

Table of the Weather.

The following Table, said to be constructed by the celebrated Herschel, is founded upon a philosophical consideration of the attraction of the Sun and Moon in their several positions respecting the Earth, and confirmed by the experience of many years' actual observation, will, without trouble, suggest to the observer what kind of weather will most probably follow the Moon's entrance into any of her quarters, and that so very near the truth that very few instances will it be found to fail.—Any person taking the trouble to refer to the hours of change for the last two or three years, compared with a register of the weather for that period, will prove the eventual correctness of this Table.

NEW OR FULL MOON.	SUMMER.	WINTER.
If it be new or full Moon or the Moon enters into the first or last quarter at the hour of 12 noon Or between the hours of	Very Rainy.	Snow or Rain.
2.....and.....4	Changeable.	Fair and Mild.
4.....6	Fair.	Fair.
6.....8	{ Fair if wind N. w.	{ Fair & frost if N. or N. E.
8.....10	{ Rainy if S. or S. w.	{ Rain or snow if S. or S. E.
10.....Midnight	Ditto	Ditto.
Midnight.....2	Fair.	Fair and frosty. <i>(wind)</i>
2.....4	Fair.	Hard frost, unless, or w
4.....6	{ Cold, with frequent showers.	Snow and stormy.
6.....8	Rain.	Ditto.
8.....10	Wind and Rain.	Stormy.
10.....12 Noon.	Changeable.	Cold rain if W. Snow if N.
	Frequent showers.	Cold with high wind.

Hence, the nearer the time of the Moon's entrance at full, change, and quarters, is to Midnight, the more fair the weather will be in Summer; but the nearer to noon the less fair. Also, the Moon's entrance at full, change, and quarters, during six of the afternoon hours, viz. from four to ten, may be followed by fair weather, but this is mostly dependant on the wind. The Moon's entrance in all the hours after Midnight, except the two first, is unfavourable to fair weather. The like nearly may be observed in Winter.

In serene calm weather, the air has weight enough to support a column of quicksilver 31 inches high, but in tempestuous weather not above 28 inches. The quicksilver thus supported in a glass tube, is found to be a nice counterbalance to the air—hence called a Barometer. The mercury sinks in stormy weather, and is lowest in storms of wind, because the horizontal velocity increases the pressure downwards; when the wind ceases, the air represses, and raises the mercury again.

Canada and Fredericton,.....	THURSDAY
Saint Andrews, and the United States,.....	Do.

The Mail departs for London and Nova-Scotia, by Cumberland, Wednesday at 4 o'clock, P. M.

Ditto Ditto by Digby.....	SATURDAY 4 P. M.
Canada and Fredericton, by the Steam-Boat,.....	THURSDAY, do.
Saint Andrews and the United States,.....	FRIDAY noon.
Canada and Fredericton, by the Land Route,.....	WEDNESDAY do.

The Inland Postage of Letters must be paid,—for Europe, Newfoundland and Prince Edward Island, at the rate of 9d. for a single Letter—for the United States, 7d. do.

If the Postage of Way Letters is paid, they will be delivered with less delay.

The Time for going through the Falls.

THE FALLS are level, (or still water) about 3½ Hours on the Flood and about 2½ Hours on the Ebb, which makes it passable four times in 24 Hours, about 10 or 15 minutes each time. No other rule can be given, as much depends on the Floods in the River Saint John, and the time of High Water or Full Sea, which is often hastened by winds, and in the proportion to the height of them.

SIGNALS made at Partridge Island, and repeated at Fort Howe, on the approach of Vessels to this Harbour,

- One Ball close, for one square rigged vessel,
- One Ball half hoisted, for two do.
- Two Balls close, for three do.
- Two Balls separated, for four do.
- A pendant of any colour, for five do.
- A do. under a Ball, for six do.
- A do. over a Ball half hoisted, for seven do.
- A do. under two Balls close, for eight do.
- A do. between two Balls separate, for nine do.
- A Flag of any colour, for ten or more do.

The above are hoisted at the East or West yard arm, according to the quarter the vessels first appear in, with the addition of a Ball at the centre of the Yard until the Rig of the vessels can be made out, when one or more of the following descriptive Colours will be hoisted at the Mast head.

