843, to the session was declined by the King in chief in the Pacific. V. at present (1869) reigns 'Geographical Dictionary, art. 'Polynesian Sandwich Islands; Consul's report.

San Francisco. A city and seaport of California, on the south side of the great bay of San Francisco, inside the bay, and at the south of its entrance. The Golden Gate, little more

than a mile in width, has, on its south side, an old Spanish fort, with a light, in lat. 37° 48' 31" N., long. 122° 27' 38" W. There are also lights on Bonita and Alcatraz Island. Having passed the fort, the course to the town is nearly E. from 3 to 4 m., and then S. and W. about as much more. The city is at the bottom of a bay, skirted by extensive flats, some of which have been formed into docks. Its growth has been quite extraordinary. Early in 1848 it consisted only of a few rude cabins; whereas it has now an exchange, a theatre, a custom-house, sundry churches and other public buildings, with great numbers of private houses, many of wood, but many, also, of adobe (sun-dried) and burnt bricks, and a vast number of tents and booths. And while such is the metamorphosis on shore, her waters, formerly quite deserted, are crowded with ships and steamers from all parts of the world. Over 100 steamers are employed in the inland waters of the State, 87 of which, measuring 20,460 tons, are registered in San Francisco; and the customs receipts in 1867 amounted to 7,412,881 gold dollars: the total internal revenue for the same year being 3,899,626 dollars currency. San Francisco is indebted, as everyone knows, for this all but miraculous transformation, to the discovery of gold deposits in the beds of the tributaries of the San Joaquin and Sacramento rivers, which fall into her bay, and in the quartz of the contiguous mountains. Such, however, are the advantages of her situation and the fertility of the adjacent country, that the exhaustion of the gold deposits, though it might check for a while, would not permanently affect the growth of the city, or the extent of her trade.

To obviate the shallowness of the water close to the town, a wharf 2,300 feet in length has been projected into the bay, and to it all sorts of vessels are safely moored; and besides docks, every effort is being made to provide the accommodation necessary for the rapidly increasing trade of the town. San Francisco stands on a sandy level; and during the rainy season, when it is most crowded, the streets were at first mere puddles, into which carriages sunk to the axles; while, in the dry season, the annoyance from dust was all but intolerable. These inconveniences have to a great extent been obviated by flooring the streets, or covering them with stout planks—a process which has been carried to a great extent, and has had the most complete success. The city has suffered much from fires, by which, indeed, it has been repeatedly laid waste. These, however, have been speedily repaired; and in a few weeks no traces are seen of the most destructive conflagrations. As houses of brick or stone are substituted for those of wood and for tents, fires will doubtless become less frequent and less destructive.

The population of San Francisco is the most motley that can be imagined; for, though Americans predominate, a large admixture is to be seen of adventurers from all parts of the world. Gambling is very prevalent, and is, perhaps, carried on to a greater extent here, during the rainy season, than in any other place either of the New or the Old World. But this is the natural result of the circumstances under which the population has been brought together; and the passion will, no doubt, abate as the circumstances in which it originated change or lose their influence. Lynch law has been here reduced to a system, and carried to a greater extent than anywhere else. Yet, despite the gross abuses to which it unavoidably leads, it is the general opinion that it could not have been dispensed with.

A sense of its necessity has led, not only to its being adopted, but to its being generally approved. And the fewness of the crimes, considering the many desperate characters in the place and the temptations in their way, is ascribed to the promptitude and severity of the punishment with which they are mostly followed.

Nowhere in the world was there so great a disparity between the sexes as in San Francisco; there being at one time from 3 to 5 men for 1 woman. But this disparity has greatly lessened, as will be seen from the annexed table, and with it some of the worst features in the condition of the population.

The population of the city differs widely at different periods, the wet and dry seasons. The following statement, extracted from the local Directory, is given in Mr. Consul Booker's Report of March 1868:—

White males over 21 years of age	-	-	45,000
White females over 18 years of age	-	-	27,000
White males and females under legal age	-	-	40,000
Chinese males and females	-	-	3,500
Coloured males and females	-	-	2,500
Floating population	-	-	15,000
Total	-	-	131,100

Though by far the largest and most important town in the State, it is not its capital. That distinction has been conferred on San José, because of its more central situation.

The newspaper press is as active and flourishing in San Francisco as in the other great cities of the Union. The *Alta California*, in particular, and some of the other papers, display considerable ability.

The bay of San Francisco, though, as already stated, it has a narrow entrance, expands within into one of the noblest basins that is anywhere to be met with, having a coast line of about 275 miles. The town has become the seat of a very extensive trade, and will continue, most likely, to be the grand emporium of the vast territory belonging to the United States on the Pacific. The trade with China, Australia, the Eastern Archipelago, and the Polynesian Islands, is even now very extensive, and several ships have been fitted out for the whale-fishery. In 1867 was established regular steam communication with Hong-Kong in six days. At present, the principal trade of the city is with Panama on the one hand, and Oregon on the other; bringing immigrants and all sorts of manufactured goods from the former, and corn and other raw produce from the latter, the steam passage to the former being from ten to fifteen days. But she has also an extensive trade with Chili, the Eastern portion of the United States, and with Europe by Cape Horn as well as by Panama. The importation of many sorts of products has been completely overdone, and occasionally some varieties of manufactured goods have been bought in San Francisco as cheap as in Liverpool or Havre. This, however, is a species of miscalculation incident to the opening of all new markets, and will speedily correct itself. Gold bullion, with small but increasing quantities of quicksilver, and hides, have hitherto been the all but exclusive articles of export.

