CUNNABELL'S
NOVA-SCOTIA ALMANAC.

Chronological Summary.

Comprising the principal Events which have occurred in Nova Scotia, from the first settlement of the Province, up to the latest period.

THE Events recorded in our last, commenced from 1828, and were brought down to the end of 1834. We continue the Summary from that period. The interest with which this department of our Almanac has been received, is evinced by the fact that a great many of our readers have been induced to preserve the back numbers.

1835.—January 21. St. Paul's Church in Halifax first lighted up for evening service. Messrs. Chambers of Edinburgh contributed towards the Cholera Fund in Halifax. 31. The House of Assembly having granted 8,000l. for the road and bridge service, his Excellency requested them by message to place one half of it at the disposal of the Executive, to be expended on the great roads. The House declined, by a vote of 20 to 18.

February 19th. The session of the Legislature was prorogued. 21st. A soup house for the poor was in operation in Halifax, and during the preceding week 1984 quarts were issued of good wholesome soup. All classes continued to contribute largely in aid of the cholera fund. Strong indications of alarm were felt, lest the pestilence should return.

March 5th. Mr. Joseph Howe, proprietor and editor of the Nova Scotian, was prosecuted by the Magistrates of Halifax for a libelous letter published in that paper; of which charge he was acquitted, and retired from the Court amid the acclamations and rejoicings of the people. 11th. The Halifax Police Office thoroughly reorganized; several of the Magistrates gave up their commissions and retired; a number of new appointments was made; and the whole put under the control of Judge Sawers, who was made *custos rotulorum*. These arrangements were made by the interference of his Excellency. 27th. His Excellency Sir Colin Campbell became patron of the Halifax Mechanics' Institute, at the invitation of the officers and committee of that institution. The road from Fresh Water Bridge round Point Pleasant, heretofore only a foot path, was made a carriage road, by the exertions of his Excellency.

November 7th. News arrived in Halifax that the bill for dividing Cape Breton into three counties, and increasing the representation, had received the Royal assent. 27th. Died in the 82d year of his age, John Howe, Sen. Esq. Postmaster General of the Province, and one of the oldest magistrates of the county of Halifax.

1836.—January 1st. Messrs. English & Blackadar assumed the proprietorship of the Acadian Recorder. 21st. The session of the Legislature was opened. During the session the settlement of the currency question occasioned many warm and lengthy debates.

February 26th. A bill substituting sterling for currency was agreed to by the House, but was subsequently lost in the Council. The House passed a resolution, by a large majority, the purport of which was, that the fees taken by the Judges of the Supreme Court were unlawful, and that the custom

ought to be abolished. An union between Windsor and Dalhousie Colleges was much talked of in the House, but the measure failed of accomplishment. By a resolution brought into the House by Mr. W. H. Roach, it appears that the public debt amounted to 59,250l., the annual interest on which was 2,963l., and that there were 60,000l. afloat in province paper at 5 per cent.

March 15th. Died at the age of 110 years, Margaret Bourgeois, of Cape Breton. She was present at both the sieges of Louisburg; and after being blind for a number of years, recovered her sight in her hundredth year, and retained it during the remainder of her life. 10,000l. was voted for the service of roads and bridges, this session. The Chief Justice, by command of his Excellency, laid before the House minutes of the authorities on which the Judges' fees have been taken.

April 4th. The Legislature was closed, after a stormy session. 9th. The Halifax Marine Insurance Company was established.

June 1st. A dispatch from the Colonial Secretary, directed that the County of Halifax should be divided into three counties—viz. Halifax, Colchester, and Pictou, in accordance with an application of the House of Assembly. A rail road from Halifax to Windsor was much talked of during the summer.

July 23d. The first letter of the celebrated political writer, signing himself "Joseph Warner," was published in the Acadian Recorder.

August 5th. The first number of the Acadian Telegraph, was published at Halifax, by Mr. J. S. Thompson, editor and proprietor. 25th. Clomb Petit and Samuel Loramore were tried before a Court of mixed commission for murder on the high seas.

November 2d. The House of Assembly was dissolved, and writs issued for a new election, made returnable by the 12th January. 9th. At a public meeting in Halifax, Mr. Joseph Howe was nominated a representative for the County; he was nominated at a public meeting at Musquodoboit, some days previous.

December 1st. Avon Bridge at Windsor completed, and opened for public travelling. 12th. Messrs. Joseph Howe and William Annan, elected for the County, and Messrs. Bell and Forrester for the Town of Halifax. The elections throughout the Province terminated in favour of a large proportion of new members. The first number of the Clock Maker was published in the Nova Scotian, this fall. The casual and territorial revenue amounted this year to the sum of 9,911. 3s. Cd. currency. Number of paupers admitted into the Poor Asylum this year, 345 men, 269 women, and 241 children. Supplies to the establishment amounted to 2,788l. 16s. 2d.

1837.—January 7th. Joseph Warner's last letter was published. These letters were read with much interest, and tended materially towards the accomplishment of the political reforms which originated in the Pictou "Colonial Patriot." 31st. The 17th General Assembly was convened at Halifax, and again elected S. G. W. Archibald, Esq. their Speaker. Mr. Howe took his first seat in this House. The usual motion appointing a clergyman of the Established Church chaplain of the House was negatived, and ministers of the other denominations were appointed in connection with the Church of England ministers.

February 2d. Mr. Doyle introduced the Quadrennial Bill, which had been brought before the House by him the preceding session and passed, but was lost in the Council. The same defeat attended its second introduction. 5th. The House having requested that the Council's doors should be opened in order that their debates might be public, the Council informed the House by message they would decline any further conference with the Assembly on that subject. Provision was made during the session for building light houses on St. Paul's and Scatterie. On application of the House of Assembly, the Commissioner of Crown Lands, by order of His Excellency, laid the accounts of his office before the House, by which it appears that

during the last four years, £3,558,7,3½; the whole establishment, including the sales at Cape Breton, the whole of which has been paid, was still due him on his account.

March 3rd. Many letters were read. 7th. The Council refused to rescind a resolution passed by members of the Council on their own interests and emolument. The House rescinded the resolution, and thus rendered it void. 21st. Leave was given to the Town of Halifax to the amount restricted to the sum. Judge Macdonald's address to the House in relation to potatoes prohibited, on a debate.

April 1st. Mr. Archibald was chosen Speaker during the session. 5th. The House laid before them of all matters with minutes of the proceedings. The House having approved with a view of connecting the House with the Government, after the close of the session, recommended that the House vote £1000 on Geology. £10,000 on this session. 13th. The House rescinded the 8th March, for a redress of grievances, address it was that brought between Stewart and Macdonald determined when the House was closed.

June 3rd. The Pearl and Her Majesty's Fourth; and Her Majesty's

August 11th. News arrived of the Crown, and was proclaimed. 20th. The session in Halifax. 27th.

October 6th. Died, a member of the House of Commons, under which signal, 23rd. A large square of the House destroyed by fire—loss estimated at £100,000.

November 23d. Was the first time that News arrived of the Crown.

December 12th. His Majesty's order to the House of Commons a Legislative Council.

address to His Excellency, and the company of Artillery, le

during the last four years, crown lands had been sold to the amount of £3,558,73½; the whole of which had been absorbed in the expenses of the establishment, including the commissioner's salary. The net proceeds of the sales at Cape Breton, during the same period, had been £1,804,13s. 6d.; the whole of which had been retained by the commissioner, and a balance was still due him on his salary.

March 3rd. Many lengthy debates arose on the formation of the Council. The House, by resolution, implored His Majesty to reconstruct that body. 7th. The Council refused further co-operation with the Assembly, unless they rescinded a resolution passed by the House, wherein they charged some of the members of the Council with having evinced a disposition to protect their own interests and emoluments, at the expense of the public. 8th. The House rescinded the whole string of resolutions, of which that obnoxious one was part; and thus restored co-operation, and saved the annual revenue. 21st. Leave was given by the House to bring in a bill for the incorporation of the Town of Halifax. The Saving's Bank, having accumulated deposits to the amount restricted by law, viz £15,000, application was made to extend the sum. Judge Marshall's work on the Duty of Magistrates, was published by the House in this session. 27th. The exportation of grain and potatoes prohibited, on account of their scarcity, after warm and protracted debates.