- An Union Jack, for a *Flag Ship*, with or without a squadron.
- Do. with a red pendant over, for a *Two-Decker*.
- Do. with a blue pendant over, for a *Frigate*.
- Do. with a white do. do. for a *small Armed vessel*.
- A blue pendant, for a *Merchant ship*.
- A red pendant, for a *Merchant brig*.
- A white pendant, for a *Topsail Schooner or Sloop*.
- A Flag blue and white horizontally, a *Neutral Fleet*.
- A Pendant white and blue, *Neutral Man of War*.
- A blue Flag, *Neutral Merchant ship*.
- A Flag, red white and blue, an *Enemy's Fleet*.
- A Pendant, red, white and blue, an *Enemy's Man of War*.
- A red Flag, an *Enemy's Merchant Vessel*.
- An Union Jack, over Neutral or Enemy's signals, *the vessel is detained, or a prize*.
- A white Flag over any signal, *vessel bears a Flag of Truce*.
- A red Flag pierced white, *for the Digby Packet*.
- A blue Flag pierced white, *for the St. Andrews Packet*.
- A Ball at the Mast-head, *vessel is on shore or in distress*;
- Should immediate aid be necessary, guns to be fired.

In thick weather, a gun will be fired at Partridge Island, in answer to each gun heard at sea.
 When a Vessel requires a Pilot, her descriptive Pendant will be shown at a yard arm, instead of the ball.
 After a Vessel has been described, and passes the Harbour, her descriptive pendant will be lowered half-staff, for an hour, and the ball taken down.

Clean Paper Hangings.—First blow off the dust with bellows.—Divide
 the loaf of eight days old into eight parts. Take the crust into your hand,
 beginning at the top of the paper, wipe it downwards in the lightest man-
 ner with the crumb. Don't cross or go upwards. The dirt of the paper
 and the crumbs will fall together. Observe, you must not wipe above half a
 stroke, and after doing all the upper part, go round again, begin-
 ning a little above where you left off. If you don't do it extremely light, you
 will make the paper yellow, and the paper will be soiled if properly

LIBRARY HOURS—

THE ECLECTIC LIBRARY,

Was founded in March, 1821, and is managed by a Society of twenty-five Gentlemen belonging to the City.

The object of this Institution is to put it in the power of every class of the community to acquire knowledge on every interesting and important subject. Semi-annual importations of the latest and best Works, to the utmost extent allowed by the funds, are made from Great-Britain.

Office-Bearers for the present year.

Mr. James Paterson, *President*,
William B. Kinnear, Esq. *Vice-President*,
John Boyd, Esq. M. D. *Treasurer*.
Mr. James Robertson, Jun. *Secretary*.
Mr. W. C. Sears, *Librarian*.

TERMS OF SUBSCRIPTION.

Persons, who include in their reading the Periodical Works, of which a dozen varieties are imported, pay, when they subscribe, for a year 25s. for half a year 15s. for a quarter 9s.

Persons who do not include the Periodical Works in their Reading, pay when they subscribe for a year 20s. for half a year 12s. 6d. for a quarter of a year 7s. 6d.

LIBRARY HOURS—From three till four o'clock on Wednesdays and Saturdays.

St. George's, St. Andrew's, and St. Patrick's Societies.

These Societies were instituted for the very laudable purpose of granting aid to their respective Countrymen in distress, and they have been instrumental, since their establishment, in affording relief to many poor families, deserving of charity.

SAINT GEORGE'S.

Thomas Millidge, Esq. *President*,
Mr. James Hendricks, *Vice-President*,

RECEIPTS, &c.

To preserve Gilding, and clean it.—It is not possible to prevent flies from staining the gilding without covering it: then with stripes of paper cover the frames of your glasses, and don't remove it till the flies are gone.

Linen takes off the gilding, and deadens its brightness; it should therefore never be used for wiping it.

Some means should be used to destroy the flies, as they injure furniture of every kind, and the paper likewise. Bottles hung about with sugar and vinegar, or beer, will attract them; or fly-water put into little shells placed about the room, but out of the reach of children.

To take Ink out of Mahogany.—Dilute half a tea spoonful of oil of vitriol with a large spoonful of water, and touch the part with a feather, watch it, for if it stays too long it will leave a white mark. It is therefore better to rub quick, and repeat it if not quite removed.

For Rheumatism.—Take a pint of the spirits of turpentine, and add half an ounce of camphire; let it stand till the camphire is dissolved; then rub it on the part affected, and it never will fail of removing the complaint. Flannel should be applied after the part is well fomented with the turpentine. Repeat the application morning and evening.

For a Sore throat.—Take a handful of salt, put it into an earthen pan, make it hot, then put it into a flannel bag, and apply the bag to the throat as hot as it can be borne. It should be worn all night.

Another.—Wear a worsted stocking round the throat all night, which has been worn on the leg during the day.

