> I hold that more can be done to benefit the agriculturist of Canada by reducing to him the cost of getting his goods in the market than by a reduction of the tariff. A reduction in the tariff is all right so far as you can go, but the farmer is vastly more interested in the wise expenditure of all the money that comes into the public treasury, contributed by all classes as well as by himself, in bettering the facilities for transport and cheapening its cost. If by improving our transportation facilities we can reduce by two or three cents a bushel the cost of landing produce in the consuming market, fancy what a benefit that is to the producer in the west, not only on one year's crop but on the crop of every succeeding year. Take, for example, the $3,360,000, contributed to the treasury by all the people of Canada, which this government gave to the Canadian Pacific Railway Company to build 330 miles of a railway from Lethbridge to Nelson.

Then at page 2152:

> By that means, we obtained a reduction which we could not have got otherwise. Among other reductions in freight rates, was a reduction of three cents per 100 pounds on all grain coming out of that country. What did that amount to? Figure it out, and you will find that the farmers, within four years, got back the whole of the $3,300,000, and they are reaping a proportionate and like benefit until this day and will be for all time to come.

And again, at page 2153:

> What does that mean to the people in the Northwest? While I do not undervalue their request for a lower tariff, what is that in comparison with the benefit they can derive from the wise expenditure of money out of the public treasury to which all the people in the country contribute? It means millions.

Whenever you can lower the insurance or the freight rates by deepening the St. Lawrence, by lighting it, by enlarging the harbours—every time you can take a cent off the cost of the transportation of the produce of this country, that is a benefit to the men who raise the crops. While I give every credit to my hon. colleague the Minister of Agriculture, for the steps he has taken and is still taking, in order to benefit the producers of this country, that is only a minor matter as compared with a wise expenditure of the public money in improving and cheapening the lines of transportation, and in this way giving our farmers money far in excess of what they would get had not these additional facilities been provided out of our public revenue.

And again at page 2154:

That subsidy was given not to build the road alone, but to secure to the people of the west the great boon of having a reduction in freight rates of three cents a hundred pounds for all time to come. In addition to that, lower rates were to be given on goods imported into that country, coal oil, agricultural implements, &c., so that, taking these things into consideration and remembering that the money has been paid back—although of course it went to farmers it was still paid back—and on that one item in four years there has been an immense relief to these people. I give it as an illustration of all the other expenditures. By wise expenditures of that kind you are benefiting the country, you increase your revenue, you have one of the greatest resources of the prosperity of this country.

If that is true of a slight reduction of freight in the Northwest, how much more would it apply to a great work of this kind which would benefit not only the farmer, but the coal producer of the east, the lumbermen of Ontario, the mines of Ontario, and a great many manufactories which would undoubtedly be started along the line of this canal on being furnished with cheap power?

I would also like to call the attention of the House briefly to the fact that, although ten years is supposed to be required for the completion of this canal, the completion of the various parts of it would be of immediate benefit to the country. Several surveys of that section of the canal between French river village and Lake Nipissing have been made. The Canadian Pacific railway made two such surveys and Mr. J. W. Fraser made a survey in 1900 under this government. His estimate of the cost of completing the canal from the mouth of French river to Lake Nipissing was $4,200,000. It is true, later reports have increased this estimate, but this was largely because of the estimate being based on a wider and deeper canal with more spent for elevators, lighting, &c. This section of the canal, if built, would at once be a paying investment, as it would open up a large section of country. The Pickerel river, the Wolf, the Rainy and the South river, the Widow river, the Sturgeon and the Wanipitae are all tributaries of this section. Much of the timber of this region would be made marketable, mines opened up, and coal delivered by boat much nearer to the great mining districts of northern Ontario, which at present bring in coal by rail from Fort Erie.

We have some very fine harbours on Lake Nipissing, and some of the best water-powers in Ontario are on the course of the French river, or what is called the French river, because it is really a succession of beautiful lake expansions. These water-powers could be cheaply developed, and no doubt the power would be very quickly utilized. A good deal is being said at the present time about deepening the Welland canal, and while I believe that both those canals will be necessary in a few years, hence, the deepening of the Welland canal at the present time would only lessen the trouble and not remove it; as a matter of fact, it would only remove the distributing point from Port Colborne to Kingston or Prescott. I was somewhat surprised recently to find a circular being distributed through Ontario by advocates of the deepeing of the Welland canal. These men undertake to show why the Georgian Bay canal should not be built, and I would call the attention of the House to one or two of the reasons they put forward. In the first clause they say:

A canal 442 miles long for a 10,000 ton ship following the bends in the Ottawa river is enough to deter the ordinary lake captain.

Now, regarding the building of this canal, there has been a good deal of misconception on the part of some people in Canada. This canal, instead of being 440 miles long, according to the most recent survey, which is a very complete one, will only be 28 miles long, on the whole course of the water-way, including the locks themselves. We have some 66 miles of water course which has to be deepened or straightened, but the balance, some 346 miles, is entirely free from any obstacle of any kind. The route will really be much safer for navigation than any part of the great lakes. Another objection that was urged is that there would be no return cargoes for vessels using this canal. But as I have already pointed out, there is no logical or any other reason why the province of Ontario should not use Nova Scotia coal when they can get it. As a matter of fact, boats using the St. Lawrence route to-day up to Port Colborne have very little freight back. The return cargo amounts to practically nothing, unless they go across to Lake Erie and load coal at Cleveland. Another point is raised, which also has been touched upon by my hon. friend from Renfrew (Mr. White). This circular says:

That northern country generally freezes up about the 5th to the 10th of November, while

we generally move grain via the St. Lawrence as far as Prescott up to the 15th or 20th December, thus making over a month's longer navigation via the St. Lawrence.

It is quite evident, to my mind, that the gentleman who wrote this did not know what he was talking about. Ever since I have known of that north country, I have never known Lake Nipissing to freeze up before the 15th of December. According to surveyors who have made careful observations, they have found that the shortest season was 210 days long, or rather longer than the open season at the port of Montreal.

Now, Mr. Speaker, I believe that during times of depression it is necessary and advisable to cut down all unnecessary expenditure. The live business man at such times seeks all means of reducing the expenses of his business, even if he has to make an investment for new machinery or plant in order to effect such reduction. I contend that on the same principle the expenditure necessary for the building of this canal would be fully justified by the building up of Canadian ports, by the saving of millions to our farmers in the northwest, the opening of new trade for our coal mines in the east, by the increase in the value and output of our forests, by the great saving in coal bills and cost of transportation to our mines, and by the facilities offered through the development of power to our manufacturers, and above all by giving us a safe and all-Canadian route to the sea, a route which will exist for all time.

Mr. THOMAS A. LOW (South Renfrew). Mr. Speaker, I have listened with considerable interest to the hon. members who have just spoken, and I am glad the subject which is under discussion is one upon which both sides of the House can agree. I fully realize the value of the speeches already made upon this subject, but I would be unfaithful to the trust my constitutents have placed in me, if I did not avail myself of this opportunity to say a few words on behalf of this great national water-way. There was a time when this project was considered one of only local importance to the people of the city of Ottawa and of the Ottawa valley. But opinion has changed a great deal, and now we find gentlemen from Alberta, Saskatchewan and the lower provinces advocating this scheme just as strongly as the people of Ottawa and vicinity. As to the feasibility of this scheme, there can be no possible doubt. For sixty years back engineers acting on behalf of the government have reported from time to time as to its feasibility. In the year 1856, as the previous speaker (Mr. White) has told us, Mr. Walter Shanley was appointed by the then government to make a report upon this water-way. In 1859 Mr. T. C. Clark was appointed to report upon it and he confirmed Mr. Shanley's report. From time to time the Canadian Pacific railway company have procured reports upon it. In 1879 the Canadian Pacific railway employed Mr. E. P. Bender, a civil engineer, to make a report upon a certain portion, and his report was favourable. Again Mr. A. F. McLeod, on behalf of the government, in 1899, made a further report. In 1899 C. R. Coutlee, acting for the Canadian Pacific railway, was requested to make a report, and reported favourably. Again in 1900 Mr. J. W. Fraser made a complete survey of the French river and Lake Nipissing districts. In 1902 Geo. C. Wisner, consulting engineer for the Montreal, Ottawa and Georgian Bay Canal Company, one of the most eminent engineers in the world, was appointed to make a further survey and report; he did so and made a favourable report. In 1904 a board of engineers consisting of Messrs. Lafleur, St. Laurent, Coutlee and Chapleau were instructed by the government to make a thorough examination and survey of the whole route, and their report has been printed and circulated. So the charge can never be made that this work was proceded with too hastily. I am sure that every member of this House who would look over that report must be convinced that the Georgian bay canal is feasible in every respect. From time to time public men on both sides of politics, men preeminent in the industrial world, have advocated this scheme. For instance, such men as Sir John A. Macdonald, the Hon. Alexander Mackenzie, Sir William Van Horne, James J. Hill and Sir Thomas Shaughnessy. . . Surely the opinions of these gentlemen are worth something upon a subject of this kind. Sir John A. Macdonald, many years ago, in speaking of the Ottawa and Georgian bay route said:

The Ottawa ship canal and the Canadian Pacific Railway must be constructed.

Hon. Alexander Mackenzie also said:

I am perfectly satisfied that the Ottawa valley presents the greatest facilities of any route on this continent for the transportation of the products of the farmers of the Northwest to the Atlantic ocean.

The geographical position of the waterway is also excellent. It will be independent of all international waters, being fed by water well within Canadian territory. As to distance, there can be no doubt of its great advantages. From Fort William to Liverpool by way of the great lakes and Welland canal, the distance is 4,405 miles. The distance to Liverpool by way of the great lakes, Erie canal, Hudson river and New York, is 4,920 miles. The distance to Liverpool by way of the great lakes, Georgian bay and Montreal, is 4,123 miles. It

is evident, therefore, that by the Georgian bay route there would be a saving of 282 miles over the present Canadian route, and over the American route a saving of 806 miles. The saving in mileage over the American route is sufficient to divert a large amount of the traffic which is now going by American channels. In time, there would be a saving of three days in the round trip from the Georgian bay to Montreal and return. I think, Mr. Speaker, many members of this House will be surprised to know that at the present time over 75 per cent of the grain of the Canadian west passes through American channels. This is the trade that the Georgian bay canal will divert; this is the trade that it will capture. It has been argued by some of the opponents of the Georgian bay canal scheme that it is too far north, but I am sure there is very little difference between the possible number of days that this canal can be opened, and the number of days that the other route can be kept open. The number of days, I understand, during which the canal could be opened would be about 210.

We may talk about the tariff, we may talk about building Dreadnoughts, and all the other numerous matters that come before the House, but the thing that is of real importance to the farmers of this country is the transportation problem. Do something to lessen the cost of transporting his grain to the markets of the world, by three cents per bushel, and you will help the farmer more in that way than you can in any other form.

What does that mean? To the farmers of the Northwest this year it would mean about 3 million dollars on a hundred million crop.

It is estimated that it will take ten years to complete the canal; by that time it is safe to say the crop of the Canadian west will have reached 300 million bushels of wheat and at the same rate of 3 cents per bushel would mean 10 million dollars in the farmers pockets.

Also, one of the great advantages of the construction of this canal will be to create practically an unlimited water-power more than as at present developed, and which will be valuable for all kinds of industries. It is estimated that more than an additional million horse-power will be created by this new canal, and I think it is a conservative valuation to say that I think it will be worth $25 per horse-power, or 25 million dollars of value to this country. Another advantage would be that towns and industries would spring up all along the canal because the country through which it would pass is full of wealth and resources of all kinds. This has happened along the Erie canal, and it would happen along the Montreal, Ottawa and Georgian Bay canal. Let us see some of the benefits that would be derived. Large pulp and paper mills would be established with cheap power and the exporting of pulpwood would stop to a great extent. Large flour mills would be established. To my mind, the day will come when we will cease to export wheat, and will grind it into flour and will retain the by-products for the use of our farmers to feed to their cattle, and will export the flour only. I am sure that a large number of men would be employed and this would be a great benefit to Canada. Cement works will spring up, we will have numerous plants like that at Hull and we will be exporting cement in place of importing it. With cheap transportation afforded to the markets of the world, the development of the great natural water-powers along the route, and economical coal supply, a great manufacturing and commercial development will take place.

Deposits of iron are lying dormant to-day because of the lack of transportation facilities. It has been stated by eminent authorities that Canada is destined to be one of the greatest countries in the world for the manufacture of iron and steel. The placef occupied by iron and steel in the industrial world has not been over-estimated; the fact that present reserves, though undoubtedly large, are being steadily invaded, has caused a great uneasiness and has forced far-sighted men to look for new and larger sources of ore supply. On the other hand, Canada posseses large deposits of iron ore which have been allowed to remain untouched just for the want of cheap transportation, to link our coal fields with our iron mines. There is no reason in my mind why these large deposits should not be utilized and why Canada should not become one of the greatest iron producing countries in the world.

Upon the floor of the House, and upon the campaign hustings in these days of party strife, we hear much about the national debt, but one thing I wish to inform the House, whether I am here for four years or twice four, I will never regret having given a vote to increase the national debt so long as I know that the country has a good live asset for the amount of the increase, or that we have improved our position. I ask you, if a great company, if a great corporation, hesitate or shrink at the thought of adding a few dollars to their indebtedness? No, if they are going to improve their position, if they are going to improve their facilities for doing business, they go ahead and borrow the money. Does a private business man hesitate at the thought of borrowing a few dollars from a bank if by that loan he knows he is going to improve his position for doing business? No, Sir, the farmers of this country will

not shrink at the idea of the Finance Minister going into the money market, because the farmers are shrewd people. A farmer will not hesitate to mortgage his farm, to borrow a few dollars, if he knows that by so doing he is going to provide for the erection of larger buildings to store his ever-increasing harvest. And I say that the hon. Finance Minister need not be the least alarmed about increasing the national debt $100,000,000 if he has the Georgian Bay canal as an asset. In some portions of Ontario there seems to be an idea that the Georgian Bay canal will rob the St. Lawrence of its traffic. That is not the case. The Georgian Bay canal would not divert the traffic from the St. Lawrence route or from existing Canadian railways. It would create a traffic of its own, and capture nearly all the Canadian grain that goes through the United States canals, and a large portion of the American traffic from Duluth. To those gentlemen I put the question: Do they know that 75 per cent of the grain exported goes by the United States canals?

Now let me sum up some of the reasons why, in my humble opinion, this work should be proceeded with.

1st. It will be 282 miles shorter than any other known route to the sea.

2nd. It will need less canalling than any other route. According to the latest reports of the engineers appointed by this government, it will need only 28 miles of canal work.

3rd. It will be the quickest and most direct route to the sea-board for the farmers' products.

4th. It would lessen the cost of transporting the farmers' grain to the markets of the world by probably three cents per bushel, thereby increasing the value of his products to that extent.

5th. It would carry Canadian grain through Canadian channels, and the 75 per cent of our grain now going through American channels would pass down the Georgian Bay canal.

6th. It would enable the mine owners of Nova Scotia to deliver coal at Fort William for 60 cents per ton, provided they could secure return cargo. This would extend the base of supply many hundred miles north, and would be of great benefit for all industrial purposes.

7th. It will be the best regulator of freight rates we can secure, notwithstanding the fact that we have a splendid Railway Commission.

That eminent authority on transportation matters, James J. Hill, has time and again stated that the secret of low freight rates lies in the development of our natural water-ways.

And now let me say a word in conclusion to the Prime Minister and his colleagues: of all the great works the government have undertaken, or may undertake, I know of none of greater benefit to the farmers of this country than the development of this great national water-way.

Mr. E. B. DEVLIN (Wright). Mr. Speaker, it is certainly most interesting to find that with the advent of a number of new members to this House we have at the same time many more advocates for the construction of the Georgian Bay canal than we had even in the last parliament. It is also well to note that the idea that advocates of the Georgian Bay canal live only along the Ottawa valley is entirely fallacious. They are to be met in every section of this Dominion. To those who are afraid of canals I would say that this project is but small in comparison with the canals which exist throughout the world. In the British isles there are 8,000 miles of canals, in Germany 3,000 miles, in Canada 3,000 miles, and in view of this, Canada, with its immense and fertile territory, with its ever increasing commerce and wealth, need not fear the building of a few locks on one of the grandest water-ways of the world. I am often asked what is the proposed route of this canal, and I may say that it begins at the mouth of the French river and ends at Montreal, a distance of 425 miles. It follows the French river and Lake Nipissing, passes at the height of land through Trout, Turtle and Talon lakes, follows the Mattawa river to its junction with the Ottawa, thence down the Ottawa river to Montreal, and leaving the bed of the river occasionally where conditions render it advisable to do so. Let me cite to the House the opinions of some eminent men in this and in other countries, in answer to the arguments which are sometimes advanced, especially by railway men, against the construction of the Georgian Bay canal. To begin with, the right hon. Sir Wilfrid Laurier has pronounced, himself entirely in favour of the building of the canal, and at the National club banquet in London, England, he used these words:

> Canada's chief item of expenditure is in creating routes for her commerce. She has to complete her railway system and build the Georgian Bay canal.

The right hon. the Prime Minister repeated the same words in other sections of the country and within my own hearing, in the city of Hull, in the county which I have the honour to represent he spoke in the same sense. Sir Wm. Van Horne, who, of course, is an eminent authority on questions of transportation, has said that the building of the Georgian Bay canal would be of great benefit to the trade and commerce of Canada, and Mr. J. J. Hill has pointed out that it will enable vessels of 400,000 bushels capacity to carry grain at a profit for three cents per bushel. Mr. Hill has stated that this canal will not only convey wheat of the Canadian Northwest to the

sea-board, but that it will carry the grain from all parts of the United States north of Kansas city, because traffic will follow the line of least resistance. In quoting such eminent authorities I cannot omit to quote from Mr. Robert Reford, who has made a particular study of transportation, and who has said:

The rates will be cut down to one-third their present cost, every fraction of which should go into the pockets of the wheat producers of the Great West.

Let me add the Erie barge canal, in the state of New York, of which we have heard so much and which will not begin to be of equal utility with the Georgian Bay canal, will cost as much as will the Georgian Bay canal, while the canalizing of the Mississippi to a depth of 12 or 14 feet would cost much more. In an article in the 'Scottish American' it is pointed out that even admitting the great drawback that our rivers are not free from ice, it is not possible that the United States canals can at all compete with the Georgian Bay canal. Now, Mr. Speaker, let us ask ourselves what would be the great advantage of this Georgian Bay canal, the construction of which has been before the people for the last 50 years or more, and hence is not a new question. In 1895 our grain exports amounted to 17,185,582 bushels, valued at $11,537,433, and in 1909 our grain export amounted to 70,526.894 bushels, valued at $63,884,355. These figures show that our trade in grain is constantly increasing, and even with the advent of the National Transcontinental railway and the Canadian Northern it is obvious that our railway systems in Canada will not be able to carry the growing wheat yield from the fields of the Northwest. Not only that, but when the Georgian Bay canal is built a great deal of the grain which now finds its outlet by American ports will be diverted by the Canadian route to our ocean port at Montreal. Sir, I am not opopsed to the deepening of the Welland canal or any other Canadian canal, but I do believe that the moment you deepen the Welland canal the Americans will immediately build a canal from Oswego to Syracuse so as to enable them to carry the western grain right through to their own ships in New York harbour. That is a natural consequence, whereas if you build the Georgian Bay canal the grain that is to-day going by New York, not all of it, but a great deal of the grain that is going via New York, will find its way directly down the Ottawa river.

At the risk of wearying the House, I shall give a few statistics. The total traffic through the several canals of this country for 1908 amounted to 17,502,820 tons. Compare that with the Suez canal. In 1908, 13,633,283 tons of freight passed through the Suez canal, 4,000,000 less than through our canals, and yet the revenue of the Suez canal in 1908 was $20,605,524.

In 1908, 776,374 tons of grain passed down the St. Lawrence canals to Montreal. On the St. Lawrence canals 2,900,102 tons of freight all told were moved. Of this 867,037 tons were agricultural products, 826,177 tons merchandise, and 430,004 tons coal and 180,022 tons were forest products. If I were speaking for the Ottawa district, I would say that 204,490 tons of freight that passed down the Ottawa river canals were the produce of our own forests. On the Sault Ste. Marie canal the total movement of freight was 12,759,216 tons.

They built a Manchester ship canal in England and yet it is only 35½ miles long, but it cost $73,172,000. The revenue is about $300,000. The Englishman is a wise man in business and if he will expend $72,000,000 in order to get a revenue of $300,000, why would we not expend $100,000,000 to get a revenue that may amount to any sum and certainly will be a very large revenue. The building of the Manchester ship canal meant a great deal for Manchester. During its construction 17,000 men and boys were daily engaged. Since its construction new ideas have been started at Manchester and along the banks; warehouses and mills previously empty are now occupied and over 10,000 new houses have been built for the working people of that city.

I know that a number of gentlemen wish to speak this evening upon this subject, they are waiting for an opportunity, in fact I believe they are simply bubbling over with enthusiasm for this canal, and it will be unfair on my part to detain the House at any greater length. I wish I had a thousand voices to go throughout this country from one end to the other and proclaim the great advantages which this canal will have for Canada. To my own good loyal friends of this country, to my military friends, to my naval friends, let me say, that Major-General Gascoyne, when giving evidence before the Senate of this country, said that the imperial authorities were most anxious for the construction of this canal because it would be a splendid route in the way of the defence of this country, Let me quote his words, which I have here in French:

From a military standpoint, I positively state that so far as strategy is concerned I look upon this scheme as a most desirable one.

Of course—and I must say so in order to make myself plain—it depends a good deal upon the depth of the water you intend to have in the canal.

Mr. Chairman.—The depth would be 14 feet.

Major General Gascoigne.—I was going to ask myself for a depth of 14 feet.

If you construct the canal of 14 feet deep, I can say that it would be of the greatest value to the country on a strategical point of view. I

know that the imperial authorities look at this enterprise at this work in that light.

It is not necessary for me to translate that beautiful language because I know that all the members of this House are familiar with the two official languages, but I would call the attention of the hon. gentlemen who are so strongly advocating to-day a naval policy for this country, who are imbued with that sentiment of loyalty towards the British Crown, and who want by every possible means to defend the empire and the country to the desirability of constructing the Georgian Bay canal, and I would ask them to join with us in advocating that work which will be one of the greatest ever undertaken by the government of Canada.

Mr. G. F. HODGINS (Pontiac). Mr. Speaker, I have listened with great attention to the hon. member for North Renfrew (Mr. G. V. White) who introduced this question and also to the hon. members who followed him. On this all-important question of the Georgian Bay canal. I believe that since confederation there has been no question which should so engage the attention of this parliament or the people of Canada as the early construction of the Georgian Bay canal. We have heard so much to-night as to its merits that I do not feel like asking the indulgence of the House in what would be a repetition of the many great things that have been said in its favour; but I feel that I would be remiss in my duty to my constituency, as well in my duty as a member of this House, if I did not take this opportunity of endorsing the construction of the Georgian Bay canal. It is not a new question, it has been before the people of Canada since before confederation, and I do not feel bashful or backward in endorsing the scheme when I find that it has been endorsed by the greatest statesmen of our country, by the railway magnates of Canada, by large shipping interests, by various boards of trade as well as by the press. Consequently I feel quite at liberty in endorsing the scheme as one that should be of the greatest possible benefit to the Dominion of Canada. I have no doubt that the delay in construction has been owing to its enormous cost; but considering that it will take 10 years to construct this great water-way, which is estimated to cost $100,000,000, an expenditure of $10,000,000 per annum will cover the entire cost and I feel satisfied that when this great canal is completed and opened for the great commerce of our Northwest and of the east, it will amply repay the government of Canada for its construction. When you consider the enormous strides the great provinces of the west have made in the last decade and their great prospects for a still further increase, I am not at all optimistic in predicting that when this canal is opened for transportation, the grain production of the great western provinces, will exceed one billion bushels per annum. Considering that in 1900 the total production was 32,000,000 bushels, in 1907, 160,000,000; in 1908, 232,000,000; and in 1909, 314,000,000; I do not think I am over-estimating when I predict that by 1920 the total production of grain of the three western provinces will exceed 1,000,000,000. We may estimate that one-half of that will be for export. Such an eminent authority as Mr. Robert Reford, of Montreal, one of the leading ship owners of Canada, claims that wheat may be transported from Fort William to Montreal at a saving of 2 cents per bushel on the present rate. That would represent $10,000,000 on the export of Northwest grain alone, quite sufficient to pay the interest on the investment of $100,000,000 as well as the maintenance and operation of the canal.

Much has been said with regard to enlarging the Welland canal, but while I believe in the deepening of that canal I am of the opinion that the day will come when both these canals will be required. And as the people of Ontario have been enjoying for many years the advantages of the Welland canal, I think it is in their interests and that of Canada generally that the Georgian Bay canal should be first constructed. The enlargement of the Welland would interfere to a great extent with the present traffic, whereas by building the Georgian Bay canal first, the people of Ontario would have a complete circle of waterways and the province of Quebec would have a water-way along its entire front. Speaking of the county I have the honour to represent, I may say that the natural resources of Pontiac alone would justify the construction of this great water-way. We have in Pontiac county enormous areas of timber, pulpwood, mineral and other resources awaiting easier and cheaper transportation facilities. I was rather surprised to hear, during the debate on the budget, the hon. member for Peterboro (Mr. Stratton) say that pulpwood was worth about $5.75 per cord in the raw, but that, when manufactured into paper, it was worth $38 to $45 per cord for low grade paper, and $50 to $100 for high grade. Last year the export of pulpwood, at a valuation of $5.75, represented something like $4,500,000, whereas had it been manufactured into paper, it would have represented over $40,000,000.

There are many people in this country who believe that protection is the greatest possible factor in building up a country, but in my opinion, transportation will do

more for us than protection ever will. I believe that if this Georgian Bay canal be built it will give our Canadian water routes an advantage over every other on this continent, and do more for the benefit of this country than possibly could any tariff.

So much has been said regarding distance and the cost of transportation, that I do not think it would be wise for me to take up the time of the House in discussing this phase of the question. I might, however, refer to the exports of wheat during the present year from Fort William by way of the great lakes. During the past year, some 77,000,000 bushels of wheat were shipped from Port Arthur and Fort William to the sea-board and intermediate points. Some 54,000,000 bushels were carried in Canadian bottoms and 23,000,000 in American bottoms. I have not the slightest hesitation in saying that were the Georgian Bay canal constructed, not only would we carry through that water-way the products of our Canadian northwest, but also to a great extent those of our American neighbours. Our neighbours view with alarm the construction of this great canal, and they rather favour the deepening of the Welland canal. Naturally they would prefer the latter, as we would have to bear the cost of the improvement while they would get the trade. I have before me some very interesting letters on this question, but as there are many other hon. gentlemen who are anxious to speak, I shall not detain the House by reading them.

The Nova Scotia coal question has been dealt with in a very able manner by the hon. gentleman who preceded me (Mr. Arthurs) so that I need but briefly refer to it. During the year 1908, the total production of Nova Scotia coal represented some 6,300,000 tons, which gave employment to some 13,000 miners. Only about 2,000,000 tons of that coal found its way west of Quebec, while on the other hand the province of Ontario imported from the United States some 8,000,000 tons. Had this coal been purchased instead in Nova Scotia, it would have given employment to 25,000 more men and have also given employment to Canadian shippers, so that I say if we want to build up our country, the first thing we should do is to attend to this transportation question. $100,000,000, which is the estimated cost of the Georgian Bay canal, is no doubt a large amount, but when we consider the resources of Canada, when we consider the fact that there are $735,000,000 of the people's money in our savings bank, when we consider the high credit of Canada in the money markets of the world, I do not see why the cost of the enterprise should make the government hesitate, and I believe that the government will receive the endorsation of the entire people if it should undertake this work. I trust that the right hon. the Prime Minister (Sir Wilfrid Laurier), who, with his colleagues, has done so much for the upbuilding of this country, will not hesitate in building this canal, and that Sir Wilfrid Laurier's name may go down to posterity as the creator of this great water-way, as well as of the many other great public utilities which have been inaugurated under his regime. Sir, I shall not take up more of your time on this question, knowing that there are others desirous of speaking, who can deal with the question more capably than I can.

Mr. J. D. REID (Grenville). So far as the resolution is concerned, of course I am not opposed to it, nor, I believe, is any member of the House, for it simply asks for the papers relating to the Georgian Bay canal project. Let me say further, at the outset, that I am not opposed to the building of the Georgian Bay canal, or any other water-way that will develop our great country. I believe that the development of this Georgian bay route must be carried out in the future. That part of our country is being opened up, and the benefit to the section which the canal traverses would justify the opening of the route, especially in view of the great water-powers to be developed which will be of immense benefit to Canada in the future. But, from the discussion I have heard on this question—I am sorry to say I have not been present during the whole debate—I am led to believe that the shortest time within which it is thought possible to build this Georgian Bay canal is ten years. For my part, I believe it will take a much longer time to build this great water-way. Therefore, I think, in the interests of the people of the Northwest and of Canada as a whole, the other part of our great water-way system, the Welland canal, should be improved almost immediately. It has been estimated by the government that the Welland canal could be deepened in five years. I believe that every member of the House will agree that, even though the Georgian Bay canal is to be proceeded with at some future time, the Welland canal must also be deepened. The highest estimate of the cost of this work is $25,000,000, and, as I have said, the work could be finished in five years. If this deepening of the Welland canal were effected, the lowering of rates would be as great as through the construction of the Georgian Bay canal and the work could be done much sooner. Of course, there are great differences of opinion to the possible rates on the Georgian Bay canal and the Welland canal when improved. It has been proven, I believe, to the satisfaction of the government that, if the Welland canal were deepened, grain could be brought from Fort William and Port Ar-

thur to Montreal at 3½ cents per bushel. My reason for making the statement is this: The present rate from Port Arthur and Fort William to Buffalo in the large lake vessels is an average of about 1½ cents per bushel. If the Welland canal were enlarged to allow these large vessels to go down to Kingston or Prescott, or other points at the head of river navigation, the grain could be brought down in these large vessels at 2 cents per bushel. Grain could be taken from Kingston or Prescott to Montreal for 1½ cents per bushel. This would make a total of 3½ cents from Port Arthur or Fort William as I have said. I do not believe that any hon. member will say that the grain could be carried for less than this by the Georgian Bay canal route. For, even if this Georgian Bay canal were opened for traffic, these large vessels would not use it to the best advantage. It would be practically all canal from Georgian bay to Montreal. These large vessels could not make the time mentioned by some of the speakers to-day. In addition there is great danger of these large ships striking on the sides of the canal and sustaining injury. By the Welland canal route, there would be only eighteen miles of canal from Port Arthur to Kingston—the length of the Welland canal. Therefore, I would urge the government to undertake at once the improvement of the Welland canal, and to proceed with the work as fast as possible. There is no reason that I can see why they should not at the same time proceed with the Georgian Bay canal and do work on that route and, when the Welland canal is completed, work all the faster on the Georgian Bay canal. I am strongly of opinion that there are other water-ways that are to be considered. For instance, there has been mentioned in this House a project of having a water-way from Port Arthur through to Edmonton. That may now seem to some hon. members of this House an impossibility. But I can remember the time—and that not many years ago—when this Georgian Bay scheme used to come before the Railway Committee every two years to have the charter renewed, it was simply thought to be a charter that would never amount to anything. But now we see it is likely to prove a success and likely to go through. The same may happen in the case of the water-way from Port Arthur to the west.

Another thing I wish to say is that, if these water-ways are to be developed, it should be by the government; the government should own them and control the traffic absolutely, and not hand these routes over to private corporations. I trust that the Minister of Railways and Canals will urge the members of the government to proceed with the development of the Welland canal so as to allow these large steamers to come down from the upper lakes to the head of river navigation. If this is done, I am satisfied that, in three or four years, the people of the Northwest will save enough in freight to pay the entire cost. And it would bring about this desirable result any where from five to fifteen years sooner than it could be brought about by the development of the Georgian Bay canal.

Mr. C. A. WILSON (Laval). I have only a few words to say and it is not in criticism of the remarks of my hon. friend from Grenville (Mr. Reid), and my hon. friend from North Renfrew (Mr. White). If I understand my hon. friend from Grenville right, it is only a question of opportunity whether the Welland canal should be dredged a little deeper than it is now, though I do not understand that he objects at all to the Georgian Bay canal project. I must say, Mr. Speaker, that it seems refreshing to find ourselves upon a subject relating to water-ways, after we have heard so much about war and Dreadnoughts. In the course of my remarks, I hope I will not wound the susceptibilities of my hon. friend from Jacques Cartier (Mr. Monk), if I touch a little upon the military features of this canal.

For the last seven or eight years I have been particularly interested in matters of dredging and navigation. During the campaign of 1902, that was one of the issues in the county of Laval. During the campaign of 1904, one of the issues was the dredging of the Rivière des Prairies and Rivière Jesus. I am glad to see present my hon. friend from Terrebonne (Mr. Nantel), who I know takes a great interest in this subject. Now, since we have had a survey and report upon this Georgian Bay canal ,nearly everybody in the Dominion takes more and more interest in the subject, and is to a certain extent posted on the project. I am not going to entertain at great length this House about the Georgian Bay canal project. Most everything has been said about it that can be said, and if any hon. member wishes to know more about it he has only to peruse the exhaustive and well framed report made by the four engineers appointed by this government to examine the project. They will find in that report everything they need. I propose to confine my remarks to that section of the proposed route extending from the Lake of Two Mountains down to Varennes, a point 6 or 8 miles from the Bout de I'sle of the islands of Montreal. Now, I would invite the hon. Minister of Public Works (Mr. Pugsley), in the estimates which he will present to this House in a few days, to include a sum of money for the deepening of that part of the canal projected through the Rivières des Prairies, north of the metropolis of Canada.

On the 15th of February, 1909, I placed a motion on the order paper of this House for a return of information regarding the dredging of the Rivière Jesus, and I was informed that in November, 1863-4, about half a mile below Macdonald's wharf was dredged by the government, and from 1902 to 1908 it was dredged by contractors. The distance dredged was about two miles, the width 100 ft., the depth from six to ten feet, and the work was carried as far as Mascouche river. These works are to reach as far as Terrebonne. Such was the information handed out from the Department of Public Works in the return I mentioned. I desire now to draw the attention to the importance of the locality bounded by these two rivers, and to show the great need there is at present for improving their channels; first, in connection with local navigation; secondly, in regard to the general scheme of Canadian navigation; thirdly, and finally, I intend to demonstrate the need of this work in connection with the Georgian Bay canal project.

According to the census of 1901, the total population of the parishes in the vicinity of these rivers, and which must benefit directly from the execution of this work, was 10,200 souls; the total population of the villages in the same section was 6,779, forming a total of 16,979. I will not detain the House with an enumeration of the number of acres of cultivated land in the surrounding country. I will simply say that, since the last census, the now incorporated village of Cartierville has sprung into existence, and a large number of families have established their homes along the shores of the Rivière des Prairies, and the consequent increase in population over the figures of the last census must amount to fully 5,000. I am sure this is no exaggeration. In fact, in another ten years that section of country will contain a population of at least 50,000 people. There is already, as I have shown, in round figures a population of 22,000. The city of Montreal is now rapidly spreading all over the island. Outlying towns and suburbs are being annexed to the city every year. Its limits already extend within one mile of the Rivière des Prairies, and very soon the municipalities of Cartierville, Bordeaux, Ahuntsic and Sault-au-Recollect will be included within the city. That is to say, the whole section, extending from the River St. Lawrence to the village of the Rivière des Prairies, will form a portion of the city of Montreal.

Along the banks of the river a number of houses of education, all of a high order, and to which many of the city children are sent, have been established. The waterworks system of the city extends to Rivière des Prairies. The new prison of Montreal is now being built within a few acres of the banks of the river and in the heart of the municipality of Bordeaux. Land is being sold in building lots, and of late, as if by enchantment, unincorporated villages have sprung up on all sides throughout that region—one of the finest in all Canada. In vain will you look through the blue-books of the past ten years for such names of places as Youville, Parc Laval, Bas du Sault, Pont Viau, Saraguay, Cartierville, Abord à Plouffe, &c., &c., all of which are considerable villages, and which but a short time ago were but land marks, or stopping places, along the route. These, thanks to the wonderful progress and expansion of the city, are to-day places of sufficient importance to entitle them to charters of towns from the provinial legislature.

Stone, wood, coal and other like commodities are in great demand there, but owing to the lack of a system of navigation, it would be difficult to obtain exact statistics as to the cost and the amount needed, both for domestic consumption and for industrial purposes. I really believe that a system of navigation circling the Island of Montreal would be of the utmost utility and benefit to all that large population along the shores, and I look ahead to such a system in the near future.

The very first question one might ask is this: Is navigation possible in that river? The answer is simple. I must draw your attention immediately to Rivières des Prairies which I am referring to as one of the two alternative routes of the Georgian Bay canal. According to the report of the engineer it would save $9,000,000 or $10,000,000 if the Georgian Bay canal were built by the route of Rivière des Prairies instead of by the St. Lawrence, where there is already the Lachine canal. It would be much shorter.

Mr. HUGHES. Better for the navy, too.

Mr. C. A. WILSON. Better for the navy, and I am glad that my hon. friend from Victoria and Haliburton (Mr. Hughes) takes that view. I will come to a point that will please him very much in a few minutes. I will refer to military and naval defence. Our cruisers, rather small perhaps, that tin-pot navy to which somebody has referred in the House, will be more protected on the Back river in those good constituencies of Laval, Jacques Cartier, Terrebonne and Two Mountains than on the border or on the south side of the St. Lawrence river and that is one of the reasons why I am in favour of that route. I was about to answer the question: Is navigation possible in that river? It is possible, for it has existed in the past, and it still exists during the high-water season. The route now under consideration has been, since the first pine tree in the valley of the Ottawa was felled by the shanty-

man's axe, the grand water-way for the immense rafts of square timber, taken down to the St. Lawrence, to the timber market in Montreal, Three Rivers and Quebec. Each year, until within about two or three years, the steamers 'Vermont,' 'Hope,' 'Aurora' and 'Monarch,' as well as others the names of which escape me, have towed rafts, barges and pontoons almost to the village of Ste. Geneviève, to a place called L'Anse du Pont de Pierre. In 1882 or 1883, Mr. Girouard, then member for Jacques Cartier, now a judge of the Supreme Court, organized at Lachine a political excursion, by steamboat, to Ste. Geneviève, and on that occasion, for a first time the rather large steamboat 'Beauharnois' was seen moored to an emergency wharf at that town. Often since, smaller boats than those above mentioned have gone down below Ile Bizard, and have turned near the foot of Rapide l'Allemand. As to the north side of the Ile Bizard, it is washed by the Lake of Two Mountains, which has a depth of water sufficient for the class of navigation under present consideration. So much for that part of the Rivière des Prairies, which covers an extent of about six miles. Navigation is both possible and practicable in that part of it.

As to the part of that river extending from Bout de l'Ile of Montreal on the east side of the level above the village of St. Vincent de Paul, we find that about 1860, and even before that the Richelieu and Ontario Navigation Company, I think, known then under another name, had for about fifteen years a steamboat service between Montreal, St. Vincent de Paul and Terrebonne The old wharf is still there; the steamer 'Terrebonne' did the service. When the reformatory of St. Vincent de Paul was changed into a penitentiary, prisoners were brought there from Kingston and elsewhere on board the steamer 'l'Aigle.'

The distance between Bout de l'Ile and St. Vincent de Paul is about twelve miles.

The only work that would be needed on that section of river would be the clearing up or dredging of the channel of the Rapide de la Passe, in front of the village of Rivière des Prairies. Every spring time the Marine Department places about a dozen buoys in that rapid for the guidance of the rafts and for general purposes of navigation.

You may reasonably ask me: What caused the cessation of navigation in that part? I may point out two, amongst other reasons: 1st, the building of the Quebec, Montreal and Occidental railway, now a part of the Canadian Pacific. This line made it then impossible for any line of vessels to compete with it in trade. The second cause is the gradual yearly lowering of the water level for a quarter of a century back, and the working of the ice on the banks and bed of the river. The ice tore up the bottom of the river and rolled here and there the heavy boulders that got into the deeper channels and broke up the navigation. I do not believe that in the last twenty-five years the government ever spent one cent to remedy that unfortunate state of affairs.

As to the fifteen miles of river above St. Vincent de Paul and up the Ile Bizard, it never was utilized for purposes of navigation although it was always a passage way for timber and rafts. It is a part that would require more work to improve it; but once that work is done it would be of the greatest importance as a water-way and will make navigation around the Island of Montreal practicable. At that place there is located a felt mill, and the electric power-house of the Saraguay Light, Heat and Power Company, as also a knitting mill, the Ile Bizard grist mill, several manufactories, and the far-famed limestone quarries of St. François de Sales, St. Martin and Bordeaux, since navigation has ceased, the population has augmented, needs have increased, business has extended; and yet the only means of transportation is the Canadian Pacific railway, which has stations only at Bordeaux, Parc Laval, St. Martin, St. Vincent de Paul and François de Sales. Their charges are burdensome and the company, so far as transportation is concerned, has a monopoly over the entire territory. For instance, on the single article of coal consumed by the penitentiary according to a statement given in 1902 or 1903 the Department of Justice would save about $5,000 each year were the retransportation by water instead of by rail. I think there is a difference of about $1 per ton between the water and the rail rates. Consider, then, the immense benefits that would accrue if a sum sufficient were voted to improve the navigation of that river to such a degree that boats drawing five or six feet of water might ply upon it. I have dwelt on this point to considerable extent in the hope of seeing a sufficient sum voted to permit of the dredging and clearing up of the rivers des Prairies and Jésus, and the rendering of them more useful to the entire city of Montreal and its neighbourhood.

I will now turn to the larger and national side of the question. I desire to show how this very section may become a strong link in that magnificent chain of water-way, to be known as the Georgian Bay canal—a project that now challenges the attention of two continents and of the two great sections of this continent—the United States and Canada.

Turning now to the grand national project of the future, of which the work suggested must form a not inconsiderable part, I shall ask your attention for but a few moments. The primary idea that inspired

the governments and engineers of the first period of this century to dig the Carillon and Rideau canals was military defence. The Georgian Bay canal report gives us the following information:

In 1828 McPherson, Crane & Company put the steamer 'Shannon,' Captain Grant, on this route. Meanwhile a great improvement was pending. The American war (1812-14) had emphasized the need of an interior route to Kingston, and in 1827 the imperial government began the construction of the Carillon and the Grenville canals, and also the Rideau canal between Ottawa and Kingston. These were finished in 1833.

In 1806, Mr. Wright, of Hull, was the first person to take down a raft of square timber from Ottawa to Quebec. His idea of running the Long Sault and the Carillon rapids with his raft was looked upon as fool-hardy and madness at the time. But he succeeded and reached the Island of Montreal in 28 days. When he had got as far as the Lake of Two Mountains he found himself in a dilemma. Which of the two coures was he to take? Possibly, warned by the fury of the Sault St. Louis, he decided to take the handier and less boisterous route of the Rivières des Prairies. So that as early as 1806 the navigation of the river with rafts (if I can so call it) was recognized as possible and the route north of the Island of Montreal seemed to guarantee safety and all that could be desired. In 1841 Captain Shepherd started from Ste. Anne and ascended, for the first time, the Carillon canal. The day before he did this he accomplished the feat of steering the steamer 'St. David' from Brockville to Lachine, running the Gallops, Long Sault, Cornwall, Coteau, Les Cedres, the Chutes à Blondeau and the Split Rock rapids, as well as the famous Sault St. Louis, thus showing the possibility of navigating those dangerous rapids which are to-day a favourite route for trade and for tourists. That same year he towed a raft of square timber, with his steamboat, from Carillon to the Rapide L'Allemand, at the end of Ile Bizard. All this forms a connecting link between what I have already said regarding the possibility of navigation in those waters and the idea of a permanent route from the sea to the great lakes. The intention of the military authorities in 1827 was to have the military system of canals run by way of Rivière des Prairies instead of by Ste. Anne.

Keeping in sight the evident purpose of the military engineers of the past and the project of the great canal that looms up on the horizon of the future, I would ask attention, for a few moments, to the 'Back River Line' as this route is called in the report of the surveys in connection with the Georgian Bay canal. And before so doing I wish to recall the opinion of Herbert Quick, author and expert writer on American water-ways, expressed in an interview prior to the Water-ways convention at New Orleans. Mr. Quick said:

Canada has already more commerce through her Soo canal than we have through ours. When she has completed the Georgian Bay ship canal she will destroy American commerce from the lakes to the sea, and the death-knell of our merchant marine on the lakes will have been sounded.

At this stage, and in presence of all that has been written of late on this subject, it is needless for me to dwell upon its importance in every sense and to point out the vital necessity it will become within the very near future, if not immediately. All are agreed on that score, and the only thing we await is the possibility of that work being commenced in earnest. Keeping, then, all this in mind, I return to the urgency and necessity of the government providing a suitable vote of moneys for the operations of dredging and improving the water courses in question. The cost will be proportionately small to the local benefits and the future national importance of the work.

I do not deem it necessary to read for this House the entire portions of the report that deal with the rivers, lakes, streams, watercourses, islands and adjacent lands to which I refer and that comprise the region in favour of which I ask the assistance of a vote. Pages 99, 100 and 101, as well as pages 512 and 513 of that voluminous report contain statistics of a most interesting and convincing character, which, Mr. Speaker, if you will allow me, I will hand over to the reporters. They show exactly what amount of work may be required to make that course perfectly navigable, as well as the time that may be required in completing such works.

BACK RIVER LINE.

St. Lawrence Ship Channel to Prairies Lock.

The line leaves the Montreal-Quebec ship channel near Varennes and proceeds due west through the soft river bed for 8 miles to Prairies lock, opposite the small village of Rivière des Prairies, which is 5 miles higher up than Bout de l'Ile.

Channels are provided to allow of either up or down bound traffic from the ship channel entering Ottawa.

The surface of the St. Lawrence at Bout de l'Ile is elevation 16 at low water, and this surface continues up to the Prairies lock; therefore the channel bottom is elevation 6. The width of the channel is 300 feet, widened at curves. This necessitates the excavation and disposal of four million cubic yards of material, which is generally a soft clay that can be excavated by suction dredges and pumped away through pipes. It can be deposited upon the islands at Bout de l'Ile, and the upper portion of the channel excavation may be disposed of on Macheu island without

incurring the risk of its running back into the channel.

The excavation could be done in three seasons. The Canadian hydraulic dredge, 'J. I. Tarte,' excavated during working season of 1907, and removed by pipe line, two million yards of material in the St. Lawrence below Montreal.

The line passes through Ile Bourdon in 35 feet cut, and this material will prove harder excavation than the channel below and above, although a good part of it can be done dry.

At this point the Chateauguay and Northern railway (Great Northern) is crossed, and a bascule double track bridge has been estimated for, leaving a clear water-way of 160 feet. About mile 8 the excavation becomes rock and continues so for the next half mile up to Prairies lock.

The line is generally direct, but bends, none of which are sharp, are necessary at four places to get between the numerous islands. Each leg is provided with range lights and mark piers so as to render navigation fully as easy as in the ship channel.

At mile 5 the St. Eustache branch of Mille Iles river joins the Back river, but without appreciable current. The manufacturing town of Terrebonne is situated 11 miles up this branch.

The end of Montreal island (Bout de l'Ile) is a triangular flat, elevated about 35 feet above the sea for a distance of two miles. The ground then runs up quickly to elevation 75, and continues to rise toward Mount Royal. Examination failed to discover any practical crossing between Bout de l'Ile and Ste Anne —the west end of Montreal island.

To cut through the island and join the St. Lawrence ship channel at the head of Ile Ste. Therese would be somewhat more expensive than the route as estimated. The saving in distance between the short cut and the adopted line, Montreal customs house would be about 6 miles in distance, but nothing in time of transit owing to reduced speed through canal cutting.

Prairies Reach.

The lock or step up to this reach is located on the north shore opposite des Prairies village, its lift being 24 feet from surface elevation 16 to surface elevation 40. A greater rise than this would flood the village property, and the damage might be considerably increased by the erosion of the soft earth banks along the south side.

The Prairies lock is founded on rock, the surface of which is elevated 20 feet, so that the walls for 26 feet in height are formed in the natural bed-rock. The remaining 25 feet in height of wall are built of concrete in a similar manner to all the other locks. About 3,000 cubic yards of concrete will be required for this, and part of the lock-pit excavation can be used.

The usual guide piers are provided above and below the lock. The upper guide pier forms a side wall to a short canal along the river bank.

There is a rock-fill dam between the lock and the south shore, which will require 100,000 cubic yards of loose rock.

The rock excavation immediately below the lock can be dammed off the excavated dry at the same time as the lock-pit, and will furnish ample material for the filling of guide piers and the dam.

Stop-log sluiceways are provided in the dam to pass the flow of the river. There are 14 openings, each 20 feet wide, and capable of passing 20 feet depth of water, and even 24 feet depth if the reach above should rise by accident. The regulated flow through Back river is 65,000 c.f.s., and 25 per cent additional is provided.

About a mile above the lock a straight channel will require the excavation of about 21,000 cubic yards of rock, which can be taken out dry.

Further up the channel, about two miles above St. Vincent de Paul, nearly 850,000 cubic yards of rock excavation is required extending right to the foot of Recollet lock-mile 17.

This heavy rock excavation is necessary so as to enlarge the river bed and prevent a current swifter than four feet per second for the total flow of 65,000 c.f.s.

The river now flows with considerable current, but with little depth, a rough limestone bed-rock. The proposed raised surface or working level will just obliterate the sloping fall of the river past Visitation island, and so destroy the current, without increasing the depth. It will, therefore, be necessary to increase the size of the river. To accomplish this a channel 700 feet wide will be taken out south of Visitation island to allow a flow of 10 feet in depth. This can be excavated dry. Part will be earth 54,000 cubic yards, and part rock, 202,000 cubic yards. The village property destroyed is often flooded, and so no great damage will be done. This channel could be excavated by three shovels in two seasons, working winter and summer.

The navigation channel north of Visitation island is full 300 feet wide, and excavated 7 feet into the rock river bed for a distance of about 1½ miles below Recollet lock. This can be closed off by dams from shore and excavated dry, especially as most of the river flow will be passed south of Visitation island. Three seasons will be required to complete this channel, that is one season after the channel south of Visitation island is finished. The water surface at Prairies lock will be raised about 15 feet and extend level to Recollet lock, where the surface will be as at present. There will be 368 acres of land inundated. The north bank from St. Vincent de Paul upwards is very steep and the south shore is fairly high but it may be necessary to protect parts of it by a stone slope, ample rock for which is available from the excavation.

A small water-power at Prairies lock will be extinguished and also that between Ile Visitation and the south shore where a small cardboard factory is now in existence.

Recollet Reach.

Recollet lock is on the north side, a mile below Pont Viau, the lift being 35 feet, which attains the level of Oka reach. It will be noted that only two locks are required to rise to Oka level by the Back river, while the front line requires three locks, as a small lift seems absolutely necessary at Ste. Anne.

Recollet lock is founded on solid rock, the

surface of which is elevation 40, so that the bottom being elevation 18.22 feet of wall is in solid rock, leaving 40 feet to be built up in concrete.

Below the lock is the usual cribwork approach, and above is the lock cribwork pier. This is backed by earth from the canal excavation to create a dam across the small gullet just above the lock, which then forms an entrance basin about a mile long.

This expansion of the surface will diminish the bore or ware which travels down a narrow canal during and after the filling of a lock, tending to slam the upper gates shut just when they are in progress of opening.

Above the lock—mile 17 to mile 28—are 11 miles of canal, and the question of a guard lock at the head and a guard gate just above the Recollet lock, comes up.

A guard lock at the head of the canal, where it enters Oka lake would be subject to the drive of the waves down the lake, which would prevent the opening of the upper gates as has been experienced on the Soulanges canal at Coteau under similar conditions.

On the other hand, without a guard lock, winds are apt to pile the water in the narrow canal towards the foot. This action nearly resulted in overflowing the banks of the Welland canal and Thorold during a gale down Lake Erie. The gates of the Port Colborne guard lock had been left open, and could not be shut owing to the heavy waves that ran in from the lake.

Again, the carrying away of the lock gates at Recollet lock or a break in the canal bank would create a swift current through the canal, and a lowering of the surface that would wreck steamers navigating the reach.

The sides of the canal have been designed 5 feet above Oka lake, which is sufficient to obviate any danger from the piling action of the water toward the lower end of the canal.

Recollet lock, like all others, on the route, has four pairs of steel gates. Both the lower pairs are always shut against a descending boat, and is beyond all human probability that a thin steel boat cutting into the 4 foot wide girders of these steel lock gates would completely carry away the pair 57 feet below. The bows of the boat would be cut in, and she would remain hanging in the wreck of the first pair of gates, forming a very effective dam.

Near the head of the canal at Bigras island a large area of sluices is provided, that empty directly into the river channel, which at this place is rock. If then the canal bank should give way at any point, these sluices will be opened and the greater part of the flow from Oka lake will discharge through them. Only a small quantity would tend to continue down the canal, and, therefore, a temporary dam could easily be constructed across the channel below the sluices till the break in the bank was repaired.

In this connection it must be remembered that, even with a guard lock, the whole contents of the canal would tear out through any break in the bank and do practically all the damage that could be done.

I have, therefore, made no provision for guard lock nor guard gates, but have preferred to place full confidence in the Bigras island sluices.

The Recollet canal necessitates over five million cubic yards of dry earth, excavation, and half a million cubic yards of rock. The standard size of embankments amounts to three million cubic yards, so that a good margin is left to widen and strengthen the usual cross section.

There are several bridges to be dealt with. Viau bridge traffic will be carried across at Recollet lock.

For the Canadian Pacific Railway, a bascule bridge is provided at Parc Laval—mile 19.

The Cartierville road traffic will be crossed by a bascule bridge in the same line as the present road.

The highway traffic to Ile Bizard can pass along the south bank as a roadway is provided over the Bigras sluices.

Along the whole 11 miles of canal it will be necessary to protect both sides by broken stone against the wash of boats, etc.

Above the canal, the channel toward Oka village will be dredged, 7 feet deep, through the shallow sand flats at the east end of Oka lake—mile 28 to mile 37—a total excavation of 4½ millions cubic yards, most of which can be handled by suction dredge.

Silting in of this channel, with sand by wind storms, is liable to occur, but the powerful suction dredges now in use are capable of rapidly and cheaply clearing it away.

The time required for the construction of the Recollet reach and Oka lake section would probably be five seasons if 12 steam shovels, or their equivalent, were employed in the canal section itself—mile 17 to 28. The dredging in Oka lake can be completed in advance of this.

It may be argued that, in view of the recent expressions on the part of the right hon. leader of the government, the commencement of the Georgian Bay canal project is somewhere yet in the near future. The desire is to see it begun at once; but the extensiveness of the other great and important public works that demand immediate attention, and the means at the disposal of the government for such gigantic enterprises, compel the relegation of this national undertaking to the time to come. Consequently, it may be said, that there is not an immediate necessity for the dredging and improvements that I have so persistently asked for. But, in reply to this, I say that the immediate necessity is of a most important local character, and that it affects the interests of the great metropolitan city of Montreal and all the immediate surroundings. And while that work is being done, and that navigation is being not only restored, but made permanent for the future, you will be 'killing two birds with one stone' and preparing so much of the route that most assuredly will be adopted whenever the government of Canada finds itself in a position to freely launch the magnificent national enterprise of building the Georgian bay canal.

I will not detain the House any further on this point; but I will sum up in a few words my request. It is the same as that made to the government on the occasion of

the interview with the hon. Minister of Public Works, when, on the 15th of December last, the subject was clearly explained and all due and careful consideration was promised. I thank the Minister of Public Works for the kindly interest he has expressed in this matter.

Mr. F. D. MONK (Jacques Cartier). Mr. Speaker, I merely wish to add a word or two to this interesting debate. I think the House is very much indebted to the hon. member for Renfrew (Mr. G. V. White) for having given such an extensive review of all that has been already said and adding to it what has lately been done in respect to this great national work. Of course we, down in the district of Montreal, are extremely interested in the prompt execution of this work, but although we are greatly interested, although that intended canal, whatever route may be adopted, passes through my own constituency, which will no doubt derive some benefit from it, still it is a work of such nature that I am more disposed to look at it as a general national work destined to benefit the whole country than to take the view which my hon. friend who has just taken his seat (Mr. C. A. Wilson) has taken of that work. He seems to consider it more as a local work.

Mr. C. A. WILSON. Does my hon. friend remember that when a delegation was received by the Minister of Public Works he was present for a few moments, although he was busy in a committee, and that he did not object to the work that was to be done in that part of the country, on the other hand the work would have his best support.

Mr. MONK. I attended that delegation, and I am greatly in favour of the performance of that particular work of cleaning up the river and deepening its navigation. I attended that delegation and I entirely supported my hon. friend in respect to that particular work. Although I was placed under the disadvantage of addressing the Minister of Public Works in French, I was pleased to perceive that he thoroughly understood me, and I even noticed from certain signs that he made that he approved of my remarks and that the work should be done at once. But I am now referring to the whole gigantic project of the Georgian Bay canal. We have had debates of this very instructive character almost every session since I have had a seat in the House. In fact, I think the public discussion of the project of the Georgian Bay canal began in some legislature, which I could not at the present moment properly designate, in 1832, and has been continued almost every year since then, and has invariably ended with an assurance by the then government that the work was one of public interest, that its utility was incontrovertible, and that the government would take up the matter with the least possible delay. It seems to me that if I had any fault, and I have no fault indeed, to find with the form of the motion of my hon. friend (Mr. G. V. White) it is that it does not conclude sufficiently towards an immediate beginning of this work. We have had before us, since 1832, what has already been designated in this House much less happily as mountains of information, and the government since I came into this House to find myself on your left, has invariably endeavoured to delay the beginning of this work which is now recognized as one absolutely necessary. I once heard our colleague of that day (Mr. Poupore), who then represented Pontiac and who was well informed on this question, fully explain to the House the necessity of the immediate execution of this work, and I heard the government at that time say that they were on the point of putting that project into execution. Later when the late Mr. Tarte sat in this House he became extremely interested in the question of transportation, and at times he caused his colleagues on the treasury benches considerable embarrassment about the subject, and in the year 1903 the government, in order to shelve the question at least for some time, decided to name a commission to study this question of transportation about which Mr. Tarte was then causing the government trouble and embarrassment which, with other causes, ended in his having to leave the government. The government named a commission, and I am bound to say they could not possibly in the estimation of everybody have chosen better men. At first, Sir William Van Horne was named, but he was unable to act and Mr. Bertram took the presidency. He died in the midst of his work and finally the presidency fell to Mr. Robert Reford of Montreal, a great authority on matters of transportation, and he sat with Mr. Ashdown of Winnipeg, representing the west, and Mr. Fry of Quebec representing the Quebec district. I have no hesitation in saying that that report in my humble estimation covers the whole ground of transportation. It was an admirable report and the work of the commission was done largely through a pure spirit of patriotism, because they were very busy men and the expense incurred was extremely small. They went fully into the question of transportation from the Atlantic to the Pacific, and made their report in December, 1905, but since that time that report has remained absolutely, to my mind, a dead letter. None of their suggestions were ever heard of since. It becomes a difficult matter to get hold of that report, and it has never been referred to, to my knowledge, by any member of the present administration.

Mr. PUGSLEY. The most important suggestions are being rapidly and steadily acted upon.

Mr. MONK. I do not take it that way. Perhaps if my hon. friend——

Mr. PUGSLEY. Take Fort William, Port Arthur, Victoria, Tiffin, St. John, Vancouver, the Georgian Bay survey——

Mr. MONK—not one single suggestion of any importance in that report has been carried out.

Mr. RIVET. What about the improvements carried on in Montreal?

Mr. MONK. Not one single suggestion in the report of any importance. What do we find in that report? It lays down as a fundamental principle that five or six or seven of our ports, which the commissioners have examined carefully, must be made national and free ports, Prince Rupert, Vancouver, ports on the Pacific ocean, some of the lake ports and they gave the reasons for these suggestions. My hon. friend speaks of Montreal, as being an example of the carrying out of those suggestions. Will my hon. friend say that Montreal has been made a free and national port?

Mr. RIVET. I will.

Mr. MONK. And that the improvements suggested by the commission have been carried out?

Mr. PUGSLEY. It has been made a national port.

Mr. MONK. What money do we owe the government, what money have we received for the improvement of the port of Montreal or carrying out a single suggestion? We have improved the port, we have obtained the credit of the government, borrowed money and carried out improvements, admirably carried out under the present commission of the port of Montreal. But in what way is it a free port? The charge is increasing every year as it must increase necessarily if the suggestion of this commission is not carried out and it is not made a free port. What is the amount taken out of the port of Montreal every year? Is that a free port? It is neither a national port nor a free port. A couple of years ago, the Minister of Marine and Fisheries of that day maintained in this House that the commission had not advised that this port should be made free, and I had to hunt up the report of the commission and show that part to the minister in which that recommendation was made, and thus made him acquainted with the fact that the commission had suggested that Montreal should be made a free port. Neither has their suggestion been carried out with regard to the port of Quebec. Improvements have been made in that port, some of them with government money, but is it a free port? Is St. John a free port, as the commission advised, or Halifax?

What the commission advised as urgent and important, namely, the making of our ports free, the proper equipment of our ports on the great lakes, has not been carried out; and we shall require to spend at least $100,000,000 to carry out the suggestions of the commission, even if you confine yourselves merely to the freeing and nationalization of our ports.

The commission advised the building of the Georgian Bay canal as an urgent matter. After Mr. Reford had sent in his report, he wrote a special, additional report to the government, which must be in the hands of the Minister of Public Works. That additional report, or letter, was written to impress on the government the extreme urgency and necessity of building that canal at once. In view of what has been done in the United States, Mr. Reford thought it necessary to write an additional letter to the government urging that the work should be gone on with at once, and that letter was published in the March following in the Montreal 'Herald.' What do the commission say about the Georgian Bay canal, and I mention this because my hon. friend from Grenville (Mr. Reid) seems to doubt what their choice was between any other means and a direct or through water-way from the lakes to the head of ocean navigation. They say:

> Your commission unhesitatingly affirm their belief in the desirability of a thorough waterway from the head of Lake Superior to ocean navigation, to aid in the carriage of the grain and the regulation of rates of a standard not less than that above set forth, so that the largest vessels navigating the great lakes can continue their voyage to ocean navigation or as near thereto as possible. But in view of the fact that the government has undertaken the survey of a proposed route by way of the Fraser river to Lake Nipissing, and thence by way of the Ottawa river to Montreal, and as the feasibility of this route from a commercial as well as an engineering point of view, and if feasible its cost, has not been ascertained, and further in view of the fact that the government has also undertaken a survey of the Welland canal and its vicinity, looking to its possible enlargement and diversion, your commission do not see their way clear to any recommendation as to route, but would recommend that, in case the Ottawa river scheme because of want of feasibility from a commercial or engineering point of view, or on account of its cost or for other reason be not adopted, then the Welland canal be enlarged and deepened to the standard of the Sault Ste. Marie canal, with a view of enabling vessels of the largest size to continue their voyage to Kingston or Prescott, thus bringing their cargo to within say 180 miles or less of Montreal before discharging same.

I am not in any way opposing the deepening of the Welland canal, but I say it appears from this recommendation that the commission preferred, as an immediate solution of the difficulty, the carrying of grain from the great lakes, not to Kingston or 180 miles from Montreal, but clean down to the head of navigation, and that by a canal projected down the St. Lawrence reaching as far as the maritime provinces which, although remote from the canal itself, would derive immense benefit from the carriage of their coal and other goods through the water-way, from the maritime provinces, without transhipment, clean beyond Duluth to the end of the great lakes.

Mr. PUGSLEY. I understood my hon. friend to say that the government had not carried out one single suggestion made by this transportation commission. Let me ask him whether he would suggest that there has been the slightest delay in carrying forward and completing the survey for the Ottawa and Georgian Bay canal?

Mr. MONK. I did not say that the government had not carried out a single suggestion, but I said an important suggestion, and I gave as a first instance the question of free ports. I singled out that one because it must be perfectly evident to every hon. member that until that suggestion is carried out, we stand in a position of absolute inferiority to the United States. Take only the great lakes ports, Superior and Duluth, and see how these are equipped. Their equipment is something marvellous; people come from the old world to see it. Compare these American ports with ours. In ours there is by comparison practically no equipment. That suggestion, therefore, of the commission has not been carried out to any extent by this government. In Montreal we have an admirable commission which deserves better encouragement. It has, by borrowing money on its own credit, carried out very important improvements, but the work is by no means finished. Any one who takes the trouble to read the splendid report of the chairman of that commission, Major Stephens, made after his return from Europe, must come to the conclusion that we shall have to spend at least $80,000,000 if we want to place Montreal on a footing at all equal to that of the great ports of Europe which he visited, the least important of which had expended on it at least $30,000,000. If we want to put Montreal on the same footing as Boston and New York and other American ports, and European ports as well, we must be prepared to spend $100,000,000.

There were suggestions less important carried out, because the shipping interests stood behind them and insisted on their being carried out. Take the St. Lawrence ship channel, the better lighting of the route between Montreal and Quebec, that has been attended to, although I am informed that a number of the lighthouses put up between those two ports have already tumbled into the water, as most government works do. But there has been an attempt in that direction, and probably also on the great lakes, because the shipping interests were there and insisted on this report being carried out which the government wanted to pigeon-hole. But these are minor points. What have they done in respect of the more important matters? Have they enlarged the Welland canal? Have they made a single start towards constructing the Georgian Bay canal? My hon. friend will say that surveys have been made. This matter has been brought up every year for the last fifteen years, and I have every year heard from the ministers the same generalities and the same replies. True, partial surveys were made before. But this last report is an admirable one. It was finished some time ago and distributed. Has the government shown any haste to make known its policy? We know that statements are made in the United States that if we should build this Georgian Bay canal, it will take the whole trade of the west, both American and Canadian, and our people are beginning to clamour for it. But when the government is urged to build it, they reply, as the right hon. the Prime Minister did a short while ago in an interview: We will attend to this work as soon as we have the money. But nothing is done. The hon. member for Laval (Mr. Wilson) insisted, and insisted very properly, a moment ago, that work should be done on a section of that canal. Why, we have lost about $10,000,000 from the fact that we did not begin that section 10 years ago. And we are losing every year about thirty per cent on the cost of that section—about $10,000,000—by that increase in value. If the government had constructed the French river end a few years ago at an estimated cost of $5,000,000, we should now have the advantage of the development and increase of population which have been spoken of in this debate.

Mr. PUGSLEY. Which section?

Mr. MONK. The French river section.

Mr. PUGSLEY. About $13,000,000.

Mr. MONK. I understood that it was much less. But what about the section in the vicinity of Montreal, which should have been begun ten years ago and on which, had it been finished, there would have been an immense saving in the cost of labour as well as the saving of the frightful increase every day in the cost of expropriation?

Mr. C. A. WILSON. I do not wish to interrupt the hon. gentleman (Mr. Monk), but perhaps he will allow me to ask him

if he remembers the campaign of 1902, when he was in the county, and I asked very plainly why he opposed this project which was my issue, and he stated that it was for political reasons I proposed it?

Mr. MONK. I never heard of that.

Mr. C. A. WILSON. I heard that from the hon. member's own lips.

Mr. MONK. The first vote I gave in this House was in favour of it. And any man who has followed the debates on this subject—by no means so long as debates we have had on some other subjects not so important—or who has read anything of this discussion must know that the project is a useful one in the saving of cost and time in transportation and in every other way. Why, one only needs to know of the fear entertained by the American experts that we will open this route, to know that it will be a good thing for Canada. I do not know that I ever had my hon. friend (Mr. C. A. Wilson) as an adversary. But this I do know—that I never opposed this project.

Mr. C. A. WILSON. The hon. member said I advocated it for political reasons.

Mr. MONK. I do not think it a political matter—certainly, I am not trying to make capital out of it. What I would like to know is: what are we going to do. All that we have heard is, of course, very interesting. To some members of this House, younger than I am, no doubt it is a piece of valuable information when the government say they will give the matter their earnest consideration. But I have heard this often before. Now that the survey is long finished, is nothing going to be done? What is the difficulty? Is it the absence of money? We have a great deal of money for useless, senseless and silly things, such as the navy.

Some hon. MEMBERS. Oh, oh.

Mr. MONK. Does my hon. friend from Laval (Mr. C. A. Wilson) laugh at that? Does he think that the navy is a more urgent and pressing matter than this?

Mr. CONMEE. It is a matter of emergency.

Mr. C. A. WILSON. I am in favour of both.

Mr. MONK. I do not think the navy is nearly so urgent as this. The hon. minister (Mr. Pugsley) asked what suggestions had not been carried out. Well, this canal idea is one idea of some importance. And the national and free ports that we must have in order to give us a proper place among the nations and that were proposed by the Transportation Commission are of some importance. Another suggestion was the acquiring of running rights for the Intercolonial to the great lakes in order to give increased facilities and regulate present rates. Has that been attended to? Has anything been done in connection with that matter? Nothing whatever.

Under these circumstances, I rose for the purpose of asking whether this is going to be merely an academic discussion. What new method can the government adopt in order to shelve the matter once more? Is there to be a committee or a commission that is going to pass upon the work—the invaluable work—of the Transportation Commission which has never been disowned by the government, but has been kept in the background? Is there any thing further to be done now that we have the report of a special survey party, the cost of which I think amounts to $700,000—certainly over $500,000?—and, as pointed out by my hon. friend from North Renfrew (Mr. White) and others, a complete and thorough report giving the cost and every thing else. What are we going to do? Are we going to allow the Americans to take all this vast commerce away from us, or are we to do that which they dread so much—make an improvement which every one agrees to be urgent and necessary? If the work is to be carried out, when is it to begin? I am sure that my hon. friend from Laval will bear me out when I say that the appropriation cost around Montreal is increasing in fearful proportion yearly. Why should we not begin on that end now? The increase of cost while the work is postponed is going on by hundreds of thousands of dollars every year. The canal may be built in sections, and if the Montreal section is finished soon a great deal of money will be saved. If there is any thing true in this valuable report of the Transportation Commission, it is that, when one-quarter of the cultivatable land of the Northwest is under cultivation and producing wheat, we shall have 800,000,000 bushels a year. The trade of the west will be brought down in ships that can go across the ocean if necessary. They will have return traffic ample for their needs. What is the reason for undue delay? Are we going to have to-day an announcement of the policy of the government and what action it intends to take immediately, or is the question to be shelved again by suggestions such as we have heard, that it is desirable to put it off still further? I say this is a most urgent matter, and I repeat that the suggestion of this Transportation Commission, except in some minor matters, have not been carried out. We must at the present moment spend $100,000,000 if we intend carrying out the suggestions of this commission in respect to the ports, their freedom and their nationalization. We must absolutely spend $100,000,000 on this canal; nobody believes that

it is going to cost less, though my own belief is that it will give a large return in the increased prosperity, not only for that part of the country, but for the whole Dominion, and that the cost may really be called insignificant in the face of that return. And must we not pay for the Transcontinental railway? And is it too much to say that we require $200,000,000 for that? Here we have $400,000,000 of urgent, necessary expenses, if we are going to carry out the policy of economic expansion which is absolutely necessary for us if we are to fulfil our destiny.

Mr. L. A. A. RIVET (Hochelaga). I had no intention of speaking, and should not have done so had not I been prompted by the very partisan speech just delivered by the hon. member for Jacques Cartier (Mr. Monk). In the first place, I desire to congratulate most heartily the hon. member for North Renfrew (Mr. G. V. White) upon the comprehensive, broadminded and nonpartisan manner in which he has explained the resolution which he has placed in your hands. As he has well said, the question under consideration is not in any way a party question, any more than it is a local or sectional question to be treated or considered from a local standpoint It is in that view that I rise to give my hearty endorsation to the views which have been so ably presented by the hon. member for North Renfrew (Mr. White) this afternoon. This is indeed a national question, and the hon. member for Jacques Cartier (Mr. Monk) himself, in his opening remarks, admitted it to be so. Unfortunately, however, in the next breath he put forth arguments which controverted entirely what he had just advanced previously. Why are we confronted to-night with the report of the Transportation Commission, and with the statement that this government has done nothing to carry out any of the suggestions of that commission? Why, the hon. gentleman himself was forced to the conclusion that some of the works which have been carried out by this government were wholly along the lines suggested by this very commission. Now, the hon. member for Jacques Cartier asked what this government had done to advance the great national scheme of the Georgian Bay canal? The answer, Sir, is very plain; this government is the only government which has done any thing to give effect to the ideas which have been advocated for fifty years in favour of the Georgian Bay canal. It is true that this question has been before the public for over half a century. A few days ago I happened to read some of the speeches delivered on this very question by Sir George E. Cartier, and I was pleased to observe that that great statesman, during the whole course of his public career, was one of the greatest champions of this project; and hon. members of this House will remember that Sir George Cartier was a member for Montreal and for Hochelaga. Now, what was done under the late Conservative regime?

Mr. MONK. I did not pretend that the previous government had not been remiss in its duty, but that the question has not become more urgent.

Mr. RIVET. But that is no reason why the hon. gentleman should charge the present government with neglecting its duty, in view of all it has done, as every well informed man knows. When this government came into power in 1896 one of the very first projects it dealt with was the Georgian Bay canal scheme; and the hon. member for Jacques Cartier has admitted that Mr. Tarte was an energetic champion of the execution of this undertaking. Later on, the Transportation Commission was appointed, and I am sure my hon. friend will be willing to give this government the credit for having appointed that commission, and if the recommendations of that commission are now before the country it is due to a certain extent to the initiative of the government in appointing that commission, a commission of eminent men such as the late Robert Reford, Mr. Fry, and others. Surely this is a very important step towards carrying out the great transportation system of Canada.

Now, the hon. gentleman has said that none of the suggestions or conclusions of that commission have been carried out. When I asked him what he thought of the improvements which had been carried out in the port of Montreal he was very indignant and denied that this government was in any way responsible for those improvements, for those great permanent works which may be seen in Montreal to-day, and which have contributed to place it on a first-class footing as compared with other great ocean ports on this continent. The hon. gentleman deplored the state of inferiority of the port of Montreal at present. I differ with him in that respect. I live in Montreal, as does the hon. member for Jacques Cartier. Although he is an older man than I am, and I willingly defer to his grey hair, at the same time I cannot agree with his conclusions as to the state of the port of Montreal.

Mr. MONK. I think my hon. friend is misrepresenting me. I admitted that great and creditable improvements had been made in Montreal, but I attributed them to the work of the commission and to local effort. But I am not aware that the government has carried out the suggestions made in the report of the commission.

Mr. RIVET. If I understood the hon. gentleman correctly, and I think other gentlemen around me understood him as I did,

he said that notwithstanding the great improvements which had been effected in the port of Montreal, that harbour was still in a state of inferiority as compared with the port of New York and others.

Mr. MONK. I never said that; I said that although it had been much improved, still a great many other improvements needed to be made.

Mr. PUGSLEY. The hon. gentleman said it was much inferior to New York.

Mr. MONK. I do not think I said that. I said the Americans were ahead of us in respect to port facilities. The gravamen of my charge was this, that the suggestion of a free national port had not been carried out by the government.

Mr. RIVET. I deny altogether that today the port of Montreal is in a state of inferiority as compared with the port of New York. Why, Sir, it is only recently that the citizens of Canada read in some of the leading organs of the United States, such as the New York 'Herald' and the New York 'Sun,' admissions that the port of Montreal had become a formidable rival to the port of New York and other American ports, not only because of its geographical position, but mainly on account of the permanent works of improvement which had been effected during the last few years.

Mr. MONK. May I ask my hon. friend if he has read Major Stephen's report since his visit to Europe?

Mr. RIVET. I have read every thing that Major Stephens has written, every report concerning the port of Montreal, and every statement that has been published in the Canadian press.

Mr. MONK. Then my hon. friend must admit that his suggestions are numerous enough to show that there is still room for improvement.

Mr. RIVET. If my hon. friend will have a little patience I will show him that notwithstanding the fact that the port of New York may be in a better position, and though there are still many improvements required at the port of Montreal, it is not because of the inferiority of the port, but in order to ensure the supremacy of Canadian trade. Any one who goes to the trouble to read the reports published by the American press will come to the conclusion that because of the improvements carried on at the port of Montreal the American business men have become alarmed, and it is this situation that has prompted them to expend large sums of money upon the extension and deepening of the Erie canal in the hope that we shall never succeed in diverting from their channels the trade which is destined to follow our Canadian route.

Mr. MONK. Why have we not a free port?

Mr. RIVET. I am coming to that if my hon. friend will have a little patience. I am sure he is not referring only to the port of Montreal, because notwithstanding the fact that the port of Montreal is admittedly the most important port in Canada from the strategical and national standpoint, there are other ports which require consideration and which have to be dealt with on the same footing and with the same measure of justice.

Mr. MONK. They are indicated in the report.

Mr. RIVET. Did my hon. friend ever dream of the expenditure which would be entailed if this government undertook to follow the policy laid down by the members of the Transportation Commission and to declare that all our ports, at least all of the ports mentioned in the report, should be immediately made free and national?

Mr. MONK. Hear, hear.

Mr. RIVET. Does the hon. gentleman realize what it would cost this country?

Mr. MONK. Yes.

Mr. RIVET. I am prepared to say immediately that I am an advocate of the nationalization of our ports. I think that is the policy of the future. If we want to place these ports on the best footing possible and secure the supremacy of our national system of transportation, as soon as the resources of this country will permit, we are in duty bound to carry into practice the conclusions of the Transportation Commission. But the hon. gentleman must remember that Rome was not built in a day, that it is utterly impossible, with the best will in the world, to carry into practice every good policy which may be initiated by this government or it may be —because some good sometimes comes from the other side—by the loyal opposition of His Majesty. I say it is utterly impossible to carry into practice these conclusions all at the same time. But, we have started to do something. What about the big dredging works that are now being performed in the ports of the Georgian bay and Lake Huron? What about the dredging work that is being carried on at Halifax, St. John and other ports?

Mr. MONK. Batiscan.

Mr. RIVET. Even Batiscan. What about the River Jesus? If I am not mistaken, in the county of Jacques Cartier?

Mr. MONK. They are making islands there.

Mr. RIVET. What about the improvements which are being carried on in the ship channel between Montreal and Quebec? Does the hon. gentleman think that it is no part of the scheme outlined by the transportation commission? He referred to the testimonials of the shipping federation. Has the hon. gentleman forgotten that in the course of one year the shipping federation passed resolutions in commendation of the policy carried out by the government and particularly by the Minister of Marine and Fisheries and by the Minister of Public Works? If these testimonials mean anything they mean that in this regard the government have not been derelict in their duty and they have done what they were advised to do by the transportation commission. That is all embodied in the report of the transportation commission. The hon. gentleman says that we have not done anything to improve the port of Montreal. I readily admit that the port of Montreal should be made national and free as soon as possible, and I am pleased that the government is able to announce to the country that when the finances of Canada permit such a policy will be carried out. But, I asked: Is the government in a position to carry out such a policy? I am sure the Finance Minister will tell us that he cannot presently do so, but that at some future date, at an early date, I hope, he will be able to announce such a policy. But, is there nothing in the policy of lending money to the port of Montreal? Whenever the Harbour Commissioners of Montreal have come to Ottawa to ask for money they have been well received by the present government and by the Minister of Finance. If I am not mistaken, during the current year, some moneys will be advanced to the commission in order to enable them to carry on some improvements urgently needed in the port of Montreal. Besides, is no credit to be given to the government for the change effected three years ago in the administration of that port. If at the present time, the port is managed by three able business men acting directly under the control of this government, and doing a splendid work, it is due to the initiative taken by the government in making the change and making a judicious selection of the commissioners. We contemplate the building of the Georgian Bay canal, and the question that one might reasonably ask is where the traffic passing through that canal will eventually go? The only answer to that question, I think, is that the port of Montreal will be in a position to handle, notwithstanding what may be said by the hon. member for Jacques Cartier, any traffic that may be carried by the boats passing through the Georgian Bay canal. During the last few years we have carried out a number of improvements in the port of Montreal and we contemplate some other improvements. I persist in maintaining that the position of the port of Montreal as compared with that of American ports, on the admission of American business people, is not one of inferiority, a proof of which is the fact that we are able to compete successfully with New York as far as the carriage of grain is concerned. I have spoken perhaps too long but I wanted to lay before this House some facts which are not in accord with those mentioned by the hon. member for Jacques Cartier. I may say that there should be no difference of opinion in this House or in the country at large as far as the principle of building the Georgian Bay canal is concerned. Now, the hon. member for Jacques Cartier has put his ultimatum to the government. What are you going to do about it? Are you going to build that canal immediately? If I remember correctly, hon. members opposite are not over zealous when they come to speak about the expenditure of this country and not long ago we saw them, one after the other, standing up in this House and criticising the bulk of the expenditure, saying that an expenditure of $100,000,000 was something outrageous, was perfectly scandalous and should not be tolerated any longer by the people of this country. My hon. friend is not consistent, and he will let me tell him that consistency is not on this question a part of his policy. The hon. gentleman is ready to advocate a larger expenditure. I believe that all of us are anxious to spend more money along those lines when the finances of Canada permit to do so. But that does not justify the hon. gentleman to stand up and make the partisan speech which he has delivered this evening. In fact, I believe his is the only speech from a party standpoint which has been delivered to-day, and it is a bad example for an old member like my hon. friend (Mr. Monk) to set to the younger members who, like myself, are endeavouring to approach every question from a national standpoint and to solve them in the way which the national interest demands. I venture to express the hope, Mr. Speaker, that the construction of the Georgian Bay canal will be begun as soon as possible by the government. As I have said this Liberal government is the only government which ever did anything towards the solution of this question, and the report of the engineers now before parliament and the country is a practical step towards the execution of that project. It is true the undertaking will involve a large expenditure, and my hon. friend from Jacques Cartier has ventured to express the idea that the building of a navy will be an obstacle to the building of the Georgian Bay canal.

Mr. MONK. Hear, hear.

Mr. RIVET. My hon. friend from Jacques Cartier is certainly a very patriotic statesman, but if he will kindly carry his patriotism to a little broader extent he will admit that it is perfectly useless to equip ports, develop water-ways and dig canals if you do not provide the necessary protection for these national works, because in the emergency of war our national ports of Montreal, Halifax, Quebec and St. John, or any of the great channels of trade which we are constructing at such large cost would be at the mercy of any hostile fleet and would become perfectly useless. My hon. friend (Mr. Monk) must admit that these two things go together, and that if Canada requires public works, it requires protection for these works.

Mr. MONK. Is my hon. friend in favour of the building of the Georgian Bay canal before the navy, or after?

Mr. RIVET. I am in favour of building both, and I would like to hope that the hon. gentleman (Mr. Monk) could make the same statement. Besides, we will have an opportunity of discussing the navy in its proper place, but in the meantime I express the hope that if the Georgian Bay canal is built, instead of having Dreadnoughts coming through its locks, we will have large vessels carrying the products of the west and adding to the prosperity of the country.

Hon. WM. PUGSLEY (Minister of Public Works). I wish to make a few remarks, not with a view of speaking for the government, because as everybody seems to be of the opinion that the construction of this canal would be not alone in the interests of the Ottawa valley, but in the best interets of the whole of Canada, the question is as the Prime Minister said not long ago, one specially of finance, and it would rather be for my hon. friend the Minister of Finance to speak for the government upon such a question. As to the desirability of constructing this canal at as early a date as possible, I think there are no two views entertained by members of this House; at all events no two views have been expressed by those who have spoken on the question. It seems to be agreed on all hands that at as an early a date as possible it is desirable in the interest of the country that this important undertaking should be commenced. But, what I rose to speak of was in reference to the surveys which have been made through the engineering staff of the Department of Public Works, over which I have the honour to preside. I desire to bear testimony to the very great care and very great ability which have been shown, not only in the engineering work itself, but in the preparation of the reports and the plans which have been submitted for the consideration of this House. I am sure that every one will agree that the engineers have performed their duties in the most praiseworthy manner. They have shown they are men of ability who were well qualified to undertake work of this character. My hon. friend from Jacques Cartier has intimated that there has been delay. Now, Mr. Speaker, I entirely repudiate that idea. In considering the question of undertaking a work of this enormous magnitude, which will involve an expenditure of at least $100,000,000, it was but the part of prudence that the government should engage the services of the very best engineers available. It was the part of prudence that the most careful examination should be made of the route, that in the first place it should be determined with the utmost care that the canal was feasible, that it would be possible to feed the locks upon the higher summit levels dividing the Ottawa river system from the French river system, and also having determined upon the feasibility of the canal system, that then the question of the cost should be got at with the very greatest possible accuracy. All this takes time, and I do not believe there has been a day wasted in the performance of the engineering work that has been entrusted to the Department of Public Works. It would have been impossible for the government to have undertaken this work before the present time, but we have now the report before us, and it will be the duty of the government, I would suppose, to give all reasonable and all fair consideration to the question as to when it would be proper that this work should be undertaken. One hon. gentleman has made the remark that he is of the opinion that this work ought to be undertaken by the government as a government work, the canal to be owned by the government, and I suppose to be free for the use of the public. Now, if I were to express my own individual opinion I would say that I think there are two sides to this question. I think there is a very great deal to be said in favour of company ownership of this canal, and that if we were to discuss the question perhaps strong arguments from the standpoint of the public might be urged in favour of company construction and company ownership as can be urged in favour of government ownership. So far as I am personally concerned, I do not wish to be understood, at this time at all events, as committing myself in favour of government ownership of the canal. One reason which has caused me very much to hold that a great deal can be said in favour of company ownership is that this canal is going to shorten enormously the distance by water between the ports on the western shores of the great lakes and the city of Montreal, and if the farmers of the

Northwest are going to derive that benefit which they ought to derive and which we hope they will derive from the construction and operation of this canal, it seems to me that it is desirable that the government should in some way have control of the tariff which is to be imposed by the owners of steamships upon the farmers of the Northwest, who would be sending their produce by vessels which pass through this canal. If there is company ownership, if the government will have as it would have, the right to control the rates which would be charged by the company, and if the government were to insist that the company which builds the canal shall also operate lines of steamers and barges between Fort William and Port Arthur and Montreal, and will control the tariff of these steamship lines and these barge lines which will be operated by the company, I think the government would be able to exercise an influence and a control in the interest of the producers of the west which it would not be possible to exercise if the canals were owned by the government, and if there was no control over the steamship lines and the barge lines which would be operating the canal system. That is one argument in favour, it seems to me, of company ownership. There is another argument in favour of company ownership, and it is that the building of this canal is going to develop an enormous amount of water-power. You will find at page XX of the report that the engineers are of the opinion:

> That with a storage system as planned, and the tributary basins thereto required for the navigation project, a reliable water-power supply is secured at various dams amounting to 1,000,000 horse-power, which can be developed for about $50 per horse-power.

If this canal were to be constructed by a company and the government were to assist the company by the guarantee of bonds or otherwise, it could be provided that the company must own and control the electric power which would be developed. The government would be able to exercise control over the company so far as the transmission and the utilization of that power would be concerned; they would be able to control the charges which the company would make for that power and that available water-power alone, one million horse-power, which would at least be worth $5 per year when it was fully utilized, would in the future more than pay all the interest charges upon the bonds which would have to be issued for the purpose of securing the construction of the canal. I think if it were built by a private company it would be possible to control and keep within the control of the company and through the company under the control of the government, this enormous water-power to such an extent as would materially lessen the tolls which would be charged in respect to the use of the canal, and as would go very far towards meeting the annual interest burden on the bonds of the company. I do not say that I have made up my mind upon this question, but I simply desire to express the view that there is a great deal to be said in favour of the government securing the building of this canal, when the work is undertaken, by means of a strong company. The hon. member for Renfrew (Mr. G. V. White) who made a most admirable speech in submitting the resolution, intimated that if the government is not prepared to at once undertake the construction of this canal as a government work it ought to allow a company to undertake the work. If there were a company prepared to undertake the work without government assistance I would heartily concur in the view presented by my hon. friend. But do not let him be deceived, do not let the country be deceived in regard to that. The papers will show that there is no proposition from any company to-day offering to construct this work without government assistance; the proposals which have been made involve assistance by the government to a very large amount. Therefore the government, when it decides the time is ripe for the undertaking of this work, so far as regards any proposals which we have before us at present, will have to decide between engaging upon this work as a government work at a very large expenditure or incurring a very large obligation in order to induce a company to undertake the work. In either case the country will be involved in a very large liability, although I do not for a single moment undertake to say that the work is not of such magnitude and importance and that the work will not mean so much for the development of the Ottawa valley and our western country as to entirely justify the government in assuming the obligations which they will be called upon to assume, large though they may be.

Would my hon. friend intimate what papers he wishes to have brought down, as this project dates back for many years and very few papers have been brought down?

Mr. G. V. WHITE. My motion calls for papers not already brought down.

Mr. PUGSLEY. My hon. friend might send me a memorandum.

Mr. MONK. I understood the Minister of Public Works to say that the Minister of Finance would announce the policy of the government.

Mr. PUGSLEY. I said if the policy of the government was to be announced it would not properly rest with me but rather with the Minister of Finance.

Hon. W. S. FIELDING (Minister of Finance). I think the Prime Minister (Sir Wilfrid Laurier), has on more than one occasion expressed the view of the government in regard to this great work and I can hardly think my hon. friend (Mr. Monk) is serious in asking the Minister of Finance to make any new announcement of policy. I cannot claim I have given as close personal attention to the matter as my hon. friend and others who have addressed the House, but I frankly say that the project of a deep waterway from the great lakes to Montreal, an all-British, all Canadian canal, has always seemed to me to be a most attractive proposition. It is attractive, commercially, it is attractive from the point of view of military tactics and naval defence, which has been half seriously referred to. I think from every point of view the whole project is a fascinating one, and far from throwing cold water on it, it is my desire to be counted among the supporters of that great enterprise.

While the Minister of Finance is obliged sometimes to take a rather cold-blooded view of some of these fascinating projects, we have had great enterprises to handle in the past. Hon. gentlemen opposite have sometimes told us we were spending too much and straining the credit of Canada to the danger point. I am glad to know that they did not mean that very seriously, because if they felt that we had been straining our credit to the danger point in the past the hon. member for Jacques Cartier would hardly ask us to undertake a new expenditure of three hundred or four hundred millions of dollars. The fact that he is ready to speak of this two or three or four hundred million dollars so lightly is in one sense gratifying, because it enables us to know that he has an abiding faith in the credit of Canada. However, the best way to maintain one's credit is not to make too many demands upon it. We have had very great success in our enterprises that called for money in the way of loans and guarantees, &c., and I have no doubt that with the tremendous expansion of business, which we are all now so pleased to observe, this great growth of Canada, we shall be able to handle these great enterprises in the future just as we have been able to handle great enterprises in the past. At the present moment we have rather heavy burdens upon us, and I am perhaps more anxious than some hon. gentlemen who have spoken to-night to think of the financial side. And so, while I would give, on behalf of the government, my cordial sympathy and support to this movement and look forward to no distant day when it shall be seriously taken up, I say frankly I do not think it should be pressed to a decision at the present moment. It is one of the big things of Canada which we must do and do at an early date, but if we are asked to undertake it immediately, I frankly say that I do not think it is good finance, I do not think it is good politics, I do not think it is a wise project. I am sure my hon. friend from North Renfrew (Mr. G. V. White) who has given us so much valuable information on this subject, not only to-day, but in former sessions, will appreciate the position we take when we say that, desirable as this enterprise is, grand as it is, fascinating as it is to us all from these many points of view, no harm will come if we have to go a little slowly in the matter and see that our financial position is strong before we undertake this new and heavy burden.

Mr. SPROULE. The minister has suggested that the hon. member (Mr. G. V. White) should give him a memorandum of the papers he desires. I do not see how the member can be expected to know what papers he wants. He certainly, I presume, desires to have all not already brought down. I understood the Minister of Public Works to say that very few were brought down. My impression is a good many were because these papers have been moved for frequently in this House. There may be many which the hon. gentleman desires, but of which he knows nothing, because they are papers passed between the government and certain parties interested, and these I presume he desires to have.

Mr. PUGSLEY. Unless he and I disagree, everything will be brought down, but I am sure we shall be able to agree.

Mr. SPROULE. That would be much better, because I am sure the hon. member could not give a list of just what he wanted.

Motion agreed to.

On motion of Mr. Fielding, House adjourned at 11.35 p.m.

HOUSE OF COMMONS.

TUESDAY, February 15, 1910.

The SPEAKER took the Chair at Three o'clock.

THE NAVAL SERVICE OF CANADA.

The House resumed the adjourned debate on the motion of Sir Wilfrid Laurier for the

second reading of Bill (No. 95), respecting the naval service of Canada, the proposed amendment of Mr. Borden thereto, and the amendment to the amendment of Mr. Monk.

Mr. E. M. MACDONALD (Pictou). Mr. Speaker; we are to-day resuming the debate upon one of the most important questions that the parliament of Canada has had to deal with in recent years. After forty years of national life, and after a century and a half of connection with the motherland, Canada is considering seriously what part she will play in the history of naval development. And, in deciding what Canada's position should be at this time we are naturally confronted with the problem as to whether we should do anything, or nothing. If we follow the policy of my hon. friend from Jacques Cartier (Mr. Monk) Canada would do nothing, Canada would stand absolutely with her hands tied, unwilling to go forward and powerless to recede. But that is not a position which a great country like ours should take. After forty years of ever widening commerce, forty years of ever increasing development, on the northern half of this continent we have reached a period in our history when we are compelled as a matter of self respect to assume those responsibilities which come to every young and growing nation. It would be just as impossible for Canada to refuse to take her position to-day in regard to naval defence, as it would be for any of our great cities to decline to provide a police force for the maintenance of peace and order within their borders. And, Sir, as we owe a duty to our country in relation to its internal affairs, so also do we owe a duty to the empire in this respect. We know that a few years ago Britain withdrew from the North Atlantic the squadron that had guarded her interests and protected her supremacy, and for four years past neither on the Atlantic nor on the Pacific coast is there to be found a naval squadron for our protection. The mother country left to Canada the duty of supplying that vacancy, and, Sir, that is the duty which we are assuming to-day when the government submitted this measure to parliament and asked parliament to adopt it.

I suppose it is hardly a matter which needs to be argued that Canada ought to do something, although the hon. gentleman from Grey (Mr. Sproule) rather intimated that it was not necessary that Canada should do anything at all. There may be throughout the Dominion some men who think that because we have had no trouble in the past, and because England has been a protecting mother through all the years of our natural career, it is neither necessary nor desirable that we should make expenditure on a navy. That however, is an ignoble plea in the eyes of British freemen; it is entirely out of touch with the advancement and development which Canada has achieved. Recognizing our status among the empire's nations, our government has come to parliament with a proposal to make a beginning in the direction of naval development by providing for the erection of a Canadian naval college in which our young men can be trained in those arts which fit them to become naval officers, and for the construction of 11 ships of different types in Canada—in Canada—in which will be enlisted and trained young Canadians who will be able to go forth and fight, not only the battles of this Dominion, but the battles of the empire as well, if time of stress should require it. This, Mr. Speaker, is essentially a policy of Canada for the Canadians. There was a time in the olden days when our brethern opposite arrogated to themselves the claim of being the only political party that ever propounded anything that was good for Canada. Away back in 1878, when they formulated the national policy and put on a high tariff which they said was intended to make this nation develop industrially and in every other way, when some one suggested that possibly such a policy might interfere with our connection with Great Britain, these doughty so-called loyalists at once replied: So much the worse for British connection. And, Sir, when Canada in her march onward and upward, says that after forty years of industrial life, forty years of the greatest development that any colony or dependency has ever seen, she proposes to inaugurate a shipbuilding industry: does it lie in the mouths of these gentlemen who in 1878 declared: so much the worse for British connection, to now set up a hue and cry about loyalty. Yes, Mr. Speaker, the object of this government in proposing this policy is that this navy is to be constructed in Canada, by Canadian workmen, in Canadian workshops, and that it is to be a Canadian navy primarily for the defence of Canada's interests. We have had quotations from gentlemen opposite in regard to what went on at the different imperial conferences. My hon. friend from North Toronto (Mr. Foster) who distorted and misrepresented almost every quotation he cited, forgot to tell the House what Lord Selborne said in 1902. Speaking at the conference of that year, discussing the various phases of the spirit which the colonies should display in their relations to Great Britain, he said—and I notice that my hon. friend the leader of the opposition (Mr. Borden) quoted from this statement of Lord Selbourne, but failed

to inculcate the lesson which Lord Selbourne desired to teach:

The British empire owes its existence to the sea and it can only continue to exist if all parts of it regard the sea as their natural source of existence and strength. If our brethren beyond the seas will undertake a large share of naval burden, well and good. But I regard it as of even more importance that they should cultivate the maritime spirit.

That is the lesson Lord Selbourne wished to inculcate in speaking of the colonies: Give us whatever contributions you like, in whatever form you like, but go on and develop the maritime spirit and teach your young men how to navigate ships, so that in times of stress and storms, they will be of use, not only to the colonies, but to the British empire. In the olden days when wooden ship-building was in vogue, the English flag was found floating over Canadian bottoms in every sea, officered by sons of Canada, but with the decadence of wooden ships all that has disappeared; and my hon. friend the leader of the opposition, coming from the maritime provinces, knows the decadence that has occurred in these provinces in maritime interest and spirit, and he knows, if no one else on the other side does, the force and aptness of Lord Selbourne's advice, that what we want in Canada above all else is to cultivate the maritime spirit. But how much of that spirit are you going to cultivate by sending $25,000,000 Canadian money to the home government? A splendid way that would be of inculcating maritime spirit in the hearts of our young men who have aspirations for a sea-faring life. We would be practically telling them: We do not want you to sail Canadian vessels, but we want to send our money to be spent in British shipyards among British workingmen and British sailors and not a dollar to be spent in Canada among Canadian workingmen and Canadian sailors. That is the policy of my hon. friend the leader of the opposition.

But some hon. gentleman will tell you that this business of building steel ships is one which Canada is utterly unable to deal with. My hon. friend from North Simcoe (Mr. Currie) last year, who usually has a splendid fund of information on almost every subject, said in this House:

Now, carrying out the idea first involved in naval defence for Canada, I do not see any reasons why we should not immediately institute some system of naval defence along the lines of torpedo boats, or torpedo destroyers, and destroyer cruisers, which would be invaluable to us in case of war.

My hon. friends opposite, who talk about this tin pot navy, had better go and reason with this gentleman from North Simcoe:

A great many members suggest or imply that it would be impossible for us to build these at home. Now I do not wish to be considered local in any way, I have always taken a national or Canadian view of every subject; nevertheless, I may be permitted to say that within the riding which I have the honour to represent there is a shipyard wherein they have launched ships over 500 feet in length, which is said to be the length of the 'Dreadnought.'

Then he went on to say:

Ship-building is a splendid enterpise, an enterprise that gives employment to a great number of men, and it is the greatest national enterprise that a country can have.

That, Sir, is true doctrine and that is what this government wants this country to do:

We should undertake the work of building carriers because the money that is paid to foreign carrier to convey our products from Canada to Great Britain and other countries is a large sum which we should retain in our own country.

Good doctrine; splendid doctrine! I am sorry to see so many of my hon. friends opposite dissent from it, but as the hon. member for South Ontario (Mr. Fowkes) has pointed out, they have forgotten every tradition their old chieftain, Sir John A. Macdonald, taught them. Their motto no longer is: 'Canada for the Canadians,' but it is: Do not spend Canadian money in Canada but spend it in any other place by preference. The hon. gentleman (Mr. Currie) went on to say:

As I pointed out we should immediately assume the position of establishing a local defence of our own. Our local defence should consist of torpedo boats and destroyers, and they would convoy our merchant ships, in case of war, to England and save them from the attacks of cruisers.

I think, said the hon. member for Simcoe (Mr. J. A. Currie) we are all presumed to be at one on that question. Why did every one presume that? If our hon. friends opposite were not at one on that question, if they were not in accord in believing that the time had come for Canada to begin her own navy and build it at home, then all they said was empty vapour. In that case the speech of my hon. friend the leader of the opposition (Mr. R. L. Borden) was a mere figment of the imagination, it was nothing but sound and fury, it had no particular significance; and as for my hon. friend from North Toronto (Mr. Foster), who can argue just as well on the one side as on the other, of course no one holds him responsible.

Why cannot we begin in Canada to build ships? Why, Germany, which these gentlemen hold up as the great menace to British supremacy to-day, only began to build steel ships some twelve years ago. If Ger-

man can build steel ships, if she can bring her naval power to such a height in twelve years that she is able, according to these hon. gentlemen, to menace the whole of the British empire, surely in five or six years, we can fall into line and build a Canadian navy. Previous to that Germany had her ships built in England, but she afterwards set to work and began to build the navy which we are told is now threatening the supremacy of England. Thirty years ago the steel process was first introduced. In 1877 not a single ship of steel was built in England's shipyards, but in ten years, over a million tons were built, under Lloyd's survey, in the different shipyards in England. Can we not make a beginning in Canada? Are we to be told that Canadian brain and Canadian industry are not equal to those of other nations? That is what hon. gentlemen opposite seem to think. Why, the whole business of making plates suitable for the construction of steel vessels is a science which has been developed in the last thirty years. Previous to that, iron plates were used; and by the various processes since developed, a saving in the cost of building a ship by the construction of steel plates, has been effected to the extent that you can now build a ship of 3,000 to 4,000 tons burden much cheaper than you could an iron ship of the same tonnage formerly. Steel plates to-day cost one-quarter what they did in 1878. There is nothing to prevent our starting shipyards in Canada in which to build these ships. It is a confession of weakness, a lack of patriotism, an indication of want of confidence in the possibilities of this country, to pretend the contrary, and the stand taken by hon. gentlemen opposite in that connection indicates how low the Conservative party have fallen from the high position they once claimed. I hold in my hand information furnished me by a responsible authority in Nova Scotia to the effect that right in the county I have the honour to represent a vessel has been built of steel plates which is navigating all over the world to-day—a vessel of 700 or 800 tons. And to the authority to which I refer, a request came for information from a business firm in the old country, desiring to know what were our possibilities in that direction, whether machinery castings could be made in this country, and they were told that these could be procured, not only in eastern Canada, but in the west. As to hydraulic and electric fittings, Canadian workshops could supply these. As regards labour, we have in Nova Scotia alone 4,500 skilled workmen in iron and steel connected with Nova Scotia industries. All you want is skilled mechanics, carpenters and blacksmiths, who are to be found in the various industrial centres throughout the country. And if there be anything which we require to import, it can be brought here at the rate of from five to seven shillings per ton. We have, in the maritime provinces, coal illimitable in its extent, which is essential to the establishment of any industry of this kind. We can make Canadian maple, oak, and pine, and use it in the construction of our vessels, and if we want pitch pine, green heart and other products of that kind we can get them either in western Canada or in the southern states. In iron and steel we have in the Dominion Steel Company an industry which at this moment is prepared to enter on the manufacture of steel plates one hundred and twenty inches in width, which is quite sufficient, according to all statistics, for all requirements in the construction of a vessel. Then we have the Nova Scotia Steel Company, and the Sault Iron Works, which are capable of diverting their energies in the direction of providing material of this kind. There is one other material factor in the construction of war vessels. Where do England and Germany get the nickel in order to make the nickel and armour plate which is essential? There is practically only one place in the world, and that is right here in Canada. At Sudbury to-day, the works are producing Morrel metal which is being used in the construction of the United States navy, and if England, Germany, or any other country wants material of that kind in order to develop their industries, they have to come to Canada to get it, and yet these gentlemen tell us that the construction of ship-building works in Canada is an impossibility, that we ought not to undertake any of these things, that everything should be thrown aside and we should send $25,000,000 across the ocean, out of Canada and borrow it, because that is the only way in which these gentlemen can get it, when we could spend every dollar in the next ten years among Canadian workmen and for Canadian labour. But, Sir, the inauguration of the ship-building industry would mean the doing away with the necessity for bounties for ship-building which have been advocated for such a long time. The inauguration of the construction of Canadian ships would mean the development of an industry which would mean eventually the employment of Canadian men in Canadian shops; it would mean in addition to that, and above that, the cultivation and development of that naval spirit, that maritime spirit, which a navy creates the world over, and which is absolutely essential if you are going to have anything successful in the way of a navy.

Then, we want to have a naval college. I wonder if the hon. the leader of the opposition (Mr. R. L. Borden) is opposed to a naval college? By his resolution he did not

want any Canadian navy or Canadian anything. That is his position, and yet this government are proposing to construct a naval college in his own county. I suppose he will go to Halifax and venture to tell the people there that he will oppose the construction of such a college. I wonder if he will. Why should we not have a naval college? In Canada, thirty years ago, there was inaugurated the Royal Military College at Kingston, and what splendid service it has done for this country. The young men who have gone through that college and equipped themselves in military science have done credit to Canada wherever they have served under the British flag and wherever they have fought the battles of the empire. Do you mean to tell me that the distinction that is brought to Canada by the achievements of Sir Percy Girouard, a graduate of that college, is not something of which Canada should be proud? Is it not something that Canada taught the other numerous young men who are identified with the various forces of the empire? When these people talk about Canada doing nothing for the empire, they forget the boys and young men of Canada who have died on the battle fields of India and South Africa, who have been educated by Canadian money at the Royal Military College. These are the men who have done something for the empire, and whose death gives back to these critics the answer to the complaint which they make, solely and wholly on account of their partisanship. Do you mean to tell me that the policy of these gentlemen is a correct policy? Should we have sent to Sandhurst and the military schools of the old country the boys and men who went from Canada to fight the battles of the empire, or should we have trained them, as we did, in Canada? I wonder if the leader of the opposition (Mr. R. L. Borden) is opposed to that naval college. I would like to see him go to his constituency, I would like to see him so anxious to have a plebiscite that he would resign his seat and go to Halifax and ask the electors if they will vote for him if he is opposed to a naval college. Then we want to have dockyards in Canada, probably at Halifax. My hon. friend the leader of the opposition (Mr. R. L. Borden) does not want them either, and I would like the people of Halifax to understand right here and now that their representative in this House has moved a resolution declaring that we shall not have a Canadian navy or a Canadian naval college or Canadian dockyards, and that that is the policy of that hon. gentleman.

Is the policy of this government a correct one for Canada and the empire and has it been considered and approved during the years that have gone? There is the history of events in regard to that. In 1902 Sir Wilfrid Laurier at a conference in London intimated what the policy of Canada was and let me remark that my loyal and enthusiastic friend from North Toronto (Mr. Foster) who bubbled over with enthusiasm and patriotism the other night, as he does at all times when it suits the interests of the Tory party to do so, was present at a conference at Ottawa in 1894 and judging from the records of that conference he seemed to make a speech every day on some subject and yet my hon. friend, when his government was in power and he was the direct representative of that government at that conference, never mentioned a single word about helping the weary old Titan across the sea. Not a word said he. The matter never came up until the Liberal party came into power and it was not until Sir Wilfrid Laurier went home in 1902, and the question came before the Imperial Conference, that he intimated there in the presence of the empire that Canada was going to adopt the policy he is putting in force to-day, the policy of the establishment of a naval force in Canada. That is the policy he then announced, that is the time it was inaugurated. Have we heard nothing about it since? To hear hon. gentlemen opposite you would think no one had heard anything about that policy since 1902, until the premier spoke in the House a few weeks ago. There was a meeting of the Chambers of Commerce for the empire in Montreal in 1903. The question was discussed there, a resolution was moved, an amendment was moved, and there were certain utterances. The leader of the opposition (Mr. R. L. Borden) knows Mr. George E. Drummond. We all know him pretty well. Mr. Drummond made a speech upon that occasion. Did he stand up and say that the correct policy for Canada was to send a contribution to borrow $25,000,000 upon the credit of Canada, not take it out of revenue, but borrow it, there was no other way of getting it, send it across the sea, leaving Canadian industry, Canadian maritime spirit, Canadian development, and all that, to lie quiescent? Was that the policy of that gentleman? Let my friends hear what he said:

> I am convinced, sir, that our contribution to imperial defence should be based upon the idea of relieving the central authority of all cost of defending Canada, and I hold that in undertaking this duty a magnificent opportunity will be afforded our government and people to establish in Canada the enterprise of ship-building to foster the production of armour plate (for which, with our wealth of nickel and iron, we are equipped by nature in a very exceptional way, to encourage, for instance, among other new industries the production of acetone (base for cordite) which we can, on account of our forest wealth, produce probably more cheaply at our Canadian charcoal by-products plants than

it can be produced anywhere else in the civilized world.

In establishing and developing such enterprises we will at the same time be making Canada, in the matter of appliances and ammunitions of war, a base of supplies on this North American continent, which in time of war on either the Atlantic or Pacific would be of incalculable value to the whole empire.

These are the words of Mr. Drummond, who, if I mistake not, is an enthusiastic supporter of my hon. friend (Mr. R. L. Borden) speaking in Montreal in the Chambers of Commerce of the empire, in 1903. And he quoted in support of his views Sir John C. R. Colomb, the distinguished naval authority. Well, Sir John C. R. Colomb, on the occasion to which I refer, said:

The truth is our present policy of centralizing the manufacture and supply of appliances and munitions of war to meet not merely naval but military requirements of a world state, is wholly indefensible and fraught with peril.

And what was the resolution adopted? Some of the gentlemen there desired to pass a resolution in favour of contribution, but the collective wisdom of the business world of the empire discarded the contribution theory, and all concurred in the following, which was moved by Col. Denison of Toronto and seconded by Mr. Masson of Montreal—both, I believe, political friends of hon. gentlemen opposite:

The word 'contribute' was struck out.

That this Congress hereby affirms the principle that it is the duty of the self-governing colonies to participate in the cost of the defence of the empire—but the colonies claim the privilege of keeping their own initiative as to the nature and help which they agree to offer.

That was the policy agreed upon by the Chambers of Commerce of the empire in 1903. Is not that a proper and sound policy?

What was the next step? In 1907, the conference took place. Now, one would think to hear hon. gentlemen opposite talk that the official wisdom of the admiralty was all directed in the line of telling Canada: If you do not send a contribution, do not send anything. What is the good, they ask, of providing a 'tin-pot navy'?—money is what we must send—tribute. My hon. friend from Jacques Cartier (Mr. Monk) revolts at the tribute idea, but what the leader of the opposition (Mr. R. L. Borden) wants to give is tribute. And that is what the hon. member for North Toronto (Mr. Foster) wants to give—tribute. But that does not appear to be the policy of the British naval authorities. This is what Lord Tweedmouth said in 1907:

He states that he did not desire to press for further contributions of men or money but cordially welcomed the co-operation of the colonies in the form most agreeable to themselves.

To-day, when my hon. friend (Mr. R. L. Borden) quibbles and twists and worries his soul in order to try to get himself into an attitude of opposition to the government measure, he tries to convey the impression that the policy of the government is not in accordance with the resolutions of 1907. And the last word of Lord Tweedmouth on the subject was as follows:

It was entirely a matter for the colonies how far they would assist by subsidy and how far by local defence, and that what His Majesty's government desired was the cordial help of the colonies in the most effective manner and in the form most acceptable to the several dominions beyond the seas.

There is no intimation there that a contribution of money was the only thing the British government wanted or that the people of Great Britain thought the colonies ought to give. On the contrary, the colonies were left absolutely free to do as they pleased, having regard to their different conditions.

My hon. friend, last year, in an eloquent speech cordially supported the resolution which was, let me say, the mandate which my hon. friends the Minister of Militia (Sir Frederick Borden) and the Minister of Marine (Mr. Brodeur) took with them when they went to England. My hon. friend from North Toronto (Mr. Foster) talked the other night about these representatives of ours refusing to offer a fleet unit in the Pacific and about their failing to do this, that and the other. But these representatives of Canada were there with strict instructions—absolute, fast instructions. The first instruction which they had to convey to the home authorities was one given by my hon. friends opposite—that the first thing they should argue for and the last thing they should say was that Canada was going to provide her own navy and that Canada would not give contributions because they were bad things. It was the unanimous resolution of this House that Canada should provide her own navy. What, then, could these gentlemen do? They could simply ask the imperial authorities to indicate how best a Canadian navy could be provided that would work in sympathy with the imperial authorities.