April 1st. Mr. Archibald, taken ill while in the chair. Mr. Smith of Pictou chosen Speaker during his illness, which continued until the close of the session. 5th. The House requested his Excellency to order an account to be laid before them of all fees taken by the Judges of the Inferior Courts, together with minutes of the authorities on which they were exacted. 6th. The House having appointed a committee to have power during the recess with a view of connecting the Customs and Excise Departments, His Excellency informed them by message, that he could not recognise their existence, after the close of the session. A committee of the House of Assembly recommended that a Provincial Penitentiary shall be erected. 10th. The House voted £100 as a compliment to Dr. Gesner, for his recent work on Geology. £10,000 was granted for the service of the roads and bridges, this session. 13th. The House embodied the resolutions which they rescinded the 8th March, in an address to His Majesty, in which they asked for a redress of grievances, which were set forth at large. [Note—This address it was that brought about many of the late changes.] The scrutiny between Stewart and McKim, had been pending the whole session, and not determined when the House was prorogued. 21st. The session of the Legislature was closed.

June 3rd. The Pearl, a weekly paper, devoted principally to literature, made its first appearance. 20th—Died, His Majesty, King William the Fourth; and Her Majesty, Queen Victoria, ascended the Throne.

August 11th. News arrived in Halifax of the accession of Her Majesty to the Crown, and was proclaimed throughout the town in due form.

September 20th. The Bank of British North America went into operation in Halifax. 27th. The Halifax Literary Society established.

October 6th. Died, at his house on the Peninsula, John Young, Esq., member of the House of Assembly for Sydney; but better known as Agricola, under which signature he wrote his memorable letters on Agriculture. 23rd. A large square of fine buildings opposite Collins' wharf, in Halifax, destroyed by fire—loss estimated at £20,000.

November 23d. Was observed as a day of general thanksgiving. 25th. News arrived of the commencement of hostilities in Canada.

December 12th. His Excellency announced to the Council, that he had Her Majesty's order to reconstruct that body, and to form an Executive and a Legislative Council. 22d. The Council terminated their existence by an address to His Excellency. 23rd. The 34th regiment, together with a company of Artillery, left Halifax, on their way to Quebec, by land. The

public expenditure of this year, according to the Provincial Treasurer's account, laid before the House, amounted to £73,238 10s. 11d.

1838.—This year was memorable on account of the alteration of the constitution, which had then existed from the earliest settlement of the Colony.

January 16th. By an announcement from the Secretary's Office, the public were informed that the old Council was dissolved, and that branch reconstructed in conformity with the prayer of the House of Assembly. The Hon. Messrs. Jeffery, Robie, Cunard, Cogswell, Allison, Sir R. D. George, J. W. Johnston, J. B. Uniacke, Dodd, Huntington, T. A. S. Dewolf, and M. Tobin, senr., were constituted an Executive Council. His Lordship, the Bishop of Nova Scotia, the Hon. Messrs. Robie, P. McNab, senr., J. Tobin, senr., Norman Uniacke, J. W. Johnston, Wm. Lawson, senr., G. Smith, Stewart, Wm. Rudolfe, L. M. Wilkins, J. S. Morse, Ousley, Cutler, Campbell, Ratchford, Fitzrandolph and Dr. Almon, were constituted the Legislative Council. The Councils were sworn in due form. 25th. The Legislature was convened; and His Excellency, in his opening speech, informed them of the changes that had been made in the Councils. Writs were issued for the election of Members, in place of Messrs. Wilkins, of Windsor; Smith, of Pictou; Stewart, of Cumberland; and Rudolfe, of Lunenburg. Mr. Doyle again presented his bill for limiting the duration of the House from seven to four years. 29th. Lord Glenelg's celebrated despatches were laid before the House, wherein he gave directions respecting the formation of the Councils, the regulating of the Civil List, the discontinuance of the Judges' Fees, opening the Council doors, and other beneficial changes. By a return laid before the House, it appears that 458 Suits were, during the last year, tried in the Court of Chancery, or pending at the commencement of the year. The Trustees of the British Museum requested His Excellency to use his influence with the Legislature to procure them specimens of natural history. 30th. The Council doors were opened to the public, and a Reporter allowed to take notes of their proceedings. The Inferior Courts established in the year 1823, were abolished by an act of this session, and the Judges pensioned off. News arrived in Halifax about this time, that Lord Durham was appointed Governor General, and Her Majesty's Commissioner. By returns made to the House, it appears that the Custom House establishment throughout the Province cost £10,633 annually.

February 20th—A question in favour of the views of Temperance Societies, was negatived in the House, 15 voting for, and 25 against it. 21st. £200 granted by the House towards the relief of the wives and children of the soldiers who were slain in Canada; large private subscriptions were also made in Halifax, Yarmouth, and other places, for the same purpose. The House of Assembly, in an address to His Excellency, complained that the new construction of the Councils, was not in accordance with the liberal intentions of Her Majesty.

March 30th. The newly formed Councils were dissolved, in consequence of instructions that had been given to Lord Durham, previous to their appointment by Sir Colin Campbell. The House was prorogued until the 5th; and the new Executive Council, consisting of the Hon. Messrs. Jeffery, Robie, Cunard, Cogswell, Allison, Johnston, J. B. Uniacke, T. A. S. Dewolf and M. Tobin, senr., were re-appointed—omitting Sir R. D. George, and Messrs. Dodd and Huntington. The same Members of the Legislative Council were also re-appointed, with the exception of Messrs. Lawson, Fitzrandolph, Ratchford and Dr. Almon.

April 5th. The House met again for the despatch of business. 11th. The House passed a bill for the purpose of making valid certain marriages at Cape Breton, by which it was said that upwards of 300 marriages were confirmed. 14th. The House agreed to an address to Her Majesty, wherein they complained of the late construction of the Council. 16th. The House by address petitioned Her Majesty to alter the form of the state oath, and make it less offensive to Catholics. £10,000 was granted for the service

floods and bridges, equal to £200, and Dr. McCulloch, who lege. 23d. The first York.

March 3rd. The Leg

froads and bridges, this session. The grant to Pictou Academy was reduced to £200, and the other £200 of the former grant was appropriated to Dr. McCulloch, who was appointed principal Professor in Dalhousie College. 23d. The first steam vessel that crossed the Atlantic arrived at New York.

May 16th. Agreeably to orders received from Lord Durham, the Hon. Messrs. Collins, Dodd, and Sir R. D. George, were placed in the Executive Council, and Messrs. Lawson, Fitzvandalph, Ratchford, and Dr. Almon, were replaced in the Legislative Council.

June 28th. Coronation of Her Majesty Queen Victoria. The day was kept as a general holiday, throughout the Province. In Halifax, Dartmouth, Windsor, and most of our towns and villages, it was marked by feasting, balls, bon-fires, and other demonstrations of rejoicing.

July 16th. A hail storm occurred at Windsor and the adjoining district which did much damage to the crops and young fruit.

August 11th. His Excellency, Sir Colin Campbell, left Halifax on a visit to Lord Durham, in Canada; Colonel Snodgrass administered the Government in his absence. 30th. A riot occurred in Halifax, in the course of which six houses in Barrack street were ransacked and nearly destroyed. The immediate cause was that a sailor had been ill used at one of them; but the remote or principle cause was the uniform and long continued bad character and conduct of those who inhabited them.

September 28th. The Hon. Messrs. J. B. Uniacke, J. W. Johnston, and Wm. Young, and M. B. Almon, Esqrs, having been deputed as a delegation in behalf of Nova Scotia to Lord Durham, returned to Halifax; His Lordship having given up his commission as Governor General, &c., their mission failed of answering its object.

October 8th. Morris Doyle, of Amherst, tried and condemned for the murder of John Clem. He was shortly afterwards executed. 23d. Lord Durham left Canada, on his return to England.

November 3rd—Died, in the 64th year of his age, the Hon. James Tobin, member of the Legislative Council.

1839.—January 1st. His Lordship the Chief Judge directed the Prothonotary to discontinue taking the fees heretofore appropriated to him.—12th. The Legislative Session was opened. His Excellency shortly after laid before the House a despatch from the Colonial Secretary, withdrawing the Civil List Question from their consideration. This occasioned much dissatisfaction, and was the cause of very warm and animated debates. 19th. His Excellency appointed John W. Ritchie, Law Clerk, and Clerk to the Parliament—a new office pertaining to the Legislative Council.