For a Consumption.—Take a pint of the strippings of a red cow, warm from her, and beat the yoke of an egg in it, and then sweeten it with sugar of roses, a spoonful of red rose water, and a little nutmeg scraped in it. Drink it in the morning for a month: this cured a person given over by the doctors.

Raspberry or Currant Wine.—Put five quarts of currants, and a pint of raspberries, to every two gallons of water: let them soak a night; then squeeze and break them well. Next day rub them well on a fine wire seive, till all the juice is obtained, washing the skins again with some of the water; then to every gallon put four pounds of very good Lisbon sugar, but not white, which is often adulterated; turn it immediately, and lay the bung lightly on. Do not use any thing to work it. In two or three days put a bottle of brandy to every four gallons; bung it close, but leave the peg out at top a few days; keep it three years, and it will be a very fine agreeable wine; four years would make it still better.

FARMER'S CALENDAR.

(From the YANKEE ALMANACK for the year 1823.)

JANUARY.—May the Editor while benevolence and gratitude throb at heart, be once more permitted to greet every patron and friend with that daily, heart-warming, *frost-of-enmity-subduing* and ear-delighting expression, which, in the blissful days of careless childhood, he has, at this festive season, so often listened, and which he has so often repeated with all the heartless sincerity of that innocent, world-unknowing age—"I wish you a happy new year." Such wishes, so natural among friends in all countries, could be expressed with that cordiality and freedom with which they are uttered by the Scotch.

May an abundant *harvest* of joy and prosperity be reaped by each of you not only throughout this new-born year, but during lives protracted to the best moment in which existence on earth can be desirable. And may it not be here; but when summoned to a better world, may you carry the golden sheaves of hope and joy with you, and be prepared to reap perfect felicity in the ever blooming fields of Paradise.

He greets one as a helper, he salutes another as a kinsman, a third as dearly loved, and all his fellow labourers and brethren. You are the salt of the earth, and preserve in a state of soundness what is most valuable, temporarily speaking, to our country its agricultural principles. In the affectionate and picturesque words of Sacred simplicity, may you enjoy a south land and springs of water and receive all the blessings of the upper and the nether regions. And although the trees should not blossom nor their boughs be laden with fruit; the labour of the ox should fail, and the fields yield no food; the flock should be cut off from the fold, and there be no herd in the fields; still may you rejoice in your God, and trust in his fatherly love.

FEBRUARY.—They who are not penny wise and pound foolish, will make many long days out of this short month.—Ned Slouch had a great notion one time to make a bold push, and do something to the purpose; and actually forsook father and mother, and ventured beyond the sound of the hasty-pudding kettle. In the heat of the moment, he put his best leg foremost (it was his best, for the fire, as he frequently reposed in his favorite chimney corner, and did not, like mathematician Emerson, encase his legs in cork, had made many a fierce irruption into his quiet domains and sorely afflicted the shin of the other,) and with the alertness of a sloth newly set out on his travels, got as far as Capt. Racket's, with whom, come what would of it he was determined to engage for at least a month. The Capt. was at home, and took him a week on trial. For three days and three nights, he was the readiest and busiest soul in the house at his—food, cider, and sleep. Racket being absent, on the fourth day, Ned paid his devoirs with such frequency and fervency to the cider hoghead, that, long ere night, he would fain take himself to what was, heretofore, his city of refuge, whenever any of the ills of frail mortality beset his path, the chimney corner. So purely fortified so impregably fortified, as he thought himself, he here discoursed unutterable and unintelligible things with Racket's fair daughter Dinah, and Morpheus, intent on mischief, threw his spell upon him. But not long as had he been a captive to the charms of Dinah, and the united powers

of Bacchus and Somnus, ere he became scorched with a hotter flame than those of love, for he soon tumbled into the fire, whence poor Dinah, so frightened, dragged him forth, in a most dolorous condition. Next morning the Capt. piled him on a sled, and sent him home. Thus ends the first chapter of Ned's travels—penny-wise, pound foolish.

MARCH.—Take good care of your sheep. This is the best direction for the preservation and management of weak lambs that can possibly be given for the best nursing of such lambs, is to keep the ewes well, either upon your best English hay or red clover, with potatoes, carrots, or white beans. Such feeding will ensure your strong lambs, with a plenty of milk, and save trouble of nursing. If any one lack these means, or others equally proper for even barley, oats or corn, will answer as substitutes for the potatoes, carrots, or white beans, if given in small quantities, so as not to excite fever and thereby cause ticks, and the shedding of the wool,) or if he neglects them, let him remember, that such weak lambs should be treated, in respects, as if they had been drowned, and he would restore them to life. Apply gentle and regular warmth; give them warm milk frequently, in small quantities, (the milk of the sheep is best,) and if the ewe has milk sufficient for its support, you may generally raise them; but if not, they commonly die. It is more work to nurse one such lamb for 24 hours, than feed regularly one hundred sheep for the same time.—Take your choice.

