Representation by population might be very well for Canada herself but in a general union of the colonies it would operate injuriously for the maritime provinces, as they could not expect to protect their interests when they would have to contend with one hundred of a clear majority over their own representation. This principle would give the city of Montreal with its 101,000 inhabitants one representative more than this island. Quite different is the representation of Great Britain, for while London has about the same population as Scotland, that city has only sixteen members in the House of Commons whilst Scotland has fifty-three. But it may be argued that as our population increases our representation will increase. This is very doubtful. Indeed under the operation of the 20th and 21st clauses of the report it seems probable that we might loose our representation altogether. Lower Canada is always to have sixty-five members, and the representation of the other colonies is to be arranged every ten years so as to give each the same ratio to population as she will then possess. Now, should the population of lower Canada increase more rapidly than that of this island, which is almost certain to be the case, our representation would decrease and we would be left perhaps without a member at all. To show at least that it is much more likely that our representation will decrease than increase, I will read the House, George Brown's opinion on the subject as given in the Toronto 'Globe.' In treating of the probable effects of these two clauses of the report, to which I have been alluding, on the representation of the maritime provinces, that journal says: The fact is best shown by illustration. Prince Edward Island, with a population to-day of 85,000, is, it is said, to have five representatives at starting. Suppose she increased at the rate of 20 per cent each ten years, at the end of twenty years her population will be 126,000. But at the same rate of progress the population of lower Canada would be 1,600,000. Divided by sixty-five, this would give one representative to every twenty-four, 550 of her people, so that the island would not be able to claim an increase of membership. If similar calculations be made with respect to the other provinces it will be proved that the addition they will be able to make to their representation will be very small. In fact, if the increase of population in some of them be not greater in the future than it had been in the past, they will, if the plan be strictly carried out, lose instead of gain.

Mr. James Duncan, another member of the government at that time, who was also, I believe in favour of confederation, said:

The five representatives allowed to us in the Lower House would not give this colony much influence there; but as our population will not increase so rapidly as that of Canada, there is a prospect, through the operation of one clause in the report, that our five representatives would dwindle down to three. Taking all these points into consideration, therefore, it is clear to me that we have nothing to gain but much to lose by adopting the Quebec scheme.

The Hon. Geo. Coles, leader of the opposition, and one of the delegates to the conference, said:

When the question of representation in the House of Commons came up for discussion this principle was ably and strenuously contended for by the Hon. Geo. Brown, and well it might, for he knew that it would enable Upper Canada to maintain the control of the general legislature for ever. Representation by population will give the two Canadas 100 of a majority over all the lower provinces in the House of Commons, and by each of the Canadas having as many members in the legislative council as the whole of their eastern sisters, they will together always command a majority there of 24 over us, so that the only principle on which we, in the maritime colonies can expect justice will be through the quarrels of the two western provinces.

I have quoted those remarks for the reason that I want to impress on this House the fact that the state of affairs now existing was foreseen and an effort was made to guard against it. That matter was brought up in the legislature of Prince Edward Island in the next session after the holding of the Quebec conference. About the same time the question was referred to the people of New Brunswick at a general election by the late Sir Leonard Tilley, and the people of that province voted down the proposition with a sweeping majority. The question was again referred to the people of New Brunswick and they were then satisfied that this matter was settled and confederation was carried. I am not going into the question of the conditions in New Brunswick to any extent, because I believe that they will be taken up by an hon. member from that province who will follow me. The province of Nova Scotia entered confederation in a rather peculiar manner. The question of adopting confederation was not decided on by the people at all. However, it is not necessary that I should go into that now. I am simply calling attention to the fact. Prince Edward Island did not enter confederation in 1867, as the hon. member for Assiniboia (Mr. Turriff) seems to think, but in 1873, some six years later, and one of the principal reasons why we did not go in before was the fact that we did not think we were getting what was right in the way of representation in this House. In 1873 negotiations were resumed, delegations consulted with Sir John Macdonald, then leader of the government, and with members of his government, and both parties arrived at the basis of settlement. But it was then understood clearly that Prince Edward Island was to have a representation of six and was never to have any less; and had it been supposed for one instant that we would not have that representation, confederation could not possibly have been carried at the poll. Those of us from that section of the Dominion who are old enough to remember, know that this was a vital question, and it was only because we were assured of this representation of six for all time that the people consented to Prince Edward Island entering confederation.

Mr. SPROULE. If that be so, is there nothing at all on record to indicate it?

Mr. WARBURTON. The debates in the House of Commons, unfortunately, are not preserved. The only record we have is in the form of newspaper cuttings, and we cannot get anything from them. But I will give what I consider very strong proof of the correctness of my contention. I gave some figures in an address in this House two or three weeks ago, but, as they have a very strong bearing on my argument, I wish to repeat them. When we came into confederation in 1873, we came in under the census of 1871. Under that census, the unit of population was 18,331. Prince Edward Island was entitled to only five representatives, with a small number over—2,366, about one-eighth of the unit of representation. But we were given six representatives, though we were clearly not entitled to that number, according to the principle of representation by population and on the basis of the unit of population of that time. The reason, of course, is that we would not come in on any other terms. The gentleman who negotiated the terms for us maintained all his life that it was an arrangement, and, though it was not inserted in the terms of agreement, it was observed. When we came to 1881, the time of the next decennial census, we were still entitled to only five representatives according to the principle of representation by population. But we retained our six representatives, though others were reduced. And it was only in 1891, after the men who had negotiated the terms of union were no longer here, that our representation was cut down. I have no doubt that had Sir John Macdonald been alive in 1891, or rather had he been taking an active part in affairs, knowing the circumstances as he did, he would have done as in 1881, and decided that our representation should remain. But, unfortunately, he was not on the floor of this House at that time, and, therefore, in 1891 our representation was cut down by one. In 1901 it was again cut down by one. Thus, there were two different censuses in which we were entitled to a representation of only five, but in both cases we were given six. There must be some reason, and the obvious reason is the one well known in Prince Edward Island, that we would not have come in under any other condition. I said in my opening remarks that a loop-

hole had been provided in the Quebec conference in regard to this very important matter that, in case of an emergency, this principle of representation by population might be evaded, when special reference was made to British Columbia coming in on terms agreed to by her own legislature. And we know that British Columbia did come in with six representatives, when she was not entitled, on a basis of population, to that number. Of course, she is entitled to more than that number to-day, but I think it was twenty years after she came in that her population was such as would justify her in claiming six members according to the unit of population that prevailed in those years. But we know that, when the terms of union were drawn up, the gentleman who was in charge on the part of Prince Edward Island either neglected his duty or did not know what he was doing. He did not, as the representatives of British Columbia, provide that the representation of the province should be 'increased' according to change of population, but agreed that it should be 'readjusted.' There is no doubt that, had he mentioned putting in the word 'increased' it would have been acceded to, that being what was intended. But, in consequence of the difference in the word, we have been losing our representation. British Columbia's interests were better looked after, and so, when it came to a redistribution, she retained her six members, even when her population did not justify it on the basis of representation by population. If, as the hon. mover of this resolution (Mr. Kyte) said, this comes back to a purely legal consideration of the terms of union and insistence upon a legal technicality, I admit, we are out of court. But I put it to this House and this country upon the broad equitable principle that, though, in the terms of union, a word was not put in which was intended to be put in and that we are losing representation that it was not intended that we should lose, it is still within the power of this parliament to remedy that injustice and that wrong. I appeal to hon. members of this House from all provinces to look at this matter in the light in which we look upon it and to restore to us that representation which we formerly had. I am not arguing very strongly in support of the resolution as it is worded, my reason being that I intend to move an amendment. I pointed out two or three weeks ago, when discussing this matter before, that one great reason why our population had not increased proportionately to that of the province of Quebec was that the enormous public expenditure upon the harbours of Montreal and Quebec and upon the St. Lawrence river channel have had the effect of developing the trade of that route and attracting population to the province of Quebec. No one is finding fault with the development of this route; every one wishes it to go on; we hope it will increase. But the effect upon us has been—aside from the question of immigration which my hon. friend (Mr. Kyte) brought up, but I think this more to the point—that we who helped as well as we could in building up this country and in making the port of Montreal and developing the St. Lawrence as a highway of commerce are really suffering from the efforts for the general good that we have put forth. The northwest probably benefits more than any other part of the Dominion by that expenditure and the works carried on there. I cannot believe that the people of the northwest, recognizing these facts, are willing that we should suffer by having our representation made less than it was. And I am of opinion that my hon. friend from Assiniboia (Mr. Turriff) would take more than two minutes to resign his seat if this were carried. I shall take up only a few moments more in referring to the amendment which I now beg to move, seconded by Mr. Daniel:

That all the words in the resolution after the word 'House' in the second line be struck out, and the following inserted:

'Each province of the Dominion of Canada shall have as a minimum representation in the House of Commons the representation it had upon becoming a province of Canada. That in the re-distribution of the constituencies to be made after the next and after every future decennial census, the representation of each province shall be not less than that minimum. And that a humble petition be presented to His Majesty praying that the British North America Act be amended in accordance with the purport of this resolution.'

In proposing that amendment, I meet at least one of the objections raised by the hon. member for East Assiniboia when he asked why it was that Ontario and other provinces should not be treated in the same manner as the maritime provinces I agree to that; I think that every province should be placed in the same category, and that point I have covered by my amendment. Ontario, when she entered confederation, had 82 members; she afterwards went up to 92 and now has 86. Though she has four more than she had at first, it may or may not happen that the increase of population in Ontario will be less in proportion than that of the province of Quebec. But if the population of Ontario increases only in the same proportion to that of Quebec, as before the last decennial census, Ontario will be reduced in ten years to her original representation or perhaps less. My amendment would cover such a case as that. So, in moving this amendment, I wish to call your attention

to the fact that it was drawn so as to cover every province in the Dominion. If it was fair to one, it was fair to all. We are more particularly concerned just now in the maritime provinces, because up to the present we have been the victims of this comparatively small increase of population. Although we have only 4 members in the House of Commons at present, Prince Edward Island has 10,000 more of a population than she had when she entered confederation. Our population may or may not increase; it is not to be expected that a purely agricultural province which, owing to its insular character, is of a restricted area, can increase very rapidly. At the same time, we have now a population per square mile greater than that of any other province in the Dominion, we have a population of from 45 to 50 per square mile. But though we may not have much room for an increase of population as an agricultural community, we may increase in population owing to our fisheries, although I do not myself expect any rapid increase. But we are situated, as you know, in a rather peculiar position; we are an outlying part of the Dominion, and, owing to our isolated position, we have peculiar difficulties to contend with. I am not going to refer to those difficulties now, they have already been referred to on former occasions by members from that province. But owing, as I say, to our peculiar situation, a full representation in parliament is more essential to us than it would be to larger provinces. My hon. friend from Richmond (Mr. Kyte) pointed out that the principle of representation by population was not adhered to in Great Britain, and was not even adhered to in Canada. The city of Montreal, for instance, has a member for 80,000 of her population, which is much greater than the unit of representation for the Dominion at large. Montreal, therefore, has not representation according to population, and when the time comes that half the population of Quebec will be in the city of Montreal, which is not impossible, then if you adhered strictly to the principle of representation by population, Montreal would return half the representation from the province of Quebec. Such a state of things would be most unfair to the rural constituencies, because it is a well known fact that outlying rural constituencies require greater representation according to population than cities, because their affairs are spread over a larger area. In cities, and districts where population is more dense, the representative can have the whole constituency, so to speak, under his eye, and a member representing 80,000 people in Montreal can attend to their wants just as easily as a member representing 15,000 population in a rural constituency. For these reasons, Mr. Speaker, I beg to move the amendment which I have placed in your hands.

Mr. J. W. DANIEL (St. John city). It affords me much pleasure indeed to second the amendment which has just been moved by my hon. friend from Queens, P.E.I. (Mr. Warburton), more especially as it contains exactly the same idea embodied in a resolution that I moved in this House in 1908. As my hon. friend has said, it does equal justice to every province in the Dominion, and calls for no exceptional action in favour of any one province. I may say that I was somewhat surprised to hear some of the remarks of the hon. member for Assiniboia (Mr. Turriff). He went into the matter very vigorously, but I do not think that he studied his subject very thoroughly before he delivered himself on the floor of this House. I expected something a little different from the chivalry and generosity of the west than the evidence that a member from that country was willing to accept favours for his own province and neighbouring provinces which other provinces of this Dominion do not, and have not, enjoyed; but when the lower provinces down by the sea ask to have that treatment continued which was promised to them at the time of confederation, the hon. gentleman threatens if this justice is done to put on his hat and leave the House. I want to remind him that when Alberta and Saskatchewan were admitted to this confederation under the Autonomy Bills, one of the clauses of those Bills provided specifically that for subsidy purposes the population of those two provinces should never be less than a certain figure; although Alberta had not at that time, and I do not suppose she has at this time, the population on which that subsidy was and is reckoned. Therefore I was a little astonished at some of the remarks of the hon. member for Assiniboia, upon whom I have always looked with a good deal of favour as a gentleman of wide views, and not of the narrow views which he propounded to the House this afternoon. I am afraid he has been taking his brief from the Minister of Justice, because I saw the Minister of Justice alongside of him this afternoon, and he has propounded the same ideas that the Minister of Justice propounded in 1907, namely, that the whole scheme of confederation was adopted by the maritime provinces on the one broad principle of representation by population. I wish to say, Mr. Speaker, that that principle was never recognized nor adopted by the people of New Brunswick. When the Quebec scheme was laid before the people of New Brunswick, they voted against it by a large majority. When this question was up on a previous occasion, I read some of the remarks of the then Attorney General, afterwards Sir Albert J. Smith, a member of the Mackenzie administration in this House. On the 20th of March, 1866,

when he was Attorney General in the Legislative Assembly, he said:

He would not vote for any scheme that proposed to base representation on population, unless there is some check in it that will prevent the interests of New Brunswick from being swamped by Canada.

You may smile, Mr. Speaker, at the idea that the people of New Brunswick should be afraid of being swamped by Canada in voting power—for in pre-confederation days the old provinces were known to us as Canada. What was the condition of affairs then? The people of the lower provinces had very few relations with the upper provinces, Quebec and Ontario; there was no intermingling of the people. Our business was carried on across the ocean, and with the people of New England States and New York and other seaboard states. They had very little business with the rest of Canada, and there is no doubt that when this matter was brought up they did fear that their interests would be swamped by an increased population in that of Quebec and Ontario. Then if we take Canada as it is now, why, Sir, the people of those provinces never supposed, any more than did the reverend gentleman whose statements were read this afternoon, that the great country west of Ontario to the Rocky mountains was anything else but an inhospitable region unable to support population, and incapable of settlement. I might remind hon. gentlemen, especially those sitting opposite, that even for a number of years after 1867, there were loud cries that it was utterly silly and foolish to build the Canadian Pacific railway through that country, because it was sterile, it was fit for nothing but to be the home of the wolf and the bear. I have no doubt hon. members will recall some such statements as that. Mr. Smith, then, Attorney General, two days afterward said, in the Legislative Assembly:

I'll go down in the ship rather than consent to representation by population, as contained in the Quebec scheme; but I have no objection to going for it, provided there is a check in the formation of the Upper House, or otherwise, that will serve to protect the interests of New Brunswick.

In the following month, a large public meeting was held in St. John on the same subject and the Hon. Peter Mitchell, afterwards well known in the history of Canada and I think the first Minister of Marine, said as was reported in the St. John 'Telegram' of April 21, 1866, as follows:

Hon. Peter Mitchell at last night's public meeting, stated, 'Government would not insist on Quebec scheme of confederation; they would accept such improvements as could be had, and would be willing to allow delegates chosen from both political parties, to go as delegates to the British government to urge such changes and alterations as might meet the views of the maritime provinces.'

That was done. On June 26 a resolution was introduced in the Legislative Assembly of New Brunswick to the following effect:

Resolved, that an humble address be presented to His Excellency the Lieutenant Governor praying that His Excellency will be pleased to appoint delegates to unite with delegates from the other provinces in arranging with the imperial government for the union of British North America——

Not on the Quebec scheme,

—but upon such terms as will secure the just rights and interests of New Brunswick, accompanied with provision for the immediate construction of the Intercolonial railway.

The province of Nova Scotia passed a resolution identically the same except that it made no reference to the Intercolonial railway. That will, I think, give the hon. member for Assiniboia (Mr. Turriff) an idea that there was a great disinclination and a determination not to accept the principle of representation by population out and out. What was the result? In accordance with this resolution delegates were sent to the old country. They attended the London conference, and this difficulty of the representation of the maritime provinces was the great stumbling block in the negotiations. An effort was made to introduce something into the Act that would serve as a check, as Sir Albert Smith and the Hon. Peter Mitchell urged, on the idea of representation by population, so that the maritime provinces should not lose their representation, if, as was expected, they did not increase in population as rapidly as the other provinces. Hon. George Brown, who has been spoken of as the great advocate of representation by population, and who certainly took a very active part in this confederation scheme, was troubled over the conditions with which they were met by the fact of these maritime provinces not being willing to consent to that scheme in its entirety, preferring rather to keep out of confederation altogether than to go in with the knowledge that in a few short years their voting influence and their representative influence in the parliament of Canada would be so weakened that it would be really swamped. The result was the framing of subsection 4, section 51, and known as the saving clause which is as follows:

On any such readjustment the number of members for a province shall not be reduced unless the proportion which the number of the population of any province bore to the number of the aggregate population of Canada at the then last preceding readjustment of the number of members for the province is ascertained at the then latest census to be diminished by one-twentieth part or upwards.

Mr. Brown thought this clause so valuable that he said of it 'The practical result will be that while lower Canada certainly will not be less, and the lower provinces may increase in population, they cannot decrease in the number of their representatives.'

Then comes the question, what is 'The number of the aggregate population of Canada' To find what comprised Canada, you have only to look at the third section of the British North America Act. That sections reads:

It shall be lawful for the Queen, by and with the advice of Her Majesty's Most Honourable Privy Council, to declare by proclamation that, on and after a day therein appointed, not being more than six months after the passing of this Act, the provinces of Canada, Nova Scotia and New Brunswick shall form and be one Dominion under the name of Canada; and on and after that day those three provinces shall form and be one Dominion under that name accordingly.

Under that saving clause the maritime provinces joined confederation. What has been the result? They have found that their charter has been broken, that this saving clause which was put in to prevent their losing representatives has been made of no effect whatever by the subsequent amendments which have been made to the British North America Act, including the population of all the rest of Canada, instead of that merely of the four provinces. The result of that has been that whereas if the original Act of 1867 had been carried out, we would not have lost our representatives, on account of these amendments being read into the Act, and the great population that has been brought into Manitoba, Saskatchewan, Alberta and British Columbia and these other parts which have been included in the Dominion of Canada we have been robbed of our representatives when we ought to have been protected by this parliament. It was on account of these amendments being read into the old Act that the Privy Council decided as it did, because it gave its decision on the law as they found it. That is the great grievance which we in the maritime provinces have; to use a common expression we have been gold bricked by these various amendments which, without our knowledge and consent, have been made to the British North America Act. We cannot seek redress in the law courts, we have to appeal to this parliament as the great high court of equity, constituted to redress the grievances of any part of the Dominion.

Let me refer to the effect which the enlargement of the province of Quebec will have, if it has not already had, on the unit of representation. In 1907, when the Minister of Justice spoke on this question, he declared that there was no doubt in the world that the Quebec which was considered in the Act of 1867 was the Quebec whose northern boundary was the height of land separating the Hudson bay waters from the St. Lawrence waters, and that being so it requires no argument to show that the additional area added to Quebec affects the unit of representation and gives us of the maritime provinces a very real grievance. In the British North America Act of 1871 there is provision for enlargement of the boundaries of the various provinces, but the very section giving that power states that it can only be done on arrangements being made with any other province affected thereby. The Minister of Justice, in the course of that address, also stated that if the lower provinces were wrongfully dealt with in 1901, they should have protested, and that having kept silent they had no right to complain now. But, we have no reason to suppose that were a protest made at that time it would be heeded. Let me call attention to the fact that in 1905 the legislature of New Brunswick did protest to this parliament. When the legislation providing for the autonomy of Alberta and Saskatchewan was before the House the New Brunswick legislature protested against the population of these two provinces being also read into the British North America Act so as to be considered when the representation in this parliament was being readjusted. But, the right hon. gentleman and his government paid no attention to that protest although Mr. Tweedie, now the lieutenant governor of the province, and others who are now close to the Prime Minister, were very strong in supporting it. Mr. Tweedie commenced his remarks by blaming those who were formerly interested in provincial affairs and who had moved to the higher political sphere forgetting their province when they came to this Dominion parliament, but I will not refer to that part of his speech. He said:

'At the time of confederation Quebec had certain well defined boundaries. According to the census of 1871, it had an area of 193,555 square miles. Quebec is the province by which the representation of the other provinces is regulated. In 1898 an Act was passed which extended the boundaries of Quebec so that it contained 351,000 square miles, an addition of 158,000 square miles to its territory. This territory thus added to Quebec is that territory through which the Grand Trunk Pacific will pass, and which we may expect to become populous in the future. The result will be to diminish our representation in a way never contemplated by the British North America Act.'

I call the attention of the hon. member for Assiniboia (Mr. Turriff) to that statement. On the same occasion in the New Brunswick legislature there was a speech also made by a gentleman, who, however we may differ about him in other respects,

we all agree is a very able lawyer, and anything he states in his legal capacity commands attention. I refer to the Hon. Wm. Pugsley who is now Minister of Public Works, and who was then Attorney General of the province, and who speaking to the resolution moved in the legislature of New Brunswick in 1905, said:

I have never entertained the slightest doubt that the fathers of confederation in framing their scheme of representation intended that it should be confined to the four original provinces of Canada, and that if other provinces were admitted it should be on terms. In that view I was fortified by the statement of one of the greatest statesmen of Canada, who was himself one of the fathers of confederation, and who took a leading part in bringing it about. I refer to the late Sir John A. Macdonald who in his report of the 29th December, 1870, on the admission of the Northwest Territory said:

'The general purview of the British North America Act of 1867 seems to be confined to the four provinces upper and lower Canada, Nova Scotia and New Brunswick originally forming the Dominion.'

I call these words specially to the notice of the right hon. the Prime Minister because I understand that he once held—whether he does now or not I do not know—a different view, and that he contended that Canada was not originally confined to the four provinces but included all that might be added at any time since. Then the Hon. Mr. Pugsley also said:

When British Columbia was admitted into the union it was stipulated that her representation should be increased under the terms of the British North America Act and that this Act should apply as if she had been one of the original provinces of the confederation, the same thing was done with respect to Manitoba. Now what has been the effect of this? It is that you must construe the British North America Act as if these provinces had been in the union in 1876.'

'If that is so, the compact of confederation has been violated by legislation and by order in council without being consulted. Surely the authorities at Ottawa should see that this wrong is remedied.

If the population of the territories and of British Columbia had been excluded New Brunswick would not have lost a representative.'

'Some may say it will be difficult to have the wrong done us righted, but I think that it can be. I have faith in the sense of justice of those administering the affairs of the Dominion.'

'I can only repeat what I said yesterday, that the province of New Brunswick entered into confederation with Quebec with certain defined boundaries, and that it was never contemplated that a Quebec should be created double the size of the original province. Yet Quebec is the pivotal province upon which the representation of this province depends. I feel that they have done us a great wrong, yet I do not despair but that when the matter is brought to the notice of the government and the parliament, some steps will be taken to see that this injustice is not continued.'

I believe that Saint Paul says that faith is the substance of things hoped for, and I hope that my hon. friend, the hon. Minister of Public Works, who has that faith, will also obtain the substance of the things which we hope for, and will be able, through his influence in the Cabinet, to have righted some of the wrongs to which we have been referring this afternoon.

At six o'clock the House took recess.

After Recess.

House resumed at 8 o'clock.

Mr. DANIEL. Mr. Speaker, when you left the Chair at six o'clock I had just read the opinions and statements uttered in the Legislative Assembly of New Brunswick with regard to the matter under discussion by the then Attorney General of New Brunswick, and now the Minister of Public Works in this government. When a gentleman of his well known legal ability expresses an opinion, it must be received with the greatest respect.

The subject we have before us to-night is an amendment asking that the minimum representation of every province in the Dominion, or which hereafter may join the Dominion, shall never be less than the representation given to it at the time of its admission. In other words, that would apply the principle to all the provinces which now applies to British Columbia. The principle of course is not a new one. It is carried out in the constitution of the Australian commonwealth, and I believe it is given effect to in the United States not alone with regard to the Senate but also with regard to congress. The idea is also embodied, as I stated before six o'clock, in our law regarding subsidies for the new provinces, in which it was provided that no matter how much smaller the population of the two provinces of Alberta and Saskatchewan should become, their subsidies would never be less than those provided in the Acts creating these provinces.

I have spoken about the protest which was sent to His Excellency the Governor General and the Privy Council and also to the right hon. the Prime Minister against the admission of the population of the new provinces into the British North America Act, so that it might also be counted against the lower provinces when their representation came to be adjusted. I shall not read the preamble but will place the protest on 'Hansard.' The preamble recites the fact that the

Privy Council left undecided the question whether the population of the territories should be included in the population of Canada, under subsection 4 of section 51 of the British North America Act. It refers to the fact that the imperial order in council admitting British Columbia and the statute admitting Manitoba provided that the British North America Act of 1867 should apply to them as if they formed part of the original confederation, thus prejudicing the position of the original parties to the agreement. It refers to the enlargement of the boundaries of the province of Quebec without making provision for the effect thereof on the other provinces, and the resolution which was passed unanimously by the Legislative Assembly of New Brunswick is as follows:

Resolved, that in the opinion of this House the earnest attention of the government of Canada should be drawn to the effect of the said order in council and statutes, respectively, relating to the admission to the union of British Columbia and Manitoba, and it should be requested to take such action as may be necessary in order to restore the four original provinces to the position in which they would have been but for the order in council and legislation passed subsequently to the Act of 1867 in respect to which, such provinces were not consulted, and to which they were not parties. (2) That in the Act for the creation of the new provinces of Alberta and Saskatchewan it should not be provided that the Act should apply to them as if they were in the union originally, and the rights of the original provinces as to revision should not be affected by the creation of such new provinces. (3) That the injustice to the other provinces, particularly New Brunswick, Nova Scotia and Prince Edward Island, which have no opportunity for enlargement of their areas, it should have been provided, and should now be provided, that for purposes of representation the boundaries of Quebec, the population of which is the basis of representation, should be deemed to be as they were at the time of confederation, or that some just and equitable provision should be made to save the other original provinces and also Prince Edward Island from loss in the representation. Further resolved that a copy of the aforesaid resolution, signed by the clerk of this House, be forwarded to the Secretary of State with the request that the same be placed before His Excellency the Governor General and that a copy be also forwarded to the Right Hon. Sir Wilfrid Laurier, Prime Minister.

I noticed, when the hon. member for Assiniboia (Mr. Turriff) was speaking this afternoon, that he threw out his chest and with an air of great importance informed the House and the country that he represented 45,000 people. Well, let me tell the hon. gentleman that quite a number of members in this House represent 45,000 people and more. I represent that number myself and I never thought it necessary to proclaim the fact as did the hon. gentleman. My hon. friend from Cumberland (Mr. Rhodes) represents a constituency which has at least 50,000 people. No doubt the constituency of Westmorland, New Brunswick contains over 45,000 inhabitants. There is the constituency of Cape Breton South which has as large a population. I think, as Cumberland, while Halifax county of Nova Scotia, is the largest contituency in the whole Dominion. So that there was no reason for my hon. friend from Assiniboia (Mr. Turriff) being so chesty, more especially when we take into account the class of people he represents. The people we represent in the maritime provinces are the descendants of the early settlers—English, Scotch, Irish and French. But who does my hon. friend represent? He represents, to a large extent, Galicians, Lithuanians, Ruthenians, Buckowinians, and possibly Doukhobors, all new comers, a great many exceedingly illiterate, not able to speak the language of the country and unacquainted with its constitution. But because he represents some 45,000 of these people, largely the flotsam and jetsam of southern Europe, my hon. friend has all the assertiveness of a grand pasha, and strives to place himself on a par or above par as compared with the representatives of constituencies such as we have in the martitime provinces. Sir, I think there is no comparison between them whatever. But even if we consider only number and not quality, my hon. friend is not a representative of more people than the average member from the maritime provinces.

What we are asking for is what we believe to be the simplest ways of remedying the injustice to which we have hitherto been obliged to submit. There can be no doubt that it is an injustice. Where there is a legal wrong there should be a legal remedy, and that legal remedy cannot be found in our courts, it cannot be found in the Privy Council, the only place where it can be found is this parliament.

And we make this appeal, not for charity, not for something to which we are not entitled; we make our appeal for the granting of our legal rights, rights which have been taken away from us by legislation passed by the imperial parliament at the instance of this parliament; we ask for equity and right treatment from this parliament as the only means by which that wrong can be righted. I do not wish to take up more of the time of the House. I have, on one or two occasions, spoken on this subject. It is one that I think very much of, and it is of most signal importance to the people of the maritime provinces. It has not, perhaps, reached the stage of agitation to any great extent yet, but I am quite satisfied that, unless justice is done to us in this respect, agitation will arise in the maritime provinces and that it will continue to aggrandize and enlarge itself until the peo-

ple of the maritime provinces, in so far as the rest of the Dominion is concerned, will show themselves to be in a very dissatisfied condition. And I think it would be far better for this parliament to use good judgment now, at a time when it can be done without any straining, without any complaint, with good-will to all. I have a great deal of confidence, as I stated, in the opinion expressed by the hon. Minister of Public Works (Mr. Pugsley). We have in the present cabinet, as has already been mentioned, three members from the maritime provinces, the Minister of Finance (Mr. Fielding), the Minister of Public Works (Mr. Pugsley) and the Minister of Militia and Defence (Sir Frederick Borden), every one of them the holder of a very important portfolio. I cannot but believe that if these hon. gentlemen use the influence that they have with the other hon. members of the government of Canada, there can be no doubt that the justice which we are asking for, the equity which we appeal for, will be done, and that at no distant day.

Sir WILFRID LAURIER. I did not wish to interrupt my hon friend (Mr. Daniel) in the course of his argument. Would he be kind enough to explain to the House what he meant by stating that the maritime provinces are labouring under an injustice?

Mr. DANIEL. I shall have very great pleasure in doing so. I am sorry the right hon. Prime Minister (Sir Wilfrid Laurier) was not in when I referred to that part of my subject this afternoon. The injustice under which the maritime provinces are labouring is that the saving clause which was placed in the British North America Act of 1867 was made perfectly nugatory and useless by the amendments which afterwards were made to that Act at the instance of this parliament, by which the population of Manitoba, Saskatchewan, Alberta and British Columbia were read into the British North America Act and were counted against us when the Redistribution Bills were made up, so that we could know how many representatives we were to have. As a proof of the importance of that fact, I would like to call the right hon. Prime Minister's attention once more to the fact that if the British North America Act, 1867, had been alone used in connection with the last Redistribution Bill, that is if the population of the four provinces originally forming the confederation had alone been counted, the province of New Brunswick and, I think, the province of Nova Scotia would not have lost their representation as they did lose it under that Redistribution Bill. I hope I have made myself clear. That is the gist, the crux of the whole question. That is why we make our complaint—that, without any consultation with the maritime provinces, without the matter being referred to them at any time in any way, the whole benefit of that saving clause has been literally stolen away from us, and we have ceased to receive the benefit from it. to which we are entitled.

Mr. GEO. E. McCRANEY (Saskatoon). Mr. Speaker, for a number of sessions this question of the representation of the maritime provinces has been discussed. It is only with this parliament that the question becomes one of practical politics, because we have in view the redistribution which must take place after the census of 1911 and the changes which are consequent upon it. The proposal which is laid down in the resolution of my hon. friend from Richmond (Mr. Kyte) is that the principle of representation by population, which is incorporated in the British North America Act, be varied, and that there be secured to the maritime provinces for the future a representation which, possibly, their population will not call for. That also is the effect of the amendment of my hon. friend from Queens (Mr. Warburton), and, for that reason, the amendment is as objectionable to us who represent the west, which is particularly in the minds of these hon. gentlemen, as is the original resolution. The hon. gentlemen who have spoken, have gone on the assumption that, had their representatives, at the time when the basis of confederation was laid down, insisted on a minimum representation for the maritime provinces, that wish would have been acceded to. I think, Sir, that we should read history somewhat and remember what was in the minds of the representatives from the provinces of Ontario and Quebec when the conferences were going on which led up to the terms of confederation. It is well known to members of this House that this very question of representation was a vexed question in the two Canadas for many years. The basis of representation in the parliament of the united Canadas was that each province should have a representation of 42 members. There was certainly a minimum representation fixed there; and if these hon. gentlemen who are advocating a minimum representation now are looking for results, I think that in the future they may expect the very results which came from this basis of representation in the provinces in the old parliament of Canada. It is very well known, too, that the population of the province of Ontario so increased that it was entitled to very much larger representation than the province of Quebec. Reference has been made to the discussion of that time, and to the part which the Hon. George Brown took in the agitation and his strong move, on the platform and in the 'Globe' newspaper, for representation by population. Those great men who had had experience in the parliament of Canada, representing both the province of Quebec and the province of

Ontario, knowing the heart-burnings which had been caused by this very principle which was laid down of a minimum—and I may add maximum—representation, were very careful to see that no such question should arise in the new Dominion which, fortunately, was the solution of the difficulties of the two provinces.

The representatives from the maritime provinces who have spoken to-day have assumed that if the members from the maritime provinces had only insisted on a minimum representation at the Quebec conference and at the Charlottetown conference that would have been agreed to. We cannot very well guess what those men would have done. My own view is, in view of the history of that day, and of what the men of Ontario and Quebec knew about this question of representation, that insistence upon such terms would have kept the maritime provinces out of confederation rather than have brought them into it. I do think that if the members from the maritime provinces who were at these conferences had looked to the future with prophetic eye, and had insisted that the population of the maritime provinces should be the unit of representation, retaining the number of members which they had at that time, that would have been acceded to, and it would have been carrying out the principle of representation by population. That is the only argument which they can make to-day. It is less objectionable than the other argument, because it is in line with a principle. But to my mind it would also be objectionable, because it would only justify the existing condition of things, and it would add much to the number of members in this House, which I think is large enough now, and which in a few years would make it a cumbersome body?

Mr. DANIEL. How many would it add? Would the hon. member please say.

Mr. McCRANEY. I have not figured that up. We are going to make no changes; if I thought we were, I would perhaps spend some time on the mathematics of the question. As a matter of fact, the fathers of confederation did make provision for the falling off in the population of some of the provinces, they could not foresee at that time which provinces they might be, by providing that if the decrease was not greater than five per cent there should be no loss of representation; that was one point. On the other hand, in the composition of the Senate, the maritime provinces were given 24 members, the province of Quebec was given 24, and the province of Ontario was given 24—no question of representation by population entering into the composition of the Senate. The Senate was to be the guardian of provincial rights, and whatever guardianship the Senate is able to offer at the present time, exists now on that basis, and the maritime provinces are as strong there as ever they were.

One would almost assume, from the discussion in this House to-day, that there was a struggle between the east and the west, and that the east were afraid of losing something because we in the west hope, in a few years, largely to increase our population. Mr. Speaker, if there has been any strife between the east and the west it has not entered this House. As a western representative, I think I may say that the proposals of the west, and they have been many, and we have made great demands, we have a great future—these demands have been met in a liberal spirit, by the people of the east. I have always said that on my own platform, and I am going to say it here. The people of the west have never shown any antagonism to the people of the east.

Mr. McKENZIE. Nobody says that they did.

Mr. McCRANEY. I am inferring that from the argument.

Mr. McKENZIE. The hon. member has no right to infer anything.

Mr. McCRANEY. At any rate, I am denying that such is the case. As long as provincialism is kept out, the east and west will get along together; it is only by the introduction of provincialism that there will be any strife. My hon. friend from St. John spoke about the make-up of the constituency which was represented by my hon. friend from Assiniboia (Mr. Turriff): Galicians, Buckowinians, Doukhobors, Ruthenians—all speaking unknown tongues—if I understood him aright, the flotsam and the jetsam of southern Europe. My hon. friend informs me that he has none of that population in his riding.

An hon. MEMBER. Four Galicians.

Mr. McCRANEY. Four Galicians, some Germans, and I have no doubt they can all speak the English language. The argument of my hon. friend is that because the people of the maritime provinces have a better educated ancestry, and are better educated themselves to-day, therefore they should count more in the numerical representation of this parliament than do these communities in the west which are largely made up of foreign population. Well, while these conditions do not exist in the constituency of my hon. friend from Assiniboia, I may tell you that they do exist in the constituency I have the honour to represent: French Canadians, Galicians, Buckowinians, Mennonites, Slovacs, Norwegians, Doukhobors, Americans, Canadians. I am very proud to represent such a constituency growing up in the Northwest

of Canada, and growing, I am proud to say, into a Canadian citizenship which will make them the equal of any population which Canada produces.

My hon. friend from Queens, Prince Edward Island (Mr. Warburton) stated that the balance of power in the west was held by people from the maritime provinces. I am not able to verify that statement, but I hope it is true. Some years ago there was a large emigration from the maritime provinces, and I am sorry to say it was not to the Canadian west, it was largely to the American states. The tide has turned, we are getting a large population from the maritime provinces. I have been struck with the way in which our own Canadian people are coming back from the United States into western Canada. I have run across so many from northern Dakota and northern Minnesota, who, themselves or their parents, emigrated from Ontario, particularly to the western States, and whose children or themselves are returning to Canada, that, in my part of the country, when a man tells me that he came from north Dakota or from north Minnesota, I always ask him: What part of Ontario did you come from?

There are some counties in the northern part of north Dakota which I could name where the population is very largely Canadian. My only regret is that we are getting, in many cases, only the children, and that of that good Canadian population which should have come into our west we are getting only a few. I am sorry that we are not repatriating people from the maritime provinces. The maritime province men invariably went into the eastern United States, and they did not find farm life there congenial to them. Had they gone into the American west, we might have got them, but I am afraid that most of the people from the maritime provinces who went to the United States prior, say, to 1900, are lost to Canada. But times have changed and we are getting them now. I hope it is true, as my hon. friend has said, that the maritime provinces have the balance of power in the west. I think it has always been true that the maritime provinces have held the balance of power in Canada. It has not been because of provincialism on the part of the maritime provinces that they have held that position, it is because their leading men were not provincialists but great Canadians, and I need only point to such names as the Tuppers, father and son; Sir John Thompson and Sir Leonard Tilley. I would note that the first lieutenant of the Prime Minister is a Nova Scotia man, the leader of the opposition (Mr. R. L. Borden) is a Nova Scotia man, and his first lieutenant, although representing an Ontario constituency, claims the province of New Brunswick as his birthplace. The Canadianism of the maritime provinces has shown itself not only in these great men who have taken part in the political life of this country, but it has shown itself in the way in which they have taken their position in the interior provinces, in our universities. I need only point to the fact that the late Sir William Dawson, a Pictou man, was president of McGill. The late Principal Grant was a Nova Scotia man, When the University of Toronto wanted a president, they took President Falconer from Nova Scotia. The successor to the late Principal Grant is Dr. Gordon, also a Nova Scotia man. All these go to confirm the statement which my hon. friend makes as applied to Canada as a whole, that the balance of power, in fact I might say the predominating influence in Canada, is a maritime province influence, and I must say, as a Canadian, I am very proud indeed of the maritime province men who have made such a stand.