February 1st. The Inferior Courts were discontinued, agreeably to the act passed last session. 12th. The Rev. Mr. Crawley, stated at the Bar of the House, that His Excellency and other Governors of Dalhousie College after promising him a Professor's Chair, refused it, and gave as a reason that he was not a Presbyterian. This gave rise to the Baptist College. 14th. £14,000 voted for the service of the roads and bridges. The harbor of Halifax frozen over, and many heavy teams crossed on the ice. Upwards of £500 was raised in Halifax by private contributions, in aid of the sufferers by the outbreak in Canada. Much excitement in New Brunswick and Nova Scotia, in consequence of an American armed force taking possession of part of the Disputed Territory, claimed as part of New Brunswick. 25th. Messrs. Young and Huntingdon appointed delegates from the House of Assembly to the Home Government. 26th. By a resolution of the House, passed unanimously, His Excellency was empowered to send one third part of the effective militia of the Province to New Brunswick, to repel, if necessary, the American encroachments, and to expend if required £100,000 in supplying and equipping them for that service.

March 3rd. The Legislative Council, by address, requested His Excel-

lency to send two delegates to advocate the interests of that body at the Colonial Office. Messrs. Stewart and Wilkins were subsequently appointed for that purpose. The remainder of the session was rather a stormy period.

April 4th. The session was prorogued. In his closing speech His Excellency inferred that the objection to the formation of the Councils arose from a disappointment which some members of the House felt because they were not placed at these boards.

June 4th—Judge Haliburton, the author of the Clockmaker, was invited to a public dinner by a number of gentlemen in Halifax.

July 14th. Died at Pictou, in the fortieth year of his age, Jotham Blanchard, Esq., member of the last House of Assembly, and for many years Editor of the Pictou Colonial Patriot; the paper which first advocated the change in H. M. Council.

August 8th. James Bossom shot at with a pistol, and killed, in the streets of Halifax, by Smith D. Clarke. 16th. The Rev. Messrs. O'Brien and Deese, of the Catholic Church, arrived in Halifax.

September 13th. Sir Poilet Thompson, afterwards Lord Sydenham, Governor General of British North America, left England for Canada. 17th. The coal pits at Pictou took fire, and occasioned immense loss to the proprietors. About this time, Miss Morris, our native artist, published her sketches of the Wild Flowers of Nova Scotia.

October 26th. The first number of the Haligonian, a semi-weekly paper, published by J. Kuhn, made its appearance.

December 31st. The annual session of the Legislature was opened. Messrs. Young and Huntingdon having both been returned, took their seats at the opening.

1840 --January 21. An important dispatch from the Colonial Secretary, directing that in future, Executive Councillors, and all the higher public officers, shall retain their places no longer than consistent with the public good, was laid by order of his Excellency, before the house. 5th. Mr. Doyle presented his annually renewed bill, for limiting the duration of the House. [Note. This bill had for several years past, been agreed to in the house by large majorities, but was lost in the council. This year however, it was agreed to by the Council and subsequently received the Royal assent.] 6th. Messrs Young and Huntingdon reported to the house the proceedings and result of their delegation. 10th. A similar report was made to the Council by the Hon. Mr. Wilkins, respecting the Council's delegation. 20th. Smith D. Clarke found guilty of the murder of James Bossom, but recommended to mercy by the Jury. He was subsequently pardoned.

February 10th. The Hon. J. B. Uniacke having heretofore given a steady support to the Government of Sir Colin Campbell, announced in his place in the house, that he had retired from the Executive Council, and that he could no longer sustain the present Government, and avowed himself determined to aid in carrying out the form of Government, ordered by the Colonial Secretary.

March 14th. A hostile meeting took place between Mr. Howe and J. C. Halibonson, son of the Chief Judge. 15th. His Excellency having refused or delayed carrying out the order of the dispatches received from the Colonial Secretary relative to the formation of the Executive Council, the House, in a body, waited on him with an address, in which they besought him to conform to the letter of his instructions. This he still declined. £18,000 granted this session for the service of the roads and bridges, and £26,000 in addition for the service of the great roads, to be expended in the three following years. 16th. A public meeting was held in Halifax, for the purpose of considering the expediency of establishing a Gas Light Company. This was the first public measure towards introducing gas lights into this Province. 22nd. Hons. John Leander Starr, and M. Tobin, junr., having been appointed by a mandamus from home, this day took their seats in the Legislative Council. 24th. The House of Assembly agreed to an address to her Majesty, wherein they solicit Her Majesty to recall Sir Colin Campbell from the Government of the Province, and by an address to His Excellency, prayed that he would remit it home to be laid before Her Majesty. 27th. The session of the Legislature was prorogued.

April 4th. A meeting of the friends of Sir Colin Campbell was held at Mason Hall, in Halifax, which passed resolutions approving of his policy, and the ad-

ministration of his Government. 6th. A public meeting was called by the party in opposition, at which resolutions were passed disapproving of His Excellency's policy and administration. 17th. News arrived in Halifax of the declaration of war by Great Britain, against China.

June 1st—The Unicorn arrived at Halifax, being the first British vessel that crossed the Atlantic, for this port, by the power of steam.

July 9th. Sir Polet Thompson, Governor General of British North America, arrived at Halifax in the Unicorn from Quebec, and was the same day sworn into office as Governor of this Province, in the Council Chamber. Sir Charles Fitzroy, Governor of Prince Edward Island, accompanied His Excellency the Governor General. 10th. Died, the Hon. Dr. Almon, member of the Legislative Council.

August 15th—Sir John Harvey, Governor of St. John's, N. F., arrived in Halifax, agreeably to an order from the Governor General. 17th The Steamship Britannia, being the first of the line of Royal Mail Steamers, arrived at Halifax, in 12½ days from Liverpool, G. B., and after discharging her mail proceeded on to Boston. The Unicorn proceeded forthwith with the mail for Quebec. The Province Building was magnificently decorated, and a splendid public ball given to the Governor General, and other distinguished guests. 28th The Governor General, having reconstructed the Executive Council and settled the political differences heretofore existing, embarked on board the Unicorn for Canada.

September 16th. His Excellency, Lord Falkland, arrived from England in the Steamship Britannia. 30th His Excellency Sir Colin Campbell abdicated the Government, which was assumed by Lord Falkland, who was sworn in according to the usual forms.

October 2d. The Hons. T. N. Jeffery, M. Tobin, H. H. Cogswell, and E. Collins, retired from the Executive Council. 3rd The Attorney General, S. G. W. Archibald, the Solicitor General, J. B. Uniacke, and Mr. Joseph Howe, sworn into office as members of the Executive Council. 3rd His Excellency, Sir Colin Campbell, took his departure for England, in the steamship Britannia. He was escorted from Government House, by the St. George's, North British; and Highland Societies, together with a large concourse of the people of Halifax, who removed the horses from his Excellency's carriage, and amid the banners of the various societies, drew the carriage to the place of embarkation. 21st The House of Assembly was dissolved by proclamation, and writs issued for electing a new House. 31th. His Excellency, Lord Falkland, as Chancellor of the Province, took his seat at the Chancery Court, attended by the Common law judges, and reversed the decree of the master of the rolls (Judge Fairbanks) in the suit Ross vs. Creig.

Valuable Information for Farmers.

MANAGEMENT OF HORSES.

MR. CUNNABELL,—As your Almanac generally contains a well digested summary of Agricultural information, I have taken some pains to compile a series of directions—for the management of horses, while under the influence of medicine, with such prescriptions as have been recommended, for the horses in the British service, from a volume lately published in England—entitled “Veterinary Directions for the Guidance of the Farriers of the Royal Artillery. Suggested by Charles Percival, Veterinary Surgeon; and approved by the Right Honourable the Master General, and Honourable Board of Ordnance.” As every farmer finds it necessary to keep horses, I have no doubt that the following Recipes will be found of essential service, not only to the farmer, but to truckman, and all who have horses, either for business, convenience or pleasure.

MASSES.

No. 1.—CATHARTIC MASS.—A Ball contains 7 drams of Aloes, the remaining dram being made up with Ol. olivar, Ol. carui, and Water. One ounce of this Mass made into a Ball is a dose of physic.

Any Horse to whom a dose of physic is given, should be fed on bran mashes, in lieu of corn, until its operation has ceased. If there be no cause for its immediate administration, let ample bran mashes be given, by way of preparation, in lieu both of hay and corn, during one day, and the Ball administered the following morning after the Horse is sufficiently watered, and a couple of hours at least before his bran mash be given him. Exercise also during the day is advisable. The following day, early in the morning, after the Horse has had water with the chill taken off offered him, till he refuses to drink more, let him be walked out briskly for one hour; unless he purge, in which case let him be returned to the stable, littered down, frequently watered, and plentifully supplied with bran mashes. But should the physic not operate at the expiration of his exercise, nor after he has remained the four succeeding hours in the stable, let him be exercised for another hour; and he may be gently trotted at this time; should he still show no signs of purging: let it be here understood, however, that in no case is a Horse in physic to be galloped. To insure purgation, water is no less requisite than exercise.