Take good care also of your breeding sows. Keep them well, and in good flesh, but not fat; and salt them often to prevent them eating their own pigs which often happens, if they are too fat and you neglect to give them salt. Now is the time to lay a proper foundation for your pork harvest. The *Guinea breed* of hogs crossed with the best kinds of our common swine are said to be the most profitable of any. The Chinese breed are very good. The large long-bodied hogs, with long ears leaning forward, are most profitable to fatten the second year. A moderate length, in proportion to the size of the body; the nose short, the cheek plump and full; carcass thin and full; neck thick and full; hair fine and thin; with a symmetry adapted to the breed to which it belongs; are marks of a good hog. Avoid the long nosed hog, as you would one of Pharaoh's lean kine, unless you intend to educate it for a learned profession.

APRIL.—We are all fools sometimes even if it be not the first of April, but the greatest fool is not always one.

Repair your fences; plough for your spring grains; and, for your flux, do it repeatedly. Prepare your pea ground as soon as the frost is out, by digging and raking, until it is completely pulverized. If your soil is weak, manure with live or leached ashes or chip dung, and rake it in; then plant your early hot-purs in double rows, 4 or 5, or even 6 inches apart, and set your peas by hand, and about half an inch distance in the rows; cover lightly, and press down the surface of the earth upon the rows with the hoe. Be sure to select for this crop the driest and warmest soil in your garden, especially such as is secured from the north winds, by a tight fence or a wall. Select from your cellar the best of your cabbages with heads, and set in some secure place to stand for seed; set different kinds remote from each other to prevent their seed mixing at the time of blossoming. Set, at the same time, your best cabbage stumps for early sallad and greens. If your ground is moist, set but just below the surface; if dry, set deep, say 6 inches or more

render your mowing even, and prevent one part from becoming too
k and lodging, before the other part is fit to cut, and thus turn to your best
fit, what, if neglected, would become waste and damage.

Don't let the boys become afraid of hasty-pudding and milk; 'tis a true
kee dish. Our southern brethern are much attached to hominy; and
should we degenerate from the simple, temperate habits of the *Pilgrims*,
they turn up their noses at it, and crave a more luxurious mess, vary the
de. Instead of milk, let us have a little butter and sugar. Count Rum-
ford, who, you know, was not only a great practical philosopher, but a *born*
key, highly recommends this way of eating it.

MAY.—Have the boys tried butter and sugar with their hasty-pudding,
en tired of milk? And how do they like it?—Joel Barlow was a farmer's
son, and was so delighted to recall the dear remembrance of his early years,
when he *spooned down* delicious hasty pudding and milk with as much *gout*
as an alderman epicure would turtle soup, or the greatest master of the gas-
tronomie art would swallow the nicest morsels which luxury has catered,—
that he wrote a poem in praise of this yankey dainty. Man being a *Cooking*
Animal, many a great genius has wearied and vexed his brains in the compo-
sition of ragouts and fricasees, soups and sauces. The late ingenious Ameri-
can, Benjamin Thomson, alias count Rumford, presided over a grand eating
institution in London, which was established on a wide scale, and where some
of his most valuable experiments in cookery were tried. In his philosophi-
cal essays, we have the following directions for eating hot hasty-pudding:—
The hasty-pudding being spread out equally on a plate while hot, an *excava-*
tion is made in the middle of it with a spoon, into which excavation a piece
of butter as large as a nutmeg is put, and upon it a spoonful of brown sugar,
is laid. The butter, being soon melted by the heat of the pudding, mixes with
the sugar, and forms a sauce, which, being confined in the excavation, occu-
pies the middle of the plate!—Thus for the array—nor for the battle!—
Dip each spoonful in the sauce, before it is carried to the mouth, care be-
ing had in taking it up to begin on the outside, and near the brim of the
plate, and to approach the centre by gradual advances, in order not to de-
stroy too soon the excavation which forms the reservoir of the sauce!

After this, I am almost afraid the boys will become too fond of it, and be
running into the house every half hour, exclaiming, "I want another plate
of Rumford!"

When you plough your land for Indian Corn, always lay it in ridges, whe-
ther it be sward or mellow, and plough the balks up to the ridges, and those
ridges never disturb by cross-ploughing, while your corn is upon the ground.

