### DR. WILSON'S PULMONARY CHERRY BALSAM.

In all temperate climates like North America, disecases of the Lungs are of very frequent occurrence, and cause a large portion of the annual death rate; so much is this the case that consumption is considered by some to be as fatal as the plague; and an announcement by the physician that the lungs are diseased is thought to be equivalent to a sentence of death, and attempts to relieve it are looked upon as mere "placebo," that is a something to amuse the patient, and take up his attention while the disease slowly saps his vitals.

Dr. Wilson at an early period of his practice had his attention drawn to this popular belief, and having under his daily care many patients so afflicted, determined to devote a large portion of his time to a study of these diseases and their proper remedies. His knowledge of the anatomy of the lungs and blood vessels so intimately connected with them, convinced him that there was no good reason why the diseases of these organs should be especially fatal, for there is no specialty in the tissues which organize them to make it an impossibility for them to be healed by proper treatment, any more than other portions of the human frame.

The lungs are two hollow bags situated in the chest, one on each side, with the heart and large blood vessel or "aorta" lying between and external to them. A good idea of their form may be gathered by likening them to a tree with the stem upward, the foliage beneath: the stem is the windpipe which connects them with the atmosphere, and through which the air finds an entrance into their cavities. At the lower end, just behind the top of the breast bone, the wind pipe divides into two branches, one to the right, and the other to the left, the bronchial pipes; these stretch out sideways, and are divided and subdivided like the branches of a tree, and bearing upon their minute subdivisions clusters of little bags like grapes on a stalk, all hollow and opening only through the bronchial tubes, and varying in size from 70 to 200 to the inch. External to and uniting these together is what is called cellular tissue, and each lung whose air cells are so united is inclosed in a bag, the "pleura," one end of which is fastened to the lungs,

the other lines the cavity of the chest, and is completely shut out from external air. The air cells are composed of elastic or distensible tissue, so that they may spread out when filled with air, and then contracting upon themselves drive out the air which was introduced into them. Running through the cellular tissue, and spread out in an infinitely fine network, immediately over the thin elastic membrance of the air cells, are the capillary blood vessels of the lungs. Now, then, we see the object of all this arrangement, the food taken into the stomach is, as we have explained when treating of the stomach and its diseases in subsequent pages, mingled by passing through the lacteals with the blood in the right side of the heart; from this it is injected through the pulmonary artery into those capillary vessels in the lungs. When we draw in our breath, that is the air, it passes through the windpipe down the bronchial pipes into the little air cells; it puffs these out, stretches the tissue of which they are composed; the air passes through this stretched tissue, through the coats of these minute blood vessels into the blood, and in so doing changes it from dark, venous blood into bright, arterial blood, suitable for the nourishment of the body. But this is not all: the black blood in these capillaries was charged with carbonic acid gas, the product of the waste tissues of the body; the oxygen of the air entering in drives this out from the blood, and takes its place; and this carbonic acid gas is the breath which we exhale when we contract our lungs and breathe out. This, then, is the work of the lungs, to take in air, pass it into the blood, and force out carbonic acid gas. Having now a knowledge of the natural formation and business of the lungs, we can see how diseases affect them.

The bronchial tubes and windpipe are lined with mucous membrane, continuous with and exactly resembling the lining membrane of the mouth. If we look at it in the mouth we see that it somewhat resembles that external skin, only that it has a softer look, not horny like the skin; it is redder, that is, is more full of blood, and it is kept moist by a secretion which we call mucous, and which very

# ECLIPSES.

In the year 1885 there will be two collipses of the Sun and two of the Moon.

I.-An annular eclipse of the Sun, March 16th, visible in Canada. Begins at 10 h. 23 m. morn., Montreal time ; ends 3 h. 20 m. eve.

II .- A partial eclipse of the Moon, March 30th, invisible in Canada ; visible in New Guinea, Ceylon and the Indian Ocean.

III .- A total eclipse of the Sun, September 8th, invisible in Canada ; visible in New Zealand and the South Pacific Ocean.

IV.-A partial eclipse of the Moon, September 24th, visible in Canada; begins at 0 h. 8 m. morn., Montreal time; ends 5 h. 40 m. morn.

much resembles in character the saliva or spittle. | ed. But some will say if a cough is only an effort The object of this secretion is the same we have in view in oiling a cart wheel axle: the surfaces are continually rubbing together; were they dry and hard there would be much wear; but the lubriecting secretion binders all this, and keeps them soft and pliable. Now this secretion being taken from the blood is the reason why more blood is required in the mucous membrane than in the skin, which is not constantly throwing off such an amount of lubricating material, and by consequence is the reason why the mucous membrane is red instead of white.

Nine-tenths of the diseases of the lungs are caused by taking cold. What, then, is taking cold, and what does it consist in?

Physical science tells us that heat expands; the want of it, that is cold, contracts substances. Our bodies at a normal temperature have their blood circulating in due proportion in all parts of it, so much in the skin, so much in the interior portion. But if the body be exposed to a sudden chill, the abstraction of heat causes a contraction of the external tissues of the body; the blood being liquid is then forced into the interior, the lungs are at once the loosest in tissue and fullest of blood yessels; most of it is therefore driven there, and the immediate consequence is that full feeling about the nose and throat so familiar to us as a "cold in the head," caused by a swelling of the mucous membrane lining those parts, accompanied by dryness, as the tissue stretched beyond its natural state by the influx of blood cannot exude its secretions at first. Now we feel this at once in the throat and nose because they are shut in bony walls, and therefore show the pressure at once ; but the same thing occurs in the lungs lower down, but lying loose in the cavity of the chest their tissue has room for its forced expansion, and does not therefore at once make its stretching manifest to our feeling. Nevertheless being all but parts of one texture intimately united together, what happens to one happens also to the other.

This full feeling and dryness is soon succeeded by another stage, that of increased moisture; the influx of blood soon begins to steal through the tissue in the shape of mucous, or in its increased quantity, taking on a new and irritating qual ... becomes what we call phlegm, and its irritating quality is shown by the effort of the nose to get rid of it by what we call sneezing, or the same thing in the lungs, coughing, these being nothing more nor less than the attempt of the lungs to clear its air passage by getting rid of the accumulated phlegm which clogged them.

Here, then, we have the exciting cause ; cold producing, first, increased quantity of the blood in the lungs; second, increased secretion of phlegm in. the pipes : third, cough, or violent effort of nature to get rid of this, and clear out the pipes for the passage of air that the blood may be properly ærat- Besides this, after a long spell of coughing, the

of nature to get rid of phlegm, is it not better to cough, and is it not dangerous to cure a cough? The answer is, and this is the key to Dr. Wilson's whole treatment of pulmonary complaints, IT is dangerous to stop a cough, IT is dangerous, hay it is fatal, to make use of such treatment as prevent the ejectment of the phlegm without preventing its formation.

It was for this very purpose that Dr. Wilson prepared his POLMONARY CHERRY BALSAM, not to stop the cough, and so mask the disease while it went on eating up the lungs, but to prevent the overloaded circulation in the lung, to tone up the coats of the blood vessels and they might be able to carry on their load of blood, to dissolve the tough, tenacious phlegm, and so render it easy to expectorate and clear the pipes, and thus do away with the cough, by depriving it of an object.

The PULMONARY CHERRY BALSAM is composed exclusively of vegetable materials, and these of the purest kind, that the dose may be small, and the stomach not be clogged by inert or hurtful and useless material.

Its base, the Wild Cherry Bark, seems as if especially intended by nature for diseases of the lungs and air passages. It acts as a tonic to the stomach, aiding to give it a healthy appetite, and at the same time assisting it in its work of preparing the food for conversion into good, bright, healthy blood, at the same time it has a peculiar soothing, what phyicians call sedative action, on the heart and larger blood vessels. Any irritation of the lungs, producing a stoppage of blood in them is referred back to the heart, and sets it to pumping more blood. in order to force a passage through and so restore the balance of the circulation. This of course only tends to increase the difficulty. Here the soothing action of the Wild Cherry Balsam comes beautifully into play; the excited nerves of the heart are calmed and quieted, the strong forcing action of the heart is allayed, the extra current of blood ceases to be forced in on the already overburdened capillaries of the lungs and time is given for another action of the Wild Cherry Balsam to be developed, that ic its power of giving tenacity to the coats of the capillaries, thus enabling them to resist the stretching from the increased quantity of blood within their cavities, and at the same time by contracting to force on the weakened current of blood through them.

1

222222

222223

To this Wild Cherry, as a base, is added an ingredient which has a special solvent action on the tough, stringy phlegm which clogs the mucous lining of the air tubes and cells. It thus acts as an expectorant, because, as can be easily seen, it cannot require so forced, convulsive cough to bring up thin liquid phlegm, as it does to force out the same substance when tenacious as glue, and sticking firmly to the inner wall of those small tubes. 1st Month. month. Saturn is an "Evening Star," rising at sunset. The Moon passes close by the place of Jupiter on the 4th, and, prior to her conjunction with the Sun, the waning Moon is near Venus on the 13th, in the morning before sunsise. Mercury is within 2° of Venus on the 24th, the little planet being favorably placed for seeing about that date, as he is then well out from the Sun, rising before the the god of day, and reaching "greatest elongation West" on the 26th. The growing Moon will be near Saturn on the night of the 26th. Mars and Uranus are practically invisible. NOTE.—"Moon's place" denotes the "Sign,"—" Planet's places" the "Constellation."

 walls o the chest become so tired and sore under the exertion forced upon them, that oftentimes the phlegm cannot be brought up at all unless so dissolved, and then it lies in these air tubes and cells, blocking them up, and after a time rotting and festering there, and thus bringing on tubercular consumption.

But there are still other ingredients added in order to produce a healing tendency in the inflamed membrane. Ever since the annals of medicine began, certain gum resins of a fragrant character have been known to possess a vulnerary action, that is they stimulate ulcerated tissue to heal. We have in our own woods in America some of these articles. viz., the white pine and fir, which exude a gum resin or turpentine of by no means despicable healing qualities. But in our climate the gums so elaborated from the sap are harsh in their action, and generally not acceptable to the stomach. Not so. the gum resins which flow from some of the trees which have their habitation in torrid climes, where the fierce rays of the sun, acting for a long season, burn out the harsh and irritating qualities, and leave only the purer and more agreeable ingredients behind, and thus producing . purer and more surely healing balsam, and at the same time being of much more acceptable flavor to the stomach.

Mixed with these materials, and holding them all in accurate combination, is a bland, unirritating lubricant, which acts as the healthy secretion of mucous itself does, by coating the mucous membrane and keeping it soft and pllable, so as to prevent the ill effect of friction. It takes the place of the acrid phlegm, dissolved away by the other ingredients, substitutes its own unirritating moisture for the irritating ulcerative action of the diseased secretion, and thus aids materially in bringing about a healthy state of the membrane.

All these different ingredients are so combined that while there shal, be no conflict between their actions, each shall mutually help and assist the other, at the same time it is made acceptable to the taste and acceptable to the stomach, thus doing away with one great objection to taking medicine, especially with children. Dr. Wilson, therefore, on theoretical grounds, as well as on the practical grounds that he has used it many years and never without an advantage to the patient, feels that he is justified in claiming for the PULMONARY CHERRY BALSAM, that it is a POSITIVE REMEDY FOR DIS-EASES OF THE LUNGS.

FROM A HIGHLY RESPECTABLE CITIZEN.

Ma. J. W. BRAVLEY: Sir, it is with great pleasure that I add my testimony to the efficacy of Dr. Wilson's Pulmonary Cherry Balsam. My daughter contracted a very severe cold about three weeks since, and we applied all the usual remedies withcut any effect. She was evidently sinking fast, and commenced spitting blood. We began to feel very much alarmed, and were induced by a friend to try Wilson's Balsam, and when she had used it but a short time she was perfectly cured, and is now enjoying good health. R P. Wurze

R. P. WINTER, Custom House, Fredericton.

### Maitland, N.S., Aug. 27, 1873,

MR. J. W. BRAYLEY: Sir, I was seized last winter with great severity by a paroxysm of Asthma, a disease which I had been afficted with for many years past. It was attended with a hoarseness and someness of the lungs and threat, together with a laborious cough, and complete prostation of the second second and threat, together with a bottle of Dr. Wilson's Pulmonary Cherry Balsam was brought home by my husband. I was induced to try it, and in a few days it completely cured me, nor have I had any return of the disease since.

### MRS. G. A. MYLES.

### Bridgeport, Ont., Sept. 10th, 1872.

MR. J. W. BRAYLEY: Sir, My wife has been a dreadful sufferer from a cough for over twenty years, not always had but very much so at times; lately it has been getting much worse, and she almost coughed herself into fits. She has tried a great many remedies, and the doctors, during that time, but they never did her any good, from hearing of DR. WILSON'S FULMONARY CHERRY BALSAM, I purchased one of the smallest bottles, and after taking the first dose she felt relief. This small bottle has broken up the cough so that she is now quite well, in fact, feels as well as ever she did in her life.