There is another thing; if the population of the maritime provinces was being lost to Canada, it would be a matter of very great regret not only to the people of the lower provinces, but to us all as good Canadians. We are glad indeed that in our Canadian west we are having maritime province men in our professions, in our lines of business and in our schools. The Chief Justice of my own province of Saskatchewan, Chief Justice Wetmore, is a New Brunswicker; the Attorney General, Hon. Mr. Turgeon, is a New Brunswicker; the president of the new University of Saskatchewan, opened last September, is Dr. Walter Murray, lately of Dalhousie College.

Mr. PUGSLEY. A New Brunswicker.

Mr. McCRANEY. And as my hon. friend the Minister of Public Works says, a New Brunswicker. The time will come when the preponderance of population will be west of the Great Lakes, and when the great representation in this House will come from there also.

My hon. friend from Charlottetown (Mr. Warburton) said that he did not think that these maritime province men in the west would see any injustice done to the maritime provinces. I am sure they will not. As western men, they are not provincialists, you will not find them standing out for Manitoba, Saskatchewan and Alberta against the east. I think you will find them big Canadians, willing to do their share in the progress of the maritime provinces, as well as in that of the Canadian west in which they are living. The only danger in which we are in the west is from provincialism. I do not think that such a resolution as is put forward by my hon. friend, with its amendment, is going to

put down provincialism. It is said by these hon. gentlemen that if we only make the changes which they suggest we shall have peace, that can be the only object of the discussion which they have brought on. I believe that if their proposals were acceded to, we would have the same kind of peace after 25 years that they had when the Canadas were united and when the basis of representation was fixed in the Act of British North America by the men who then struggled for some new form of government to get out of a dilemma. I have only to say, in conclusion, that so long as there is no provincialism, and so long as there is a Canadian spirit, east and west will work together. It matters little as to the numbers of the representatives that are in this House, it matters very much as to the kind of representatives who are here. I have no doubt that in the future the maritime provinces will do as they have done in the past, and send us their very best, and if they do that, if they send the kind of representative that has always been here, there will be no danger at all to the interests of the maritime provinces.

I may say that if this question comes to a vote I shall be bound to vote against both the motion and the amendment.

Mr. O. S. CROCKET (York, New Brunswick). Mr. Speaker, I desire to add my voice to what has already been said on behalf of the amendment proposed by my hon. friend from Queens, P.E.I., (Mr. Warburton), and seconded by my hon. friend from the city of St. John (Mr. Daniel). It seems to me that the mover and seconder of this amendment have made out a case which must appeal to that sense of justice and fair play which, aside from party questions, ought to animate this parliament in its deliberations. The mover and seconder of this resolution have shown that the provinces of Nova Scotia, New Brunswick and Prince Edward Island were in a peculiar situation when the confederation compact was negotiated, they were small provinces, with small areas, with no opportunity of expansion of any kind. They could not possibly hope to keep abreast with the great provinces of Ontario and Quebec in the increase of their population. These two small provinces of New Brunswick and Nova Scotia were giving up the control of their own affairs with respect to which they formerly had full and plenary powers; they were assigning to the large Dominion parliament in which they were to be greatly outnumbered the control of their trade and commerce, their criminal laws, the right of taxation, and the other important subjects which are assigned to this parliament by the terms of the Confederation Act. In return for that they asked some slight concessions, and I think it will be agreed by any student of the history of the confederation conferences, that these concessions were practically agreed to by the delegates from Ontario and Quebec. The concession which they chiefly asked was a slight modification of the principle of representation by population. There can be no doubt—I do not deny it, and I do not think it will be denied by anybody—that representation by population was laid down as the guiding principle of representation when this confederation was formed. But the delegates from the smaller provinces insisted that there should be some modification of that principle, and the modification which was assented to by the delegates representing the four original provinces is to be found in section 51 of the British North America Act which I propose to put on record, because, although subsection 4 has been referred to, there is a point in the first subsection which is important in this discussion:

On the completion of the census in the year 1871, and on each subsequent decennial census, the representation of the four provinces—

I would wish the House to mark this:

—the representation of the four provinces shall be readjusted by such authority, in such a manner, and from such time, as the parliament of Canada from time to time provides, subject and according to the following rules:—

(1) Quebec shall have the fixed number of 65 members.

(2) There shall be assigned to each of the other provinces such a number of members as will bear the same proportion to the number of its population (ascertained at such census) as the number of 65 bears to the number of population of Quebec (so ascertained).

(3) In the computation of the number of members for a province as a fractional part not exceeding one-half of the whole number requisite for entitling the province to a member shall be disregarded; but a fractional part exceeding one-half of that number shall be equivalent to the whole number.

And this is the subsection which has been spoken of as the saving clause and offered to the provinces of New Brunswick and Nova Scotia as a guarantee against diminution of representation:

On any such readjustment the number of members for a province shall not be reduced unless the proportion which the number of the population of the province bore to the number of the aggregate population of Canada at the then last preceding readjustment of the number of members for the province as ascertained at the then latest census to be diminished by one-twentieth part or upwards.

That is the section that covers the representation of the different provinces in this House. It will be seen that the original British North America Act contemplated only four provinces and that this

very section uses the expression 'four provinces.' The agreement and the compact was so entered into between these four provinces. My hon. friend from St. John (Mr. Daniel) and my hon. friend from Charlottetown (Mr. Warburton) quoted the declarations which were made by Mr. Galt and the Hon. George Brown upon this question, and the declarations which were made in the legislatures of New Brunswick and Prince Edward Island with reference to the contention which those provinces were making. They felt there was a danger in giving up the control of their affairs to such a large parliament as this that they would be outnumbered, and that they could not keep abreast with the increase of the population of Ontario and Quebec. It will not, I think, be disputed by any member of this House that that was the position which those delegates took. When the principle of representation by population was under discussion they made this claim and subsection 4 of section 51 was offered to the delegates of Nova Scotia and New Brunswick as a sure and certain safeguard against any reduction of the representation of these provinces. And Mr. Speaker, it would have been a sure and certain safeguard had it not been for the developments which have taken place since and which could not possibly have been foreseen at that time. They were far-seeing statesmen in those days, but how could they possibly have divined the wonderful development and growth of the Northwest Territories? Since that compact was entered into no less than five provinces have been admitted to the union with the result that that which was offered to the delegates of Nova Scotia and New Brunswick as an absolute safeguard against any reduction of their representation has been practically read out of the Act. Another thing which occurred after the confederation conferences which had its effect in altering the conditions, was the extension of the boundaries of the province of Quebec. Quebec was made the pivotal province so far as representation was concerned and the province of Quebec had the advantage of having a minimum representation fixed.

Mr. TALBOT. And a maximum as well.

Mr. CROCKET. And a maximum as well. But so far as Ontario and New Brunswick and Nova Scotia were concerned they accepted subsection 4 of section 51 as a protection in that particular. It was felt in the maritime provinces, as I think all members of the House will agree, that in order to have effective representation in the large federal parliament composed of upwards of 190 members there must be a minimum of representation fixed. It was felt in New Brunswick that to ensure effective representation of that province and the exercise of the fair influence to which that province was entitled in the confederacy, we should have at least fifteen members, and, the people of Nova Scotia in like manner felt they should have at least nineteen members. That was the representation which was assigned to these provinces at the union, with this saving clause, that there should be no reduction unless the proportion which the population of each of those provinces should bear to the aggregate population of Canada should be reduced by a one-twentieth part or over. Take the case of the last census; it is true that had the population of Canada been reckoned under the terms of that section as it was embodied in the original Confederation Act and made applicable only to the four original provinces: Quebec, Ontario, Nova Scotia and New Brunswick, neither Nova Scotia nor New Brunswick would have lost a member as actually happened.

It was only for the reason I have pointed out, that five new provinces have since been admitted to this union, that this result took place. I appeal to the hon. members of this House, if it strikes them as fair or equitable that that expression 'four provinces' in that section of the British North America Act should be construed to mean nine provinces. That is, however, just what the judgment of the Judicial Committee, of the Privy Council means. Although the expression 'four provinces' was used in that section on which we rely, the judgment of the Supreme Court of Canada held that in consequence, not of anything contained in the original Act to which we were parties, but of amendments having been made in it afterwards, with reference to which we had not been consulted, the meaning of the section was changed. I ask hon. members if it is fair or equitable that, although that was held, in the very judgment that has been referred to, to be the meaning at the time, we should be held bound by a change of that meaning effected by legislation to which we were not parties at all. My hon. friend from the city of St. John (Mr. Daniel) has stated, in his very able argument this afternoon, that the judgment of the court proceeded upon that ground; and in order that hon. members may see that his contentions were well founded, I am going to read a few brief extracts from the judgment of the judges of the Supreme Court of Canada. Perhaps I should first point out that the amendments to which I refer as having been subsequently made to this Act were the amendments made to the Imperial Act of 1871, the Act of 1875 and the Act of 1886. Mr. Justice Davies, in the course of his judgment, used this language:

After careful consideration of the whole Act, and its amendments, I have concluded that the expression 'four provinces' means and must be construed as 'several provinces.'

I have no doubt, reading into this Act those subsequent amendments, that that is a sound judgment, and that technically and legally Mr. Justice Davies was quite right; but I ask this House to consider this question, not upon strict legal grounds —because we all recognize that in strict law we are bound by this judgment—but whether that is a construction by which in equity we should be bound, when the courts of this country hold that the expression 'Canada', consisting of four provinces means for the purpose of the readjustment of our representation 'Canada consisting of nine provinces.' Further, he said:

If any reasonable doubts did exist as to the true meaning of the sections under review, this subsequent imperial legislation would seem to remove them.

That the judgment of Mr. Justice Davies was based, not on the original Confederation Act, but on the subsequent amendments which were made without the smaller provinces consenting thereto is abundantly clear from these extracts. Further on, Mr. Justice Davies said:

Upon the whole, after careful consideration, I am of the opinion that after the admission of new provinces and territories into the union, the expression 'Canada' and 'provinces' throughout the Act of 1867 must, unless specially restricted by the context, be necessarily given an interpretation different from that which they respectively bore before these provinces and territories were admitted.

Then there was the judgment of the chief justice, Sir Elzear Taschereau:

It may be well that the framers of the British North America Act have not foreseen or provided for every possible eventuality in the positions of the different provinces of the Dominion as to population or other matters; it may be that some provinces would have refused to join the union had they foreseen all the results that their adhesion to it is now ascertained to carry, but with such considerations we are not here concerned.

A very proper dictum in a judgment determining a matter on strict legal principles; but I ask hon. members of this House whether such considerations are those by which the parliament of Canada should be bound.

Now, I must express my very great surprise at the opposition to this resolution which has come from hon. members from western Canada. I was particularly surprised at the speech of my hon. friend from Assiniboia (Mr. Turriff), who frankly stated that he did not know very much about the legal aspect of the case, and I think that before he concluded he convinced the House that that statement was absolutely correct. What astonished me more than anything else was the threat which that hon. gentleman made that he would resign his seat in this House if this proposal were adopted. The hon. gentleman based his whole argument upon an assumption which I have shown was erroneous. He dealt with this matter as if the maritime provinces were appealing to this House as a matter of favour or grace. That is not the situation at all. It might possibly appear to be so from the terms of the original resolution, and I quite concur in the suggestion made by the hon. member for Assiniboia, that to be logical and consistent, we should ask for the restoration of the representation which was assigned to us when we entered the union. I think, from what has been stated so well by my hon. friend from the city of St. John (Mr. Daniel) and my hon. friend from the city of Charlottetown (Mr. Warburton), and from the quotations which I have read from the judgments of the Supreme Court, the hon. member for Assiniboia should recognize that we are not asking this matter as a favour. We are asking that a positive injustice which has been done to the maritime provinces in the matter of its representation be remedied by this parliament, and it is only upon that ground that such a request could be made. We think that has been fully established, and I have listened in vain for anything either in the speech of my hon. friend from Assiniboia or the speech of my hon. friend from Saskatoon (Mr. McCraney), which in any way meets the case which has been so well made out by the mover and the seconder of this resolution. Those hon. gentlemen spoke as if we were seeking to disturb the principle of representation by population and to alter the terms of the British North America Act. We are not seeking to do anything of the kind. We are asking to have restored to us a right of which we have been deprived by the amendments to the British North America Act to which I have referred, and by the admission of five new provinces into this confederation, which, under the meaning of that Act as it was passed and as it was accepted by the delegates from the maritime provinces, was never intended to enter into the calculation when the question of the readjustment of the representation in this parliament should be dealt with. I deprecate the position which my hon. friend from Assiniboia took. I do not think he breathes the spirit or gives voice to the sentiment of the west on this question. I know certainly of one hon. member from the west who, after hearing the very able speech of my hon. friend from St. John

(Mr. Daniel) this afternoon said that the latter had made out a good case and that so far as he was concerned he would, as a representative of the west, vote for it. I would put the question to my hon. friend from Assiniboia (Mr. Turriff) whether members from the east are disposed to deal with a question affecting the west in the same spirit as the hon. gentleman displayed this afternoon. If they did, what would become of this parliament? Can the hon. gentleman point to any occasion in which the east has shown any disposition whatever to treat the west with anything else than the utmost generosity?

Mr. TURRIFF. Has the west ever shown any disposition to treat the east with anything but fair play, justice and generosity.

Mr. CROCKET. It is not very often that representatives from the east demand anything from this parliament. This is one of the first things we have asked since I have been a member, and the first voice raised against that request is that of my hon. friend from Assiniboia (Mr. Turriff), and he is not content with simply opposing it, but threatens to resign his seat if it be granted. I do not know that I could retaliate by threatening to resign mine if it be not granted. I do not think that would have very much effect, but it would certainly create a very interesting situation if some of our good Liberal friends from Nova Scotia, New Brunswick or Prince Edward Island would threaten to resign if this measure of justice should be denied them. I have confidence in the fairness and the justice of this House upon questions that are not party questions, and I am convinced that members of this House who have studied this question and have followed the debate, must be themselves convinced that a case has been made out to which no adequate answer has been or can be made.

Mr. J. W. RICHARDS (Prince, P.E.I.). I wish to say a few words in support of the amendment moved by my hon. friend from Queens (Mr. Warburton). The question now under consideration has been brought up in this House on several occasions. I understand that in the session of 1907, and also in 1908, a lengthy discussion took place with regard to this question of representation. In the province from which I have the honour to come, it is one that has been agitating the minds of the people for a considerable time. You are all aware that Prince Edward Island was very reluctant to join confederation, and it was only after some years of discussion and considerable agitation that it decided to throw in its lot with the union. But there was one question standing out very prominently that is, the question of representation and we were not anxious to enter confederation unless we were assured that we would have six representatives in this House for all time to come. I do not think it necessary to read the despatches and telegrams which were passed at the time the negotiations were going on for the purpose of bringing Prince Edward Island into the union, as these have been already presented to the House and to the country. But there can be no doubt that the intention was to give Prince Edward Island six members for all time to come, and when, on the readjustment in 1891, we lost one member, there was very much dissatisfaction in our province. There was, however, a strong belief in the minds of the people that some measure would be taken to rectify what was considered an oversight on the part of our delegates in negotiating the terms of confederation. The matter went before the courts and ultimately to the Judicial Committee of the Privy Council. The decision was adverse to our contention, and now we can only look to the parliament of Canada for redress of what we consider was an error at the time and which is to-day a grievance. Should we continue to lose our representation in the same ratio as we have done in the past, it will not be many years before we shall have but one or perhaps no representative at all. I do not know what shall be done when that condition comes about; but if there be a desire to remedy this grievance, this is the opportune time to do it. Our Dominion census will be taken again in June, and after that time there will be no doubt redistribution of the representation in this House. The present would be, therefore, the best time for this parliament to take some definite steps and have the matter settled. It is not my intention to go over the ground which has been so well covered by the different speakers this afternoon. I rise only to place on record my views on behalf of my constituents in Prince county, Prince Edward Island. Time and again they have urged me to bring this matter before parliament; and in doing so I am simply discharging a duty which I owe those I represent, and I can only express the strong hope and conviction that this parliament will take such measures as will restore to the maritime provinces the representation they had when they entered confederation. In doing this, parliament would be accomplishing a graceful and generous act. It would remove a grievance and do an act of justice which would be very much appreciated and go a long way to remove the discontent now existing in the maritime provinces.

Hon. WM. PUGSLEY (Minister of Public Works). I think that perhaps it would not be out of place for me to make a few remarks on this very important question, more especially as my hon. friend who seconded the amendment (Mr. Daniel) has referred to the argument I made on the

subject while a member of the provincial legislature and also to the fact that I acted for the province of New Brunswick when the case was argued before the Judicial Committee of the Privy Council. In my opinion the way in which this matter should be presented is rather along the line taken by my hon. friend (Mr. Richards) than along that taken by my hon. friend from York (Mr. Crocket). My hon. friend from York said that a great injustice was done the maritime provinces, and he claims that these provinces were not here asking for a favour but demanding, as a matter of right, that a change should be made in the representation.

Mr. CROCKET. If my hon. friend will pardon me, I said we were demanding the restoration of a right of which we had been deprived.

Mr. PUGSLEY. I understood the hon. gentleman to say, and I think I understood him correctly, that it is not as a matter of favour, but rather as a matter of right that the representation should be restored to what it was. But it seems to me that my hon. friend from Prince (Mr. Richards) has put the matter on the only ground on which it can be put, and that is that it would be a generous thing for the larger provinces to recognize the dissatisfaction existing in the maritime provinces and which is bound to increase as our representation declines. It would be an act of broad generosity, for the larger provinces to recognize that fact, to deal in this spirit with the smaller provinces and to restore the representation to what it was at the time of confederation and below which the people then thought it never would fall. The reason that I say that it cannot be said that an injustice has been done to the lower provinces is that we have no right to complain of what is the interpretation given to the constitution by the highest court of the realm. Under confederation we have a supreme court for the whole Dominion constituted by virtue of the provisions of the constitutional Act, under which the constitution may be interpreted. The question of representation came before that court and that judgment was given. Appeal was taken to the Judicial Committee of the Privy Council and the Act was interpreted by that tribunal. We are bound by that interpretation; the smaller provinces are as much bound by it as the larger provinces; and no province has any right to complain when the constitution is being lived up to by the provinces of Canada. Therefore, it is that I say we cannot base our claim upon the ground that any injustice has been done to us. When I was arguing the matter in the provincial legislature, upon the occasion to which my hon. friend from the city of St. John (Mr. Daniel) refers, I was arguing in the light of the constitution as I interpreted it. But I was contending that, according to the true meaning of section 51 of the British North America Act, the 'four provinces' meant the four provinces of Ontario, Quebec, New Brunswick and Nova Scotia. I thought that was a fair and reasonable interpretation to give to those words. But the Supreme Court of Canada and the Judicial Committee of the Privy Council have held otherwise, and we cannot complain of the decision which these courts have given. It is the decision of the highest court in the empire and we are bound to regard that as a correct interpretation.

Mr. CROCKET. Was not the argument referred to made after the delivery of the judgment?

Mr. PUGSLEY. One argument was made after the delivery of the judgment, I think, at the time the resolution was passed. But, if I remember rightly, I made an argument before the case went to the Judicial Committee. Possibly an argument was made after, at the time of the resolution which was forwarded to this parliament and to His Excellency the Governor General.

Mr. DANIEL. In 1905 that was.

Mr. PUGSLEY. My hon. friend may have been referring to the latter argument. But I do not know that that alters the case. We cannot complain that any injustice has been done to us by reason of the interpretation that the highest court of the empire has given to the British North America Act. My hon. friend from the city of St. John (Mr. Daniel) said that the Judicial Committee of the Privy Council has given a decision which has taken away the rights of the maritime provinces, and that that decision was based on legislation put through this parliament by the present government. Now, I was sorry that my hon. friend put the matter upon that ground because I could not help thinking that he was seeking in some way to create prejudice against the present administration by reason of legislation which this government had asked parliament to adopt. If the decision of the Judicial Committee of the Privy Council rests upon legislation passed subsequent to the British North America Act, that legislation began in the year 1870, some twenty-six years before this government came into power——

Mr. DANIEL. I was quite aware of the time, and mentioned when these Acts were passed. I do not see how the hon. gentleman could understand me as having referred only to what took place after 1896. The thing was monstrous——

Mr. PUGSLEY. I am glad to hear my hon. friend's explanation. He said, not only once but twice, that the decision of

the Privy Council had been based upon legislation introduced into this parliament by this government.

Mr. DANIEL. This parliament.

Mr. PUGSLEY. The hon. gentleman used the word 'government' perhaps not meaning to do so. I am glad we understand each other. The first legislation was passed in 1870, when it was provided that a portion of Prince Rupert's land, should be carved out and created into the province of Manitoba. And, by section 2 of that Act, these words were used, and upon them the Judicial Committee of the Privy Council has laid some stress, as also has the Supreme Court of Canada.

On, from and after the said day on which the order of the Queen in Council should take effect as aforesaid, the provisions of the British North America Act, 1867, shall, except those parts thereof which are in terms made, or, by reasonable intendment, may be held to be specially applicable to, or only to affect one or more, but not the whole of the provinces now composing the Dominion, and except so far as the same may be varied by this Act, be applicable to the province of Manitoba, in the same way, and to the like extent as they apply to the several provinces of Canada, and as if the province of Manitoba had been one of the provinces originally united by the said Act.

The same language is used in the order in council admitting British Columbia into the union, and the same language was used subsequently when the provinces of Alberta and Saskatchewan were carved out of the Northwest Territories. Therefore, I think no particular responsibility can rest upon one party more than another so far as this parliament is concerned in reference to the legislation enacted here or by the imperial parliament. But, I think that, in considering as to whether or not the judgments of the Supreme Court of Canada and the Judicial Committee of the Privy Council are such as can properly be complained of we must bear in mind that they rest their judgments to a very large extent upon section 146 of the British North America Act which provides that Prince Rupert's land, British Columbia and also Newfoundland may be taken into the union and become provinces of the Dominion of Canada, and have held that it must be considered that, when the four provinces went into the union they went in with the full knowledge of the fact that Prince Rupert's land, British Columbia and Newfoundland as well might subsequently come into the union, also, that when they did come in, they must come in as if they had originally been provinces of the Dominion, and also that when they did come in the word 'four' should be held to be eliminated and the number be read as five, six, seven, eight or nine as the case might be, and that regard must be had to all the provinces of Canada at the time when section 51 and subsection 4 of that section were being interpreted. I do not intend to say very much more, but I would like to express my own opinion that, strongly as I feel upon this subject, strongly as I feel that it is desirable, not alone in the interests of the maritime provinces but in the interests of Canada at large, that the representation of these smaller provinces should not decline, and that in some way, if at all possible, it would be to the interest of Canada that the number should be restored to what it was at the time of confederation, yet I think it would be a most regrettable thing if this resolution were to pass. Suppose, as we can conceive it possible, this were to pass against the wish of the majority of any one of the provinces, it would be regarded as an attempt on the part of the representatives in this parliament to alter the terms of the constitution against the views of the majority of one of the partners to the compact of confederation. That would be a most deplorable result, and it seems to me that, if we are ever going to attain the wishes we have with regard to the representation of the smaller provinces, we must go about it in a different way.

This thought occurs to me, that possibly the proper way to go about it would be to do the same as was done when it was sought to secure an increase in the allowances which were made from the Dominion treasury to the different provinces of Canada. At that time all the provinces were consulted, at that time an interprovincial conference was held, at which representatives of all the provinces of Canada were present. After considerable discussion and deliberation, they agreed among themselves that it was desirable that the British North America Act should be altered as respects the subsidies to the provinces. They passed a resolution, which was submitted to this government, and as a result, a petition was sent to the Imperial parliament praying that the British North America Act should be amended, and that the basis of subsidies to the provinces should be altered. It is possible that some such course might be adopted with regard to representation. It is possible that if the governments of the smaller provinces were to make representations to the provincial governments of the larger provinces, they might be induced to hold a conference of the representatives of the different provinces of Canada, which might agree among themselves with regard to representation; they might pass a resolution and forward it to this government, with the request that it should be laid before parliament to be dealt with. I can well understand that if all the provinces of Canada were unanimous on this question, if they were all to agree

that the representation of the smaller provinces should be restored to what it was at the time of confederation, this government might feel it to be its duty to bring the matter before parliament, and parliament might feel it to be its duty to give effect to the unanimous resolution of the representatives of the governments of the various provinces. When the subsidies were readjusted, I remember distinctly it was stated in parliament that this was an agreement which had been come to by the family of provinces, that it was a matter for the provinces to deal with, they had spoken with united voice, and their voice ought to be heeded by this parliament. It may be that if the governments of the different provinces were to speak again with united voices in regard to representation, and if they should unanimously agree that the representation of the smaller provinces should be restored to what it was at the time of confederation, then this parliament could act upon such a resolution. But it seems to me that until that course is taken, it certainly would not be desirable, it would not be proper, and it would be entirely against the best interests of Canada, that the present resolution should be adopted by this House.

Mr. D. D. McKENZIE (Cape Breton North). At the commencement of this debate I had no idea that any such an element as sectionalism would enter into it. I am sure that there is no foundation for introducing sectionalism into this discussion; and if the hon. mover of the resolution, or the hon. mover of the amendment, has introduced any argument which might be understood as diminishing any of the powers or possibilities of the west, I am sure it was inadvertently and unintentionally, I do not remember that any such argument was used. But there must have been something that stirred up my hon. friends from the west to make the observations they did, particularly the hon. member for Assiniboia (Mr. Turriff). We in the maritime provinces believe that we have a good record behind us in respect to our feelings and actions towards the west. In 1870 they had some trouble in the west. I ask my hon. friends from the west: who were foremost in quelling the trouble that occurred in those days: Were not volunteer red coats from Nova Scotia to the fore in quelling that rebellion, and standing up manfully for the rights of the people of the west? In 1885 another trouble occurred in the northwest, and the same thing happened; the boys from Nova Scotia willingly and manfully volunteered to stand all the hardships that were necessary, to risk their lives within the zone of fire, defending the interests of the people of the west and the rights of Canadians. That is the record of our feelings and conduct towards the west. I do not think that if my hon. friends would read the history of those days, they would likely speak about us as if we had no interest in the west. Our interests in the west have grown very materially since those days, the number of our people who have gone to the west has increased during the last 20 and 25 years, and for that reason our love for the west and our interest in the west have proportionately increased as the years have gone by. For that reason, I think this idea of sectionalism must be wiped out, and anything that has been said along that line must be understood as not having been said at all.

The Minister of Public Works, distinguished and able lawyer as he is, will understand that there are many cases where the courts of law will find that a statute must be construed in a certain way, and that decisions will be given in such a manner as to take away rights and equities which were understood to be safeguarded by the principles and rules of the statute which is under interpretation. The learned Minister of Public Works no doubt knows that on several occasions, on scores of occasions, people have come back a second time to the legislature to get another enactment to take the place of one that had been legally construed by the courts, and so to change it that the original intention would be borne out by the subsequent legislation. That is very largely the position which is taken by the hon. mover of the resolution and the hon. mover of the amendment which are before the House, because there is very little difference between them. I submit, Mr. Speaker, that the principle adopted at confederation was not the principle of absolute representation by population. The principle of representation by population was only adopted, as some other things were adopted at confederation, subject to stipulations. For instance, in the British North America Act the subject of education is absolutely given over to the jurisdiction of the provincial legislatures. If you stop there, you would think that this House has nothing to do with the question of education. But you will find that the subject is hemmed in by certain conditions which make it impossible for a local legislature to legislate on the question of education as they may see fit, they must have regard to the stipulations attached to that particular proposition in the British North America Act. Upon the same principle, it is stated here in the terms of confederation that representation shall be based upon population; but if that were so without any restriction at all, what is the sense of this

subsection 4 of section 51? It would have no meaning at all. We must suppose that it was put there for a purpose, and the purpose which I see was that of safeguarding the smaller provinces against the effect of representation by population. We find that absolute representation by population would take away some of the privileges we had at confederation, and this was put in to safeguard them. That subsection 4 of section 51 was to be interpreted of course as it was then understood, together with the section which defines what Canada was territorially; and we submit that properly defining that section 4 which says Canada shall be, or as considered to be, we would still retain our representation; that is our contention. We say: Give this Act the reasonable and equitable interpretation which was put upon it by the fathers of confederation and we will not lose any members at all. Since then four has been converted into nine. Other conditions have come into consideration and the court of highest appeal in our country has said that this safeguard is not enough, it does not protect us at all when the aggregate is turned from the four provinces into nine. The aggregate is so great that five per cent or one-twentieth of the whole is not enough to safeguard our representation.

I say that purely in a court of equity and seeking equity as we come to this House, we have a right to say: If you have enlarged the aggregate from four to nine, you have a right to give us a safeguard in place of the insufficient old one that will protect for us and preserve for us the same ratio of representation which we had when we came into confederation. While that may be an absolutely bad argument in law, as it probably is in view of the decision of the Privy Council, it is a proper argument in equity to lay before this House in asking for fair and equitable treatment, and beyond that we are not looking for anything.

I could understand the disappointment of a member for any province if what we are seeking would deprive them of a single representative in any part of Canada. I cannot understand that it does, I submit that it does not. The unit of representation remains the same, that is all they need be concerned about. In Saskatchewan, Manitoba, British Columbia, Alberta or any other province outside the maritime provinces, disappointment might be caused if the unit of representation was to be disturbed. It is not to be disturbed and therefore they will get the same number of members whether we have less or more; it does not strike them in any way, their population will be divided by 65 as the Quebec representation is to remain fixed at 65. Therefore, the other provinces will get their number of members according as their population bears a ratio to the population of Quebec and they need not be concerned about where we are, it does not take a single member from them. I could understand further that if the number of members who are to constitute this House was fixed they would have reason to find fault, they could say: There is only a place for 181 members, as the original agreement provided, and therefore if there are 15 or 18 from Nova Scotia, there will never be room for us, and it is only fair that they should be put out in order to make room for our representatives. That is not the condition, and therefore that argument falls to the ground because there is no limit upwards to the number of members who may compose this House. Yet it may well be said that this House should not be constituted of a smaller number of members than the number named at confederation. Therefore, as the unit remains the same, as we must make room for the members in this House as occasion requires—a larger House must be built if necessary—no man need be afraid that any group or unit of his people will remain unrepresented, because we have the same number of members we had at confederation, or because there is no room for them in this House. Therefore, unless it be on the question of allowance to members or some expense attached to a greater number of members, I cannot understand where it in the slightest degree touches the right of any province or increases or lessens the number of representatives outside of the provinces asking to be dealt with in this amendment. For that reason I cannot appreciate the objections taken on the grounds that have been set forth by the hon. members for Assiniboia (Mr. Turriff) and Saskatoon (Mr. McCraney). I think it is fair to say that those fathers of confederation who came from the maritime provinces expected that they would have at least the same representation they had at that time. In my own province of Nova Scotia, we can readily understand why we had nineteen members. In those days we had a member from each county, and could not think of having less. The city and county of Halifax had two members. Therefore, our representatives from Nova Scotia agreed upon having the same number of members here that we had at that time. The political division of the province into counties had much to do with it. If we had had twelve counties I suppose we would only be looking for twelve members, and it was never intended that any of our counties should be deprived of their representation. When two counties are joined together in one constituency in Nova Scotia, it is looked upon as if one or both were to some extent disfranchised. If the old member for one county gets the united seat, the other part of the constitu-

ency feels itself more or less disfranchised. Take the county of Shelbourne, take the county of Victoria which I represent, and I think Pictou which formerly had two members. Victoria feels very keenly that it has been deprived of its member. If it can be done, without interfering with the rights of any other part of Canada, it would seem best for the sake of peace and harmony if that which was the intention of the fathers of confederation could be continued.

I would say to my hon. friends who object to the proposal we make—why do they sit in the House for one day with the condition in the Act in respect to British Columbia. I have not heard any one finding fault in respect to that province, and yet that is all we are asking, simply that the condition in the Act in respect to British Columbia, shall be applied to us in the maritime provinces. The representation in British Columbia can never be reduced below the number of members with which it came into this union. My friends in the west are right in touch with the province of British Columbia. They do not regard that provision as unconstitutional or as militating against them, and if that condition of things in British Columbia cannot be regarded as unfair to the people of the west, how can similar conditions concerning what we regard as our rights in the maritime provinces be regarded as in any way infringing on any rights they may think themselves entitled to under the constitution. We do not want in the slightest way to cause any friction in this country, but I think it is our duty to our people to lay our case before this House, the highest and last tribunal to which we as Canadians can come, and to ask the powers that be, in their wisdom, to deal with it as in the best interests of the country.

Mr. A. L. FRASER (Kings, P.E.I.) Mr. Speaker, the history of this whole matter has been so well set before the House by hon. gentlemen from the maritime provinces who have already spoken that anything I might say would be repetition, and as I do not believe in reiterating arguments which have already been forcibly advanced, my remarks shall be brief. This question vitally affects the interests of the maritime provinces and more especially my own province of Prince Edward Island. The hon. gentleman, (Mr. Warburton) who moved this amendment, has been for a long period of years identified with the public life of our province, and every unprejudiced mind must give great weight to any declaration which he may make concerning our provincial affairs. Let any unprejudiced man in this parliament ask himself: Would the fathers of confederation have entered the union had they known that conditions which at present face us would have arisen, and the answer must be, no. Read the correspondence, read the utterances of the public men of the period, read the newspaper comments, and in all these it appears most forcibly that were it known to the representatives of the maritime provinces at the confederation conference, that in time to come the representation of these provinces would be reduced, confederation would not have been accomplished. I am surprised at the attitude taken by the hon. member for Assiniboia (Mr. Turriff) and the hon. member for Saskatoon (Mr. McCraney) with regard to this motion. I believe that the western members are blessed with a spirit of fair play, and I know that if they study the question they must conclude that no harm can arise to their provinces by conceding that which we justly demand. All we ask is that the original compact upon which we entered the union be carried out in its spirit. The hon. member for Assiniboia said that the representation of the province of Ontario had been reduced since confederation, but I think he is mistaken in that; and that only the maritime provinces are in this unfortunate position. We appeal to the sense of British fair play of hon. members of this House not to allow this injury to be done to the maritime provinces, and we ask them to aid us in getting redress. Let me tell the government that this question will not be settled until it is properly settled; let me tell the government that this question will not down; and that the longer relief is deferred the more troublesome it will become. It may be—I trust the day will never come—but it may be that some day this will become a burning question between the east and the west. We do not seek to injure the west; we helped to build up the west, and we spent our hard earned money in that endeavour. We of the east opened up the west and gave these people the great advantages they now enjoy, and would it be unnatural that they should now seek to penalize the provinces that brought them into existence. When the Hon. Mr. Pugsley was in the New Brunswick government he took a very strong ground on this question, but I am sorry to see that to some extent he has receded from his then position. There are no two men in the House more conversant with this whole question than the Minister of Public Works and the Minister of Justice; because when the former was Attorney General of New Brunswick he urged the cause of his province, and the Minister of Justice himself was retained by the legislature of Prince Edward Island to plead our cause before the Privy Council of England. The Privy Council unfortunately decided against us, and now we appeal to this parliament to give us the equity we

are entitled to. The hon. the Minister of Public Works, in referring to this question, and mark you after the Judicial Committee of the Privy Council had decided against the contention of New Brunswick, used these words:

In the course of the argument before the Privy Council one of the law lords admitted that if Newfoundland should seek admission to the union she would have the right to stipulate as regards the terms and in respect to representation. How have our rights been taken away by the legislation of the Dominion. The only justification for it is that it was done by the authority of imperial orders in council or imperial statutes at the request of the government of Canada. When British Columbia was admitted into the union it was stipulated that her representation should be increased under the terms of the British North America Act, and that the Act should apply as if she had been one of the original provinces of the confederation. The same thing was done with respect to Manitoba. Now what has been the effect of this. It is that you must construe the British North America Act as if these provinces had been in the union in 1867. If that is so the compact of confederation has been violated by legislation and by orders in council without our being consulted. Surely the authorities at Ottawa should see that this wrong is remedied.

Now, Mr. Speaker, one of the authorities at Ottawa to-day is the Hon. Mr. Pugsley, who then declared that Ottawa should right this wrong, and, on this same subject the same hon. gentleman further said:

Therefore, when we raise the question of representation it is not that we are opposed to Quebec, but because we desire to preserve our rights and to maintain some degree of political influence in the east.

Again he said:

It does not seem to me that in view of the legislation which has already taken place, so seriously affecting our interests, and in view of what is now being done in connection with the legislation for the Northwest Territories, this government is yet doing its duty in asking the legislature to express its views and to endeavour to undo this great wrong.

These are the sentiments which were expressed in the year 1905 by the Hon. Minister of Public Works in the legislative halls of his own province of New Brunswick. Now that he is one of the authorities at Ottawa, I would expect, and I think we should all expect, that he will continue to entertain these views. I will close by asking the members of this House, if they are not prepared to vote in favour of this resolution now, to study the question, and they will find that there is nothing in the resolution to do wrong or injury to any other province in Canada.

Mr. CLARENCE JAMESON (Digby). Mr. Speaker, it is not often perhaps that a debate in this House drags out through so many hours as this one has so harmoniously, and I am glad to find that only two hon. members from the west have raised their voices in opposition to the resolution and to the amendment before the House. I think it speaks well for the modesty of demeanour and the mild-mannered disposition of the Bluenose brigade that they are able to introduce into this House a resolution of this character without, as far as it has gone, striking fire from any of the parliamentary flints which are not infrequently met with. With regard to the suggestion of the hon. Minister of Public Works that this question should be referred to a provincial conference, let me say that in my opinion it is one which is perhaps too much involved and too directly concerned with the maritime provinces alone, to permit of a solution at a conference of that character. It seems to me also that much valuable time might be lost by referring the question to such a conference. It would be some time before the conference could be summoned, and next year another census is to be taken and a redistribution will shortly follow. So that, while I do not wish to intimate, by any remarks of mine, that the hon. minister is not entirely sincere in putting forward this suggestion, it does seem to me, with all due deference to his opinion, that it would be merely postponing the question indefinitely, and the chances are that if a conclusion were reached by that conference, it would be an adverse one, and not such as one arrived at by the hon. members of this House, who are, it seems to me, the proper parties to adjudicate on this question.