There have been occasions when a charge of lack of consistency would necessarily have very little force. For instance, in the old days, in regard to Gladstone, who entered parliament as a Conservative and came to the end of his journey as probably one of the greatest Radicals of his time, a charge of inconsistency would have been out of place. But when a public man performs somersaults of opinion; when a public man who is supposed to have a sense of responsibility deliberately stands before

parliament and before his country and declares a certain policy to be the wise policy, when he keeps on reiterating the same opinion on every possible occasion on which he appears in public, either in this country or in England, and sticks to the same story when he first comes back at the opening of parliament,—and then suddenly changes, the charge of inconsistency becomes a serious one, and that public man must show some good cause if he is not to be condemned as guilty. What did the hon. gentleman (Mr. R. L. Borden) say last session?

I am entirely of opinion, in the first place, that the proper line upon which we should proceed in that regard is the line of having a Canadian naval force of our own.

That was last year. This year he moved a resolution which declares that he does not want a Canadian navy:

It was pointed out in discussing this question that Australia in providing a force of that kind would provide a force which it would be difficult, if not impossible, for Great Britain to send across the seas, and that in thus protecting themselves they were providing the best possible force for the protection of the empire. So I am at one with the Prime Minister as far as this is concerned. I am at one with him in this respect also, that I think that an——

And let us mark what he said.

—that I think that the expenditure of money designed for that purpose ought, in the main at least, to be under the control of our own parliament, and that by making an appropriation of that kind and attending to the defence of our own coasts, by co-operation and co-ordination with the imperial naval forces, we would be rendering a real service in the defence of the empire, and we would be doing our duty not only to Canada but to the empire as a whole.

These are splendid sentiments. Did he mean them? I would like to know whether he meant them or not. Was he trying to fool his own party and the people of Canada when he uttered these words? Why did he take that position declaring that he was in favour of a Canadian navy, first, last and all the time? Later on, in the same speech he said:

I do not desire to say anything more on this subject. I believe that the defence of our own shores and the protection of our own commerce is due to the self-respect which should fill the heart of every man in this country——

I ask my hon. friends on the other side who have any Canadian ambition, who are proud of the fact that they are Canadians —can these words of their leader fall without response upon their ears?——

—that the defence of our own shores and the protection of our own commerce is due to the self-respect which would fill the heart of every man in this country. You say that we may rest contented to depend for our naval defence on Great Britain. Well, if we have assumed the status of a nation in one respect, shall we adhere to the status of a Crown colony in other and still more important respects?

I wondered, when my hon. friend from North Toronto (Mr. Foster) was talking of the 'rag baby of autonomy' the other night, what he thought of the expression of his leader that this country might be reduced to the status of a Crown colony. And the fact that we failed to undertake these duties in regard to naval development and merely give a contribution would mean that Canada would sink to the status of a Crown colony. Yet that policy to-day is the policy of my hon friend, the policy that Canada should be demeaned, that Canada should sink away below the other colonies of the empire from the premier position which she now occupies, away back to the standard of a Crown colony. Well, my hon. friend went down to Halifax to his own constituents, and told them that he was in favour of a Canadian navy, and his newspaper in Halifax reports him as follows:

Mr. Borden lifts the question of national defence above petty partisanship.

Wasn't it splendid?—lifting the question above petty partisanship. Well, if that phrase means anything, it only means that my hon. friend at the present time has got it down to the level of party politics. I think, and I desire to say this again, if my hon. friend is a stickler for constitutional usage he ought to resign his seat and go back to his constituents and tell them that he has changed his mind, that what he regarded, when he was in England, as the worst form for Canada, he now regards as all right; after making such a volte-face as he has done on this question, going down to his constituents and telling them that he was for a Canadian navy, and six months afterwards discarding the whole thing and saying: We don't want a navy, we want to send $25,000,000 to England, and borrow the money to do it. This is what he said last summer:

The House of Commons last session laid down a certain policy touching naval defence in which both political parties united. It may not have suited the aspirations of all Conservatives.

So, then there were some gentlemen on the other side last year who did not want a Canadian navy, These gentlemen were not powerful enough to throttle him last year, but they have become powerful enough in the meantime to drown the voice with which he spoke last year.

But it seemed our bounden duty to place, if possible, above the limits of partisan strife, a question so vital and far reaching, and to attain the standard which has for many years

governed both political parties of Great Britain with respect to foreign relations.

That is a splendid sentence.

How the present administration will work it out, the policy which was outlined by the resolution to which I have alluded, remains to be seen. One governing principle at least should control, namely, that out of our own materials, by our own labour, and by the instructed skill of our own people any necessary provision for our naval defence should be made so far as may be reasonably possible.

Then he went on to flatter the aspirations of his constituents.

In this connection may we not hope that there shall be given a stimulus and encouragement to the ship-building industry of Canada which has long been lacking.

Then this friendly newspaper says:

To-day should be Nova Scotia's opportunity.

Carried away by the enthusiasm of my hon. friend, and by the prospect of a navy of which Halifax is to be the centre. Then this enthusiastic paper says that my hon. friend went on to tell them:

To-day should be Nova Scotia's opportunity in that regard.

My hon. friend now does not propose to let Nova Scotia have an opportunity, he proposes to remove any chance whatever of Nova Scotia building ships.

Providence has endowed this province with the material——

My hon. friends opposite, who do not think that we can build ships in Canada, see what your leader tells you:

With the men and with the maritime situation which are essential not only for developing a scheme of naval defence and protection but also for the resuscitation of that shipbuilding industry which once made Nova Scotia famous throughout the world.

Splendid words, were they not? I leave it to you, Mr. Speaker, whether it is not the bounden duty of the leader of the opposition to go back to his constituents and tell them that he has turned his back on the whole thing, that Nova Scotia's opportunity has passed away, that he will not do anything to retain it, that they shall never build ships in Nova Scotia, if he can prevent them from doing it. My hon. friend kept the faith until January 12 of this year, when he said:

Canada could not be a hermit nation. Canadian interests will exist and must be protected not only upon the high seas, but in every quarter of the globe. The great empire of China attempted to isolate herself from the rest of the world and did so with some measure of success, but the result was not encouraging. To conceive that Canada could play any such part in these days of steam and electricity, when the oceans of the world have ceased to be an impassable barrier and have become magnificent highways, is but an idle dream.

Then my hon. friend does not want any permanent co-operation. If Canada can only be defended by the use of her own material, then my hon. friend's policy is not a policy of permanent co-operation. He goes on to say:

By the use of our own material, the employment of our own people, the development and utilization of our own skill and resourcefulness, and above all by impressing upon the people a sense of responsibility for their share in international affairs. I regard the resolution of March last as the most important step towards co-operation that has been made in this country for 25 years.

That is the view of my hon. friend in January, and he stuck to that view in a half-hearted way down to February 3, when he began to try to escape from his position, when the thumb screw, and the rack, and the composing room the hon. member for North Toronto (Mr. Foster) told us about, got in their fell work; and the people of Canada were treated to the humiliating spectacle of a leader of a great party absolutely going back on every principle he had laid before them inside of a year. But even then he hung on, to some extent, to the old faith when he said on February 3:

As far as I am concerned, while the system of annual contributions might be best, and, no doubt, would be best from the purely strategical standpoint, I firmly believe that no such system could be adopted, but that eventually and permanently the basis upon which Canada must contribute to the defence of the empire will be by employing our own material, our own men, our own resources and the skill of our own people.

Well, now, when we have been able to call a witness like my hon. friend the leader of the opposition, and get such strong testimony from him, you would think it was scarcely necessary to go on and amplify our case. If we were trying this matter before a jury the testimony of the leader of the opposition would be sufficient in the minds of any reasonable men to convince them that the proper thing for this country to do was to start out with the construction of a Canadian navy, the employment of our own men and material, to build the ships in Canadian shipyards, and thereby we would be giving the best assistance to the empire. Don't you think that would be right? Well, I have ample testimony here upon the subject. It is not often that counsel in arguing a case is able to go to the ranks of the opposing counsel and to their witnesses and to prove every step of his case out of the mouths of the men who are opposing him. Yet that is the position in which the government finds itself

to-day before the jury of the people of this country. Every step in advance they have taken upon this matter has received the full endorsation of every man on the other side of the House who is supposed to have anything to do with directing the policy of the party. Now, I am going to call a witness who is not so reputable, whose judgment upon questions of this sort does not inspire the same confidence as does the judgment of my hon. friend; still he is witness, he belongs to the enemy's camp, I refer to the hon. member for North Toronto (Mr. Foster). This gentleman says, not upon his oath, but upon his honour as a public man in parliament:

So far I have been dealing with the stated normal policy that I think Canada ought to adopt.

Mark you, 'Canada ought to adopt.'

General lines of defence by a coast line and harbour defence of small vessels——

That is the tin pot navy the hon. gentleman sneers at.

—at first we would make the attack of the rambling, raiding cruiser a doubtful and dangerous one, and which would ward off the first brunt until more sufficient aid could be brought if the force were a menacing one.

Then my hon. friend went on and said:

It is said also that there are physical and mechanical difficulties to be overcome. I have mentioned these—they can be overcome. Time and the application of a reasonable amount of resource will overcome those difficulties and place us where we have had to place ourselves with reference to every other great line of development; we must begin at the beginning and work up gradually until we gain the skill, the plant, the machinery and the power to make for ourselves what at first it was physically impossible for us to make.

That is pretty good testimony to start with. Then my hon. friend grew more eloquent. My hon. friend went on to say that he did not believe in the policy of a country hiring some one else to do these things for it, any more than be believed in a thoroughly good healthy man hiring some one else to look after his family. Then the hon. gentleman came to another consideration and he said:

Then would come the dockyards, which would be of sufficient size to enable us to repair the smaller vessels, and in time build the smaller vessels that we need at first, to be implemented by co-operation between Canada and Great Britain in the shape of a dockyard sufficient to dock any lame vessel of the British navy that might happen to limp to our coast and require refitting and repairs. And so, in that progressive, gradual way working up to the fulfilment of this idea, a defensive force in Canada which would be an auxiliary in the case of an outbreak of actual hostilities, which would be sufficient for the ordinary suveillance of our coasts, and which would be, in time of war, sufficient to work in conjunction with the main portion of the fleet that would be sent to the part of our country that was menaced.

Hon. gentleman opposite are trying to run away from the splendid policy with which they had become impregnated, and even in the harangue we had last Thursday, my hon. friend, in trying to save his face, dropped this remark which was probably his true sentiment with regard to the matter:

Having seaports on the Pacific and seaports on the Atlantic at the present time, entirely at the mercy of the smallest armed gunboat of a hostile power, we thought that was an unworthy position, an unsafe position, and that what Canada ought to do was her own proper work, and make some provision, some adequate provision, for the defence of her seaports and her exposed harbours and coasts.

Will the proposition to borrow $25,000,000 and send it across the ocean to be spent by the British admiralty, without restriction or condition that they should ever spend a dollar in or for Canada, meet the aspiration which this hon. gentleman set forth there? But, witnesses are prolific they are numerous, they are to be had from every quarter, and we have only to go to a former leader of the Conservative party, to the grand old chieftain whom these gentlemen were proud to follow, next after Sir John Macdonald himself, to the man who led them in 1896 and 1900. He has told his successor what he should do and he has told the people of Canada on more than one occasion what their duty was and where their interest lay in dealing with this question. Now, Mr. Speaker, of course, the hon. member for North Toronto told us that it was only lately that the Liberal party had gone to Sir Charles Tupper for an authority. I have noticed that my hon. friends on the other side have not been going to Sir Charles Tupper of late for very much inspiration. It hardly lies in the mouth of the hon. member for North Toronto to talk about our interest in Sir Charles Tupper. I think there are a good many gentlemen on the other side of the House who have lost interest in that gentleman, and I am afraid from all I hear, that Sir Charles Tupper has lost interest in a good many of them. If that is so then we start fair. Sir Charles Tupper, who has retired from political life, after the longest experience of any public man in this country, writes to his successor this admonition:

I am glad to learn that you have resolved to maintain the patriotic attitude that the Conservative party assumed last session.

There is a ring of the old man about those words.

A few years ago, when Canada was struggling to open up for British settlement the

great granary of the world, a few gentlemen here raised the question of a Canadian contribution to the imperial navy, I joined issue with them and was sustained by the press and public opinion.

Thus he joins issue with the proposition which my hon. friend is now making, and the old man says that he was sustained by the press and public opinion, that my hon. friend was wrong and that he was right.

The demand will soon be made by some that Canada should contribute to the imperial navy in proportion to population, I regard as preposterous and dangerous. I read with pleasure the resolution passed unanimously by the House of Commons which pledged parliament to proceed vigorously with the construction of the Canadian navy and to support England in every emergency. . . . I cannot understand the demand for Dreadnoughts in the face of the fact that the admiralty and the British government have determined that it was not the best mode of maintaining the security of the empire, and arranged with Canada and Australia (the latter of whom had offered one or two Dreadnoughts) for the construction of local navies to keep open the trade routes in case of war.

But with an interest in the Conservative party, whose leader he had been and which, in his time, he had adorned with his splendid abilities, he gives it this warning:

I cannot avoid thinking that a fearful responsibility will rest upon those who disturb or destroy the compact entered into on this vitally important question.

Yet, the hon. leader of the opposition, flouts his predecessor. He cares not for the experience of this man of Dominion fame, yes of imperial fame, and who comes from the same province as the hon. leader of the opposition and myself. My hon. friend knows that Sir Charles Tupper, during all his long life, has taken the position which he reiterated in that letter and which has been his attitude all along. If we were to believe my hon. friend from Jacques Cartier (Mr. Monk) the sentiments expressed by Sir Charles Tupper were the sentiments shared by Sir John Macdonald and Sir George Cartier. Yet, my hon. friend, under the pressure of the composing room, the rack and the thumb screw, about which the hon. member for North Toronto knows so much, climbs down, departs from the traditions of his party, and turns right away from its policy and the position which he has taken from the very time when responsibility began. Now, this is part of the case. I do not want to exhaust all the material. My hon. friends who will speak upon this subject can summon witnesses, numerous and influential, and I think also witnesses of character whose judgment will carry weight. My hon. friends joined in the resolution. They told the delegates that went over to England last year that they must take the position that Canada must build her own navy; and secondly, above everything, do not give them a contribution. That has been reiterated everywhere—do not give them a contribution, but let us work out a plan in co-operation with the imperial authorities, and let us build a Canadian navy that will stand for Canada in time of peace and stand by Canada and the empire in time of war. That was the policy which they asked for, that is the policy which has been developed, and that is the policy which the premier of this country asks the people and the members of this House to ratify here to-day. Now, some of our hon. friends say: Oh, this is a tinpot navy, and that kind of thing is something that Canada does not want. She wants Dreadnoughts. They talk about Lord Charles Beresford. Every one knows how certain gentlemen in Canada tried to dragoon Lord Charles Beresford into making some statement last fall in support of this innocent policy of theirs, but they could not succeed. He would not do it. What is the history of Lord Charles Beresford? For the last five years he has been contending against Sir John Fisher on this very question of Dreadnoughts as against cruisers, and holding that smaller vessels necessary for coast defence and to protect commerce were more important than were large vessels of war. Let me read an extract from the Portsmouth 'Evening News,' where Lord Charles Beresford recently ran an election:

The 'News' learns from a trustworthy source that provision will be made in the navy estimates for four battleships, two armoured cruisers, eight small cruisers, twenty-four destroyers, and ten submarines. The shipbuilding programme will be a further admission of the accuracy of Lord Charles Beresford's contention that more small cruisers and destroyers are needed.

The policy of Lord Charles Beresford has been and is to-day—and hon. gentlemen opposite cannot conceal the fact—in favour of the theory that the trade routes of this country and the trade routes of the empire should be protected by the smaller cruisers, and that has been the cause of the bitter quarrel between him and Sir John Fisher. I could quote also the opinion of Sir Wm. White, but that has been referred to by the Minister of Militia. Now, I want to call attention to a statement of the various schemes for the commonwealth of Australian naval defence from 1902 to the present time, and this statement which I have before me shows that not until 1909, when the proposition of building an armoured cruiser—not a Dreadnought, mind you, the people of Australia are not giving a Dreadnought, they are putting an ar-

moured cruiser at the head of their fleet—not until 1909 was there a single proposition in Australia to build a vessel larger than 3,000 tons. But, in the Canadian naval programme we have one vessel of 4,300 tons, one vessel larger, and destroyers of the improved river type, which are all along the line of the sound and wise judgment of the men both inside and outside the admiralty whose opinion is worth having on this matter. That is our policy, Mr. Speaker, and I do not need to amplify it at greater length.

Mr. R. L. BORDEN. I would like to understand the hon. gentleman; does he say that the Australian fleet unit does not include any vessel larger than 3,000 tons?

Mr. MACDONALD. With the exception of the one vessel included in the Australian programme of this year. In all the naval programme of Australia, from 1902 down to that date, not a single one of these programmes included a vessel over that tonnage.

Mr. R. L. BORDEN. I am speaking of the programme of 1909.

Mr. MACDONALD. The armoured cruiser of this year exceeds that tonnage, but in the various other programmes not one of the vessels exceeded 3,000 tons.

Mr. R. L. BORDEN. That armoured cruiser is of the Dreadnought type?

Mr. MACDONALD. I do not know about that. The Hon. Mr. Fisher, of Australia, who ought to know took issue on that question, and he declared it was not of the Dreadnought type, and his judgment ought to be worth more than that of my hon. friend (Mr. R. L. Borden).

Mr. R. L. BORDEN. Well, I do not know what took place in Australia; I am referring to the paper which has been brought down to us and laid on the table of the House.

Mr. MACDONALD. Mr. Fisher, of Australia, took the position that the programme has been changed and that instead of a Dreadnought it was an armoured cruiser.

Mr. R. L. BORDEN. I do not know anything about any change having taken place in Australia, and my hon. friend may be right about that, but the paper laid on the table of the House certainly does refer to an armoured cruiser of that type.

Mr. MACDONALD. I am speaking of the programme laid before the Australian parliament by the Hon. Mr. Fisher in October last, and he starts out with one armoured cruiser of the Indomitable class.

Mr. R. L. BORDEN. What is the exact date in October?

Mr. MACDONALD. I have not got the date at hand, but I will endeavour to get it for my hon. friend. Now, Mr. Speaker, I have endeavoured, probably at too great length, to outline what our policy is, and why we have adopted that policy. I believe, Sir, that all parties in this country will agree that our policy is a wise one. As I have shown, that policy has the approbation of the admiralty. I believe that Canada is acting wisely in to-day laying the foundation of a greater navy, making the beginning of a navy which will grow with our growth and expand with our development. I believe, Sir, that is the wise and sensible course for Canada to take, and I am confident it will be vindicated by the people of this country.

But, let us see where our friends opposite are on this question. We have no less than three or four policies from the opposition. The leader of the opposition starts out by saying: No Canadian navy; in the dire necessity of Great Britain, at the present time we will give her $25,000,000 to do what she pleases with it. It is not to build Dreadnoughts mind you, because the word Dreadnought was introduced into that resolution simply and solely for the purpose of misleading the people, and helping out the men who wanted to take the stump in the back concession lines, to talk about Dreadnoughts. It was a good sounding phrase! And so they put it in the amendment. What the hon. leader of the opposition says is: Give England $25,000,000 because there is a tremendous naval necessity at the present day, give them a cash contribution and dont bother about a Canadian navy. And, my hon. friend from North Toronto (Mr. Foster) says: Wipe out this Canadian navy business, we dont want it. I dont care whether there is necessity or not, I dont care whether the weary Titan is groaning under the burden or not, give them $25,000,000, I dont care where you are going to get it, I dont care whether you have to borrow the money or not, find it somewhere and send it over. Then my hon. friend from Jacques Cartier (Mr. Monk) has another policy, and I am sorry he is not in his seat now because there are one or two things I would like to say to him. His policy is to do nothing at all; his policy is a policy of attempting to set in flame the embers of discord in this country. Imagine the hon. member from Jacques Cartier undertaking to appeal to the spirit of the men of 1837. A lot he knows about the men of '37. Why, he belongs to a class who spoke of the men who fought at that date for responsible government as the smooth faced, insidious instigators of the doctrine of rebellion. That is the school from which my hon.

friend from Jacques Cartier comes, and together with the new light of the Conservative party, Mr. Bourassa, in the province of Quebec, they are playing the game of the leader of the opposition down there. That is his policy. Does he want a plebiscite? Not a bit of it. Any one who reads the speech of the hon. member (Mr. Monk) will see there is no connection at all between the words he uttered and the demand in his resolution for a plebiscite; there is no logical connection between the two at all. Plebiscite indeed? Why, the game that the member for Jacques Cartier is playing is the old game the Conservative party has been playing ever since Canada has been ruled by the Liberal party led by the right hon. Sir Wilfrid Laurier. They have been telling the people of Quebec that he was too English for the French, and in the English provinces they have been saying: Surely you are not going to have a Frenchman rule over you? I have read the amendment of the leader of the opposition with the greatest possible care. It is drawn with a great deal of astuteness. In our province of Nova Scotia the hon. gentleman (Mr. R. L. Borden) has always been recognized as a very shrewd lawyer, and he will pardon me for saying that that resolution was drafted as some counsel would draft the defence in a bad case, in which counsel did not know exactly how to answer the complaint. The hon. gentleman always had the reputation of being an astute lawyer, and when the opposition wanted to declare their policy they committed to his hands the task of quibbling, and drawing up this defence for their bad case. Why, what does the hon. gentleman say? He says that what worries his soul is section 17 and section 18 of the Naval Bill, which sections say: That the Governor in Council may place the navy on active service when it appears there is an emergency, and that in case of emergency the Governor in Council may place at the disposal of His Majesty for general service in the Royal Navy, the naval service and so on. The hon. gentleman (Mr. R. L. Borden) regards that as very dangerous. And it is because of these clauses in the Bill that the hon. gentleman rushes off and says: I wont have anything to do with the Canadian navy at all, give them a contribution. Now, one would think that the government had undertaken something very revolutionary and something that was never heard of before.

My hon. friend from North Toronto (Mr. Foster) says, oh, that smacks of independence. Well, what is the condition of affairs in that regard? Of course, my hon. friend from Jacques Cartier (Mr. Monk) regards those sections as most terrible—but from another standpoint. They tie us he says, to the empire in an irrevocable way—taxation without representation and all this kind of thing. The King's prerogative, he told us, will enable His Majesty to decare war at any time without the consent of parliament and Canada would be tied hand and foot. My hon. friend, the leader of the opposition was also worried. But what need is there for any anxiety on his part? Look at Todd and see what is done when a question of war comes up. On page 351 of his work I find it laid down:

> The previous consent of parliament, either to the commencement of a war or the conclusion of a peace, is not formally required by the constitution. The necessity of obtaining adequate supplies for the prosecution of a contest with any foreign power, and the control possessed by parliament over the army and navy by means of the annual Mutiny Acts, coupled with the existence of ministerial responsibility, constitute a sufficiently powerful check against the improper use of the prerogative. Nevertheless if the hostilities about to be entered into are likely to involve serious consequences, it would be the duty of the ministers before engaging therein to summon parliament to communicate to it the reason for resorting to arms and to ask for its advice and co-operation in carrying on the war.

That is what has to be done in England in the case of a war of any serious character, and in this Bill provision is made that before the Canadian forces may engage in war, the Canadian parliament must be called together just as the English parliament is in the old country. Yet my hon. friend's soul is worried and he is shocked tremendously Is this anything new? Why it has been in the Militia Act for years. How can a navy run without money and how can the navy get money without the government comes to parliament and asks for it? Is it a new departure taken only by Canada? My hon. friend should know that Australia has had it embodied in its Defence Act since 1903. Let me read the Defence Act of Australia of 1903 regarding the disposition of Australian forces in case of war, and there is no country which the hon. gentleman has held up to us as so signal an example of everything loyal, patriotic and splendid. Section 53 of the Australian Defence Act is as follows:

> Section 53. In time of war the Governor General may subject to the provisions of this Act, place the defence force or any part thereof under the orders of the commander of any portion of the King's regular forces or the King's regular naval force as the case may be.
>
> Section 54. The Governor General may in time of war—for the defence and protection of the Commonwealth and of the several states thereof—place the naval forces or any part thereof on board any ship of the King's navy on the Australian station, and during the time they are so placed they shall be under the command of the officer commanding the ship upon which they are placed and be subject to

all laws and regulations to which the King's naval forces are subject.

Almost the same words as are in our Act. My hon. friend knows that in the province of Quebec, Mr. Bourassa is going up and down declaring that 'may' means 'shall,' and that the moment there is any war, automatically our forces are at the disposition of the mother country. And he quotes my hon. friend's opinion upon the construction of a statute in another case to show that 'may' means 'shall,' and in order to convince the people, whose passions he is endeavouring to inflame against this government's proposal, Mr. Bourassa quotes my hon. friend as a lawyer, to that effect.

Mr. R. L. BORDEN. What is the case he quotes?

Mr. MACDONALD. I cannot give the exact case, but I would advise my hon. friend, least Mr. Bourassa may be using his name improperly, to find out what he is saying and contradict him.

Mr. R. L. BORDEN. That is the reason I am asking for information now.

Mr. MACDONALD. My hon. friend can ask his friend from Jacques Cartier (Mr. Monk) and he will tell him all about it. Let us see where Australia stands on this question. Look at what Mr. Fisher, formerly premier of Australia, said in the Australian parliament last autumn. In discussing this navy question last October he said, regarding the position which Australia should occupy:

The late government while declining to have anything to do with the Dreadnought proposal, took occasion to communicate to the imperial authorities their view regarding Australia's connection with the empire, and stated what they were prepared to recommend the Commonwealth parliament to do. So far from refusing to take part in the protection of the best interests of the empire, we said that, whilst our policy was designed primarily and almost wholly for the protection of the shores of Australia, yet in time of war or national energency, not only should we risk the promise of a Dreadnought, but would offer the mother country the whole of the resources of Australia to support her. That is the real position that we took up, and it is the view that I hold to-day.

That is practically the position of this government, and it is the view I hold:

In moving the second reading of this Bill, the Minister of Defence did not make quite clear his view as to the extent to which the imperial authorities by reason of their contribution of £250,000 per annum towards the upkeep of the Australian navy, will have any real control over it while it is in these waters or when it goes beyond them. That is a delicate question. There must be a link between the imperial and the commonwealth authority. The last government had a definite idea upon the subject and we put it into writing. We held that the sole control of the fleet must be with the Commonwealth. I can speak more freely on this question because I have never favoured the view that the fleet should not fight outside Australian waters. But there should be a clear and definite understanding. I wish to know whether the contribution of £250,000 provides for Commonwealth control?

Mr. Joseph Cook,—I can make that clear later.

Mr. Fisher,—There may be emergencies and the telegram read by the minister to Admiral Kingsmill shows that Australia made her postion clear and that it is exactly the same as Canada has taken which will require our ships to fight elsewhere but generally speaking they should not be taken to remote seas without the express authority of the commonwealth. The strength of the empire will depend upon the ability——

And this is a pregnant remark for my hon. friend to remember—

—of the five self-governing nations which compose it to provide for their own defence.

That is the kernel of the whole question. The Australian statesmen gave at once the crux of the whole problem. The strength of the British empire, he said, will depend in the future upon the ability of the five self-governing nations which compose it, to provide for their own defence. If they can do that, the empire would be better protected than by the assembling of a fleet at any one point. Then he says:

The opposition will not make this a party measure, our desire being to promote the defence of the country with a view to the protection of the best interests of the empire and the securing of the continued peace of the world.

A splendid example, which I commend to my hon. friend the leader of the opposition. It is in strong contrast to the attitude he has taken in leading up his dividing forces with one wing in the province of Quebec making a flank attack on the government, and he himself leading another line of attack entirely inconsistent with the position he took a year ago. My hon. friend should have revised his utterances. He should have been a little more careful before submitting his resolution. On January 12 he said we need not worry about wars in Canada, that the empire would never go to war again without consulting Canada first. He said:

It has been urged, and with some force, that we in Canada cannot properly take a permanent part in the naval defence of the whole empire unless we are to have some voice as to the wars in which Great Britain may engage. Let me say in the first place, that I do not believe Great Britain will in the future engage in any great war—except indeed it may be a war forced upon her without a moment's notice—before consulting the great dominions of the empire.

But if Great Britain is going to consult the dominions of the empire, and if the dominions require to be consulted before there is going to be war, what fault can my hon. friend find with this clause in the Navy Act which simply anticipates consultation and conference?

Sir WILFRID LAURIER. Hear, hear.

Mr. MACDONALD. My hon. friend went on to say—I want to emphasize that point:

And, Sir, I venture to believe that in the future the self-governing nations of the empire will have something to say about the wars of the empire.

But how is Canada to have a word to say about the wars of the empire unless she reserves the right to say it as she does in this Navy Bill? Then my hon. friend proceeds:

It is not wise to prophesy what the future may bring forth, but I would venture to hope that a defence committee or an imperial conference having special jurisdiction over defence matters, composed of men from both parties in Great Britain itself as well as in the self-governing nations of the empire, would have some control over the organization of imperial defence, and as an outcome of such a committee or such a conference I would expect that in future Great Britain would engage in no great war without knowing beforehand that she would have the support and the sympathy of every one of the great self-governing nations of the empire. This would give to these dominions a voice in the control of war, because I thoroughly agree that if we are to take part in the permanent defence of this great empire we must have some control and some voice in such matters.

How in the name of common sense can my hon. friend seriously complain about these sections in the Naval Act when he declared and reiterated that there would be no quarrels of the empire in the future unless Canada was consulted, and how would Canada be consulted, except by some such provision as is contained in this Act? I think we can very fairly leave my hon. friend in the fond hope that when he examines the precedents in England, when he looks over the conditions of affairs in Australia and reviews his own utterances, he can feel confident that no harm can come through Canada reserving to herself the very right which he says she ought to reserve. He criticised the Naval Bill on the ground that men would only be trained three years. The Minister of Militia (Sir Frederick Borden) punctured that by pointing out that he had misread the provision of the Act, that the Act laid down methods by which men would be trained for six years. Then my hon. friend with these misgivings rushed impetuously, and with utter disregard of everything he had said before on this question, to the extreme limit of the objectionable position which he had before said should not be taken. Give them $25,000,000—nothing for the defence of Canada, do not hamper these people with any conditions, do not say that the Dreadnoughts when built or the money when expended, is to come to Canada to be used in defence. As the Minister of Militia points out it need not be Dreadnoughts at all. The leader of the opposition simply says: Here is $25,000,000, do what you like with it, do not care anything about Canada, do not provide for local defence, do anything you like but take it, take it, without any condition, without any restriction, Canada's interests being utterly disregarded in every way and without a single step forward being taken in the direction of Canadian defence or in any way in which Canada's interests would be advanced. If that is the way in which Canada is to maintain herself in the empire, it is a very miserable way. What would our friends have thought if in 1900, instead of sending the boys to South Africa, we had said: Here, take $10,000,000, we do not care anything about the empire, we do not want to fight for it, we do not want to share in its future or its defence or its glories, or anything of that kind; here is the money, take it. A splendid answer to my hon. friend was afforded in the letter from Captain Stairs, of Halifax, which I read the other day, in which he spoke of the importance of giving to the empire that real service which could only be rendered by the sympathy and influence of men all over the country who, whether on sea or land, will have that interest in the welfare of the empire, which would lead to its preservation and its extension.

I need not detain the House to place on record the statements of the leader of the opposition (Mr. R. L. Borden) about contributions. I shall read only one of them. On January 12, of this very year, hardly a month ago, the hon. gentleman made this statement:

It has been suggested that instead of the organization of a Canadian naval force, there should be a system of annual contributions from this country to the mother country; and I am free to admit that, from the strategical point of view, that I would be inclined to agree with the view of the admiralty that that would be the best way for the great self-governing dominions of the empire to make their contributions.

And mark this:

But, sir, from a constitutional and political standpoint, I am opposed to it, for many reasons. In the first place, I do not believe that it would endure. In the second place, it would be a source of friction. It would become a bone of partisan contention. It would be subject to criticism.

Of course it would be:

As to the character and the amount of the contribution in both parliaments. It would not be permanent or continuous.

But last of all—and I want you gentlemen who sit behind you leader to follow this—this is what he said on January 12, as to the effect of a contribution:

It would conduce to severing the present connection between Canada and the empire.

Of course, my hon. friend may have been simply talking without any deliberation, without any responsibility. I assume the leader of the opposition has the right to talk without responsibility sometimes. I do not know whether he was here talking to his Quebec wing when he proposed to give a contribution with the idea that it is going to tend to sever our connection with the empire; perhaps it was to the hon. member for Jacques Cartier (Mr. Monk) who said just before concluding his speech that there was something in the resolution of the leader of the opposition with which he agreed, perhaps it was that part of it.

Mr. MONK. I would ask my hon. friend where he finds in any utterance of mine or of anybody on this side of the House a desire or an intent to sever the connection with the British empire? Where does he find it, and if he does not find it anywhere, what right has he to insinuate here?

Mr. MACDONALD. If my hon. friend will possess his soul in patience I will give him evidence in a few minutes as to statements made by the hon. member for North Toronto (Mr. Foster) which will satisfy him that the hon. member for North Toronto regards him as a gentleman who would like to do that. I do not propose to call the hon. member for North Toronto (Mr. Foster) as a witness on the question of contribution, I do not have to; I think the leader of the opposition has proved my case. But as we hear a great deal about Australia, about the virtue of contribution and all that, let me call attention to what Mr. Deakin, the premier of Australia, says about contribution. Speaking at Melbourne in 1902, he said:

The policy of centralization restricted the colonies to contributions in coin while the policy of decentralization would substitute trained men and basis of supply with place of subsidies. Australia strongly favoured the decentralization advocated by Sir Edward Barton as contrasted with the centralization sought by the proposals of Mr. Broderick and the admiralty which in no way appealed to the patriotic sentiment and self-reliant spirit of Australians. No colonial force under war office control could have furnished such effective soldiers for South Africa as the volunteer contingents had furnished to show loyalty to the empire, let us send money; the Liberal party says: Let us train up men interested in the defence of Canada who will stand by Canada and the empire both in peace and war.

But what does the Sydney 'Bulletin,' that influentical Australian paper say:

From what ever point of view—imperial or anti-imperial—the scheme is considered, its only logical defence lies in the theory that Australia is a poor, forsaken country.

They are speaking of the Australian agreement of 1902.

Without administrative brains, courage, enterprise or intelligence, not fit to have any dignified part in its own naval defence, not to be trusted with any weapons lest it should misuse them, worthy only to drudge for the money which a higher and more capable power shall spend.

All of which is true about my hon. friend's position to-day.

And to provide the loblolly boys the slushes, and the deck swabbers, whose efforts a higher power shall direct and control.

A splendid policy for young Canadians, is it not?

The alternative to the naval tribute, proposed by Mr. Barton, is the expenditure of a like sum of money, or if necessary a much larger sum of money, on an Australian navy, which would be organized on the same lines as the Australian army, and would probably be, for some time at least, commanded by a British admiral, and to a very considerable extent officered by Britishers.

This navy would, in times of peace, be used as a training squadron for Australian naval men. In times of war it would be available for the defence of Australia, and there is no doubt, for the assistance of Britain in other waters, if that were called for.

That is what Australia thinks about contributions. I need not go over in detail the points in which that which Australia is doing differs from what is proposed by hon. gentlemen opposite. It is enough to say that Australia is providing a navy for the defence of its own coasts, and New Zealand is making it a condition—an absolute condition—that the ship which she is providing shall be stationed at New Zealand and shall be for the protection of New Zealand; and the money she gives is not given to the admiralty but is given solely and only for the purpose of paying extra wages to the New Zealand men who go into that establishment. And yet these hon. gentlemen want to give $25,000,000 not for anything that is going to come back to Canada, not for anything that will guard our coasts or that will contribute to our own progress and advancement, but simply to throw it away without restriction or condition.

But my hon. friend says that a great panic is on, that the power of Great Britain is menaced, and all that kind of thing, and therefore we must send this money. Why, this story of naval panic is an old

story to one who has studied British naval history. Not long ago I had the opportunity of reading a book entitled 'The Naval Progress of the Nineteenth Century', in which a whole chapter was taken up with pointing out the fact that for the last seventy-five years a naval panic had occurred about every five years. In 1850, Sir Francis Head published a book called 'The Defenceless State of Britain', in which he gave a description of the capture of London by a French fleet. In 1859, under the government of Lord Derby, a committee sat to consider the state of the navy, it being represented that the naval force of the country was far inferior to what it ought to be in comparison with other powers. In the old days, France was the bugaboo; in our times Germany is the scare. In 1874, the navy was said to be in a shameful condition. Sir Edward Reid said that the government had practically abandoned the naval position of the country in Europe. In 1886 another panic was on, and the charge was made that the navy was allowed to fall away below that of France. In 1901, only nine years ago, the London 'Times', the Thunderer—which is not averse to playing politics when necessary—published an article entitled 'The National Danger' in which it used the time-honored expression about Nero fiddling while Rome burned. That was the last scare before the present one. From time to time we have had panics on this subject. There was a panic because England's wooden sailing ships were of an inferior type; another because the sailing ships had become useless and steam vessels were required; another because vessels were built of wood and should be armour-plated; then these were not good enough and should be built of iron; then, there was the change from iron to steel. 'The 'Blue-sea School', of which my hon. friend the Minister of Militia (Sir Frederick Borden) spoke the other day, are liable to get up a scare on this subject at any time. And how did this feeling arise? In 1904, when the Unionist government went out of power, Great Britain had a budget of £13,000,000 for the navy, Germany's budget naval at that time being £4,000,000. The Radical government let that budget drop year by year, until, in 1908, it had gone down to £8,000,000, while Germany's had been going up, so that in that year, Germany's naval expenditure was as much as that of Great Britain. The result was that what might be called the Conservative wing—or, rather, the old Whig wing—of the Radical party, men like Mr Haldane, Mr. Asquith, and Sir Edward Grey, realized that something would have to be done to bring their followers up to the point of supporting a strong naval policy and enabling them to get a budget out of which they could spend on the navy the amount that England had been accustomed to spend and they spoke strongly and sternly about the effect of a reduced contribution. These are the facts; any one who reads English politics knows them to be the facts. And what was the position of Mr. Balfour in the last campaign. Mr. Balfour did not say that England's prestige was menaced. What he said was that this Radical government had neglected the defence of the country, and had not kept the naval expenditure up to the figure at which it should be kept, and his object was to condemn them for that neglect and to compel them to change their course or retire. Mr. Balfour absolutely disclaimed, upon many platforms in the last campaign, the idea that Germany had any notion of going to war with England. These are facts known to every student of current English politics.

The secretary of the admiralty, speaking on January 13, last, pointed out that:

> In April, 1912, the so-called point of danger, we should have 20 Dreadnoughts to Germany's 13; 40 pre-Dreadnoughts to Germany's 20; 35 cruisers to Germany's 8; 16 docks for Dreadnoughts to Germany's 9.

In other words, in 1912, Britain would have a fighting force of 95 vessels against Germany's 41. So, when these hon. gentlemen attempt to raise a scare in this country about Britain's naval position, they are simply imposing on people who do not sit down and study the facts as they actually are in England. I venture to say that any one who would attempt to raise a scare about the empire being in peril from this cause would be laughed off any platform in Great Britain. Let us see what the British ministers say about the situation. Hon. gentlemen opposite talk about a 'tin pot navy'. Well, Mr. Haldane, the secretary for war, speaks about the contribution which Canada is making as 'a splendid scheme of imperial co-ordination for imperial defence'. Speaking three weeks ago in Scotland:

> He said he had served on the confidential committee of the cabinet on imperial defence. They had inquired into the question whether the admiralty had kept up the navy to the proper standard or whether, as was alleged by Lord Charles Beresford, they had let it down.

That is, whether Sir John Fisher was building too many Dreadnoughts and too few cruisers.

> They went into every detail, had everything before them, and they were satisfied, not only that the fleet had not been let down, but that it was stronger than it had ever been before. (Cheers.) If any of them would take the trouble to look at the navy list, and if they compared what was called the home fleet with what the home fleet used to be, they would see

that to-day they had got together during the course of the last year a fleet more powerful, both in quality of ships and in their numbers, in the divisions of which consisted in its organization, than any fleet this country ever possessed before during the whole of its time. It was a fleet twice as powerful as the German fleet in the North Sea—(cheers)—and when he said that, he wished emphatically to disassociate himself from the suggestion that there was, or ought to be, any unfriendly rivalry between this country and that great nation over the German ocean with which we did a great trade, and with which we desired to be on the most friendly footing. (Cheers.) Our duty and their duty was to see that defences were perfect, not in the interests of war, but in the interests of peace, and the most foolish thing that anybody could do was to make the kind of speeches that had been made recently by their opponents suggesting that there was some rivalry between us and Germany which must end in war. After all, it was the Liberal government, with the work it did of co-ordinating the forces of the empire last summer, with the work it did of organizing the foundations of an imperial navy——

That is how Mr. Haldane, the secretary for war—characterizes the part that Canada is playing in this matter.

—it was the Liberal government that had translated imperial federation into something like the beginnings of reality, instead of leaving it to rest either in vain declamation, or any proposal to impose taxes——

That is what my hon. friend (Mr. R. L. Borden) wishes to do—impose taxes.

—could in the end only have the result of irritation between the various parts of the empire.

Here is about what Mr. Asquith, the premier of England, said a month ago at Liverpool:

Let me say once for all and I speak with full deliberation and after careful inquiry—that the navy to-day is able to maintain not only this year but in the years that lie before us our supremacy at sea and should the necessity arise—which God forbid—to guarantee the integrity of our commerce and the inviolability of our empire.

Then, look at what Sir Edward Grey has said—and everybody who studies English politics looks upon Sir Edward Grey as in the very forefront of big men, the responsible men, of the empire. No matter to what political party a man may belong either in England or here, there is not a man, not even the most extreme Unionist of the old country, who will not tell you that Sir Edward Grey is a splendid man. He has been quoted in this House. But let us hear what he said in January last, referring to his speech of March, 1909:

We said that the situation would be serious if proper efforts were not made to maintain the navy, precisely because we wanted to impress the country with the need for making those efforts, and with our intention to make them.

Just what I said. These men took the position they did in order to make their followers stand up for the proposition of a large expenditure for the navy. That shows why the English navy to-day occupies such a position of impregnable superiority that no man who is interested in the empire's future need worry about England's supremacy on the sea. That shows why the British budget to-day proposes an increase of £7,000,000 for naval expenditure over 1908. The apathy which seemed to have settled down over British people has now entirely disappeared as the result of the efforts of those English statesmen who have been able to bring their radical followers up to the position of supporting them in a policy of a strong navy. Now, if there is nothing in the objection of my hon. friend to sections 14 and 15, if contributions are not necessary, if there is no panic, then the result is that his resolution falls to the ground, and my hon. friend ought to return to the ground on which we all stood together last year, that we should relieve the British taxpayer of the responsibility of Canadian defence, that we should build up in Canada a fleet for inshore defence, to act in concert with the British navy in time of war. I hope my hon. friend will see his way to come back to that position. I am afraid, however, that if the influences with which the hon. member for North Toronto is so familiar, the thumb screw, the rack and the composing room, are still to prevail, there is little hope that my hon. friend will see the error of his way and retrace his steps.

Now, let me consider the policy of the hon. member for North Toronto. He does not care whether there is any necessity or not for a Canadian navy. Let us send over $25,000,000 to the British government. Sir, that is an evidence of the utterly reckless character of my hon. friend, and shows him to possess those qualities which have rendered it impossible for the men who sit behind him to regard him as a serious factor as a leader in Canadian politics. The position taken by the hon. member for North Toronto on this question, far exceeding even the reckless character of the resolution of his leader, shows that he has become so partisan in his judgment of men and affairs that he is utterly unable to have a clear vision, such as we had reason to expect he was naturally endowed with. His whole speech was the speech of a partisan, not of a man who wished to approach big questions in a big way, of a man who was anxious to proceed on right lines in national politics. That has not been his position, and he appealed to heaven to witness his consistency. Well, I was struck with his attitude upon that question. Consistency is a virtue which he

abandoned long years ago; he has little acquaintance with it, at least since I have been in the House. He gloried in the fact, however, that it was better to have 'diversity with integrity than uniformity with servility,' referring to my hon. friend who sits behind him. He also gloried in the fact that both the member for Jacques Cartier and himself, though they were at the antipodes upon this question, yet they joined harmoniously in condemning the policy of the government, as if anybody expected them to do anything else. He actually talked about the thumb screw, and the rack, and the composing room. Strange words these, and he presumed to attribute the advancement of the hon. gentlemen on this side of the House to the utilization of those instruments. Does my hon. friend imagine that he belongs to that class of men of whom the poet speaks:

Men whom the spoils of office will not buy,
Men whom the lust of office will not kill?

If he is under any delusion of that kind, he should disabuse his mind at once, because nobody in this country regards him as a man of that character. My hon. friend entered parliament in 1882 as an out-and-out temperance man and prohibitionist, advocating the most extreme legislation; as a man who was elected to parliament as an independent, a high-minded gentleman who was going to enter the arena of Canadian politics and look down from a lofty position, and regard big questions from a high standpoint. That was his position in 1882. I do not know whether the great Sir John Macdonald utilized any of those methods in bringing him to time. But when he told us that it took the Minister of the Interior ten years to get into line with his leader, I could not help thinking that it took my hon. friend (Mr. Foster) only three years to do so. I leave it to the imagination to suggest what were the influences that affected him. And his effort to justify himself in regard to his attitude last year was most amusing. After circling round and declaring that the first resolution meant that we should have a Canadian navy and not contributions, he boldly took the course of veering quite around. He admitted that last year he supported the proposition of a Canadian navy as opposed to contributions, and yet he never attempted to explain his attitude, or to show why he is taking the other position to-day, but he started off on that extreme course without any justification whatever. And didn't he grow eloquent over the terrible lack of judgment on the part of the Minister of Marine and Fisheries and the Minister of Militia, because, forsooth, they had not taken Canada's money and given it to the imperial government to supply a fleet unit on the Pacific! I wonder if the judgment of this House is that the proper thing for Canada to do would be to provide a fleet unit on the Pacific, and by so doing leave the Atlantic seaports with all those lines of commerce with the mother country, unprotected? Yet he says they should have done that. Why, I venture to say that if my hon. friends who went over to England had promised to take the people's money and build a unit on the Pacific, he would have been the first man in Canada to raise his voice and denounce them for going beyond their instructions, for betraying the Canadian people, for putting their hands into the people's pockets and taking this money and throwing it away. The first man to have gone after them would have been the hon. member for North Toronto. Then my hon. friend grew facetious. He recalled the old story of Don Quixote and Sancho Panza, and he went on to declare what the leader of the government had done, and said that he had conjured up a fiction of the imagination. Let us see what he said:

Then my hon. friend had a tilt with sundry windmills. He knows the story of the old knight and his doughty squire, filled full of the spirit of battle if not of conquest, bound for adventure, if not for human gore, who went around tilting at windmills. My right hon. friend before this audience and the wider audience of Canada, he did it to perfection, he did it well. What were the windmills with which he tilted? He tilted. Sir, against the windmilll which he took as an enemy to responsible government, and he drove his spear through all the wings of the mill. He then went to the next windmill which represented in his mind's eye a sturdy opponent of Canadian autonomy, and he burst the wings of that mill. He proceeded and he met another enemy, conjured up, the enemy of the autonomy of this country in the shape of centralization of power in Downing street, and he tilted against that, and then filled with a lust for still further battle, he found another windmill which was taxation without representation, and he glutted his desire for warfare until he had demolished that one.

Then he said:

Who made that statement? The British government, the British admiralty, any person in a responsible position in this House or in the country? My hon. friend knows that when he made that statement it was a complete fiction of imagination.

Yet, these statements were made by somebody, and they were made in this House. They were made by a gentleman of some responsibility. Let me read some that were made on January 12 at page 1830 of 'Hansard':

Are we going to be in the position that the whole foreign policy of the empire is going to be framed, and formed, and carried out by a cabinet of men in Downing street, men absolutely controlled and elected by the electorate of the British isles; that we, British subjects like themselves, are going to be placed upon a different footing, that we will not have

a voice in the conduct of that policy, that we are to be responsible for everything while having no voice in the conduct of anything? That was not what on more than one occasion —I have simply mentioned the principal one —was stated at the conference, and stated not by colonials but by men who knew that it would never work with Anglo-Saxon people to have in any sense taxation without representation.

Mr. MONK. Hear, hear.

Mr. MACDONALD. My hon. friend admits the soft impeachment. But, does it not strike hon. members of this House that if we are going to carry out this policy that is proposed by hon. gentlemen opposite, we will become responsible generally and severally with the people of the British Isles for the whole foreign policy of the empire without having a voice in the formation of that policy?

Mr. MONK. My hon. friend admitted that himself a moment ago, because he said that it would come by-and-by.

Mr. MACDONALD. I am not concerned with my hon. friend about that. I am interested, for the moment, in my hon. friend's relations with the hon. member for North Toronto. I will deal with the other matter directly.

Mr. MONK. You had better attend to your own divisions.

Mr. MACDONALD. Now, the gentleman who made this statement, might I say the windmill against whom the Prime Minister tilted, as described by the hon. member for North Toronto, was the hon. member for Jacques Cartier, who just sat down.

Mr. MONK. And himself a year ago.

Mr. MACDONALD. And the hon. member for North Toronto had the audacity to say that the hon. member for Jacques Cartier had never used any of these words at all. He said that the tilting of the Prime Minister against these words was a pure figment of the imagination, that nobody had every uttered them anyway. I do not know whether the hon. member for North Toronto regards the gentleman who sits behind him as nobody, or whether he regards him only as a windmill. The hon. member for Jacques Cartier goes down to Quebec, and, in conjunction with his ally, Mr. Bourassa, wants to propound all those theories that the hon. member for North Toronto says there is nothing in. Rag baby autonomy! If it is a rag baby, it is a very serious kind of a baby. If the hon. member for Western Ontario who has just interrupted would sit down and read the speech delivered by the hon. member for Jacques Cartier, he would not think that it was any rag baby, but he would realize that it was a very live kind of baby. I do not think the hon. member for North Toronto paid his colleague behind him the compliment of listening to his speech. I do not think that he read it, because if he had, I think he would have avoided the utterances which he used in regard to that hon. member. I quite concede that the hon. member for Jacques Cartier, if he thinks the autonomy of this country is imperilled in any way, has the right to state his position before the House, but he has no right to be ignored by one of the joint leaders of the party, who turns around and tells him that nobody had ever made use of these arguments in this House. But, the hon. member for Jacques Cartier need not worry; the hon. member for North Toronto was tilting with everybody, and he used language as reckless with regard to several other hon. gentlemen as that which he used in regard to the hon. member for Jacques Cartier.

We hear something about a plebiscite. I wonder if the hon. member for North Toronto is in favour of having a plebiscite about the question as to whether we should give $25,000,000 to the empire? We have not heard anything about that. Because we propose to spend $11,000,000 among Canadian workmen, in Canadian workshops, and in developing the interests of Canada, forsooth, we must have a plebiscite; but when we take $25,000,000 and let it go there is no need for a plebiscite at all. I notice that even the hon. member for Jacques Cartier has not extended his resolution to cover this $25,000,000 that his friend the leader of the opposition proposes to give.

Mr. MONK. It covers everything, as my hon. friend will see if he reads the resolution. It covers the whole scheme.

Mr. MACDONALD. Does my hon. friend say that his amendment proposes that there should be referred to the people of this country the proposition of the leader of the opposition that $25,000,000 should be given to the people of England?

Mr. MONK. If my hon. friend will read it he can understand it.

Mr. MACDONALD. I did read it with some care, and, according to the construction I put on the English language, I came to an entirely different conclusion. It is rather news to me if the hon. gentleman's resolution has any such meaning. His proposition is:

That all the words after 'that' be struck out.

He proposes to strike out the amendment of the hon. leader of the opposition, and in place of the proposal of the leader of the government he proposes to substitute this:

This House, while declaring its unalterable devotion to the British Crown, is of opinion, that the Bill now submitted for its consideration change the relations of Canada with the empire and ought, in consequence, to be

submitted to the Canadian people in order to obtain at once the nation's opinion by means of a plebiscite.

There is nothing there about submitting a proposition to give $25,000,000 to the empire, and I think that if my hon. friend has any desire to set himself right on this question he ought to ask the House to have his resolution amended so as to enable him to raise that issue.

Mr. MONK. I will not go for advice to you.

Mr. MACDONALD. My hon. friend, in all good humour, might go to a worse place. Now, I think my hon. friend ought not to feel offended with me. He ought rather to feel resentment at his colleague, the hon. member for North Toronto, because he is the gentleman with whom I have been dealing, and the hon. member for Jacques Cartier has only accidentally got in the way, and if the hon. member for North Toronto chooses to call the hon. member for Jacques Cartier a windmill it is not my fault. But then he went tilting with the leader of the Liberal party. He told us that Sir Wilfrid had taken a position of absolute antagonism to effective help to the British empire as a whole. How did he justify his statement?—by stating that my right hon. leader had defended the right of Canada to make commercial treaties. We heard my hon. friend the Minister of Marine (Mr. Brodeur) and my hon. friend the Minister of Finance (Mr. Fielding) a couple of years ago assert in this House that they had negotiated a commercial treaty with France and claim that there was some credit or some congratulation which Canada had gathered or was entitled to from the fact because they had practically done the thing direct, although the English ambassador at Paris had been there, and that as a matter of fact the negotiations had been carried on almost exclusively by the representatives of Canada. I remember the hon. member for North Toronto standing up in his place and declaring that they were entirely mistaken, that they had no right to claim any such credit, that Sir Charles Tupper had negotiated the French treaty ten years ago the same way. Yet, forsooth, my right hon. friend the leader of the government is to be charged with being disloyal because he thinks that Canada should do what we have been doing for ten years! Then, the hon. member for North Toronto inveighed against the right hon. leader of the House because he had said that sometimes British diplomacy had not been a success. I regret to have to refer to the hon. member for Jacques Cartier again. But, that hon. gentleman knows very well that in his speech, which was carefully prepared, carefully thought over, and an able deliverance, he traced the whole history of British diplomacy from 1782 down to the present day. He argued that Canada had suffered on every occasion when English diplomats had her case in hand.

Mr. MONK. I agreed absolutely with the Prime Minister until last year; he left me; I did not leave him.

Mr. MACDONALD. My hon. friend (Mr. Monk) is worrying too much about himself.

Mr. MONK. The hon. gentleman is worrying too much about me.

Sir FREDERICK BORDEN. He is worrying you, not about you.

Mr. MACDONALD. My hon. friend from Jacques Cartier is labouring under a delusion. I do not think I could dignify the member for North Toronto by calling him the leader of the member for Jacques Cartier, but at all events last Thursday night the member for North Toronto charged the Prime Minister practically with being disloyal because he had said that British diplomacy was not always what it should be. And when I called the attention of the House to the fact that the member for Jacques Cartier had taken up every treaty from 1782 down to date to prove that British diplomacy was not a success so far as Canada was concerned, surely he must settle his accounts with the member for North Toronto and not with me. Did not the hon. member for Jacques Cartier wind up his remarks on the subject with this statement:

> I merely mention these facts and have no wish to go into detail. There are many other facts that might be cited to prove this claim that any man who says that we owe a debt of gratitude to the mother country in respect to these many transactions under which our territory has been greatly fragmentized, is speaking of what he knows nothing about.

The hon. gentleman (Mr. Monk) nods assent, and I am to assume that he agrees with me that when the hon. member for North Toronto was speaking on Thursday night he was talking on something he knew nothing about. However, I merely point out this to show that when the member for North Toronto gave these as his reasons why the House should have no confidence in our great leader, he was in the same breath maligning the hon. gentleman from Jacques Cartier who sits behind him. But, more than that, Sir, the member for North Toronto (Mr. Foster) indulged in misrepresentation. He quoted from a speech which he alleged the Prime Minister had made in 1888, and he led us to believe that Sir Wilfrid Laurier had said that the time was coming when the present relations between Great Britain and Canada must either become closer or be severed altogether. But, would you believe that a gentleman of such long experience in public life as the mem-

ber for North Toronto would be guilty of absolute misrepresentation. The offence might be pardoned in a man who sat on the back benches and did not know the amenities which should characterize those who sit on the front benches. But would you believe, Sir, that the member for North Toronto suppressed language of the Prime Minister used in the same connection and in the same speech as it is reported in Hansard for that year, which went to show really what the Prime Minister meant? Sir Wilfrid Laurier, speaking in parliament in 1888 used this language:

If you on the other side pretend that our colonial relation curtails and limits our possibilities, that England would allow us to reach a certain altitude and go no higher, I say you slander England, and if any man were to use at the other side and tell us that England would be jealous at whatever we could do to improve our condition, I say that man does not know England, he mistakes the England of to-day for the England of 100 years ago—But what we ask, Sir, is not political independence. We want to keep the flag of England over our heads, but we affirm that we are economically independent as we are legislatively independent.

Yes, Mr. Speaker, and the hon. member for North Toronto suppressed language of the Prime Minister which was necessary to a proper understanding of his meaning. Then, he repeated the old story that Sir Wilfrid Laurier was opposed to the contingents going to South Africa. This is the same old game they played in 1900. You will remember that in the elections of 1900 the Conservatives claimed in the English provinces, that the Prime Minister would not move one step in the direction of helping England in the time of trial, until he was compelled to by the Conservative party, and my hon. friend from Carleton (Mr. Carvell) tells me he was defeated on that cry, and I have no doubt of it. But, in the province of Quebec the Conservatives told an entirely different story. They said that Sir Wilfrid Laurier was 'Too English' for them and I have in my hand a pamphlet sent out by the Conservative party in Quebec in 1900 and franked from this House of Commons by Conservative members, some of whom are here yet, and this is the kind of story they told in the province of Quebec regarding the right hon. Sir Wilfrid Laurier:

The first utterances of imperialism were made in London, by Sir Wilfrid Laurier. Then it was that he put the Canadian soldiers at the service of the English.

Canada to do honour to the Prime Minister had sent to England the very cream of the troops to act as a body-guard. A splendid detachment of mounted police, a battalion composed of the elite of our militia, were sent to London and aroused the enthusiam of the old metropolis. Sir Wilfrid Laurier, dazzled by the applause of which he was the object, then committed the fatal mistake to give vent to words which were binding us to war destinies of Great Britain.

Then and there was sealed the pact now stained with Canadian blood which flowed at Paardeberg, Belmont, Mafeking, Faber Farm, and in many other encounters.

On the 18th of June, 1897, at a banquet held at the imperial institute, after a military review before Lord Lansdowne, Secretary of War, Sir Wilfrid Laurier, in a moment of enthusiasm, put all the Canadian troops at the disposal of the empire. As a worthy descendent of French blood, he choose the anniversary of Waterloo to make the offer.

I hope my hon. friend from Jacques Cartier will not indulge in any talk of that kind now:—

According to a cablegram, dated London, June 18, 1897, to the 'Globe,' on Lord Lansdowne, asking if, in a case of just conflicts, the colonies would be willing to help England, and Sir Wilfrid Laurier is said to have replied as follows:—

Lord Lansdowne has mentioned that a day may come when the empire might be threatened. This date, anniversary of the battle of Waterloo, reminds us that at all times England has proved itself able to win its own wars, but should a day come when it should be in danger, then let the bugle blow and rallying fires be lighted on the hills and in the colonies, and though we may not be able to do very much we shall give all the help within our means.

This was a solemn promise and it was kept.

And, Sir, I commend to this parliament that splendid deliverance of our Prime Minister in 1897 uttered in England, which shows his true position and his devotion to British connection. These are the words of the man who, according to the member for North Toronto, stands for independence, the man who, according to the same authority, is not true to Britain; this is the language which the Conservative party scattered broadcast through the province of Quebec in 1900 in order to set race against race and to influence the people against the Liberal party and against its great leader.

Now, while the hon. member from North Toronto has been charging the Prime Minister with moving towards political independence, with antagonism to everything that is British, and with disloyalty, the hon. member from Jacques Cartier is singing an entirely different song. Every word of his utterance on last Thursday night was an arraignment of the government, because he said they were committing Canada to be tied hand and foot, they were casting her in every possible way on the mercies of Downing street, abandoning all principles of responsible government, and depriving us of a free voice in our own affairs. Now, if the hon. gentleman from Jacques Cartier really believes the views he gave utterance to then, he is in an unfortunate position when he sits behind the gentleman who

railed against this government because this Naval Bill is lacking in all these considerations which ought to be present if the interests of England were to be protected. Now, which of them is right? Is the leader of the opposition right or is the member for Jacques Cartier right? If these gentlemen hold their views honestly and sincerely it is absolutely impossible for them to work in concert. One of them must be wrong; there is no use trying to preach peace, peace, when there is no peace. The hon. member for Jacques Cartier cannot honestly work in harmony with the leader of the opposition, because the sentiments expressed by the hon. member for Jacques Cartier are absolutely and diametrically opposed to everything which the leader of the opposition said he believed. My hon. friend from Jacques Cartier disclaims any desire to make trouble, and he agrees with something in the resolution of the leader of the opposition. What part of that resolution is it with which he agrees? Does he agree with the proposition that we should send over $25,000,000 to the home government?

Mr. MONK. If my hon. friend is as intelligent as I believe him to be, surely he understands that the part of the resolution which proposes a plebiscite is the part with which I agree.

Mr. MACDONALD. That then is the only part, and we are to understand that he does not agree with the proposition of his leader that we should send $25,000,000 to the mother country?

Mr. MONK. I will give my views at the proper time.

Mr. MACDONALD. Then this great tribune (Mr. Monk) who has been leading his people along certain lines, who has been telling them what their duty is with regard to this question of the navy, is not prepared to tell them whether he is in accord with his leader or not on the question of sending $25,000,000 to the home government. My hon. friend presented a petition this afternoon. I do not know whether that petition was against sending the $25,000,000 or against our building a Canadian navy, but I hope that, after he gets into conference with his friend and ally, Mr. Bourassa, he will be able to tell us just where he does stand on this question. In any event he does not stand behind his leader, and I say that he had no right to invoke in this House the memories of the heroes of 1837. Nor had he any right to charge the men who are supporting the government from the province of Quebec with having voted against his resolution in 1905 in connection with the French language in the northwest. He had no right, on a question such as this, to appeal to any sentiment of that kind.

Mr. MONK. Why had I no right?

Mr. MACDONALD. Because my hon. friend was raising the question of race in this country.

Mr. MONK. I defy my hon. friend to point to a single instance during this controversy in which I have appealed to race or anything of that kind. I defy those who are applauding him to prove it. I have been before my constituents, and I have not spoken anywhere else except here.

Mr. MACDONALD. My hon. friend has the right, as every free man has, to say what he thinks in this House, but he has no right to conjure up in his address the heroes of 1837 in order to give point to his contention that the autonomy of this country is becoming in any way imperilled by the measure before us. In so doing he declares his dissent from the opinions of his own friends. He puts himself diametrically in opposition to the hon. member for North Toronto (Mr. Foster) who has said that this autonomy business is nothing but a rag baby anyway; and when he seeks to import into this discussion the men of 1837, he is simply raising the racial cry.

Mr. MONK. My hon. friend knows nothing about it.

Mr. MACDONALD. I have the same rights here as my hon. friend. I come from a race of men who, in the little province of Nova Scotia, fought the battle of responsible government, just as did my hon. friend's compatriots in the province of Quebec. Our fathers in Nova Scotia won that battle, and won it a little earlier and without any particular display, but we won it nevertheless, and it is just as dear to us as it can possibly be to the people of any other province in this Dominion. But what I complain of particularly on the part of my hon. friend is this language which he used on February 3 in this House:

> I have seen these gentlemen in this House——
>
> (Referring to Liberal members from the province of Quebec.)
>
> —vote against the maintenance of the rights that were claimed for the minority in the organization of the new provinces of the west, I have seen them vote against the maintenance of the right which all parties in this House admitted to exist with regard to the French language in these provinces when at one time I moved for the maintenance of the strict right of the French Canadian to speak —only to speak—in that language in one of the assemblies of this province.

What possible relevancy has the use of the French language to do with the question as to whether we ought or ought not

to give a contribution to the British navy or build a Canadian navy?

Sir WILFRID LAURIER. Hear, hear.

Mr. MACDONALD. I say that my hon. friend, in this line of action, was simply seeking to fan the flames of discord. The course taken by the opposition shows simply an endeavour on their part to repeat their tactics of the year 1900, when we had one wing going to the English-speaking people of Canada and saying that this government was doing nothing for the empire but was seeking to bring about independence, and the other raising the cry in the province of Quebec that it was bartering away our autonomy and sacrificing everything to the British connection. These are tactics which it is only right and proper should be exposed. But where does the Liberal party stand in this matter? Have we any such ridiculous divisions in our ranks? No, Sir, the Liberal party stands solid to the only policy that can make Canada great and the empire secure. Our only strength as a nation lies in the fact that while, as a part of the great empire, we shall control our defence in times of peace, in times of stress and danger we may stand by the motherland when necessary. What should be the ambition of those who wish to see the empire as great and strong as it ought to be? Would they desire to see us relapse into the state of a crown colony and be content with paying tribute by way of contribution, or would they not rather have this country follow the policy spoken of by the hon. Mr. Fisher, at one time Premier of Australia, who declared that the five great self-governing colonies should prepare for their own defence the better to assist the empire in time of war. The position in which the Liberal party stands today is the same as that which was enunciated 45 years ago by the late George Brown, then leader of the Liberal party in the province of Ontario:

> The colonies are now in a transition state. Gradually a different colonial system is being developed, and it will become year by year less a case of dependence on our part and of overruling protection on the part of the mother country, and more the case of a hearty and cordial alliance. Instead of looking upon us as a merely dependent colony England will have in us a friendly nation—a subordinate but still a powerful people to stand by her in North America in peace and war.

That was the policy laid down by George Brown in Ontario in 1865 and that defines the aspirations of the great leader of our party who has guided the destinies of our country during the past sixteen years. The spirit which animates that policy is well set forth by Mr. Jebb, whom I quoted the other night in reply to the hon. member for North Toronto:

> My pages are concerned with the other soul—the embryo consciousness of the younger nations, which the English brother 'does not understand.' His notion of imperial union has been based upon that helpless 'Loyalty.' He has acquired the habit of supercilious condescension, as though he owned the whole empire—new nations and all. His instinct has been that the mere colonial ought to pay his share, and be thankful whilst the superior Englishmen runs the empire on his own lines. The soul of the empire is a perplexing mystery to him; partly because it is only now that even the elder of the new nations are bursting the colonial chrysalis; partly because, in the old country, the simple sense of patriotism has been suppressed beneath delusive cosmopolitanism. Yet he might understand if he tried to change places. Supposing Uncle Sam, in an absent-minded moment, made him a generous offer, namely to take over the British navy and run it for a nominal cash consideration. Would the overtaxed English brother jump at it? No, his dormant national pride rises in revolt. Then how can he expect new nations to pay hire for his navy? He complains that they do not take their share of the chores. It is his own fault, because he will not have them do it in self-respecting manner. For example, he trampled energetically upon the suggestion of national naval squadrons. He looks askance if they propose to do things in the British fashion. He thinks of it as 'disloyalty.' No wonder they are discouraged. The English brother talks pleasantly of alliance, but tries to force his supremacy. So they are constrained to imagine that national independence means cutting the painter. Ungrateful and disloyal colonies, to think that you should assert the temper which made England herself.

We say that the same spirit and the same traditions which have dominated the British race during its long history of 2,000 years should animate the Canadian people on the northern half of this continent. Those of us who are of the dominant race appreciate the fact that we are the inheritors of those institutions which have been the great factors in British supremacy throughout its long history, and those of us who form the minority appreciate in equal degree the liberties and the free institutions which we could not have got from any other nation.

This policy which has been inaugurated by our leader, is the only sound policy for Canada and both races in this country join in supporting it. Those of us who belong to the Liberal party, and many who do not, recognize in our great leader one whose legitimate ambition is the development of the idea of a nation within the empire, acting in concert with the other great self-governing colonies in the preservation of their local defence and autonomy and prompt to come to the assistance of the motherland. In the splendid path along which the great leader of the Liberal party has led this country, his achievements

have been memorable and are the pride of all fair-minded men in this broad land, to-day, no matter from what race they have sprung or at what altar they bow, just as they will be the glory of our children and of all those who come after us in Canada. Our internal affairs have been marked by the greatest period of development in all our history. First of all the colonies under his wise direction we relaxed the antagonism of tariffs towards the mother country and by our preference to Britain's wares and Britain's products we blazed the way which has been followed by the Unionist party in Great Britain in their policy of tariff reform for the empire. For the first time in our history under him, we sent our sons at our own cost and with our own money to fight the battles of the empire in South Africa.

And now, in order to assist in maintaining the supremacy of Britain on the ocean, having reached that stage in our national history when we are in a financial position to do so, we relieve the nation's burdens by inaugurating a fleet that in the days to come will grow and develop with our strength as we develop in population and wealth and stand at all times for the empire in peace and war. And above all, just as in the old land the Angles, the Saxons, the Jutes and the Normans were, by process of time and the wisdom of succeeding statesmen in Britain, welded together into that great race which has dominated the world for the past one thousand years, so here in Canada he has taught us all, whether we are French or English or Irish, or Scotch, to be true to Canada and to Canada firet, last and always. And the accomplishment of the result to be attained by this Bill is but a step in the work he has yet to do. He has not yet finished his work. Much remains to be done in laying the foundations, so that the edifice of after days will be worthy of the formative stage. He has been the master-builder. And not only is it the prayer of the Liberal party, but it is the prayer of every lover of Canada's who reads Canada's history aright, that that Providence which gave him to Canada to bind up the ties that were being loosened, and to cement the varying elements that were breaking away may still preserve him for many years to come to insure the fulfilment of his prophecy that the twentieth century is to be the century in which Canada will prove herself worthy of her traditions and responsibilities and will take her place as the centre from which British traditions of government and influence will radiate throughout the world through all future time.

Mr. W. J. ROCHE (Marquette). Mr. Speaker, I do not rise to take part in this debate with the idea that I can contribute anything of a very original character at this stage, for I recognize that the ground has been already so completely covered that it is now difficult to introduce new material. I wish to explain why I intend to support the amendment introduced by the leader of the opposition in preference to the Bill now before the House. The hon. gentleman who has just spoken is a good actor. He was speaking to the galleries to-day. The gentleman who formerly occupied his seat in this House, a former member for North Cape Breton, was usually allotted a certain task in the old parliament. Whenever the hon. member for North Toronto (Mr. Foster) would make a particularly effective speech, usually at a late hour of the night that member would be put up to indulge in personal abuse and vituperation and it would appear as if the hon. member for Pictou (Mr. Macdonald) has assumed the role vacated by that hon. gentleman. I must acknowledge that he fills the bill to a nicety. He has been incubating for the last five days in his endeavour to obtain a suitable reply to that splendid address of the hon. member for North Toronto. He accuses that hon. gentleman of misrepresentation. I will admit that he should be a good authority on misrepresentation, because two-thirds of his own speech was made up of misrepresentation, distortion of facts and false premises. He has put words into the mouth of the leader of the opposition (Mr. R. L. Borden) which that gentleman never uttered. He has, in order to carry his point, whether deliberately or not, I will not say—although he accused the hon. member for North Toronto of deliberately doing it—misinterpreted the resolution introduced in amendment by the leader of the opposition (Mr. R. L. Borden) and if you separate the chaff from the wheat in his speech I am afraid there will be very little of No. 1 hard left. He has spoken of the partisan character of the speeches made by hon. members on this side. Whose example are we following? Who made the first partisan speech? His own leader, the Prime Minister, who should have set an example to the younger members, who should have established the debate on a higher plane. Fancy the hon. member for Pictou accusing any one of making a partisan speech after the address we have listened to. He, of course, discussed this on purely national lines, on a broad basis. He did not descend to any partisanship. I repeat that language of a partisan character makes up at least two-thirds of his speech. He has referred to the unanimity that exists among members on this side. What about the unanimity that exists among the members opposite? I know whereof I speak. Take these hon. gentlemen outside of this

House and what will they say in regard to this Bill? I have heard their expressions in regard to it.

Mr. TALBOT. Name them?

Mr. ROCHE. Their name is legion. Some hon. gentlemen came down here and were going to open up the whole question. Oh, if they could only speak their minds, would they not show up the whole thing! It is true they have a certain cohesion and adhesion. You talk of cement having cohesive and adhesive qualities—it is not in it with the spoils of office. There is a post office here, a customs house there, an armoury in another place, a drill hall some where else. A prospective cabinet ministership in some other place—and I hope the hon. member for Pictou has earned his reward by his defence this afternoon. The hon. member places men of straw to show the members with what facility he can knock them down. I have referred to his misrepresentation. He stated that the hon. member for North Toronto misquoted a speech of Sir Wilfrid Laurier in 1888. I challenge him to show a word of misquotation. I say he made no reference to that speech except four or five lines.

Mr. MACDONALD. I said he had quoted a part of the speech of the Prime Minister and not quoted the context to show what he did mean.

Mr. ROCHE. The portion of the speech to which he took exception was in a speech delivered in this House in 1892 by the Prime Minister and if he looks up 'Hansard' he will find that.

Mr. MACDONALD. If you look it up you will find it was given as 1888. I went to 'Hansard' and found it.

Mr. ROCHE. He referred to the hon. member for Jacques Cartier, and said to him: What has the French language to do with the Bill before the House? I would ask that hon. member to discuss this question on broad national lines. What has his reference to the hon. member for North Toronto (Mr. Foster) as being a former temperance lecturer got to do with it? I would say to him: Let him first take the beam out of his own eye before he attempts to pluck the mote out of his brother's. He has referred to the leader of the opposition as being in favour of giving 'tribute.' The hon. gentleman is a lawyer; he knows the meaning of the word 'tribute.' Are we proposing to give tribute to the motherland, when we, voluntarily, of our own free will, and in a time of emergency, grant a contribution of money to strengthen the British navy? Do you call that 'tribute'? The hon. gentleman had better re-read his history if he desires to find the true meaning of the word. I have heard arguments put forward by hon. members surrounding the hon. member from Pictou (Mr. Macdonald), and these hon. gentlemen have not taken the position that a voluntary grant was anything in the nature of tribute. The hon. gentleman (Mr. E. M. Macdonald) has gone so far as to say that the leader of the opposition has had a letter addressed to him by the old leader of the Liberal-Conservative party to task for not supporting that meapolicy of the government, and urging him to support it. That letter was written—and the hon. gentleman knows it—before the proposition of the government was submitted to this House at all. If Sir Charles Tupper had written this letter after seeing the provisions of the Bill now before the House, and had taken the Conservative party to task for not supporting that measure, there might be some force in the hon. gentleman's criticism. That letter, written by the former leader of the Conservative party, Sir Charles Tupper, was against annual, stated, fixed contributions. So, the hon. member for Pictou, in offering his criticisms on that letter, as well as on the policy of the leader of the opposition in regard to these criticisms, does not differentiate between an emergency contribution and a contribution made annually, a fixed, stated sum, to be continued as a permanancy. He was not fair in his representation in that regard.

Now, the hon. member states that the Australian unit and the New Zealand unit are meant for the protection of the coasts of those countries, and he says that that is what we are doing here. And in what manner? By providing, for instance, two 'Bristols' on the Pacific ocean to 'protect' our own shores—two vessels that, according to the leading Liberal journal of the province of Quebec are purposely built to elude the pursuit of the enemy. The hon. member for Pictou has also put words into the mouth of the leader of the opposition when he states that that hon. gentleman does not want docks built in Canada, does not want a naval college, does not want ships constructed in Canada, and so on. I would ask him to point to a single expression of the leader of the opposition to bear out his assertions.

An hon. MEMBER. He can't do it.

Mr. ROCHE. He cannot do it without misrepresenting the facts. And, is it not amusing to hear the hon .member for Pictou give voice to good Conservative doctrine, of giving work to our own home people, of maintaining our own workshops, of keeping our money in our own country—a good protectionist speech; whereas, in the days gone by, these hon. gentlemen, when in opposition, had only one cry and shibboleth, and that was to buy in the cheapest market? Now, the Prime Minister (Sir Wil-

frid Laurier) himself admits that the construction of this navy in Canada—and, if we are to have it constructed at all, we on this side as a party do not object to having it constructed in Canada—will cost thirty per cent more at least than if it were built in Great Britain, the direct opposite of the policy preached by these hon. gentlemen before they found places on the treasury benches.

Now, I mean to refer to some other expressions of the hon. member for Pictou (Mr. Macdonald). But I can do so in a more connected manner as I continue my own remarks, and, as the several points arise, deal with what was stated by the hon. member. This question of national defence is one of very great importance; it is one which has engaged the attention of our public men, not only in the overseas dominions but in the motherland, for some years past to a greater or lesser extent. So far as Canada is concerned, in the earlier history of our country, when we were engaged in opening up and developing its resources, when our prairies were lying vacant, when our revenues were of a very limited character, when we were engaged in laying deep the foundations of our future greatness, there was some excuse, some reason, why Canada should not engage in duties of an imperial nature that would have resulted in too great a strain upon the exchequer of the country—greater than Canada could well afford at that time. But, now, when the initial stage of development is passed, when Canada is exporting millions of bushels of grain to other countries, when our hitherto vacant lands are filling up, when we are boasting of our so-called surpluses, and buoyant revenue, when our industries are on a substantial basis, when we take such pride in referring to the fact that Canada is a nation within the empire—and especially when England is groaning under huge financial obligations consequent upon her endeavours to maintain a superior fleet, not only for the protection of her own shores, but for the protection of the empire as a whole, —our self-respect should compel us not to withhold our aid longer, but to give in no niggardly or selfish spirit, to assume a fair proportion of the cost of protection, that protection to be used according to the best opinion of the naval experts of the empire to bring about the desired result. Surely our citizens are sufficiently patriotic, sufficiently loyal to the empire's interests, to cause us to rally to the support of the motherland in time of peril, and to assume our share and the responsibility of that share of maintaining the undoubted supremacy of the British fleet that should protect our status as a nation, and without which we should be at the mercy of every hostile foe. In reading the expressions of opinion on this subject, I have come across the suggestion that, so long as Canada remains a colony of Great Britain, so long she is entitled to and should receive the protection of the British navy. But, to say nothing of the pusillanimous spirit of a people who would expect, nay, demand, protection at the hands of the motherland, while, at the same time, refusing a proportionate share of the cost of that protection, where should we look for protection were the British fleet annihilated? Whose colony would Canada become then? With Germany as the conquering foe, having no colonies of her own in which to locate her surplus population, could we reasonably expect so rich a prize as Canada to escape her clutches, or to be closed against the German desire for expansion or colonization? Are we, as British subjects to complacently view the possibility of being compelled to transfer our allegiance to a foreign nation, and the severing of those ties of kinship and of love that have made us part and parcel of what we have proudly spoken of in years gone by as the greatest empire the world has ever seen? I refuse to believe that there is any great element of our population that would thus repudiate responsibility on our part. Now, where national status exists, national obligations follow as a matter of course. And, were Canada to be involved in serious international complications requiring any assistance, I am sure that the whole power of the British fleet would be at her back to espouse her cause, to defend her, to fight her battles if need be; and it would be a craven spirit that would thus accept and expect this assistance and protection without assuming the responsibility of doing our share towards keeping that means of defence in the highest state of efficiency. The proposition embodied in this Bill for the construction of an independent Canadian navy is one that is not designed to meet, and certainly will not meet, the immediate necessities of the empire. And, as the best guarantee of peace is to be fully prepared for war, and our course should be to show the nations of the world that all her colonies are at the back of the motherland. Viewed even from an economic standpoint, the price of peace, no matter how great it is, would be much less than the price of war, with its immense sacrifices of life and waste of money, Canada's duty, then, is to render immediate, effective assistance to make overwhelming the superiority of the British fleet so that no nation, Germany or any other, would dare to challenge that superiority on the high seas.

Hon. gentlemen opposite have quoted statements of leading Liberal politicians in the mother country, made during the excitement of an election campaign, to create the impression that no emergency exists or is likely to arise within the next few years. But it must be remembered

that these same gentlemen who have been quoted in this House gave voice to similar expressions in the British parliament when they were reducing the estimates for naval expenditure, but who a few months thereafter had to confess that they were in error, that later and more reliable information had come to them, that they had no idea of what extensive preparations were going on in Germany, and practically admitted that those preparations were designed to challenge British supremacy on the seas. Let any one read the statements as to the unpreparedness for war of the British fleet, let any one read the statements of Lord Charles Beresford, who declares that it will require millions of dollars to be spent on the British navy in order to bring her into a state to enable her to cope with Germany; read the statements of leading statesmen of Great Britain on both sides of politics made not during the heat and excitement, all sounding a note of alarm, consider that the thoughtful press of that country has admitted that there is grave danger, read the reports of level-headed business men of England, not politicians, who have visited Germany and who have seen for themselves the extensive preparations that are being carried on, who have sounded German public opinion, and who, on their return, have expressed their conviction that the crisis was imminent. Is it for us who are so far removed from the scene of operations lightly to brush aside those expressions of opinion as idle words? Are we to ignore them? Is it not much better, if we are to err, that we should err on the side of safety, that we should put our House in order to meet the expected attack? For it cannot be denied that in the undoubted supremacy of the British fleet lies, not only the salvation of England, but the salvation of Canada and the salvation of the whole British empire. Should the war cloud pass over without any international complications of a serious danger arising, let us not feel that in giving this contribution proposed by the leader of the opposition we shall have wasted so much money, for that contribution would represent a permanent means of defence and of protection upon which we could rely for all time to come. But I am confident that probably such a contribution might be the means of calling a halt in the enemy's plans.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

SECOND READING.

Bill (No. 142) to incorporate the Congregational Union of Canada.—Mr. A. Haggart.

NAVAL SERVICE OF CANADA.

House resumed the adjourned debate on the motion of Sir Wilfrid Laurier for the second reading of Bill (No. 95) respecting the naval service of Canada, the proposed amendment of Mr. Borden thereto, and the amendment to the amendment of Mr. Monk.

Mr. ROCHE. Mr. Speaker, I was about, at six o'clock, to refer to the statement made by the hon. member for Pictou (Mr. Macdonald) that Germany, up to eight years ago, had been purchasing her ships in Great Britain, and that she had not previously engaged in steel ship-building. If the hon. gentleman's statements in other portions of his speech are no more reliable than that, the hon. members of this House will know just exactly how much stock to take in them. If the hon. gentleman had refreshed his mind by looking at Brassey's Naval Annual for 1905 he would have found a list of over 100 vessels, armoured and unarmoured, on the effective list of the Germany navy. In every case the place where the vessel was built is mentioned. Every one of these vessels was built in the German yards, some of them as early as 1876. The first German ironclad which originated in Germany was built in 1869, while the last naval vessels built for Germany in England, instead of being launched in 1902, as the hon. member for Pictou stated, were launched in 1874. As a matter of fact, German built liners won the blue ribbon of the Atlantic about eight years ago. I quote that to show how very inaccurate the hon. member for Pictou was in his statement in that regard. The German method is, and always has been to effectively, quietly and very secretly prepare for war, while at the same time professing peace. That has been her history in the past, as evidence her treatment of France and Austria. That is, according to the present indications at least, just what she is doing to-day. See the immense scale that these preparations are being conducted on. What is the particular object in view? Can anybody seriously contend that it is purely for defensive purposes? Notwithstanding the fact that the hon. Minister of Militia (Sir Frederick Borden) quoted some authority to that effect the other day, I do not really believe that he would seriously express his own opinion to the same effect. I cannot think that the Minister of Militia, after having visited Great Britain during last summer, after coming in touch with members of the admiralty, with members of both political parties, and after having become acquainted with public opinion in that country, is taking his present position in regard to this Bill from conscientious conviction, for I believe that were he to follow his own feelings in the matter, instead of for party pur-

poses being compelled to support the Bill before the House, he would take an entirely different tack. I stated that no person would seriously contend that these preparations are being carried on, on such a very large scale simply and purely for defensive purposes. What nation on the earth has shown any desire, any determination, to cope with Germany, to attack her for a great many years past, knowing how really impossible it would be to do so successfully? Germany has to-day the largest and best trained army in the world. Germany can place as many as 4,000,000 men in the field if it is desired under system of compulsory military training; Germany's population is almost fifty per cent greater than that of England, and with all these preparations I do not think that anybody would seriously contend that it is purely for defensive purposes. Why would the German taxpayer, submissive as he has been in the past to the heavy national taxation which is imposed on him for the purpose of maintaining a very large standing army for defensive purposes, tamely submit to this largely increased taxation under the pretense that it was merely designed to protect her own shores? Every sensible man knows why these preparations are being carried on on such an immense scale. The German people recognize it, the people of England recognize it, the people of other countries of the world see it, and it is idle for us to shut our eyes to the true situation. When Britain began the Dreadnoughts a few years ago, then it was that Germany began the construction of her navy on such a large scale, realizing that future war vessels would be largely of the Dreadnought type. And, when England, through a mistaken policy, cut down by many millions of dollars their naval estimates, then it was that Germany took advantage of the apathy, and I may say the culpable negligence of certain men in public life in England, and hastened the construction of her increased naval armament.

Let any person read the expressions of public men in Germany, professors in her universities and others occupying high positions of responsibility and trust, and one cannot escape the conviction that these war preparations are for the single purpose of challenging the supremacy of the British navy. Germany has largely increased her capacity for rapid construction during the past eighteen months. By working day and night she can construct one Dreadnought or super-Dreadnought per month, or twleve in a year, and in this respect Germany is not surpassed even by Britain herself. Germany has built during the past eighteen months or has in process of completion 17 naval docks, and she has enlarged her harbours, deepened her canals and constructed her ships with the evident object of utilizing them in the home waters of the North sea. And still there are those who will say there is no danger, and who make their wilful blindness their excuse for refusing to contribute to strengthen the British navy. The policy of the British admiralty in the past has been to distribute the British fleets at strategic points throughout the world for the guardianship of British interests, but that policy has been to a considerable extent reversed in recent years and now the fleet is largely concentrated in home waters to protect the shores of Britain. Does that look as if England desired to engage in a war of aggression or conquest? Is it not the very best evidence that England recognizes that the war she will be called upon to fight in the future will be purely defensive. Is it not significant, especially in view of the war preparations carried on by Germany, that there is this concentration of British fleets to protect the shores of Great Britain? Germany is to-day England's commercial and political rival, and of recent years she has been outstripping England in trade. Germany by her policy of protection has built up great industries, and by her progressive legislation she has done more to advance the efficiency of her labouring classes than has any country in the universe. The products of Germany are admitted to the British markets free of duty, while the products of Britain are met at the German frontier with high tariff duties. Is it surprising under these circumstances that the German people were so anxious to see the defeat of the Unionist party in the recent British elections, with their policy of tariff reform which would strike back at Germany in commercial matters and of their policy of increased naval expenditure which would strike back at Germany in her naval policy as well? England has nothing to gain by aggressive war even if successful, save a possible war indemnity. England has her colonies for her surplus population, and she has her various naval bases at strategical positions throughout the world. England's supremacy is to-day no more a menace to the peaceful development of the German empire than at any time within the past half century. Germany is immune from attack by any other country on account of her immense standing army. England's naval supremacy is absolutely necessary for the salvation of England, so as to prevent a blockade of her ports which would result in shutting off the importation of food products upon which the population of Great Britain is dependent. England is Canada's best market, and with that market jeopardized as it undoubtedly would be in the event of war with Germany should the British fleet be crippled, how long do you suppose our prosperity in Canada would continue without any British protection for our trade routes? Some people in Canada say: We are busy with our

domestic affairs, we are engaged in building another National Transcontinental railway, we are improving our waterways, we are developing our resources, and they think that thus they are discharging their full obligation in the way of national defence. Let me ask, what spirit it is that dominates us in the developing of our own resources? Surely we are doing this solely and wholly for our own advancement and for the prosperity and progress of our own people. If England has incidentally benefited by reason of Canada's development, are we, because of that, to calmly fold our arms and congratulate ourselves on having discharged our full obligation in the way of naval defence? When Canada built the Canadian Pacific railway which joined our various provinces into one mighty nation, true we incidentally provided a new highway between Great Britain, Australasia, China and Japan, but who will claim that any imperial sentiment inspired us in the construction of that railroad? Who will seriously contend that such an idea entered into our calculations at all? If Canada spends her millions of dollars for the purpose of developing her resources, for the purpose of making this an attractive field for immigration and increasing the prosperity of our people, does not that very fact entail on us an additional obligation, for surely a country that is worth developing, is worth defending? The question is: What are the best means of defence? Now, in connection with this question, probably one of the greatest obstacles to overcome is the apathy of the people consequent on a feeling of false security. We have been so prone for years past to look upon the British fleet as being invincible that we possibly have not taken into consideration the great changes that have taken place in recent years in the increased armaments of other countries. Another reason for the apathy of the people is to be found in the sentiment of a large proportion of them against what is called militarism. But, Sir, so long as a hostile country starts out with the avowed object of overcoming the British fleet, which at the present time is our sole and only guarantee of peace and prosperity, much as we may deplore large expenditure for purposes of defence, no monetary considerations should be permitted to prevent us from a continuance of that means of defence which will insure to us that peace and prosperity which is so essential to our national existence. In union there is strength, and this is just as true in connection with naval matters as it is in connection with other matters, and, with a large, powerful, central empire's fleet not merely for the purposes of local defence, not merely for the purpose of defending Canada, Australia and New Zealand, but to be stationed at the most vulnerable points in time of war, that in my opinion is the best means for the security and permanent defence of the empire as a whole. I have referred to the state of public feeling in Germany with regard to England, and I desire to draw attention to a few extracts which have not as yet been quoted to the House—and it is very difficult to get extracts that have not been cited up to the present—in order to show the state of public feeling in Germany against England, notwithstanding all that has been said to the contrary by the Prime Minister and others on that side of the House. Professor Hans Dilbruck, lecturer on history in the University of Berlin, writing to that well-known periodical, the 'North American Review,' said:

> A nation as well as an individual must seemingly either love or hate. If the multitude had no enemy to be the object of its hatred it would take no part in foreign politics at all. So the German nation, which once celebrated with delight, the memory of the 'belle alliance of Blucher and Wellington at Waterloo,' has now riveted its hate against England.

I am sorry the right hon. the First Minister is not here, because he referred to this. Notwithstanding these people were allies in the past, notwithstanding that they fought together at Waterloo, here we have a German professor stating that the German people to-day are actuated with hatred against the English race. What object would this gentleman have in misrepresenting the state of public feeling in his own country? But he is not the only authority. Another German professor writing to Sydney Whitman, the well known English authority on German affairs—I refer to Professor Theodore Mommsen, of the university of Berlin—regarding the German attitude, said:

> The hate against your countrymen has reached fearful, and I must add, unjust dimensions.

Would these gentlemen write in such a strain unless they had good ground? Later still, Professor Treitsche, the great German historian—and I wish to call the attention of some of the Liberal members who spoke last year on the resolution, to this particular authority:

> If our empire has the courage to follow an independent colonial policy with determination a collision of our interests and those of England are unavoidable.

An hon. gentleman who spoke in this House last session said he knew perfectly well that the enlargement of the German fleet was destined for colonization purposes. But where are they going to get those colonies, and how are they going to get them? By peaceful means? Not according to this German authority, who says they cannot

avoid a collision if they persist in carrying out that policy. This historian goes on to say, and I am sorry the right hon. the Prime Minister is not here to listen to this, in view of the stand he took at the conferences of 1902 and 1907, because the course he followed at these conferences, I believe, laid the foundation for just such a sentiment as exists among the German masses:

In the British colonies very little attention is paid to antagonism between Great Britain and Germany. Never has the fact been more clearly demonstrated that Great Britain is only standing by herself and that her colonies have grown into separate nations with their own separate interests.

I think that if the right hon. gentleman had fallen in line with the representatives of the other colonies at the conference of 1907 and supported the resolution introduced by Dr. Smart, there would not be such a feeling prevailing in Germany as we witness there to-day. The Germans would not have gained the impression that England was standing alone and that her colonies were not at her back. I have also referred to facts stated freely in England, and I desire to quote from a speech by Lord Rosebery—not a political speech, not a speech destined to help the Unionist party, but a speech delivered at the Imperial Press Conference, in which he referred to the British navy, and practically made an appeal to the colonies to rally around the motherland:

We can and we will build Dreadnoughts or whatever nearest type of ship may be as long as we have a shilling to spend on them or a man to put on them. All that we can and will do, but I am not sure that even that will be enough and I think it may be your duty to take back to our young Dominions across the seas this message and this impression—that some personal duty and responsibility for national defence rests upon every man and citizen of the empire. Tell your people, if they can believe it, the deplorable state at which Europe is rattling into barbarism, and the pressure which is put upon this little England to defend itself, its liberties and yours. Take this message also back with you, that the old country is right at heart, that there is no fault or weakness in her. For her own salvation she must look to herself, and that failing her, she must look to you. —

I say that this was an invitation from Lord Rosebery, who was certainly not making a speech for any political effect. Himself a Liberal, he urged on Canada, as well as on the other colonies, the duty of rallying to the support of the motherland and not allowing all this taxation for national defence to be borne by the motherland alone.

I wish to quote another expression of opinion, the opinion of a Liberal, Mr. McKenna, Lord of the Admiralty and member of the Asquith government:

We cannot force our strategetical ideas on you; we should fail if we attempted to do so. If any dominion came to the admiralty at home here and asked us what our view was as to the best assistance for the purpose of common defence which could be rendered, we should be ready with an answer, but we should not necessarily expect you to accept our answer. You will have your own views as to the proper development of defensive forces in your own dominion. It is only by your working out your own problems for yourselves that you can gain experience. Lessons told you by others will never come home to you with the same force as lessons which you have learned for yourselves.

What occurred after that? The colonies did go to the motherland; they did go to the British admiralty. They did ask for advice. Australia took the advice and so did New Zealand. Canada got the advice but refused to follow it. The Chief Lord of the Admiralty said that the admiralty was quite willing to advise the colonies as to the best means of national defence, but did not wish to impose their views on Canada.

Again, Mr. Balfour, speaking at this conference, and not making a political speech, also referred to the fact, that though local defence is necessary it is really subordinate to imperial defence and subordinate from the view point of the colonies themselves.

The German ocean, the channel, the neighbourhood of these islands, possibly the Mediterranean, those are the theatres in which, if there is to be an attempt to dissipate those fleet contingents, so that when the time of an Armegeddon, the Armegeddon will take place, and it is impossible for a crisis to arise which shall not be able to have that concentration on which our whole imperial existence and the defence of each separate portion of the empire really depends. The fate of Australia, the fate of New Zealand, Canada, South Africa, India, is not going to be decided in the Indian ocean; it is going to be decided here.

What does that mean? It means that the fate of Canada is not to be decided off the coast of the Atlantic or the Pacific, but in the North sea or the home waters, by the enemy striking at the central fleet. How easy it would be to despatch the individual fleets, such as the Canadian fleet, if the central fleet were overwhelmed.

Referring to Mr. Balfour, my hon. friend from Pictou (Mr. Macdonald) said that he never took stock in this German scare. My hon. friend has not been reading the newspapers or he would not have made that statement. What has the German press been doing if not holding up Mr. Balfour to execration as a scare monger simply because he had been making reference to the condition of the British fleet and to what the Germans had been doing with the avowed object of attacking England. So that the hon. member for Pictou (Mr.

Macdonald) was entirely erroneous when he said that Mr. Balfour had never admitted there was a German scare.

I can quite well understand why the creation of an independent Canadian navy would be welcomed by those who look forward to the independence of Canada as our future national destiny, for I recognize that in order to maintain a separate national existence a considerable navy would be absolutely necessary. But I deny that there is any large sentiment in Canada in favour of Canadian independence, notwithstanding the fact that some of the right hon. gentleman's supporters, from at least one province in this Dominion, are sedulously cultivating that idea among their followers and are using that as an argument to induce the people to support the government's proposition. Canada is to-day enjoying as great an amount of autonomy as is consistent with its remaining an integral part of the British empire, and I feel that the consensus of opinion and desire in this country, far from being that as the right hon. gentleman said a few years ago, we would in the process of time drift away from the motherland as the ripe fruit falls from the parent tree, is that the overseas dominions and Great Britain will be drawn more closely together in fact as well as in name, under one sovereign, one flag, one navy, each component part having a reasonable voice at least in matters pertaining to the defence of the empire. The history of the Canadian confederation is a notable example of the benefit to be derived from union. The history of the Australian Commonwealth is another and the latest example within the British empire is the confederation of South Africa. In my judgment the time is not far distant when all the overseas dominions and the mother land will be drawn together and confederated for many purposes and to a great extent, each one having an equal say in all important matters in the councils of the empire. Sir, if the actions of the Prime Minister in regard to the future destiny of our country is being viewed with considerable amount of distrust by the people of Canada, he has only himself to blame and well he knows it. The people of this country have not forgotten his past utterances in regard to Canadian independence. They have not forgotten that celebrated Boston speech of his, paragraphs of which have been quoted. I shall quote another paragraph lest we forget. The right hon. gentleman after he became leader of the Liberal party visited Boston and before a great audience gave voice to the following utterance:

> In my opinion the conduct of England, of Canada, towards the United States during the war was a disgrace to the civilization of England, of Canada. The American people could fight their own battles; they required no help, but when they were engaged in a supreme struggle for the life or death of this great nation; when they were fighting for a cause as great, as holy, as ever engaged the devotion of men; when they had reason to expect the outspoken sympathy of those nearest to them, it was galling that southern privateers could be built, manned and equipped in England, with the passive connivance of the British government, to destroy American commerce on the high seas; it was galling that rebel refuges could find shelter in Canada, and there, with impunity and without provoking condemnation, plot abominable crimes to help secession.

This was greeted with applause. Here we have the Prime Minister of Canada, at that time the leader of a great political party, visiting a foreign country and before that large audience, true to his instincts and desire to say something to tickle the ear of the particular audience that happened to be present, holding up to the execration of that foreign audience, old England, the motherland, and Canada, the land of his birth, for which he claims to have such an affection to-day. He says this, forgetful of the fact that in that very same life and death struggle of the civil war, there were admittedly not less than 40,000 Canadian citizens engaged and enrolled in the American army fighting the battle of the American union. Did the Prime Minister dwell on that aspect? Did he say what Canada did for them at the time of that civil war. No he did not say so. Was this the action of a patriot, was this the action of a statesman, a man who desired to see amity, peace, and good will prevail between the peoples of the respective countries, or was it not the act of a man who seemed more impressed with a desire to sow the seeds of strife and discord, to create prejudices if prejudices did not exist? Small wonder under the circumstances that the American papers report that this part of his speech met with great applause, although I very much doubt if the better element of that self-same audience respected the hon. gentleman for thus speaking of his own country. I know that hon. gentlemen on the other side of the House do not like to hear these quotations made. Hon. gentlemen opposite throw reflections on members of this side for casting aspersions on the loyalty of the Prime Minister. Have they a word to say in condemnation of these words? They have never been repudiated nor retracted. Why do they blame us for quoting the words of their own leader, why not visit their condemnation on their own leader. The Prime Minister said the other day: I am not an imperialist. These words were entirely superfluous coming from the right hon. gentleman.

Who would expect for a moment that the hon. gentleman who uttered these words:

I am a subject of the British Crown, but whenever I have to choose between the interests of England and Canada, it is manifest to me that the interests of my country are identical with the interests of——

What?

—the United States of America.

Who would ever accuse any gentleman uttering those expressions of being an imperialist? So, I say that his expression the other day on the second reading of the Bill was entirely superfluous. Again:

The present position of Canada cannot last for ever. Even at this day England and Canada have interests totally apart, and the time will come when in the very nature of things separation must take place.

If the right hon. gentleman had stated that he was a separatist, it would have more nearly conformed to his past utterances on this subject. But, to say: I am not an imperialist, was superfluous. Again:

It is a great mistake, a fundamental mistake, to make allegiance, British allegiance——

With the emphasis on the British.

—the basis of trade.

Yet we have the right hon. gentleman's supporters rising in parliament and telling us: we gave a preference to the motherland and to-day we are enjoying a sentimental preference in her market, but notwithstanding that we should not make allegiance the basis of trade, especially British allegiance. Again said the premier:

I have again and again repeated that the goal of my aspiration is the independence of Canada, to see Canada an independent nation, in the course of time.

No man in this or any other country would have to state that these words were not likely to emanate from an imperialist.

I notice that the member for Pictou (Mr. E. M. Macdonald), referring to and reflecting on the member for Jacques Cartier today for his utterances in regard to British diplomacy, had not one word of condemnation to offer to his own leader for giving voice to similar or even stronger expressions. I am not here to defend the hon. member for Jacques Cartier (Mr. Monk). I will frankly say that in this regard I do not agree with him. Will the hon. member for Pictou and other gentlemen opposite be equally frank and say that they condemn the Prime Minister's statements? What the hon. gentleman stated is reported in 'Hansard' of April 7, 1892. Speaking about the making of treaties, and referring to the present hon. member for North Toronto (Mr. Foster), he said:

The hon. gentleman has told us in a casual way, however, that if we adopted the power which is now claimed, we would be relieved of the services of British diplomacy.

This is his answer:

Is there a Canadian anywhere who would not hail with joy the day when we would be deprived of the services of British diplomacy? What has been British diplomacy to us, Sir. British diplomacy, so far as Canada is concerned, has been a record of failure, and of surrender and sacrifice.

And the hon. member for Pictou (Mr. E. M. Macdonald), apparently, is approving of his leader's course while condemning hon. gentlemen on this side for statements very much milder in effect.

Now, it may be stated that the speech delivered in Boston was delivered at a time prior to an election in this country. That is true. But it was repeated in effect after that election was over, after the defeat of the Liberal party at the polls, when the present Prime Minister had plenty of time to weigh his words and the effect of them upon himself, his party and his country. Yet he rose in this House and repeated the declarations and absolutely gloried in them. And I state that, up to the present time, these expressions have never been repudiated or retracted. The hon. member for Pictou began his speech the other evening with a reflection upon a past leader of the Conservative party as being an annexationist. He had not the manliness to state whom he had in mind. Had he stated the name, then we should have known that the gentleman referred to was one who, as a young man and, long prior to his entering upon public life, had signed an annextion manifesto at a time when the relations between Canada and Downing Street were most strained and when there was great irritation in this country. Had the hon. member for Pictou desired to be fair, he would have gone on to tell us that, in another chamber of this parliament, that gentleman, after becoming a leader in public life, had risen in his place and frankly confessed his error, and stated that he and others had acted 'like a lot of angry school children,' but that he thought his life since then had surely more than counteracted that youthful indiscretion. Sir, the people of Canada can honour a man like that, who can acknowledge a fault. But the Prime Minister has never retracted his words. And we have a right to say that he could not retract them, because they express his sentiments to-day. He had it put up to him by my hon. friend from North Toronto (Mr. Foster) the other night: 'Are these your sentiments still, Sir?' And, by his silence, the Prime Minister gave assent. Why are we accused and attacked by hon. gentlemen on the other side when we recall to the attention

of the House and the country, expressions which the Prime Minister openly made and which he has never retracted? The quarrel of these hon. gentlemen is with their leader, and not with the members of the Conservative party.

Why did not the Prime Minister himself attend the conference in Great Britain last year to which his colleague the Minister of Marine and Fisheries (Mr. Brodeur) and the Minister of Militia (Sir Frederick Borden) went? Was it because he had already placed himself on record at the conference of 1907 as being entirely opposed to Canada contributing in any way, shape or form, towards the defence of the empire? Was it by reason of the fact that he had opposed the resolution introduced by the representative in that conference of Cape Colony, Dr. Smartt? That resolution has been referred to by the leader of the opposition (Mr. R. L. Borden), but I shall again recall it to the attention of the House in order to show that there was nothing in this resolution which the Prime Minister should have objected to, and more especially in view of what he is doing by this Bill for the construction of an independent Canadian navy. This was the resolution moved by Dr. Smartt:

That this conference, recognizing the vast importance of the services rendered by the navy to the defence of the empire and the protection of its trade, and the paramount importance of continuing to maintain the navy in the highest possible state of efficiency, considers it to be the duty of the dominions beyond the seas to make such contribution towards the up-keep of the navy as may be determined by their local legislatures——

No infringement of autonomy.

—the contribution to take the form of a grant of money, the establishment of local naval defence, or such other services, in such manner as may be decided upon after consultation with the admiralty and as would best accord with their varying circumstances.

What was there in that resolution that the Prime Minister of Canada, the representative of Canada at that conference, should object to? Does it infringe on self-government in this country? Does it infringe upon that blessed 'autonomy' of which he is the only guardian according to his own expressions? It plainly states by 'local naval defence or such other services.' But the Prime Minister opposed that resolution. And it is by reason of that, I verily believe, that Germany has been going forward, in the belief that the colonies were not at the back of the motherland, carrying on her naval preparations, thinking that Great Britain stood alone. Dr. Smart, after discussing the question for some time, expressed great disappointment that the representative of Canada, the premier colony of the empire, should have taken such a strong stand in opposition to the resolution. He argued for it, and pleaded that it was nearly time we did something. He said:

I thought the wording of this resolution would have specially met your views, because towards the up-keep of the navy it may take the form either of a grant of money or the establishment of a local defence force or other services.

The reply was no argument. Sir Wilfrid Laurier said:

I have said all I have to say on the subject.

This was the curt reply. 'Well,' said Dr. Smartt, 'I think it is a great pity we do not pass something. We have done so much in the way of pious affirmation'—and we can see whom he had in his mind's eye when he used these words—'that I am anxious we should do something of a practical character.'

Was it because he was on record in that conference that the right hon. gentleman (Sir Wilfrid Laurier) refused to attend in person the conference of last year? In view of the stand he then took, and of the stand he has taken here, is it surprising that people view with suspicion and distrust the introduction of this Bill, fearing that it is designed, as some of his followers state, as another step towards the independence of Canada? The people may well be forgiven for their distrust in view of the Prime Minister's own statements.

We have been taunted with having diverse views on this question on this side. Hon. gentlemen on the other side have stated that they are going to hang together —instead of hanging individually, I presume. There is as much diversity of opinion on that side as there is on this; more correctly, there is as much opposition to the construction of a Canadian navy amongst members on the government side as there is on our side. But, of course, they will support the Bill. Oh, you may be sure they will support the government. They dare not do otherwise.

Mr. TOLMIE. Why not?

Mr. ROCHE. Why, because you have before you such examples as Mr. Bourassa, who, a few years ago, was the pride of the French Canadian Liberal wing in the province of Quebec, a man to whom they were looking forward as a great leader, but who, because he asserted his independence and read some well deserved lectures to his own party, has been politically ostracised. And there was Mr. Lavergne, the independent young member from Montmagny, who, before he took his place in this House, found on his desk a document he was asked to sign, to support the government, to be tied hand and foot before he even knew what measures he would be called upon to sup-

port; and, because he would not sign away his independence, he was driven from the ranks of hon. members opposite.

Mr. E. ROY. Will the hon. member (Mr. Roche) allow me a question? Does not he know that Mr. Lavergne chose not to run in the last Dominion election, but sought a seat in the local house?

Mr. ROCHE. I did not say it was in the last election. Mr. Lavergne himself is the authority for what I have just said. He used these expressions in this House and before his colleagues, and none of them denied the truth of what he said.

Mr. E. ROY. It was before he left the federal political arena.

Mr. ROCHE. Certainly, and how is he being treated by his friends? Are they giving him the glad hand? Is it not rather a back-handed way of treating an old political friend? But he is not the only one. There is Mr. Richardson, of Winnipeg, who was elected a member of this House in 1896, and who refused to support this government because they had gone back on their pledges to the people; he also has been driven into outer darkness, and is no more recognized amongst them. Then there was the late Mr. Tarte, a gentleman who, for speaking his own opinions, and holding his own convictions, for preaching what other gentlemen in the cabinet had been practising, was read out of the party; and others who had dared to assert their independence have been treated in the same way, as the serpent was hung up in the wilderness, as a warning to others who dare assert their independence in opposing this Bill. They know the punishment that will be meted out to them. Therefore, I say that the spoils of office have stronger cementing qualities than anything else. I do not think it lies in the mouth of those hon. gentlemen to reproach the members of this side of the House for having the manliness to give a free and untrammelled expression to their opinions, because our leader does not put into operation any gag law on this side of the House, there is room for a diversity of opinion on a great public question like this. But is there that harmony of views amongst our friends opposite that they wish us to believe exists? I think not. We have all read the published interview of Senator Domville, a Liberal, who has condemned in unmeasured terms the government proposition for the construction of a Canadian navy. Of course it may be said that he is beyond the reach of the hand of the Prime Minister. It does happen occasionally that when men get beyond this Chamber they assert their independence. Then we have read the published interview of the hon. member for Westmorland (Mr. Emmerson) who, if he has been correctly reported, and I presume he has been, has made declarations which show that he cannot be claimed as an enthusiastic supporter of the government's navy proposals. Why, Sir, read the speeches delivered in this House last session on the resolution of the hon. member for North Toronto; especially read the speeches of the hon. member for the Yukon (Mr. Congdon) of the hon. member for Queens, P.E.I. (Mr. Warburton), of the member for Dorchester (Mr. Roy), of the member for Nicolet (Mr. Turcotte), and you will look in vain for that harmony of views which hon. gentlemen say prevails in their ranks. Some of the statements of these gentlemen have been referred to by my hon. friend from North Toronto. The member for the Yukon certainly made no pro-British speech in this House; we on this side thought he made an anti-British speech, he opposed a contribution towards the Canadian navy. These gentlemen little thought at that time that they would be called upon to support a Bill of this nature. The hon. member for the Yukon, speaking here last year, opposed any contribution. He said, even if the fleet of England were destroyed, Canada would not be in the slightest danger of any foreign aggression. Well, I refer him to the speech of the Prime Minister, his own leader, who stated, on the second reading of the Bill that our whole national existence depends on the supremacy of the British navy. Let these gentlemen get together and harmonize their views that are now so divergent. And still they reproach members on this side of the House with holding divergent views. And yet the hon. gentleman stated in the same breath that Germany's fleet was the outcome simply of her desire to found colonies for her surplus population. Where is she going to get those colonies? According to the authority I have quoted, she must found them on British territory, and this desire must inevitably lead to a clash between Germany and England. The hon. member for Queens, P.E.I., I believe, has occupied an honourable position in his own province, and I am sorry he has not taken a broader minded view of this question. He was not in sympathy with the resolution, and he instanced what we were doing in the way of national defence. He took the ground that when we were developing our own resources we were doing all that we should be called upon to do for imperial defence. He says:

> We are providing homes for the people of England, and relieving the congestion in that country.

Fancy, Doukhobors, Galicians and Poles come into Canada, and are treated in all respects on the same terms as the Englishman, and we are relieving the congestion

of those countries quite as much as we are of England, and therefore we are contributing in the same way to the defence of Russia, of Poland and of Austria, and all other countries from which we get a foreign population. We are allowing these foreigners to come into this country on exactly the same terms as the Englishman, all of them get 160 acres of land free, after performing settlement duties in exactly the same manner. The Englishman gets no preference over the foreigner in that respect. It is indeed a strange argument to contend that in thus allowing Englishmen to come into our country and relieve the congestion in Great Britain, we are discharging our national duty in the way of defence. Now, the hon. member for Dorchester (Mr. Roy) also stated that he was opposed to the construction of a Canadian navy; still he will vote for this Bill just the same. He spoke against the immediate construction of the Canadian navy, especially, he said, 'if it is intended to take part in England's wars.' I have no doubt that the hon. gentleman will go down into the province of Quebec and tell the people that this navy is not intended to take part in England's wars, and in support of his position he will quote the expression of the Prime Minister, when he says that this navy will not go to war without the sanction and consent of the parliament of Canada, including the hon. member for Jacques Cartier. He will thus be able to argue that the navy will not take part in the wars of Great Britain, while the government supporters from Ontario will also quote from another speech of the Prime Minister on the second reading of the Bill when he said that when England is at war Canada is at war.