Should the animal continue to purge on the third day, let his bran be eaten dry, and let him be kept short of water, and without exercise, until the physis be set. As soon as his dung shall have put on its natural appearance and consistency, the usual ration of provender may be restored and he may return to duty.

If the Horse have been lately taken up from grass, or be low in condition, or light-carcased, six drams of the mass is generally a sufficient dose; but if he be of large size, and in high condition, even nine drams may be occasionally required.

Horses of a costive habit, whose dung-balls are small and not of their natural colour—whose coats are rough and skins tight upon their ribs, and who do not thrive, require physic. Purging balls are also given with benefit to horses that have mange, or itchy skins—swelled legs, or grease—fever in the feet—inflamed eyes—staggers—locked jaw—any swellings from blows or wounds, &c.

When a sick or lame Horse requires physic, to whom exercise would be injurious, let the dose be increased by one or two drams; and to him the ball may be given at any time—either day or night—he may stand in need of it; in order that its operation may be as speedy as possible.

To a Horse not labouring under active disease, a second dose of physic is not to be administered prior to the seventh day; but to a sick one, should the case be urgent, the dose may be repeated at the expiration of twenty-four hours.

Horses suffering from coughs, discharges from the nose, or inflammation of the lungs, are not to have full doses of purgative medicine given them, but the febrifuge or sedative mass should be given.

No. 2.—Febrifuge Mass.—A Ball contains Aloes 1 dram, Antim. tart. one dram, Nitre 2 drams, and common Turpentine 3 drams.

This mass is especially useful in fever, cough or discharge from the nose in which fever is present. The Ball may be administered once or twice a day according to the symptoms; but it must be discontinued whenever it appears to affect the appetite, or should purging appear to be coming on. The animal must be kept warm and quiet, and fed with bran mashes, in lieu of corn.

No. 3.—Sedative Mass.—A Ball contains—Digitalis 1 scruple, Antim. tart. 1 dram, Nitre 2 drams, Linseed meal 3 drams, and Treacle 3 drams.

In cases of diseases of the lungs, these Balls are especially beneficial—a disease in which colds and coughs not unfrequently terminate. The horse should be first bled, according to the violence of the symptoms, or strength of the animal; then give a sedative ball three times a day at regular intervals. Rub the sides with the blistering liquid, clothe warmly, and hand rub the legs, making use of the turpentine liniment; when they become warm bandage them with flannel. Should the symptoms continue, the operation of bleeding may be repeated after four or five hours, and again in six if the animal continues unrelieved. Let the horse be littered down, and have bran mashes. No exercise.

No. 4.—Diuretic Mass.—A Ball contains common Turpentine half an ounce, Nitre 2 drams, and Sulphur 2 drams.

Diuretic or urine Balls may be given when required, one every third night. Should the flow of urine prove abundant, and the horse cannot stale without experiencing pain about the loins and hip, or if the animal be stiff in moving those parts, diuretic balls must on no account be given. Diuretics are beneficial in recent swelled legs; linen bandages and walking exercise being had recourse to at the same time. They are also useful in watery farcy, drops, and puffy or watery swelling of all kinds.

No. 5.—Alterative Mass.—A Ball contains Aloes 1 dram, Calomel a scruple, Sulphur half an ounce, and Treacle three drams.

To ill-conditioned Horses that do not thrive, notwithstanding they eat and

appear otherwise

appear otherwise in health—to Horses that rub themselves, or that have small lumps or bare places, upon the skin (not mange.) Balls made up of this mass are serviceable: one may be given every day for a week, or every other day for a fortnight, unless the Horse should purge, when they are to be omitted and had recourse to again in the course of a week or ten days. Bruised corn, hay cut into chaff, and frequent and full supplies of water, contribute to restore such horses to condition. Walking exercise once or twice a day, according to the strength and thrift of the Horse, is also recommended.

No. 6.—Tonic Mass.—A Ball contains blue Vitriol one dram, Verdigrase half a dram, Linseed meal 4 drams, and Treacle 2 drams.

For horses affected with farcy or under suspicion of Glanders, after the swelling and inflammation attendant upon those diseases have been abated by bleeding, purging, and diuretic medicines, give one ball in the space of 24 hours; but do not continue the dose unless the horse's appetite be good.

No. 7.—Antispasmodic Draught.—(For horses that become griped.) Mix together two ounces of Spirits of Turpentine, and one ounce of Tincture of Opium, and add a pint and a half of warm water.

[In administering draughts to horses, the greatest possible care and attention is required; should the horse cough, or make an attempt to do so, his head must be instantly lowered, otherwise a portion of the drink will be apt to find its way into the trachea or windpipe, which will produce most distressing symptoms, if not death. In lowering the head, a can or vessel of any kind should be held under the mouth to catch the drink as it escapes.]

In mild cases of gripes this single draught will generally suffice, but in violent attacks, four or five quarts of blood ought to be immediately taken away, and the draught after an interval of a couple of hours repeated; also two or three ounces of the turpentine liniment should be well rubbed upon the surface of the belly. If no dung is passed, let the horse be raked, and have clysters of salt and water (about four ounces of salt dissolved in four quarts of water) thrown up every hour until the bowels be relaxed. When the horse continues to lie down and rise in the stall, and to roll upon his back, relief will frequently be given by walking exercise for ten minutes.

Those cases in which the symptoms do not intermit, and in which the pulse and breathing are much quickened, are not gripes but *inflammation* of the bowels. Take away five or six quarts of blood without loss of time, and give a draught composed of eight or ten drams of Aloes dissolved in a pint and a half of hot water, with the addition of an ounce of tincture of opium, inject clysters frequently, rub a blister upon the belly, composed of equal parts of oil of turpentine and blistering liquid, wrap the legs in flannel bandages, making use of the turpentine liniment to the legs if cold, and clothe warmly. Water, with the chill taken off, should be plentifully given; or, what is better, water-gruel.

No. 8.—Vermifuge Powder.—Three drams of this Powder, containing one dram of Calomel and two drams of Tartarised Antimony, form a dose.

To be given in a bran mash at night to a horse having worms, and to be followed up by the administration of a dose of physic the following morning—paying attention to the direction already laid down under the head CATHARTIC MASS. The Powder and Physic may be repeated in the course of a week or ten days.

No. 9.—Anti-Purgation Powder.—This Powder is composed of prepared chalk half a pound, Cinnamon four ounces, Tormentil three ounces, Gum arabic three ounces, and Long pepper half an ounce, reduced to a fine powder and mixed together, with the addition of Gum Opium.

An ounce of the Powder which contains only a scruple of Gum opium, may be administered in a quart of gruel in cases of continued purging or scouring, every four or five hours, or as circumstances may require, but its use is to be discontinued when the purging is checked.

No. 10.—Discutient Powder.—This Powder is composed of Zinc vitriol three drams, and Bole armen one dram.

A Lotion composed of half an ounce of this Powder and one quart of water, is a proper application to sore backs, and to recent swellings from blows or injuries of any kind.

Bandages may be used, wetted with this lotion, in sprains of the back sinews.

No. 11.—Astringent Powder.—This Powder is composed of Linseed meal half an ounce, Powdered alum half an ounce, Blue vitriol half a dram, and Bole armen two drams.

This powder is prepared principally for grease and thrushes, but it is also a good dressing for unhealthy sores—or sores in which there is proud flesh. For grease, when the discharge is little, besprinkle the affected parts with this powder; give the horse exercise morning and afternoon, and if the legs be swollen,

let a diuretic ball be occasionally administered. If the discharge be copious and fetid, apply to the heels, by means of pledgets of tow and linen bandages, an ointment composed of this powder and oil, and keep it on for 2 or 3 days; during which time a dose of physic may be given. Let his food consist of bran mashes. As soon as the dressings shall have been removed, the animal ought to be exercised for two hours, the heels afterwards wiped dry, and the liniment again applied, unless the discharges have ceased: in which case the powder sprinkled upon the part, as above recommended, and a diuretic or two, will complete the cure. Should the case require a repetition of the liniment, purgative balls, are preferable to diuretics.

Of Horses that have thrushes, lower the heels, that the frog may be on a level with the heels of the shoe, pair out the cleft, with a small drawing knife, so as to cut away the ragged parts of it, and introduce a little of the astringent powder daily, at the evening stable hour. If heat be perceptible in the foot, a dose of physic may be given at the same time.