The grounds on which we from the maritime provinces present this case are not legal, but equitable grounds, and we feel justified in putting forward this resolution on the following grounds among others. We consider that this parliament should right the wrong which it has already done. There is no doubt that the destruction of the saving clause in the British North America Act which was provided by the fathers of confederation has tended to bring about the very condition which is complained of in the maritime provinces to-day. Furthermore, there has been the enlargement of the boundaries of the province of Quebec, which has altogether altered the pivotal province, and which in the course of time will make the disparity in point of representation still more apparent than it is to-day. Then, by the amendment to the resolution, all provinces are to be treated equally—there is to be no advantage taken. Each province of the Dominion is to be placed in exactly the same position that British Columbia has been in since the time it was admitted to confederation, by having a minimum fixed below which its representation cannot fall. Again, the objection which

has been urged from time to time, and which has been advanced to-day, that the British North America Act should not be amended, seems to me to fall to the ground, because that Act has already been amended, and amended over and over again, and no serious objection to those amendments was raised at the time they were introduced into this House. Furthermore, it seems to me that the maritime provinces are entitled to fair and generous treatment at the hands of this parliament. My hon. friend who has just taken his seat (Mr. Fraser) has made brief reference to that, and I propose, during the course of the very few remarks I shall address to the House on this question, to refer again briefly to that feature of the case.

The right of adequate representation in the nation's council is a principle which is near to the hearts of all free-born citizens. It is one, too, which, history teaches, no governing body can well withhold and yet retain the esteem of the governed. I hope that it will never be the part of any government of Canada to deny to any section of this country that privilege and that right; and I say at this juncture that if the government of to-day were to say that this resolution shall pass, this resolution would pass. There can be no question about that. No hon. gentleman will raise the contention that if the government were to pronounce in favour of this resolution it would be defeated in this House. I am sure that my hon. friend from Assiniboia (Mr. Turriff) who intimated that he might retire from the House if the resolution were favourably received, was only speaking in a Pickwickian sense when he made that remark. Even at this distance, I think I detected a twinkle in his eye. He knows, as every other hon. member of this House knows, that there is an easy and natural course by which most gentlemen in time retire from this House, and in all human probability the hon. gentleman will find himself in due course retiring from this House in that manner. But I cannot think that the hon. gentleman was serious in that remark, and I believe he wishes us to take it entirely in a Pickwickian sense.

Now, at the time of confederation in 1867, there were four original provinces in the union—New Brunswick, Nova Scotia, Quebec and Ontario. At that time the representation of three provinces was temporarily fixed, and the representation of the province of Quebec was placed at 65 in perpetuity. In 1869 Canada acquired Prince Rupert's land, the Hudson Bay territory and the Northwest territories, paying some £300,000 for the transfer of that property. That sum to-day, a million and a half of dollars, roundly speaking, of our currency, does not perhaps seem very large; but in those days it was a very considerable sum, and it seems to me that the maritime provinces as well as all other provinces of the original confederation, being joint partners, were equally entitled, and stand equally entitled to-day, to what we might term partnership profits. It has been shown very clearly in this House to-day that the boundaries of the various provinces have been enlarged from time to time. Now, the province of Quebec in 1898 obtained an addition to its territory almost equal to the size of the original province. I would like to ask the right hon. the Prime Minister whether at the time the Act was put through this House the various other provinces interested in the original confederation were notified? The right hon. gentleman does not say whether that was the case or not; but I think that if they were not notified and if they were not given an opportunity to protest, such an opportunity should have been given them.

Sir WILFRID LAURIER. I did not know that my hon. friend wanted an immediate answer, and I have no objection to give my view of the case. I do not admit at all that when the boundaries between Ontario and Quebec and between Quebec and the rest of Canada were settled by statute in 1898, that was done with the view of increasing the territory of the province of Quebec. It was done to settle a dispute as to where the boundary was between Quebec and the rest of Canada.

Mr. JAMESON. I am not in a position to contradict the right hon. gentleman, nor would I do so, but according to the census returns of 1871, the area of the province of Quebec was shown to be some 193,000 square miles, and the area of Quebec to-day is stated as 351,000 square miles.

Sir WILFRID LAURIER. All this is conjecture. It never was asserted.

Mr. JAMESON. According also to the recognized maps of the period just following confederation, we find that the province of Quebec was very differently outlined from what it is at present. Further, let me read from 'Hansard' of March 30, 1905, a speech delivered by the hon. member for Qu'Appelle (Mr. Lake) in which he says, with reference to this very matter:

> If there is any doubt as to the statement I have made, I would like to lay before the House a few extracts from an order in council of the Quebec government, dated the 24th April, 1898, upon which the legislation was subsequently framed. Attached to this order in council is a report from Mr. E. H. Taché, assistant commissioner of Crown lands, who, after discussing the question as to the province of Quebec making a demand for that portion of the coast of Labrador which is under the jurisdiction of Newfoundland, goes on to say: The claiming of that territory

would result in serious diplomatic complications which the Dominion government certainly will not raise, but it seems to me that a compromise might be arrived at which will prove acceptable to all those interested. The claims under the old French regime, thus altered, would still include a vast extent of territory, which in extent and value would be a good equivalent to the territory claimed by Ontario. The claim might be framed in the following manner:

Mr. Taché then went on to define in detail the boundary line as it was finally adopted in the Bill passed by this parliament, and he said:

The definition of the limits means an increase in area of 116,550 square miles. In my opinion to go further, as far as the Hudson straits would be too grasping.

That is what I base my opinion upon. In 1908, a resolution was adopted by this House to add to the province of Quebec a portion at least of the territory known as Ungava, and at the same time to add to Ontario and Manitoba the southern portion of the very vast district of Keewatin. I only mention this to show that the province of Quebec has had its territory considerably enlarged, and that, should that additional territory become populated, the unit of representation will be changed and changed very prejudicially to the maritime provinces. Although to-day the land is barren and seemingly inhospitable, no man can say that in its icy grasp there may not be valuable minerals. Indeed we have fair authority for believing that there are, in all likelihood, gold and silver deposits, and even iron and coal there. One American professor, an enthusiast it may be, has gone so far as to say it probably contains diamonds. Well, we know what the discovery of any of these would mean. That discovery would be followed by development, and development means an increased population, so that there is nothing very improbable in the prospect of the addition of this territory considerably changing the unit of representation. To-day we are speaking hopefully of the construction of a railway to Hudson bay, of which no one 25 or 30 years ago would have dreamt the possibility. There is therefore no argument in saying that this territory is not likely to have a large population at any time, or may not figure in the representation to the extent of altering the unit. In this connection let me say that the maritime provinces have also some claim to this vast territory purchased from the Hudson Bay Company in 1869, for the sum of $1,500,000 and that in any further disposition of that territory the rights of the maritime provinces, as partners to the extent of their original partnership interest, should be recognized. The maritime provinces are sea-girt, so that their natural boundaries are fixed and determined and they cannot expand their

population by any extension of their boundaries. Therefore they are not likely to grow so fast as the other provinces. My hon. friend from Kings' (Mr. Fraser) has referred to the building up of the west at the expense of the east. No doubt if there had been no east, we would have no west. We know that opening up of the territories, the construction of the Canadian Pacific railway, and the vast inflow of immigration were things not fully contemplated when confederation was formed, and not considered in their great effect when the British North America Act was framed. But despite that fact a saving clause was put into the British North America Act, and it was only by the Act of 1886 that that saving clause was taken away, or its effect destroyed.

The fact that British Columbia was given a minimum of representation seems to me fair ground why we should ask for similar treatment for the maritime provinces. The argument that in order to do so we should change the unit of representation from Quebec to the maritime provinces does not seem to me well taken, and that is the only argument which can be put forward against the conceding of the very reasonable proposition advanced by the hon. gentleman who has moved the amendment to the resolution. It seems to me that for another reason too, the maritime provinces are entitled to fair and reasonable consideration from this parliament. At a time when the political fabric of old Canada was tottering to its very foundations, when the statesmen of the day were unable to find a common ground on which to uprear a lasting government, in fact when the very fate of the country seemed to be trembling in the balance, they looked to the Atlantic coast, there they saw the Atlantic provinces, their people happy, prosperous and progressive, their statesmen, wise, firm and far-sighted. The maritime provinces were called in to redress the balance of the old Canadas. Confederation became an accomplished fact, a firm and stable government was erected. The maritime provinces may be said to have saved the situation. That larger Canada gave to the statesmen of the day the courage and to this Dominion the resources and standing in the money markets of England to enter upon the great national undertakings which were then begun and are still going forward with giant strides. I do not think, Sir, that the people of old Canada or of the new west will deny to the maritime provinces who undoubtedly made sacrifices to render these things possible; that mead of recognition in this House which the founders of confederation evidently considered they should have. And I trust that the amendment to this resolution, for the various reasons advanced to-day, will carry, and that the matter will not be deferred as has been intimated.

Mr. T. S. SPROULE (East Grey). I think there is little doubt that most people of generous disposition will regard this question as one of equity rather than of law. While it may fairly be admitted that there are elements which have been brought into the situation since the original compact was entered into by the four provinces that disturb the relations of to-day and make them different from what they would have been had the original compact been adhered to closely, still I do not think there is anything in it that seems to give them a legal right—if a layman may be permitted to express an opinion on a question of law. to entitle them to the consideration asked for. But thinking it over it seems to me that the four original provinces might well claim that in our representation here we will adhere to the right which we secured at confederation of having our representation struck by the census of these four provinces, excluding all other provinces, and according to the unit of representation ascertained by dividing the population of Quebec on a basis of 65. Ascertain the unit of representation and by that means determine the number of members each of the maritime provinces should have. But I do not think that Prince Edward Island can claim the same right, because that province came in afterward, and the Act provides that any province which might come in afterwards would come in upon the terms of the agreement that was come to by its own legislature and the federal authority. Prince Edward Island came to some understanding, and that understanding was embodied in the agreement. That is, Prince Edward Island made its terms according to the judgments of its legislature and came in under that Act passed in accordance with those terms. And one of these terms was the unit of representation. It has been cited here to-night that when Manitoba, the Northwest Territories and British Columbia came in it destroyed the proportion. Well I think that is a fair and reasonable contention. I listened to the figures given by the hon. member for York, N.B., (Mr. Crocket) when he said that if representation had been given at the last decennial census, ascertained on the basis of the population of the four original provinces of confederation, Nova Scotia and New Brunswick would be quite satisfied. I think they have a right to claim that, regardless of what principle was adopted in giving the other provinces representation, and that it is not in justice to the other provinces if that right is conceded to them, for it is in their bond and they have a right to look for the fulfilment of the conditions of their bond. There is another thing, that has disturbed the relative strength of these provinces in this House. We provided for Manitoba, and Saskatchewan and Alberta taking a census every five years and having their representation rearranged according to the increase of population. The British North America Act provides for redistribution every ten years. Here is another element in this situation that disturbs the balance to the disadvantage of New Brunswick and Nova Scotia.

In view of these considerations, it seemed to me it would not be unreasonable or very much out of place if this parliament should take it up and give to these smaller provinces a proportionately larger representation than the larger provinces have. That is a principle that obtains in all deliberate assemblies. In our county councils in Ontario we provide that any township with a population of one thousand shall send one reeve to the county council; if it has more it sends a deputy reeve, if still more two deputy reeves; but the smaller townships are given a larger representation proportionately than the larger one. In the United States they follow the same principle in regard to the smaller states of the union, and in legislative representation, and in even the election of the President, they are given a larger proportionate share of power than the more populous states. That seems to be in harmony with the idea that the weaker shall have something to help them in addition to their own strength. I do not feel that the maritime provinces are depending only upon the number of their representatives or that the influence they exercise in the House is simply through the men who are sent here by the votes of the people of those provinces. For, as an hon. member has pointed out, many maritime province people have gone to Manitoba, Saskatchewan and Alberta and helped to develop that country, some of them have done so well that the electors of their several districts have sent them back here as representatives for those districts. I have no doubt that when they come here and take part in the deliberations of this House they will not forget the fact that they are natives of Nova Scotia, or New Brunswick, or Prince Edward Island and will exercise, it may be a silent, but nevertheless a potent influence on behalf of their native provinces in addition to the influence which they exercise as representatives of their constituencies in the west. So they have a little additional influence in this House beyond what mere numbers would seem to indicate. So with regard to the influence we have in the Senate. Come to the province of Ontario. Quebec wisely provided that her province should be divided up into various districts with a senator for each one. But we did not make the same provision in Ontario; therefore, in the rural districts, there are large areas which are unrepresented by a senator, and when you

speak of representing a given district, we have no representation in the Senate from any of those districts. But as the larger number of the representatives in the Senate reside in the cities, they are still representatives of the province, they have their interests in the various portions of the province and in making a calculation how many shall be in this House from the cities we do not give the same proportionate representation as the country districts Why? Because a large number of senators and members reside in the cities, they have the larger share of their property in the cities, and they look after the interests of the cities as well as of the rural districts. We have no rural districts represented in Ontario, in the same sense rural district are represented in the province of Quebec. The same remark applies to the maritime provinces, some of whose population has wandered off to the northwest, and are coming back here as representatives from those various districts. I think there is some thing in the enlargement of the province of Quebec as one of the disturbing elements, it is a factor at least that may be regarded as an element of the situation. The first minister said that it was only in 1878 that we determined what was the boundary line. Well, we passed an Act declaring it, but it was never determined, as it ought to be, by some tribunal established for that purpose. We determined the boundary line between Canada and the United States, not by an arbitration, but by men selected to ascertain where the boundary was. I have no remembrance that we ever appointed any commission of experts to determine exactly where the boundary was between the provinces of Ontario and Quebec; but we determined it by Act of parliament, and by so doing we enlarged very much the province of Quebec. It was admitted in this House that we were enlarging the province of Quebec, and when a desire was afterwards expressed to have the province of Manitoba extended it was said that we had enlarged the province of Quebec, but we refused to enlarge the province of Manitoba. We did not determine by any tribunal exactly where the boundary line was between the old provinces of Ontario and Quebec, but we made practically an arbitrary boundary by federal statute. In speaking now, I am saying very little with reference to the resolution except as regards the equity of the claim. It always did seem to me that there was some equity in the claim; and speaking personally, and judging by public sentiment, I do not think the larger provinces would be averse to conceding to the smaller provinces the right never to have their representation less than it was when they entered confederation.

Mr. SPROULE

Sir WILFRID LAURIER. I believe this day has been very profitably spent in discussing a question which is growing in importance to a certain portion of the Dominion. This is above all things a maritime question, it affects the maritime provinces. The resolution is intended to deal exclusively with the maritime provinces. It reads thus:

That in the opinion of this House the maritime provinces of Canada should have preserved to them the representation in the House of Commons that they now enjoy. That in the redistribution of constituencies to be made after the next decennial census the number of representatives to be returned from the said provinces should not in any case be reduced.

This motion has been prompted by the fact that as a consequence of the two last censuses the representation of the maritime provinces has been decreased on each occasion. Prince Edward Island has lost one man, Nova Scotia has lost four or five, and New Brunswick three or four. If that motion had been adhered to, I think it would have been more favourably received than it can be with the amendment added. The amendment which is to take the place of the original motion, reads thus:

Each province of the Dominion of Canada shall have as a minimum representation in the House of Commons the representation it had upon becoming a province of Canada, and in the redistribution of constituencies to be made after the next, and after every decennial census, the representation of each province shall not be any less than that minimum.

I never heard any expression of opinion asking for a change in our present constitution except from the maritime provinces. I do not see any reason why there should be such a change applied to Ontario, or to any other province. I can see some reason why such a change should be made with regard to the maritime provinces. Therefore, so far as my judgment goes, the only way in which it can be approached is on the lines laid down by my hon. friend the Minister of Public Works, and repeated by the hon. member for Grey (Mr. Sproule), that is to say, that the maritime provinces, in view of the peculiar position which they occupy, ought to command a generous treatment from the other provinces. Now, I would like the House to remember that confederation was a compact originally, and must remain a compact between province and province. When the first four started the work of confederation together they agreed upon certain conditions. I have listened carefully to this debate, with the exception of a little time when I was called out; I have listened to the arguments which have been brought forward by hon. gentlemen who have spoken to the resolution. They have

not all been conducive to the resolution, and some of the arguments in support of the amendment have been conducive to the motion. I must say that I differ altogether from the arguments of my hon. friends from the maritime provinces when they assert that they are labouring under an injustice. I cannot see where the injustice lies. They say the injustice lies in the fact that when they entered confederation it was stipulated that the unit of representation should be the representation of the province of Quebec, which was then apportioned between four provinces, and that the unit of representation has been changed by the fact that it is now apportioned between nine provinces instead of four. Now, if there is one thing more certain than another, it is that historically there is not a shadow of doubt that when the four provinces of Ontario, Quebec, Nova Scotia and New Brunswick, made the original compact of confederation, they had no idea that the Dominion would always be composed of those four provinces only, they certainly contemplated that other provinces would join them. Section 146 makes this as plain as it can be:

It shall be lawful for the Queen, by and with the advice of Her Majesty's most honourable Privy Council, on addresses from the Houses of the parliament of Canada, and from the Houses of the respective legislatures of the colonies or provinces of Newfoundland, Prince Edward Island and British Columbia to admit those colonies or provinces, or any of them, into the union.

Therefore when the four provinces made the original contract it was contemplated that Prince Edward Island should come in, that Newfoundland should come in, that British Columbia should come in. When each one of these provinces was to come in under, what terms and conditions was it to come in? It was to come in under certain terms and conditions to be agreed upon by themselves but always subject to the original contract. These are the very words:

On such terms and conditions in each case as are in the addresses expressed and as the Queen thinks fit to approve, subject to the provisions of this Act.

What was one of the provisions of this Act? One of these provisions, and it was an important one, was in regard to this very item of representation. How was it to be done? Every time that a new member was joined to confederation, an apportionment was to be made on the unit determined by Quebec, but to be apportioned between four, five, six, seven, eight or nine provinces as the case might be. Provision was made for the admission of the three provinces then in existence, and provision was made also for the acquisition of Rupert's land and the Hudson Bay country, and with what object? With the object, accomplished since, of making provinces, and it also has been determined legally by the Privy Council and historically that what had applied to confederation was to extend to the provinces, that every new province coming in was to have the same rights, privileges and restrictions as the other provinces.

The difficulty, however, has arisen from this point, that the provinces by the sea have not developed as rapidly as the other provinces. You would not hear of this motion being made to-day if the provinces by the sea had developed as rapidly and had been able to keep their representation. But Quebec moved more rapidly, Ontario and the other provinces in the western part of the country all moved more rapidly, and the consequence was that as every other province had its representation increased, the representation of the maritime provinces was decreased. They ask for some remedy. They cannot have it in law, they cannot have it, so far as I can see, in the arguments which they have advanced. The only way in which they can have a remedy is, as I said a moment ago, to apply to the other provinces, more potent than they are, with larger representation, to give them some equivalent to what has been given to British Columbia. The members from the maritime provinces must remember that representation by population was a bone of contention in the provinces of Ontario and Quebec for something like 20 years. It did not bring on a revolution, but it almost brought on a revolution, and at last it was conceded that no fairer and no more equitable principle with regard to representation could be found than population. What principle can be fairer than every province which is represented on the floor of this parliament should be represented according to the number of its population? It is impossible to find or to imagine a principle more equitable than this one. And you propose now to limit it. In what way? In regard to the other provinces. I very much doubt if the other provinces would agree to limit it in any way, and moreover, I say to my hon. friends from the maritime provinces, that the principle is fair and equitable and cannot be gainsaid on that ground. But it is another story if you say to me: The provinces by the sea are small compared with the others, they have not the same opportunity of expansion as the others have, they cannot extend their territory, they are necessarily limited; the territory of Quebec, Ontario, Manitoba, and the other provinces, can be increased because there is a large territory behind them, but the provinces by the sea are cramped, and therefore they cannot increase, and it can be claimed in equity or fairness that it is not a matter of concern to the other provinces, if their representation is kept up to the

limit as at the time of confederation, because the other provinces have become so large that even if the maritime provinces are granted that small privilege the balance between province and province would not be seriously affected and the preponderance of one province over the other would not suffer. This is a view with which, for my part, I would be disposed to agree, but I have to say also that there is great force in the contention of my friend, a force absolute, a force paramount in my judgment, that it would not be in the right spirit of the Confederation Act that the parliament of Canada should undertake to disturb in any way the principle laid down in the British North America Act as to the representation of every province in this parliament unless the other provinces have been consulted. I do not think, for instance, that an amendment of this kind should be taken up by this parliament unless all the other provinces had had an opportunity to express their opinion on it, and for this reason I think it is well that we should pause and look about before we go further into this.

I may repeat that I welcome this discussion. I am sorry that the time has come now that we must adjourn, because I would like to hear more about it. I am sorry that we have not heard from the other provinces. We have not heard from Ontario or Quebec, we have heard from only two of the provinces, other than the maritime provinces, and, therefore, I move the adjournment of the debate.

Motion agreed to, and debate adjourned.

ADJOURNMENT—BUSINESS OF THE HOUSE.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. R. L. BORDEN. I understand that the Minister of Railways is to make his statement to-morrow?

Sir WILFRID LAURIER Yes, the Minister of Railways and Canals, in view of the fact that Mr. Butler, the deputy minister, has taken another position, would like to dispose of the estimates. He will premise that with the usual statement in regard to the railway. The discussion on that may possibly take more than one day. I had intended to take up the Naval Bill on Wednesday, but in case this other debate is not concluded to-morrow, I propose to take it on Thursday next.

Mr. R. L. BORDEN. It does not appear that there is any provision for a report by the present board of management of the Intercolonial railway. That is due, I presume, to the fact that the board has been constituted under the general powers of management conferred upon the Minister of Railways and Canals by the Act respecting the Intercolonial railway. It would be desirable, it seems to me, that such a report should always be presented to parliament. That is merely a matter of administrative order by the minister, assuming he has the power under the statute to which I have referred. No such report has been laid before us up to the present time, and I trust that the minister, when he makes his statement, will at least give us every item of information which might reasonably be expected if those commissioners were bound under the terms of the statute to make a formal written report to parliament

Sir WILFRID LAURIER. I shall call the attention of my colleague to the matter.

Motion agreed to, and House adjourned at 10.45 p.m.

HOUSE OF COMMONS.

TUESDAY, February 1, 1910.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 128) to incorporate the James Bay and Eastern Railway Company.—Mr. Girard.

Bill (No. 129) to incorporate the Ontario and Ottawa Railway Company—Mr. Low.

Bill (No. 130) respecting the Vancouver Island and Eastern Railway Company.—Mr. Ralph Smith.

PURE FOOD ACT.

Mr. J. A. CURRIE (North Simcoe) moved for leave to introduce Bill (No. 131) respecting pure foods.

Mr. TEMPLEMAN. Explain.

Mr. J. A. CURRIE. Pure food is now attracting world wide attention especially in respect to the conditions under which food is prepared for human consumption. The United States, the Australasian colonies, Great Britain herself, all civilized countries are legislating in the direction of securing the purity of food. In Canada we have the Adulteration of Food Act, and we have the Canned Goods Act, and we have the Inspection of Foods Act, all directed more or less towards this object, but to any one who has studied the subject it would appear that something is still wanting. This Bill among other things proposes to provide legislation for the establishing of standards of pure food, and in drafting the Bill I have endeavoured not to intrude upon the prerogatives of government by placing any charge upon the public or interfering with any trade. I trust the Minister of Inland Revenue, under whose jurisdiction

such matters come, will give this Bill careful consideration. My only regret is that some medical man who may understand the matter better than I, is not in charge of the Bill. This Bill provides that it shall be called the 'Pure Food Act', and that it shall be read and construed with the Adulteration Act, the Canned Goods Act, and the Inspection and Sales Act, and, following the precedents set by the legislature of Victoria it to some extent consolidates these Acts relating to pure food, and provides a uniform law on the subject. Under the heading of 'interpretation', the chief point is the definition of the words 'article of food' and for the purpose of this Bill an article of food is defined to be every article used for food or drink by man. Then, the Bill provides, similar to existing legislation, that an officer may enter upon and examine premises, and 'an officer' for the purpose of this Act is interpreted to be an officer under the meaning of the other Acts to which I have referred. The provisions with respect to seizure and so forth are similar to those in the Inspection and Sales Act and the Adulteration Act. This provision is made because there may be included in the standards fixed under this Bill certain things which are not contained in our present legislation.

Another clause provides that food put up for sale must bear a legible stamp or stencil mark, giving the name of the article, the quantity, measure, volume and so forth, and the name and address of the vendor or maker. The package must have on it, placed in a prominent position, in prominent letters, the words ' prepared under the regulations and standard of the Canadian Pure Foods Act.' The purpose is to give in a larger measure a guarantee to the public that these articles are properly prepared. I find that other countries compel manufacturers to place a guarantee of this kind on their exported goods, so that it gives to the foreign consumer a certain guarantee of their quality. I desire that we should have the same law here, so that any foods or other articles of food that we sell abroad will carry with them a stamp of a pure food law of our own, such as is carried under the laws of the United States and Australia. The next subject that is dealt with is how samples should be taken in packages. Another clause concerning witnesses, provides that a witness need not be compelled to disclose where he obtains his information, also making a provision where and how an officer may purchase samples. Then another clause provides that the prosecution must be instituted within forty-two days after the information has been given, that is to limit the prosecution to a certain specified time. Then again when a person is summoned under this Act the summons is not returnable for fourteen days. The next clause perhaps is one of the most important and defines what is meant by adulteration.

For the purposes of the Pure Food Act an article of food or substance or compound or other article shall be deemed adulterated or falsely described,

(a) When it contains or is mixed with or diluted with any substance in any quality to the prejudice of the purchaser or consumer, or in any proportion which diminishes in any manner its food value or nutritive properties as compared with such article in a pure or normal state and in an undeteriorated or sound condition,

(b) When it contains or is mixed with or diluted with any substance of lower commercial value than such article in pure or normal state and in an undeteriorated or sound condition, or

(c) When it does not comply either wholly or in part with the standard therefor prescribed under this Act by any regulation, or

(d) When it contains any substance prescribed as a prohibited addition, or

(e) When it contains any substance concerning which any restrictive regulation has been made in excess of any quantity or proportion permitted by any such regulation, or

(f) When it contains methyl alcohol, or not having paid customs or excise duty, it contains more than two parts of proof spirit per centum, or

(g) When any article of food or other article or substance or compound in any package is described by any stamp or stencilled or impressed or printed or written statement or claim or brand or covering or label or mark or tag purporting to name or indicate the nature or quality or strength or purity or composition or origin or age or proportion of any article of food or ingredients or substances contained therein, which statement, claim, brand, covering label, mark or tag, is false or incorrect or misleading.

This clause in the Act virtually follows the Australian and American law. The next clause takes up the question of the addition of certain injurious drugs to liquors and wines, and provides that certain dangerous ingredients shall not be contained in them, such as cholorides, sulphites, sulphuric acid and other substances of that nature. The next clause deals with the quality of the tin which is supposed to be used in putting up a package, and makes provision against there being a dangerous quantity of lead in the covering or package. The next clause deals with toys, wall paper and articles of that kind, and provides that there shall be no arsenic in the paint used on them. Then another clause deals with the matter of use of dangerous compounds in wall paper, leathers, and so forth. This provision against the use, for instance, of arsenic and lead, is contained in the statute-books of other countries, and is borrowed largely from them. The principal clause deals with the question of who shall

fix these standards, and that is perhaps the most important section in this Act. It reads thus:

The Governor in Council may appoint for the purposes of this Act a pure foods standard commission.

(a) Such commission shall be composed of fifteen members. The chief analyst of the Dominion shall be a member and shall preside as chairman of the commission.

(b) The other members of the commission must hold the position for the time being or have held the position of professor or teacher of any one of the following subjects in a recognized university in the Dominion of Canada, chemistry, biology, materia medica, physiology, agriculture, sanitation, bacteriology, veterinary science. The said members shall be appointed from the following faculties: One from a university in Nova Scotia, one from a university in Prince Edward Island, one from a university in New Brunswick, one from the University of Laval, one from the University of McGill, one from the University of Queens, one from the University of Toronto, one from the Western University of London, one from a university in Manitoba, one from a university in Saskatchewan, one from a university in Alberta, one from a university in British Columbia, and two provincial medical health officers.

The commission shall have power to fix a standard for foods and drugs, and to establish regulations. In the United States this commission is composed of three officers of the government who frame regulations and fix the standard. There has been considerable difficulty and controversy over these standards, and in order to avoid any theories or fads in the establishment of our standards, I think it would be wise for us to have a board of experts as large as possible, and composed of men who would be above reproach in any possible way. I think the commission I have suggested in this Bill would be well qualified to fix the standards on those articles mentioned in the Bill, and they would remove any onus from the department or officers connected with the department. The public at large could have every confidence in this commission who had fixed these standards.

There are other clauses which provide that the commission shall meet twice a year, and that the commission shall be called on notice of the chief analyst for the purpose of considering the advisability of placing some new article on that standard or of changing the present regulation.

Those, Sir, in substance, are the main provisions of this Bill. I trust the Minister of Inland Revenue will take it into his favourable consideration, and will adopt if possible some of its provisions and incorporate them in our present law. At present the standard is fixed under the Adulteration Act, and virtually it is the chief analyst whose duty it is to fix the standards. The Act has been on the statute-book for many years, and we have had no standards as the law says we shall have. The duty of fixing the standards being placed upon the shoulders of one man exposes him possibly to attack from manufacturers on the one hand, and also to attack from the public on the other. For that reason I think the commission as proposed here would lead us wisely out of the difficulty. The Australian law provides for a commission established on a similar basis, and it has received the commendation of those who have given consideration to the matter of pure foods in other countries, and other countries have followed a similar plan. I think, Sir, that the matters dealt with under this Bill are of sufficient importance to the people of Canada to merit that the Bill should be considered in committee, to see if we cannot arrive at some better method of securing a high quality of foods in this country than we have at present.

Mr. TEMPLEMAN. Mr. Speaker, it would be premature to discuss the Bill, as explained by the hon. member for North Simcoe (Mr. Currie), at the present time. When it is printed and circulated and when we have had time to study its provisions it will be the proper time to give that consideration which my hon. friend asks for it. But, as my hon. friend explains the Bill, it seems to me, that we would require to amend or repeal the Adulteration of Foods Act. The most important provision in the Bill, as explained by my hon. friend, is that providing for the establishment of standards for foods. In the present Adulteration of Foods Act, as my hon. friend has just stated, there is power for the Governor General in Council to establish standards of food and if the Adulteration of Foods Act in Canada has not been that success that it might have been it is due to the fact that standards of food have never been established. But, for some months the chief chemist of the department has had the question under consideration and food standards are now being prepared and will be in force, under the present Adulteration of Foods Act, I think, on the first of April next. These standards embrace 500 or 600 articles of food. It has been a large undertaking for the chemist of the department to prepare these standards, but I am hopeful that as soon as the manufacturers of food stuffs in Canada and others interested have been apprised of what these standards are going to be, and as soon as the standards are properly prepared they will be enforced. I just want to state that at the present time under the Adulteration of Foods Act the department is preparing to put into force what is apparently the most important provision of my

hon. friend's Bill. However, after the Bill is printed and circulated we will have a better opportunity of considering it.

Motion agreed to, and Bill read the first time.

RATIFICATION OF FRENCH TREATY.

On the orders of the day being called:

Mr. FIELDING. Mr. Speaker, before you proceed with the orders of the day, may I have your permission to state that a telegram has been received announcing that the exchange of ratifications of the Franco-Canadian treaty took place this day at Paris and therefore the treaty is now in operation.

INQUIRIES FOR RETURNS AND PAPERS.

Mr. U. WILSON. I would like to inquire about a return with reference to immigration agencies that I moved for on the 18th day of November. The minister, a few days ago, said that it had been brought down long ago, but I made inquiry this morning and found that it has not yet been brought down.

Mr. FIELDING. I will call the attention of the hon. Minister of the Interior to it.

Mr. R. L. BORDEN. I would like to ask the hon. Minister of Finance (Mr. Fielding), in the absence of the right hon. the Prime Minister, whether or not there is any answer to the inquiry made by my hon. friend from North Toronto (Mr. Foster) yesterday with regard to further documents touching the question of naval defence. I would like to know whether all the papers relating to the recent defence conference have been brought down, whether there have been any subsequent correspondence or communications, which, in the ordinary course, would be laid before the House for the purposes of a debate upon the second reading of the Bill. If there are any such documents or communications I think they should be laid on the table of the House not later than to-day in order that we may make ourselves acquainted with their purport before the debate takes place on Thursday next.

Mr. FIELDING. I will see that the attention of my right hon. friend the Prime Minister is called to the matter as early as possible. I have no doubt he has given his attention to it, but unfortunately he is not very well to-day and unable to be present, but I will see that his attention is again called to it, so that if there are any additional papers they may be brought down.

Mr. R. L. BORDEN. If the Minister of Finance would be good enough to communicate with him as early as possible I would be very glad; or, perhaps the hon. Minister of Militia and Defence (Sir Frederick Borden) is acquainted with the circumstances and can answer my question.

Sir FREDERICK BORDEN. My impression is that all the papers have been brought down. Precisely the same papers have been laid on the table of this House as were laid on the table of the House of Commons in England. The conference was secret, as was announced at the time, and so were the meetings of the subcommittees of the conference and unless some correspondence in reference to certain ships which have been under consideration may be in my hon. friend's mind I do not think there is any thing whatever connected with the conference per se which has not been laid on the table.

Mr. R. L. BORDEN. I do not know of anything except that we would like to have the definite assurance that every thing which ought to be brought down and which in the ordinary course would be brought down has been laid before the House.

Sir FREDERICK BORDEN. I will look into that myself to-day.

Mr. JAMESON. I wish to draw the attention of the minister in charge of the Department of Marine and Fisheries to return (No. 82) respecting the salmon fisheries of Digby county. I find that this return as brought down is incomplete. I know that certain investigations were had subsequent to the conclusion of this return, and I would ask that the return be completed as early as possible.

Mr. FIELDING. I will call the attention of the acting minister to the hon. gentleman's request.

SUPPLY—INTERCOLONIAL RAILWAY.

Mr. FIELDING moved that the House go into Committee of Supply.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). Mr. Speaker, according to custom, I propose to make a few observations on the work of the Department of Railways and Canals including that branch of the department's work, so much talked about, the Intercolonial railway. I wish in the beginning to note the regret I feel at the withdrawal from the public service of Mr. Butler, the able deputy and chief engineer of the department. In the few years he has been in the department he has made good, if I may be allowed that expression, and his efficiency in every

branch of his work is acknowledged. But perhaps above and beyond that is the fact that his sterling integrity and unswerving devotion to the public interest are conceded by every person. It is too bad in the public interest that we are not able to retain the services of such men because a question of salary, certainly, in reason, is not to be considered, because the difference between a capable and honest man and one who might lack either one or the other of those qualities, might mean an entire year's salary in one transaction in that department. However, Mr. Butler's ability and knowledge have been recognized by a great corporation, he has engaged with them and will leave the department in a few days I have appointed in his place as deputy minister, Mr. Archibald W. Campbell, who is well known, particularly throughout the province of Ontario. Mr. Campbell is an engineer of standing and for the past few years has been deputy Minister in the Public Works Department of the provincial government. I know Mr. Campbell personally, and he has an excellent reputation, both for ability and honesty, and I believe that in him I have secured a deputy minister who will give good service to the country. I intend to make a change in the officials of my department to the extent that Mr. Campbell will act as deputy minister and a chief engineer will be appointed, separate and apart from the position of deputy minister. I propose also to make Mr. Campbell, chairman of the Board of Management of the Intercolonial railway, of which I shall speak in a few moments.

Mr. LENNOX. What will be the difference in cost by reason of dividing the position?

Mr. GRAHAM. It will depend on the salary I will be compelled to give the new man as chief engineer. Mr. Campbell's salary as deputy is regulated by the Civil Service Act and will be $5,000. Mr. Butler, as chief engineer, receives $3,000 in addition to the $5,000. I may say frankly that I have no anticipation that I can get a chief engineer of the ability required for the position for anything like the difference between $5,000 and $8,000. I propose to look about and see what I can do, and then I shall lay before the House an estimate for the amount for which I think we can get a chief engineer.

Mr. FOSTER. What experience has Mr. Campbell had on railways?

Mr. GRAHAM. Previous deputies of the Department of Railways and Canals have had very little experience in railways, and as deputy he would not need to have any experience in railways other than being a good business man. When the Temiskaming and Northern Ontario railway, that is the Ontario government railway, was constructed, the construction was undertaken through a commission, and that commission originally was under the Public Works Department of Ontario. The present commission reports through that department. In the original construction, I think Mr. Campbell as deputy—I am speaking from memory—had a good deal to do in the department with the detail of the construction, not of the actual work but of the returns. So far as I know that is all the experience he has had in railway work.

In approaching the question of transportation, we enter upon a very large subject. Canada has undertaken very large things in the way of the solving of the problem of carrying the produce of the people at as fair a rate as possible, but the work that she has begun and has now in contemplation does not by any means mean the completion of what she will have to undertake. I shall not detain the House further than to say what I have said before, that I believe the Canadian people have shown greater courage than any people in the world in this direction, and that in the years to come and even now, we are reaping the benefit. But the present benefit is nothing to what the people to follow us will reap in this country from the amount of money we are now expending in solving this great question. I look forward to the time, I think with some degree of reason at least, when Canada will do a large proportion of the carrying trade of this continent. We will not only carry our own goods from west to east and east to west, but will, on account of our situation and the natural advantages we enjoy, be enabled to make a successful bid for a large portion of the carrying trade of our neighbours to the south, because business men accept the best offers they can get for transportation as for anything else; and I say again that I look to the time when Canada will do a large portion of the carrying trade of the continent of America.

I shall not go into generalities, but wish to state a few concrete facts in connection with the work of transportation. During my visit abroad last summer I took occasion to visit the great Kiel canal in Germany. This is, if I remember, the only canal in Germany owned by the state, or at least the only large one. The great majority of the canals in Germany and other countries of Europe are owned by private companies. Some of them are owned by county councils, some by railway companies, which is a somewhat anomalous position when we consider the fact that canals are supposed to be rivals of railways and to reduce the cost of transportation. I visited the Kiel canal, a very large work about 61 miles long. It connects the

Baltic sea with the North sea and is used for the transport of the smaller war vessels, and the great improvements being made in it is for the purpose, I believe, of enabling the German government to move their larger warships from ocean to ocean. The length of the locks they propose to make in the new canal will be approximately 800 feet, and the locks will be 150 feet wide and 42 feet deep. This is looked upon as a very large enterprise and it is, but, Sir, when we look at some of the enterprises that are staring the Canadian people in the face, I think we might well say that Canada has engineering problems that she has undertaken and others that she will shortly undertake that will compare favourably in magnitude with even the great Kiel canal which the German government is building. The question of smaller canals in Germany is one that is attracting the very close attention of the German government. They have plans now prepared to practically make a network of canals all through the German empire. But, as I said a moment ago, they are not built by the state or the government, they are largely owned by private corporations, and in some instances by county councils. They build them in canalized rivers, they build small canals connecting lakes, and also build them where there seems to be practically no communication, in order, as one gentleman pointed out to me, to give manufacturers an opportunity to extend their operations out on these cheap waterways, away from the cities, away from the larger taxation, and the other troubles that they have in cities. The manufacture of coarser goods, such as brick, &c., is said to be greatly assisted by the construction of these smaller canals.