Mr. E. ROY. Does the hon. gentleman say that I was opposed last year to the construction of a Canadian navy?

Mr. ROCHE. I said the member for Dorchester; I presume the hon. gentleman is the member for Dorchester. I read the hon. gentleman's speech carefully, and I think if he reviews his own speech he will find that he spoke against the immediate construction of a navy for Canada, and especially, he said, 'if it was intended to take part in England's wars.'

Mr. E. ROY. I do not think the hon. gentleman has carefully read my speech.

Mr. ROCHE. The hon. member for Nicolet (Mr. Turcotte) also reflected upon those who are in favour of contributing to the British navy, or who were in favour of taking any part at all in the defence of the empire. That hon. gentleman, speaking against the resolution of the hon. member for North Toronto, says:

> Instead of sacrificing millions in the construction of battleships and arming our coasts—

For what purpose?

> —to flatter the imperialistic propensities of those whose erroneous patriotic ideas have misled them, provision should be made to ensure the construction of the Georgian Bay canal.

Here is another gentleman who talks of the development of the resources of Canada as a discharge in full of our national obligations to the empire. This hon. gentleman, like the others, will line up and vote for this Bill for the construction of a Canadian navy, to take part, according to some hon. members, in England's wars, but according to other members, and according to the premier, not to take part in any of England's wars without the sanction of parliament. And these are the gentlemen who rise in parliament and cast aspersions upon hon. members on this side of the House for want of harmony in their views, and in face of their contrary pronouncements of last year, they now come forward and actually glory in their subserviency. These gentlemen take the position that because we are engaged in our own domestic affairs, and building public works, we should be exonerated from contributing to imperial defence. They put me in mind of a little clipping that I saw in a Liberal newspaper. I would like to call the attention to it of the hon. member for Red Deer (Mr. Clark), who referred to members on our side of the House the other night as Little Canadians. This is what the paper stated:

> While Britain is building Dreadnoughts, Canada is providing the sinews of war, food for the men whose physique, pluck and stamina energize these floating battlements. While others do the fighting, let Canada do the feeding.

This is the little Canadianism that I refer to the hon. member for Red Deer. He is quite willing, as one of these little Canadians, to stay at home and let Britain's sons from all the other colonies and from the motherland fight all the other nations of the world in defence of the empire, while Canadians stay at home, grow wheat and sell it at war prices. That is his idea of the status of a Canadian.

I would like to ask if this present policy is designed to materially enhance the fighting strength of the British navy? If it is not, then it is absolutely useless as a fighting force in the interest of the defence of the empire. So long as Britain's fleet remains supreme, so long as she maintains a two-power standard, so long as she is overwhelmingly superior to her foes, as she has been in the past, so long Canada will be immune from attack, because the respect that is paid to the Union Jack

when it floats over the battleships of the British fleet will be a protection for Canada and she will need no other defence. I do not know whether it has been settled or not, but up to the present we have not learned what flag is going to float over our Canadian navy, whether it is to be the Union Jack or the Canadian flag. This has been kept in the background and probably for a very good purpose. While the British navy remains supreme that is a sufficient protection for Canada, and it has been so up to the present time, but should that navy be defeated, where, I ask, would we look for support and protection? Our present duty is to strengthen the British navy in our own self-defence and not to do so, in my humble judgment, would be unwise and unpardonable. The right hon. Prime Minister has practically confessed that he cannot give an accurate estimate as to when this navy will be provided. He did hazard a guess on the second reading of the Bill when he said that within a year he thought that docks should be constructed and within five years the navy. But, if the right hon. gentleman's estimate in regard to this is no more nearly accurate than was his estimate as to when the National Transcontinental railway would be constructed, and especially as to its cost, I think we can quite readily come to the conclusion that were his estimate doubled it would be well within the mark. We have no docks, no ships, no men to man them, no officers, no training schools, no equipment, and it takes years to secure these, and in the meantime should an emergency arise where is Canada going to be? The hon. Minister of Militia and Defence (Sir Frederick Borden) and the hon. Minister of Marine and Fisheries (Mr. Brodeur) stated at the imperial conference that the supreme consideration was the constitutional freedom of the state to which all questions of strategy, no matter how important, must be subordinated. I ask, where would our boasted freedom of state be were the British fleet swept off the seas?—a not impossible contingency. Where would we get our freedom then? The Minister of Militia and Defence might get down upon the Atlantic shore and his colleague, the Minister of Marine and Fisheries, on the Pacific with the most powerful megaphones and sing out to the enemy, many miles off, that word, 'autonomy,' 'autonomy,' until they were black in the face, and it would not be as much protection as our dinky little navy that we are going to construct under this Bill. If the Canadian navy is intended to be of any assistance to the British navy why does it not include a first-class battleship, a Dreadnought, such as Australia is providing, notwithstanding what the hon. member for Pictou (Mr. Macdonald) says about the Indomitable class, which is practically a Dreadnought. Why have we not contributed a Dreadnought to the fleet the same as New Zealand has? The nations of the earth are actually rebuilding their fleets in order to include vessels of the Dreadnought class in them. A modern fleet which is without a Dreadnought is practically useless as a fighting force. Any modern battleship of the Dreadnought class, on our Atlantic or Pacific shore, would send our navy to the bottom of the sea without coming within the range of the guns of our fleet. The question, in my opinion, is: Does Canada desire to be an integral portion of the British empire, and, if so, is she willing to undertake the responsibility for her share of the national defence? If we refuse I think we are neglecting our own duty and that we ought to be thoroughly ashamed of ourselves. I have referred to the character of the vessels required, and I will quote what has been already quoted from the words of a gentleman who was formerly First Lord of the Admiralty. Lord Selborne, speaking with regard to the character of the battleships required, said:

> The sea is one and the British navy must be all one. If the idea should unfortunately prevail that the problem is one of local defence, and that each part of the empire can be content to have its allotment of ships for the purpose of the separate protection of an individual spot, the only possible result would be that an enemy who has discarded this heresy and combined his fleets will attack in detail and destroy these separate British squadrons, which united could have defied defeat.

This was not the expression of a politician, but of the First Lord of the Admiralty in reference to the concentration of the fleet in time of war instead of having it separated as proposed by this Bill. Again I quote Mr. McKenna, the present First Lord of the Admiralty. Speaking in the British House of Commons on March 16, he is reported as follows:

> There will come a day when, by an almost automatic process, all ships of an earlier type than the Dreadnought will be relegated to the scrap heap. The maintenance of our superiority then will depend upon our superiority in Dreadnought class alone——

Not any second-class cruisers that are made to elude the pursuit of the enemy.

> The German power of constructing this particular type of vessel is at this time almost, if not fully, equal to our own, owing to their rapid development within the past eighteen months.

Again, Sir Edward Grey, the Foreign Secretary in Mr. Asquith's government, speaking on this same question, said:

When the German programme is completed Germany will have a fleet of 33 Dreadnoughts. That fleet will be the most powerful the world has ever seen. This imposes upon us the necessity of rebuilding the whole of the fleet. That is the situation. If we were to fall into a position of inferiority we should cease to count for anything amongst the nations of Europe and we should be fortunate if our liberty were left, and we did not become the conscript appendage of some stronger power. That is a brutal way of stating the case; but it is the truth.

These are the words not of a jingo, but of Sir Edward Grey the present Foreign Secretary, which practically in effect were repeated by Mr. Asquith who described the situation as:

Most grave, and to us not only unforeseen, but unexpected.

I think that is proof that a fleet without a Dreadnought is practically useless and that it is not an addition to the war strength of the navy in time of war. The hon. Postmaster General delivered an eloquent speech the other day which we all very much admired as far as its eloquence was concerned, but which contained a goodly number of misrepresentations. That hon. gentleman, swelling himself, said: This is the third occasion upon which Canada is rushing to the support of the motherland. The first was in the tariff of 1897, brought down to this House, in which we gave a British preference, the second was when we sent our troops to South Africa, and the third was when we brought down this navy Bill. Let us deal with these seriatim. In the first place I challenge the hon. gentleman to show one expression in the tariff of 1897 that gave a preference to Great Britain. That tariff contained a reciprocal clause, but while the hon. gentleman was not a member of the government, although a member of the House, the present Finance Minister (Mr. Fielding) and his colleagues took particular pains to explain to the members of the House that any nation in the world might have the advantage of that reciprocal clause. It was pointed out by every hon. gentleman on this side of the House that it would be impossible to grant a British preference under that provision of the Tariff Act. But hon. gentlemen opposite knew it all and it was not until British diplomacy, which in years gone by was ridiculed so much by the Prime Minister, had helped them out of the hole into which their blundering legislation had got them, that they were enabled later on to give a British preference. So that, the hon. Postmaster General was not accurate when he said that in 1897 they gave a British preference. But was it the preference which had been promised the people by the right hon. Prime Minister? I have here the London speech of the Prime Minister in which he told the electors that he was just as much in favour of a preference as was Sir Charles Tupper. He stated that one of the first things he would do when returned to power would be to send a commission to England to negotiate a mutual preferential treaty, but within forty-eight hours after he landed in England he broke faith with the people of Canada and he advised the English people not to grant us a preference, and not to have anything to do with the obnoxious policy of protection which was the curse of Canada, but which by the way he has retained as a principle of his fiscal policy down to the present hour. I say he betrayed the people of Canada; I say that any one who acted as he did in the ordinary business relations of life, would be found guilty of false pretenses, in that the right hon. gentleman secured the support of the people of Canada on his pledge of preferential trade, which on being returned to power he absolutely repudiated. The Postmaster General must think that the people of Canada are blest with a very short memory when he claims credit to this government for sending Canadian troops to South Africa. We do not forget the Prime Minister's Chicago interview in which he stated that the Militia Act would not permit Canada to send volunteers beyond the confines of our own country, that the constitution would not permit it, that there was no appropriation, and that parliament would have to be called. We do not forget the interviews and editorials in the Toronto 'Globe' to the same effect. We do not forget that a colleague of the Prime Minister stated in the province of Quebec that not a man and not a gun would be sent by the Canadian government to assist the motherland in South Africa. We do not forget that Sir Charles Tupper, the leader of the Conservative party, wired Sir Wilfrid Laurier, pledging him the support of the Conservative party if he sent the troops to South Africa, nor do we forget that in reply to the telegrams of the Montreal Star ' sent to the mayors of every city, town and village the universal response came back: Send our boys to the front. We know that it was only when forced by overwhelming public opinion that the Prime Minister yielded and that Canada was able to participate with England in that campaign. We know that then the Prime Minister went down to the province of Quebec and that he practically apologized for permitting Canadians to enlist and fight in the British army. We had Mr. Bourassa, when a Liberal in the House, telling the whole story of that war some years ago, and the character of the campaign that was carried on in Quebec. Mr. Bourassa told us that there was a large section of Quebec opposed to the sending of

Canadians to South Africa, and he said that the campaigners in Quebec in order to make it as easy as possible for the government used this argument: First, they contended that the Boer war was indefensible; second, that Canada should not have participated in it; and third—and this is the excuse they gave—Sir Wilfrid Laurier was forced into it by the fanaticism of a united English-speaking population. And, in the face of this, the Postmaster General, has told us that out of the fullness of her heart Canada voluntarily sent her troops to fight the battles of the motherland in South Africa. It reminds me of that somewhat egotistical expression of the Prime Minister when he told us that he went to bed one night leaving Canada a mere blot on the map and he woke up in the morning and lo and behold, Canada was a nation, and: 'I did it'. What a personification of modesty.

Now, Mr. Speaker, I have not prepared any typewritten peroration, such as we listened to this afternoon. I simply desire to say in plain words that I am going to oppose this Bill, first, because it provides for an independent Canadian navy which will have no association whatever with the empire fleet. It is not a unit of the British fleet such as Australia has, and I was surprised to hear the Prime Minister say, far from frankly, and wrongly stating the facts in regard to the Australian fleet, that Australia instead of giving a contribution to England of one million dollars for the upkeep of the British navy, as she formerly did, had now reversed her policy, and had come to Canada's way of thinking, and would do as Canada was doing. Australia is doing nothing of the kind. True it is, that Australia had been contributing for years to the upkeep of the British navy, as had the other colonies, and in 1907 she had increased her grant, but at the recent imperial conference Australia took the advice of the admiralty and is now constructing under that advice, an Australian unit of the British navy, which Canada is not doing. And why is England contributing to Australia's navy? It is because she is going to get something in return that will be of service in time of war. And if Canada had taken the advice of the admiralty and had done as Australia is doing, England would also have contributed to the Canadian navy a million dollars just as she is contributing to the Australian navy, which will be of some service to Britain in time of war. Then, the Prime Minister has told us that this is not a new policy of his, but that it has been before the country for the last eight years. He bases that assertion on what Dr. Smartt, of Cape Colony, called a pious affirmation by the Prime Minister, in 1902, that Canada was willing to take into its consideration the idea of some kind of

naval defence in the future. And mind you, that pious affirmation was made when, in 1902, the other colonies were giving fifty thousand pounds, and a hundred thousand pounds, and two hundred thousand pounds to the upkeep of the British navy, and when Canada was lagging behind just as she has been lagging behind ever since this government came to power in everything that appertains to contributing to the defence of the empire. But, even if the Prime Minister did make that declaration eight years ago, up to the present hour he has not lifted his little finger to implement it by practical legislation. It is ridiculous to claim that this is a new policy; it is not treating with sufficient respect the intelligence of the members of this House and the people of the country for the right hon. gentleman to make such a claim. And, Mr. Speaker, I object to this proposal, not only because it is not a unit of the British navy, but because its cost will be enormous, and in time of war it will be utterly useless. The initial expenditure will not be eleven millions dollars as stated by the hon. member for Pictou, because according to the statement made by the Prime Minister, if it is built in Canada thirty per cent will have to be added, and that will bring the initial cost to fifteen or sixteen million dollars. Its upkeep will be twice what it was represented to be, and in the end the navy will be of no benefit to the empire. The people of Canada have never had an opportunity of pronouncing an opinion upon this policy, and I am democratic enough to believe that such an opportunity should be afforded. We know that the Prime Minister, in days gone by, claimed to be a democrat to the hilt, but he has singularly changed his character in that respect. He once sneered at empty baubles and glittering titles, which appealed to men of less noble mind, but he soon changed his mind, and the excuse he gave was that Her late Majesty, Queen Victoria, had actually thrust a knighthood upon him that he could not refuse—another exemplification of his modesty. I am sufficient of a democrat to desire that before engaging in this permanent policy, which certainly can be of no help to the motherland for five years, and perhaps for ten years, if at all, the people of the country should have the opportunity of passing judgment upon it. I shall, therefore, support the amendment of the leader of the opposition for a direct contribution to purchase two Dreadnoughts, or the equivalent, according to the best expert opinion of the British admiralty. Again, the hon. member for Pictou reflected on that. We are going to send them any place the admiralty desires in time of war. Yes, we have sufficient confidence in the British admiralty—far more than we have in this government—to believe that they

will utilize their war fleet where it will reach the most vulnerable point and best protect and safeguard our interests. For this reason, I shall oppose the Bill and support the resolution in amendment of my hon. friend the leader of the opposition, with the firm belief that in doing so, I am voicing the consensus of opinion in my own constituency at least.

Mr. SEALEY. In view of the resolution unanimously passed by this House on the 29th March last, and in view of the newspaper discussion throughout Canada since then, as well as the discussions by public men in the meantime, it would seem to me that the time has arrived when Canada should make a beginning in the establishment of a Canadian navy. We have heard a good deal about our duty to the empire and loyalty to the King, but, personally, I have every confidence in the thorough loyalty of every Canadian to the empire and the King, to the last dollar and the last man. The only difference of opinion seems to be as to how we can best put that loyalty into actual and useful practice. For that purpose, we have three propositions before us. We have the Bill of the government proposing the construction of the Canadian navy, out of Canadian material, by Canadian workmen, in Canada and owned entirely by Canada. Then we have the amendment of the leader of the opposition, proposing a contribution of either two Dreadnoughts or $25,000,000, and a plebiscite to decide whether we should do anything further or not, and we have the further amendment proposing that we should do nothing. As between the three I favour the first—a Canadian navy, built in Canada out of Canadian material by Canadian workmen.

As the trend of the discussion generally has largely had to do with the attitude of Germany, so without repetition I might occupy the time of the House a few minutes in saying something about Canada and on behalf of Canada's interests in what we propose doing. The construction of a navy in Canada would do many things for this country. It would not only be in the best interests of Canada but of the empire as well, whereas a contribution of money would merely mean the expenditure of it by Britain and the incurring of that much additional debt by this country, because I do not suppose we have $25,000,000 surplus not in use to contribute. We would not be giving any immediate benefit to the British navy, because to-day the British navy yards have orders for future delivery more than they can fulfil, and are taxed to their utmost. Consequently to increase the British navy faster than it is being increased, we must have additional shipyards, and personally I would prefer to have those additional shipyards in Canada. A few days ago we learnt by the daily newspapers as well as quotations in this House that, to the credit of Australia, her first born had been launched in England and christened the 'Paramatta' by Mrs. Asquith. Personally, I would prefer seeing Canada's first born launched in Canada and christened the 'St. Lawrence' by Lady Laurier. I believe that by the construction of a navy in Canada we would not only be doing our duty by the empire, but by Canada as well, and we would add to Canada's prosperity along commercial lines as well as naval and military lines. This Bill provides for the construction of a Canadian navy, composed of four ships of the Bristol type, one Boadicea and six destroyers, the construction to be completed within the next four years at an expenditure of $12,000,000, or an average of $3,000,000 per year. The first $3,000,000 would of necessity require to be expended in the construction of dry docks and shipyards, and I believe that, apart from the question of the navy, it would be worth $3,000,000 to have those dry docks and shipyards constructed in Canada. A few months ago, when the Empress of Ireland became disabled and a notice came by wireless telegraphy, her owners arranged to send her around to New York to be repaired, because we had no accommodation in Canada for vessels of that size. In my opinion our trade and commerce, and our merchant marine are too important to remain longer in that condition, so that I believe that, irrespective of the navy, we should do something to secure in Canada facilities for the construction and repairs of our merchant marine, so that this first year's experience would be of the greatest possible benefit to Canadian commerce. If at the end of the first year, we have these dry docks and shipyards constructed, we shall have good results for Canadian trade and commerce apart altogether from the standpoint of a Canadian navy.

The second year we would require to go largely into the equipment of our navy yards with drills, punches, trip hammers and all that sort of thing. Our iron and steel companies would require to instal in their plants rolls, not for turning out steel rails, but for turning out ship plates, and every machine shop and factory in general would require to prepare for turning out the various requirements of a navy yard, because as I understand it, the intention is not merely that the parts be built in Britain and assembled in Canada, but that they be constructed in Canada as well as put together there. What a stimulus that would be to the various industries, machine shops and other concerns providing the necessaries for the equipment of our navy yards. That alone would be worth another $3,000,000 to Canada. And I believe that at the end of the second year, even though we had not a battleship constructed, we

would still have good value for our money in the benefit derived by our commercial marine from that expenditure.

The third year, the expenditure of the next $3,000,000 would go into construction; and if in that construction, we inaugurated a new era of ship building in Canada on steel lines, that would ultimately lead to our recapturing the position we occupied in the old days of the wooden ships. That, I think, would be well worth the $3,000,000. So far as the raw material is concerned, according to the reports of the Conservation Commission of Canada, as well as other information, we have abundance of iron and steel in Canada, and all we require is the plant to put that abundance to profitable use. For that reason it only requires some act to stimulate and develop it to reinstate our ship building industry until it occupies the same place as the building of wooden ships in Canada in the old days. If we had that, we would have splendid value for our $3,000,000 expenditure, when, on the expiration of the fourth year, if our expectations are realized, we will not only have a navy composed of four Bristols, one Boadicea and six destroyers, but we will have expended $12,000,000 in establishing and in encouraging an industry that we so greatly need in Canada, and in addition to that we will have had an expenditure made in Canada for wages, materials, &c., in the actual construction as well as the allied industries which, on an average, would give a profit to the Canadian people of 25 per cent. So I believe in the organization and encouragement of that industry we would have splendid value for our money in addition to having the foundation for a fairly satisfactory navy.

I have compared these vessels with the vessels of the British navy, and while they have been characterized as a tin-pot navy and tin-pot vessels, I notice that the British navy is made up very largely of the same kind of vessels. If our four Bristols are tin-pots, Britain has 60 or 70 tin-pots of that same type in her navy. If our Boadicea is a tin-pot she has 71 of the same class. If our destroyers are tin-pots, she has 152 of that class, and it would seem that, outside of the advantage of the additional numbers, her eight Dreadnoughts would be about the only superiority of the British navy as compared with the Canadian navy. For that reason I think the Canadian navy will be a credit to Canada and of great value to the empire generally. I do hope that the argument which has been advanced that we could not construct a navy in Canada, that we have not the men and have not the ability, is advanced merely for argument's sake, and is not seriously held by any people in Canada. In entering the library of parliament we pass a tablet:

To the honour of the men who constructed the Royal William, the first vessel to cross the Atlantic in her own steam in 1833.

That inscription is evidence that in the early days we were the pioneers in the construction of steam vessels crossing the ocean, and if we bred the people who were in advance and leaders at that time, I think we can do it again. Mr. Samuel Cunard, afterwards head of the famous Cunard line, was associated with the construction of the 'Royal William,' although he afterwards went to the United States to seek a larger sphere for the exercise of his abilities. We have further evidence as to the ability of Canada compared not only with the remainder of the empire, but with the world, even in the matter of the South African contingent. The South African contingent, according to newspaper report and according to the reports and records of the officers and men who were there, seemed to have displayed the greatest ability and to have struck more terror into the enemy than any other body of the same number of men or even of two or three times the number; in fact, it is said that the appearance of the Canadian contingent close to the enemy's front was what finally prompted them to capitulate. That being the case, we certainly have the men here who are able in military matters to rank with the men of the British empire and the rest of the world, and I believe that with a little practice our people would rank equally high in naval matters. I am satisfied that the Canadian contingents in South Africa were worth to the British empire ten times what they cost in money, and I believe that the admiralty will value a Canadian navy at a cost of $12,000,000 ten times more than they would a contribution of $25,000,000 and nothing else. I believe that with the establishment of a Canadian navy and with the class of men we have in Canada and with the training that the Canadian government will give them, the whole of the empire will be infinitely better pleased than they would be with a mere contribution.

The importance of the Canadian fleet from the standpoint of the protection of our ocean borne commerce and the policing of our shores must not be overlooked. In Canada we are finding it necessary to increase our police protection not only in the centres of population, but in the rural districts as well. In my own county we have recently decided to establish a thorough system owing to certain cases of lawlessness that occurred. The products of Canada, not only of an agricultural but of all other classes, are protected during their production and transportation to the sea-board by the police, and in case of necessity by the militia of Canada. Once these products reach the sea-board, they are placed on

ocean-going ships and are subject to any chance or mishap that may occur. As we have protected our products within Canada, the general consensus of opinion would seem to be that we should do something of the same kind from a naval standpoint.

I said that the 'Royal William' was built in Canada and that we had reason to feel that we could, with perhaps some instruction and assistance at the outset, achieve similar success in modern naval construction. One evidence of that is that Sir Edward Douglas, a Canadian, is in charge of the construction of the Japanese navy which is expected to be most up-to-date.

Another evidence of our ability would be the Canadian construction of the Ross rifle which has proven superior to all rifles throughout the empire, and is likely to be adopted by the imperial government, and I believe with a fair chance our success in naval construction would be equally satisfactory. From a commercial standpoint—and that side of the question has not been much touched upon—the expenditure of $12,000,000 would seem quite an amount. Yet, considering that it would mean the employment of an average of 3,000 people during this naval construction, it would increase our population by 3,000 heads of families, or, perhaps, 15,000 people. For, if people now in Canada are employed in naval construction, the places they now occupy will require to be filled by others. Consequently, this naval construction would stimulate immigration and increase population in Canada. And the people would have to be provided for in Canada. A population of 15,000 would consume products from Canadian agriculturists and manufacturers—largely agriculturists—to the amount of from $2,000,000 to $3,000,000 a year. We should in that way provide a home market for this additional amount of Canadian products during the construction. That would probably be equal to the results we shall receive from the French trade stimulated as a result of the negotiations during the past two years for better trade relations with that country. For, up to the present time, our trade with France has only amounted to about $1,250,000 a year. We have worried a great deal about our trade with Germany and about the German surtax. But our trade with Germany has amounted to only about $2,000,000 or $2,250,000 a year. So, Germany and France together have given us a trade of less than $4,000,000. The providing of a home market for between $2,000,000 and $3,000,000 of our product, would, I believe, be more profitable to the people of Canada than both the French and German trade combined. While I appreciate the advantage of these treaties, I am satisfied that the home market for one-half the amount of this foreign trade would be about as profitable, if not more so. And from an agricultural standpoint, I think it would be fair to assume that the agriculturists will have to contribute by way of revenue to a considerable amount of our naval requirements, because it is announced that the expenditure of $12,000,000—at the rate of $3,000,000 a year—is to be paid out of current income. That being the case, I think it would perhaps be fair for us to consider for a moment how we could make that as easy as possible upon the agricultural interests of the country and upon the people generally. And I venture the suggestion that, by a stroke of the pen, if my trade and commerce calculations are right, that could be done at once. We exported from Canada 800,000 cords of pulpwood for the year ending the 31st March, 1909, according to the trade and commerce returns. We received, according to these same returns, less than $4,500,000 for this pulpwood, or an average of about $5.50 per cord. After the purchasers outside of Canada had received that pulpwood they expended on it not $4,500,000, but a further sum of $34 per cord, or $26,200,000, to convert the pulpwood into the finished product. I have given some attention to how that expenditure was made. I find that half of it, or over $13,000,000, was expended for direct labour, which is equivalent to the employment of 15,000 people all the year round at an average of $3 a day. That 15,000, as heads of families, would represent 75,000 of a population. Over $13,000,000 was expended also in machinery, other materials, buildings, &c., and of this amount also fully one-half or about $7,000,000 went into direct labour. This would provide similar wages for 7,000 people, representing a further population of 35,000. If our conditions remained as they are to-day and provision were made for turning that pulpwood into the finished product here in Canada, it would mean an increase in our population of 110,000, or at the very least, 100,000. That population would require a supply of $10,000,000 a year, so that we should provide a home market for that amount of additional product, largely along agricultural lines. And an expenditure of $26,000,000, such as was made on this pulpwood, could not possibly be made without leaving a profit to the artisans, merchants and others, including farmers, of 20 per cent or upwards of $5,000,000. In that way we could provide for an expenditure of $3,000,000 on our naval construction, and also provide for the upkeep, which, I understand, will amount to from $3,000,000 to $4,000,000. And the upkeep, of the navy will also create a considerable increase of demand for our home products. If I understand aright, there are to be about 1,500 naval officers and men to man the navy. In that way, it seems

to me our expenditure could be met, and Canada could be furnished with a navy, or, at least, a very good beginning of a navy, consisting of up to date vessels, without putting a heavy burden upon any person. In fact, so slight will be the burden if we adopt these other methods I have referred to, that, I believe, it could be borne with very little inconvenience. And, while things were pretty good, in fact splendid, along agricultural lines at the present time, I believe that, as 'preparation for war is the best guarantee of peace,' so, in matters of trade, I believe that in good times it is good policy to prepare for bad times. And I believe that the better we are prepared for bad times, the less bad times we shall have. Though there might be some objection at present, to raising the tariff on agricultural products, I do not think the tariff has very much bearing to the consumers on prices at the present time for it does help the producers. But, I think it would be a good thing for us to provide for dull times—not that they are likely to occur in Canada, but they will occur in other countries which will then try to dump their products into Canada in unfair competition with our own, and if we provide at the present time, when, perhaps, there is not so much need for it, for the difficult times that overtake the world generally, which we in Canada, I believe, will feel much less than the average country, but which, with proper precautions, I believe we can provide against feeling at all.

Returning to the construction of the navy, I believe in that construction being made in Canada—not merely assembling the work here, but rolling our plates here, and making the nickel steel that goes into these armoured cruisers and converting it into armour plate here. I believe that the concern undertaking the construction of the navy for $12,000,000 will spend $25,000,000 in providing materials and plant. I do not mean to say that they will expend $25,000,000 and sell the product at $12,000,000. But foreseeing the establishment of a merchant marine ports in Canada, they will build their plant and equipment accordingly, and will spend by way of starting that industry in Canada at least $25,000,000 before the $12,000,000 worth of war vessels is built. That will stimulate the construction of a merchant marine, and establish a shipbuilding industry in Canada upon quite an extensive scale. From some newspaper reports I have seen, and from remarks I have heard on the floor of the House, it is expected that a British company will get the order for building the navy, but it is yet uncertain whether they will do a large part of the work here, or merely assemble here, after building the docks. But I think by the time the government advertises for bids for the construction and delivery of this navy, they will have a bid from a concern entirely Canadian, who will be able to do the work at least as low as any other company. Of course the government will accept the lowest tender, and if a British firm chances to be the lowest, the government will oblige this firm to submit to the same conditions of construction and equipment in Canada as they would a Canadian firm.

Now, as to whether a Canadian navy will be an assistance to the British navy and of assistance to the empire, we have to remember what was said by the Prime Minister on the introduction of the Bill, that when England is at war, Canada is at war. I think that declaration should be sufficient evidence and guarantee that there will be no hesitation in placing the fleet at the command of the British admiralty in case of war. In keeping the navy under the control of the Canadian parliament, we are simply following the precedent of Australia and of other countries. You might as well say that our militia should be at the beck and call of Lord Roberts, as to say that our navy should be at the beck and call of the British admiralty. That is not practicable in time of peace, but in time of war it will be so. As to whether a contribution of $25,000,000 will be of more assistance to the empire than a $12,000,000 navy, I think we can consider what took place in the Russo-Japanese war. We are told that the Russian money chests were filled with gold, but their gold availed them very little when they met the war vessels of Japan on the open sea. Neither $25,000,000 of Canadian money, or Canadian notes, or promises to pay at some future day, would be of any advantage to the British admiralty, but a Canadian fleet, I am satisfied, would be of infinitely more advantage. I am satisfied that a Canadian navy, acting in conjunction with other fleets of the empire, will be of infinitely more value to the empire than any cash contribution we can make.

Now, I think, Sir, that every member of this House has a right to his own opinion, and I am going to express mine. We have heard a great deal said in this House about the German menace and the German war scare for months back. Personally, I have no faith in the German scare. I think it has been largely got up by the dukes and lords, and perhaps by the British admiralty. The dukes and lords have been inclined to champion unsound doctrines, they own the greater part of the land of Britain, and have been endeavouring year after year to shunt their responsibilities off on people who have much less; and now, when the dukes, and lords, and landowners are likely to be called upon to pay their fair share, they have created the German scare, in order to induce the colonies to contribute and relieve them of a part of their burden. However that may

be, I think the proposition contained in the Bill before the House is infinitely better than any other proposition that has been made. I think also that it will give an impetus to our merchant marine, and will make it a great credit to Canada. To-day, notwithstanding that our trade and commerce are growing so rapidly, only ten per cent of it is carried in Canadian bottoms. I think a country that is situated as ours is, with extensive coasts on two oceans, and an export trade that must be done almost entirely by water, we should do something to increase our shipbuilding industry, so that instead of ten per cent of our commerce being carried in Canadian bottoms, fifty per cent of it will be carried in Canadian bottoms before the expiration of the next ten years. I think also that a Canadian navy, in case a difficulty really were to arise—and I do not think there is any more probability of difficulty arising between Canada and any other nation than there is between Germany and England—but I say if difficulty really were to arise a Canadian navy would be a great assistance to the British navy and an effective support of our militia on land. With the construction of the new Weland canal to a depth of 27 feet from Hamilton to Selkirk on Lake Erie, 40 miles distant from the international boundary, and with the construction of the Georgian Bay canal our navy could pass up into the interior of Canada entirely on Canadian waters, and a Canadian navy could co-operate in case of emergency with our Canadian militia to much better advantage than two Dreadnoughts in England could possibly do. In comparing our position, and the position of our navy with that of Australia, I can only say that, from the remarks I have heard and from the newspaper comments I have read, I would much prefer the position of Canada, owning her own navy, built by herself, to the position of the Australian navy, to which the British government contributes.

While perhaps it has not been said in so many words, it has been said in substance that it is necessary, in order to show our loyalty to Britain, to contribute $25,000,000 in money. I think Britain has every confidence in the loyalty of Canada. Canada is loyal to the last man and the last dollar. It is entirely unnecessary to demonstrate our loyalty by a contribution of $25,000,000; in fact, there is no question about our loyalty except as it is raised occasionally for party advantage. Our trained men would be of equal advantage in case of a naval difficulty to Great Britain as our contingents were in South Africa. To question our loyalty and to read quotations in support of such argument is, to my mind, a mere juggling with words and has no real substance or meaning. The insinuations in respect to Canada's tin pot navy are as unfair to Great Britain as they are to Canada because our navy, except in minor particulars, will be on exactly the same plan and basis as the British navy. Therefore, if we speak about Canada's tin pot navy, we have to say that Britain has a tin pot navy also with the exception of her eight Dreadnoughts. There is no reason why we should not excel as Canadians in the construction of naval vessels and vessels of the merchant marine. We have excelled along military lines wherever we have come in competition with military men of other portions of the empire. At Bisley we have not only carried off our fair average share of honors, but for a number of years past we have carried off very much more than our share; in fact, it is said that we have carried off nearly fifty per cent of the honors that are granted at these great meets of the empire's military men. In South Africa our contingents won distinction by their conduct on the field of battle. In the construction of the Ross rifle we have certainly carried off honors in being able to construct military weapons on a small scale, and I believe that if we only have courage we will be able to engage in naval construction with equal success. The cost cannot be so very great if at present our military expenditure only represents eighty cents per head. The naval cost is estimated at forty-five cents per head only for the completion of the vessels which, with interest on construction and maintenance, will make a total of $1.25 per head. It would not seem to represent a very large increase in the expenditure and over rapid increase in population will in all probability by that time, not increase the per capita cost above the present 80 cents. But I believe that when we are expending eighty cents to see our products safely to the ocean ports we can afford to make a further expenditure for insurance on the high seas, even on commercial lines, of forty-five cents in order that our products may reach their destination without interruption. If we are going to be the granary of the empire in years to come it is necessary that we should have some naval defence for our coast. While not a military expert I have frequently paid visits to navy yards and know something of their equipment and methods, I may say that in actual warfare it is not expected that merchant marine can be protected by naval vessels during the whole course of the Atlantic voyage. If we had two Dreadnoughts placed at our disposal in the English channel they could not possibly be trusted to come out to Canada to escort our commerce over because they would require very considerable protection themselves. Therefore, two

Dreadnoughts from the Canadian standpoint for coastal protection would be white elephants on our hands. A navy such as that proposed consisting of four Bristols, one Boadicea and six destroyers is certainly the most practical and useful from the Canadian standpoint, and for these and many other reasons I propose to support the Bill now before the House for the establishment of a Canadian navy.

Mr. A. S. GOODEVE (Kootenay). Mr. Speaker, I do not intend to weary the House by giving long extracts from the opinions of naval experts in order to crowd the pages of 'Hansard' with matter that is already on record. But, after listening carefully to the speeches which have been delivered on both sides of the House I propose to give some reasons, why, in my opinion, we should oppose this Bill and vote for the resolution introduced by my hon. friend the leader of the opposition (Mr. R. L. Borden). In reference to the hon. member who has just taken his seat (Mr. Sealey) I can only say that he has made one of the strongest appeals apparently that could be made to the government benches, namely, the appeal of the loaves and fishes. He has told them how the money will be expended in Canada, and how they will reap direct personal benefit from the expenditure of that money. That may appeal to a certain number of people, but I do not believe that the great Canadian people as a whole can be appealed to by an argument of that kind. As it seems apparent that no speech on the naval question can be made without reference to that great historcal character, Peter the Hermit, I shall commence by referring to what was said by the right hon. leader of the government (Sir Wilfrid Laurier). Referring to that character, he spoke of his wonderful ambition and eloquence and he reminded us that by means of that eloquence he had been enabled to gather together a large army of men in order that they might rescue from desecration by the Mohammedans the tomb of our Saviour. It proved, however, to be a failure. The reason of the failure was the lack of discipline, training and unity. But the right hon. gentleman failed to apply that to himself when he told us, with wonderful eloquence, of all the glories of the British empire. But, in the next breath he stated that in his opinion we could better aid the empire by having a navy of our own; in other words, that if we in this country undertook to have a navy separate from that of the empire it would end just as the great army of Peter the Hermit ended in disastrous failure. Again, I find that the leader of the government quoted with great favour from the poet:

Daughter am I in my mother's house
But mistress in my own.
The gates are mine to open
As the gates are mine to close.

But, Sir, I ask what would be thought of the daughter nursed at the mother's breast, nurtured in a mother's arms, shielded and protected by a mother's love and strength, until her house was thoroughly established and her children had grown into manhood and womanhood. Then, when the mother felt she was justified in asking the daughter's aid in protecting her own and her daughter's home, she should shut the gates in her mother's face. I ask you, Mr. Speaker, what would be thought of such a daughter? Yet, Mr. Speaker, the right hon. First Minister said he could conceive of such a case. I confess, I cannot. He said, page 3044, 'Hansard':

If Britain is at war, we are at war and liable to attack. I do not say that we shall always be attacked, neither do I say that we would take part in all the wars of England. That is a matter that must be guided by circumstances, upon which the Canadian parliament will look to pronounce and will have to decide in its own best judgment.

But, Mr. Speaker, he went further. He proceeded to give an illustration in which he, by inference, said he would not hesitate to 'shut the gate' in the mother's face. He referred to the history of the Crimean war, and these are his words:

I would hesitate very much before I would give my consent that we should take part in any such war.

But he piously added:

The conditions are not the same now as they were then; we have British Columbia to look after.

I would like to ask, Mr. Speaker, how the right hon. the leader of the government proposes to look after the province of British Columbia? The British admiralty asked that there should be a Canadian unit placed on the Pacific to co-operate and work in unison with the China unit and the India unit, so that the empire might be safe-guarded on the Pacific. But what was the answer of the delegates sent from this government, and of the leader of the government himself? They said: We are unable to do that; we are not satisfied to be incorporated in that manner. Not only is that his policy as set forth by the leader of the government, but we find that the official organ of the government, the Toronto 'Globe,' took the same stand, and wrote:

And this question as against Britain has its Canadian counterpart. It ought to be said distinctly and with emphasis, that Britain's obligation to share in quarrels of Canada's making is also nullified by self-government and self-respect. If Canadian politicians

blunder into international conflicts, if Canadian capitalists become involved in aggressive foreign graft, if Canadian militarists succeed in picking a quarrel with their neighbours, no obligation of duty or of honour will rest with the British war office. Canada's quarrel must be just and the issues at stake must be imperial, otherwise it is no affair of the army or navy of Britain.

Now, Mr. Speaker, I would like to look a little further into that matter and to ask what would be the result of the argument advanced by the Prime Minister. If Britain entered into a war which Canada did not consider just, or if forsooth with a navy constructed as it is proposed to be constructed by the government, Canada should undertake a war, and if it is true that Canada would not be affected in the one case or Great Britain in the other. Let us assume for the sake of argument that Britain did enter on a war which in the opinion of the Prime Minister was not a just war, which in the opinion of this government was not a just war, and let us say further that Great Britain was finding difficulty in that war, I ask you, Mr. Speaker, what would be the position of Canada? Would she stand aloof waiting until the empire had been destroyed, or would she as duty called, arise and go to the rescue of Great Britain? If Canada failed in her duty; if she carried out what I understood to be the policy announced by the leader of the government, and the official organ of the government, she would stand aloof. Let us take as an illustration the South African war. You know how it was only after great pressure that this government was brought to send troops to South Africa to aid the mother country. I do not mean to say for one moment that Great Britain would not have been victorious without the Canadian troops, and further I want to say that great as was the physical aid rendered by the brave soldiers of Canada and the other parts of the empire, and nobly as they did their duty, yet I venture to say that the physical advantage gained from the troops sent by the various colonies was infinitesimal compared with the great moral effect their presence had, not only on the enemy himself, but on the world at large. Why, the speech of the right hon. the first minister reminds me of an extract from an oration by the Minister of Labour (Mr. Mackenzie King). He was describing one of his many peregrinations on behalf of the country, his trip from Vancouver to Japan, and, I do not quote him verbatim, but only his expression of thought—he said:

> As I lay in the luxurious deck chair of a palatial Oriental steamer, watching the smoke curls of my fragrant Havana, I saw in the heavens a great luminous body, and, as I gazed in wonder, the thought came to me 'like winged light' that this was 'the same old moon' that was watching over the peaceful slumbers of the good citizens of Berlin after a hard day's work in field or factory, in order that they might contribute of their earnings to keep me travelling in foreign countries.

And, Mr. Speaker, as I listened to the speeches of the first minister and of hon. gentlemen opposite I thought it was the same old moonshine—a great cloud of words to hide the issue. There were no details as to how they proposed to carry out the provisions of the Bill, or how the Bill is going to benefit the empire. Why, when the first minister was asked by a gentleman on this side of the House for some detail, he said: I do not know anything about it, I am only speaking in a general way. And, when a moment later he was asked to give one or two facts in regard to very pertinent matters, the answer of the right hon. gentleman was: Oh, let me alone, I want to finish my speech—I was almost going to say 'work.'

Now, just a word as to the speech of our good friend the Postmaster General. As I listened to his eloquent description of French Canadian history I was reminded of my early school days, but it was evident to me that the Postmaster General had not profited by the admonition of his leader when he said: I think we are getting pretty far away from the question we have on hand just now. I agree with the first minister that the arguments advanced by the Postmaster General were pretty far from the question that we have in hand just now. Why, Sir, he undertook to place on 'Hansard' a list of what he called colonies, but all of which turned out to be independent countries, and if he were advancing any argument at all in regard to them, he was advancing the argument—because he used it in that direction—as to the advantage of an independent navy, and we find that the result of their independent navies was, that they became individual petty states in all these countries, and today, I would ask the Postmaster General to look over the financial record and see the large cost to every one of these states for the maintenance of these navies. And, let me ask: Is there a single state named in the list brought down by the Postmaster General that would for a moment stand today before any of the first-rate powers of the world? I say no, I say such navies would be of little assistance in such a conflict. Further, I find we have the opinion of Professor J. Shield Nicholson, who has written recently in his new book, 'the Project of the Empire':

> 'The need for effective colonial aid for the maintenance of naval power is,' he says, 'urgent and pressing; it cannot be met by promises which will require a long period for their fulfilment; nor merely by the adoption of means designed to advance the general

prosperity of the constituent parts of the empire.' Whatever is to be the future status of the colonies, the cost of naval defence must be borne. 'If,' says Prof. Nicholson, 'each colony aims in the first place at securing only its own local defence, or the trade routes in which it is most concerned, if it insists that its own contributions shall be spent entirely under its own control, there will be a loss of economy and a loss of efficiency.'

Now, Sir, I want to point out that that is the position taken by the admiralty and by the Minister of Defence for Australia. Here is what the Minister of Defence for Australia said, and it appears to be exactly the position taken by Professor Nicholson. I quote from the report of the conference of 1902, page 13:

I cannot think that for Canada and Australia to each have a few war ships, and the Cape and New Zealand a few also, each independent of the other, is a plan suited to empire; such a plan would seem to be in accord with the actions and sentiments of a number of petty states rather than in accord with the necessities and aspirations of a great free united people.

Again he said:

If the British nation is at war, so are we; if it gains victories or suffers disasters, so do we; and therefore it is of the same vital interest to us as to the rest of the empire that our supremacy on the ocean shall be maintained. There is only one sea to be supreme over, and we want one fleet to be mistress over that sea.

Again we find that Lord Selborne, at that time the First Lord of the Admiralty, took exactly the same view. Here is what he said:

The first point on which I would lay the greatest possible stress is the reason why we have eliminated from this memorandum any allusion to the word defence. There was a time in this country, not so very long ago either, when naval strategists regarded the naval problem mainly from the point of view of defence. That, I submit, is altogether heretical. The real problem which the empire has to face in the case of a naval war is simply and absolutely to find out where the ships of the enemy are, to concentrate the greatest possible force where those ships are, and to destroy those ships. That is the only possible method of protecting this empire from the efforts which other navies may make to damage her commerce or her territories. It follows from this that there can be no localization of naval forces in the straight sense of the word. There can be no location of ships to protect the mouth of the Thames, to protect Liverpool, to protect Sydney, to protect Halifax. If we make any such attempt of the kind we should only be inviting disaster.

I would call the attention of my hon. friend from Pictou (Mr. Macdonald) to that quotation. Lord Selborne was very clear and distinct in stating that that was the most important point he had to bring before the conference. The hon. member for Pictou says that the British admiralty had removed its ships from the Pacific ocean. That is true, but the conditions of naval warfare are not those which existed some ten years or even five years ago. They are rapidly changing all over the world.

It has also been said that if we should make a grant of some Dreadnoughts, it would only be a few years when they would be relegated to the scrap heap. Well, should that be so, we would at least be in the same position as the other nations. Great Britain would stand, as she has always stood, ahead of them. I have read very carefully and with a great deal of interest the debate in the English House of Commons on the Naval Bill, and I regret to say that, according to that debate, England has lost forever the two-power standard, and it is now only the question of a one-power standard. My hon. friend from Red Deer (Mr. Clark) I have always looked upon as a very logical man, particularly careful in his premises, but I find, in an argument he used in this House, that he drew exactly the opposite deduction which the premises warranted. Speaking with regard to the fact that Mr. McKenna had changed his opinion from that which he had held a few months previous, my hon. friend said that the reasons he changed was because England had laid down more warships and that consequently there was no danger to the supremacy of the British empire. Why, the reverse was the case. Mr. McKenna was pointing out how necessary it had become for him to change the opinion he had held a few months before. There was a similar change of opinion in the case of Mr. Asquith, and Mr. Asquith was perfectly honest and frank in admitting it. He said frankly and freely that when he spoke twelve months previous, he had looked on the German question merely as a paper programme, but now he regretted having to take another view. He said:

I am obliged to tell the House these matters in order to let them understand why we economists have presented these estimates to the House. There has been such an enormous development in Germany, not only in the provision of shipyards and slips on which the hulk and fabric of a ship can be built and repaired but what is still more serious—in the provision for gun-mounting and armaments of those great monsters, these Dreadnoughts which are now the dominating type of ship—such an enormous development—and I will venture to say this without attempting to exercise anything in this nature of unnecessary alarm in this country—such an enormous development as to be so serious a development from our national point of view, that we could no longer take to ourselves, as we could a year ago with reason, the consoling and comforting reflection that we have the advantage in the speed and the rate at which ships can be constructed.

That was the whole gist of his argument at that time—not that there was no danger, but that the danger had actually increased and he was compelled to alter the opinion he had expressed a few short months before.

As I understand the problem presented to Canada, it is two-fold. First, is there an emergency? Or better, if some of our friends object to the word 'emergency,' is there a danger to the naval supremacy of the empire? If there is, what is the duty of Canada and how best can that duty be performed? Dealing with the first question, after weighing all the evidence, all the records and the opinions of the leaders on all sides of politics in Great Britain —Mr. Asquith, Mr. Balfour, Mr. McKenna, Sir Edward Grey, Lord Milner, Lord Roberts, Mr. Blatchford and others—I cannot but come to the conclusion that the danger does exist. That being the case, what is Canada's position and what is her duty? I want to deal with this question for a moment from a purely Canadian standpoint. I believe that the sentiment among all classes of our people from the Atlantic to the Pacific is overwhelmingly in favour of our doing something substantial in assisting the empire. I am further of the opinion that if we are to have a permanent navy, to be added to from time to time as required, that navy should be built in Canada, manned by Canadians; but accompanying that opinion is the uncertainty that we shall thereby be plunging into a large and increasing expenditure from which we shall receive no commensurate benefit. Having regard to the past record of this government, that fear is not without foundation. When we consider the way this country was committed to the construction of the Grand Trunk Pacific, when we consider the fact that the right hon. the Prime Minister, who was supplied, as he told us, with mountains of information, resulting from the most careful surveys, declared that this railway would cost only $13,000,000, and when we realized that its estimated cost has now reached the enormous sum of $114,000,000, and when we take in that connection the Hodgins charges and the charges in connection with the resignation of Mr. Lumsden, and when we consider further the fact that a fair and full, investigation into those charges has been voted down, by a straight vote of the Liberal party—when we consider all these things, are we not justified in opposing the construction of this navy?

Further, we were informed by the right hon. the Prime Minister that this navy is to be under the jurisdiction and control of the Department of Marine and Fisheries. Well, after the result of the investigation into the management of that department, after the evils which came to light through that investigation, hon. members on this side, are warranted in hesitating before they commit the people to this expenditure without giving the people an opportunity to pronounce upon it.

It has been said that the leader of the opposition is shirking his responsibility in asking for a plebiscite. I do not so undertstand the resolution. What I understand by the resolution of my hon. leader is that as this is an entirely new policy and as the carrying of it out, as proposed in the government Bill, may involve serious changes in our relationship to the empire, the whole question should be put before the people, not as a plebiscite, but as the National Policy was put before them in 1878, on the public platform and through the public press. That is my understanding of the resolution of the leader of the opposition.

I want to refer to another matter. The Prime Minister said that he was much impressed by the statement made by the leader of the opposition that England had time and again subsidized the nations of Europe to enable them to defend their autonomy and independence against the oppressor. Then he went on to say:

> She was able to do so. Why? Because of all the nations of Europe, England was the nation which had spent least upon armaments. She had never spent any of her resources as other nations did, purely on her arms. She had extended her trade and her commerce, she has developed her resources, &c.

Assuming that these statements are correct, we in Canada have an immense territory with a comparatively small population. We have many problems to solve that require a large expenditure of money. We have the completion of the Grand Trunk Pacific, we have the deepening and enlarging of the Welland canal, we have the building of the Hudson Bay railway, we have the building of the Georgian Bay canal. We have, over and above all these things that are great problems for us as Canadians, a far greater responsibility in assuming our duty rightly towards the great British empire. So I say, taking all these things into consideration, I believe it is a very strong argument why we should make a direct contribution. Following out the argument of the First Minister himself, let us follow in the footsteps of the mother country, gradually developing our commercial shipping, our plant and industries, until we are in a position to build such war vessels as may be needed. With this object in view, we must enlarge our docks on both the Atlantic and the Pacific, and encourage the establishment of ship-building plants in Canada, not based on the number of Dreadnoughts we can lay down, but rather on the fact that we have all essentials in the way of coal, iron, steel and nickel

for the successful establishing of such plants, and that our growing shipping trade warrants such a venture. We have given bounties to encourage steel, lead and other industrial pursuits, why not go a step further, and if necessary offer bounties to induce ship-building in Canada? But the member for Pictou calls it tribute. But it was not my intention to go into details or make suggestions as to how best this policy could be carried out, and I was only induced to do so by the argument of the right hon. the First Minister. But, Sir, before we can do that, we want to take the people into our confidence, we want to weigh well our position in this regard and see that everything is looked into carefully in advance and not have the same fiasco as we have had in the past.

Coming to the Bill itself, the Prime Minister assured the House that he had the unanimous support of his followers. I am not surprised at that. In this Bill we have something unlike anything in the Heavens above, in the earth beneath or in the waters under the earth. Therefore, our hon. friends can fall down and worship it. This Bill can be made all things to all men, if by any means we can save Laurier. That is the position we have before us. They can take this Bill to Quebec and say: We are not giving away your money in contributions to the British empire as the opposition are prepared to do; we are doing as little as we possibly can, and that little we are spending with you. Then they can go to the other provinces and say: We are doing exactly what the British admiralty asked for. And yet, as we see by clause 18, and the quotations I have made from the Prime Minister and the official organ of the party, they have said that they have neither part nor parcel in the wars of the empire. So I say that every man who is loyal to himself and loyal to his country should support the amendment of the leader of the opposition (Mr. R. L. Borden).

Now for a moment let us look at that amendment and see what we are asking for as compared with the Bill before the House. This clause of that amendment reads as follows:

> The proposals of the government do not follow the suggestions and recommendations of the admiralty and in so far as they empower the government to withhold the naval forces of Canada from those of the empire in time of war are ill-advised and dangerous.

I would ask if any man can dispute the proposition laid down in the first clause of the resolution, that they are not following out the request of the admiralty. Clause 5 of the conference at page 24 says:

> In the opinion of the admiralty, a Dominion government desirous of creating a navy should aim at forming a distinct fleet unit; and the smallest unit is one which, while manageable in time of peace, is capable of being used in its component parts in time of war.
>
> The fleet unit to be aimed at, should, therefore, in the opinion of the admiralty, consist at least of the following:—
>
> 1 armoured cruiser (new 'Indomitable' class) which is of the 'Dreadnought' type.
> 3 unarmoured cruisers ('Bristol' class).
> 6 destroyers.
> 3 submarines.

Again, clause 11, reads:

> As the armoured cruiser is the essential part of the fleet unit, it is important that an 'Indomitable' of the 'Dreadnought' type should be the first vessel to be built in commencing the formation of a fleet unit.

We have there ample evidence that that clause as introduced into the resolution is justified. Again the second clause of the resolution reads:

> That no such proposals can safely be accepted, unless they thoroughly ensure unity of organization and of action, without which there can be no effective co-operation in any common scheme of empire defence.

I have shown that this is the opinion not only of Australia at the imperial defence conference but also of the British admiralty, that they have clearly pointed out that under modern conditions a separate unit is of little or no value. Let me here say a word with reference to the last speaker's lauding of the Ross rifle. Not longer ago than the conference of 1902, the admiralty took occasion to refer to that and pointed out that even so small a departure as that was a very serious thing to the empire. They pointed out the absolute necessity of an interchange of arms in an imperial war and the advantage it would be to have rifles of the one type.

Then again, the resolution says:

> That no permanent policy should be entered upon involving large future expenditures of this character until it has been submitted to the people and has received their approval.

I think it is a reasonable proposition. As has been pointed out here to-night and during this debate, we are making a new departure. There is no reason at this time why we should not take the people into our confidence. There is no reason why we should not go before them and ask their instructions in regard to this great question. It is one that will involve a very large expenditure of money, it is one too that will mean a great change just as the introduction of our national policy in 1878 and it is one on which I think the people should be consulted. Again, the resolution reads:

> That in the meantime the immediate duty of Canada and the impending necessities of the empire can best be discharged and met by placing without delay at the disposal of the imperial authorities as a free and loyal

contribution from the people of Canada, such an amount as may be sufficient to purchase or construct two battleships or armoured cruisers of the latest Dreadnought type, giving to the admiralty full discretion to expend the said sum at such time and for such purposes of naval defence as in their judgment may best serve to increase the united strength of the empire and thus assure its peace and security.

Great objection has been made particularly to that last clause. Several speakers on the government side have said that we have asked authority to give away $25,000,000. Of course a matter of $6,000,000 or $7,000,000 is neither here nor there with the present government, but I would like to know where they get their authority for two Dreadnoughts costing $25,000,000. The estimate given by the British admiralty for a Dreadnought of the latest type is £2,000,000, and yet, in the face of that, they have repeatedly asserted that the opposition are prepared to give away $25,000,000 of the people's money. After all, it is not a question of amonut, but of principle, and I am here to endorse that principle. Sir, that will do more for Canada and for the empire than the navy they are proposing at this particular time. And the hon. member for Pictou (Mr. E. M. Macdonald) says: Not only will they give away $25,000,000 of your money, but you will never receive any benefit from it. I would like to ask hon. members on the other side of the House, whether, after carefully weighing those words, they honestly and sincerely can subscribe to the doctrine thus expressed—that money given to the mother country in a time of need will produce no benefit to Canada or to the British empire. That is a proposition that has been thrown across the floor of the House several times this afternoon—that we are giving away the people's money, from which they are to receive no benefit. We have taken great credit to ourselves for our wonderful growth and prosperity. I want to say, as a Canadian born, that there is no man in this House more loyal to Canada, more interested in, or more proud of its vast development, than I am, yet I want to say also that I realize that the best blood of our mother nation has been shed to water the soil of our country, that the best blood of her people has been shed that we might have the peace and prosperity under which we have grown from an infant to a great nation. But, while I do not hesitate to say, equally with those on the other side of the House, that I look forward to the continued growth and prosperity of this counry of ours, and believe that we shall be a nation, I believe also that we shall be a nation within the empire. And I want to say at once—because, as I said, I do not propose to weary or detain the House—I would change once more the metaphor of the First Minister. He has repeated this metaphor over and over again—that the time will come when we shall drop from the parent tree as the fruit drops from the limb. Let me say that to my mind the time has come when, as the new wood is grafted upon the old stock, so the dominions overseas shall be grafted on the mother of nations, and we shall become a mighty tree whose branches shall shelter and assure the peace and commerce of the world.

Mr. MICHAUD. In the absence of the hon. member for St. Hyacinthe (Mr. Beauparlant), and, on his behalf, I move the adjournment of the debate.

Motion agreed to, and debate adjourned.

COMMERCIAL AGREEMENT WITH GERMANY.

Hon. W. S. FIELDING. By command of His Excellency the Governor General, I beg to place before the House copy of a commerical agreement between Germany and Canada, signed at Ottawa this day, together with certain papers connected therewith.

Mr. FIELDING moved the adjournment of the House.

Mr. R. L. BORDEN. What business will be taken up to-morrow?

Mr. FIELDING. We shall continue the naval debate.

Motion agreed to, and House adjourned at 10.50 p.m.

HOUSE OF COMMONS.

WEDNESDAY, February 16, 1910.

The SPEAKER took the Chair at Two o'clock.

DOMINION LANDS ACT AMENDMENT.

Mr. MAGRATH moved for leave to introduce Bill (No. 143), to amend the Dominion Lands Act. He said: The object of the Bill is to surround our western water-powers with greater safeguards than at present exist. Under the Dominion Lands Act no period is fixed for which licenses shall issue. Under the regulations prescribed by the Governor in Council that period is restricted to 25 years. I believe it is in the interest of the public, who own these water-powers, that that period should be fixed by law. There is no intention in this Bill to lessen the authority of the Minister of the Interior who issues these licenses. The Bill provides that no license shall be issued for longer than 25 years in any of our northwestern provinces nor for longer than 10 years in any unorganized territory.

There is the further provision that a license shall not issue without the approval of the Lieutenant Governor in Council. That idea is expressed in this language:

And any such license or other authority so issued shall contain a clause providing that the same shall not be exercisable until there is endorsed thereon the approval of the Lieutenant Governor in Council of the province wherein such license or other authority is exercisable and subject to such conditions and regulations as may be imposed by such Lieutenant Governor in Council.

Mr. MONK. The legislation proposed by my hon. friend is certainly in the right direction. I would like to inform my hon. friend that the section of the Conservation Commission which has in charge the question of our water-powers is now preparing a Bill very much on the same lines as that of my hon. friend, and is getting information on the subject from different parts of the Dominion and from men experienced in these matters; and as soon as that Bill is finally adopted by that section of the commission, it is intended, with a very brief delay, to lay it before the House.

Motion agreed to, and Bill read the first time.

QUESTIONS.

NATIONAL BATTLEFIELDS COMMISSION.

Mr. LAKE:

1. What properties have the National Battlefields Commission bought in Quebec for the purpose of making the park and driveway, from whom were the properties purchased, and what was the price given in each case?
2. Is it the intention of the commissioners to widen Gilmour Hill, the Belvedère road and parts of St. Louis and Ste. Foy roads? If so, when is the work to commence?
3. How much money have the commissioners on hand, and what has been the cause of the delay in beginning the works?

Hon. W. S. FIELDING. I beg to submit the reply to the hon. gentleman's question, supplied by the chairman of the Battlefields Commission:

1. The following properties have been bought by the commission: (a) a lot of land situated on the north side of Ste. Foy road, being subdivision No. 58 of lot 26 of the cadastral plan of the Banlieue of the parish of Notre Dame de Quebec, belonging to one Pierre Cauchon. Area, 16,060 square feet; price, $7,846.55. (b) Part of lot No. 4440 on the cadastral plan for Montcalm ward, in the city of Quebec, belonging to 'Le Seminaire de Quebec'. Area, 1,137,111 square feet; price, $129,137.99. The following properties have also been deeded to the National Battlefields Commission, without cost, for the purpose of the park: (a) The piece of ground commonly designated as 'The Plains of Abraham', covering an area of 88 arpents and 71 perches (French measure). (b) The plot of ground on which is erected the monument known as 'Le Monument des Braves', on the Battlefield of Ste. Foy. (c) A certain parcel of land on which Martello Tower No. 4 is erected.

2. (a) Yes, if reasonable arrangements can be made with the landowners interested. (b) As soon as possible after the lands required have been secured.

3. (a) $348,387.56. (b) Certain legal points which have arisen in connection with the mode of procedure under the powers of expropriation given to the commission.

HALIFAX CUSTOM HOUSE.

Mr. CROSBY:

1. Have any repairs been made to the Halifax custom house since it was handed over to the customs authorities by the contractor? If so, what was the nature of the repairs, were they done by contract or by day work, and what was the cost, and who did the work?
2. Were any repairs made to the Queen's wharf or the Lumber wharf at Halifax during last year? If so, what was the nature of the repairs?
3. Was the work done by contract or day work?
4. If by contract, who was the contractor, what was the amount paid, who were the parties asked to tender, how were they asked, and what were the amounts of the different tenders?

Hon. WM. PUGSLEY:

1. The following repairs have been executed:

	$ cts.
Repairing roof, copings, &c..	1,131 80
Repairing floors	554 68
Re-glazing	60 25
Re-hanging windows	400 00
Re-laying floor in doloment ..	564 90
	2,711 63

Materials were supplied and work was done by Malcolm & Johnston, Frank Reardon, Nickerson Bros. and the Montreal Doloment Company, under the supervision of C. E. W. Dodwell, district engineer.

2, 3 and 4. No expenditure by this department.

WINNIPEG POST OFFICE SUNDAY CLOSING.

Mr. A. HAGGART:

1. What applications have been made to the government or the Post Office Department for the closing of outer doors of the post office on Sundays, and what persons or institutions have made these applications?
2. In what post offices have these outer doors been recently closed and box holders refused access to their post office boxes on Sunday?

3. If the post offices have been closed on Sundays, what are the reasons for such action of the government or the department?

4. Is the action of the government or department only an experiment, or is it the final determination of the government to close the post offices on Sundays for all time to come?

5. Why should the department receive on Sunday a letter for transmission and prevent its delivery at its destination on that day?

6. Does the Post Office Department know that in Winnipeg for over thirty years box holders have had access to their post office boxes on Sunday, and that the present action of the department, it is alleged, will cause serious inconvenience to a large number of citizens?

7. Is it known to the Post Office Department that a large number of commercial men are said to so arrange to pass Sundays in Winnipeg with their families, to receive and answer their mail on that day?

8. What good purpose will be served by the recent action of the government in closing the outer doors of post offices on Sunday?

9. How many post office officials in Winnipeg, by reason of the closing of the outer doors of the post office to box holders, will be relieved from work on Sundays?

10. If the present action is only an experiment, then why did the government or department not make full and complete inquiries, and obtain sufficient information before taking any action?

11. What orders were given by the Postmaster General or his department to the postmasters in reference to this Sunday closing?

Hon. RODOLPHE LEMIEUX:

1. Numerous communications and petitions have been addressed to the department from the local branches of the Lord's Day Alliance, and also from the citizens and business men throughout the west, asking that the lobbies of the post offices in that section of the country should not be opened for the convenience of box holders on Sunday.

2. At the following post offices, viz: Battleford, Saskatchewan; Brandon, Manitoba; Calgary, Alberta; Dauphin, Manitoba; Edmonton, Alberta; Emerson, Manitoba; Esquimalt, British Columbia; Fernie, British Columbia; Lethbridge, Alberta; Macleod, Alberta; Maple Creek, Saskatchewan; Medicine Hat, Alberta; Moosejaw, Saskatchewan; Nanaimo, British Columbia; Nelson, British Columbia; New Westminster, British Columbia; Portage la Prairie, Manitoba; Prince Albert, Saskatchewan; Qu'Appelle, Saskatchewan; Regina, Saskatchewan; Revelstoke, British Columbia; Rossland, British Columbia; St. Boniface, Manitoba; Saskatoon, Saskatchewan; Vancouver, British Columbia; Victoria, British Columbia; Winnipeg, Manitoba.

3. The post offices have been closed on Sundays in the west in accordance with what is believed to be the spirit of the people of Canada—that Sunday should be observed as a day of rest and cessation from business. The privilege of keeping the post offices open in the west was given or rather taken in the early days when the train service was scarce and irregular and the arrival of mails uncertain. When great numbers of the people coming into the country as settlers, or prospective settlers, had their mail directed to certain points where they exepcted to be at certain dates, and when it was important that they should obtain their mail so that their progress in travelling should not be obstructed. Moreover, the offices were a great distance apart, and settlers only went for their mails on the days when they were least busy and when the exigencies of their business permitted them. This usually occurred on Sunday as even then the settlers, moved by the spirit of their early training, did not usually devote themselves to business and labour for financial gain, and a great majority of them went into the towns where the post offices were situated for the purposes of public worship. Now, the situation is entirely different. The country is becoming settled, is intersected in all directions by lines of railway, and mails are received as regularly and frequently in all centres of the west as in the other and older parts of Canada, and the necessity which existed for keeping the offices open in the large towns and cities of western Canada, has entirely disappeared. Furthermore, it has been reported to the department by its officers, by many leading citizens, and men in religious and commercial life, that the result of business men obtaining their mails freely on Sunday has led to the transaction of business at these western points and the forcing of employees to labour on Sunday almost as much as on week days, at all events to a sufficient extent to interfere with their enjoying any advantage which might accrue by Sunday being granted a day of rest. The statement that conditions in the west differ from those in the east is due to the fact that, not the mass of western people, but great numbers of business men have imported into Canada the practice of carrying on business on Sundays the same as any other day, notwithstanding that it is absolutely opposed to the best interests of labour and the laws and spirit of the Canadian people, viz: That every man may enjoy where possible the benefit of Sunday as a day of rest.

4. The action of the government is not an experiment, nor is there any necessity for such an experiment. This has been tried in the cities of the east for many years, and it has been found that not only is no inconvenience caused to business, or to the travelling public, but that it has received the unanimous support of all classes of the community, who have found it to

be in the interests of both the employee and the employer.

5. The vast number of letters posted on Sunday, in fact, it might be said the whole of the letters posted on Sunday are not for local delivery, but for outside points and in most cases far distant points.. The refusal to receive these letters on Sunday would mean a delay during the week of perhaps 12 to 24 hours and serious inconvenience to business, and it cannot be compared with the delivery of mails on Sunday to addresses locally, where all unnecessary work is supposed to cease, particularly, in view of the fact that all such letters are delivered in plenty of time for the opening of business on Monday morning. Moreover, these trains would run whether mails were placed on them or not, and the public and business people would naturally resent any failure on the part of the department to forward the mails on all running trains, involving as such action would make a delay of 24 hours in the transmission of a large portion of the correspondence for business centres. This has been specially recognized by parliament and exempted from the working of the Lord's Day Act.

6. The department is aware that for many years box holders have had access to their boxes on Sunday, but is not of the opinion that the present action will cause any serious inconvenience to the citizens at large, and has reason to believe that outside of the few business men who take advantage of Sunday delivery for the purpose of working themselves and their staff on Sunday, as well as the other days of the week, there is no desire for the keeping open of the post offices on Sunday.

7. The department is not aware that a large number of commercial men are said to arrange to pass Sunday in Winnipeg with their families to receive and answer their mail on that day.

8. Better opportunities for the observance of Sunday, and protection to labour.

9. The men engaged in sorting for Sunday box delivery will be relieved from duty. The department is unable to say definitely how many clerks require to be engaged in this work, but there must always be a considerable number of men engaged in sorting these mails for Sunday delivery.

10. The present action is not an experiment, but was taken after the fullest consideration by the department.

11. A circular was sent out from the department on the 20th January, 1910, to the postmasters of the offices above mentioned, instructing them that on and from the 1st February, 1910, the lobbies of their offices must be closed to the public on Sunday.

Mr. LEMIEUX.

BOAT HARBOUR, TONEY RIVER, PICTOU, NOVA SCOTIA.

Mr. STANFIELD:

1. What was the amount expended in each year to date on construction of Boat harbour at Toney river, Pictou county, Nova Scotia?
2. What is the total paid to date?
3. Is the work completed?
4. What further sum is to be expended?
5. Who were superintendents or overseers of the work, for how many days and how much was each paid?
6. What is the length of each wharf constructed?
7. What is the depth of water at the outer end of the wharf at high tide and at low tide, respectively?
8. How much further out will the wharfs be extended?
9. When so extended what will be the depth of water at outer end of high tide, and at low tide, respectively?

Mr. PUGSLEY:

1 and 2.

In 1905-6	$4,727 55
1906-7	2,103 11
1907-8	758 05
1908-9	1,793 02
Total	$9,381 73

3. No.
4. $2,000.
5.

H. McKinnon (1906-8), 169 days at $3	$507 00
D. A. Barry (1908-9), 29 days at $3.50	101 50
D. A. Barry (1908-9), 24 days at $3	72 00
Total	$680 50

6 and 7. The works referred to are protection piers on east and west sides of a channel 1½ feet deep at low water and 7½ feet deep at high water; the east side protection pier is 291 feet long, and the west side one, 235 feet.

8 and 9. Fifty feet on each side, the depth of water at outer ends remaining the same as at present.

MR. BENJAMIN BOURGEOIS.

Mr. LENNOX:

1. At what dates were the services of Benjamin Bourgeois, division engineer, district 'B,' National Transcontinental Railway, dispensed with, and for what cause?
2. At whose instance was the investigation held, who investigated, and what is the report or finding?

Hon. GEO. P. GRAHAM:

The following information is supplied by the Transcontinental Railway Commission: On the 31st January, 1910. The chief engineer having reported that the services of Mr. Bourgeois were unsatisfactory, an in-

vestigation was ordered by the chairman to be held. It took place in Quebec on 17th December last, when Mr. Bourgeois was examined by the chairman and the chief engineer on matters relating on residencies 27-28, division 7, district 'B,' namely, as regards rip-rap returns, and the admission of Division Engineer Bourgeois that he was wrong was deemed sufficient to justify his being discharged.

EASTERN DIVISION, GRAND TRUNK PACIFIC.

Mr. FOSTER:

1. Is the Prime Minister aware that the following formed a part of the speech from the Throne, read at the opening of the present session of parliament: 'The eastern division of the Transcontinental Railway is now open for traffic from Winnipeg to Lake Superior Junction, and thence by the Grand Trunk Pacific branch to the lake itself'?

2. Is he aware that the Minister of Railways did on the 4th day of February make the following statements in the House of Commons: 'There is no regular traffic over the eastern division of the Transcontinental Railway, from Winnipeg to Lake Superior Junction. The engineers say that the contractors offered to put in a certain service; but I think they are not yet doing a regular traffic business on the road. His, Mr. Grant's, recent report to me is that it will be practically complete and ready to carry wheat almost in another year'?

3. Has the Prime Minister had any communication with His Excellency in regard to this matter, or has he any explanation to make to the House in regard thereto?

Sir WILFRID LAURIER:

1. Yes.

2. The words which the question purports to quote seem to consist of portions of different places in 'Hansard' (unrevised), columns 3163, 3153 and 3154, not spoken in the order or connection quoted, and from which intervening sentences and portions of sentences are omitted.

3. What was in fact said on the subject by the Minister of Railways, as reported in 'Hansard,' is not in conflict with the statement in the speech from the Throne, and does not call for any explanation.

His Excellency has not been communicated with on the subject.

TORONTO SUB-POST OFFICES.

Mr. FOSTER:

1. Is there a sub-post office at 253 Avenue Road, Toronto? If so, in whose building is it kept, by whom served, and what is the yearly cost thereof?

2. Is there a sub-post office at 1160 Yonge street, Toronto? If so, by whom kept, in whose building, and what is the yearly cost thereof?

Mr. LEMIEUX:

1. There is a sub-post office at No. 253 Avenue Road, Toronto, which is known as 'Sub-Post Office No. 27.' The office is in charge of Mr. E. G. Seyler. The salary attached to the office, including commission on stamp sales, &c., is $319.80, for the year ended March 31, 1909. The Department is not aware who owns the building in which the office is kept.

2. There is a sub-post office at 1160 Young street, known as 'North Toronto Sub-Post Office.' This office is in charge of Mr. Jas. A. McKenzie. The salary attached to the office, including percentage on stamp sales, was $549.33, for the year ended March 31, 1909.

The department is not aware who owns the building in which the office is kept.

The various sub-post offices and letter boxes in the city of Toronto are all served under one contract, which is in the hands of Mr. R. Newell.

MR. JAMES H. McKENZIE.

Mr. FOSTER:

Is James H. McKenzie in the employ of the Inland Revenue Department at Toronto? If so, in what service, at what salary, and what portion of his time does he devote to that work?

Hon. WM. TEMPLEMAN. Mr. James H. McKenzie is employed in the excise branch of the Inland Revenue Department at Toronto He is a deputy collector with a salary of $1,700 per annum, and gives full attention to his official duties.

QUEEN'S OWN RIFLES.

Mr. FOSTER:

(a) Is the government informed that the Queen's Own Rifles are to go to England during the coming summer to take part in the Aldershot manœuvres? (b) If so, is the government to bear any portion of the expense of the corps?

Sir FREDERICK BORDEN:

1. (a) Yes. (b) No.

HAY AND WOOD PERMITS, MANITOBA.

Mr. W. H. SHARPE:

1. What amount was collected by the government during 1908 and 1909 for hay permits from Dominion lands in Manitoba?

2. What amount was collected by the government during 1908 and 1909 for wood cutting permits from Dominion lands in Manitoba?

Hon. FRANK OLIVER:

1. 1908, $859.25; 1909, $762.85.

2. Total revenue from timber cut under permits in 1908 $44,932.50; total revenue from timber cut under permits in 1909, $38,-042.98.

THE GERMAN SURTAX.

Mr. ARMSTRONG. Before the orders of the day are called, I would like to ask the hon. the Finance Minister a few questions with regard to the German arrangement which the hon. gentleman brought down last evening. Is what is called the German conventional tariff the lowest German tariff? Does the schedule that has been placed in our hands contain all the articles that are likely to go into Germany under that favoured clause and are we giving to Germany access to our markets for all German goods under our general tariff while the German people are only granting to us a portion of their most favourable tariff? Will the minister be good enough to bring down the letters and negotiations leading up to the present arrangement between this government and Germany?

Mr. FIELDING. There is no information to be brought down in addition to what has been placed before the House. Negotiations have taken place, almost entirely in the form of personal interviews between the representatives of the German government and the Minister of Finance. What little correspondence there is, is unimportant, but is necessarily of a confidential nature. There is, therefore, nothing more to be brought down. My hon. friend asks whether the articles mentioned are all the articles we might be able to send into Germany. That is a matter of opinion on which every hon. gentleman must form his own judgment. We think the list covers the things of most importance and which would be most valued by Canadian shippers. Whether or not every article on that list is of greater or less value than some other article would, I fancy, be a matter of some difference of opinion. At all events, we think the list comprises the things that are of most importance. The last question of my hon. friend whether we permit all German goods to come in under our general tariff while they only permit a limited list to enter Germany. That is correct, but it is worth remembering that we do not give to Germany favoured-nation treatment. We are not giving to Germany, under this arrangement, all that we were willing to give Germany at a previous stage of the discussion, we are refusing Germany the advantages of the French treaty. That is a matter that is left for further negotiations if it is found in the interests of Canada to have further negotiations. The arrangement is that we give up the surtax only; Germany in return for that gives us the benefit of her lowest tariff upon a specified list of articles which, in the judgment of the government, are the most important articles to the Canadian shipper.

Mr. OLIVER.

Mr. ARMSTRONG. Has the minister taken into consideration the fact that there are manufacturing interests in this country that have been built up under the surtax and that require perhaps some different treatment than this?

Mr. FIELDING. I do not think my hon friend is quite correct in saying that any manufacturing interests have been built up in Canada relying on the surtax. The surtax was a war measure. Germany demanded that she should receive the same consideration in the markets of Canada as we gave to the products of Great Britain. That was the bone of contention. So long as Germany adhered to that view, we could make no arrangement with her. When Germany abandoned that contention, we felt we were free to negotiate with Germany. I am quite sure that any manufacturer in Canada who has given any attention to the question must have been aware that this surtax was, if I may so describe it, a commercial war measure, and that just so soon as Germany receded from what we regarded as her unjustifiable position of a few years ago, we should be free to remove the surtax, retaining as we now do the general tariff which was the basis on which, I think, all manufacturing establishments have been created in recent years.

Mr. LALOR. Has the minister considered, or will he consider, the question of the removal of the duties upon raw material that is used by manufacturers, who will be affected very materially by the removal of the German surtax? I speak from knowledge and experience, especially in connection with the knitting business, one of the industries that will be affected to a very great extent by the removal of this duty. It does not seem fair to these manufacturers that their raw materials should be taxed so heavily when they are brought in direct competition now under the regular tariff, with German goods.

Mr. FIELDING. What does my hon. friend mean by raw material, as applied to this industry? It is rather difficult to give a general answer.

Mr. LALOR. Mercerized cotton yarn, coarser than 40's, which is now taxed under the present tariff 25 per cent coming from any country, with the exception of Great Britain, and from Great Britain 17½ per cent. No yarns of that class are manufactured in Canada, there is no industry in Canada engaged in that particular business, and these yarns are used to a large extent. I am an importer of these goods myself to the extent of probably £100,000, and with a tariff of 17½ per cent against Great Britain and 25 per cent against the United States we are not in a position to compete with

Germany manufacturing the same class of goods and shipping them into this country.

Mr. FIELDING. That would be a question with regard to the general tariff policy of the country, and I would hardly be able to answer that off-hand. I do not quite see that it has any particular relation to the surtax, because the surtax was not adopted as a revenue measure, nor in a sense was it even a protective measure; it was something over and above the revenue and protective elements in the Canadian tariff. It was imposed to meet a hostile position of affairs on the part of Germany, and when Germany abandoned its hostile attitude we felt free to remove the surtax. My hon friend's question would have relation to the general question of the duty on raw materials, and I would not be free to answer that off-hand.

Mr. R. L. BORDEN. Would the Minister of Finance tell us the precise difference, if there be any difference, between the treatment accorded by Germany to Canada under this new arrangement, and the treatment accorded by Germany to the rest of the empire in respect to tariff matters?

Mr. FIELDING. I understand that Great Britain receives the full conventional tariff, and in return for that Great Britain necessarily guarantees to Germany the most favoured terms that are granted to any foreign country. We have declined to grant to Germany, for good reasons we think, the most favoured terms that are granted to any foreign country. and so we have made only a partial arrangement. We receive the German conventional tariff on a specified list of articles in return for the abolition of the surtax. Great Britain would receive the full conventional tariff without any limitation.

Mr. R. L. BORDEN. I am speaking of the empire as a whole. Does the hon. gentleman mean by the term 'Great Britain' to include all the rest of the empire, Australia, New Zealand, South Africa, &c.? It is most particularly in regard to them that I was asking.

Mr. FIELDING. All the self-governing colonies, of course, in all recent negotiations, are treated independently of the United Kingdom. I will look into the matter from the point of view of Australia and New Zealand.

Mr. R. L. BORDEN. While it is only a matter of recollection, I understood that after the German treaty was denounced, another treaty was entered into between Germany and Great Britain, the terms of which included all the dominions of the empire except Canada. I would like to know whether or not the German conventional treaty, so called, applies in full force not only to Great Britain alone, but to the rest of the empire under any such arrangement.

Mr. FIELDING. I will look more closely into that, but the essence of the arrangement in any case would be that if any portion of the empire receives the full conventional German tariff it must guarantee to Germany most favoured nation treatment, and as we are not prepared to guarantee that to Germany to-day we would not be in the same position to demand the full conventional tariff. However, it is a matter of reasoning. I will endeavour to ascertain the facts.

Mr. R. L. BORDEN. It is not altogether a matter of reasoning, but it would rather depend on the terms of the treaty.

Mr. FIELDING. I have no difficulty in knowing that the German conventional tariff will be given in its fullness only to portions of the empire which are willing to give most favoured nation treatment to Germany. That is one of the first principles of international negotiation, and I think my judgment of it is right, but I will look into the facts as suggested by the hon. gentleman.

INQUIRIES FOR RETURNS.

Mr. LENNOX. I wish to call the attention of the Minister of Railways (Mr. Graham) to a return ordered by the House with reference to Transcontinental railway matters on the 24th January, last. I have reason to believe, from certain things that have transpired since, that the return has been ready for some time although it has not been laid on the table.

Mr. STAPLES. I wish to call the attention of the Postmaster General (Mr. Lemieux) to an order that passed this House regarding papers dealing with the establishment of a post office at St. Charles in the constituency of Macdonald, and I would like to ask when we may expect these papers to be brought down.

Mr. LEMIEUX. I will see that they are brought down as soon as possible.

Mr. OWEN. I wish to ask the Postmaster General (Mr. Lemieux) if he has issued an order that parcels sent by registered post must be signed for at their destination by the party to whom they are addressed before they will be delivered up.

Mr. LEMIEUX. If my hon. friend (Mr. Owen) will put a question on the Order Paper I will answer. This is an order from the department of which I may not have had any knowledge.

Mr. MAGRATH. I wish to call the attention of the Postmaster General to an order issued on December 13, and to a return brought down by the Minister of

Public Works on January 20. The return called for reports, documents and correspondence between the two departments and other documents as well in connection with providing proper post office facilities for Lethbridge. The return evidently was prepared by the Public Works Department, but I think it has escaped the attention of the hon. gentleman's department as there is no correspondence with his department shown in the return, and I know there is certain correspondence that has been had with his department.

Mr. LEMIEUX. I will look into the matter and see if anything has been left out but I do not believe it has been left out. I may inform my hon. friend that his wishes in the matter have been carried out. I know he has taken some interest in the Lethbridge post office. He is probably not aware that proper post office facilities in Lethbridge have been arranged for. At all events I will see that the correspondence is completed.

Mr. MAGRATH. I thank the minister for his courtesy in giving me this information, but it has come to me already through other sources from Lethbridge.

Mr. LEMIEUX. That shows that the post office is well organized.

THE NAVAL SERVICE OF CANADA.

The House resumed the adjourned debate on the motion of Sir Wilfrid Laurier for the second reading of Bill (No. 95), respecting the naval service of Canada, the proposed amendment of Mr. Borden thereto, and the amendment to the amendment of Mr. Monk.

Mr. BEAUPARLANT (St. Hyacinthe). (Translation). Mr. Speaker, I may be allowed at the outset to express my thankfulness to my hon. friend from Victoria, N.B. (Mr. Michaud), who was kind enough, at my request, to move last night, on my behalf, the adjournment of the debate, the state of my health preventing me from addressing the House at such a late hour. I have also to thank the House for having graciously acceded to such request, customary as it is to do so.

I had the pleasure of listening to part of the speech delivered by the hon. member for Kootenay (Mr. Goodeve). He is entitled to congratulations on account of the able manner in which he expounded his views, though distasteful to me. There is nothing beyond criticism in this world, and I shall single out two references in his speech to which I am bound to take exception. In the first place, he was in no way warranted in referring to the management of the Department of Marine in the manner he did. While technically a man occupying a position of trust may be called to account before the public for certain happenings, even if he be laid up and unable to attend to business, the hon. member should in all fairness have pointed out in what respect the management was inefficient in so far as the minister was concerned; and moreover he should have supplied some proof in support of his contention, and that was lacking entirely. He was content with making a few broad statements reflecting more or less on the minister whom illness confines to his house, and in support of these he has not adduced any facts, I repeat it, although he and his friends have had a whole session and a prolonged investigation devoted to unearth such facts. In the second place, the hon. member shows some inconsistency when directly after taking exception to the government's proposal to entrust forthwith, without consulting the people, the management of the proposed navy to the Department of Marine, he turns around and approves of the proposal of the leader of the opposition to send to England forthwith and without consulting the people, two warships of the latest design, representing an expenditure of some $25,000,000.

I am now coming to the question which has been brought up for the fourth time in this House within a year. As might be expected, the data in relation thereto have been pretty well sifted out. It has, moreover, been discussed at the last conference in London at which the Dominion government was ably represented by the hon. Minister of Marine (Mr. Brodeur) and the hon. Minister of Militia (Sir Frederick Borden).

The question is assumed to be entirely new. At page 3075 of the unrevised edition of Hansard, for the current session, my hon. friend from Jacques-Cartier (Mr. Monk) is made to say:

> There can be no doubt that the policy is entirely novel, and that the people have so far been kept in the dark as to its real meaning and import.

Then at page 3078:

> Will my right hon. friend (Sir Wilfrid Laurier) or any of the gentleman who sit behind him, from the province of Quebec at any rate, state that even this has been laid before the people of our province? They have never heard of it, in that shape or in any shape, and have never had any occasion to pronounce their opinion upon so important a matter.

Nevertheless, the memorandum of 1902 quoted on a previous occasion by the Postmaster General (Mr. Lemieux), is quite clear. Again, in the course of the debate which took place on March 13, 1903, previous to the two last general elections, and which was as usual widely distributed and discussed, I find that the following clean cut statements were made. At page 37 of

the French edition, Mr. R. L. Borden is thus made to speak:

Reference has been made, in the proceedings of the colonial conference, to a proposal by the Canadian government to establish a local naval force.

And the hon. Prime Minister, at page 51, is credited with the following utterances:

I confess that we owe it to ourselves as a nation—as we claim to be—to assume our own defence. And so far as that goes, if we have to spend more money upon military and naval service, I am sure that parliament and the Canadian people will not grudge any sum demanded for that purpose.

Then the hon. member for Jacques Cartier at page 64:

Sir, I listened attentively to the right hon. leader of this House when he spoke in regard to the colonial conference.

One could not possibly acknowledge receipt of notice in more explicit terms.

With such statements before us, there is not much ground for contending that the question is an entirely new one. On the other hand, it would be a matter of surprise were a matter of such importance to be threshed out without developing a new departure of some kind.

Men who are interested in throwing cold water on propositions of all kinds, contend that the proposed navy cannot possibly be autonomous. Notwithstanding which, I take the responsibility of stating that the principle of leaving the management of the various navies to the various governments building them is inserted in the Bill, in the same way that it prevailed at the London conference in August last and in this House on March 29, 1909.

True, that settlement of the question is not an ideal one. Of course, merchantmen are preferable to men of war, and such ideal settlement of the question could be brought about only through an international conference which would put an end to warfare for all time. Unfortunately, mankind has not reached as yet that degree of perfection and the settlement proposed is to my mind for the time being that which is best in accord with our political status and present conditions.

However, the hon. member for North Toronto (Mr. Foster), and the government should not expect us to-day, any more than when the matter was brought up for the first time, to welcome this proposal of an expenditure for military purposes with as much enthusiasm and earnestness as if it were destined to promote agriculture which supplies, or manufacturing which transforms, raw materials and adapts them to the uses of man, or else trade which acts as an intermediary between the two. It stands to reason that means of destruction should not be viewed in such favourable light as those things which minister to our sustenance and our comforts. So it is not to be wondered at if members of this House or citizens of this country feel like approving of proposals of this kind only under circumstances when such expenditure cannot be dispensed with, and pending the adoption by the various powers of some more equitable means of settling their differences, than sheer force or luck, through the clashing of fleets or the hurling of explosives of all kinds.

We might, on the other hand, postpone action, as suggested by the hon. member for Jacques Cartier and others. We have not been attacked for a long time past. There is no danger in sight. A fleet yet in its incipient stage will not enable us to face all emergencies for many years to come. Then our relationship to Great Britain and the neighbourhood of the United States may be considered either in the light of objection to the government proposals or of assurances of security for us. On the other hand, the landlord who has remained several years without feeling the need of carrying any insurance, may not always have the same luck. Then again, it will be acknowledged that there is some remissness in delaying armament until the attack is on. As regards the third objection, if Japan and the United States, whose organization and development were effected in recent years, had taken such a stand as is implied in that objection, fifty or sixty years ago, they would never have evolved into the great powers which they are to-day. Lastly, while recognizing the sterling qualities of the British people, while sympathising, as some of us may do, and as I for one do sympathize, with the neighbouring republic and its institutions, we cannot fail to perceive that neither the inhabitants of Great Britain nor those of the United States will be very prone to tax themselves to defend us as well as themselves. And should they be of any service to us in that respect, should they undertake to defend us at their own expense, we may rest assured that they will be expecting some remuneration for their services. That may take the shape of preferential duties, or may come through the settlement of boundary disputes, or be embodied in the clauses of some treaty, or result in a direct call of funds to meet the cost, the amount of which would be in due proportion, as we may well expect, to the expenditure incurred, to the risk undergone. Or possibly such a kindly ally would not mind retaining for himself something worth while, some fine section lopped off our territory. That is exactly what Uncle Sam has done in retaining Porto Rico as compensation for having helped Cuba to fight Spain ten years ago. That is also

what France did, in retaining Savoy, as a compensation for the help tendered in 1860 to Italy in the fight against Austria. That is also what England has done in obtaining the transfer of the major part of the Suez Canal stock and practically getting the control over Egypt after taking a hand in righting the finances of the country rather upset through the bungling of some khedive or other.

Should such developments take place, you may be sure that Cape Breton, which is the most important vantage point on the whole Atlantic coast, from the North Pole to the South, on account if its coal mines, would be greatly coveted by the United States, and it will be readily understood to what extent the holding of the Gulf and River St. Lawrence would be made difficult, were Cape Breton to fall into the hands of a foreign power.

Whoever contends that any government, whether American, French, English or other, will exact sacrifices of money and of men from their peoples, towards protecting, without compensation therefor, the interests, whatever they be, the trade, the welfare of a foreign country, is imposing on the good faith of his hearers or readers who take him seriously. No, Mr. Speaker, there never existed, and there does not exist today a country on the face of the earth that has not had to provide for its own defence, whether directly or through others, but always at its own expense.

I am not any more a spendthrift or a bravado than the most firmly convinced of the advocates of peace. I also, am opposed to militarism, and I trust that the idea of arbitration will prevail in the end. On the other hand, as long as international intercourse is carried on under the present system, I cannot agree that Canada should remain the only country in the world with coasts to protect, but without a single ship suitable for their defence.

The fair treatment which to this day is granted to those who are not in a position to defend themselves, is such an uncertain quantity, that not only a feeling of national pride, but one of self respect and the very instinct of self preservation should induce us to look for something better.

As we are aware that question was not at first a popular one in the province of Quebec. There are questions which it is advisable to take up first from the point of view of their drawbacks. Such is the proposal of undergoing a heavy expenditure for military purposes. Moreover our opponents took the lead. However, while such a policy has its drawbacks, its weak points, it has its strong points, its justification on the grounds of caution, dignity and the need of protection, and these will not be lost sight of any more in Quebec than in the other provinces of the Dominion. And when as the actual facts warrant us to do, we inform the people of Quebec that their opposition members in this House—averse as they are to contributing anything — greeted with tumultuous applause the proposal of the leader of the opposition to contribute at once the equivalent of two Dreadnoughts, or about $25,000,000—a foregone conclusion—and when we add that the major part of that opposition who advocate an immediate contribution, applauded in the same way the hon. member for Jacques Cartier and his few followers, the electorate of Quebec and other parts of Canada who do not like double dealing, will say, as they have said since 1896, that they prefer the outspoken attitude taken by the government who for all sections of the country declare that we have reached the state of manhood, that consequently we are bound to act as men and to see to protecting ourselves, which is more satisfactory, and ultimately will be cheaper.

It has been contended that if the people were called upon to express an opinion, the answer would be against the proposed expenditure. If it were so, do you believe the leader of the opposition, after spending ten months in poising public opinion, would be willing to go even farther than he had decided to go in the footsteps of the government on March 24 last?

These hon. gentlemen are free to seek encouragement from audiences made up mainly of opponents of the government—which they have the right to be—and who have numerous other grievances against us. It is an easy matter to find flaws in a measure of such importance; but numerous queries remain unanswered after our opponents have stated their platform.

If through the courtesy of England and the United States we are to be dispensed with the burden of maintaining a navy, it is preferable to be a colony to being a sovereign state. In that case the inhabitant of the metropolis would be made to pay tribute to the colonist. That is certainly not in accordance with history, and the experience of all people the world over and from time immemorial upsets such a contention. There is no example of a nation having preferred the status of a colony to that of a sovereign state, as its ultimate condition. If a navy is an unnecessary thing, how is it that all countries of any standing in the world have provided themselves with one?

It is stated that there is no attack impending. As a matter of fact, there is no immediate danger, but Canada with its young and enterprising towns and its vast plains is the country which has the greatest attraction for immigrants from the old world; and if Japan has had the pluck to take exception to the management of schools in California with a view to protect-

ing Japanese children attending such schools, it is likely enough that this same power might be disposed to question the wisdom of our immigration laws. Now, Japan, which was very little known fifty years ago, has an already powerful fleet.

Only a few days ago, British diplomacy, seconded by the prestige of the British navy, secured for us from the government of Uruguay an amount of $50,000 as compensation for the illegal seizure of some of our fishing boats along the coasts of that country.

In many cases a navy cannot be put to any use, and so much the better. It then has indirectly its usefulness in accordance with that rule, which though objectionable in practice, has some strong points in its favour: 'Si vis pacem, para bellum.'

In his speech of February 3rd, the hon. member for Jacques Cartier recalled an incident of those troublous times of 1837: a British officer present at the trial before court martial of a patriot took pleasure in sketching the prisoner as he would appear on the gallows. Now, there is not a member of this House, there is not a Canadian, whether of English or French lineage, but will repudiate such cruelty, such cynical insult to misfortune. The very perpetrator of such an offence must have been ashamed of himself as soon as the first period of excitement was over. On the other hand, I fail to see what argument the member for Jacques-Cartier will draw from this incident either in favour or in condemnation of the government's proposal. Excesses of that kind cannot be charged against our forerunners, who were the victims and not the perpetrators of such deeds.

During that same debate of February 3rd, the hon. member for North Toronto depicted the former prime minister of Quebec, the late Honoré Mercier, under rather unfavourable colours. He represented him as anti-British, and in so doing he was speaking of a man of whom he had a very imperfect knowledge. Mercier, who had a free hand in Quebec about 1888, was well disposed towards Ontario. We all remember how such disposition materialized in 1890, when unfortunately the university of Toronto was consumed by fire. I refer to this fact, not that it has a great meaning in itself, but as showing what were the real feelings of the man and how uncalled for are the aspersions cast on his memory by the member for North Toronto on February 10. If that hon. member only took the pains of ascertaining the facts in regard to Quebec's representative men, he would have to modify a good many of his utterances.

Now, as to those who would be disposed to contribute cash or the equivalent of two Dreadnoughts.

Mr. PAQUET. (Translation). Will the hon. member allow me to ask a question?

Mr. BEAUPARLANT. Certainly.

Mr. PAQUET. (Translation). The hon. member for St. Hyacinthe asserts his willingness to defend Canada on land and on sea, but will he go so far as to say that he approves of the idea of our taking part, in case of emergency, as stated in clause 18 of the Bill, in all imperial warfare?

Mr. BEAUPARLANT. (Translation). If the hon. member will take patience, he will see in the latter part of my remarks what position I take. I propose voting for the Bill and clause 18, subject to amendments which may be made in committee.

Mr. PAQUET. (Translation). Then you are in favour of the proposal of Canada participating in imperial wars?

Mr. BEAUPARLANT (Translation). In so far as I am concerned, I do not wish to be debarred from the privilege of entering into an alliance with whomsoever I may deem it useful to make such an alliance in my country's interests. As a French Canadian I have just as much the right to enter into an alliance with England whenever I believe it in the interest of Canada, in the same way that the French people in France have themselves formed an alliance with England previous to the Crimean war in 1854. I take just as much pride in my French Canadian ancestry as the hon. member for l'Islet may take; and it is this very desire of doing my duty as such which enjoins me to take all means possible of promoting the interests of Canada according to circumstances, under the control and responsibility towards the representatives of the Canadian people of the Minister of Marine of Canada. I would not be doing my duty as a French Canadian, by laying down as a principle never to enter into such alliance or other, under any circumstances, even though should that alliance be useful to us.

Now, those who are willing to contribute purely and simply, forthwith and unconditionally $25,000,000, or any other amount, or who, in other words, would be disposed to hand over the whole outfit to be controlled exclusively by the home authorities, do not appear to realize that differences may arise between the mother country and the colonies, or else should such differences arise, they would allow the matter to be settled at the sweet will of the adverse party. Now, that is not at all in accordance with the Anglo-Saxon's love of liberty, or desire of upholding his rights, nor with his legitimate craving for managing his own affairs.

Differences of that nature do not arise solely between foreign nations. The Spanish colonies of South America, the peoples

who colonized North America, though homogeneous and of either Spanish or Anglo-Saxon undoubted origin, have not always had interests or views similar to those of their mother lands, neither have the northern and southern sections of the United States, following the war of independence, always had similar views. And the question of bi-metalism, while it did not bring about such grievous animosities between the East and West, was an occasion of serious differences.

Within the very bounds of the Dominion, British Columbia, has not always been in unison with the other provinces on the question of oriental immigration—as my eloquent friend from Nanimo (Mr. Ralph Smith) is aware— neither as regards its financial arrangements with the Dominion government. The Dominion government and the Ontario government have also been at loggerheads, especially regarding the license law, a difference which culminated in the carrying of the Hodge case, though unimportant as regards the amount involved, to the foot of the Throne. The province of Quebec has also occasionally differed from the other provinces. Finally, in England, a country wherein order and public opinion have a predominating influence, and make for stability to a remarkable degree, harmony has not always prevailed on important issues.

Some may object that these are questions of local government, and that when it comes to a question of national defence, the whole forces of the nation should be made to converge towards the attainment of one same object. But, in such a case the least that could be done would be to provide representation in the same measure as new obligations are imposed. And the plan proposed by the hon. member for Victoria and Haliburton (Mr. Hughes) though I cannot approve of it, would be more in harmony with the principle 'no taxation without representation,' than the system which consists in handing over the control to a country over whose administration we have not the slightest control.

Now, if diversity of interests and differences of opinion have arisen within the bounds of a single Dominion, there is still greater reason to expect that such differences exist or will assert themselves between countries separated by oceans. And the diplomatic wording, the ominous expressions, wherein such an emergency is deftly passed over, is necessarily pregnant with concealments and reservations.

Whoever puts himself at the mercy of others might just as well at the outset give up all contention of his own. The proposal agreed to at the last conference, the principle of which has been retained in this Bill, is preferable to the former system, inasmuch as it provides for the protection of Canada's special interests, and if, as we have reason to hope, the navy is to be built in Canada, it also ensures to the Canadian producer and worker the benefit of such contributions as we are called upon to make. That is why I approve of such proposal in preference to that of contributing without anything been granted in return, while we are ourselves deprived of all means of control.

It is that liberal policy of the home authorities which ensures to Great Britain the loyalty of its colonists and helps in maintaining her in the forefront of the nations of the world. Of all the dependencies of Great Britain, Ireland alone has been deprived of its autonomy, of its self government, and that at the beginning of the last century. Now, if I am not entirely mistaken, there is not much sympathy towards England to be found in Ireland than there is in Canada, Australia, New Zealand, or even South Africa, whose conquest is of such recent date.

Equal rights and mutual consideration are better cementers of durable and true alliances than the mere exercise of force. However, it is from another view point that I propose dealing with this question.

If the philathropic idea which inspired the Hague conference had been fully put into practice, the question which we are considering, as well as all questions of militarism, would have been solved in a thorough, final and world-wide manner. And if it were Canada's power, even through the expenditure of an amount equal to that necessitated for the establishment of a navy to take a hand in bringing about such a result, I do not say that I would oppose the government's proposal, for then there would be of course no occasion for the government introducing such a measure.

Of course, the great powers only are in a position to deal effectively with such a matter. The voice of a colony, whatever its importance, would not be heard. Sovereign countries only had representatives at the Hague conferences of 1899 and 1907. On the other hand, conferences between the mother country and ourselves are of frequent occurrence; and that means is always open to us of reaching the international concert, should we be more fearful of assuming a status of complete sovereignty,—an isolation which may be deemed alarming,—than other colonies which though weaker at the time than we are to-day, have been bold enough to assume such a status.

Universal peace is a dream of philanthropy, the carrying into effect of which may be permitted to wish for. Apart from her own forces and those of her colonies, England may rely on the help of the neighbouring republic a natural and powerful ally, and on the co-operation of her old-time rival, France, a friend to-day; and we

have reason to believe that the combined influence of those three great powers and of those who naturally follow their lead, would bring about the acceptance of certain all important clauses in the treaty for universal peace. The United States, France and England after coming out victorious in war, would crown their achievements by a final victory in peace.

These humanitarian views have been given expression to by the official delegates of the British workingmen, Mr. Appleton, who at the International conference held at Paris last summer, deplored in bitter terms the fact that while England was spending two billions for the maintenance of the army and the navy, she was spending fifty millions only towards education and the development of arts and sciences. And bear in mind that England is one of the countries of the world wherein the illiterate are in the smallest numbers, and one of the countries of Europe, at any rate wherein military service is less exacting, inasmuch as it is not even compulsory.

The feeling in France in this respect has also already received semi-official expression. As the result of a competition bearing on the question as to who was the greatest Frenchman of the nineteenth century, a competition initiated by a great French newspaper, modestly designated 'Le petit Parisien,' militarism was relegated to the fourth place by a majority of subscribers to this paper, who represent practically French public opinion, and the first place was assigned to philanthropy, which commends itself to the human reason and to the good feelings of men, when not vitiated by circumstances. Through that plebiscite France proclaimed that her greatest citizen of the last century was Pasteur, the healer, the benefactor of humanity, and not Napoleon, the scourge of humanity.

French and German advocates of peace, forgetting their broils of recent occurrence, and their old-time grudges, extend a friendly hand and unite in denouncing those constantly recurring conflicts and armaments by their respective governments.

The president of the United States, Mr. Taft, and Canadian statesmen, among others the hon. Postmaster General (Mr. Lemieux), whom I now see at his seat—have also with marked satisfaction, during the recent festivities at Burlington, celebrated the centenary of peace maintained between Canada and the United States, and that along a frontier of 3,000 miles in length.

In this Dominion of Canada, in Toronto, that hot-bed of loyalty, there has been established a Canadian association for peace and arbitration, of which Mr. William Mulock is the president and Dr. C. S. Eby, the secretary. In the course of a sermon delivered at the Crescent street Presbyterian church of Montreal, an English preacher, the Rev. W. W. Dickie, has not hesitated in condemning before a numerous audience the policy of militarism as a disgrace to civilization.

Finally, the two conferences both held at the Hague in 1899 and 1907, may be pointed to as events of a novel character to this day, as regards their humanitarian inspiration, preciseness of their object, the plausibility of their methods and the evident good faith of their promoters. The human conscience, which for centuries past has not tolerated that differences between private owners as to property rights should be decided by handicuffs on the street, is beginning to be impatient at witnessing the settlement through pitched battles of differences arising between sovereign countries of boundary disputes or other international conflicts.

Ethics should not be made to vary in accordance with the importance of the interests at stake. These are, amongst many others, indications of a desire to see universal peace firmly established, a result which the heads of the ten principal states of Europe and America should and might bring about through the making of an international code which would be finally and permanently accepted.

What the heads of the ten leading states of Europe and America have not had the courage or power of accomplishing, delegates of the working fraternity the world over who are to meet in London next summer, have decided to attempt at their conference. On that account they are entitled to universal gratitude.

The acceptance of an international code carries with it the establishment of tribunals. Tribunals are human institutions; as such, they are not always above reproach; but their decisions as a rule should be more equitable than the rule of the sword.

It has been objected that there exists no sheriff, no bailiff in international matters, to carry out the orders of a world-wide tribunal and ensure their observance. That would be the part assigned to the common international force to which the various nations would contribute units much smaller than their present armaments. And if a bailiff, single-handed can enforce on individuals the will of the nation, a few thousand men will be in a position to enforce the observance of international decrees.

These are facts, theories and hopes on which the advocates of universal peace rely for ultimate success; but, it should be admitted that the spirit of warfare is far from being yet extinct on the face of the earth. While making a pretense to peaceful intentions, the various powers are all very self

asserting. At the Hague conference motions for postponing the settlement of various questions were more likely than any others to carry unanimously. Many are the reservations made in regard to the final conclusions. And if we are not willing to be content with what other nations despise, if we are desirous of being on a footing with other countries, at any rate on a par with a few of the 47 states who were represented at the Hague, apart from Canada, we will have to make sacrifices somewhat similar to those made by mature nations, at any rate until the time comes when international conflicts are settled through arbitration.

While adapting Canadian politics to meet the needs of the moment, we should strenuously deprecate those doings which are the main causes of international strife; the excessive ambition of nations, of institutions, and even of individuals, self conceit, prejudice, the coveting of riches, the spirit of domination, and above all possibly that false patriotism, the outcome of which is merely to set up each nation as the foe of all others.

Patriotism, as it is oftentimes understood and advocated, is a deplorable evil which has done humanity more harm than all other covetings and wrong-doings of men. We often hear people dilating on the ardent love men should have for their country. Now, that love of country, which in itself is worthy of admiration, ceases to be such as soon as it depends for its sustenance on the hatred of the foreigner. If in France, the people are to be taught to love France jealously, exclusively, if in England the people are to be taught to love England jealously, exclusively; if in Germany, in the United States and in the various other countries of the world, the same policy is followed, then bloody wars will ensue and to horrible condition will humanity be brought.

A theory cannot be considered good, if the consequences it leads to are undeniably deplorable. If only we habitually viewed our fellowmen as human beings and not as fellow-citizens or foreigners, those in the majority, the great powers, and those in authority would lose nothing of their privileges, while minorities, small nations and weaklings would obtain some improvement in their condition.

Let appeals to national prejudices be discarded, and grasping individuals, institutions or nations, who have existed under all climes and at all ages, will thus be deprived of the means of preying on the naive heroism of the masses, and finding themselves unsupported, will lose all hope of attaining their object. Though it may be designated as patrotism, such exclusiveness is nothing more than egotism and selfishness extended to the nation is neither more generous nor worthy of greater admiration, while the consequenecs are proportionately more disastrous as it extends from the individual to the nation.

No, Mr. Speaker, though substantial progress has been made in that direction, the problem of universal peace has not yet been solved. And we have to choose between making sacrifices in proportion to those made by other nations, or else be content with what others will be willing to concede to us. Now, history and experience have long ago apprised each one of us that if we expect to get fair treatment when left at the good will of others, we will be sadly mistaken. As long as international intercourse is ruled by the customs now in force, it would be folly on our part to put ourselves in such position.

Our opponents entreat us in the name of what is dearest to us, to abstain even from providing the basis of a Canadian navy. That is pure rhetoric, which may appeal to an audience made up for the most part of opponents of the government, who have numerous other reasons for fighting us, but it is no answer to a question which requires to be solved by a growing people, who have reached the adult stage, and who unwilling to continue subsidizing others directly or indirectly for their defence, have resolved to undertake that task on their own account. We might as well and with better cause state that it is in the interest of those who are dearest to us that we consent to the necessary sacrifices being made with a view to laying the foundations of status superior to that of mere wards or dependents of other nations, and to ensuring to the Canadian people and to every one of our fellow-citizens security, consideration, greater independence and more comfort, either at home or elsewhere; to the merchant on the ocean, as well as to the farmers and manufacturers who supply his cargo. Whether powerful or not, whether rich or poor, for the stay-at-home as well as for the traveller, for the diplomat, the shipmaster or the crew of the fishing craft navigating in foreign seas, for the youthful emigrant seeking fortune in neighbouring countries, as well as the hardy pioneer who winds his way to the mining regions of Alaska or the poor miner who goes down into the depths of a Pennsylvania colliery. It is better to belong to a nation esteemed and respected than to a nation enjoying no such consideration.

In conclusion, the proposed expenditure is of a most undesirable character. It is not at all necessary to be in the ranks of the opposition to recognize that. However, it cannot be avoided under present international conditions, unless we are willing to abide by whatever concessions foreign nations are willing to make in our favour. As long as other nations go to the length of

appropriating money for armaments, we cannot reasonably suppose that they will not be more exacting than ourselves as regards the sharing of powers, riches and other advantages.

And if we Canadians are obliged to make further sacrifices towards armaments, let us at any rate retain control, and not only in principle or in theory, but practically, effectively and permanently. We shall thereby occupy a better position in matters of international import, and obtain better treatment should we become a party to some treaty of alliance, or otherwise, with other nations.

However, let us hope that before these ships that we are about to build have become old, out-of-date, through the progress of aerial navigation and otherwise, the arbitrators of international peace will have accomplished long ago, that is they will have contributed to the settlement of that question the required quota of good will in the shape of mutual concessions, and that these ships instead of being used as a means of prolonging such unreasonable and onerous conflicts, will have for the greater part been remodelled and made to develop international trade, that powerful agency for promoting international prosperity and welfare.

Mr. THOMAS CHISHOLM (East Huron). I am sorry I was not able to follow very closely the speech of the hon. gentleman (Mr. Beauparlant) who has just sat down. If I understood him correctly, however, he directed a good deal of his discourse towards the hon. member for Jacques Cartier (Mr. Monk), and also the hon. member for North Toronto (Mr. Foster). While I applaud his enthusiasm and the patriotic way in which he delivered himself, I detected however, a strain of selfishness in his address, for he seemed to confine his patriotism almost entirely to the province of Quebec. Now I will just say that the Dominion should be taken as a whole, we should have equal loyalty to every part of this Dominion. The province of Quebec is not the whole of Canada; and there seems to be in some quarters a feeling that the proposed fleet should lie in the mouth of the St. Lawrence. Again, I think we should take in the whole of the British empire into our consideration, just as we should take in the whole Dominion. We should look to the safety of the British empire, feeling that we are citizens of that empire. I am sure that if the province of Quebec were attacked, the other eight provinces would rise as one man to go to her defence.

Now, Mr. Speaker, I have followed this debate very carefully for a number of days, and I have tried to do so with an open mind. I feel that we should conduct this discussion entirely above politics, and it is in that view that I desire to discuss it myself. In the first place when this question began to be discussed, I was under the impression that we should have a Canadian fleet built by Canadians, built in Canada, and of Canadian materials. However, as the discussion has gone on, one question struck me continually, and I waited day after day and hour after hour to hear that question answered. That question is this: What are we going to do for Britain and the British empire if the British empire is attacked within the next five years? We have no guarantee that peace will be maintained for five years, that Germany will not attack Britain within the next five years. But we are told plainly that it will take us one year to enlarge our dry docks, and four years at least to build our little Bristols. Now what are we going to do in the meantime? Are seven and a half millions of King Edward's loyal subjects on this side of the Atlantic going to stand with folded hands and see the old land taken by an enemy, see her robbed of her wealth, see our beloved King Edward led off a prisoner as Napoleon the Third was? Are we to stand idly by for five years without doing anything to ward off such a catastrophe? Until that question is answered I feel that I cannot agree with the Bill that is now proposed for our consideration.