No. 12. Ophthalmic Powder. This Powder is composed of Sugar lead two drams, Turmeric half a dram. So long as the eyes appear red and angry, nothing but cold water should be made use of to them, with which they ought to be kept continually wet. At the same time, if there be much inflammation, take four or five quarts of blood from that side of the neck corresponding to the affected eye, or from both sides should both eyes be bad.

When the inflammation has abated, sponge the eyes and eyelids with a Lotion, made by dissolving a quarter of an ounce of this Powder in a quart of cold spring water, several times in the course of the day. Should it be found necessary to draw blood, a dose of physic is recommended. In every case of bleeding, the horse should be kept quiet, without exercise.

No. 13. Blistering Liquid. This liquid is composed of Cantharides four ounces, and Linseed oil a pint and a half. For sore throat, and jagged swellings in glanders or farcy; for inflammation of the lungs, and inflammation of the bowels, the Blistering Liquid is a proper application.

For spavins, splints, old strains, carbs, ringbones, windgalls, thoroughpins, and other enlargements of joints that have no heat in them, and swellings in general which will not yield to simple remedies, this liquid may likewise be used.—Let a small quantity of it be well rubbed in with the hand; without the hair being cut off; and let the same be repeated at the expiration of six hours should it not have taken effect. About one table-spoon-full of this mixture is sufficient for the throat, 2 for the leg, 3 for the side of the chest, and so on.

No. 14.—Turpentine Liniment.—This Liniment is composed of equal parts of Spirits of Turpentine, and Linseed oil.

In cases of sore throat, and cough, this liniment will be found very useful, as well as in cases of inflammation of the lungs and fever, where the legs are cold, making use at the same time of flannel bandages, and repeating the liniment every two or three hours, until they become warm.

Half an ounce will be found sufficient for a leg, or for the throat, and requires to be well rubbed in.

No. 15.—Turpentine Ointment.—It is composed of equal parts of common Turpentine and Hog's lard.

This Ointment is the best application that can be made use of in cases of treads or wounds on the coronet, between hair and hoof; a small quantity is to be spread upon a pledget of tow and bound on with a bandage. It is likewise a good dressing for broken knees or curs, and to promote the action of rowels.

No. 16.—Black Oil.—It is composed of Olive oil one pint, Spirits of Turpentine half a pint, and Acid vitriol two drams.

In recent wounds, such as broken knees or other lacerated wounds, this will be found a good dressing to promote healthy and speedy granulation. It may be applied to extensive wounds by means of a feather, and in cases of broken knees, a fliget of tow is to be bound on with a tail bandage.

It is likewise a good application for sitfasts, produced by the pressure of the saddle.

No. 17. Hoof Ointment. This Ointment is composed of Tar and Train oil equal parts.

This ointment is intended for brittle feet, or such as have sand cracks.

By mixing one part of the ointment with two of train oil, it forms a good application for mange.

DESTROY YOUR WEEDS.—Every farmer should be up and doing, be active and vigilant in waging a war of extermination against weeds of every name and nature, from the Canada thistle to the insignificant chickweed, that is a grievous annoyance in our garden.

WATER FOR CALV Know, viz:—that ca supposed the milk But in changing my trough, and drank h

BARN YARDS.—"Of the methods which I have tried, I consider the following as the most economical. The barn yard should be excavated in the form of a dish, leaving a margin on all sides sufficiently broad for the comfort of the stock and convenience in feeding. In the fall, the yard may be covered to the depth of ten inches or a foot, with material from swamps, bottoms or ditches, or turf from the road side—together with all the weeds and refuse of the farm. And I am strongly of the opinion that here is the most profitable place to spread the lime, ashes, plaster and salt which we design to apply to the land in the coming spring. The liquid from the stables should be led into the middle of the yard, and the manure from the stable, as fast as it is made, be equally spread over the whole, that the quality may be uniform. No water should be permitted to come into the yard, except what falls directly upon it. By the treading of the cattle during the winter and spring, the whole will be incorporated, and made fit to apply to the land. By this course, I have more than doubled the quantity and value of manure on my farm. Some farmers, in order to secure a dry yard for stock, are very particular to leave a *drain* to carry off the wash. Such farmers might as well cut a hole in their pockets."

EXTRACTING STUMPS.—We have seen the following very simple plan of stump clearing, adopted with good success. Take a strong, hard wood stick of timber, say fifteen or twenty feet long, and six inches in diameter, cut around the stump, and take off some of its roots; then place the timber upright against the stump, and chain them together strongly; from the upper end which is now in the air, let the chain pass to the axletree of a pair of cart wheels, to the tongue of which a pair of strong oxen are attached; when all is ready, start the oxen along, and the stump "keels over" as easy as you capsize a cabbage in a garden.

TO PREVENT MUST OR MOWBURN IN HAY.—Take a number of smooth poles, lay the butt end outside, so that they may be easily pulled out, let the mow or stack settle for a few days; then pull them out; this will leave a passage for the air into the hay, that will insure it against must or mowburn, for some distance around the holes.

SCIENCE OF MOWING.—By adopting the following rules a farmer will perform more work than by the usual method:—

1st. The scythe should hang natural and easy, and must be kept in first rate order.

2d. As you approach the standing grass let the heel of the scythe move to the very point of commencement, and let it stop the instant it has done its work. There is nothing lost by a backward or forward swing. If the grass stands up so as to admit of mowing on, measure with the eye the utmost capacity forward of your scythe, take a quick, easy gait, moving your right foot well up towards the standing grass, and your body with it though leaning back, by bending the knees a little forward so as to bring your whole weight to bear upon the scythe without twisting the body from right to the left, as many do—thus giving ease to each clip, and ability to repeat in an advanced position.

TAR THE SHEEP'S NOSES.—In August and September, a fly, which is very troublesome to sheep, lay eggs in their nostrils, which are hatched, and the young worms ascend into their heads where they become very distressing, often causing death, unless some powerful remedy be applied to cause their ejection or destruction. The better way is to prevent the evil.

Tar is considered the best remedy. By tarring the sheep's noses the injury will be avoided. The better way to effect this object is to lay tar on boards or in troughs in a sheltered situation, and then strew on salt, and the sheep will perform the operation of smearing; or take a stick of timber, dress the upper side, and bore in some large auger holes two or three inches deep, put some salt in these holes, and once a week, or oftener, put tar round the edges of the holes.

Sheep suffer much from these flies at the time they are assaulted, and they often run with their noses to the ground in order to avoid these vexatious flies, or they will run their noses into the dust when an opportunity presents, and for this purpose some persons plough up the earth on spots often frequented by sheep in hot weather.

The application of tar, as here recommended, is conducive to the health of sheep otherwise than by preventing the evil we have named. It is good for colds and other disorders.

WATER FOR CALVES.—Accident recently taught me what, till then, I did not know, viz:—that calves, while fed on milk, need free access to water. I had supposed the milk (constituting their entire food) was enough without water. But in changing my calves from one pasture to another, they passed a water-trough, and drank heartily. I acted on the hint, and have since supplied them,

and find they need water as often as older cattle. No day passed without their using more or less. Perhaps every body else knew this; but lest some may be as ignorant as I was, I thought best to speak a kind word for the calves, who cannot speak for themselves.

[Our agricultural readers will also find a variety of useful information on the Calendar pages, and in other parts of this Almanac.]

Astronomical, &c.

Eclipses.

In the year 1846 there will be only two Eclipses, both of the Sun.
 First—A partial eclipse on Saturday April 25th, and visible at Halifax as follows:

	h. m.	
First contact of limbs,	11 58 A.M.	} Mean Time.
Greatest Phase,	1 5 P.M.	
Last contact of limbs,	2 13	

Angle from the North Pole of { first contact 137° to the west.
 { last contact 115° to the east.

5½ digits eclipsed on the Sun's southern limb.

This Eclipse will be visible in the western part of Europe, the north west part of Africa, in the North Atlantic Ocean; to Iceland, part of Greenland, to the greater part of North America, part of South America, to part of Africa, along the Atlantic Ocean, and across the Isthmus of Panama the Eclipse will be annular, or like a ring of light.

Second—An annular eclipse of the Sun, visible only in the Eastern Hemisphere of the Earth, on Thursday, October 19th.

The Planets.

♀ Venus will be an evening star till March 1st, and a morning star from the middle of March to the Middle of December.