#### Douglas, County York, June 8th, 1876.

Ms. J. W. BRAYLEY: Sir, in the spring of the present year (1870) I took a severe cold, caused by exposure while following my usual business of surveying lumber on the brows, where it remained without relaxation for four weeks, and growing worse, with a great deal of soreness and weakness of the lungs. I was fast becoming mable to attend to my business. I commenced in earnest-to try and restore my lost health. I consulted our Doctors, and they gave me medicine, but to no purpose, and I tried many other remedies, but felt growing worse. I had a 'arrible cough, and raised a good deal. My appetite had failed, and the grave was fast claiming me as its victim. When in this state a friend recommended me to try Dr. Wilson's Pulmonary Cherry Balsam, and to my great joy I soon found this remedy was fast making a cure of me. I took about a bottle and a half, and have since then been entirely well. I believe this Balsam saved me, with the blessing of God, from a settled attack of consumption, and I shall ever recommend it highly.

#### WHITMAN ESTEY.

Let us for a few minutes examine seriatim the different diseases of the lungs and air passages, that we may have an intelligent understanding of their symptoms, and the application of the CHERRY BAL-SAM to their cure. Beginning with the throat, QUINSY, SORE THROAT, DIPTHERIA, CLERGYMAN'S SORE THROAT, are all different stages of the same disease, viz., an inflammation of the tonsil glands and the mucous membrane lining the opening of the throat. They all begin with INFLAMMATION and Swelling, DRYNESS and SORENESS on SWAL-LOWING, followed, if allowed to have their own way, by ULCERATION OF DEEP-SEATED ABSCESS OF gathering. The great thing in their treatment is to begin at the beginning; treat the disease before it has time to grow to more formidable dimensions. Take a full dose of DR. WILSON'S ANTI-BILIOUS PILLS, to work off the inflammation downwards, and at the same time carry off by the bowels the vitiated phlegm which soon begins to

from being an "Evening Star," comes into conjunction with and passes behind the Sun, on Feb. 11th, becoming a "Morning Star" for the rest of the year. Venus and Mercury are near each other on the morning of the 12th. The waning creacent of the Moon pays court to Venus on the 13th, and Mercury the following morning; the three forming a pretty picture in the early twilight. The giant of the solar system, Jupiter, with his four Moons, comes into a direct line with the Earth and Sun (opposition) on the 19th, passing from a "Morning" to an "Evening Star." The Moon is near Saturn on the 21st, and Jupiter on the 25th. Mars is in perihelion (nearest the Sun) on the latter date.

er a ynd th of a med ie,

be secreted in quantity, and goes down into the [ lubricate the mucous membrane, and stimulate stomach poisoning the blood. Repeat the Pills every second day, till the disease is killed. At the same time apply externally to the throat, DR. WILSON'S CRAMP and PAIN RELIEVER, which by its counter-irritant qualities as a liniment, tends to draw the inflammation to the outside, and by its penetrating qualities serves to relieve the soreness and pain. Gargle the throat also, three or four times a day, with a solution of one teaspoonful of the RELIEVER, with six teaspoonfuls of milk. The object of this is to stimulate the mucous membrane to throw out its secretion, to be washed away by the gargle, and thus relieve the swelling. At intermediate times, keep the throat constantly lubricated with small quantities of the PULMONARY CHERRY BALSAM. There is no need of being afraid of it. Carry the bottle in the pocket, and take a few drops in the mouth as often as the tickling or painful sensation in the throat or the tendency to cough comes on. By so doing the phlegm is dissolved, the pain is soothed, the inflammation is reduced, the swelling subsides, and ulceration and gathering prevented.

In all cases this is the proper method in which to use the PULMONARY CHERRY BALSAM, not in large doses and seldom, but in small quantities and frequently, so as to keep a continuous action on the diseased tissue.

COLD IN THE HEAD, CATARRH, BRONCHITIS are all inflammations of one or the other part of the same continuous mucous membrane. In the first, the membrane lining the inside of the nose is involved ; in the second, the whole back part of the throat is also affected; in the third, the inflammation travels down into the pipes, and the consequent extra secretion blocks up the pipes, and so keeps the air cells from receiving their supply of air; in the fourth, the acute inflammation becomes CHRONIC, that is its first acute type has subsided, and there is left behind a loose, flabby membrane, pouring out an acrid secretion, which, after a time, by its presence constantly in the pipes, leads to ulceration of the mucous tissue, and often times results in true Consumption, or ulceration of the lung tissue itself. In all of these, the action of these remedies is the same ; if only used EARLY and FREELY the cure is certain. A few doses of the PILLS, at short intervals, to work off the irritation, and carry away, by the emunctories, the acrid secretions which find their way into the stomach, and which, if they remained, would get into the blood and produce FEVER ; external application of the CRAMP and PAIN RELIEVER as a counter-irritant, to substitute an irritation of the skin where it quickly subsides for the internal irritation which tends to grow worse and produce organic changes, add a free use of the PULMONARY CHERRY BALSAM to relieve the internal congestion, dissolve away the acrid phlegm,

it to heal.

Brownsville, Ont., June 2, 1884.

MR. J. W. BRAYLEY : Sir, My brother has just recovered from one of the most severe attacks of Bronchitis ever known in this City, and so acknowledged by his Physician, who is an able pracdespaired of his recovery, and so did every person that saw him. His case was alarming, and a description of it would almost challenge belief. Being in a Store when a person came to purchase a bottle of DR. Wilson's PULMONARY CHERRY BALSAM. and on hearing him describe a cure of Bronchitis performed by it, I purchased a forty cent bottle and induced my brother to try it, and the effect was astonishing. I was with him night and day, and watched the progress of the disease and the effect of the medicine. It worked like a charm, and I know of no medicine equal to it.

JAS. RUSSELL.

PNEUMONIA, INFLAMMATION OF THE LUNGS, LUNG FEVER, are the scientific and domestic names of one and the same disease. It generally results from cold : it consists of an increased amount of the same inflammation as we find in BRONCHITIS, that is the congestion of blood which we found in the mucous lining of the pipes only, in that disease, here extends to the tissue of the air cells, and the cellular tissue which surrounds and connects them together. Under its influence the light hollow sacs of the lungs become solid, and look more like liver than lungs. The air cannot penetrate into them at all, hence the short, gasping, difficult breathing. The cough is constant, but the lungs are only able to expel frothy, bloody phlegm, and that not at all freely. The fever runs high, because the blood fails to get its supply of air, and circulates full of poisonous carbonic acid gas, which burns up the tissues. The flesh wastes because the blood unærated cannot supply proper nutriment to the muscles, nerves, and vessels. PNEUMONIA is generally accompanied by PLEURISY or inflammation of the short sac which surrounds the lungs, and produces acute pain of the affected side or sides, if both lungs are affected. But every case of PNEUMONIA is not so accompanied, and many of them run their course without any acute pain, but only the dull, heavy, internal aching and "dyspnœa," or difficult breathing. In this disease, where the patient is at all strong, a full bleeding from the arm should begin the treatment. This will always give temporary relief, and allow time for the other remedies to effect a permanent cure. After this free purging with WILSON'S ANTI-BILIOUS PILLS will be found to be of vast importance, and should be continued till the acute inflammation is subdued, for it has its hold upon the very seat of life, and must at all hazards be expelled thence. Rub the skin of the chest thoroughly and frequently with my CRAMP and PAIN RELIEVER, mixed with an equal quantity of sweet oil or melted lard. This is better than a mustard poultice, for it has the same substitutive action as the mustard, while it

does not, by its weight, add to the difficulty of breathing, and may be applied very frequently without blistering the skin, which the mustard cannot. Give freely and often of the PULMON-ARY CHERRY BALSAM, its action is just what the sore inflamed lungs want, sedative to the Grculation, quieting to the nerves, tonic to the vessels, helping them to get rid of their load; solvent to the tough, viscid, irritating, bloody phlegm, and lubricating the inflamed membrane. Under its influence the swelling subsides, the air finds its way into the lungs, the blood gets a supply of air and grows bright and clear, the tissues gain new life from this improved supply, and health gradually returns

But many persons neglect these attacks; they say it is only a cold and will work itself off. They take no precautions against renewing the cold ; they use no medicine, or inefficient ones, to work off the acrid phlegm which accumulates in the stomach, nothing to dissolve it away and cleanse out the pipes. The result is, that after a time the putrifying phlegm so accumulates in some of the small pipes as totally to exclude the air from a series of the air cells. This happens most frequently at the top or apex of one or both lungs. The air cells, unstretched by the frequent access of air in breathing collapse, and their walls lie closely in contact with one another. The presence of the putrifying phlegm near them produces increased irritation, more blood as a consequence is sent to their capillary vessels, not meeting with the air or getting rid of its carbonic acid gas, it clots there, forms a solid mass which gradually hardens, and as it increases presses on the proper tissue of the air cells, causing them to ulcerate and become putrescent ; at length no trace of the true tissue of the lungs can be discovered in that spot, but instead a cheesy, half putrid mass, which goes by the name of Tu-BERCLE, and constitutes PULMONARY CONSUMPTION. If this is allowed to go on unchecked, after a time it ulcerates its way through the lung tissue, constantly increasing in quantity, for the tendency of all such half vitalized tissue is to absorb and take the place of the living tissue near it. . Its presence meantime in the lung has the effect of keeping up a constant hacking cough, especially in the morning, after sleep. This cough at first does not have the effect of bringing up much phlegm, for that is so hardened in the lungs that it is not easily set free, but instead a small, frothy, sticky, sweetish, sometimes saltish spittle. The ulceration, however continuing, at last finds its way into a bronchialtube, which is open to the air. Perhaps in its way into this pipe, it eats through the coat of one of the larger vessels of the lungs, and then comes on a more or less copious BLEEDING AT THE LUNGS, according to the size of the vessel eroded. At any rate as soon as the tubercle reaches the open bronchial

a horrid, soft, purulent matter, with more or less solid or semi-solid lumps in it. This is Consumtion in the second stage, or the stage of breaking down. Now comes on the HECTIC FEVER, the NIGHT swEATS, the CHIELS, the WASTING OF THE FLESH, the HAGGARD COUNTENANCE, and the verdict is "GONE WITH CONSUMPTION-CANNOT LIVE,"

If these truths were more generally known ; if timely precautions were taken; if on the access of cold, these valuable remedies which we have been writing about, and striving to put within the reach of all, were made use of as they ought to be, at once and persistently, till the effects of the cold were removed, how many valuable lives would be saved? For undoubtedly the most certain time for curing CONSUMPTION is before it begins, check the inflammation, stop the clotting, and the tubercles cannot form. But all is not lost even in those cases where tubercle does begin to form. The same remedies which, if properly used in time, would have prevented it, have still potent power. Fortunately for us, it is quite possible to live and enjoy a fair degree of health, with only a portion of our lungs permeable to air. If the lung tissues around the tubercle can be so acted on by remedies as to prevent ulceration, after a time the tubercle becomes quiescent, its tendency to kill the living flesh becomes exhausted, and it lies an inert mass, of course blocking up that portion of the lung effectually from any access of air, but otherwise harmless.

That this result does frequently occur under proper treatment, Dr. Wilson satisfied himself from watching many hundreds of cases during the course of his extensive practice, and he is equally confident that in his PULMONARY CHERRY BALSAM will be found the very best remedy for such a diseased state of the lungs. He has found no other medicine to have the same calming effect on the nerves and vessels, the same power of dissolving away the unhealthy irritating secretions, the same power of healing the diseased lung tissue, and preventing the ulcerative tendency of the tubercle, as has his PULMONARY CHERRY BALSAM. Only it must be used persistently for a length of time, for the tubercle takes a long time to become quiescent, and a too early disuse of the remedy allows its dormant power to be awakened.

3

At the same time, the local pains which accompany this state of the lungs is materially alleviated by the external use of the CRAMP and PAIN RE-LIEVER; and the occasional use of my PILLS keeps the bowels in a healthy condition, purges away the foul humours which are apt to collect in the stomach, keeps the appetite good, and the digestive power strong, and so aids in the cure.

larger vessels of the lungs, and then comes on a more or less copious BLEEDING AT THE LUNGS, according to the size of the vessel eroded. At any rate as soon as the tubercle reaches the open bronchial tube it begins to escape into it and be conghed up,

PLANETS IN APRIL.—Jupiter, Saturn, Uranus and Mercury are "Evening Stars" during the month. Mars and Venus are "Morning Stars," but to close to the Sun for observation. Mercury is very favorably placed for notice in the i y after sunset, for a few days before and after the 7th, on which date he reaches his greatest elongation of 19° 17° E. The old Moon is near Mars and Venus on the mornings of the 13th and 14th. The New Moon passes Saturn's place on the 18th in the evening, and overtakes Jupiter on the 23rd. Mercury passes between the Earth and Sun (inferior conjunction) on the 27th, and is in conjunction with Venus on the following day. same PULMONARY CHERRY BALSAM. It will assuage the "DYSPNCEA," ease the cough, calm the NERVOUS irritation, and render the downward path to the grave less agonizing.

CROUP is a disease of the air passages peculiar to young children. It is characterized by inflammation of the mucous lining, producing a coating of coagulable lymph, which blocks up the wind-pipe, preventing the access of air, strangles the poor little sufferer. In this disease the PULMONARY CHERRY BALSAM should be freely used to calm the irritation, dissolve the membrane, and keep the passage free. But it should be assisted by an occasional emetic in order to throw off the membrane so dissolved, as the little patient does not know how to spit it up as an adult would do. At the same time free application of my CRAMP and PAIN RELIEVER, on cloths wrung out of hot water, to the outside of the throat and chest, assists in subduing the inflammation, and so preventing the formation of the membrane. 11.45

WHOOPING COUGH is a spasmodic disease of the air pipes, caused by an irritation of the nerves, and is best treated by frequent use of the PULMONARY CHERRY BALSAM, as the Cherry in it has a peculiar calming effect on such nervous irritation. At the same time, as it is generally accompanied by more or less BRONCHITIS, the solvent and healing action of the BALSAMS in it aids in the cure, by relieving this accompaniment.