After listening to this discourse for a considerable time, I feel it my duty to speak out boldly and freely in regard to a question of such vital importance as the defence and preservation of Canada and of the British empire. I do this the more freely, because I have some suggestions to make which I think might be of use if they were properly considered, but which I fear will scarcely be in accord with the views of either the leader of the government or the leader of the opposition. I may say however, that some of my constituents and many others whose opinions I value very highly, seem to think that my views are sound, safe, economical and businesslike. Of course I may be wrong, but I am open to conviction. Let me say, however, that there must be something more to convince me than mere bald assertions. That has been tried on me already, and it has failed. I must have logical arguments put up to me, arguments founded on known facts and founded on common sense. In the meantime I feel that I would not be doing my duty to my country and to my constituents if I sat silent in this House, and beheld one of the greatest and most far reaching follies that was ever perpetrated in a civilized country enacted before my eyes. My duty becomes doubly imperative when I find that some hon. gentlemen on my own side of the House are inclined

to advocate measures that I do not find quite satisfactory. You will, therefore, gather from what I have said that I do not think that either of the two great political parties in Canada exactly realize how they can most effectively assist Great Britain in the present emergency.

That there is an emergency, I make no doubt. No one has yet proved that there is not an emergency. The very fact that the Asquith government brought in a budget imposing extra taxes to meet an emergency, that they required so much more money, and that the budget was so unpopular, that the Asquith government was nearly defeated, shows that there is an emergency. Since that election was over they have ordered the building of four extra Dreadnoughts, showing that in Great Britain at least an emergency is believed to exist. Actions speak louder than words. Now, an emergency requires emergency measures, and these are generally of a temporary character. Therefore, it seems to me that all we have to do at present is to make some temporary arrangement that will enable Britain and the empire to tide over the present crisis. Now, in the old days when a great general met with a military emergency in the shape of a great river that impeded the onward march of his army, he did not stop to build a stone bridge with solid stone abutments, and erect thereon a steel structure; if he had done so, he and his army would have been taken at a great disadvantage, and would have been ruined. Instead of that, he built a bridge of boats over which he safely transferred his army. Similarly, by adopting the principle of a temporary arrangement, I am prepared to show how Canada can give to Britain seven extra Dreadnoughts until this crisis is over. Now, Sir, you may say that is a strong assertion, but I will ask you not to condemn it until you have heard my argument. Besides that, I think I can show you how we can save millions and millions of dollars at the same time to the Canadian people without spending nearly as much money as either of the proposed plans would entail, simply because it will be a temporary measure. Now, if I undertake to prove that big proposition, it will be necessary for me to examine thoroughly the ground and establish my arguments on a solid foundation, because there is no doubt that I will have the whole House against me.

In the first place, I will take up the question of dry-docks. I am in favour of the enlargement of our dry-docks, and I think the government in that respect are going in the right direction. It is absolutely necessary that we should enlarge our dry-docks. Our trade and commerce require it. Take the dry-dock at Lévis, Quebec, only 600 feet long and 62 feet wide. Suppose the 'Oceanic' wished to come to that port, she is 685 feet long and 68 feet wide, and if any accident should happen to that vessel in the Gulf of St. Lawrence she could not be repaired on this side of the water, she would have to cross the ocean before she could be repaired. Now, we know that a vessel, when injured, generally draws more water than she did before. Therefore, I say that the dry-dock at Lévis should be enlarged. We have many other vessels plying to Quebec which the dry-dock is too small to accommodate. We have sailing the ocean such ships as the 'Kaiser William II.,' the 'Deutschland,' the 'Cedric,' and the 'Baltic,' the great size of which renders it necessary that dry-docks must be made larger and larger. Why, not so long ago, the 'Empress of Ireland' had to be taken across the ocean to be repaired. I say, Sir, that the requirements of our trade and commerce demand that these dry-docks should be enlarged. If we are to compete with an enlarged, and deepened, and improved, Erie canal, we must do everything in our power to keep up the good name of the St. Lawrence route, and to provide that insurance rates on that route shall be reduced. For my part, I would approve of the dry-dock at Halifax being enlarged, and I may say here that I am in favour of the establishment of a naval college in Halifax, or anywhere else, where it may best be located. I believe also that the dry-docks at St. John and Esquimalt should be enlarged. But, Sir, I object entirely to saying that such improvements are to be charged up to the motherland as something we have done for her or on her behalf. Why, to say that, would be acting on the principle that if a man had a fine residence in this city with beautiful grounds, and some tramp was to attack him in his garden, and a neighbour came across to assist him, and after the melee it was necessary to take that neighbour into his house, get a surgeon and have his wounds attended to, and then when he would be going away, instead of the man thanking him for coming to his assistance he would say: I built this big house and fixed up these grounds for your special accommodation and benefit. In a similar way, if a war vessel of Britain is ever injured in Canadian waters, it will be when she comes here to protect the cowardly Canadians who will not defend themselves, and surely we might give these British ships the benefit of our dry-docks until they get their wounds repaired.

There is another matter which I think should be taken up by the government, and that is the encouragement of aviation. I think this government should have done something for Messrs. McCurdy and Baldwin, when they attended the military camp at Petawawa last summer. We are told that the government gave them the use of some sheds on the grounds, but what the gov-

ernment ought to have done was, to pay their way there, maintain them properly when they were there, and pay their expenses back again at least. They are considering in other countries the question of the navigation of the air and Canada should not be behind. I notice that is the course of one experiment made in California a man had gone up in an airship and was able to drop 200 pounds of sand on to a piece of white paper ten feet square. If the science becomes so perfect as that it might be possible to destroy even Dreadnoughts by airships. We know what they are doing in Britain in this matter, we know what Zeppelin has done in Germany, we know what success they have had in France, and why should not Canadians be encouraged in the development of aviation. When we consider that Messrs. McCurdy and Baldwin had backing them a man of such genius as Dr. Graham Bell, the inventor of the telephone, surely this government should have accorded them some practical help. I notice that Mr. D'Almcida, in a lecture before the Engineers' Club, of Toronto, stated that he thought the time was near at hand when airships would be considered the safest, cheapest and best means of transportation, and added that the time may come when we will be able to go around the earth in seventy hours. Surely, there may be some wonderful developments in the future when such remarks are taken cognizance of by an intelligent and educated body like the members of the engineers club. Now, why are we neglecting this very important factor in the defence of our country? It is stated in the Toronto 'Globe' of the 14th instant—and no doubt it is true when the ' Globe ' prints it—that a military airship in Britain was launched for the use of the British army, and that she answered her helm perfectly on her trial trips, even when speeding in the teeth of a stiff breeze. Well, our Canadian people should be encouraged in the pursuit of this science and in the near future it may mean more than a fleet of little cruisers, or even Dreadnoughts. Indeed, the control of the navigation of the air may mean more to Canada than either of the propositions now before the House. This is an important day in the history of Canada; it is an important day in the history of the British empire and the world, because I believe that to-day the eyes of every nation on earth are turned towards Canada. It is known everywhere that a perilous time and fearful crisis in the affairs of the British empire is approaching, and the world is wondering what Canada will do. I would remind the House that the very moment it was known that this crisis was near our younger, smaller, and weaker sister nations did their duty and did it vigorously. They did not wait to write, they cabled assistance to the mother country, and Canada has been the only tardy child, the only laggard in this great family of nations. It was known right here in Ottawa more than a year ago, that this danger was coming, and what have we done? Deliberately in the face of that knowledge we spent the whole of the year 1909 in passing, unanimously it is true, a very high sounding and loyal resolution. We made a noise but we did nothing. The session of 1910 is well advanced now, and still nothing practical has been done; we have had a great deal of talk, Grit talk and Tory talk, but we have done nothing. I think it is admitted that we will have to spend 1911 in enlarging our dry-docks, and then I suppose we will spend 1912 in building the slips on which, in 1913, we will begin to build our little cruisers. If we may judge by the progress that is usually made in erecting public buildings and the construction of government works in this country we may safely assume that the ships cannot be ready before 1920. The Prime Minister said it will take four years to build the cruisers and it is admitted it will take one year to enlarge the dry-docks; the leader of the opposition says the cruisers will not be ready for fifteen years, but I will take a happy medium between the two and say they will be ready in ten years.

Could the enemies of Britain wish anything better than to know that under these circumstances we are to have a Canadian-built navy composed of little vessels or cruisers that are sure to be obsolete and out of date before they are constructed? Why, if the government were in league with the enemies of Canada, it could not give them a better guarantee. It is simply a guarantee that even these little cruisers will not be ready for from seven to ten years, and will not be of any use when they are ready. Britain has a great many of these small vessels now, and has had them for a good many years, before Dreadnoughts were built. She could only use a few of them in a struggle in the North Sea, because these little vessels of the Apollo and Bristol type are used only as scouts; they are used to evade the enemy, to run away, not to fight. They would be worse than useless in a contest on the ocean unless there were a Dreadnought or super-Dreadnought in the neighbourhood behind which they could run for shelter. There is no doubt, however, that Great Britain can use all the little vessels she has to good account, without taking them into the North Sea, to guard her cotton raw material and food supplies. Those who are pretty well on in life remember well the great suffering that there was in Lancashire when the cotton supply was cut off at the time of the American war. If Britain's cotton supply were cut off tomorrow, there would be the greatest possible suffering, and if her food supply were

cut off, she could be surrounded like a beleaguered city and starved out in a month. We have recently heard a great deal in this House and out of it about the immense aggregate tonnage of Britain's warships. This is a very plausible argument, but it is just as deceptive and misleading as it is plausible, and it is unworthy of a great man and a clear thinker. We all know that the smaller ships are so far out-classed by Dreadnoughts that in a battle on the ocean they could not get near to a Dreadnought or injure it in any way. Therefore, in future nothing but the tonnage of Dreadnoughts and super-Dreadnoughts will count. I often think that Canadians who live hundreds or it may be thousands of miles away from the ocean, have a small idea of what a fearful death-dealing monster a Dreadnought really is. We can only convey this idea to them by comparison and description. We cannot take them to see one. Some idea can be formed when I say that a Dreadnought has a displacement of 22,000 tons, whereas the little ship in which Jacques Cartier first crossed the ocean and landed in Canada had a displacement of only 60 tons. A Dreadnought is simply a death-dealing monster covered with nickel steel eleven inches thick and armed with ten 12-inch guns, any one of which, if discharged at close range, would send a ball through a solid mass of wrought iron three feet thick. It requires 200 pounds of cordite for a single charge and it throws a shell weighing 750 pounds; so that if the ten guns were discharged all at once, they would hurl forth nearly four tons of metal bursting shells which would be deadly at six miles. Now, Germany will have a great many of these Dreadnoughts by 1912 or 1913. We have heard so many different estimates here, and they are so confusing that I scarcely know how many she will have; but from what I can gather, she will have from 17 to 20 of these marine monsters in 1912 or 1913. Britain will have as many or a few more; but she cannot, like Germany, put all her Dreadnoughts in the North Sea at the same time, because she has many outlying points to guard, in the Mediterranean and elsewhere; and she will have to guard Quebec too. More, owing to her insular position, she must in every case guard the line of her food supply, and protect it perfectly. It is as important to guard that as it is to meet the German fleet in the North Sea. We would still have an adequate idea of the preparations which are being made to dismember the British empire if we had not some idea of the invincible land army with which Germany is now guarding the Dreadnoughts which she is building. A writer for McClure's magazine for November last, gave a very good description of that. He said that Germany could on 12 hours notice hurl 400,000 men, fully armed and equipped, and 800 guns upon either her eastern or western border; that in two days she could increase that number to a million, in two weeks to two millions, and finally to four millions, the greatest and best army on this earth. Germany has in her war office ready for use, plans for the invasion of every country in Europe. She has an intelligence system that seems to make known to her what is going on in every part of the world. She has accurate maps of every country on earth, and every officer and man in that vast army has secret mobilization orders that will enable him, when notified by telegram or telephone, to take his place immediately in the great German fighting machine. The railroads of Germany are mostly owned by the state, and are part of her military machine. She has armoured trains ready. She has bridge-building materials lying at suitable places, and at the great fortress of Spandau, near Berlin, this writer says, she has many hundreds of sacks of gold, a part of the French war indemnity, which is carefully guarded, and which forms the nucleus of a war fund. I might also call your attention to the fact that Germany has a magnificent air fleet capable of thundering destruction from the skies. At Ehrenbreitstein not long since that air fleet had military manoeuvres and a sham battle that lasted three hours. So that in every direction Germany is preparing for the conflict; even her air ships are ready for action; and I think we know what all these preparations are for. Germany has an immense population, rapidly increasing, of more than 60,000,000 people, cooped up in a little territory of 208,000 square miles, about four-fifths the size of our new province of Alberta. Her farmers are thoroughly protected, and therefore they are prosperous and numerous; and by means of her technical schools and the wonderful industry of her population she has become one of the leading manufacturing countries in the world. Germany wants more room and new markets, and there can be no doubt that is the origin of the trouble. This is no false alarm, because we find the Krenz Zeitung, a leading German paper recently said that for England to think that Germany was not building her Dreadnoughts for the purpose of opposing Britain, was simply to adopt the policy of the ostrich which sticks its head into the sand and then thinks it is safe.

During this debate, we have had the names of eminent statesmen quoted to us time and again—men who are leaders in both the great political parties in the old land, men who have the means of knowing and who do know, men whose word and wisdom are above suspicion—and

these men have told us that not only the integrity, but the very existence of the British empire is threatened. If Germany is not making those preparations to attack Britain, why is she building so many Dreadnoughts? She does not require them to attack France or Russia or any other land power. She is evidently building them for one purpose, and that is the destruction of the British empire. Her evident intention is to outclass and outnumber and defeat the British fleet on the North sea, seize the very heart of the empire, plunder the country, exact an enormous war indemnity, and perhaps carry away our beloved King, a prisoner, as she did the Emperor Napoleon III, and then proceed to crush and conquer the colonies at her leisure, and as a matter of detail. When the German Dreadnoughts are ready, she can choose her own time to make an attack; and there is no doubt at all, that when she does strike, she will follow her usual course of striking quickly, and when least expected. Just look at her strategical position. She has everything to gain if victorious, and if defeated she has nothing to lose, for all her fleet has to do is sail back to the protection of her invincible land forces; whereas should she win she can dismember the British empire, capture its immense wealth, control the ocean, and become the leading power in the world. That is something for Germany to fight for; and if we do not watch ourselves, there is little doubt that she will succeed. Judging by her past record I fear she would make a merciless conqueror and a hard taskmaster. We know what she has done to others. In 1864 she picked a quarrel with little Denmark, and despoiled that kingdom of two provinces. In 1866, owing to the discovery of her needle gun, she succeeded in crushing Austria in a single battle. In 1870, she overran France, seized two of that country's most favoured provinces, took the Emperor Napoleon away a prisoner as a hostage, and allowed him to die at Chiselhurst, and exacted the until then unheard of war indemnity of $1,000,000,000. Need we expect that this hitherto invincible power will spare Britain and her colonies if that unfortunate day should come when conquered Englishmen, Irishmen and Scotchmen and oversea Britons would have to plead for mercy before their victorious and unrelenting masters. Germany, it is said, has spent thirty years in preparing for this. In the meantime she has consolidated her empire, she has enlarged and improved her old canals, and built many new ones. She has been increasing and perfecting her invincible land army, and also supported and encouraged the enterprising firm of the Krupps until it has become the greatest manufacturing establishment of military supplies in the world.

Germany has the advantage of being able to attack Britain by sea, whereas Britain cannot attack her by land; and I would just say that should the day come when Germany shall have conquered Britain, and a German tax be put on our products going to the British market, our Canadian farmers will suffer very severely. Even that is something to look after. Should the day of peril ever come, those silly Canadians, who are willing to trust to our little unbuilt cruisers, would then find out, when too late, that their cruisers, even if built and going out to meet the fleet of German Dreadnoughts, would simply be the laughing stock of the world. And what is still worse, if these cruisers were manned by loyal Canadian citizens and seamen, the poor fellows would be slaughtered before they could raise a finger to defend themselves. They would be simply butchered to make a German holiday.

As to those other foolish Canadians who depend on the Munroe doctrine, they would find, also when too late, that though the United States might not be willing to allow a European country to take permament possession of Canada, they would never think of going to war, especially with the conqueror of Britain, for the purpose of preventing Germany from levying on Canada a war indemnity of such astounding proportions that it would simply mean the ruin of this country.

In the face of all this, we are told there is no danger, that these preparations do not mean anything; and although one of the greatest military disasters that could befall a civilized country is almost upon us, our government is doing nothing but waving the old flag, shouting loyalty and marking time. I had a letter from one of my constituents the other day in which he said the people were becoming alarmed and suspicious. He said that they heard the 'hail master' and the giving of the kiss, and were beginning to be afraid of what might follow. Britain requires Dreadnoughts in the North sea. She requires them without delay. Why then this policy on the part of our government of putting off, doing nothing, dilly dallying? Is it any wonder that our sister colonies are beginning to suspect Canada's loyalty to the British Crown? In my opinion Canada is loyal, but the whole trouble is not a lack of loyalty on the part of the government, as some of our friends seem to think, but simply their want of promptness and business ability, because there is neither promptness nor business ability shown in their proposal to build those little cruisers. In the first place should the crisis come upon us, we have no time in which to build them, we have not the trained mechanics, we have no mills with facilities to roll plates of nickel and steel

such as would be required. It would take us years to get the men trained for this work and those necessary appliances.

What good would those cruisers be to Britain if they were lying in the mouth of the St. Lawrence if Britain were engaged in a life and death struggle with German Dreadnoughts in the North Sea? They would be no more use to her than my hitching post standing on the street in front of my office in Wingham would be to me today in trying to rouse the government to do their duty and avoid this foolish and extravagant expenditure of public money. If a wounded man were in a position where he could not get away, and saw a man loading a rifle with the avowed intention of attacking hm, if he was not just fit for the lunatic asylum, he would not sit down there to manufacture a little wooden popgun to defend himself. He might try to borrow, or hire, or buy, some weapon. The government is in a similar position, and is acting just in that way. The German Dreadnoughts are nearly ready to launch, and yet our government are going to sit down to build little Dreadnoughts of their own. I think that settles the government question.

I will now undertake a task which is probably not so agreeable, that is an examination of the resolution that has been brought in by the leader of the opposition (Mr. R. L. Borden). I must say that I do not approve very much of either, but, after all, the resolution brought in by the leader of the opposition would give Great Britain two extra Dreadnoughts at the right time and in the right place, before 1912 or 1913. It may have a great many other drawbacks, and certainly there are a great many reasons why I do not approve of a gift of money, but at the same time it has that good quality, and I consider in that respect it is a little better than the government plan. I must admit that there was some truth in the remarks of the hon. gentleman who has just assumed his seat (Mr. Beauparlant). He referred to the fact that the government were proposing to spend a certain amount of money on war ships, and that there was a proposal that there should be a plebiscite. I think myself there is a great deal of force in that, and if the government are to be blamed for spending $15,000,000 or $20,000,000—for I have no idea it will be anything less—without consulting the people, certainly there is a little force in the argument that the opposition should not propose to spend $20,000,000 without consulting the people. I must admit there is some force in that argument. There is another argument. We have not got $20,000,000 to spend. I notice that there has been a continual reference to $25,000,000. That sum is not mentioned in the resolution of the leader of the opposition, it only mentions enough to build two Dreadnoughts. The original Dreadnought cost not qute $10,000,000. Therefore, $20,000,000 is the amount. We have not $20,000,000. If we pass a resolution to-day to give to Britain $20,000,000, or two Dreadnoughts, we have neither dollars nor Dreadnoughts to give. We will have to go to Great Britain to borrow the money, and if we gave the Dreadnoughts, we would have to go to Britain to get them built. We would be like a child going to his father in the Christmas holidays and saying: I want to get $100 to buy you a new watch, to make you a present. The father to please the child might give the $100, but he would know he was weakening himself financially, for if he kept the $100, he could certainly make a better bargain than the little boy.

Another objection to a money payment is that by it we would be paying for protection instead of fighting for our freedom. Canadians are not such cringing cowards that they are afraid to fight. They are ready to fight for the empire but here we are going to give them a few dollars and say: Let us away. That is the part the coward always plays, he does not want to meet the foe but hires a substitue, he gives a little money. In this connection I may say plainly that no nation that has long depended on hired protection has retained its liberty for any length of time. We have an example of this in the old days. At the close of the Persian war, the Athenians and the minor Greek states met together and arranged to raise a fleet for the protection of their common interests. It was arranged that three small states should have fleets of their own and that the others should pay an annual subsidy to Athens and she was to keep a fleet for their protection. This went on for a short time until after a while, some of the smaller states requested that Athens should account for the money she had received. Pericles told them: Oh this is a tribute, you have no right to ask for an accounting. He had command of the fleet they had paid for and they had to continue in subjection. What was the result? These hitherto invincible Greeks remained subjects and were enslaved for nearly 2,000 years, being mastered by the Macedonians and the Romans and the Turks in succession. But we have another example more easily understood by people in this country. After the Romans left Britain, the people of Britain who had been doing no fighting for about 400 years, were unable to protect themselves against the Picts and Scots. They hired the Germans under Hengist and Horsa who came over to assist them and it runs in my mind that the descendants of the Saxons who came there at that time are there yet, they took possession of the country. We have also an example in our own country. When Champlain came to our country the Algon-

quins, a powerful people, employed him to assist them in their wars against the Iroquois, and we see to-day that Champlain's friends have possession of this country and the once powerful Algonquins are simply subjects of charity, wards of the people of this country.

In the course of this debate the example was brought up that Britain at one time gave a great deal of money to Frederick the First to assist him in his wars. Great Britain gave a great many million dollars to Frederick the First of Prussia. What is the result? That same Hohenzollern family that laid its foundation so solidly and deeply in British gold has to-day grown to such dimensions that it is threatening to take possession of the British throne. The old story of the Saxons repeated, hired assistants trying to take possession of the country that employed and paid them.

Another objection to a money contributon is that it proclaims to the world that Great Britain is financially weakening under the strain of the war—of ship-building which has been put upon her. It is, as it were, making a pauper of her. It is a case of telling Germany that Britain is in difficulties, that her colonies have to give her money, that she cannot continue this warship building which has been put upon her.

Another objection is that we do not keep control of the money which we raised. I know that there are examples of cases in which we have given away money; we gave $50,000 to the French in Paris, we gave money to Italy and to San Francisco in times of disaster, but these are only small sums, no more to Canada than $5 or a $10 gift would be to a town council. When we come to give away millions of dollars, I do not consider that the peoples' representatives have any right to make any such valuable gifts of other peoples' money. It is contrary to the principles of responsible government, because it is a grand principle of the British constitution that those who pay the tax should have a voice in spending it.

Now I am ready to put my proposition before the House. I shall proceed to prove that we can give to Britain during this crisis the use of seven extra Dreadnoughts, and at the same time not spend more than one-third of the money that s called for by either of the other propositions. I must explain that Britain's food supply must be protected. She cannot get it from the Mediterranean, because Austria will have 13 large war vessels in the Adriatic by the time the crisis is expected in 1912 or 1913. She cannot get it from Australia, or India, or New Zealand, or South Africa, because the lines of food supply would be too long, and it would take too many ships to protect them. You could not depend on a foreign nation like the United States. In the United States one man out of every four is either a German or of German origin. There are 20 millions of people in the United States of German origin, out of the 80 millions altogether. Then Britain has other enemies in the United States besides the Germans. I think, therefore, that in time of war Britain could not depend upon the United States even if they did not actually declare war. Now then I come to this point, that Britain will be compelled to get her food supply from Canada. For that purpose it would be necessary for her to put all her spare small vessels and at least four Dreadnoughts on the line of that food supply, because that line would extend from the south of the island of Newfoundland away into the centre of the Atlantic, and it would be difficult to guard. Now Britan must have many small vessels on that line, whether we do anything or not. It is only a matter of business for us, we are as much interested in giving her the food as she is in getting it, and it is only a business transaction that we should do something to protect her food supply while it is being conveyed from Canada to the shores of the motherland. I would propose that Canada lease a certain number of these small vessels from Britain until this crisis is over, lease as may of those vessels as she can get, say each year for $1,500,000. In the meantime we would have a few Canadians trained in our naval college to put on those vessels. Now $1,500,000 would pay the interest on $50,000,000. Britain can borrow money at 3 per cent; if we borrowed it we would have to pay 3½ or 4 per cent. Britain can pay the interest on $50,000,000 and with the money that we will give her, she can pay the interest, and not a single extra dollar of taxes would be put on the British people. With the $50,000,000 Britain can build five Dreadnoughts, and when the crisis would be over Canada could negotiate with the motherland on the grand old British principle of the budget that if we have to pay and to fight we should have a voice in the expenditure of money and in the making of war and the declaration of peace otherwise we will take over $20,000,000 of the debt and two of the Dreadnoughts, one for the Pacific and one for the Atlantic. She can build a Dreadnought in from 20 to 24 months, and she can have these extra five Dreadnoughts in time for the crisis. Not a single extra cent would the British people have to pay, and the people of Canada, with that small amount of money, would accomplish that great work. Now I will show you how we could give her two more Dreadnoughts. The line of food supply from Canada would be a very long one, and a difficult one to guard. I would propose that we should open up the Hudson Bay route, that would shorten the line of

Britain's food supply, and would be so much safer and more easy to guard that she could take off two of the Dreadnoughts which she would otherwise be compelled to have on the long line, and then there would be seven extra Dreadnoughts for the North Sea. I know I am undertaking a difficult job to open the Hudson bay. But as I said in the beginning, I am speaking impartially. I would say to the government that their proposal to build the Hudson Bay railway may do more to aid Britain than both plans the two parties are offering to-day. I know that in proposing to open up the Hudson Bay route, I have to face powerful antagonisms. I know that the Hudson Bay Company succeeded in making us believe for 274 years that we could raise no grain in our whole northwest. A British nobleman some years ago talked about the immense deserts of North America covered with ice; and we know that a French king signed away Canada with the remark that it was only a few acres of snow. I have here a little pamphlet published by the government dealing with this question, which says:

According to Dr. Saunders, the head of the Dominion Government's Experimental Farm system, and an authority second to none, if only one-fourth of the suitable land in Manitoba and the southern parts of the two other prairie provinces were annually under wheat, the yield would be more than 812,000,000 bushels, reckoned at the Manitoban average of 19 bushels per acre. This, he points out, would not only feed a population of 30,000,000 in Canada itself (at present there are only about 7,000,000), but would meet the present requirements of Great Britain three times over.

Now, Sir, there is just as much fallacy current about the navigation of the Hudson bay as there was about our wheat lands. There are certain powerful companies interested in keeping the shores of the Hudson bay as a fur preserve. There is another great obstacle in the way, and that is our transcontinental railways. They are very much opposed to opening up the Hudson Bay route, because it will take away their trade. I know that eastern Canada is opposed to it, but I am a big enough Canadian to give western Canada all her rights. I see no advantage in being so narrow minded. We have now four lines of railway running from Winnipeg to Fort William; we have the Canadian Northern, the Grand Trunk Pacific, and a double line of the Canadian Pacific railway, and these have all they can do. In the Agricultural Committee the other day we were told that only six per cent of the available wheat lands in the west is under cultivation. Now it is only a calculation for a ten year old boy to figure out. If six per cent of the wheat land in the northwest requires four lines of railway to move the product, how many lines will it require when the whole hundred per cent is under cultivation? It will require 64 lines. Then why should we dilly-dally about the opening up of the Hudson bay route?

Now I am going to deal with the climatic conditions of Hudson bay, and first I will read something that I find in 'The Dominion of Canada,' published by the Hon. Sydney Fisher, as part of our immigration literature. Here is what he says about the Hudson bay and about Lake Superior. We have only two ways of getting our food from the wheat fields of the west or our meat from the ranches, either by the Hudson bay route or by the Lake Superior and St. Lawrence route. Now here is what this book says:

The large bodies of water inland greatly modify the severity of the climate. Hudson bay is 1,000 miles long by 600 wide, with an area of 444,000 square miles. Its temperature is 65 degrees F. during summer; in winter it is 3 degrees warmer than the waters of Lake Superior.

This is the point I want to make, that the waters of the Hudson bay in winter are warmer than those of Lake Superior. Why? Because the waters of the Hudson bay are on the level of the ocean, while the waters of Lake Superior are 600 feet above the level of the ocean. Take the mountain of Ben Nevis in Scotland, 4,004 feet high, with sheep grazing at the foot of it and snow all the year around at the top; showing that if we could raise the water of Lake Superior six or seven times as high as it is now, it would be frozen all the year round. But there are other agents. The water of Lake Superior is soft and the water of Hudson bay is salt. I have here a document published by the Marine Department which tells us that:

Immediately after its formation sea ice contains a noticeable quantity of salt, chlorides as well as sulphates, carbonates and other salts. Such ice is very different from fresh-water ice in its physical properties. It melts below zero, and begins to show signs of melting by contraction of volume at temperatures far below zero.

Now then it takes 13 degrees more cold to freeze salt water than fresh water. I have shown that there are three degrees more cold in Lake Superior owing to the elevation, and there are 13 degrees more in favour of Hudson bay on account of the water being soft. Not only that, but the ice of the Hudson bay is more porous, and the ice is more easily smashed. There is another reason. It is a well known law of physics that large bodies cool much slower than small bodies. The Hudson bay, being a thousand miles one way and 600 miles the other, is a very large body of water, while Lake Superior is a smaller body and will cool more rapidly than the water of the

Hudson bay. We have not only to compare the large body of water at Hudson bay with Lake Superior, but we have to compare that with our shallow canals, and with our little shallow lakes that we meet with in the St. Lawrence route. Then there is another reason, which I would commend especially to our friends from the west. The climate of western Canada will improve very rapidly. I will undertake to show that the climate will be so much improved inside the next 50 or 100 years that we will be raising wheat further north than the mouth of the Mackenzie river. I commend that idea to the government. Here is another point. Science tells us that black is the warmest of colours. We can prove that any time during the next month, when the suns rays are getting strong, by taking a piece of black cloth and putting it on the snow and near by it a piece of white cloth. A little further away cover a piece of snow of the same size with a matting of grass or hay. After four or five days you will find that the suns rays have penetrated the black cloth, they have not been reflected, while the heat rays falling upon the white cloth have been reflected, and consequently you will find that the black cloth has sunk into the snow, while the white cloth will not have sunk so far, because it has rejected a certain amount of the solar heat rays. But when you come to the spot that has been covered with hay or grass, what will you find? You will find that the snow has sunk away from it on all sides, because snow and grass are not a conductor of heat. If you wish to keep ice during the summer we will cover it with hay or straw. My good friend from Pincher Creek (Mr. Herron) tells me that he went to that country first thirty years ago, and that at the end of July he dug down into the ground that was covered with hay and grass and found ice two feet from the surface. Now, that black is the warmest colour I have had frequent opportunities to prove in travelling through the country for 33 years.

I would have occasion in the spring of the year, after the sheep were sheared, to go out through the country, during the night time, and as I drove along I would find flocks of sheep lying right on the black road. I would drive over them, and I had the greatest trouble in the world trying to avoid them. I wondered why the sheep lay on the black road, and I thought it was more reasonable that they should lie on the grass at the side, but, these sheep had been sheared, they were cold and they naturally got upon the black road, because the black road absorbed the heat by day and gave it out at night. Therefore, when our western country is all black, when it is all ploughed, it will absorb the heat through the summer day, give it off at night, and you will have no more summer frosts to kill the wheat. All that we have to do is to wait a little. I think I have given a scientific reason why the climate will change. Most men have read Caesar's De Bello Gallico—I read it when a boy—in which he described the climate of Germany, and from which it is evident that they have overcome the disadvantages of climate in the same way there. He talks about the fierce Germans, the rigour of their climate, and the Hyrcinian forest. That forest has been cleared up and drained, and it is now a vineyard, and it is there that the celebrated hock wine is made. The same can be said with regard to the climate of the whole of Europe to-day, the change being so great that it has made a difference of ten degrees of latitude. That means a difference of 695 miles, or, let us say, a difference of 600 miles. That being so, it means that we will be growing wheat as far north as the 73rd parallel of latitude. If you can go 600 miles north, our wheat district will extend to that limit just as soon as the whole country is blackened, or cultivated, and we will be raising wheat on the islands of the Arctic that Captain Bernier is going to look after. There is another reason why the Hudson Bay route will be the better one. It is not only that it is in a better position than Lake Superior, that it is open longer, but it will be benefited by this improvement in the climate much more than Lake Superior will, because that blackened and consequently warmer country will be nearer to Hudson bay. There is another reason why the Hudson Bay route will be preferable. We hear a great deal about drift ice coming down from Fox channel, and we have a great many reports about this drift ice. I had the old principle instilled into me when I was a boy that the whole is greater than its parts. The drift ice coming through Fox channel must come through the Fury and Hecla straits, and it occupies only about one-sixth of the width of Hudson straits. It is impossible that the drift ice coming through Fury and Hecla straits can fill the whole of Hudson strait. All the reports we have about ice in Hudson strait are reports of ice along the south shore of the strait. The floe ice coming down Fox channel will naturally lodge on the southern shore of Hudson strait. At the same time it is quite evident that there cannot be enough ice to fill the whole of Hudson strait, and there must be clear water to the north. Wireless telegraphy, signal stations, &c., would remedy this by giving warning and information to passing ships. I will read to you what some people say of the navigability of Hudson bay and straits. I have a few authorities here. There was a committee appointed by the legislative assembly of Manitoba in 1884 to inquire into this subject. It was composed of Messrs. Harrison, Greenway, Killam, Lea-

cock, Wilson, Davidson, Cyr, the Hon. Mr. Brown and the Hon. Mr. Miller. On page 14 of the report of this committee we find the following:

1. Captain James Hackland has been employed by Hudson Bay Company 39 years. First navigated Hudson bay in 1843, and was in command of Hudson Bay Company's schooner for 16 years from that time.

He says, 'the straits are open all the year round, never freezes; there is no reason why steamships should not navigate the straits at any time. The navigation of Hudson bay is not considered dangerous. There are no shoals, there are few fogs. During that sixteen years, navigation was never impeded by fog.'

Page 16:

2. Walter Dickson was twenty years in the employ of the Hudson Bay Company, from 1853 to 1873. I lived for thirteen years on the coast of Hudson bay, and for seven years in the interior between James bay and Lake Superior. I have had an opportunity of gaining information respecting Hudson straits from my long acquaintance with Esquimaux who reside about the straits, and from my personal observation of the bay itself. I have every reason to believe that the Hudson straits and a great body of the bay proper, are navigable at all seasons of the year and afford no peculiar difficulty to ordinary navigation.

To Manitoba and the Northwest, the route via Hudson bay is very important, giving them a shorter and cheaper route for both export and import than can possibly be had by any other route. I believe that Hudson straits are never frozen over in winter. My reasons are first, that the latitude is not too high; second, that the current and tide are too strong to allow of a general freezing over at any time.

Page 18:

3. That the Esquimaux make use of skin boats for ordinary hunting and travelling purposes in winter, and during a residence of thirteen years amongst them, I never heard of any Esquimaux crossing the straits on the ice. Icebergs, properly so-called, are not formed in Hudson bay and straits, nor can they get there so far as I am aware. The nature of the ice found in Hudson bay is shore ice, generally from 2½ to 3 feet thick, and at many places along the coast is porous at all seasons.

To my knowledge, there have been fewer losses or disasters to shipping in Hudson bay and straits than any known route of travel during the past 250 years. I do not know the rate of insurance, but believe it to be less than the average. I believe the Hudson Bay Company have ceased to insure their vessels, deeming the route so safe as not to call for it. Hudson bay is less subject to storms than the great lakes.

Page 19:

From what I have observed of the movements of ice in the Hudson bay during the summers I passed there, I am perfectly assured that an ordinary iron screw steamer would never have any difficulty in getting through or around that which is usually met with in the bay and straits. The chief reason why the old sailing vessels of the Hudson Bay Company often met with detention in the ice was that at the season when floe ice is met with, there is generally very little wind, and sailing vessels are consequently as helpless amongst the ice as they would be in a dead calm in the centre of the Atlantic or elsewhere. Hudson bay has always been found of easy access to a good and careful navigator.

Page 27:

Dr. Bell obtained from the company's offices in London, a record, which, printed in his report, shows the date of arriving and sailing of their vessels at York Factory for ninety-three years, and at Moose Fort for 147 years. These lists show that in some years, several vessels were sent in charge of British-men-of-war, and there has been almost every year during the past two centuries, ships of various classes and sizes navigating the strait without loss, and it seems almost incredible that such a number of voyages could be made, extending over 274 years without the loss of over one, or as is claimed by some writers, two small sailing vessels.

Page 28:

It is but a comparatively short time since it was claimed that it would be impossible to navigate the St. Lawrence with steamships.

Page 29:

The lower St. Lawrence, notwithstanding its comparative narrowness, is partly open even in the middle of the winter. But the difficulty, as in the case of Hudson bay, in the apparent impossibility of getting into the harbours. Harbours, such as Churchill or York on the Hudson bay, would have the advantage over Quebec or Montreal of connecting directly with the open sea, and hence, in autumn, vessels would not be so liable to be frozen in, as occasionally happens in the St. Lawrence, as for example, in the autumn of 1880, also in the autumn of 1870, when the outward bound shipping got frozen in below Quebec, occasioning a loss, it is said, of over a million dollars.

Page 46:

James Hargrave was at the Factory on Hudson bay from 1867 to 1871 in the employ of the Hudson Bay Company. Have heard the captains of vessels and sailors say that the Hudson straits are navigable all the year round.

Page 47:

President of the Northwest Navigation Company, Winnipeg, says, 'I am interested in the carrying out of the Hudson Bay scheme, and during the time I was in England in January last, I conversed with many persons in Liverpool and London as to the project. I also met in London, some gentlemen from Berlin and conversed with them. The opinion of all with whom I conversed was that the straits and bay were navigable for powerful steamers all the year round.

Page 52:

James Ward left Stromness on the 6th July, 1882, on the Hudson Bay Company's ship, 'Prince of Wales,' Captain Hard, who commanded the vessel, told me that was his forty-sixth trip through the straits. Hudson bay was clear of ice and as smooth as glass. The bay and straits are open all the year round.

Page 53:

I am surprised how people can doubt the navigation of the straits or bay on account of ice. Not one man that has come over the route but believes in its practicability. Mansfield island will be a good place for a lighthouse and station. There is a little lake of good water on that island.

In the annual report of the Department of Railways and Canals at page 22 I find the following reference to the Hudson Bay survey:

It might be mentioned here in passing, the greatly increased difficulty a hostile fleet would have on blockading the Atlantic coast of Canada were the Hudson Bay route opened. The fact that ships may enter and leave Port Nelson all the year round is a fact worth remembering when the possibilities of war are considered.

In a publication by the government called 'Canada's Fertile Northland' I quote from page 117:

Evidence of Robert Bell, M.D., C.M., F.R. G.S., C.E., &c., of the Geological Survey of Canada, given before the Select Committee, March 12, 1907.

Dr. Bell explained that he had been through Hudson strait nine times. The first time was in 1880 in a ship called the 'Ocean Nymph,' a small sailing vessel, and the last time was in 1897 with Commander Wakeham. His trips were distributed over those seventeen years between 1880 and 1897.

All his trips were between June 22 and about October 10.

In navigating the strait during the season between those dates, with a steamship, they never had any difficulty.

Witness never heard that the strait was frozen across in winter.

Dr. Bell said he did not know any more desirable piece of navigation in the world, excepting the middle of the ocean and even then a common sailor who could not take an astronomical observation could sail through the straits with perfect safety. That is what Henry Hudson's men did after putting him and part of the crew into an open boat and leaving them behind.

Now, Sir, I think I have shown that Hudson bay is navigable and that it is open for ten months in the year, instead of being frozen for ten months, as some people allege. We have evidence that wheat can be raised at the 63rd degree of latitude, and do you mean to tell me that a salt water bay located in a latitude without fear of summer frost, is frozen up for ten months in the year.

Mr. CONMEE. And where there is a fairly high tide.

Mr. CHISHOLM. Yes. The Gulf of the St. Lawrence has always been looked upon as somewhat dangerous for navigation, and before its coasts were equipped with wireless telegraphy and its waters charted and modern aids to navigation erected, it was difficult of navigation and the insurance rate on ships was high, and is still high, a thing which has handicapped us in competition with the Erie canal. If we go back we will find that when John and Sebastien Cabot sailed along the north coast of America in 1498 they did not venture into the inhospitable Gulf of the St. Lawrence. We are told that Verazano and Cortéreal also sailed along the Atlantic coast, but there is no proof that either of them entered the gulf. The first man who had the courage to navigate the Gulf of the St. Lawrence, so far as history tells us, was Jacques Cartier, a native of Normandy, and he had in his viens the daring blood of the sea kings. He sailed from St. Malo on the 20th of April, 1534, and we find him in the Baie de Chaleurs in the latter part of July. We do not know the exact date, but we know that the weather was very hot, and so he christened that sheet of water 'Baie de Chaleur' (Hot Bay). Then he went to Gaspé and erected a cross and took possession of the country in the name of his King, Francis the first. The Indians told him there was a great river not far off, the source of which they did not know, and Jacques Cartier sailed for that river and arrived at the Island of Orleans, near Quebec, on the 7th of September, which shows that it was far on in the season before he entered the gulf. There he was met by Donacona. Cartier did not tarry long in these waters on that voyage because he feared being caught in the ice so late in the season. Next year he came back, but he took good care that he would not reach the St. Lawrence even in July, for we find that he landed on the 10th day of August, the feast day of St. Lawrence, after whom he named the bay and the river. Then he sailed along and succeeded in reaching Hochelaga on the 2nd of October. But he made out to get back to the mouth of the river, but was there frozen in all winter, and could not get away. The next indication we have of the sailing conditions in the Gulf of St. Lawrence is in the coming of Champlain. Did he come in January or February or March or April or May or even June? No. He landed on the third of July, and we have recently celebrated the tercentenary of his landing. All this shows that the Gulf of St. Lawrence was looked on as far more dangerous to navigation than Hudson bay. Now, I think I have shown that Hudson bay is open. The next thing is to show how to get out;

because I have still these two Dreadnoughts to put in the North Sea. I am trying to show how to shorten the route for the food supply and in that liberate two Dreadnoughts. Remember, it was the small vessels I proposed to rent, not the Dreadnoughts, which would be required to complete the fleet units on the longer line.

I can go to Mr. Gouin, at Quebec, and say to him: 'I see that not long ago you were in Toronto, where you and Sir James Whitney were talking pretty loyally. We are going to give you a dry-dock at Quebec, and we are going to give you something else. You want that great territory of Ungava; there is in it a great deal of land and also timber, fish, minerals and water-powers. That territory does not belong to you; it belongs just as much to British Columbia, to Nova Scotia and to Ontario as it does to you. But we want to make a bargain with you. We will give you that, but you must do something for us. We want you to build a railway right away from the St. Lawrence river to the Gulf of Ungava. That will develop that country. You do not know what you may find on the road. It may contain great mineral deposits. The Ontario government have built a railway towards James bay, and in the process they discovered Cobalt, the royalties from which will pay for the whole road. You build a railway to Ungava bay; we will give you the land, and you can borrow on the land the necessary money to build the railway.' Then I go to Sir James Whitney and say to him: 'You have been shouting loyalty a bit lately, and we want to give you a chance to do something to prove it. Your railway is now within 129 miles of Moose Factory. You want a portion of the territory of Keewatin. Finish the railway to Moose Factory, and we will give you a portion of that territory.' Then I go to Manitoba, and, as Mr. Roblin is away, I shall probably find there the Hon. Robert Rogers, who we know is pretty loyal, and I will say to him: 'Here is a bargain for you. You want to get a piece of Keewatin; we will give you that, with the land, the minerals, the timber and everything, only you must build a railway from Winnipeg to the mouth of the Nelson river.' Then I go to Premier Scott of Saskatchewan and I say to him: 'You have no lands or timber or minerals; you should have had them long ago; but we will give you all these now if you build a railway from Regina to the extreme north of your province, with a branch to Fort Churchill.' I go with a similar proposal to Premier Rutherford of Alberta. In that way we shall have five railways built to Hudson bay by 1912 or 1913, like so many spokes of a big wheel, and the Dominion government will build a sixth. We need them all. I have shown that the Hudson bay is navigable and how much safer and shorter the Hudson bay route will be for the products of the Northwest, and how quickly we can send the two Dreadnoughts to the North Sea, because we can spare them on the shorter line. My plan is a business plan. We rent Dreadnoughts from Britain in a business way, temporarily, paying for them $1,500,000 a year for four years, by which time the crisis will be over. That will only take $6,000,000 altogether, and it will give Britain seven extra Dreadnoughts in the North Sea. Then look at the strategy of this arrangement. If our Atlantic sea-board were blockaded, Britain would send her fleet to Ungava bay, and convey an army to relieve Quebec. If Toronto were attacked an army could be landed at Moose Factory. If Winnipeg or Regina or Edmonton were attacked, Britain could send an army of relief via Fort Nelson or Fort Churchill. By means of this plan we would develop our country to such an extent that instead of our population increasing by half a million a year, as it has done recently, it would increase by more than a million a year, and in twenty years from now we would have 30,000,000 people in this country; the country would be developed in width as well as in length; the farmers of the west would get ten cents a bushel more for their wheat and $10 a head more for their cattle, while the goods they used at home would be greatly reduced in cost because of reduced freight rates. We have an immense country to build up, and when we have a population of 30,000,000 I shall be in favour of a Canadian-built navy, and one equal to that of Great Britain. I have no doubt that there are men living to-day who will see the time when Canada will have a navy larger than that of the mother country. We shall have one of the greatest inland seas on the face of the earth for the manoeuvres of a military fleet. Look over the whole world and you can find no place equal to Hudson bay for the manoeuvres of a great military fleet, if the country around it were only properly settled and developed. I think I have shown that this is a business proposition and that it violates none of the principles that I have laid down. I think I have shown that by this means where we have to fight we must pay. We do not want to hire any one to go on fighting for us. Our French-Canadian fellow citizens can truly and proudly say that at one time the heroes of Chateauguay saved Canada to the British Crown, and to-day Canada has the opportunity to have it said of her in the future that she saved Britain to the empire.

Mr. F. T. CONGDON (Yukon Territory). Mr. Speaker, I trust that the hon. member for East Huron (Mr. Chisholm) will not

accuse me of any disrespect toward him if I confess myself as at present quite unable to answer him. Besides my inability to follow him in many of his learned disquisitions, I am under the misfortune of not having heard some portions of the hon. gentleman's speech when he turned aside to address gentlemen behind him or lowered his voice. Therefore, if I attempted to answer his speech, I fear that I would make myself ridiculous by confusing banana belts with Hudson bay, hitching posts with Dreadnoughts, or committing similar confusions which might make it appear that I was ridiculing the hon. gentleman's effort. I have no doubt that upon that effort the hon. gentleman has bestowed a great deal of time and learning, and I think it would be impossible for me or any one else, merely from hearing such a speech, to make an appropriate answer to it. One thing stands out perfectly plain and clear from his speech, and that is, that my hon. friend the leader of the opposition has in his ranks another gentleman who has another policy to propound on this naval question. I regret that certain portions of this debate have assumed a tone which I think not quite worthy of this House. Let me begin with my hon. and learned friend from Jacques Cartier (Mr. Monk). I have always listened—as I think most men in this House have—with great respect to any speech made by the hon. gentleman. I know of no man in the House who has more dignity of bearing, a better parliamentary style, more learning, better reasoning faculty and greater eloquence, but I venture to say that the House will share my opinion, when I assert that he descended to a plane not worthy of him when he ventured to characterize hon. gentleman on this side as having entered into the plan proposed by the right hon. the leader of the government, merely because, if they did not, they would be deprived of patronage. Sir, hon. gentlemen on this side are as high-minded and conscientious as is my hon. friend, and are no more influenced in the views they express and the positions they take by the lust of patronage than is the hon. member for Jacques Cartier.

Another passage in the hon. gentleman's speech was, I think, unworthy of him; and for it I believe the hon. gentleman, if he were present, would, on his attention being called to it, express regret that he had so far forgotten himself as to accuse the right hon. the Prime Minister of being a master of circumlocution and deceit. Such language does not raise the tone of the debate in this House. On the contrary, it lowers debate from that lofty plane on which every well wisher of Canada, every one solicitous for Canada's fair fame and reputation, would desire to see it carried on.

I do not think there is much necessity to deal with the amendment proposed by the hon. gentleman. I take it for granted that one or two members in this House may be found to support it, but it embodies a principle so novel in the history of Canada and so much at variance with our theory of responsible government, that practically it implies a change in the principles and methods underlying our constitution. At all events, whether open to this objection or not, it is sure to receive so small a measure of support, that I do not think it deserves very serious consideration.

The most important matter to discuss is the amendment proposed by the leader of the opposition (Mr. Borden). In respect of that, I desire to say that it starts out with a statement which very nearly ventures on the borders of audacity and ends with an inconsistency. It starts out with the assertion that this scheme of the government is not upon the lines laid down by the imperial conference of 1907. True, the policy outlined in this Bill does, to some extent, vary from that proposed in the imperial conference of 1907; but does the hon. gentleman accept the doctrines of that conference as absolutely conclusive or final? Has he run aground upon the conclusions of that conference, and is he not willing to allow even an imperial conference, directed by the admiralty, presided over by the Prime Minister of Great Britain, to advance a step in regard to these matters. Because it is plain, from the correspondence which has been laid on the table that, though in some degree the proposition in the Bill may slightly vary from that originally entertained in the conference of 1907, it does not at all depart from but absolutely carries out the conclusions arrived at by the conference of 1909; and surely, in regard to these matters, we are not bound up by the conclusions of any one imperial conference, but are at liberty to follow from time to time the latest developments and adopt the latest conclusions in that connection.

In the conclusion of his amendment, the hon. gentleman was guilty of the inconsistency so well pointed out by my hon. friend from Red Deer (Mr. Clark). It assumes that, without reference to the people, it is quite proper for this House to vote $25,000,000 to meet the cost of two Dreadnoughts, and send the money over to England to be used there, but that it is improper for us to construct a Canadian navy of our own, out of our own material, by our own men, and man it by our own people, without submitting that proposition to the people of this country. It seems to me inconsistent to say that you shall take so large a sum of the revenues of our people and send it over to the mother country,

and allow it to be spent there without submitting that proposition to the people, but that when you come to consider the proposition of improving our naval capacity and establishing a Canadian navy, you cannot do that without referring it to the people and taking a fresh vote with regard to it.

Another point in the resolution, which requires to be dealt with to some extent is, that it is founded on the idea that an emergency is actually in existence. One would imagine that we were in the midst of a long and arduous military and naval struggle with Germany, that the conflict between the British and the German empires was only now reaching the stage which required us to intervene and collect our resources into the shape of a bill of exchange and send it to Britain to save her from destruction. This matter of panics is not a new one in British history. Shakespeare, in Henry IV., indicates the cause of their origin, when he puts in the mouth of Henry IV. this advice to Prince Hal; 'Therefore, my Harry, be it thy course to busy giddy minds with foreign quarrels, that action thence borne out, may waste the memory of the former days.' In those days, when it was necessary to busy men's minds with foreign quarrels, the advice was addressed to stout-hearted men who believed: 'Come the three corners of the world in arms, and we shall shock them, nought shall make us rue, if England to itself do rest but true.' There was nothing like panic then. But in modern times a degenerate spirit has entered the minds of some men, because when they want to divert attention from domestic to foreign matters, they do not busy giddy minds with foreign quarrels, but busy giddy minds with dread of foreign countries.

If you come down through the years, you find as early as 1847, a change with regard to this, and that all these panics have been at one time or another, initiated by old men who have lost their nerve. Mr. Asquith, the British premier, says they have usually been initiated by old women of both sexes. I would not desire to use that expression, because coming from me, it contains a measure of insolence, but I say that from the first panic of 1847 down to the present time, there is not one of them which has not been instigated by some elderly gentleman who has completly lost his nerve. Get Cobden's history of the three panics, and you will find in each one the same little alarms we hear to-day; in each of them—heated speeches, plans of invasions and senseless talk about silent toasts—all those absurd things raised to-day to induce the British empire to imagine that the Emperor of Germany, without any reason or cause, is building up his power for no other reason than to make an unprovoked attack on the liberties and rights of Britain. There is a class of Englishmen who have inherited nothing but the tendencies of their old Saxon forefathers to dread foreign invasion—who keep peering out over the North sea, imagining that the Danes and Saxons are coming to invade their shores, sack their homes, and put their king to ransom. This endeavour to excite a panic by reason of anything in the relations between Britain and Germany is absurd—just as absurd as were those panics which took place in 1847, 1851, 1854, 1858 and 1859.

These panics exhibit in a most remarkable degree as has been well said by a recent clever essayist how much in the shape of illusion can be accomplished by the resolute lying of a few respectable men. There is no falsehood that has not been urged to prove in former cases that France was contemplating an invasion of England; that later on, Russia was seeking to attack Great Britain, and recently that instead of France or Russia, these old powerful enemies of Great Britain, Germany is taking their place and endeavouring to attack the British empire. In 1847-48 the panic was begun by a pamphlet written by Prince Joinville, a Frenchman. There was nothing alarming in that pamphlet. He pointed out what he considered the inferior position of the French navy, and paid what were considered by many thinking Englishmen, to be extensive compliments to the British navy. But it was seized on by some panic-mongers in England as an indication that the prince was endeavouring, not merely to induce the authorities of France to bring the French navy to a state of efficiency, but that it was intended to build up at once in France a navy that would threaten the integrity of the British empire and attack Great Britain. That brought forth a letter from the Duke of Wellington to John Burgoyne, which the duke afterwards said he never intended to have published, but which was secured by some person and published. That letter contained an expression to which only the venerable age and the great ability of the duke would have given any weight or influence whatever. In it he said that there was a portion of the southern coast of England which at any season of the year, in any state of weather, or any condition of the tide, could be assailed by France, and an army of 50,000 troops landed without difficulty. As was pointed out by Mr. Cobden, no one would have paid the slightest attention to such a remark from an ordinary man because there is no coast of twenty miles in the world in respect to which the statement of the Duke of Wellington could be considered to be true. There is no coast of that extent where in any state of the weather, in any condition of the tide, or at any time of the year it would be possible in the brief space of a few hours to land

so considerable a body of men as 50,000. The campaign relating to that panic went on through 1847 and 1848. It was ended by something similar to what was sought in the recent budget as a cure for the late panic in England; the panic of 1847-48 was largely cured by an addition of five pence to the income tax. Hume pointed out that these panics in olden times were produced by old women, but that this panic and recent panics differed from the former ones in this regard that they are occasioned not by old women, but by too many clubs in London of half-pay officers who desire employment, and have nothing else to do except write letters to the papers pointing out the defenceless character of the empire and the danger of attack from this, that or the other enemy.

It must not be forgotten that Canadians must have regard to their own interests as well as to the immediate interests of Great Britain. It is no disloyalty to say that. By the way, there are some people who imagine that if a gentleman in this House, or in Canada indulges in a criticism which would be taken as a matter of course, a matter of ordinary intellectual interest in Great Britain, if say an Englishman who has come to this country, and is living here where he should be 'in Britain with elbow room and doubly free,' makes use of an expression that would attract no attention or would simply provoke an answering argument in England, the moment he says it in this country, the answer is that he is disloyal and a traitor. I claim as a British subject living in Canada that I am not going to sacrifice one of those rights which the Britisher who remains at home exercises constantly. Mr. Fred. Jane, recently Unionist candidate in Plymouth, has made a most effective reply to the remarkable book of Captain Mahan on 'The Influence of Sea Power'. In his answer he discusses the question of what must be the ultimate destiny of the great dominions of Britain beyond the sea. He argues and argues with great force and strength that the ultimate destiny of these great dominions must of necessity be independence. He invokes in support of that, history and all the thousand reasons that can be urged in favour of it. Does any one in England say that because Mr. Jane argues that the ultimate destiny of the great dominions must be independence, he is a traitor? And yet I find the hon. member for North Toronto (Mr. Foster) and even the hon. and learned member for Marquette (Mr. Roche) citing as disloyal a passage from a speech which I had the honour of making in the House last year on this subject in which I introduced Macaulay's reference to the New Zealander standing on London bridge and viewing the destruction around him. No one would ever accuse Macaulay of being anti-British, and yet, because a Canadian happens to venture on a line of argument like that, not indulging in any overt acts or doing anything to break the connection, but pointing out what may be the ultimate destiny of this country, he is met, not by argument or reasoning, but by the wild flopping of the old flag, and shouts of disloyalty. The time has come in this country when the people are sufficiently advanced to permit, without danger to our relation to the mother country, without the slightest danger to the interests of the empire or of Canada, every citizen of this country to indulge in the freest and most open possible manner, not only thought and intellectual exercises in regard to these matters, but open and free discussion of them.

The next panic that occurred in England was the panic from 1851 to 1854. That panic was raised in very much the same way. It was said that England was going to be invaded and occupied by an army of 50,000 Frenchmen. There was the usual complaint of some French General proposing and laying out the whole scheme for the invasion of England. He denied ever having made such a plan. No one ever produced it, but again and again it was reported that such a plan had been proposed by him. There were all the usual incidents of these panics, 'our special correspondents' at Paris kept writing about the vast increase in the French navy, and the same inquiry was made that has been made in this House repeatedly: What does France want of these ships, if not to attack England? The same cry that we hear to-day except that instead of France it is Germany, what can Germany be building ships for except to attack Great Britain? I want to know if France in those days, if Germany to-day, has not as reasonable and fair a right to build up her naval strength as Great Britain has? You must find and show some reasonable ground for believing that it is directed solely and wholly against Great Britain before you can start any complaint in regard to it. It is the duty of every great people to provide for their own defence. There never will be a time, I trust, when any portion of the British empire will not be ready to engage in the greatest sacrifice in order to protect itself against attack from without. But I say that it is the duty of every loyal subject of the British empire, that it is the duty of every man who is loyal to civilization and the happy progress of the world, not to go around howling and raising prejudices against Germany or any other country.

The hon. member for Marquette (Mr. Roche) read a number of German extracts, from articles for which I do not know how much had been paid by the magazines. One gentleman seemed to say that every na-

tion must have one other nation that it hates and the nation that Germany had especially selected for hatred was the British empire. Does the hon. gentleman want us to cultivate something of that same spirit in order to meet this hatred? Is it necessary that the people of the British empire should take pains to instill in the youthful breast of every British subject hatred of Germany? Is it not better that we should rather be silent on these subjects than incur the danger of creating in this country a hatred of Germany and increasing the corresponding hatred of Germany to us? Is it not better that, if we have any causes of ill-feeling and friction with Germany that we should have such pleasant removal of it as we see to-day, in the conclusion of an agreement by the hon. Minister of Finance (Mr. Fielding) with the hon. the Consul General of Germany and endeavour to remove all possible cause of friction between these two nations.

The remarkable feature of this panic to which I have been referring, from 1851 to 1854, was that, as Cobden said, had a British subject left England on a certain day he would have been in the midst of a panic created by the possibility of a French invasion of Great Britain. Had he gone to New Zealand, and immediately returned to Great Britain, he would have seen two fleets lying side by side in Besika bay, the British and the French fleets. And knowing only what he knew of the relations of the two peoples when he left England he would naturally be solicitous to know what would be the result of an encounter between the British fleet and the French fleet, and he would be overcome with surprise when he learned that these two fleets which he contemplated as only enemies to one another were lying side by side in alliance against the great power of Russia. That panic was concluded by the alliance between France and Germany, the two nations that took part in the invasion of the Crimea. Then came the panic of 1858-59. Notwithstanding the fact that the Emperor of France, Napoleon the Third had always been friendly and was then engaged in Italy in his war against Austria, notwithstanding that apparently all the rest of the world considered that his hands were full with the management of that conflict, the panic started. It was represented in Britain that the French soldiers at Rome were chafing in their eagerness to get across the channel to take part in the sack of London. That panic continued until the Mason and Slidell incident—the Trent affair. On that affair arising Great Britain found it necessary to rush forces to Canada. Great Britain found that she was short of long boots and the French government sent a message across to England offering the British government 1,500 pairs of boots to supply the soldiers who were going to Canada. Further than that, notwithstanding the attacks made upon it by the panic mongers, the French government joined with the other governments of Europe in urging upon the government of the United States that it had made a mistake in this seizure, that it had violated the law of nations, the result of these representations being that the United States government returned the two gentlemen who had been taken off the British vessel by an American man-of-war. That incident was closed in that way. Yesterday the hon. member for Pictou (Mr. Macdonald) went over the history of the later panics, and it seems to me that no one can review the panics of this kind without being persuaded that it is absolutely necessary and essential as a common sense people that we should not allow ourselves to be carried away by panics of this kind, but that we should endeavour as far as possible to assume the part of true statesmen by not creating, increasing and arousing panics but by honestly and sincerely endeavouring to allay them. There is found a passage in a speech, or possibly a pamphlet, of Sir Robert Peel who will be recognized by every one as one of the most cautious and sagacious statesmen that Great Britain produced in the last century. His language ought to appeal very strongly to all Conservatives, because he was undoubtedly one of the great Conservative leaders of the last century, and it seems to me that his language in this regard contains so much truth and common sense as to be worthy of being inculcated in the minds of all sane people. He was speaking of this eagerness for armaments in time of peace instead of reserving the gigantic efforts of the nation for times of war and he said 'We must consent to incur some risk.' He is urging retrenchment and he is pointing out that the nation is not fitting itself best for war if it expends too great a part of its resources on war in time of peace. Sir Spencer Walpole referring to the old Roman maxim si vis pacem, para bellum—in time of peace prepare for war—points out that it is a maxim which has been greatly modified in modern times by the recognition of the fact that money is the sinews of war and that the best preparation for war is by husbanding our resources in time of peace. As Defoe said it is not the longest sword, but the longest purse that wins in the end, and it is wise to be governed in these matters by a certain conservatism and to recognize that if not only Canada, but the whole British empire expended all its resources in endeavouring to secure itself against attack, such an expenditure made by the mother country and by all the great dominions in the endeavour to secure the em-

pire against every possible risk would not probably achieve its object as completely as would be done by merely initiating proper movements of defence and consenting with regard to the rest to incur some risk.

The great trouble about all these discussions is that the very starting of the idea of danger, the mentioning of another nation as possibly coming in conflict with Great Britain, the statement that the British empire may soon be involved in war with Germany, the very consideration of the subject, tends to produce in both nations a spirit that inevitably must help to lead to war. Let me say in regard to this country, that I do not think that any real danger of trouble in the future is likely to come from any of those gentlemen in this House, or throughout the country, who are frequently made the objects of attack as being disloyal and traitorous to the empire, but rather from the ultra-loyal gentlemen, who, not being satisfied with their devotion to the British empire, must exhibit on all possible occasions their hatred and detestation of all other nations. It does not seem to me that the man is extremely loyal, however much he may think he is, who, not satisfied with loving and serving to the utmost his own country, but thinks it necessary to pin-prick and create hostility in the minds of other nations and incur difficulties in the future. I believe, myself, that a moderate course in this regard is the proper course. I do not believe that it is wise for us to continue to the extent even that we do to-day this policy of endeavouring to dominate the world. It is enough for the British government to dominate the British empire, it is enough for the people of Canada to dominate the vast domain which they possess. More than that, is a spirit which is provocative of war. It may lead to the ultimate destruction of civilization if we are not satisfied with controllng our own dominions and treating other people with that same respect and regard with which we wish them to treat us. I heard a gentleman, not long ago, not in this House, but elsewhere, state that our children and, if not our children, our children's children, would see the time when Canada would dominate the whole of this continent. Could anything be more absurd than an idea of that kind? Could a gentleman who expects to see his children, or his children's children dominating this continent, including the great republic to the south of us, which has so much power to-day that it would have no great difficulty in dominating this country if it desired to do so, complain if the Americans say, if this is the spirit which is to dominate civilization, we will be guided by it also, and we will attempt to dominate the American continent? Lord Beaconsfield originated the absurd policy, which he was obliged to withdraw, the policy of claiming for Great Britain ascendancy in the councils of Europe. Why has Great Britain to arrogate to herself ascendancy in the councils of Europe? Does Great Britain expect to have ascendancy in the councils of France, of Germany, and of Russia? Is it not to be expected that Frenchmen, Germans and Russians will resent such a policy, and what would be thought if they attempted themselves to dominate any portion of the British empire? It is not the spirit that should dominate the Canadian people in endeavouring to aid the British empire and her colonies.

Now, I shall come more directly to the question before the House, although I think that the discussion that I have already entered into is incidental to the assertion contained in the amendment of the hon. leader of the opposition (Mr. R. L. Borden), that there is an emergency which requires this aid. I think what I have said is germane to that in showing that there is no more evidence of hostility to-day than there was on every one of those previous occasions, and history shows that every one of these panics was so utterly and inexcusably absurd as to render the old gentlemen who created them absolutely a subject of laughter to those who read the history of that time.

Let us come directly to the question: What is it necessary Canada should do, having due regard to her own self respect, in the way of taking part in the defence of the great empire to which we belong? There are several courses before Canada. I am not speaking now as to the form of the defence, but as to whether she shall continue to rely upon the defence afforded by the vast naval power of Great Britain? If Canada is to continue to do that then no one who has any regard for his self respect could refuse to aid in a reasonable and proper proportion in the defence afforded to Canada by the British navy. One gentleman, in his newspaper, has repeatedly opposed the policy of the government as well as the policy of granting two Dreadnoughts, and he has said that Canada for her defence is amply provided for if she depend upon the Monroe doctrine. Well, I am one of those who believe that there is no reason why the Munroe doctrine—which by the way originated with a great British minister—should not supplement materially in assisting not merely in the defence of Canada, but in the defence of the whole empire. But I do say this, and I think most Canadians will concur in this view, that even if we were safe under the protection of the Munroe doctrine, the self respect of a courageous people, such as undoubtedly the Canadian people are, will not let them accept such defence without contributing their portion of assistance towards what is required to maintain the Munroe doctrine. Therefore,

in my humble judgment, whether we continue to rely upon the protection of the great British fleet—and every one of us in this parliament is anxious and willing to make the greatest possible sacrifices in order that we may so continue whether we so continue, or whether we are to abandon British connection and rely solely and wholly on the Munroe doctrine for our protection, our own public spirit, the pride and self respect of our people will certainly declare that whether protected by the navy of Great Britain or by the navy of the United States we must contribute a fair proportion to the support of the protecting navy. I think it is perfectly evident from my observations made in this House on former occasions, that I am one of those who do not believe in militant imperialism. I believe that, the imperialism that is going round flopping the flag and insulting, and causing quarrels with other nations is the greatest mistake in the world. And, even though some gentlemen who deem it extremely loyal to flaunt the flag, may think that one who objects to that is not loyal, I venture to say that the highest and truest loyalty to the British empire is to be found in the endeavour to keep that empire out of difficulty and trouble. If you regard the condition of the German navy at the present day you will find certain curious things. In the first place you find in Germany a most remarkable growth of naval power. It is only a few years since there was no German navy. I must confess that I sometimes think it is the irony of history that to-day Great Britain is being cursed to a very considerable extent by the dread of a German navy, when I recollect that in 1850, in the days before the German empire was established and when the German confederation existed, there was a difficulty about Heligoland, and when the Germans sent out some of their hired fleet, they were notified by the British government that there was no such flag known on the seas as the German flag, and that any vessel flying that flag would be treated as a pirate. I do not think that any one who has any conscience at all would to-day justify on the part of Great Britain such treatment of the inferior naval power of Germany at that time. At all events Germany has reached a position to-day that no vessel flying the German flag is longer in danger of being treated as a pirate. It is within the memory of most of us living, when Germany scarcely had a sea-port and when the German empire had to buy five square miles from the Dutchy of Oldenburg to get a naval station. We know that the naval stations of Kiel, Wilhelms haven, Emden and Elbing are practically artificial, and that when the present German Emperor came to the throne Germany scarcely had the semblance of anything approaching a navy. The progress made by Germany in creating a navy is surprising to every one who studies the evolution of the nation. The great progress of Germany in the construction of warlike ships has been accompanied by equal progress in the building of merchant vessels, and by the industry, the aptitude, and the intelligence of her people Germany has to-day placed herself in a very considerable position among the nations of the world, as regards both her naval and merchant service. It is a noticeable fact that the decline of ship building in Canada was practically concurrent with the growth of ship building in Germany. It was due undoubtedly to the fact that wooden ships had passed their day, that steel ships were coming into vogue requiring mechanics, artisans, stokers, electricians, all congenial to the scientific bent of the German people. Germany started to build a navy, and Germany has to-day a navy that is certainly remarkable considering the short time spent in its development.

On the motion of Mr. Congdon the debate was adjourned.

Motion agreed to, and House adjourned at six o'clock.

HOUSE OF COMMONS.

THURSDAY, February 17, 1910.

The SPEAKER took the Chair at Three o'clock.

VOLUNTEERS BOUNTIES ACT.

Mr. S. SHARPE:

Is it the intention of the government to so amend the Volunteers Bounties Act to enable the Canadian civil surgeons who served in the war to receive grants? If not, why not?

Hon. FRANK OLIVER. It is not considered advisable to enlarge the scope of the Act.

BEAUHARNOIS CANAL LESSEES.

Mr. MONK:

1. What persons occupying government lands along the Beauharnois canal, now under lease, to the Canadian Light and Power Company, are at present indebted for rent, and for what amount?
2. Has the government given instructions to issue legal proceedings against such persons so indebted for arrears of rent?
3. If so, to what lawyers or firm of lawyers have such instructions been given?
4. What instructions have been given?
5. What persons have been sued?
6. Have instructions been given to sue all or only some? If so, which of the persons so indebted?

Hon. GEORGE GRAHAM:

1. The names of several persons appear as being indebted to the government for arrears of rental for lands along the Beauharnois canal; but as some of the above parties have raised the question, as to the validity of the amounts claimed, it is not considered in the public interest to give the names at present pending a settlement.

2. The Department of Justice are now in negotiations with their agent, Mr. R. A. E. Greenshields, K.C., of Montreal, who is acting in the matter.

3, 4, 5 and 6. Answered by number two.

MR. CALVIN McKENZIE.

Mr. STANFIELD:

1. Was Calvin McKenzie employed on the Intercolonial Railway, in Pictou county, N.S., in October, 1908, and February, 1909?

2. If so, where was he employed, what was his work, and what was his wage per day?

3. Was he at work on the 26th October, 1908, and was he paid the usual wages for that day?

4. Was he at work on the 16th February, 1909, and was he paid the usual wage for that day?

5. If he was not at work on the days mentioned, or either of them, why was he off duty, and why was he paid his usual wages, for such days, if that was the case?

6. Is he still in the railway's employment? If so, what is his work and what are his wages?

Mr. GRAHAM:

1. Yes.

2. At Stellarton, as boiler maker helper at sixteen cents per hour.

3. Yes, at night, received the usual wage of sixteen cents per hour.

4. Yes, at night, received the usual wage of sixteen cents per hour

5. Answered by numbers three and four.

6. Yes, he is still employed as boiler maker helper, working at night, at sixteen cents per hour.

TRENT CANAL FLOODS.

Mr. LENNOX:

1. Have the following persons in the township of Asphodel, namely, John Lynch, John Sayent, Patrick Crowley, G. A. L. Humphries, James Warner, Thomas Davidson, J. J. Breckenridge and Charles Faux, been paid damages for flooded lands occasioned by the dams on the Trent river at the village of Hastings?

2. If so, for what acreage, has each been paid, what sum, and when was payment made?

3. Who acted as valuator for the government?

4. Who acted as solicitor for the government in each case, and what sum was the solicitor paid for his services, in each case?

Mr. GRAHAM:

1. Yes.

2. John Lynch, 8 acres, $40, 14th June, 1909; John Sayent, 60 acres, $600, 17th March, 1909; Patrick Crowley, 32 acres, $320, 16th June, 1909; G. A. L. Humphries, 50 acres, $550, 17th March, 1909; James Warner, 30 acres, $330, 5th March, 1909; Thomas Davidson, 5 acres, $45, 30th April, 1909; Charles Faux, 80 acres, $720, 29th April, 1909; J. Breckenridge, 6 acres, $60, 14th June, 1909.

3. James Dickson.

4. L. F. Clarry. Nothing has yet been paid, but his accounts have been approved by the Department of Justice, and will be paid as soon as the money is available, April 1, 1910.

MR. GEORGE WALTON.

Mr. SCHAFFNER:

1. What amount of money has been paid each year to Geo. Walton, Manitoba, by the Interior Department from January 1, 1906, to December 31, 1909?

2. Has Mr. Geo. Walton received any money since January 1, 1906, from any other department of the government?

Mr. OLIVER:

1. 1906, nil; 1907, $200; 1908, nil; 1909, $1,650.71. In regard to the second part, as it involves more than one department, I would suggest that my hon. friend move for a return.

Mr. SPEAKER. Stand as a notice of motion for a return.

MR. ARTHUR JOHNSON.

Mr. GEORGE TAYLOR:

1. Is the following return correct in the last report of registered vessels: No., 122417; name, 'Reliever;' owner, Manley Chew; post office, Midland; length, 226 feet; horse-power, 80; tonnage registered, 306.

2. Was one Arthur Johnson engineer of said vessel during the season of navigation of 1909?

3. What certificate would be required of the first engineer of said vessel?

4. Did said Arthur Johnson have such a certificate duly issued by the Marine Department?

5. If not, was a permit issued by the department allowing him to act in such capacity?

6. If a permit was granted, under what circumstances was the same granted and at whose request?

7. Has the said Johnson now a certificate from the department entitling him to act as engineer on a vessel of such tonnage?

Hon. W. S. FIELDING:

1. Yes, excepting that the registered tonnage should read, 366. The horse-power by ship's register is 80 but the nominal horse power from actual measurement is 70·5.

2. Yes.

3. Third class certificate.

4, 5 and 6. Yes.

7. Yes.

MR. JOHN E. RUSSELL.

Mr. J. D. REID:

What amount in each year, including the current fiscal year, has been paid to John E. Russell for work done in connection with Toronto harbour and the eastern entrance thereto?

Hon. WM. PUGSLEY:

	$ c.
In 1898-99..	1,585 95
1905-06..	5,856 67
1905-06..	4,299 82
1907-8..	5,785 83
1908-09	3,705 82
1908-09..	2,529 60
1909-10	9,783 81
Total	33,547 50

CANADA PERMANENT FORCE.

Mr. BORDEN:

1. What proportion of men serving in the permanent force of Canada have re-enlisted after the expiration of their term?

2. Is the permanent force at full strength? If not, what is the shortage?

3. If there is a shortage or deficiency, what is the cause of it?

4. What proportion of the permanent force is Canadian born?

5. For what term are men enlisted in the permanent force?

Sir FREDERICK BORDEN:

1. 50 per cent.

2. Yes.

3. Answered by No. 2.

4. Approximately; officers 90 per cent, non-commissioned officers and men 20 per cent.

5. Section 17 of the Militia Act provides that the period of service in time of peace shall be as follows: (a). For the active militia, *three years. (b). For the reserve militia, such period as is prescribed.

*The term active militia includes the permanent force.

SUBSIDIES TO BRUCE MINES AND ALGOMA RAILWAY COMPANY.

Mr. BOYCE:

1. What subsidies have been granted to the Bruce Mines and Algoma Railway Company by the Canadian government?

2. When were these granted and are they still in force?

3. How much of this line has been completed, and how much has been paid in subsidies?

4. Has any application been made recently for renewal of subsidy to this line?

Mr. GRAHAM:

1 and 2.. By Subsidy Act, chap. 7, 1901, item 24, a subsidy was granted for a line of railway from a point on the Algoma branch of the Canadian Pacific railway at or near Bruce Lake station northerly to a point at or near Rock lake, not exceeding nine miles.

Mr. FIELDING.

This subsidy was granted to the above-named company by contract No. 14,360, dated November 5, 1901, and expired May 23, 1905.

By Subsidy Act, 1903, chap. 57, item 38, a subsidy was granted to the above-named company for 21 miles from the end of the line subsidized by chap. 7, of 1901 (no contract was made for this subsidy). This subsidy expired October 24, 1907.

By Subsidy Act, 1904, chap. 34, item 2, a subsidy was granted to the above-named company for:

(a) That portion of its line of railway from Bruce Mines junction south to the town of Bruce Mines on Lake Huron, not exceeding three miles.

(b) The six miles of railway constructed from Gordon Lake station, being the end of its line as subsidized by chap. 7, 1901, north of Rock lake, a distance of six miles.

(c) Twelve miles from Rock lake north, a distance not exceeding twelve miles.

These subsidies were granted in lieu by item 38, section 2, of chap. 57, 1903.

On October 20, 1904—A contract was entered into by the above-named company for the subsidy covered by section 'b' of Act of 1904, being from Gordon lake to Rock lake.

By contract dated January 28, 1905, the company were granted subsidy for the line (a) mentioned in Act of 1904, chap. 34, for the line from Bruce Mines junction to the town of Bruce Mines, a distance of three miles. These subsidies expired August 10, 1908.

3.—

1903—	
January 24. Subsidy on nine miles at $3,200, from a point on the Algoma branch of the Canadian Pacific railway, near Bruce Lake station, to a point near Rock lake..	$28,800
1905—	
January 4. Subsidy on 5·90 miles, Gordon Lake station to Rock lake at $3,200 per mile..	$18,880
March 9. Subsidy on 1·95 miles, from Bruce Mines junction southerly to town of Bruce Mines at $3,200 per mile..	$6,240
	$53,920

4. Yes, an application was received on the 4th April, 1909, from McCarthy, Osler, Hosken & Harcourt, on behalf of the railway company.

ADDITION AND REPAIRS TO KENSINGTON WHARF.

Mr. BOYCE:

1. Upon whose representations did the Department of Public Works act in sending its engineer to make an examination of Kensington wharf for the purpose of ascertaining what additions and repairs were necessary?

2. Upon whose recommendation or representation was the sum of $3,300 placed in the estimates for the addition and repairs to this wharf?

Mr. PUGSLEY. In matters of the kind referred to in these questions, the minister must take the responsibility of his action, and does not usually, I think, feel prepared to state upon whose representations matters have been decided upon. All I can say—all I think proper to say—is that in the matters referred to, the action taken was taken by direction of the minister.

MILITARY PROPERTY AT ST. JOHNS, QUEBEC.

Mr. WORTHINGTON:

1. Is it the intention of the government to dispose of the military property at St. Johns, Que., to the College of De Monoir, or to any other corporation or persons? If so, to whom, and on what conditions?

2. (a) What is the valuation of the land held for military purposes by the government at St. Johns, Que., (b) what is the valuation of the buildings thereon, and (c) what has been the annual cost for the last five years for maintaining the upkeep of these buildings?

Sir FREDERICK BORDEN:

1. No.

2. (a) $31,200.
   (b) $88,218.
   (c) 1904-05 .... $4,869.77
   1905-06 .... 1,761.90
   1906-07 .... 4,007.35
   1907-08 .... 3,057.93
   1908-09 .... 9,194.65

FISHERY INSPECTOR PETER GUNN.

Mr. BRADBURY:

Has Peter Gunn, of Lac Ste. Anne, been appointed a fishery inspector? If so, for what district, and what salary does he receive?

Mr. FIELDING. Yes, for the electoral districts of Edmonton, Victoria and Strathcona. Salary, $1,200 per year; but the department has received his resignation, which has been accepted.

MR. THOMAS COSTELLO.

Mr. WORTHINGTON:

1. Has the government any further information, reports or correspondence that was not brought down in reply to a question on the Order Paper of February 11, 1909, 'Hansard' p. 1176, vol. I., 1909, re woollen industry by John Costello? If so, what is the nature of the correspondence, and when will it be brought down?

2. Has the government any information concerning a report made at the same time for the United States government by United States government agent W. Graham Clark?

Hon. WM. TEMPLEMAN:

1. The government has no further reports or correspondence to be brought down in reply to a question on the order paper of February 11, 1909, 'Hansard' p. 1176, vol. 1, p, 1909.

2. There is in the Department of Customs one copy of a report by W. A. Graham Clark, on 'Manufacture of Woollen Worsted and Shoddy in France and England,' published by the government printing office, Washington, 1909.

MILITARY SCHOOL OF INSTRUCTION AT ST. LAMBERT, QUEBEC.

Mr. WORTHINGTON:

1. What is the nature of the military buildings, the erection of which the government has under consideration at or near St. Lambert, Quebec, and for what purposes are these buildings intended?

2. By what corps or regiments will they be occupied?

3. Has the site for these buildings been purchased? If so, from whom and at what cost?

4. When is it intended to commence the construction of these buildings, and what is the estimated cost?

Sir FREDERICK BORDEN:

1. Barracks for the permanent corps to accommodate a school of instruction for Montreal and vicinity.

2. Answered by No. 1, but the actual details of the units have not yet been settled.

3. No; it is expected that these buildings will be erected on land already vested in the Crown.

4. The surveys and plans have not yet been completed, and, until this has been done, it will not be possible to say when construction will commence, or what the cost will be.

THE NAVAL SERVICE OF CANADA—EXPLANATIONS.

Mr. R. L. BORDEN. Before the orders of the day are called, I would like to ask a question of the Minister of Militia (Sir Frederick Borden) concerning a statement forming part of his recent speech, pages 3415 to 3418, of the unrevised 'Hansard' What I particularly desire to ask is concerning the cost of the 'Rainbow,' which does not seem to be included although the ship is mentioned.

Sir FREDERICK BORDEN. It is not included. I think the cost is about £50,000. I am not sure.

Mr. R. L. BORDEN. I desire to know also what is included under the term 'upkeep?' For example, does it include interest and depreciation?

Sir FREDERICK BORDEN. In the statement I gave, these are not included.

Mr. R. L. BORDEN. What does 'upkeep' include? May we count it as including practically everything else besides interest and depreciation?

Sir FREDERICK BORDEN Yes, everything outside of interest and provision for sinking fund.

QUESTION OF PRIVILEGE.

On the orders of the day being called:

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, I desire to bring before the House a matter of privilege. On the 14th instant, the hon. member for York, New Brunswick (Mr. Crocket) read an extract from the Toronto 'Globe' of a day or two before, as follows:

By reading extracts from some documents and carefully refraining from reading others he sought to convey the impression that money was being taken from the public treasury and spent upon a wharf at Pink Rock owned by a company managed by a political friend of the Minister of Public Works.

Hon. Mr. Pugsley destroyed Mr. Crocket's pretty little piece of political patchwork at one blow by producing an agreement which showed that the wharf had passed from the hands of the company referred to by the member for York into those of the Crown, and that the expenditures complained of were for the improvement of a public work in the public interest.

The hon. member for York is reported as making the charge that the statement in the Toronto 'Globe' was untrue, and stating also that the Minister of Public Works (Mr. Pugsley) knew it was untrue. It is with regard to the latter assertion of the hon. member that I feel it my duty to bring the matter before the House as a matter of privilege. I may say, as the hon. member appealed to me, that I am unable to corroborate in the slightest degree his statement that the report in the 'Globe' was untrue. I think that, if one takes the whole report, one must conclude that the reporter did give a true account of the state of affairs, so far as the Pine Rock wharf is concerned. It is necessary to read the whole report in the 'Globe' in order to form a correct opinion of the truthfulness or otherwise of it. I will read it more fully, including the paragraphs quoted by the hon. member for York, which I have just referred to:

By reading extracts from some documents and carefully refraining from reading others he sought to convey the impression that money was being taken from the public treasury and spent upon a wharf at Pink Rock owned by a company managed by a political friend of the Minister of Public Works.

The impression which I received from the statement of the hon. member for York (Mr. Crocket), and I think it was an impression fairly to be received from his language, was that the Public Works Department were expending money on a private wharf which was owned by the Albert Manufacturing Company. The facts of the case are that nothing of the kind has been occurring. Not one single dollar of public money has been expended upon a private wharf. The wharf which is being constructed is wholly the property of the Crown. My hon. friend from York may not have intended to create that impression, and I trust he did not intend to do so, but that was the fair inference to be derived from his language, and it is the inference which the hon. member for South Lanark (Mr. Haggart) also drew from his language, because that hon. member made the statement that money was being expended on private property. Therefore, I think that the reporter of the 'Globe' was clearly warranted in drawing that inference from the remarks of my hon. friend. Then the article proceeds:

Hon. Mr. Pugsley destroyed Mr. Crocket's pretty little piece of political patchwork at one blow by producing an agreement which showed that the wharf had passed from the hands of the company referred to by the member for York into those of the Crown, and that the expenditures complained of were for the improvement of a public work in the public interest.

I think that the agreement which gives to the Crown the absolute right to collect wharfage tolls, both side wharfage and top wharfage, and which gives to the public the right of way over the property which had been originally constructed by the Albert Manufacturing Company, over that property, to the work which the government was itself constructing beyond the length of the wharf originally built by the Albert Manufacturing Company, entirely justified the reporter of the 'Globe' in stating that the control of the property had passed from the Albert Manufacturing Company into the hands of the Crown, because that is the effect, not only substantially but wholly the effect of the agreement, subject simply to the right of the Albert Manufacturing Company to have its own vessels lie at the wharf free of tolls. Then the reporter further proceeds:

That the expenditures complained of were for the improvement of a public work in the public interest.

That statement was also absolutely correct. Therefore, for these reasons I, as I have said, am entirely unable to agree with the member for York (Mr. Crocket) that the report appearing in the Toronto 'Globe' was in any way inaccurate.

Mr. O. S. CROCKET (York, N.B.). The Minister of Public Works has apparently felt it necessary to do some more explaining, a thing that he has been very frequently called upon to do in this House. He states that he is not able to corroborate the statement of the hon. member for York on Monday last, that the statement in the 'Globe' newspaper was untrue. If

the minister is not able to corroborate that statement, I am able to corroborate and confirm the statement I then made, from a return furnished to me by an officer of the minister's own department. Although the minister started with the statement that he was not able to corroborate the statement I made, he ended by practically confirming the statement, inasmuch as he admitted that the wharf had not been conveyed to the Crown. The statement to which I took exception in the 'Globe' was the statement that this wharf, to which the government is building an extension, had passed from the hands of the company into the hands of the Crown. I said the other day that the statement is untrue. I reaffirm it to-day. And the minister——

Some hon. MEMBERS. Hear, hear

Mr. CROCKET. It is all very well for the Minister of Public Works to talk about this being in the public interest. That is an expression we very frequently hear from the Minister of Public Works. I suppose the many expenditures that have taken place in St. John, and important places in New Brunswick, have been, of course, primarily in the public interest, according to the Minister of Public Works.

Mr. PUGSLEY. All in the public interest.

Mr. CROCKET. But there are very many works in the province of New Brunswick for which the Committee of Supply of this House has voted thousands and thousands of dollars which are not primarily in the public interest, and which have manifestly been for the improvement of private property. The minister says that the wharf which is being constructed is the property of the Crown. The wharf which is being constructed by the vote which passed the Committee of Supply is for an extension of the private property of the Albert Manufacturing Company, of which Mr. Osman is the managing director; and the agreement that has been referred to, which the minister states is practically a conveyance of the property to the Crown, is nothing more or less than a colourable arrangement providing, as I stated the other day, that Mr. Osman, or the Albert Manufacturing Company, would very graciously allow His Majesty to charge wharfage upon all vessels other than their own, or vessels chartered by the company, that might use the wharf. The fact is, and the minister knows it to be true, that there is no other shipping at that wharf except the shipping of the Albert Manufacturing Company, and will not be for some years to come. I have the documents here, and I challenge the Minister of Public Works to contradict a single statement I have made to this House with reference to this subject. The very second document on the return which was furnished to me by an officer of the Department of Public Works states that the wharf is intended for the shipment of gypsum, which is the product of the Albert Manufacturing Company, the only gypsum that can be shipped from that wharf. There is the statement from a return brought down by the officers of his own department. Furthermore, it is not only to the fact that this wharf had not been conveyed to the Crown that I took exception in this case, it is to the fact that the expenditure which has been made and which has been entered in the Auditor General's Report for one year's work on this wharf, was made by Mr. Osman, under his own management and direction, without any supervision or direction from the Department of Public Works, and that the bills which Mr. Osman contracted were simply forwarded to the Department of Public Works, and the whole of that expenditure, amounting to over $2,000, was paid and entered in the report of the Auditor General as if the expenditure had been made by the Department of Public Works under its supervision. That fact is abundantly proved by the return which I have.

In order that the House may understand the matter fully, and may understand particularly that the statement I made the other day was absolutely true, I have here a letter signed by Mr. J. C. Osman, and dated at St. John, New Brunswick, September 7, 1907, from which it appears that although an officer of the department suggested that this wharf should first be transferred to the Crown before any public money was expended on it, Mr. Osman declined to do that, and he suggested this beautiful colourable arrangement which the Minister of Public Works has represented as complying with the requirements of the case. The letter is as follows:

I am in receipt of a letter from your secretary in reference to the extension to the Pink Rock wharf, Westmorland county.

In regard to the suggestion that our company should convey the wharf which we have already built to a length of about 250 feet to the Crown, I do not see how we could properly be asked to do this, and I do not think that it was the intention of parliament that we should do so. The appropriation, as you know, is for the extension of the wharf. We would, however, be willing to give to the Crown, for the use of the public, a free right of way over our property from the highway to the wharf, and will make a good road and keep it in repair, and we will also undertake to give to the Crown, for the use of the public, a right of way over our wharf to the proposed extension, and will undertake to keep our wharf in repair, and for vessels other than ours or those chartered by us coming to the wharf——

And, as I have stated, no other vessels than those of the company, or those char-

tered by the company, do use or will use the wharf.

—we will allow the Crown to collect wharfage, both in respect to such portion of our wharf as the vessels may occupy and the government extension, without ourselves making any charge for its public use, and as an equivalent for vessels chartered by us and our own vessels having the use of the government wharf, we will undertake, at our own expense, to keep the whole wharf in repair.

Now, Mr. Speaker, if it were not for the very firm conviction that I have that the Minister of Public Works would be absolutely incapable of doing such a thing as dictating a letter to himself to be signed by somebody else, I would be disposed to remark that that letter is couched in such smooth and skilful terms as to be almost worthy of the fine Italian hand of the hon. genius who presides over the great spending department of the government. The suggestion comes to me the more readily because of a subsequent letter of September 10, written by Mr. Osman, in which he refers to a very pleasant interview which he had had with the minister at St. John a few days before. This letter is dated September 10, and it was written from Hillsboro. The last was September 7, and written from St. John.

Hon. Wm. Pugsley,
Ottawa, Ont.

Dear Dr. Pugsley,—Referring to the matter of the extension of the wharf at Pink Rock. the details of which we fully discussed during the pleasant interview I had with you in St. John, I now beg to confirm on behalf of the Albert Manufacturing Company and the New Brunswick Gypsum Company the proposition I then made to you.

I think that these letters not only confirm the statement I make, but they show that it was suggested to the minister by an officer of the department that this wharf ought properly to be transferred to the Crown before a public expenditure could be made upon it, and that that was a suggestion which Mr. Osman refused to comply with.

Mr. PUGSLEY. I rise to a point of order. The hon. gentleman (Mr. Crocket) is entirely in error. There was not one single dollar of public money expended upon this wharf.

Mr. CROCKET. I cannot understand the hon. gentleman's statement. He took an appropriation from the Committee of Supply the other day of $10,500, or something of that kind, to complete an extension of the Pink Rock wharf upon which nearly $5,000 had already been expended.

Mr. PUGSLEY. That is a new wharf.

Mr. CROCKET. Is it independent of the old wharf? I would ask the hon. Minister of Public Works if he could name another case in the history of the Public Works Department where a private wharf has been extended by the government for private or public purposes without the department first acquiring the wharf to which the extension was being made?

Mr. PUGSLEY. Yes, my hon. friend will find an identical case upon the western side of the harbour of St. John.

Mr. CROCKET. Who was the owner of the wharf?

Mr. PUGSLEY. The city of St. John.

Mr. CROCKET. It was a public wharf.

Mr. PUGSLEY. So was this.

Mr. CROCKET. If this is the only instance that the Minister of Public Works can give it is one which does not help his case very much. I do not think it necessary to add anything to the statement I have made. The minister started out with the statement that he could not corroborate the statement which I had made, but before he concluded his speech, he himself absolutely corroborated the precise statement which I had made, viz.: that the wharf had not passed from the hands of the company to the Crown as alleged by the 'Globe'.

Mr. PUGSLEY. While the discussion may be somewhat out of order I presume the House will accord me the privilege of replying to the hon. member for York. I first desire to call your attention, Mr. Speaker, to the fact that the hon. member for York has not denied yet the statement——

Mr. R. L. BORDEN. I presume we will have a general discussion on this subject?

Mr. FIELDING. No, I cannot consent to that.

Mr. R. L. BORDEN. Well, if my hon. friend the Minister of Finance cannot consent to that it had better stop now.

Mr. FIELDING. I think the discussion has rather wandered a little.

Mr. R. L. BORDEN. The Minister of Public Works had an opportunity of making a full statement. If the debate is going to continue it will have to be general.

Mr. PUGSLEY. I would appeal to the sense of fairness of hon. gentlemen opposite to allow me to make a brief reply, and for this reason that the hon. member for York did not confine himself to the statement in the Toronto 'Globe', but went on with a general discussion.

Some hon. MEMBERS. Order, order.

Mr. SPEAKER. Order. A question of privilege partakes of the nature of a per-

sonal explanation. The Minister of Public Works having made his statement it was quite fair and within the rules that the hon. member for York should reply. The minister may be permitted to reply to the hon. member on the understanding that no new matter is to be introduced. Solely upon that ground perhaps the minister may be allowed to complete any explanation, but to bring any new matter would be irrelevant.

Mr. PUGSLEY. I will not introduce any new matter. I was calling attention to the fact that the hon. member for York has not denied the statement which was contained in the report of the Toronto 'Globe' that he had sought to lead members of this House to believe that the Department of Public Works had been expending money upon private property. In regard to the agreement of transfer——

Mr. R. L. BORDEN. If the minister will permit me to ask him a question: Is this an extension of a private wharf?

Mr. PUGSLEY. This is a wharf which is built at the end of the wharf which was owned——

Some hon. MEMBERS. Oh, oh.

Mr. PUGSLEY——which was owned by the Albert Manufacturing Company. I stated that in the city of St. John the government is building a wharf which you might call an extension of a wharf owned——

Mr. R. L. BORDEN. I object to the minister going into that unless it is understood that this debate is going to be a general one.

Mr. PUGSLEY. I do not want to make it general.

Mr. SPEAKER. It must be confined strictly to the matter now before the House.

Mr. PUGSLEY. In the case of the city of St. John, the city owned the wharf——

Mr. R. L. BORDEN. I object to going into the question of the wharf in the city of St. John.

Mr. PUGSLEY. I will be brief, Mr. Speaker.

Mr. R. L. BORDEN. Mr. Speaker——

Mr. PUGSLEY. I did not interrupt the hon. member for York, although he wandered far afield, although he did not keep within miles of the question which is really before the House, and I do think I should be allowed a few words of reply. In the case of the building of the wharf beyond the wharf in the city of St. John—

Mr. R. L. BORDEN. I object to introducing new matter.

Mr. PUGSLEY. Well, I will not go into the wharf at St. John.

Mr. R. L. BORDEN. No, I think you will have enough on your hands to deal with this wharf.

Mr. PUGSLEY. All right. The hon. gentleman (Mr. Crocket) has referred to the agreement regarding this wharf and he has called it a colourable agreement. There is nothing whatever in the agreement, or in anything which was before the committee, or is in the possession of my hon. friend, which would justify him in making that statement. That agreement provides that there shall be a free right of way to the whole public over this wharf, a right of way over the road which was constructed by the Albert Manufacturing Company, that the whole public shall have the right to use it, subject to such tolls as the Crown may impose, and that the Crown shall have the absolute right to collect wharfage upon all vessels except those which are coming there for the Albert Manufacturing Company.

Mr. R. L. BORDEN. Because they were the only ones that use it.

Mr. PUGSLEY. If the hon. gentleman (Mr. Borden) had been in the House the other day he would have heard the hon. member for Westmorland (Mr. Emmerson) state that not only are other vessels using the wharf besides those of the Albert Manufacturing Company, but that there are scores of vessels, a large number of vessels using it and that it is of the utmost importance to the traders and fishermen in the vicinity.

Mr. CROCKET. Mr. Speaker——

Some hon. MEMBERS. Order, order.

Mr. CROCKET. I rise to a point of order.

Mr. SPEAKER. I have tried to be as fair as possible to both sides and the minister will understand that no new matter can be brought up.

Mr. PUGSLEY. No.

Mr. CROCKET. My point of order is that the Minister of Public Works attributed a statement to the member for Westmorland, which the member for Westorland did not make. The statement of the member for Westmorland was that there were some fishing vessels using the wharf.

Mr. PUGSLEY. What the member for Westmorland stated was that to his knowledge there were a large number of vessels besides these belonging to the company which were utilizing this wharf, and it was a wharf in the public interest entirely, outside of the Albert Manufucturing Com-

pany's business. Further, it seems to me that the agreement that this company was to maintain its original wharf of 225 feet in length at its own expense and give to the Crown all these privileges over it; was an agreement made in the public interest, and I repeat that it absolutely justified the reporter of the 'Globe' in making the statement which he did.

Mr. SPROULE. Might I ask the minister this one question—in that letter from Mr. Osman he says: We will not only allow you to charge for vessels over the old wharf, but the extension which we now propose to make. Does not that imply that the Crown cannot own it? He says: We will allow you the privilege of doing so for both the old wharf and the new; as though it was their own wharf.

Mr. PUGSLEY. I think the hon. gentleman is mistaken as to the language of the letter, but I will say to him that there is no question whatever, and nobody has ever raised a question outside of my hon. friend from Grey (Mr. Sproule) as to the ownership of the soil right in the wharf which the Crown has built. That belongs absolutely to the Crown. It is built upon Crown property and it is the sole property of the Crown. Now, just one other word and then I am done. The hon. member for York (Mr. Crocket) with that sense of fairness, or rather what he would I suppose assume to be fairness, which characterizes him, suggests that this letter which the manager of the Albert Manufacturing Company wrote to me, with regard to giving these privileges upon the wharf originally built by the company, was probably written by myself. I need not answer that suggestion further than to say that those who know Mr. Osman will know that he is just as capable of putting a fair business proposition in a letter as I would be, and a good deal more able to do it than I would be. I can simply say that I never heard of the letter and never saw the letter until it was submitted to me by my officials in the department here at Ottawa. That is the answer which I make to that, and I think that my hon. friend really had begin to devote his attention to somewhat larger subjects; begin to deal with people a little more fairly, and if he does he will not only do more public good, but he will really do himself very much more good than by pursuing the small tactics which he is pursuing.

THE NAVAL SERVICE OF CANADA.

The House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the second reading of Bill (No. 95), an Act respecting the Naval Service of Canada, the proposed amendment of Mr. Borden thereto, and the amendment to the amendment of Mr. Monk.

Mr. F. T. CONGDON (Yukon Territory). —resuming—Mr. Speaker, this debate has already continued so long that it seems almost necessary that one should offer some apology for venturing to address the House further. I do not suppose that it is possible for either myself or any of the gentlemen who will follow me, to add much interest or refreshment to the topic now before the House. I do not know but we shall be compelled to take refuge in the excuse of Elihu the son of Barachel, the Buzzite who after having listened for a long and considerable time to the elders speaking; to Eliphaz the Teemanite, Bildad the Shuhite, Zophar the Naamathite and to Job himself, deemed it necessary that he should apologize for speaking and gave his excuse in the words: I will speak that I may be refreshed. Under the circumstances, Sir, those of us who are deeply possessed of sincere opinions on this subject may feel that if we cannot refresh the House we may at all events have some satisfaction in refreshing ourselves when we speak on this matter. I trust that none of us will be open to the accusing inquiry that came in the whirlwind: 'Who is this that darkeneth counsel by words without knowledge.' I endeavoured yesterday to review somewhat briefly the panics which had possessed the British public in former years. I endeavoured to show that these panics were largely instigated and intensified by the action of elderly men, whose lives had in some cases been spent in warfare, but who had lost somewhat of the nerve and vigour of their earlier years. I mentioned the Duke of Wellington, Lord Lyndhurst, Lord Ellenborough, and Sir Charles Napier. These are the men who at that time added greatly to the panics which possessed the public mind. I endeavoured to show further that none of these panics were justified by the event. Some of them arose out of the fact that men who for long years had been engaged in military and naval affairs appeared to have lost a correct sense of the perspective regarding the British empire. They seemed to believe that the greatness of the British empire was founded on her army and her navy, forgetting that the greatness of the empire which promises to endure is founded not upon a navy or an army, but upon the principles of freedom and justice, which have inspired the people of that great empire. At the adjournment of the debate, I was endeavouring to show the great progress which had been made in a very few years in the construction of the German navy. I pointed out the great difficulties which met German statesmen; that practically the nation had no harbours; that the people had no savoir faire in sea-

manship and that for years it seemed an impossibility to establish in Germany either a naval or mercantile marine. But, by indefatigable zeal and by persistence, the German people have to-day a navy which has to be reckoned with in the politics of the nations. I mentioned also that concurrently with the increase of the German navy there practically disappeared the old wooden ship building industry of Canada. There came to the rescue of the Germans in their effort to found a navy the application of steam power to vessels and the utilization of iron and steel in their construction. The natural aptitude for scientific pursuits of the Germans gave them an opportunity to attain a certain mastery in seamanship. It would have been impossible for them to have become potent upon the sea if the old system of navigation had continued, and if conditions had not so changed as to render no longer necessary that expert seamanship which was required on the old sailing vessels. I referred also yesterday, with some satisfaction, to the announcement made by the Minister of Finance of the abolition of the surtax. I forgot to mention in connection with the panics of former days that they differed from the present day panic in that they were not to the same extent fostered by the yellow press. I think any one who has read the despatches containing the announcement of certain newspapers in England with respect to results which will follow from the removal of the surtax, cannot doubt that the yellow press is to-day a potent influence in fomenting these panics.

It almost leads to the suspicion that they do so for no other purpose than to increase the sales of their miserable papers. The grounds given by the syndicate of papers in England for their opposition to the removal of the surtax on German goods are in line with the remark made by Monck in 1666 when Great Britain was engaged in war with the Dutch. 'The justification of the war,' he said, 'is not this reason or that; but what we want is a greater share of the Dutch trade.' It would seem as if the gentlemen managing these papers in England care nothing at all about the fiscal relations between Germany and Canada, care nothing for the removal of those causes of friction between the two nations which have existed in the past and which to some extent continue to exist to-day. All they care for is a greater share of the trade of Germany. Let me compare the language used by these papers with the language used by gentlemen in this country to show that the surtax was removed, not in consequence of any result of the British elections, but solely in the best interests of Canadian trade. This fact is expressed in a Toronto paper by a gentleman whose opinions, I have no doubt, will be listened to with great respect by hon. gentlemen on both sides of the House—Mr. W. R. Brock, of Toronto, a gentleman well known not only in that city, but throughout Canada generally, and of course also well known to hon. members of this House, of which he was at one time a member. That gentleman is reported in the Toronto 'Daily Star' as having said of the removal of the German surtax:

> It is better than ten Dreadnoughts, and to my mind it affords an excellent opportunity for this country to look into the very great expenditure on ships of war which they are about to undertake. They are always talking about a war with Germany, but it's not war that Germany is after, it is business. The fact that they have made very great concession shows that they are primarily a trading people. Broadly speaking—I like to speak broadly on such matters—it is of much greater importance to Canada to have the good opinion of Germany and the United States than to have a great expense like this navy will be. Peace and commercial intercourse are heralded by this treaty, not war.

And if you go to the root of this matter I believe you will find that it is to no great imperial reason, no idea of conquest on the part of Germany, that the difficulties between Great Britain and Germany are due, but that they are due solely to the endeavour of each nation to secure the greatest portion of the commerce of the world.

My object in calling attention to the growth of the navy in Germany was to point out, as I have endeavoured to do, that the difficulty which Germany was obliged to meet was similar to the difficulty which we had to meet in this country when our wooden ships began to be superseded on the sea by iron ships, and when we had the misfortune not to have developed our resources, nor to have accumulated capital sufficiently to enable us to turn readily from the construction of wooden ships, which required less capital and for the construction of which we had ample material, to the construction of iron and steel ships. That is not the case to-day. In the eastern part of Canada, in the province of Nova Scotia particularly, in consequence of the policy adopted by a former government of the province, of which my hon. friend the Minister of Finance was then the premier, the coal trade of the province assumed important proportions and increased to a very great extent. It has since become a most important industry in that province. As the result of the adoption of that policy, we have in Nova Scotia, not only the coal, but the iron and steel and all other essentials for the construction of ships. The same thing, or nearly the same, is true of the Pacific coast of Canada. So that for the construction of iron and steel ships we are in as good, nay, a better position in Canada than

Germany was at the time of the first serious decadence of wooden ships, for securing a fair share of the trade of the world.

We in Canada are now in a position, if we so desire, to go into the construction of ships, whether for mercantile or military purposes. To my mind, the real question involved in this discussion may be subdivided into two questions: which is better for Canada, and which is better for the empire? Is it better for Canada that we should adopt the provisions contained in the Bill before the House, and endeavour to initiate and build up in this country a ship building industry; or is it better for Canada that we should take the money of the taxpayers of this country and send it to England in order that all the skill and genius in naval matters should be confined to the inhabitants of the little island across the Atlantic? I venture to say that there can be no question as to which is better in the interest of Canada. And in considering these matters we have a right—possibly a first right, certainly a co-ordinate right—to consider what is in the interest of Canada concurrently with what is in the interest of the empire. To my mind, the only redeeming feature in the initiation of a naval policy is the fact that not only will it secure in this country the ability to construct vessels of war, which can serve as a defence for Canada and as an aid in the defence of the empire, but it will also at the same time, and in the same shipyards, develop an ability in this country to construct merchant ships which can engage in the carrying trade of the world. If we pass money over to England, there can certainly be no such result as that. For my part, I can see no more justification at the present moment for taking twenty or twenty-five millions of money belonging to the Canadian people and sending it to England, and saying to Great Britain, build Dreadnoughts and do what you like with these, we do not want or expect any of it back, than there would be in sending to Great Britain a delegation from the government of Canada to say, we want you to give us twenty-five millions to build ships for the defence of the empire in Canada. This will make you and us more secure than we are at present. Such a proposition would be regarded in England as utterly absurd; but it does not seem to me more absurd than the proposition to send our money to the other side of the Atlantic.

Look at the imperial position of affairs to-day. What do we find? Great Britain never occupied a position of greater naval superiority than she does to-day. All the authorities agree in that. If you read the last annual report of the British Navy League, you will find the statement there made, that during the last year Great Britain has occupied a position of greater superiority in naval matters than she has ever occupied before. If you compare the list of British men of war of various kinds, from battleships down to submarines, with those of Germany or of any of the other European nations, you will find that that is absolutely true. From the calculations made by the very highest authorities on the subject, it is stated that if Great Britain absolutely ceased the further construction of battleships until 1919, and Germany carried out the programme of naval construction upon which she has entered, at the end of that period, the navy of Great Britain would still be superior to that of Germany.

If you look at the reports, you will find that in spite of this progress of Germany in shipbuilding, the Clyde alone produces more battle and merchant marine than the whole of Germany. And to tell us that in spite of the fact that Great Britain has nearly three battleships and armed cruisers to one of Germany, and that in the matter of tonnage and seamen engaged, she has in the proportion of almost three to one—to tell us that in spite of these facts, this is a period of emergency, that Britain is in danger from the Germans, is enough to make us despise the men who utter such sentiments. We are told that Germany can throw an army into England of 200,000 men and conquer it. Well, if the invasion by 200,000 Germans or 200,000 of any nation, can conquer England, it is about time that England was conquered and some new blood infused into her veins. England cannot be conquered in that way. The idea that she must keep standing armies and be constantly preparing for war, as though Germany and other nations had nothing to occupy them except the idea of conquering Great Britain, is absurd. Britain is not to be conquered in that way. Germany has enough to do to attend to Russia, on the one side, and Austro-Hungary and France, on the other; and it is quite sufficient for her to see that she is safe against the attacks of any of these, without making a new enemy in Great Britain. As it seems to me, the position is this. Great Britain is absolutely safe against Germany. No doubt Germany alone cannot venture to attack Great Britain, nor is she thinking of attacking her. The great thing to do is to establish a circle of protection for the commerce belonging to Great Britain and her various colonies. It is pointed out in Haslem's work 'The Admiralty of the Atlantic or the Navy League'—but each is equally strongly imperialistic, and whatever they say against any idea of contributing largely to the British navy may be taken as stronger than anything they can say in favour of it—that the only danger to Great Britain from any European combination, is the danger of having to distribute her home forces in order to protect her lines

of commerce. But if we contribute a powerful assistance and leave the navy of Great Britain in the North sea, where it can readily protect the empire against any European enemy, we will be contributing all that is desirable and can be required from us for the defence of the empire at present. The best authorities I can find on the subject indicate that the great danger to the British empire is not immediate. The danger is that Germany may secure preponderance over Britain in naval matters by becoming able in her shipyards to produce ships faster than Britain can. The danger is that in the race for superiority, by reason, as she thinks, of her workmen and iron and steel and other matters of that kind, Germany may be enabled to outclass Great Britain, and in a given time turn out a greater number of ships. For shipyards are the roots of the navy. Without them you can have no navy. By the policy of the government, we shall not be contributing to the defence of the empire merely for the day. The great objection to the policy of my hon. friend the leader of the opposition is that it is a make-shift policy and contains no provision for the future. Whereas the policy of the government is one which decides the way in which, for all time, we can contribute to the defence of the empire. We certainly would be contributing immensely to the strength of the British navy if we were able, within five or ten years, to point to three or more naval yards in the Dominion, where we would have material superior in quantity and equal in quality to any in Germany, and have that material ready at a moment's notice to be utilized in building ships of any character we might require. It seems to me absurd to imagine that the whole genius and skill of the British empire are to be centred in those little islands, and that no encouragement or outlet is to be given to the genius and ability of the people of the rest of the empire. They are not to be permitted to qualify themselves at all; they are not to be permitted to utilize their own resources in the defence of the empire. No, the only people, apparently according to the leader of the opposition—if one properly reads the implication of his resolution— the only people who have the skill and ingenuity to build ships are to be found in the British islands, and those descendants of Britain who have crossed to this side, and our other people, have lost all genius and skill in that regard. Well, Mr. Speaker, that is not my opinion. I believe that the best interests of the empire will be served, not by contributing to the building of ships in the British islands and the development of the skill and genius to be found there, but by enlisting the abilities and skill and genius to be found in all portions of the empire, and utilizing them in the constructing of a great system.

Sir WILFRID LAURIER. Hear, hear.

Mr. CONGDON. This may appear inconsistent with the views I expressed on a former occasion, when my hon. friend from Yale and Cariboo (Mr. Burrell) quoted the language of Cobden. I do not think that my hon. friend read any portion of the context, but simply took his quotation from the annual of the naval league to the effect that Cobden was ready to contribute £100,000,000 to the defence of Great Britain if he thought she was to be made the object of attack. In that regard I agree with Cobden. I agree with the whole school of England peace lovers who are willing to go to any sacrifice to guard their country against contemplated attack and secure its defence. But they do not see in every move of every nation a design and determined attempt to undermine the liberties of the British people.

There is one feature of this that I think is not worthy of attention. I believe there are promising signs that the time will soon come when there will be something approaching international peace. We have to-day an exhibition in the nations of the earth of something that did not exist in former times, and it is the glory and the boast of democracy that more than any other form of government it has contributed to the development of what may be called a national conscience. If you study the history of the world you will find that under absolute monarchy or aristocratic oligarchies, there was nothing approaching the semblance of a conscience. You have to come down to modern times when the great heart of the people is engaged in the government of the country, before you can find anything approaching a national conscience. In our own time, and within a few years, we have seen an exhibition of national conscience utterly inconceivable to warriors and statesmen of olden times. We have seen the United States, in its impulse for freedom, taking part in a war to liberate Cuba, and then, after it had succeeded and could have made Cuba a part of the American republic, restore Cuba to its own people and refuse to aggrandize the United States by adding Cuba to its own territory. That shows something approaching national conscience in the United States. We have seen something of the same in the case of Great Britain. We are proud to boast that the magnanimity displayed by the United States in regard to Cuba has been paralleled by that which Great Britain has shown in her treatment of her conquered subjects in South Africa. She has exhibited towards them none of the suspicion which some hon. gentlemen

thought she was bound to display. On the contrary, she has trusted them, and the only way you can secure the allegiance and confidence and loyalty of a people is by that mode which Great Britain adopted in the case of the Boers. And to-day, as the result of that generous treatment, you will find among those men in South Africa, who only a little while ago were fighting British troops and our own sons among those troops, as loyal and devoted sons of the British empire as can be found in any portion of the empire.