JUNE.—You may plant cucumbers to advantage the first of this month.
They will often be as early as those planted in May, and generally bear bet-
ter. Nurse your plants with your hoe often. Remove the dry earth, and
give them fresh earth, especially if the season be dry. The best time is early
in the morning. Continue to hoe and weed out your onions, and all other
plants, even before the weeds appear, if possible. Hoe and bush your late
beans. Plant more potatoes; sow more turnips. Continue to plant cucum-
bers for pickling. Top all such bush beans as are in blossom by cutting off
the top of the vines near to the blossom: they will be earlier and bear bet-

16/10
5.18
15.16
52/10
52/30

ter. Thin out, and earth up all your plants. Remember that frequent hoeing is both rain and manure to your plants, especially in dry weather, done in the morning. Plant out your cabbages, cauliflowers, &c. in moist, cloudy weather, but not when the ground is wet and heavy. Thin out your beets, carrots, and parsnips, and fill up the rows that may be vacant. Cut your sage, mint, &c. when they begin to flower, and spread them to dry in an airy place.—As your winter manures, from the farm-yards and hog-sties are, doubtless, disposed of to the best advantage, it becomes necessary that you attend to the formation of your summer manures, to dress your land in autumn. Let your hogs be enclosed in an open pen, near to or in one part of your barn-yard. Into this enclosure, throw the scrapings of your barn together with every vegetable substance that will putrify and rot through the summer. Plough up, and cart in, occasionally, such earth as can be collected from ditches, or old sward balks. Your hogs will root and mix the together, and thus, with a little attention, you may obtain 20 or 30 loads of the best manure; or much more, if your hogs are numerous, and receive your attention. You will find a benefit both in the growth of your hogs and in the quantity of manure, if you sow half an acre, or an acre of clover, on a rich soil near the barn-yard, and begin to cut early for feed for your hogs.

JULY.—*There's nothing like grog.* To be sure, there is nothing like it to take away a man's money and senses. Our fathers drank beer, molasses, and water, milk and water, &c. in day-time; but now-a-days every body must be turned with a glass of grog.—Time is every thing, in "making hay while the sun shines." The best plan, therefore, is, for the farmer to be diligent in his mowing betimes in the morning. Cut down as much as possible by nine or ten o'clock, by which time the dew will be off. Then spread the mowed grass evenly, and about noon turn it over where it lies thick. In the afternoon rake it into winrows, but shake it up lightly, so that it may be exposed to the air. Towards sundown shake it into neat small cocks, and let it remain so a day or two. If it be not then dry enough, shake it out again on a small space of ground, and turn it over till it is dried. Then, if necessary, cock it again, and as soon afterwards as possible, draw it in. But it will save time and trouble in drying hay, if from four to eight quarts of salt be applied to every ton of it. It is found that hay thus salted can be well saved in a much greener state; and at the same time the benefit which the hay derives from the salt is more than ten fold its cost.—Don't delay billowing your corn, until haying, to husband time: it is the worst calculation possible. There is damage to your corn by such delay: to hoe or hill when your land is heavy or wet, is bad: it leaves your land tight, excludes the free circulation of air to the roots of your corn, and is a waste in the delay of hoeing, both in time and strength. 'Tis all bad. Select, therefore, the finest weather for your several hoeings—your land will then plough easy, hoe easy, your weeds will wilt and die in the sun, and your corn will be refreshed with a warm, loose, or light earth, which will readily receive the air and moisture, to nourish the corn.—The earlier your wheat and rye are harvested the better. Do it before the grain becomes hard: it will then have a thinner skin, and produce whiter flour, although the whole weight of the grain will be rather less than if harvested later.

AUGUST.—Handle your tools without mittens, and charge the boys to

reserve their sweet-hearts' dominancy, and, who say any thing, and to be expi- and expi- and become, her care, it w- mowing land the aim of far- the grass as c- marks, that is when this is in- inch at the be- fax. arge the boys to