ASTHMA, HAY ASTHMA, in one of those chronic and inveterate diseases of the lungs which have usually been regarded as incurable, and many have suffered from this distressing affection all their lives, merely seeking temporary relief by the use of palliatives calculated to shorten the paroxysm, without any hope of obtaining a permanent cure. A great variety of medicines, and among them many secret preparations, have been employed in the treatment of this disorder, and while they may have been the means of mitigating the severity of the spasmodic symptoms, yet they have failed to prevent the recurrence of the paroxysms and restore the lungs to a healthy condition.

Buchanan, Ont., May 28th, 1884. AR. J. W. BRAYLEY: Sir, Being severely afflicted with an attack of influenza, a bad cough and asthma, and finding every means fail of relieving me, Con-sumption appeared inevitable; but by taking one bottle of DR. WILSON'S PULMONARY BALSAM, I was restored to perfect health.

### MRS. KNAPE.

M. PIERRE, Merchant, St. George, Q., April 16th,

1884, writes,-"THE CHERRY BALSAM has cured several cases of Cough, and two bad cases of Asthma. H. S. WHTE, Esq., bought two bottles and got immediate relief after the first dose, and by the time he had used them both he felt better than he had done for ten years.

MR. G. PATTIE, Carlisle, Ont., under date of June

18th, 1854, says,-I was seized with great severity by a paroxysm of Asthma, a disease with which I had been afflicted |

for many years past. It was attended with a hoarse-ness, and soreness of the throat and lungs, together with a laborious Cough and complete prostration of strength, and worn out with suffocation, when a bottle of Wilson's PULMONARY CHERRY BALSAM was sent to my house by a friend. At first I thought it was nothing but quackery, but it being recom-mended by my Doctor I was induced to try it, and in a few days it completely cured me, nor have I ever had any return of the disease since.

### CENTREVILLE, Ont., Febr. 16th, 1884.

MR. J. W. BRAYLEY: Sir, The WILSON'S PULMON-ARY CHERRY BALSAM is the best medicine I ever used. I have been afflicted with Asthma for upwards of 3 years, and a small quantity of the Balsain aided by a few doses of Wilson's ANTI-BILIOUS and PRESERVING PILLS have given me so much relief that I have never been troubled with the disease since. was so had that I was confined to the house and had to apply to a number of Doctors, but without benefit. My husband induced me to try the Balsam, and it has wrought a complete cure. I want every body to have the benefit of this remedy, especially those who are afflicted with complaints similar to mine, they ought to know there is such a certain cure.

### MRS. GEO. G. DUFF.

Loss OF VOICE, OF APHONIA, as the learned call it, is generally caused by a swelling of the mucous membrane about the vocal chords at the top of the "laryux" or upper part of the windpipe, which serves to moderate the sound of the voice. The tonic, healing and lubricating qualities of the PULMONARY CHERRY BALSAM, renders it peculiarly suitable for such cases, while its tonic, strengthening properties towards the whole system, and especially towards the air passages, render it a very valuable auxiliary to those who have to speak much to public assembles, doing away with HUSKINESS, and rendering the voice CLEAR and SOFT, and preventing the LASSITUDE and tired feelings about the lungs which so many PUBLIC SPEAKERS complain of.

### Edgar, Ont., Sept. 16th, 1883.

MR. J. W. BRAYLEY : Sir, It affords me very great pleasure to offer my testimony to the efficacy of Dr. WILSON'S PULMONARY CHERRY BALSAM for the cure of Coughs and Colds. Early last antunn I caught a severe cold, which settled in the lungs and chest. Cough was very severe, and it continuing for some months, gave me much alarm. After using quite a number of so-called celebrated cough medicines, I fortunately was induced to purchase a bottle of Dr. Wilson's Pulmonary Cherry Balsam, and to of Dr. Wison's remnonsy cherry theory is having and to my wonder and amazement, before I had used one half the bottle, my throat, lungs and chest-were entirely healed and Cough entirely removed. My daughter was also troubled with a hacking cough for months. The same remedy had the same effect. Since then I have recommended it to many others. and have never known one instance of failure. I also consider it far superior to any "troches" for public speakers or singers. I keep it constantly on hand at my house to give my children for simple cold and coughs.

### C. J. CREIGHTON.

. PORTER, Merchant, Maitland, N.S., under date of May 14th, 1884, writes,

I am out of Wilson's CHERRY BALSAM, and I think you had better send me one half gross. It is the best medicine I ever had in my store for cough and lung complaints generally.

### DR.WILSON'S TONIC AND SARSAPARILLIAN ELIXIR

is designed for the Cure of Scrofula, Scurvy, Cancerous Sores and Ulcers, Scald Head, Syphilis, Salt Rheum, Cutaneous Eruptions, Catarrh, Canker, Epileptic Fits, Erysipelas, Female Complaints, Gravel, Derangement of the Kidneys, Jaundice, Indigestion, Dyspepsia, Liver Complaint, Faintness at the Stomach, Constipation, Piles, Palpitation of the Heart, Spinal Complaint, Prostration of the Nervous System, General Debility, &c.

It operates upon all the secretions and excretions producing a gradual change in the fluids of the system, renovating the blood, and freeing it from all impurities, it is in fact the GREAT HANDMAID OF NATURE in renovating and invigorating the human system. Its restorative powers are immediately perceived by the patient, whose hopes are inspired at once by the beneficial effects of the remedy, and the proprietor assures the public that its certainty and power in removing disease, and its efficacy as a PURIFIER OF THE BLOOD entitle it to the entire confidence of the afflicted. It combines all the properties of the most powerful alteratives, with a mildness of operation peculiar to itself, and possessed by no other remedy. It is an exceedingly valuable Tonic, and an excellent remedy for removing those languid feelings, which although indescribable, are felt by multitudes at the approach of spring. Litta

The Tonic and Sarsaparillian Elixir is a combination of vegetable remedies, of known and acknowledged power in the removal of those diseases for which they are designed, and as such they have the unqualified approbation of many eminent physicians of the present century, whose knowledge of diseases and medicine entitle their opinions to the entire confidence of the public. It has performed many distinguished cures in cases which haffled the skill of eminent physicians, and in which many celebrated remedies had proved unsuccessful.

Alterative medicines ought to produce their efsible to the patient, and w fects very slowly and gradually upon the system, scarcely causing much cathartic effect, except in those cases in which there is manifestly a vitiated state of the blood, and even then the medicine should not be used in quantities sufficient to profrom this cause prevented.

duce any powerful laxative effect. Such remedies as act speedily aud powerfully upon the system invariably do violence to the laws of nature, and yet many of the mixtures in use are calculated to act powerfully, and some of them are positively drastic. It is well known to scientific men that those vessels that are stimulated to an over-discharge of fluids, in a given time inevitably sink to a state of torpor, and there is a corresponding diminution of the secretion until sufficient time has elapsed for a reparation of the loss. This accounts for the fact that purgative medicines are so frequently followed by constipation or costiveness. This ELIXIR accomplishes all that can be accomplished by any, other alterative or cathartic medicine without disordering the stomach or influencing the bowels, by simply stimulating the secretory glands to a healthy action, producing a degree of relaxation just sufficient to remove the hardened fæces from the cells of the colon, which are frequently retained after the use of powerful purgatives. THE TONIC AND SAR-SAPARILLIAN ELIXIR, while it is sufficiently powerful to produce any degree of CATHARSIS which is requisite, contains at the same time a Tonic and invigorating property, exactly adapted to restore patients laboring under general debility, and prostration of the nervous system. This is a most important property, and in this respect the Elixir has no competitor.

In the appropriate blending of medicines lies the great art of the Pharmaceutist. It is a fact, abundantly proved by experience, that powerful remedies become milder by combination, without losing any of their specific effects. This statement is in perfect accordance with sound physiology. Cathartic and alterative medicines act on different parts of the alimentary canal and organs secreting. into it. If several such medicines are administered at the same time, each in a diminished dose, it is obvious to every reflecting mind that the combined alterative or cathartic effect will be experienced, while the irritation being feeble in each part affected, and diffused over a large space, will be less sensible to the patient, and will more readily subside. In the Elixir all the active ingredients are associated together in proportions corresponding with their respective doses, so that an excess of any one ingredient is guarded against, and violent irritation The projute for wishes to call the attention of sa- [ is not checked it terminates' frequently in organic

PLANETS IN JUNE. — Uranus is stationary on the 5th, and reaches quadrature (90° from the Sun) on the 19th. Venus and Saturn are near each other on the 7th, the latter arriving at conjunction with the Sun on the 18th, when he becomes a "Morning Star" until Dec. 26th. The old Moon is near Mars on the morning of the 11th, and after becoming "New," passes Venus on the evening of the 18th. Luna overtakes Jupiter on the 17th. The Sun enters the tropical sign Cancer on the 21st. Mercury and Venus are in perihelion towards the close of the month, and the former is at "superior conjunction" on the 27th. The proprietor wishes to call the attention of inwalkids, with whom alone he has to do in this preparation, to a very important principle in medicine laid down by Sim BENJAMIN BRODIE: "That where a medicine is compounded of a large number of ingredients the diseased organs of the system will appropriate to their own use and relief by a law of the animal economy, such articles as are adapted to restore them to their normal state, while the remaining ones pass of like other substances which are received into the system."

This ELIXIR is such a blending of ingredients, of a perfectly harmless character, as impart to them great power in removing all derangements of the liver and secreting organs belonging to the digestive apparatus, rousing the stomach and intestines into healthy and vigorous action, and bringing all the functions of the diseased organs into complete health and harmony. Its operation is performed upon the blood, rendering it healthy and pure, and at the same time it invigorates the powers of nature, enabling the vital principle to perform a permanent cure.

Dyspepsia on Indigestion. Under the general head of Dyspepsia may be classed all the varieties of indigestion. Its symptoms are so various, and differ so much in different individuals; that it is almost impossible to classify them. Generally at the commencement of this disease the appetite is variable, frequently weak, and sometimes entirely fails, the patient is troubled with flatulency, distension of the stomach, acid eructations, and colic pains, the mind becomes depressed and languid, the tongue covered with a white fur, the bowels frequently obstinately constipated, the system languid, especially during the process of digestion, and there is a constant uneasy feeling at the stomach. Sometimes the appetite is morbidly craving, but if it be indulged, the patient becomes greatly oppressed, and suffers severe pains after eating. If the disease is suffered to advance, the pulse becomes tense, the epigastrium tender to the touch. the mind irritable, disconsolate and gloomy. The colic pains are more frequent and severe sometime after eating, the bowels irregular, being sometimes constipated, at others affected with diarrheea, during which portions of food are occasionally passed off in an undigested state, the stools vary in color, consistence, and character. The body at this stage of the disease begins to become emaciated, the strength fails, the epigastric distress becomes painfully severe and constant, the countenance assumes a sallow and haggard appearance, the patient is unable to repose upon the left side, the skin becomes dry and shrivelled, and there is usually a morbid sensibility to low temperature. Among the sympathetic effects of indigestion, severe headache is the most constant and annoying. There is also sometimes pain in the eyeballs, imperfect vision, with small black specks floating before the eyes. singing in the ears, and palpitation. If the disease

is not checked it terminates frequently in organic affections of the liver, lungs, or heart, and the patient dies. The patient should take alarm at the very first approach of the symptoms here enumerated, and meet them with a prompt and effectual remedy. The first indication of the cure is to restore the tone of the stomach. There is no remedy so effectual to accomplish this object as the TONIC and SARSAPARILIAN ELIXIR. The Tonic powers of the remedy render it peculiarly appropriate in this stage of Dyspepsia. If taken according to directions its tonic and invigorating effects are immediately perceived, and the patient rallies at once under its influence. THE ELIXIR acts also gently laxative if taken in somewhat larger doses, thus obviating the costiveness, and rousing the liver from its torpidity, and enabling it to perform its functions properly, and causing the secretion of a sufficient quantity of healthy bile to keep up a regular or peristaltic motion of the bowels. THE ELIXIR produces in the first instance a gently stimulating effect upon the stomach, while, at the same time, it cleanses and imparts tone and energy to it, without causing that debility which usually follows other preparations.

### Hilton, Ont., April 10th, 1884.

Mr. J. W. BRAYLEY: Sir, I feel in duty bound, with gratitude, to make a statement respecting the efficacy of DR. WILSON'S TONICAND SARSAFARILIAN ELINE, with a hope, by giving it publicity, I may be the means of inducing others to try it also, being well assured the dyspeptic will find it a certain cure. I have been afflicted with dyspepsia for over twenty years in a very distressing manner. Last summer I got a bottle of the Elixir at your store, and after taking it, could attend to my work as usual. I now enjoy good health.

### JAS. A. DOWKER.

### Kingsville, Ont., May 8th, 1884.

Mr. J. W. BRAYLEY: Sir, In a former note I stated that I had been afflicted with Dyspepsia for the last fourteen years; that I have trievel all elimates, all medicines, and all manner of advice without success, and that I had at last in despair abandoned all medicine and confined myself for my sole diet to oatmeal mush, jeilies, and such like delicate food. During the whole of this long period I was compelled to confine my diet to the simplest I could procure. By a regular course of Dr. Witson's Toxic AND ALTERATIVE ELIXIR, assisted by Dr. Witson's ANTI-BILIOUS PILLS, I am now happily restored to sound and perfect health; can sit down to the table with my family and friends; and live like other people, and go to my rest at night and wake in the morning refreshed, and with a light stomach and vigorous appelite.