The most serious objection which my hon. friend the leader of the opposition has offered to the policy of the government is to that clause which leaves to the determination of the Governor in Council when the naval forces of Canada shall take part in any war of Great Britain. One would imagine that it was an unheard-of thing for Great Britain to be engaged in a war without Canadians being in danger of having their houses burned about their heads by the enemies of Great Britain. Why, if I am not mistaken, Great Britain is at war at the present time, yet most of us know nothing about it except as we gather a few stray facts from some obscure paragraph in the newspapers. Great Britain has been engaged in scores of wars in which Canadians took no part and no interest. And, in future, Britain may be engaged in similar wars. But, of one thing we may be sure, and that is that when war becomes a serious strain upon Great Britain, a danger to the empire, there will be no lack of the loyalty which will lead to the declaration that the military and naval forces of Canada shall take part in that war. It seems to me that the suggestion that there may ever be any difficulty about that matter is a reflection upon the loyalty of Canada. My hon. friend (Mr. R. L. Borden) seems to doubt himself, his party and perhaps the rest of us. He seems to think that we should bind ourselves now for fear that our loyalty may not be sufficient to cause us to do our duty later. But when a war breaks out he can trust Canadians, for I believe the people of Canada are so loyal that no government would desire or dare to withhold the forces of Canada from the assistance of the mother country when that assistance was required. That is all that is necessary.

Some hon. members of this House seem to entertain the idea that it is a sort of treason for us to question any utterance of the British admiralty. But in England they do not so regard the matter. I notice that my Lord Charles Beresford, who thought it necessary to get into parliament in some way or other, does not reserve himself in his criticisms of the admiralty. He says that the whole thing is guided by espionage, favouritism and other disgusting things. But, according to some hon. members, we in this country should be so loyal that we cannot be allowed to question any decision of the admiralty, but, when it has told us what it wants we must yield without a word. For my part, I would sooner be guided by the declarations of the leader of this government in anything regarding the relation of Great Britain and her overseas dominions than I would be by the Lords of the Admiralty, or even by the Prime Minister of Great Britain. We have in this country trained statesmen equal to any imperial statesmen of the time. The necessities of our situation, the fact that we have two races in this country, have made it a necessity that our leader should have a power, a diplomacy, a courage equal to those of any statesman. It is much easier to manage Englishmen and Scotchmen together than it is to manage Englishmen and Frenchmen together; and the fact that we have raised up statesmen who have governed the country agreeably to the wishes of their French Canadian constituents as well as to their British constituents, shows that we have developed a statesmanship in that regard which is unsurpassed in the history of the world. The checks and limitations which the leader of the government has placed upon the military forces of Canada, exactly similar to those which have been placed upon the military forces of this country are required by the whole situation not only of Canada but by the British empire. My hon. friend would carry his argument a little further, and, because we have to-day one of the greatest and best kings ever known in the history of the world, would think it insulting to continue in his case the limitations imposed by constitutional monarchy. But I do not think much support will be given to that idea. It is true that we have a great king, a king whom we can trust, in admiration and support of whom we would go to any length. But we think it a wiser principle to confine the operation of every branch of our government to its legitimate sphere and not to allow it to transgress its due limitations. And, notwithstanding our loyalty to our sovereign, notwithstanding the great love in which we have held that sovereign, no one would think of removing one of the limitations upon his absolute monarchy. And the same with regard to the imperial parliament. It is true, we have confidence in imperial management, but we have so much confidence in their management that we prefer to leave it to its own proper sphere and to retain for ourselves control of that sphere which properly belongs to us. It is absurd, in my humble judgment, to ask our people to adopt a policy which will take from the responsible governors of this country the control of any large por-

tion of our public revenue and hand it over to the imperial government. And it seems to me that the dangers that would be involved in such a confusion of authority afford the best reason for not venturing upon so unusual an experiment.

I think that the Bill introduced by the leader of the government best expresses what is in the interests of the people of Canada and of the empire. I do trust and hope that circumstances in international affairs may take such a line that it will not be necessary that we should construct any considerable number of ships. But one thing is certain—that, while we will not join in any imperial policy of aggression, while we will not back up any policy which seeks to infringe upon the rights of other nations of the earth, we in Canada will always be ready to yield up every ounce of our influence and every bit of our resources for the maintenance of the great empire to which we belong. We should be lacking in the self-respect which must be the attribute of a great and free people if we were not ready to sacrifice ourselves in order to defend our institutions.

I was struck with a statement in the work of Jane on 'Heresies of Sea Power,' to which I before referred in discussing this matter. There are some gentlemen possessed with the idea—and they hold it as though it were a political axiom—that sea power has always dominated the world, and that the nation that has the sea power is bound to be the dominating nation. Jane points out that if you follow the course of history you learn that this idea is absolutely unfounded; there are as many cases in the history of the world in which the nation having no knowledge of sea power, no possession of sea power, has conquered as there are instances in which the nation possessed of that power has conquered. If you go back to the old struggle between the Athenians and the Spartans, you find that the Athenians were the finest seamen, while the Spartans knew nothing of seamanship; yet the Spartans had the fighting qualities and they won out. Then when we come down to the wars between Carthage and Rome we find that, though Carthage had inherited the great sea skill of the Phoenicians, and, at the time when the wars opened actually commanded the sea, and though the Romans did not even know how to build a ship until some unfortunate Carthaginian ran ashore and furnished them with a model, yet the result of the Punic wars was the complete conquest of Carthage by Rome.

Mr. R. L. BORDEN. That did not take place until the Romans had become dominant on the sea.

Mr. CONGDON. I do not understand—

Mr. R. L. BORDEN. Rome first acquired the dominion of the sea, and it was for that reason that Hannibal had to march through Spain and over the Alps.

Mr. CONGDON. But does my hon. friend (Mr. R. L. Borden) mean to say that the Carthaginians had not command of the sea for the first, the second—

Mr. HUGHES. They lost command of the sea in the first Punic war.

Mr. CONGDON. I confess, I cannot understand the interruption. The assertion with which I started was that the nation that had the great sea power met the nation that had no sea power and was ultimately defeated and conquered. My hon. friend points out, in objection, that the nation that had the sea power at first afterwards lost that sea power. It lost it because the nation with which it came into conflict was the greater nation, with the greater courage.

Mr. R. L. BORDEN. I did not wish to interrupt the hon. gentleman (Mr. Congdon), but, on the other hand, I do not wish him to misunderstand me. What I said was that Rome did not conquer Carthage until she had acquired dominion of the sea.

Mr. CONGDON. That is quite immaterial to my argument. Of course, I do not object to the interruption, but it is quite immaterial to me to fix the exact time when the sea-power passed from Carthage to Rome. It is undoubtedly the fact that, in the commencement, all the sea-power was with Carthage while Rome had none. I am coming simply to this, that it is not the possession of ships or any of these things that determines ultimately the conquering powers of a race, fitness to win is the determining factor. As Mr. Jane says: It is not ships or the ability to handle them, it is not great commanders or ready obedience, but the sum of the sentiment of every individual combatant. What I urge is that if in Canada we conduct ourselves in such a way as to build up a free democracy, a democracy that does not need a large standing army in order to stimulate a martial spirit, that does not need any of these adventitious aids to martial spirit, we shall be able to protect ourselves, come what may in our future. I believe we should possess the spirit pictured by Caesar as possessed by one of his lieutenants. He tells in the story of the great and terrible revolt of the Gauls, how one of his lieutenants, in dire distress, had surrendered and was butchered with all his followers. Labienus was in equal straits, but, says Caesar, in splendid praise of his bitter enemy of later years: In these difficulties he took counsel from the valour of his mind. Difficulties and dangers may assail the Canadian people, but if we see that we build up in this country a vigor-

ous, a stout-hearted, a moral and a righteous people, we shall always be prepared to defend ourselves. It is this fitness to win that is the determining factor. You may get all the ships you want and all the guns, but you must have the men behind them to accomplish much.

Sir James MacIntosh has pointed out the change that has taken place in conditions of this kind since men emerged from a state of savagery and a state of despotism into the free institutions of to-day. He points out that in a despotic country it is necessary to have an army as a seminary of martial spirit, in order to prevent the despot sinking into languor and laziness; in order to stir up the best impulses and faculties of the savage, it is essential that he should be stimulated at times by the frenzy of war; but in this greatest of free communities, the British empire, we need no such stimulants as that. We have, in the habits and modes of our life, that which readily lends itself to the system and genius of war. We have a free people; the point of honour with our nation is not its army, not its navy, but liberty, and if you preserve this liberty throughout the empire, if you preserve the freedom of the individual and of the component parts of this empire, there will be never lacking, either in Canada or any other of the Dominions of Britain, a spirit that will defend that particular portion and assist to the greatest possible extent in the defence of the whole. The people of Great Britain have never been a people of soldiers, no occasion has arisen on which they have not shown themselves a nation of warriors. I believe the same thing will be true of Canada, that we have to-day in Canada enterprises that require identically the same skill, as much courage and persistence, as are engaged in the task of war. You have the pioneering population engaged in operations as serious and dangerous as any of those ever taken part in by warriors; you have our whole railway system, which requires as much genius in organizing and operating as are required in the organization and operation of a large army. And so, in all the diverse operations and business of civilized life, you find that which stimulates every faculty of the mind, which stimulates all the best qualities in men and prepares them when there is any danger, to defend themselves without having to go through preliminary drills in awkward squads. What we need is the nucleus of military and naval defence. So far as this Bill carries that out, I am heartily in favour of it. So long as it is only the legitimate and just provision for the defence of this country and contains no threat of aggression on any other nation unless we are attacked, I am in favour of it, and I mistake the spirit of my countrymen if they have not sufficient faith in our genius, to undertake the construction of all the instruments necessary for our defence without sending their money to Great Britain or any other country to be expended for that purpose.

I believe that such a policy is in the interests of this country and of the empire and therefore I shall have great pleasure in voting for the original resolution before the House.

Mr. SAMUEL HUGHES (Victoria-Haliburton). Mr. Speaker, I am sure the House has listened with a great deal of interest to the very magnificent essay, partly on philosophy, partly on metaphysics, with a little touch of religion in it some very badly quoted history, a eulogy of the First Minister, a eulogy of the Nova Scotia Steel Works and the natural resources of our country, an apology for every enemy Britain has had and a condemnation of everything that has gone to make up Britain's greatness in days gone by. We have listened to the hon. gentleman along this line yesterday afternoon and to-day, and I am sure he has contributed very little to the matter before the House, the Naval Bill which the government has brought down and the amendment moved by the leader of the opposition (Mr. R. L. Borden). According to this luminary on military and naval matters, the opinions of Lord Roberts, Lord Kitchener, Lord Wolseley, Lord Charles Beresford, Hon. Mr. Asquith, leader of the Liberal government, Mr. Lloyd George, Mr. Balfour, Mr. Haldane, every prominent statesman of to-day—and they are not old men because the Asquith government boasts of being young men—are of no value. These gentlemen are in their dotage, they are old women, to use his own expression, and they know not whereof they speak in warning Britain whereof they know, that Britain is in danger from the sea power as she is from the military power of the German empire. Dreamers are always nice gentlemen to meet but very dangerous men. Robespierre in France was one of the most beautiful types of intellect that could be found in the whole of that magnificent empire. He would weep at seeing any of the minor animals in trouble, a chicken losing its head caused him to shed tears, and yet Robespierre was the man of all others who drenched France in blood when he got the authority. Dreamers are dangerous men, Sir. My good friend has referred in contemptuous terms to the Duke of Wellington, to Lord Beaconsfield, to Charles Napier, and to numbers of other gentlemen whose names I was unable to catch as he uttered them. He has spoken of the English to-day as panic mongers, and has said that these agitations were gotten up in music halls, by half-pay officers, and that there was no falsehood that has not been

urged in creating these panics in Great Britain against Germany. He went further and condemned the journals of the city of London, the leading newspapers of the world, regarded as such in every land, as a yellow press, and he referred in eloquent terms to the removal of the German surtax as an evidence of the friendliness of Germany. We are all, I presume, more or less pleased at the removal of any trade barriers if their removal will benefit this country. But does any one suppose that the removal by this government of the surtax on German goods was not actuated by the action of Germany? When she penalized the Dominion of Canada, Canada, I say, very properly penalized Germany.

Canada, I say, properly penalized Germany; so that this new concession, this surrender on the part of Germany, is not in the interest of the British empire, not in the interest of Canada, but it is in the interest of Germany herself that this surtax has been removed. The hon. gentleman reproved my hon. friend from Jacques Cartier (Mr. Monk) with daring to speak of the leader of the government as a master of circumlocution and deceit. There is an old maxim that in a corrupt government there is no such thing as patriotic feeling. Its place is supplied by private interest, public fame and devotion to a chief. We found from first to last that the hon. member, in speaking upon this subject, beslobbered the leader of the government —adulation, devotion to a chief—and his only argument against the proposition of my hon. friend the leader of the opposition was this: Don't send money to England; keep it in Canada and spend it among the boys. Yet this is the gentlemen who reproves my hon. friend from Jacques Cartier for having spoken in terms that did not meet with his approval regarding the first minister, and in the next moment, in referring directly to the motion and, indirectly to the leader of the opposition, he uses the terms, 'audacity' and 'inconsistency.' There is an old Scotch proverb that would aptly fit the hon. member for the Yukon. I need not quote it because he knows it:

> Oh, waud some power th' giftie gi'e us
> To see oorsels as ithers see us.

I will challenge the pages of 'Hansard' for a number of years past to find more reflections cast upon prominent men in Great Britain than have been cast by the hon. member for Yukon upon the statesmen and soldiers of the old land in his speech of yesterday and to-day. Not content with that the hon. member indulges himself in a little—what shall I say?—I must be careful and not use a harsh term —shall I use the term misrepresentation? His language is as follows:

> It does not at all depart from but absolutely carries out the conclusions arrived at by the conference of 1909.

He was speaking of the Bill introduced by the First Minister. What was the proposal of the British government as set forth at the conference of 1909? I shall not go farther back, as it has been entered into in detail before. Section 5 of the report, at page 21, says:

> In the opinion of the admiralty, a Dominion government desirous of creating a navy should aim at forming a distinct fleet unit; and the smallest unit is one which, while manageable in time of peace, is capable of being used in its component parts in time of war.

Then it goes on to recite what a fleet unit it is, and in section 11 it speaks of a vessel of the Indomitable type as being necessary. Then, referring to the training, it says:

> If the fleet unit maintained by a Dominion is to be treated as integral part of the imperial forces, with a wide range of interchangeability among its component parts with those forces, its general efficiency should be the same, and the facilities for refitting and replenishing His Majesty's ships, whether belonging to a Dominion fleet or to the fleet of the United Kingdom should be the same.
>
> Further, as it is a sine qua non that successful action in time of war depends upon unity of command and direction, the general discipline must be the same throughout the whole imperial service, and without this, it would not be possible to arrange for that mutual co-operation and assistance which would be indispensable in the building up and establishing of a local naval force in close connection with the Royal navy.

In not one solitary point have the wishes of the admiralty, or have the propositions made by the admiralty at the conference of 1909, been carried out by the government in the matter. Our hon. friend enlarged upon the policy of the leader of the opposition in favour of extending $25,000,000 to Great Britain, and our objecting to the construction of this navy in Canada. Why, Sir, where is the evidence that they are constructing their navy in Canada? Not only are they not constructing a navy in Canada, but they are buying British ships and spending money in weakening the imperial fleet in case of war. If they would build ships it would be all right. We have the guarantee of the right hon. the First Minister that these ships are not going to be of assistance to Great Britain in war unless his sweet will dictates that they shall go. Therefore, with Canada buying these ships as she is to-day, suppose Great Britain were engaged in a war in the course of a few weeks, what would be the position of Canada should the leader of the government not see fit to allow these vessels to go? In the first place, Canadian

money would have been spent in Great Britain, and in the second place, the British fleet would have been weakened to the extent of the number of ships she had sold to Canada.

Mr. TALBOT. Why do the English admiralty sell them if they are weakening their own strength?

Mr. HUGHES. I presume they are a lot of old things that they wanted to get rid of. They are unloading on this government a lot of old ships that they want to get rid of.

Mr. TALBOT. They are not weakening their own strength then.

Mr. HUGHES. The hon. gentleman (Mr. Congdon) quoted some gentleman named Jane, and declared in the fulness of his eloquence that it was the right of every citizen to discuss the future of this country. We are not disputing that, but when it comes to a matter of legislating for independence, then it is time that the people of this country sat up and understood what was going on. I trust that I shall be able to show before I am through that in the Bill now before the House there is the most sinister attempt at laying the foundation of the independence of Canada that has ever been presented to the public. Our good friend made various other references, but I will discuss them as I pass on. Now, Sir, what has been the policy from start to finish of this question? A mandate was issued by the conference, in which Canada took part, for the defence of the empire. Last year a resolution was solemnly passed by this House containing a mandate to the government. The absolute unanimity of the House was behind that resolution instructing the government to act. First, there was to be speedy assistance. Does the government's Bill propose speedy assistance? To my mind it proposes no assistance whatever, and certainly there is no pretense that there will be any assistance forthcoming for the next four or five years. That resolution proposed co-operation. Is there any co-operation provided by this resolution? I fail to find it. That resolution gave the government a mandate last year to stand by the unity of the empire. I fail to find in the Bill proposed any provision for standing behind the unity of the empire. Co-operation means operating together for the same end. I find nothing in this Bill providing for the operation of these fleets towards the same end. Co-operation means mutual help. The Bill before the House does not guarantee mutual help. It is a jug-handled policy; we are always to receive the help of Britain when we need it, but Canada will help Britain according to her own sweet will. Co-operation means reciprocal assistance, and under this Bill there is no reciprocal assistance proposed or guaranteed. It means concurrent effort, and under the Bill before the House there is no proposition for concurrent effort

Now, Sir, the First Minister was even more equivocal—I hope that will not be offensive, I do not like to say anything that may offend the First Minister, I know he is in a very difficult position. He has played the game so long—appealing with one cry to certain elements in the province of Quebec, and with a different cry to certain elements in other provinces—he has played the game so long that the old adage is coming true about the chickens coming home to roost. We can all remember when in 1885 he stood on the Champs de Mars in Montreal, and stated that had he been on the banks of the Saskatchewan he would have shouldered his musket to fight the loyal Canadian soldiers who went to the front. In 1895 and 1896 in the province of Quebec, where it was congenial, he stated in regard to the vote of $3,000,000 for the purchase of rifles for our volunteers, and his friends also stated it: Are you going to put the Tupper government in power and have your money sent to Britain to buy rifles to have your sons fight Britain's battles in all parts of the world? I need not refer to other agitations led by the First Minister. In 1896 the song that was sung in Ontario was: Hands off Manitoba. No coercion of Manitoba, and, quoting from Shakespeare he struck that beautiful attitude which he can so well assume and said: No Italian priest shall tithe or toll in these our fair Dominions. Then, the right hon. gentleman went to the province of Quebec and told the people: 'Will you trust Tupper, a Protestant and an Englishman, or me a Frenchman, and Roman Catholic, put me in power and I will give you a stronger remedial Bill than Tupper will.' I need not follow him down to 1905, and show his attitude at that time further than to point out that the chickens are coming home to roost, and in view of his equivocal language in the past I can see the position the First Minister finds himself in. Even though he wished to come up and do his duty to the old empire he has tied himself by his own past actions, so that I can easily make an apology for him which he finds it impossible to make for himself. Had the government brought in a proper Naval Bill, had the government obeyed the mandate of this House last year to give speedy assistance and co-operation so as to maintain the unity of the empire, there is not a single Conservative in this House who would not have endorsed such a proposal. Further, I wish to take my good genial friend the Postmaster General to task. In the speeches of the First Minister, and of the Postmaster General, and of the member for Pictou—I do

not see how the member for the Yukon happened to miss it—they all eulogized the heroes of 1837, and by heroes they mean the cowardly men who went in for misleading the poor innocent habitant in the province of Quebec, and the innocent yeomen in Ontario, and inciting them to commit crimes which led to loss of life and destruction of property. These gentlemen have stood on the public platform, and even in this House in this very debate they have eulogized the rebels of '37 and '38. Why have these gentlemen stood up in this parliament and insidiously endorsed rebellion. The hon. member for Pictou, in his remarks the other day gave a very nice touch to the leader of the government in that regard. He showed how constitutional government had been obtained in the province of Nova Scotia, and, in censuring the member for Jacques Cartier he said:

I have the same rights here as my hon. friend, I come from a race of men——

How proud these gentlemen are of the race whence they sprung.

I come from a race of men who in the little province of Nova Scotia fought the battle of responsible government just as did my hon. friend's compatriots in the province of Quebec.

And now comes the gentle slap at the Postmaster General and the First Minister:

Our people in Nova Scotia won that battle and won it a little earlier and without any particular display, but we won it nevertheless and it is just as dear to us as it can possibly be to the people of any other province in the Dominion.

Then he refers to the 'heroes' in Quebec and the 'heroes' in Ontario. Why, Sir, what does history teach about these 'heroes'? I have the facts here, if any one disputes the statement I make. The truth is they deceived and misled the poor fellows who took up arms, and I say here to-day that no man can name a solitary wrong under which these people lived at that time that could not have been easily redressed by an appeal to constitutional methods. I go further and I say that one solitary wrong cannot be mentioned that these people laboured under at that time which could have justified in the slightest a recourse to arms. What was the conduct of the leaders in Ontario and Quebec? The moment they got the poor, innocent, misguided fellows into trouble, the moment the first shot was fired the leaders skiddaddled.

Mr. C. A. WILSON. Does the hon. member refer to Dr. Chenier?

Mr. HUGHES. Comment?

Mr. C. A. WILSON. Are you referring to Dr. Chenier of St. Eustache as a man who fled from the battle?

Mr. HUGHES. I am referring to Papineau, the leader of the rebellion in Lower Canada, and to Mackenzie, the leader of the rebellion in Upper Canada.

Mr. C. A. WILSON. That will please Mr. Bourassa, the friend of Mr. Monk.

Mr. HUGHES. They were leading Liberals for a great many years, and if the hon. gentleman disputes what I say I can give the reference.

Mr. C. A. WILSON. I will dispute it so far as Dr. Chenier is concerned.

Mr. HUGHES. So far as the leaders all over were concerned, they made quick time and left the poor fellows whom they incited to suffer from the evil effects of the rebellion.

Mr. C. A. WILSON. That is not history.

Mr. E. ROY. The member for L'Islet will answer that.

Mr. HUGHES. These gentlemen opposite endorsed not only the rebellion of 1837-38, but the Northwest rebellions of 1870 and 1885. These gentlemen opposite, in endorsing rebels, are getting the people of this country accustomed to believe, simply because the loyal men of the country do not care to come out and oppose them on every occasion, they are getting the loyal people of the country gradually to believe that there were some wrongs to be redressed in 1837 and 1885.

Mr. PAQUET. Is the hon. member prepared to prove that the people of Quebec were misrepresented as he says?

Mr. HUGHES. Which people?

Mr. PAQUET. The people of Quebec.

Mr. HUGHES. I don't understand you.

Mr. E. ROY. Would you tell us something about the rebellion of Cromwell?

Mr. HUGHES. Cromwell's rebellion was just; the United States rebellion was just; but here in Canada we had two or three rebellions and there was no justification for them at all.

Mr. E. ROY. They won responsible government for us.

Mr. HUGHES I cannot hear the remarks of the hon. gentleman. These gentlemen have whistled that tune so long that they actually believe it. They have endeavoured so long to justify the rebellion of 1885 in the Northwest that they have actually come to believe that it was just.

Mr. LEMIEUX. Do I understand my hon. friend to say that the American rebels were right?

Mr. HUGHES. Yes, sure.

Mr. LEMIEUX. I merely wanted that admission from my hon. friend from Victoria and Haliburton.

Mr. HUGHES. The First Minister and the Postmaster General may expatiate on the justice of the rebellions of 1837 and 1838, and may talk about the rebels as heroes; but I am willing to let their speeches speak for themselves. I again repeat, they will search the pages of history in vain to find one solitary disability under which the people laboured at that time that would justify them in engaging in a rebellion.

Now, Sir, what are the principles at stake in this naval business? One is the question of immediate help. Does this Bill provide it? Not in the slightest. At the earliest, it will be four or five years before this little fleet will be ready, and when it is ready it will be of no use. Secondly, does this Bill uphold the unity of the empire? I maintain that from first to last the unity of the empire is threatened by this Bill. We all deplore war as much as the hon. member for the Yukon does; but, as the Scotchman said, 'Nae man can live at peace wi' his neebur unless his neebur lets him'; and before I am through I will endeavour to show that the German nation is determined that her neighbours will not live at peace if she can prevent it. Under the policy outlined by the First Minister, the wars of the future are to be easy. For instance, if the Yankees fight us, we will fight them, because they are our near neighbours; but he did not think we would be justified in engaging in a war between Great Britain and Russia, which would possibly involve the integrity of the whole empire. One plan of the First Minister is to get up a fleet here and give our boys a chance to get some good jobs in connection with it, and then not go to war at all. Another plan of his, as stated on page 3050 of 'Hansard,' is this: 'If Great Britain got into trouble, a wave of enthusiasm to assist her would sweep over this country and all other British countries.' That wave of enthusiasm would strike terror to the hearts of the Germans. That is one form of strategy proposed by the First Minister. Then, at page 3040, another plan proposed by him was 'all joining in the case of a common danger and from all points of the earth, rushing upon a common enemy.' Another beautiful plan, in time of war, when we have no fleet ready. His third proposition, which is found on page 3047 of 'Hansard,' is this: 'We would strike the enemy before the enemy would strike us.' This is an old rule in warfare, but I do not see what he would have to strike with under this Navy Bill. We require to have something to strike with or something to rush or something to be carried along by this wave of enthusiasm which the right hon. gentleman talks about. The policy of the opposition is to put something now at the disposal of Great Britain to strike with, and to make these gentlemen sit up in case of trouble.

When the hon. member for the Yukon was speaking, I thought of the old prophet Buddha, that apostle of love and peace, who on one occasion was accosted by a tremendous giant, who said to him:

> 'Lo! son of peace,' the giant cried, 'thy fate
> Is sealed at last, and Love shall yield to Hate.'
> The unarmed Buddha, looking with no trace
> Of fear or anger, in the monster's face,
> In pity said, 'poor fiend, even thee I love.'

Then the giant, becoming transformed into the form and fashion of a dove, circling around the head of Buddha, sang:

> 'Hate hath no harm for Love,' so ran the song,
> And peace, unweaponed, conquers every wrong.

I do not see how this escaped my good friend in his comments. The philosopher from the Yukon reminds me of a professor of teaching who heard this story of Buddha, and lectured his students on the proper mode of discipline. He said: 'Of course, punishment must be meted out when a wrong is committed; but when you enter your class, you should always leave your rawhide on your desk and watch the first opportunity. When a boy misbehaves, you should hand over the rawhide to the young delinquent, fold your arms and wait the result. The delinquent will burst into tears, apologize to the teacher, and there will be harmony and peace all round. A number of teachers tried the plan. One morning a pupil committed some depredation and his teacher said to him: 'My little man you have been misbehaving, and punishment must be inflicted, but inasmuch as I prefer to receive it rather than administer it, you take the rod and I will take the punishment; and to his surprise the young lad, unlike the one in his story, picked up the rawhide and belaboured the teacher and chased him out of the schoolroom'. So the fine theory of the hon. member for the Yukon about the people of England staying at home and giving out love stories to the Germans will not work out in actual practice with poor old humanity. Cicero told us long ago that 'war should be waged in order that we may live in peace without suffering wrong'. I am satisfied that Great Britain has had within twelve months provocation to go to war with Germany; but owing to that long suffering spirit which is characteristic of the English nation, she has refrained. William Pitt long ago told the people of England that war with all its evils is better than a peace in which there is nothing but usurpation and wrong; and in case Germany should carry out her intention of going to war with the British empire, no nation would ever have indulged in a more

righteous war than Great Britain would to repel the invader. Douglas Jerrold says:

> We love peace as we abhor pusillanimity, but not peace at any price. There is a peace more destructive of the manhood of living man, than war is destructive of his material body. Chains are worse than bayonets.

In regard to some of the arguments that have been advanced as to our duty to build up our material welfare, Shakespeare is my authority for saying that 'plenty and peace breed cowards'.

Now, Sir, I may be asked, why is this naval question in issue at the present time? The German ambassador to the peace conference at the Hague has published recently a curious book, in which he declares that 'the growth of the peace movement involves a national peril'. According to Baron Von Stengel, human progress has more often been the result of war than of peace. 'Athens and Rome', he writes, in his striking chapter on 'the significance of war for the development of humanity'.

> Not only in spite of, but just because of their many wars, rose to the zenith of civilization. Great states like Germany and Italy are welded into nationalities only through blood and iron. Storm purifies the air and destroys the frail trees, leaving the sturdy oaks standing. War is the test of a nation's political, physical and intellectual worth. The state in which there is much that is rotten may vegetate for a while in peace, but in war its weakness is revealed. Germany's preparations for war have not resulted in economic disaster, but in unexampled economic expansion—unquestionably because of our demonstrated superiority over France. It is better to spend money on battleships and armaments than luxury, motormania and other sensual living.

Germany to-day has upwards of 4,000,000 men that she can turn into the field at an hour's notice. She has undoubtedly the command of the land, and she aspires to the control of the sea. It is a well known fact that for ages she has aspired, and that recently, she has still more aspired, to the control of Holland and Belgium. She wishes, as she showed by her attitude at the time of the South African war, to disrupt the British empire and obtain control of the British colonies. In this connection I do not know that I can do better than quote from an address made by the hon. member for the Yukon last year, to convince this House that that is the object of Germany. In a speech in this House, reported in 'Hansard' of last session, at page 3526, that hon. gentleman said:

> I believe the object in the creation of the German navy is to obtain an outlet of that kind, but I am satisfied that that aim could be best obtained by negotiations with other nations

Where can Germany get the outlet? Can my hon. friend from the Yukon point to any area under the broad canopy of heaven where Germany can get colonies that are not already occupied. Taking him at his word, Germany's aim is to obtain colonies for her trade, and she can obtain these only in one way. They cannot be obtained by peace negotiations. The way Germany negotiates is at the point of the bayonet and the end of the rifle. As Britain holds 25 per cent of the land of the globe and 90 per cent of the colonial territory of the globe, the only way in which Germany can obtain colonies is by taking them from Great Britain. And, we have the spectacle of this great empire, the champion of liberty in every part of the globe, threatened by a nation created by herself the century before the last.

Now, I want to touch upon a point about which this House has heard from me before. At the time of the American colonies Benjamin Franklin and other American statesmen proposed the confederation of the British empire. That proposition was not taken up. In the old days French Canadian gentlemen from the province of Quebec proposed that the colonies should be given representation in the British parliament. Gentlemen from upper Canada many years ago proposed the same thing, and the redoubtable Joseph Howe, in letters and speeches, proposed a federation of the British empire, under which the colonies would have a voice and a vote in the government of the empire and be prepared to take their fair share in its defence. These men were right in assuming that in return for the privileges conferred upon us, we should take our share of the risks and dangers to which the empire may be exposed. I am satisfied that the solution of the problem is easy. A man with the genius of Cromwell or William Pitt or William III. could federate the empire in a year. I believe that if Chamberlain or Milner, or Balfour, or either of the Greys, or Mr. Amery, one of the greatest students of imperial questions, were given the opportunity, any of these men could federate the British empire in six months; and, although I have not the honour of the acquaintance of Mr. Asquith or Mr. Lloyd-George, I believe that either of these gentlemen if he had a heart and soul as broad as his ability, could do the same. The history of colonial and imperial wars proves that colonial assistance which was declared by some of the great men of Canada as monstrous, as contrary to responsible government, as impossible, was supplied in two weeks' time when the emergency arose. So let the statesmen of to-day not hesitate about the confederation of the empire, which would solve every question that might arise in connection

with armies or navies for the defence of the empire.

In connection with this Bill, it might be well for us to consider for a moment what is the condition of the dominions beyond the seas. The First Minister has said that Canada is going to become independent as fruit falls from the tree, and he told us in his Toronto speech that Canada is a suzerainty—in other words that the King is a feudal lord instead of our soverign lord. We are told, not only by the Prime Minister, but by his followers, that we must maintain our autonomy. I wonder how many of them could define the meaning of the word 'autonomy' which is constantly in their mouths. We are told also that we are 'sister nations,' with an emphasis on the word 'nations,' and the other day the right hon. the Prime Minister described us as a 'daughter nation.' Then hon. gentlemen on this side are charged with attacking the principles of responsible government and imperilling the liberty of the subject, and our friends opposite praise rebellion and use up as much nickel and silver as would furnish a mine in Cobalt or Gowganda in polishing off their expressions which, to my mind, are merely the forerunners of a movement for the independence of Canada. But what means allegiance? What is our duty to the empire? To what do we owe allegiance? In days gone by I had the privilege of running foul of a very distinguished English officer in this country, General Hutton.

Mr. LEMIEUX. That was rebellion.

Mr. HUGHES. There are just and unjust rebellions. The rebellion of the American colonies was justifiable. The Quebec Act of 1774 drove that people into rebellion by taking from them what are today the states of Ohio, Indiana, Wisconsin and Michigan, and in 1785 the Americans rebelled. Had I been living at that time, holding my present views, I would have been among them.

Mr. LEMIEUX. Tell that to the United Loyalists.

Mr. HUGHES. I would tell it to any man. There are mitigating circumstances of course.

Mr. LEMIEUX. There are rebels and rebels.

Mr. HUGHES. Certainly, and my desire to uphold the majesty of the British empire is not actuated by any wish to rub elbows with any red tape authority across the water.

Mr. LEMIEUX. What about discipline?

Mr. HUGHES. Does my hon. friend know the meaning of the word? Discipline means polish, education, culture and upbuilding but not repression or tyranny.

Mr. LEMIEUX. The composing room.

Mr. HUGHES. My hon. friend knows more about that than any one on this side. In my regard for the upholding of the empire, I am not actuated by any red tape proclivities, but by what is required to accomplish the object I have in view. On this occasion I had taken the liberty of offering to the imperial authorities the services of a Canadian regiment and I had 23,000 men ready to enlist under me for the South African war. I did observe the proper military or disciplinary course, I did send an application to the general officer commanding, but I also took the course of offering my services to the Minister of Militia. From the latter gentleman I received a courteous answer, but from General Hutton I received a reprimand. Having my doubts as to whether my application through the military channel would go forward—I knew that to General Hutton would not be forwarded—I exercised the right, which I consider belongs to every British citizen in any part of the empire and communicated direct with the home government. I was reprimanded for this direct application. In reply to General Hutton, I used the following language:

That application to the right honourable the Secretary of State was made in order that should the plan be favourably considered in Great Britain steps might be taken by the home authorities—of course with the consent and approval, but outside of the Canadian government—to enroll such a corps here. In the event of failure of action in Canada, through the failure of the general officer commanding to bring the official military application before the Minister of Militia, or through the Canadian government not deeming it advisable to act in the premises, the imperial authorities would be aware that whether or not the general officer commanding or the Canadian government had faith in such plans, yet the imperial authorities would be made aware of the fact that there are tens of thousands of Canadians ready to assist in the up-building of the empire by enrolling for active service abroad.

While a Canadian, I am also a British subject, and should Canada try to cut adrift from Britain, I, as either soldier or citizen——

This was written away back in 1899.

—would not be disloyal in recognizing the home authority rather than the general officer commanding in Canada, or the Minister of Militia——

Although I would almost do anything for the Minister of Militia when he is right.

—or the Secretary of State for Canada. Any citizen of Canada, civilian or militiaman, can

properly volunteer to the imperial authorities direct to enroll a corps. I cannot find that I am debarred, as an officer of the militia, from any privilege which Canadian citizenship confers upon her sons. Any citizen of Canada can enroll himself in the imperial service independently of the general officer commanding or of the Canadian government. In case I, for example, undertook to enroll a corps of Canadians for imperial service, or enrolled myself alone, I could do so, merely resigning my Canadian commission before accepting the imperial, even supposing the Canadian authorities were adversely inclined to such action. Were they friendly they could and would manage as is now done for imperial officers in Canada's service that both commissions be retained.

Those are my views. They were my views in 1899 and they are mine to-day on the question of allegiance.

An hon. MEMBER. Is that taken from a sessional paper?

Mr. HUGHES. I am quoting from 'Hansard' of 1901, Vol. 1, page 394. My view on the question of allegiance is this: I regard the empire as a pyramid of which the people constitute the great foundation. Then we have minor divisions. We have townships, towns, school sections and so on. We have the superior divisions of counties, the still larger divisions of provinces, and the larger still of dominions. And over and above all there is the empire. My allegiance in minor matters goes to my own municipality as against the adjoining ones. In county matters, it goes to my own county over its neighbours. In provincial matters it goes to the province of Ontario over all others. In Dominion matters it goes to Canada over Australia or any other part of the empire; but in national matters it goes to the empire of Britain and not to Canada. There is the allegiance that I owe; and when the right hon. gentleman talks of suzerainty, let me inform him that he does not understand the question of this country as I believe the fathers of confederation understood it. We want no more prating about autonomy, no more talk about 'ripe fruit dropping off the tree', or about 'sister nations'. Each is supreme in its own sphere and should have a voice in the affairs of the empire. But the pyramid is incomplete in three ways. First, the oversea dominions, have as yet no voice or vote in the affairs of the empire. Second, the parliament of Britain is not adapted for administering, under its present constitution, an empire of this kind, and therefore should be remodelled. In Britain they have their minor subdivisions or counties and shires, but they have no provincial subdivisions and I can see no reason why they should not, according to my reading of the British North America Act as applied to Canada. Nevertheless has South Africa deemed it advisable to have any provincial divisions? But in case such should be found to be necessary, I will take the liberty of suggesting that the judicial districts into which England, Scotland, Ireland and Wales are divided might be taken as the basis of provincial division in Britain. In England and Wales there are nine judicial divisions, in Scotland three, and in Ireland there are the old provinces of Ulster, Munster, Leinster and Connaught. And, if they wish to confer upon these any extra privileges, and any extra provincial power, let us see what could be given them under the British North America Act.

The amendment from time to time, notwithstanding in this Act, of the constitution of the province, except as regards the office of lieutenant governor.

Nothing wrong about that.

Direct taxation within the province in order to the raising of a revenue for provincial purposes.

Nothing wrong with that.

The borrowing of money on the sole credit of a province.

I don't see anything wrong with that.

The establishment and tenure of provincial offices, and the appointment and payment of provincial officers.

That is necessary.

The management and sale of the public lands belonging to the province and the timber and wood thereon.

They have none, so that will not be necessary.

The establishment, maintenance and management of public and reformatory prisons in and for the province.

I do not see anything wrong with that.

The establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals.

I do not see anything wrong with that.

Municipal institutions in the province.

They have these institutions already, and these could be placed under provincial jurisdiction.

Shop, saloon, tavern, and auctioneer and other licenses, in order to the raising of a revenue for provincial, local or municipal purposes.

No reason why they should not have that.

Local works and undertakings other than such as are of the following classes,——

Then follows a list that are excluded.

Incorporation of companies with provincial objects.

That seems all right.

The solemnization of marriage in the province.

I do not see why that should be a provincial matter.

Property and civil rights in the province.

That might be all right.

The administration of justice in the province.

The imposition of punishment by fine, penalty and imprisonment for enforcing any law of the province made in relation to any matter coming within any of the classes of subjects enumerated in this section.

Generally, all matters of a merely local or private nature in the province.

—and under our constitution—education. I do not know whether, in Great Britain, they woud take in education or not. But, if they want provincial government, I do not see where they could get a better basis than by taking the old judicial divisions.

Now, to come to the British parliament —and I wish to make a distinction between the British parliament and the parliament of Greater Britain—this parliament should be erected into the parliament of Greater Britain, and there could be a separate, minor parliament, to manage the affairs of Great Britain. If that were done, the jurisdiction of the parliament of Greater Britain could include every dominion beyond the sea, and that parliament could deal with inter-imperial matters, international affairs, defence questions, trade and commerce, a tariff for imperial purposes, and an imperial court of appeal. Each dominion should have its own tariff. The sovereign would be the King of England. The upper House would be composed of members elected for life, and the lower House of members elected for a term of years. The capital should be London, and, during the first two years of each parliament members should visit the dominions of the empire. If we elevate the British parliament into a parliament, of Greater Britain, the door would be opened for representation of the colonies. When our good friend the First Minister (Sir Wilfrid Laurier) was speaking on this question early in the session, he recited a very beautiful incident in connection with the agitation in Rome following the execution of the Spanish patriot, Ferrer. When a number of the clergy from Canada, resident in Rome for educational purposes, found themselves in danger from a mob, they sought protection under the old Union Jack, that 'herald of mercy, as well as of might.' And I can easily understand how they would realize the sentiment expressed in the beautiful lines of Eliza Cook:

Mr. HUGHES.

Then, then did out hearts learn how precious can be
The fair streamer of England—the flag of the free!

When he was speaking of this incident, I noticed a blush mantle the cheek of the Prime Minister. It was enough to make any Britisher, any Canadian wherever he may be, blush to think that here we are sheltering ourselves under the folds of a flag to whose upkeep we do not contribute a man or a dollar. The Prime Minister in his remarks grew eloquent, as usual, over the contrast between Great Britain and imperial Rome. He spoke of the surprise that a Roman citizen of the time of Augustus would have felt had it been foretold to him that that far-off dependency of Rome, Britannia, should attain the prominence in the world of affairs that it holds to-day. And he said the answer would be:

That is Utopia; force and force alone can build and maintain an empire.

Let me remind the Prime Minister that every empire in the history of the world has been acquired by force and by force—I was about to say, by force alone—but it is certainly true to say that every empire was acquired by force. In this connection, I am reminded of a remark of my hon. friend from the Yukon (Mr. Congdon) who quoted the Latin maxim, Si vis pacem, para bellum, 'If you wish peace, prepare for war.' This was enlarged by Washington, who said, that the most certain way to defend a nation was in peace to be prepared for war. My good friend (Mr. Congdon) quoted from Sir Spencer Walpole, who, in this regard, said, that the world had changed and that victory now depended not so much upon the long sword as upon the long purse. Let me remind him of the case of the Franco-German war. France was worth two dollars for every dollar of Germany's, yet this rich nation was brought to her knees in a few days. Within two months of the beginning of the war, France was not only conquered, but humiliated in the dust before Germany —France, next to England, at that time undoubtedly the richest nation in the world. In that connection, let me call the attention of the hon. gentleman to a maxim of Machiavelli, that all the armed prophets have conquered and all the unarmed prophets have perished. Let me remind him also of the famous expression of one whom the hon. gentleman belittled, that the Lord is found on the side of the best disciplined, best drilled and heaviest battalions. These are standard maxims and require no further explanation. Let us get back now to the First Minister's reference to Utopia. This is not the first time the right hon. gentleman has used the word. When I approached him on the subject of sending

men from Canada to assist in the South African war, he said that my ideas were Utopian—as did others. Yet, he found his Utopia had vanished in two short weeks. Within that time colonial assistance in imperial wars became an actual fact—to remain a fact, I believe, for all time. One week carried the Prime Minister in favour of the federation of the empire in 1899, and, I believe, that in relation to the question of the navy, one week would change him as it did then.

Now, why is this Bill introduced, and why is the amendment introduced? Again, I ask, has the Bill carried out the mandate of the resolution of last session? Had it done so, so far as I am concerned—and I believe I speak the views of every member on this side of the House—there would have been no amendment. But the Bill did not carry out the mandate of that resolution. Owing to the impulse created by the old spirit of the colonies as exemplified in the war of 1812, and when rebellions were put down in 1837, in 1870 and in 1885, by the loyalty which stands true to the empire and is characteristic of Canada on all occasions, the question came up of assisting Britain in her troubles across the sea. This spirit culminated in the union of the empire's forces in the South African war of 1899-1902.

And then Great Britain learned two things; she learned the inestimable value of the colonies, and she learned that the hand of Germany was behind the scenes seeking to disrupt the empire in the South African war. Germany is after Britain's colonies. It is known that in 1896, three years before the war, she officially notified the British government that German interest demanded the independence of the Transvaal. If Germany had had a fleet then, what would have been the result of Britain's refusal to recognize that demand? War—and as Germany is always dabbling and mixing up in the foreign policy of other nations, upsetting long-established policies, when she has a fleet, the first time she is rebuffed there is going to be war. I have not one word to say against the German people. They are a credit to humanity, to the world. They are a shrewd, law-abiding, true, devoted, patriotic people. They are a peace-loving people, and when the war with France was about breaking out in 1870, not thousands but millions of the residents of the German empire petitioned the sovereign not to go on with the war against France. But the policy was laid down, the plan was to carry on war against France, because they found France in an awkward position, and the prayers of the people were unheeded. So, although the German people to-day do not want war, they are a peace-loving nation, nevertheless the policy of the German nation undoubtedly tends towards war with Great Britain. Britain found these people scattered, disjointed into a lot of principalities, where the hireling soldiers of Europe were obtained prior to the wars of Frederick the Great. Britain backed Frederick the Great and established the Prussian Kingdom, and later at Waterloo they broke the power of Napoleon for ever. Britain continued to uphold Prussia, and the great North German Confederation was established. About 1870 Britain practically coaxed Germany into becoming a colonial empire. German Southwest Africa was practically the first important colony that Germany ever possessed. She got it through a little incident that occurred near Walfish bay, when Gladstone called on Germany to police these areas and bear her fair share of the white man's burden. In other words, Germany is a creation of Britain, created as a barrier against tyranny, created for the preservation of peace, and to-day her own creation threatens the dissolution of her own empire.

Following on this period of German expansion, like others who become opulent, she became arrogant and still further grasping. Going back to an old quarrel of hundreds of years previous, she seized from little Denmark, Schleswick-Holstein in 1864. In 1866 she humbled Austria in the battle of Sadowa. Then came a period of intrigue between Bismarck, representing Germany, and Napoleon the Third, represeting France. The plan was this: Germany was to have the southern German states: Bavaria, Wurtemburg and Baden, and Holland. In return for that divvy-up, France was to have the left bank of the Rhine, including Belgium, down to the sea. When the Franco-Prussian war broke out and these plans became European property, in answer to Britain's demand for an explanation of this, Bismarck said that he did not want to unsettle the state of Europe by telling what the Emperor was always up to, that he paid no attention to his suggestions. Certainly he paid no attention, he played him, he led him on, he knew that France was being disrupted, that the Republican party was growing stronger in France, and that the power of Napoleon was not great. He listened to Napolean, he encouraged and fomented discord in France, and when the time was ripe, he struck and struck right home. In this regard, let me point out what the aims of Germany then were, and are now known to be. They practically had South Germany. They wanted Alsace-Lorraine, which was settled by Germans, they wanted the left bank of the Rhine, and they wanted French Flanders and Havre, as well as Holland and Belgium, and had it not been for the intervention of European nations in 1870, Germany would have carried out her

plan. These facts are known in diplomatic circles the world over, and yet gentlemen will tell us that this truly pacific nation has no designs on her neighbours. I see in the press this despatch from the Hague:

The Hague, Feb. 10.

In the first chamber of the states general yesterday, Baron von Heckeren asked the minister of foreign affairs if he intended to take steps to guarantee the integrity of the Netherlands in regard to Germany and Great Britain, explaining when questioned that he did so because 'a neighbouring sovereign had intimated a few years ago he would be obliged to have Dutch territory occupied if Holland had not placed herself in a state of defence against Great Britain.

The minister pressed for further details, but the Baron declined to reply and the debate thereupon closed. It is understood the Baron referred to the Emperor of Germany.

So that to-day what do we find? Germany with her iron hand on Holland, Krupp the great gun maker, by arrangement with the German government is placing his guns, made in his own factory, in every fortress in Holland and it is Krupp who lays out the plans of the forts, not the Dutch administration, so that practically to-day Holland is a German province, and if Germany should get control of Austria's and Italy's fleets should assume control of what is under her influence to-day, the navy of Holland, and should seize Belgium, where would England be, with all her double fleet against such a combination? Of course France would undoubtedly ally herself with Britain because France was the first country Germany wished to humiliate. They would humiliate France and then Britain would be an easy mark. That is the policy of the German empire, and yet we are told we must sit with our hands folded and develop our home resources and do nothing for the development of this great empire. More than that, Sir, Germany ran foul of Great Britain the moment she established her fleet. In 1879 in Samoa, the United States and Great Britain having had previous occupation were intruded upon by Germany and they had to put her in her place. Then Germany was stepping in to plant her colonies in South America, seeking to obtain control of established governments there. The United States quietly again reminded her that there were others on the continent besides Germany, and that these countries possibly could look after themselves as well as Germany. Then we know that she meddled in Persia, in Turkey, in the near east, in the far east, in China.

When the United States were at war with Spain the German fleet ranged itself on the side of Spain as much as to say: We shall protect Spain in possession of these islands, and the Yankees will keep to their own side of the water. Thereupon the old Britisher lined his fleet up alongside the Yankee fleet, and but for that Germany would have taken part in the war against the United States, and would have endeavoured to obtain possession of the Philippine Islands for herself. We all remember the Kaiser Wilhelm telegram to Kruger in 1896, and the official note of the German government to the British government that the interests of the German government demanded that the Transvaal should remain an independent republic. Then, Sir, even after the humiliation caused him by the sending of the Kruger telegram, the Kaiser stated that in the near future the trident, that is the control of the sea, must be in German hands. In spite of this and a thousand other instances that I could give, we find hon. gentlemen standing up in this House, belittling the best statesmen and soldiers of Great Britain, siding with Germany, saying that there is no cause for alarm, and that if there is any cause for alarm Britain herself is responsible for it. Take the South African war; we know to-day what the plan was. Germany and Russia, together with France, which was not too friendly then over the Fashoda affair, were to join hand in hand in establishing South African republics and in driving the British flag into the sea off the Cape of Good Hope, and from the British dominions as far as her colonies were concerned. The plan was afterwards given away by one of the Russian diplomats. But, these powers hesitated when they saw that the colonies, including Canada, in spite of the First Minister, rallied to the defence of the flag in South Africa. Only last year Germany almost precipitated a war in Europe. She sought to humiliate France in connection with the Morocco incident, although she had no more to do with it than a child, and she sought to humble her upon another occasion, but Great Britain stood behind France, France stood her ground, and for the time being Germany withdrew. Then, only last spring again we know that Austria, with Germany behind her, took Bosnia and Herzegovina and wiped them off the map of Europe, and if Russia had been prepared, war would have resulted. This was all owing to the fact that the German Emperor and his army are so all-powerful. Now we find ourselves face to face with the construction of one of the most tremendous fleets that has ever been raised up in any country. Germany wants colonies. The hon. member for Yukon suggests that she may obtain these by peaceful negotiation, but that is not Germany's mode of getting these things. She gets them with the iron hand of war. She is determined to get them and there is no nation she can get them from except from Great Britain. She wants coaling stations, she wants markets, and she wants shipping, and if she gets them she

must get them from Great Britain. By her action in connection with her reference to this surtax business, by removing her objections, she is showing that she is ready to try and cajole and dicker with the colonies. How is the British nation meeting this? What are the British people doing? They are telling us what a great people they are, they are talking of their prestige, they are recalling the days of Agincourt, but ancient history never maintained a nation. It may inspire it, but it does not maintain it. She is blowing and blustering of her own greatness. They tried the Hague conference with Germany. You have heard the story of the German ambassador at that conference. Then they tried to coax Germany. They said: We will not build any more warships if you will not, but while the British ambassadors were at the conference the Germans laid down the keels of another couple of Dreadnoughts. Then Keir Hardie, John Burns, and other British statesmen, said: We think we will try slobbering. Germany listened to them, and although Great Britain had stopped laying down keels, Germany laid another keel or two. Then she formed an alliance with France and Russia, the only sensible thing that she has done, although this had the tendency to make Germany go on and build warships. Then, a number of radical members of parliament went over, these members of parliament are splendid people to get people out at elections, but they tried their cajolery in vain on the Germans. They drank their wine, ate their bologna sausages, and toasted each other, but the Germans laid down two more keels while they were there. Then, they said we are going to strike the fatal spot; we will make arrangements with the socialists and the labouring men in England, and the socialists and labouring men in Germany, and get them to agree that they will not dig any more coal in war time. In Britain the labouring men were a unit in favour of playing the game, but in Germany the socialists mined enough coal to last five or six extra years, and that scheme fell through. Then, they tried another plan. They said: We are relatives. We have heard the First Minister at this same game. I guess he had heard of it across the water. We are relatives, we are allies, we are friends, and we are Christians with a capital 'C'. They shouted 'Hurrah for King William' and stopped building Dreadnoughts. Germany reciprocated, admits that they are relatives, allies and Christians, and they cry 'Hoch der Koenig, Edward VII. But, in the meantime they get control of the British market, get the British naval plans and lay down the keels of four or five Dreadnoughts. So that Germany has shown that she does not go duck hunting with a brass band. The Germans continue to look after their own interests and they are looking after their own interests in no uncertain way. This reminds me of an old axiom which I have already repeated to the House, but a good thing can stand repetition. It is contained in the work of one of England's finest poets, a woman in whose breast there glowed the proper spirit. I wish she had the management of affairs in Britain with the spirit which she displays in this poem. I refer to Eliza Cook:

Never trust the soft breathing that preaches of peace,
With a pledge-giving lip and a smile-lighted eye;
Hear it all with good-will but be provident still
With men that are earnest and powder that's dry.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. HUGHES. Mr. Speaker, just before six o'clock I drew attention to the fact that last year it was rumoured that the German Emperor had interfered with Holland in regard to her defences. And in connection with that I shall read the following despatch which appears in the newspapers dated from the Hague on the 15th of this month:

The Hague, Feb. 15.—Baron van Heeckeren sent his promised statement to the Senate today in regard to his charge that Emperor William of Germany had told Holland that if she did not fortify certain points against Great Britain, he, the Kaiser, would be compelled to do so.

It will be recalled that when Baron van Heeckeren made the statement about 'a neighbouring sovereign' threatening Holland in regard to her military preparedness against Great Britain, the foreign minister demanded specific proofs. Later Dr. van Swinderen, the foreign secretary, denied absolutely that Queen Wilhelmina had ever received a threatening communication from the Kaiser.

In his letter to the Senate to-day Baron van Heeckeren says he received information from Dr. Kuyper, the former prime minister. He adds that the matter was frequently discussed between them.

It would thus appear that this peaceful nation of Germany has already Holland practically under her control. As I pointed out a short time ago, the German Krupp firm is not only making guns for Holland, but has charge of placing them in strategic positions, and you may be sure they will not be placed to the disadvantage of Germany. I understood the hon. member for Pictou to say that when the national policy was introduced, and when it was pointed out that it might be bad for Britain, Sir Charles Tupper said: So much the worse

for British connections. Now, the hon. gentleman (Mr. Macdonald) cannot find any authority for attributing that statement to Sir Charles Tupper. The hon. gentleman made another reference to Sir Charles Tupper, and that was that Sir Charles had written a letter to the leader of the opposition asking him to support the naval policy of the First Minister. But what Sir Charles Tupper said in that letter was:

I read with pleasure the resolution passed unanimously by the House of Commons, which pledged parliament to proceed vigorously with the construction of a Canadian navy and to support England in every emergency.

That was the recommendation made by Sir Charles Tupper, and instead of this government following that recommendation they have departed from it in its first essential 'in every emergency.' Gentlemen on the other side have complained that in connection with this question the charge of graft has been levelled against them, but I will read the statement made by the hon. member for Pictou (Mr. Macdonald) who, if not a minister, is an embryo minister, and we will see from it the plane on which he puts the establishment of a Canadian navy. The hon. member for Pictou said:

Yes, Mr. Speaker, the object of this government in proposing this policy is that this navy is to be constructed in Canada, by Canadian workmen, in Canadian workshops, and that it is to be a Canadian navy, primarily for the defence of Canadian interests.

And this afternoon the member for the Yukon told us that the only redeeming feature of the navy was that it would lead to the construction of these ships in Canada. There is no spirit of patriotism in such remarks, none whatever. Every sentence of every speech delivered from the government benches so far enunciates the maxim of la Bruyère: that under a corrupt government there is no such thing as patriotism, its place being supplied by private interest, public fame, and devotion to a chief. That is what we see on the other side of the House. No nation would engage in war unless fairly certain she is going to win, and if the British empire wants to preserve her position unsullied before the world she is in duty bound to prepare for war. We have been told by gentlemen on the other side of the House that the plans of Germany are directed towards obtaining colonies; the member for the Yukon told us that Germany wants to obtain them by peace, but the real fact is that Germany wants to obtain them in her own way: by blood and iron. Canada has a duty in this crisis, and Canada's duty is to be ready by sea and land to defend the mother country. In this connection, I may refer to an incident which occurred in the Franco-Prussian war. The French rifle in 1870 was superior to the German rifle, and although the French rifle far out-ranged the German rifle, a prominent German officer who led his corps at the battle of Weissembourg, declared that while his men came under the French fire at 1,700 yards, yet between 1,700 and 600 yards not one man was struck by a French bullet, which went to show that at the beginning of the war the French were bad shots. Later on they became better trained, and in the succeeding battles they gave a better account of themselves. In the American civil war the southern soldiers, who were excellent shots, although armed with muzzle-loading rifles, made it absolutely impossible for the northern army to advance on their position. In Canada, and the other colonies of the empire, are to be found expert shots, who, when they come to the assistance of Britain, I am satisfied will more than give a good account of themselves in any struggle in which they may take part. The hon. member for the Yukon, in his address, compared the militia law of this country with the naval law, but he forgot that there was an essential difference between the mobilization of the militia and the mobilization of the navy. It is good old English law that parliament should be called when war is declared, and that is a good sound principle in Canadian law so far as the militia is concerned. In the Franco-Prussian war it took weeks before the German army could be mobilized, although it was supposed to be the best organized army in the world, and there was plenty of time to call parliament, and as a matter of fact the German parliament was called. In the case of our militia it, of course, would take some time to mobilize them, and it is quite right that parliament should be summoned when the militia is called out, and there would be plenty of time to do that. But in the case of a naval war the clash comes like a lightning flash. A war may break out to-day and a German ship may be in some harbour, or lying outside the three mile limit, and the music begins at once. So that a navy must of necessity always be ready to take the sea for active service, whereas an army and a militia are not necessarily in the same position.

Let me draw a contrast between the two policies. The government claim that they are adhering to the resolution passed last year, whereas we take the position that they are not carrying that resolution out in any essential point. The policy of the leader of the opposition provides immediate help. In furnishing two Dreadnoughts, it gives the necessary security, whereas the policy of the government is

simply one of promise. Their fleet will not be completed, and they do not profess that it can be completed short of five years unless they buy their ships from England. The policy of the opposition is an imperial navy under the one flag, united and strong, under which Canada will have ample protection. The place where the farmers of Canada require to be protected is the North sea, because there is the danger point, although in some future day the centre may be changed and the danger point may be in the Mediteranean. Canada is not in any danger on the Pacific slope or the Atlantic sea-board, but in the North sea. Germany at the furthest is but two days sail from the British shores, and if she succeeds in taking Holland, she will be within only a few hours sail of the British coast, so that Britain has to be ever on the alert, not knowing when the German fleet may advance on her coasts and attack her navy. The policy of the opposition is one imperial navy, ready to be concentrated at a moment's notice at any given point. But the policy of the government is to have a Canadian navy acting independently and restricted to our own coasts, and which consequently could not give any effective assistance in an emergency. The policy of the opposition is to provide an effective navy and at the same time do so as economically as possible. Not that we object to proper expenditure, but we desire that every dollar should be expended where it can have the most effect; and when the time comes for a reference to the people, and the people will draw a contrast between the government policy of a Canadian navy, not acting automatically in concert with the imperial navy, and which will only go out to service when the Prime Minister of Canada gives the order, and the policy of the opposition which will provide a navy ready to take service at all times, I have no doubt as to what the verdict will be. Under our policy, while we would provide at once an effective navy, the cost to the country would be only $800,000 a year, whereas, under the government policy, which would only provide a navy in some five years, the cost will be infinitely greater —upwards of four and a half million dollars per year. Then the navy outlined by the government cannot guarantee protection to our trade and commerce on the sea because it would not be concentrated with but would act separately from the British navy. On the other hand the policy proposed by the leader of the opposition does guarantee protection to our trade and commerce; and all that we would spend on this line would be well spent, even though we had to pay the same every year for all time to come. In fact, as an insurance on our trade and commerce, it would be a very small contribution indeed. The policy of the opposition would tend to promote peace by letting Germany see that, not only the motherland, but the colonies of the empire are prepared to do their duty. On the other hand, the policy of the government has the tendency to create uncertainty and to disunite and disintegrate the nation.

The policy of the leader of the opposition is automatic—when Britain is at war Canada is at war, and our ships, trained in the imperial navy, are ready for action. Let me point out as an answer to those who criticise this aspect of the case that long before the Franco-Prussian war, an arrangement was come to by the independent kingdoms of Bavaria and Wurtemburg and the Grand Duchy of Baden with Prussia, that the moment the commander in chief of the German army issued the order, the troops of these three nations would automatically, be at the unrestricted disposal of Prussia. If then, for the purpose of the German empire, Prussia could make such an arrangement with Bavaria, Wurtemburg and Baden—three absolutely independent nations—so that their troops would be at the order of the King of Prussia, and automatically take the field under his command, the moment war broke out, why should not such an arrangement be arrived at between Britain and her colonies. Much greater is the necessity that the troops and the navies of the colonies should, when the emergency arose, be at the command of the parent government. When the parent government felt the emergency coming, no doubt we would all be consulted, but when the emergency arose our navy would automatically fall under the command of the imperial authorities, and we would have combined training as well as united strength. The position of the government reminds me of the captain of a company of Fenians down near Huntingdon border at the time of the Fenian raid of 1870. He lined his men up against the border and he said: Now boys, before you is Canada and behind you is the United States, I want to ask you one question: Will you fight or run? The answer came promptly, we will. Again, he said, I repeat the question, will you fight or will you run? Again came the answer, we will. And the captain said: I knew you would. And just the some farmers along the border who had heard the fellows were coming over, let into them and they soon knew which they would do. In like manner this policy of a Canadian navy, hedged up and kept at the disposal of the government of Canada until the Prime Minister gives his sanction to its going to the support of the motherland, possibly untrained and unequipped, with a lot of officers better posted in balls and dances, which take up most of their time while dallying around our harbours, will be about as effective as this Fenian corps who

were routed by the Huntingdon farmers. Besides our ships would be such small ones that they dare not go within range of the enemy. A small ship carrying light guns is to-day absolutely useless, because their guns will reach only five or six miles, while the 12 or 16 inch guns on the larger vessels, can be effective for a distance of 15 miles.

My hon. friend, the leader of the opposition, has proposed a policy which will give automatic assistance to the mother country. More than that, our vessels, officered and manned under our policy, will be trained in the British navy, whereas under the policy of the government they would not. Our policy would make them ready to fight at a moment's notice, which would not be the case under the government's policy. The right hon. the Prime Minister himself has said that the United States is the only enemy with whom we might possibly fight. But there is no chance of the United States and this country ever coming to a quarrel. Reference has been made to the fact that the Americans have training ships along the inland lake. Well, so far as I am concerned, I would be delighted to see an American training ship at every large American port on our inland lakes and a Canadian training ship at every port on the Canadian side. What difference would it make? If war came it would make no difference, but war is absolutely impossible between these two nations. When Britain and her colonies are incorporated together, I look to an offensive and defensive alliance being reached between Britain and the United States and possibly France, Japan, which will guarantee the peace of the world for years to come; and I think that the right hon. the Prime Minister was very impolitic in his suggestion that the United States is the only nation he could think of against which he would allow his ships to go and fight.

Now, I come to the great material difference between the two policies. Under the policy of the leader of the opposition, the Union Jack would fly from these ships; under the policy of the government the Union Jack would not fly from these ships.

Mr. FOWKE. What would fly?

Mr. HUGHES. I am just going to explain the position to the hon. member. In a memorandum on page 24 of the Defence Conference report is found this paragraph:

> The question of the flag was also discussed, and it was arranged that the admiralty would give the matter consideration and would communicate its views at a later date to the Canadian government.

What need was there for discussing the flag? The fact is that the old Union Jack flies over the parliament of Canada—and a number of us intend that it shall long fly there. And it would be sufficient to have the old Union Jack flying from the Canadian fleet in case one should be constructed. I should be glad if the First Minister (Sir Wilfrid Laurier) had been here, or some member of the government who knew something about this question, to tell us what is meant by that paragraph in this report that 'the question of the flag was also discussed.' Perhaps the Finance Minister (Mr. Fielding) could tell us?

Mr. FIELDING. I am not making the speech, Mr. Speaker.

Mr. HUGHES. Is the hon. minister listening to the speech?

Mr. FIELDING. Yes, every word. I know all about the old flag.

Mr. HUGHES. What we want to know is that the old flag shall fly.

Mr. FIELDING. We will look after that.

Mr. HUGHES. I can give the First Minister (Sir Wilfrid Laurier) a guarantee that there are lots of the boys who will look after it if he does not. If he does not do it willingly, he will do it anyhow—he will go as the fellow went with the bayonet behind him. The policy of the Conservative party is that the old flag shall fly, and the policy of the government is that the old flag shall not fly.

Mr. FIELDING. If my hon. friend (Mr. Hughes) knows, why does he ask me?

Mr. HUGHES. I want to commit the minister. But it seems impossible to get these gentlemen committed. They plead the equivocal. They say: We will look after that—and when the time comes they do not look after it. But, leave non-essentials aside, and let there be fair warning that, when the hour arrives, the old flag is going to fly.

Canada cannot declare war, there is no doubt about that; she is not a nation, not even a sister nation, and she cannot declare war, and rightly so. Nor can she prevent her people from taking part in the defence of the empire. No matter what the orders may be from Sir Wilfrid Laurier, neither he nor any other power in Canada has authority to prevent the Canadian who wishes to do so from serving the empire. In peace or war, the Canadian flag has no authority beyond the three-mile limit, and is not recognized beyond that. Suppose that war were to break out, and one of our ships were down in South American waters, or in the Mediterranean——

An hon. MEMBER. How could it get so far?

Mr. HUGHES. Suppose it were towed there, or engineered somehow. If war were to break out at that time, what would hap-

pen in the case of that ship? The First Minister is considering whether he will take part in the war or not. What flag does that ship fly in the meantime? The British flag? Then, if so, the first ship of the enemy that comes near her, lets into her and down she goes. But suppose those on board do not know what flag to fly—Sir Wilfrid Laurier and his cabinet have not decided whether they are going to let us fight or not. Of course, the boys are always ready to fight; but suppose even it is decided not to fight, and the flag is taken down. What is the position of that ship? She is a common pirate; and not only the enemy's ships but the ships of every nation would be bound to capture her, for that is the law of nations. In war or peace our ships must fly the Union Jack or nothing. And, as I have said, our intention is that the Union Jack shall fly. The First Minister has spoken of responsible government, and his word is being repeated. Now, I would like to point out that the policy of the leader of the opposition maintains the policy of responsible government, and the policy enunciated by the First Minister departs from that principle. A few years ago, this country freely voted a sum of money—I think it was $250,000—to the relief of the poor in Ireland. Would any one maintain that because of that vote we were under tribute to Ireland? At a later time we voted money to San Francisco—did that mean that we were under tribute to the United States? We voted money to relieve the sufferers in Sicily: were we departing from the principles of responsible government in doing so?

Mr. HARTY. And to France the other day.

Mr. HUGHES. We voted $50,000 to France the other day—a splendid country. I wish some of our hon. friends opposite had as sound ideas of freedom as they have in France in many things.

Mr. FIELDING. Have not we French domination? I have heard the hon. gentleman (Mr. Hughes) say that.

Mr. HUGHES. Never.

Mr. FIELDING. I apologize. I have heard it stated that we were suffering from French domination.

Mr. HUGHES. There is a wing of the French element which is trying to make us suffer, but fortunately there is another wing that tries to keep things in proper shape. Will any one say that because of the vote given to France the other day, we are subject to the domination of France? Not for an instant. We were standing by the principle of responsible government in every one of these votes. We appropriate money for the exhibitions in foreign countries—hundreds of thousands. Are we then, subject to the domination of Belgium and these countries to which we send our officers with our exhibits? We are spending hundreds of thousands of dollars for lighthouses and other means of protection for the commerce of the world on our coasts. Are we subject to the nations that are thus benefited? No. The money was freely voted. In voting it, we stand by the principle of responsible government, and we seek no subterfuge, and make no equivocation. But what is the position of the government, as we find in the speech of the First Minister? They are quoted in many parts of the country as being in favour of helping the motherland, but when we come to analyse them, you find that the ship he is proposing does not fly the British flag. And what is going on in Quebec to-day? Why, it is whispered about: 'Never mind; vote this money; it is all right; it means Canadian independence.' The First Minister tells us that he is accused on both sides—accused of being too loyal, and accused of not being loyal enough. But there is no question as to our position—we are standing by the principles of responsible government, and we are not obtaining the money for our policy by false pretenses. Under our policy Canada would have a voice in the councils of the empire, because Canada, having contributed these ships to the navy, would be represented on the imperial defence committee, and her voice would be heard, not only in the management of the ships, but on the question of war or peace. Our policy is a policy for the whole empire, and not a policy for Canada alone.

There are four or five ways in which Canada could have helped the motherland in this extremity, and of those four or five ways the government has chosen the worst possible way from Canada's own point of view or the point of view of the empire. The first policy is that of the government of Canada having a navy no matter where it is bought, controlled by Canada—and we know what that means—which may or it may not be loaned. There is the policy of the government in a nutshell, and as I pointed out before, the British flag is not necessarily the flag that floats over that navy.

The second policy is that proposed by the leader of the opposition (Mr. R. L. Borden), a direct contribution in the meantime, and then we will be prepared to fight out at the polls whether the policy of the government is the one that should be upheld or not. That policy would fly the Union Jack.

The third policy would be that outlined by the admiralty, an imperial navy with docks, naval schools, training ships, etc., in Canada, so that whether we confederat-

ed or remained as we are, we would do something towards the upkeep of the empire. That policy, too, would fly the British flag.

The fourth would be a combination of a direct contribution and an imperial unit, working in harmony with the admiralty. Jack would fly from the masthead.

The fifth is the one to which I have adhered for many a long year and which I trust will come within a very few years, a confederation of the empire, a full partnership on a union basis. That would combine all the good that is in the others and we would have the manhood of the nation elevated, there would be no complications in the matter, and the old Union Jack would fly from the masthead.

The only one of all these policies concerning which there is any doubt as to the position of Canada is the one that the government has selected, and why is that? Why? All we can do is to surmise. I am free to admit that the First Minister is in a rather difficult position in this matter. But it is the old question of chickens coming home to roost, and he cannot complain of anybody but himself.

Let us take a little review. We have listened so long to misrepresentation of these heroes of 1885, of the heroes of 1870 and the heroes of 1837-38 and all this sort of thing, that I think it will do no harm to place a few facts before the House. In 1763, by the treaty of Paris, Britain acquired the French property in the new world. In 1774 the Quebec Act was passed. Under that Quebec Act what happened? I am not referring to any concessions given to the then province of Quebec further than to point out that the territory for which the American colonists have given their time, their money and their lives, the valley of the Mississippi and Ohio, that great tract including Ohio, Indiana, Illinois, Wisconsin, part of Minnesota and Michigan, was taken deliberately from the British colonists in the United States and handed over under the Quebec Act to the province of Quebec.

Mr. J. P. TURCOTTE. Why not?

Mr. HUGHES. Because it did not belong to them, because they never conquered it, because it was bought by the blood of the men of New England and of Virginia, it was captured from the French by the blood of New England. In 1775, there was the American revolutionary war brought about not alone by the Stamp Act and kindred Acts, but by the fact that this territory for which these men of Virginia and other parts of the British dominions had given their lives had been taken from them. That is why these men rebelled more than any other single cause. The American revolution was brought on by the Quebec Act of 1774 more than by any other single cause.

Mr. J. P. TURCOTTE. That is new history.

Mr. HUGHES. Following that came the Constitutional Act of 1791. I have not a word to say against the passage of that Act, only that our French-Canadian fellow countrymen did not ask it, it was given them by the English speaking people there, many of whom had lived under responsible government in England. They had heard the name and they wanted a Constitutional Act passed in Quebec whereby they would have self-government. They got self-government, in other words representative government, the control of their own assembly, but had not control of the appointment of the ministry.

In 1783, owing to the fact that the Yankees gained their independence, the states that they had won from France, formerly, that is Ohio, Indiana, Illinois, Wisconsin, part of Minnesota and Michigan, they again took back and they took them back from Britain and from Quebec. They then were parts of the American union, so in 1791 the province of Quebec was curtailed and was divided into upper and lower Canada. But from that time on a small party in Quebec, active until the present hour, began an agitation to sever that province from the British Crown. For a few years after they got the Constitutional Act passed, there was hardly a Britisher, only three or four, to be found in the whole assembly. British immigrants were practically forbidden to enter the province and were treated as foreigners, and when the settlers came in from the United States and colonized the eastern townships, the opposition was so strong that they would hardly build a road in there. The statement was then made: We must preserve the land for our own people, and the statement has been made in a Montreal paper within a week from to-day that we must have this province our own and must join the French-Canadian fellow countrymen of the New England states with the French-Canadians of the province of Quebec. Fortunately these views are not held by many in Quebec and they have thus far fallen on unsympathetic ears. The chief agitations were against British immigrants, English, Irish and Scotch. They also demanded that they should have an elective legislative council, and in the province of Quebec to-day they have not an elective legislative council. I believe that legislative councils and senates should not be elective for a short term, they should hold office for life or a very long period. They also demanded control of the revenues from timber, from minerals, from forests and the lands.

Then followed the rebellion of 1837 and 1838, in Ontario, in Upper Canada led by a mountebank agitator, who had been a man of no character in his own country, Scotland, and had come out here. He had heard of responsible government in the old land, he did not know anything about the constitutional methods to be pursued, he gathered a few innocent people near Toronto, and the muskets being short-ranged in those days, the bullets could hardly reach them, they ran so fast.

In Quebec another man, clever and brilliant in many ways, but a man fitted for anything in the world almost rather than for leadership, gathered together a lot of poor, innocent fellows from various parts of the province and they met with disaster also. But history records that not one of the solitary grievances has ever been put in type that could not have been settled infinitely better by constitutional means as the hon. member for Pictou (Mr. Macdonald) pointed out the other night that Nova Scotia settled her grievances without much fuss—a gentle hint to those so-called heroes of 1837 and 1838 in Ontario and Quebec that they were wrong in their agitation was all that was necessary. The aim in both provinces was independence. But, we have heard of other grievances. I can well remember the time when I sat in this House long years ago, and when gentlemen who occupy seats in the Senate, and who were appointed before they had ceased for a year to be members of parliament, stood up at these desks and declared that a law should be passed making it illegal for a member of parliament to hold a seat in the Senate, or a position anywhere else under the government, within a year after his retirement from the House. They demanded that the land should be kept for the settler in the Northwest. They said that we should have free trade in this new land of Canada, and they declaimed against robbers great and robbers small up and down the country. They also demanded that the Senate should be reformed. Most of them are in there now and it is pretty well reformed. They demanded rigid economy. There was almost a rebellion in the country because the Conservative party had an expenditure below $40,000,000, while these gentlemen have run it up to over $120,000,000. They demanded that we should have purity in public life and we have a splendid illustration of it in the government of the day. They also demanded that the question of prohibition should be placed before the public, that the people should vote on it and that it should be carried, but their voices are dumb to-day on that question and we hear no more about it. Then we have this laudation of rebellion, but as that has been referred to before, I will not take any more time discussing it. All I will say is this, that the right hon. the First Minister and his colleagues who are ever prone to glorify the so-called patriots of 1837-38, both of Upper and Lower Canada, are the men who forced upon a free people, people accustomed to responsible government, which the people of 1837-38 were not, upon the free men of Saskatchewan and Alberta, in 1905, an iniquitous measure which should have brought about rebellion among free men in that country if anything could have done so. What was the policy of the right hon. gentleman and his colleagues in that regard? One of the demands in 1837-38 was that the assembly should have control of the revenues from the land, timber, mines and water-powers. The chief thing that the government restrained the people of Saskatchewan and Alberta from was the exercise of their rights with regard to the control of the land, mines, timber or water-powers. In 1837-38 it was right to rebel because the assembly, composed of men in both provinces who did not understand responsible government, were not given absolute control of these natural resources, while it was wrong in 1905 with a free people skilled in government. They took their rights away from them and they doled them out a pittance every year the same as a remittance man here receives from his father in the old country. Under the constitution, education belongs to the provinces, and yet this government that pretends to be Liberal, took from the people of these two provinces, in 1905, the right to control their education. Yet they will talk of the heroes of 1837-38 who had not one ground upon which to base any objection to the legislation of the time, and they will preach autonomy and responsible government. I have often thought that in their hearts they must despise these free men of Alberta and Saskatchewan for tamely submitting to these iniquities, while being ready to glorify the men of 1837.

I have not heard either of the last two speakers indulge in this criticism—perhaps the hon. Minister of Public Works (Mr. Pugsley) will when he goes away down alone by the sea—but the criticism has been made of the Conservative party that we joined hand in hand with the hon. gentlemen opposite in passing the resolution one year ago and then have gone back upon it. Such is the language of the First Minister. Let us examine it man to man and see what we have done. The resolution reads:

> This House fully recognizes the duty of the people of Canada, as they increase in numbers and wealth, to assume in larger measure the responsibilities of national defence.

Have we gone back on that? We are standing by it to-day.

> 2. That this House reaffirms the opinion, repeatedly expressed by representatives of Canada, that under the present constitutional

relations between the mother country and the self-governing dominions the payment of any stated contribution to the imperial treasury for naval and military purposes would not, in so far as Canada is concerned, be a satisfactory solution of the question of defence.

We stand to it to-day. We do not believe in paying regularly and periodically a contribution to the motherland. We are in favour of paying an emergency contribution to-day to keep our flag flying because it is better to be sure than sorry, in the meantime and how cheaply we would all feel if the British fleet should happen to be defeated for lack of the two Dreadnoughts which Canada could have supplied. That is the policy we favour to-day. We are not in favour though of paying that regularly because before many years shall have elapsed some systematic form of naval assistance will have been devised.

3. This House will cordially approve of any necessary expenditure designed to promote the organization of a Canadian naval service.

Does the government provide a speedy service? How can they have the hardihood to ask hon. gentlemen on this side of the House to support such a resolution? There is no speedy contribution about it. We are standing by the resolution. We want something done 'speedy'.

Some hon. MEMBERS. Oh, oh.

Mr. HUGHES. I do not refer to a boat going up and down grafting for hon. members on the other side; I refer to the resolution that something should be done quickly. I see that some of my right hon. friends over there think I mean the 'Speedy,' and have reference to graft, &c

This House will cordially approve any necessary expenditure designed to promote the organization of a Canadian naval service in co-operation with and in close relation to the imperial navy.

Is that the policy proposed by the government—'in co-operation'? Co-operation is something mutual. This is a jug-handled, lop-sided plan. They may say: We will not go. We, on this side, desire that the plan shall be co-operative. When Britain is in trouble we will help her, and when we are in trouble we want Britain to help us. We may think that the condition of our stomachs is such that we cannot allow the navy to go and help Great Britain when our help is needed.

Mr. J. P. TURCOTTE. You want some millions.

Mr. HUGHES. If the millions go in graft in the harbour of Quebec and in the constituencies along the shores of the counties in various parts of that province the hon. gentlemen will not kick, but so long as they go to keep the old flag flying in Quebec there is a kick.

In close relation to the imperial navy.

Our policy is that our fleet should be part of the imperial navy. There is no measurable distance in connection with it.

Along the lines suggested by the admiralty.

These gentlemen in no sense have followed the lines suggested by the admiralty. Yet, they have the hardihood to ask us to support such a resolution.

Another clause of the resolution is:

In full sympathy with the view that the naval supremacy of Britain is essential to the security of commerce, the safety of the empire and the peace of the world.

But, the government in reserving to themselves the right to say whether or not that navy shall take part in a war in which Britain is engaged are departing from an essential part of the resolution of last year. The resolution concludes:

The House expresses its firm conviction that whenever the need arises the Canadian people will be found ready and willing to make any sacrifice that is required to give to the imperial authorities the most loyal and hearty co-operation in every movement for the maintenance of the integrity and honour of the empire.

The policy of the government departs from that. How can they have the nerve to stand up and ask us to join them in such a measure as they propose to-day. We are told there is no danger for the British empire. Well, Sir, what does the history of the world show. Thousands of years before the birth of Christ there was as great a nation as Britain is to-day, a nation relatively even greater. The Phoenician nation had all the liberties that Britain has to-day in many respects. Her ships traded in every sea, Carthage was a colony, Sardinia and Corsica were colonies, the Balearic islands, the southern part of Spain and parts of the British islands were colonies. The ships of the Phoenicians traded all along the northern coast of Africa, down the west coast, around the Cape of Good Hope, and to the distant Indies; their caravans crossed every desert. It was that nation that furnished the Christian world with the religion of one God; it was that nation that furnished the world with the alphabet, the principles of mathematics, and the learning which has graced and benefited humanity. They had everything the heart could desire, and yet that nation fell. The Grecian states in succession rose and fell, other nations in the east rose and fell. In the year 256 B. C., the first Punic war came, Rome knew that Carthage had succeeded Phoenicia as mistress of the seas,

and Rome prepared a fleet in order to meet Carthage. Their fleets met off the coast of Sicily and 300,000 men were engaged in that sea fight, the greatest naval battle in the history of the world. The Carthaginian fleet was wiped out of existence by the fleet of Rome, although Rome was comparatively a new nation. Taking advantage of the system of boarding the enemy's fleet, which was not thought of by the Carthaginians, the latter were driven from the sea and disaster followed to Carthage. Nation after nation has risen in power and might and has gone down. And why? They all had liberty; they all had their parliaments. The statesmen of ancient Greece would put to blush the eloquence of this parliament here to-day. Gifted as is the First Minister, with his nickel-plated eloquence, he could not hold a candle to the orators of ancient Greece. In the Roman Senate addresses were delivered which are still the wonder of the world. These men had liberty as we have liberty, they had education as we have education, they had religions and creeds galore, they had temples and churches and colonies, they had sister nations, but they have all vanished. And why? They began to live on their past records, they became self-important, they became wealthy—and gentlemen on the other side of the House tell us that the chief ambition of a nation is to become wealthy and opulent. As they became wealthy they became impotent, they neglected the principles of liberty, they centralized, they became sister nations instead of being part and parcel of the one great nation; they did not understand the principle of decentralization in non-essentials, while retaining control in a central government over matters of great national character. They forgot that eternal vigilance is the price of liberty; they did not realize that while it takes a thousand years to form a state, an hour may lay an empire in the dust. Shall we, in these days, forget our duty to the empire and to humanity; shall we embrace the spirit of militarism which has been the bane of many nations, instead of upholding the principle of democratic military training under which every citizen will do his duty to the state, by which every boy of ten years and upwards shall be trained to shoot and every boy of fourteen and upwards be trained to command his company. Shall we not place ourselves in the position as we can easily do, of being able to put a million men in the field, each one of whom would be a good rifleman. Shall we not place ourselves in an inpregnable position in Canada, and thus become a tremendous strength to the motherland in time of war. Our duty is to unite in one great imperial federation. Oceans no longer divide, the genius of man has overcome distance, and ships can traverse the ocean as rapidly as trains can cross the land. If you want to blockade the Canadian Pacific railway between here and Winnipeg all you have to do is to blow up a bridge on the north shore of Lake Superior, but you cannot block the pathless ocean against the traffic of ships of commerce, or ships of war. I maintain, Sir, that for the benefit of humanity, and the building up of the empire, our duty is to stand shoulder to shoulder in a union of the whole empire. It is said that in the course of time the sun must go down on the British empire. I am not a prophet, nor the son of a prophet, but I make this prophecy; that if the sun ever does set on the British empire, it will rise next morning on the empire of Greater Britain.

(Translation.) Now a few words to the Prime Minister and to my fellow citizens in the province of Quebec. The population of that province is the offspring of a race whose name and practice are always in favour of liberty, 'La belle France' is but another name for freedom and loyalty.

As in England the Normans and Huguenots were the best citizens amongst the British nation, so the Frenchmen in Canada, at every period were characterized by all the virtues of good citizens; that is, they are characterized by integrity, honour, energy and enterprise; they are also thrifty, witty and courageous.

The political chieftains in the province of Quebec, in our two parties, do not show them the confidence they deserve.

I ask the Prime Minister to stump Quebec in order to teach the good citizens in that province that the empire of our greater Britain is to continue to give them the right they have enjoyed so far. But they must remain steady and loyal in order to maintain under all difficult circumstances and against any danger, the integrity of the British empire and the majesty of the Union Jack.

Mr. HUGH H. McLEAN (Sunbury and Queens). Mr. Speaker, this question, which is one of the greatest questions that has ever been brought before this parliament, has been so thoroughly discussed that it is difficult for one now speaking to bring forward any new matter. I did hope that this great question would be discussed without party feeling. I did hope that the two great parties in parliament, having passed the resolution of last session, would have united in carrying it into effect. As a new member, I must say that I do not like the reflections that have been made by the hon. members of the opposition on the right hon. leader of the government and on members of the government. Surely, Mr. Speaker, the hon. gentlemen do not think

that the right hon. leader of the government is disloyal. I do not believe that members of the government party are disloyal. Since I have been here I have not heard one sentiment of disloyalty pronounced by any hon. gentleman or seen any such sentiment given effect to. I know that the members of the government party are loyal, and I know that every member of the opposition is loyal. I believe that we have in the right hon. leader of the government as loyal a man as we ever had in Canada, and a great statesman. I believe that we have in the hon. leader of the opposition a gentleman of the highest integrity and character, and a loyal man. Therefore, I say that it is beneath the dignity of any member of this House to give utterance to sentiments impugning the loyalty of any gentleman here present. I am loyal; I am a grandson of a loyalist. I may say further that I am an imperialist. I say that, because I have heard a number of members declare that they were not imperialists. It has also been asserted here—what I never thought would be said in parliament—that the right honourable leader of the government was against sending men to South Africa. Unless the government at that time had responded to public sentiment, and sent men to South Africa, so far as I am concerned, and so far, I believe, as every man in the maritime provinces is concerned, they would not have had one supporter. But I cannot find that there was any holding back on the part of the right hon. leader of the government in that matter. I find that the right hon. gentleman left on the 7th of October for Chicago and returned on the 12th. I find that the Boer ultimatum was issued on the 9th of October, that it was rejected on the 10th, and that war was declared on the 11th. I find that Sir Wilfrid on the 12th of October declared that he would send a contingent to South Africa even if his government were defeated in consequence thereof. Then I find that on the 13th of October, an order in council was passed to send a contingent; and it reflects great credit on the Militia Department that within such a very short time the contingent was recruited, equipped and sent. At that time no regular regiment, supposed to be ready for service, was able to get ready and sail any more quickly than the contingent we raised, equipped, armed and put on ship-board. But our hon. friends of the opposition, who have given expression to such ultra-loyal feelings, cannot have forgotten what was stated by Mr. Bourassa, in a debate in this House in 1906. Mr. Bourassa, who is now, one might say, the Moses of the Conservative party in the province of Quebec, stated this on page 98 of 'Hansard' of that year:

Mr. H. H. MCLEAN.

My attitude regarding the South African war was that observed by Sir John A. Macdonald in 1885, when he refused to the British authorities the right to enroll men in Canada for the British army in the Soudan.

Let hon. gentlemen of the opposition take that to their hearts and what do they think of it? What a howl they would have made if that action had been taken by any man on the Liberal side! While they sat under it quietly and without a protest at that time, I am satisfied that the gentlemen who compose the opposition in this House to-day would not support a policy of that kind. Any member of the opposition who would declare such a policy to-day would be almost driven out of the party. I am sure that any man on the government side would be. But I will go on and read further what Mr. Bourassa said:

My attitude on that question was the same that Sir Charles Tupper took in 1893 when he said in Winnipeg that the idea of basing a closer union between Great Britain and her colonies upon the principle of unity in defence of the empire, was a false one, that Canada had done all she could do, all that she ought to be forced to do for imperial defence, when she fortified her own territory and developed her own resources by building railways in the Northwest and giving communication to British troops between England and Asia.

Mr. MEIGHEN. May I ask the hon. gentleman if he takes the responsibility of the correctness of Mr. Bourassa's statements?

Mr. HUGH H. McLEAN. There is no doubt that the statements made there are correct. If they were not correct, why did not some of the gentlemen on the opposition side at that time get up and deny them? The statements were made on the floor of the House and were put in 'Hansard,' and have never been denied. I have made inquiries, and I find that these statements are absolutely correct. I defy any hon. gentleman of the opposition to say that the statement made by Mr. Bourassa as regards the action of Sir John Macdonald in 1885 was not correct.

Mr. GEO. TAYLOR. Bourassa was then the Moses of the great Liberal party, was he not?

Mr. HUGH H. McLEAN. He was not loyal enough for us, so we gave him to you. He was not loyal enough for us, because he was against our sending troops to South Africa, and so we handed him over to your party. But I do ask, why refer to irrelevant matters of that kind? Every one knows that Sir John Macdonald was a loyal man, that Sir Charles Tupper is a loyal man, an ultra-loyal man. Can there be any doubt that the right hon. the leader

of the government is a loyal man, and that the members of the government and those supporting the government, are just as loyal as any one in opposition? Can there be any doubt that, in case of emergency, in case England wanted our assistance, there would be any man on the government side who would hesitate to give it?

Mr. COWAN. May I ask my hon. friend a question? Is independence the goal of his aspirations?

Mr. HUGH H. McLEAN. It is not. My great grandfather fought with the loyalists, and when my hon. friend from Victoria and Haliburton (Mr. Hughes) condemned the action of the loyalists in making the sacrifices they did, in fighting for their king at that time, and then coming to this new country, rather than remain under a foreign flag, I say this is a matter which has nothing to do with the subject under debate, but which I would like to discuss with him at some other time. The Union Jack is good enough, Mr. Speaker, for me, as it was good enough for my forefathers, and I hope to live and die under the old flag.

Now, will you allow me to refer to the resolution of the 29th of March, and in that connection, I want to say this. I want to say that I, as a young member, am proud of the stand which was then taken by the right hon. the Prime Minister and the hon. the leader of the opposition when they joined hands for the empire and agreed to a resolution whereby Canada showed her readiness to offer naval assistance to Great Britain. I listened with great pride to the speech made by the hon. the leader of the opposition in London, the 1st of July last. When he said he was true to that resolution, passed on the 29th of March, and that he hoped Canada would soon have a navy of her own, that declaration aroused tremendous applause from the very large number present. The fact that Canada was going to organize a Canadian navy was the one thing which every man you met in Great Britain seemed to approve of. I listened, with approval, to the splendid speech made by the hon. the leader of the opposition on January 12. He then said:

> We have no Dreadnought ready; we have no fleet unit at hand. But we have the resources and I trust the patriotism to provide a fleet unit or at least a Dreadnought without one moment's unnecessary delay.

I agree with the leader of the opposition with regard to the fleet unit. I say that while the providing of these cruisers is a splendid action on the part of the government, we ought to go still further, and I would like to see one or two cruisers of the 'Indomitable' Dreadnought type provided.

Some hon. MEMBERS. Hear, hear.

Mr. HUGH H. McLEAN. But referring to that proposition, my hon. friends who say, 'hear, hear,' will not be pleased with what I am going to say now. I am in favour of the greatest assistance being given Great Britain. The reason a fleet unit should be provided is that two cruisers and one 'Indomitable' would be better than five cruisers without an 'Indomitable.' However, I am perfectly prepared to take the advice of the admiralty in this matter; and I hope that it will not be very long before we will have an 'Indomitable' and cruisers of the highest type. But, let us appreciate what is being done. First, we are providing four Bristols of the highest type of cruisers afloat. It is true that none of them have been put in commission yet. The Bristol is supposed to be put in commission this year. She is to have a speed as high as 27 knots per hour, is to be armed with 10 4-inch guns and 2 6-inch guns, in addition there will be three torpedo tubes, and as regards the cruiser type, she is to be absolutely ahead of any vessel of that class. The destroyers are to be of the very latest pattern. So that as regards cruisers, with the exception of the armoured cruisers of the 'Indomitable' type, a Bristol can handle any other vessel she may be brought up against. In case of war, we know that Germany would undoubtedly send out privateers. That great authority, Lord Charles Beresford, has said that in the hold of every tramp vessel belonging to Germany are guns which they can mount in case of need. So that having that class of the fastest cruiser, we can more than hold our own against any vessel except those of the 'Indomitable' type.

Again, as regards the furnishing of an 'Indomitable,' the proposition of the hon. the leader of the opposition to simply give money to the British admiralty to be spent as they may see fit, does not appeal to me. Here are his words:

> Giving the admiralty full discretion to expend the said sum at such time and for such purpose of naval defence as in their judgment may best serve to increase the strength of the empire and thus assure its peace and security.

Surely, the hon. gentlemen belonging to the opposition should not approve of that policy. It seems to me a cowardly thing to simply hand over our money and not our men, and not to have any vessel of our own to take part in the fight. Not having any vessels of our own manned by Canadians, but simply sending over our money to the admiralty to invest in ships, would take from us that immediate, intimate interest in our contribution to the navy which we otherwise would have. It is quite clear that the British admiralty cannot furnish the armament and the guns for

more than eight Dreadnoughts a year. It was supposed that it would be impossible for Germany to furnish the armour and guns for more than four Dreadnoughts. Krupps have increased their resources by more than double, and they are now able to furnish armour and guns for eight Dreadnoughts. Therefore when my hon. friends talk about sending over this money for Dreadnoughts, let me tell them that the naval policy of 1909, which means the furnishing of eight Dreadnoughts is the limit of the yards of England and of the power to equip and furnish armour for those vessels. Therefore, Britain would only be able to keep our money. Let us see what has been stated by the admiralty in this matter. At page 23 they state:

It was represented on the part of the admiralty that it would be difficult to make any suggestions, or to formulate any plans, without knowing approximately the sum of money which Canada would spend. The Canadian representatives then suggested that two plans might be presented: one incurring an annual expenditure of £400,000, and the other an expenditure of £600,000, omitting in both cases the cost of the present fishery service and hydrographic surveys, but including the maintenance of Halifax and Esquimalt dockyards, and the wireless telegraph service, estimated at some £50,000 a year.

Then, they say:

Taking, first, the plan for the expenditure of £600,000, after discussion the admiralty suggested that the Canadian government might provide a force of cruisers and destroyers comprising four cruisers of improved 'Bristol' class, one cruiser of 'Boadicea' class, and six destroyers of improved River class. As regards submarines, it would be advisable to defer their construction because they required highly-trained and specialized complement.

There we have the advice of the admiralty as regard the cruiser class. Is there any hon. member within the sound of my voice, or is there any man knowing the position who would favour the advice attributed to the admiralty that a fleet unit if furnished by Canada should be stationed in the Pacific?

Mr. SAMUEL SHARPE. Did the admiralty suggest that?

Mr. HUGH H. McLEAN. They wanted suggestions, and when the matter was discussed, they say: Give us the fast cruisers, the scout type, give us destroyers; place so many on the Pacific and so many on the Atlantic because we recognize that with your double sea-board that will be better than to have the unit type. I have said, and I say it again, that personally—though I may be extravagant in this matter—I would be in favour of having a full unit on the Atlantic and, when we can afford it and can get it, an Indomitable also on the Pacific. That is a matter which, I say, will come; it is sure to come by the time we have men to put on the Indomitable. Do you think that Canada is going to build an Indomitable and have it manned by Englishmen who are hired to do our fighting? Not a bit of it. We will have a training ship and put our men aboard and have them trained. In three or four years they will be thoroughly qualified to furnish the crew of a first-class fighting ship. Then we shall have a Canadian ship, manned by Canadian seamen and manned, in case of a fight, by Canadians. That is the policy I would like to see adopted, and that is the policy I hope will be adopted and carried out. Let me call the attention of the House to a letter written to the 'Times' by Mr. Macaulay, who is an authority of naval matters. He puts very plausibly the reasons why a fleet unit on the Pacific would not be advisable. He says:

A cruising range of 14,000 miles would evidently entail an enormous expense, and very 'intermittent training' especially as regards the terminal units. . . . The method you advocate would again be better applied if the Canadian naval force were in the Atlantic, not on the Pacific.

He says also:

The nearest British port of any naval value to the west coast of Canada is 5,000, 6,000 miles away. This distance is only traversible by the largest war vessels (cruiser or battleship) at low speed. . . . The connection of the Canadian fleet with the rest of our naval forces, would be entirely dependent in war on the good-will of the only powers that, who for very many years at least, can possibly threaten her Pacific coast. In a war with the United States, a Canadian fleet, placed as you suggest, would be at once isolated. In a war with an east-Asian power, the naval defence of the west coast of North America can best be carried out by a fleet operating from Singapore and Hong Kong.

If the opinions of this gentleman, for the reasons given, commend themselves to the judgment of hon. members present, they can take them; certainly, they commend themselves to me.

Now, I wish to refer to one of the leading admiralty authorities of England as regards this question of cruisers. His article was published in the 'Fortnightly Review' for May, 1908. He says:

I advocate India and the colonies owning their own scouts, destroyers and submarines, as it would be out of the question for these types of small craft to be sent out when once war had been declared, no matter how pressing might be the need for them.

Other advantages might be enumerated as follows:—

1. Great usefulness at comparatively small expense.
2. As the professional knowledge required is much the same in all the types of vessels here advocated, the officers and men would undergo a uniform standard of training, and would be able to take service in any type of colonial ship or boat.
3. The officers would become highly trained specialists in practically one particular branch of naval warfare, and would possess an intimate knowledge of the pilotage of their own territorial waters.
4. If the scouts and destroyers were fitted with turbine machinery and oil fuel, this method of propulsion, being very simple and easily worked, would mean comparatively small complements, both below and on deck, thus enabling higher wages to be paid, and thereby ensuring a good class of men entering the service.

There is the opinion of one of the highest naval authorities in England declaring that this is the correct policy. There can be no doubt that it is the correct policy. As regards the guarding of our coasts, scouts, cruisers and that class of vessels are the kind we want for the purpose. As I have said before, they could beat any vessels below the armoured cruiser class or the protected cruiser. That being the case, I say that if we have, in addition to that, a cruiser of the Indomitable type we get practically clear of any danger through Germany sending to our coasts vessels below the Indomitable type in case of war. Take, for example, the Atlantic coast; that coast is very easily guarded. The entrance to the Gulf of St. Lawrence is Belle Isle Straits, which are narrow and 40 miles long. One or two destroyers could guard that entrance. The other entrance is Cabot Strait, between Cape Ray and Cape North, that is between Cape Breton and Newfoundland. With two destroyers or a scout cruiser it would be difficult for any privateer or any vessel, except one of the very largest class, to get through that entrance. Then practically you have, after leaving Quebec, about 600 miles of protected water before the vessel would get out on the high seas. When it was out on the high seas, as is pointed out by Mr. Hamilton in some very clever articles he has been writing in the 'University Monthly,' she would be comparatively free from attack, as to find her would be like hunting for a needle in a hay stack.

Then take the Bay of Fundy. The entrance there is only twenty miles broad. Vessels have to keep clear of Muir Ledgese, they have to pass between Gannet Rock on one side, Brier island on the other, so that the entrance there is so narrow that it can be easily guarded and protected. Therefore, I say that with a very little expense, because Halifax with the guns she has is well protected, our eastern coast could be defended. We found at Santiago at the time of the war between Spain and the United States that a few guns on land were more effective than four or five times their number at sea. The obsolete guns which the Spanish had at Santiago were able to keep at bay the whole American fleet. Therefore, I say that we will be able to do what the admiralty want us to do, that is to effectually protect our own coast line and effectually guard our commerce until the ships get on the high seas.

A great deal has been said about the 'German Scare.' I may say that I do not agree with many of my friends on the government side that this is a scare. As far as I can find by looking into this question the action taken by Germany is a very serious one. Unless England now carries out the policy she has adopted, Germany would in a few years become strong enough to force the issue with England, and perhaps might make it very doubtful. But the result is that England is aroused now, last year four vessels were laid down and this year eight will be built. I want to call attention to the class of vessels England is now building. We have heard about the Dreadnought class, that is a vessel of 17,000 tons, with 21,000 horse-power, armed with ten 12-inch guns. Now they have the super-Dreadnought type, a vessel of 22,000 odd tons with greater horse-power, and some of them are proposed to be armed with 13·5-inch guns. They are laying down this year four of the largest class of super-Dreadnoughts. Let me call your attention to one vessel that England is laying down this year, that is what is called the Capital cruiser type. This vessel has over 80,000 horse-power. Think of that! She will have a speed of over thirty knots, and as you all know, a knot is one and one-eighth miles. She is to be armed with twelve 13·5 guns, the largest now being made. She is to be armed also with a number of 10.6-inch guns and a number of 4-inch guns. A vessel of that class with 80,000 horse-power, armed as she is and with her great speed would be practically invincible.

Another type that England is now laying down is called the Destroyer type. It is called a destroyer of destroyers. Vessels of this type have a speed of over thirty-eight knots. The 'Tarter' lately made a record of over forty knots. She is armed with four 4-inch guns, and has a torpedo tube. Here is a vessel capable of doing tremendous execution in case of trouble. These are the newer types. We remember that since the time of the 'Admiral' class every type of battleship has been made larger until we came to the Dreadnought type. Since then, we are go-

ing on to a still larger type. The Dreadnought type was 17,000 odd tons. We have come now to the super-Dreadnought type. After that we come to the Capital Cruiser type, an improvement on the Indomitable type. The 'Indomitable' is, as you know, a cruiser with great speed. She has lately made a record of twenty-nine knots. She can maintain a speed of twenty-seven knots. Three of that type have been built and the fourth, the Indefatigable, will be completed next February. The 'Lusitania' and 'Mauretania' were built with a speed of twenty-seven knots. They are capable of carrying 40,000 tons. In case of war these vessels, with the two Indomitables would be practically free from any danger of capture, and would be able to keep up ocean communication with England. We know that England, in case of war, will depend for her supplies on the colonies, or on Canada. Her position is something like that of a lighthouse, supplies must be taken to her. She has not at present supplies sufficient to keep the people there for more than three months. Therefore the lines of communication must be kept open. You will thus see the necessity of our furnishing the necessary naval protection, not only to ensure the safety of our commercce, but to keep open the line of communication with Great Britain in case of war.

Speaking of the German scare, I shall not discuss the recent German Naval Bill. It will be sufficient to refer to the Naval Bill of 1908. That provided for three battleship and one armoured cruiser to be laid down each year, and from 1912 to 1917 one battleship and one armoured cruiser, from 1908 to 1917. two protected cruisers and twelve destroyers each year. We know that in the event of a fight it is necessary that we should have at least as many as Germany, but England must have more Dreadnoughts than Germany. You can call it a scare, or you can call it what you like, but these are facts that have to be met, and there is the further fact that there is a strong feeling in Germany at the present time against England. People are assured, and I feel convinced of the fact, that when Germany feels she is strong enough to quarrel with England there will be one of the greatest wars that has ever been known. There is no use of blinding ourselves to these facts. There is no use of singing the Swan Song and saying that there is no danger. I hope there will be no danger. I believe that England, now being thoroughly aroused, will be able in this ship-building war to build the highest class of vessels faster than Germany can build them, and in greater number. We know from the German naval policy exactly what she is going to do and exactly what she will have by

1917. As regards Germany building these vessels there can be no question about it. She has demonstrated her ability not only to turn them out according to her naval programme, but she will turn them out before the time specified. Therefore, it is fair to assume that her naval programme will be carried out by the time she states it will be. We cannot rely on the good nature of the Germans. Germany is a business nation; Germany is a warlike nation. Germany will be prepared like England to take any advantage she can. If England got into trouble Germany would be there to take advantage of it. Nothing could avail with Germany if she thought she could succeed in a war with England. The Emperor of Germany is acting now on the principles laid down by Frederick the Great. Frederick the Great laid down for the future guidance of the Emperors of Prussia this maxim:

> Constant attentions must be paid to hiding as far as possible one's plans and ambitions. Secrecy is an indispensable virtue in politics as well as in the art of war.
>
> If possible the powers of Europe should be made envious and be set against one another in order to give occasion for a coup when opportunity offers.
>
> It is one of the first political principles to endeavour to become an ally of that one of one's neighbours who may become most dangerous to one's state. For that reason we have our back free as long as it lasts.

Reference has been made by some hon. gentleman who has spoken to the fact that Germany strikes with secrecy. She strikes when her victim is believed not to be ready, as witness Silesia, Denmark, Austria, France. The pretext may be a forged telegram as in 1870. The ambitions of the Kaiser are boundless. He seeks to dominate the continent as a first step to dominating the world. When hon. gentlemen speak of the peaceful intentions of Germany, let them remember what has taken place within the last four years. Thrice in four years has Germany threatened war, and in two of these instances she has achieved her aim. In 1905 she told France that the affairs of Morocco—a country in which she had only the vaguest interest—must be submitted to an international conference. Delcasse, the foreign minister, refused; finally he was forced to resign and France gave way. Later in the same year Great Britain's support enabled France to withstand Germany's threat in the Cabsablanca incident in Morocco. The latest instance of German aggression was the seizure of the two Turkish provinces of Bosnia and Herzogovina by Austria without the consent of the signatory powers. Austria is in the Triple Alliance, and Italy is called the cork leg of the alliance. Austria will have to participate in case of war with Germany, and she is given this additional territory

as the price of her alliance. We know also that when the Navy Bill was being discussed and the British government tried to come to an accommodation with Germany, the Kaiser and his ministers would not negotiate. By way of reply to Great Britain's overtures looking to a scaling down of armaments, Germany enlarged her naval and military appropriations. These appropriations still increase. For 1910 they are $312,000,000, or $43,000,000 more than last year. The outlay on the navy alone for next year will be $111,000,000, by far the largest in the country's history. The Germany government stands pledged to a policy, by Act of parliament, to add four Dreadnoughts a year up to 1912. That is the adopted policy of the nation.

I wish to refer now to a statement made by the gentleman who represents the 'Times' in Paris. I am told that he is a gentleman of the highest standing and one who would not make a statement which he did not believe to be correct. He says:

> Politicians observe that whenever the question is raised of reducing armaments, whether on land or at sea, and whether the initiative comes from the Tzar of Russia, or from the British Prime Minister, Germany is always the first to refuse, with a shrug of the shoulders, and a loud German laugh.

The doctrine of English naval supremacy is one that William the Second is determined to overthrow. It has been said, and I have heard it stated, that Germany could not afford to build these vessels, that she could not afford to go to the enormously increased expense. I have a statement here made by her Finance Minister. He says that the expenditure on the army and navy per head in Germany is 18·95 marks and in Great Britain 29·23 marks. That means that Great Britain's army and navy expenditure is almost 60 per cent larger than Germany's. Germany's military and naval burden is carried by a larger number of people. The vastness of her unexercised resources may be seen from the fact that Professor Conrad tells us she could raise an additional £50,000,000 per year by increasing only her indirect taxation to Great Britain's level, leaving her more direct taxation unchanged. It is only necessary to refer to this financial statement to show that the position of Great Britain is serious. Her taxation is the heaviest in the world. Reference has been made by the hon. gentleman who has spoken to the position of Germany's great army and the hon. Minister of Railways and Canals (Mr. Graham) told us the other day of the Kiel canal that he saw when he was in Germany last year. The Kiel canal is 60 miles long. That canal is being enlarged so as to accommodate the largest battleships. An enormous amount of money is to be spent so that she can have communication between the North Sea and the Baltic.

Now, Mr. Speaker, in considering the causes which led to the rise and fall of nations, we find that the first requisite to ensure national greatness is the national sentiment, that is, a patriotic feeling in the individual, and a general confidence in the future of the state. This spirit naturally exhibits itself in military powers, in the determination of placing country first, in being willing to undergo hardship, privation and want, and even to lay down life on behalf of the nation. There is no record in history of any nation obliterating itself and giving up its nationality for the sake of making a few cents a dozen on its eggs or a few cents a bushel on its grain. The fallacy that peace and progress are synonymous, that war is retrograde, has lately been in vogue. This doctrine is peculiar to a section of the British race, but it has found few followers in any other great nation. We find around us nations armed to the teeth, watching an opportunity for dividing among themselves this, our empire, and it is the preacher of this galling, senseless doctrine that may yet open the door for them. Wherever civilization has found its way, there it has been carried by the sword, and nurtured by Christianity. Every nation that has risen, has carved its way up by the sword, and retained its position only by a preparedness with force of arms. When once its weapons have been laid aside, then has been the signal for decadence. Ruskin puts it as follows:

> We talk of peace and learning, and of peace and plenty and of peace and civilization, but I find that they were not the words which the muse of history coupled together:
>
> That on her lips the words were: 'Peace and sensuality, peace and selfishness, peace and death.' I find in brief that all great nations learned their truth and word and strength of thought, in war; that they flourished in war and wasted by peace.

Trained by war and betrayed by peace. In a word, that they were born in war and expired in peace. The pages of history show the following nations have expired in peace: Portugal, Holland, Sweden, Norway, Greece. Japan, a nation born yesterday, she could to-day, by force of arms, encompass the overthrow of the whole five combined.

Thus were these nations betrayed, standing as beacons to guide us, the proud possessor of an empire, an empire entering upon a period of peace adoration which is foreign to the clime of military races. Other nations have recognized that the greatest evil, attendant upon civilization, is the abhorrence of war, and they have, in time, taken the steps necessary to counteract the dislike for fighting, by getting ready to fight. Germany, through her

thrift, intelligence and the prosperity of her people, illustrates to mankind the advantages of training her citizens, in their youth and manhood, to the use of arms. The habits of discipline and the order and cleanliness of person. It is recognized today as a national characteristic, that the womanhood of that nation look with reproach upon men ignorant of military training. Germany is well to the fore in all that belongs to the twentieth century civilization. The greatest lesson of all we learn from China. There is a nation of 3,000,000,000 to 4,000,000,000 of people. Honest traders, inoffensive, and unaggressive. A nation which, from its physical character, the industrious habits of its people, and its natural resources, should have been the last to arouse hostility. It neglected its defence on water, and we now see the result. The nations in possession of navies are trying to tear it to pieces and divide the spoil. Do we hear of any of these nations being worried by honest scruples? No. The whole dispute is over the division of the spoils.

Reference was made by the Minister of Railways to the splendid internal canal system of Germany, and all that has been done within the last ten years. But, now that England is aroused we need not fear any danger. We know very well that with England's resources she is now building at the rate of eight ships per year, and that she will never again allow Germany to approach near the danger point.. The statement of some hon. gentlemen that there will be a war in a year or two seems to be absurd. It has never been stated by any naval authority in England that Germany could hope to enter into successful war with England even in the year 1912. Up to that date Germany would certainly be far outclassed. We must further remember that although Germany may be building these new ships she has to take men from the farms to man them. Germany has no large coast line to support a maritime people, and the men for these ships are taken by a system of what we would call force. They are forced to serve in the German navy, as they are forced to serve in the German army for a number of years, and while there is no doubt that after a time they do make good seamen, yet it is fair to say that even after these new ships are built it will take some years before the men are trained and before she is able to go to war with England. Now, let me point out to the House that in the year 1912, which it is prophesied by some may be the year of danger, Britain will have 22 Dreadnoughts, super-Dreadnoughts and Dreadnought cruisers; her naval programme for 1909 provides for the building of eight of the super-Dreadnought

type. The Navy League annual shows that in 1912 England will have 22 Dreadnoughts, super-Dreadnoughts and cruisers, as I have already mentioned. But look at the improvement in these ships. The first Dreadnought was 17,900 tons and the last four ships of the super-Dreadnought class are to be of 25,000 tons. The first Dreadnought had 23,000 horse power, but the super-Dreadnoughts are to have 45,000 horse power and a speed of 23 knots instead of the Dreadnought speed of 22·4. They are to be armed with ten 13.5 inch guns and fourteen 6 inch guns. I might give a short description of these guns as follows:

The 16·25-inch gun.