reserve their gloves for Sundays, and against they dash out to visit their sweet-hearts; otherwise the delicacy of their hands may accuse them of effeminacy, and disgust the rosy-faced damsels. Let them listen to poor Richard, who says, "the cat in gloves catches no mice."—If you housed your harvest, and planted your late potatoes in July, attend how to your late haying and to your oats. Proceed with your late haying as with your English and timothy. But if you gather it in a careless slovenly way, and suffer it to be exposed to the rains, as if of small value, and not worth your time and expense, you must, of course, expect it to repay you in your own way, and become, in very deed, of small value. Collected and housed with proper care, it will be more valuable, and repay you with large interest. Where mowing lands are of a perfectly smooth surface, which it should always be the aim of farmers to have them, no pains must be omitted in mowing, to cut the grass as close to the ground and as evenly as possible. Arthur Young remarks, that grass will never thrive well, unless it be mown quite close; and when this is not done, the loss in the crop is not inconsiderable, "for one inch at the bottom weighs more than several at the top."—Attend to your flax. If you design it for the nicest domestic manufacture, you should pull it when the blossoms begin to turn and fall off, as they do in Ireland, and water-rot it not in a pond or stagnant water, but in a brook or river, where the water may often change. But if you wish to save the seed let it stand till the stalk begins to turn, and the under leaves fall off, and then pull it. In either case, bind up as you pull, in small bundles, and set up the bundles in small bunches, to dry; or spread it upon the ground for several days if the weather be fair and promising. Though some farmers after this, bind and stack it in long stacks with the butts or roots cut, and cover the stacks with loose flax, to prevent its injury by rains; yet the better way, certainly, is to house it as soon as dry, as carefully as you do your harvest.

SEPTEMBER.—This is a month of fruits, of health, of joy, and of gratitude. It imparts pleasure to the sons and daughters of industry: its health-infusing breezes revive the drooping emaciated victims of wari disease; and its rich rewards poured into the capacious granaries and coffers of ready-handed, sun-burnt activity, may awaken conviction, and call up regret, in the breast of idleness and neglect.—Gather your seeds; attend to your celery. Put your winter grain into the ground, if not already done. Get your cider mills in readiness, the winds daily prepare fruit for the press. Gather in your beans. Begin the second cutting on your English mowing grounds; but let your timothy stand for seed; and remember that rowen requires double the drying of the first crop, or the hay will be bad, and give your horses a cough, and the heaves.—If you top the stalks upon your Indian corn close to the ears, as soon as they are too hard for boiling, your corn will ripen the faster, and receive no injury, and your stalks will be more valuable. Bind the stalks in small bundles, and stack in small stacks the same day they are topped, to secure them against rain.—If you wish to increase your fodder, when your hay is short, or if you want to sow winter grain after your Indian corn, or wish to secure your corn against the effects of early frosts—you may cut up your cornhills close to the ground, in fair weather, with a sharp knife or sickle, and lay two rows into one, in small bundles, as when you top and secure your stalks; bind your bundles the same day, and stack in small stacks, either upon the borders of your fields, or in an ad-

ining one; you may then plough and sow as upon fallow grounds; secure your stacks by doubling down the tops, and binding the heads with a pliable stalk; which will exclude the rain that otherwise would damage the corn. In this way, you may bring forward the sowing of your winter grain 2, 3, or 4 weeks, which will again at harvest repay the expense of clearing your corn fields.

OCTOBER.—Move alertly and merrily, boys: 'tis no time for lounging and loitering now; in so busy a month, it wont do to hear or tell long stories, make long meals, smoke long segars, or court long dreams and smiling girls. Hasten to the corn-fields and potatoe grounds. Dont stop half an hour in the road to swap watches or horses, or to make up a junket-dance for the next Saturday night.—Dry your seeds well before you put them up; and when put up, let the air have access to them. It is best to put them into drawers, or partitions of drawers, kept part way open. Gather from the gardens all winter vegetables, before the hard frosts commence, especially winter squashes; dry and house them carefully. If you do not select your seed corn, before gathering, from the hills, do it as you are husking, selecting the fairest and ripest ears, and such as have the smallest cob, and are best filled out at the ends; though the kernels near the end should never be reserved for seed.—Now is the time to improve your next crop. By pure seed, and by selecting the earliest or the ripest, you may bring forward your succeeding crops 10, 15, or 20 days earlier, and thus enable you to improve your late sowing. Nor needs the improvement stop here. By selecting your seed-corn from your field, taking the ripest ears, (at different stages of the corn, and beginning early in September,) and from the most thrifty stalks, you may bring forward your next crop still earlier. And, moreover, if you select this seed from such stalks only as produce two or more ears, you may, by adhering to this practice, double, or even treble your quantity of corn upon the same grounds, with only the same tillage.—Now carting corn, throwing up gardens into ridges, digging potatoes, &c. keep all hands busy by day; while husking, eating baked puddings, apple pies, &c. and telling a merry tale, or singing a humorous song, make a long evening speed swiftly and pleasantly away.

