EDUCATION

CARBONEAR, April 13th, 1880. Dear Sir_-

For some time past the present state of education in this country has received a good deal of public attention. In many of our public journals articles of more or less importance have recently appeared, in which the various short comings of our present school system have been commented upon, with more or less abis lity, and in which many suggestions have been made, having as their object, the raising of our present standard of instruction. It is an indication of the growth of a sound public opinion to see matters of such great public importance made the subject of discussion in our local newspapers, and affords proof that our people are now fully alive to the importance of providing a good education for the rising generation of the country. It must be admitted that at the present day there is no subject that claim a greater share of attention at the hands-Notice.-This paper will not be des of those having charge of the public aflivered to any subscriber for a less term fairs of this country than the improves than six months-single copies four- ment of our educational institutions.