The principal details of the 110-ton gun are as follows: It has a bore of 16¼ inches in diameter, and is 43½ feet long. Its projectile is 1,800 pounds in weight, and is propelled by a charge of slow-burning cocoa powder weighing 900 pounds. This gun can only be fired at the rate of one round every seven minutes, and the life of it is not estimated to exceed 100 rounds. Now obselete.

The 13·5-inch gun.

The 13·5-inch gun throws a projectile weighing 1,250 pounds, with a muzzle velocity of 2,016 feet per second, and with a firing charge of 630 pounds of powder has an energy of penetrating 25 inches of wrought iron at 3,000 yards.

The 12-inch gun.

Next in order we come to the 12-inch gun, which, with various modifications of design, remains the standard heavy British naval gun of the present time. The total length of this magnificent gun is 617·7 inches. The initial velocity of its projectile is 3,010 foot-seconds, which gives a muzzle energy of 53,400 foot-tons; the effective range against an average modern armoured warship is computed roughly at about four miles, and the extreme range is 25,000 yards, at which limit the remaining velocity of the shell would be so relatively small as to render it comparatively harmless save by virtue of its own weight.

When we remember that the latest British Dreadnought type of battleship are armed with ten of these mighty pieces of ordnance apiece, the tremendous concentration of their powers of aggression makes contemplation of the future naval battle simply appalling.

The 10-inch gun.

The 10-inch gun is a weapon that has been fitted to a few of our battleships, although it has never found particular favour amongst the gunnery experts of the British navy. The Vickers' pattern of this weapon, which is largely used in the Russian, Italian, Japanese, and United States navies, is 34·5 tons in weight, has a length of 45 calibres (464·9 inches, including breech-chamber), and throws a projectile of 500 pounds, with a muzzle velocity of 3,000 foot-seconds, and a muzzle energy of 30,990 foot-tons.

The 9·2-inch gun.

Continuing to follow the category of primary weapons in the order of their size, we come now to the 9·2-inch gun, which is the most popular and in its way the most useful piece of artillery in the British fleet. It is

to be found alike in our battleships and big cruisers, and, whilst it lacks the shattering power of the heavier weapons against modern armour, yet its remarkable penetrative qualities, coupled with its rapid fire delivery—three rounds per minute—renders it a deadly effective gun. The Woolwich pattern, Mark X, of this type, weighs 28 tons unmounted, is of 46·6 calibres in length (extreme total 442·35 inches), and has a muzzle velocity of 2,800 foot-seconds with a muzzle energy of 20,685 foot-tons. The projectile weighs 380 pounds, and has a striking power at a range of 3,000 yards equal to carrying it through 25 inches of wrought iron.

The 7·5-inch gun.

The 7·5-inch gun, of Vickers' wire-wound pattern, weighs 16 tons without mountings, is 50 calibres long (extreme length 386·7 inches), and has a muzzle of 3,007 foot-seconds, giving the projectile a muzzle energy of 12,540 foot-tons.

The 6-inch gun.

The 6-inch gun has been said, not inappropriately, to mark the strict limit to the quick fire series, although not officially so regarded. But its projectile of 100 pounds in weight is the heaviest that can be man-handled, and the result is that the weapon can be fired at the rate of twelve rounds per minute. Indeed, nothing but the necessity of waiting for the recoil to spend itself restricts the rapidity of fire delivery with the 6-inch piece. The latest (1908) Elswick pattern weight 8¾ tons, is 50 calibres in length (total over all 315 inches), and has the remarkably high muzzle velocity of 3,050 foot-seconds, with a muzzle energy of 6,492 foot-tons.

The 4·7 inch, the 4 inch and Small Q. F. Guns.

The biggest and most familiar type of naval 'mosquito' armament is the 4·7-inch. gun, immortalized by the memorable part it played in the salvation of Ladysmith. This weapon in its latest type weights 3·27 tons, is 45 calibres in length, and throws a shell 45 pounds in weight, with a muzzle velocity of 2,925 foot-seconds, and an energy sufficient to penetrate 8·6 inches of wrought iron at a range of 2,000 yards. But excellent as this gun has proved itself, it has been quite supplanted as a light quick-firer by the 4-inch, wire-wound pattern. This is a piece of ordnance of extroardinary range and penetrative powers for its size. Its weight unmounted is 2,018 tons, and its length 50 calibres (giving an extreme measurement of 208·45 inches). It discharges a projectile 31 pounds in weight at a muzzle velocity of 3,030 foot-seconds, and with a degree of energy equal to penetrating 16 inches of wrought iron at the muzzle. The fire delivery of this gun is estimated at 15 rounds per minute. The 3-inch. naval gun is, strictly speaking, the smallest weapon which can legitimately be classed as big warship ordnance. Below this we come to mere popguns, throwing 6 pound and 3 pound projectiles, and machine guns, which rattle forth a hailstorm of 1·457 inch. bullets at a rate of 300 rounds per minute. These weapons are really designed to repel boat attacks, and within the limits of their effective range would prove very deadly. The 3-inch. gun referred to above, in its latest pattern (1908), has a length of 50 calibres (156·9 inches over all), weighs 19 cwts. unmounted, and throws a projectile of 12·5 pounds in weight, at the rate of 25 rounds per minute, with a muzzle velocity of 2,700 foot-seconds, and a penetrative energy equal to passing through 9·65 inches of wrought iron at the muzzle.

The four super-Dreadnoughts and capital cruiser ships are to be laid down in April, 1910, and they are to be put in commission in March, 1912. I wish also to refer to another authority, and it may fairly be said that this authority is not prejudiced. The authority to which I refer is Pulsifer, who, in the United States navy book for 1909, gives the following as the comparative strength of the navies of Great Britain and Germany at the present time.

Great Britain.	Number.	Tons.
Battleships (10,000 tons and over)..	60	941,450
Coast-defence vessels..		.....
Armoured cruisers..	40	506,350
Cruisers above 6,000 tons.. ..	18	176,250
Cruisers 6,000 to 3,000 tons.. ..	48	214,700
Cruisers 3,000 to 1,000 tons.. ..	24	51,675
Torpedo-boat destroyers..	168	81,356
Torpedo boats..	69	15,014
Submarines..	67	19,078
Total..	494	2,005,873

Germany.	Number.	Tons.
Battleships (10,000 tons and over)..	32	436,424
Coast-defence vessels..	8	32,378
Armoured cruisers..	12	151,693
Cruisers above 6,000 tons..		.....
Cruisers 6,000 to 3,000 tons.. ..	26	105,293
Cruisers 3,000 to 1,000 tons.. ..	17	37,626
Torpedo-boat destroyers..	97	49,859
Torpedo boats..	33	5,819
Submarines..	8	1,600
Total..	233	820,692

When we come to the total number of ships and the total tonnage we find that England has of first-class battleships, armoured cruisers, torpedo boat destroyers, all effective 494 with a tonnage 2,005,873, and Germany has a total of 233 ships with a tonnage of 820,692.

From this it will be seen that at the present time the British navy is superior to the German navy by more than the two to one standard. It is therefore, fair to say, that at the present there is no danger from Germany as regards her navy, either now or in 1912, when these vessels are built, and that in 1917, England will be better prepared than ever to cope with Germany if the need should be. But, the point I want to emphasize is this: That in 1917, Canada, instead of adopting the policy propounded by the opposition of giving money and doing nothing else, Canada in 1917 will have at least 800 first-class, thoroughly trained men for these cruisers of ours. In addition to that we will have

our naval reserve. We have in the maritime provinces a large number of fishermen who go to sea during the summer months, manning our fleet and manning largely the Gloucester fishing fleet as well. These men are half mechanics, they live at home in the winter, they are handy with tools, they are the very finest class of men for the making of a naval reserve. But hon. gentlemen may say: Oh, you cannot get these men; you cannot pay them the wages. Well, for three months in the winter these men have no employment and during these three months we can take them on a cruise to Bermuda and train them so that in four years they will be thoroughly competent to take their positions on a warship. They are skilled now in seamanship, they are hardy and brave men, and all they need is technical training to fit them for duty on a man of war. Is not that better assistance to England should she ever come to a time of stress and emergency, than it would be for us now to hand over $20,000,000, and as the resolution of my hon. friend (Mr. R. L. Borden) says: Let England do with the money what she pleases. Is it not better that we should provide first for the highest type of coast cruisers; next, that we should be training that large body of men to take their place in the fighting line; and third, that we should then be able to have one or two of the highest type of fighting vessels? I do not know but that the government are right in the policy they have adopted of not spending a large sum of money now in buying an Indomitable. It is fair to say that we should wait now until the highest class of warships is developed, and we can get the best; because when Canada purchases a war vessel, she must have the very best afloat. If a Dreadnought or super-Dreadnought of 25,000 tons, or a capital cruiser with a speed of over thirty knots, is going to be the highest type, that is the vessel we want for Canada, and the vessel we will get. We hope this great war will never occur, but if it is to come off, we must be prepared. We shall have the men trained and cruisers of the best type. Surely that would be more effective aid for England in a great struggle than to give a certain sum of money and then lie back on our oars and wait for an emergency to arise in the future. Surely that is not the stand which gentlemen with love for Canada and loyalty for the mother country should take. It is a cowardly thing for us to expect Englishmen to do our fighting. It would be like Canada saying to England at the time of the South African war: 'Here is $50,000,000; go and do the fighting for us.' Sending out our own men was the effective way of showing England that we were in earnest, and that our assistance was to the point. Some of the naval men of England absolutely believe that we could not furnish men to man or equip a battleship, no matter what training they received. That is the same old story that General Hutton put forth when he was here. I heard him say at a dinner in the city of St. John, in June, before the South African war broke out, that it was absurd to suggest that Canadians could go to South Africa and assist in that war. 'They have not had the training or the discipline,' he said. 'Why, it takes from three to five years to give the necessary discipline to a man before putting him in the fighting line. All Canada could do would be to send out these small contingents to guard the base of supplies.' The then Chief Justice of New Brunswick, Chief Justice Tuck, rose at the table and said to General Hutton, 'You do not know what you are talking about,; our men will go to South Africa, they will be in the fighting line and will be among the best fighting men there, and more to the same effect; and any one who knows Chief Justice Tuck, knows how forcible he would be. He was so forcible that General Hutton felt insulted. That was the opinion of the English military men of that time, and I have no doubt the naval men of England have a similar opinion to-day. England does not want our money; it would be a mere drop in the bucket if she had it. What she wants is trained men, and that is what we propose to give her.

Now, I have heard hon. gentlemen talk of what they call our tin pot navy. What do these gentlemen mean when they talk in that way? There is one thing sure: they have never made any reflection, nor could they make any reflection, on the men whom we propose to put on board those ships. There is not a man of position but will say that the men we propose to put on board those ships will be the best fighting material England has. In the course of a few years, not only will they be efficient, but Canada, will be proud to be represented by them in the event of trouble. Let us see what ships we propose to have. There is the Bristol, which is a new type. There is no Bristol yet in commission; but it is expected to be in commission next July. The matter of its equipment has been kept very secret; but we do know from the Navy League Annual, that she has a draft of 15 feet, turbine engines of 22,000 horse-power, that she can steam from 25 to 27 knots, that she will be armed by two six-inch quick firing guns, and ten four-inch quick firing guns. The Bristol was launched in 1909 and is to be completed in 1910. Four more of this type were ordered in November last, and are to be delivered in July and August, 1911. Of the Boadicea type four vessels are built—the Boadicea, the Bellona,

the Blanche and the Blonde. The Boadicea is in commission. She was laid down in July, 1907, and was commissioned in July, 1909. On her trial she attained a speed of 27·9 knots. Her length is 385 feet, beam 41·6 feet, draft 13·6 feet and tonnage 3,360 tons. She will be a most efficient vessel for cruiser purposes, one of the most efficient that could possibly be built. She is fitted with turbine machinery on the Parsons system, of 18,000 horse-power. Her cost will be £284,000. The ship's company numbers 263 officers and men. Our hon. friends of the opposition could not say anything against the Bristol type or the Boadicea type, the most efficient of the stout cruiser class yet built for the British navy; and when we are making a start by getting five of the best type of cruisers possible and six of the latest type of destroyers, surely it is a very good commencement. Of course, many of us would like the government to go a little faster; but one thing this government deserves credit for—this is the first time any government in Canada has ever made a step in this direction. It is the first time that the naval forces of Canada have been put into commission, so to speak. This is the first time that our great sea-faring class, the raw material of a navy, will be trained and ready in case of war. We have our land militia and know they are efficient, and now we shall have our naval militia as efficient as any class of seamen in the wide world.

Mention was made about destroyers—what are called the river class. They are fine powerful boats of from 500 to 550 tons, with a speed of 25½ knots, also armed, and the most effective class known. They will be most efficient for guarding the entrance to the Gulf and Belle Isle straits and the Bay of Fundy. Nothing could be better for coast defence than vessels of the class the government have ordered. Lord Tweedmouth, at the naval conference of 1907, said:

> You can have the most magnificent ships, guns, armour, and everything else, but if the human element is not very properly trained, your guns, your armour, and your ships are absolutely useless.
>
> The history of our navy shows that the self-sacrifice and endurance of British sailors has been beyond compare, and we believe they have reached a higher state of efficiency than has ever been known in the history of our country.

I say we have these men on our coasts, we are rich in seamen of that class, and with proper training they will be as efficient as any in the British navy. Of course we know that warships need highly trained specialists, such as gunners, engineers, wireless operators, and signal men. But, with the exception of the engineers, all that other class can be well trained in five years. In the meantime, while our young men are being qualified, we can get British officers, and we will in five years have a full complement on board these ships of Canadians, well trained men.

It is well to call the attention of the House to the sea trade of Canada, of which I have the figures here. In the year ending March 31, 1908, our export trade in home produce stood as follows:

To Great Britain..	$126,000,000
The rest of the empire..	13,000,000
The United States..	90,000,000
Other foreign countries..	17,000,000
Total..	$246,000,000

In other words:—

Total overseas..	$156,000,000
Trade by land..	90,000,000

Thus over 63 per cent of our trade is maritime. If we were to include the proportion of our trade with the United States which is done by Atlantic and Pacific coasting vessels, it is evident that fully two-thirds of our trade with the outside world is ocean-borne.

I read in the London 'Times' a speech made by Mr. Smithers, chairman of the Grand Trunk railway. Dealing with the resources of Canada, he said:

> Her railway mileage was now 24,100, exceeding that of Great Britain and Ireland by 1,000 miles. The wheat crop of western Canada last year was a record, amounting to 144,000,000 bushels, as compared with 64,000,000 bushels in 1905, and a very remarkable feature was the rapidity of the extension of wheat growing in Saskatchewan. If we took the crops of all Canada, wheat had risen from 84,000,000 bushels in 1901 to 168,000,000 in 1909, oats from 122,000,000 in 1901 to 355,000,000 in 1909, and barley from 24,000,000 in 1901 to 57,000,000 in 1909. It was calculated that the actual cash value of wheat alone to the farmers of the three western provinces in 1909 was 106,000,000 dollars. According to the president of the Canadian Bank of Commerce, the total bank clearings of the fourteen Canadian clearing-houses for 1909 were 5,204 million dollars, against 4,142 million dollars in 1908. The total value of all minerals produced in 1908, as shown by the preliminary government report, was 87,000,000 dollars. He left to the imagination the value of the timber, cattle, dairy produce, and fruit and fisheries.

In case of war, we therefore would be able to supply England with all the food she requires. And by the aid of these cruisers, we would be able to guard and protect our coasts. What a great panic would there be caused should there be any interruption of our trade with England. We know that at the time of the Spanish war, just a few vessels, obsolete vessels, created a panic, and we know that unless England could send us out coasting vessels, a privateer or armed merchantmen could simply paralyze our whole trade.

I want to call attention also to our mercantile marine. At present, Great Britain stands first in the world with 12,000,000 tons odd, Germany comes second and the United States third, and Canada at present stands ninth. But, with 70,000 more tons, Canada would pass Italy and stand sixth.

Criticism has been made regarding the building of these ships in Canada. Well, it does seem to me that that is the very best thing the government of this country could do. It excites one's ire to hear men talking about our not being able to go into this line of business. Why, we have had to bring skilled operators from other countries to start our manufactories, and Canada, in the old days of wooden ships, was able to build the best ships in the world. Scotland could not compete with her. We know that the fastest skipper ship ever built, came out of a St. John shipyard—the 'Marco Polo.' And now when steel plate has taken the place of wood, we know that we have all the raw material necessary for steel ship building and all that we require is the plant and trained mechanics. Of course, it is not possible for any private individual at present to establish a plant large enough, but on looking over the register, I find that over 600 steam vessels now on our register were built outside of Canada and that practically very few have been built here. Take the one firm in St. John, Wm. Thompson & Company; they had fourteen steel steamships—ocean steamers—built on the other side. But as against these croakers who decry our capabilities, let me point to the example of Germany, and let me point out that Japan 18 years ago did not have a steel vessel. But Japan started to build up her navy, she got one of these big contractors from Scotland and started a plant, and she is to-day not only building her own ships of war, but also her mercantile vessels, and she is doing this to such an extent that she is now eighth in the list of countries owning ships. Germany's example, however, is still more marked. The first liner built in a German yard was built in 1887. To-day, in the German yards, are built not only her own ships, but also ships for foreign powers. They have built 757 steel ships besides four warships for foreign nations, and yet only fifty years ago, her whole navy was sold at auction.

When you think that, in 1887, her first vessel was built, when you think that it was not till 1898, that she commenced really to put down the keels and build her own steel vessels, and when you find these results, this great development of steel shipbuilding, and when you remember also that German plants were started by Scotchmen—of course the Germans rapidly learned the business, and they are able to carry it on now—why should any man say that

what Japan has done, what Germany has done, what other nations have done, in establishing these building plants, we cannot do in Canada? And it is a frivolous, childish objection, it seems to me, to say that it is going to cost you more to build your ships here than in England, and it is going to take you a year longer. But is it not a great thing to know that the establishment of a steel building plant in Canada, and the building of these war vessels, eleven in all, will start the steel building industry and shipyards, providing new employment for thousands of skilled men at big wages—for these men do get big wages? We shall be starting in Canada the biggest industry we ever had. For we are a maritime nation. Men who live by the sea, as do a number of the gentlemen present, know the enormous amount of money that is made by carrying freights. They know that for us to pay out the best part of our money to foreign ships to carry our produce is not Canadian, it is not business. Surely it would be better for us, with the enormous amount of our export business, that we should carry it in Canadian ships? A further fact is that which I have already mentioned—that over 600 steam vessels on the registry were built outside of Canada. Then, there is the point that made a great impression upon me, that nine-tenths of the cost of a steel vessel goes out in wages. Of course, you understand, there is the ore to be taken from the mines. Then it has to be smelted—and we can do that at Sydney. Then there is the work to be done on the hull, and all the rest, so that nine-tenths of the cost goes in wages to those employed in connection with it. That is a marvellous fact. It shows, when this industry is started, what a great thing it will be for Canada. I do hope, Mr. Speaker, that the day will come when we shall be united in one great power, forming a federation of great nations, a confederation for the purpose of consolidating power against foreign countries, and a moral influence on all international questions. Nations can only enjoy their freedom by being able to defend it. The true policy for us is to be closely united, to be thoroughly organized and equipped, and to be able to use our whole strength to the greatest advantage for the common safety of Great Britain. Canadians desire to be free and safe. It must be in an empire to which we are attached by every tie, to which we must render effective service, if necessary give our all, for the common defence, if we are to expect the forces of that mighty empire to be at our back when our lives as free people are threatened, we should show a square front to any enemy that may attack us. We must be ready to play our part towards the security of our country, and if occasion offers, be ready to defend. For de-

fence, because every great thinker, and every man who has studied the subject, knows that we may have war upon us at any moment. Take the last words of that great statesman, Lord Dufferin, when he says:

> Nothing, neither a sense of justice, nor the precepts of religion, nor the interests of humanity, would prevent any nation from attacking us at the first favourable opportunity.

And Joseph Howe, forty years ago, wrote in his essay on 'The organization of the empire':

> Security for peace is only to be sought in such an organization and armament of the whole empire as will make a certainty of defeat a foregone conclusion to any foreign power that may attempt to break it.

Something has been said about the Monroe doctrine. Let me say one word about it. It seems to me that the plea of the Monroe doctrine has been effectually answered and the doctrine shattered. We must not forget that for us to depend on the protection of the United States would be a cowardly position for us to take—that we should wait and ask the United States to keep away any bad people that want to come against us. It would be very doubtful whether the United States would be able to do it. But what would be her price? It would mean that we should give up our independence. We should go into the United States to bear a part of the enormous expenses they are under. Our provinces would not receive the subsidies they are receiving; our industries and manufactures would no longer flourish, and perhaps she would take away from us all our raw products to manufacture them over there. That would probably be the price she would ask.

We have not received from the United States very much consideration in the past. In 1785 we had trouble with them—an invasion. In 1812 there was another invasion from the United States. Then, there was the Fenian raid in 1860, and of the enormous sum of money that we had to pay for the defence of Canada, not one dollar did we get back from the United States. There was the Trent affair; there was the New Brunswick matter, the Aristook war, when our friends in Nova Scotia volunteered to send us 10,000 men to help us. That, of course, is not a matter mentioned now, but it was very acute at that time. That trouble was over a little bit of territory they wanted to get away from us. There was also the Venezuela affair. About the 1st of January, 1896, President Cleveland issued his message in reference to a dispute between Great Britain and Venezuela. It was couched in the most hostile terms, most insulting in its character. Among European nations it would have been accepted as a declaration of war. This was approved of by the United States as a whole. From 42 out of 45 States messages of approval came to President Cleveland, with offers of the services of their militia to be used in the invasion of Canada. It shows you what we could expect from the United States in case we got into a tight corner. But we hope, of course, that we shall be able to get along in peace and quietness with the United States. We shall be able to get along with the United States while we respect ourselves and while we show that we are able to defend ourselves. I am not one of those who believe that, in case the United States attempted to invade us, she would have an easy time. With a smaller number of people we have been able to hold our own in every invasion and to beat the United States in every fight that has come up. I am not saying this as a rag to the United States, or a chip on the shoulder or anything like that, but it is fair to say that since 1785 every invasion of Canada was brought on us not by our fault, but by the aggression of the United States and without excuse. The Venezuela affair, of course, was the worst and latest. But we ought to dwell in peace with the United States, that is our desire, we have never in the past given any occasion for offence, we do not in the future intend giving any occasion for offence. We hope to live with them as friendly neighbours should live. But I repeat that I believe if it did come to an invasion by the United States they would find that we could hold our own as our fathers did before us and would be able successfully to defend ourselves.

And now in conclusion let me ask you to support the establishment of a Canadian navy, so that we can quote with truth the words of Kipling:

> Carry the word to my sisters,
> To the Queens of the East and the South,
> I have proved faith in the heritage
> By more than the word of the mouth.
> They that are wise may follow
> 'Ere the world's war trumpet blows,
> But I, I am first in the battle,
> Said Our Lady of the Snows.

Mr. ANDREW BRODER (Dundas). Mr. Speaker, I do not intend to delay the House at this hour of the night, but I do not care to give a silent vote on this question, which I consider of such importance to the country. I must say in reference to the hon. gentleman, who has just taken his seat, that I do not intend to criticise his speech very much, because it has been a speech most of which could very readily be credited to this side of the House. I must say that those who have spoken of what may be considered a crisis, in the light and jocular manner that some gen-

tlemen opposite have spoken of it have received their answer from the hon. gentleman. I must attribute to my hon. friend a good deal of courage. I can see by his speech and by his training that he is a fighting man and he has had a good deal of courage to charge the fighting man of the government, the Minister of Militia, with cowardice. I think that the Minister of Militia has said that the Munroe doctrine was of great interest to us, that it was a great protection to us and the hon. gentleman (Mr. H. H. McLean) says it is cowardice to say that. He has a fighting quality about him. He criticised the statement made that it will cost more to build a navy in Canada. To whom can we attribute that statement? His leader was the first man who mentioned that in the House, and he said it would cost 30 per cent or one-third more to build a navy in Canada than in England. I think he is a good honest critic of the other side of the House.

I do not think long speeches will build a navy, I am rather inclined to think they will delay it, but some things have been said in this House with which I do not agree. A good deal has been said about launching the country into militarism. A navy is just the opposite of militarism, and if you wish to go back in history, you will see that the battle of Trafalgar hindered the greatest military organization that this world has ever seen. What did Pitt say? That England had saved herself by her exertions and she intended to save Europe by her example.

They say that we want to build this navy in Canada. That is a laudable object, but perhaps it is the lowest possible ground on which you could put this question to-day. If there is a crisis then the most effective way of meeting that crisis is our duty, wherever it may be. I shall not endeavour to prove whether there is a crisis or not, but the prominent public men of England, of both political parties, men not apt to lose their heads in a crisis, have indicated to the world that there is a crisis. Then the duty of Canada is to assist in thwarting the purpose of whoever intends to bring to England that crisis. Does any one pretend to say that the proposal of the government will in any sense meet that crisis? Does any one pretend that a navy or dock-yard started this year in Canada for the purpose of building war vessels in the next five or ten years will meet that crisis? Does any one pretend to say that if we had our navy ready to-morrow and fully equipped it would in any sense assist to meet the crisis? If there was trouble between Germany and England—and God forbid there ever shall be any such trouble—a great naval battle would take place and that battle would not last more than fifteen or twenty days at the most, then where is your Canadian navy to assist England? The result would be that England's ports would be blockaded. If Germany became victorious, England's ports would be blockaded, and the Canadian navy would be as helpless as an infant in the cradle to help England in the crisis. The bounden duty of Canada is to rise in her loyalty to the empire and to British connection and to do her the most effective service if there is a crisis as we are told there is.

We have heard a good deal from the opposition side of the House from the right hon. leader down to the smallest singer of the song, and what has it been? The 20th century for Canada! Look at our great resources, look at our great revenue. The 20th century is Canada's. They would thus lead England to great expectations and hopes in reference to Canada's assistance to the empire and when they come to offer their gift, what is it? In the first instance it is a flat refusal. Who makes that refusal? The right hon. gentleman who leads the government of this country. He said in this House a few days ago, as an answer to the proposition from the leader of the opposition, that the matter should be submitted to the people, he said it had been before the country. How has it been before the country? In 1907 the right hon. gentleman in the conference absolutely refused to do what he is proposing to do to-day. I am not asking him to take my statement, I shall read what the right hon. gentleman did say in the conference in answer to a resolution moved by a gentleman from South Africa. I shall read the resolution and shall show that the Premier of Canada flatly refused to vote for it, and out of respect to his refusal that resolution was withdrawn. Then he went to the country in 1908, making this refusal and the country endorsed him; hence, they must have endorsed his refusal. Then, it is necessary that we should go to the country with his present proposition. Let us see what he says: Dr. Smartt, a colleague of Dr. Jameson, moving the following resolution:

> That this conference, recognizing the vast importance of the services rendered by the navy to the defence of the empire and the protection of its trade, and the paramount importance of continuing to maintain the navy in the highest possible state of efficiency, considers it to be the duty of the dominions beyond the seas to make such contribution towards the up-keep of the navy as may be determined by their local legislatures—the contribution to take the form of a grant of money, the establishment of local naval defence, or such other services, in such manner as may be decided upon after consultation with the admiralty and as would best accord with their varying circumstances.

That embodied the proposition that is before the House to-day in a sense. What did the First Minister say in answer to that only two and a half years ago?

I am sorry to say, so far as Canada is concerned, we cannot agree to the resolution. We took the ground many years ago that we had enough to do in that respect in our country before committing ourselves to a general claim. The government of Canada has done a great deal in that respect. Our action was not understood, but I was glad to see that the First Lord of the Admiralty admitted we had done much more than he was aware of. It is impossible, in my humble opinion, to have a uniform policy on this matter.

The disproportion is too great between the mother country and the colonies. We have too much to do otherwise; in the mother country, you must remember, they have no expenses to incur with regard to public works; whereas, in most of the colonies, certainly in Canada, we have to tax ourselves to the utmost of our resources in the development of our country, and we could not contribute, or undertake to do more than we are doing in that way. For my part, if the motion were pressed to a conclusion, I should have to vote against it.

What was before the country was his flat refusal to do anything in any respect. Then he says that this matter, having been before the country, there is now no necessity of submitting it to the people. We hear a great deal with reference to the right hon. gentleman's attitude by hon. members of this House, who endeavour to square it with his past record; we hear him eulogized by hon. gentlemen on the other side of the House who say that his name will go down through the annals of history when hon. gentlemen on the other side of the House are not heard of. Well, it is to be hoped as he lived in history and ceases to act, his record will appear more consistent. Why, is it necessary that we should have some interest in the navy? They say: You are going to give $20,000,000 or $25,000,000 to England, and you will never see your money again. Is it not right that Canada should do something in recognition of the service which England has rendered this country in protecting her shores with her navy? Oh, well, they say, we want everything done in Canada. A few years ago hon. gentlemen opposite were not very anxious to have everything done in Canada. Now, they have changed their minds. We remember that a British shilling was not worth as much as an American dollar to hon. gentlemen opposite. British connection has been our protection and a contribution of $20,000,000 or $25,000,000 will have a wonderful moral effect upon the world. We will have for our protection more of a navy than we can build in Canada in the next twenty years. It will be a notification to the world that the mother will be protected by the children that surround her in recognition of her past service. We talk about Quebec, Ontario, Nova Scotia, &c., but there are no people in this country who are more interested and I believe more sincere in their wishes to maintain British connection than the French people of Quebec. Why? They realize that British connection means the continuance of the solid liberty which they possess. They do not wish to run the risk of having any change in that respect. Is there any necessity of our recognizing our obligation to British connection if you wish to speak of it in that way? I believe that it is the great bond that holds us together and gives us our security, liberty and permanence. What does it mean? The British navy means the great police force of the world. It does not mean militarism. It means that it has made it impossible for piracy to continue on the high seas. It means that it has been made impossible for the slave trade to continue, and it means that no citizen is so well protected and guarded in his rights as the man who is able to call himself a British subject. For these reasons, if for no other, and there are no higher or more consistent reasons, Canada ought to recognize the obligations which she owes to British connection and show that she is prepared to stand to the utmost against the world and do her duty to the empire to which she belongs. Is there a man in whose breast it does not awaken pride and respect to realize that he belongs to the British empire? Lord Rosebery said that it was the greatest secular force that the world had ever seen in the interest of peace, harmony and good. Are we not to lend our assistance and aid, our moiety and our arms, if need be, to continue that great moral force which secures to Canada and to all the people of the British empire that peace and prosperity which every one now enjoys under the Union Jack? The navy of England is regarded as one of the greatest factors contributing to the public peace. Are we to have no share in it? That is the simple question before the House to-day. We are going to have a navy which is going to be built in Canada. When are you going to construct the guns in Canada with which to equip these great vessels? Has the Minister of War any idea when we will be able to build these guns in Canada? When will you be able to make the plate to put upon these vessels in Canada? You talk about putting Canadians on these vessels, and rightly so, but the quickest way of putting Canadians on these vessels is to put them on British training ships on the Atlantic and Pacific coasts, drill them there and have them ready for your navy when your navy is ready to float. The Minister of Militia and other hon. gentlemen who have spoken have talked a great deal about

manning these vessels with Canadians. How many of our permanent militia are native born Canadians, can you tell me? Why, the Minister of Militia stated to-day that only twenty per cent were Canadian born and yet we hear a great deal about putting Canadians upon these vessels. What did the right hon. gentleman say when he went on to talk of the navy and our fighting qualities? He turned round to his friends and he said: You need not fight if you don't like, you have to volunteer first. I suppose he intends that for the province of Quebec. The probability is that the right hon. gentleman does not intend to fight and his friends don't intend to fight. There is not the slightest doubt in my mind about that, because, I believe he made that statement with the express intention that it should go abroad that some one else should do the fighting, while the government built the navy. Well, I think that is about what we will get. There is a great deal said about Germany and I am not going to pitch into Germany. I think Germany is able to take care of herself. There is no doubt a great deal of activity in Germany in shipbuilding, but a great deal of that shipbuilding has been for her inland waters, and she carries to-day four-fifths of her inland commerce by water instead of by rail. She has trained her men in the inland waters and she has given to her people cheap freight, and in that way a great impetus to her industries. That is a legitimate purpose for Germany to pursue. Her object is to get colonies, in which she can place her people under the German flag, and that is commendable. England stands prominently in the world as a great colonizing nation, and the only successful colonizer, and other nations are no doubt jealous of that. That jealous feeling must permeate the German people to some extent and the example of England in that respect is no doubt a legitimate example for Germany to aim at. There is no doubt that Germany desires to secure possession of the Rhine to its mouth, including Holland, but there is no room for German settlement in Holland, and the great object of Germany is to get room for her people under her own flag. There is another question that has not been much talked about—and you would think after the talk we have had in this House for the last three or four weeks there could not be a subject in theology or history that has not been touched upon—but, we have not talked much about the position of the American people in regard to their maritime affairs. When we hear the government and their supporters talking about war vessels, and what they are going to do and all that, it reminds me of some people who were getting ready for war and who declared: We will hang our colours on the outer wall and if the enemy comes we will run away, but if the enemy does not come we will bleed and die for our country. The Americans are a great people, 80,000,000 of them; aggressive, energetic, wealthy, ingenious, but what about their shipping? When you take away the lake shipping of the United States they have very little left. It is possible to have a navy, it is possible to have all that accompanies a navy, and yet not have that shipping and commerce which a nation should have. The Americans have no continuity in their naval policy, and in that they are different from England or Germany, or the other European countries. They will bring in a large estimate and reduce it, and they will bring in a small estimate and increase it, and the strange thing about shipping in the United States is that while 50,000,000 bushels of wheat are shipped from Baltimore yearly, only 10,000 bushels of that is shipped under the flag that sheltered the grain while it was growing. They have 1,200 ships leaving New York every year, laden with American commerce for the ports of the world, but only seven of these ships carry the American flag. No wonder that one of the American senators said: Just think of it, ten cruisers, eight Dreadnoughts, and nineteen battleships, guarding eight merchant ships in the Pacific. That is a beautiful picture is it not? Is that the kind of thing we want in this country? You talk about war and of sending your navy over to help England, why, England would have to send an escort over to help your navy to cross the ocean to get ready to fight. If we were a small country surrounded by water, and having a population of 7,000,000 we might build a navy, but we are a sparsely settled country with an enormous area of land and we are proposing to do what there is no necessity for doing in the interest of this country and which is not in the interests of British connection and the empire either. It means that you will spend $2,000,000 or $3,000,000 or $4,000,000, or $5,000,000 this year and two, three, or four millions next year, and you have got to continue doing that or your navy will become obsolete. That is a serious question before this country to-day. If we had 20,000,000 people it would be a different question altogether. Now, from all I can learn, far and near, the verdict of the Canadian people is: We don't want a navy built in this country to-day, if there is necessity to do something to help the motherland in the crisis, and let the matter end there for the present. That is the opinion of the Canadian people. We have heard a great deal about this country, and that country, and the other country, and before I sit down I want to say that the strongest card we can play for the assistance of the empire and for the maintenance of British connection is to show to the world that we

will be ready to act and act promptly, and if we do that, hostile nations will stay their hand before they think of attacking the motherland.

On motion of Mr. Warburton the debate was adjourned.

Mr. FIELDING moved the adjournment of the House.

Mr. R. L. BORDEN. What business will be taken up to-morrow?

Mr. FIELDING. The House will be moved into Committee of Supply to take up the estimates of the Minister of Public Works.

Motion agreed to, and House adjourned at 11.10 p. m.

HOUSE OF COMMONS.

FRIDAY, February 18, 1910.

The SPEAKER took the Chair at Three o'clock.

FIRST READING.

Bill (No. 144) for the relief of Jessie Maud Mary Maxwell.—Mr. Boyce.

GOVERNMENT BUSINESS.

Mr. FIELDING moved:

That from Monday next, the 21st instant, inclusive, government orders shall have precedence immediately after questions to be put by members.

Motion agreed to.

COMMERCIAL AGREEMENT WITH GERMANY.

Mr. R. L. BORDEN. I desire to remind the Minister of Finance (Mr. Fielding) of the statement that he proposed bringing down with respect to the German tariff as applied to other portions of the empire. In that connection, I would like to point out that the memorandum laid on the table of the House enumerates certain articles as they are enumerated in the German conventional tariff. It omits, however, certain information which was submitted to the House in the papers brought down with respect to the French treaty. It does not disclose the duties applied to these articles under the conventional tariff, or the maximum tariff. Perhaps the hon. gentleman will be good enough to have a statement made conveying that information, so that we can more easily appreciate what will be the effect of the arrangement which has been entered into.

In addition to that, I observe, that, by the third article of the agreement which has been entered into with the imperial German consul for Canada, the agreement itself is a provisional one, and that the question of a general convention for the regulation of commercial relations between Germany and Canada should be deferred for consideration at a time that may be found mutually convenient. I would ask if such negotiations are now in progress, and, if not presently in progress, whether it is the intention of the government to embark upon such negotiations immediately?

Mr. FIELDING. Answering the last question first: no such negotiations are in progress, and no immediate negotiations are contemplated under that clause. It is intended that, as the clause itself says, at a time mutually convenient, such negotiations may be taken up, but there is no immediate intention to deal with the matter in that broader form. With regard to the papers brought down, they were necessarily, having regard to the time when they were prepared, confined to the agreement itself, and in the agreement was not necessarily furnished the information the hon. gentleman suggests. But it is proper that the information should be furnished to the House, and I will have such a statement prepared and brought down at an early day.

Mr. R. L. BORDEN. Perhaps it would be better to show in the statement both the maximum and conventional rates.

Mr. FIELDING. I have already given directions to have such a statement prepared, converted approximately into Canadian currency as the most convenient method of conveying the information to the House. The first part of the hon. gentleman's question was as to a statement which was to be brought down. I have not contemplated bringing down any document; it was rather a question of a general inquiry, and while the inquiry is not complete perhaps, I think I might say that so far as it has gone it has confirmed the impression which I expressed the other day, that the other portions of the British empire do share with the United Kingdom in the privileges of the conventional tariff of Germany, share, as I understand, to the fullest extent, but which receive that consideration in return for the most favoured nation treatment which those various portions of the empire are obliged to grant to Germany. That is the information and the impression that I have. I have every reason to believe that we could obtain the same consideration on the same terms, that is, if we are willing to give to Germany at this moment what is called the most favoured nation treatment, that is, the best treatment that is granted to any foreign

country, we could receive in return the full conventional tariff, just as it is to-day enjoyed by other portions of the empire. But in order to do that we should be obliged to reduce our duty on German goods to the schedule of rates set forth in the French treaty; and whatever may be done in the future, for the present we have not thought it expedient to take that step. I think that is a correct statement of the situation.

Mr. R. L. BORDEN. It is quite satisfactory so far as it goes, but it does not clear up one matter I had in mind, and I am not at all sure that the other day I made my meaning quite apparent in that respect. What I desired to know above all was whether, in consideration for receiving the advantages of the German conventional tariff, the other dominions of the empire are bound to concede to the German empire any tariff concessions which such dominions might make to the United Kingdom?

Mr. FIELDING. No, I think not. At the time of the difficulty between Canada and Germany, Canada was the only portion of the empire which had granted a preference to Great Britain; consequently Canada was the only portion of the empire which was brought into antagonism with Germany. My hon. friend had the impression that immediately after the denunciation of the old treaty a new treaty was made, giving to the various portions of the empire, except Canada, all the privileges that the former enjoyed. So far as I can ascertain, there was no treaty, but in another way the same result was brought about by an exchange of correspondence. Privileges which had formerly been extended to the British empire were extended to the British empire except in the case of Canada, and the reason for that was that Canada was the only portion of the empire which at that time granted a preference to Great Britain; consequently Germany had no quarrel with the rest of the empire, she quarrelled with Canada, and the result we know. So I have no doubt that in consequence of the contest with Canada, in consequence of the contention which Canada set up, and successfully set up, I think it is correct to say that Germany no longer insists upon the right of receiving the same treatment as other portions of the British empire; consequently to-day the other portions of the British empire would be receiving the full conventional tariff of Germany. That is my impression.

Mr. R. L. BORDEN. Although granting tariff concessions to Great Britain which were not extended to Germany?

Mr. FIELDING. Yes, these tariff concessions which have been granted in more recent years. As I have pointed out, at the origin of the trouble Canada was the only country which granted such concessions, and it was several years afterwards before the concessions were granted to Great Britain by some other of the overseas dominions. In the meantime Canada had made a fight on that question, and I think it is not too much to say that the German government began to take a different view, and that to-day they do not insist as respects the other portions of the empire on that or which they contended a few years ago.

Mr. HENDERSON. While dealing with this matter I would like to ask the Finance Minister if there was any special reason why such important grains as peas and rye, rye especially, should not be included in the German conventional tariff.

Mr. FIELDING. I might have difficulty in giving a reason as to particular items. If we were dealing with a permanent treaty, a comprehensive treaty, it would be important that we should contend for every item. This only professes to be a provisional agreement. We could not expect to get the whole conventional tariff from Germany, because we are not prepared to give what others give. As to the merits of a particular item, I might have difficulty in answering my hon. friend. Those items which we have received we think are important. I have no doubt there may be others which some hon. gentleman might also think important.

Mr. HENDERSON. Especially rye.

Mr. FIELDING. I would not answer as respects a particular item.

Mr. ARMSTRONG. I would like to ask the minister along those same lines, why dairy products are not included, also bacon and flour, and a number of other articles, in which farmers have a direct interest.

Mr. FIELDING. I would be pleased if hon. gentlemen desiring information on a particular point like that would be good enough to let their questions stand, and I will make inquiry. I do not pretend to give reasons why any particular item is not there. We could not obtain the whole earth, but we think we have obtained our share of it.

Mr. MONK. I would like to ask the Finance Minister if it is too late to make any representations in regard to the item of hay. I have received a large number of communications from extensive hay dealers in Montreal, and they have requested me to ask the government if it would not still be possible to have that item included. It seems to me that there is a possibility of a large trade with Germany in hay. I

was asked to bring this question to the notice of the government at once, in order to find out if it were possible to include that article in the temporary arrangement.

Mr. FIELDING. I am afraid it would be too late. By the terms of the agreement, as my hon. friend will see, the document is complete and signed. However, it is only at best a temporary arrangement; and if it has the effect of bringing out suggestions as to other items which it seems desirable should receive consideration in connection with negotiations with foreign countries, I should be happy to receive such suggestions, and we will profit by them in due course.

Mr. LALOR. I would like to ask if Canada enjoys the same rate of tariff that the United States enjoys with Germany.

Mr. FIELDING. I think negotiations are at present in progress between Germany and the United States. The German government has taken authority to grant to the United States its full conventional tariff. Whether they have actually by treaty at this moment granted the full conventional tariff, I do not know. But upon the items mentioned in our schedule, the rates will be the same as those enjoyed by the United States.

SAULT STE. MARIE DRY DOCK COMPANY.

Mr. BOYCE. Before the orders of the day are called I would like to ask the Minister of Public Works whether any decision has been arrived at as to granting the subsidy applied for in June last, or thereabouts, by the Sault Ste. Marie Dry Dock Company in support of their undertaking?

Mr. PUGSLEY. I have written my hon. friend on the subject, I presume he has not received my letter, But no decision has yet been arrived at.

Mr. BOYCE. What is the cause of the delay?

Mr. PUGSLEY. I am not able to state that to my hon. friend. The matter has not yet come before council.

SUPPLY.

House in Committee of Supply.

Harbours and rivers, Ontario—River St. Lawrence—improvement of Canadian channel between Kingston and Brockville, $60,000.

Hon. WM. PUGSLEY (Minister of Public Works). This is to continue the work of improving the Canadian channel between Kingston and Brockville. There was a vote for it last year of $75,000, of which we do not expect to have expended more than $15,000 by the end of the fiscal year, so that the total amount we are asking now is a revote.

Mr. ARMSTRONG. What is the nature of the improvements?

Mr. PUGSLEY. The work is entirely the blasting of rock. It is the straightening of the channel by blasting off the points of islands along the route. The object is to make the Canadian channel navigable for the larger vessels which are now obliged to use the American channel.

Mr. DANIEL. Is this new work?

Mr. PUGSLEY. Yes.

Mr. LENNOX. Is this the total estimated cost?

Mr. PUGSLEY. The total estimated cost is $125,000.

Mr. LENNOX. This is as much as you expect to be able to expend this year?

Mr. PUGSLEY. Yes. We have only spent $15,000 during the current fiscal year, but the work did not proceed as rapidly as we had hoped it would.

Mr. ARMSTRONG. What depth, width and length of channel do you expect this improvement to give you there?

Mr. PUGSLEY. Perhaps I could give the information better if I gave a full description of the work. The first working is 18½ miles east of Kingston, and will be the removal of the three shoals lying about 500 feet north of the 'Punts Islands.' The first and largest shoal is about 170 x 100 feet in area on the 16-foot depth contour, with a minimum depth upon it of 5 feet. The second, a small shoal to the north-east, being a continuation of the above larger shoal, and which is about 30 x 40 feet on its 16-foot depth contour, with a minimum depth upon it of 12 feet. The third shoal is 500 feet west of the two above-mentioned, and is about 90 x 30 feet on its 16-foot depth contour, with a minimum depth upon it of about 10 feet. The total amount of material in these shoals will approximate 2,610 cubic yards measurement in place.

The next location for improvement lies ¾ miles to the east and is a submerged point which forms a part of the north-west end of Camelot island. This point is approximately 100 x 40 feet, sloping at an abrupt angle from a depth of from 5 feet to the line of 16 feet depth. The quantity in this point will approximate 200 cubic yards in place. Excavated material at this point may be wasted in the main channel near by. A shoal 300 feet from the northwest end of Myers' island, which is 5¾ miles below Camelot island, will require to be removed. It is about 160 x 60 feet on its 16-foot depth contour, has a minimum depth on it of 9 feet and contains approximately 725 cubic yards in place.

One half mile below the Myers shoal is Lyndoe island, the submerged point of the north-west end of which will require to be removed, and is that part between the shore line and the 16-foot depth contour. The slope of this point approaches mid-channel at a very abrupt angle. It will approximate 250 by 60 feet, with a minimum depth of that part nearest the shore of the island, of about 6 feet. The quantity to be removed will be about 2,005 cubic yards in place.

At Fiddler's elbow proper, about ¾ mile below the Lyndoe light, are five locations to be improved.

A part of the island known as Morris point will require to be removed to a depth of 16 feet low water. The part to be removed being that which lies on the channel side of the red line, part of which is above and part below the water surface. The material there will approximate 7,300 cubic yards in place.

To the south of Wood island there is a small island which will require to be removed. The quantity here will approximate 9,275 cubic yards in place.

To the north of Wood island are three submerged locations, all within a distance of one-half mile. These will require to be removed to the depth of 16 feet. These locations will approximate 3,300 cubic yards.

In mid-channel at the upper entrance to Brock's group of islands, and about 3½ miles above the railway dock at Brockville, is the Hillcrest shoal.

This shoal will require to be removed to a depth of 16 feet at low water. It is approximtaely 300 by 130 feet, and contains about 3,500 cubic yards in place. We hope to obtain a depth of 16 feet at low water.

Mr. GEO. TAYLOR. Who has the contract?

Mr. PUGSLEY. Mr. Gilbert, who is connected, I think, with the Gilbert Dredging Company of Montreal.

Mr. GEO. TAYLOR. Has he sublet the work?

Mr. PUGSLEY. Mr. Gilbert, or the Gilbert Dredging Company, has lately assigned the work.

Mr. GEO. TAYLOR. He has assigned it to another contractor?

Mr. PUGSLEY. Yes.

Mr. GEO. TAYLOR. Was any work done except at Fiddler's Elbow last year?

Mr. PUGSLEY. The work done during the present fiscal year has been confined to the improvement of the channel through Fiddler's Elbow.

Mr. GEO. TAYLOR. All that was done there was the letting of a sub-contract to some persons to blow the top off an island down to low water mark.

Mr. PUGSLEY. I do not know as to that.

Mr. GEO. TAYLOR. I am passing it every day, and there was practically nothing done except putting in a few shots and blowing the top off the island. None of the other work was proceeded with, and I certainly think that the government, if it is the intention to deepen the channel, should let it to another contractor. This contractor fooled away all the summer, and did practically nothing.

Mr. PUGSLEY. Yes, the work proceeded very slowly, and a great deal of fault was found with the contractor. He was notified that unless arrangements were made for more speedily going on with the work, the contract would be cancelled. An arrangement was made, and after that, I believe the work went on more satisfactorily.

Mr. ARMSTRONG. When does the minister expect the work to be completed?

Mr. PUGSLEY. We expect it to be completed in 1911.

Mr. DANIEL. What is the rate per cubic yard?

Mr. PUGSLEY. $3.95; it is all rock work.

Mr. DANIEL. What for the other?

Mr. PUGSLEY. There is no other, it is all rock.

Mr. DANIEL. This department is doing a very large amount of dredging all over the country, and I understand that the department has under its control some dredges. I would like to ask the minister how many dredges the Public Works Department has? I do not know whether it is the intention of the government to increase the number rather than to have so much of the dredging done by private contractors. We find all over this country that dredging is done at very varying rates per cubic yard, and I have no doubt that if the government did this work itself, it would be done very much cheaper. Where there is so much of this work to be done, I think that the government could get it more cheaply done if the department had its own dredges and did its own work. I would like the minister to give us an idea of how many dredges there are in his department, and where they are. Then we could judge whether we should advise the minister to have more dredges, so that his own department could do more of the work.

Mr. PUGSLEY. I am informed that a return which was asked for last session

will be brought down in a few days, giving a list of the government dredges and their operations for the past three or four years. When we come to the dredging vote, I shall be glad to give to my hon. friend a statement of where the government dredges are at the present time; I have not the information available at the moment. In my opinion, there is a great deal in the suggestion that the government fleet of dredges should be increased. Of course, we cannot always judge of the proper cost of dredging in one place from what it is in another. The prices vary greatly by reason of difference in the locality or in the quality of the soil, the quantity to be removed, the depth of the water, the liability to storms, and other considerations; but, speaking generally, I am inclined to think that the government is able to get dredging done by its own dredges at a lower rate than by contract. On the Pacific coast, where we have four dredges at work, we are doing all the dredging with our own dredges. In the eastern provinces we have recently somewhat increased the government dredging fleet, and I anticipate that we shall continue to increase it with reasonable rapidity.

Mr. DANIEL. Are all the government dredges employed at present?

Mr. PUGSLEY. Yes, during the past season every government dredge has been kept vigorously at work.

Mr. LALOR. Can the minister give us the cost per yard of dredging by the government dredges?

Mr. PUGSLEY. As I have just stated, the cost varies so much that it is only possible to give the cost in each case. It may be ten cents in one case, fifty cents in another, a dollar in another. In order to get the information for myself so as to have it for the committee, I asked the deputy minister to have a statement made, as near as might be, of the cost of dredging with the government dredge at Gaspereau during the season just passed; and I find, taking the cost of operation, and making a fair allowance for interest, maintenance and sinking fund, that it cost about one dollar per cubic yard. There are other places where the government dredges do the work at fifteen cents, twenty cents or twenty-five cents. When the return comes down, my hon. friend will be able to see the cost of dredging by government dredges at the various places where they have been employed.

Mr. BARKER. I would like to call the minister's attention to that Gaspereau work, because it gives at a very recent date the estimated cost of the work done by the government itself and the cost of the work done by contractors. In 1907 an estimate was obtained by the department for certain dredging work at Gaspereau, and the minister's own engineer on the spot estimated it at from fifteen cents to twenty cents per yard. In the following season the minister let that work by contract at ninety cents per yard.

Mr. PUGSLEY. After public tender.

Mr. BARKER. When the chief engineer of the department was examined on the subject, he said that twenty cents was the estimate made by the departmental engineer of what the work would actually cost the government, and in the face of that the government let the contract to the Maritime Dredging Company of St. John at ninety cents a yard.

Mr. PUGSLEY. I am very glad my hon. friend has mentioned this matter, because it will afford me pleasure to give to the committee all the information I can in regard to the Gaspereau dredging. The estimate of the probable cost was made originally by Mr. Day in 1903; Mr. Day was an engineer of the department. Mr. Stead evidently followed his estimate and the chief engineer with no knowledge of the locality, never having visited the spot, accepted the estimate of Mr. Day who evidently was of the opinion that it could be done by the government dredge at that price. As to letting the contract—there has been very strong pressure for a good many years by the people of Port Elgin and by the people of Gaspereau that the work should be done. When I became minister, the member for Westmorland urged me very strongly to have the work done with the least possible delay. I knew from inquiry that there were no government dredges in the vicinity and that it probably would be difficult to get a contractors' dredge. I was aware that the maritime dredging company was bringing a dredge down from the St. Lawrence, in the vicinity of Chicoutimi, to the maritime provinces, and on the route down it would pas Port Elgin and could go through the straits of Canso around the Nova Scotia coast to the Bay of Fundy. I asked the manager of the Maritime Dredging Company if he would be willing to have his dredge stop on the way down as the work was urgent, and, pending the calling for tenders to go to work, and agree to accept for the work which would be done pending the reception of tenders and only that, the price of the lowest accepted tender. He agreed to that and when the dredge reached Port Elgin it stopped there and the engineer was notified it was ready to go to work. Tenders were called in the ordinary way and there was only one tender, that of the Maritime Dredging Company at 90 cents per cubic yard. The chief engineer, having that

estimate of Mr. Day though it had been made several years ago, and also the estimate of Mr. Stead based upon Mr. Day's estimate, thought that the tender price was too high and before deciding he made further inquiry. I say that Mr. W. J. McCordick, who had been for I think 30 years superintendent of dredging in the maritime provinces—I do not know whether he was appointed by the late Conservative government or by the Liberal government between 1873 and 1878, but at all events he remained for 18 years in the employ of the Conservative government enjoying their confidence as he enjoyed the confidence of this government to the most marked degree. My hon. friend from St. John knew the late Mr. McCordick, and I think he will agree with me that it will be difficult to find an official of the government who was ever more careful to guard the public interest than that gentleman. If he ever erred at all with regard to accounts it would be on the side of protecting the government and against the individual claimant—Mr. McCordick was directed by the chief engineer to go to Gaspereau and examine into the work which was being done, with a view to giving his opinion as to whether the tender price was fair and reasonable. There was no man in the lower provinces better qualified to give an opinion than Mr. McCordick for the reason that he had been for 25 years in charge of the government dredges. He knew just what a dredge would do, he was familiar with the weather conditions and the effect of gales upon such an exposed coast. He went to Gaspereau, saw the dredge at work, saw the conditions, and he reported —and my hon. friend must have seen that report because it was on file before the Committee on Public Accounts. He reported that in his judgment 90 cents per yard was a fair and reasonable price. I was not content with that and I directed that Mr. J. K. Scammell, the resident engineer in St. John in charge of dredging work, should also be sent to Gaspereau independently of Mr. McCordick to make an examination and give his opinion as to whether the tender price of 90 cents was fair and reasonable. He went and reported and his report was on file before the committee. In his judgment 90 cents per cubic yard was fair and reasonable. Then Mr. Stead, the resident engineer, who had adopted Mr. Day's original estimate of 20 cents per cubic yard for work done by the government dredge, also reported that 90 cents per cubic yard was fair and reasonable, and the chief engineer having those reports before him also certified that in his opinion 90 cents was fair and reasonable. Therefore, before the formal contract was entered into agreeing to pay to the Maritime Dredging Company their tender price of 90 cents per cubic yard, we had the reports of Mr. W. J. McCordick, of Mr. J. K. Scammell, of Mr. Stead, and of the chief engineer Mr. Lafleur, that the price was fair and reasonable. With all these certificates I sent a recommendation to council that the tender price be accepted. Now then, the Maritime Dredging Company continued the work during the fall of 1908, but as it got along towards November the weather became very rough and they took the dredge away to St. John. Last year, in order to continue the work I endeavoured to arrange as early as possible for one of the dredges to go there to continue the dredging operations. I asked the president of the company or one of the directors, or I think both of them, if they would go back and they said they did not care to do so because of the heavy storms which frequently prevailed there and they also referred to the fact that one of their scows had been swamped, entailing considerable loss.

Mr. CROCKET. Who is the president of the company to whom the minister spoke?

Mr. PUGSLEY. Mr. John E. Moore.

Mr CROCKET. And the other director?

Mr. PUGSLEY. Mr. George McAvity. The pressure was continued by the people of Port Elgin and by the member for Westmorland to go on with this dredging. I was urged in the very strongest way to continue it because there are large interests at Port Elgin, there is considerable shipping, large quantities of lumber are shipped from there, and it was urged upon me, and I was impressed by the fact, that it was very important to continue the dredging as early as possible. I was able later on in the season, to remove the dredge 'George McKenzie', one of the government dredges from Nova Scotia and bring it to Gaspereau for the purpose of continuing the work. I have had a statement made up showing the actual cost of bringing the 'George McKenzie' and taking her back, the actual cost of operation while she was at work, and after allowing a reasonable amount of interest and wear and tear and sinking fund, besides a reasonable profit, the cost is as near as may be $1 per cubic yard as against 90 cents paid the contractor. These are the facts with reference to Gaspereau. The place is very much exposed, the depth of water is not very great at low tide or even at high tide, and the circumstances attending the dredging are very unusual, so that I am satisfied that the engineers exercised a fair judgment when they placed the cost at 90 cents per cubic yard.

Mr. BARKER. If the hon. minister is correct in his story, then the chief engin-

eer did not know what he was talking about, because his account contradicts almost in every particular what the hon. gentleman has given us. The department directed that Mr. Stead, the local engineer, should report; his report was obtained, and then the department directed that advertisements should be published for tenders. While those advertisements were being published, and within a week or ten days before the tenders were to be received and opened, the department handed the work over to this Maritime Company of St. John.

Mr. PUGSLEY. Under the agreement I spoke of.

Mr. BARKER. The work was placed by the department in the hands of the company, the only condition being that whatever the lowest tender might be, the work should be done at that price.

Mr. PUGSLEY. My hon. friend has misunderstood me. I thought I stated clearly that the understanding with the company was that if they were not the lowest tenderers, they would leave the work and would only be paid for the work done up to that time at the price of the lowest tender.

Mr. BARKER. As the understanding was in writing, I know that the minister is wrong.

Mr. PUGSLEY. The hon. gentleman does not.

Mr. BARKER. I do. The condition of the letter was that the work was to be placed in the hands of the company on the condition that they would carry out the contract at the price of the lowest tender.

Mr. PUGSLEY. No.

Mr. BARKER. No other tender was received, except the tender of this company. While asking tenders from the public, the department put this company in possession of the work, under a direct message from the chief engineer instructing Mr. Stead to put them at work and specifying distinctly the condition that they were to be allowed for the work, whatever the lowest tender would be. There was only one tender of course. No man of ordinary common sense would ever suppose that there would be any other. Why should any people tender to do that work when this company was already in charge and had written authority from the office giving them the work. The minister was placing that work in the hands of the Maritime Company at whatever price they chose to tender for themselves. The hon. gentleman makes the statement, probably on the recollection of a year ago, but there are numbers of gentlemen on both sides who heard all this evidence given forty-eight hours ago and who have read the papers.

Mr. PUGSLEY. I think I can read and understand documents just as well as my hon. friend, and I tell this committee that the understanding—not only verbal, but written—was that the company should be simply given the work temporarily until tenders were received, in which case we would accept the lowest tender and they would be paid for what they had done at the lowest tender rate. That is not new. It is not a practice inaugurated since I became minister, but one which has prevailed a long time—probably ever since confederation. Where there is urgent work to be done, tenders are called, and the person who does the temporary dredging is paid simply for what he does at the price of the lowest tender and then has to quit. In this case if any one else had tendered for even 85 cents per cubic yard, the company would have had to accept that for the work they did and then they would have had to take their dredge away, and the dredge owned by the lowest tenderer would be put in its place. The hon. gentleman says that the fact of the company having been set to work, prevented other people from tendering. I do not believe it. I do not believe my hon. friend can produce the testimony of any dredge contractor who would say that he was deterred from tendering by reason of another being put to work. But I know perfectly well, by reason of the isolated position of Gaspereau that it was possible, if this company did not put their dredge to work, which they were bringing down through the Straits of Northumberland, we would not get the work done, and it was work which the people of Gaspereau and Port Elgin represented as work of the most urgent character.

Mr. BARKER. The dredge was at the work before you gave them the contract.

Mr. PUGSLEY. On its way to St. John, the dredge stopped as I had recommended. Why should it not stop, it was arranged with the responsible head of the department that it should. They notified the engineer that they were ready to go to work and they went to work upon the arrangement I have mentioned. That was a fair and reasonable and businesslike arrangement. It is one only come to in cases of urgency. It would not have been come to, under these circumstances, but for the fact that this dredge was brought down and passed this very spot, and, on account of the urgency, it was not unreasonable to give it the work temporarily. What should I have done?

Mr. BARKER. You should not have let that work within ten days and awaited the opening of tenders.

Mr. PUGSLEY. How has the country suffered by that? My hon. friend says that if I had not done that, somebody else might have come in and tendered. But he cannot find the slightest evidence that any contractor was prepared or would have tendered for that work, whether the dredge was at work or not. Is not this the important thing, that I advertised for tenders and nobody evidently wanted to go there to go to works. And is it not an important fact that, the next year, these people, the Maritime Dredging Company, having the opportunity to go there to work, did not want to go? If it were the 'soft snap' my hon. friend would have the committee believe, would not they have been anxious to go there? But they had had enough of it; they had worked there under most disadvantageous circumstances. And, when we actually put the government dredge to work, we found that a fair and reasonable cost was $1 per cubic yard. Now, does the hon. member think the price is too great? Does he think that the late W. J. McCordick gave a fictitious valuation for that work? Will my hon. friend who represents the city of St. John (Mr. Daniel) rise in his place and say that he would not rely on the statement which the late superintendent of dredging made? I do not think he will, for he knew W. J. McCordick as well as I did, and he knows there was not a more careful and conscientious official in the employ of the Dominion than that gentleman. And will he say that Mr. Scammell, an engineer of ability and integrity, would go up there, and, having examined the work, make a false certificate? And would he say that Mr. Stead, who also saw the work, had to go on it day after day, made a false report when he said that it was worth 90 cents a yard? Surely, these hon. gentlemen who have taken up days and days of the time of the Public Accounts Committee——

Mr. LALOR. May I ask the hon. minister a question?

Mr. PUGSLEY. Certainly.

Mr. LALOR. Is the Mr. Stead of whom he speaks, the same gentleman who reported that the price paid for the saw-dust wharf was a fair and reasonable price?

Mr. PUGSLEY. The same gentleman. And may I say that not a man from the town of Richibucto, the county of Kent, or the province of New Brunswick, has ventured to come here before the committee, except Mr. Richard O'Leary, and impugn the valuation, and——

Mr. CROCKET. Mr. Richard O'Leary sold the property for $700.

Mr. PUGSLEY.

Mr. PUGSLEY—he is a violent partisan, one of the most violent——

Mr. GEO. TAYLOR. He sold the property himself for $700.

Mr. PUGSLEY. These hon. gentlemen incurred the expense of summoning a very prominent man, a resident of Richibucto, Mr. James, a prominent lawyer, who has lived in Richibucto all his life, and who drew the deed of this property to Mr. O'Leary, yet not one of them ventured to ask Mr. James the fair value of the property. On the other hand, disinterested witnesses testified that it was fairly worth from $5,000 to $10,000. And I will say this to the hon. gentleman (Mr. Lalor) who asked this question, that the Crown can dispose of a part of that property, retaining the portion which we require more immediately and which is most necessary for the purpose of the Crown with a view to extending the railway wharf, for $3,500.

An hon. MEMBER. Better do it.

Mr. PUGSLEY. And, with this sold, we shall have a most valuable property, which, when it is improved, will be not only of advantage to the general trade, but will greatly promote the interest of the town of Richibucto.

Mr. LALOR. Does the hon. minister intend to dispose of that property for $3,500?

Mr. PUGSLEY. Yes, I may say, I do. I can sell the whole property for $5,500, or $500 more than the Crown paid for it. I can retain 200 feet frontage——

Mr. GOODEVE. May I ask the minister —can he sell it at the advanced price without improvements?

Mr. PUGSLEY. Yes, without spending a dollar.

Mr. CROCKET. To whom?

Mr. PUGSLEY. To A. and R. Loggie.

Some hon. MEMBERS. Oh, oh.

Mr. PUGSLEY. Some hon. members laugh, but let me say that A. and R. Loggie are men whose reputation will not be questioned, in the province of New Brunswick at all events, and they have made us a distinct and business offer of $5,500 for the property. I have declined it, because we require 200 feet to improve the wharf and give the necessary railway facilities to——

Mr. OWEN. Mr. Chairman, I——

Mr. PUGSLEY. If my hon. friend (Mr. Owen) will permit me one moment——

Mr. OWEN. I rise to a point of order, Mr. Chairman. Last session, I brought up some matters relating to Ontario when the committee was considering the estimates

of the maritime provinces, and I was told I was out of order. Now, I think we ought to consider Ontario estimates this afternoon.

Mr. PUGSLEY. The hon. member (Mr. Owen) is quite right. But I was asked a question by the hon. member for Hamilton (Mr. Barker) who entered into a discussion, and another hon. gentleman asked me about the resident engineer of the wharf at Richibucto.

Mr. DEPUTY SPEAKER. In discussions on the estimates, I am always disposed to give a wide interpretation to the rule, and allow as free and broad a discussion as possible. In the present case, I think the discussion has gone beyond what is relevant to the item. The item of Gaspereau can be referred to to illustrate or apply to the present item. But the discussion has not taken that form, and the point of order is well taken.

Mr. PUGSLEY. I agree with you, Mr. Chairman, but the hon. member (Mr. Lalor) asked me a question about Richibucto wharf, and I felt that it would be discourteous of me not to reply to an hon. member who is always so courteous as my hon. friend. He will be glad to know, I am sure, that we can keep 200 feet of the Richibucto property, which will give us 400 feet on the Richibucto river, and afford good railway and terminal facilities, and sell the remainder of the property for $3,500. We have a positive and distinct offer of that amount. I shall not further trespass upon your consideration.

Mr. CROCKET. I regret very much to be compelled to say that the statement the hon. minister (Mr. Pugsley) has made of the arrangement with the Maritime Dredging Company in regard to Gaspereau is incorrect. I challenge proof.

Some hon. MEMBERS. Order.

Mr. DEPUTY SPEAKER. The hon. member cannot be allowed to re-open the question unless he specifically applies it to the item under discussion.

Mr. CROCKET. This refers to dredging, and the dredging work throughout the country——

Mr. PUGSLEY. There will be an item for dredging generally.

Mr. DEPUTY SPEAKER. When the discussion has proceeded further than it ought to have done, and is declared to be out of order, it will not do to refer back to the words of one particular speaker and make those words a reason for continuing the discussion. At present, the item under discussion is the river St. Lawrence. Any reference to similar work elsewhere that can be brought to bear upon this item is in order, but the discussion of other items for the purpose of considering whether the expenditures under those votes were well or wisely made will not be in order. I have ruled that the discussion on Gaspereau or other items for that purpose is not in order. I hope the hon. member will not discuss it in that sense. If he can apply his argument to the item under discussion, it will be received.

Mr. CROCKET. I did not hear the whole of the present discussion, but I understood that the item was one for dredging in Ontario. We are discussing the policy and practice of the department with regard to dredging contracts, and we have a very illuminating case in the province of New Brunswick which I think the House should be fully seized of, so that hon. members may determine precisely how these dredging works are being handled by the Public Works Department. I had not intended to intervene in this discussion at all, and would not have done so but for the statement that the Minister of Public Works made with reference to the terms of the contract under which the dredging at Gaspereau river was done.

Mr. PUGSLEY. Does the hon. gentleman (Mr. Crocket) think that the hon. member for Hamilton (Mr. Barker) was not equal to the question. I spoke in answer to him.

Mr. CROCKET. I am referring, not to what the hon. member for Hamilton said, but to what the hon. minister (Mr. Pugsley) said. He stated that the arrangement with the Maritime Dredging Company should—

Some hon. MEMBERS. Order.

Mr. CROCKET. I think I am perfectly in order.

Some hon. MEMBERS. Chair.

Mr. DEPUTY SPEAKER. I must rule in this sense—that when an hon. member has been called to order for speaking of matters that are not relevant to the question before the committee, it is not allowable for others to discuss what that hon. gentleman has said, and which has been ruled out of order. The hon. gentleman (Mr. Crocket) may, perhaps, take up Gaspereau or some other item in a way to make it applicable to the item under discussion. But he is not at liberty to discuss what the minister said since what the minister said has been declared to be out of order. The point of order having been raised and decided, is not open to discussion.

Mr. CROCKET. I understood the objection was taken only to the matter of the Richibucto wharf. I was confining my remarks entirely to the question of dredging,

which is involved in the item before the Chair.

Mr. PUGSLEY. I understood the hon. member for Northumberland (Mr. Owen) to the effect that last year when some items for another province were under consideration, he rose to speak with reference to an Ontario item, and he was shut off on the ground that the discussion was to be confined to the item under consideration. I think it is better that that rule should be observed. I will say to the hon. member for York (Mr. Crocket) that he will not be precluded from an opportunity of discussing dredging in the maritime provinces, because there will be a vote for dredging in the maritime provinces.

Mr. EDWARDS. As a representative from Ontario, I feel that the Richibucto wharf matter is one that interests us, because the Ontario members desire that the money on all these wharfs shall not be wasted.

Mr. CROCKET. On August 4, 1908, the chief engineer of Public Words had telegraphed to the resident engineer——

Mr. CARVELL. I rise to a point of order. If the hon. member for York is going to be allowed to discuss this matter, let us know. He has been ruled against twice. I would like now a positive ruling from the Chair, as to whether the member for York is going to obey the Chair.

Mr. SPROULE. When a subject like dredging is under consideration is it not competent for any member of this House to give a history of any transaction in the same department, or under the same government? He must give a history of a transaction in order to make a comparison, and is he not within his rights in making a comparison with regard to what has been done elsewhere? I would like a ruling of the Chair.

Mr. DEPUTY SPEAKER. I think I have expressed the rule with regard to such matters. The discussion on the item before the House should naturally be confined to the St. Lawrence itself, and the improvements between Brockville and Kingston. It is proper, however, by way of illustration, either of the work of the department or a work of a similar kind, dredging for instance, to quote other items of work that have been done by the department. But to quote these it is necessary that the argument should be applied from them to the item before the Chair. It then comes to be a matter of judgment with the Chairman whether the hon. member is doing that. If it appears to the Chairman that he is merely discussing this other item for the sake of deciding whether it is well done in itself, or for any other purpose than to apply it to the item before the Chair, then the Chairman would rule him out of order. Until the argument has proceeded a certain distance it is not possible to know whether the discussion is out of order or not. I am not in a position to rule as out of order a reference to Gaspereau the moment the hon. gentleman mentions the name. His argument must proceed a certain distance before I am able to judge whether he is discussing that merely for itself, or to apply it to the item before the Chair. I may ask the hon. gentleman, however, if he touches on any other item than that before the Chair, to apply his argument as rapidly and clearly as possible to this item. Otherwise I will be forced to rule him out of order.

Mr. CROCKET. I was referring to a statement the minister made with reference to the terms of the contract that was entered into with the Maritime Dredging Company, and I wanted to prove to the House that the minister's statement was incorrect.

Mr. CARVELL. What has that to do with the question under discussion? I want a decision.

Mr. DEPUTY SPEAKER. In that case I will have to decide that such a discussion is out of order. The minister himself was ruled out of order for prolonging an irrelevant discussion on the possibility of executing some other class of work. The item before the Chair is the St. Lawrence, Brockville item.

Mr. GEO. TAYLOR. I want to inquire from the minister who this contract was sublet to? Mr. Gilbert was the contractor.

Mr. PUGSLEY. I am not aware of any contract being sublet. One was assigned to Mr. E. G. Evans.

Mr. GEO. TAYLOR. At what price?

Mr. PUGSLEY. It was $3,95 per cubic yard. It is marine blasting, to the depth of sixteen feet under water.

Mr. GEO. TAYLOR. It is merely blowing an island out. You have to blow the top off, and that is all they have done.

Mr. PUGSLEY. Tenders were called for, and there was a large number received, and this was the lowest, at $3.95.

Mr. GEO. TAYLOR. How much has Gilbert been paid on his contract, and how much work has he done?

Mr. PUGSLEY. The expenditure to the 1st of January was $8,253. It has been paid over on certificates of the engineer.

Mr. GEO. TAYLOR. How much work has been done?

Mr. PUGSLEY. About 2,000 cubic yards.

Mr. GEO. TAYLOR. What report or certificates does the engineer send in?

Mr. PUGSLEY. He gives certificates from time to time according to the quantities.

Mr. GEO. TAYLOR. Has the minister the certificates there?

Mr. PUGSLEY. No, but I can get them for my hon. friend.

Mr. GEO. TAYLOR. Has there been a yard of blasting under water done, of marine blasting?

Mr. PUGSLEY. I cannot tell my hon. friend as to that. But I can get the certificates which will show exactly. Perhaps I may be able to bring them down this evening.

Mr. ARMSTRONG. In what way are the measurements taken? Does the engineer examine the work and make his estimates, or does he measure the amount of material excavated?

Mr. PUGSLEY. We have a man constantly on the work, who makes his certificate, and then payment is made. The engineer in charge of the work, Mr. Chapleau, makes an actual survey, showing how much has been excavated. There was a survey made originally in situ, then he makes a new survey, and determines what quantities are removed; and upon those certificates payment is made.

Mr. ARMSTRONG. When did the work commence?

Mr. PUGSLEY. The contract was let on the 1st of February, 1909, and the work commenced early at the beginning of the season.

Mr. ARMSTRONG. How much does the man who has charge of the work receive?

Mr. PUGSLEY. You mean the engineer?

Mr. ARMSTRONG. No, I mean the other man.

Mr. PUGSLEY. $2.50 per day.

Mr. GEO. TAYLOR. Who is he?

Mr. PUGSLEY. Mr. Bullock.

Mr. ARMSTRONG. It seems to be absurd that a man and an engineer are necessary to take charge of a work involving an expenditure of $8,000 in a year.

Mr. PUGSLEY. The engineer is a member of the regular staff. We had expected that the work would proceed more rapidly and next year I have every reason to believe that it will go forward with reasonable rapidity.

Mr. ARMSTRONG. In this case you have expended $1,000 to look after the expenditure of only $8,000.

Mr. PUGSLEY. How does my hon. friend make it a thousand?

Mr. ARMSTRONG. $2.50 a day for a man in the neighbourhood of a year.

Mr. PUGSLEY. No, from the opening of spring to the close of navigation which would not be over 100 or 150 days. Instead of $1,000 it would not be over $300 or $400.

Mr. GEO. TAYLOR. Then there is the engineer.

Mr. PUGSLEY. The engineer is on the regular staff and he has other work under his charge.

Mr. GEO. TAYLOR. I would like the minister to bring down the engineer's returns at eight o'clock.

Mr. PUGSLEY. Yes, I will have them here at eight.

Mr. GEO. TAYLOR. The minister made the statement that work commenced immediately upon the opening of spring and went on during the whole season.

Mr. PUGSLEY. I did not say 'immediately.' I said that it commenced after the season opened.

Mr. GEO. TAYLOR. They went out in April last to this island, but the only work that they did was some time in August.

Mr. PUGSLEY. I think my hon. friend is mistaken. My deputy informs me that he was there in May and that they were working at the island then.

Mr. GEO. TAYLOR. They hauled an old dredge out and she lay there till August.

Mr. PUGSLEY. We only pay by the cubic yard.

Mr. OWEN. $125,000 is a large amount of money, and from the way the work has been proceeding it seems to me that it is hardly necessary. I would like to ask the minister if there has been any trouble in navigating this part of the St. Lawrence channel recently, how he came to find out that it was necessary, and why they have been so slow in proceeding with the work if it is really necessary?

Mr. PUGSLEY. As long ago as 1901 representations were made to the department urging that this work should be done, and even as early as 1901 a survey was made under the direction of Mr. Chapleau, who is now in charge of the work with the view of having it done. But, nothing was done until last year. When I became minister the matter was urged strongly upon my attention by the hon. member for Kingston (Mr. Harty) who gave me certain facts which convinced me that it was a work desirable in the public interest. It was also urged by the hon. Minister of Railways

and Canals (Mr. Graham). The channel which is used by the larger vessels is the American channel. I think that, if there was no other reason for that improvement, pride in our own country ought to induce the desire that we should have a channel on the Canadian side of the St. Lawrence river which could be navigated by steamers ordinarily using that route. There is another thing. There are communities growing up on the Canadian side, and it is desirable, in the interest of these communities, that the Canadian channel should be improved so that the steamers ordinarily navigating the river might give accommodation to them.

Mr. J. HAGGART. What depth of navigation will this work give?

Mr. PUGSLEY. Sixteen feet.

Mr. J. HAGGART. The same as the canals?

Mr. PUGSLEY. Yes.

Mr. SPROULE. This work has been going on for several years, if I remember correctly?

Mr. PUGSLEY. No, not this work.

Mr. HARTY. There never was a vote for it until last year.

Mr. PUGSLEY. No, it was commenced last year.

Mr. SPROULE. We have been told on former occasions of the importance of getting a certain depth of water along the river channel there. I remember distinctly the Hon. Mr. Tarte telling us what was intended to be done, and the work was to be continued for several years until it was accomplished. What I desire to ask is how much of this work has yet to be done, and if, when done, it will give a uniform depth of water in the St. Lawrence channel?

Mr. PUGSLEY. My hon. friend from Kingston gives me a bit of information which had escaped my memory. This also shortens by six miles the round trip between Kingston and Brockville. In answer to my hon. friend from East Grey, I may say that during the past year the work done cost $8,253. The total estimated cost is $116,260.35, in addition to which there are superintendence and contingencies, making, in round figures, $125,000. That will be the total cost of the work, and will give us a comparatively straight channel upon the Canadian side of a depth of 16 feet.

Mr. SPROULE. It will give you a channel between Kingston and Montreal of at least 16 feet?

Mr. PUGSLEY. Yes.

Mr. SPROULE. Is one company given the whole contract?

Mr. PUGSLEY. The whole contract at $3.95 per cubic yard.

Toronto harbour improvements, $250,000.

Mr. PUGSLEY. I understood that some gentlemen might possibly want to speak on this item, and it stood over.

Mr. SPROULE. I understand that my hon. friend the member for North Toronto (Mr. Foster) desired to speak on it, but he has the misfortune to be absent to-day.

Mr. PUGSLEY. I suppose it had better be carried?

Mr. SPROULE. What is that work for?

Mr. PUGSLEY. For a considerable time there has been pressure to make a new western entrance to Toronto harbour, and this is to continue the work and to complete that western entrance. It will be a great advantage to the city of Toronto. Some of this money may be expended upon improvements at the eastern entrance.

Mr. SPROULE. As there is a good deal of diversity of opinion in regard to what should be done in the best interests of the city, I think it would be better if the minister would leave the item for the present, seeing that there is no member for the city of Toronto here to-day.

Mr. PUGSLEY. It is the only item left in the Ontario list, and we cannot pass any resolution at all if we leave one item. Would it do to have it understood that when the hon. member for North Toronto returns, if he desired to do so, he can discuss it upon any other item? It is not a new work, and it was discussed last year. It is under contract. I do not think the hon. member for North Toronto would want to have it delayed, but upon any other item we can give him the opportunity of discussing it.

Mr. ARMSTRONG. Before we leave the Ontario items, I would ask, has the government purchased the land for the approach to Grand Bend Pier in my county?

Mr. PUGSLEY. Not yet. This vote is to purchase the land to complete the approach to the wharf.

Mr. ARMSTRONG. Why was not the land purchased last year when the minister had a vote?

Mr. PUGSLEY. That vote was two years ago and it lapsed.

Mr. ARMSTRONG. What is the cause of the delay in purchasing the land?

Mr. PUGSLEY. We could not agree as to the price and we had to expropriate it.

Mr. ARMSTRONG. This pier has been built for a number of years, it stands out in the lake and the only possible way to get on or off it is by a ladder. The approach has been obstructed by the owners of the land for several years. What is the use of spending $25,000 on this pier and allowing it to stand out in the water as a momument?

Mr. PUGSLEY. My hon. friend is entirely right. When the pier was built it was supposed the government owned the land between it and the shore but private owners made a claim to the land and the Department of Justice reported their claim well founded. We were finally obliged to expropriate the property.

Mr. ARMSTRONG. Does it take two or three years to do that?

Mr. PUGSLEY. It took considerable time to arrive at a conclusion as to whether the claim was well founded. I agree with my right hon. friend that it is desirable to get this adjusted as quickly as possible.

Mr. ARMSTRONG. That is a useful pier and because of its incompleted state the people have suffered great inconvenience for years. The department has not acted in a business-like way. Will the approach to the pier be completed withn the next few months?

Mr. PUGSLEY. It is the intention to proceed as soon as possible. We cannot do anything until we get the money.

Mr. MARSHALL. Has the mnister any idea of establishing a life saving station at Port Stanley?

Mr. PUGSLEY. That is a matter for the Department of Marine.

Mr. HENDERSON. It was my intention to discuss on the Ontario item for harbours and rivers the question of constructing piers or groins along the shore of the western end of Lake Ontario.

Mr. PUGSLEY. There is an item in the British Columbia estimates under which that discussion might more properly come.

Mr. HENDERSON. The British Columbia item is the only parallel case in the estimates, but I fear I may be precluded from discussing the matter under that item because of the recent ruling of the chairman. If it is understood that I will be permitted to raise the point on the item for the Fraser river I will not delay the committee now.

Mr. PUGSLEY. It might be understood all round that the hon. gentleman could do that. He might argue that this item should not pass for British Columbia unless similar work were done in his constituency.

Mr. SPROULE. Is it not much more regular to discuss an Ontario matter such as this under the public works items for the province of Ontario?

Mr. DEPUTY SPEAKER. I would much prefer for myself that the discussion should take place on the items now before the Chair.

Mr. HENDERSON. Very well. The Minister of Public Works is aware that along the north shore of Lake Ontario adjacent to Burlington Beach, and at another point distant two and a half miles to the east, the waters of Lake Ontario are causing the erosion of the shore and the indentations are now very deep. The roadway along the lake shore was established fifty, or it may be 100 years ago, and it is practically now put out of use. The farmers are suffering from the fact that their land is being washed away. In one instance near the town of Bronte a gentleman who owned a farm there 25 years ago, told me that at that time there was an apple tree growing on the lake shore 120 feet from the lake, and that now that apple tree was gone and the waters of the lake washed over the spot where it grew. Thus, 120 feet of that farm has been lost in 25 years. This is too serious a matter and too expensive for an individual or for a municipality to deal with, and I appeal to the Minister of Public Works to do something to prevent this washing away of the land which I believe can be easily done by building groins or piers out into the lake so that the waves may wash up the gravel and sand in such a way as to form new accretions of earth. I drew the attention of the minister to this last year but he was not disposed then to give me any great encouragement. However, I am pleased to say that since then he has been good enough to send an engineer to the village of Burlington to examine these erosions and see the damage that they have done. I had the pleasure during the Christmas recess, of accompanying the engineer over the ground, and I invited him to visit a point two and a half miles east of the village. Though he told me he had no instructions to go beyond the village of Burlington, he was good enough to visit that point with me, and there he saw where the county council of Halton had built a pier about 75 feet long out into the lake opposite one of these erosions. But this work is too expensive for either the township or the county to undertake. I think it is a matter that the country should deal with. It is the navigable waters of Lake Ontario that are doing the damage, and therefore the country as a whole is bound to see

that something is done to prevent the great damage which must otherwise accrue to the shore. The county of Halton has already spent, I think, $500 or $600 to build the pier I have spoken of. It was recommended that they extend the pier 25 feet further, which would probably cost another $150 or $200. But there ought to be at that point three or four or five piers to prevent the rapid washing away of the land. The erosion is gradually encroaching on the roadway, and will compel the municipality of the township to buy another roadway to take the place of what has been in use probably 75 or 100 years. My argument is that it is the navigable waters which are under the control of this government that are doing this damage, and I appeal to the Minister of Public Works to take some steps to prevent it. I think I am making an appeal for an appropriation of public money which can be justified. In many parts of the country public money has been expended in less advantageous ways. A year or two ago a British Columbia municipality, I believe, spent money on protection works on the Fraser river, and I find in the estimates of the present year an item which reads thus:

Fraser river—to refund to the municipality of Delta one-half their expense of constructing emergency works to protect the south bank of the river near Ladner's Landing, on condition that the government of British Columbia will refund the other half.

I understand that this municipality went to the expense of building a groin or piers, and the government now proposes to refund to that municipality the amount of money they expended. I have no authority to speak directly for the county of Halton on this question, but I know what the county have done and what they are willing to do. They have not asked, and I do not think they are going to ask, the government to do the whole thing. They have done something themselves to meet an emergency, and I think the government can well afford in this case to help people who are trying to help themselves. If the county is willing to spend a certain amount of money on this understanding, I think the government can well afford to come to the rescue and assist them. I may be told that this point, 2½ miles from Burlington, is not a harbour, and that, therefore, there is no just claim on the government to assist in this work on the ground that it is their duty to look after the harbours of the country. But in the village of Burlington, where there is a harbour, damage of this kind is going on every day, and it is becoming there a very serious question. The erosion is now very close to the highway, on the other side of which stands the drill hall, and I would not be surprised if in the course of 10 or 12 years the Minister of Militia were obliged to have his drill hall removed to another site. I was pleased to know that the minister went so far as to send an engineer to examine the location of this erosion in Burlington, and if he inquires of his engineer at Toronto, I am sure that he will get information in regard to the erosion 2½ miles to the east of Burlington to which I have made reference. I do trust that the minister will do something to assist these people who are willing to help themselves. I ask him to give me a promise to that effect, and I will be very happy to convey it to the people of the county.

Mr. PUGSLEY. If it were possible to give my hon. friend a very satisfactory promise, I should be glad to do so, because he always presents his requests in a very reasonable and fair manner; but I find very great difficulty in making a promise to my hon. friend. This question of protecting the shores of navigable waters, whether upon the ocean or upon the lakes or upon navigable rivers, is one which has given me a good deal of concern since I have been minister, and has caused me a good deal of difficulty. When I became minister, I found that there were certain protection works going on in different sections of the country, more especially in the province of British Columbia, where the government had been paying one-half the cost of protecting the banks of certain rivers. The soil of the banks of those rivers, such as the Fraser and the Columbia and some others is of an alluvial character, and in many cases the banks are being eaten away, very much to the injury of people owning land along those banks. In several cases the Dominion government contributed one-half the cost of the protection works and the British Columbia government the other half. I had applications from many other localities—from Fort McLeod, from the city of Edmonton and from a point on the St. Lawrence, where a portion of the bank had fallen, or gave signs of falling, into the river unless it were protected, and in case it did, would cause damage to an important village. Some protection work has been done in the maritime provinces, but I came to the conclusion that if this government were to admit its responsibility in a general way, there would be no end to the liability we would be called on to assume. I have taken a course somewhat at variance with that taken by some of my predecessors, and which they took only to a limited extent. Lately we have declined to contribute one-half of the cost of protection works in British Columbia; we have also declined to engage in protection work on the Macleod river, and we have de-

clined to do some protection work in the province of Quebec, which we were asked to do. If we were to admit our liability to do this work, there would be no end to the work we would be called on to assume. In Manitoba, Saskatchewan and Alberta the population is growing rapidly. Towns, cities and villages are springing up along the banks of these navigable rivers, and there will necessarily be a considerable amount of work required in the near future to protect those communities from the erosions of their banks by rivers. I am not prepared to hold out any inducement that this work will be done by the federal government, much as I sympathize with the individuals who are suffering in the way my hon. friend describes. My hon. friend says that this is a navigable water. That does not throw the responsibility on the federal government. All the federal government has to do with it, is the control of navigation, and this has nothing to do with the control. The federal government has to do with the improvement of navigation, but this is in no way connected with navigation at all. The soil of the lake is either owned by the provincial government or by the riparian owners, and the federal government has no more to do with the protection of the banks from erosion by navigable rivers than with the building of highways. The work is purely of a local character.

Mr. SPROULE. Why, then, do we spend so much year after year down the St. Lawrence to prevent landslides into the river?

Mr. PUGSLEY. At what place?

Mr. SPROULE. I could not say from memory.

Mr. PUGSLEY. If that was done, it was not done under my administration. It has been done in some places before my time, in the eastern provinces as well as in Ontario and the west, but I have felt that we were going from precedent to precedent; and if we recognized the obligation, our responsibility would grow to a very large amount, and instead of having money for improving harbours and navigation, and building wharfs, we would be forced to spend a great deal on local protection works of this character. It seems to me that this is a work rather for the municipalities themselves and the provincial governments. My hon. friend says that the highway is likely to be washed away. In Nova Scotia and New Brunswick, the highways are looked after by the provincial governments. There is a local tax, but the provincial government attends to the building and repairing of highways, exacting a local tax from the people to assist in this work. If this work be needed for a protection of a highway, the provincial government might very well join with the municipality in paying for it. I do not wish to be considered as throwing the liability on the provincial government, but it is a fair matter for consideration whether they should not join the municipal authorities in doing this work. I do not know whether my hon. friend's voice would be potent in the legislative halls of Ontario or not, but it would be well worth his while to suggest the matter for the consideration of the provincial authorities. In British Columbia, the provincial government is doing a good deal of work in preventing the banks of navigable rivers from being washed away, just as in the case referred to. For these reasons, I regret I cannot give the promise my hon. friend asks.

Mr. HENDERSON. I regret very much the hon. gentleman's decision. He thinks that we should look to the provincial government, but the provincial government may say that they have nothing to do with Lake Ontario and that they are not responsible for the damages done by that lake.

Mr. PUGSLEY. Neither are we.

Mr. HENDERSON. I disagree with the hon. gentleman. Lake Ontario is a navigable water under the control of this government. And I notice there is a Bill on the Order Paper which would practically prohibit either the Ontario legislature or the municipality in question from constructing these piers without the consent of this government, and this government might not give that consent. This government is assuming control anyway by this Bill which will prohibit the county of Holton from extending a pier out into the lake or building a groyne to prevent those erosions.

Mr. PUGSLEY. They need have no fear on that score. They will get permission very readily.

Mr. HENDERSON. That very fact is an evidence that this government has assumed the responsibility. I think that there is an admission in that statement, that the government has something to do with the whole matter. But let us go to the village of Burlington alone and leave the other. Surely, the hon. minister does not intend to throw off responsibility for the care of harbours, and the erosions at Burlington have everything to do with the harbour. At any rate, they take place so close to the harbour that they interfere with the harbour at that village, and, therefore, I do not think the minister can escape responsibility. He certainly should instruct his engineers to give him a special report on the subject and see whether he would not regard this damage at Burlington as an interference with the harbour. True, the government has never spent any money on Burlington harbour. The wharfs

there are private docks and the water is of such a depth that no demand has been made for any dredging, although some may be required. Perhaps if that harbour happened to be in some other part of the country there would be some dredging done. However, it is getting along very well without any. I am not saying that it is not needed, but I do say that if this continued washing is allowed to go on—the washing of clay out of the bank into the harbour—it will be necessary for the minister to do some dredging or erect some structure to prevent the washing away of the land. The property of the Militia Department will very soon be in danger, as it is only just across the street, and in ten or fifteen years we may find that the drill hall is being washed away, unless something is done to protect it. I think there is very strong reason in this case for invoking the assistance of the department. In these very estimates I find an item, which we may be asked to pass to-night, as follows:

Fraser river—to refund to the municipality of Delta one-half their expense of constructing emergency works to protect the south bank of the river near Ladner's Landing on condition that the government of British Columbia will refund the other half.

Now, if we are going to give that to our friends in British Columbia, why not do the same in the case of the county of Halton? I am not asking the government to do the whole thing. I believe the county council will be quite willing to assist. Yes, and without authority, I would say that they would be willing to do half if the government would come to the rescue and do the other half. I think we have an excellent precedent in this case of British Columbia, and I hope the minister will not disregard that precedent. If he asks the House to vote that item, I think he is bound to do the same for the county I represent, for the cases are very similar. I trust the minister will instruct his engineer, if necessary, to make another survey of Burlington. I hope he will not allow it to be lost sight of. And, while he is doing that, I believe he might extend his observations two and a half miles further east, and do something to assist the county, who are constructing one groyne or pier, to put out three or four more and so prevent the destruction of property and the washing away of the land and roadway which is going on constantly. I understand that along that shore the farmers are throwing out groynes or piers in an inexpensive way. They have been doing this for years. But outside of Burlington only in the two cases I have specially mentioned has the damage been very great. One is in the township of Nelson, and the other in the township of Trafalgar, where 120 feet of a man's farm have been washed away in twenty-five years. I am not speaking of that so particularly, because I have not had an opportunity to examine it. But I am sure these are matters worthy of serious consideration. The minister may say that it is not the policy of the government to take up this matter, but I am inclined to think that these are serious matters which he will find, as time goes on, that he will have to give his attention to. New things crop up, and I believe there is a great deal of public money of this country spent in matters that are less worthy than these to which I refer.

Mr. PUGSLEY. I am afraid I have a very unhappy way of expressing myself if the hon. member (Mr. Henderson) has derived comfort from what I said. I did not intend to hold out hope that his application could be complied with. In the case of the Fraser river, it was put upon the ground that the erosion was the result of dredging operations which the federal government had carried on. That was what the municipality stated, and we were satisfied that the claim was not unreasonable. With regard to Burlington, application was made to build a wall along in front of the property of about thirteen different people, in order to protect the property from erosion caused by the wash of the lake. We could not justify doing it upon that ground. But the hon. gentleman has made the statement that the harbour is being affected by reason of this silt being washed into the harbour——

Mr. HENDERSON. It is my impression that it would be. I gave that as a reasonable conclusion.

Mr. PUGSLEY. And it is the most reasonable thing the hon. member has said. For he puts it upon a tangible ground, and one that appeals to me. I will have the matter looked into and see whether the harbour is being affected by this erosion. In that case, we might do there the same as we are doing at Toronto island, where we are building protection works which will incidentally protect Toronto island from being washed away, but the direct object of which is to protect the harbour from being filled with the silt being washed from the island. I will have a further report made on the harbour, and see if this erosion affects the depth of water.

Mr. HENDERSON. Will the minister have a report made on the erosion two miles further east? Better say yes.

Mr. PUGSLEY. I do not think that would be of advantage at the present time.

Mr. D. A. GORDON. Is it the intention of the government to take steps looking to the improvement of the channel south of Fighting island, one of the most dangerous

spots, I think, between the head of the lakes and the foot of Lake Erie? A great many accidents have occurred there, accompanied with considerable loss of life during the past few years, owing largely to the enormous increase in tonnage. I think that last year, no less than seventy million tons of freight passed that point, a tonnage greater than the combined tonnage of London, Liverpool and the Suez canal. That comparison gives an impression of the immense traffic there. And this is being added to by the rapid growth of the Canadian tonnage. Last year, Canada added 30,000 tons. This matter is of all the more importance by reason of the fact that the Americans are spending this year no less than $83,000,000 for the improvement of waterways and harbours, much of which is being spent to the advantage of Canada. I merely call the attention of the minister to these facts. Right in the vicinity to which I refer, millions of dollars are spent to deepen the Lime-kiln Crossing, and I think the government might well look into the matter. I understand that an expenditure of from $250,000 to $300,000 there would render navigation much more safe.

Mr. PUGSLEY. I agree that the matter referred to by my hon. friend (Mr. D. A. Gordon) is of great importance, and I am glad that he has brought it to the attention of the committee. I can assure him that the subject is receiving the earnest consideration of the department. So far, we have not felt able to go on with the work in view of the very numerous demands made upon the department. But I can assure the hon. gentleman that it is receiving earnest consideration, and I trust that before very long we shall be able to undertake it. The United States government is doing a work of great importance of which Canada gets the benefit in the improvement of the channel, and I think it but reasonable that Canada should do its part.

Mr. MARSHALL. Is there any intention to make improvements in Port Bruce, between Port Stanley and Port Burwell?

Mr. PUGSLEY. Not at present. The matter is being considered, but it is not our present intention to proceed with the improvements during the present season.

Mr. MARSHALL. Will there be anything in the supplementary estimates for this work?

Mr. PUGSLEY. I cannot say what the supplementary estimates will contain, or whether there will be any. I shall not know until they are brought down.

Mr. M. Y. McLEAN. May I ask permission to say a few words with reference to the work to which my hon. friend from East Lambton (Mr. Armstrong) referred a little while ago—Grand Bend harbour or pier. Although this work is situated in the hon. member's constituency, I think it is of greater service possibly to a portion of my constituency than it is to his. I fully agree with him that a very considerable additional expenditure there is necessary before the wharf will be in anything like the shape it should be. But I did not press the work upon the minister this year, and for this reason. There are some two or three railways projected, all of which are pointing in that direction. One of them was incorporated by this parliament last session, and is making a terminus at Grand Bend. If all of these railways should reach that point, then much greater improvement will be necessary in that harbour. I may say that there is a natural harbour at Grand Bend, and with a comparatively small expenditure it could be made one of the best and safest harbours on that shore of Lake Huron. At present, however, it is comparatively valueless except for fishing purposes. Owing to the peculiar action of the water at that point, the sand drifts in and fills up the mouth of the river, and sometimes there is a sand bank across the mouth of the river so high that you can almost cross over it dry shod. A few weeks hence possibly that sand bank will have drifted all away. If a moderate expenditure were made there to build an additional pier so as to protect the mouth of the harbour and dredge the harbour, we would have a very safe and efficient harbour the year round. Should any of these railways come to that point, a considerable additional expenditure would be necessary to make the harbour useful for their purposes. I mention these things so as to prepare my hon. friend the Minister of Public Works, and to warn him that possibly we may make a raid upon him for that harbour next year.

Harbours and rivers — Quebec — Angers (L'Ange Gardien)—wharf on River Ottawa—revote of $4,950 lapsed, $5,700.

Mr. GEO. TAYLOR. None of the hon. gentlemen representing Quebec on this side of the House are present. I have just sent upstairs to see if any of them are there. I presume the hon. gentleman will hold over some items in Quebec, so as to allow them to discuss any other items.

Mr. PUGSLEY. We will leave one item at the end on which they can discuss any other item.

Aylmer—wharf on Lake Deschenes—revote of $2,500 lapsed, $5,000.

Mr. PUGSLEY. For a considerable time a public wharf at Aylmer has been asked for. There is a possibility that we may buy the Ritchie wharf; if we do, we will repair it with this money. We can get

the Ritchie wharf for about $2,000, and if we bought it we would spend the other $3,000 in repairing it. We may however, build a new one.

Mr. GEO. TAYLOR. Why should the government build a public wharf at Aylmer more than at any other town on the St. Lawrence?

Mr. PUGSLEY. Aylmer is an important town, and the people are strongly urging us to provide a public wharf. There are reasons why a public wharf is of much greater benefit to a locality than a private one. If there is a public wharf all parties will have the same right to use it, steamers, tug boats and scows; whereas a private wharf is under the control of the private owners.

Mr. GEO. TAYLOR. Then we might just as well buy all the private wharfs along Lake Ontario and the river St. Lawrence. There is not a public wharf in the city of Kingston, they are all owned by private individuals. The same way at Gananoque, Brockville and Prescott, they are all private wharfs. Why should the government go and build a public wharf at Aylmer, and not build one or buy one at any of these other places? There is more shipping done, ten times over, at any one of these towns I have mentioned than there is at Aylmer, yet not a dollar has been spent on any of them, or on any place along the St. Lawrence. Yet here the government goes to work and builds a wharf in opposition to a private wharf there now, or buys it. I think this thing ought to stop—either take over all the private wharfs in the country, or build others, and stop spending money in such little places through some favour or pull of the member for that constituency. I think it is an outrage to use the public money in this way, and cannot be justified from any standpoint that I know ot.

Mr. PUGSLEY. My hon. friend did not claim that the building of a wharf at Gravenhurst was an outrage, yet there is a private wharf there owned by the Grand Trunk railway. There are evident advantages to a community from a public wharf rather than from a private wharf, the owners of which would have a right to show favours to individuals, particularly where there is no harbour master to see that the wharf is used for the benefit of the public instead of a private owner. Now this wharf is reported to us as being in very good condition, and if we buy it and put it in repair it will certainly be a public benefit. In other places we have done the same thing. Down on the St. Lawrence some wharfs which were owned by the Richelieu Navigation Company have been purchased by the Crown, and some were purchased before I became a minister. This is not at all an unheard of thing to do. I do not know the circumstances at Kingston. Probably the wharfs there are under the control of a harbour master.

Mr. GEO TAYLOR. No.

Mr. PUGSLEY. There is a harbour master there, and harbour masters have the right to locate vessels at private wharfs and determine the turn those vessels shall have. In a place like Aylmer there is no harbour master; therefore there would be great advantage in having a wharf owned by the Crown.

Mr. GEO. TAYLOR. There is a private wharf there now. If the owner of that wharf does any shipping, or receives any goods, no doubt he does as they do at Kingston, Gananoque, Brockville and Prescott, charge a wharfage, and makes a business venture of it. Why should the government take it off his hands? At Kingston, if a person ships goods he has to pay a wharfage on every package; the same at Gananoque. It is done by private individuals. Why should not the government say: We will own this wharf and give it to the public free as they are doing at Aylmer, or at Hull, where there is not a pound of freight shipped during the year or a steamer tied up. It is simply a waste of public money and not in the public interest. If the government do that for one place why not treat everybody alike? The hon. member for Kingston (Mr. Harty) will bear me out when I say that in that city there is no government owned wharf that any steamer can go to.

Mr. HARTY. Not for steamers, but there is one at the barracks.

Mr. GEORGE TAYLOR. That is at the barracks and it is for government business only. But, there is no other wharf and we pay wharfage both on goods coming in and going out. They might do the same at Aylmer. If the wharf at Aylmer is owned by a private individual and it is a private speculation why should we take it off his hands?

Mr. BRADBURY. I am not going to object to the idea of building a public wharf. Up in our country we need these things. I was going to say a word to the minister regarding the city of Winnipeg. If the principle is a good one of building a public wharf at Aylmer, and I am not objecting to it, it is all the more reason why a wharf should be built at Winnipeg. We expect to have navigation on the Red river to the head of Lake Winnipeg shortly and there

will be an absolute need of a first-class wharf at that city. I hope the government will take into consideration the idea of building a wharf there. I do not approve of the idea of the government taking over an old wharf. I think it is a mistake. If the government is going to do anything in the way of assisting the people at Aylmer to have a wharf it should be a new construction altogether because then the country would likely get value for the money. Spending money on repairing an old wharf will never give as good a result as the construction of a new work. I hope the minister will not forget Winnipeg.

Mr. PUGSLEY. If Winnipeg makes application to the department for a wharf it will receive very careful consideration.

Bécancour river—wharf near mouth—revote of $5,000 lapsed, $8,000.

Mr. MONK. What is this wharf to be used for?

Mr. PUGSLEY. It is to be used in the ordinary way for river steamers. It is in the county of Nicolet and the wharf is near the mouth of the river.

Mr. LEMIEUX. I remember the circumstances connected with this wharf. My hon. friend from Jacques Cartier is aware that the Delaware & Hudson Railway Company has built as far as St. Clement in the county of Lotbinere and it has built a branch to the wharf at Becancour. It is in order to take timber coming from the St. Maurice river that it has extended its line to Becancour. The Delaware & Hudson does a big business in timber which is exported to the United States. That is the reason the wharf is being built.

Mr. MONK. I do not like to enter into a separate criticism of each of these public works because this is the system sometimes adopted in the province of Quebec: You ask why is a wharf required at Becancour in which an expenditure of $8,000 is involved. The next thing you know is that you are denounced in the locality for having objected to the construction of a wharf through some particular animosity to that particular locality. You are very fortunate if you escape being taxed with being opposed to the rights and religion of the province. That is my experience. We are told every year that the construction of great and necessary works is deferred because there is no money. Quite lately we were told by the Prime Minister that it would be perfectly impossible to begin the construction of the Georgian Bay canal because there is no money and when we speak of the equipment of our principal port, which has been recommended by the Transportation Commission, which everybody admits is necessary and which is clamoured for by the commerce of the country, we are told the same thing. We have here a lot of small works half of which are absolutely useless—no use whatever.

Mr. PUGSLEY. Including this?

Mr. MONK. I do not mention any particular work—oh, no—but I have little doubt that Becancour itself would be twenty times more benefited if the national port of Quebec were properly equipped and the Georgian Bay canal were begun. I say that with respect to Becancour itself, and I know something more about that particular locality than my hon. friend the Minister of Public Works does. Every year this government has systematically laid aside the completion of these great works. Why? For the purpose of patronage, for the sole purpose of putting up small works in little places to gratify some local man who wants a contract—

Mr. E. ROY. Where?

Mr. MONK. Where is my youthful friend?—wanting to get me to say that this is an instance. I see there are a great many wharfs in the county of my hon. friend the Postmaster General—a great many. If I were to say that putting up a breakwater at L'Anse des Femmes or Descente de Femmes, or some such place, was not justified, I would be denounced there next week. But, that is what we do every year. Young members want to put up a little public building and mark their names on the door of some post office at a cost of $10,000 or $15,000 which is absolutely not needed at all. Or, they want to dredge a channel across the river, as they did $50,000 worth of dredging across the St. Lawrence at Batiscan. Go down to St. Pierre-les-Becquets and ask the people and they will tell you that they cannot understand what the government is doing it for. They are dredging in quicksand across the river and as fast as they dredge it fills up. If they kept on dredging for generations they would never make a permanent channel there. That is what they told me when I went there. If the government were to take the people of my own province and of other provinces into their confidence and say: Look here, we have finished spending $8,000, or $9,000, or $10,000 here and there on public buildings which are not required, or on wharfs which are never used, and we are going to do something better than that, we are going to build the Georgian Bay canal and develop those immense undertakings connected with a line of national communication, the result would be much better for the country at large. But, what is more than that, if we carry out the recommendations of that commission, the benefit will spread for a distance of 100 miles around Montreal, and for 100 miles around Quebec. If you continue this sys-

tem, which began before we had the great question of transportation thrust upon us, and which the Conservative government we must admit for a long time after confederation carried on, of putting up these little public buildings throughout the country, we will never be able to provide for the needs of transportation in Canada. I do not know how it is in the other provinces; I suppose it is the same; but in the province of Quebec the first thing a member elected to support the government thinks of, is getting a public building or a wharf in his county, no matter whether that public work is necessary or not, and he will put it in a place where he got a majority or where he expects to get one. The funds of the country go for such purposes. I do not want to take up these items for Quebec one by one, but I can say that beyond question more than one half of them are intended for that very purpose. For instance, my young and active friend from Berthier (Mr. Ecrement) no doubt has a wharf for his county.

Mr. ECREMENT. No.

Mr. MONK. Well, he must have a public building; he could not escape having one or the other. I notice that in many instances we are putting up wharfs for the Richelieu Company; we have been doing that for some years, and I do not know if the government has any arrangement with regard to these considerable structures we are building for that company. I think it was our industrious friend (Mr. Ames) who last year got an estimate of what the revenues are from these different wharfs we are constructing, and I think it was found that we sometimes spend $10,000 on a wharf from which there is no revenue. In the same way we have in a small town a post office which serves its purpose and which costs us only a few hundred dollars a year, but we erect a large public building costing $25,000 from which there is no revenue commensurate with the expenditure. We will never be able to carry out the system of transportation outlined by the commission until the government has the courage—and I venture to say such a government would have the support of the whole province of Quebec—to say, we will have done with these little recompenses here and there to please members who do not see beyond the limit of their counties. When the government comes to that conclusion then we will have the Georgian Bay canal and proper transportation facilities afforded for the trade of the country, and I believe the people would endorse a government that is courageous enough to take that stand.

Mr. PUGSLEY. My hon. friend (Mr. Monk) has caused me a great surprise when he says that he will not criticise any public work in the province of Quebec, because if he did so an opponent would go into the constituency and charge him with having tried to prevent the erection of a public building.

Mr. MONK. That is the fact.

Mr. PUGSLEY. If my hon. friend were a young and timid member, one who had grave doubts as to his strength and influence with the people of his province, I could understand him taking that attitude, but for an old and experienced parliamentarian, the first lieutenant of the leader of the opposition, the leader in the great province of Quebec, for him to decline to give the Minister of Public Works the benefit of his judgment on these various works for fear it would injure him and his party in a particular constituency, that gives me the surprise of my life; I am amazed.

Mr. MONK. I do not think the minister has put it exactly as it should be. The trouble is this: If, for instance, I want to know why there should be any expenditure on a wharf at Isle Verte, and if I inquire about the traffic in connection with the remarks I made a moment ago as to the continued delay in carrying out our scheme of transportation—and I have made protests every year almost in the same terms for many years—then my hon. friend from Berthier, if the criticism applied to his county, would go down next Sunday and denounce me as a fanatic for endeavouring to deprive his county of necessary improvements. I do not think my right hon. friend would say that I proposed as an alternative a work which would be of great advantage to the whole Dominion and to the whole of the province of Quebec in particular, and it is very disagreeable that one should be denounced in that way for making a perfectly legitimate criticism. No man in his senses who has studied the problem of transportation would say that it is better for us to spend annually three-quarters of a million dollars on these little two-penny-half-penny works when we could with that money provide for a great national scheme.

Mr. PUGSLEY. Which of these works do you designate by that happy expression of a two-penny-half-penny work?

Mr. MONK. Ah, the minister is always setting a trap for me to fall into. Now, although I may be exposed to criticism I might take the liberty of asking why we want these landing piers at Lake Massiwippi, it is an inland lake to which American tourists come in the summer.

Mr. PUGSLEY. We are now at Becancour.

Mr. MONK. Well, what is the urgency for a wharf at that ancient seignorial or

feudal place named Becancour. I know a great deal about Becancour—if we are to fall let us fall at Becancour. I know that it is in the county of Nicolet and that the Postmaster General has done a great deal for that county. I think he was the author of the dredging across the St. Lawrence there which so mysteriously disappears every year.

Mr. LEMIEUX. I am very glad the hon. gentleman has singled out Becancour as an example.

Mr. MONK. Of course my hon. friend will admit that I am acting in a spirit of justice.

Mr. LEMIEUX. Oh certainly, it is the right of the hon. gentleman to ask for information. It is true that when I was member for Nicolet I recommended the Department of Public Works to expend that money for the construction of that wharf. The circumstances are these. The Delaware & Hudson railway was formerly constructed only as far as St. Philomene in the neighbouring county of Lotbiniere—and I may say this railway will be constructed to Quebec, as soon as the bridge is completed—and there was no necessity for a wharf at Becancour, but when they reached the parish of Becancour which is one of the wealthiest and largest in the county of Nicolet, the company decided to build a branch line to reach the mouth of the river Becancour, and they had the harbour deepened so as to allow barges from the St. Maurice laden with lumber to come to the railway at that point. I may say that the lumber trade there is carried on by large American companies, but still they are adding to the prosperity of Canada. The object of constructing a wharf was to help the company and also to enable the trade of the St. Maurice river to reach the railroad.