Mr. FOSTER. Did the minister find any like the——

Mr. LENNOX. —the Newmarket canal?

Mr. GRAHAM. My hon. friend is getting anxious again. Another point that struck me, and here I think Canada will stand fairly well in the comparison, is that I did not find a canal in the countries I visited owned by any of these people which was free like the Canadian waterways. We have shown greater courage in making our canals free than any of these countries. In Germany, and in England as well, the rates in many cases were high. On one canal the rates were five cents a ton besides harbour dues charged for loading and unloading in harbours constructed along the canal. On another canal the rate went to seven cents a ton, and these canals are run both for the benefit of navigation and as investments. In most instances they pay a small interest on the investment. I point these things out to call attention to the fact that in that respect Canada has shown greater courage than any of these older countries by spending millions upon her canals and throwing them open to the commerce of the North American continent. I also took occasion to visit the great Manchester ship canal, which is about 60 miles from the sea; but even at that distance Manchester is made an ocean port. But I wish to draw attention to the fact that Montreal is now an ocean port, though a good many miles farther from the ocean than Manchester. We have spent millions of dollars in making Montreal an ocean port, and in that again we have shown courage for a young people. Taking our expenditures on our railways, our canals and our waterways generally, it is not at all out of the way to say that Canada has shown greater courage than any other country in the world in the amount of money she has expended per head of the population for carrying out these great works.

With regard to our canals, we have all heard the discussions pro and con upon the Georgian Bay canal and the Welland canal. The opinion of the government as to these is pretty well known. I might state here that there is now being urged the necessity, owing to the great increase in canal traffic in this country, of building another lock at the Sault. Allow me to make a guess, which will not be considered an educated guess on my part, that this will cost the country from $8,000,000 to $10,000,000. That lock, if constructed, ought to provide for a depth of from 25 to 27 feet, because it would be folly to half do the work, when in a few years we would have either to deepen the lock or build a new one.

A few words of statistical information. The canals of Canada in 1909 carried perhaps the largest volume of traffic in their history. The freight which passed through amounted to 33,720,748 tons, as compared with 17,502,820 in 1908. This was an increase of 16,217,928 tons, or 93 per cent in one year. To give an idea of the measure of increase in the freight traffic through our canals, let me state that three years ago the total traffic was only 10,523,185 tons, and ten years ago it was only 5,013,693 tons; so that last year it was nearly seven times as much as it was ten years ago. Of the traffic of 1909, 27,976,399 tons was eastbound and 5,744,349 westbound.

Mr. FOSTER. Has the minister the proportions of Canadian and foreign?

Mr. GRAHAM. I have not the figures, but I can state generally that while we carried a large amount of American traffic, the proportion of increase of Canadian traffic has been equal and perhaps a little more than that of American traffic.

In this connection I may be allowed to call attention to Port Colborne and the Port Colborne elevator. The harbour at that point was originally an open roadstead which was at the mercy of the sea, and it became absolutely necessary to protect the harbour if it was to be used as an entrance to the canal. Both the Public Works Department and the Department of Railways and Canals have done a large amount of work there. That entrance to the canal was adopted a good many years ago. At that time or shortly afterwards the depth of water in the canal was only 14 feet, and, therefore, the depth of the entrance was only 14 feet. But when it became advisable to build an elevator at Port Colborne, to unload the traffic from larger vessels into smaller ones, it became necessary to make the depth of the harbour equal to the draft of the vessels on the lakes. As the ruling draft of the vessels on the great lakes is now 20 feet, it became necessary to make this harbour suitable for vessels of that draft. This cost a large amount of money for the protection of the harbour; and I may say that more work will have to be done in the way of building breakwaters in order that the harbour may be fully protected, and that ships may be perfectly safe there, no matter what storms may prevail outside, in taking on or discharging their cargoes. The elevator at Port Colborne has now a capacity of 850,000 bushels, and we have foundations and other provisions for increasing that to 2,000,000 bushels. Last year there was put through that elevator about 1,500,000 bushels. That is a comparatively small quantity, particularly when you bear in mind that this elevator is perhaps as efficient a one as can be found any where, capable of unloading some 60,000 bushels per hour. I was not at all sanguine that this elevator, if carried on by the government, would handle any great amount of grain. I think it is no secret that corporations only use government property when they cannot do anything else. They do not encourage us to any great extent in this work. But I am told by a very large shipper that the fact that there was such an elevator at Port Colborne, ready and willing to tranship grain from the larger vessels into the smaller ones, had a very mollifying influence on the freight rates by other routes. One man thought that this resulted in a saving of nearly a cent a bushel in the rates of the other transportation lines. I am not going to discuss that, because I do not know. But even if the saving were only half a cent or a quarter of a cent a bushel, it would mean a great deal to the people shipping their grain from the west. It might be in the interest of all parties—I have not made up my mind on it—if the elevator were leased and run in connection with some of the lines of transportation; but if we did that, unless some restrictions were imposed, it might deprive us of the benefit the elevator now confers of keeping down the freight rates on other routes.

Leaving the canals, allow me to take up the question of the railways of Canada. We have a larger railway mileage per head of the population than any other country in the world. It now amounts to 24,104 miles, an increase on the previous year of 1,138 miles. There is a peculiar situation in reference to the traffic of last year: there was a considerable improvement in the moving of products, but the passenger traffic fell off. Notwithstanding the apparent improvement in business, the people did not travel as much last year as the year before when business was better, perhaps having less business they had more time to travel the year before. The results were as follows:

The railway mileage of Canada is now 24,104, an increase of 1,138 miles during the year.

The freight traffic aggregated 66,842,258 tons, an increase of 3,771,091 tons. In dollars $1,968,128.00.

The passenger traffic amounted to 32,683,-309, a decrease of 1,361,683. A decrease in dollars of $919,015.00.

Nearly a million dollars decrease in the income from the carrying of passengers last year. I do not attempt to explain it but merely state the fact.

I wish to place on record a memo I have received concerning the Grand Trunk Pacific from Mr. Collingwood Schreiber, chief engineer for the government. I shall just read this memo as I think that is the shortest way to put what I desire on record:

Office of the General Consulting Engineer to the Government and Chief Engineer of the Western Division of the National Transcontinental Railway.

The Hon. Geo. P. Graham,
Minister of Railways and Canals.

Ottawa, Canada, January, 13, 1910.

Sir,—I think it desirable at the close of the year that I should report the condition of the works of construction on the western division of the Grand Trunk Pacific Railway up to the 31st December, 1909.

Prairie Section.

This section of road extends from Winnipeg to Wolfe Creek, a distance of 915 miles. The grading and bridging are completed throughout the whole distance, and 1,431 miles of single fencing have been built. The track is laid from Winnipeg to a point about 24 miles west of Entwhistle, a distance of 885 miles, and a telegraph line has also been built. There is a lift of ballast on the line from Winnipeg to Entwhistle, a distance of 861 miles.

The road is in operation from Winnipeg to Edmonton, a distance of 795 miles, and the traffic for the past twelve months has been as follows:—

74,715 number of passengers.

5,880,069 bushels of grain.

117,810 tons of general freight.

The accommodation provided for public traffic service on this section is as follows:—

6 engine houses, 3 machine shops, 6 divisional station houses, 33 way station houses, 56 section houses, 67 bunk houses, 55 tool houses, 35 water stations, 6 coaling stations, 77 loading platforms, 113 grain elevators, 13 stock yards.

For the safety of the travelling public all crossings by this road of other railways have been guarded by an interlocking plant.

The following is the public traffic rolling stock:—

92 locomotives, 6 sleeping cars, 3 parlour cars, 4 first-class cars, 9 second-class cars, 4 mail and express cars, 9 baggage cars, 11 colonist cars, 83 conductors vans, 33 refrigerator cars, 2 official cars, 3,213 box freight cars, 895 platform cars, 31 stock cars, 3 Russell snow ploughs.

Work on the 'prairie section' is practically closed down for the winter season; the only work going on, being the laying of the track and the finishing of some of the buildings.

Mountain Section.

This section of the road is about 837 miles in length.

The following works are under contract, viz:—

From Wolf creek to a point 179 miles west thereof. Messrs. Foley, Welch and Stewart are the contractors for the grading and wooden bridges.

They have done considerable clearing of the right of way and about 200,000 cubic yards of excavation. They, however, have a great number of teams on the tote road hauling in plant, tools and supplies, so as to be in readiness for a vigorous prosecution of the works upon the opening of spring. Only a small force is now at work in the cuttings.

Mr. Charles May is the contractor for the substructure of the Wolf Creek and McLeod river bridges.

There is a large quantity of sand and gravel delivered at both points, and a large force of men are engaged in excavating the foundations for the piers, pedestals and abutments; as soon as the track reaches Wolf creek, say in three weeks, cement will be carried up to that point by train.

It is of urgent importance that the work on these two structures be rushed to completion with the greatest possible speed, in order that the track-laying may be advanced, thus facilitating the transportation of plant, tools and supplies to the unlet portions of the 'mountain section,' enabling intending contractors to bid very much lower for the work than they otherwise could.

From the point 179 miles west of Wolf creek to a point 597 miles west thereof, the work has not been placed under contract.

From the point 597 miles west of the Wolf creek to Prince Rupert, a distance of 240 miles, the work of grading and the construction of wooden bridges is under contract with Messrs. Foley, Welch and Stewart.

No work has as yet been executed on the first 40 miles, and merely a good start has been made on the next 100 miles; the reasons being, that navigation closed on the Skeena river about a month earlier than usual, thus putting a stop to running in supplies, tools, plant, etc. However, the contractors are exerting their efforts to push a tote road through so as to enable them to haul in supplies, etc., by team and keep the work moving throughout the winter. They are now at work on one of the tunnels and some rock cuttings.

The work of grading and the construction of wooden bridges on the last 100 miles, to Prince Rupert, was practically completed when a very heavy storm with a high tide caused damage, washing away some of the rock embankments where exposed to the sweep of the open ocean, and bringing down considerable slides from the mountain sides, filling up some cuttings and blocking up waterways. The damage, however, was not very extensive.

Mr. Ferguson, the contractor for the substructure of the several steel bridges, having failed in carrying out his contract, the Grank Trunk Pacific Railway Company have relieved him of the work, and are carrying it on themselves by day labour. This work is progressing very slowly, but better conditions are promised for the future. If these promises are not realized, the track-laying in the spring will be delayed.

Steel rails for this 100 miles; one locomotive; one conductors' van and 24 cars, for the work of track-laying and ballasting, have been delivered at Prince Rupert, and a large quantity of ties have been delivered along the line.

About one mile of track has been laid, but nothing further will be done in that direction until next spring.

I have the honour to be, Sir,
Your obedient servant,
(Sgd.) COLLINGWOOD SCHREIBER,
Chief Engineer, West. Div. N. T. Ry.

In addition, at the risk of being tedious, I want just to give in a concrete form the position of the work up to date on the eastern section, so that hon. gentlemen will see at a glance what has been done on the whole undertaking by looking at 'Hansard.'

GRADING ON MAIN LINE.

	$67,890,697 59

That gives as briefly as possible the standing of the work, both on the western division and the eastern division of the Transcontinental, and hon. gentlemen will be able to see at a glance just about what has been done.

Now, Sir, I come to a very important matter. Hon. gentlemen have no doubt read with some interest the report presented by Mr. Butler, chief engineer and Deputy Minister of the Department of Railways, on the Hudson bay route. This report was made by Mr. Butler after studying the report of Mr. Armstrong, the engineer in charge of the Hudson bay railway project. Mr. Speaker, I wish to make it clear to the country and clear to this House that this government has been committed to this work and intends to proceed with it with all possible speed. After a full study of the matter, or rather a study of it so far as is possible at the present time, the government has decided, and I believe the country will concur in that decision, that it is advisable to make the Hudson bay route another great outlet for the rapidly increasing products of the western part of this great country. Every dollar that can be saved to the people of the west in the transportation of their products means that a large part of that dollar will go to better remunerate them for the labour they expend in the cultivation of the land. The government intends to proceed as rapidly as possible with the construction of this work. You will notice in the report presented by Mr. Butler something which no doubt surprised many hon. members, as it certainly did surprise me. I refer to the fact that in the opinion of Mr. Armstrong, the engineer, Nelson harbour is superior to Churchill as the terminus of the Hudson bay railroad. I had always concluded, whether rightly or wrongly, that Churchill was the most suitable harbour on the Hudson bay, but my preconceived idea in that respect has been upset by the report of Mr. Armstrong, who, from the data secured, has no hesitation in expressing his opinion that Nelson is the better harbour of the two.

Mr. W. F. MACLEAN. Which would be the shorter route?

Mr. GRAHAM. To Nelson it is 67 miles shorter than to Churchill, by the railroad.

Mr. SAM. HUGHES. Has he given his reasons why he believes Nelson is the better harbour?

Mr. GRAHAM. They are explained very well in the report.

Mr. J. HAGGART. I drew a different conclusion from the report of the same man.

Mr. GRAHAM. Well, he says in his report that Nelson is the better harbour. However, before either terminus is selected it would be wise to make sure of that fact, and I may say that the Minister of Marine will ask from the House a vote for the purpose of sending a ship up through the channel which will come into both these harbours from the outside, make an examination of the channel and of the passage through the straits. This expedition will make a thorough investigation of the entrance to the outer harbours of both places, and when that is done we will be in a position to take up in a more practical way that part of the project at the harbour end. But that need not mean any delay in the beginning of the construction of the railway. Included in this great project there are wharfs and elevators, and the construction of these great wharfs and elevators will be greatly facilitated by having the railway constructed so that the material may be carried in. I repeat that the delay necessary in making a full investigation as to the particular harbour which will be selected does not of necessity mean delay in the construction of the railway which, in my opinion, ought to be constructed in advance of the building of the elevators and wharfs, so that the supplies may be more economically taken on the ground.

Mr. SAM. HUGHES. Instead of sending a ship round there to take soundings in the harbour, why not send a canoe? It would do just as well.

Mr. GRAHAM. It is not far from the strait into the harbour, and the ship will be sent to make observations in the Strait as well.

Mr. SAM. HUGHES. That is a different matter.

Mr. GRAHAM. The ship will enter the harbours of Churchill and Nelson and make observations and give us information as to the approaches to these harbours as well as with respect to the conditions inside.

Mr. SAM. HUGHES. The approach to the straits would be the same for one harbour as for the other, and I see no reason whatever for delaying to get up a junketing expedition to explore the harbours. There are fifty boats plying along each harbour, and the soundings of these harbours are just as well known as the soundings of the harbour of Montreal.

Mr. GRAHAM. I am glad my hon. friend (Mr. Sam. Hughes) has information about that, because the engineers have divergent views.

Mr. SAM. HUGHES. The minister had that information in his department long years ago.

Mr. GRAHAM. Well, I will not stop to discuss that now. The objection taken to some works undertaken by the government has been that the government embarked on the enterprise before they had full information, and so in this case I am going to try and get information in order that we may ensure that we shall select the proper harbour.

Mr. LANCASTER. Does the hon. gentleman propose to start to build his railway before he knows where the terminus is going to be? Surely he will want to know in what direction he is going to run the railway.

Mr. GRAHAM. For over 200 miles the route will be in common no matter which harbour is selected.

Mr. ARMSTRONG. Why were not the investigations in regard to the channel made before?

Mr. GRAHAM. I am sure I do not know why they have not been made before, but, if we are going to provide what is to be a through route, and if we are going to have a railway to connect with that route for the transportation of the products of the people of the west, I think every one will agree that we ought to have all the information which it is possible for us to obtain as to which is the better harbour. Heretofore the general opinion has been that Churchill is the better harbour, but we are now told by the engineers that Nelson is better, and even if Nelson is no more than as good a harbour as Churchill, if we can save 67 miles railway construction by going to that harbour, I think the country will consider that we are wise in making a thorough investigation of the matter. However, as I have pointed out, that does not mean that we should delay commencing the construction of the railway, because about 260 miles of the road will be the same no matter which harbour is selected, namely, from Pas Mission to Split lake.

Mr. SAM. HUGHES. How far is it from the Pas Mission to Nelson?

Mr. GRAHAM. It is 410 miles from the Pas Mission to Nelson, and 477 miles from the Pas Mission to Churchill, which gives a difference of 67 miles. There is a very interesting statement in this report, if it be true, that by the construction of this railroad and the establishing of the route, 5 cents per bushel can be saved to the people of the west on the grain they produce. An

examination of the conditions seems to lend credence to that statement, and if that be so it is in the interest of the people, of the west, yes, it is in the interest of Canada as a whole that we should without delay place within the reach of our western people this method of transportation which will enable them to effect this great saving. The report states that the distance from Nelson to Liverpool is 3,200 miles, and from Montreal to Liverpool 3,007 miles, or practically the same distance.

Mr. BRODER. Would the construction of this Hudson bay route have any effect on the Georgian bay canal project?

Mr. CONMEE. There is lots of work for both.

Mr. GRAHAM. It is a little hard to say what the result would be, but I am such an optimist that I believe that within the next 25 years, in the Dominion of Canada, we can undertake to build all the projects we have in view and still not have any too many lines of transportation to carry the products of the country.

Mr. BRODER. If you take grain by the Hudson bay route at 5 cents per bushel to the shipper, I do not see that you will get much advantage the other way.

Mr. GRAHAM. It was estimated at 5 cents per bushel in comparison with existing rates, and my hon. friend must remember that running the Hudson Bay railway at full steam, and carrying all it is possible, we can relieve the pressure on the traffic from the Northwest to only a small amount, in view of the vast production of that country. I suppose hon. gentlemen have read that report, and they have seen that it is stated as the opinion of Mr. Butler that the coal of eastern Canada could by that route be taken at a commercial price to at least some of the points in the great west. If that be true, then not only is the west interested in the construction of this great work, but the people away in the remote east of Canada are also interested in the rapid and speedy completion of this great railway transportation. Now, without going into further details, I may say that when the supplementary estimates come down there will be an item providing for the commencement of the construction of this project as rapidly as possible, and I hope during the coming summer; I believe we will be able to undertake the construction of this project this summer, before we have another session of parliament. The country can rest assured that the government proposes to deal with this work in a practical way, and to proceed with its construction; because if any benefit is to accrue, I have always believed in trying to get some of it for the people who are now doing the work and making the investment, and the sooner we get this project completed, the sooner returns will come to the people.

Mr. CROCKET. What is the estimated cost of the railway?

Mr. GRAHAM. The engineer in charge, Mr. Armstrong, made an estimate, and the chief engineer of my department thought that in his estimate he had not provided for a standard of road such as ought to be constructed for the heavy traffic that will be carried during the very busy season. I want to say that this estimate is made on preliminary surveys, a survey party is now engaged in making the location from Le Pas to Split lake. There may be an increase in this figure after the line is properly located, because an estimate that may be approximate on a preliminary survey quite often is not a proper estimate if you have to change the location to some other point, and make it an absolute location. The estimate as given for the entire railway, with elevators, warehouse and terminal facilities at Nelson, is $16,426,340.

Mr. J. D. REID. Is that likely to be as accurate as the Grand Trunk Pacific estimate?

Mr. GRAHAM. I have tried to explain these estimates to the House. I say frankly that these are approximate, because these are not location surveys, and we might run across a different kind of soil, and different material. But this provides for a railway of a grade of four-tenths of one per cent. There may be some difference of opinion as to the necessity of building a road with 80-lb. rails and an expensive grade of that kind. But as a matter of fact, the contour of the country is nearly level, and the engineer thinks he is well within his estimate.

Mr. HUGHES. Four tenths of one per cent going to Hudson bay?

Mr. GRAHAM. The engineer thinks it is practicable to make a grade of that kind both ways, and that grade will be at least for the east bound traffic.

Mr. LAKE. Is the western end to commence at Le Pas mission and run into the prairie country?

Mr. GRAHAM. The western end of this line has always been discussed and regarded as starting from Le Pas mission. Provision can be made for running lines into the country in other directions, but the western end of this line is supposed

to commence at what is known as Le Pas mission.

Mr. LAKE. Is it the idea of the government to construct this as a government work?

Mr. GRAHAM. The hon. gentleman is asking me questions very rapidly. There might be a difference of opinion as to whether this should be constructed as a government work, or whether we should allow the project to be dealt with largely by a company. To-day I am not prepared to say in what way it may ultimately be done. But no matter how it is done, that does not of necessity mean that we cannot begin the construction at once, because if an arrangement were made with a company that was satisfactory, any work the government had done could be handed over to it on reasonable terms in a contract.

Mr. WHITE. The minister has said that there will be an appropriation in the supplementary estimates for building the Hudson Bay railway. I would like to know if there is any chance of an amount being provided for the commencement of the Georgian Bay canal?

Mr. GRAHAM. Well, I think not this year. I have not been discussing the Georgian Bay canal. However, it is a great work which is before the people, and will be constructed in due time by this government, which has always undertaken the great projects that the country required. Now, Sir, the question of what a railway ought to do has been discussed in this House, and discussed elsewhere. Some hon. gentlemen have thought that a railway is a great promoter of industry, that is, that a railway can own industries, run them and make them profitable, and thus develop the country. I think however, that is hardly the proper view to take. As for England, I have looked into a recent decision there which was to the effect, that a railway company could not engage in any other business, but it must devote itself to the business of transportation. But there are cases in the old land where railways have constructed canals and operated them in connection with the railway. I think that is not the best method, because it places the rates practically in the hands of one company, and canals do not operate as they ought to operate in keeping down railway rates. But returning to the question of railways doing other business, in England they are not allowed to transact other business. In France, I think six private companies own all the railways except that portion of the railways that is owned by the state, the figures of which I will give in a few minutes. The conditions of aid given to the French railways are such that, if carried out, the state will own all the French railways by 1950 or 1960. But it is fair to say that as occasion requires, France has deviated from the arrangement with those railways, and has made some concessions and changed the conditions that were originally made. The only railway line not being operated under this arrangement with the government, was recently taken over by the French government, I think they call it the Great West Railway, which is now a part of the system. In the United States, one of the troubles in connection with railways during the past few years has been that they have been doing a coal business in connection with the railway, and imposing rates that the people thought were too high. When the Interstate Commerce Commission took charge, they began regulating the rate of the railways, but the railway could immediately proceed to make it up on the price of coal, and consequently there was no benefit coming to the people from the regulation of that railway. The inter-state commerce law now prohibits railways from owning and operating coal mines. If they do it they have to do it under some other name. I am merely pointing this out to show that the theory that a railway could go into any part of Canada and operate coal mines would not work out to the benefit of the people, and it would not be five years until an Act was passed prohibiting that because we would lose in railway rates by such an amalgamation. The United States has found it necessary to say that railways shall not own and operate coal mines.

I wish to place before the House a short statement in reference to the state railways of the continent of Europe to which I have given some study during the past few months. Germany, out of 35,000 miles, operates 31,043. In answer to my hon. friend I want to point out that the federal government of Germany does not own a mile of railway, but that these railways are owned and operated by the various states in Germany, just as if the various provinces in Canada owned and operated their railways. So, it is hardly fair to point to German state railways and compare the situation there to that which would exist in Canada if Canada owned her railways. I wish to say again that the states of the German empire own and operate their railways and that the federal government does not, while in Canada it would be the federal government that would have to operate them. To proceed with this table:

Country.	Miles of Railway.	Operated by State.
Germany...	35,000	31,043
France..	29,293	5,530
Italy..	10,068	6,600
Russia..	38,300	35,350
Austro-Hungary .	23,600	12,430
Belgium..	3,850	2,480
Sweden..	7,580	2,600
Norway..	1,548	1,329
Switzerland.	2,480	1,500
Denmark.	1,934	1,120

In New South Wales there are 3,623 miles of railway owned by the state and operated under a commission. In Victoria the South Australian railway is operated under a commission, being 1,879 miles in length, while in New Zealand 2,682 miles of railway are owned and operated by the government under a general manager. I may say in passing that in Italy in 1885, owing to dissatisfaction with government operation, the lines were leased to a private company, but they found that private operation was obnoxious, the state took them back in 1905 and they are now being operated by the state.

I could speak at some length on the question of the railways in Germany or with reference to those to which I gave particular attention. I think perhaps it would not be amiss to speak of one or two points. With reference to passenger rates on all railways, I think I am safe in saying that in the aggregate they are lower than in this country. The great majority of people do not travel first-class on any of the European railways. Asked why the traffic was gradually and constantly increasing, the reason given by one of the general managers was that the multiplicity and increasing number of automobiles rendered it so easy for people who would travel first-class to reach their destinations, in comparatively small countries, that a great many of them travelled by automobile instead of going by the railway. But, the fact remains that first-class rates are very high in comparison with second or third class rates. On a German railway I travelled from Kiel to Paris, a small portion of the railway being in France, and I paid, first-class, including baggage—and it was very light baggage—4½ cents per mile.

Mr. LANCASTER. Single fare?

Mr. GRAHAM. Single fare. I also paid for sleeping accommodation $3.50. When we compare this with our first-class fare it would be abnormally high both for the sleeping accommodation and the travelling rate.

Mr. FOSTER. Was that an upper berth?

Mr. GRAHAM. No, this was a good berth. The accommodation is excellent on the trains, but I submit again that there are certain phases of travel in the old land, even in a first-class carriage, or in a good many of them, that are not as good as they are in this country. An improvement is being made and has been made during the past few years, by the introduction of corridor cars, which removes to a large extent some of the objections which I have in mind. Go where you will in the old land, whether on a private or a state owned line, and you are impressed with the fact that first-class travellers have to pay much more than they do in this country. In Germany they practically carry no baggage at all, or a very small amount, and you have to pay for your baggage. That may account for the other fact that people coming from Germany or from the old land carry into their seats all the baggage they possibly can because they have got into the habit of having their baggage weighed in England or weighed and paid for in Germany. When you come to the lower classes, travelling is very cheap in the old land, and it can be cheap because there passengers travel by the million and the railways have the short haul and the crowded trains which is the ideal condition enabling a railway to make money. But, when you come to freight it is a little different. I found this out in my investigation, and I came back impressed with the fact that there is no place in Europe, at least, where the control over rates can at all compare with the control over rates by the government of this country. They have control, through certain bodies, over the rates, but their rules are so lenient and their enforcement is, I think, so lax, that the railway companies, as far as I could judge, practically make their own rates and have very little, if any, interference. A good deal has been said in this country about cheaper passenger fares. That is the ideal situation, but I submit to the House and the country that the people whose labour is involved in the producing of goods are more interested in getting cheap rates for the transport of their goods than they are in securing cheaper passenger rates.

Mr. W. F. MACLEAN. That is that the human consideration is less than the dead matter.

Mr. GRAHAM. The consideration is not as my hon. friend stated. It is a matter of dollars and cents, but the human consideration is also taken into account. The matter of dollars and cents comes back all the same to the man's pocket whether he

is travelling himself or sending a carload of freight.

Mr. W. F. MACLEAN. There are some things you cannot measure in dollars and cents

Mr. GRAHAM. That is true, and it is a good thing it is true. When I come to consider the freight situation I say without hesitation that the people of Canada are in an infinitely better position as regards freight rates and the amount they get for the money paid in freight rates than they are in any country in Europe. I will in a few moments give you a table of figures which, I think, will convince you of that fact. The great attention paid to passenger rates in the old land seems to have deterred them from going as far as they might with respect to freight traffic. Of course, they have the small cars, wagons they call them, of 15 or 20 tons, although some, I think, are now 30 tons. But when you come to consider the freight rates they have to pay on this haulage, the people of this country would be astonished. In Germany, with state owned railways, taking into consideration all the special rates—and they have many of them—the freight in that great country of industry, that country filled with population and teeming with the products of the people, are more than double what we pay in Canada. In the matter of freight haulage we in Canada,—owing possibly to the regulation by the commission, and to the fact that we have given much aid to the companies—have rates lower than are enjoyed in any country in Europe which I visited. Speaking of the Railway Commission, I was called on by two or three gentlemen in London and was told that we were giving altogether too much power to our board of railway commissioners. One gentleman said that we were going so far as to perhaps make capital a little timid. Of course, I disagreed with him at once, and took up, as I thought, the practical side, the benefit derived by the people on account of the appointment of the commission and the work they are carrying out. I believe to-day that the decisions of the commission are fair and that the commission are looking after the interests of the people, but not in a way to be unjust to the men who have put their money into these great undertakings. The people of Canada do not want any control to be unjust to the people who have made investments in this country, and I do not believe the commissioners are unjust.

Mr. HUGHES. Have any data been collected as to the possibility of winter navigation as apart from the spring navigation of Hudson straits?

Mr. GRAHAM.

Mr. GRAHAM. I cannot perhaps give my hon. friend a satisfactory answer. My idea in having a steamer sent up there would be that we would make observations and get all the data necessary. That is the reason why I thought great care would have to be exercised. I have read in reports that while the navigation in the harbour was open for quite a long period, the navigation in the Strait was open for a much shorter period. These questions only emphasize the necessity of a thorough investigation before we decide on what harbour we should select.

I turn now to another question involved in the management of the Department of Railways and Canals, that is the Quebec bridge. Hon. gentlemen will excuse me, I know, for giving a brief history of this project since it was taken over by the Department of Railways and Canals two years ago, and the work of preparing for reconstruction undertaken. As there are a good many technical terms in connection with this, the House will bear with me if I read the memoranda because some hon. gentlemen in the House are engineers and they will like to see the statement just as it is. The memorandum is as follows:

QUEBEC BRIDGE.

Following the precedent of the United States government in the case of the Panama canal; the state of New York in the case of the Erie Canal enlargement; and of the city of New York in the case of the Blackwell's Island bridge, a board of eminent engineers has been appointed charged with the responsibility of designing the bridge, and the following gentlemen were selected for the task:—

Henri Vautelet, M. Can. Soc. C. E., of Montreal, as chairman and chief engineer.

Ralph Modjeski, M. Am. Soc. C. E., consulting engineer, of Chicago.

Maurice Fitzmaurice, C. M. G., M. Inst. C. E., chief engineer, London county council, England.

The task entrusted to these gentlemen is a great one, and, as was anticipated at the time of their appointment, material differences of opinion have arisen between them. Under the provisions of the order in council creating the board, in the event of differences arising, consulting engineers were to be called in to assist. Accordingly, on the question of foundations and substructures, Mr. Alfred Noble, M. Am. Soc. C. E., chief engineer of the Pennsylvania Railway tunnel, of New York (one of the most experienced men in America in foundation work), and Mr. Henry Holgate, M. Can. Soc C. E., of Montreal, were selected, and the matters in dispute were accordingly settled.

The south pier is to be enlarged to an area of 180 feet by 80 feet at the base.

A new caisson is to be sunk for the north pier and is to be carried to the rock, reducing the span from 1,800 to 1,785 feet.

Specifications covering every phase of the substructure work have been completed. Gen-

eral plans for guidance of the contractors have been prepared. The work of the substructure was advertised widely and the work was allotted to Messrs. M. P. & J. T. Davis, they being the lowest tenderers.

The other tenderers were Larkin & Sangster and M. Connolly.

Superstructure.

A great deal of valuable work has been done. The span, centre to centre of main piers, has been fixed at 1,758 feet; the width, centre to centre of trusses, at 88 feet; with a maximum depth of truss of 290 feet. A clear head room of 150 feet above the highest water has been provided for, a width of 600 feet under the centre of the bridge.

A general specification has been prepared, fixing the loading so that it will be ample for all possible contingencies of the future.

The unit stresses allowed have been settled, for carbon steel and nickel steel, and are conservative.

The form of the main compression members has been determined.

A series of tests of model columns has been started and a similar series of tests of chord bars will be carried to completion.

The dead load has been thoroughly computed and the relative concentrations determined, thus eliminating all possibility of error in calculations for the new structure.

Material differences of opinions relating to the superstructure have arisen from time to time between members of the board, and acting under the provision of the order in council, Mr. Paul Wolfel, M. Am. Soc. C. E., consulting engineer of Philadelphia, and Mr. Phelps Johnson, chief engineer and manager of the Dominion Bridge Company, of Montreal, were called in as consulting engineers, and the difficulties were overcome.

The work has advanced and at present stage is as follows:—

An advertisement has been published in the 'London Engineering' and 'The Engineer,' in England; 'The New York Engineering News' and 'The Engineering Record,' in New York; and in the Canadian press, inviting the bridge builders of the world to go to the office of the board at Montreal and study the problem. The plans and general specifications are here, and they will be allowed until May to prepare their studies, get familiar with the details of the plans and specifications; after that date three or four months will be allowed for the preparation of tenders. All tenderers must bid on the plans prepared by the board, but may submit alternative designs—in this way the form of the trusses, about which there is a reasonable difference of opinion, will be tested; the question of a suspension or cantilever bridge will be settled. The board have completed studies for a suspension bridge and also for a single intersection cantilever. The ultimate decision will be made when all the designs are before the board, having regard to: first, safety; second, speed of erection and completion; third, cost.

As the responsibility for the proper carrying on of the work is placed upon the builder, and the fact that the best designs the board are able to prepare is in competition with the best efforts of the best bridge builders in the world, we hope to secure the best bridge that the present state of engineering skill can produce.

Mr. M. P. Davis, who secured the contract for piers, was the lowest tenderer, the other tenderers being Messrs. Larkin & Sangster and Mr. Connolly.

I wish to point out to the House, although perhaps it is unnecessary, that unless you have studied this question beside an engineer and listened to all the difficulties suggested and discussed by him, or you are an engineer yourself, you have no idea of the magnitude of this work. It is so great that men with the ability and the reputation of these men will only move very carefully and very cautiously and not until they have absolutely made a study of every step to be taken. As I pointed out to them when discussing the question with them, the great point to be considered was the stability of this project, there must be no chance, so far as engineering skill can provide against such chance, of any failure in the construction and the remaining constructed of this bridge. That being their instructions—and they would have done it without any such instructions—they studied every step with the greatest care, tests and studies were made both in this country, in the United States and in more than one country in the old world. so that step by step they might be sure of what they were doing.

The effect of the specification as to width and height of the bridge, mentioned in the statement I have read, is that the channel for navigation will be 600 feet wide, and that there will be a clear head of 150 feet from the bridge to high water level.

Mr. ARMSTRONG. I wish to ask the minister whether they had considered the large boats that are liable to come up to Montreal. Some years ago I had occasion to place some statistics and facts in regard to the boats coming across the Atlantic, and I would like to know whether it is not possible to raise the bridge more than 150 feet above the water.

Mr. GRAHAM. That matter was placed before this board and information obtained and discussed, but it was thought that if any vessel needed a greater space than that for its masts or funnels, provision should be made for passing the bridge in the construction of the ship, but in all human probability this 150 feet will accommodate all vessels that want to come to Montreal.

Mr. ARMSTRONG. Not with the Marconi system; it will only allow the smokestacks to go under.

Mr. J. HAGGART. Has the minister at hand a statement of the differences between the engineers as to the substructure, to settle which these other engineers were called in?

Mr. GRAHAM. The trouble was technical, so technical that I would not attempt to explain it. It was a difference between engineers. The question came up about formations and finding solid rock. Another term I heard discussed was as to the angle of repose for the earth—how far they would have to go to get certain results. There were technical questions of engineering, and these two experts were called in to consult with them. I might say that it is proposed that in the contract with the builder, so that there can be no question, he shall be required to accept the contract on the plans and specifications, and shall be held responsible as a builder for the construction of the bridge on the plans and specifications which he accepts.

Mr. W. F. MACLEAN. Will he have a guarantee?

Mr. GRAHAM. He will have to give a guarantee or he cannot get the contract.

Mr. ARMSTRONG. How long will it likely be before the bridge will be completed?

Mr. JOHN HAGGART. And what will be the probable cost?

Mr. GRAHAM. I think it would be hardly fair for me to mention the estimated cost while we are asking for tenders. My own opinion is that the bridge will be constructed in about four years. That is not the opinion of the engineers, but my own; I have not asked their opinion.

Mr. ARMSTRONG. Four years from next fall?

Mr. GRAHAM. I imagine so.

Mr. LENNOX. Will there not have to be a limit of time fixed within which the contractors will be required to complete the work?

Mr. GRAHAM. It will be very difficult to fix a time limit if that were to affect the safety of the project. The board will probably tell us what time will be ample for the construction of the work, and that will be the time limit we will put in the contract. Up to this time I have not studied that phase of the question, and I imagine that the engineers are not yet prepared to say what time limit should be fixed.

Mr. JOHN HAGGART. The minister will have to give an estimate of the cost when he comes down with his estimates for the expenditure, and he might just as well give it now.

Mr. GRAHAM.

Mr. GRAHAM. My hon. friend will understand the difficulty, when we are advertising for tenders, of telling people what they would be able to tender for. I shall perhaps be in a position to give my hon. friend some information as to that a little later. There is no hesitation at all in giving it except public interest.

Leaving that and coming to a question of more local interest, perhaps, I will take up the much-discussed, mildly-criticised and somewhat interesting question of the Intercolonial railway. I want to speak of the question of capital account in connection with railways. The Intercolonial railway management, both under this government and under previous governments, has been criticised for its expenditure on capital account. Some of the criticisms, possibly, have been fair, but some of it I think will not be warranted by a comparison with other roads. A great advance has been made in arriving at a basis of what should be charged to capital account in the last few years owing to the action of the Interstate Commerce Commission. Under the ruling of that commission, a certain amount each year, according to the particular railway, is required to be devoted to betterments, and any betterments over and above this stated amount must come out of capital. That is to prevent work being done out of revenue that ought to be done out of capital. The result of the former method, or lack of method, was that in good fat years, when there was good business, the companies would make a lot of expenditures out of their revenue. That would really prevent the public knowing what their net profits were. But since the Interstate Commerce Commission have endeavoured to regulate rates, they have insisted that many things which heretofore were charged to revenue, shall be charged to capital account, so that people will know exactly what the profits of the railway companies are, and they can regulate their rates accordingly. I know that is the reverse of the argument that has been used, but that is the absolute fact to-day under the ruling of the Interstate Commerce Commission. If we take the principle that is now adopted on all the American railways, the Intercolonial can stand side by side with them on a question of what should be charged to capital and what to revenue. I will go further: I believe that in past years we have charged to revenue what under the Interstate Commerce law we would be compelled to charge to capital.

Mr. HUGHES. And vice versa?

Mr. GRAHAM. There is no vice versa in this case. On the question of what ought to be charged to capital account there has been a difference of opinion. I have been told in this House that certain small expenditures should not be charged to capi-

tal account, and that when a railway reaches a certain point its capital account ought to cease.

Mr. W. F. MACLEAN. The minister speaks of the Interstate Commerce Commission controlling capital account. When does he propose that the Railway Commission of Canada shall have similar control?

Mr. GRAHAM. That is a question to be dealt with by the Canadian parliament, of which my hon. friend is a member. I admit that I think he has done his duty in that respect. We want to treat the government railways in as approximately fair a way as we would the railway of a company. This much seems to be forgotten that about seventy-five per cent of the company lines on this continent have gone into liquidation, and the original capital and the original stock-holders have, for all purposes of profit, been wiped out. If you would apply the same principle to the Intercolonial railway, you could have wiped out all the capital invested in it some years ago, and started afresh, just as the purchasers of these other railways did when they wiped out the original investment by legal sale. Every dollar invested on capital account on the Intercolonial railway stands there to-day against it, whereas in many of the company lines one-half the original capital has been practically wiped out by liquidation.