NOVEMBER.—The late Mr. Romaine of London, preaching one day extemporaneously, on what the world calls petty sins, or fashionable frailties, observed that "men, now-a-days, have an excuse for every thing. Nothing is so bad that they do not palliate it. They dont so much as call the deed by his right name, but stroke him down the back with the pitying apostrophe:—'poor mistaken angel!'"—Fashion gives a gloss to whatever bears her impress, far surpassing all that the richest and most costly silks can boast, and a brilliancy of polish, far transcending the lustre of the finest gems that ever passed through the hands of the most ingenious lapidary. Her decrees are more carefully studied, and more sacredly regarded, than either the laws of earth or the laws of heaven. Her prescriptions are followed without objection or fear: if she recommend the potion, it is swallowed with delight, be it ever so nauseous. At her command, her votaries would become the worshippers of the devil, with as little hesitation, though not with the same motive, as an untutored son of Africa; for he would do it from fear, but she from love. Influenced by her, and her father, Ambition, Mrs. Wearbreech insisted upon it, first, that Jacky should go three months to the nearest "o-

allow grounds; secure every thing; for he shouldn't work, by no means. And her insistings were always as fixed as the laws of the Medes and Persians. So having acquired the old lady's three months' allowance of manners at an academy forty miles from home, Jacky was placed, by order of the father's ruler, in a store twenty miles off. While the smart lad, relieved from what he deemed the drudgery of the field and the barn and the plough, the hoe, and the cattle, was, by the provident forecast of his mother, put into the only sure road for becoming a gentleman: his father, deprived of what, but for the whim-whams of the lady ruler, would have been the boy's useful services, was left to tug and wear himself out in the field alone. Jacky instead of learning to be industrious, honest, and sober, soon learned to smoke cigars, drink grog, &c.

DECEMBER.—Industry may now relax a little from her annual toils and look around her, on her comforts and enjoyments, with a brightening countenance, while the warm aspirations of gratitude issuing from her heart, ascend to the Giver of All Good, from whom those comforts and enjoyments are all derived.—Securely house your carts, harrows, ploughs, and all the implements of the summer's labours. Improve the first spell of sledding to renew your stock of wood. See that your fences are in good repair, to prevent the cattle, &c. from injuring your crops of winter grain, meadows, &c. in case of an open winter. Hogs for home use may now be killed, as it is the best time for making good bacon.—Feed not only your cattle, but also the houseless, foodless child of want; so will the prayers of the poor call down blessings on you and yours.—I hope you do not, as is the practice with some, make use of shingles, saws, and pot-lids for your day-books, and the inside of your kitchens for ledgers: 'tis a sorry improvement in book-keeping; and, like a false friend, the record may leave you in the lurch, when most needed. Pray, look over your account-books, whatever they may be, and endeavor to settle with your neighbours, and the collector before you are wished a happy new-year. It is hoped, that every town and village is now supplied with a wise and virtuous school-master. Two most important things now claim your attention; the first is, see that your children are kept steady at school, and well supplied with useful and valuable books; the next is, that you seize every possible opportunity to improve your own minds, by reading history, geography, biography, and the sciences in general. A knowledge of geography is necessary to understand what you read in the newspapers. The newspapers are the great vehicles of general information. And now, friends, farewell.

AGRICULTURAL.

The Pea.—There are various kinds of peas; some of which are more, and others less, valuable for cultivation. The best for garden culture are the small early, and the marrowfat pea; the former for early use, and the latter for an after and more abundant supply.

The method of cultivating each, in the garden way, is too generally known to need any particular description. They may

be sown in the field in the broadcast-way, for family use, which is much the easiest, as the trouble of raising them in the garden is very considerable.

The culture of the common field-pea is considerably attended to in the State of New-York, among the German Farmers, and usually precedes the crop of wheat; being considered a good preparative for that crop, as the ground is left mellow, and but little exhausted by the crop of peas.

They yield from sixteen to forty bushels an acre. The haum is also of some considerable value for fodder. The allowance of seed is two bushels to the acre; though, perhaps, a greater allowance is advisable, as the thicker they are sown, the less liable are they to fall flat to the ground, which in some measure prevents the filling of the pods.

They are to be sown during the first decrease of the moon after the ground can be prepared in the Spring; for, if not sown whilst this planet is performing that part of its revolution, the crop will ripen unevenly; some stalks will be green while others are dead ripe. The ground should be well mellowed, before sowing. Plaster is excellent for this crop, where the ground is suitable for that manure.

Soaking the seed in some fertilizing liquor, before sowing, such as a solution of saltpetre, old urine kept for the purpose, lie of wood ashes, or perhaps all united, would no doubt be of service to the crop. If the soil be inclining to clay let the seed be dried with lime; but with plaster, if it be suitable to the ground.