Mr. MONK. Does the trade of the St. Maurice river go across the St. Lawrence?

Mr. LEMIEUX. I am informed that the lumber for export crosses the river. So it is a most necessary and urgent work, in the interest not merely of the company, but also of the entire lumbering industry of the county. Besides, nothing has been asked before for this parish. It was only when the railway was built to Becancour that the wharf was asked for.

Mr. MONK. Becancour is on the south side of the St. Lawrence, and Three Rivers is on the north side. I know that back of Three Rivers there is a large lumber region, but it is new to me that the shipping of lumber from the northern side of the St. Lawrence is going to be done by crossing the St. Lawrence at Three Rivers and loading the lumber on the railway at Becancour. The Canadian Pacific railway goes to Three Rivers.

Mr. LEMIEUX. It does not go to Berlin Falls, where this company has its mills.

Mr. MONK. What shipping has been done at Becancour to justify this expenditure? It is one of those staid old places, wealthy and well-to-do, and how is it that a wharf is required there? Has there been a petition for it? It would be an advantage to have the member for the county here to give us the details of this matter. Not that I find fault with him for being absent, but we would be better able to discuss it if he were here. Has there been an estimate, not only of the cost of the wharf, but of the prospective trade?

Mr. LEMIEUX. A petition was not needed. It was self-evident that a wharf would be required as soon as the railway was completed.

Mr. MONK. The railway runs all the way to Quebec.

Mr. LEMIEUX. It has not reached Quebec. Owing to the accident to the bridge the railway stopped at Ste. Philomene, and about 40 miles will have to be built before it reaches Quebec. But it was self-evident that as soon as the railway reached Becancour, and the company built a branch line to the mouth of the river, a wharf would be needed and the harbour would have to be deepened. My hon. friend says: Who asked for it? The railway company asked for it; but it is not in the sole interest of the railway company; it is in the interest of trade and transportation. Barges will ply between the St. Maurice river, which is right opposite Becancour, where the mills are situated, and they will unload their cargoes at the Becancour wharf, and they will there be put on the trains. The Delaware and Hudson River railway is an American road running partly in Canada and partly in the United States, but it is a great feeder of the mills, and our people get the benefit of the money it brings to the country.

Mr. BUREAU. I may tell my hon. friend from Jacques Cartier that the reason of the lumber going across the river was that the Canadian Pacific railway does not run to where the Quebec Industrial Company has its mills, and it could only send its lumber across the river to Becancour and Doucet, shipping it from there either by the Grand Trunk or the Delaware and Hudson.

Mr. MONK. What is the estimated cost of this work?

Mr. PUGSLEY. The cost, as estimated by the departmental engineer, is $12,000.

Bic harbour—repairs to old wharf, $1,000.

Mr. J. D. TAYLOR. I would like to know where Bic harbour is, and the nature of the traffic carried on there.

Mr. PUGSLEY. It is in Rimouski county. There is a lumber business there, and it is a very popular summer resort, and also the centre for the pilots of the St. Lawrence.

Mr. J. D. TAYLOR. The reason I ask is that I find in the annual report of the Minister of Public Works that some very extraordinary works were carried on at Bic during the past year. In deference to the remarks of the hon. member for Jacques Cartier, I wish at the outset to absolve myself from any desire to make an attack on any body's race or religion or nationality. I simply wish to know whether we can have in the district I represent the same kind of expenditures as are made in this fortunate district of Bic. I read in the report of the chief engineer that Bic is a favourite summer resort, and that it has a harbour that affords good natural shelter for vessels. For the year covered by this report there was an expenditure of $7,103 at Bic, and that expenditure was carried on by day labour between September 22 and November 30. It is only a coincidence, of course, that the general elections were going on during the same period. The dates are September 22 to November 30. While this place is most famed as a summer resort, the expenditure in that year was carried on after the summer resort travel had disappeared and at a most unfavourable season. In fact, there is an apology in the report by the engineers for doing the work at the season when it was done. Here is something to which I would call the attention of the minister, because I would like to secure in the district of Chiliwack some expenditure of this precise nature, because of course, when the department made it at Bic, they cannot will dney it at Chiliwack.

Mr. GEO. TAYLOR. Wait until the elections are on.

Mr. J. D. TAYLOR. No, we want it before the elections. We did very well at the last elections and are entitled to some reward. Here is a description of some of the work done at Bic:

> A good deal of work was also done to improve the roads leading from the village to the wharf. A large quantity of rock was blasted, and the roadway was finished by the addition of a layer of sand six inches thick. Ditches and culverts were built where found desirable.

I would point out that the government wharf at Chiliwack is what might be termed a moveable feast. Owing to the lack of dredging there, we often have to move the spot of gravel which is called a wharf a mile further out than where it is located in favourable seasons, and it is very difficult to get teams out there for freight and passengers. Would the hon. minister say whether we might expect at Chiliwack a liberal expenditure for an approach to our wharf or if not why one locality should be favoured and not another.

Mr. PUGSLEY. There has been no application, since I have been minister, for an approach to the wharf at Chiliwack. If there should be, it would receive due consideration. This work at Bic was done very properly for the purpose of giving a suitable approach from the village to the wharf. The land around Bic is very picturesque, but somewhat hilly, and it was difficult to make the road, and I have no reason to suppose that the road cost more than was absolutely necessary. When the Crown builds a wharf, it is not unreasonable that it should build an approach from the public highway to that wharf. If the case at Chiliwack is as strong as that at Bic, I shall give it proper consideration.

Mr. LEMIEUX. If my hon. friend from Quebec West (Mr. Price) were here, he could assure my hon. friend from New Westminster that this work was much needed. As my hon. friend probably knows the member for Quebec West is at the head of the very important firm of Price Brothers.

Mr. J. D. TAYLOR. I am not opposing the work.

Mr. LEMIEUX. I am simply explaining the circumstances. Price Brothers practically own the whole of Rimouski county. They carry on large lumbering operations there and Bic is one of the chief places. If the hon. member for Quebec West were here, he would say that this work was much needed.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

DOMINION MILLERS' ASSOCIATION.

House in committee on Bill (No. 111) respecting the Dominion Millers' Association —Mr. Harris.

On section 2 as amended—powers to hold real estate.

Mr. LENNOX. This is the matter to which I called attention the other night. I do not know who takes charge of this Bill on behalf of the government, but I urge again the point I mentioned. Instead of 'for the purposes of their business,' it

should read, 'for the purpose of their undertaking.'

Mr. PUGSLEY. I think 'business' is rather more applicable to a company of this character than 'undertaking,' particularly as, in other sections of the Bill, 'business' is the word used. For instance, section 3, subsection (a) authorizes the association to carry on the 'business of purchasing, selling,' and so on.

Mr. LENNOX. I cannot see it in that way. What I called attention to the other night is that in the case of railway Bills, the object is to confine them to the business they undertake, and in these Bills we say 'for the purposes of their undertaking.' This form of words has acquired a definite signification in connection with railway charters, and it seems to me very much better to adopt the same form of language in connection with a Bill of this kind. Of course, if the government think otherwise, I have nothing more to say.

Mr. PUGSLEY. It is like chips in porridge.

Mr. LENNOX. Well, chips in porridge are uncomfortable.

Mr. PUGSLEY. But they do not change the taste.

Mr. LENNOX. Very true, but they are very inconvenient. For my part, if it is legislative porridge, I would rather have the chips out. And, if I may express an opinion on the subject, I think we are not quite as particular as we ought to be in reference to legislation that we pass. The observations I offer from time to time—they are very infrequent as it happens—are with the object of making legislation better where possible. However, I recognize the fact that the government take the responsibility. Still, I do not regard this as a 'chip in porridge,' but as a matter of substantial importance. We should bear in mind that our legislation gets into the courts from time to time, and, if we have one phraseology in one statute and another in another statute, in cases in which the meaning is substantially the same, we inevitably lead to litigation and to confusion. And that, as I say, is not a matter of 'chips in porridge,' but a matter of substantial importance.

Mr. NESBITT. I agree with the Minister of Public Works (Mr. Pugsley). The hon. member for South Simcoe (Mr. Lennox), of course, is quite right when he says that we use the word 'undertaking' in relation to railway matters. But this is a different thing, and I think what we wish to say is better covered by the word 'business.' It is a technical point, and really it would be hard to tell the difference, but there is a difference. The railway is an undertaking; this says: 'Business or businesses.' I think the words: 'For the purpose of its business,' covers the object better than the words: 'For the purpose of its undertaking.'

Mr. SPROULE. If that be the case, why do they put the same words in a power company? Because we passed one or two Bills last year, and we have one before us now, and the same words are in them.

Mr. NESBITT. That is also a power company, it is an undertaking, and it defines the undertaking. The charter defines the undertaking.

Mr. SPROULE. It is an undertaking that proposes to do the same thing. It is to have a wharf, docks and vessels. If you went before a court with two statutes, one for a power company and the other for a millers' association, surely the court would decide that there must be some difference of meaning between a business and an undertaking; and if they both mean the same thing, would it not be better to have one phraseology applying to all? Then there would be no doubt, it would be understood both by the people and by the court.

Mr. PUGSLEY. Section 3, paragraph (a) says:

> Carry on the business of purchasing, selling, storing, shipping, &c.

If you were to say, ' carry on the undertaking of purchasing, selling, storing, shipping, &c.' the word ' undertaking ' would not be apt, it would not be a proper word to use in that connection. Therefore we are, in the first place, authorizing this company to carry on the business of selling, —that is ordinarily spoken of as a business; we do not speak of a railway undertaking as a business in the same sense as merchandizing. Then when you come to paragraph (b) you provide that for the purpose of enabling the company the better to carry on its business, which by the previous clause it is authorized to carry on, it may charter vessels, &c. Therefore the word ' business ' is much more apt, it seems to me, than the word ' undertaking ' in a Bill of this character.

Mr. ROCHE. I would ask the Finance Minister in reference to subsection (a) of section 3, the latter part:

> May construct, acquire, operate, hire, lease, sell or otherwise dispose of elevators for elevating wheat, grain or other products, and acquire, lease, and utilize hydraulic, electric or other power for the purpose of the said business, and generally may carry on an elevator or storage business.

I desire to ask the Finance Minister, who is aware that the grain growers had a delegation here lately waiting upon the government in regard to the government taking over terminal elevators, and operating them under government control, would this Bill, under that clause, confer certain rights on this company, that might prove embarrassing to the government in carrying out that policy, and entail expense? Are you giving rights under this Bill that would have to be purchased by the government should the government decide to accede to the request of the grain growers?

Mr. FIELDING. My impression is that we would not. This is simply an enabling Bill which authorizes them to do certain things which an individual might do for himself, and which they are permitted to do in their corporate capacity. I do not think the Bill would create any vested rights that we would have to purchase. Possibly the company might think they would have such rights.

Mr. OLIVER. I would like to have an explanation of the provisions of this section 3.

Mr. FIELDING. Perhaps the Bill had better stand.

Mr. SPROULE. I move that the committee rise, report progress, and ask leave to sit again.

Motion agreed to.

SECOND READING.

Bill (No. 140) for the relief of Frederick Joseph Gustin McArthur.—Mr. A. Haggart.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 86) respecting the Western Canada Power Company, Limited.—Mr. J. D. Taylor.

Bill (No. 112) to incorporate the Independent Order of Rechabites.—Mr. Verville.

SUPPLY.

House resumed in Committee of Supply.

Mr. MONK. I did not understand that the Becancour wharf item had passed.

Mr. PUGSLEY. That was carried.

Mr. MONK. Well, my hon. friend invited me to criticise each one of these items, a task which I did not feel disposed to undertake, but we asked a couple of questions in regard to this wharf at Becancour. My hon. friend knows that we found out that this wharf was being built to accommodate the Delaware & Hudson railway. I asked who had petitioned for this wharf, and the hon. Postmaster General (Mr. Lemieux) told me that it had been asked for by the Delaware & Hudson Railway Company. My hon. friend the Minister of Public Works knows the country well enough to know that at Three Rivers we have three of our own railways, the Canadian Pacific railway, the Canadian Northern railway and the Transcontinental railway, built by ourselves, the others having been largely subsidized by the country. It is in order to permit the Delaware & Hudson Railway Company to get the wood of the Three Rivers district across the St. Lawrence, put it on its cars and take it to the United States, probably pulp wood, that this wharf is being built. In reality we are building the wharf to accommodate an American railway which is depriving these three railways at Three Rivers of their wood freight. I just submit to my hon. friend whether this is a carefully considered and wise policy. My hon. friend the Postmaster General—I do not say it to blame him at all—is one of the directors, I believe, in Canada of the Delaware & Hudson Railway Company. I give that as an instance of how far we might go in our criticism if we brought the same examination to bear on each one of these items. I have no desire to delay the minister, in fact, my desire is to abridge what concerns my own province of Quebec, not only for the reason I gave my hon. friend, but my hon. friend knows that there are very few of us from Quebec here to-night; in fact, I feel like one who treads alone a banquet hall deserted, because, apart from the Solicitor General and the hon. member for Dorchester—

Mr. PUGSLEY. If my hon. friend argued very strongly against an item he might persuade me.

Mr. MONK. I do not like, in the absence of these gentlemen, to criticise items that they have obtained the insertion of in the budget. Since I have been a member of this House I have tried hard, but in spite of every effort I have never succeeded in getting an item into the estimates of the department of my hon. friend, and I am therefore in a very different position from those who can get items in without even having the trouble to be present to explain them. This manner of criticising the estimates is a most unsatisfactory one, and I had hoped that the committee to amend the rules of the House would have given us an opportunity this year of suggesting some change in the way of proceeding with the estimates. I do not believe there is an assembly voting Supply in any part of the world where estimates are put through in this way. There is no such method adopted in any other deliberative and legislative assembly. If I did what I suppose we

used to do in connection with these estimates I would put the same questions as I have put in regard to Becancour with reference to all these other items covering more than two pages, and I would detain the minister here until very late. Apart from the other objections which I mentioned before the committee rose at six o'clock, I have no desire to do that, and the question suggests itself to me as to whether there would be some easier way of going through these estimates of the province of Quebec, because I cannot assert some things here in the absence of those representing the counties, because what I might say would be open to objection and might very well be corrected if they were here. These two pages of the estimates involve an expenditure of nearly three quarters of a million and, as my hon. friend will admit, lay the foundation for a very much larger expenditure indeed, because many of these undertakings are really beginnings. I do not know if the suggestion I am going to make to my hon. friend and the committee is an acceptable one, because we have sitting now for the last time the very important committee on race track betting, we had all agreed to be there, and it was quite unexpectedly that I was called down here. Does the minister think he could lay upon the table a short statement which might be placed in 'Hansard' giving answers to the questions that are usually put in connection with these estimates, that is, the date and the amount, the original estimate of the work for which he asks a vote, the amount of the original contract, the name of the contractors, the tenders if called for, when tenders were called for, if called for in the public papers, the expenditure to date, the amount required to finish the work, the revenue received last year, and the amount expended for maintenance last year. All the questions that could be put in this committee, constituted as it is this evening, could not go beyond that. We have to take up the time and employ the whole paraphernalia of the House to elicit answers to these questions. It seems to me that if the minister could reserve one of these Quebec items, and at some future sitting of the committee lay that statement on the table of the House and place it in 'Hansard' I would be perfectly satisfied, and I think it would greatly abridge the work of the committee and of my hon. friend. There are two items in these estimates for Quebec to which I would like to direct my hon. friend's attention. One is an item of $60,000 for improvements on the Richelieu river. That is a considerable item, and it will require some discussion. There is a further item for a deep water wharf at Sorel, for which $86,000 was voted last year, and for which $42,000 is asked this year. As my hon. friend is no doubt aware that wharf was built and slipped into the river, we are building it over.

Mr. PUGSLEY. In a different way.

Mr. MONK. Yes. It seems a pity not to go a little into the discussion of these two items. In regard to the others my hon. friend will see that there could be no other questions asked than those I have jotted down in this memorandum. As my hon. friend is not familiar with the province I might be tempted to extend the discussion unduly. The members who represent these counties are not here. I make these suggestions with the desire of abridging the work of the committee and not taking up my hon. friend's time. If this suggestion is practicable, I would not take up the time of the minister and of the committee by asking the self same questions on each item.

Mr. PUGSLEY. I do not think it is proper to accept the suggestion of my hon. friend with regard to the province of Quebec; I think we should have the same rule as to public works in all the provinces. I think it is a good deal of benefit to discuss items; I receive benefit myself from criticisms by both sides of the House. These gentlemen who are familiar with the public work under review are able to advance arguments in favour of it when criticism is offered. There is the other objection also that the suggestion would mean the postponement of the items for Quebec, because so long as one item stands the resolution cannot be adopted and we are not much further ahead. I am desirous of going on with the Quebec items to-night, because I informed the members from Quebec these items would be under discussion, as I informed other hon. gentlemen that Quebec, Manitoba, and British Columbia items would probably take up the time of the committee. I am sorry my hon. friend (Mr. Monk) has to go to the race track committee.

Mr. MONK. I have made the suggestion for the convenience of the minister and the committee. This is the last meeting of that committee, we all agreed to be there and I really must attend.

Mr. PUGSLEY. If there is any particular item my hon. friend will wish to discuss he could do so on the vote for the dredging plant in Ontario or Quebec.

Mr. MONK. My suggestion was with the idea of facilitating the passing of the estimates and not to delay them.

Mr. PUGSLEY. Very well, then we will go on with the Quebec items.

Cabano—landing pier on west side of Lake Temiscouata, $3,500.

Mr. PUGSLEY. This is to cost $3,500, and we expect to finish it with this vote.

Mr. R. L. BORDEN. Is it by tender?

Mr. PUGSLEY. Probably, but I am not sure.

Mr. R. L. BORDEN. Why is not the minister sure?

Mr. PUGSLEY. Where the amount is under $5,000 and the resident engineer is of the opinion that the work can be done better and cheaper by day work we sometimes do it that way.

Mr. R. L. BORDEN. Has there been any report as to whether it is advisable to do it by tender or day work?

Mr. PUGSLEY. No.

Mr. R. L. BORDEN. Who judges that?

Mr. PUGSLEY. The chief engineer, subject to the decision of the minister.

Mr. R. L. BORDEN. On what does the chief engineer make up his decision?

Mr. PUGSLEY. It would depend perhaps on the remoteness of the locality and the likelihood of persons wishing to tender.

Mr. R. L. BORDEN. Is this a remote locality?

Mr. PUGSLEY. Not very.

Mr. MICHAUD. It is quite a large manufacturing place.

Mr. PUGSLEY. There are a good many who are of opinion that where cribwork is to be done, if you get a good foreman who will look after the work and get good timber, you can do it better than by contract. Under the law we have not the same discretion where the work costs over $5,000.

Mr. LENNOX. Are you guided by that?

Mr. PUGSLEY. Yes, very largely.

Mr. LENNOX. Are there not a great many exceptions?

Mr. PUGSLEY. Not a great many, quite a number. In case of emergency or in cases where it appears that work such as repairing an old wharf can be better done by day work, we do it.

Mr. LENNOX. There always have to be exceptional circumstances?

Mr. PUGSLEY. Yes.

Mr. LENNOX. That is what the minister says?

Mr. PUGSLEY. Yes, I so interpret the Act.

Mr. LENNOX. The minister is guided by that, there must be exceptional circumstances or else the minister conforms to the Act?

Mr. PUGSLEY. That is what the Act says.

Mr. LENNOX. I know what the Act says as well as the minister does, but I want to know what you do.

Mr. PUGSLEY. The minister is guided by, and conducts himself under, the Act.

Mr. LENNOX. As a matter of fact, unless exceptional circumstances justify departure from the Act, the minister is controlled by the Act?

Mr. PUGSLEY. Yes, the minister would not think of violating the Act.

Mr. DANIEL. See him smile.

Mr. R. L. BORDEN. I have not heard anything so far which would lead me to believe that this work ought not to be done by tender.

Mr. PUGSLEY. I am not aware that I can give any reason why it should not be done by tender in the usual course.

Mr. R. L. BORDEN. The minister says it is somewhat less expensive to do it by day work with a foreman or inspector; is it the foreman or the inspector the minister relies on?

Mr. PUGSLEY. We usually use the term 'foreman,' the words are interchangeable.

Mr. R. L. BORDEN. Was not a tailor once employed to superintend some public work?

Mr. PUGSLEY. Which tailor?

Mr. R. L. BORDEN. I forget his name, but he was a tailor by occupation, and the scene was in New Brunswick.

Mr. PUGSLEY. That is a long time ago. Under the old Conservative government, there was a foreman who was an undertaker.

Mr. R. L. BORDEN. His occupation would seem to fit him better for the job than if he were a tailor.

Mr. DANIEL. The leader of the opposition is referring to the building of the armoury in Sussex, where a tailor was put in command of the work.

Mr. PUGSLEY. My hon. friend (Mr. Daniel) ought not to butt in on this; how long ago was that?

Mr. DANIEL. Since this government has been in power.

Mr. PUGSLEY. That is a long time.

Mr. LENNOX. Altogether too long.

Mr. PUGSLEY. I think I have in mind the gentleman the hon. member refers to. He is a thoroughly good, practical man.

Mr. DANIEL. A good tailor?

Mr. PUGSLEY. No, a good all round man, who will do what he is called upon to do—faithfully and well.

Mr. DANIEL. I may say that this celebrated tailor was kept on inspecting considerably after the work was done, according to the statement of the gentleman who then represented Kings county in the House.

Mr. PUGSLEY. If that was so, it would be very unusual and ought not to take place. I do not think it has taken place in recent years.

Mr. R. L. BORDEN. You cannot have too much of a good thing; and if he was as good an inspector as the minister says he was, his services were probably as valuable afterwards as before.

Mr. PUGSLEY. I think my hon. friend from St. John is relying upon his imagination when he makes the statement he does.

Mr. HENDERSON. My recollection is the same as that of the hon. member for St. John, that the inspector was kept on after the work was done.

Mr. DANIEL. I was not relying on my imagination, but on the positive statement of the former member for Kings, which statement will be found in 'Hansard'.

Mr. PUGSLEY. Will the hon. gentleman tell me what that has to do with the wharf at Cabano?

Mr. DANIEL. Not the slightest.

Mr. R. L. BORDEN. It has to do with the general principle we were discussing of carrying on these works by tender or day work. The minister was relying on inspection, and I observed that it depended on how good the inspection was. I would not consider it consistent with efficient administration that a tailor should be selected for the inspection of an armoury.

Mr. PUGSLEY. The question of the inspection of this work does not come up now. Our effort is always to get practical men, and I think we succeed in getting them. I have not heard complaints in recent years in regard to inspectors.

Cap à l'Aigle—repairs to wharf, $2,400.

Mr. PUGSLEY. This is to provide for repairs to the wharf, as recommended by the resident engineer, Mr. Decary. The total estimated cost is $2,400.

Mr. R. L. BORDEN. When was the original wharf built?

Mr. PUGSLEY. In 1881 and 1882. It was widened in 1901.

Mr. R. L. BORDEN. Is it a free port, or are tolls charged?

Mr. PUGSLEY. As it has not been transferred to the Marine Department, no revenue is derived from it.

Mr. LEMIEUX. I know this place well. It is in the county of Charlevoix, and is one of the summer resorts in the St. Lawrence. The government have a steamer plying between River L'Ouelle, St. Irenée, Cap à l'Aigle, Murray Bay and the terminus of one of the branch lines of the Intercolonial railway. It is at the request of the Richelieu Navigation Company that this vote is put in the estimates.

Mr. R. L. BORDEN. On what principle does the government act in transferring or not transferring wharfs from the Public Works Department to the Marine Department?

Mr. PUGSLEY. There has never been any principle.

Mr. R. L. BORDEN. Is it not time that there should be one?

Mr. PUGSLEY. It is, but it is a difficult matter to work out. It is now engaging the attention of the Minister of Marine and Fisheries and myself. I may say that this is not a new difficulty; it has existed under all governments since confederation. Suppose I transfer this wharf to the Marine Department. It would at once begin to collect tolls. The farmer who takes half a dozen bags of potatoes to the wharf has to pay toll. He goes home and brings a barrel of flour, and on that he has to pay toll. All the tolls in the course of a year do not amount to much, but they are a burden on the farmer. In several cases I have hesitated on this account to make the transfer. We are endeavouring to work out some plan under which we would charge a yearly fee to the steamboat owners, so that the farmers would not have to pay any toll. We may work out a solution of the difficulty on some such basis as that.

Mr. R. L. BORDEN. I think it is desirable that that should be done, because, admitting the existence of what the minister calls a hardship to farmers, it is still rather inequitable that farmers in some parts of the country should be subjected to that hardship, while farmers in other sections are relieved of it. I therefore think some general system should be adopted, and what the minister suggests seems to have some merit in it. It should not be allowed to continue in its present state of confusion.

Mr. HENDERSON. In my county fishermen who land their fish on the wharf have to pay wharfage dues, which was

not the case until the wharf had been repaired. I do not see why in some sections of the country there should be no wharfage dues charged, while in my county they are charged because the wharf has been transferred to the Marine Department. One rule should apply to all. I am not particular whether a tariff is charged on this wharf or the one I refer to made free, for the revenue obtained out of the one I refer to is so trifling that it would make little difference if no tolls were charged. The harbour cost the government something over $30,000 and only one boat went there last year.

Mr. WRIGHT. Did I understand the hon. minister correctly that these wharfs are free while under the Public Works Department, but when transferred to the Department of Marine and Fisheries, dues are charged.

Mr. PUGSLEY. That is right. Does my hon. friend urge that the wharf at Gravenhurst should be transferred to the Department of Marine and Fisheries at once?

Mr. WRIGHT. It is likely to be long before it is finished unless the work is proceeded with faster.

Mr. PUGSLEY. It will be completed in good time.

Mr. LENNOX. The minister's question is hardly a fair one. Last year we had a statute under discussion, and it was understood that a uniform system was going to be adopted which would work almost automatically. Some regular system should apply, and it should not be left to the discretion of the minister to decide that it will be a hardship to make the transfer in one case and not in another. I understood that last year in many cases the costs of the agent who looked after the collections were quite equal to the amount collected and sometimes far more.

Mr. PUGSLEY. The department pays only 25 per cent of the recipts.

Mr. LENNOX. I think there are cases where the wharfingers are not confined to a percentage. I am not in favour at all of any hardships being inflicted which would only result in collecting a very small amount of fees in proportion to the expenditure, but there should be some uniform system adopted.

Mr. PUGSLEY. There was a wharf built by the old government some twenty years ago upon one of the lakes in the eastern townships and it had never been transferred to the Department of Marine and Fisheries and the old government never collected any wharfage. After I had been minister about a year—the wharf had then been built about nineteen years—there was a suggestion made to me to transfer the wharf to the Marine Department. Of course I let it be known that the department would charge tolls. All the people were then up in arms. They said it was a monstrous thing. For nineteen years they had enjoyed under both governments free use of the wharf and now the government was going to impose toll. The result was, whether rightly or wrongly, I did not make the transfer.

Mr. R. L. BORDEN. That only shows the necessity of some system.

Mr. PUGSLEY. So it does, but it is a difficult thing to work out. There are two wharfs, one in New Brunswick and one in Nova Scotia, that pay one-third of the total tolls collected from wharfs throughout the whole Dominion. One of these wharfs is at Digby and the other at Campbellton.

Mr. BRADBURY. Last year I drew attention to the condition at Selkirk. The Public Works Department controls the dock at that place. There has been considerable expenditure on that dock, and I understood there was to be some arrangement by which it would come under the control of the Marine and Fisheries Department. I am not anxious to see a change if dues are to be collected, but what does take place is this. There is a wharfinger supposed to be there, but who is a private banker, and he levies, I presume by authority of the department, a certain fee on each steamboat and fishing boat that comes to the dock. I understand he collects something like $300 a year of which the government does not get a cent. It all goes into his pocket and he does no work that I know of. As a rule, the dock is controlled by Captain William Robertson, who is the largest lumber shipper in that locality, and you generally find the dock crowded with his lumber. There is no advantage to the government in these tolls which are charged and they are a hardship on the steamboat men. I would just as soon see this fee done away with altogether, and have an absolutely free dock.

Mr. PUGSLEY. I am surprised at my hon. friend's statement, because if a wharfinger has been appointed, that would imply that the wharf had been handed over to the Marine Department. My department does not appoint any wharfingers.

Mr. BRADBURY. I may not be correct in saying he is a wharfinger, but he collects the money and keeps it.

Mr. PUGSLEY. Is there a harbour master in Selkirk?

Mr. BRADBURY. Not that I know of, unless this man acts as harbour master.

Mr. R. L. BORDEN. Perhaps he is an inspector.

Mr. LOGGIE. I think you will find that the wharfinger only keeps a percentage of the money.

Mr. BRADBURY. I have looked through the Auditor General's Report several times to find out how this man gets his money, and can find nothing to indicate where this money goes, but I know it is paid.

Mr. PUGSLEY. I will give instructions to have the matter looked into.

Mr. R. L. BORDEN. This will complete the work?

Mr. PUGSLEY. Yes.

Carleton—repairs to wharf, $1,500.

Mr. PUGSLEY. This is recommended by the resident engineer, Mr. Amyot. This wharf was built in 1882-3.

Mr. J. D. TAYLOR. I find that this is a recognized summer resort and therefore, according to the report, the wharf should be kept in order. But it is rather singular that these reports should have been delayed until the election month. The work, which was done by day labour, was begun October 5. Here is a description of the work:

The old beach protection, situated a few acres west of the wharf, has been replaced by a new round timber construction 350 feet long, 6 feet wide and 4 feet high, well ballasted with stone.

I should like to know wherein that differs from the beach protection work on the Fraser river, which we were told could not be given because of some constitutional difficulty?

Mr. PUGSLEY. This beach protection done at Carleton, was simply a renewal of the old work which had been done years ago. It is not at all improper that the government should repair works it constructed and which had got out of repair.

Mr. J. D. TAYLOR. Then are we to understand that it will be perfectly in order to make application for repair to old beach protections?

Mr. PUGSLEY. If they were built by this government originally, I think that would not be out of the way.

Mr. R. L. BORDEN. Will this complete the work?

Mr. PUGSLEY. Yes—estimated cost, $1,500.

Mr. R. L. BORDEN. What was the revenue last year?

Mr. PUGSLEY. There was no revenue—this work has not been transferred.

Chateauguay—wharf on south shore of Lake St. Louis, between Woodland and Bellevue—revote of $2,900 lapsed, $8,000.

Mr. PUGSLEY. This work, it is represented, is very much needed in order to enable steamers to call.

Mr. LENNOX. Was the former vote of $2,900 part of a larger vote?

Mr. PUGSLEY. There was a vote of $3,000, from which there was an expenditure of only $73.25. The remainder lapsed.

Mr. R. L. BORDEN. How is this work to be done?

Mr. PUGSLEY. By tender and contract in the usual way.

Mr. R. L. BORDEN. Are there any private wharfs there?

Mr. PUGSLEY. There is a dilapidated private wharf, but the public feel that it is of no use to them. We have been urged by resolution of the municipal council to do this work. It is expected that the shipments from this wharf will reach at least $100,000 annually, and will include hay, cattle, fruit and general farm produce. This is an important place.

Chicoutimi—harbour improvements, $15,000.

Mr. PUGSLEY. This is to complete a work which is under contract, consisting of harbour improvements in the Saguenay river at Chicoutimi, also to make renewals and repairs of the old government pier there.

Mr. R. L. BORDEN. What is the total cost?

Mr. PUGSLEY. This will complete the work we have in hand. The amount of the contract was $55,455.

Mr. R. L. BORDEN. What is the nature of the improvement?

Mr. PUGSLEY. The extension of the old wharf.

Mr. R. L. BORDEN. Then, why call it 'harbour improvements'?

Mr. PUGSLEY. There is some little additional work in renewing the old government pier. That will be done by day work.

Mr. R. L. BORDEN. Is this really the construction of a wharf or the improvement of a harbour? I thought 'harbour improvements' included some such thing as dredging.

Mr. PUGSLEY. It includes that and wharf construction as well.

Mr. R. L. BORDEN. It seems a pretty substantial sum for a wharf.

Mr. PUGSLEY. It is to have a concrete superstructure. It will be a very substan-

tial wharf. Chicoutimi is an important town.

Mr. ARMSTRONG. How many thousand inhabitants has it?

Mr. GIRARD. Five thousand.

Mr. LENNOX. It seems to me this expression 'harbour improvements' hardly conveys to the committee the idea as the minister has explained it. I think that members of the committee generally would not get from the word 'harbour improvements' the idea of the construction of a wharf alone. I think that, in such a case, the department would be treating the committee with more candour if it asked for a vote for a wharf. When we speak of 'harbour improvements' we think of such things as are going on in the harbour of Montreal. But where there is a wharf and nothing more, it should be called a wharf, and then the committee would know better what is under discussion.

Mr. PUGSLEY. We are not adopting a new plan in this matter. The Quebec harbour improvements include dredging and wharf building, and the same at Montreal. Take the case of St. Andrew's rapids, on the Red river—we speak of the works there as 'improvements'. At Chicoutimi, this work has been carried on from time to time, and it was thought that under this heading it would be easier to give the committee information as to all the expenditures in this harbour.

Mr. LENNOX. I thought I had expressed myself with a reasonable degree of clearness. Perhaps the minister was not listening. He said about what I said. If there is a variety of improvements, I do not object to the word 'harbour improvements'; but where there is nothing but the making of a wharf, I think that the committee would not expect to find the work described by the general term. It would strike one that $55,000 was a large sum for a wharf, but one would be less apt to question such an amount spent in the general improvement of a harbour.

Mr. R. L. BORDEN. Is this an old wharf or an entirely new structure?

Mr. PUGSLEY. This is a recent structure.

Mr. R. L. BORDEN. The minister spoke of an old wharf.

Mr. PUGSLEY. The original government pier—yes. Some repairs have to be made upon it. This work is an extension of the government pier.

Mr. R. L. BORDEN. The minister is repairing the old portion and extending it?

Mr. PUGSLEY. Yes.

Mr. ARMSTRONG. Would the minister give us the size of the pier and the material of which it is made?

Mr. PUGSLEY. The work is the inclosure of a lot 500 feet long on the river front with a mean width of about 190 feet, opposite the Coté, Boivin Company's property on the lower side of the present government wharf. It is being constructed with 50 feet on its outer face on the side of the bridge, and 15 feet high above low water. A retaining wall open face, ballasted cribwork, 31 feet in depth, extending 500 feet down stream in a westerly direction nearly at right angles to the old pier. Then the area which is inclosed on the north and east side by the new retaining wall is to be filled in with material from the river bed by dredging 15 feet at lowest water in front of the retaining wall. The Richelieu and Ontario Company's steamers run there. There is a pulp mill at Chicoutimi which ships its products to Europe. We are gradually deepening the Saguenay so that ocean vessels will be able to go right up to the wharf. The property upon which this is being built is owned by the government.

Mr. R. L. BORDEN. What was the revenue from the old wharf last year?

Mr. PUGSLEY. My hon. friend who represents Chicoutimi and Saguenay (Mr. Girard) tells me it was about $2,000 last year.

Mr. R. L. BORDEN. Perhaps the hon. member would tell us why it is necessary to make this large extension?

Mr. GIRARD. The Quebec and Lake St. John railway runs to Chicoutimi and discharges its freight on the wharf. A great deal of freight from Quebec to Montreal is transferred on this wharf, because the rates of transportation are not as high as they are by railway. Chicoutimi is the railway terminus.

Mr. R. L. BORDEN. Is there a transfer of the traffic made there from railway to the boat?

Mr. GIRARD. Yes.

Mr. R. L. BORDEN. And the traffic is increasing?

Mr. GIRARD. Increasing every year. There are several lumber companies operating there, all using that wharf in the summer time.

Mr. R. L. BORDEN. Will this complete the work?

Mr. PUGSLEY. No; it is expected it will take about $9,000 more.

Cap de Chatte—extension of training pier at mouth of river—revote of $2,000 lapsed, $2,000.

Mr. PUGSLEY. The training pier is for the purpose of directing the current so as to keep the channel clear.

Mr. LENNOX. Why was this $2,000 held over?

Mr. PUGSLEY. It was one of those works which we decided to postpone last year on account of a shrinkage in the revenue.

Contrecœur—wharf—revote of $1,000 lapsed, $3,000.

Mr. PUGSLEY. This is to reconstruct the old wharf purchased from the Richelieu and Ontario Navigation Company. The estimated cost is $7,000, and the cost of the old wharf is $2,000. We spent, in 1908-9, $2,000. We will require $4,000 to complete the work.

Mr. R. L. BORDEN. Why did you buy the wharf?

Mr. PUGSLEY. We bought it because we thought it would be in the public interest that it should be owned by the Crown, and we were able to get it at a very low price.

Mr. LENNOX. What is this made of? Is it made of good substantial material, and not sawdust?

Mr. PUGSLEY. Sawdust is only a name. I hope that the hon. gentleman will not die anywhere within the next 50 years, and that when he does die the word 'sawdust' will not be found engraved on his heart.

Mr. R. L. BORDEN. I think it is more likely to be engraved on the minister's heart. Is the minister embarking to any considerable extent in the business of buying wharfs?

Mr. PUGSLEY. Not to a large extent. We buy them where we can get them very cheap, and where it is in the interest of the public to acquire them.

Mr. ARMSTRONG. What representations were made to the minister to urge him to buy this wharf?

Mr. PUGSLEY. The member for the county, and also the Minister of Marine and Fisheries, both urged it strongly as being in the public interest. It is in the county of Chambly and Verchères.

Mr. R. L. BORDEN. When was it acquired by the government?

Mr. PUGSLEY. It was acquired, pursuant to order in council dated April 1, 1909.

Mr. LENNOX. Do the Richelieu and Ontario Company continue to use it?

Mr. PUGSLEY. I am informed by the Solicitor General that they use it. I would assume that they have an arrangement now by way of lease with the Marine Department; if they have not, the Minister of Marine and Fisheries took authority last session to insist upon a rental. I am in error as to this. It has not been transferred yet to the Marine Department, and will not be until it is finished. It will require $4,000 more to complete. The total cost will be $9,000. We paid $2,000 for the wharf.

Mr. ARMSTRONG. What is the amount of revenue?

Mr. PUGSLEY. I am not able to say. There is a large amount of traffic carried on in agriculture, fishing and manufactured products.

Mr. LENNOX. It was out of repair when the government bought it, I assume?

Mr. PUGSLEY. It required repairing. The resident engineer reported that the foundation was good, the part under water being sound and just as good as new.

Doucet's Landing—pile wharf—to complete, $2,000.

Mr. PUGSLEY. This is to pay balances due on the work, and to complete repairs on the roadway leading from the highway to the wharf.

Mr. LENNOX. What is the total cost?

Mr. PUGSLEY. It is expected that $10,587.10 will cover the cost, of which there has been paid $8,587.10, leaving a balance of $2,000. This is quite a large wharf, 163½ feet long with 12 feet depth of water at low tide. It is near the railway.

Mr. R. L. BORDEN. Is it a new wharf?

Mr. BUREAU. Yes.

Mr. R. L. BORDEN. Where is it?

Mr BUREAU. It is at the terminus of the Grand Trunk railway running from Arthabaska. It is opposite Three Rivers. The Grand Trunk are the owners of a wharf there and they had to contribute to get on that particular wharf. This is to provide accommodation for the traffic which is increasing all the time on that side.

Mr. LENNOX. A pile wharf, is a cheap class of wharf, is it not?

Mr. PUGSLEY. It may be a little cheaper than cribwork, but a pile wharf may be a permanent construction. I think all the wharfs in the harbour of New York are pile wharfs.

Mr. LENNOX. Sometimes you build a pile wharf and sometimes a crib wharf?

Mr. PUGSLEY. It depends on the opportunity for driving piles. If there is a good foundation for driving piles it may be better to drive the piles rather than construct cribwork. In some cases you must

build cribwork because you cannot drive piles. The engineer informs me that in places where it is not exposed to pressure from running ice pile work is just as good as cribwork.

Mr. LENNOX. What little experience I have had with pile work has gone to show that it is not very satisfactory. It slewed off to one side and became crooked.

Mr. PUGSLEY. I noticed when I was in Vancouver that the wharfs built there mostly by the Canadian Pacific Railway Company are pile wharfs and I think it is the same in New York.

Mr. R. L. BORDEN. Did the minister state what it would cost to complete it?

Mr. PUGSLEY. This will complete it.

Father Point—wharf repairs and improvements, $4,800.

Mr. PUGSLEY. This is for repairs and improvements to the wharf at Father Point which have been urged very strongly by the resident engineer, Mr. Tremblay.

Mr. R. L. BORDEN. What was the revenue last year?

Mr. PUGSLEY. This has not been transferred to the Department of Marine. This is the wharf where the pilots leave to go aboard the ships.

Mr. R. L. BORDEN. Will this complete it?

Mr. PUGSLEY. It will complete all we have at present in contemplation. It may be before long there will be further work to be done.

Fort William—wharf on Ottawa river—revote of $4,000 lapsed, $5,000.

Mr. PUGSLEY. This is to make provision for the construction of a public wharf, freight shed and waiting room for passengers at Fort William on the Ottawa river in the county of Pontiac. This is a stopping place for the steamer running on the Ottawa river.

Mr. R. L. BORDEN. What revenue is expected from it?

Mr. PUGSLEY. I cannot tell.

Mr. R. L. BORDEN. Is it to be transferred?

Mr. PUGSLEY. I think this is a wharf which we will transfer and let the Department of Marine and Fisheries endeavour to make a lease with the steamboat company.

Mr. LENNOX. Is it usual for the government to build a freight shed, or does the government frequently do that?

Mr. PUGSLEY. It is not out of the way to build a freight shed and shelter for passengers. If my hon. friend goes down the St. Lawrence he will find that the wharf at Murray Bay and the wharf at Tadousac both have sheds.

Mr. LENNOX. Built and kept up by the government?

Mr. PUGSLEY. Yes.

Mr. ARMSTRONG. Will this complete the work?

Mr. PUGSLEY. No, it will leave a balance of $7,600. The total cost is estimated at $12,600.

Mr. ARMSTRONG. What is the population of Fort William?

Mr. PUGSLEY. It is somewhere in the vicinity of 1,000. In the summer when the steamboat travel is on it is considerable. It is quite a summer resort, but it is also an important district for the shipment of agricultural and other products.

Mr. R. L. BORDEN. To what places do the steamers ply?

Mr. PUGSLEY. It is not far above Pembroke. I do not know just where the termini of the steamers are. There is a steamer running up and down the river which calls at Fort William.

Gaspé—deepwater wharf, $50,000.

Mr. PUGSLEY. This is to make provision for the building of a deep water wharf at Gaspé. Gaspé is rapidly assuming a position of very considerable importance. It has been for years an important place, but it will become many times as important, I anticipate, by reason of the construction of the Atlantic and Western railway. That railway is being constructed at very large expense. A company consisting of English capitalists are investing somewhere in the vicinity of $3,000,000 in the building of a railway. The railway will be completed during the coming year and it is proposed to construct a wharf, which of course is necessary for the accommodation of the steamers which are expected to come to Gaspé to make connection with this railway. I believe that Gaspé is open about ten months in the year.

Mr. HENDERSON. Where is Gaspé? Can you describe the location of this wharf?

Mr. PUGSLEY. If my hon. friend has not been to Gaspé he has a great deal still to live for.

Mr. HENDERSON. I have seen the Gaspé coast, but it is a mighty long coast.

Mr. PUGSLEY. Gaspé is right out at the extreme end of the peninsula.

Mr. R. L. BORDEN. Has the minister been there?

Mr. PUGSLEY. No.

Mr. HENDERSON. Then I have as much personal knowledge as the minister. I do not think this is a coast that has an end; it is a sort of semicircle.

Mr. LEMIEUX. It is a peninsula and at the head is the Bay of Gaspé.

Mr. R. L. BORDEN. Has the Postmaster General ever been there?

Mr. LEMIEUX. Oh, yes.

Mr. ARMSTRONG. What is the population?

Mr LEMIEUX. This is not in Gaspé. There is Gaspé village or Gaspé town and then there are Sandy Beach, Douglastown, and Point St. Peter. I think there is a population in the bay of about 5,000 or 6,000 people.

Mr. ARMSTRONG. But how many are there in Gaspé village alone?

Mr. LEMIEUX. The wharf is not located in Gaspé village.

Mr. LENNOX. Is there anybody there at all?

Mr. LEMIEUX. Yes, a large population.

Mr. LENNOX. What is the population?

Mr. LEMIEUX. In the bay there are about 5,000.

Mr. ARMSTRONG. What is the extent of the bay?

Mr. LEMIEUX. I could not say exactly; it is a large bay. It is one of the harbours selected by the admiralty. When the British fleet comes across the Atlantic it generally anchors in the Bay of Gaspé. It will be the terminus of the Gaspé railway, and they are spending $3,000,000.

Mr. R. L. BORDEN. There are steamers plying there?

Mr. LEMIEUX. Yes.

Mr. ARMSTRONG. Are you going to build shipyards there?

Mr. LEMIEUX. No; but I think it will be a great rival of St. John and Halifax.

Mr. LENNOX. What is the total cost?

Mr. PUGSLEY. I am sorry to say it will cost a considerable amount of money. We are obliged to build a pier 1,000 feet long, 95 feet wide at the top and running out to 45 or 50 feet depth of water. It will cost in the vicinity of $300,000.

Mr. LENNOX. What is it to be built of?

Mr. PUGSLEY. Ordinary cribwork faced. We did hope to narrow the width so as to decrease the cost, but we could not feel sure that the wharf would be safe.

Mr. LENNOX. What is the object of going to 45 feet of water?

Mr. PUGSLEY. We get to deep water very quickly after going out a long distance.

Mr. ARMSTRONG. Could it not have been dredged?

Mr. PUGSLEY. No.

Mr. LEMIEUX. I thought if the wharf were narrowed it would reduce the cost, but as the railway company will have probably three tracks on it, it could not be narrower than it is. The amount appears large, but the work will be very useful. It is the terminus of the railway, and they intend to have a line of steamers there running to Liverpool.

Mr. SPROULE. Are we building wharfs for the railway companies?

Mr. LEMIEUX. Oh, no; we are building it for the public; there will be a line of steamers to Europe from there.

Mr. SPROULE. But the minister says that the wharf has to be made wider because the railway company will have three tracks on it, and it would seem as if the whole thing was for the benefit of the railway company.

Mr. LEMIEUX. For the public.

Mr. SPROULE. Yes, but the railway will charge the public for every pound of freight they haul. It looks as if we were subsidizing the railway by building a wharf for them.

Mr. LEMIEUX. The railway company first applied to parliament to build a short line through the interior of the peninsula, but the population is along the shore, and the railway company acceded to the wishes of the people that the line should run along the coast. They are building a very high grade line, one of the best in Canada, and on account of running along the shore they have to construct twenty-six bridges within 100 miles, which adds enormously to the cost. It is quite natural that we should provide facilities at this terminus as we do at Montreal, Quebec, Fort William, Port Arthur and elsewhere. In this instance the money is well expended in the public interest.

Mr. SPROULE. I am not saying that the money is thrown away, nor do I contend that it is not proper to provide facilities for the commerce of the country, but the minister told us it was necessary to make this wharf wider, because the railway company would have three tracks on it,

and the question is: Why does not the railway contribute towards the extra cost?

Mr. LEMIEUX. The railway company has given to the government valuable land for the abutment of the pier.

Mr. R. L. BORDEN. What revenue does the minister expect from this?

Mr. PUGSLEY. I think the revenue would be pretty considerable. If the expectations are realized, I should think the revenue would be quite as great as at Campbellton, where it amounts to a few thousand dollars.

Mr. BRADBURY. If the government is going to spend all this money, would it not be better for them to build a more substantial structure than they propose? What is the life of a wharf of that kind?

Mr. PUGSLEY. That part of it which is below the water will last for ages, and that above the water ought to be good for 25 or 30 years.

Mr. BRADBURY. I do not know what the conditions are on the Atlantic coast, but I know that on the Pacific coast that has not been the experience with wharfs of that kind.

Mr. PUGSLEY. The teredo worm is much worse on the Pacific coast.

Mr. SPROULE. That depends on the kind of timber you use. If you use hemlock, it would last only for ten or fifteen years.

Mr. PUGSLEY. The outer face of this wharf will be built of creosoted timber, and it will be double-faced; so that we think it will last a very long time.

Mr. SPROULE. But the timber on the cribwork is not creosoted.

Mr. PUGSLEY. The teredo is not likely to get through the creosoted square-faced timber to the inside. The creosote thoroughly protects the inner timber.

Mr. HENDERSON. What is the character of the freight that will be obtained by the railway and shipped from this wharf?

Mr. PUGSLEY. Fish, lumber, farm produce, probably pulp and paper, all the usual products of a country of varied resources rapidly developing. I do not believe there is any section of eastern Canada developing more rapidly than northern New Brunswick, and that part of the province of Quebec facing on the Bay of Chaleurs.

Mr. LEMIEUX. My hon. friend is aware that this is not a small railway. At first the railway company applied for a charter to build from Cascapedia to Gaspé Basin; but since then they have acquired the old Baie des Cheleurs railway from Matapedia to Cascapedia; and now they have power to build from Matapedia to Rivière du Loup to connect with the Intercolonial, and also to build from Campbellton to the St. John river to connect with the Transcontinental railway. The route by Gaspé Basin is the shortest between Canada and Liverpool.

Mr. ARMSTRONG. I would like to know if the Minister of Public Works makes a practice of building wharfs for the railways at small places, which is practically what this means.

Mr. PUGSLEY. Not in small places. This is a question of policy, and in determining whether or not the government will build a wharf to facilitate the exchange of traffic between a line of steamers and a railway line, one must consider whether or not the traffic is such that the work partakes somewhat of a national aspect. At Fort William, for instance, the government is not only dredging out the Kaministiquia river, but is building a wharf of considerable length, not merely for the purpose of assisting the Grand Trunk Pacific railway, but to promote the transportation interests of the country by facilitating the easy and rapid transference of traffic from the railways to the steamers and from the steamers to the railways. We are proposing to do on a smaller scale the same thing at Gaspé, which we believe will be an important port in connection with the transportation interests of Canada. We believe there will be a very large traffic there as a result of the construction of a splendid line of railway, and therefore we are justified in proceeding with the construction of this work.

Mr. ARMSTRONG. Would not that argument apply to many towns on our lakes and rivers?

Mr. PUGSLEY. We are doing it in hundreds of places. We have done it at Port Hope, at Tiffin on the Georgian bay, at Collingwood, at Lakefield, at Parry Sound, and at hundreds of other places all over the country which are the terminal of railways, or where railways run to navigable water, in order to facilitate and cheapen transportation.

Mr. ARMSTRONG. Does the minister say he is actually building a wharf on which a railway runs its tracks and transhipps goods?

Mr. PUGSLEY. Yes, and we are glad to have the railway tracks on the wharf. I would ten times rather build a wharf on which a railway runs its tracks than where there is no railway connection.

Mr. R. L. BORDEN. There is still a good deal of force in what my hon. friend (Mr. Armstrong) has urged. It is perfectly

apparent that this wharf is really a part of the railway. If the government did not build it, the railway company would be obliged to build it; otherwise its railway line would be to a certain extent useless, because steamers could not connect with the railway and traffic could not be carried on. It is a matter of policy, of course, whether or not the government shall build a wharf; but if they do and make it an essential part of the railway, they ought to receive reasonable returns. If they spend $300,000 on the construction of this wharf, they should insist on some arrangement with the railway company by which the company shall pay the interest on the money expended and the cost of maintenance. If we are assured of that, there does not seem to be any special objection to this item.

Mr. PUGSLEY. I take it for granted that the Department of Marine and Fisheries will exact reasonable toll, having regard to the business carried on and the cost of the wharf, so as to get a revenue which, in a large measure at all events. will pay the interest on the cost and also provide for repairs. I may say that you cannot build a wharf any where, where a railway comes to navigable water, without in some way benefiting the railway. You cannot benefit the public without benefiting the railway. Take the city of St. John, take all those wharfs which the city has built on the western side of the harbour, and one of which is now being built by the government as an extension, the Canadian Pacific railway is the only line running there, and you might argue that this is for the benefit altogether of that company. But it is not. The Canadian Pacific railway brings the traffic, but the wharfs are equally an accommodation and encouragement of business, which is evidenced by the fact that since 1895 the winter export trade of that city has grown from small dimensions to $25,000,000. That is the result of giving accommodation to steamers. The Canadian Pacific railway gets its benefit, but the whole country gets the benefit as well.

Mr. ARMSTRONG. Has the minister any idea of the number of steamers likely to call there?

Mr. PUGSLEY. I am told that there will be a regular line of steamers going there. Who would have imagined 14 years ago that the growth of business of St. John would have been so rapid? You provide the facilities and the business will develop.

Mr. ARMSTRONG. It is a good harbour.

Mr. PUGSLEY. One of the best on the coast.

Mr. SPROULE. Has any contract been let?

Mr. PUGSLEY. No. There was a small vote the year before last, but we did nothing because when we found that the wharf was going to cost so much we thought it would not be fair to parliament to enter into a contract without coming back and informing parliament of the cost.

Mr. SPROULE. How is this wharf to be built? Is it to be of cribwork? Is it to be faced with creosoted material to prevent the teredo worm from getting in its work? From the remarks of the minister one would conclude that it is to be faced around so that it would be impossible for the teredo to get into the cribwork. How is that to be done?

Mr. PUGSLEY. If it is absolutely closed tight how can the worm work through the timber?

Mr. SPROULE. Will you place it as you would a piece of tongue and grooved staging?

Mr. PUGSLEY. Certainly.

Mr. SPROULE. You put it down to the earth where the sand is washing against it and the water working through the stone all the time, how then can the minister say it is possible to keep the teredo worm out of these cribs?

Mr. PUGSLEY. I do not say it, but the engineers do.

Mr. SPROULE. I shall be very much surprised if they succeed, and if they do not, that raises an important question. If the teredo worm destroys the cribwork, what will hold the wharf together unless it is very much bound by iron bolts or something else.

Mr. PUGSLEY. It will be double faced, and the joints will overlap each other some six inches, and be almost water-tight.

Godfroy river—cribwork extension to pile wharf, &c., $1,000.

Mr. PUGSLEY. This is recommended by the resident engineer.

Mr. R. L. BORDEN. Is this transferred?

Mr. G. A. TURCOTTE. This wharf was built some two or three years ago, and the road to it is frequently overflooded at certain seasons of the year. We have been asking for money to raise the road, so that the public may be accommodated. Godfroy is an important place. There is a ferry between it and Three Rivers which carries all sorts of goods from the parishes in my county, and this road has to be kept in first-class order.

Mr. R. L. BORDEN. But the item is not for a road but for a wharf.

Mr. G. A. TURCOTTE. Besides the road there is cribwork to be built alongside the wharf, because the wharf is too high at low water. It is to be an extension of the wharf. The money was asked for that cribwork and the raising of the road.

Mr. R. L. BORDEN. Is it for cribwork or for a road?

Mr. PUGSLEY. It is a cribwork extension to be filled in with stone, and there will be an approach as well.

Mr. R. L. BORDEN. Apparently the '&c.' is pretty much the whole thing, because the hon. member for the county seems to think so.

Mr. PUGSLEY. The chief work is the cribwork. There is a wharf there.

Mr. LEMIEUX. And a line of steamers goes to it.

Mr. R. L. BORDEN. I would like to know whether it is a road or a wharf?

Mr. PUGSLEY. It is both. It is really an approach. This takes in both. In order to get to the wharf you must have an approach.

Mr. HENDERSON. How far does it extend into the country?

Mr. PUGSLEY. I would like to send my hon. friend from Halton (Mr. Henderson) the picture of a wharf which his friends built about twenty years ago.

Mr. HENDERSON. I would rather you sent some money to construct some piers in my country as easily as you are induced to send it for wharfs down here.

Mr. LEMIEUX. The land is very low. When you pass Three Rivers, you can see on the south shore, nothing but low land. At the mouth of the river there is a wharf built by the government, and my hon. friend from Nicolet meant the approach to the wharf.

Mr. G. A. TURCOTTE. It is a road that starts from the main road and goes to the wharf. Call it an approach if you like.

Mr. R. L. BORDEN. The only misapprehension is that we misunderstood the nature of the thing which is to be built. We thought it was an extension out into the water, but it is an extension back into the country.

Mr. PUGSLEY. With that explanation, it ought to carry.

Mr. R. L. BORDEN. If that is not it, what is it?

Mr. G. A. TURCOTTE. There is the approach to the wharf, and then there is an extension by a crib on account of the water going too low this summer.

Mr. R. L. BORDEN. Has the minister a plan of this wharf?

Mr. PUGSLEY. We have in the department, but none here.

Mr. R. L. BORDEN. I would really like to see it, because I do not thoroughly understand it yet.

Mr. PUGSLEY. Could not I explain it?

Mr. R. L. BORDEN. I think you could, but I am not sure I could understand it.

Mr. PUGSLEY. There is a pile wharf and at the end the water is not sufficiently deep to give accommodation to the vessels which frequent it. We propose to build an extension which will give an ample depth of water. This will be the main expenditure. Then, we shall build an approach to the wharf. And the whole will cost $1,000.

Grand Méchin wharf—to complete payments, &c., $6,000.

Mr. PUGSLEY. Of this amount $3,398.86 is the amount of a claim to the contractor—a balance due, certified by the resident engineer, Mr. Tremblay. The balance of the vote is to be used in rip-rapping work for the protection of the wharf.

Mr. LENNOX. How much will the whole work cost?

Mr. PUGSLEY. The original contract was $26,900, to which this vote is to be added.

Mr. R. L. BORDEN. What is the anticipated revenue?

Mr. PUGSLEY. I am sorry, I cannot tell my hon. friend. Matters connected with the revenues are made up in the Marine Department.

Mr. LENNOX. I think this system would stand a good deal of improvement. Over and over again, we are told, concerning things that we ought to know, that the matter is in charge of some other department and the information is not to be had. The minister may tell us that the system is the same as under a former government—

Mr. PUGSLEY. If the hon. gentleman (Mr. Lennox) will pardon me; this wharf is not yet transferred.

Mr. LENNOX. My remark may not apply so much to this particular case, but it applies to many cases. There ought to be some system by which the minister will be able to give us the information that we ought to have. If necessary to have another minister here to assist him——

Mr. R. L. BORDEN. Or some official from the other department.

Mr. LENNOX. Yes. This difficulty arises, not only once or twice during the session, but often. Does not the minister think he could effect an improvement?

Mr. PUGSLEY. My hon. friend (Mr. Lennox) will see that until the wharf is transferred and until some experience has been had of the business, it would be impossible for an official to estimate the revenue with any degree of accuracy. In fact I would not ask him to make an estimate in advance.

Mr. R. L. BORDEN. I do not agree with that. I suppose that, when the proposal is made to build a wharf, one department or the other would consider whether the revenue would be likely to pay for the maintenance at least. I should hardly suppose that the Department of Public Works would undertake the building of a wharf quite without regard for that consideration. I do not say that there might not be cases where you would go on with the work even if you knew that the revenue would not maintain it. But I should think that the inquiry must be made.

Mr. PUGSLEY. This is to serve as a breakwater as well as a wharf. This point is an important fishing centre.

Mr. LEMIEUX. That would be incidental to the wharf. That is, if you had not a wharf you would not need a breakwater.

Mr. PUGSLEY. No, this is a place to which fishermen resort for safety. And it might be that the primary object was to give a harbour of refuge.

Mr. LENNOX. Is that true in this case?

Mr. PUGSLEY. Yes. We had a memorial presented to us stating that the fishing industry at this point was an important one, and that every year the fishermen have to provide themselves with new boats to replace those broken on the rocks, and a place of resort in stormy weather is very much needed. The department decided—before I became minister—that it would be well to give the breakwater and create the harbour of refuge. They have decided also that it was advisable to make the breakwater available for a wharf.

Mr. ARMSTRONG. Is it customary for the minister not to make inquiry as to the probable revenue.

Mr. PUGSLEY. So far as I am concerned as minister, the object has been rather to look at the accommodation given to the people, and not so much at the revenue to be derived. In the case of these wharfs, you cannot expect to derive much revenue. Wherever we can feel that a wharf will operate as a breakwater and at the same time create a harbour of refuge, I am always more impressed with that consideration rather than the few dollars that may be derived as a revenue from the construction of the wharf. I do not know what were the arguments used in this case, because, as I have said, petitions were presented and the work undertaken before I became minister. But I found there were many petitions in favour of it dating as far back as January, 1903.

Mr. ARMSTRONG. What will be the total cost?

Mr. PUGSLEY. The total cost, when completed, will be a little over $30,000.

Mr. ARMSTRONG. Are we to understand that the minister is to spend $30,000, and cannot give us even a reasonable idea of whether there will be any revenue?

Mr. PUGSLEY. There will be no revenue unless we transfer it to the Marine Department.

Mr. SPROULE. Surely the government ought to know whether their policy is that this will be transferred to the Marine Department. If the principle is good in one locality, it ought to be equally good in all.

Mr. ARMSTRONG. What was the nature of the wharf accommodation before?

Mr. PUGSLEY. There was none before, no breakwater, no protection to fishing.

Mr. ARMSTRONG. What is the population?

Mr. PUGSLEY. The population in 1901 was 557.

Mr. SPROULE. Is it the intention of the government to have these wharfs transferred to the Marine Department?

Mr. PUGSLEY. When we take up that question, we will have to consider whether the primary object of this work is a breakwater and harbour of refuge; if it is, I would not think that would be a case where it should be transferred to the Marine Department, and where these people would be obliged to pay tolls. But that is a matter I have not yet considered. I am waiting for the Minister of Marine and Fisheries to determine upon his policy under the statute passed last session. I shall be guided greatly by the suggestion of the Minister of Marine and Fisheries, because the legislation was promoted by him.

Mr. SPROULE. The minister is putting us off. When we ask what will be the income from this, he says he does not know until it is transferred to the Marine Department, thereby implying that it is going to be transferred. I do not wish to be understood as saying that they ought to be transferred, but I do mean to imply that the government ought to have some settled

policy with regard to them, that would be applicable to the whole country. But when he says he does not know what the income will be because it has not been transferred, that seems to me to be an excuse for the time being to get the item passed.

Grande Rivière (Gaspé)—repairs to wharf and approach, $5,000.

Mr. PUGSLEY. The proposed extension will be 100 feet long, and the probable cost will be $15,500. Repairs to the approach, $500. We expended in 1908-9, $7,772.

Mr. ARMSTRONG. How long will it be before the work is completed?

Mr. PUGSLEY. We hope to have it completed during the coming fiscal year. The extension is cribwork filled with stone, 37 feet in width at one end, and 40 feet at the other. We are extending it 100 feet.

Mr. LEMIEUX. It was built 25 years ago. I think there was at the outer end of the wharf something like 20 feet of water. But the Grand river empties nearby, and carries down sand, and for a few years back there has been an accumulation of sand which, on several occasions, prevented ships from reaching the wharf. There are three steamers using this wharf, one running between Montreal and Gaspé, one from Campbellton to Gaspé, and, I think, another one running between Montreal, Quebec and Gaspé ports. This is a very important place. On two or three occasions last summer a steamer was stopped on its way on account of the accumulation of sand.

Mr. PUGSLEY. The estimate of the engineer is that this sum will complete the work. We have already expended $7,772, and this $5,000 will make $12,000. That will leave $2,500 more that we will have to get later on.

Mr. SPROULE. That is done by contract, I presume?

Mr. PUGSLEY. So far the work we have done in the way of repairs has been by day labour, but we have not decided as to whether we shall ask for a contract for this. I think that in all probability we shall.

Mr. SPROULE. But you say you have spent $7,000 on the new work?

Mr. PUGSLEY. Did I say on the new work?

Mr. SPROULE. I asked if it was on the new work.

Mr. PUGSLEY. My notes do not distinguish clearly between new work and repairs. The only note which I have is that this $5,000 is to make provision for repairs to the wharf and roadway of approach and extending the wharf at Grand Rivière. The total cost is estimated to be $15,000. Then we deduct from that the expenditure during 1908-9, which work was done by day work. There is an appropriation for the year which will expire on March 31 next of $5,000. I have not a memo of how much of that has been expended.

Mr. SPROULE. Was it done by day work or contract?

Mr. PUGSLEY. Whatever has been expended has been by day work. Then we have the additional $5,000 which we are now asking, and we will require $2,500 more to finish the work.

Mr. SPROULE. I suppose that you propose to do that by day work?

Mr. PUGSLEY. We have not decided, but I do not see why we should not do that by contract.

Mr. SPROULE. I do not see why the other should not have been done by contract, if you pay any attention to the resolution to this House, that all work involving an expenditure of $5,000 or over shall be done by contract unless the circumstances are exceptional.

Mr. PUGSLEY. As to that, I shall confer with the chief engineer, but I think it could be very well done by contract.

Grande Vallée—restoration of breakwater pier—revote of $9,850 lapsed, $10,000.

Mr. PUGSLEY. That $9,850 was voted for the year which ended on the 31st March, 1909, and it was not used. We are asking for an extension of the same amount. This is to make provision towards repairing the pier at Grande Vallée. There are quite a large number of mills at that place, and the wharf is badly in need of repairs.

Mr. LENNOX. Is $10,000 the total amount?

Mr. PUGSLEY. We will require to spend the $10,000, but the estimate is that $4,500 more will be required to finish it.

Mr. LENNOX. Will this be done by contract?

Mr. PUGSLEY. I am afraid this will have to be done by day work, as it is repairing and it is very difficult to let a contract for it.

Mr. ARMSTRONG. What was the total cost of this pier?

Mr. PUGSLEY. The total expenditure up to the 31st December, 1909, was $57,773.85.

Mr. ARMSTRONG. This is not the pier that is built in front of or on private property that we heard of some years ago?

Mr. PUGSLEY. No, I do not think so. My hon. friend may possibly have the same work in his mind, but the government owns the site. It is built on government property.

Mr. ARMSTRONG. Is there only one lumber company there?

Mr. PUGSLEY. There is the Dominion Lumber Company, and the residents of Grande Vallée have also requested that these repairs be made as rapidly as possible.

Mr. SPROULE. Has this been transferred to the Department of Marine, and if so, what income is there from it?

Mr. PUGSLEY. This is a breakwater and not a wharf. Of course, it serves the purpose of a wharf, but its primary purpose is that of a breakwater. It also creates a harbour of refuge.

Mr. SPROULE. Is it pile or cribwork?

Mr. PUGSLEY. Cribwork.

Mr. SPROULE. If it is cribwork and $10,000 has been spent on it surely it could have been done quite as well by contract as by day work. It is the most ordinary kind of work that could be done in the shape of a breakwater. I do not see any reason why it should not be done by contract and you would be much more likely to get a full return for the money than by doing the work by day labour.

Mr. PUGSLEY. In repairing a breakwater it is pretty difficult to specify with any certainty the work which will have to be done. If we were to specify less than was necessary, in order to receive tenders we would be liable to be called upon to pay quite large sums in extras, unless we specified it so liberally that the tenders might be larger than the actual cost would be. It is very difficult to specify with any reasonable degree of accuracy in a case like this where different kinds of repairs have to be made.

Mr. SPROULE. I would say that in a case of that kind it would be. I infer that this is a wharf as well as a breakwater.

Mr. PUGSLEY. The primary object is that of a breakwater, but it is used for both. It is called a breakwater pier.

Grosse Isle quarantine station—repairs and extension to wharf, $30,000.

Mr. PUGSLEY. This is required to make repairs to the wharf at Grosse Isle and to make further provision towards the extension of the eastern or hospital wharf. This larger work has been applied for by my hon. friend the Minister of Agriculture (Mr. Fisher) who has assured me that it was regarded as absolutely essential for properly carrying on the quarantine work there.

Mr. SPROULE. There was some money voted last year. Is it the same work that is being carried on?

Mr. PUGSLEY. Last year $4,200 was voted simply for repairs, while this larger sum here is for the extension of the wharf.

Mr. ARMSTRONG. Will this complete the work?

Mr. PUGSLEY. Yes, it is expected it will.

Mr. SPROULE. What kind of an extension do you propose to make, and how do you propose to do the work?

Mr. PUGSLEY. I presume it will be of the same character as the present work. It will be close faced cribwork, ballasted and sheeted. The object is that the ocean steamers may land there and discharge passengers who are to be placed in quarantine.

Mr. ARMSTRONG. Should not cement or some permanent material be used in such a work?

Mr. PUGSLEY. It would cost a great deal of money.

Mr. SPROULE. Will this be let by contract?

Mr. PUGSLEY. Yes.

Mr. SPROULE. Will this complete the work?

Mr. PUGSLEY. Yes.

Harrington Harbour wharf, north shore, Gulf of St. Lawrence, $1,500.

Mr. PUGSLEY. This is to build a very necessary wharf to be utilized in connection with the most valuable work which Dr. Grenfell is doing on the Labrador coast.

Mr. SPROULE. We do not know whether Dr. Grenfell is a blacksmith or a lumberman or a mason, or what work he is doing. However, this is a small amount; is this to complete the work?

Mr. PUGSLEY. Yes. I thought my hon. friend knew Dr. Grenfell's work. He has devoted his life to the people along the Labrador coast.

Mr. LENNOX. He is the man who brought out the reindeers.

Mr. PUGSLEY. Yes. Dr. Grenfell has done considerable himself in the way of giving accommodation at Harrington harbour, and this amount is required to complete the work.

Mr. SPROULE. Carried.

Ile Verte—repairs to wharf, $1,500.

Mr. PUGSLEY. The estimated cost is $2,500. We will have to ask for a thousand more later.

Kamouraska wharf—repairs, $1,200.

Mr. SPROULE. Will this complete?

Mr. PUGSLEY. It is expected this will complete.

Lake Aylmer—wharf at Stratford Centre, $3,500.

Mr. ARMSTRONG. Will this complete the work?

Mr. PUGSLEY. No, the total cost will probably be $6,500.

Mr. ARMSTRONG. Where is Lake Aylmer?

Mr. PUGSLEY. In Richmond and Wolfe. There is a good deal of travel there, particularly in the summer. There are five saw mills, five stores, population about 1,000.

Mr. LENNOX. It is a very nice place, we were down there to see it once.

Les Eboulements—repairs to wharf and shed, $1,450.

Mr. PUGSLEY. The estimated cost is $2,950.

Le Petit Debarquement, $5,000.

Mr. SPROULE. Will this complete the work?

Mr. PUGSLEY. No, the total estimated cost is $12,000.

Mr. SPROULE. What are the dimensions?

Mr. PUGSLEY. 25 feet long, 30 feet wide; we want to get about 12 feet of water.

Malbaie (Gaspé) boat shelter, $3,000.

Mr. PUGSLEY. This will complete the work it is supposed.

Mr. LEMIEUX. There is a mistake in this item. There are two Malbaies in Gaspé and this vote is for Barrachois de Malbaie.

Mr. PUGSLEY. I move that the item be changed to read that way.

Matane—protection pier on east side of outlet of the Matane river, $20,000.

Mr. PUGSLEY. This is asked for by petition of the residents, and is regarded as a very important work. The total cost is estimated at $41,500.

Mr. LENNOX. What is the nature of the traffic there?

Mr. PUGSLEY. There is a large lumbering business. Price Brothers have a large mill there.

Mr. ARMSTRONG. What is the length of the pier?

Mr. PUGSLEY. It is to be 500 feet long.

Mr. ARMSTRONG. Does it protect the land from being washed away by the river?

Mr. PUGSLEY. It prevents the sand drifting in and filling up the harbour.

Mr. SPROULE. Is it to be cribwork and stone ballasting?

Mr. PUGSLEY. Yes.

Mr. SPROULE. How much does ordinary work cost?

Mr. PUGSLEY. From 8 to 10 cents per cubic foot, taking the woodwork and the stone together.

Mr. SPROULE. Is this work going to be done by contract?

Mr. PUGSLEY. Yes.

Montebello—wharf on the River Ottawa, $9,000.

Mr. PUGSLEY. This is asked for by petition of the residents. It will be a double decked cribwork structure extending out 240 feet and having a height of 14 feet. This is a new work. The estimated cost is $9,000. This will be done by contract.

Murray Bay wharf—enlargement and repairs, $10,000.

Mr. PUGSLEY. This is a very important work. Murray bay is one of the principal points at which steamers navigating the St. Lawrence call. The wharf has got out of repair, and we require this amount to make the necessary repairs. We had a vote of $7,800 for the same purpose which was allowed to lapse.

Mr. LENNOX. That seems a little peculiar. I would think that if a vote is taken for necessary repairs, that ought not to be allowed to lapse. I think the repairs ought to be carried on, as the wharf gets a great deal worse if it is allowed to stand, and the repairs cost more. Has the minister any explanation as to that?

Mr. PUGSLEY. My hon. friend will notice that this is for enlargement and repairs. We felt that the enlargement could stand over until this session, but the repairs became so urgent during the season just passed that we were obliged to obtain a Governor General's warrant, and the repairs have been completed.

Mr. LENNOX. How much was expended on Governor General's warrant?

Mr. PUGSLEY. Some $6,000.

Mr. BLAIN. Is that a usual procedure or very unusual?

Mr. PUGSLEY. It is a very unusual procedure, and it is only done when the work becomes absolutely necessary and we cannot wait for the meeting of parliament wtihout detriment to the public interest.

Mr. LENNOX. Did these repairs become urgent owing to storms, or were they a matter of decay?

Mr. PUGSLEY. Owing to storms last winter and spring.

Mr. BLAIN. Is there anything at this wharf besides the steamers that call there?

Mr. PUGSLEY. There is a great deal of traffic. It is a very important point. In addition to the Richelieu steamers there is a steamer running from Rivière Ouelle in connection with the Intercolonial railway and which brings a great deal of traffic.

Mr. BLAIN. Is there any revenue?

Mr. PUGSLEY. Yes, I could get the amount from the Marine Department, but no doubt it will be in the Auditor General's Report.

Mr. BLAIN. It would be a good thing for the hon. gentleman to keep before him, the amount of revenue in each case when asking for these large expenditures.

Mr. PUGSLEY. If I had that, my hon. friend might not be so inquisitive on this point. He would then want something else.

Mr. BLAIN. No, the hon. minister has always told us that he keeps in view the revenues to be derived from these wharfs. Perhaps if he would keep before him the amounts received in past years, he would be a little more economical.

Natashquan—breakwater pier on north shore of St. Lawrence—revote of $1,960 lapsed, $5,000.

Mr. PUGSLEY. This is towards constructing a breakwater, 175 feet by 25, and 125 feet by 30, 18 feet of water at low spring tide. This is asked for by petition of the residents.

Mr. ARMSTRONG. Is this to prevent land being washed away?

Mr. PUGSLEY. No; it is to be used as a wharf as well as a breakwater. Natashquan is some 75 miles below Esquimalt Point, and I am told the best fishing ground on the north shore.

Mr. BLAIN. Is this a new wharf?

Mr. PUGSLEY. Yes. There is a very large fishing establishment there. It is the terminus of the mail boats on the north shore, and can be made a good harbour.

Mr. BLAIN. Is this to be construtced to serve this large fish corporation?

Mr. PUGSLEY. It is to be a harbour of refuge for the fishermen.

Mr. ARMSTRONG. How many of a population?

Mr. PUGSLEY. About 100 fishermen during the fishing season. It is in the counties of Chicoutimi and Saguenay.

Mr. ARMSTRONG. Will this complete?

Mr. PUGSLEY. No, it is estimated to cost $20,000.

Mr. BLAIN. Is the representative of the county here? I would like an explanation from him.

Mr. GIRARD. Natashquan is one of the principal fishing places on the north shore, from Belle Isle up to Esquimalt Point. It has a large population during the summer, and there is a population of about six or seven hundred all the year round. Natashquan Point is the head of the mail boats from Quebec down the north shore. It has no protection at present, and when the weather is a little stormy, the boats cannot land at all, and the result is that the mails, which are sent by the boats and are carried by small boats down to Belle Isle, are delayed two or three trips, so that this wharf is required to give a chance to the whole population to get their mails regularly. There is also a local traffic, which is very important in summer. That traffic consists of the export of fish and the import of the necessary requirements for the fishing population, which amounts to many hundreds in the summer time.

Mr. BLAIN. What accommodation have the people there now?

Mr. GIRARD. There is no wharf there at all.

Mr. BLAIN. How did they get along so many years without it?

Mr. GIRARD. The boats which come there have to anchor at a great distance from the shore, and when it is a little stormy these boats cannot remain there, because there is no protection, and outside of that the small schooners, used by the fishermen are often obliged in stormy weather to cross over to Anticosti island for protection against the wind.

Mr. ARMSTRONG. What is the nearest railway point?

Mr. GIRARD. It is Quebec. From Quebec down to Belle Isle there is no railway at all, and the only way of communication is by sea.

Mr. BLAIN. How is it that the minister has neglected this part so long?

Mr. GIRARD. It has been neglected since the beginning of the world, and this is the first time any government has looked after it.

Mr. SPROULE. Will this be by tender and contract?

Mr. PUGSLEY. Yes.

Mr. BLAIN. How does the minister advertise for these public tenders?

Mr. PUGSLEY. As widely as is reasonably necessary in order to insure keen competition.

Mr. BLAIN. Is there any change in the policy?

Mr. PUGSLEY. No.

Mr. SPROULE. Has nothing been spent here before for wharfs?

Mr. PUGSLEY. Never except we bought some timber, some $2,000 out of the general vote, for harbours and rivers.

Mr. SPROULE. But you have no harbour there.

Mr. PUGSLEY. We are going to make a harbour.

Mr. SPROULE. But I see there was another vote, because there is an amount of $1,900 lapsed. That might imply that there was money spent. I asked how it was spent and the minister says it was spent on timber.

Mr. PUGSLEY. Not out of that vote, but out of the general vote.

Mr. SPROULE. Why did the hon. minister take money out of the general vote to buy some timber when there was no work undertaken. When an amount is voted for harbours and rivers generally, I have always understood it was for ordinary repairs and could not be used in beginning new work.

Mr. PUGSLEY. In 1898 there was an appropriation of $2,000, out of which $35.68 was spent, leaving $1,960 which lapsed.

Mr. SPROULE. What was the expenditure started for?

Mr. PUGSLEY. The expenditure was only $35.66 and probably for engineers examination. During the present fiscal year we bought timber for this work to the amount of $2,000 and we pay for that out of the general vote for harbours and rivers.

Mr. LENNOX. Will that remain that way, or will the $2,000 be restored?

Mr. PUGSLEY. When we make a contract, the contractor will be obliged to take over the timber at actual cost.

Mr. LENNOX. But will the $2,000 go back to the general vote?

Mr. PUGSLEY. It will go into the cost of this work.

Mr. ARMSTRONG. This $2,000 will come out of the $20,000?

Mr. SPROULE.

Mr. PUGSLEY. Yes, the total cost of $20,000. Of this we are asking now $5,000; there is also this timber, $2,000, leaving $13,000 to complete.

Mr. SPROULE. What will be the nature of this work?

Mr. PUGSLEY. Cribwork with stone ballast. It is to be 300 feet long, with a width of 25 feet for 175 feet, and of 30 feet for 125 feet.

Mr. BLAIN. The minister was to produce a letter from the member representing the county in relation to the Roberval item. Has he it here?

Mr. PUGSLEY. That related to public buildings. We have not been on the items of public buildings since that time. But when the public buildings for the province of Quebec are before the committee again, I will have it here.

New Carlisle wharf—repairs and renewals, $2,500.

Mr. PUGSLEY. This is for repairs, and is recommended by the resident engineer. The flooring and stringers are in a very bad state and must be renewed. This is in Bonaventure county.

Mr. SPROULE. Does this complete the work?

Mr. PUGSLEY. Yes.

Norway bay—wharf on River Ottawa—revote of $2,000 lapsed, $3,000.

Mr. SPROULE. Where is this?

Mr. PUGSLEY. In Pontiac county.

Mr. SPROULE. Will this complete the work?

Mr. PUGSLEY. No; we shall require $4,000 more.

Paspebiac, East (portage) — breakwater, $5,000.

Mr. BLAIN. What is the length of this breakwater?

Mr. PUGSLEY. 900 feet long.

Mr. ARMSTRONG. And what will be the total cost?

Mr. PUGSLEY. It will be $15,000.

Mr. ARMSTRONG. And what is the object of building a pier 900 feet long?

Mr. PUGSLEY. This is to provide a harbour of refuge, as many boats have been damaged and others totally wrecked. There are over 200 fishermen there.

Mr. WRIGHT. Is there a village there? If so, what is its population?

Mr. PUGSLEY. About 1,000. I am told it is the most important fishing station on Chaleur bay.

Mr. ARMSTRONG. What kind of accommodation was there there before?

Mr. PUGSLEY. Practically none, so far as protection works were concerned. These people carry on business under enormous disadvantages when they have no harbour of refuge.

Mr. WRIGHT. What vessels ply on that harbour?

Mr. PUGSLEY. Fishing vessels. A large number have their headquarters there.

Mr. SPROULE. What is the nature of the work?

Mr. PUGSLEY. Cribwork with stone ballasting—the usual style.

Mr. SPROULE. A length of 900 feet seems very great for a breakwater for a village of 1,000 inhabitants.

Mr. PUGSLEY. You must provide the length necessary to afford the shelter—no use doing the work if you do not accomplish that. We would not make it so long if we could help it.

Mr. SPROULE. The water must be very shallow there.

Mr. PUGSLEY. This is to give 15 feet at high water, spring tide.

Mr. SPROULE. Will this work be done by contract?

Mr. PUGSLEY. Yes.

Petit Saguenay river—wharf on west side, near mouth of river, $1,000.

Mr. SPROULE. Is that a new work?

Mr. PUGSLEY. Yes. It is estimated to cost $3,000, so we shall need $2,000 more to complete it.

Mr. BLAIN. Are these close estimates the minister is giving?

Mr. PUGSLEY. The estimate of the engineer, and I rely upon it as accurate.

Mr. BLAIN. What county is this in?

Mr. PUGSLEY. Chicoutimi and Saguenay.

Mr. BLAIN. Is any revenue expected from this work?

Mr. PUGSLEY. I should not expect any to speak of.

Piché Point wharf, on Lake Temiscaming—ice breaker and repairs, $2,000.

Mr. PUGSLEY. This is to provide two or three ice breakers to protect the wharf and to make necessary repairs to the wharf. This is opposite Haileybury.

Mr. ARMSTRONG. Will this complete the work?

Mr. PUGSLEY. Yes, it is expected to complete.

Mr. BLAIN. Is there deep water there?

Mr PUGSLEY. Yes, steamers ply upon the lake.

Mr. SPROULE. I thought the lake was not deep.

Mr. PUGSLEY. There is about 9 feet navigation in Lake Temiscaming

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. SPROULE. What business will be taken up on Monday?

Mr. FIELDING. We will continue the naval debate.

Motion agreed to, and House adjourned at 11.20 p. m.

HOUSE OF COMMONS.

MONDAY, February 21, 1910.

The SPEAKER took the Chair at Three o'clock.

OFFICIAL REPORT OF DEBATES.

Mr. FIELDING moved:

That in pursuance of the recommendation of his hon. the Speaker of the House of Commons, laid on the table of the House, with other papers on the subject, on Thursday the 17th instant, by virtue of the Civil Service Act and amendments thereto, Mr. Ernest L. Desaulniers be appointed as translator of the Debates branch of the House of Commons, in place of the late Rodolphe Laferrière, deceased.

Mr. BORDEN. I presume the necessary provisions of the Civil Service Act have been complied with.

Mr. FIELDING. Yes. If my hon. friend will look into the Votes and Proceedings of the 17th of February, he will find all the certificates there in connection with Mr. Speaker's report.

Motion agreed to.

RAILWAY ACT AMENDMENT.

Mr. GRAHAM moved for leave to introduce Bill (No. 145) to amend the Railway Act. He said: Briefly the provisions of this Bill are as follows: Section 1 provides that the Board of Railway Commissioners can deal with work already done by railway companies irrespective of the Act under which they should have proceeded. Some railway companies have proceeded to locate lines, for instance, without going through the necessary routine of getting the approval of the Board of Railway Commissioners. When called upon to deal with these the board held that they had no juris-

diction unless practically the rails were removed and they started over again. In order to give the board the power to deal with such cases in the past, but not in the future, this amendment is introduced.

The second section is to provide that railway companies may appoint vice presidents with certain prescribed duties although those persons are not members of the Board of Directors.

The third section is to expedite the passing of wires for telegraph, telephone, or electric light purposes over railways without waiting for an order of the board.

Section 4 deals with the question of the necessity of a brakeman riding on the rear end of a locomotive when it is passing over certain portions of the line. The employees of the railway companies complain that while they have no objection to being on the rear end of the locomotive while it is engaged in shunting, for the necessary protection of the public, in some cases where they have to run many miles, there is no protection to the public and it is very severe on the men, particularly in cold weather.

Section 5 provides that the railways in Canada may give transportation, if they wish, to an ex-employee of a railway company, or to members of the Inter-state Commerce Commission.

Section 6 amends the clause in the existing Act, which provides that working agreements between telephone companies must be approved by the Board of Railway Commissioners by extending the application of the clause to telegraph companies.

Section 7 is to correct what seems to be an error in the statute of 1909. In that statute in the section referring to the protection of level crossings by railways to be constructed in the future, the words 'constructed after the passing of this Act' are used. This interpreted would mean after the passing of the Act of 1903, and it is to make it clear that this is after the passing of the amendment of 1909.

Motion agreed to, and Bill read the first time.

PRIVATE BILLS.

DOMINION MILLERS' ASSOCIATION.

House again in Committee on Bill (No. 111) respecting the Dominion Millers' Association.—Mr. Harris.

On section 2,—objects of the association.

Mr. A. H. CLARKE. The Bill was referred by the Private Bills Committee to a sub-committee of which I was a member. That clause was discussed to a considerable extent and it is practically the same clause as was in the Act incorporating the company in 1892. The members of this company are not confined to shareholders but are confined to millers generally; the present Bill extends it to farmers so that farmers may become members of the company as well as millers. The only difficulty the members of the committee had with this section was in connection with the subsection providing that they should have no power to fix the price to be paid. That was put in at first at the instance of the Grangers or the Patrons of Industry. There was another question as to whether it should go further and forbid them to fix the selling price, but it was thought that that was sufficiently guarded by the general law against combines.

Mr. SPROULE. Is this the association that settles disputes between millers and those from whom they purchase grain? For instance if a miller brings grain from Port Arthur and there is a shortage of the shipment, it has been complained that I think this association sometimes acts in an arbitrary manner.

Mr. A. H. CLARKE. They can only arbitrate when both parties agree to have them arbitrate.

Mr. SPROULE. I am supposing that I am not a member of the association, but am ordering through them, and they have heretofore exercised rather arbitrary powers in the judgment of some, in saying just how much they should give you.

Mr. A. H. CLARKE. That point was considered by the sub-committee. It is not intended that this Bill should give the company power to arbitrate so as to bind persons who are not members of the association. This Bill cannot bind any one unless they agree to submit their differences to the board.

Mr. R. L. BORDEN. The arbitration is not compulsory?

Mr. A. H. CLARKE. I think it is compulsory on those who become members and agree to that regulation, but it is not compulsory on outsiders. In that respect there is no change in the law.

Mr. OLIVER. This Bill is peculiar in that the previous Act was an Act to provide for an association of millers, but this Bill, purporting to be an amendment, establishes that association as an ordinary business enterprise. Therefore, by the Act now in force, and by this present Bill, the parties concerned have the benefit of legislation which establishes them as an association and also as a business enterprise. Whether there is any serious harm actually in the Bill or not, as it reads, it would indicate to me that it is an attempt to secure legislative authority for a merger

or combine, which it does not appear to me to be judicious that parliament should assent to without the very fullest consideration of what seems to be the object of this legislation. If, after it has been gone into carefully, it is found that no such feature exists in this Bill, I would say let it pass, but so long as there appears on the face of it that intention it would scarcely be judicious I think for parliament to give its sanction.

Mr. SCHAFFNER. I put a question about that feature of the Bill in committee and we got no very satisfactory answer. I am in sympathy with the remarks of the Minister of the Interior. There never has been a proper explanation made as to the real intention of this Bill, and it does look to me that it is quite possible that the smaller mills in Manitoba and the west might be injured. Before this Bill passes I would like an explanation as to what extent it might lead to a merger or combine in the milling industry. A great deal of capital has been expended in building smaller mills in the west of from 50 to 300 barrels capacity. We have a splendid mill in my town of about 300 barrels capacity, and through the influence of the larger mills, like the Lake of the Woods and Ogilvies, that mill, like many others throughout Manitoba, has been unable to carry on its business because of the control of prices by these larger corporations. If this Bill tends towards that object I would oppose it, and at all events it should not pass until the member who introduced it is here to explain.

Mr. SPROULE. I understood the hon. member (Mr. A. H. Clarke) to say that this Bill is the same as the last Bill, but that is not so. Clause 3 of the original Bill provides that they shall not deal in grain, and this Bill is the very reverse, for it provides they may carry on the business of purchasing, selling, storing, shipping, dealing in grain, and selling flour, and acquire by hire or otherwise, elevators and so on. That clause gives them the power to become a monopoly or a controlling element in the handling of grain to the detriment of others. I have grave doubts that we should pass such a Bill.

Mr. A. H. CLARKE. I did not intend to say that the powers given by this Bill were not greater than the powers in the former Bill. We were only discussing clause (d) as to the power to arbitrate, and what I said was that that provision was in the former Bill. This Bill does give wider powers than the previous Bill, and I think the Minister of the Interior has stated what these powers are. The former Bill did not give them the power to operate as traders and to buy and sell grain. It rather constituted a combination of the smaller millers, and this was a central organization for promoting their interests. It was stated before the sub-committee that this company had been formed for the protection of the smaller millers as against the larger millers, the Lake of the Woods and others. Section 3 of the former Bill gave them power to extend, promote and improve the manufacture of flour and meal, to engage in the business of flour milling generally in Canada, in shipping and selling to foreign markets, as well as the markets of this country, of grain, flour or meal, and to assist the members of the association with regard to the matters aforesaid. There was an express denial there of the right to do a trading business. It is said that it should not constitute a trading company, or empower them to engage as a trading association in the business of buying and selling grain. The intention of this present Bill is to remove that restriction and to give them power to do not only what they have done before, but to buy and sell grain. There is an incidental power given in one of the later clauses which is common to every company: That they may take stock in other companies and other companies may take stock in this company. It was on account of this that the Minister of Agriculture made some objection when it first came before the Private Bills Committee, and it was for that reason referred to a sub-committee. The sub-committee heard Mr. Watts, the representative of the association, and it appeared that the powers sought under this Bill are similar to those which other companies of the same kind possess, and so far as the sub-committee could see the powers which were being sought were practically the same as those which had been accorded to similar companies. If it is an objection that the company should be incorporated for buying and selling grain, then that power is included in this Bill. I am not at all concerned in the Bill; I am only speaking because I was a member of the sub-committee in order to tell the House what took place before that committee. The sub-committee could not see that any harm would be done by incorporating this company to buy and sell. It is a legitimate enterprise; it is something an individual could do, and I do not see any good reason that this company should not be incorporated to do these lawful things which individuals associated together might do without an Act of parliament.

Mr. ARMSTRONG. Seeing there are so many different views with regard to this measure, and that the member who is in charge of the Bill is not present, it would be wise to leave it over until the member for Brantford be here to explain.

Mr. A. H. CLARKE. The Bill is merely in his name; he does not know any more about it than any of us.

Mr. OLIVER. While I have the highest respect for my hon. friend from South Essex (Mr. Clarke). I think he has hardly stated accurately the position taken by those who are criticising this Bill. There is no objection to any number of gentlemen coming to this parliament and securing incorporation for the purpose of buying, selling and dealing in grain, probably in the very terms which are contained in this Bill; but there is no reason why gentlemen who already have certain powers for another purpose should come here and obtain the legislation which they would be entitled to have if they were not associated together for that other purpose. As it appears to me, these gentlemen are getting the advantage of two separate and different situations by legislation in the one Bill, and the amendments to it. I submit that that is dangerous, looked at from the standpoint of the public interest. There is no reason why, if these gentlemen want to buy and sell grain, they should not come here and get incorporation as a company to buy and sell grain; but, on the other hand, there is no reason why, in order that they may do that, they should come as a Millers' Association, and ask that the Millers' Association shall have power to buy and sell grain.

Mr. SPROULE. The trouble seems to be what I referred to in the first place. Any one outside of that association who desires to buy a carload of grain cannot get it unless he orders it through the association, and comes to their terms, no matter what they are. I am speaking from my own experience. You may buy grain in the west at a reasonable price for shipment to Ontario, but you cannot get it shipped except through the association otherwise, unless you pay an exorbitant freight rate. The railway company would not agree to deliver your grain in two, three, or four months. There is no use in attempting to handle grain in that way. I am not saying that this association is responsible for that, or whether it influences the railway companies or not; but I do know that grain that was ordered in the west did not reach Ontario for two and a half or three months. Such delay destroys the chance of any one getting any profit out of the business, and many who desire to have the grain do not order it because they cannot depend on getting it. If this association is responsible for that, then I think we are giving them too much power.

Mr. NESBITT. As I understand those speaking for the members of the association, they have no desire to hinder an independent miller from getting grain at any price he can get it at. Their desire is through organization to assist the smaller millers throughout the country, who cannot buy in the quantities that the large millers can, to buy unitedly. With regard to what the hon. member for East Grey (Mr. Sproule) has said about holding up independent parties, it seems to me there should be no difficulty of that kind, because any person who is held up can apply to the Railway Board, set forth the facts, and get redress. It is quite impossible, in my judgment, for any association to hold up those who are independent of it, and make them pay a higher freight rate or delay shipment. If the members of this association want to buy grain for the purpose of distribution among themselves, I do not see why we should not allow them to do so. As to their calling themselves an association instead of a company, that is an immaterial distinction, and so long as their objects are legitimate, I do not see why we should not pass the Bill. I have no interest in the Bill further than to see that justice is done to the smaller millers throughout the country.

Mr. SPROULE. If a man wants a carload of grain, he is not going to waste his time going before the Railway Board, if he cannot get it.

Mr. NESBITT. He need not waste time. He need only write a letter.

Mr. SPROULE. If you are ordering a carload of grain from the west, and you are told that the only way you can get it through is through one of these associations, you begin to think that the association has some influence with the railway company that it should not have. I am not sure how far the association is responsible, but I am sure that you could not get the grain or know when it would be shipped, and besides, you would have to pay a higher freight rate on it. These are two objectionable features to the man who wants to buy, and if this association exercises such influence with the railways, I think it is a bad one.

Mr. JOHN HAGGART. The object of the association may be a very good one, and very likely is, namely, that a lot of millers may combine together for the purpose of competing with the large milling companies like Ogilvie's, or the Lake of the Woods Company in purchasing grain; but, on the other hand, it may be an injury. You do not know the terms on which these parties combine together. Some individual in the combine may not have as much interest as others. The House ought to know particularly what fees the association is allowed to charge, and it might be right to limit it in that respect, so that it would be obliged to give equal rights to all who hold stock in the association. The object is a perfectly good one. The association en-

ables parties who want only one or two carloads of grain to get them by entering into a combination of this kind, and sending a buyer into the market to buy two or three hundred carloads. Two or three hundred may be purchased cheaper than a couple might be able to do. It may be all right for an individual mill owner to belong to a concern of this kind, but the powers granted should be strictly guarded so that no advantage may be taken of individual mill owners who are not in it.

Mr. BLAIN. I do not wish to say anything special on the merits of the Bill, but I think there is sufficient opposition to it to justify our allowing to give further explanation. While it may not be written law, it is a well observed custom that when the introducer of a Bill is absent we should not proceed with it if there be any opposition.

Mr. A. M. MARTIN. There appears to be quite a misunderstanding regarding freight rates. The freight rate must be approved by the Railway Commission and printed and published before coming into effect. No society of any kind has any power or right over the freight rates of any company. Any man who wishes, may go into a railway freight office in any part of the Dominion and get a copy of the freight rates. There is no difference in freight rates, but there is a milling rate which gives the miller the right to take the grain into his mill cheaper than the rate to an ordinary shipper who buys to sell. The reason of this is that the miller ships the product over the same road. That is all the preference he gets. This association has been in existence since 1902. The members of it are all responsible men who have been carrying on a legitimate business under it. The association was formed, as the hon. member for South Essex (Mr. Clarke) has said, to compete against the larger mills. They have the right to buy grain under their charter and all they now ask is the right to sell grain. That is about all the difference. I see no harm in this. I was on the sub-committee with the hon. member for South Essex (Mr. Clarke) and we went over the Bill very carefully and made one or two changes. The Bill itself does not differ from some other Bills. I had before me a Bill to incorporate the Maritime Milling Company, and its terms are precisely similar. As regards arbitration, this association is not asking for more powers than are given the board of trade. The only case of arbitration it has ever had is one which is before it now, so that if there have been, as the hon. member for East Grey (Mr. Sproule) has said, other cases, they had no connection with this company whatever.

Mr. SPROULE. This company is asking for very much larger powers. Section 3 in the old Act is as follows:

The objects of the association are to promote, extend, and improve the manufacture of flour and meal, the business of flour milling generally in Canada, and the shipping and sale to foreign markets, as well as to the markets of this country, of grain, flour and meal, and to assist the members of the association with regard to the matters aforesaid, as provided by by-law, and to arbitrate, adjust, settle and determine controversies and misunderstandings between persons engaged in the said trades, or such as are submitted for arbitration as hereinafter provided; but nothing herein contained shall be construed as constituting the association a trading company, or empowering them to engage as a trading association in the business of buying and selling grain, flour or other merchandise; nor shall the association, by rule, regulation, by-law or otherwise, fix or determine, or endeavour to fix or determine, in any way whatever, the price that the members or any of them shall pay or offer for grains in Canada.

That is to be repealed and the following substituted:

The association may carry on the business of purchasing, selling, storing, shipping and dealing in grain——

Just what the other provides they shall not do.

—and manufacturing, buying and selling flour and other products of grain and may construct, acquire, operate, hire, lease, sell or otherwise dispose of elevators for elevating wheat, grain or other products, and acquire, lease and utilize, hydraulic, electric or other power for the purpose of the said business, and generally may carry on an elevator and storage business;

(b) construct, acquire, charter, operate, sell, lease and otherwise dispose of all kinds of vessels and boats, and wharfs, docks, workshops, stations and other buildings.

These are very much more extensive powers than the others and would seem to have very little relation to this association, but would rather appertain to a transportation company.

(c) acquire and hold shares in any ships, and manage, navigate and operate such ships and may acquire shares in any company incorporated for the purpose of owning, managing and operating ships and may lease, hire and charter any such ship and do all acts and things for the promotion, extension and improvement of the manufacture of flour and meal, and the business of flour milling generally, and the shipping and sale of flour and grain and other products in foreign markets as well as in the markets of Canada, and assist the members of the association with regard thereto.

Then we have subsection (e).

(e) carry on any other business which may seem to the association capable of being con-

veniently carried on in connection with the business of the association, or calculated directly or indirectly to enhance the value or render profitable any of its property or rights;

(f) apply for, and purchase or otherwise acquire any patents, licenses, concessions conferring any exclusive or non-exclusive or limited rights to use, or any secret or other information as to any invention which may seem capable of being used for any of the purposes of the association, or the acquisition of which may seem calculated directly or indirectly to benefit the association, and may use, exercise, develop or grant licenses in respect of, or otherwise turn to account the property, rights, or information so acquired;

(g) enter into any arrangement with any authorities, municipal, local or otherwise, that may seem conducive to the association's objects, and obtain from any such authority any rights, privileges and concessions which the association thinks desirable, and may carry out, exercise and comply with any such arrangements, rights, privileges and concessions;

(h) acquire and hold shares in any company or association having objects together or in part similar to those of the association or carrying on any business capable of being conducted so as directly or indirectly to benefit the association;

(i) draw, make, accept, endorse, discount, execute and issue promissory notes, bills of exchange, bills of lading, warrants and other negotiable and transferable instruments.

It seems to me that while the old Act limited this association generally to millers, doing a milling business, who required to get grain, this makes out of it a company to buy, sell and ship and own vessels —aiming at the same kind of work which the original incorporators in this company claimed was so detrimental to them, namely, the obtaining by the big milling companies of control of the grain supply and putting the small workers at a disadvantage. This is a Bill which requires to be looked into very carefully before we decide to pass it. It may give rise to many evils which we may not see at a moment's glance to-day.

Mr. A. H. CLARKE. I have no interest in the Bill; but, as it was before the committee of which I was a member, I may be allowed to say a word. I would be glad, like my hon. friend from North Wellington (Mr. A. M. Martin), if any one would suggest what possible harm could come from the incorporation of a company or the granting of the additional power proposed. The committee endeavoured to find if any such interest would be jeopardized. There were men of affairs there, for instance, the hon. member for South Ontario (Mr. Fowke) who is in the shipping business, the hon. member for Kingston (Mr. Harty) and others. It had been suggested that there might be some room here for combination or something of that sort; but, so far as the committee were able to discover, after hearing the member of the company who was there, and comparing this Bill with the acts of similar companies, we could not discover that any interest would be jeopardized, but, on the contrary, that competition would be increased, which we thought would be for the benefit of the farmers having grain to sell. It means the addition of one more competitor in the market for the purchase of grain. I have not the slightest objection, if it is thought that anything would be gained by further consideration. I know the promoter of the Bill the hon. member for Brantford (Mr. Harris) does not know anything about the Bill. It was put in his name, but beyond that he was not able, in the committee, to give us information or render us assistance. There is one point I have thought might possibly require guarding, and that is in subsection (d) where it is provided that the company are not to fix the price for buying. It might possibly be right to go further and say that the company shall not fix their selling price. The committee thought that the law of combines would cover that. But this is one company, and it might be said that there would be no infringement of the combine law if they were to regulate the price at which their own members would sell. I would be inclined to add a proviso that the company should not determine the price at which they should buy or the price at which they should sell. That, it seems to me, is the only way in which they can possibly combine under this Bill to do harm.

Mr. JOHN HAGGART. The objection to this is the same as to every other combine. Here you give powers for the incorporation of mill owners.And for what purpose? For buying which they are to grind and selling the products of that grain after manufacture. If it is a harm for fifty or sixty millers to combine, surely there is harm in this. It occurred to me that we might remedy the difficulty by providing that any mill owner should be at liberty to join this association and that no individual should be placed at a disadvantage in joining it or belonging to it, but that all should have equal rights in it. But, unless——

Mr. A. H. CLARKE. Would not the regulations provide for all these things?

Mr. JOHN HAGGART. The regulations do not provide for them. You are giving them special power to do certain things under the law. I doubt very much whether, under the regulations against combines——

Mr. A. H. CLARKE. I did not refer to those regulations, but to the by-laws and regulations of the company. Any one

joining the association knows exactly on what terms he is joining, and these parties, I understand, are the ones about whom the hon. member (John Haggart) is concerned. And, if they know the terms of the by-laws and regulations, I do not see how they could be injured.

Mr. JOHN HAGGART. The by-laws and regulations might be such that parties would not wish to join. But every one should have an equal right to join.

Mr. A. H. CLARKE. I think they have.

Mr. JOHN HAGGART. No; this is a combination of certain persons for certain purposes and may be exclusive.

Mr. A. H. CLARKE. Section 6 provides for those 'who may become members'. And not only mill men, but farmers may join. At first it was confined to mill men, but now the Bill is extended to farmers as well. That will be found in section 5 of the Bill as it now appears.

Mr. PUGSLEY. It occurred to me, on reading the Bill over, that if the measure provided for a larger capital, it would be one of the most favourable arrangements for a millers' trust against the farmers that one could possibly imagine. It provides that all the millers in Canada may become members of the Millers' Association, and, in that way, they could do what, under the present law, they could not do, that is, fix the price at which they would buy the grain from the farmers.

Mr. A. H. CLARKE. Paragraph (d) expressly forbids that.

Mr. PUGSLEY. I think not. That relates only to arbitration proceedings. This would become a company of which all the mill-owners in Canada could be members, and they could regulate the price which they would pay to the farmers for their grain. It seems to me to be a wrong principle to incorporate a company to enable all the purchasers of grain—for the farmers must look to the mill-owners as their customers —to make a legal combination which they could not do without some such special Act as this. This would be a recognition of the desirability and propriety of forming a trust, and I do not think that parliament would accede to that without very careful consideration. I listened to section 3 of the original Act, as read by the hon. member for East Grey (Mr. Sproule), and it seemed to me that that section met all reasonable requirements. But I think that before we make such a very great alteration in the Act of incorporation, we ought to have very clear reasons for making that change. By this Bill it is proposed to strike out at once all the safeguards which parliament seems to have thought necessary to place in the original Act of incorporation. I think we ought to have very strong reasons presented to us before we do so.

Mr. BLAIN. May I ask the hon. member for South Essex (Mr. A. H. Clarke) if any representative farmers appeared before the special committee, or were they particularly invited?

Mr. A. H. CLARKE. No person appeared except the representative of the association.

Mr. BLAIN. I appeal to my hon. friend (Mr. Fielding) who is leading the House, that there is certainly sufficient opposition to this Bill to justify us in asking that it be left for further consideration. The special committee, of necessity, was a small one. No doubt, they have gone into the matter very carefully—I am not offering any criticism of their action whatever—but the great mass of the members on both sides have had no opportunity of looking into this matter, and I am sure that it is a matter that requires very careful consideration. The Minister of the Interior (Mr. Oliver), and the Minister of Public Works (Mr. Pugsley) have pointed out grave objections and grave reasons why this should not become law, and, for myself, I think that I and other members should have an opportunity of consulting the farmers to learn whether they do or do not regard this as a combine.

Mr. JOHN. HAGGART. I do not wish to be thought to be opposed to the principle of the Bill. I can understand the absolute necessity, in some cases, of a Bill of this kind. The small mill owners, if they are to exist at all, can exist only by some form of arrangement of this kind for the purchasing and selling of grain. The hon. member who is chairman of the committee says that this Bill is not exclusive, that any one has the right to join and participate in its advantages. But I see an absolute necessity of some arrangement, or of the formation of some company on the line of this Bill, if they are going to carry on business at all in competition with larger concerns.

Mr. OLIVER. I would not wish to be understood as urging anything against the millers of Ontario, either small or large, organizing to defend their interest in a proper way, and I am not saying that this Bill is an attempt on their part to organize improperly. But there is a feature of this Bill that claims attention. There is no doubt that the purpose of the Bill is not, as my hon. friend from South Essex (Mr. Clarke) says, to increase competition, but to eliminate competition so far as possible in the buying of grain. Now that is something that claims the attention of those who are interested in the selling of grain, and we ask therefore, that it be made per-

fectly clear that this elimination of competition in the buying of grain is not going to be of such a character as to injure those who are interested in selling grain, and in the maintenance of competition in selling that grain. There is no objection whatever to any set of persons investing their capital in the business of buying grain, there is no attempt to prevent any such thing. But the objection is to using the powers of an association and the powers of an incorporated company in conjunction; that, it appears to me on the face of it, is not a fair proposition. Now let me call attention to section 6 of the Bill:

Section 9 of the said Act is amended by adding at the end thereof, 'but no such by-law shall provide for the expulsion of any person who has become a shareholder in the association, but, as to such persons, shall make provision only for their being deprived of the special privileges and advantages of the association other than such pecuniary advantages as are incident to their stock holdings.'

Mr. NESBITT. Would the minister read the first part of it so as to give the sense?

Mr. OLIVER. Generally speaking it provides for a board of arbitration, and for the expulsion of members who do not comply with the requirements of the Bill, and then this section comes in and says:

But no such by-law shall provide for the expulsion of any person who has become a shareholder in the association, but, as to such persons, shall make provision only for their being deprived of the special privileges and advantages of the association other than such pecuniary advantages as are incident to their stock holdings.

Did anybody ever see a clause like that in the charter of an ordinary incorporated company, whereby a distinction was made, to give privileges and rights to one shareholder over another shareholder? That shows the extraordinary character of this measure. While it may be all right, this House, having set its face against combines and mergers, should be very careful before putting legislation on the statute-book which, on its face, is of such an extraordinary character, and on its face does actually combine the advantages of an association and those of a business enterprise, as in this section it undertakes to combine them. I do not think that is safe legislation to put through without understanding its limitations.

Mr. A. H. CLARKE. I think, in view of the interest in the Bill, there is no objection to its standing over so that all objections may be considered. I am not at all interested in forcing it through.

Mr. SPROULE. To my mind any Bill which incorporates an association that can get better advantages or terms than an individual, using the railways, and trying to buy cheaper, has something wrong in it. Now the old association was thought to be a pretty good one, and it did not put the fee at a higher figure than $5, but might have put it at $25, so high that no man who wanted to buy one or two carloads of grain could have joined it for that purpose. Now here was the trouble. I was in correspondence with parties in the west year before last when I desired to buy frozen grain. I could buy frozen grain for 25 to 29 or 30 cents a bushel, but I was given a freight rate from Brandon, I think at 25 cents a bushel, and from Moosejaw at 29 to 30 cents. I was told that if it was purchased through an association I would save 5 or 6 cents a bushel, the railway would carry it at 5 or 6 cents a bushel cheaper than they would for a private individual. Now I held that to be a distinct injustice to the farmer and to myself. I could give him a higher price for the grain if I could get a fair rate of transportation, what the law provides I ought to be able to get, the same rate of freight from the railway as a company gets, because the law says that the railway company shall not discriminate in favour of one against another. But you want the grain and you cannot help yourself. There are two things you are confronted with: One is that you are charged a higher price, and the other is that you have no guarantee when you will get the grain. I know a case where the grain did not reach Ontario for two or three months.

That is not the kind of business any farmer wants to do. There is just where the trouble comes in. You cannot buy from the man in the west who desires to sell, because he is a farmer, he is not a member of this association, and you are not a member of the association. I inquired why it was that the association can do better than the individual? It was because they have got their men all along the line, they know the railway companies better, they have greater influence with the employees. They will perhaps take on cars for an individual at Brandon or Moosejaw and drop them off at North Bay, or Kenora, or Port Arthur, and they may lie there for weeks or months. This association have men at all these prominent places along the line stirring up the railway companies to pick up these cars, and can push them forward. These parties have that advantage which a private individual could not have. Now I know a large number of people in our country who desired to buy grain, and could sell it at a little higher figure than it was sold at in the west, but they could not take the advantage, because they could not get it shipped through. The restrictions prevented them from handling it at that price. I am not saying positively that the company was responsible for it, but it was at least the

general understanding that the company was responsible. I say that if any company exercises such control or such power, then it is injurious both to the farmer and to the man who wants to buy.

Mr. SAMUEL SHARPE. When this Bill was before the Private Bills Committee, it was opposed on the ground that it looked too much like a combination, like allowing millers, farmers and others to combine for the purpose of getting grain at a cheaper price, to the detriment of the farmer. One of the great objections taken was to clause 7 because it restricted the membership of the association. If this association has such benevolent purposes as the promoters pretend, there is no object in restricting the membership to certain specified individuals. Why not have the shares placed on the market and allow any one who desires to purchase them? I raised that objection before the committee, but like many other private Bills coming before that committee it was rushed through with little consideration.

Progress reported.

LONDON AND LAKE ERIE RAILWAY AND TRANSPORTATION COMPANY.

House in Committee on Bill (No. 91) to incorporate the London and Lake Erie Railway and Transportation Company.—Mr. Harris.

Mr. GRAHAM. This Bill was somewhat intricate in its different provisions, as it was dealing with companies that had already made agreements with the municipalities in that part of the province. In order that the Railway Committee might thoroughly understand what all these agreements meant which we were asked to confirm, this Bill was referred to a special committee who went into it thoroughly and this amended Bill is the result of their work. I think from the report brought in by the special committee of the Railway Committee, that the rights of the municipalities are perfectly guarded with reference to the agreements they had formerly made with these other companies which this company proposes to take over.