It is said sometimes that the Intercolonial railway charges small things to capital which should come out of revenue. Well, in that respect I submit the Intercolonial stands on all fours with company lines and will also compare with them in that same respect as regards age. If the capital account of a railway must cease after a number of years, then the Baltimore and Ohio, which is 82 years old, ought to have come nearly to the end of its capital account. But it has not. I have its last annual report before me; and I find in that report charged to capital account items of a similar kind as those objected to in the capital account of the Intercolonial railway. For instance, I find such items as repairing tracks at shops, $289.18; a wagon scale, $358.62; new track scale, $983.69; improving track crossing, $98.23; new stock block, $142.44; sidings, new yardmaster's office, increasing water supply, new yards, round house—all these items are very familiar, and we see them all in the capital account of the Baltimore and Ohio railway as presented last year in its 82nd annual report. Therefore, the Intercolonial railway is doing exactly what these companies are doing as regards expenditure on capital account.

Mr. FOSTER. What I would like for my own information is not so much the independent items as the principles laid down for determining what is capital expenditure and what is expenditure out of revenue. If we could have those principles, which have now become operative in the United States, under the commission my hon. friend speaks of, explained by the minister, that would be of real service to the House. In the case of a round house or a yardmaster's house, several things might occur. Was the trackmaster's house to replace one which had been burnt down or was it a new building rendered necessary for the traffic of the road and, therefore, chargeable to capital?

Mr. GRAHAM. The report says a new yardmaster's office——

Mr. FOSTER. Whether the yardmaster was new or not, I suppose the house was one which had not existed before and was not the successor of a similar house.

Mr. GRAHAM. I am not sure whether the yardmaster was new or not. It was the office I was speaking of, and my hon. friend was simply making a little play on words. The items in the Baltimore and Ohio report are identical with those we have in our own capital account. The rule, I think, is that anything which will add to the value of the property, any betterment which will add to the power of earning, should go into capital account. One man, a very great authority, has given the extreme opinion that if you put two nails into a plank where there was only one before, the second should be charged to capital account.

Mr. FOSTER. So that is the principle, we can understand it.

Mr. J. HAGGART. Will the hon. minister give us the principle as laid down by the commission?

Mr. GRAHAM. I have given it in my own words.

Mr. J. HAGGART. I mean the American commission. Do I understand the minister to say that he has given in his own words what the American commission have decided upon?

Mr. GRAHAM. That is my understanding of the principle on which they act.

Mr. W. F. MACLEAN. The American roads, through the commission, are systematizing the whole business of capitalization and keeping accounts. It would be useful information if we could get the actual rules and principles adopted in that country.

Mr. GRAHAM. I think that would be a good idea, and I thought I had explained it.

Mr. FOSTER. As the hon. gentleman has put it, if you put an additional nail in a plank along side the one which was already there, and it is serviceable, you can charge that additional nail to capital account. But if the old nail rusted out and you put a new one in its place that would not be a new nail and could not be charged to capital account. Is that the ministerial interpretation?

Mr. GRAHAM. I did not give the Interstate Commerce Commission rule, but I gave the opinion of a railway authority. Practically speaking, anything that is new and that gives additional value or additional earning power is chargeable to capital account.

Mr. FOSTER. Suppose a nail rusted out and you put another one in to take its place, that gives additional earning power, as the earning power would be less without it.

Mr. FIELDING. Suppose you put in a bigger nail?

Mr. FOSTER. If you come down to measurement, you will charge to excess. The principle is absolute, if that is what we understand. What has been doing service and has become worn out, is not replaced at the expense of capital. But what never has been there and what it is necessary should be there, is chargeable to capital when put in?

Mr. GRAHAM. My hon. friend, I think, is right. The former condition should be kept up out of revenue, but there is this which all railway companies have done, so far as I can find out. When they are building a new station, to replace an old one, they charge that to capital. For instance, the railway companies will have to build a station in Toronto. Notwithstanding the fact that they have a station there already, every dollar of the new station will come out of capital account.

Mr. R. L. BORDEN. On what principle is that?

Mr. GRAHAM. I am not stating a principle but a fact

Mr. R. L. BORDEN. On what principle is it done?

Mr. GRAHAM. The old station becomes useless. There is no value for it for the railway, and a new, commodious and modern structure must be built, and it will be built out of capital.

I want to put on record just a few things that have been done out of capital account.

Mr. BARKER. All the discussion in recent years in this House arose out of the expenditure on steel rails, steel or iron bridges. It was not a question of these small things; it was whether the minister of the day was taking advantage of putting in heavier rails to charge the whole of the rails to capital account. He had a sixty-six pound rail in the track already charged to capital account; he removed that and put in an eighty pound rail and he charged the whole eighty pounds to capital. That, we protested against. We said he was obliged to put the sixty-six pounds to maintenance and the fourteen pounds, the difference between the two, to capital. That is a perfectly well known principle.

Mr. GRAHAM. It would be if you threw away the sixty-six pound rail.

Mr. BARKER. No, your sixty-six pound rail goes into stores for what it is worth.

Mr. GRAHAM. Well the difficulty in accepting that principle absolutely is that some of the sixty-six pound rails which were replaced by eighty pound rails on the main line were relaid elsewhere and still remain in active service. I agree with my hon. friend that when the sixty-six pound rail is sold, capital should be given credit for what it brings, and I would go even further and say that the difference between what the light rail is worth when it goes out of service and what the new rail costs might be charged to capital. The practice of railways is that every year they set aside a certain amount for the renewal of rails, just as the Intercolonial railway has done, but they do not actually charge the rail difference to capital account.

Now, I want to point out a few things in reference to the Intercolonial and the amount of money expended on it. A good deal has been said as to the number of locomotives on the railway, and one hon. gentleman in making his criticism has pointed out that we had so many locomotives last year and the year before and we only have the same number now, so that consequently we have not improved the rolling stock. Well, it is not a question of the number of locomotives or the number of cars. The question is, what the locomotives can haul and what the cars can carry, and if in the renewal of rolling stock the hauling capacity of the engines and the carrying capacity of the cars is increased then the capacity of the railroad is so much greater than it was before, and one need not bother about numbers. One locomotive to-day will haul three or four times as much as it did twenty years ago, and a 60,000 pound car at the present time will carry twice and sometimes three times as much as a freight car carried fifteen or twenty years ago. Here are some figures extending over the last thirteen years which

will give some interesting details as to the increases which have taken place in the different services of the Intercolonial railway:

—	1896.	1909.	Increase per cent.
Length of line	1186·5	1479·13	25
Capital invested	$55,277,034.63	$90,994,664.06	65
No. of locomotives	204	414	100
Tractive power of locomotives, lbs	2,686,725	10,318,716	284
Passenger car service, number	276	450	60
Freight car service, number	6,667	12,692	90
Ploughs, flanges, &c., number	77	103	30
Engine mileage	4,714,661	9,208,327	95
Car mileage	43,005,684	93,374,119	117
Train mileage	3,842,502	6,865,204	79
No. of passengers	1,471,866	2,933,754	100
Tons of freight	1,379,618	3,552,739	160
Sidings	157·25	365·74	132

These figures show improvement all round.

Now, Mr. Speaker, I come to the question of what the Intercolonial railway has done during the past nine months. This question of the managing board is one which is surrounded with difficulties, and I am in a position to speak as to that with some degree of knowledge. The board has been criticised, sometimes I think severely. With that, however, I have no fault to find because the Intercolonial railway is a public institution and these public-managed and public owned affairs are always liable to criticism by the people who are the owners of the property. The question of appointing a managing board was laid before the House last year and discussed pretty thoroughly, and in the discussion one hon. gentleman told the Minister of Railways that if the minister could come back to the House this session and state that the board had managed the railway without any interference from him he would feel that the Minister of Railways deserved to be complimented. Well, I am prepared to say that such is the state of affairs to-day. This board has managed the Intercolonial railway during the past nine months without any interference from the head of the Railway Department. I need hardly say that it has not been easy for me to take that position, but whether rightly or wrongly, I have taken it and whatever was done on the Intercolonial railway last year is entirely the result of the work of the managing board. Now, Sir, a board was appointed consisting of Mr. Butler, the deputy minister of railways, Mr. Pottinger, Mr. Tiffin, and Mr. Brady. Mr. Pottinger is a man of great experience and knowledge of the road. Mr. Tiffin was the traffic manager, and Mr. Brady the general superintendent. They organized some time in June, but their work really began in July, and they held their meetings regularly and discussed what they thought was in the interest of the Intercolonial railway. They started in to bring about results on the railway and they have worked with that idea in the interests of the Intercolonial railway, treating it as a transportation project belonging to all the people of Canada. As is well known, and as was explained to the House last year, the traffic on all railways, the year previous had dwindled very materially and the receipts on all railways including the Intercolonial railway were much less than they were in the preceding year. There was a deficit for the year ending 31st of March last. A large decrease in the traffic without a corresponding decrease in the number of employees and other expenses, gave us a deficit of approximately $800,000 on the Intercolonial railway last year. The board undertook the work, and wishing to bring about an equilibrium, or to make the receipts balance the expenditures, and put the railway in what they thought ought to be a better shape, they did reduce the staff of the Intercolonial railway, all told, 503 employees were dropped. The railway companies had made greater reductions in their staffs months before. I may say in this connection that as time goes on, men are constantly leaving the employ of the railway, some of these men have been taken back already, and as others leave, I am asking the board of management to give the old employees the preference, so that they may regain their employment on the Intercolonial railway when opportunity serves. I hope in a great measure to meet the difficulties that have arisen by dropping the employees, through no fault of their own, except that the board thought there was too great a number on the line. Now, in order to improve repair work on the Intercolonial railway and to get more work out of the new shops, an

expert was engaged, Mr. McKenna, and he did reorganize the work there with the result that a great deal more work is being turned out by the staff with the new machinery than was turned out before.

Mr. HUGHES. These men were not dropped before the last election.

Mr. GRAHAM. Does my hon. friend refer to the election in Ottawa?

Mr. LANCASTER. The minister told us a few minutes ago that he had not interfered with the management of this railway; but he seems to have interfered as to who should be re-employed.

Mr. GRAHAM. I have not interfered with the management of the railway; I submit to the wisdom of the House if what I said I have done was an interference. I suggested that it would be wise that the old men should be given re-employment as opportunity serves; that is no interference. I made a suggestion, no doubt every man along the line has made some suggestion or other, perhaps not of that kind. I am free to say that I have not interfered with the Intercolonial railway. When it was impossible to obtain an expert such as the board wanted to reorganize the locomotive shops, they took three of the bright men from the shops themselves, and sent them to the New York Central shops in order to find out what was being done there, and they have come back with new ideas that I think will help in reducing the cost of the work, by turning out a greater amount of it with the same number of men; at any rate, they think that can be done. There were substantial savings made in the maintenance of way department, which is a very expensive department. Now, I want to point out to the House what we are doing in this respect, let me give a list of the expenditures that have come out of revenue, over and above the ordinary.

Unprecedented rain storms in New Brunswick, on the Canada Eastern Division, causing washouts, repaired at a cost of.. .. ..$	2,673 65
Extraordinary high tides causing washouts near Dorchester..	3,426 36
Extraordinary rainfall in Nova Scotia causing washouts near Antigonish..	2,141 78
Forest fires in the preceding year destroyed station buildings at St. Cyrille, Que., Carmel, Bathurst, N. B., Daveluyville, all of which have been replaced this year at a cost of.	9,901 00
Engine house and turntable at Pt. du Chene..	2.055 54
Power house chimney..	1,702 68
Heavy repairs and painting buildings	2 828 29
Repairs to bridges and culverts... ..	29.150 85
Painting bridges...	21.977 35
Extraordinary wharf repairs..	11.102 72
Building and repairing fences.. ..$	36,408 48
Other heavy repairs..	8,138 43
Or in all..	131.507 07
Rail renewals..	100,000 00
Total.. .. ..$	231,507 07

So we have laid aside for the renewal of rails, $100,000. The American railways, I think, lay aside a certain amount every year for renewal. Now 55½ miles of track have been ballasted. I want to call attention to this next item, because it has been stated in the press that no new ties were placed on the Intercolonial this year. I want to tell the House that no less than 574,237 new ties were placed on the Intercolonial during the past nine months; 11½ miles of track were relaid with 80-pound rails to the yard, new steel rails—I am now speaking altogether of revenue; and 5⅓ miles of track were relaid with 67-pound rails. The maintenance of the track has been generally kept up.

Now, I come to another point which is of interest, and I want to give credit to my predecessor for this improvement. During the last year of his service he inaugurated a system of laying aside each month a certain amount for maintenance of equipment along the line. The policy of charging against revenue a fixed sum per month on account of renewal of equipment was inaugurated in the fiscal year 1907-8. In that year large purchases of equipment were made, and the account stood to debit of the fund on March 31, 1908, $57,755.63. During the fiscal year 1908-9 business was dull; a great many cars were idle; the new shops were nearing completion; work of magnitude could not be satisfactorily done; the equipment was more than ample; accordingly the fund was allowed to accumulate, so that on March 31, 1909, there was a credit of $207,262.20. During the current year $25,000 per month has been credited to this account, so that at the end of December the account amounts to $439,000. The following rolling stock has been contracted for delivery before April 1, 1910, and the amounts I am reading now come out of revenue from the road through this account:

1 Pacific type passenger locomotive..$	22,600 00
10 Simple consolidation freight locomotives..	196 000 00
30 50-ton all steel coal cars..	45.480 00
6 box baggage cars for express trains..	9.804 00
3 first-class sleeping cars..	41.600 00
5 first-class passenger cars..	58.890 00
3 full mail cars..	25.800 00
2 full baggage cars..	13.050 00
3 colonist cars..	32.700 00
Total.. .. ..$	445.924 00

I may at once be asked: Is this a betterment or is this new? Well, there is not

a cent of it from capital. I have said to the House that $25,000 a month placed to one side will realize an amount sufficiently large to keep our equipment in good shape from year to year. Now during the next three months there will be $25,000 a month placed to the account of this fund, so at the end of the year, after spending the large amount I have mentioned, there will remain in this fund $60,000 as a nucleus to start with next year. Now these thirty 50-ton steel cars, some one will say, have replaced a larger number of cars, and you are not getting as many. That is true; we are replacing 153 wooden cars and 29 20-ton coal cars. The old cars, only had a capacity of 1,498 tons, while the new cars have a capacity of 1,500 tons. There is a benefit to be derived in transportation, because there is much less dead weight to haul with the new cars than with all these others we had on hand before. So there is not only a small gain in the carrying capacity with these new cars, but there is a considerable gain in hauling lighter weight over the dead weight. Nine new locomtives have been bought to replace several old and smaller ones. These nine new locomotives have a traction power of 338,697 pounds, while the locomotives which they replaced had a traction power of 304,681 pounds. I want to point out that in adidtion we have spent during the past year out of revenue for maintenance:

Locomotive repairs...	$553,500
Passenger cars..	194,800
Freight cars..	440,900

The average number of freight cars repaired per month was 1,200, passenger cars and locomotives 10. I had thought of placing upon record some things that have been said by men who have travelled over this line and who know whereof they are speaking, but I shall just quote one and I ask the attention of hon. gentlemen from Ontario to this one particular question, because it emphasizes the fact that Ontario as well as other provinces get some benefit from the Intercolonial railway as a government road and from the rates which it has always charged. This gentleman has been a shipper of flour over the Intercolonial railway for a good many years and he writes as follows in September:

We must congratulate the Intercolonial railway for the splendid service they have been giving to the province and are trying to support you by giving you everything possible over your line.

I say that the testimony of that kind coming from a business man who uses this line and is going to use it on account of its superior accommodation ought to count for something in sizing up the results of the work of the board of management.

Mr. SPROULE. Name.

Mr. GRAHAM. I do not think my hon. friend meant that.

Mr. SPROULE. Oh, indeed I do.

Mr. GRAHAM. Some time I will ask my hon. friend for a name when I know he will not give it to me.

Mr. SPROULE. It is on the principle of asking your brother if he is a rogue.

Mr. GRAHAM. I take everybody to be honest until he is proven otherwise.

Mr. LANCASTER. An anonymous letter has not much weight.

Mr. GRAHAM. This is not an anonymous letter at all. I will give any hon. gentleman the name if he asks me, but I do not want to parade this hon. gentleman's name through the House.

Mr. J. HAGGART. I propose that he lay it on the table.

Mr. GRAHAM. It may not be a public document. Now, I come to the question of the trade of the Intercolonial railway. I could go into that question at some length, but I will just refer to the wheat traffic which is of interest at the present moment and may be of more interest in years to come in dealing with the larger problem of carrying goods from the west to our own sea ports. Through Halifax up to January 4, 1910, we contracted for the transport of 329,699 bushels as against 81,904 bushels last year. Through St. John we contracted, up to January 4, for the transport of 1,165,967 bushels as against 525,753 last year.

Mr. E. M. MACDONALD. May I ask the hon. gentleman from what source he gets that grain?

Mr. GRAHAM. It is handed over to us by the Grand Trunk.

Mr. LANCASTER. What is the rate on that wheat from Montreal to St. John?

Mr. GRAHAM. The rate, if it were just going from Montreal to St. John would be practically the same rate as that of the Canadian Pacific railway—I think the same rate.

Mr. LANCASTER. That is where the Intercolonial railway would carry it.

Mr. GRAHAM. The Intercolonial railway carries it there and the Intercolonial has to go 200 miles farther than the Canadian Pacific and carries it for the same rate, which shows one of the difficulties of managing the Intercolonial railway in competition with a line 200 miles shorter to a given point.

A little while ago I mentioned the ques-

tion of railways in other countries, and I want hon. gentlemen to pay particular attention, if this is not too dreary for them, to see the condition that exists in Canada with our government owned railway as compared with government or public owned railways in other cities. I desire to place on record the following table:

Country.	Density of passengers per mile of railway.	Passenger rates.	Freight density per mile.	Freight rates per ton mile, average.	Cost per mile.	Length of line miles.	Inhabitants per mile of line.	Average pay for employees.
		Cents.	Tons.		$			$
South Australia	82,816	1·3	146,437	2·08 cts.	37,250	1,916	188	
New South Wales	85,674	0·84	169,050	2·00 "	64,365	3,471	393	
Germany	482,142	0·99	833,136	1·41 "	107,272	35,652	1,587	252·82
France	368,281	1·5	460,284	1·46 "	126,350	29,293	1,333	
Italy	147,141	1·96	183,446	2·42 "	109,560	10,203	3,119	
Russia	266,356	0·68	833,618	9·32 mills.	83,080	35,214	2,941	
Austria-Hungary	398,904	0·47	113,688	2·07 cts.	87,816	25,618	1,854	
Great Britain and Ireland	417 219	1·54	558,126	2·31 "	272,291	23,058	1,786	261·00
United States	121,862	2·014	1,040,212	7·57 mills.	58,664	227,455	349	641·00
Canada	84,342	1·921	545,991	7·27 "	55,638	24,104	300	505·00
I. C. Ry	95,583	1·775	658,372	0·575 cts.	62,885	1,447	.....	633·00

Mr. W. F. MACLEAN. I understand from these figures that state owned railways give much lower freight rates than private owned railways in Great Britain.

Mr. GRAHAM. It would appear from the special returns that their rates are less than the freight rates in Great Britain. But there is this difficulty that we have to figure back and forth to get the result as to railways in Great Britain because they will not and do not give the information and even pass a resolution saying that it is not necessary. It is therefore difficult to get a definite statement of statistics from these lines but we have taken their traffic statemens and worked the figures out from them.

Mr. HUGHES. How do German freight rates compare with freight rates in Canada?

Mr. GRAHAM. The German freight rates are much higher. They are nearly three times as high as the rates on the Intercolonial railway and more than double those of other railways. I wish to point out before I leave this subject that the average rate of wages paid to employees on the Intercolonial railway is only exceeded in one instance and that is in the United States. The average wage paid to the employees on the Intercolonial railway is $128 more than the average paid to railway employees in the Dominion of Canada. It is approximately three times as much as the employees are paid in Great Britain and approximately twice as much as is paid to the employees in Germany.

The managing board has adopted the system of a purchasing department, the head of which is in Ottawa, Mr. Lavoie. From the experience I have had of him, and he has been in the service of the railway for several years, he is not only an able and industrious but I believe a thoroughly honest and upright man and a young man who will make good. These purchases are all made and the tenders opened in the department, Mr. Lavoie overseeing them under the supervision of the Deputy Minister. I might intimate that I am so pleased with the arrangement that I think I will add to the staff and have all the purchases of supplies for canals and everything else placed in charge of this department.

I wish to put on record now the average number of employees on the Intercolonial railway during the last nine months, and the wages paid them to show the public and the country and our friends how much money we are absolutely paying every month to the employees on the Intercolonial railway. This does not mean at all the amount of money expended for purchases, but the money paid to the men, and I say that the Intercolonial railway will compare favourably in a very bright light with any of the railways in Canada in this matter.

The average number of employees and wages paid for the nine months ending December 31, 1909, were:—

	Number of men.	Wages per month.
Maintenance of way	2,671	$ 90,804 48
Maintenance of equipment	2,508	113,699 49
Conducting transportation	3,213	197,762 98
Conducting traffic	78	5,966 33
General expenses	143	8,449 63
Capital account	133	6,884 97
Stores	88	3,902 98
Total	8,833	$427,470 86

Briefly, the result of the operations of the road for the nine months ending

December 31, 1909, are set forth in the following statement:

The expenditure on capital account for the year will be approximately $1,280,000 against $3,867,232.60 last year.		
The gross receipts for the 9 months ending December 31, 1909, amounted to..		$7,073,300 97
An increase of $442,154.87 over last year.		
The gross working expenses amounted to.	$6,310,912 36	
A reduction of $757,087.98.		
Charged to revenue for rail renewals..	100,000 00	
		6,410,912 36
Leaving a net revenue on December 31, 1909, of.. ..		$ 662,388 61

What the net revenue at the end of the year will be can only be estimated, but we are having a very mild winter, and my hon. friend from South Lanark (Mr. J. Haggart) knows that that means a great deal along the line. I predict that if no unforeseen or untoward circumstance arises, the surplus on the Intercolonial railway at the close of the fiscal year ending March 31 will amount to at least $662,000, and probably will exceed it by a small amount.

I wish to speak for a moment of the Prince Edward Island railway. The Prince Edward Island railway forms no part of the Intercolonial railway. It is run on Prince Edward Island, some 260 miles. I wish to take the House into my confidence clearly in reference to it and to state that you need not expect, it is not fair to expect, and nobody does expect, that the Prince Edward Island railway will ever keep even. The traffic is not there to keep it even, and we are prepared and must be prepared to run the Prince Edward Island railway for the accommodation of the people and to take out of the consolidated revenue fund of the Department of Canals whatever deficit there may be, because deficit there will be every year no matter what you do so long as you give the people any service at all. Small boats run around the island carrying a large part of the traffic and the island railway serves the people as best it can. I have a good deal of sympathy with the complaint made on Prince Edward Island that they do not get the passenger service that they might expect, not that they do not get all the passenger service to which they are entitled if you discuss it on the cold calculation of what the revenue would warrant, because on that calculation we might not have any service or not have an efficient service. But it is a matter for serious consideration if we ought not to improve the passenger service on the island a trifle and be prepared, owing to the difficulties that exist there and the isolation of the people, to take out of the consolidated fund of the Dominion of Canada an amount sufficient to give to the people of that island decent and fair passenger service. The members from the island have been urging strongly the construction of branch lines, and branch lines will probably have to be constructed, but that will be a matter for future consideration. I want, however, to place myself absolutely on record as having great sympathy with the people on the island on account of the conditions that exist and to ask the House that when we come to discuss the railway problem as affecting that island, they will not discuss it along distinctly and absolutely business lines, because if you do you will not serve the people of Prince Edward Island as they ought to be served with railway facilities. The amount expended on capital account on the Prince Edward Island railway during the present year will be approximately $170,000. Last year the amount was $561,206.90. Up to November 30 the deficit on the Prince Edward Island railway amounts to $44,554.45. I expect that by the end of the year it will amount to about $70,000, against $89,010.78 last year.

A great deal has been said as to the rates on the Intercolonial railway. It has been pointed out that the rates of the Intercolonial railway to St. John are the same as those of the Canadian Pacific railway, although the haul is 200 miles longer. The rates to competing points are always the same; but I want to point out that where there is no competition the rates on company owned roads are higher than those on the government road, where there is no competition. Moreover, I want to ask hon. gentlemen from Quebec and Ontario, and especially hon. members from the western part of Canada, if they think, from their experience in the west, that if any private company had had during all these years in the eastern part of Canada the monopoly which the government railway has had, the people would not have paid at least two and a half times as high freight rates as they have been called on to pay on the government road? That means millions in the pockets of the people of the eastern provinces, and millions also in the pockets of the people who have had to transport goods on the government railway when there was no competition. The good which that railway has been to Canada cannot be estimated by a casual or superficial investigation, but must be estimated by regarding it as a part of the great transportation system of the country and as a regulator of railway rates during the years before we had a railway commission. I believe the Intercolonial railway is run as well as any other

railway in this country. For the traffic given, I believe it runs a greater number of trains and stops at a greater number of stations and gives greater accommodation to travellers than people could hope to get from any company railway in the world.

Mr. JOHN HAGGART. How do the passenger and freight rates on the Intercolonial railway compare with the rates on railways in Quebec and Ontario?

Mr. GRAHAM. The freight rates on the Intercolonial railway, where it has no opposition, are much lower than the rates on company roads where they have no competition. The passenger rates, I think, approximate those of other railways throughout Canada.

Mr. JOHN HAGGART. What about freight rates?

Mr. GRAHAM. Where the road has a monopoly, they are less on the Intercolonial railway; but from competing points they are exactly the same.

Mr. JOHN HAGGART. How do they compare with the rates fixed by the commission?

Mr. GRAHAM. The rates allowed by the commission are higher than the rates on the Intercolonial railway; and if a company had the Intercolonial railway, the commission would allow it to charge higher rates than the Intercolonial railway charges.

Mr. W. F. MACLEAN. Before the hon. gentleman concludes, he might give us this information. He has narrated his experience of state-owned roads in Europe, and has made some comparisons between them and private-owned roads. He has not told the House what is to be his policy hereafter in regard to the Intercolonial railway. I gather that he is more than half a believer in government ownership. In view of the observations he has made in Europe, and in view of the statements going throughout the country that the Intercolonial railway may be abandoned as a state-owned road, what is to be the future of that railway?

Mr. GRAHAM. That is a pretty broad question, and would bring us to a discussion of the policy of public-owned versus private-owned railways. Conditions sometime arise that alter situations, or situations arise that alter conditions. But I may say to my hon. friend that there is no immediate danger of this road going to a private company, for I purpose continuing the road under the board of management, and I want to tell the House that I intend to appoint another member to that board in the next few weeks, which I think will be in the interest of the public and of the railway.

Mr. GRAHAM.

Now, I have detained the House too long, for which I must apologize; but I have endeavoured to place before the House and the country the general position of Canada as regards her canals, her railways and the other great projects which we have in hand. I have devoted particular attention to our public-owned railway, the operation of which during the past nine months has shown good results, and which I believe, with the co-operation of those interested in it, such as we have had during the last nine months, will continue to give the people a first-class service at fair rates, and come out at the end of the twelve months without showing a deficit.

At six o'clock, House took recess.

After Recess.

SECOND READING.

Bill (No. 117) for the relief of Geo. Robert Buttonshaw.—Mr. Campbell.

SUPPLY—THE INTERCOLONIAL RAILWAY.

Hon. JOHN HAGGART. I propose to follow the Minister of Railways briefly through the various points in connection with the Intercolonial railway which he touched on this afternoon. In the compliments which the hon. minister paid his deputy, Mr. Butler, on the retirement of the latter from office, I heartily concur. In anything I have had to do with Mr. Butler, I always found him very kind and obliging and everything that an officer of the government ought to be, and I cordially join the minister in wishing him every success in his new employment. Mr. Butler's successor, the hon. minister has told us, was formerly Deputy Minister of Public Works in Ontario. Mr. Campbell may be very competent for the office, but personally I know nothing of his qualifications, and we have been told by the minister that he intends appointing also a chief engineer who will take the engineering duties off Mr. Campbell's hands.

On the question of transportation, the hon. minister cited the different kinds in which this country is interested, and spoke of some new schemes which he considered were in the public interest. He passed slightly over the Welland canal and had very little to say in favour of what is, to my mind, a solution of the transportation problem for the Dominion. I refer to the Georgian bay canal. The Hudson Bay railway scheme, he said, the government were committed to, and he believed that great benefit would result from its completion to the people of the Northwest by the saving on the cost of transportation of their produce. He was of the opinion that the large quantities of grain exported from

that country would yield an additional revenue to the farmers, through the construction of this railway, to the extent of five cents per bushel. Well, Mr. Speaker, the Hudson bay railway scheme was one of the first considered when I entered this House some 37 years ago. I am glad to see it become a practical issue at present, for I was one of the promoters of that scheme. There were then two rival schemes. The promoters of the one declared that the only port worth going to was Fort Churchill, and their rivals advocated the claims of Port Nelson. The Hon. Wm. MacDougall was the promoter of one of the schemes, and I was backing the other. After thoroughly considering the whole question, after reading with interest the accounts of all the voyages made by British officers to Hudson bay, and all the reports of the Hudson bay schooners which had navigated those waters for the last thirty or forty years, we came to the conclusion that the bay was navigable during a certain portion of the year. How long I do not know. The length varied according to the different seasons. I see that the minister quotes in his report a paper by Mr. Armstrong, who advocates Port Nelson as a terminus, much preferring it to Fort Churchill. Mr. Armstrong says that the bay never freezes over at Fort Nelson during the whole season, that the navigation there is a month longer than it is at Fort Churchill, and still another month longer if you go further south. In that connection I would draw the attention of my hon. friend the Minister of Public Works (Mr. Pugsley) to the statement of Mr. Armstrong, who advocates Port Nelson as the terminus, because that statement opens up a beautiful vista of dredging to be required in that section—a veritable elysium of dredging. For five or six miles out of Churchill there is a sand bank, and along the banks of the Nelson river for about ten miles dredging would have to be done in order to afford accommodation to vessels. Another advantage in connection with Port Nelson is shown by Mr. Armstrong in his advocacy of the canal system of transportation. I see that the minister has become a convert to that system since his travels in Germany There he found out that the Germans, who are a practical, common-sense people, are in favour of what is after all the democratic way of conveying freight and passengers—transportation by water; and one of the advantages of Port Nelson, according to Mr. Armstrong's report, is the possibilities of a canal being built, paralleling the railway, down to Fort Nelson and up to Lake Winnipeg. Well, that is not a possibility in the near future, but it is a possibility, and we may yet have water communication between Winnipeg and Hudson bay. It has that advantage over the Fort Churchill route, because the river is very tumultuous and precipitous along its course. But I would like to draw the minister's attention to one thing. Notwithstanding all the reports and notwithstanding all the references to the particular value of this port or that, through its being a month longer open than any other, the period of navigation is not determined at all by the length of open season at any particular port, but by the navigation of the straits. It does not matter if you have a port open the whole year round, if you can only navigate the straits during four months.

The minister talked about a saving of five cents in the transportation of grain. Well, we had that question discussed ad nauseam some 25 years ago, and the statement was made that we could send grain from Winnipeg and most of the points along the Canadian Pacific railway to the head of Lake Superior cheaper than we could send it to Hudson bay. Calculations were made again and again to prove that from the head of Lake Superior to Liverpool grain could be delivered cheaper than from Fort Churchill to Liverpool. That may seem strange. There are six months' navigation in Lake Superior and the St. Lawrence. The vessels engaged in that trade sail from Montreal and Quebec to Liverpool and have only seven months navigation. But they have this advantage. The other five months of the year they can be employed in other parts of the world. The steamers for the Hudson Bay route must be specially constructed for that service, and so they will be engaged for four months in the year and be obliged to lie idle for the remaining eight months. However, the scheme looks beautiful and no doubt the government will endeavour to carry it out. But, I mention these things to dispel if possible the idea the minister seems to have that five cents per bushel will be saved on northwest grain by sending it via the Hudson bay. From all the information I was able to gather at that time I believe it to be a practical fact that you can take grain from the western country down to Lake Superior and over to Great Britain cheaper than you possibly can by the Hudson Bay route. If that be so, and I think it is, the necessity for the Hudson Bay railway is not very pressing. I venture to draw the attention of the government, when the Transcontinental railway was proposed to the House, to the mistake made in the estimated cost of that railway and the minister now tells us that it is estimated that the Hudson Bay railway with its terminals, will cost about $18,000,000. Well, even $18,000,000 is a very large expenditure on top of the other enormous expenditures we are now making for the building of railways and the improvement of our means of transportation. Let me tell the minister that

if he studies carefully the question he will find that the solution of the transportation problem in this country is the building of the Georgian Bay canal. I have advocated that project for years. God knows I have no personal interest in it, nor have my constituents because we are situated half way between the two charmers', the St. Lawrence river and the Ottawa river. It may be affectation for me to mention that I speak from the bottom of my heart when I say that the Georgian Bay canal would be the wisest scheme this government could undertake now. Nature has favoured us by placing us in a position geographically to control not only the trade of Canada but the trade of the northern part of the American continent. I am glad that the minister is converted to a certain extent to my views because he has expressed the sentiment which I have just given utterance to, and when he did so I wondered if he had in his eye the Georgian Bay canal. Let me counsel the government: Be economical in all your expenditures, be economical because the country needs economy and because by practising it you will teach the people what is right and wrong in the science of government. I have studied the question from my boyhood upwards, I know the geography of the country, and I ask the government to take my word for it that the solution of the transportation problem is the building of the canal along the route followed by the old voyagers, up the Ottawa, across Lake Nipissing and along the northern shore of Lake Superior to the west. Enough upon that question; we have to deal with a good many questions tonight and I would like to be brief.

The Minister of Railways directed our attention to the $7,000,000 already expended on the Quebec bridge, and to my mind nothing has happened in this country so disgraceful as the action of the government in connection with that particular bridge. We were induced to subscribe a lot of money for the purpose of assisting in building that bridge. The bridge belonged to a company; it was assisted not only by the Dominion government but by the province of Quebec and the city of Quebec. When the bridge tumbled down you would have thought that the contractors and the parties who were interested in the corporation building the bridge would have suffered some loss. But no, out of the generosity of our hearts we paid them all the money the members of this company had advanced and we paid them interest upon it; we paid back all the money contributed by the city of Quebec and by the province of Quebec to aid in its construction, and we took the concern over holus-bolus. That was an act of generosity unparalleled in the history of the world.

Mr. J. G. HAGGART.

Mr. SPROULE. Act of generosity; it was more like an act of dishonesty.

Mr. JOHN HAGGART. I am not saying there is any dishonesty at all about it, It might have been done for state or political reasons. The Prime Minister represents the city of Quebec and he was interested that the city should not suffer, but I do not believe there was anything corrupt about it; if there was I do not know of it nor have I ever heard any authority for it, and I am merely stating the facts I know of. What is the position now? After the bridge fell we employed engineers to devise a scheme for the substructure and the superstructure of the new bridge. The minister tells us to-night that these engineers have agreed upon the plans for the substructure, but they have not yet been able to decide whether it is to be a cantilever or a suspension bridge, and so they will call for tenders for each kind of bridge. And the minister tells us that he will not furnish us with the estimate of the cost. That is curious; it is the first time I ever heard of such a thing in this parliament. When the government comes to parliament for money to build an undertaking the first thing they do is to furnish the plans of the engineers and the estimates of the cost, and then they ask us for the money. But we are told that if that were done in this case it might give an advantage to some contractor. Well, if the minister is in any way afraid of that he could put the estimates pretty low and that would get him out of the difficulty. You remember when the Transcontinental railway was under discussion how the Minister of Finance told us that after making a minute calculation and after taking various things into consideration, the whole cost to the country would represent only $13,000,000. I told the minister what I believed would be the cost of the Transcontinental railway, I told him that the cost would be in the neighbourhood of $70,000 per mile from Winnipeg to Moncton, I told him that the statement he made in reference to $13,000,000 would not cover the Quebec bridge alone. We have already lost on that bridge in the neighbourhood of $7,000,000. Will that bridge and the approaches to it ever be completed for less than $7,000,000 or $8,000,000 more? It will cost in the neighbourhood of $15,000,000 to $18,000,000. When the road was under contemplation, I stated that the Quebec bridge alone would cost more than the sum which the Minister of Finance and the Prime Minister said would be the cost of the railway; it is turning out to be so now. Let us see what that road is likely to cost. According to the books, the expenditure on the Grand Trunk Pacific up to the end of last year was $53,000,000.

Mr. GRAHAM. I think the figures I gave this afternoon were $67,000,000.

Mr. JOHN HAGGART. I am basing my statement on the report, not reckoning to the end of the fiscal year. Now, see what an enormous liability will rest upon the country for the cost of the prairie section, 915 miles from Wolf Creek to Winnipeg. That was to cost $13,000 a mile, and we supplemented that by a loan of $10,000,000. The cost of the prairie section, according to Mr. Schreiber, will be $33,007,449. On the eastern section from Moncton to Winnipeg, 1,804 miles, we have spent, up to March 30 last year, $51,950,000. Mr. Lumsden calculated that it would cost $66,427 per mile, making $114,395,765. The interest during construction—I am supposing it will take seven years to construct—will be about $10,000,000. The interest we will have to pay for seven years after construction will be $14,422,000. The terminals at Moncton, Winnipeg and other places will cost $5,600,000. The Quebec bridge, on which we have already spent $7,000,000, will cost at least $8,000,000 to $10,000,000 more. I calculate that the mountain section of the road will cost about $75,000 per mile for somewhat over 800 miles. We have not got from the chief engineer or from the department any information of the actual cost; I am putting it at $75,000 per mile, so that the interest on the total cost will be $10,000,000. We have now reached a grand total of $167,716,000. Then we advance on the prairie section a loan of $11,895,000. Upon the mountain section we guarantee $75,000 a mile, or $62,700,000. Add to the two latter sums the $10,000,000 loan, and we have $84,595,000 to add to the $167,000,000.