### ROLAND WELLS.

### Maryville, Ont., Jan. 9th, 1884.

MR. J. W. BRAYLEY; Sir, Having been afflicted for many years with Dyspepsia, and having tried the Doctors' medicine from time to time to no good purpose, I was induced to try Dr. Wilson's Tonic and Sarsaparillan Elixir, and I find my health entirely restored. At my recommendation, others have used it with similar benefit.

#### GEORGE SANDERS.

In JAUNDICE and LIVER COMPLAINT, and more especially to prevent attacks of them, the Elixir

the evening, Montreal time. The crescent of the waning Moon is near Mars on the 9th, and Saturn on the 11th. After becoming "New," Luna will pass South of Venus on the evening of the 13th, and pay her court to Jupiter the following evening. Mercury is very near Venus on the night of the 17th. Mercury is in conjunction with a Leonis, (Regulus) on the night of the 25th.

is of sovereign remedy. These diseases arise from | congestion of the liver, producing a stoppage of its functions of secreting bile, and thus allowing the bile to be carried, by the circulation of the blood, into the tissues, producing a more or less yellow or green tinge of the white of the eyes, and a yellow, dirty, greasy appearance of the skin, according to the quantity of bile present. It is of most frequent occurrence in the spring and early summer, and arises in this way: during the winter the cold air and frosts produce such an effect upon the system as to increase the appetite very much, and that more especially for articles of diet, such as pork, beans, etc. etc. While the cold lasts active labor keeps the emunctories of the body clear, but in the spring the increased appetite continues, afterthe increased demand for food in part ceases, and the consequence is that the liver and kidneys become clogged with fatty acids, which congest those organs, and then we have a train of symptoms like the following, viz., heaviness and drowsiness, costiveness, deep greenish urine, a feeling of weight, especially in the right side and pit of the stomach, acid eructations, clay colored stools, a coated tongue, and lastly, the yellow color of the eyes and skin, now relood 64

Now these symptoms may be readily prevented by a proper use of the Elixir. An occasional dose taken during the winter helps to keep the stomach clear from these generated acids, but "IN THE SPRING CHIEPLY IS THE TIME TO FURIPY THE BLOOD." This time-honored maxim is the result of experience, and however much it is sneered at as an old woman's whim, it is at least one well deserving of attention.

In this Elixir we have all the ingredients needed for that purification. In it we have an alkali which serves to neutralize these fatty acids in the stomach; it also mixes with and renders soluble these accumulated fatty acids deposited in the tubes of the liver, which clog them up, and prevent the secretion of bile, and is, in fact, the very alkali which chemists detect in large quantities in healthy hile, and which serves to keep the bile liquid, so that it may readily flow through its natural channel. Combined with this alkali we have cathartics, mild or powerful according to the amount taken, which act on the stomach, the liver, and the whole alimentary canal, a powerfull alterative, which is digested by the stomach, from it passes into the blood, and circulating with the blood, is carried to all the secreting glands, and more especially to the kidneys, stimulating them to increased activity, that they may thrust out from the body the corrupt particles which, if retained in the system, make the blood impure, and lay the foundation for a host of disorders which may be fatal, may cause much pain, sickness, and misery. Dr. Wilson wishes particularly to impress this fact upon the public mind, viz., that "Prevention is better then cure." OUR BLOOD IS OUR LIFE; keep that pure, and you keep all the different

parts of the system healthy. Then disease has no chance of affecting you, for, in a large majority of cases, the manifestations of disease are but the attempt of nature to cast out of the body foreign matter, which, if retained, would set up putrefaction, or decay of some portion of that body. Prevent then this formation of morbific matter; in other words, PURIFY, PURIFY the blood, and you lay the foundation for a healthy old age. Do not wait till disease has laid its hand upon you, till your blood is circulating through your veins, charged with putrefactive particles, which must be cast off, and in being cast off may cost you your life, or, at least, if not your life, much pain and suffering; but begin at the beginning, keep the blood pure as it forms, and you may rest assured you will not be disappointed by the results. For this purpose Dr. Wilson desires again to inform the public, as the result of a long experience, that he knows of no more effectual remedy than this TONIC and SARSAPARILIAN ELIXIR,

IN SCROPULA OR KING'S EVH., a disease which is destructive to health, comeliness and life, and which is often handed down to the unfortunate offspring of those affected by it, the TONIC and SARSAPARILIAN ELIXIR is offered with strong faith in its healing and purifying qualities, the result of no small experience. For a long time the word Scrofulous was looked upon as an opprobious enithet, as being a disease resulting only from poverty, vice, and filth, and leaving untouched the virtuous, the cleanly, and the healthy. But juster ideas now prevail, and we know that the scrofulous taint is a very wide-spread one, and one that affects persons of all ranks, and places its mark upon them. It has its origin in impure blood and shows itself in some persons in consumption of the lungs, in others. especially children, in consumption having its seat in the bowels, and producing great emaciation, with swollen belly, full of hard lumps, or in the brain, producing water on the brain, or in the bones, producing rickets, or softening of the bones.

In less severe cases it produces those swollen glands which are so apt to shew themselves under the chin and in the groin, continuing for some time in that state, and then ultimately breaking, and after a long time healing up, if at all, in a bluishred pucketed scar, very detrimental to beauty.

The ointment of Iodide Potash applied to those swollen glands twice a day, with gentle friction, will prove a valuable aid in restoring the glands to a healthy condition.

In another class of cases Scrofula shows itself in fever sores, ulcers of the leg, eruptions of various kinds on the skin, sore eyellds, all cases difficult of cure.

Dr. Caron, St. Luc, Q., reports the cure of several cases of Scrofula by the use of DR. WILSON'S TONIC and SARSAPARILIAN ELIXIR. Some of the sufferers were nearly blind. Dr. Caron uses it extensively in his practice.

### DR. WILSON'S FAMILY ANTI-BILIOUS AND PRESERVING PILLS

Are confidently offered to the public as a safe, pleasant and certain remedy for a great variety of diseases. In preparing them, their author has expended much time and thought, that they might be suitable for all climates, all seasons, and all constitutions. Remembering the injunction of Celsus, which was impressed upon him by a judicious teacher at many a bedside while yet in his pupilage, that it was not enough to cure, but that the cure should be effected "tuto cito et jucunde,"-as safely, quickly, and with as little distress to the patient as possible,-he, in this prescription, has left out all mineral medicines, not because he doubted their efficacy when employed judiciously, and watched by one who would recognize the first indications that they were overstepping the bounds of doing good, and should therefore be stopped; but because he knew that the vegetable world urnished medicines equally suitable to relieve disease, and equally safe not to remain lurking in the system after expelling the disease, leaving it more liable to new diseases. from cold or exposure, or chemically amalgamating with food or other articles which might be taken into the stomach, and from it into the blood, and so bringing on those hosts of chronic disorders which every day add much to the mortality of the human race.

But it was not enough that they should be safe, not to leave behind more ills than they cured—they must be safe to be put into the hands of those unskilled in medical lore, least acquainted with the deleate machinery of the human frame—safe to use in diseases to all appearance so opposite in their mature, as costiveness and diarrhora, fever and general debility—safe also to use when the sun's rays bring us their maximum of heat, or when our part of the earth is wrapped in its icy mantle.

Our bodies are so constituted that it is necessary for us at short intervals to supply from external materials, called food, the waste of our system. Every breath we draw, every motion we make, asleep or awake, yoluntary or involuntary, uses up a portion of our body. This used up portion then becomes waste, and is carried by the veins back towards the heart; but in so passing most of it is carried into what the medical faculty call the portal circulation, sels of the intestines. From this the liver drains off the blood flowing through the liver, and the vessels of the vessels into the bowels, to mingle with the portions of food which the stomach did not

digest. The liver pours out this bile to mingle with the food just after it leaves the stomach, and goes into the small intestines, from which the facteals absorb all the useful portion, and carry it to mingle with the blood, which goes to the lungs to be mixed with air, and then carried by the arteries for the nutrition of the body.

The bile serves as a natural purgative to excite the intestines, and carry off the waste material, by a daily evacuation at stool. The kidneys from this same portal circulation carry off some salts dissolved in the water of our food, which, if it passed through the bowels, would excoriate them and keep them sore.

The skin by its free perspiration helps to keep down the great heat of the body produced by the chemical changes within it, and by the rays of the sun; and it also serves to keep the blood of such a consistency that it may keep moving through the arteries and veins and yet not exude through their conts, and so produce dropsy.

Knowing this connection between the different parts, how one complements and supplements the other, we can understand how diseases are brought about, and how those which seem most opposite may really be the same, and are to be similarly treated.

Indigestion - or, as it is more frequently called, Dyspepsia, that is a faulty state of the stomach. rendering it unable to properly prepare the food put into it for its assimilation into blood - lies at the foundation of the disorders which afflict the human race. It cannot be otherwise. A foul source cannot afford a pure stream. Food being the source of our blood, must affect that blood, just in proportion to its proper preparation for being changed into blood. If food, when swallowed, instead of finding a clear, healthy stomach to act upon it, gets into one foul with slime and unhealthy secretions, changing the pure gastric juice which should be there into a festering, corrupt, fermenting compound, which cannot reduce the food into the normal pulpy state required for passing through the lower orifice of the stomach, and being acted on by the lacteals it continues a long time in the stomach, it gradually begins to ferment, the first process of decay, and in doing so, it brings on that dreadfully distressing feeling as if a lump of lead lay in the pit of the stomach. As it ferments it sours, and produces eructations into the throat of acid, or bitter gas, or wind, or possibly a bitter liquid, WATERBRASH; the acidity produces HEARTBURN; then if vomiting does not follow, or some active purgative is not taken to work to off, the fermenting food forces its way down into the bowels with much PAIN and FLATULENCE; coming down in this state it finds the liver irritated by the distress and pain from its near neighbour, the stomach; its ducts partially or wholly closed by spasms; and fails to get its due admixture of bile : the consequence is that a great part of it the lacteals

PLANETS IN SEPTEMBER.—The Moon runs near Saturn on the 4th, and Mars on the following morning. The Sun suffers eclipse on the 3th. Jupiter reaches conjunction with the Sun on the 8th, and becomes a "Morning Star" for the rest of the year. The growing Moon is near Venus on Sept. 10th. Mercury is a "Morning Star," and well placed about the 18th, when he is farthest away from the Sun. The Sun enters the equinoctial sign Libra on the 22nd, and the Moon is eclipsed on the next day. Urahus comes into conjunction with the Sun on the 26th, and is a "Morning Star" for the rest of the year. Saturn is at quadrature—90° from the Sun—on the 30th, when he rises at midnight. He is in conjunction with the Moon on the following morning. goes down to clog up the small intestines, but as there is not enough bile mingled with it to make it move on there it remains, producing pain, distress, in the shape of Conc, or perhaps a Binorow attack.

Here, then, we have INDIGESTION first, and COS-TIVENESS and COLIG next. But this is not all: very soon the large intestines begin to feel the irritation of the extra load in the small gut above, and it begins to cry out for something to pass through it. After a while probably some portion of the fermenting, rotting mass above comes down, and still more irritates the already irritated lower bowel; and we have then combined with the COSTIVENESS or retention of what should be the faceal evacuations frequent watery stools, small in quantity which scald the bowel, and give intense pain and constant desire to stool without a possibility of the usual natural relief. This is DIABERDES.

Let it go a step further, -let the DIARRINGA be not relieved, and the blood begins to be forced through the coats of the vessels, rendered soft and pulpy by the irritating mucus, and the constant straining or pressure of the bowel upon itself; and then you have BLOOPY FLUX or DYSENTERY.

The Kidneys in the meantime also begin to sympathize in the trouble. They fail to get their supply of water from the food which should have come down. They go on secreting the salts from the portal circulation, till the water they have becomes saturated with these salts; then the urine is red, scalding, and small in quantity. Perhaps after a time, if not refleved, the blood becomes dissolved by mingling with these salts in the Kidneys, and comes away instead of urine. This is the BLOOPY UKINE.

In the meantime the portal circulation becomes slow and languid, because it cannot find exit above and the knots of vessels at its lower portion, or the fundament, become swelle I and inflamed, and perhaps their coats bur ', evil then you have Piles, either BLIND ', P'ooDY, according to the extent to which they have gone.

The whole body also languishes, because, in the first place, it fails  $(\gamma_{c}, t, i)$  supply of proper food; the pain of the costiveness and diarrhoes increase its nervous exhaustion, the skin becomes dry and hard, and then FEVER and GENERAL DEBILITY are brought one.

This is not an exaggerated account. Doctors will tell you that this is a correct statement. It is not always so sharp and severe as this case stated, but when it is in a minor degree, and the system is tougher and bette<sup>\*</sup> able to bear it, the throwing back of the ble upon the liver, the irritation from too faulty digestion, serves to produce the dreaded Liver COMPLAINT and JAUNDICE, and this in its turn produces WATEN BRASH, SICK HEADACHE, FEVER, INFLAMMATION — DEATH.

This then was the question which Dr. Wilson might be fully obtained, no portion of what a proposed to himself: how safely, quickly, and as be of use in the economy of life should be we pleasantly as might be to remedy this variety of nor any weakening of nervous energy induced.

disorders? The answer you have before you in these Pills. They are composed of Five DIFFER-ENT VROETABLES, or rather the CONCENTRATED EX-TRACT of their juices, so combined that all their virtues might be brought together in a small bulk, in such a manner as might be most acceptable to the stomach.