Mr. S. SHARPE. Is this the Bill concerning which certain delegates waited on the Railway Committee asking for the insertion of a clause protecting the Sabbath Observance law in relation to this railway? I understand that Dominion jurisdiction is being given over what were previously provincial railways. Is it the intention of the government to put in a clause protecting the Sabbath Observance law as requested by the delegation?

Mr. GRAHAM. My hon friend was in the committee when the Bill was thoroughly discussed, and I do not think he moved any amendment to that effect. It was perfectly free to any member to move anything he chose. The matter was discussed and the committee decided that if the Railway Commission were to be brought under Dominion jurisdiction it must come under the provisions of the Railway Act of the Dominion in its entirety and be subject to the Railway Board.

Mr. J. HAGGART. Under section 8, you give them power to acquire the Southwestern Traction Company. Has that company power to sell?

Mr. GUTHRIE. Yes, the sale was carried out under the order of the court. The Southwestern Traction Company was wound up by the court, and its assets were sold by order of the court.

On section 15,

Mr. S. SHARPE. Is that the usual form in which this clause is inserted in these Bills? It says that it must be approved by a by-law of the council. Should it not be ratified by the people, because frequently the railway companies can carry a by-law by influence in the council, that would not be approved by the people. Should they not be obliged to obtain assent of the people as expressed by their votes?

Mr. GUTHRIE. We do not usually insert such a provision.

Mr. S. SHARPE. It was done in the Michigan and Ontario Power Company Bill.

Mr. GUTHRIE. It may be inserted in some particular instances, but it is not usual.

Mr. BEATTIE. This is a special clause drawn by the city solicitor for London who thought it was all that was necessary.

Mr. SPROULE. The object of that clause was to provide in case a municipality had a plant of its own, that this company should not become a competitor with it. If a municipality had a plant of its own the people would be sufficiently interested not to pass a by-law unless they thought proper to do so.

Bill reported, and read the third time, and passed.

THIRD READING.

Bill (No. 114) respecting the Richelieu and Ontario Navigation Company.—Mr. Forget.

SECOND READING.

Bill (No. 144) for the relief of Jessie Maud Mary Maxwell.—Mr. Boyce.

QUESTIONS.

CANADIAN NAVAL SERVICE.

Mr. BOYCE:

1. What cruisers or other vessels, if any, have been purchased by the government for the proposed Canadian naval service?
2. What is the description of the vessels and what prices were paid for them, respectively?

Hon. WM. TEMPLEMAN:

1. Negotiations have been going on for the purchase of one steamer for the protection of the fisheries in British Columbia, and for the purchase of another ship in connection with the navy, subject to the money being voted by parliament.
2. Negotiations are not complete, and no moneys have been paid.

IMPORTED SEWER PIPE.

Mr. WALLACE:

How much duty was collected on vitrified sewer pipe last year under the dumping clause at Toronto, Montreal, Winnipeg, Halifax and Vancouver, respectively?

Mr. TEMPLEMAN. The total duty collected on vitrified sewer pipe during the calendar year 1909, at the undermentioned ports, was as follows, under dumping clause:

	Duty collected under dumping clause.
Toronto	
Montreal	
Winnipeg	$ 46 76
Halifax	
Vancouver	834 13
Total	$ 880 89

Mr. WALLACE:

1. What amount of vitrified clay sewer pipe and fittings, in gross dollars, entered each province in Canada during 1909 from the United States and from Scotland, respectively?
2. What is the rate of duty on sewer pipe and fittings, both in double and single strength, also in first and seconds, from these two countries?
3. Is there a dumping clause on pipe and is it enforced?
4. What is the discount basis on pipe entering Ontario from the United States, and what is the discount basis on pipe entering Winnipeg and west, from factories located where the Western American list is used, and also where the Eastern list is used?
5. What amount of pipe entered Port Arthur during 1909, in gross dollars, was it invoiced in as firsts or seconds, and on what discounts was duty levied?
6. What is the duty based on when pipe is shipped from Indiana and Ohio for shipment to Winnipeg and west?
7. What is the duty based on when shipped from Macomb, Illinois, to Winnipeg and west?
8. How often are the American selling prices for home consumption checked up, and when were they last checked?

Mr. TEMPLEMAN:

1. The imports of earthern sewer pipe and fittings entered for duty in each province, during the fiscal year ended March 31, 1909, from the United States, and the United Kingdom, respectively, were as follows:

	United Kingdom. Value.	United States. Value.
Ontario	$2,875	$ 19,642
Quebec	16,581	4,267
Nova Scotia	407	428
New Brunswick	1,258	120
Manitoba	.....	19,437
British Columbia	13,115	25,182
Prince Edward Island	.....	
Alberta	.....	57,241
Saskatchewan	.....	9,492
Yukon	18	
Total	$34,254	$135,809

2. The rate of duty on earthenware sewer pipes, single or double strength, and fittings is as follows:

Under tariff item 284, 35 per cent general tariff.

Under tariff item 284, 25 per cent British preferential tariff.

3. Earthen sewer pipe being articles of a class or kind made in Canada, are subject to the provisions of the dumping clause. The dumping clause is enforced in cases where the collectors decide it to be applicable.

4. The price lists of sewer pipe usually imported from the United States are known as 'the Eastern Price List' and 'the Western Price List'. The basis of discount off these price lists to importers is treated as confidential by the Department of Customs.

5. The value of sewer pipe (invoiced as firsts and seconds) entered at Port Arthur during the fiscal year 1909 was $2,496.

6. Sewer pipe shipped direct to Canada from Indiana is held to be dutiable on the basis of the eastern or western price list, according to the location of the shipping point in that state. Sewer pipe shipped direct from Ohio is held to be dutiable on the basis of the eastern price list.

7. Sewer pipe shipped to Canada from Macomb, Illinois, is held to be dutiable on the basis of the western price list.

8. The American selling prices are investigated at irregular intervals, and when considered necessary. The last report of investigation into these prices by a spe-

cial customs officer is dated 21st January, 1910.

GODERICH EXCISE COLLECTIONS.

Mr. BEATTIE:

1. What were the excise collections at Goderich, Ontario, for each of the past five years?
2. Who is the officer in charge, and where does he reside?
3. Is he employed in any other occupation than that of collector of inland revenue?
4. What was his salary at the date of his appointment, and what has his salary been each year since appointment?

Mr. TEMPLEMAN:

1904-5	$1,505 29
1905-6	943 71
1906-7	581 37
1907-8	755 09
1908-9	1,208 60

2. M. J. Dalton resides near Kingsbridge.
3. Not that the department is aware of.
4. Salary at appointment, $800; 1905-6 at rate of $800; 1906-7 at rate of $800; 1907-8 at rate of $800 for 11 months; $1,000 for 1 month; 1908-9 at rate of $1,000 for 1 month

LETHBRIDGE POST OFFICE.

Mr. MAGRATH:

What was the total revenue from the post office in the city of Lethbridge Alberta, for the ten months in the current fiscal year ending 31st January, 1910?

Hon. RODOLPHE LEMIEUX. $22,994.78.

FISHING LICENSES IN BRITISH COLUMBA.

Mr. J. D. TAYLOR:

1. Have any claims been made upon the government of Canada for compensation to holders of licenses to fish, because of alleged interference with the enjoyment of the right covered by such licenses arising out of the dispute said to exist between the federal government and the government of the province of British Columbia?
2. If so, by whom have such claims been made and for what amount in each case?
3. Did Sir Wilfrid Laurier direct that written intimation should be sent to J. A. Kendall, of New Westminster, that all due consideration would be given to his claim?
4. Has such consideration been given? If so, with what result?
5. What was the date upon which intimation of due consideration was addressed to claimant named; and when, if at all, was the result of the promised consideration communicated to said claimant?
6. Does the federal government recognize responsibility for protection of holders of fishery licenses in the exercise of the rights conferred by these licenses?

Mr. TEMPLEMAN:

1. Yes.
2. J. A. Kendall, $850; W. Kendall, $737.50.
3. Sir Wilfrid Laurier's private secretary, by direction, acknowledged the receipt of Mr. Kendall's letter in the usual formal way and stated that due consideration would be given it.
4. The Department of Marine and Fisheries had already dealt with the matter, and had informed Mr. Kendall that there did not appear to be any ground upon which it could favourably consider such a claim. No further facts being adduced by Mr. Kendall in support of his claim, the department had no reason for changing their opinion in the matter.
5. The formal acknowledgment above referred to was dated 30th April, 1909, but the Department of Marine and Fisheries had already, 14th January, 1909, declined favourable consideration of the claim.
6. The question is too general to be answered definitely. Any claim made against the federal government would be dealt with upon its merits.

FORT HENRY RESERVE.

Mr. M. CURRIE:

In what condition was the land on the Fort Henry Reserve, formerly leased to R. J. Dunlop, when the Department of Militia resumed possession?

Hon. W. S. FIELDING. The land was in poor condition in that all fallen limbs of trees, etc., and underbrush had been allowed to lie, and the danger from fire was, consequently, very great. Also a fence which has been placed by Mr. Dunlop around the property was in a very dilapidated state and of little value. Several buildings, however, erected by Mr. Dunlop, viz:—a frame house; a frame barn and addition, and a small shack, were in fair condition.

CAMP BARRIEFIELD RIFLE RANGE.

Mr. M. CURRIE:

1. Did any one object to having the Rifle Ranges at Camp Barriefield, on the south side of the road, and were they consequently moved across the road, and new ranges erected at a cost of $12,000?
2. If such objection was made, from whom did it emanate?
3. Why did the government build an embankment of earth back of the butts on the new range within 100 yards of the foot of a hill which rises 10 to 12 feet higher than the embankment?

Mr. FIELDING:

1 and 2. No one objected. The reasons why the range was changed from the south to the north side of the Gananoque road were amply sufficient. In the first place the old range was laid out by the imperial authorities some sixty or seventy years ago, at a time when the extreme range of the arms then in use was much less than at

present. In the second place the old range was placed exactly between the travelled road on the one side and the St. Lawrence on the other and was but a short distance from either. The consequence was that, if a bullet was fired too high, it might very easily fall into the road a long way off or else into the St. Lawrence which was being constantly traversed by boats and vessels of all descriptions. With long range rifles accidents would have been sure to occur. A new rifle range of 18 targets has been erected at a cost of about $12,000.

3. An embankment of earth in rear of the targets was built to prevent ricochets upon the hill itself, and act as an effective stop butt for the majority of bullets. The natural slope of the hill is much too flat to prevent ricochets. It is also rock faced and does not run at right angles to the line of fire, thus increasing the danger from ricochets. The crest of the natural hill is five feet higher than the top of the artificial stop butt. This five feet, however, is at a greater angle to the line of fire than the remainder of the hill, and, therefore, less liable to ricochets.

ANALYSES OF JAMS AND JELLIES.

Mr. BRODER:

1. Has the Inland Revenue Department analysed any jams and jellies during the years 1908, 1909 and 1910? If so, has any person or firms been found adulterating such, or violating the law with regard to same, and have any prosecutions been made by the department? If so, what are the names of the persons so prosecuted?

2. If no prosecutions have been made, why not?

Mr. TEMPLEMAN:

1. The Department of Inland Revenue has analysed jams during the years mentioned. Yes, one sample was pronounced adulterated. No prosecution resulted.

2. No prosecution was instituted for the reason that the adulteration consisted only of an excess quantity of glucose, and it was admitted that, owing to the variable nature of glucose, this quantity could only be approximated.

RESCUE STATIONS IN COAL MINING DISTRICTS.

Mr. MACDONELL:

1. Is the government aware, in view of the rapid extension of the coal fields of the Dominion, of the urgent need of rescue stations in the coal mining regions of Canada? If so, what steps has the government taken to establish such rescue stations, or to see that such stations are established by the collieries?

2. Is the government aware that the technologic branch of the United States Geological Survey is said to have in hand the establishment of rescue stations in all the large coal mining districts of the United States, and that the governments of Great Britain and other countries are said to be working along similar lines?

3. Are there any collieries in Canada equipped with rescue apparatus?

4. Does the government propose to establish a rescue station, or stations, for the purpose of demonstration or instruction in the matter of saving life and property in the event of conflagration or other disasters in coal mines?

Mr. TEMPLEMAN:

1. Yes. The government has this matter under advisement.

2. No. On the contrary, the government understands that such is not the intention. Several demonstration stations have been established or planned for, but the object is to try to educate the operators and miners to the advantages of the rescue and fire-fighting apparatus, so that the companies may be interested in establishing joint rescue stations maintained by the companies in each important mining centre. The United States has such a demonstration station at Urbana, Illinois, but it is for a very large area, with a great number of mining centres, Illinois, Indianna, Iowa, Western Kentucky, Michigan and Missouri.

The government understands that the practice in the European countries is to have such joint stations as the United States Geological Survey wishes to see established in the states.

3. Yes.

4. Answered by No. 1.

LOBSTER FISHERIES.

Mr. JAMESON:

1. Are any fishery officers, in the employment of the Department of Marine and Fisheries, the owners or operators of, or interested in, any lobster canning plant, operating under license from the department?

2. If so, what are their names and addresses, and what are the dates of their appointment?

3. Have such, if any, complied with the regulations respecting the size limit of the lobster used?

Mr. TEMPLEMAN:

1, 2 and 3. Not so far as the department is aware.

ST. SIMEON-TADOUSAC MAIL SERVICE.

Mr. PAQUET:

1. Have tenders been asked for the carrying of the mails between St. Simeon, county of Charlevoix and Tadousac county of Saguenay?

2. If so, who was the lowest tenderer and what was the amount of the tender?

3. Has the contract been given to the lowest tenderer? If not, why not?

Mr. LEMIEUX:

1. Yes.

2. Joseph Couturier; (b) $974 per annum.

3. No. Mr. Couturier having failed to furnish satisfactory sureties, the contract could not be awarded to him.

QUESTION OF PRIVILEGE.

Mr. H. H. MILLER. Before the orders of the day are called I rise—for the first time in my six years as a member of this House—to a question of privilege. I do not know that I would have done this were it not that the hon. member for Jacques Cartier (Mr. Monk), in a very courteous letter this morning, drew my attention to an article in the 'Citizen' and said that it ought to be brought to the attention of the House. The article is entitled 'a breach of parliamentary etiquette,' and refers to the issuance by me of a pamphlet regarding the Bill before the House to suppress gambling at race meets. I do not complain very much of the article or the language used. In my opinion the 'Citizen' is usually one of the fairest of Conservative newspapers, in the giving of news and the making of comments. One of my hon. friends near me suggests that it is improving. Perhaps in that respect it is. Nor do I desire to complain of the last paragraph in the article which says that Mr. Miller is a perfectly honest man. That statement I shall not endeavour to deny but would rather say, in connection with this matter at least, that I have endeavoured to be perfectly honest. But while I have no particular complaint to make of the article, I do say that the statements in it are not exactly correct. While, in the first place, I do not attach any importance to this, because it is beside the question, the article says:

While acting as chairman of the Special Committee on his Bill against racing, Mr. Miller, M.P., has issued a pamphlet in which he lauds the Bill and condemns racing without stint as a public evil.

Further down it says:

Mr. Miller's action in deciding the case against racing, when the committee had only just begun to hear testimony——

I say that is aside from the issue. The Bill does not in any way condemn racing nor have I endeavoured to condemn it. I hesitate to detain the House by reading the article, but perhaps I had better do so:

——while acting as chairman of the Special Committee on his Bill against racing, Mr. Miller, M.P., has issued a pamphlet in which he lauds the Bill and condemns racing as a public evil to be done away with.

That is not correct.

While acting as chairman of the Special Committee on his Bill against racing, Mr. Miller, M.P., has issued a pamphlet in which he lauds the Bill and condemns racing without stint as a public evil to be done away with. The main portion of the pamphlet is dated January 26, the preface February 1, indicating that it was prepared shortly after the committee had commenced the inquiry, while many other witnesses had to be examined pro and con, and, of course, long before he and his colleagues were in a position to discuss the evidence and form an unbiased conclusion. Anything more contrary to parliamentary etiquette or at variance with ordinary fair dealing it would be difficult, with all respect to Mr. Miller, to imagine.

In Canada, English parliamentary custom and procedure are followed. The members of a special committee are supposed to discharge a function corresponding to that of a judge on the bench. The testimony cannot be printed nor a report brought down without the sanction of parliament and the concurrence of the committee. In May's Law and Privileges of Parliament, edition of 1863, page 395, it is related that the chairman of a committee who had published and circulated a draft report which he had submitted to the committee, but which had not been entertained by them, was considered to have acted irregularly and contrary to the usage of the House.

In another case where a report had been prepared by the chairman, apparently without the knowledge of the other members of the committee, it was ordered to be cancelled. But these other lapses by the chairman of special committees in the imperial parliament are as nothing compared with Mr. Miller's action in deciding the case against racing when the committee had only just begun to hear testimony, and publishing his decision and the grounds on which he bases it without consulting his committee or saying 'By your leave,' to the Speaker of the House.

If this sort of thing is to be condoned, committees of parliament will no longer be safe guardians of the public interest. We shall have the chairman of the Public Accounts Committee deciding in advance of a complete hearing, or perhaps of any, that the charges brought by the opposition of extravagance or evil doing on the part of ministers or officials are baseless; while the chairman of the Railway Committee decrees of his own motion that an applicant company is not entitled to a charter or another ought to have its charter annulled.

Mr. Miller is a perfectly honest man, and we are sure that when he comes to reflect upon what he has done, he will be extremely sorry that he did it. Meanwhile the affair should be promptly dealt with by parliament.

As to the statement that the pamphlet is dated 26th January, shortly after the beginning of the inquiry, I would like to point out that the preface of the booklet I have published is dated 1st of February, that the end of the pamphlet bears the date 26th of January. The matter was sent to the printer on the 26th January and dated the 26th January, the proofs came back about the 1st of February, and were considerably changed and added to and redated the 1st of February. If hon. members will look at the pamphlet itself, they will see that it contains an editorial from the 'Globe' which appeared on the 2nd of February, so that it must have been

subsequent to the 2nd of February that the copy was finished and sent to the printer.

Mr. BOYCE. When was it distributed?

Mr. MILLER. I shall refer to that in a moment. I beg to call attention to the fact that all the evidence, which has been brought in so far, was taken before the date when the pamphlet was sent to the printer. True, a considerable amount of evidence is to follow, but the greater part is in print and now before the House—the greater part though not by any means all. The article states:

> The members of the Special Committee are supposed to discharge a function corresponding to that of a judge on the bench.

That is perfectly true up to a certain point. The members of a special committee, including the chairman, act in a dual capacity. I was, however, not only the chairman of the special committee, but the one who had introduced the Bill. In fact, I believe it was because I had introduced the Bill that I was appointed on the committee, just as one or two others were put on because they had expressed themselves in opposition to the Bill; and I can quite understand that, in acting as chairman of the committee, it was my duty to show all the fairness and impartiality of one acting in a judicial position. That I have endeavoured to do. My position was not in that respect particularly easy. It was known—and I took no pains to conceal the fact—that I was in favour of the Bill, but, nevertheless, I did endeavour to act with perfect fairness in conducting the committee in so far as a committee can be conducted by its chairman. That I am confident I succeeded in doing. The task was not an easy one, because there were some eight or nine lawyers employed by interests opposed to the Bill, and one by interests in its favour. That being the case, and it being well known that I was in favour of the measure, it was not easy for me to act so that all parties would be convinced I was dealing by them fairly. I am, therefore, the more gratified to know that at the close of the evidence, Mr. Leighton McCarthy, one of the leading counsel opposed to the Bill, thanked the committee for our perfectly fair treatment of all those who had come before us. He said that every one had been given a fair hearing and had been impartially dealt with, and several of the lawyers who appeared before the committee against the Bill personally thanked me for the fair manner in which I had conducted the meetings of the committee. But when those hearings before the committee had terminated I think that I occupied rather a different position. What objection could there have been to my

speaking to any member of this House at any time during the conduct of the case and exposing plainly and fully my views on the subject and supporting them by whatever arguments I might see fit. Surely, that I was chairman of the committee did not preclude me from the right that was enjoyed and exercised by other members of the House who chose to discuss the Bill. It has been asked: When was the pamphlet put in circulation? That, Sir, is a matter to which I intend to call your attention and that of the House. While the pamphlet was sent to the printer before all the evidence had been taken, I kept it in my possession—did not part with more than half a dozen copies to friends, until the committee had heard every bit of evidence that was to be heard.

Mr. BOYCE. May I ask the hon. member was not the inquiry adjourned to receive arguments on the question?

Mr. MILLER. I will refer to that; it is perfectly fair. The pamphlet was retained until all the evidence had been heard. The point is well taken that the committee was adjourned to receive the arguments of counsel. But as to that, I freely say that I do not expect to be influenced by arguments of counsel who had no more opportunity of hearing and weighing the evidence than I had. And all the evidence produced was exactly of the same character as that in reference to a similar Bill in the New York legislature that I had read and studied and was thoroughly informed upon. Now, I wish to refer for a moment to the instances mentioned in this article of the 'Citizen':

> In May's Law and Privileges of Parliament, edition of 1863, page 395, it is related that the chairman of a committee who had published and circulated a draft report which he had submitted to the committee, but which had not been entertained by them, was considered to have acted irregularly and contrary to the usage of the House.

I contend that it is an entirely different case from the present. That gentleman was acting and purporting to act as chairman of the committee. In issuing this pamphlet I was not acting as chairman of the committee, but was exercising my right as introducer of the Bill and a member of this House. The pamphlet does not purport to come from the chairman of the committee or even from a member of the committee, but from myself, member of this House and a citizen of this country. The next case cited in the article is a similar one. In that case, a report had been prepared by the chairaman of a com mittee, apparently without the knowledge of other members of the committee, and it was ordered to be cancelled. There again,

the gentleman was acting and purporting to act as chairman of the committee, an entirely different case from the present. I have not thought—nor would I think—of expressing the views of the committee, or of making a report that purported to be the report of the committee, or of the chairman or of a member of the committee, but, I repeat, I was only exercising my rights in putting into print arguments that no one could object to my making in support of the measure of which I was in charge. What I have done I have done with perfect frankness. I have not endeavoured to lobby for the Bill, or to buttonhole members, or to use one argument to appeal to one and another argument to appeal to another; but I have placed in print the argument in support of the views I hold and have circulated the same, presenting a copy to every member of the House in the most frank and honourable way. To those explanations I would add that I believe that those in charge of the 'Citizen', in their criticism, have been perfectly honest, and I believe that when they further reflect upon the article they have written, they will be exceedingly sorry for having written it.

Mr. MONK. I suppose this should be considered a question of privilege, and it is for that reason that I venture to address the House upon the subject, for I think it involves a very important question of custom and parliamentary regulation. I may tell my hon. friend (Mr. Miller) that he is a little mistaken in saying that by my letter to him this morning I called his attention to the article in the 'Citizen'. I think it was only after having despatched my letter to my hon. friend that the article was brought to my notice. What I wrote this morning was that, upon receipt of the pamphlet he had circulated, it had occurred to me that he had committed a very serious infraction of the privileges of the House, and that it would be our duty to call the attention of the House to it. I did not base my communication to my hon. friend on the article of the 'Citizen', but I deemed it necessary, in relation to this question which arose out of very little, to ask the House to lay down a rule with regard to such a proceeding as my hon. friend—quite sincerely and honestly—saw fit to adopt. Although one may not refer to the proceedings in the committee for the purpose of the decision of this question, I presume that it may be said that the Select Committee to which this Bill was referred had heard the evidence and had given the counsel concerned in the case one week to furnish written arguments in support of their contention. And it was, I think, Friday evening when the pamphlet of my hon. friend was circulated. I was immediately struck by the thought which, I believe, must have struck everybody, that that method of proceeding was quite unusual and irregular. I may say that our proceedings in committee have been most harmonious, and my hon. friend (Mr. Miller) has discharged his duties as chairman very satisfactorily—I do not think any difficulty arose amongst the members of the committee. But the question we have to consider is: Does the circulation—by a member of parliament, by a member of the committee, or by the chairman of the committee indifferently—of a statement in favour of a Bill or any subject matter that has been referred to a select committee, constitute an irregularity which amounts to an infraction of the privileges of the House. I think it does. And I think that if we allow the door to be opened to that kind of procedure, if the House does not declare that such a proceeding is not to be allowed, it will give rise to very serious abuse.

Mr. MILLER. Does the hon. member (Mr. Monk) think there is any difference between presenting to him, a member of parliament, an argument in writing or in print and making the same argument to a member in conversation?

Mr. MONK. I think there is a very great difference, and I will tell my hon. friend why. There is no doubt that all the members of the House are familiar with the principle. Matters that are referred by the House for special investigation to a committee are supposed to be fully investigated, and the minds of members of the House left uninfluenced in any way until that committee has investigated the matter and made its report. And, indeed, we carry the principle so far that it is strictly forbidden even to refer in the House in any way to the proceedings or the subject matter before the committee, and it is, strictly speaking, a breach of the privileges of the House to even communicate what takes place before the committee. That rule is relaxed, I know, with regard to the public press, as is a similar rule of the House itself. But it is more especially adhered to in regard to matters referred to a committee than in regard to affairs discussed in the House itself. The House will perceive at once that if it were possible to allow a member of the committee who is cognizant of everything taking place before the committee to address appeals to members while the committee still has under consideration and advisement the matters which have been referred to it, and before it has reported, that proceeding would give rise to the greatest possible abuses. I did not know that my hon. friend intended bringing up the matter at the present stage, and I must reproach him for not having advised me,

because I told him this morning it would be necessary to bring the matter to the notice of the House. I think he should have told me that he intended bringing it up.

Mr. MILLER. I was simply doing what he said to me in his letter ought to be done.

Mr. MONK. I did not intend bringing it to the notice of the House without first informing my hon. friend and my colleagues on the committee. I was surprised at my hon. friend doing so without informing his colleagues that he has such a proceeding in mind. I quite recognize the truth of what my hon. friend says as to the way in which he has seen fit, ex parte, so to speak, to present his case to the members of the House and the public. I must say that if we tolerated such a course we would be admitting a principle and changing a custom of parliament, admitting a principle that appeals may be made by members of this House to influence opinion on a subject matter which is being considered by a select committee. It is conceivable that that would give rise to grave abuses. I intended to put the question in the shape of a motion which would allow the House to lay down the principle which I think has been laid down time and again in England, that such a mode of procedure is absolutely irregular.

Mr. BLAIN. As a member of the committee, I had no notice of this matter coming before the House to-day. Therefore, I will make no comment on the question under discussion further than to say that in my opinion the House should seriously consider whether, after an hon. member presents a Bill and that Bill is referred to a special committee, it is proper for him to be himself the chairman of that special committee appointed to investigate the Bill. I think this difficulty would not have arisen had that circumstance not existed. I am not offering any criticism, only saying that in my experience, I think it would be in the interest of everybody concerned that the gentleman who introduces a Bill, and gathers evidence and brings it into the House, should not be selected as chairman of the sub-committee appointed to consider his own Bill.

Mr. SPROULE. I received a copy of that pamphlet. This is my view of the case: parliament has charged that special committee with a certain duty, namely, to consider a certain Bill, to call witnesses, to order the payment of those witnesses, to take down evidence, and report it for the purpose of enlightening parliament. During the time that sub-committee is engaged in this work, I think it would be improper for any member of the House to refer to the subject in this House or to discuss it in any way. The order of reference was for a committee to take evidence as they saw fit and report their evidence to parliament. While I think it might not be considered perhaps improper or irregular for a member of that committee to address any appeal to any person outside this House, I do think it was very improper to address any argument, by way of pamphlet or otherwise, to any member of this House. Parliament, as my hon. friend from Jacques Cartier (Mr. Monk) says, is supposed to have an open and unbiassed mind, and to reach no decision until it has received and considered the report of its sub-committee. Therefore, I thought, whether the hon. member meant anything wrong or not, that he had not a very keen appreciation of the proprieties of parliamentary life and the ordinary usages of parliament, when he addressed a pamphlet like that to every member of the House at the very time the subject matter was under consideration by a committee.

Mr. MONK. I had not under my hand a moment ago the parliamentary rule with reference to this matter. I find it in Bourinot at page 155:

> The House has also frequently decided that the following matters fall within the category of breaches of privileges:—
> 4. All attempts to influence the decision of a committee on a Bill or other matter before it for consideration.

There is a note referring to a case in England:

> In 1879 Mr. C. E. Grissell and Mr. J. Sandilands Ward were ordered to attend at the bar for attempting to influence the decision of the Committee on the Power High Level Bridge (Metropolis) Bill in the interest of certain parties from whom they expected to receive some pecuniary advantages for their services.

Mr. MILLER. Does the hon. gentleman think this is a parallel case?

Mr. MONK. It is a different case, but it illustrates the principle of attempting to influence the decision of a committee.

Mr. FIELDING. The case the hon. gentleman quotes referred to outside influence.

Mr. MONK. I will finish my quotation:

> Mr. Ward was ordered into custody and subsequently released; Mr. Grissell evaded the order, but was afterwards arrested and imprisoned in Newgate.

Now the distribution of such a pamphlet not only to members of the House, but to members of the committee, is an attempt to influence them and is, therefore, a breach of privilege.

PURCHASE OF DREDGES BY THE GOVERNMENT.

Mr. GERMAN. I wish to call the attention of the government to a matter af-

fecting the Public Works Department, and I am sorry the Minister of Public Works is not present. Nearly a year ago an order was made by this House for a return, moved for by myself, asking for the number of dredges owned by the government, from whom purchased, the prices paid, and the work that was being done by these dredges. I have spoken to officers in the department on different occasions with reference to this return, and have always received the reply that it was in course of preparation. I know, of course, that the work of preparing a return of that kind is necessarily tedious and perhaps technical, and I felt that ample time was required. I must ask the government now to prepare it speedily, and the reason is that I am informed that the Minister of Public Works has announced it as the policy of the department, if not of the government, to purchase more dredges. I think the return I have asked for should be in the hands of members of the House before a discussion takes place on that particular line of policy, because I think such a return will have a beneficial effect on the minds of the House, and even on the minds of the members of the government, if they contemplate adopting such a policy.

Mr. FIELDING. I will call the attention of the Minister of Public Works to the hon. gentleman's request.

SAULT STE. MARIE DRY DOCK COMPANY.

Mr. BOYCE. Before the orders of the day are called, I wish to ask the government once more with reference to a statement made in the House yesterday with regard to the Sault Ste. Marie Dry Dock Company. I asked the question as to whether the government had granted to that company the usual subsidy provided for by statute, and the Minister of Public Works said that no decision had then been arrived at. But I saw by a newspaper last evening that the government had decided at a council meeting held either that day or some previous day, to grant a subsidy to that company. I would now ask the hon. the Finance Minister what truth there is in that statement, in view of that statement made by the Minister of Public Works on the afternoon of that day?

Mr. FIELDING. I would prefer to have the question answered by the Minister of Public Works, who, I am sorry, is not present. But it will be my duty to call his attention to what the hon. gentleman has said, and on another occasion to give the information.

NAVAL SERVICE OF CANADA.

House resumed the adjourned debate on the motion of Sir Wilfrid Laurier for the second reading of Bill (No. 95), respecting the naval service of Canada, the proposed amendment of Mr. Borden thereto, and the amendment to the amendment of Mr. Monk.

Mr. A. B. WARBURTON (Queens, P.E.I.). Mr. Speaker, when this matter came before this House during the last session, I took occasion to make a few remarks upon it and to give the opinion which I then held and which, to a great extent, I still hold, upon this great question of imperial defence. I then pointed out that we were doing very much to strengthen and consolidate the empire, and also to provide for its defence, by filling up our western provinces with immigrants from the old country, by building up a powerful and virile people, at the same time relieving the congestion in the old country and finding homes for the people from there. This was a benefit to the old land as well as to ourselves. I then said that by thus building up a strong race in Canada we were establishing what would be a bulwark to the empire, and that in doing that we would render the greatest service we could towards permanently securing the defence of the empire.

I may say further that having recently read some remarks of Lord Roberts, it also seemed to me, although I am not an expert in this matter, that possibly an even better way than the establishment of a navy to strengthen the empire would be to strengthen the military arm of our service. However, the view I then held was evidently not the view of hon. members, and when the discussion came on last March, and we came to unanimous decision on March 29, I supported and voted for that resolution, and having done so I propose to abide loyally by it. I would not have referred to this had it not been that the hon. member for Marquette (Mr. Roche) made reference to my remarks and rather disconcerted me to this extent, that I was under the impression we were building up a fine race of people in the west, that our prairies were being settled by a virile race that would be a credit to the country, and that we must look to them in the future for our strength. I believed that a great proportion of the people going in there were from the old land and of the Anglo-Saxon race, a people the most desirable to be had anywhere to go into a country and build it up. But if my hon. friend from Marquette (Mr. Roche) is right, I have been utterly wrong in that supposition, and instead of our western lands being occupied and filled by splendid people of Anglo-Saxon origin, they are being filled with Poles, Doukhobors and others whom the hon. member evidently looks on as undesirable. I regret that those western lands are being filled up in that way. I do not doubt, however, that when the next census is taken my hon.

friend will be anxious to have these people counted in when it comes to deciding what proportion of representation the west shall have. I did not expect to hear this from a western member. It might have sounded better from some of the representatives of eastern Canada, who are not so well aware of what is going on in the west. Notwithstanding my respect for the hon. gentleman's opinion, I still believe that the western land is being largely filled by people of the Anglo-Saxon race, by people from the motherland, who will carry out the ideal we have for the west, and will in time become a great source of strength to the empire, perhaps one of the greatest defences it could have.

The hon. member who preceded me (Mr. A. Broder), in his very excellent though brief speech, called attention to the curious fact that out of 50,000,000 bushels of wheat going out of Baltimore and grown in the United States, only 10,000 were shipped under the American flag, and that out of 1,200 ships leaving New York every year laden with American commerce for all parts of the world, only seven carried the American flag. He continued:

> No wonder that one of the American senators said: Just think of it, ten cruisers, eight Dreadnoughts, and nineteen battleships, guarding eight merchant ships in the Pacific.

I agree that it is curious to see that, and it is a wonder that something has not been said, not about the commerce, but about the lack of commerce of the United States. It might have occurred to my hon. friend to give some reasons why the commerce of the United States, a people naturally given to commerce and whose flag at one time almost, if not quite, rivalled the flag of the old country upon the seas, is non-existent so far as sea-going commerce is concerned. He might have told us that the great navy that the United States is building up is perhaps a good sign of better times, and that the commerce of the United States, having been driven off the seas under a mad and unwise fiscal policy, there are now indications in the United States that that policy will, in the not far distant future, be to some extent reversed, and possibly then the commerce of the United States will be seen on the seas and there will be some use for the United States navy in guarding it.

During the early part of this discussion the hon. member for Yale-Cariboo (Mr. Burrell) spoke and his address, as all his addresses are, was exceedingly eloquent. At the same time it contained some things that seemed strange. I would say that the state of mind in which my hon. friend must have been in from the time that the resolution was introduced by the Prime Minister until he made the speech, would be a subject of most interesting investigation on the part of a student of psychology. The hon. gentleman referred—and I suppose he referred to it in order to render more pronounced his expression of loyalty—to a report that had been made of a little incident that took place in this Chamber when, upon the conclusion of the speech of the hon. leader of the opposition (Mr. R. L. Borden), and when you, Mr. Speaker, had put on your hat and declared it six o'clock, there was what to my mind appeared to be a pre-arranged spontaneous outburst of loyal songs. This incident has been reported as occurring at the close of the speech of the right hon. the leader of the House, and my hon. friend asked the Prime Minister what he was going to do about it. The reply of the Prime Minister was: What have I to do with that? My hon. friend after referring to this incident, went on to say:

> But, we do claim from the right hon. gentleman and his party, as this matter was given such extraordinary prominence in the papers throughout the country, he should have used his undoubted influence to have got, in an equally prominent position, a correction of the report and a true statement of what took place in this House. When I put that question to the Prime Minister this afternoon what was his answer. His answer was! What have I got to do with it? Well, let me show that the right hon. gentleman had far more to do with that question than he had with another question on which he expended a great deal of power and energy last session. Everybody remembers the occasion last session when British Columbia affairs came up, that there was introduced a garbled telegram, and the Prime Minister waxed indignant upon the immorality of publishing a telegram of that character, though it had not half as much to do with the right hon. gentleman as this particular episode has to do with him at the present time.

I would not have gone into this subject, and I do not see much use in my hon. friend bringing it in, because it recalls perhaps a somewhat unsavoury episode. What surprises me is that the hon. gentleman should speak of it as a garbled telegram; it was not a garbled telegram, it was a forgery, it was a crime. To call it 'garbled' is taking a very extraordinary view of a very base crime. I would like to ask my hon. friend, who seems to think that the Prime Minister of Canada has nothing to do but to go round and correct newspaper reports, whether, when he knew of that crime, and knew that a minister of the Crown had been robbed of his seat by means of that crime, he ever took any means to have the criminal punished. Why did he not say: The Conservative party will not be in receipt of a seat in that way, and insist on having the Minister of Inland Revenue given the seat of

which he was deprived by means of that criminal act. I do not propose to dwell further on that subject, but it did seem to me that, as a psycological study, the remarks of the hon. member were of great interest.

Now, my hon. friend from Queens-Sunbury (Mr. H. H. McLean) spoke very eloquently the other evening as to the defence of the ports of this Dominion which can be so well provided for by the navy contemplated by the government, and I shall not repeat what that hon. gentleman has said. He pointed out that we will have a naval college, modelled on the lines of the military college at Kingston, in which young Canadians who wish to join the navy will receive their training, and if we are to judge by the success which has attended the Royal Military College at Kingston, then, hon. gentlemen on both sides will agree with me that we will have a splendid class of young men turned out from that naval college. It takes a good deal of time to train men for the naval service. I was told by Admiral Kingsmill some time ago that the imperial naval regulations are to be adopted in the Canadian navy, and under these regulations, officers or seamen in order to become thoroughly proficient must commence about the age of fourteen years and continuously work at their profession for at least five or six years so that they may become thoroughly drilled and qualified for the performance of their duties. We cannot make good gunners and good men-of-wars-men in a brief period, because long and intelligent service is necessary to qualify them. In the course of five or six years, we will have a number of young men who will be well fitted to take any position in the British navy which their age will permit of, and of course as they grow older they will become better qualified and more efficient. I believe that for the future navy of Canada, under this system, we shall have a class of officers of whom we will have every reason to be proud. I say that, because it is my opinion that we have in Canada the best young men on the face of the earth, and consequently I expect splendid returns from the young Canadians who will engage in that service. I hope that the imperial regulations will be adopted and carefully carried out, because I believe that work which is worth doing at all is worth doing thoroughly. It would appear to me that the proposal of the government is a wise one and that the amendment of the leader of the opposition simply amounts to a scheme to build the superstructure of a navy before the foundations are laid. In the old sailing days when you got good sailors on board your ship you had all that was necessary, and, we have as fine a class of sailors on the shores of the maritime provinces as are to be found in the world. But, the sea-faring men of the maritime provinces, excellent as they are, would be, without training of little more use than landsmen on board a modern man of war; they would certainly have the advantage that they would not be sea-sick, but that is about all. We heard during this debate a good deal of talk about the command of the sea, and we have had many learned references from history. The leader of the opposition during the opening of his speech quoted that eminent authority Captain Mahan as having said that at Trafalgar it was not Villeneuve, but Napoleon that was defeated. It is a good many years since I read the work of Captain Mahan, but I have a distinct recollection of the views expressed by him, and I will say that if in the public schools of this country the children were trained to have their thinking powers as well as their memory cultivated it would be a very good thing, and they could learn for themselves the lessons taught by Captain Mahan. I do not wish to be considered pedantic, but I may be pardoned for referring to two of the examples of effective sea-power as given by Captain Mahan. He cites from ancient history the second Punic war, and he points out that the Carthaginians, though a sea-faring race, owing to dissensions and factions at home, and possibly owing to a large extent to jealousy of the great family of Barca allowed the command of the sea to slip from them and to be captured by the Romans. The Carthaginians although under the command of a man who was probably the greatest military genius of history were not able to succeed. Their commander could not get supplies or reinforcements by sea and having to go by land through a hostile territory, the fate of the Carthaginians' army was sealed. The reason of their defeat was that the Carthaginian forces were in a hostile country, harassed by a hostile people, through which they could not get their supplies and reinforcements to the sea. But that does not apply to the present case at all.

The next example which is referred to is that of the British army in Spain during the Peninsular war, but in that case the British held command of the sea and they were always able to pour in supplies and reinforcements. That also was a different case from the present. It is true the British were in a foreign country, but they were in a friendly country and in addition to that they had command of the sea. That is a case different altogether from the position in which the Carthaginians found themselves, but it is more nearly parallel to the conditions which would confront us at the present day were Great Britain to be engaged in war. And, Sir, if Great Britain should be forced to war I have not very

much fear of the ultimate result. Of course, the great difficulty of Great Britain would be to obtain food supplies for her people. At present the time Great Britain does not raise, within herself, sufficient food supplies for her population, although possibly if some day or other the people should go back to the land she might be able to place herself in that enviable position. However, with the naval force that Canada could supply, under this proposal of the government, the ships carrying supplies to the old country would be well protected. As was pointed out by my hon. friend from Queens-Sunbury (Mr. H. M. McLean) the Canadian naval force could very well defend the approaches to the harbours of this country and the ships carrying food would reach the open sea unmolested, and when once ships are at sea it is very difficult to find them. It is possible that an odd ship might be captured, but one thing that surprises a man more than anything else when he crosses the Atlantic for the first time is the small number of vessels his ship falls in with. I had the experience, now becoming rare, of having crossed the Atlantic twice in sailing ships besides a number of times in steamships, and my experience has been that the appearance of a sail, during the voyage is so rare as to become almost a curiosity. Once you get your supply ships in the open sea they are practically safe and, the Canadian navy which it is proposed by the government to build would be amply sufficient to protect British commerce to that extent. As has been pointed out by my hon. friend, the vessels which are being built are no tin pot vessels. They are vessels with a formidable armament of six-inch guns, and are swift vessels, which are quite a match for any vessels that may attempt to prey on our commerce. I suppose it is not necessary to assert that neither Germany nor any other power in Europe, if at war with Great Britain, would send their Indomitables or Dreadnoughts out to sea to try to prey on the commerce of the enemy; that would be an absurdity. They would send out smaller vessels, and these would be well taken care of by vessels such as those of the Bristol type. They could not afford to send out those powerful ships to patrol the Atlantic ocean to intercept our trade and commerce, because they would be needed at home. Moreover, these vessels are built with a small coal-carrying capacity—a fact which has been put forward as an evidence that they are intended for use against Great Britain in the North sea—and therefore they could not keep out at sea for any great length of time.

Mr EDWARDS. How does the coal-carrying capacity of one of those German Dreadnoughts compare with the coal-carrying capacity of one of the German cruisers?

Mr. WARBURTON. I believe it is from four to six days. The powerful German cruisers could not be spared from the North sea in case of war with England. The lighter cruisers no doubt could be spared, and they would have sufficient coal-carrying capacity.

With regard to these small cruisers, I wish to quote a very distinguished authority. My hon. friend from North Grey, in discussing this matter the other evening, referred to Lord Charles Beresford as the greatest naval authority in England today. While I am not prepared to go quite as far as that, because I believe there are greater naval authorities in England today than Lord Charles Beresford, yet he is a great authority, and his words are worthy of our attention. I have not a copy of the speech he delivered ten or twelve years ago, on the occasion of the gift of a battleship to Great Britain by the Cape of Good Hope, but I have a distinct recollection of what he said. He expressed his warm appreciation of the gift, but he intimated clearly, without wishing to lessen his appreciation, that it would have been very much better if the people of the Cape of Good Hope had devoted the money which they had spent on that battleship to fortifying their local ports and providing for their local defence. We have heard it asserted repeatedly that a great many of the ships in the British navy at present are fit for the scrap heap. Lord Charles Beresford evidently does not think so, because he has criticised the present government for having sent a great many ships to the scrap heap. In a speech delivered in September last at Pembroke, he said:

> This government scrapped 150 ships and dismantled the repairing stations. This imperilled the safety of our trade routes. It cut, as it were, the arteries, and with the nation as with a man, if they cut the arteries of trade it would expire. Small cruisers were invaluable because they stopped armed tramps on our trade routes interrupting our commerce, and therefore the scrapping of them was a great mistake. Other nations saw this, and our colonies recognized it. He held that 18 small cruisers should have been built this year and 18 next year.

This quotation ought to go a long way to disabuse the minds of gentlemen both in this House and outside of this House of the idea that these smaller cruisers are not of much value. Great Britain herself does not seem to think that cruisers of the Bristol type are so worthless as some people represent them to be, because she is building more of them. My hon. friend from North Grey told us that it was not always the tonnage that counted, that although the tonnage and the numbers of an enemy's fleet might be much smaller, they might be much more powerful, and therefore would be likely to be victorious in case of a conflict. Again, I find it stated in a paper published in Montreal, the 'Cen-

tury', that it is guns and men that count; and my hon. friend from North Toronto (Mr. Foster), not to be outdone by any one else, told us, as reported at page 3473 of 'Hansard':

When I find a nation like that putting on, with surprising rapidity and wonderful minuteness of detail, worked out to the very last degree, the construction and fitting out of a fleet which in four short years has waked up old England as she was waked up in 1909, and which comes close indeed to rivalling her in the effective counting power of war to-day, the Dreadnought and the super-Dreadnought—I told you when I look at all that and see Germany's allies, and see how few Britain has, and recognize that within sight of the homes of Britain all that immense fleet, like hounds in leash, are held compact, sheltered by their compact army and dominions behind, whilst the British dominions circle the globe and are exposed in every quarter of the earth, and have to be watched and guarded and warded by the British fleet.

Well, suppose we take it at that. To begin with, I do not suppose that any hon. member of this House on either side will be so disloyal to the race from which he sprang as to say that an Englishman is not as good a man as a German any day. I read an article which appeared in the Canadian 'Courier' in the beginning of the month. This is an independent paper published in Toronto. I do not know what are the political leanings of its editor, but I have been informed that he is personally a strong Conservative. But whether he be Conservative or Liberal, he manages to make a very independent paper. With your permission, Mr. Speaker, I should like to read this article, written by the editor himself:

Opponents of the Canadian navy idea assert that Great Britain is in danger of being defeated by Germany 'now' or 'soon.' From this they argue that to be an effective aid to Great Britain we should construct a Dreadnought in Great Britain at once or contribute enough cash to enable Great Britain to construct one at once. They never tell us exactly why they think Germany will fight soon, nor why they think that if a fight occurred Great Britain stands the slightest danger of being defeated. Hon. R. P. Roblin recently made a long speech on the subject in Winnipeg, and the best he could do in the way of quoting an authority was to cite the opinion of ex-Senator Chauncey M. Depew. This was a joke. What the Hon. Chauncey knows about warships and European conditions would hardly fill as much space as one of the chestnuts he cracks in an after-dinner speech.

Now is there any authority whose word we can take any impartial observer with expert knowledge?

How would the Naval Department of the United States do? They issue an annual report on the standing of the navies of the world. If they think Germany is beating Great Britain in naval progress, that would justify the opponents of the 'tin-pot' Canadian navy and support a movement for a quick contribution. Their report for 1909 is just out and it should be examined.

In that report they group Dreadnoughts and cruisers of the 'Invincible' type because both are armed with big guns mostly eleven-inch or over. Of these Great Britain has seven completed and nine under construction. Total 16. Germany has two completed and nine under construction. Total 11. How long will it be before Germany can beat Great Britain in that particular? Won't it be sufficiently distant to enable us to build a few warships and train a few thousand men?

Of battleships of the first-class other than Dreadnoughts, Great Britain has forty-nine and Germany twenty-four. How long will it take Germany to catch up with Great Britain in that particular? Won't it be long enough for us to build several first-class cruisers in Canadian shipbuilding yards?

Of armoured cruisers other than the 'Invincible' type, Great Britain possesses thirty-five and Germany nine, and the British vessels average more tonnage than the German. How long will it take Germany to catch up with poor decrepit Great Britain in that particular? Can she do it in ten years? Can she do it in fifteen?

Of torpedo-boat destroyers Great Britain has 148 and Germany 79. Can you see Germany gaining on Great Britain in that particular? Can she catch up before the little Canadian fleet is built and organized, and Canada given a real place in this naval game?

The truth is that in either present tonnage of war vessels or projected tonnage, Great Britain has nearly three times the strength Germany has, presuming, of course, that the United States naval department knows what it is talking about, as well as a discredited ex-senator of Congress.

Those who examine the facts will be surprised to know that Germany's present fleet does not equal that of the United States. Uncle Sam could go up against the Kaiser at the present moment, with a fair chance of success. And even Uncle Sam admits that Great Britain's fleet is unmeasurably superior to his.

The real truth of the matter, as pointed out by the 'Scientific American,' is that Germany had to get into a feverish haste over warship-building or the United States would have had a fleet unmeasurably superior to Germany's. That journal says: 'As late as a year ago, when Germany had no Dreadnoughts afloat, she actually possessed only fourteen battleships capable of fighting effectively at modern ranges, as against twenty-five flying the United States flag, and forty-nine under that of Great Britain.'

Think of that ye self-appointed protectors of crest-fallen Great Britain! Think of that, ye followers of Chauncey Depew! Think of that, ye blindfolded politicians who would rush Canada into an ill-considered naval policy! A year ago, the German fleet was about one-half the strength of the United States fleet in long-range work, and only one-quarter the strength of the British fleet. Germany had reasons for her haste. The fight in the Sea of Japan proved to Germany that her fleet

was badly constructed and feebly armed. Her ships were too light for modern guns. Her 9·4 guns, which were her main armament, were practically useless in the first line of fire. One year ago, Germany was down and out as far as fleet efficiency was concerned.

The following table which will be found in the recent report is commended to the kindly and serious consideration of those who would have us believe that if we don't send a few millions over to London in the next few weeks, that Britannia will cease to rule the waves forthwith.

RELATIVE ORDER OF WARSHIP TONNAGE.

Name.	At present. Tonnage.	With all Vessels completed. Tonnage.
Great Britain..	1,758,350	2,005,873
United States	682,785	785,687
Germany..	609,700	820,692
France..	602,920	766,909
Japan..	396,368	489,704
Russia..	259,263	412,250
Italy..	216,038	257,818
Austria..	114,897	167,297

In confirmation of this view, many British utterances might be quoted. Just one week ago to-day, the Chancellor of the Exchequer speaking at Reading, paid his respects to the scare-makers 'who mistook the rattling of the milkman's cans in the mornings for the jingle of spurs of German Hussars.' On the sea, he declared, Great Britain has three times as many men and three times as much material as Germany. Did these scare-makers think a German would eat three Britishers as if they were three frankfort sausages?

The people who imagine that the Germans are roaring lions going about seeking whom they may devour have a difficult task on hand when they attempted to prove their case by authentic evidences. A certain labour representative has been making quite a fuss in England about German aggression, but the Rt. Hon. John Burns tells us not to worry as the man's views are warped. Otherwise, no prominent voice in Great Britain argues that the danger from Germany is immediate, and few admit that it is even remote.

'Why all this recent fuss in Great Britain, then?' some one will ask. The question cannot be satisfactorily answered, except to say that it was mainly political. Times were bad, and the builders of naval vessels were afraid the building of ships would be seriously lessened. They and other interested people got up a scare. The contest between Lord Beresford and Admiral Fisher further added fuel to the flames.

The best proof of this is that the fuss is nearly over. Very little is heard about it. The House of Lords has supplied a new topic for people who must talk. Canada's manifest duty is to keep cool. We have seen flags waved before and it should not be allowed to drive us into frenzy on this particular occasion.

It seems to me that this article is well worth considering. Let me now take up the question of guns, which the hon. member from North Grey (Mr. Sproule) and others have dealt with. I find in the navy year-book of the United States of 1909, to which my hon. friend from Queens and Sunbury Mr. McLean) referred the other night, that the tonnage of Great Britain as compared with that of Germany is as 5 to 2 all round, and the number of battleships about double. Again, in battleships, Great Britain has 51 first class and 13 second class. Of the 51 first-class, 42 are armed with ½-inch guns and a few with 13·5-inch guns, and I believe that some of those which are being built are to be armed with 13-inch guns. These guns are the most powerful in the world. Compare Germany's position in this respect. Germany has 30 battleships in the first class, that is with 3 Dreadnoughts; 4 in the second class, and her heaviest guns are 11-inch. So that if you take the matter of guns, the British fleet altogether outclasses the German. And they are not falling behind in the making of guns. Take another matter: The British battleships range in speed .from 17·5 knots to 21 knots; the Germans' fastest battleships have a speed of 21 knots. A difference of one knot in twenty means a difference of five per cent, which. I should think, would be a most important matter in time of battle. And the British are building several strong armoured cruisers with a speed of over 22 knots. The Germans are building a number of powerful battleships, but the highest speed attained by them is 20 knots.

But the hon. member for North Toronto (Mr. Foster) told us to look around and see Germany's allies and see how few Great Britain had. I join issue with the hon. member on that point. You will find that Great Britain has more and better allies than has Germany. The best of feeling does not prevail between Russia and Germany, and, as to the next most powerful military nation to Germany, France, it is clearly not to the interest of that nation that Germany should prevail over Great Briain. Living along side of her Germany is a continual menace to France. It must be remembered that France has a powerful fleet already, and is beginning to build battleships. Besides, she has a splendid army. Military men will tell you that France is not in the position, from a military point of view, in which she was when she went into the Franco-German war some forty years ago. At the time of the Franco-German war, while the men of her army were as brave as any men who had ever lived in France—and that is saying all that a man could say of men—nevertheless, owing to the corruption of government and the maladministration of the army, the men were badly led, badly officered and badly equipped. But, if we can believe the reports of military men who have considered the France

of the present, this is not the case to-day. The French army is a powerful engine of war. Nothing that has happened in the history of the world would be so menacing to France as that Germany should command the sea and overcome Great Britain. And, whether she willed it or not—and I believe she would will it—she would be compelled to take sides with Great Britain. I do not say that Great Britain would need such assistance; I am speaking of what the hon. member for North Toronto said as on the subject of allies. It is true, Germany has the triple alliance, with Austria-Hungary and Italy. But what does that alliance mean? It is certain that Austria-Hungary can hardy be called a naval power; it has a very small navy, and its people are not a maritime people. Besides it has been known to every one who reads the political history of the times, that the dual empire holds together only by a thread. It is generally believed, and has been believed for long, that the existence of this empire largely depends upon the life of the present aged ruler. Then, the other member of the triple alliance, Italy. As was said on this floor recently, she is the wooden leg of the triple alliance. The policy was laid down years ago by Cavour that Italy should be the ally of Great Britain; and, through evil report and good report, Italy has followed out the policy of her great statesman. It can be relied upon, when it comes to a time of emergency, that Italy with her great coast and her extensive interests will maintain the policy that Cavour laid down and that has ever since been maintained, and that she will be found with Great Britain and not on the side of Austria-Hungary and Germany.

At six o'clock, House took recess

After Recess.

House resumed at eight o'clock.

Mr. WARBURTON. At six o'clock, I was referring to the remarks of the hon. member for North Toronto (Mr. Foster), when he was looking around to see how many allies Germany had and how few Great Britain possessed. I sought to show that in my opinion the facts were diametrically opposite to those which the hon. member stated, and that instead of Great Britain being practically without allies, she was really stronger in that respect than Germany was, and that without reference to Spain or any of the minor powers. Before parting with the hon. member for North Toronto, I wish to say a few words more in comment on his speech. He spent about three hours in a very eloquent address, nearly half of which was given to an effort to show why it was his party had made a change of base, and the other half was given to the impossible task of trying to show that the right hon. the leader of the government was not loyal to Great Britain. I think the mere statement of that proposition refutes itself. The hon. gentleman from North Toronto, as usual with him, was very keen in his remarks, he indulged in sarcasms, he indulged in denunciations like those with which hon. members of this House are familiar. He denounced the leader of the government and everybody else except himself and his own friends. He also referred to a speech which he said had been delivered by the present premier of this country a great many years ago at the time of the North-west rebellion when, moved with indignation, he denounced the persons responsible for the shedding of blood in that rebellion. I do not know whether the Prime Minister ever spoke as he was reported or not; but I have no doubt that he was indignant, and very properly indignant. But although the hon. member for North Toronto has practically lived for so many years in an atmosphere of sarcasms, of sneers, of invective and of denunciations, until that atmosphere has almost become the breath of his nostrils, how is it then that he has not seen fit to use his great powers of invective against the men who were really guilty of the blood and waste of treasure which the country had to deplore on that occasion? Is it because the hon. member, despite his long experience in denunciation, could not find it in his heart to denounce himself?

We have had during this discussion many references to Mr. McKenna, the First Lord of the Admiralty, and what he said about a year ago. He has been quoted frequently. But Mr. McKenna has spoken since then. A year ago or thereabouts he was seeking to arouse the British parliament to the necessity of taking active steps in ship building and in strengthening the navy, in which effort he was supported by Sir Edward Grey. That work has been done, and there is now no danger so far as Great Britain is concerned. A short time ago Mr. McKenna, in reply to some of the articles that were written against him, took occasion to make these remarks:

At this moment Great Britain has got seven Dreadnoughts in commission. Germany has got two. When Germany has four in commission Great Britain will have ten, when Germany has five in commission Great Britain will have twelve, when Germany has nine in commission Great Britain will have fourteen, and when Germany has eleven in commission Great Britain will have sixteen, and when Germany has thirteen in commission Great Britain will have twenty. That carries us right up to March 31, 1912. Up to the present no programme in either country has gone beyond that period. Next year will see its own programme, and I have no doubt the figures will be equally satisfactory,

giving absolute security to this country with regard to subsequent years. These are the facts, given you on official authority, and I think they are sufficient to substantiate the claim of the government that everything has been done with regard to the construction of these great ships. I have not referred to ships of an earlier type than the Dreadnoughts. We have an overwhelming superiority in that class of ships. The navy scare has not the slightest foundation in fact.

Then he goes on to say that it is grossly untrue to say that in two years Germany would have ten Dreadnought docks to Britain's three. As a matter of fact, Britain has at the present time twelve Dreadnought docks, and in two years time she will have sixteen, as compared with Germany's nine. So that if we take the well weighed words of the First Lord of the Admiralty spoken quite recently, I think we may safely conclude that so far as human knowledge can go, the British navy is quite prepared to meet the German navy, or any other enemy that may come along. Sir Edward Grey recently made the following remarks:

> The British navy is being maintained in a position to protect the country against any probable combination of fleets.

With the utterances of these responsible statesmen I think we may fairly content ourselves. We have heard much praise given to New Zealand and Australia for offering Dreadnoughts. I do not wish to belittle those dominions, I would give them all the credit to which they are entitled. I had occasion last session to look up the debt of New Zealand, and I find that she then owed $345 per head for every man, woman and child in the country, and she was getting into debt at the rate of $10 or $15 per head every year, right straight along. I have not seen the New Zealand Year-book since the one I saw last year, but it is safe to assume that if she has been going on at the same rate, her debt is now at least $365 per head. I have not been able to find what the debt of Australialia is since the Commonwealth was organized, or whether they have any as a commonwealth. But knowing as we do that the Australian, as well as the New Zealanders are a very progressive people in the way of running into debt, it would be a marvel, indeed, if Australia had not run up a considerable debt during the eight years of her existence as a united commonwealth. But the states of that commonwealth in the aggregate owe £57 10s. sterling for every man, woman and child of their population, and I do say that while it is nice for New Zealand and Australia to be furnishing Dreadnoughts and offering to furnish more if necessary, it may not be equally as nice for those who lend them the money. It is true that Australia sent a Dreadnought, but she went to England to borrow the money. It is one satisfaction to England, that she will have New Zealand's note and New Zealand will have the protection of the Dreadnought.

Then again in view of the facts as they now exist in the world, as far as we can judge, in view of what has been said by responsible British statesmen quite recently, the question must arise: Is there any reason whatever for this gift of $25,000,000, is it needed? Especially with the great preponderance in Britain's favour of tonnage, ships, guns, and men, an average of five to two all around, there does not appear to be any such need. In this connection, I would like to read an extract from a letter which I received on Saturday from a gentleman who was twice elected to this House in the Conservative interest, and who also contested the seat which I now have the honour to hold with Sir Louis Davies, a gentleman who has always been a strong Conservative, who is, I may say, the great source of strength to the opposition in the county from which I come, a gentleman who has such strength that if he were to withdraw his opposition to the government candidates and give them his support, or even to withdraw his opposition without supporting them, the path of the government candidates at the next general election would be rendered very smooth. I am referring to Dr. John T. Jenkins, formerly a member of this House, who wrote me as follows, under date of February 15:

> With regard to the Navy Bill, I say frankly I don't see the need for it at present, but as to Borden's resolution to give 25 or 30 millions to England (now when the German war squall, it was a hysterical squall, all screeching and kicking without any foundation, is over), I see nothing but lunacy in it. If we are to have a navy I am heartily in favour of the government policy. If we build here the money remains in the country and we get the good of it, but if we give millions to England, it is gone, and gone for ever. There is talk of a dissolution over it. If so you may say I will go against Borden's policy and support the government with all my force, and I think I have a little left. I feel very strongly over this matter. I never thought to change my politics (there is little to change now, anyway), but to fool away millions that England does not want and that we need most seriously in the development of our resources is, to my mind, the worst kind of folly.

Mr. Jenkins is becoming an old man now, but in his early manhood he served in the Crimea and has the British and Turkish medals.

The hon. member for Victoria and Haliburton (Mr. Hughes) delivered an eloquent two-hour speech the other evening to which I listened with great interest, as I do to all of his eloquent addresses. While listening to him I could not help recalling a passage

in a speech which he delivered last session in which he undertook to prophesy. I remember the prophecy, because I thought at the time it was a daring prophecy, and I recalled the advice of Hosea Bigelow that a man should not prophesy unless he knows. The hon. member, speaking in almost poetic language, in language that might almost be grafted into one of the Old Testament books, told us that before the June sun melted the snow from the hills we would be at war with Germany. I could not find the passage in 'Hansard,' but I distinctly remember these words being uttered in this House. In view of that prophecy, and the force with which it was delivered and the importance attached to it, I need not devote more time to replying to that hon. member's speech.

It may not be a very easy matter to ascertain how this panic or scare arose; that it arose is beyond question. It seems to be inherent in the British mind that every 12 or 15 years they must have a panic or a war scare to relieve their feelings. There seems to be a certain amount of nervous fire-damp which collects in the British heart and which has to be let off in some way, and if there is no war or active work to relieve them of it, they must get into a panic or a scare. The scare was about due when it broke out last year, and there were political reasons at that time which made it convenient. There was this fire-damp in the air and it required something to touch it off. The elections came on, and they, with one or two other things were sufficient, and we had the explosion. But men forget these scares and panics, those who suffer most from them are as cool and collected as any one else, in the face of real danger. Should war break out their scare would pass away. In a short time this scare will pass away without war, we will hear no more panic, and the panic-mongers will be ready to take their part, the old fighting blood of their race will assert itself, and they will wonder that they were scared at a shadow.

Another scare will be due in another 12 years' time, and I have no doubt that those then living will see and understand it. What form it will take it is not possible at this distance to tell. The scares have been numerous. I was looking up the other day some points in connection with the maritime provinces representation case, and I found in the debates of Prince Edward Island, 1864, that one reason advanced by a gentleman in favour of confederation was that we would be protected from the danger of aggression from Russia. It seems that at this time there was fear of trouble with Russia. We have had since that the battle of the Dorking scare, the Fashoda scare, the scare about the Emperor William and the Boers. We have had lots of scares. It seems that the British people must have these scares, that they enjoy them just as some people enjoy ill health. It looks as if in the old country the scare-mongers or perhaps the yellow journalists of the Harmsworth type were trying to bring about war. If so, no course which man can conceive would be more mete for reprobation. The men in Great Britain and elsewhere who are now alarmed will forget this panic and scare. Personally, I have not the slightest faith or belief in any ground for the panic or the scare. But the men who are in a frenzy are the descendants of the old sea dogs of the race of the old vikings who raised and flew the flag in every sea and planted it on every land. They were never too curious as to the number of their foes, but were ever and always anxious to know where they were to be found and fought.

Mr. G. H. COWAN (Vancouver City). Mr. Speaker, if instead of a navy Bill this were a Bill of attainder for the forfeiture of the estates and the corruption of the blood of the opposition members in this House, the speeches of the Prime Minister and his followers, and especially of the Prime Minister, would have been quite as apt and appropriate as they have been in relation to the question before this House. For myself, I had hoped that in the measureless importance of this question to Canada, in the intricacy of its many problems and in the necessary inexperience of this House in dealing with these problems, the right hon. gentleman the Prime Minister would have found sufficient reasons and very cogent reasons for avoiding in his opening speech in this debate that regrettable exhibition of bitter party rancour and that regrettable display of a desire to whip this Bill through this House as a party measure, and not at all to treat it as a measure for the defence of our common country.

I cannot help thinking that the right hon. gentleman would have been better advised had he followed the non-partisan example set by the leader of the opposition, because then he would have been following the best traditions and the unvarying practice of the British House of Commons where questions of defence have always been placed far and away above and beyond all considerations of party politics. It would have been expected from the right hon. gentleman that he should set a high tone to this debate, but he did not see fit to do so. Instead, he directed the battery of his great rhetorical powers against the Conservative record, against the Conservative citadel. He fulminated and fretted and fumed at opposition silence; he trained his other guns, Krupp and Popp, upon the opposition. His followers, after his example, hurled their little party javelins and party missiles at our devoted heads on this

side of the House until the whole place is belittered and bestrewn with party bombs and party shells and javelins and missiles of every calibre, with the result—I cannot help thinking, with the intended result—that the Prime Minister's little toy navy is almost buried out of sight in the debris. To exhibit that toy in all its childish proportions, to bring it once more into public view we, on this side of the House, must first exhume it; we must first remove this political debris. Disinterment is always a disagreeable task; it is doubly so when the material to be removed, foul from the first, is covered, as in this case, with all the must and mould of ages. But the task is ours, and it must be faced, and although the last speaker thinks he has found a reason why the Minister of Inland Revenue was defeated in Victoria, he will pardon me if I turn first to the missiles of the Prime Minister. As first in eloquence and office, if not in accuracy of aim, the first favour is perhaps his due. First Jove, then the satellites of Jove. Let us turn then to the speech of the Prime Minister. In it the party gong is sounded and the party whip is cracked, and at once the faithful followers chant: There is leadership, there is statesmanship, at the same time they mutter: But no battleship or any other ship fitted or intended to add to the fighting strength of the imperial navy, or fitted to be a credit or of service to Canada. Leadership in that speech? Yes, there is leadership, I grant you; a leadership, consistent, absolutely consistent with the record of the right hon. gentleman's attitude towards British connection as leader of the Liberal party in Canada for the past twenty years, a leadership towards what he himself has so often described, both in and out of this House, as the goal of his aspirations—the independence of Canada. 'I hold out to my fellow countrymen the idea of indepenence,' the right honourable gentleman has actually declaimed on the floor of this House, an independence to be achieved, of course, by means of an independent navy as 'naturally as the severing of the ripe fruit from the parent tree.' Let me epitomize the history of that parent tree and its fruit. In 1852 Great Britain was without a colony. Prior to that date she had acquired possessions beyond the seas, but her seapower had not been great enough to hold them. Since that date, that parent tree has gathered within her ample foliage no less than 70 clustering British colonies, and by the command of the sea she has held them—with one or two exceptions—and sheltered them from every withering blast. Many of these possessions she has peopled with her own breed and get, has this mother and nurse of our public and our private virtues, until to-day her territory covers more than one-fifth of the earth's surface, and her liege subjects number more than one-fifth of the earth's population. To these peoples she has given the freest constitutions and the most absolute guarantee of their sacred rights and privileges, and in good faith she has executed that guarantee, has this home of splendid models, this classic land of liberty, until to-day these clustering dominions beyond the seas are as firmly attached in affection, in sentiment, and in loyalty to the motherland as are the people of Great Britain themselves attached to the sea-girt isles that are their home. Within these clustering dominions no renegade abuse of Britain or Britain's diplomacy can breed disaffection; no insect of independence, no woolly aphis, can blight that fruit or sever it from the parent stalk. There it is, and there it will remain. 'Down through the grooves of change' it will be and remain, let us hope, for ever unhurt. Amidst the wars of prejudice within her borders, or the crash of worlds without. But, the right hon. gentleman holds out to his fellow countryman the idea of independence with the King of England as suzerain. This language, Mr. Speaker, cannot be explained as the mere flourishings of rhetoric. On whatever occasion uttered, it is not to be lightly brushed aside as mere words 'full of sound and fury signifying nothing.' It is language fitted to estrange and alienate the hearts and minds of His Majesty's subjects from their dutiful obedience; it is language fitted to create in Canada a great national movement for independence; a movement conceived without grievance, originated by wrong, a movement which for the last twenty years has been instilled into the hearts and minds of the people of Canada in many headed form—and which in one of these forms in 1891, as we have been told in this House, drove the Hon. Edward Blake, and many another loyal subject, out of the ranks of the Liberal party—a movement which it is now sought to have consecrated in this Bill in its ugliest shape. Here we have the leadership of a great man whose brilliant qualities and charm of manner disarm suspicion and invite good will, but whose fixed purpose in this matter has ever steered a straight course towards a definite goal and has raised for the first time in this House and in this country a straight issue between independence and British connection. Let us then turn to the Bill; and, in turning to the Bill, let us remember that it is introduced as the strong and consistent policy of the man who 'in thoughts that breathe and words that burn,' has declared that the independence of Canada is the goal of his aspirations.

Our deeds still travel with us from afar,
And what we have been makes us what we are.

We will turn, then, to the Bill. That Bill

provides for a permanent navy separate from and independent of the imperial navy, By section 18 it is provided that the government may send that navy to the defence of the empire. If the government does that, then by section 19 the government must convene parliament within 15 days to have that Act ratified or the fleet recalled. For the whole people of Canada, speaking through parliament, to recall that navy at a time when between the empire and its enemy a state of war exists, and the international laws and usages of war obtain—what does it mean? What would the other nations of the earth, whose sacred duty it is to enforce those laws and usages, be bound to declare that Act to mean? What but Canada's neutrality on the high seas as between two belligerents? And then what follows? By those same laws and usages of war, and by such treaties as the treaty of Washington, negotiated in 1871, it follows, as the night the day, that the Canadian government is bound to prevent either belligerent, either the empire or its enemy, from fitting out, arming or equipping in Canadian waters any vessels with which to cruise or carry on war against the other—from using Canadian ports and Canadian waters as a base of naval operations against the other belligerent. So that worse than useless to the empire shall then become not only the Canadian navy, but Canadian ports and naval stations and coaling stations and dockyards—yes, and Canada herself. Because what does a declaration of neutrality mean but a declaration of independence? Not only are those provisions silly and unworkable beyond the dream of folly; not only is there planted in them the seed, the loathsome seed of separation and independence, planted at a time when every dictate of conscience and honour tell us that we should be adding to the fighting strength of the British navy, instead of striking a fatal blow at British prestige; not only all that, but there is a reverse side to this picture, a negative side to this provision—a side more offensive still, if that be possible, more out of joint with Canadian manhood, Canadian aspirations and Canadian sentiment. As I have said, by section 18, the government may send the navy in defence of the empire; in other words, the government may place that navy at the disposal of the King. The obverse side of that permission, the reverse side of that picture, the negative side of that statement, is that the government may not send that navy to the defence of the empire. In case the government withholds that navy from the defence of the empire in case it is kept at anchor in Canadian ports at the hour when the empire is engaged in a life-and-death struggle with its enemy, then, forsooth, the government does not need to convene parliament to have that Act either ratified or reversed. The Bill assumes that the citizens of this part of the empire, the people of Canada, will endorse beyond peradventure that do-nothing policy. The Bill assumes that the people of Canada will say to the government; Well done, thou good and faithful servant; true, the empire is in danger, but what care we? By your wise statemanship our little navy is not endangered; to make assurance doubly sure, however, have that navy seek further safety and security up the shallow creeks of Canada beyond the reach of bomb and battleship.

Take the reverse side of that picture, and I contend that that is the only meaning of that side. What a spectacle we are presenting to the gaze of the world. We cannot find any parallel for it in colonial history. The American colonies, the most fanatically independent and self-contained of all the colonies, at a time when they, unlike ourselves, had a real grievance against the motherland, expressly declared their willingness to continue contributing, as they had done in the past, to the defence of the empire and to tax themselves for that purpose, and they spurned the suggestion that they were cowardly enough to shirk that duty. Before the bar of the British House of Commons, in 1764, Mr. Benjamin Franklin made this clear, when he said that the colonies were willing to raise a special revenue to be devoted without an 'if' or a 'but' by parliament to the defence of the empire. And, as we know, the American colonies, in the great wars of the 18th century, out of their own blood and treasure in a foreign field, without waiting for the ipse dixit of parliament, did valiant service in defence of the empire. For Canada to do less, for Canada, without a grievance of any kind against the motherland, and while professing lip loyalty, and accepting protection from the British navy, for Canada now to do nothing but take the power to be in waiting until the empire becomes embroiled in a life and death struggle with her enemies, and then with a kiss to betray that empire into the hands of her enemies—that act could have but one parallel in all the annals of the human race. But it is said, and may be said again, that although power is given by this Bill to the government to withhold the navy from the defence of the empire and although power is given parliament to recall the navy from that defence, yet no government in Canada will exercise that power to withhold and no parliament in Canada will ever exercise that power to recall. If that be so, why give the power, why insert that provision in the Bill? But let that Bill once pass, with that provision in it, and let the empire be again engaged in

another war such as that in South Africa, ten years ago, and I very much fear that we may have some doughty Canadian premier rise in his place and cry out: Canada is not menaced; I will not be stampeded.

But, Mr. Speaker, perhaps the most mischievous, the most insidious feature of this Bill, is that it is an attempt, an unconstitutional, an unpatriotic attempt, to change the relations of Canada to the motherland. By section 15 of the British North America Act, the command in chief of all the naval forces of and in Canada is declared to continue in the King. I regret I have not the section here to read it, but hon. gentlemen can refer to it for themselves. By that Act, the command of all naval forces of and in Canada is to remain in the King after confederation as before. How was that command vested in the King prior to confederation? If you will turn up the old statute of 16, Charles II, you will find the answer. That old statute was in force at the time of confederation and is still in force. By that statute it is declared that the sole supreme command, government and disposition of all sea forces is the undoubted right of the King, and that either or both Houses of parliament cannot pretend to the same. It is that undoubted right which is continued in the King by section 15 of the British North America Act. Of course, not even by this old statute, may the King act in person or upon his own arbitrary impulse. Indeed, in none of his executive acts may he do so. He must always act upon advice. But there are two kinds of executive acts exercisable by the King. There are the executive acts concerned with the administration of parliamentary enactments. In these the King acts upon the advice of his cabinet or government, but there is another kind of executive act exercisable by him. There are executive acts done in the exercise of the discretionary power placed in the hands of the sovereign by virtue of the common law without any express parliamentary sanction or provision. Of such is the command of the navy under the old statute of Charles II, which I have cited, and of such also is the command of all the naval forces of and in Canada, under section 15, of the British North America Act. My hon. friend from East Grey (Mr. Sproule) has been good enough to give me a copy of that Act. Section 15 reads as follows:

> The command-in-chief of the land and naval militia, and of all naval and military forces, of and in Canada, is hereby declared to continue and be vested in the Queen.

I would draw your attention to the fact that the old statute of Charles II, which I have cited, and the British North America Act, are both imperial Acts, and under both the command given to the King is exercised and administered in exactly the same way and upon the same advice. Again, I have to regret that I have not my authorities with me. But I remember them. If you will turn to volume 6 of Lord Halsbury' Laws of England, page 419 —as I remember it—you will find exactly in what way and upon what advice that command is exercised and administered. You will learn that that command is not exercised and administered upon the advice of the King's cabinet or government; you will find that that supreme command is exercised and administered by the Commissioners of the Admiralty who now exercise all the powers and jurisdictions enjoyed by the Crown at common law. By the orders of the admiralty, and their orders alone, all ships are built, repaired, and put to sea, all ships are laid up in reserve or sold, or sent to the scrap-heap, all ships are put in commission and put out of commission. By them all ships are employed, either on the home station, or on foreign stations, or sent on voyages of discovery. All admirals, vice admirals, rear admirals, hold their commissions from the admiralty, and all appointments and all promotions in rank are made by the admiralty. By the admiralty all orders for the payment of naval moneys are issued, and by the admiralty the annual estimate of the expense of the navy—the naval budget—is prepared and laid before parliament for its sanction. All that parliament or government can do in reference to the navy is to vote the supplies. Neither parliament nor government can at its own will or caprice place the navy at the disposal of the King or withhold it from the King. So that we now see, that, under section 15 of the British North America Act, command of all naval forces in Canada is to continue in the King. By the constitution, that command, and continuance of that command, in the King is not that our Canadian navy shall be placed at the disposal of the King or withheld from the King at the caprice of the Canadian government. But the Bill before the House would change all this, the Bill before the House aspires to amend section 15 of the British North America Act. By that Bill the command of all naval forces in Canada is not to continue in the King and be vested in the King, but it is to be placed at the disposal of the King or withhheld from the King at the will or caprice of a political body, namely, the government of Canada. The Bill before the House, like the right hon. the leader of the House, has a goal for its aspirations. That Bill aspires to make the Canadian government independent of section 15 of the British North America Act, just as the right

hon. gentleman would make the whole of Canada independent of the whole of that Act. 'Independence for me', says the Prime Minister; 'independence for me,' says the Bill we are considering. But, 'the lack of independence for us'. say the slavish supporters of both. So that this Bill, I say, is void in conscience and in principle. This House has no authority to alter or overthrow the constitution; this House has no mandate from the people to change the relations between Canada and the motherland, this parliament was elected to make new laws, but not to make a new constitution. This parliament has no autonomous right—oh, how they love that word, 'autonomy'—to change the constitution of Canada. This parliament was elected by the people of Canada as their trustees. The people of Canada are our masters and we are their servants, and we have no right, without a mandate from those masters, to change the relationship and weaken the tie that binds this country to the motherland. If this parliament, or any parliament, were to introduce a Bill to do away with the appeals to the privy council, or, as the Minister of Railways and Canals (Mr. Graham) would seem to wish, to do away with the Royal assent and the services of the Governor General, would any man assert that such an act would be valid? Would any man be insane enough to assert it? And, would the insanity of that assertion be mitigated by the insertion in the Bill of the provision that the government 'may' allow appeals to the Privy Council, the government 'may' treat the Governor General as the King's representative? Everybody will admit that it would not. As well might a man imagine that the blow by which he destroys his wretched body at the same time annihilates his immortal soul, as for this House to imagine that by the abuse of its own constitutional rights it can destroy the King's power in this country.

Of course, the right hon. gentleman the leader of this House assumes, and perhaps rightly assumes, that the home authorities, especially in the present crisis, will not openly and actively resent this invasion of their rights. 'His ambition, he tell us, is to exhibit to the world the unique, the unprecedented example of a nation achieving its independence by the consent of both countries, and in such a way as to preserve the good feeling and good will of the motherland.' But what a time, Mr. Speaker, is this to make that exhibition, and what an exhibition! The present now, when there is a call, unvoiced it is true, but none the less urgent, a call from Great Britain to her own protected kith and kin across the seas, not a call to build separate navies, that cannot fight in defence of the empire, and perhaps would not if they could, not a call even to help Great Britain—Great Britain has yet to utter the Macedonian cry—but a call to help ourselves, a call to be men, a call to share in the glory of preserving the peace of the world. to share in that glory by giving and giving at once not to the royal navy, but to the imperial navy, by giving to that navy a giant that no rival power will dare to test. Why not forego our lip loyalty and hearken to that call? Why not, with the faith of freedom, make that sacrifice for the sake of ourselves and the world's peace? And we shall find that the new wine of Canadian patriotism will burst the old vessels of the constitution and will give us and the other dominions across the seas, better than anything else and quicker than anything else, the right to prompt the mother's voice when it speaks abroad, and that before we have even had time to settle down to a permanent naval policy.

Separation and independence! That is not the tendency of the time, the great force of the age is democracy, and it is a federating force. Amongst its great works are the federal union of the states to the south of us, the union of this great Dominion, the union of the Australian commonwealth, and more wonderful still, the recent union of the South African colonies. The task to which democracy will next address itself will be that of moulding the different parts of the British empire into a closer and firmer union under one kingly head. But the right hon. gentleman the leader of this House, would reverse the hands on the dial of our destiny, he would block the wheels of democratic progress. Why not, Mr. Speaker, close now, and close for ever, the gate that leads to separation and independence? Why not give, and give now, according to our means? Why not give, and give now, to that imperial navy which all admit is the best guarantee, and in fact the only guarantee, of our permanent peace and of the empire's peaceful progress? In support of his policy of a permanent navy independent of the imperial navy, the right hon. gentleman goes gunning for authorities. The only author in the old land that he can find is Kipling:

> Daughter am I in my mother's house, but mistress in my own,
> The gates are mine to open as the gates are mine to close,
> And I set my house in order.

Thus the poet makes Canada speak. Of course every school boy knows that the gates to which the poet refers are the customs gates, and the lines were written merely to point out that each country has absolute control of its own tariff. But does the right hon. gentleman not know that out-

side these gates, and beyond the reach of these tariffs, there is between these two Houses, the mother's and the daughter's, an ocean pathway, an ocean pathway which the mother and the daughter, actuated both by the same self interest and the same sentiments, are determined by organized, organic and united effort, by effort at once,—by blood and iron, if necessary, to keep open and under their joint control? Does the right hon. gentleman not know that over that self same pathway the daughter sent to her mother's house last year no less than 88 per cent of her enormous animal and agricultural exports, and no less than $134,000,000 out of the $260,000,000 of her total exports last year? Has it not occurred to the right hon. gentleman that as an insurance, an insurance which every sane man would place on his own private property, as an insurance of this great and growing trade en route, it would be good business for mother and daughter to join in the common task of keeping open for their mutual trade that ocean pathway between their houses? The component parts of the British empire have at least this in common, it is a condition not only of the prosperity, but of the very existence of each, that it shall at all times have a goodly portion of its wealth afloat upon the sea. That is true, as I say, of all the daughter states. But it has been left, as far as Canada is concerned, to the parent state to guard that trade route. Surely out of self interest we all should assume our share of the guardianship. But let us look at that in another way. From Halifax to Plymouth, from Quebec to Plymouth, of all the imperial trade routes, these are the shortest and most easily protected. To accept that short trade route between Canada and the motherland, as the main supply route will solve the most knotty problem in imperial defence, the problem of the food supply of England and the market of Canada in time of naval war. If we will but accept that route as the main supply route for the empire, and will join with the motherland in the common task of not only developing that trade, but protecting that route, we will do more than anything else could do to establish the market of England as the preserve of the Canadian manufacturer and the Canadian producer.

Let us then, as I have said, join with the motherland in developing that trade and that imperial navy to protect that trade route, and we will be joined with the mother country in interest as well as in heart, and we will be better prepared to maintain intact, in domain and untarnished in honour the splendid inheritance received from our forefathers.

But, Sir, apart altogether from these trade considerations, there is the relationship which the right hon. gentleman has pointed out of mother and daughter. Out of that relationship there has been ever an increasing flow of affection, such an increasing flow of affection that not even the right hon. gentleman himself a few years ago was permitted to call a man from the old land either a foreigner or a stranger. 'So flows the stream and shall for ever flow.' Yes, Mr. Speaker, Kipling is correct—'Daughter, am I in my mother's house.' There is in Canada a love of the old land as the love of a mother, a love that comes uncalled, one knows not how. It comes in with the very air, with the instincts, with the first taste of the mother's milk, with the first beatings of the heart—

A mother is a mother still,
The holiest thing alive.

What ruthless hand would tear asunder those ties and make the daughter a stranger or a foreigner in her mother's house? I have spoken of the sacred relationship of mother and daughter. The right hon. gentleman seems to be unable to take any account of that relationship, and it would seem that his whole attitude in the public life of Canada, and especially as embodied in this Bill, is to absolutely ignore that feeling. I say that the time has come when the people of Canada, the free people of Canada, cannot allow this—shall I say this nonsense about independence and an independent navy to continue, even if we would. We owe it to our Canadian ancestors of whatever race, we owe it to the fathers of confederation, to preserve entire our rights of inheritance in that empire, the greatest empire the world has seen. We owe it to posterity not to suffer these rights to be severed, sundered or destroyed. But if it were possible for us to be insensible to these sacred claims, there is yet an obligation which we owe to ourselves and from which nothing can acquit us. To make the present necessity for empire-defence the stalking horse to a mean ambition for independence and an independent navy, and then, in the hour of struggle, before the eyes of the world and in the face of the common foe to withhold or withdraw that navy from that defence, would be a betrayal as much worse than open rebellion as a life of honour is better than one of disgrace. And, if that life be the bounty of heaven, we scornfully reject the noblest part of that gift, if by our own act and our own ignominy we find ourselves and our children rifled and bereft, in the eyes of the nations, of that fair name for national honour and national good faith without which no people can be otherwise than miserable and contemptible. That the Canadian people, if they had an opportunity of expressing their views at this moment, would be so utterly degenerate as to suffer this, as to allow us to pass an

Act which is intended to give us the power, in the hour of struggle, to withhold our fleet and so declare the neutrality and therefore the independence of Canada—that the Canadian people would be so utterly degenerate as to suffer this—I refuse to think so meanly of them. The national honour of any country is the bulwark of its national interests. There is this distinction between individuals and nations: if you lower the honour of a man in the eyes of his equals he may still say: my fortune is not attacked, my estate is not impaired, the laws will protect my rights and my person, I have my independence. But, if you lower the honour of a nation in the eyes of the other nations of the earth you not only deface her colours, you strike down her shield, her credit is injured her commerce suffers. If you take the awe from her flag, you take the wealth from her merchants, and from her people you take the power to check violence and wrong in behalf of liberty and right. No, the destiny of Canada is not in separation as provided by this Bill. But if separation must come, which heaven forbid, let it come without dishonour, and discredit, and disgrace to the people of Canada.

Now then, I would ask the House to recall the revelations made in the British House of Commons on the 16th of March last, as to the defences of the empire, revelations made by the leaders on both sides, and which revelations alone awoke Canada from her policy of drift, and awoke a desire not only in Canada but in all parts of the empire; a desire not to build separate navies, but a universal desire to strengthen the arm of whom?—to strengthen the arm of King Edward the peace maker by adding to the fighting strength of his navy. And in this connection Mr. Speaker, I cannot help remarking that there is not only in Canada, but throughout the whole of the British empire a rising tide of what I would call an inter-imperial brotherhood and interest, a rising tide of imperialism if you please; a tide of which this Bill takes no account and which the supporters of the government seem to mistake for little Canadianism. Blink their eyes to it as they please, there is that tide. In Canada that tide first set in with force as you will remember, Mr. Speaker, at the time of the South African war in 1899. And on that occasion you will also remember that the right hon. the First Minister mistaking the backwash for the flood of that tide ordered it to recede, mark you, saying: Canada is not menaced. But, Sir, you will remember also that on that occasion history repeated herself, and, that full ebb and tide kept rolling steadily on and swept along with it the best of our Canadian boys to the defence of the empire, and the undying glory of their native land. Since that South African war that tide has still been rising, growing with our growth, gathering volume and velocity, until to-day it must be reckoned with as a force-making for the stability of the empire and the strength of its rulers in the world. But the right hon. gentleman cannot see that; he is still unable to distinguish that great general ebb of the tide felt through every part of the British empire, from the little recoil, the little backwash which he detects in certain small portions of Canada. He still thinks that it is a spasmodic thing, as he himself has said: a mere wave of enthusiasm which manifests itself only when Great Britain is in danger. He does not realize and he will not learn from the lesson of 1899, that that rising tide is nothing in Canada but manly, robust, self-reliant, self-respecting Canadianism bent on maintaining British connection for Canada. By that feeling is demanded a navy built and equipped in Canada by Canadians so far as that can be done; a navy officered and manned in Canada, and provisioned by Canadian merchants, so far as that can be done. But, a navy one and indivisible with the imperial navy, a navy that will build up in Canada a buttress of that great arch of empire, the imperial navy, under which we have no pledge of permanent security, and the empire no guarantee of peaceful progress. But after all is it a navy Bill or is it a Bill of attainder against the opposition that is under discussion, or rather what do the government speakers take it to be? Let us examine? Again, let me follow that order of precedence I mentioned at first, namely, first Jove, then the satellites of Jove, and follow it in lighter vein than I have been pursuing. Perhaps the followers of the Prime Minister will prefer that instead of that metaphor I should adopt that rather impious metaphor used by the right hon. gentleman on the 5th of January last, in Toronto, and that I should call them not sattelites of Jove, but the chickens, which, even as the hen, the right hon. gentleman has warmed and hatched into political existence if not significance.

Whichever you will, the order remains the same. Let us, then, examine the speeches made by the gentleman on the government benches and their followers. Let us take first the speech of the Prime Minister himself. The Prime Minister, it is true, tells us that he gets his naval policy from Kipling, but he quickly drops it at that; and then he charges full steam ahead a la 'Rainbow' at the member for North Toronto, and he says of him that: 'He is one of those who carry abroad upon their foreheads imperial phylacteries, who boldly walk into the temple and there loudly thank the Lord that they are not like other British subjects, that they give tithes of everything they possess, and that in them alone is to be found the true incense of loyalty.' The right hon. gentleman's

imagery here scarcely jumps with nature, and his metaphors are somewhat mixed. It is not usual to find incense of any kind inside a man. The right hon. gentleman charges Pharisaism. I will not admit that he is a judge even of that article in which he is a wholesale dealer. But let that pass. What the House will notice is that he is not not at all dealing with the subject of a naval Bill, but he is dealing with the subject of a Bill of attainer. And so, too when he trots out Talleyrand and charges loquacity, and Peter the Hermit, and Papineau, and the fiasco of 1837, and Lord Durham, and Lord Elgin, and Lafontaine and Baldwin, and periodical contributions, and Sir Charles Tupper, and Lord Milner, and Sir Walter Scott and 'Quentin Durward'; and these references happen to cover fifteen out of twenty-seven pages of his speech. However, the right hon. gentleman does find time to say in one part of his speech that he had said in the speech in which he introduced this Bill, that 'when England is at war we are at war', and he there defended that statement. But later in his speech he says: 'It does not follow that because England is at war we are at war'. To say nothing of the sense of those two statements, would not the sound of them jar a stone wall? 'When England is at war we are at war,' but 'it does not follow that because England is at war we are at war.' To the satellites of Jove that may be symphony, but to my mortal ear it is mere cacophony. But bad as the sound is, the sense is confusion worse confounded—'when England is at war we are at war.' but 'it does not follow that because England is at war we are at war.'

Perhaps a remark of the hon. gentleman the Postmaster General would afford a clue to the meaning. It may be that one of these statements is intended for consumption in Quebec and the other for consumption in Ontario. The right hon. gentleman tells us that he has been assailed in Quebec because there it is said that under no circumstances shall his little navy go to England's war; and he has been assailed in Ontario because there it is said that under all circumstances his little navy shall go to England's war. And he tells us that he speaks from a double standpoint and his policy is the expression of a double opinion. What a Janus-faced policy! Why the thing is cross-eyed. It looks two ways. It is like the little nigger's coon trap, set to catch them 'gwine and comin'. Now the right hon. gentleman is a very intelligent and very able man, and he knows that those two statements cannot agree together. When England is at war, we are at war, but it does not follow that when England is at war we are at war. He knows that those two statements cannot get into bed together, and he knows too that his policy, because it pretends that both these statements are true, is in itself mere opportunism and not true. By the way, I am reminded that this double-jointed statement and policy is very much on a par with that statement which he made at Toronto on the 5th of January last with all the ambiguity of an oracle. It was reported in the Toronto 'Globe' of that date, whose editor was chairman of the meeting at which the statement was made. The statement is this:

> We are under the suzerainty of England; we are the King's loyal subjects; we bow the knee to him, but the King of England has no more rights over us than are allowed him by our own Canadian parliament. If this is not a nation, what then constitutes a nation? And if there is a nation under the sun, which can say more than this, where is it to be found?

Again in those remarks, there are no two statements that will agree. If the one be true, the other must be false. And indeed both and all are false. The whole thing is compact of error and misstatement. Those remarks are the very concentrates, the very quintessence of error and unwisdom regarding the relations of Canada to the motherland. Let us examine them. If the King of England is suzerain of Canada, then we are not only not his loyal subjects but we are not his subjects at all. Prior to the South African war, the King of England was suzerain of the Transvaal republic, but the citizens of that republic were not citizens of the King and could not be. That suzerainty gave to Great Britain a certain control over the external relations of that republic with the other nations of the earth, but it did not give and could not give to the King, as such, any rights over the people of that republic as his subjects. So that if the King of England be suzerain of Canada, the people of Canada are not his subjects, and those two first statements of the right hon. gentleman cannot agree together.

Again, the right hon. gentleman says that we are the King's loyal subjects, but that he has no more rights over us than are allowed him by our Canadian parliament. I venture to assert that no loyal subject can say that the King of England has no more rights over us than are allowed him by our Canadian parliament. The King has the right to assent to every Bill of this parliament before it can become law. That right was not allowed him by this parliament, but reserved to him by the British North America Act and cannot be taken away. The King, by his representative, has the power to dissolve this parliament at this moment. These powers were not 'allowed' him by this parliament; these powers were reserved to him by the British North America Act. And

we might resolve and resolve that we would not dissolve but we would dissolve just the same, if the King's representative, with or without the advice of his cabinet, saw fit to dissolve this parliament. So that I say there are no statements that agree. If we are his loyal subjects, we cannot say that he has no more rights than are allowed him by this parliament, and to say so is an assault, and nothing less than an assault, on the King's constitutional right in this country. Then the right hon. gentleman adds:

If there is a nation under the sun that can say more than this, where is it to be found?

And by that he means that we are as independent of Great Britain and her King as any other nation under the sun. If he does not mean that, his words are without meaning, or else language has been given the right hon. gentleman, as Talleyrand said, to conceal his thoughts. If that be the case, then what a sinful profusion there has been in the case of the right hon. and learned gentleman, who has two living languages, and, no doubt, several dead ones, in which to conceal the most disloyal and unconstitutional thoughts in regard to the relations of Canada and the motherland that have ever been entertained by any public man in Canada.

But, to return to the right hon. gentleman's statement, I think I told you that fifteen out of twenty-seven pages were devoted to the subjects I enumerated. The remaining part of the speech is addressed to Quebec. Again, with painful reiteration he trots out the Plains of Abraham—Lord Durham — Lafontaine — Papineau — Lafontaine again—Baldwin. What has Peter the Hermit done? When addressing his people in Quebec, the right hon. gentleman says nothing about Peter the Hermit. And he winds up by saying that these names and these events are his supreme inspiration in turning this page of the history of Canada. Incidentally, however, he drops a hint that may be taken as a reference in some way to the Navy Bill. He drops a hint that this little Canadian navy is to go to England's wars only if Canada is attacked. He points out that this navy will be to Canada just what the police are to Montreal, and he hints, not obscurely, that this navy is fitted and intended to be of just as much service in one of the naval wars of the empire, as a policeman of Montreal is fitted or intended to command a battleship in such a war.

An hon. MEMBER. Hear, hear.

Mr. COWAN. I have heard from the fringe. I am very glad to hear from the fringe,—delighted that they appreciate that sentiment, and that they let us know what their sentiment is. Perhaps I can learn further that they too, like the right hon. Prime Minister, have a goal for their aspirations. I wonder if my hon. friend who called out, hear, hear', regards the independence of Canada as the goal of his aspirations. I wonder if my hon. friend who called out, 'hear, hear', means by that that the Canadian navy is not to join in the wars of the empire except when Canada is attacked. I wonder if he means by that that the Canadian navy is not fitted or intended to be of any more service in a naval war of the empire than a policeman is fitted or intended to command a battleship in such a war. Perhaps the hon. gentleman who said, 'Hear, hear' will be good enough to tell us.

This, then, is the speech, and the whole speech, of the right hon. the Prime Minister of Canada. Let us turn then, to the next in order. Let us turn from the Prime Minister (Sir Wilfrid Laurier) to the Postmaster General (Mr. Lemieux)—again from Jove to a sattelite of Jove. As that gentleman attitudinized and swelled to his theme, he led this House to expect one of those performances described in the playbills as 'imitations of popular performers.' And let me assure the hon. gentleman that his audience on that occasion was not disappointed. But let me tell the hon. Postmaster General that the malignant indelicacy of his reference and allusion to the distinguished and noble ancestry of the hon. member for Jacques Cartier (Mr. Monk) did but little credit to himself and did injustice to the people of Quebec. Because that reference, that allusion, could be made only on one assumption—namely, that a distinguished and noble ancestry unfitted a man for public life in Quebec.

Let me tell the hon. gentleman also that he did not, to my mind, illumine this subject of the navy to any marked extent, by dwelling at such length and with such particularity on his own personal history and ambition, but when he reached that point of self-inflation where he declared he was the knight of labour in this House, well, Mr. Speaker, I did pity the Minister of Labour and the member for Nanaimo (Mr. Ralph Smith). But I recollected the attitude of all these gentlemen towards technical education and the Eight Hour Bill, and I was ready to concede that the Postmaster General was not only the (k)night, but the Egyptian darkness of labour in Canada. Well, then, the hon. gentleman, leaving the entrancing subject of his own personal importance and by natural sequence and in further illumination of the subject of the navy, he recalled the guillotine and Madame Roland and then exploded in this apostrophe, 'Oh loyalty what crimes are committed in thy name.' Whereupon, by a trick of memory, I was translated in imagination away from this Chamber and its stifling atmosphere, away to the sunny slopes of the broad Pacific, where last fall on the banks of the Fraser

the hon. member for Westminster (Mr. J. D. Taylor) and myself watched, in our light hearted way, a dirigible balloon ascending into the heavens, into the clouds, and when the steering gear went wrong, the balloon became not less a balloon, but less dirigible, and descended into the waters of the Fraser, and was carried away to the ocean of oblivion. 'Oh loyalty, what crimes are committed in thy name,' the hon. gentleman cries, and forthwith he proceeds to perpetrate the crimes. He asks:

At the time of the South African war, were we disloyal when we sent——

Mark that, my countrymen:

—when we sent to South Africa the young men of this country to fight the battles of Great Britain?

The government sent the Canadian boys to South Africa! It was the other way about, Mr. Speaker, the Canadian boys sent the government about their business, and despite the technical obstacle they put in their way, they went to South Africa, as I have had occasion to say in this House before, they rushed to South Africa as to a festival. The hon. member for Sunbury and Queens, (Mr. H. H. McLean) made what, in many respects, was an excellent speech. It was the first note of Canadian manliness we have heard from the government benches. That brave soldier of the King stood up in his place in this House, and told his leader, man-fashion, that he did not share his aspirations for the independence of Canada, that his proposed fleet was but a sorry substitute for the fleet unit recommended by the admiralty, that the right hon. gentleman's denial that there was anything in the nature of an emergency or crisis was but the song of a dying swan, sweet in tone, but of brief duration. For my part after hearing that right hon. gentleman, I could not help thinking of that fabled goddess, fair to look upon and tempting to follow, but, when embraced, turning into a cloud. Had the member for Sunbury and Queens commenced his inquiry, instead of on the 7th of October, 1909, on the 3rd of October, 1899, he would have found something to indicate that there was a holding back on the part of the Prime Minister in regard to sending our boys to South Africa. Everybody in this House remembers that on the 3rd of October, 1899, the right hon. the Prime Minister granted an interview to a representative of the 'Globe' in this very city, wherein he said that the Militia Act would not allow us to send our boys to the front. and that anyway Canada was not menaced. Every one will remember that a few days afterwards, on the 5th of October, 1899, Sir Charles Tupper, then leader of the Conservative party in this House, wired the Prime Minister expressing the hope that the Canadian boys would be allowed to go to South Africa, and assuring the Prime Minister that if the government allowed them to go, it would receive the support of the Conservative party. The hon. member for Sunbury and Queens, seemed also to overlook the fact that after the publication of that interview in the Toronto 'Globe,' on the 4th of October, 1899, there arose from the people of Canada a ground swell of indignation, expressed in telegrams, in resolutions, in memorials, such a ground swell that it swept the Prime Minister and the government away from the position they had taken of putting petty obstacles in the way of the Canadian boys going to the front.

The Postmaster General exclaims: Are we disloyal when we are the first in the history of this Dominion to give His Majesty the King a navy? If that navy is to be taken as the measure of Liberal loyalty to the King, then heaven help the King. If that act is the measure of Liberal loyalty, the Postmaster General and his party are free to suck such comfort out of it as they may. The Postmaster General tells us what apparently he thinks we did not know before, that we have a double sea-board, and he asks us not to cast any aspersions on this so-called tin pot navy because there, across the Pacific, was Japan awakening and putting on the forms of European civilization and government, and China, and this navy was intended to protect British Columbia from the attacks not only of China and Japan, but also of Russia and the United States. He forgets that we, the people of Canada, know that the admiralty realize that the completion of the present naval programme of Japan will synchronize with the termination of the treaty of alliance between Great Britain and Japan, and that the admiralty realize the significance of that fact, not only to Great Britain, but to that part of Great Britain, that portion of Canada, British Columbia. For that main reason, the admiralty suggested that Canada should provide a fleet unit on the Pacific because the Atlantic sea-board is within striking distance of the royal navy, and its trade routes can be protected without any help from Canada. But in that policy of putting a fleet unit on the Pacific, the right hon. the leader of the government and his followers see no votes, it is not the necessity of Canada or the defence of the empire, it is votes they are after, and the Postmaster General would have us believe that this mutilated fleet, emasculated of its only fighting ship, emasculated of the battleship, this mutilated fleet, divided between the Atlantic and the Pacific, would be sufficient to resist the attacks, not only of China and Japan, but of Russia and the United States. The childish absurdity of this schoolboy rhe-

toric, in the face of facts, not only known to the laymen of Canada, but set forth with great particularity by the experts of the admiralty!

I could go on and refer to the speech of the hon. member for Pictou (Mr. E. M. Macdonald). I could refer to the speech, the volcanic eruption from Red Deer. Usually that gentleman is content to belch forth the burning lava of Cobdenism on his friends in this House, and especially, infandum dictu, on our own and only Cobden-medalist, until that right hon. gentleman finds himself buried and suffocated in the slag and ashes and forgotten things, of a dead doctrine. I could refer to the other speeches, but I wish to repeat in conclusion that manly, robust Canadianism is well content with a fleet if it conforms to these conditions: it may be a fleet built and equipped in Canada by Canadians, officered, manned and provisioned by Canadians, but it must be an integral part of the imperial navy just as Canada herself is an integral part of the British empire. Canada has grown on the gaze of the world, a signal example of internal expansive energy, but Canada has not yet found herself, Canada has not yet realized the significance of her peculiar, her unique position in the empire, and has not been fruitful in the more salient and striking characteristics of nationhood. How can that be brought about? Let us cease to seek shelter under, let us cease to be parasites upon, the British taxpayer and the American taxpayer. Let us give, and give at once, to the imperial navy, which all admit is the best guarantee of Canada's future greatness and safety. Let us remember that armed and equipped by nature with all the wealth of boundless wheatfields, of inexhaustible mineral resources, of vast forests and teeming fisheries, Canada occupies in the British family in these vigorous latitudes of the north, a peculiar, a pivotal position. Midway between Europe and Asia, midway between Europe and Australia, on the direct line of commerce between the occident and the orient, stands Canada, that young giant of the north, with hands outstretched, the one for the trade and commerce of the Atlantic, the other for the new and growing trade of the Pacific. How essential to that trade and to the protection of that trade it is that the imperial navy shall continue to be our navy, and shall continue to hold the supremacy of the seas. With these two conditions satisfied, who will deny that Canada, owing to that central position she occupies in the empire's circle, will one day become the centre of the merchant fleet, the commercial progress and the transportation facilities of the British empire. Long may the day be distant when any party or propaganda in Canada will be able to swing the pendulum of our destiny outside that empire circle; that circle within which lies not only our present freedom and liberties, but our future permanence and greatness as a people, a nation and an empire.

Mr. RALPH SMITH (Nanaimo.) I find as such difficulty in controlling the argument of my hon. friend (Mr. Cowan) as he and my good friend the member for New Westminster (Mr. Taylor) found when they were operating that balloon on their fishing trip last summer. I have listened carefully to every word my hon. friend (Mr. Cowan) has said and to every argument he has tried to present, and I say that no hon. member in this House has submitted to this parliament a depreciation of the leading men of this country in any way equal to the denunciations of the hon. member. He began by telling the House how very important it was that we should eliminate politics from this debate, and I submit to the intelligence of every fair-minded man in this parliament that the hon. gentleman strayed very far from his own advice. He went on to argue in his own way that the Prime Minister was propagating, preaching and proclaiming a doctrine of absolute independence and that he was using his influence at every opportunity upon the hustings in certain portions of this country in favour of a spirit of alienation from Great Britain. Mr. Speaker, that is a charge not against the Prime Minister but against the intelligence of the British people in this country. There is no one man in this country to-day—even if the Prime Minister had the disposition the hon. member speaks of—strong enough to use an influence that could alienate the attachment that the great mass of the Canadian people have for Britain and British institutions. But that is not the doctrine that hon. gentlemen opposite preach all the time. In one portion of the country they cry out that the right hon. gentleman is too British, and in another portion of the country they declare—and I know full well where that portion of the country is—that the right hon. gentleman is not British enough. We never have gone through a federal campaign in British Columbia, but that the principal declaration of hon. gentlemen opposite is—the repeated statement that the Prime Minister of Canada is not loyal to British sentiment, or to the interests of the people of the west. No question has ever been submitted to this parliament of greater importance or of more far reaching effect, and no question was ever submitted to this parliament that ought to receive the sober deliberation, of this House more than the question now under discussion. And yet I submit, Sir, and I think the members of this House will agree with me, that to-night we have had to listen for two hours to the performance of a political mountebank.

Mr. SPROULE. I rise to a point of order. I submit that that statement of the hon. gentleman is not in order.

Mr. SPEAKER. That term is unparliamentary.

Mr. RALPH SMITH. I did not say that the member for Vancouver was a mountebank, I said his performance could be likened to that of a political mountebank.

Mr. SPROULE. I understood the hon. gentleman (Mr. Ralph Smith) to say that he had been listening to a political mountebank.

Mr. RALPH SMITH. I submit myself to the Speaker of this House.

Mr. SPEAKER. I don't think the term is parliamentary.

Mr. RALPH SMITH. I will be glad to withdraw the term mountebank, but I submit, Sir, that if evidence of right about face is to be taken, evidence of political manœuvering on the part of hon. gentlemen opposite and of my hon friend (Mr. Cowan) with reference to the principle of a Canadian navy, I do not know what word better than 'mountebank' can describe that position. I submit, Mr. Speaker, that this contention before the House at the present time and the consideration of this important question, originated where? It originated in the resolution of the hon. member for North Toronto (Mr. Foster) a year ago. And what was it in favour of? It was not in favour of sending Dreadnoughts to Britain. Neither the member for North Toronto nor the leader of the opposition, nor any member opposite said anything about that. It was in favour entirely and absolutely of the commencement and the formation of the nucleus of a navy in Canada. But, the hon. gentleman (Mr. Cowan) went further, and he contended that in the Bill before the House the British North America Act, the constitution of this country, is infringed upon. My hon. friend (Mr. Cowan) read section 15 of the British North America Act to prove his case, but to demonstrate his simplicity it is only necessary that some one else should read section 4 of the same Act. Section 15, that my hon. friend read and made so much out of states that the authority should rest in the King, and, he said that the Bill before the House removed this authority from the Sovereign.

The command in chief of the land and naval militia and of all naval and military forces, of and in Canada, is hereby declared to continue and be vested in the King.

Now, what is the section in the Bill? I read this to show that the hon. gentleman has dwelt for twenty minutes or half an hour in his speech on this very principle, and yet had demonstrated to the House that he has never read the Bill. Section 4 of the Bill is the very section of the British North America Act that I have just read; it is worded in exactly the same way:

The Command in Chief of the Naval Forces is vested in the King, and shall be exercised and administered by His Majesty, or by the Governor General as His representative.

My hon. friend from Vancouver founded an argument, and declared upon the foundation of that argument the disloyalty of the government towards the constitution of this country; and yet he had not examined or understood this section of the Bill of which he complained. Now, before I move the adjournment of this debate, I want to make this remark. The whole contention of my hon. friend is that the development by this country of its own land and naval forces has only one meaning, that is, that it is promoted and intended to develop the independence of Canada apart from the British empire. The development of this country, and its protection on land and on sea, are the greatest security that can be given to the British empire to-day; and if hon. gentlemen opposite twenty years ago had recognized, in any degree at all, the responsibility which they seek to have others recognize, and had done then exactly what this government is providing to do to-day, what position would Canada have been in to-day to send her fleets across the Atlantic to assist the empire in any emergency that might arise on the other side? But because they did nothing, and because things have to have a beginning, and because it takes time to promote them and bring them about, the whole blame is cast upon the present government. Hon. gentlemen opposite complain that very little is being done by the government, and yet in their very amendment they object to the enormity of the provisions already made. They say, you are making a tin-pot navy, and then they declare that the question is sufficiently important to have the opinion of the people of this country upon it before you carry out the project. I have no hesitation in saying, and I think I shall be able to prove to this House at a later time, that there never was a proposition placed before the parliament by the leaders of any great party, in view of the position that was taken by those leaders years ago, that represented such mixed and contrary opinions, while it is only intended to appease the fanatical wrath of hon. gentlemen belonging to their own party, but does nothing to establish the principles on which this country can be defended or can ever hope to be of any important assistance to the motherland. I beg leave, Mr. Speaker, to move the adjournment of the debate.

Motion agreed to, and debate adjourned.

On motion of Mr. Fielding, House adjourned at 10.40 p.m.

INDEX

SECOND SESSION—ELEVENTH PARLIAMENT, 1909-1910.

Abbreviations of well known words and Parliamentary expressions are used in the following:—1°, 2°, 3°, First Reading, Second Reading, Third Reading; 3 m. h., 6 m. h., 6 w. h., Three Months' Hoist, Six Months' Hoist, Six Weeks' Hoist; *, without remarks or debate; Accts., Accounts; Adjn., Adjourn; Adjd., Adjourned; Amt., Amendment; Amts., Amendments; Amalg., Amalgamation; Ans., Answer; Ass., Assurance; B., Bill; B.C., British Columbia; Can., Canada or Canadian; C.P.R., Canadian Pacific Railway; Com., Committee; Co., Company; Conc., Concur, Concurred, Concurrence; Consd., Consider, Consdn., Consideration; Cor., Correspondence; Deb., Debate; Dept., Department; Depts., Departments Div., Division; Dom., Dominion; Govt., Government; His Ex., His Excellency the Governor General; Hse., House; H. of C., House of Commons; Incorp., Incorporation; Ins., Insurance; I.C.R., Intercolonial Railway; Man., Manitoba; Mess., Message; M., Motion; m., moved; Neg., Negatived; N.B., New Brunswick; N.W.T., Northwest Territories; N.S., Nova Scotia; O.C., Order in Council; Ont., Ontario; P.E.I., Prince Edward Island; P.O., Post Office; Par., Paragraph; Prop., Proposed; Q., Quebec; Ques., Question; Recom., Recommit; Ref., Refer, Referred, Reference; Rep., Report, Reported; Reps., Reports; Res., Resolution; Ret., Return; Ry., Railway; Rys., Railways; Sel., Select; Sen., Senate; Sp., Special; Stmnt., Statement; Sup., Supply; Suppl., Supplement, Supplementary; Wthdn., Withdrawn; Wthdrl., Withdrawal; Y.N., Yeas and Nays; Names in Italics and parentheses are those of the mover.