Now there is a possibility that that portion of the road from the Pacific to Winnipeg will be paying in a short while, so that it will not be a charge upon the country. It may be worth what has been expended on it. The prairie section must be supplemented by contributing lines of railway; as at present projected, it cannot become a paying concern unless branch lines are built connecting with it. A single line of railway passing through a prairie can only levy for a certain number of miles north and south of it, and from this source it could not derive revenue enough to keep it running. They will have to build lines of railway paralleling the main line for the purpose of assisting the main line. Now there is a possibility that the line to the head of Lake Superior wil never become a charge on the government of the country. What will the Grand Trunk Pacific Railway company do? The moment they find that the road from Winnipeg to Moncton is not a paying road, are they likely to continue running it? What means have you of forcing them to do so? You may say that you have a lien upon the stock. Well, your lien upon the stock only becomes valid along with the lien held by the parties who bought the stock. What lien have you upon the road that is being built? You had a lien prior to the company borrowing money for the purpose of constructing that road, and you gave it away to the Grand Trunk Pacific. Your lien at the present time runs pari passu with that of the parties who have loaned money on the prairie section and the mountain section; and how are you going to enforce it for the benefit of the eastern section? You may say that they owe you the money. You take the road and you work it and run it. But who do you take it and run it for? You work it and run it for the benefit of yourselves and other creditors who have with you a lien upon the road. What means have you to compel the Grand Trunk Railway company, who you say have entered into an engagement with you, to work the eastern section of the road? Supposing you obtained an order from the court that the Grand Trunk railway must work it, what penalty could be imposed on the Grand Trunk for refusing? The franchise of the Grand Trunk railway lies in the common stock, and the common stock is worth little or nothing. It is only worth something for speculative purposes. I am not going to say a word against the Grand Trunk. The Grand Trunk has done a great deal for Canada. The men who put their money into the Grand Trunk have not had the results which they expected from that investment. The people of Canada owe a great deal to the Grand Trunk. I am only pointing out the position of the government with regard to the Grand Trunk Pacific railway. If they do not work the road from Winnipeg to Quebec to your satisfaction, what are you going to do? Take over the road, the rolling stock and everything else? You take over, as I say, the western section, subject to the lien upon it held by the parties who have advanced money, subject to the claim on the rolling stock and subject to your own lien. You stand pari passu with the parties who advanced the money for the construction of the road. But, you have no tangible claim whatever for the purpose of enabling you to take the road over. The same is true of the eastern section. You say to the Grand Trunk: Go on and work that road. They say: We have spent money enough on the undertaking, we have found out that it is impossible to operate the road from Winnipeg to Moncton with satisfactory results and we will not run it; run it yourselves. You have no remedy against the Grand Trunk. The only result will be that you will take possession of it. Fancy the government in possession of a road on which they have expended $164,000,000 with no connection at Winnipeg and with no connection with Lake Superior, because the key to the situation, the branch line

from Superior Junction to Lake Superior, is in the hands of the Grand Trunk Railway Company. They refused to mortgage it or give it as a security for this undertaking. The parties who own the road, own that branch independently, and this government has no claim upon it. You have the road on your hands, you have to work it, and you not only lose the interest on the $164,000,000, but you have the road passing through a country not at all comparable with that which the Intercolonial railway passes through. The result will be that you will operate that road at a cost which will make the people very sick of the undertaking. It would be better for them if you had pitched the whole of the money into the sea rather than that you should have invested it in any such undertaking. There are possibilities. Some mineral discoveries may be made in the country. Some bonanza in the shape of a Cobalt, gold mines, or chance development may give an impetus to the road which does not exist at the present time. The wildest scheme that was ever propounded to the people of any country was the idea of drawing grain from Winnipeg over the western section of the road down to Quebec, across the bridge, and from there to St. John and Halifax, and establishing an undertaking in competition with other roads. We all know that the cheapest manner of transporting grain or heavy freight of any kind is by water. President Taft of the United States, in making comparisons, says that transport by water can be carried on at one-eighth of what it costs by rail. I think that perhaps he is too low; at any rate, let us say one-quarter. That is the cheapest way of conveying heavy freight. What is the result? Grain from the west to the markets of the east will seek the quickest possible way, and that is by means of water communication. The large carrying companies realize the importance of water carriage. The Canadian Northern, the Grand Trunk Pacific and the Canadian Pacific railway all go to Fort William to take advantage of water transportation. No all-rail communication can compete with water communication from the head of Lake Superior down to the sea. That is one of the reasons why I am an advocate of the Georgian bay canal. It is the cheapest means of transporting the great products of the west to the sea-board. I have shown the enormous expenditure that this country will have to undertake. It will have to pay interest on $164,000,000 plus the cost of the road from Winnipeg to Moncton for the next thirty or forty years. The Grand Trunk is not going to do it. Any one who looks with a prescient eye ahead must say that the results I predict will come. If no other result comes, see what an enormous burden it places upon us. Why did the government not build the line as laid down and advised by the opposition? The opposition were in favour of opening up the west, they stated their plan and showed how the road ought to be built, but I do not believe that the right hon. gentleman could carry out this scheme with the aid of his supporters, unless he agreed that there should be a summer terminus at Quebec and winter termini at St. John and Halifax. Fancy building a road paralleling the Intercolonial railway, our own road, that does not pay at the present moment. They claim that they are shortening the distance by 120 miles. But, does it shorten it any? Sir Sanford Fleming tried to get a better line for the Intercolonial railway, and if such a line could have been obtained, surely he ought to have known it. For years they have been exploring down there. They have their line practically completed, and what do they find? They find that they cannot get a much better line or any shorter line from Lévis to Moncton than the old route of the Intercolonial railway. They at present have a railway that they hardly know what to do with. The Intercolonial railway is a puzzle to them, and there is a deficit on it from year to year except during the last nine months, with which I intend to deal presently. They have built a harbour at Port Colborne at an expenditure of $3,500,000 which has not fulfilled the expectations of hon. gentlemen opposite. Ships were to go down there that would otherwise go to Buffalo; they were to unload a portion of their cargo at Port Colborne, pass through the canal, and go down the St. Lawrence. I told them at the time that if a vessel wanted to load to go to Montreal or Quebec, it was just as easy for it to go to the port of Buffalo, 10 or 15 miles away and get the cargo from a vessel there, instead of spending $4,000,000 or $5,000,000 for the purpose of building this elevator at Port Colborne. They no sooner had it built than the Minister of Railways (Mr. Graham), in his tour through the west, promised the people in that section the deepening of the Welland canal. What use would the elevator at Port Colborne be after the deepening of the Welland canal? You have 21-foot navigation in the port, and you will have 21-foot navigation on the canal. Vessels will not stay in the port at all, they will go clear through the canal. It is a useless expenditure of $4,000,000. The hon. minister does not seem to be pleased with the business done by the elevator, but he hopes that in the future it will develop. It has been built now and running for over a year and actually 1,000,000 bushels have gone into that elevator, one of the largest in the country. It has been an entirely useless expenditure.

Let us come to the question immediately before the House, the management of the Intercolonial railway. The people of this country will hardly believe the amount that

Canada has expended on the Intercolonial railway. I suppose very few of them read the blue-books, but if they look at the report issued by the Minister of Railways this year they will find the extraordinary statement that $91,000,000 has been expended on capital account of the Intercolonial railway, and nearly $8,900,000 on the Prince Edward Island railway, and for the nine months, bringing the figures down to the present day, there has been a further expenditure of $1.200,000 on the Intercolonial railway. From 1896 up to the present moment the capital expenditure on the Intercolonial railway and its branches has increased from $49,000,000 up to the neighbourhood of $102,000,000. What benefit has the country got from it? What is the difference whether you charge an amount to ordinary revenue or to capital account? The minister never thinks of paying the interest on his capital account. He makes comparisons between what is charged to capital account by this railway and other railways, but he forgets that the Baltimore and Ohio and the others with which he makes comparisons pay interest on the capital account. How long suffering have the people of Canada been? From mismanagement—and I shall prove the mismanagement out of the evidence produced by the Minister of Railways this year—the debt on the Intercolonial railway, or the capital account, has increased in fourteen years from $50,000,000 to $102,000,000. The hon. gentleman says: Oh, the great benefit the Intercolonial railway is to the people in that section of the country! I would like to see figures in support of the statements of the Minister of Railways that the Intercolonial railway carries freight and passengers for less than any other railway. The passenger rate is the same——

Mr. GRAHAM. I think I stated that the passenger rates were about the same as on other roads, I think they are; the freight rates are cheaper.

Mr. JOHN HAGGART. I said that the hon. gentleman stated that the passenger rates were the same on the Intercolonial railway as on other roads. He said that the freight rates were greatly below the freight rates on other roads. The freight paid by the ordinary merchant, farmer or other customer along the Intercolonial railway is, I venture to say, as high as on any road in Ontario or Quebec. I looked into the question and I state that the people of the maritime provinces pay a fair price on all the freight they carry. The average is brought down by the rates on two or three commodities. Coal, lumber, shingles and some other things—and the coal is principally carried out of the maritime provinces—are carried at a ridiculously low rate. But as a general rule the freight rates on the Intercolonial railway are on an average about the same as in other sections of this country. The passenger rates are the same and the freight rates are the same. Then why is it that it costs so much to run the road? Why is it that there is deficit after deficit? Last year I drew the attention of the minister to the enormous number of employees on the road, a number largely in excess of its requirements. He evidently found my complaint to be well founded, for he tells us to-day that the Commission of Management, who were appointed to manage the road have discharged about 600 men. Then last year it cost a greater amount to collect the revenues on the Intercolonial than it did the preceeding year. Last year they collected less and paid more. Something wrong about that, $600,000 less collected and it cost a couple of hundred thousand dollars more. It is an anomaly, and the officers ought to be obliged to explain it.

The appointment of a commission to manage the Intercolonial is a peculiar move. Who are the commissioners? The deputy head of the Railway Department, Mr. Pottinger, the manager of the road; Mr. Brady, Mr. Tiffin, all members of the staff of the Intercolonial. The curiosity is that when they are under the direct direction of the Minister of Railways the affair goes to the devil. Joined together, meeting together for the purpose of managing the road, they do first rate.

Mr. GRAHAM. That is a good idea.

Mr. JOHN HAGGART. I know Mr. Pottinger, the manager of the road, perfectly well. Give him his instructions and he will carry them out. It is a difficult thing for the manager of the road, when he knows there are a lot of incapables or old men on the road not fitted for their positions and not able to do their work. He does not like to discharge them—it is human nature. He has a kind heart like the Minister of Railways, who interested himself with the commissioners on behalf of a lot of the employees. Mr. Pottinger is a good and efficient manager of the railroad. Give him his instructions, and he will carry them out. Take him to your office, and say to him: Here are the mistakes and faults in the management of the road; you have too many men; make a comparison of the freight rates on your road and those on other roads—why cannot you manage and give as good results as they can? And he will say: Give me a free hand; get rid of the political influences that are tempting me or making me do otherwise; let there be no political influence in the management of the road, and I will manage it as economically and as well as any other manager in Canada can. I had occasion to test this matter when I was Minister of Railways. I found a similar state of affairs to what the hon. gentleman found when

he came into office. I sent for Mr. Pottinger and Mr. Schreiber, both capable men. I said to Mr. Pottinger: I want such and such results. It can be done, but you must discharge such a number of men. Is it possible to do it without degrading the character of the road, impairing the rolling stock or lowering the standard below what it is at present? I want the rails, the stations and the rolling stock all kept up; can you do it and give me such results? And he said: I can if you give me a free hand. He was given a free hand. He found that he had 1,200 men on the road more than were necessary, placed there through political influences. I am not accusing one political party of being worse than the other in this respect; but the minister can keep control, even with the commission that exists at present, though it may act as a go-between between himself and his political supporters in the House. But if he insists on a satisfactory result, it can be got, and it can be got only from a minister who does not represent the maritime provinces. It is a good selection to take a Minister of Railways from another province. If he exercises the power and the honesty which I believe from the bottom of my heart he has, though I differ from him politically, he can manage the affairs of that department so that it will be an honour and credit to the country, and there is no man on this side of the House who would not be proud to see him do it. There is no trouble in doing it. It is just as easy to have a million dollars of revenue from the Intercolonial railway, with the freight and passenger rates as they are at present, as to have the present state of affairs. There has been a saving of over $700,000 in the last nine months under the commission. That looks hopeful of a saving of nearly $1,000,000 a year; and $1,500,000 or perhaps $2,000,000 could be saved as easily. When I was Minister of Railways the Intercolonial railway was a little affair. The total receipts and expenditures were in the neighbourhood of $3,000,000 a year. Now the receipts and expenditures are over $9,000,000 a year, which shows that either the population or the business of the maritime provinces during the last fourteen years has wonderfully increased. There is three times the business done now on the Intercolonial railway that there was in 1896. Why is it that every railway of any enterprise in Canada is paying well except the Intercolonial?

Now, let me criticise the statement furnished by the commissioners. The expenditure on capital account for the year will be approximately $1,280,000, against $3,867,232 for the previous year. But the extraordinary thing is that the Prince Edward Island railway, with receipts of about $200,000 and an expenditure of nearly $300,000, had a capital expenditure last year of about $500,000.

Mr. GRAHAM. Not all on the railway proper.

Mr. JOHN HAGGART. It was for enlarged accommodation at stations, sidings and a lot of other things, among them a judgment against the railway obtained by a man who was building a bridge down there. The gross receipts on the Intercolonial for the nine months ending December 31 amounted to $7,073,300, an increase of $442,154 over the corresponding nine months of the previous year. The gross working expenses for the nine months amounted to $6,310,912, a reduction of $757,087. What I want to draw the attention of the minister to is this: He collected during the nine months of this year $442,000 more than he did during the same period last year, and yet he expended $750,000 less in that same period. That is an extraordinary statement. You have an increased revenue of $442,000 in the nine months and a decreased expenditure of $757,000. There must have been a startling condition of affairs in the preceding year when such a reduction in expenditure and increase in revenue were possible, or there must have been a considerable charging up of ordinary expenditure against capital account. I want to draw the attention of the House to the enormous capital account on the Intercolonial railway. We hope for better days, but we have a deficit now which will amount this year to about $800,000.

Mr. GRAHAM. A surplus.

Mr. JOHN HAGGART. No, a deficit. The $1,200,000 charged to capital account ought to be charged to ordinary expenditure, and I so stated when that amount was voted for particular expenditures. You can never have an honest statement from the officials of any railway when they have the right to manipulate their capital account just as they please. There ought to be no such thing as a capital account in a railway belonging to a government. It is not an account on which we expect any interest to be paid, and consequently should be wiped out altogether. In saying this I am not merely expressing my own opinion, but I am repeating the statement made again and again by the right hon. gentleman who leads the House when he used to attack the late Sir John Macdonald and the Conservative party for having a capital account on the Intercolonial railway and concealing extravagant expenditures under that head. The right hon. gentleman said: You can have no honest, no trustworthy management of the Intercolonial or any other government enterprise until the cap-

ital account is wiped out altogether. So it should be because there is no need for it. There would not be any such capital account in any other country in the world. We charge a lot of expenditure in this country to capital which is not done in other countries. When we build fortifications, we charge them to capital account as well as a lot of expenditure from one end of the country to the other. Just fancy a Dreadnought being built by the British government and charged to capital account or a dock at Malta or Gibraltar. There is no such thing as capital account in the British public accounts, and there ought to be none here. Let us have a plain statement of the expenditure on the road and let us form our own conclusions as to whether that expenditure was judicious or not. The minister has no basis for making a comparison between the Intercolonial and company owned railways in this connection. The directors of railway companies have to provide an income out of which to pay interest on the capital, but there is no interest paid on the Intercolonial and never will be. I am hoping for better things. There has been a little better management than in the past. I believe the hon. gentleman is trying to do something. Let him bend all his energy to obtaining an honest administration of his department, either by a commission or something else. I have no faith myself in commissions, and the hon. gentleman had very little when he appointed this one. The suggestion came from my leader (Mr. Borden), who drew a comparison between the Intercolonial railway and the government railways in Australia and other places, which are managed by commissions and gave good results. He thought that the government railway in this country might be managed by a commission with like good results. Of course we know that the people of the maritime provinces will not allow what they consider a peculiarly maritime interest to be owned by any railway company, but some other method of management might be devised. It might be run in the interests of the three railway companies which connect with it. Or there might be a joint stock arrangement, in which the three different railways interested would pool, each its share of the earnings, and share each the cost of the management. I thought that perhaps something of that kind might be possible, but we should always have a string to that railway. Should Lloyd George's theories prevail in the old country, should the theory of my hon. friend from York (Mr. Maclean) on municipal or state ownership of railways and other public utilities take root in this country, it is possible that the day may come when we might take a new departure along those lines. Let us then keep control of something we own, and if we should part with the management ourselves, let us always have a string to bring it back to the people. I hope for better things in the future. I see a bright future because the maritime provinces are progressing wonderfully. They are progressing more than the old provinces of Ontario and Quebec, if we can judge by the amount of freight and passengers carried on the different lines in the provinces by the sea. Nova Scotia and New Brunswick particularly are doing three times the business they formerly did. May that business continue to flourish is the wish of every one on this side no matter to what portion of the Dominion he may belong. That these little provinces down by the sea—that portion of the Dominion of which we are so proud—may prosper and flourish and that the people's railway may be a success is what none desire more ardently than hon. gentlemen on this side.

Mr. E. M. MACDONALD (Pictou). Before proceeding with the few observations I have to make on the subject under discussion, let me congratulate the hon. minister (Mr. Graham) on the most admirable statement he has given us this afternoon. And let me also felicitate my hon. friend who has just taken his seat (Mr. Haggart) on the kindly manner of his criticism and, let me assure him that we deeply appreciate the generous sentiments he has uttered and which are all the more welcome, coming from so old a parliamentarian, one whom we may call the father of the House. I would like at the outset to express the hope that now, when we are about to rebuild the Quebec bridge, the government may see its way to put its construction in the hands of some of our Canadian bridge builders and artisans. If it be possible to find among them men able to construct that work, the government should take every opportunity to give them the preference and entrust to them this great national undertaking. If they should do this, I am sure that there will be much greater satisfaction among our own people than if they entrusted this enterprise to outsiders. Might I also be permitted to remark that while we hear great solicitude expressed by hon. members from all parts of the country regarding the Intercolonial railway, yet in the maritime provinces where we have to use that railway, we may be admitted to have a greater personal interest in its successful operation than can possibly be felt by hon. gentlemen from other sections.

May I be permitted to say that I do not think that the fact that the Minister of Railways was able to announce a surplus this afternoon is any special reason for

congratulation. I do not know whether my hon. friend from York (Mr. Maclean) who is the apostle of public operation in this country believes that it is the duty of a government which is operating a public utility to milk it to the greatest possible extent. If he does, then I am afraid the admiration for public ownership in any portion of the country that had practical experience of it would speedily fade away. There is one thing about this question which most hon. gentlemen forget, and that is that while it is a most desirable thing to make both ends meet, yet, this year when you have a surplus of $600,000 or $700,000 that surplus becomes of no value to the future of that enterprise. It is not like the balance in the profit and loss account of a company operating a railroad, because under the book-keeping system of the government, when there is a surplus at the end of the financial year that money goes into the general revenue of the country, ceases to be available for any purpose whatever in connection with the operation of the road. Hon. gentlemen opposite sometimes complain that expenditures are made on capital account, while on the other hand they insist that the Intercolonial railway should have a surplus. But, the moment a surplus is obtained it is appropriated out of the resources for operating the road and disappears altogether as a factor in the management of that railway. How are you going to provide for capital expenditure? how are you going to provide for these accretions which necessarily must be made to any great public work, unless you resort to capital expenditure? I, therefore, say that the fact that we have a surplus of $600,000 or $700,000 this year has no significance from the standpoint of government operation of railways. If for instance this year you have not done as much track repairing as you might have done if you did not put in as many ties as you might have put in, if as much ballasting was not done this year as the year before, it simply means that next year you will have to provide for what you failed to do this year, and when you come to provide for it instead of having the surplus in the treasury as a company would have, your surplus from the year before has disappeared. If, for instance, there should be a falling off in passengers and freight, where is the government going to get the money to make up the deficit. There will be a deficit, the surplus of the preceding year will have vanished from the transactions of the Intercolonial railway, and those gentlemen who have such great solicitude for the Intercolonial railway, but who never travel over it and know nothing about it, will hold up their hands in holy horror. It seems to me that instead of having large surpluses it would be much better if the country would begin to realize what is the real position of affairs in regard to the public operation of this public utility. It seems to me it would be much better that you should endeavour to provide for the running of your railway, to make both ends meet each year, and to operate it in such a way that deficits would not occur. Referring again to my hon. friend from York (Mr. Maclean) and his pet theories, I would like to know from him whether or not this beautiful system of government operation or government ownership of public utilities that he advocates, means that in the operating of the utility there is to be any advantage to the people who are living in the community where the utility is operated?

Mr. W. F. MACLEAN. I will answer my hon. friend in a moment—public ownership means absolutely giving service to the people and not realizing profit on capital, and public ownership is to be judged by the service it gives and nothing else.

Mr. E. M. MACDONALD. At better rates?

Mr. W. F. MACLEAN. At better rates, and public ownership will give a better service and better rates if it is efficiently administered, but there must be efficiency of administration.

Mr. GRAHAM. And my hon. friend (Mr. W. F. Maclean) holds up Germany as an example of public ownership, and yet Germany took out of the people rates sufficient to pay six per cent on capital, and in addition to that a certain stated amount every year.

Mr. W. F. MACLEAN. And under public ownership in Germany they have the best express service in the world.

Mr. GRAHAM. But not the best freight service.

Mr. W. F. MACLEAN. Yes, I will tell you about the freight service later on.

Mr. E. M. MACDONALD. I should have known that if my hon. friend (Mr. W. F. Maclean) got started on his pet theory I would never be able to get a look in at all, and now I hope to be permitted to continue my remarks. What I desired to know from my hon. friend (Mr. W. F. Maclean) was whether one of his theories that the people who were to be served by the utility should have the advantage of better rates than if the utility were operated by a private company. If I underestand my hon. friend (Mr. W. F. Maclean) aright that is his idea. But some of his friends are fond of complaining that lower rates of freight are obtainable on this public utility, the Intercolonial railway, and, therefore, I am at a loss to understand the position of some gentlemen from this larger province who

are such strong apostles of public ownership, but who at the same time are always wanting the Minister of Railways of the day to extract a surplus out of this public utility. It seems to me that when we come to discuss the Intercolonial in this House we forget a good many things. The people of the maritime provinces, at all events those of them whom I represent, are not asking for any exceptional consideration that is not extended to any other portion of Canada, but surely we ought to remember that the Intercolonial railway was constructed for the purpose of promoting trade between the maritime provinces and central Canada. When Canada stretched out towards the Pacific and absorbed the western provinces, Canada pledged her treasury and her public lands for the purpose of providing an interprovincial railway which would reach to the Pacific coast. Canada spent more money on that railway, and it is spending more money from year to year in providing interprovincial communication between the western provinces, than ever Canada dreamt of spending, even comparatively speaking, in the maritime provinces. Therefore, this question should not be regarded in any sectional way, nor should it be considered that those of us who live in the maritime provinces are asking for sectional consideration. We are asking for nothing of the sort. In this connection, let me tell some of these hon. gentlemen some reasons why the Intercolonial does not pay. If a private company were operating the Intercolonial railway to the port of Halifax, whence immigrants come from all countries in Europe, you would have agents of that railway soliciting these people to travel over the Intercolonial railway when they reached Canada. But, is the Intercolonial railway doing that? Is there a single attempt made by passenger agents of the Intercolonial on the continent of Europe or the British isles to sell a single ticket to an immigrant coming to Canada? No. Every other railway is doing it, but yet this Intercolonial railway, which controls the front door of this Dominion for six months in the year through a port which is open all the year around for the arrival of passengers, does not attempt to induce a single emigrant leaving for Canada to utilize that railway. Now, I do not blame the Intercolonial for not doing that; the fault lies in the inherent difficulty in the operation by the government of public utilities which my hon. friend (Mr. W. F. Maclean) is so fond of advocating.

Mr. W. F. MACLEAN. Let me tell my hon. friend that Switzerland has its agents in America soliciting passengers for the state-owned roads in Switzerland, and there is an answer to his question. What Switzerland does could be done by Canada if we believed in the principle.

Mr. E. M. MACDONALD. My hon. friend (Mr. W. F. Maclean) is unfortunately not able to speak for all of the hon. gentlemen on the other side of the House.

Mr. W. F. MACLEAN. I do not profess to.

Mr. E. M. MACDONALD. If a proposition had been made to this House at any time to appoint agents of the Intercolonial railway in Europe, we would have a loud wail from hon. gentlemen opposite about the extravagance of spending money in Europe on account of the Intercolonial railway. What is the result? The result is that the Canadian Pacific railway takes practically every immigrant that comes into this country from the east. It takes him at St. John and runs him to Montreal and other points west. If they arrive at Halifax, it brings them to St. John over the Intercolonial, and then they get the long haul on the through ticket to all points in the west. That is one point that hon. gentlemen forget in discussing the Intercolonial. Look at the immigration that is coming into Canada. Every week thousands of people have been coming in during the winter time, landing at our seaports, but the Intercolonial does not get any advantage from them. That is one of the reasons why the Intercolonial does not pay. But there is another reason. If a company were in the position in which the government of this country is in at present, they would long ago have imposed upon goods coming from the mother country under the preference, a restriction that they must come into Canada through Canadian ports. So during particularly six months of the year when these goods come to Canada, the railway would have the opportunity to haul them from the eastern ports under that restriction. But that is not done. The fact is that the Canadian Pacific has the full advantage of that preference in hauling the goods. The Grand Trunk runs from Montreal to Portland, and the goods that come to Portland during the winter under the preference, are brought to Montreal by the Grand Trunk, the Intercolonial gets no advantage from them. Yet hon. gentlemen who want this road to show a surplus, who want it crippled by dismissing its employees, will stand up in this House, as I have heard them in the last parliament, and object to the proposition that there should be put in force a restriction that the preference should only apply to goods which come in through Canadian ports.

Then look at another difficulty. This railway was originally constructed as an interprovincial railway and it stopped at Rivière

du Loup. But as the march of commerce proceeded towards the west it was extended. Consider in what an isolated position were the whole of the maritime provinces when that railway terminated at Rivière du Loup. So hon. gentlemen opposite purchased a piece of railway, and purchased the St. Charles branch in addition, and extended the Intercolonial railway to Levis, joining it with the Grand Trunk at Chaudière. Still every part of the maritime provinces was 400 or 500 miles away from the great metropolis of Canada, it had no connection with Ontario, it had no connection with the west, and it was handicapped to a degree that hon. gentlemen can hardly imagine. Where would we have been to-day if this government had not in 1897, purchased the Drummond County railway and extended it to Montreal? It purchased these two pieces of railway, involving a capital expenditure which helped to increase it to the large figure which the hon. member for Lanark (Mr. Haggart) has spoken of. Yet with even all these expenditures, and with the extension of the Intercolonial railway to Montreal, that road is not to-day a transcontinental line, it is solely a local line. Why? I suppose that there has been no industry in late years that has attracted so much attention as has the Dominion Iron and Steel Company, and along with it the Nova Scotia Steel Company, in which a great many people in this part of Canada are interested. These two large industries manufacture in different lines probably more iron and steel products than all the other iron and steel industries of Canada put together. Yet for nearly six months of the year only a small portion of the product of either of these industries passed beyond the city of Montreal. This country imposes upon these products a tax which interfers with their competing in Ontario and points west with products from the United States. When hon. gentlemen complain about the low rates, let me say that while I agree with the minister that in certain schedules the rates are lower for short hauls than they are on company roads, yet in the majority of the schedules the rates for one hundred miles haul and over are as great and when you come to make a comparison in regard to long hauls, the Intercolonial railway charges just as much as do the company roads in this country. Yet hon. gentlemen opposite wish to continue this impost upon our industries in the maritime provinces. We in Nova Scotia are the only people who produce coal east of the Rocky Mountains, but we cannot send a pound of coal west of the city of Montreal and compete with the Americans. Hon. gentlemen talk about Canada for Canadians, about protecting home industries and all that kind of thing, and they want the people of the maritime provinces to be screwed down so that the Intercolonial railway may show a surplus. These are things that ought not to be forgotten in discussing a question of this kind, these are some of the difficulties under which we labour.

But there is another thing. Talk about the advantage of the Intercolonial railway! What would my hon. friends think if the Minister of Railways were to come down with a proposition empowering him to develop industries along the line of the Intercolonial railway? All the other big companies do it. Everybody recognizes that that is one of the advantages of company ownership and operation, that companies are able, by virtue of the facility with which the directors can deal with problems of that kind, to develop natural industries along the line of their railway. The Intercolonial railway cannot do that. So I say that hon. gentlemen opposite do not appreciate the difficulties under which we labour, and which I have indicated. Every session hon. gentlemen hold up their hands in horror because my hon. friend the Minister of Railways has not extracted a surplus from the people who use that railway. If he had extracted a surplus, it could only be by injuring and crippling that railroad for the future. I say that for these reasons the minister has no right to have a surplus of $700,000. All that this country has a right to expect of him, seeing that this road was a special feature of confederation, is that he should make both ends meet, and that the interest of the people who live along that line of railway should have his first consideration. You talk about this being a road in which everybody in Canada is interested; of course it is. But, what would my hon. friends from the further west say if we were to criticise railway development and railway problems up there? They would tell us that they ought to have the first say about their own railways.

Now, I do not think every one was satisfied to hear my hon. friend assure the House that he had not interfered with these gentlemen who compose the Board of Management of the Intercolonial. Down in our country we learned long ago, perhaps before some hon. gentlemen in other parts of Canada did, the advantages of responsible government; and the people expect that when you have a minister of the Crown entrusted with the the operation of a great public utility, he must be held responsible therefor. And my hon. friend is responsible for it, and I do not think that he is assuming his full responsibility unless he intimates to this Board of Management what his ideas are as to how they should act. In a free country like this it is impossible to get rid

of ministerial or governmental responsibility. My hon. friend from Lanark (Mr. John Haggart) tells us that he thinks he is getting on all right, but unfortunately for the minister, in the constituency from which I come and in the constituencies of other hon. gentlemen along the line of the Intercolonial railroad, it will not do for us to say that the minister never spoke to these commissioners, because they have learned the lesson of responsibility, they know that the representatives of the people and the government are responsible at all times for the proper carrying out of this public utility, and that they have the right to interfere in the best interests of the people. I know the motives that animate my hon. friend in dealing with these matters in that way, but it will not in the slightest degree protect him from the attacks of hon. gentlemen opposite for him to say that he has nothing to do with this Board of Commissioners. I think the minister has the right to interfere with the Board of Management. He has the right to direct the policy of the board, he has the right to say, when they undertake to infringe upon the rights of the people, that these rights must be respected.

The hon. member for Lanark (Mr. John Haggart) intimates that the way to fix the Intercolonial is to dismiss a great army of people. I think that the action of this board, where they dismissed 503 employees and where, I am free to say, they exercised their judgment to the fullest extent that my hon. friend from Lanark could have wished, was not justified by the circumstances. I think that they could have worked out just the same results without making these dismissals. As a matter of fact the lure of the west is calling from our eastern provinces numerous men and they are going to the railways of the west and of central Canada. Hundreds of men every year are going west and it would not have taken very long to have reduced the staff of the Intercolonial railway without dismissing these men. It must be remembered that in 1908 the Intercolonial railway began to feel the effect of the bad times which the great central railways had endured for the two previous years. Every one knows of the lack of prosperity that existed on the Grand Trunk and Canadian Pacific railway in 1908. We began to feel that down there and my hon. friend's board, dealing with this question, summarily dismissed these men. I have no objection to the greatest possible economy being exercised in the operation of the road. I quite agree that there have been abuses in the past—abuses that have come down from the time when my hon. friend the member for Lanark was Minister of Railways and Canals. While he endeavoured in his own way to check the demands that were being made upon him by his political friends in the maritime provinces, he left a condition of affairs that fortunately is gradually disappearing. And, there is no representative of the people of the maritime provinces who would not stand by the minister in every effort he would make to apply the principles of economy to the management of the road by getting rid of unnecessary officials, and so operating the road that the people of the country will have the best service and under conditions where they will be able to do the business in the best possible way.

It will not do to point to some local rates, as the hon. member for Kings-Albert (Mr. McAllister) did the other day. The Intercolonial railway was not built for the purpose of giving a man a local rate on this or that little product to be carried 15 or 20 miles; it was built as a great Canadian enterprise to connect the different provinces of the Dominion together, and the service which it ought to render to this country is that it should break down the barriers which lie between the provinces of the east and the provinces of the west, so that the products of the east may go to the west and the products of the west may be carried to the east. That is what the country expected when it constructed this road, and that is what it ought to get no matter who directs or controls the road. Unfortunately, this problem of the Intercolonial railway which has been so much discussed in this House, comes back to this difficulty to-day that it is purely a local line. We do not share in the great transportation development of the west, in the great prosperity that has come to Saskatchewan and Alberta, with their influx of population, with their increase in grain production and with all the great accretions which have come to this country. The great product of the west is brought down, as far as transportation goes, over the great trunk systems until it reaches the city of Montreal. A little bit of that product trickles down to Nova Scotia and the seaports of Canada, but the great proportion of it switches off at Montreal and goes down to Boston, Portland and other American cities. We only ask that this Intercolonial railway should be regarded as a national work, and that it should be so utilized, either by absorption with the great transcontinental railways or otherwise, that every part of Canada shall share in the development which has come of late years to the western portion of our country. My hon. friend from Lanark need not think that our people by the sea are so wedded to the theory of this railway that we would forego absolutely whatever rights we may have to prevent parliament from making it part of the Transcontinental lines. This rail-

way belongs to the Dominion of Canada, it is owned by the people and apparently it cannot be alienated. But what is this country going to do when the Grand Trunk Pacific comes to Moncton? Inside of two years it will be in operation there. Are you going to let the Grand Trunk Pacific go down to the sea? If you are you must utilize the Intercolonial railway or build a new line to reach the seaports. If the Grand Trunk railway goes there, why should not the Canadian Pacific railway and the Canadian Northern go there, and why should not the Intercolonial railway be utilized so that in our maritime part of the Dominion we should have centred the national termini of the great transcontinental railways? We would have a oneness and connection that we could not get otherwise. We are apt to regard this question upon narrow lines, to look at it from a contracted view point. We would like the Minister of Railways to exercise his full responsibility and to realize that he must be responsible to the people if he is to act in the best interests not only of the maritime provinces, but of the whole of Canada. Let the whole Dominion of Canada realize that a miserable surplus of a few hundred thousand dollars is no advantage compared with the development of trade routes throughout this country, and if by absorption or connection with other lines the whole of the Dominion can be rounded out as far as trade is concerned in connection with the three great transcontinental lines, you will be doing something which will not only be for the good of Canada, but will to a great degree obliterate these little local distinctions and local discussions which now characterize the consideration of this question.

I have had repeated occasions to speak to the minister in regard to the method of dealing with claims made to the Railway Department from people living along the line of the Intercolonial for damages by fire, accidents to animals and injuries in various other ways. I say to the minister in all frankness and kindliness, and I know that he will appreciate my attitude in that regard, that this part of his administration of the Intercolonial calls for some remedy. It is a difficulty that has always existed in the past, but if there are advantages in government operation, as the hon. member for York (Mr. W. F. Maclean) thinks there is, I wish to tell him that there is one phase of government operation which presses very hardly upon the good people who live along the line of this public utility, and that is the recovery of damages in such cases as I have spoken of. A few years ago a statute was passed providing that if a man's property is destroyed by fire from a railway, the company is prima facie liable, the onus is thrown on the company to show that it is not liable, and claims of that kind can be easily settled in a court of law. I ventured to introduce a Bill and it was carried through parliament, which attempted to apply to the government railway the same extent of liability as other railways, but somehow the claims department of the Intercolonial railway has never discovered this on the statutes, and so far as I have been able to discover since that time, although not only in my own constituency but all along the Intercolonial railway, fires have occurred and the liability prima facie existed under the statute, some one connected with the department or somewhere else solemnly undertook to judge the liability and the evidence and the law and decided that the railway was not negligent. While that is a small matter it causes great difficulty and dissatisfaction to people living along the Intercolonial railway. A rule has been put in force of late that when an investigation is held in regard to the merits of a claim the parties having a claim cannot employ a solicitor to come and see that the claim is properly presented. While we have great public questions to deal with, while I have myself ventured to suggest that we should look at this whole problem from a broad view point, here is a matter of detail by satisfactorily adjusting which the minister will render himself and his management very popular along the line of the Intercolonial railway.

Mr. GRAHAM. I have been for four weeks trying to work out something along that line, and if I am successful, as I think I will be, my hon. friend will be perfectly satisfied.

Mr. E. M. MACDONALD. It is satisfactory to find that my hon. friend is responding so quickly to my suggestion of improvement in this regard. I am sure we will appreciate it. If my hon. friend will realize that it is his duty to tell these commissioners once in a while what they should do and what they should not do, and that he would be really deserving of condemnation instead of praise if he failed to do that, and if he will also realize the importance of the difficulties I have pointed out, and if he does not make the surplus too large next year, I think the whole House will be satisfied because the hon. member for Lanark (Mr. J. Haggart) was especially satisfied to-night.

Mr. J. W. MADDIN (Cape Breton South.) Mr. Speaker, I have listened with great pleasure of the annual philippic of the hon. the Minister of Railways and Canals in bringing down his statement of the report of the board of management of the

Intercolonial railway. I shall deal with but a few of the points in that address. Until a few years ago, up to the time of my election to represent the county of Cape Breton, we enjoyed on the eastern end of the island of Cape Breton, two trains per day from the capital of Cape Breton to the capital of the province, we had what we called the express and the fast express or flier. Within the last four years during the winter months the fast express was taken off the Halifax-Sydney route and a great deal of agitation took place in the eastern part of the province. It was a matter which affected not only the county of Cape Breton but all the counties from Sydney to Halifax, and it also affected the people of the whole province as well as the people of the upper provinces with regard to mail matter and travel. A great deal of agitation was started with a view to having this train put back on the road and one year ago last month on coming up to the House of Commons here, I spoke to the Minister of Railways in the hope that as there was a pronouncement made at that time that even during the summer months a second train would not be put on the Intercolonial railway from Sydney to Halifax, some arrangement might be made for the benefit of the people in the province of Nova Scotia. There was a freight train leaving the city of Sydney at about six o'clock in the evening which was due at Fort Tupper on the Intercolonial railway somewhere about 11 or 12 o'clock at night. An express train left the town of New Glasgow every morning at about 7 o'clock for Halifax, and I suggested to the minister that a sleeping car should be attached to this freight train which would run on schedule to Point Tupper and that one of the numerous freights between Point Tupper and New Glasgow should be run on schedule to connect with the express from New Glasgow to Halifax. The Minister of Railways stated to me at that time that it was his intention to make some change in connection with the Intercolonial railway, and that as this change would be taking place very shortly he did not deem it wise to put on another train or make any alteration in connection with the administration of the affairs of the road. Some time subsequent to this the new board of railway management and control was appointed. I called on one of the members of the board and submitted the proposition to him. He said that in all probability the proper thing would be to have a regular express train. He said to me: Mr. Maddin that end of the road does not pay. Here I would like to recall a question which I asked the Minister of Railways on the 5th of May, last:

Mr. MADDIN:

1. What were the earnings from freight shipped from the Island of Cape Breton over the Intercolonial railway in 1908?
2. What were the earnings from freight shipped to the Island of Cape Breton over the Intercolonial railway in 1908?
3. What was the revenue from the sale of passenger tickets to passengers going to and coming from the Island of Cape Breton for the year 1908, on the said railway?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1. Separate accounts are not kept for this portion of the Intercolonial railway.
2. Answered by number one.
3. Answered by number one.