♂ Mars will be an evening star till the end of June, and a morning star from October to the end of the year.

♃ Jupiter will be an evening star till the end of April, and a morning star from June to September, then an evening and morning star (to the end of the year.

♄ Saturn, a morning star till June, morning and evening star till August, and evening star to the end of the year.

USEFUL RECIPES, DOMESTIC ECONOMY. &c.

VALUABLE AND SIMPLE MEDICINE.—When food is taken that causes oppression, the best remedy is hot water in which the rind of old cheese has been grated, to be drunk freely.—This simple remedy ought to be in the possession of every family, as it will generally afford speedy relief. Some fifty years since a young lady died in this town, from the effects of eating fruit. A post mortem examination

RANDOM truthfully thought so EVIL COM entered Van requested the teach the oth

RANDOM READINGS.—MONEY.—Somebody, who writes more truthfully than poetically, says :—“ An angel without money, is not thought so much of, now-a-days, as a devil with a bag full of guineas.”

EVIL COMMUNICATIONS, &c. A buck, with a cigar in his mouth, entered Van Amburgh’s menagerie, when the proprietor politely requested the visitor to take the weed from his mouth, lest he should teach the other monkies “ bad habits.”

HOW TO GET A COMFORTABLE WARM DURING THE COLD WEATHER.—Enter a coffee-room, enquire for a gentleman you are sure is not there, stand before the fire, read all the newspapers, and then leave word, if any one should enquire for you, that you will call again.

HARD DIET.—A journal advertises for two girls, “ who are accustomed to feed on a double Adams’ power press.”

DARK EYES.—A certain poet sings of the “ dark-eyed maidens of the south.” We grant him that the farther south we get, the more numerous the darkies become.

A GOOD RETORT.—The ladies of Rochester have adopted the motto, “ Total abstinence or no husbands.” The young gentlemen, to be even, adopted the motto, “ Natural waists or no wives.”

A COQUETTE may be compared to tinder, which lays itself out to catch sparks, but does not always succeed in lighting a match.

CONTENTMENT.—A gentleman, it is said, had a board put on a part of his land, on which was written, “ I will give this field to any one who is really contented,” and when any applicant came he always said, “ are you contented ?” The general reply was “ I am.” “ Then,” rejoined the gentleman, “ why do you want my field?”

A YOUNG DANDY, who supported

was had, and some experiments were made—nothing was found to have so good an operation upon the contents of the stomach as the grated cheese rind. Soon after another lady was placed in a similar dangerous situation from the same cause. Her medical attendant prescribed the above remedy, and immediately relief was obtained. The medicine became popular with the past generation, and a lady of that age wishes us to publish it to this, and succeeding generations.—*Portsmouth Journal.*

FEEDING FOWLS.—Fowls require a variety of food. Grain of all kinds is good. Wheat-screenings, which can be had at all mills where wheat is ground, constitute a cheap and good feed for fowls. Buckwheat, barley, oats and Indian corn, should also be given occasionally. They should also have animal food. This may be supplied from the offals of slaughter-houses. If they are kept confined, they should have occasionally some cabbages cut up and given them. Potatoes and turnips will also be found useful.

IMPORTANT REMEDY FOR CANCERS.—Colonel Ussery, of the Parish of Desoto, informs the Editor of the Caddo Gazette, that he has fully tested a remedy for this troublesome disease recommended to

an enormous moustache, asked a lady what she thought of his looks. "Why," said she, "you look as if you had swallowed a poney, and left the tail sticking out of your mouth."

LOVE AND LAW. The difference between love and law is this— in love, the attachment precedes the declaration; in law, the declaration comes before the attachment.

A COMPLIMENT.—"Why, Jem! the last time I saw you, you hadn't a rag to your back, and now you are all rags."

BLACK SOULS.—An officer of the United States Frigate Constitution, writing from the island of Zanibar, says:—"Zanibar contains a population of 30,000 souls, mostly black."

HOBSON'S CHOICE.—The late Beau Nash, introduced Mrs. Hobson, a beautiful lady, to the company assembled in the ball-room at Bath, with this supplementary observation: "I have often heard of Hobson's choice, but never had the pleasure to view it until now, and you must coincide with me that it reflects credit on his taste."

VERY FRENCH.—The Paris correspondent of the New York Evening Post, says that a witness in a Parisian court of justice, in testifying to the apparent affection of a husband for his wife, said, with perfect gravity, 'he loves her so well that you would not have believed she was his wife.'

WHAT'S IN A NAME!—"George Washington Napoleon Jackson Hannibal Harrison!" "Yes ma'am!" "Tell Josephine Rosina Cleopatra Matilda Victoria, to bring up the slop pail!" "Yes ma'am."

HAPPY UNION.—One Mr. Goode-nough recently married a Miss Too-good! We suppose they being combined make things just about right.

him by a Spanish woman, a native of the country. The remedy is this; take an egg and break it, then pour out the white, retaining the yolk in the shell, put in salt and mix the yolk as long as it will receive it, stir them together until the salve is formed, put a portion of this on a piece of sticking plaster, and apply it to the cancer about twice a day. He has made the experiment twice in his own family with complete success.

COOKING FOOD FOR SWINE.—Dr. Lee, in an article on pork-making in a late N. E. Farmer says:—"From some experiments of my own, and considerable research into the published results of the experience of others, I am satisfied that ten bushels of boiled potatoes,

thoroughly mixed with the pudding that can be made from three bushels of corn or peas, will make as much pork as twenty bushels of potatoes, and six bushels of corn or peas fed raw."

PERFUMING.—Cologne, or any other liquid perfume made with essential oils, will scent a room much better and longer if, instead of sprinkling it about, you pour a few drops into a glass of water, and set it in some central place.

LUNAR OBSERVATIONS.—“The Moon,” said a total-abstinence orator, “is not quite tea-total, but she lets her ‘moderation’ be known to all men, for she only ‘fills her horn’ once a month.” “Then she fills it with something very strong,” observed a bystander, “for I’ve often seen her ‘half’ gone.” “Ay,” said another, “and I have seen her ‘full.’”

and unquestionable axiom :—
The man that in this world would rise,
Must take the news and advertise.

THE JOINT COMMITTEE.—“Pa,
do the tailors have committees in the
Common Council?”

“No, my love.”
“I’m sure they ought, for the but-
chers have one.”

“Not that I am aware of.”
“Oh yes, Pa, I read it in the paper.
It is called the *Joint* Committee.”

GET MARRIED.—Man never be-
comes a member of society until he is
married---unmarried, he is looked up-
on with distrust. He has no home,
no abiding place, no anchor to hold
him fast, but is a piece of float wood
on the great tide of time. His interest
is not with society, farther than the ac-
complishment of some selfish object is
concerned.

“ONLY AN ACQUAINTANCE.”
—A ludicrous mistake happened some
time ago at a funeral at Marylebone.
The clergyman had gone on with the
service until he came to that place
which says “Our deceased brother or
sister,” without knowing whether the
deceased was male or female. He
turned to one of the mourners, and
asked whether it was a brother or a sis-
ter. The man very innocently replied
—“no relation at all, sir, only an
acquaintance.”

TOO OBSERVANT.—“Father, I
heard you say in the rail-car yesterday

milk from her bag, is to have her milked thrice a day ; early in the morning, midday, and again rather late in the evening. This may be pursued with advantage for the first five months after calving, and relinquished by degrees ; regard to be had to her food being sufficiently nourishing during the time of yielding extra produce.

WINDOWS CLEANED BY STEAM.—A very simple method of cleaning windows is now coming into general use in England. The window is first dusted with a bunch of feathers, or dusting brush, and

when the dust is thoroughly removed, place a bowl of boiling hot water at the base of the window: the steam immediately covers the glass which is removed by a wash leather, and finished off with another, quite clean and dry. The method saves time, prevents that cloudy appearance left by whiting, and produces a more brilliant and durable polish than any other.

VERMIN.--Take a quantity of whale oil, and about the same quantity of lard and tallow, simmer them a few minutes together, so as they will mix. Apply the mixture with a feather or a fine brush, to the

CURIOUS EXCISE ENTRY.—Alexander Gun, an Excise Officer in Scotland, being dismissed from his employment for misconduct, an entry was made in a book kept for the purpose as follows:—"A Gun discharged for making a false report."

ROMANTIC REVENGE.—In Kentucky, a ploughman became enamoured of a milkmaid on a neighbouring farm. His addresses were rejected; and the disappointed swain, full of melancholy and vengeance, procured a rope—went to the farm, and tied all the cow's tails together!

crevices and joints of the bedstead, and the vermin will not only desert the bed, but leave the room.