One portion acts upon the liver; it stimulates it to secrete the bile, it soothes the irritation, opens wide its duct, that its secretion may freely mingle with the food, and so work off by the natural channel the indigestible food — the food which was supplied in too large a quantity for the stomach to digest — the effete particles which, worn out by the system, are brought back by the portal circulation to be cast off.

It is not a DRASTIC HARSH PURGATIVE, such as form the basis of so many Pills now before the public, which crush everything before them, regardless of consequences; but it acts through the natural emunctory, it assists nature, and so while it evacuates it also gives tone and strength to the parts.

The second is a Superstric, which stimulates the pores of the skin to pour out perspiration, and thus get rid of superabundant watery material in the blood, so that the current may flow freely unchecked by too great pressure.

The third is like the second, only that it expends its main action on the KIDNEVS, causing a free flow of watery matter, with its salts held in proper solution, and thus beginning at the fountain head, prevents DROPSY, INFLAMMATION OF THE KIDNEVS, and alleviates those disorders which vicious practices bring upon us, corrupting our blood, and which are sometimes handed down to our innocent offspring.

A fourth part is an EXPECTORANT, which assists in unleading unhealthy phlegm and humours from our lungs; but of this we shall speak more at large when we come to treat of the Balsam, which we have especially devised for that purpose, and to which this acts as a useful adjuyant.

The  $f^{\infty_h}$  part, which preeminently makes these Pills superior to all others, is its PRESERVING Principle. Other Pills, other medicines, purge away irritating matters from the bowels, from the kidneys, and from the lungs; but, unfortunately, they weaken while doing so, and by this very induced w akness have behind them an ever-recurring tendency to the disorders which they alleviate. Like this purt to the jaded horse they, for the time, seem to infuso new life, but only to leave behind agreater exhaustion than they found.

It was Dr. Wilson's good fortune to discover, after much study and many experiments, how to combine a tonic, strength-producing medicine, with the evacuating power, so that the influence of the one should not oppose the other; so that while the object of getting rid of all the effets, harmful material might be fully obtained, no portion of what might be of use in the economy of life should be wasted, nor any wakening of herrons energy induced.

PLANETS IN OCTOBER.—The Moon is a few degrees South of the ruddy Mars on Oct. 3rd, and ere becoming "New" ske passes the place of Jupiter on the 6th. The New Moon is in conjunction with the beautiful Venus on the 11th, the latter planet being at Aphelion—farthest from the Sun—on the 16th. Mercury is behind the Sun on the 16th, and is an "Evening Star" for the rest of the month. The slow moving Saturn is at Perihelion—nearest the Sun—on the 19th, and "Stationary amongst the Stars" on the 20th. The Moon passes near him on the 28th.

### NURSE WILSON'S SOOTHING SYRUP

Is now so well known, and its valuable qualities have been so thoroughly tested and acknowledged, as to render it almost superfluous to call the attention of the public to it.

The Nurse Wilson who invented it, had for a lifetime enjoyed an extensive practice as Nurse and Ladies' Physician. When she first commenced practice, she found it the invariable custom in the nursery to make the youngest infants, when wakeful or troubled with colic, stupid with gin or some other liquor, to quiet their pains and give their parents rest.

As they grew older, and their teeth began to give pain and swell their guns, causing restlessness and uncasiness, the same or similar compounds were resorted to. If, as was very often the case, a troublesome diarrhœa came on in the course of teething, brandy—burnt or otherwise—and sugar, was poured into the little sufferer's stomach.

The result was that many children died in convulsions; some were stupid or idiotic, nearly all were more or less stunded in their youth and injured in their constitutions; and there is but too much reason to fear that the foundation of the appetite which has led many a man, and woman too, to a drunkard's grave, was laid in the nursery by this very means.

It was a knowledge of these facts forcing themselves upon her attention which led Nurse Wilson to try a variety of more innocent articles with her little charges, none of which answered the purpose thoroughly, till at last she hit upon the compound which she afterwards gave to the public under the name of NURSE WILSON'S SOOTHING SYRUP, and which has everywhere been hailed by mothers as the grand desideratum.

Many infants are troubled with WIND COLIC, almost from their birth; their mother's milk does not agree with them; they vomit it almost as soon as it is taken, or pass it through them in curds, almost unaltered. Of course, the babe thus afflicted cannot sleep or gain in flesh. It looks shrivelled, and as if its skin was too large for it. Its limbs are cold and drawn up. Its whole system is disordered, because its stomach is so irritable that it cannot digest its natural food.

In such cases, if the mother, instead of dosing it with any other, with gin, saffron, or calamus tea, will give from six fantile diseases.

to ten drops of NURSE WILSON'S SOOTHING SYRUP, she will soon find a delightfid change. The little darling will begin to thrive, and look up smiling into her face when awake, or lie quiet and easy when asleep, instead of keeping up a constant fretful wailing, indicating untold misery.

The mother's own health too will be benefitted; for if her sleep is disturbed, and her heart wrung with anguish at her darling's misery, she cannot have a proper appetite for food, and cannot therefore form milk in her breasts suitable for the child's nourishment.

From the fifth to the seventh month after birth, mothers first begin to notice the signs of the TEETH coming through the guins.

First the babe is noticed to bite the nipples when sucking, and be anxious to rub its gums on every smooth, hard substance. On looking at the gums the form of the tooth anderneath will be seen to push the gums upwards and ontwards. The gum then grows red and swollen, and the child cries out frequently, as if in severe pain. Its rest at night is apt to be disturbed; its bowels are loose; its skin hot; it will be noticed to twitch frequently, and its whole countenance betrays the anguish it suffers.

Now is the time when NURSE WILSON'S SOOTHING SYRUP proves itself such a boon to mothers. Given in the dose of a small teaspoonful three or four times daily, just enough to allay the pain and relieve the nervous irritation, it gives the poor little sufferer rest, strengthens it by allowing nature's restorer - sleep - to exercise its influence; relieves the teasing diarrhea, causes its food to be properly digested, and generally prevents those dreadful "FITS" which young children are so apt to suffer with while teething, and which even if recovered from, are so apt to affect their mental powers, a result even worse than death. Parents should never be without the Syrup in the nursery where there are young children, for if a child wakes in the night with pain and inflammation of the guins, it immediately gives ease.

In all cases of INFANTILE DIARRHOEA this SOOTHING SYRUP is of the utmost benefit. It relieves the acidity, brings away the wind, relieves the pain, checks the too frequent discharge from the bowels, and gives tone to the digestive organs. It should be given for this purpose in doses as directed, watching the effect as repeated every four or five hours, or in bad cases, after every very painful stool. By so doing you will often save your children's lives, and more frequently yet prevent long attacks of wasting illness, the effect of which they may feel for a lifetime; for in infancy is laid the foundation of many diseases which affect your riper years.

Be sure to ask for it by its full name, "NURSE WILSON'S SOOTHING SYRUP," do not confound it with any other, as this is the best adapted to infantile diseases.

### DR. WILSON'S PERSIAN SALVE.

Among the numerous "ills to which flesh is heir" the different DISEASES OF THE SKIN take no contemptible rank. Although they are not generally or often fatal, they produce no small amount of pain, uneasiness and unsightliness, and therefore call for remedies, no less than more fatal diseases.

A long experience in the treatment of t lese diseases has proved to Dr. Wilson that the difference between them, whether they make their appearance in the shape of PIMPLES, ULCERS, PUSTULES, SCABS, REDNESS OR DISCOLORATION of any kind, are only differences of degree, not of kind, and that in fact they are but the outward expression and visible sign of IMPURITY OF THE BLOOD, which impurity not being cast off through the natural emunctories, the liver, the kidneys, and the bowels, and being carried by the circulation of the blood into the minute glands of which it is in great part made up, are there cast off, either by being pushed off in bran-like scales, or if in greater quantity, ulcerate the skin, and are passed away in the shape of humour, or else produces little isolated MATTERY SPECKS called PIM-PLES, or large MATTERY SORES called Boils or CAR-BUNCLES. The evident means of cure then, is to cut off the supplies of morbific matter by PURIFYING THE BLOOD, and of this we have spoken fully in our articles on the subject of WILSON'S ANTI-BIL-IOUS PILLS, and WILSON'S TONIC AND SARSA-PARILIAN ELIXIR, which possesses a power of renovating impure blood belonging to no other medicine,

It is necessary then, to attack the disease locally, and for this purpose Dr. Wilson has devised the PERSIAN SALVE, than which, from his own long experience in its use, and from the numerous and spontaneous testimonials of others, he is certain no better application can be found.

In preparing this Salve, he uses as a base, a perfectly pure emollient, in order to restore the natural elasticity of the skin, which want of elasticity is ALWAYS THE EARLIEST SYMPTOM OF every skin disease. Dr. Wilson has combined with this base several balsams, whose HEALING AND FEVER PREVENTING VIETUES experience has taught him. Lastly he has added CHEMICAL ANTISETICS, or medicines which prevent slonghing or mortification of tissue and consequent formation of PUS or MATTER, thus bringing into connection all the curative means required in the local treatment of diseases of the skin.

### Manners Sutton, October 30th, 1871.

This certifies that a boy of mine, twelve years of age, has been cured of a festering sore on his under lip, of three month's standing, by the use of Dr. WILSON'S PERSIAN SALVE, after having tried various other remedies. JOHN MCGOWAN.

The power of the PERSIAN SALVE is astonishingly great. There is no Salve now in general use that can surpass it in prompt and energetic action.

If applied in sufficient quantity to the surface of the body, in the vicinity of the most highly inflamed part, externally, it at once subdues the inflammation and pain. It will quiet the most "angry" looking wounds, soften and reduce swellings of the hardest kind, and purify and restore to perfect soundness old and inveterate sores. Among the diseases to which this ointment is adapted are the following :--- SWELLED BREASTS and SORE NIPFLES of Nursing Women, FELONS and RINGWORMS, SCALD HEAD, and an invaluable dressing for BURNS, SCALDS and DRAWN BLISTERS, SEINGLES, ERVSIPELAS, and PILES. Inflammation of the eve vields to its power immediately. All BRUISES and FRESH CUT WOUNDS are cured with great rapidity, Fever Sores and SCROFULOUS SORES are soon changed into a healing condition, and frequently entirely cured. The first great and distinguishing power of this ointment is its ability to REDUCE INFLAMMATION. It is vain to hope for relief or for cure in any complaint unless the inflammation attending it be conquered or cooled. Dame Nature will not give healing or health to any part or function of the body while throbbing or fretting with inflammation. The moment inflammation subsides, nature comes kindly to the sufferer's relief, and at once institutes the healing process.

Just look at the blood that is drawn from a person suffering from an inflammatory disease of any kind. It coagulates rapidly, and shows a yellow or buffy coat. As long as this excited and unnatural state of the system continues, how can Nature complete a cure? A CORE IS INFOSIBLE until the part gets rest and coolness; and it is in this vital particular that the PERSIAN SALVE is sovereign and potent.

Another important effect is, that its EFFECTS ARE ALMOST IMMEDIATE. It is generally the case with other Ointments, and the like, that for a time they rather increase the pain and inflammation. People generally suppose that the increase of pain is a good sign,-that it shows the application is doing good; BUT THE CONTRARY IS THE FACT. If an application is adapted for inflammation, it should allay inflammation, not increase it, not even for a minute. It is sheer nonsense to talk of an anti-inflammatory Ointment increasing inflammation and pain. It should commence its soothing influence at once, or it is not worthy of its name. The throbbing, festering, feverish, angry wound or sore will be quieted with this Salve, beyond the shadow of a doubt. For BURNS. over which it has SOVEREIGN FOWER, apply the salve at once, and it gives immediate relief. Keep the part entirely covered, and there will be no scar.

The great principle to be remembered is, that inflammation accompanies the great majority of human ailments, and DR. WILSON'S PERSIAN SALVE is a safe, sure, and speedy cure for any species of INVLAMMATION.

### DR. WILSON'S CRAMP AND PAIN RELIEVER.

Applied externally it cures Ague in the Face, Bruises, Scalds, Sprains, Frost Bites, Toothache, Felons, Neuralgia, Rheumatism, Lumbago, Diphtheria, Stings of Insects, Boils, etc.

Taken internally it cures Coughs, Colds, Sour Stomach, Heartburn, Indigestion, Cankered Mouth and Stomach, Pain in the Kidneys and Back, Sea Sickness, Cramp and Pain in the Stomach and Bowels, Diarrhœa, Cholera Morbus, Cholera, Vomitings. Sore Throat and Diphtheria. oid

The CRAMP AND PAIN RELIEVER is a vegetable remedy. It is a pure article, safe and innocent. It is the only remedy before the public that kills and exterminates pain by removing and curing its cause. Opium, Morphine, Chloroform, and other preparations similar to this remedy do not touch the case, but only deadens the nerves of sensation, and as soon as this influence passes off the pain returns again with increased violence, and the same deadening, chilling, benumbing process has to be again resorted to; and in the meantime the nervous system is becoming destroyed, and if presevered in for any length of time, the body becomes paralyzed. Ice, vinegar, or any other refrigerating agent, in case of inflammation will secure temporary relief; but to secure permanent freedom from renewed attacks, the cause that induces the pain must be removed. This CRAMP AND PAIN RELIEVER, thus far, is the only remedy that accomplishes this. It stops pain immediately when applied to the parts where there is inflammation or congestion. It is a counter-irritant and diffusive stimulant. Inflammation is caused by the stoppage of the circulation, and the congested blood pressing upon the nerves occasions pain. The CRAMP AND PAIN RE-LIEVER restores the circulation, withdraws the inflammation, stimulates the nerves, and restores an equal circulation of the blood. No repeated applications are necessary. If a redness or heat does not appear after the first application, foment with hot water, which will bring about the desired result. The CRAMP AND PAIN RELIEVER stops pain by arousing the vital fluids of the system to action.