I was told by the board of control that this end of the railway did not pay, and that consequently it was not desirable that another train should be put on for the convenience of the public. I submit that until the Minister of Railways adopts a system of book-keeping which will show what the earning capacity of the eastern end of the Intercolonial is, he is not in a position to tell us that the road does not pay. In discussing the freight earnings of the eastern end of the road with this member of the board of control, I forget whether it was Mr. Butler or Mr. Brady, I pointed out the enormous freights carried for the Nova Scotia Steel Company and the Dominion Iron and Steel Company. That gentleman told me that these freights were hauled at practically a loss—that there was a very heavy grade at George's river, and that in order to haul heavy trains over that grade, it was necessary to cut them up into short trains, so that the freight could not be hauled profitably at the rates charged to those industries. He also said, what was quite proper, that it was not the policy of the Intercolonial to increase the rates for moving steel billets from those works, in view of the fact that they received bounties from the government, and it would not be right for the federal treasury to pay bounties for the production of steel and take them away by charging high rates of freight on the product. That is a view which I think all members of this House will readily agree with. But just before this government went to the country in 1908, a pledge was given to the people of Cape Breton that the grades at George's river would be reduced, and the sum of $350,000, if I remember rightly, was placed in the estimates for that purpose. During the passage of the estimates last session, I pointed out to the Minister of Railways and Canals that there was in the estimates a sum of only $50,000, which he said was there for the purpose of purchasing a right of way for the proposed reduction of grades, and owing to the depression of trade in the country he did not deem it expedient to place a sum in the estimates last year for

the work. But in view of the fact that the Minister of Railways and Canals has assured this House that in the supplementary estimates to be brought down at a subsequent date, the sum of $16,000,000 will be placed for the construction of the Hudson Bay railway, and in view of the further fact that a surplus of $666,388.67 has been declared for a period of nine months operation of the Intercolonial railway, a surplus which the hon. member for Pictou (Mr. E. M. Macdonald) said the minister should not have declared, it is due to the people at the eastern end of the Intercolonial that a sum be placed in the supplementary estimates for the completion of the promised survey and reduction of grades at George's river in the county of Cape Breton; and I wish to ask the Minister of Railways and Canals now if it is his intention to place in the supplementary estimates a sum to be applied for that purpose?

Mr. GRAHAM. Is there not a sum for it in the main estimates?

Mr. MADDIN. No.

Mr. GRAHAM. Look again, my hon. friend must be mistaken.

Mr. MADDIN. Last year the estimated cost of the reduction of the grade, as given to us by the Minister of Railways and Canals, was a sum exceeding $400,000. I took the ground then that the sum of $50,000 was not adequate. I was told that it was placed there only for the purpose of purchasing the right of way, and that it was not proposed to take any active steps in connection with the matter. In the estimates for this year there is the sum of $100,000; but in view of the statement of the minister that $400,000 will be required, that sum is not adequate for the carrying on of this work, and I ask the minister if it is intended to place a sum in the supplementary estimates sufficient for the carrying out of this work?

Mr. GRAHAM. The work cannot all be done in one season. We are doing with this work what we are doing with every work, placing in the estimates an adequate amount for the work to be done this season.

Mr. MADDIN. What work was done for the $50,000 which was in the estimates last year?

Mr. GRAHAM. There was considerable work done.

Mr. MADDIN. Well, it seems to me that the Department of Railways and Canals are not exhibiting the same anxiety for the reduction of grades at George's river in the years 1909 and 1910 that they exhibited in 1908, before the elections. In answer to a question put last session, the hon. Minister of Railways and Canals said that the engineer had gone down to make the surveys for the reduction of these grades as promptly as he could after the House closed. Although he hastened down and made the surveys after the House closed in 1908, there has been no actual work done there from that time to the present.

Now, the hon. Minister of Railways and Canals has told us with some assurance that there has been no interference from him with the administration of the railway under the board of control. I admire the courage of the hon. member for Pictou, who took the minister to task and told him what his responsibilities in connection with the administration of that railway really are. If the hon. member for Pictou demonstrated anything this evening, it was that he, and not the present incumbent of that portfolio, should be administering the railway in the maritime provinces. I doubt if any hon. member on either side of the House has much ground to complain of interference on the part of the Minister of Railways, either the present incumbent of that office or any of his predecessors. I think the railway has suffered much more from the lack of interference than from interference on the part of the minister. Last year, when the Railway Board was appointed, we were given the strongest assurance through the Liberal press of the country that the railway was now brought out of the range of politics, and that from now, henceforth and for ever, there would be no interference from politicians with the administration of the affairs of the road. People imagined that this was actually the fact, for it was only a short time after the appointment of the new board that 503 heads fell into the basket, the result of the over-manning of the road during the general elections in the fall of 1908. While the Minister of Railways plumes himself on not having interfered with the road, I think it would be much more to the credit of himself and his administration if he could have assured us that there had been no interference with the affairs of the road by men of lesser responsibility than himself.

I wish to point out that in the month of June last, when these 503 men were dismissed, a gentleman by the name of James Edwards, a boilermaker in Sydney, was suspended in the mechanical department at that end of the road. He was told by the foreman that he need not take his tool box away, that he was not dismissed but merely suspended, and that if an opening should occur in that line of work, his services would be required again. But permit me to diverge for a moment to something that took place previous to this. In the fall of 1908, about a week before the general elections in Cape Breton, Mr. Edwards, the boilermaker, was sent for by Alexander Johnson, the Liberal candidate in Cape Breton South, and was invited by him to

the office of the 'Daily Record.' On entering Mr. Johnson's presence, he was addressed as follows:

So you are the man who was cheering for Maddin out in ward 4. You ought to take a tumble to yourself. See if Maddin can get you a job.

This was in the fall of 1908. In June, 1909, this man was suspended along with others. But his tool box remained in the shop, and he was told that when a vacancy occurred and his services would be required he would be sent for. Being aware that there was a vacancy, he went down and sought for re-employment, but his employer said to him: You will have to make your peace with the Liberal party. Edwards said: I thought the commissioners said there was to be no politics or seniority on the Intercolonial. His boss replied: Do you think if I wanted to hire ten mechanics I could go and hire ten of the best men to be found regardless of their politics? No, I would have to go to Mr. Johnson or Dr. Kendall for every one of them. Mr. Edwards then called on Dr. Kendall, the local member, and complained of unfair treatment, and the doctor promised to make inquiries. He met the doctor on the street a couple of days afterwards, and the doctor said to him: Edwards, I understand how it is about your job. You were working for Maddin against Mr. Johnson. See if Mr. Maddin can get you a job. Edwards said: I thought politics and seniority had nothing to do with the railway, that it would be run on a new principle, independent of politics. He said: We will let you see that. And Edwards is still unemployed. If the road were purged of the administration of its affairs by politicians and ex-politicians, those who have graduated from this House, and are taking a post graduate course in journalism and provincial politics—if this road were purged of the operations of these ex-politicians, and a little more attention paid by the Minister of Railways, who is really the one responsible for its administration, there would be fewer complaints.

Something has been said with regard to the Hudson Bay railway, and we are given to understand that this railway is to be taken up by the government and completed. Well, we have had reports to the effect that there is only navigation in that bay for some two months in the year and that in the straits there is navigation for less than two months. As every one is aware, the class of vessel required to go through the drifting ice are vessels of slow speed, high power, sheathed in wood to resist the ice jam. These vessels have to be specially constructed and are unfit for other traffic. If this railway is completed and is going to remove the crop of the west, it will only defer the building of the Georgian Bay canal. The hon. member for Pictou has pointed out that we are only able to ship our coal from the province of Nova Scotia up to Montreal, and cannot ship it beyond that point. But if the Georgian Bay canal were completed, I submit that coal could be shipped from Cape Breton to Port Arthur as cheaply, if not cheaper than it can be landed at Montreal to-day. A great drawback with regard to getting coal into the upper Canadian market is the question of transportation. The vessels built for carrying coal to Montreal are obliged to come back in water ballast, but if the Georgian Bay canal were built they would carry coal to Port Arthur and get return freight so that coal could be landed at Port Arthur as cheaply, if not cheaper, than at Montreal at present. But if this government is going to experiment in millions of dollars expenditure on the Hudson Bay railway, in order to have shipments for a couple of months, that will only delay the construction of the Georgian Bay canal.

The hon. member for Pictou (Mr. Macdonald) said that my hon. friend from South Lanark (Mr. John Haggart) was opposed to the government rates charged on the Intercolonial railway on traffic coming east or going west. I would like to point out that the hon. gentleman was not complaining about the dearness of the rate, but what he did complain of was that the railway did not pay, although there was no reason why, with the passenger and freight rates that were being charged it should not.

In his address to the House this afternoon, the minister of Railways dealt with the different canal projects and western railway and finally wound up with a report of the Intercolonial. He went into the expenditure and revenue of this road and took a good deal of time to point out that this year in particular, there was a surplus, instead of a deficit. I submit that there should not be exhibited this undue anxiety on the part of the minister in his annual presentation, because the Intercolonial railway was never intended to be a revenue earning railway. The hon. minister has told us that he has great faith in the future of this country. He believes that in the course of the next twenty-five years all the great public works now projected will be completed and that even then we will not have more highway than we require for our freight and passengers. Let me tell him that the Intercolonial railway was projected and built at a period of our history when it required more faith than is required to-day to foresee the benefits bound to arise to this country from its construction. In the provinces of Nova Scotia and New Brunswick, men were not lacking before confederation who would undertake to build the Intercolonial railway as far as Rivière du Loup. It was not built for the

purpose of earning revenue, but for the purpose of developing the resources of our country down by the sea. It was constructed for the purpose of carrying products of the mines, the forests, the fisheries and the farms to the different markets of the world and to bring in to those provinces the imports required for their development and maintenance.

It was assumed by those who brought this railway into existence that it possibly might be run at a loss; it certainly never was expected that it would be made a revenue paying concern. Let me ask if the Minister of Railways exhibits any very great anxiety year after year because the canals in Upper Canada, which cost the country over $100,000,000, and through which the people of Nova Scotia cannot ship a single ton of coal, are not paying dividends, and yet we all know that the canals were made free and that they were not even expected to pay their way. This $100,000,000 expenditure of canals is practically of no use to the people of the maritime provinces, but do we raise an annual wail because the canals don't pay? No. We realize that our canal system in Upper Canada is necessary to the development of that part of the Dominion, and might we not with some reason be allowed to hope that the railway system in the maritime provinces should be looked upon in somewhat the same light. The Intercolonial railway is to some extent looked upon by the people of the maritime provinces as more particularly an asset of these provinces, just as the canals may be looked upon as an asset of the people of western Canada. Do we hear the members from the maritime provinces complaining about the employment of too many men on the canals or the dismissal of men on the canals? Oh, no, but year after year the government is asked: Are they going to sell the Intercolonial, or are they going to lease it, or are they going to put it under a Royal Commission, or are they going to get rid of the incubus in some way. I submit, Sir, that if the Intercolonial were freed from political influences which yet characterize its management there would be less complaint about it. I shall not draw any comparison between the administration under Conservative rule and under Liberal rule, I am not going to say that political influence did not exist in the days of the Conservative administration, but we all know it is a recognized fact that at the present time political influence is exercised in connection with everything appertaining to the Intercolonial, from the hiring of a common labourer to buying of stores and the making of contracts. It was recognized that patronage and partyism permeated the management of the road throughout, and when the board of management was appointed we were promised that these influences would be got rid of. But let me say, Sir, that so far from this board being now free from external political influences that is not the case, and in that respect their administration has been a failure. Now, coming more particularly to details, I trust the minister will see that the grades on the Intercolonial railway at George's river will be reduced immediately. The minister has now a surplus which is more than sufficient to pay for this work, and the excuse that he made a year ago that the financial conditions of the country do not warrant the expenditure has now disappeared. I trust he will in the near future carry to completion the reduction of the grades at George's river, which will be a great improvement to the system.

Motion agreed to, and the House went into Committee of Supply.

Railways and canals—capital—Intercolonial Railway—Beresford subway, $6,000.

Mr. GRAHAM. This is to remove a dangerous crossing and build a subway. The cost is estimated at $6,000.

Mr. SPROULE. Will the government follow the rule laid down as to the distribution of cost and ask the municipality to pay a share of this amount?

Mr. GRAHAM. This will be all paid by the government. The Intercolonial railway pays no taxes to the municipalities as the other railways do.

Mr. LENNOX. Having regard to the fact that this railway does not pay taxes, and probably for other reasons, you do not propose to ask the municipalities to contribute anything?

Mr. GRAHAM. We do not.

Mr. STANFIELD. Does the Intercolonial pay a frontage sewerage tax to the municipalities as all other land owners do?

Mr. GRAHAM. My information is that the Intercolonial railway pays no taxes of that kind.

To strengthen bridges, $61,000.

Mr. GRAHAM. This is for strengthening bridges on the line to accommodate the heavier rolling stock.

Mr. FOSTER. Is the whole cost of the strengthening of these bridges charged against capital or against revenue?

Mr. GRAHAM. The amount charged up to capital would be, less the amount realized on the material in these bridges.

Mr. FOSTER. But suppose you have a wooden bridge which has done service up

to the present you could not tear it up and get anything for it. If you are putting in a steel bridge to replace a wooden bridge it seems to me that at least the service cost of the wooden bridge should be contributed from revenue. What is the general principle upon which the strengthening is proceeded with, in other words, what is the total cost of strengthening all the bridges to which you are going to appropriate this money. Is it $61,000 or is it $120,000, the other half being appropriated from current revenue?

Mr. GRAHAM. This is all being taken out of capital. For instance, if the old rolling stock had remained, very few of these bridges would have needed to be strengthened, unless one of them was worn out entirely, in which case we might have replaced it out of revenue. But where, on account of heavier rolling stock, we have to do away with an old bridge, the bridge becomes useless altogether. It is worth nothing for present use, because heavier rolling stock demands a heavier bridge. It is not like a rail. When you take up a 67-lb. rail you have the rail, but when one of these bridges is removed, it becomes of no value, and I do not see how you could well credit it to anything. It is the common practice of company railways to do that.

Mr. FOSTER. I would like to know the principle upon which roads in the United States, under the commission, operate. There must be some statement of the methods of their operation, which the minister could lay on the table of the House for our information.

Mr. GRAHAM. I will get the principle. If it is not in a concrete form, I will work it out and lay it on the table of the House.

Mr. BLAIN. This is an item that appears every year, and I presume will appear for many years to come. May I ask what proportion of the bridges on the Intercolonial have already been strengthened, and how many does he expect to strengthen the coming year?

Mr. GRAHAM. My information is that the present amount will nearly complete the work this year. If the rolling stock on the line is practically doubled in weight, it will mean that every bridge must be strengthened. There may be two or three bridges in addition to these, but no more. Then if they are renewed afterwards, the cost will come out of revenue.

Chaudière Junction—engine house, &c., $6,000.

Mr. GRAHAM. The item has been reduced from $20,000 to $6,000, because we have abandoned the idea of building a new engine house. This is to complete the tracks and signals, fire pumps, &c., which are accessories to the round house.

Diversion of line at Chatham, and branch to wharf, $150,000.

Mr. GRAHAM. This is a large item. The estimated cost was about $440,000 for building this diversion. I suppose it will be about eight and a half miles. It gets over a heavy grade between Nelson and Loggieville, it shortens the line, and it opens up and gives access to the harbour at Chatham. As a matter of fact, the station is a long way from the harbour, and quite a distance from the town itself. I visited the place, and was much impressed with the fact that there ought to be some means of getting nearer to the harbour. Everything had to be hauled a long distance. It was represented to me by the Board of Trade, by the council and by a large meeting of citizens, that they had in view some great new industries which they would undertake if they could get the railway nearer deep water. I think, in the interest of the road, that would be one consideration. But there was another thing, and that was getting rid of a very heavy grade and shortening the line. We decided to undertake this work about a year ago. The estimated cost is $440,000, of which we have spent about $3,000 on surveys. I have a full estimate of the work in its details. The old road would be abandoned.

Mr. FOSTER. What you are really doing is to build the old railway into the city?

Mr. GRAHAM. To get down into the heart of traffic, and we expect a larger traffic on account of reaching deep water.

Mr. STANFIELD. Why not take the original route?

Mr. GRAHAM. The old Canada Eastern did that, but they did not pay much attention to grades. This is bringing the old Canada Eastern railway down into the town of Chatham. At present, it is not on the Intercolonial proper.

Mr. LENNOX. This is on a line that we acquired a few years ago, and when this is done will you be right down to the harbour? What is the nature of the work that is going to be done now for this estimated expenditure of $150,000?

Mr. GRAHAM. We have to get the right of way, grading, ballasting and track laying. We expect to run along the harbour for one or two miles.

Mr. LENNOX. Does the $440,000 include anything for harbour improvement, or is it all for railway construction?

Mr. GRAHAM. It is merely for the railway. I suppose it will include a station. It will necessitate the removal of the station from its present location to a location in the town.

Mr. LENNOX. Has the minister at hand a summary of what amount has been spent under the head of capital expenditure on the Canada Eastern railway since we acquired it?

Mr. GRAHAM. I will get that information for my hon. friend, if possible; it is quite a large amount. There has been ballasting, new bridges and that kind of thing. I think last session I gave the full capital expenditure.

Mr. FOSTER. What is the opinion of the minister as to the increase in traffic that you are going to get by adding nearly half a million of expenditure on this branch road?

Mr. GRAHAM. There seems to be a prospect for a good traffic in lumber and pulp wood. Strong representations were made that a very large mill would probably be erected at that point if they had proper railway facilities.

Mr. STANFIELD. They have a pulp mill there now.

Mr. GRAHAM. Yes, they have, I know but it is working under a great disadvantage.

Mr. FOSTER. Are they going to build another?

Mr. GRAHAM. My information is that another pulp mill and perhaps a paper mill would be erected there. But, no matter how good the port facilities are the distance that they have to haul of a mile or a mile and a half between the station and the port is an obstacle. If the possibilities are to be developed at all this is the only way in which we can do it. In addition the heavy grade we have there has made it almost impossible to do any business over that line.

Mr. FOSTER. The minister is incurring a very large expenditure on very airy grounds. He has no real certainty of anything. Pulp has been remotely considered or suggested. A paper mill may follow. It does not seem to me that we are justified in doubling the amount that we originally paid for the road and which we were told bought a road which was reasonably well constructed and well equipped. We pay out half as much more and there is no certainty at all that the development and extra business which the minister refers to will result. Railways do not build unless there is some reasonable certainty of securing extra business. We are going to put into a road that we were told would cost us $800,000 something in the neighbourhood of $2,000,000.

Mr. GRAHAM. There is a good deal of truth in what my hon. friend says. But in the province of Ontario a great deal of the difficulty that we have had with some of our company railways has been that they have built half a mile or so from the town and if it is possible to give any other railway the business we always do it. It is in the interest of the railway that we should develop the traffic there. You cannot have any guarantee at any of those places. You have to look at the possibility of the trade and overcome one of the charges which have been made against this government road that it will not assist the industries of the maritime provinces as other railways would do. In a port like this it is wise to get to the water front so as to get whatever traffic may be there. In addition we make a great reduction in the grade which has been a handicap in attempting to do any business there.

Mr. FOSTER. What service does the Intercolonial railway give to Chatham?

Mr. GRAHAM. We have a branch line from Chatham Junction, but the station is a mile or a mile and a half away from the the town.

Mr. LENNOX. I did not get an answer explicitly from the minister. The minister will furnish us with the total amount which has been expended upon capital account on that eastern railway since we acquired it?

Mr. GRAHAM. Yes.

Mr. LENNOX. I recollect there was a great deal of criticism as to the wisdom of acquiring this railway at the time we did acquire it. It was the Gibson line and it was represented to us that it was in good working condition, would be a very valuable line and that we would not have to expend any considerable sum of money in order to begin immediately to derive a benefit from it. I think it will be found that we have already expended a large sum upon capital, here is an item of $440,000 and we can assume that it will reach half a million or more before it is finished. There is a good deal in the suggestion that there is a very airy possibility of any considerable advantage to be derived from the expenditure on this line. Although I dislike always to speak of the Newmarket canal it is a good deal on the same line as the construction of that expensive work for the purpose of building up one possible industry. It was said that the Kane Bros., would probably leave Newmarket if we did not build that canal and $200,000

or $300,000 was going to do the whole thing. Now we find that it is running into a very large amount of money. I do not want to obstruct the minister in any of these items, but I think we ought to have pretty full information as to what is contemplated as well as what has been done in connection with this Canada Eastern railway.

Mr. GRAHAM. I will bring all the information down.

Mr. FOSTER. Maybe the minister would do just as well to let this item stand and go on with other items, because I think this is rather too important to pass with the information that we have.

Mr. GRAHAM. If my hon. friend will tell me what he wants I will try to get it. There is no information as to the trade except that a man with practical ideas looks over the ground and comes to the conclusion that there is a possibility of very large development there. The other advantage is that we are getting rid of a grade and bringing down to the sea-board a railway that is a mile or a mile and a half away.

Mr. LENNOX. We find $440,000 as one item of proposed expenditure. Is this the total or will we be confronted with other items as we go along?

Mr. GRAHAM. I do not know but that there may be on this whole length of railway, but this covers everything at Chatham. Anything new that has to be done must be charged to capital account.

Mr. LENNOX. Here is a railway that cost us $800,000, and here is one spot on that railway that is to cost more than half a million in addition to what we paid for the railway. What are we to expect in reference to the rest of it? What was suggested by the member for North Toronto (Mr. Foster) was that the minister should let this item stand until we get the information spoken of, and then the minister will probably indicate what other items of capital expenditure are for the construction of this. Of course the minister must know what he contemplates, in addition to this, off-hand.

Mr. RHODES. As I understand the Minister of Railways, this expenditure is justified on the ground that the branch line will increase in efficiency, whereby its earning power will increase so that you can haul more cheaply.

Mr. GRAHAM. That is one of the great reasons.

Mr. RHODES. Then how does the minister reconcile this with the line of policy laid down in connection with the Branch Lines Bill, not to take over any branch lines reported to be not in a good and safe condition? In other words, not to take over a railway that requires expenditure on it.

Mr. GRAHAM. This railway has been taken over and this is absolutely a new road that we are constructing.

Mr. RHODES. I quite understand that, but the principle is there just the same, you are expending money on a road that has been acquired. I am not speaking in a critical way, because in connection with the Branch Lines Bill I believe that the government should take over a railway even if it is only a rattle-trap road if, after it is placed in proper condition, it will be a paying asset to the government. But I ask if, while you are making an expenditure on this branch line to increase its efficiency, you should not do so in reference to any future road acquired under the Branch Lines Bill?

Mr. GRAHAM. We are criticised now for taking over a road on which we will have to spend money, and the Branch Lines Act rather protects us in the future against that criticism. This road has already been purchased and we want to get the best possible results from it. We want to get down into the town of Chatham, where there is a chance not only of decreasing the grade, but of getting more goods to haul.

Mr. FOSTER. Suppose it had been left entirely to this managing board or to the chief engineer just on the ground of the traffic necessities of the road, would they have recommended an expenditure of $400,000 or $500,000 in order to improve the road for the sake of the haulage over it? Is it not a fact that this is another method of paying respect to very strong party pressure which has been made at certain times? This road was acquired in the first place as a result of a political promise. The House was misled, because we were told we were getting a road well worth the money and in a reasonable state of repair and efficiency. I think that from the debates in this House we could show that the minister became sponsor to the House that it would not land us into very much greater expenditures. Here we are increasing the cost price in one little instance by one-half the whole price.

Mr. GRAHAM. But we are getting a good deal more by the expenditure. This was no political promise, I can assure my hon. friend. If it had been it would have been made to one political party. I visited Chatham and spent some hours there. I met the citizens, I do not know who were Liberals and who were Conservatives. I met the board of trade, the council and citizens generally and I was strongly cen-

sured by the Conservative press there because I did not absolutely promise on the spot that I would do this. I considered it carefully, I had a talk with the chief engineer and the deputy, and while in answer to my hon. friend's question, I think if it were only to improve the haulage for the goods we now have, we would not go to this very large expenditure, it would be worth a large proportion of the expenditure to do that. But, taking into consideration the possibilities of the place, the fact that we are trying to assist the development where we can without too much expense to the railway, feeling that we get a return, I undertook, after full consideration, not as a political promise but as a promise to the citizens and in the interest of transportation and development, to do this work. It is not a political promise in any sense.

Mr. STANFIELD. What are the freight earnings for Chatham?

Mr. GRAHAM. I have not those figures with me, there is considerable freight.

Mr. STANFIELD. I do not object to having the line put into the town but it seems a large expenditure, for the exports of Chatham are nearly all lumber and you will not haul lumber over your road, it has to go by water as they have a good harbour and the same thing is true of pulp.

Mr. GRAHAM. It was not so outlined to us by the prominent business men there. They felt that a great deal of traffic would be developed by the road going to the harbour.

Mr. FOSTER. What kind of traffic? They must have told the minister.

Mr. GRAHAM. It does not follow as a fact that because some hon. gentleman is of opinion that certain traffic will not go by the route, it will not go, because possibly a good deal will be carried.

Mr. FOSTER. You must exercise your judgment.

Mr. GRAHAM. It is a matter of opinion, that is all. The men of the city were positive that a great deal of traffic would be done on this railway if it got down to the harbour, and a great deal of traffic and merchandise would go to the harbour that does not now go there because the railway is so far off they cannot make connection.

Mr. FOSTER. This is a road from Fredericton to Chatham. We know the nature of the country through which it runs. It is not a country calculated to throw much traffic into the town of Chatham. What will go to Chatham? The lumber along the streams is taken down the streams to Gibson or Marysville and from there it is shipped on the St. John river. Will this road divert that traffic from that old and cheap route? Most of the lumber must take that route, and will not be shipped on your line even when you add this extra $500,000. Is there much agriculture produce, &c., which will run to the town of Chatham and bring you a return in freightage on that road? That traffic will be very small. What is there in Chatham, now or to come which will find its outlet by way of Chatham over this Canada Eastern to Fredericton and what is to become of it there?

Mr. GRAHAM. My hon. friend forgets that this road will work in connection with the Intercolonial railway. It does not necessarily go to Fredericton at all. Traffic goes east and west on the Intercolonial railway. It is a mistake to say that all lumber is shipped by water. A large quantity of the sawn lumber there goes by rail.

Mr. FOSTER. Will it go by rail from Chatham over this road in the direction of Fredericton?

Mr. GRAHAM. A large share of it will go to Chatham junction and be shipped on the Intercolonial railway east and west from there.

Mr. FOSTER. Over how many miles of road will that accretion go? What will be the haulage you get?

Mr. GRAHAM. The Intercolonial railway will get all the haulage when it strikes that line. We get it at the junction and by getting to the harbour it is represented we will get a larger trade than we do now. It does not need to go to Fredericton, it goes to the junction and then to St. John by the Intercolonial railway. It is true that we do not get all the haulage on the Canada Eastern branch. While this is a part of the Canada Eastern branch, it will also be a feeder to the Intercolonial railway at the junction point and the Intercolonial railway will take charge of the traffic there.

Mr. LENNOX. What has been the net revenue from this Gibson road, say for the last year? That information might enable us to judge how this matter will work out. Is the minister of the opinion that this addition of $440,000 would result in a proportionate net increase of revenue or in a deficit?

Mr. GRAHAM. My hon. friend must know that this question cannot be answered. In any transportation problem you cannot guarantee that you would get any stated revenue. You look over the ground and hope you will.

Mr. LENNOX. What revenue have we been getting in the past from this road?

Mr. GRAHAM. I answered that question as fully as possible last year, in reply to the hon. member for St. Antoine division,

Montreal. I have not the figures with me at present.

Mr. LENNOX. What was the general result—considerable profit?

Mr. GRAHAM. No, I think not. This year, when the year is up, it may be different.

Mr. LENNOX. It would be unfortunate if, with an increase in the expenditure, we had a proportionate increase in the deficit.

Mr. PUGSLEY. I happen to know very well the situation of affairs at Chatham, and I can assure the committee that it would be impossible to project any extension of the railway which is more likely to add to the business of the main line.

Mr. FOSTER. In the whole wide world?

Mr. PUGSLEY. Yes, relatively to the business of the main line. As my hon. friend knows, the Miramichi is a very important river, navigable up to Chatham, and even beyond Newcastle. There are important industries there, and the people of Chatham are unanimously of the opinion that this extension along the water front will lead to the establishment of a number of very important industries. They believe that it will give new life to the town, tend to develop large industries and bring to the railroad a great traffic which it could not possibly get unless this connection were made between the water and the railway.

Mr. FOSTER. All of which was said by another gentleman, at a different time, and in almost the same words, with reference to the Newmarket canal.

Mr. PUGSLEY. On the Miramichi there is 20 feet of water.

Mr. FOSTER. Well, that is an advantage; there is water there. But there is no plan of this proposed extension; we are entirely in the dark with reference to it. If the minister will gather up some of the information asked for and bring a plan of it when we come to the estimates tomorrow, I think we shall make more progress.

Mr. GRAHAM. I will bring a plan and lay it on the table to-morrow, although I do not think my hon. friend can form much of an idea from an engineer's plan.

Air-brakes to freight cars, $10,000.

Mr. LENNOX. How many cars is it expected this will equip?

Mr. GRAHAM. About 200. We have a total of 12,779 cars, of which we have equipped 10,801, leaving 1,978 to be equipped. Our cars cannot go across the line if they are not equipped with air brakes, even if we did not have them as a measure of safety.

Mr. LENNOX. I suppose the minister intends to have all the freight cars equipped with air brakes?

Mr. GRAHAM. Yes.

Mr. STANFIELD. Why does not the minister have the work pushed through? In the different carshops at Moncton, Stellarton and Halifax, men were laid off. Why were these men not kept at this work?

Mr. GRAHAM. We are getting along pretty rapidly, having equipped already 10,801 cars.

To exchange drawbars of freight cars, $10,000.

Mr. LENNOX. How many cars will this amount equip?

Mr. GRAHAM. About 200 cars, which will leave a balance of about 493.

Mr. FOSTER. Is this work done in the carshops?

Mr. GRAHAM. Yes, in our own shops.

Mr. LENNOX. What is the reason for exchanging the drawbars?

Mr. GRAHAM. We have to have a standard drawbar, or no other road will accept our cars. On the old-fashioned car there was a link coupling, which is obsolete and only good for scrap.

General protection of highways — Intercolonial railway, $10,000.

Mr. LENNOX. What policy does the minister propose to adopt as regards protection of highways?

Mr. GRAHAM. This is to place bells for the protection of highways at level crossways—either bells or gates. Year by year we are taking a moderate amount and are setting the other railways a good example. We are eliminating some level crossings altogether every year and in other places there will be something for overhead bridges.

Mr. LENNOX. I hope the minister will adopt some relative basis as regards protection by gates and bells and overhead crossings and subways. I think the minister will be justified in making to some extent the Intercolonial railway an object lesson to the other railways, especially in connection with the safety of the public.

Mr. STANFIELD. Does this include the vote passed last year for the protection of the crossing at Londonderry?

Mr. GRAHAM. Yes.

Mr. RHODES. It is my duty to bring to the minister's attention the bad condition of the roadway and also the station yards at Amherst. Amherst is a town of some 9,000 population. The railway track

divides the town in two. There is a level crossing at Main street, which is guarded in the daytime by an old pensioner, who is away at meal hours and at night time leaves altogether. There is a very large block between the main street and Christie's crossing, about half a mile. On the south side of the highway are a number of factories, employing some 1,600 men, most of whom live on the north side of the track, and their only way to reach their homes is to cross the railway. During the past three or four years, there have been a large number of accidents and several losses of life. Only in December last, a twelve-year-old girl was killed. With the shunting and moving about constantly of the trains the cars are not separated, so that there is no passage way and the result is the children crawl underneath, and in doing so this girl was killed. I would urge that an item be placed in the estimates for the building there of an overhead bridge. In the case of the Chatham branch, we are spending $450,000 to improve the line of railway and the station, and the freight and passenger earnings of that branch only amount to $163,000. In the case of Amherst, the total receipts from freight and passenger earnings, as shown by the Auditor General's Report, amount to $563,000, so that on the basis of dollars and cents, the minister should consider this case. But from the standpoint of human life, there is very great need for an overhead bridge.

Mr. GRAHAM. An overhead bridge might be built, but as the place is practically level, it would have to be so high that in nine cases out of ten, people would still cross beneath the bridge. At least that is my experience in western towns.

Mr. RHODES. You could build a subway more cheaply, perhaps. Between Christie street crossing and Victoria street crossing, there is a street known as Station street. At that point a subway could be continued to opposite the car works and enable the operators to pass back and forth in comparative safety. I know that three or four losses of life have occurred there in the last three or four years. I think a subway could be built there quite cheaply, as there is no rock and the drainage is good. The subway is not only needed for the employees but for their children who live on the south and go to school on the north.

Halifax—increased accommodation, $52,650.

Mr. GRAHAM. This has been going on for a long while. It is for additional tracks in the yard on the west side of Water street and also for removing buildings in Richmond yard. It is estimated that the pavements will cost $11,500, and the wiring of buildings $5,000.

Mr. RHODES.

Mr. LENNOX. There was $180,000 voted last year. That will be all spent by the end of the present year too, I presume, and $52,000 more is wanted. Will those two complete the work?

Mr. GRAHAM. It would not be honest for me to say that there would not be any more expenditure at a terminal like Halifax, because expenditures will constantly be going on there.

Mr. CROCKET. Are all the works included in this $52,000, under contract?

Mr. GRAHAM. Yes, except the track laying, which is done by ourselves.

Indiantown and Blackville—to put line into condition for operation, $2,000.

Mr. FOSTER. What do you mean by putting the line into condition for operation; is it not running now?

Mr. GRAHAM. There has been an expenditure of $168,000 on this Indiantown branch, which includes the building of quite a large bridge, and we have it now in practical running order, and this $2,000 will finish the job. It was not in good running order when we got it.

Mr. FOSTER. What is the length of the line?

Mr. GRAHAM. About eight miles.

Mr. CROCKET. Will trains be run regularly this year to connect with the trains on the Fredericton and Chatham branch?

Mr. GRAHAM. I think there is a regular train connection there now, but I would not be sure without looking at the time table.

Mr. CROCKET. There was some interest in the question as to whether, when the Indiantown branch was open, a traveller from Fredericton to Montreal might go by way of Blackville and Newcastle, instead of by Chatham Junction.

Mr. GRAHAM. I rather think the through connection would still be made by Chatham Junction.

Mr. CROCKET. Is this the last of this expenditure?

Mr. GRAHAM. Yes.

Lac au Saumon—overhead crossing, $1,400.

Mr. LENNOX. Does this represent the total cost of this bridge?

Mr. GRAHAM. Yes, the contour of the land there renders it cheap and convenient to erect this bridge.

Mr. LENNOX. This is an instance of what I have advocated, that where the formation of the land lent itself to an over-

head bridge like this, a bridge should be erected.

Mr. GRAHAM. I think so myself.

Mr. LENNOX. The interest upon this expenditure is a mere trifle, and it is much better than to employ a watchman.

Mr. GRAHAM. It is better than a bell and much safer.

Mr. LENNOX. It is an illustration of what I have been contending for.

Loggieville—improvements, $12,000.

Mr. GRAHAM. This is for improvements at the station.

Mr. CROCKET. What will be the total cost of these works?

Mr. GRAHAM. The total estimated cost is $32,000.

Mr. CROCKET. Is it the intention to include in the supplementary estimates this year an appropriation for the station at Fredericton? There was an initial vote of $10,000 put in the estimates for 1908, but that vote was dropped from the estimates last year, and it is not included in the main estimates this year. The minister has been to Fredericton and he has recognized the absolute necessity for a new station. The present building is a disgrace to the railway and an eyesore in the community. The board of trade and the city council of Fredericton have taken the matter up, and I would like to hear from the minister if it is the intention to put a vote for a new station at Fredericton in the supplementary estimates?

Mr. GRAHAM. I would not like to say that. But I agree with my hon. friend that the station at Fredericton is not fit for that city. I may go further, and say that I do not think the station at Truro is fit either. But we are going along gradually. There is some question about our property at Fredericton that has been bothering us considerably, and it is not quite clear yet. I would not like to say that I will put an item in the estimates. But every word my hon. friend says about the station at Fredericton is absolutely true; we must have, before long, a new station at Fredericton.

Mr. CROCKET. An initial appropriation was made a year ago. Why was that dropped?

Mr. GRAHAM. I did not know certain things about the property there that I have found out since, and which it would not be wise perhaps to reveal. But the hon. gentleman will not have to wait long for a station. Last year I hoped to make some arrangement with the Canadian Pacific railway, and join them, but unfortunately we cannot do that.

Mr. CROCKET. Can the minister say whether a site has been decided upon? Because I may say that some of the gentlemen who figure prominently in the Liberal organization there are buying up land, and purchases have been made within a week or two by the gentleman who has the patronage of the Liberal party. I would call the attention of the minister to that fact, so that if they have any particular location in view, they may make their purchase of land from the present owners, and not be called upon to pay large profits and rake-offs to middlemen.

Mr. GRAHAM. I think my hon. friend can rest assured that we will guard against that. If we were to give an intimation of where we wished to purchase, I imagine the price would immediately go up. I have not heard the circumstances which my hon. friend has outlined, but he can rest assured that we will buy the land at the lowest possible price, and if we cannot get it at a price which we think reasonable, there is a process by which we can get it at a fair valuation.

Mr. STANFIELD. Ever since I have been in the House I have advocated a new station at Truro. That station is a disgrace to the road. Amherst has had two new stations since that was built, Pictou has had a good station, Stellarton has had one, Antigonish and some other places. I would like the minister to give me some kind of a promise that we will get that station. I feel sure that if the present deputy had remained—I am sorry to see him going—we would have had an item in the estimates for next year.

Mr. GRAHAM. I know that my present deputy has been studying the question of a station at Truro. Perhaps I may be pardoned if I say something that may sound a little blunt. I think we have designed stations along the Intercolonial, I will not say extravagant but sometimes out of proportion to the needs. My hon. friend has spoken to me about the station at Truro, and we need a new station there. We are studying the question, and it cannot be very long before we shall have to have a new station there, even in our own interest.

Mr. CROCKET. I would like to say to the minister in connection with the diversion of the line at Chatham, that if he has not got the information now, I would like him to state, when we return to the item, just what negotiations have taken place with reference to the acquisition of

the right of way, what properties have been purchased, if any, and from whom, and at what prices.

Some resolutions reported.

On motion of Mr. Fielding, the House adjourned at 11.35 p.m.

HOUSE OF COMMONS.

WEDNESDAY, February 2, 1910.

The SPEAKER took the Chair at Two o'clock.