SAVE YOUR SALT BARRELS.—Dried fruit, kept in old salt barrels, will save from the depredations of insects. This fact is of great importance the present season, as next year we must depend upon fruit kept over. These barrels will keep grain uninjured from insects.—*Baltimore Patriot.*

PRESERVING MILK.—It is said that a spoonful of horse radish, put into a pan of milk, will preserve the milk sweet for several days, either in the open air or in a cellar, while other milk will sour.

PRESERVING POTATOES THROUGH WINTER.—An intelligent neighbour practices the following mode by which he rarely loses one bushel in five hundred. The potatoes are placed in a large heap on dry ground, and covered with straw in sufficient quantity to be at least one foot thick around the heap when closely packed. Three or four inches of earth are then shovelled upon it. During the mild weather of Autumn, a hole is made in the top for ventilation, which is closed on the approach of the severe frosty weather in winter.

POPULAR TOASTS.—The following toasts were lately drank at the Printers' Commemoration Festival, at Boston: Printers: intellectual smelters, who receive the dross of their labour, while the world gets the metal. Editors: the locomotives of society; nothing can go ahead without them. Bookbinders: the best executioners, without whose skill no author's works would hang together.

DOUBLE RENT.—"Tell your mistress that I have torn the curtain

said a gentleman to a punning domestic of his lodging house. "Very well, sir; mistress will put it down as a rent."

TITLES OF HONOR.—The keeper of a Scotch alehouse having on his sign, after his name, "M.D., F.R.S." a physician of the Royal Society asked him how he presumed to affix those letters to his name. "Why, sir," said Boniface, "I have as good a right as you have. "What do you mean, you scoundrel!" replied the doctor. "I mean, sir," returned the other, "that I was Drum-major of the Royal Scotch Fusiliers."

AN EASY METHOD OF PROGNOSTICATING THE WEATHER WITHOUT A BAROMETER.—Take a single young lady, and place a looking-glass before her, when you will find the glass indicate "fair." There will be an indication of "change" should a young gentleman be assiduous in his attentions; if broken off, her eyes will fortel "much wet"

A PROVIDENT DUTCHMAN.—"What is the matter with you?" said a gentleman to an old Dutchman, as he was crossing the Strand. "I got de rhumatis." The gentleman advised him to rub himself with brandy until it penetrated well. "Oh, man, I dosh peeter as dat," replied Myuheer; I drinks te prandy, and then I rub my leg wit de pottle."

DRINKING HEALTHS.—On the birth days of children, do not omit (ca-

TO RESTORE FLOWERS.—Most flowers begin to droop and fade after being kept during twenty-four hours in water. Place the flowers in scalding water, deep enough to cover about one-third of the length of the stem; by the time the water has become cold, the flowers will have become erect and fresh; cut off the ends, and put them into cold water.

TO SWEETEN RANCID BUTTER.—Take twenty-five to thirty drops of chloride of lime, mixed with sufficient water to cover two

pecially if the manager be present, and has any pretensions to personal charms), among your sincerest wishes, to express a hope that "the little rose-bud may in time expand, and equal the beauty of the full-blown rose." Applause will certainly follow, (in compliment to the lady, if not to your eloquence) and you will be most likely booked for the next dinner.

BARREL ORGAN.—A phrenologist being interrogated as to what organ would most likely preponderate in the head of a drunkard, replied—"The barrel organ."

how many young ladies would it take to reach thence to Bath? *Ans.* 108; because a *miss* is as *good* as a *mile*.

“Why is a butcher’s cart like his boots?—Because he carries his calves there.

Why do butcher’s always rob themselves?—Because they all steel (steal) their own knives.

Why are cowardly soldiers like butter?—Because, when exposed to a fire, they run.

Why is a man who keeps his eyes shut like an illiterate schoolmaster?—Because he keeps his pupils in darkness.

What organ of the body would a man name when contradicting with a female named Sarah?—Nasal, (Nay, Sal.)

Why are children whose parents are dead like worn-out shoes? Because they are (left-off ’uns) orphans.

What game designates the moving of a vessel in a storm?—Fitch and toss.

When may a man be strictly said to be in the habit of always keeping his word?—When nobody will ever take it.

WHISKERS.—“I cannot imagine,” said an alderman, “why my whiskers should turn grey so much sooner than the hair on my head.” “Because observed a wag, “you have worked much harder with your jaws than your brains.”

PAINTING A LADY’S MOUTH.—Vigee, the artist, taking the portrait of Lady L—— (who was always very desirous of being thought to have an exceedingly small mouth,) perceived that whilst busily engaged about the mouth, she was twisting her features in order to render it smaller, and drew her lips into the closest contraction. “Do not trouble yourself so much, madam,” exclaimed the painter, whose patience was quite exhausted, “for if

painter’s brush warm, if upon the outside of the building; if within doors, co’d. The above forms an excellent whitewash, and will retain its brilliancy for years.

MANURE FOR ONIONS.—I have always succeeded in the following way, being the surest and most economical:—Take off about 4 inches of the earth on the surface, the length and width of your bed, so that the ground under be solid. Spread stable dung well over,

about 4 inches in thickness, and then cover the same over with the earth taken from the surface. Sow your seeds rough, and you are almost sure of an abundant crop; and the land is the best for parsnips and carrots the following year.—R. F. J. Otery.

DEATH ON FLIES.—A strong infusion of Souchong tea, sweetened with sugar, is said to be as fatal to flies as arsenic.

HOOF AIL AND SORE TEATS.—Cows as well as oxen are liable to the hoof ail. On the treatment of disease, in connexion with that of sore teats, a writer in the Western Farmer remarks:

you choose I will draw you without any mouth at all;" This rebuke reduced the mouth to its natural size.

ALPHABETICAL.—A young man should be active, benevolent, conscientious, diligent, economical, gentle, honest, industrious, just, kind, lenient, modest, noble, open, prudent, quick, religious, sincere, trust-worthy, urbane, virtuous, wellbred, xpert and yielding.

BLISSFUL IGNORANCE — Genius is in one respect like gold; numbers of persons are constantly writing about both, who have neither.

CERTAIN CURE FOR CORNS.— One tea-spoonful of tar, one ditto of brown sugar, and one ditto of saltpetre. The whole to be warmed together, and spread on kid glove leather, the size of the corn, and in two days it will be drawn out.

EGGS.—"Mother," said a fellow the other day, "is there any harm in breaking egg-shells?" "Certainly not, my dear; but why do you ask?" "Cause I dropt the basket just now, and see what a mess I'm in with the yolk!"

FROZEN LIGHTNING!—An amateur American astronomer says:—"The light supposed to be a comet's tail, is nothing more than a streak of lightning *friz* up."

OBLIVION.—An indulgence which we extend to the injuries we have done to others, and the benefits which others have done to us.

FLATTERING PREFERENCE.— Two natives of the Marqueras Islands have been carried to France. The story runs, that on the voyage, one of their fellow-passengers asked them which they liked best, the French or the English? "The English," answered the man smacking his lips, "they are the *fattest*." "And a great deal more *tender*," chimed in the woman with a grin that exhibited two rows of pointed teeth, as sharp as a crocodile's.

"Both these diseases are early cured by the application of white paint laid on with a small brush; the body of the paint acting mechanically in preventing the action of the air on the sores, and the lead operating mechanically or medicinally in drying and healing them. Care must however be taken not to apply the lead to the teats while they are sucking calves; and afterwards caution must be used at the time of milking, but no danger need be apprehended in the hands of careful persons. In inveterate hoof-ail it might first be necessary, ei-

LOST IN A FOG.—"Suppose you are lost in a fog," said Lord C — to his noble relative, the Marchioness, "what are you most likely to be?" "Mist, of course," replied her ladyship.

DILEMMA.—A young man meeting an acquaintance, said, "I heard you were dead." "But," says the other, "I am alive." "I do not know how that may be," replied he, "you are a notorious liar, but my informant was a person of credit."

ATTRACTION.—"John, can you tell me the difference between attraction of gravitation and attraction of cohesion?" "Yes sir, attraction of gravitation pulls a drunken man to the ground, and attraction of cohesion prevents his getting up again."

KNOWLEDGE IS POWER.—While a worthy individual was "laying down the law" the other day to a knot of his acquaintances, he caught the eye of a carter hard by, who had been vainly endeavouring to raise a sack of potatoes to his cart, and who appealed to the man of knowledge—"Come awa', Mr. ———, knowledge is power, ye ken: gie us a lift on wi' this poke a'taties."