DIPHTHERIA, the foundation of this disease is a local congestion of the throat; the congestion quickly passes into an inflammation, of a character which produces mortification or death of tissue. It is a very fatal complaint. The cause of this is not very far to seek. The seat of the disease is very near the seat of life. The poison formed in the throat is constantly carried by being swallowed into the stomach, and thence into the blood. By every breath the patient draws, the foul emanations from the putrefying surface is carried into the lungs and goes with the air which should vivify the blood, to carry death there. Is it any wonder then, that thus at first local congestion speedily becomes a GENERAL FEVER, from the fact of the putridity being carried into the whole circulation, and thus producing its poisonous putrefactive action on the whole system? | the most certain COUNTER-IRRITANT in use.

In DIPHTHERIA, then, Dr. Wilson has found, after a most extensive experience, that there is no remedy equal to his CRAMP AND PAIN RELIEVER. If when Diphtheria is in the air, for it travels in the atmosphere, every attack of soreness and congestion of the throat is at once met by the free application of the CRAMP AND PAIN RELIEVER to the inside of the throat, diluted as a gargle according to directions; to the outside of the throat in its pure state so as to produce its revulsive effect on the skin. and taken internally to stimulate the general circulation, the disease will be prevented altogether.

DIARRHCEA, CRAMPS, COLICS, etc., or those Disorders of the bowels are very common and for the most part when unaccompanied with inflammation readily yield to simple remedies. They are usually produced by over repletion of the stomach, the food passing into the bowels in a crude state, provoking irritation and disturbance, or by the introduction of indigestible and irritating substances, such as raw vegetables, unripe acid fruits, meats somewhat spoiled or high, as epicures term it. I have abundant proof that WILSON'S CRAMP AND PAIN RELIEVER has never been surpassed as a remedy for those intestinal affections. It should be taken in doses repeated more or less frequently, according to the severity of the symptoms, and at the same time used externally by occasional friction over the abdomen with a flannel cloth saturated with it. In severe form of colic, attended with an accumulation of wind in the stomach and bowels, it will promptly relieve the flatulence by its powerful carminative influence, possessing, as it does, decided anti-spasmodic properties, it will speedily subdue the cramps and spasms, that give rise to the wrenching, twisting pains so characteristic of the disorder. Great relief will also be afforded by wringing a flannel cloth out of hot water and thoroughly saturating it with the CRAMP AND PAIN RELIEVER and applying it to the abdomen. Sudden and violent attacks of dysentery have been promptly arrested by a faithful application of this powerful remedy, in this manner.

DR. WILSON'S CRAMP AND PAIN RELIEVER is the great FAMILY REMEDY. It it always safe, and should always be on hand. It combines in itself a STIMULANT, which will prevent the effects of SUDDEN COLD, THE FRUITFUL MOTHER OF DISEASES ; AD ANTI-SPASMODIC, which stops internal pain, and an ANTI-SEPTIC to destroy the cause. Used externally, it is

### HURD'S HAIR VITALIZER.

For restoring Gray Hair to its original color, for promoting a Healthy and Luxuriant Growth, and imparting to it a Soft, Silky appearance.

It is compounded from the prescription of an eminent dermatologist for the purpose of giving increased vitality to the growth of hair, making it the more luxuriant and restoring its natural . color and glassiness.

There is now nothing wanting in this happy combination to make it the most perfect preparation for the hair in every respect, that this age has yet discovered. It is complete in itself, combining all the essential qualities of a HAIR RENEWER AND INVIC-ORATOR, A HAIR RESTORER AND VIGOR, AND A HAIR BEAUTIFIER OR DRESSER. It is not a dye, and is entirely free from *mineral caustic*, which is instantaneous in its effects, and destroys the vitality of the hair, leaving it harsh, wiry, and disagreeable. These Hair dyes give it an unnatural color by staining the coating of the hair, and in so doing fills up its pores preventing the natural circulation, and thus lead to the hair becoming brittle, breaking off, and to its ultimate death.

The HAIR VITALIZER acts in a different way .- Its almost miraculous virtues result from its powerful invigorating, vitalizing effect upon the scalp, thereby increasing that tonicity of the tissues, which is necessary to keep the hair in its place, and its healthy, stimulant effect upon the bulbous roots of the hair, giving them new life and vigor, thereby securing a strong, healthy growth of the hair, and a due secretion of coloring matter. This preparation keeps the scalp clean and entirely free from scurf and dandruff or dead cells, which are thrown off from the root and shaft, which if allowed to remain, close up the pores and prevent the circulation through the shaft, drives away humorous eruptions of every kind, prevents the hair from falling out, restores gray hair to its original color, changing all the varieties of light, sandy, and carroty hair to a beautiful auburn, and crowns the head with a rich, luxuriant growth of hair, rendering it dark, and at the same time imparting to it the richest lustre.

Chemical analysis shows the hair to be composed of albumen, saits of line, sulphur, manganese and iron, and a certain proportion of oily substance. Each hair has a bulbous root or sack, which resembles very much the common onion. Every hair fits into its follicle or sack, closed at its inner extremity, where it supports the growth of the hair. These hair follicles are imbedded in the skin, and furnish the requisite nutriment for the growth and sustenance of the hair. Here then is the seat of all diseases which produce the loss of hair, and blanching or turning gray. When the bulb of the hair is in a healthy condition, the hair is moist and glossy, but

when diseased, the hair loses that fresh appearance, and gradually turns gray and falls out. Each hair consists of two distinct parts, an external fibrous tube, and an internal substance or pith through which circulates a portion of the blood, and an oily, coloring matter, secreted by the follicles, and by which is produced the various shades of color that we see in hair. The HAIR VITALIZER acts directly upon this bulb, and restores it to its former healthy state. The nerves which support it are strengthened, and it cures the disease, and nature resumes her natural sway.

By many it is said, that where the hair falls out it cannot be restored; as well might they say there is no remedy for disease. Now the hair is constantly falling out, but, where there is no disease new hair grows from the same hair tubes, as new shafts are constantly in process of formation, the old being pushed forward by the new. The cause of hair becoming gray or blanched, is through an impairment of the secretary follicles, and this is very frequently the case when their strength and vitality in other respects is undiminished. In such cases the hair merely becomes gray without any tendency to baldness. It is evident from the above physiological truths that a HAIR INVIGORATOR, RESTORER OR RENEWER to be successful, must possess the power of strengthening and vitalizing these hair follicles, This the HAIR VITALIZER will accomplish. We have not particularly adverted to the losing of the hair which frequently occurs in young persons, or those of middle period of life, but particularly of persons of nervous temperament, or by excessive mental labor and activity of mind, which produces a febrile affection of the head. By sickness the same result is arrived at. The loss of hair in both of the above cases proceeds from too great amplitude of the pores, or the relaxation of the skin. The use of the HAIR VITALIZER, by its tonic properties, will give tone and vigor to the scalp, and strengthen the weakened nervous vessels, and give a healthy condition to the capillary tubes.

GRAY HAIR, as it is termed, is liable to occur at any period of life after the person has arrived at the age of manhood or womanhood; and however honorable gray hairs may be to the aged, yet a premature blanching of the hair is much to be regretted by either sex, especially women; there are a variety of causes, which produce blanching of the hair. In many cases it is want of tone of the scalp, resulting from a weakened energy, and is in a great measure attributed to excess of mental and excessive labor, also humors of the scalp, which can be detected by a small white scale around the hair tube, which when foreibly removed, will exude a yellowish matter. This, if not cured, will result in baldness | of the most inveterate kind, but by using the VITAL-IZER in time, it will eradicate the disease. Another phase of disease is a contraction of the skin which closes around the hair sheath, and prevents a circulation of the coloring matter. This disease is caused by the use of oil and alcohol preparations, which have been sold under the name of tonics and restorers, Excessive perspiration will not only produce gray hair, but baldness. The perspiration contains an excess of salt, which after being thrown out by the pores of the skin, the water evaporating. deposits the salt upon the scalp, and is again absorbed by the skin, which will change the condition of the coloring matter, and destroy the nutritious principles of the hair.

The proprietor of the HAIR VITALIZER does not pretend that in those cases in which the bare scalp presents a shining, glossy appearance, and in which the hair follieles are closed up, and the hair bulbs dead, that the VITALIZER will produce a new growth of hair. In such cases the skin is chalky white, thinner than the surrounding skin, and almost transparent, so that the seams of the bones can be seen. There is a lack of subcutaneous fat wherewith to nourish the oil tubes. In such cases, that occur past the prime of life, it is generally hopeless. The powers of nature are limited. He can induce more vitality in natural processes, but nature must supply something to work upon. To create is beyond his power.

But in very large proportion of cases, baldness and thinness of hair are the result of an inactive state of the scalp, a dormant condition of the hair bulbs, and a choking up of the hair follicles. Very often this is the result of fever, or other wasting disorders. In these cases the HAIR VITALIZER will be found a specific. Under its use, the short, stumpy, brittle hair, whose color is dead, and whose general appearance has not inaptly been compared, by some facetious youth, to that of a half worn scrubbing brush, will at once take on new life. The scalp, instead of being covered with dry branny scales-Dandruff-resumes its natural pinkish hue, it becomes soft and elastic; the hair bulbs change their wizened appearance, and swell out round and full; the half dead shafts of hair resume their natural gloss, their ends instead of being split or stumpy lengthen out apace; while the renewed circulation brings back the original brightness of its color, deepening it in proportion to the renovated vitality.

Nor is it merely on account of the greater beauty which the new growth of hair produces, that the HAIR VITALIZER is a boon to mankind. The ingreased thickness of the hair, for a strong, healthy hair bulb will send off more than one shoot or shaft, gives a necessary protection to the brain hencath from the vicissitudes of the weather, and from accident, and thus often wards off disease and even death.

But it is not only to bald or partially bald persons

that the Vitalizer is of decided benefit, as a dressing for the hair, or an invigorator for the scalp, it has no superior, A luxuriant head of hair is a most noble ornament to the person. Those who are by nature thus endowed, will find the HAIR VITALIZER just what they want. It keeps up the natural growth, it cleanses the scalp, it prevents the necessity for hair oils and greases, which are both uncleanly and detrimental to the hair. Even the most vigorous growth of hair must fail, if the scalp is not kept clean and healthy, and its natural gloss and color must be deteriorated if the pores are not kept open. and the circulation allowed to penetrate the whole of the shaft, by the occasional use of some such cleanser as the VITALIZER, and for that purpose we know nothing can be compared to it. The young should not fail to use it, when they desire to give a deeper shade to that light, faded, undecided color of the hair, which is so repulsive, and which so detracts from the beauty of the person. Those whose locks are wearing thin and bare, and becoming sprinkled with gray, either from age, sickness or mental anxiety, by using the HAIR VITALIZER will soon rejoice in an increased growth of hair, rivalling in luxuriance and beauty that which was their pride in their youthful days,

The HAIR VITALIZER will also be equally certain and effective in restoring the color of the whiskers. It will be necessary, however, to make more frequent application than when it is used to restore the color of the hair, as the whiskers change more slowly than the hair. They should be rubbed thoroughly with the VITALIZER every night, and it will be better to keep them tied up every night with a piece of old silk until morning. The proprietor is fully confident, after long study and medical research, employed in investigating the various agents that have been used and recommended for renewing and restoring the hair, that HURD'S HAIR VITALIZER comes nearer perfection than any other preparation of the kind before the public, as it is a hair reviver, hair restorer, hair beautifier, and a hair dresser. a most vine and anaparties have

### DIRECTIONS.

After well shaking the bottle, wet a sponge with the Vitalizer, and completely saturate the hair and scalp, then rub the hair thoroughly with the fingers until it has been equally distributed. Do this every other day until the hair has resumed its natural color. After that, once a week is sufficient to keep it soft and silky. To restore whiskers to their original colour, a daily application must be made (they being coarser) until the natural color appears, after that twice a week. If a new growth of hair is desired, first rub the hair briskly with the hands. Do this every day, and apply the Vitalizer immediately after, rubbing it well in, and a vigorous growth will follow in due time. If applied only as a dressing, once or twice a week, as the hair demands, Price 75 Cents,

3,

There is no field in which medical science is cultivated which is so fruitful in new facts, or useful deductions therefrom, as the great medical schools of Paris-from which the FRENCH MAGNETIC OIL has emanated.

Even among justly celebrated physicians, there is oftentimes evinced in their practice, a want of appreciation of the great part which the nervous system plays in the daily nuirition and growth of our bodies, and more especially of the influence of nervous force in disease and its cure. Nerve Force, Animal Magnetism, Electricity, call it what you willfor daily observation of the effects prove that they are different manifestations of the same power acting through diverse organisms -- has for a long time attracted the attention of medical scientists; but it is only within a very late period, that is has been so well understood, as to be intelligently brought under command for the cure of diseases.

persons, that even with such common complaints as Colds, Cramps and Pains in the stomach, and more especially in Rheumatic Pains, Lumbago, Sciatica, Neuralgia, etc., that it is not only the application of cold, or the indigestible food into the stomach, which induces these disorders. At one time wet feet, food of an indigestible character, or at an unsuitable time, will be borne with impunity by the same person, who at the time will suffer excruciating agony. or intense distress from what would seem to be a much less amount of cause.