The crop, to make it sufficiently profitable, should be of luxuriant growth; and as such will cover the ground more completely, it will, on that account, be in better condition for the succeeding crop of wheat.

In regard to harvesting, the practice commonly pursued is to let it stand till it is dead ripe. If, however, it were harvested while the haum was partly green, it would be much better for fodder: and we believe the grain would not thereby be essentially injured; though, perhaps, a little more trouble would be requisite in drying the haum.

It is cut by the German Farmers with a sithe and cradle; but we believe a common mowing-sithe is just as good for the purpose. In cutting, it is at the same time gathered into small bun-

es; in which it is sown.

Peas are cut into small pieces, and sown; but with these in the garden, a few are mentioned, and directed, and

 rted in.

Peas are subjected to the depredations of a small black bug,
 at eats into them. It does not, however, hinder them from
 owing; but if not destroyed, the next crop will be infested
 with these insects. To kill them, let the peas intended for seed
 put, a few seconds, into some, or a mixture of the liquors be-
 re mentioned, made hot; and then dried in the manner before
 racted, and sown immediately.

Flax.—Such crops of flax as are usually raised, do not pay
 for the labour bestowed on them. This must be owing to bad
 management. As this is a crop the farmer must raise, if he
 ave any regard to domestic economy, the means of raising it to
 dvantage should be duly attended to.

A good method of raising a crop of flax is as follows:
 Summer-fallow a piece of ground of suitable soil, and give it
 six or eight ploughings and harrowings, during the summer, so
 as to destroy all the seeds of weeds. Apply your manures dur-
 ing the first ploughings, unless composts or top-dressings; at all
 events, let the soil be made rich enough for hemp.

The next spring, mellow ground again, by two or three
 ploughings, harrow it, and sow, of well cleaned seed, at the rate
 of about three bushels to the acre, and harrow it in lightly.
 Give the ground a top-dressing, of about four bushels of fine
 salt to the acre, and also some plaster, if the soil be suitable.
 Let the crop be sown about the first of May, or as soon as the
 ground can be effectually prepared, after vegetation has com-
 menced. By this method of culture, and with a proper change
 of seed, five or six hundred pounds of flax, of a fine quality, may
 be reasonably expected from the acre. It should be remem-
 bered, however, that, in order to obtain a good crop of flax, a
 farther requisite is, that the ground shall not have borne flax,
 for as much as seven years previous to the time it is to be sown
 with this crop.

E N I G M A S.

To man alone I owe my birth,
 And strange origination;
 He drew my essence from the earth,
 Devoid of animation:
 And then, to model something droll,
 It seems he took a caper;
 So formed me with an ample poll,
 Bent neck, and body taper.
 But when placed in my destined seat,
 Mark what a transformation!

With bodyround my neck and pate
 I hold an ensy station.
 To man and beast my aid's so good
 I'm frequently commanded
 To pass, unmoved, through flesh
 and blood,

For means of use intended.
 On Erin's flow'ry plains I'm found
 Discursive to meander,
 And sometimes osculate the
 ground,
 As o'er the field's I wander.
 Though void of life, to life allied,
 I fear no sad disaster,
 But stand in guardianship well tried
 To keep from harm my master.

From earth to heaven, from heaven
 to earth,
 My first alternate goes,
 My next, an ancient instrument
 Of war you may disclose.
 Connect these parts—my beauties
 still,
 Outdo the greatest human skill.

R E B U S E S.

To five, and five, and fifty-five,
 The first of letters add;
 It is a thing would please a king,
 And set a subject mad.

Transpose a fish that swims the
 main,
 And with an insect do the same;
 Now join my first and last—you'll
 see
 What every beav would wish to be.

My second's one half
 The skin of a calf;
 My first's of your noddle the same,
 My whole I peruse,
 -Myself to amuse;
 Diarians, pray what is its name?

Four sevenths of a fish join'd to
 half of a crowd,
 Will show you an art of which many
 are proud.

God Save the King.

GOD save Great GEORGE our King,
Long live our Noble King,
God save the King;
Send him victorious,
Happy and glorious,
Long to Reign over us,
God save the King.

O Lord our God arise,
Scatter his enemies,
And make them fall;
Confound their politics,
Frustrate their knavish tricks,
On thee our hopes we fix,
God save us all.

Thy choicest gifts in store,
On Grandeur be pleas'd to pour,
Long may he Reign;
May he defend our Laws,
And ever give us cause,
To sing with hearts and voice,
God save the King.

From every latent foe,
From the assassin's blow,
God save the King;
Thy arm thine arm extend,
Thy Britain's sake defend,
Thy Father, Prince and Friend,
God save the King.