Exports of Gold.—It is extremely difficult, if it be not impossible, to form any very accurate estimate of the exports of gold from California. But it appears that the following amounts have been manifested and shipped in steamers and sailing vessels, viz.:—

From April 1, 1849, to December 31, 1850	dols.	34,370,255
In 1851	-	34,493,631
In 1852	-	45,801,322
In 1853 (first 6 months)	-	28,999,535
Making a total of -	-	113,665,764

1212 SAN FRANCISCO

Again in the 5 years 1863-67 the exports were:—

1863	-	-	£ 9,228,790
1864	-	-	11,111,150
1865	-	-	9,174,630
1866	-	-	8,802,830
1867	-	-	8,535,250

The value of the receipts from all points, at this port, of the precious metals was as follows, viz:—

1863	-	-	£ 9,631,000
1864	-	-	10,702,600
1865	-	-	10,575,570
1866	-	-	11,095,751

SAPAN WOOD

But to this have to be added the large sums, of which no account is taken, carried by miners and others leaving San Francisco for other parts of the United States, Mexico, Chili, China, and elsewhere. This has been variously estimated; but it is believed that in taking it at 15 per cent. we shall be considerably within the mark: on this hypothesis the total exports in 1867 will have been 9,585,538. It has been estimated by well-informed persons that the total shipments in the course of 1868 would not be less than from 70 to 80 million dollars.

Account of the Value and Destination of Exports from San Francisco, other than Treasure, in the 5 Years ending with 1867.

	1863	1864	1865	1866	1867
Eastern Ports of the Union	£ 818,150	1,055,750	1,234,080	1,118,875	1,352,075
Great Britain	333,565	191,170	235,150	291,850	1,965,750
Australian Colonies	97,540	125,950	119,250	553,290	14,600
China	219,250	271,870	216,750	308,810	955,070
Japan	8,800	9,900	24,710	297,590	162,090
Sandwich Islands	71,175	151,990	149,690	178,980	133,070
British Columbia	219,560	302,150	231,100	212,670	195,800
Mexico	365,520	415,125	416,530	310,650	596,575
South America	56,510	52,225	105,500	76,225	154,100
Other countries	23,650	79,775	115,950	117,790	155,925
Total	£ 2,409,560	2,611,265	2,910,760	3,460,830	4,093,150

The Value of the Imports from Great Britain into San Francisco in 1866 and 1867.

	1866	1867
Malt liquors	£ 47,505	58,401
Cotton goods	534,539	562,102
Linen goods	561,967	599,212
Knitting goods	25,978	38,809
Woolen goods	585,758	391,781
Hardware	155,708	162,599
Wines and liquors	23,256	45,104
Coal	28,166	37,787
Sundries	1,747,146	1,812,148
Total	£ 3,920,021	3,704,911

The chief imports in 1867 other than those from the United Kingdom were: sugar 332,891 cwt.; tea 2,027,332 lb.; coffee 90,012 cwt.; rice 141,415 cwt.

The most noticeable features in the exports from San Francisco are the great increase in the value of shipments to England, and the extension of trade with Japan: the former is caused by the large shipments of wheat and flour, and the latter by the new steam communication. The value of the principal articles of Californian produce exported in 1867 was as follows:—

Flour	£615,475	Hides	£25,806
Wheat	1,890,510	Quicksilver	186,240
Barley	15,750	Ores	100,500
Clay	2,900	Tallow	6,000
Wool	225,100	Wine	27,100

Passengers.—Arrivals at San Francisco by sea in 1867, 35,683. Passengers leaving San Francisco by sea, 20,419. Excess of arrivals by sea 15,264.

Port Charges.—Pilotage (half to be paid if no pilot be employed): vessels under 500 tons, 6 dollars per foot draught; vessels over 500 tons, 7 dollars per foot; harbour dues, 4 cents (2d.) per ton. Wharf tolls: vehicles drawn by one horse, 25 cents each; by two, 50 cents; by four, 1 dollar. All goods landed on the wharf and taken therefrom in lighters, or taken direct from the ship in lighters, pay 12½ cents per ton. The port wardens charge 15 dollars for each survey, but the total charge on each vessel must not exceed 75 dollars; for all separate certificates of survey required by the consignees of cargo, a charge of 2.50 dollars is made, and for each order of sale 10 dollars. The coasts of California, Oregon, and Washington boast 17 fixed lights and 3 revolving lights, and two more were in 1868 in course of erection.

Account, showing the Number of Vessels that arrived at San Francisco in 1867, their Nationality, their Tonnage, and the Value of their Cargoes.

Nationality	Vessels	Tonnage	Value of Cargoes
United States	225	270,656	7,144,000
United Kingdom	117	71,071	967,500
France	15	5,291	45,500
Russia	1	1,851	5,000
Belgium	1	285	1,400
Hamburg	10	4,516	57,500
Italy	1	2,617	16,000
Prussia	10	5,557	47,500
Bremen	7	3,710	37,000
Spain	1	337	6,500
Austria	1	177	4,000
Norway and Sweden	2	707	7,000
Holland	2	1,189	23,000
Mexico	4	269	1,500
Columbia	3	1,032	16,000
Sandwich Islands	17	6,225	28,000
(Georgian Islands)	3	408	2,000
San Salvador	3	2,418	5,000
Guatemala	1	572	1,000
Total	450	557,621	8,812,500