Why is this? We answer : It arises from a different state of animal magnetism. Why, this is just what makes the difference between the living and the dead body. In the dead body the parts are all there, the skin, the muscles, the flesh, the blood, the bloodvessels, the heart, the brain, but then all the nerve machinery, the life, the force, the nervous energy, the magnetism is gone, and nought remains but cold inanimate clay.

Now, it is a well established fact, that magnetism is stored up in a quiescent condition in many mineral and vegetable productions, and it is now understood, that by making use of certain combinations of these different articles, medicines may be prepared, by the internal and external use of which upon the human body, deficient nervous energy or magnetism may be restored to the system, and the painful effects of its loss obviated.

Among the simplest, and yet most useful articles of this class, is the celebrated FRENCH MAGNETIC OIL, which has established for itself a reputation in the old world, but is now for the first time introduced to the people of America. It is a combination of powerful vegetable oils, which exist naturally in a state of opposite magnetic condition, but which when brought together in contact with the nervous system of the body, penetrates it readily, and brings about a state of magnetic equilibrium, and thus cures the pain, which was the result of this deficient and disturbed magnetism.

It is thus that the FRENCH MAGNETIC OIL exercises so powerful an influence in Cramps and Pains in the stomach and bowels. Taken internally, in the dose of one teaspoonful in a little molasses and

We all know, for we have all observed in our own water, every half hour as long as the pain lasts, it will soon be found to give permanent relief, because it supplies the magnetism which was wanting. At the same time it should be rubbed in freely on the outside of the pained organ, because in this way the cure is much more rapidly and certainly brought about.

> Flatulence, or Wind in the Stomach and Bowels, in Diarrhaa, Dysentery, Cholera and Colic - all allied diseases, and all owing to deficient or disturbed animal magnetism - the FRENCH MAGNETIC OIL will be found to be the great remedy. Take it in teaspoonful doses, always adding molasses and water to it, to keep it in combination, and repeat every half hour till relief is experienced, at the same time rub it in outside thoroughly and persistently, and it will not fail.

> For Cold, Coughs and Influenza, all of which are the result of cold acting on a body temporarily deprived by overwork, anxiety, loss of sleep, or some other cause of its animal magnetism, its nerve force, the FRENCH MAGNETIC OIL, given in doses of one teaspoonful in molasses and hot water, frequently at first, till it brings on sweating, and afterwards at intervals of two or three hours, will be found to be the surest and speediest remedy; at the same time bathe the throat and chest freely and frequently with it, smelling the bottle frequently also, if there is Headache.

> Chronic and Subacute Rheumatism have long ago earned for themselves the name of the opprobrium medici ; the doctors disagree, because so much time, patience and skill has been expended upon them with so little relief. This, in a great measure, results from the tendency of the faculty to look for the cause of the pain in some change in the fluids and solids of the body, to a great extent overlooking the fact that the true difficulty lies in the Magnetic state of the nerves of the part.

> It is because the French Magnetic Oil well rubbed into the painful part, as well as taken internally, at such intervals as may be required by the severity of the pain, supplies the Magnetism which is wanting. and brings about a state of equilibrium, that it is powerful in relieving all forms of Chronie Rheumatism, Lumbago, Sciatica, and Neuralgia. These are all allied diseases-all produced by the same cause, and all relieved by the same means,

The French Magnetic Oil in the same way gives speedy relief to Local Museukar Pains, the Growing Pains of Children, Pain in the Side, Back Ache, Cramp in the Limbs. In any of these cases rub the Magnetic Oil well into the part affected, wet a piece of flannel in the Oil, and keep it applied to the part, and give one or two doses internally. Bruises and Contusions will speedily disappear under the application.

Those who have recently become mothers will find that by the use of the *French Magnetic Oil* upon their breasts, they will prevent the occurrence of *Lumps and Gathering in the Breasts*. If the Breasts become at all hard and painful, have them well rubbed down from the root of the breast to the nipple with the *French Magnetic Oil*, and then apply it on a fold or two of flannel, repeating it every two or three hours. It will soon be found that the pain and heat are relieved, the glands are softened, and the milk can be drawn thoroughly and without pain.

For Chilblains and Frost-bites the French Magnetic Oil will be found to be the very thing needed. It restores the Magnetism to the filaments of every nerve, so profusely scattered through the skin, and so promotes the activity of the circulation of the blood in the small capillary vessels, which connect the arteries and veins, and which have been deprived to a greater or lesser extent of their proper circulation of blood and nerve force by the loss of their normal caloric.

In Sore Throat, Quinsy and Diphtheria the French Magnetic Oil will be found to be of great service. By its powerful influence on the nerves of the parts affected, it exerts a healing and emollient effect on the glands which are gorged with blood—what is called inflamed. It should be rubbed into the outside of the throat thoroughly, then applied on some folds of linen—used as a gargle, one or two teaspoonfuls diffused in a half teacupful of milk or barley water, frequently. Where the pain is at all severe a teaspoonful in molasses and water may be taken with advantage every three or four hours.

The French Magnetic Oil will be found to exercise a very healing and soothing effect on those cases of *Enlarged Veins* in the lower extremities, which are so frequent and so painful. They should be bathed well two or three times daily from the foot up towards the body, and then supported by a well-fitted bandage, or an elastic stocking. The frequent use of the Magnetic Oil relieves the inflammation which is so apt to result in those terrible *Chronic Ulcers*, which are so hard to cure, and so weakening.

In Milk Leg no better application can be found than the French Magnetic Oil. Bathe the sore limb well, but softly, with it, and then encase it in a sheet of batting, and keep it lying as high as the body. Repeat the application every six hours or thereabout, till the pain is relieved. After attending to the state of the bowels, if there is much pain, give the French Magnetic Oil internally in teaspoonful doses, mixed with molasses and water, every three

or four hours, or as often as may be needed to keep the pain easy.

In fact as a sofe, cheap and effectual Household Remedy, the PRENCH MAGNETIC Off. CANNOT be surpassed. It is applicable to all sorts of Pains, cures Bruises and Strains, Rheumatism, Neuralgia, Gramps internal and external, Toothache, Earache, and a host of other diseases to which we are all frequently liable.

The FRENCH MAGNETIC OIL is also an excellent remedy in very many diseases of Cattle and Horses. For *Bruises* and *Strains*, *Garget*, *Colie* and *Belly-ache* it is very effectual. The dose for a Horse would be a full bottle, and may be repeated every hour or two until relieved.

We would ask of what we have always found to be an appreciative public, a fair trial of the FRENCH MAGNETIC OIL. We know by our own experience that it is a boon to suffering humanity. We do not puff it, but tell the plain, unvarnished tale of its powerful efficacy, in the removal of pain. And day by day, science makes more clear to us the great influence exercised by the subtle but unseen force of *Magnetism*. We shall no doubt attain to a surer command over many of the diseases which afflict our frail bodies. Then it will be seen how large a step in advance the FRENCH MAGNETIC OIL is over any other preparation of its time.

### Tracadie, N.B., June 13th, 1881.

DEAR SIR.—In the fall of 1875 my wife was taken sick with Asthma, and for three years she was an invalid, unable to do any housework, and many, many times so had that we despaired of her recovering, or even surviving for many hours. Westried all the known remedies for Asthma, but without any avail. We consulted several good doctors, among them an eminent physician from one of the public hospitals in New York, who was here last summer for a while, who also prescribed for her, but without any permanently beneficial effect. In January last, when she was having one of her worst spells, a friend called to see us, and advised us to try British Oil; a few drops taken with sugar, it was said, would alleviate the suffering. When, providentially, I went to inquire for British Oil, your Agent here told me he had none, but that he had what was much better—FREXEN MAONETO CUL. Ig of a bottle. On taking some she found immédiate relief, and before she finished using the whole of it, her health was completely restored. She took a heavy cold once since, and shewed what we thought were slight symptoms of Asthma returning. We got another hottle, a few doses of which completely warded it off. In the interests of other sufferers I have much pleasure in forwarding you this certificate of the efficacy of your FREXCH MAONETIC OUL, and hope that you will give it all the publicity possible.

Yours faithfully,

JUSTINIAN SAVOY, J.P., County Councillor.

### Glassville, N.B., Sept. 19, 1884.

SIR, —The MAGNETIC OIL I had from your agent is all sold, and has always given perfect satisfaction in every case. It is a marvellously good remedy, and I must have some more immediately. Send me a full supply. HUGH MILLER,

### DR. WILSON'S WORM LOZENGES

Are offered to the public as a pleasant, safe and sure remedy for the destruction of those disgusting parasites which infest the human intestines, and produce so many injurious consequences, and which are the bane of a child's existence and the prolific source of the numerous diseases which imperil the lives of children. Their presence in the intestinal canal is the source of great irritation, which, by operating on the delicate nervous organization of the child, so keenly alive to every morbid impression, gives rise often-times to the most violent disturbance of the nervous system, such as Fits, Convulsions, Epilepsy, and St. Vitus' Dance. This being the case, it behoves the prudent mother to watch with jealous care the earliest symptoms indicating the presence of worms, and, by the use of an efficacious remedy, dislodge them before the health of the child is seriously impaired or its life endangered. For this purpose there is not a pleasanter or more certain preparation than DR. WILSON'S WORM LOZEN-GES. Being perfectly harmless in their effect upon the system, the mother should not fail to use them when there is the suspicion of worms. This valuable remedy is purely vegetable in its composition and entirely free from poisonous and injurious ingredients. Being presented in a palatable form, it can be administered to young children without any inconvenience. The active principles of the most powerful anthelmintics known to the materia medica are so combined as to furnish a certain specific against worms, and yet be entirely free from that disagreeable taste which is inseparable from medicines in their crude and bulky state. It has been before the public for many years, and during that time has received assurances not only from scientific physicians, but some others in all parts of the country, that no worm "Lozenges" or Comfits ever used have given so much satisfaction, or have been so uniformly successful as these Lozenges.

e

t

y

t

Of their great efficacy there can be no question. In hundreds of cases where they have been employed, worms have been expelled in numbers ranging from twenty-five to five hundred. No instance has come to my knowledge where worms were present, that these Lozenges have failed to bring them away. Why not, therefore, use this certain, safe and pleasant remedy, which is so readily taken in preference to those disagreeable and nauseating "Vermifuges" which are so repugnant to younng children that they are never used till alarming symptoms supervene, owing to the trouble and inconvenience of administering them? Mothers can place the utmost reliance in this harmless and pleasant remedy, and, therefore need not have any hesitation in using it whenever they think the symptoms demand a remedy for worms, for although it is a powerful and effectual worm destroyer, it can be given to the most delicate child without the least fear of injurious conse-

quences, and, besides, it has the approval highest medical authority. Whenever the me observes her child pining away, growing weak, by day, accompanied with a variable appetite, a unhealthy doughy complexion, a weak irritable stomach, with irritation of the bowels, manifested by slimy mucous discharges, a fetid breath, and with feverish and restless nights, she should not fail to give this valuable remedy a fair trial, and if it does not bring worms, she can then rest satisfied that some other treatment is demanded, for although these symptoms are strongly indicative of the presence of worms, yet they are likewise the frequent concomitants of intestinal irritation from other causes. It is well to recollect that the production of worms is often-times connected with an unhealthy condition of the system, on account of which all of its functions are feebly and imperfectly performed, giving rise to a depraved state of the secretions, especially of the stomach and bowels, and thus furnishing the predisposing causes and conditions for the propagation of these parasites, while they in their turn, by their irritation and reflex action, aggravate the previous morbid conditions of the vital powers. In such cases where the symptoms indicate a constitutional difficulty, such as scrofula, something more will be required than the expulsion of the worms. After this has been done by the use of these Lozenges, the scrofulous poison must be eliminated from the system. Dr. Wilson's Tonic and Sarsaparilian Elixir will accomplish this without fail, and thus prevent the recurrence of worms by getting rid of these predisposing causes.

It must be borne in mind, though, that wonms do not always come away whole, though they often do. This depends entirely upon where the medicine found and killed them. If it was high up in the small intestines, they would be dissolved in the juices pertaining to that part of the body, and cast off with the feculent matter. But if it were lower down in the larger intestines that it found them, they would then come away whole whether alive or dead. In either case, the relief resulting to the patient is the same.

There is hardly a complaint which the presence of these animals will not excite or imitate. Cases are recorded of their producing Epileptic Fits, Catalepsy, Lockjaw, Dropsy of the Head, Palsy, Fainting, Hiccup, Dysentery, Convulsions, &c. There is often a very strange alteration of voice, and sometimes a loss of speech.

Dr. Wilson's Worm Lozenge leaves no excuse for this dangerous delay, as it is not only superior to all other preparations of its class as a worm destroyer, but it can be given to the most delicate child, without the least fear of injurious consequences, and, besides, it has the approval of the highest medical authority.