NINE HUSBANDS.—At Birdbroke was buried in May, 1681, Maria Blewitt, who was the wife of nine husbands successively. The text to her funeral sermon was—"Last of all the woman died also."

WHAT'S IN A NAME?—We are informed that in consequence of an order from the Horse Guards to the Regiments who have served in the late war to wear the word "China," in their caps, the Peninsular veterans have applied for permission to place "Hardware" in front of theirs.

A LEFT-HANDED COMPLIMENT.—"God bless your honour! you once saved my life," said a beggar to a captain, under whom he had served. "Sa-

fields, and then roll them in and turn upon them the dirt thrown out by the plough. In this way the log is not only got rid of, but the labour of cutting, lifting, piling, and burning is saved. When decomposed it furnishes a rich bed of vegetable matter to the land. You would be surprised at the rapidity with which a log is consigned to its narrow house. Protecting the land from washing is another great advantage of this process of log burying.—Am. Agriculturist.

FOR THE LADIES.—If the stem of a white rose be placed in a solution of yellow prussiate of potash for four or five hours, and then

placed in a solution of sulphate of iron, the color will be changed to a delicate primrose, while the fragrance remains unchanged.

A CHEAP AND DURABLE CEMENT.—A most valuable and durable cement for the buildings, fences, &c. may be obtained by mixing two parts of sifted wood ashes, one of fine sand, and three of clay; these being again mixed with oil, and applied to the surface of the wood, is said to be capable of resisting the inclemency of the weather even better than marble itself

ved your life!" replied the officer. "Do you think I am a doctor?" "No," answered the man; "but I served under you at the battle of Corunna; and when you ran away, I followed, or else I should have been killed."

THE HONEST WAY OF GETTING INTO GAOL.—A lad lately committed to Chester Castle, for poaching, was asked how long he had been a poacher. He replied, "Not long, sir. You see, the farmers would not find me *no* work, and I was like to starve. So, says I to myself, 'I never heard of any one starving in prison.' But the question was, how was I to get in prison without losing my character? At last, I went a-poaching, because that was the honestest way of getting into gaol as I knowd of."

A HINT FOR FASCINATING FAIR ONES.—A lady was rating her maid upon the giddiness of her conduct with young men, when the girl meekly observed, "Well, Mem, I'll take your advice: I'll wash my hands of 'em all, and goose-grease 'em." "How! grease them?" inquired the mistress in astonishment. "Not the fellers, Mam, but my hands," replied the servant: "cause my last mistress said goose-grease was safe to keep away the chaps."

A SLIGHT DIFFERENCE.—"A-lass! A-lass!" as the old bachelor exclaimed when he felt a desire to marry. He made the same exclamation after marriage, but spelt it differently.

ANCESTRY.—An empty coxcomb boasting of his ancestry is no better than a potatoe blossom—all that is good pertaining to him being under the ground.

HOW TO BRING UP CHILDREN.—"Mamma," said a little fellow, whose mother had forbid him drawing horses and ships on the mahogany sideboard

BE KIND TO BIRDS.—It has been ascertained that a pair of little sparrows, with young to maintain, will destroy 3,360 caterpillars per week. We have no doubt that the birds of every country town destroy tons of insects, which, if left to grow to maturity, would devour all our grain, roots, and grass crops, and ultimately make a famine in the land.—Consider, then, that birds are among your best

friends, and that they should be cherished and protected, instead of stoned, shot at, and tormented in various ways.

To HAVE GREEN PEAS IN WINTER.—Take the peas when they are plenty, shell them, wash and scald in hot water, then drain, put them into bottles, and pour on strong brine enough to cover; on this pour a good layer of good salted oil, cork tight, then dip the corks into melted pitch. The bottles should be quite full, and kept upright.

all boiler, full pressure—it's hard work to hold her in, at the wharves and landings. I could run her up a cataract. She draws eight inches of water—goes at three knots a minute and jumps all over the snags and sand-banks.

STORY OF A "SPOON".—A Leicestershire farmer, who had never seen a silver fork, had some soup handed to him at a dinner lately. He found that no spoon was placed at his elbow. Lifting the fork and twirling it in his fingers for some time, he called the waiter, and asked what was the use of giving him a spoon with so many slots in it!

A WAG.—We were recommended the other day, to a man celebrated for making one of the greatest luxuries—a good bed. We remarked that the price was exceedingly high. "High, sir," said he; "why, we are all nearly plucked; there is no feathering the nest now-a-days; everybody wishes to buy cheap, and we are one and all obliged to bolster up our concerns by getting 'tick' wherever we can find it."

CONJUGAL AFFECTION.—A woman from the neighbourhood of Granville, went into an apothecary's shop the other day with two prescriptions, one for her husband and the other for her cow. She inquired what was the price of them, and the apothecary re-

ASTHMA.—We copy the following from a provincial contemporary:—"It has long been known that there is no cure for the asthma, nevertheless there is great relief to be had, and that too in the following simple receipt—Get some blotting paper and saturate it well in saltpetre, take it out and dry it; this done, take a piece about the size of your hand, on going to bed light it and lay it upon a plate in your lodging room; by doing so, persons no matter however badly afflicted with asthma, will find that they can sleep as well almost as

they ever did in their lives. Thus at least we are assured by a correspondent."

TO PREVENT THE TOOTH-ACHE.—Rub well the teeth and gums with a hard tooth brush, using the flower of sulphur as a tooth powder, every night on going to bed; and if it is done after dinner it will be the best. This is an excellent preservative to the teeth, and void of any unpleasant smell.

plied that it was so much for the man, and so much for the beast. The woman finding she had not enough money, reflected for a moment and said, "Give me the medicine for the cow, I can send for my husband's to-morrow."

SECRETS OF TRADE.—Dr. Moore (author of *Zeluco*) used to say that at least two thirds of a physicians fees were for imaginary complaints. Amongst several instances of this nature he mentions one

of a clothier, after long drinking the Bath waters, took it into his head to try the Bristol Hotwells. Previous, however, to his setting off, he requested his physician to favour him with a letter, stating the case to another brother of Galen. This done, the patient got into a chaise and started. After proceeding about half way, he felt an itch to pry into the contents of the letter, when the following words presented themselves, 'Dear Sir; the bearer is a fat Wiltshire clothier; make the most of him.' It is unnecessary to add, that his cure was at that moment effected, as he ordered the chaise to return, and immediately proceeded home.

A LONG NOSE.—A Paisley manufacturer having got, by some accident, a severe cut across the nose, and having no court plaister at hand, stuck on his unfortunate probosis one of his dum tickets, on which was the usual intimation, 'warranted 350 yards long.'

TRADING BRIDEGROOM.—After a marriage in Connecticut, the bridegroom took the parson aside most mysteriously, and whispered to him, 'Can't you take the pay out in taters?'

THE FRENCH ARMY.—In future all the laurels of the French officers are to be gilt; they are forbidden to marry any woman who has less than 1,200 francs a year! Mere love is not to be allowed out of the ranks.

TO GET OIL OUT OF BOARDS.—Mix together Fuller's earth and soap lees, and rub it into the boards. Let it dry and then scour it off with strong soap and sand or use lees to scour it with. It may be put on hot, which may be easily done by heating the lees.

TO TAKE OUT SPOTS OF INK.—As soon as the accident happens, wet the place with juice of sorrel or lemon, or with vinegar, and the best hard white soap.

Province of Nova Scotia.

GOVERNOR. His Excellency Lucius Bentinck Viscount Falkland, Knight Grand Cross of the Guelphic Order, and Member of Her Majesty's Most Honorable Privy Council, Lieutenant Governor and Commander in Chief in and over her Majesty's Province of Nova Scotia, and its dependencies, &c. &c. &c.

Mutual Life Assurance.

Scottish Amicable Life Assurance Society.

Head Office, No. 141, Buchanan Street, Glasgow.

The Constitution and Regulations of this Society insure to its Members the full benefits which can be derived from such sums as they are willing to devote to the important duty of *Life Insurance*. The whole profits are secured to the Policy Holders by the Mutual System on which the Society is established, and their allocation to the Members, is made on fair, simple, and popular principles.

It is provided by the Rules, that the whole Directors, Ordinary and Extraordinary, shall be members of the society, by holding Policies of Insurance for Life with it, of more than three years' standing. This rule secures to the public that those Noblemen and Gentlemen, who appear as Directors of the society, have practically approved of the principles.