## DR. DOW'S STURGEON OIL LINIMENT.

This celebrated chemical compound is the result of an extensive experience, with regard to the curative powers of all the known medicinal agents, and of a theoretical and practical knowledge of the various chemical affinities brought into play in their combination. By careful investigation and laborious research, the ingredients-having been selected with special reference to their different virtues and peculiar powers, and with an accurate knowledge of the various chemical reactions by which each could be made to modify and strengthen the other-were so compounded as to form a perfectly homogenuous compound, possessing through its wonderful efficacy and manifold healing influences, an adaptation to a wide circle of diseases. The experience of years has fully demonstrated the skill of its composition, and the superiority for all the purposes for which it was recommended. There is no one who has used this Liniment, and tested its curative powers, but what gives it preference over all other Liniments, which accounts for its popularity. It is valuable not only as a counter-irritant to draw pain and inflammation from the internal organs to the surface, thereby relieving deep-seated injuries and organic lesions, but will be specially useful in restoring the skin to a healthy condition in all those annoying affections, attended with inflammation and eruptions, but where the surface is not broken, such as FROST BITES, CHILBLAINS, BURNS, SCALDS, ERYSIPELAS, RINGWORMS, BOILS, FELONS, &C., &C.

For horses it is equally efficacious as for the human family, and has no equal. Farmers and Stable Keepers, and all who have the care of horses and cattle, should not fail to keep the STURGEON OIL LINIMENT constantly at hand, as it is the best application for external injuries on animals, and for almost all diseases to which they are liable, that has yet been discovered. We say this with perfect confidence, that all who may use it will corroborate the truth of our assertion. A discerning public is rapidly appreciating its unrivalled excellence, and as it becomes widely known its complete triumph will be rendered secure.

Invented as it was by a Physician in extensive practice in New Brunswick, and whose reputation for a knowledge of horseflesh is co-extensive with the Province, it soon found its way into general use in livery and private stables, for all the uses for which a Linhnent is applicable.

For BRUISES, STRAINS, SADDLE and COLLAR GALLS, CUTS, WOUNDS of all kinds, SCRATCHES, SCURYY, CRACKED HEELS and GREASE, it was found to be an excellent application, cooling down the inflammation. preventing proud flesh, and bringing about a speedy healing surface.

Dow's STURGEON OIL LINIMENT is also a valuable strengthener for Weak Knees, giving tone to the eords and muscles of the knee.

Applied early to cases of Blood Spavin, it never fails to reduce the soreness and swelling, and if thoroughly applied often brings about a positive cure. has

In Founder, Ringbone, and Hard Hoof, its virtues are well known and acknowledged by the most experienced horse owners. In fact it is not too much to say that for the ordinary diseases of horses and cattle, such as are most commonly met with, Dow's STURGEON OIL LINIMENT and CLARK'S DEREY CON-DITION POWDERS make one almost independent of the Veterinary Surgeon. The liniment is applicable to all the external injuries, while the Derby Condition Powders keep the blood pure and the strength unimpaired.

Poll-Evil and Fistula in the Withers have been frequently cured by injecting the Sturgeon Oil Liniment in the fistulous pipes. It must be recollected in those cases that an opening must be made at the point where the matter gravitates, and kept open by a seton so as to allow a free exit for the matter. If this is done, and the Sturgeon Oil Liniment is used by injecting it into the fistulous opening, a cure will be effected without fail,

WIND GALLS can be dissipated very frequently in one night by taking a pad of several thicknesses of old muslin and saturating it with the Sturgeon Oil Liniment, and applying it to the WIND GALL, securing it in its place by a firm bandage,

CRACKED HEELS, SCRATCHES and GREASE, are all names for the same disease in the different stages of its progress. These are very troublesome affections, but are readily cured by the use of the Sturgeon Oil Liniment, if strict cleanliness is observed. Before each application the affected parts must be washed with Castile soap and warm water, and thoroughly dried. In the several forms of the disease it would be well to add a drachm of alum or blue vitriol to a bottle of the Liniment.

In SAND CRACK the STURGEON OIL LINIMENT has been found an effectual cure. It will soften the hoof, prevent fungous granulation from the sensible laminae, and by anointing the coronet with the Liniment two. or, three times a day, it will stimulate a healthy secretion of the horn, and gradually obliterate the opening in the hoof. A hot iron should be applied to the angle of the crack for a second, to prevent its further extension, and the hoof be bound with wax end.

Dow's Sturgeon Oil Liniment has never been puffed into favor--it has always pushed its way by its own merits, its inventor did not label it as good for such and such diseases, regardless of truth, but carefully trying it, where he found it useful he kept a note of it, trying it again in similar cases until he was sure of its efficacy. In this way he was led to use it in his practice for Neuralgia, Rheumatism, Contracted Joints, Lumbago, Sciatica, Cramp in Muscles, Sprains and Bruises, and for all these he found it a most valuable remedy, and now that it has been before the public, and its value thoroughly tested, he can still bear his testimony that he has found no other remedy in his wide experience which can do more good by external application than the Sturgeon Oil Liniment. He has seen contracted joints which seemed gone beyond hopes of recovery, yield gradually under its persistent use, in a way which astonished him, and the severest pains of Sciatica vanish like a dream under its soothing application. If for these diseases there be a better remedy than his Sturgeon Oil Liniment, he has yet to be informed of it.

The Proprietor appends a few certificates; they are selected from a large number in his possession :

### Grand Falls, N.B., Oct. 8, 1884.

We are using DR. Dow's STURGEON OLL LINIMENT amongst our teams with good satisfaction, and we prefer it to any other horse liniment. We have trued nearly all kinds, but find this superior. We have sixteen horses in the woods hauling.

### W. F. FOWLER.

### Renous Bridge, Sep. 19, 1884.

I am now dealing in horses quite extensively, and would desire to say a word in favour of Dr. Dow's STURGEON OLL LINIMENT. I keep it constantly on hand, and want no better preparation than this liniment. It suits horsellesh exactly. I have never found anything to compare with it.

### F. H. JARDINE.

### Middle Simonds, N.B., Aug. 1884.

I keep a country hotel on the roadside between Woodstock and Andover, and being well known as being fond of horses, and a reputation of knowing what would benefit a horse in case of injury—I take great interest in any article which can be relied on to give quick relief. I have used DR. Dow's STUR-GEON OIL LINIMENT,—which has a great reputation around here—on all the injured horses that I could hear of, and in every case it has done good, and made speedy cures. I believe it is the best liminent for horses ever invented. WM, MILLS,

### High Bluff, Manitoba, Sep. 28, 1884.

You will please send us a good supply of DR. Dow's STURGEON OIL LINIMENT, It is the best horse liniment in use.

SPARLING & ARMSTRONG.

### "VOICE OF THE PEOPLE."

LAWRIE BROS., Morris, Manitoba, write:—I wish you would send a gross or more of DR. Dow's STUR-GEON OIL LINIMENT. It is in great request in this section. It is a prevalent opiaion here that nothing ever has been produced that is its equal for horses.

MANGE. — For this very annoying affection the STURGEON OIL LINIMENT is a certain specific. After you have brushed the loose scurf from the skin, anoint all over with the STURGEON OIL LINIMENT, after mixing equal parts liniment and alcohol. Let it remain a day, and wash off with soap and warm water. Repeat this operation three or four times, and the horse will be well.

### Bristol, N.B., May 27, 1884.

The Dr. Dow's STURGEON OIL LINIMENT I had from you is all sold. You will please send arother gross as quickly as possible, as I have daily calls for it. I used it myself with perfect success on a colt that had the mange. My neighbours are all pleased with it. C. A. PHILLIPS.

MR. J. T. WASSON, Westwood, Ont., writes under date November 27, 1883 :--

Having heard of the great value of Dr. Dow's STURGEON OIL LINIMENT for horses, I was induced to try it in a severe cut on my horse's left knee, received from a scythe. Before I used the Liniment it had partially headed up, leaving a large lump on the knee that looked very bad. I now tried the liniment, and to my great surprise, in less than three weeks, it healed up entirely, and took away the lump, leaving the knee without scar or tumour. One of my neighbour's horses, about the same time, was injured just at the top of the hoof, which produced a running sore, and the hoof itself cracked open at this point, resembling a sand crack. He used the liniment with the most perfect success. He bathed the hoof and coronet two or three times day, and it was thoroughly cured before he had used two bottles. We both think the STURGEON

### "NONE SO GOOD."

MR. JOHN TURNER, Riviere du Loup, P.Q., writes :-- 1 have tried all kinds of liniments, but have never found any so good as Dr. Dow's STUR-GEON OIL LINIMERT, for the various diseases in horses for which liniment is used.

G. A. RUDOLF, Maria, P.Q., writes; -I have used DR. Dow's STURGEON OIL LINMERT, and in my estimation it stands superior to any remedy I ever used in my stable. For horseflesh it beats the world,

### Buctouche, N.B., Feb. 16, 1884.,

As regards Dk, Dow's STURGEAN OIL LINIMENT, I would remark that I have always found it to meet the approbation of the public. In a word it is a popular remedy. My customers say it is one of the best remedies for scratches ever used.

### B. H. FOLEY.

BONE-SPAVIN.—An affection of the bones of the hock-joint, caused by too violent action of the joint in galloping, heavy draughts, &c., producing inflammation, and the union between the splint-bone and the shank becomes bony instead of cartilaginous. When forming there is always lameness, but this often disappears, while the disease still exists.

### Brockville, Ont., Sep. 3, 1883.

In September last, I drove a four year old horse ninety miles, he was sound when I started. Driving him this journey caused a spavin, perfect in its formation. I applied Dr. Dow's STURGEON Car. LINTMENT, and before the second bottle was used he was restored to perfect soundness.

### E. F. KILBURN.

### Stratford, Ont., Oct. 15, 1883.

I have found DR, Dow's STURGEON OIL LINIMENT so useful and valuable in my stables, that I am induced to recommend it in this public manner. I gave a bottle to a neighbor, which cured his horse of a spavin in a few days. P. H. BROOM. Mr. B. S. SHORT of Brockville, Ont., said he had been many remarkable cures of Rheumatism made by DR. Dow's STURGEON OIL LINIMENT. The most wonderful was that of a neighbour who had suffered from Rheumatism for fifteen years, and after using the LINIMENT got well. To it, after God, he ascribes his wonderful recovery.

Mr. A. E. Hoop's case was equally remarkable. Mr. Hood lives in Salmon River, N.B. He suffered from Rheumatism for years, and most of the time the pain was exeruciating. Nothing did him any good, although hardly a remedy was left untried. When it came to the turn of DR. Dow's STURGON OIL LINNERNT it cured him very quickly. He is of opinion that no earthly reward is high enough to recompense Dr. Dow for the inestimable benefit to the public in his STURGEON OIL LINNERT.

Mr. I. T. CLOUETTE, NO. 742 Manchester Street, New Haven, U.S., had suffered for months from Rheumatism and Sciatica in his leg, which made it impossible for him to walk. But having seen in a newspaper that DR. DOW'S STURGEON OIL LINIMENT had no equal in performing wonderful cures, he thought it must be possible to be cured by it, and ordered two bottles by express. He used it in accordance with the directions, and found with great pleasure that one bottle was all that was necessary to effect a cure.

C. M. BURROWS, of Alma. N.S., during the winter of 1878 suffered from Rheumatism, and more severely, he says, than he can indicate. With every change of weather his pains were exeruciating; a friend brought him a bottle of the STURGEON OIL LINIMENT, and insisted on his using it. He did so, and now is as well as ever he was.

Mr. D. W. REEVES, of Churchville, N.S., has had one of the most remarkable experiences of Rheunatism on record, and his recovery is almost without a parallel. For no less than fifteen years he had been afflicted with Chronic Rheumatism, and at times was unable to raise out of his chair without assistance. His limbs were stiff and joints swollen, and relief outside of the grave seemed impossible. But at last it was forthcoming in the shape of Dn.

Dow's STURGEON OIL LINIMENT, in which it has come to many. After using three bottles of it he was as well as any person, and now can walk as well as ever he could.

### Springfield, N.B., Dec. 19, 1876.

Having tested the virtues of your STURGEON OIL. LINIMENT in the cure of a most obstinate disease, I feel impelled to relate the particulars of my case for the benefit of persons similarly afflicted. The disease was at first acute or inflammatory, but became at last a most obstinate chronic complaint, defying all attempts at cure. During the whole of four years I was in more or less pain continually, and was confined to my room, or obliged to hobble on crutches at least six months in the year. After using one bottle of your LINIMENT I experienced great relief, both as regards pain and the use of my limbs. After using the second bottle I could walk out and attend to business. I feel it a duty and pleasure to send you the above few facts.

### W. O. STEVENSON.

### Grand River, N.B., Feb. 14, 1882.

I never expected to be able to write such a letter as this, to say that I am clear of Rheumatism. I hardly knew what to make of it, after suffering excruciating pain for years. At every coming storm my whole body and joints were in the greatest possible torment man could bear, and somehow or other it always appeared to me as if nobody pitied a man with the Rheumatism. However, thanks to you, I now ask no man's pity on that secore. I can do as good a day's work as I ever could. I used but two bottles of your STURGEON OIL LINIMENT, and now feel like another person. W. H. BLACKMAN.

### Salmon River, N.B., Dec. 5, 1876.

Your STUBGEON OIL LINIMENT CUTEd me of Rheumatism of four years' standing. I suffered with severe pains during a great part of the time. No other remedies could cure, or even do me any good. But your Liniment has, and my health is entirely re-established. That I should be sincerely grateful to you is natural enough, and I am; and that you will be rewarded is the sincer wish of

A. E. HOOD.