HOURS OF LABOUR ON PUBLIC WORKS

Hon. MACKENZIE KING moved that the second report of the special committee on hours of labour on public works be concurred in: He said: I might say that in introducing the motion on this subject the other day I may not have explained it to the House as fully as I should have, that this is a report of the committee appointed by the House to inquire into the subject, and that it was as chairman of the committee I presented the report. It was suggested by some members of the House that the appointment of any one to assist the committee was unnecessary, inasmuch as officers of the Department of Labour might be expected to do that work. It is true that we have in the Department of Labour officers who are capable of doing work of the kind; but the work which is required to be done would involve taking these gentlemen off their departmental work to do that which is of the nature of committee work. It was also suggested that this looked like an attempt to get some one a situation. In that connection I have only to say that the motion to retain a specialist for this purpose in the committee was made by an hon. gentleman sitting on the other side of the House, and I am quite sure he had no such idea in his mind when he made the motion. Further, I do not think any member of the committee had in mind anything other than the purpose of securing the best expert advice it was possible to obtain in connection with the furtherance of the work, so that when the report was brought down to the House it would be as complete as possible. Seeing that this is the unanimous report of the committee, I hope the House will concur in it.

Mr. BLAIN. I have nothing to add to what I said in the House a day or two ago. I suppose that remark would apply to my hon. friend the Minister of Labour (Mr. King), because he has not added any new reason why the House should adopt this new principle. When the matter was before the House a few days ago the Prime Minister suggested that, as this was a new departure, time should be given to look into it. I hoped that the Minister of Labour would be able to give us some new reasons why the committee should ask that a specialist be appointed to gather information as to the labour legislation of other countries. My hon. friend's department is costing this country, according to the Auditor General's Report, about $112,000 every year; with a Minister of Labour, a deputy Minister of Labour, and a staff of officers, all new within the last few years; and if my hon. friend, after all these years of effort and expenditure, has not in his department now the legislation that is in force in other countries with which Canada has any relations, then I think the Labour Department is a distinct failure. I am not interested as to whether a gentleman on this side of the House or a gentleman on that side moved the motion in the committee. That is unimportant. What I do say is that whatever information is required by this subcommittee should be found in the Labour Department. If it is not found there, then my hon. friend the minister and his department are not doing what the people of this country expect them to do.

Mr. KING. In answer to the hon. gentleman (Mr. Blain) I would say that the legislation in question is to be found in the Department of Labour; but that is not what the committee is asking for. Legislation of this character passed by other countries has been the subject of interpretation in the courts, particularly in the United States, and in several states the courts have passed upon the effect of that legislation.

Mr. BLAIN. Could not my hon. friend refer those matters to the Justice Department?

Mr. KING. The decisions of the courts are only one phase of the matter. But referring the matter to the Justice Department would not get over the difficulty of throwing upon a department of the government an amount of extra work which, having regard to the work the department is already doing, it could hardly be expected to undertake. My hon. friend has said that this is a new departure. I think he is mistaken. I am informed that in connection with other committees of the House a like course has been adopted for example in the case of the telephone committee, where the assistance of an expert was obtained. It is simply that the committee may have the benefit of expert knowledge on this very important question. One or two clerks of the department, if given this special work to perform, I have no doubt would discharge it satisfactorily, but to do that would involve their leaving other work

for a considerable time. I take it that this House is anxious, and certainly the country is anxious, that this measure should be furthered as expeditiously as possible, and it is to expedite the consideration of this Bill, and also to enable the House to have the fullest information possible, that the committee has made this recommendation.

Mr. LENNOX. In referring to the expert employed in the case of the investigation in reference to telegraphs and telephones, my hon. friend is somewhat unfortunate. That was a case in which, it is true, we employed an expert, and a great deal of time of the members of this House was taken up in order to ascertain facts which were supposed to be useful to parliament and to the country. But unfortunately no use was made of that, the government remained absolutely idle for two or three years, and when the matter was brought up and discussed in the House, the government saw fit to put up one or two of their well known defenders to make statements which were not justified by the facts, and which were not justified by subsequent investigation. If the action of my hon. friend is on the same line of obtaining expert assistance, and then not availing himself of it, or rather perverting it to improper purposes, it would be unfortunate. For my part, I am of opinion, and have often expressed myself to that effect in the House, that we are far too prone to employ others to do work that we should do ourselves. That remark applies distinctly to this new department of the government, the Department of Labour. It is realized by members of this House, I think, and by the country generally, that this department, at all events, has not too much work to do. It is well understood in the country, and is emphasized by the press, that the peculiar functions assigned to the Minister of Labour have not been very efficiently discharged, in some respects, by that gentleman, and the prediction of the good results that would follow the constitution of a Department of Labour, have not been verified. I think it would be better for the departments to familiarize themselves with the work they have in hand, and to enable members of this House to familiarize themselves with the conditions of the country, by appointing special committees to investigate these matters as far as possible at first hand, than to allow this system to creep in of employing experts, royal commissions, and so forth, to do the work which we could well do ourselves. I see the Prime Minister is in his place and an apt illustration of that will come up later on in the case of the appointment of the special Commission for the Conservation of our Natural Resources. When that proposal was introduced into this House we were told that it would only cost a matter of $20,000 a year or less. I find that the chairman of that commission is about to apply to parliament for a vote of $50,000 for the year's work of the commission. The matter of money is of little account, comparatively speaking, but I called it to the attention of the Prime Minister at the time that we were, by relegating these duties to outsiders, preventing ourselves from obtaining that familiarity with the resources of the country which we require in order to be in a position to prevent these resources from being raided. I venture to make the statement that much of the information acquired by the commission will be utilized for the purpose of enabling those in close touch with the government to make raids upon the natural resources of this country and to utilize them to their own advantage. At the present moment we have some evidence that information which is being obtained by the commission is being exploited by members of this House, and is being turned to their own advantage. It will be a surprise to the country, or to me at all events, if it turns out that much of the money we are spending for the purpose of gathering information and collecting it with reference to our natural resources will not really be used for the purpose of enriching and aggrandizing certain persons.

Sir WILFRID LAURIER. I think my hon. friend (Mr. Lennox) will regret the language which he has just made use of. First of all, it is out of place altogether upon this motion, and it is out of place because he makes an insinuation. If the hon. gentleman has charges to make, he is at liberty to make them. Otherwise, his words have no weight at all.

Mr. MACDONELL. As a member of the committee to which this question was referred, I desire to say that we felt that if we were to properly discharge our duties it was necessary to obtain some outside assistance. The committee asked the hon. Minister of Labour to see if his department could furnish the assistance. He said that it could not, and, having regard to the nature of assistance we required, which was of a semi-legal character, it did not seem unreasonable to the committee that some outside assistance should be secured. That assistance was procured in the person of a gentleman who has appeared before the committee at the various sittings and who, in the opinion of the committee, has given entire satisfaction. It was felt by the members of the committee, eleven in number, that they could not devote sufficient of their time and attention to the work to do it complete justice. Most of the gentlemen were sitting on other select committees, all of them on the general committees, and I, as a member of

that committee, felt that I could not give it that personal attention necessary to investigate the various sources of legislation in other countries that, in my opinion, it required, and the other members of the committee felt that they were unable to give proper consideration to the measure. That being the view of the committee, this gentleman's services were, by unanimous consent, procured and he is performing his work. If it is not usual to procure services such as this gentleman is rendering, well and good; that is another matter entirely, but his services were procured because it was felt by the committee that some such assistance was necessary. He is giving the committee the assistance it had been looking for, and which it requires in order to give proper consideration to the matter referred to.

Mr. FOSTER. I do not think we have heard from the minister in exculpation of his own department or any sufficient reason why there should be this extra employment. The whole matter seems to be that a rather expensive department, with what we supposed to be an up-to-date minister and staff, is not able to collate and bring before the committee the results of the legislation with regard to labour, so that the committee could have the material upon which to carry on its investigations. I think it is time that we should know what the Labour Department is going to do for the amount of money we are paying, which is yearly increasing. It seems to me that it should have intelligence enough to do this little bit of research and collation which is necessary to put certain information before the committee. I am not raising any objection against a small amount of money being expended for the purpose if it were absolutely necessary; what I am pointing out is that the Labour Department ought to be able to give at fairly short notice certain information which ought to be at the hands of that department at any hour.

Mr. BLAIN. Again I ask the minister if this official who is referred to in the report has been engaged and is at work now?

Mr. KING. I would say, in answer to the question just asked, that Professor Skelton, whom it is desired to retain in this connection, has already been giving evidence before the committee, has been giving the results of some of his researches into this question, and it is proposed that the committee shall ask him to make a special report.

Mr. BLAIN. He has already been engaged by the committee?

Mr. KING. He has already given some of his evidence before the committee. As chairman of the committee I was informed by the clerk of the House that it was not necessary to ask the concurrence of the House in the action of the committee in obtaining this gentleman's services for this purpose, but it was thought better to do it and for this reason this present concurrence is being asked.

Mr. FOSTER. By what authority was a payment of money agreed to without any appropriation or authorization by the House?

Mr. KING. I understand that there is a general appropriation for the purpose of assisting committees in the matter of the evidence which is taken before them, and it was proposed by this committee to deal with this in the same manner as these matters are dealt with by other committees.

Mr. FOSTER. That does not warrant them in employing special help. That is for the witnesses and the like of that.

Mr. KING. If the House will give me an opportunity I will be very glad to show what the Department of Labour is doing in view of some of the reflections which have been cast upon its work. However, at the moment, I will content myself with drawing attention to the kind of criticism that is made of the department and of the unfair nature of the charges that are sometimes levelled at it. The hon. member for Peel (Mr. Blain) has just read to the House from the Auditor General's Report a statement which he says shows the expenditure of the department to be $112,000 a year. I have in my hand a copy of the Auditor General's Report, and I will read from it just to show how that total is made up. I see here Royal Commission re losses of Japanese residents of Vancouver through riots in September, 1907, $623, and Chinese claims re riots in Vancouver, September, 1907, $27,433.41. That was money paid in settlement of the claims of Chinese for losses occasioned in the riots in Vancouver. something with which the Department of Labour as a department has nothing to do. The item is included but it is not a part of the expenditure of the Department of Labour in any sense of the word. Similarly, we have the Royal Commission re oriental labourers, $1,268.23, the Royal Commission re cotton industry in the province of Quebec, $1,404 and the joint International Opium Conference, Shanghai, China, $5,500. These are all items which are not properly chargeable in any sense of the word to the Department of Labour. If they are deducted from the total it will be seen that the cost of the Department is not anything like what the hon. gentleman would lead the country to believe.

Mr. CROSBY. We started in to discuss the question that is before the House. We have gone into one or two other matters and now we have come to the Chinese question. I think we should confine ourselves to the question before the House.

Mr. HUGHES. May I ask the minister if the item of $112,000 includes the expenditure of the officers of this government who went specially to bring in these Chinese as workmen in the first place?

Mr. SPEAKER. The House should confine itself to the question before the Chair.

Mr. KING. Any digression from the original motion lies with the hon. member who introduced it in the first instance.

Mr. BLAIN. Mr. Speaker, with your permission I would like to ask a question.

Mr. SPEAKER. The hon. gentleman has already spoken.

Mr. BLAIN. I simply want to ask the Minister of Labour whether or not——

Mr. SPEAKER. I hear a remark from the hon. member from Halton. It is customary in the House to allow a member of the Crown to give the House information, and to answer questions, when it would not be permitted to a private member.

Mr. FOSTER. Give the poor fellow a chance.

Mr. SPEAKER. If there is any doubt on that point I would like to have it settled.

Mr. SAM HUGHES. I would extend the privilege to any person in charge of a Bill.

Mr. HENDERSON. I have no objection to the Minister of Labour answering questions, but the minister rose time after time when there was no question asked of him, and I was surprised that a minister of the Crown should seek to get privileges in this respect that are not accorded to other members. I was deprived of the opportunity of saying something on this motion simply because the Minister of Labour rose time after time to address the House. I have no desire to in any way interfere with the minister answering questions. I thought this was the Department of Labour, but it seems to me that the object of the department is to shirk labour. We have a minister and a deputy minister and a staff of officials, at large cost, and instead of doing the work they should reasonably be expected to do they simply want to throw that work over on somebody else. I do not know what this committee has accomplished, but it seems to me that the Bill which has been referred to them is not very difficult to decide upon. I do not know what extra knowledge is required to assist the committee. I think this parliament is capable of making precedents for itself without going to foreign countries. If the object is to find out whether a man working on one side of the street on a government job should work 8 hours, while a man working on the other side on a private job should work 10 hours, then I think that any man of ordinary common sense could settle that question without the assistance of even the Minister of Labour. It seems to me that it is quite unnecessary to call in this expert at large expense to the country, and unless the minister can give more substantial reasons for his proposal the House should not agree to it.

Mr. BLAIN. I ask the Minister of Labour whether or not this gentleman has been engaged, and if so, at what salary and on whose authority?

Mr. KING. Mr. Skelton has been giving evidence before the committee. He has come to Ottawa at his own expense, and up to the present time the question of his remuneration has been left open. If the House decides not to concur in this report I suppose Professor Skelton will not be paid for his services. If on the other hand, it is felt that the country would not be justified in taking advantage of the professional services of this gentleman without remuneration, then, if this report is concurred in, I presume the committee will have authority to pay him for his services.

Mr. J. D. TAYLOR. I am astonished that the Minister of Labour should have deferred until this moment the acknowledgment that so far as he is concerned, this professor has been engaged and that his services are to be paid for. I am the more surprised, in view of the fact that a report recommending his engagement has been brought down to this House and has been discussed twice, with a week intervening, before the minister thinks it worth while to inform the House that his department, and therefore the government, is committed to the payment of this university professor. I submit that that is not a proper way to use the House of Commons. I submit further that this committee is not charged with any duty which necessitates the calling in of a university professor to give it advice or to convey to it any information as to the working of the eight-hour law in other countries. I agree with the hon. member for Halton (Mr. Henderson) that this parliament is quite capable of setting its own precedents and making its own laws, and it seems to me that when parliament affirmed the principle of the eight-hour day on government contracts, as it did when it gave this Bill a second reading,

it does not well become this committee to re-open the whole question, to go beyond its commission, and to call in a professor, not to assist it in the duty with which it is charged, viz., that of perfecting the Bill so that it may be precisely what it is intended to be, but rather to give instances from other countries, with the possible result of discrediting the eight-hour movement. It seems to me that the developments have justified the question I put to the Minister of Labour when it was suggested to refer this Bill to a special committee. I then asked the Minister of Labour whether he would tell the House what might be expected from the committee, because I did think that as the committee was virtually chosen by those supposed to be promoting the Bill they would select a committee likely to be in a position to discharge the duties entrusted to it. It seems to me that this House is now asked to be a party to a hippodrome performance in connection with this special committee, and as a member of this House I object to lending myself to any performance of the kind. To my mind the Department of Labour ought to have ample information to deal with this Bill. It has been three sessions before the House, and last session the then Minister of Labour referred at some length to the legislation in other countries dealing with eight-hour laws, thus proving that the Department of Labour at that time was seized of information respecting the operation of eight-hour laws in other countries. What has become of that information between last session and this? Are the archives of the department so formidable that these facts have been lost and cannot be resurrected to make a report to this committee? It seems to me that the only effect of calling in this university professor to make diligent research and advise the committee will be to put this matter off so that it cannot be dealt with this session. I am confirmed in this belief by a statement just now made by the Minister of Labour that if he undertook to prepare this in his own department, it would take the clerks of that department away from their other duties for a very prolonged period of time. I submit that this Bill was referred to the special committee with the idea that it should be reported on this session, and that there was no intention on the part of this House that the matter should be put off until next session by the device of appointing a university professor to make lengthened research into the legislation in other countries.

Mr. CROSBY. It seems to me that this committee was appointed not for the purpose of making researches, but to draft a Bill to replace a Bill which we had before the House and which did not meet with the approval of the House. We referred that Bill to a committee and some of us were bold enough to ask that there should not be too many lawyers on that committee in order that we might get a perfect Bill. Now, we find the committee, without asking permission of this House, have engaged some body to carry on this work. It is customary for a committee to come back and report progress. This committee were not able to report progress and they would not come back and report no progress, saying they had not ability to carry on the work that was assigned to them and they now say they will employ some one else outside of parliament to do the work entrusted to them. During the short time I have been in the House this Bill has been bandied about from pillar to post. Apparently this House is not prepared to deal with it, and it is thought that the best thing to do is to bandy it about among the professors. I am prepared to say that this is a question purely and simply for this government and this parliament. What does this Bill refer to? A general eight-hour day? No, it simply refers to an eight-hour day on the public works of this Dominion, the works controlled by this parliament. That is what the Bill is intended for, and therefore I say that the information should be furnished by the Labour Department, created a short time ago. I must say that we have had more labour troubles since the department was created than ever before. Any one who looks over the Dominion of Canada for the last year will see that we have had a great number of strikes; none of them are finished yet, they are all going on vigorously and the Labour Department was instituted just in time to witness all these strikes. What have they done to relieve the situation? This Bill was intended for no other purpose than the inaugurating of an eight-hour day on the public works of this Dominion, that is the public works being done by this parliament and under the control of this parliament. Surely we need not go to the United States, Germany or Russia, to find out what this parliament should do with a matter under their control. The Labour Department should have every bit of information possible on this subject. If we were going to deal with this in a general sense I could understand the Labour Department asking time, but I cannot understand them asking us to hand over this matter, which has been entrusted to a committee, to some professor whom they have decided to engage. I should like to know if the hon. member who introduced this resolution (Mr. Verville) is prepared to allow this Bill to be kept back for a year or two years. I think he will agree that we are here to try to inaugurate a system that will benefit the workingmen in this country, and in order to do that we want the federal government to undertake a

forward step, to show a good example. I do not wish to have our control referred to any provincial legislature or any foreign country. We should deal with these matters ourselves as they come before us. This session and in previous sessions the effort has been made to put this thing over another year or two, I do not know for how long, but that seemed to be the intention in engaging this expert assistant. Surely if we have a Department of Labour we must have some expert assistants in that department, and the only reason I can see for the Minister of Labour being put on the committee was that he would be able to furnish the expert information necessary. It does not seem to me that a great deal of ability or expert information would be required to frame a simple Bill to be placed on the statute-books of Canada, providing that the public works of Canada should be constructed by men under an eight-hour system. I do not think a great deal of expert evidence is required for that purpose or that a great deal of expert ability is required to draft such a Bill. This House should be prepared, I am prepared, and the House should be, to decide this matter in parliament and not to go outside for any further information.

Mr. VERVILLE. We are anxious that this Bill should be passed in such form that it will give satisfaction to all the members who expressed themselves during the discussion on the second reading. As there were apparent misunderstandings or misinterpretations of the Bill, we called in expert advice, and the reason for bringing it before the House during this session is to enable the committee to do the work it has done and to be in a position to make a full and proper report to parliament. This we will be able to do if we are not obstructed on every occasion. This is not a question of whether a man should work so many hours on one side of the street and another man on the opposite side a different number of hours; it is an attempt to enable men to do all the work possible. I have looked into the laws of many countries and I claim that we have to go to Europe, the United States and other civilized countries for information as to suitable legislation on different subjects. I do not see why we should not go to these countries for information in regard to the labour question just as in regard to other things, and so place ourselves in a position to submit a proper report. For that reason, if this report is adopted, we will be in a position to proceed as quickly as possible with our work. Of course I would be anxious that the Bill should come back to us speedily for discussion.

Mr. J. D. REID. The hon. member (Mr. Verville) states that this specialist should go to the different countries to get experience or information from them.

Mr. VERVILLE. I did not say that.

Mr. J. D. REID. I should understand from the hon. gentleman that that is what he meant. What surprises me is that from the speech he has made, he practically admits that the Minister of Labour does not know his business. I understood that the Minister of Labour was an expert in so far as the labour question was concerned, that he occupied the position of Deputy Minister for some years, that he went to very many foreign countries, to Japan and China, and that he was in England inquiring into the labour question. I should think that the Minister of Labour would be about the best expert we could get, after all the experience he has had travelling around these countries. What work has the Minister of Labour to do? I have been trying to bother my brains and find out what he has to do in his department unless it is something of this kind, finding out what has been done in other countries. We are practically told that the Minister of Labour has to get an assistant to tell him what the labour position is in Canada from one end to the other. We have had a great many strikes in Canada, we have them in eastern Canada and in western Canada. We have had a great many strikes, both in eastern and western Canada, and if my memory serves me right, when the Minister of Labour was Deputy Minister he was sent to these different strikes. But to-day we are told, practically, that the Minister of Labour does not know anything about the position of the labour question in Canada, and he has to get a specialist to instruct him. Now, will the Minister of Labour stand up and declare that he does not know his business, that he does not know anything about the labour question in Canada?

Mr. KING. If the House is prepared to accept the statements in regard to the eight-hour question as given by the Minister of Labour, and to accept them beyond question, the Minister of Labour will be only too pleased to bring down to the House a report of the whole matter. But it is recognized that of all questions that are likely to become subjects of debate in this House, no one will be fought more keenly than this eight-hour question. In order that all appearance of unfairness might be removed in dealing with this question, it has been thought well to bring in a third party, whose opinion one way or the other could not be questioned, and ask him to interpret the decisions relating to this matter that have been given elsewhere. I would gladly give my views to the House, and am prepared to do so, if the House is prepared to accept them; but seeing this is a party

question, a question on which men hold very different views, it was thought more satisfactory to get the opinion of an expert rather than the opinion of hon. gentlemen who sit in this House.

Mr. J. D. REID. I should say that the House would be pleased to have the report of the Minister of Labour, then we could decide whether we would agree to it or not. But the Minister of Labour wants this House, wants every member, to pledge himself that he will agree to this report before he shows us what it is. The minister wants another expert appointed. I understand that he has a deputy minister now, who should be disinterested, he is not supposed to support either one political party or the other. The minister practically tells the House that this is a political question. Well, surely his deputy minister is not a politician, he must be disinterested, and why not let him get us the information? I claim that the present Minister of Labour, after all his experience, must have made some inquiries about this eight-hour question, and surely he could give us that information, and if he has a report, why don't he lay it on the table now? Perhaps, after we see it, we will not require a specialist, the House might concur in the report. I suppose the minister is afraid to let us see the report, and he wants to keep it in the dark until he gets another man to agree with him, a man who will be an appointee of his own, and then he will come in and ask us to agree with the minister. I think the whole thing is a political question, got up by an hon. member who has been moving for this eight-hour day, who had a Bill on the order paper for six or seven years. He would not move it just before the last election, but now he goes ahead in order to make people believe that he is the great defender of the labour men. I believe if the hon. gentleman had brought in that Bill when he first proposed it, instead of allowing himself to be held down by the Prime Minister, we would have had this matter settled long ago. But every one knows that the Prime Minister told the hon. gentleman: Don't bring it on now.

Sir WILFRID LAURIER. No.

Mr. J. D. REID. Don't bring it on, keep it back. Of course the hon. member was elected as an independent, and has voted independent ever since he came to this House, and he now wants to pose as the great labour man. Now, every man in this House sees through this whole thing. The Minister of Labour and the hon. member who brought in the Bill have put their heads together, and they are trying to concoct some political scheme by which they can pose as the friends of labour. I think a great reflection has been cast upon the Minister of Labour to-day, when he stands up and admits that he does not know anything about the labour question in Canada, or about the eight-hour day question, and he has to get a specialist to come and instruct him, as to what is going on in Canada, Japan, China, India, Africa and all the other places the minister has been to.

Mr. BURRELL. I understood the minister to say that this was a party question, a singular statement to come from a minister. I would ask him to explain what he means.

Mr. KING. There are two great parties to this controversy, Capital and Labour. It is perfectly apparent that on this question there is ample room for debate.

Mr. HUGHES. As long as the Prime Minister kept the young gentleman who now ornaments the Department of Labour as minister, travelling around the country as deputy, and bringing in glowing reports from India, Timbuctoo, China, Japan and various other places, we didn't pay much attention to it. We thought perhaps some of the information might be useful, and we were willing to submit to paying his travelling expenses. In those days we all regarded him and his assistants as only so many political satellites. I know in our district the gentlemen who are connected with the labour organizations have been neither more nor less than political satellites of the government of the day. But when the Department of Labour was formed, and the Prime Minister appointed him as minister of the Crown, then the people naturally began to wonder what was afoot. Then the explanation was offered that this young gentleman was brought in to fill up a gap. We were told that the Minister of Justice had not panned out as expected, he was a failure; that the Minister of Railways had fallen below anticipations, and that this young gentleman was really a prospective Prime Minister. And so other hon. gentlemen who had occupied high positions in the country with a great deal of ability, were supposed to be eclipsed by this young and brilliant luminary, and a new portfolio was created, and this gentleman was foisted into it. We said nothing. The people were willing to put up with a little ornamentation. But when it comes to adding dollar to dollar in the expenditure of this department, when there has been delay after delay in dealing with all these great questions, then the people naturally commenced to wonder what this was for, and we are up against it now. Some one of the right hon. gentleman's friends, I do no know whether it is a prospective minister or not, but some friend wants a committee appointed to inquire into a small Bill that should not occupy our attention more than twenty-five mintues to determine. But forthwith a committee, acting under the hypnotic in-

fluence of this brilliant luminary, is appointed.

Sir WILFRID LAURIER. There are some of the hon. member's (Mr. Hughes') friends on that committee.

Mr. HUGHES. That makes no difference, where a question of principle is concerned, as the Prime Minister knows, there is a bandage over my eyes. This committee—and I care not how many of my side may be members of it—without the authority of this House and improperly (if the facts stated to us are true) engaged the services of this young gentleman to do work that any boy could do in a very short time. And if the Minister of Labour has anything like the genius and ability that the first minister has given him credit for in his speeches in this House and throughout the country, he ought to be able to give the House the advice which this young man is to be sent wandering over the country to prepare. I shall oppose the adoption of this report.

Mr. GEORGE TAYLOR. If the motion of the Minister of Labour is made to include instructions to this young man to gather information as to whether the Department of Labour should be abolished, I will support the motion. But if it is to saddle an expenditure on the treasury, which would be opposed by the agriculturalists of this country and three-fourths of the members of this House are, like myself, representatives of agriculturists—then we ought to vote against spending one farthing in this proposed inquiry into whether eight hours should constitute a day's labour on public works or not. I shall vote against the motion purely in the interests of my constituents, for they do not want a dollar spent to ascertain whether the money that they pay to the government should be spent in employing men at eight hours for a day's work when they themselves work for twenty hours a day part of the time. If the government make eight hours a day's work on public works, the farmers will have to adopt the same principle; and I appeal to hon. members representing agricultural constituencies to oppose this expenditure. If the question of abolishing the Department of Labour is to be investigated that will be a different matter, for, as an hon. member said, we have three or four strikes now for one that we had before the department was established. I was interested in one last year, and drew the attention of the Minister of Labour to it. The strike was in a coal mine in Alberta, and the labouring men called upon the minister to repeal his Bill because it was no good and they would pay no attention to it. I put the documents about the matter into the hon. minister's hands. Since the present minister took office, I have recommended the course which ought to be taken in the interest of the labouring man in relation to strikes. Have a commission appointed, like the Railway Commission, and then, in case of labour disputes arising, have the representatives of the two sides go before that commission. There should be legislation against strikes, not to take away from men their right to stop work, but, before they strike, to refer their grievance to the commission, and the commission, after investigating, will settle the matter as railway disputes are settled. The idea of having a minister, a deputy minister and a staff of clerks with a building all to themselves—and no minister has a more luxurious apartment than that of the Minister of Labour—and yet when a little Bill comes forward we must employ a man who knows something to go about the country, and then come back and tell the minister whether there should or should not be an eight-hour day on public works. Representing an agricultural constituency as I do, I will vote against this expenditure.

Mr. RALPH SMITH. It is a little difficult to understand how the question before the House should be reduced to a criticism of the Labour Department generally and a very severe personal attack by some hon. members opposite upon the minister who is responsible for that department. As I understand it, this professor was brought before this committee to give evidence as a man of large experience and special knowledge on this question before the committee. That committee was composed of members on both sides, the parties being almost equally represented. After he had manifested to the committee that he had expert knowledge upon this question, it was proposed, not by the Minister of Labour, but by the members of this committee, that it would expedite the business of that committee and make it more possible to get a report before this House this session if the services of this expert were engaged for a short time. The chairman of that committee was instructed unanimously by the committee to ask the House to consent to the engagement of this expert. It is suggested by my hon. friend from Halifax (Mr. Crosby) that the employment of this outside man is a method of shelving the question and making it impossible for a report to be had this session. Why, the only good reason that could be given for the employment of this gentleman for this service is that it will expedite the business of the committee by giving us expert evidence so that the report can be presented this session. In the committee there was no difference of opinion on the subject—Liberals and Con-

servatives were agreed. And the object is to have expert, concise and scientific evidence brought to bear upon the question in order to expedite the business.

Mr. J. A. CURRIE. What evidence is this gentleman expected to produce, what vast knowledge of the subject has he, to justify this resolution?

Mr. R. L. BORDEN. One would naturally suppose, as this subject has been very much to the fore, not only in parliament, but in the press of the country during this past seven or eight years, that the Department of Labour might very well have issued a blue-book on the subject. The Minister of Labour, I understand, thinks that the department is seized of a considerable volume of information on the subject which must be considered by this committee. There is a good deal of force in the criticism made that, if such be the case, the Department of Labour might very well do the work which this gentleman, as I understand it, is to be called upon to do. However, no such information is before the House in the shape of a blue-book or otherwise, and we have the word of the Minister of Labour that it is necessary to employ this gentleman who is supposed to be an expert on this subject, for the purpose of making clear to the committee the working out of similar enactments in other countries. In other words, he is to bring before the committee an analysis of the legislation of this character which has been passed in other countries as well as his estimate of the results of the passing of such legislation. As I have already said it would appear to me that the Department of Labour ought to have its command all information of this kind. But, apparently it has not that information, at least, it has not the information in such a form as can be readily utilized by the committee. Inasmuch as the committee have unanimously recommended that this gentleman be employed for the purpose in order to expedite its work, I would think that the recommendation ought to be accepted by the House, although, as I have said before, there does seem to me to be a great deal of force in the criticism upon the past work of the Department of Labour which has been made by several hon. gentlemen. The subject of the relations between capital and labour is an exceedingly important one in this country, and I am bound to say that the action of my hon. friend the Minister of Labour, representing the government of the day, does not very well correspond with the attitude which the government took and which he, as deputy Minister of Labour, I presume, took three years ago when I asked that the Conciliation Bill should be submitted to a committee of this House in order that all parties might be heard. One of the answers made to me at that time by the then Minister of Labour was that the Department of Labour had at its command and could afford to this House every possible item of information in regard to the subject. Well, we have a different tale to-day, but I suppose we must accept the minister's statement of the lack of knowledge in his own department, and as the committee unanimously recommends that this expert gentleman should be employed, it would seem to me, following the usual course of procedure in this House, that the unanimous recommendation of the committee ought to be accepted.

Mr. OSLER. Usually if you want to get an absolutely unreliable opinion, you should go to a young university professor. I do not know this young gentleman, and I have no objection to his being employed to gather statistics, but the Minister of Labour has stated that he was to be employed to give an expert opinion. I do not think it is possible, in any question which arises in business or public life, to get a man who is so utterly useless as a young university professor to give an opinion. That is the experience of every man of business. No matter how clever the young man may be, his enthusiasm carries him away, he runs to one side or the other, and he has wild ideas. To go to a young university professor to get an opinion is to go absolutely to the weakest source possible; his opinion would carry no weight with any man of ordinary ability.

Mr. GOODEVE. The Department of Labour has been a conspicuous feature of the government during the past few years. No question has excited more widespread interest in the country in recent years than the question of the hours of labour. We have had this country flooded from end to end, at a large expense to the Dominion, with literature purporting to deal with questions of labour. The government, through the Department of Labour, have been telling the workmen of this country all that they are doing on their behalf. When this Bill was introduced, passed its second reading and referred to the committee with the unanimous consent of the House, the only objection to it was the fact that it was not properly drawn. It was said that the Bill contained that which was not intended by the hon. member who introduced it. We have in connection with the government not only a Department of Labour, but a Department of Justice, and surely if that is the only objection to the Bill the Department of Labour might have been consulted with the Department of Justice with regard to the proper drafting of the measure. The hon. Minister of

Labour (Mr. King) tells us that he himself is prepared to bring in a Bill at this time, but he thought it was wiser to get expert advice from an outsider. The reason advanced by my hon. friend from South Toronto (Mr. Macdonell) in favour of the recommendation of the committee is that an expert should be employed—and I sympathize with that reason—it is the strongest arrangement that possibly could be made of the Department of Labour. My hon. friend from South Toronto said that when the committee met they found that they were unable to get the necessary expert information and advice with regard to this question. I would like to know what the Department of Labour is for. I quite sympathize with my hon. friend from South Toronto and the other members of this committee. They cannot be expected to take the time from their duties as members of this House and otherwise to gather the necessary statistics and information, but what have the Department of Labour been doing all these years in not having these statistics properly tabulated in order that they may be placed at the disposal of this committee? We were told that this Department of Labour was to do so much for this great Dominion, and particularly for the labouring classes that it was necessary to appoint a separate minister and create a separate department. It is only a short time since we formed it into a separate department of the government. The minister now in charge of the department, and who was for a long time the Deputy Minister, has travelled in foreign countries at the expense of the people getting information to be used in the preparation of laws for the Dominion of Canada. I venture to say that such recommendations as he has gathered in his foreign travels have not met with favour, at least, in western Canada, and I am speaking for the people of western Canada at this time. I am very doubtful whether we will get professors in colleges in the east to deal with these questions in a practical way, or to give us information which will be of any advantage to us. It resolves itself down to this simple question whether the Bill as introduced was properly drawn and, if properly drawn, whether the members of this House are prepared, at this particular time, to pass a Bill providing for eight hours of labour on government work. The question is a simple one, and it is a question for each member to decide in his own mind whether it should be adopted by this country. I do not think that this Department of Labour should act as a buffer, and I venture to say that in this and in other instances the government, instead of using this department for the advantage of the people, are simply making a buffer of it to stand between the workingmen and the government with regard to these difficult questions. I am not prepared to accept the recommendation as brought down by the minister under these conditions, but if we do accept it it will only be because it has been pointed out by my hon. friend the leader of the opposition (Mr. Borden) when a unanimous recommendation of this kind comes in it is usual to accept it. But, I venture to say that we would get very much more information from practical men in dealing with a question of this kind.

Mr. SCHAFFNER. I am absolutely opposed to this resolution. I understood the hon. Minister of Labour (Mr. King) to say that the committee was unanimous. I understand that the committee was not unanimous. One member of the committee, at least, my hon. friend from Macdonald (Mr. Staples) was opposed to it.

Mr. KING. Will any member of the committee rise in his seat and say that he was not in accord with all the members of the committee on that resolution?

Mr. SCHAFFNER. My hon. friend from Macdonald is not here, but he made that statement to me before he left the House.

Mr. KING. As the hon. member is not here and cannot speak, as chairman of the committee, possibly I might speak for him. I would say to the House that every member of the committee present at the meeting endorsed that resolution. It was on the motion of the hon. member for South Toronto (Mr. Macdonell) that this recommendation was adopted by the committee. My reason for not opposing the resolution of the hon. member for South Toronto was that I was most anxious that the committee should feel that any suggestion coming from the other side of the House would meet with the hearty accord of this side.

Mr. SCHAFFNER. Although I am quite willing to accept the statement of the hon. minister, that does not prevent my saying that I am absolutely opposed to any party ground being taken in connection with this matter. Whether intentionally or not, the Minister of Labour referred to it as a sort of party issue. I presume he is a party man, as I am myself; but when I hear such staunch independents as the hon. member for Nanaimo (Mr. Smith) and the hon. member for Montreal (Mr. Verville) support the measure, that might be some reason why we should support it. I believe that the Minister of Labour ought to have sufficient intelligence, ability and information to settle this matter without any further expert evidence, and I would like to ask what particular qualification this university professor has which the minister has not. From what I have heard it seems to me that it is not for want of information

that the minister is so anxious to have this motion carried, but in order that he may be relieved from the responsibility of making a statement in this matter, which I believe he should be in a position to make.

Mr. J. D. REID. So far as I am concerned, I want my vote recorded against it.

Mr. J. A. CURRIE. I wish to put myself on record, as a manufacturer, in favour of the eight hour day. It appears to me that this labour bureau is something of a cyclone cellar where these problems are relegated by the government when they come up, and the chief party to building this cellar and nailing a tin roof on it is the hon. member for Maisonneuve (Mr. Verville). For several sessions a resolution of this kind has been on the order paper, and the hon. gentleman has always failed to have the courage to put it to a vote, and the motion before us is simply another way of side-tracking the question. I do not see what information an expert can give that will be of any value to the House, or which the House has not already. We have had some experience already in connection with experts. The Department of Militia sent an expert to South Africa to write an account of the war, and we have not yet had his report. Another was sent to Japan and China to give us a report of what was taking place in those countries, but we have never had that report yet. If we appoint this gentleman, his report will probably be as little likely to be forthcoming, and we shall have this matter up session after session and the government will continue to side-track it. It would be best for this House to deal with the matter fairly and squarely and let every member vote according to his conscience and his opinion. As one who has had experience in the matter, I unhesitatingly commend the eight hour day to employers of labour. They will find that their labouring men will do as much work in the eight hours as in the ten. It seems to me that the government should not be behind the great majority of manufacturers who are now coming to realize the advantages of the eight hour day system. I am therefore opposed to any further delay. I do not think the expert we are asked to employ has any practical experience in the matter. In my opinion, the men in this House are sufficiently level headed and well versed in business to deal with the question fairly and honestly.

Mr. RHODES. In employing this expert, is the object to have him pronounce on the merits of the eight hour day or solely for the purpose of assisting the committee in drafting a measure to carry out that system?

Mr. KING. Perhaps I could best reply to the question by quoting the hon. member for North Toronto (Mr. Foster).

Mr. SCHAFFNER.

Mr. RHODES. What I want is the opinion of the minister himself.

Mr. KING. My opinion coincides with that of the hon. member for North Toronto (Mr. Foster). The other day in speaking on this question, that hon. gentleman said:

> The specialist's work comes in after you have a collation of what exists and when you want evidence as to the results of that. Then, a specialist, who has made a study of the question, has travelled and has the experience, would be a very great benefit to the committee. I would not be opposed to having the very best we can get in that respect.

That is the motive which has actuated the committee.

Mr. RHODES. The hon. minister has not answered the question I put to him. I asked if, in employing an expert, his object was to have an opinion as to the merits of the eight hour day, or whether the committee were simply calling in this expert in order to have his assistance in drafting a measure to carry out that system.

Mr. KING. The committee, in its report, asks that leave be granted to employ the services of a specialist to assist the committee in its researches into legislation respecting the hours of labour. That makes it perfectly clear what the intention of the committee is.

Mr. RHODES. Have those researches to do with the merits of the eight hour day or merely with the drafting of the measure to carry that out?

Mr. KING. With both.

Mr. RHODES. Then I understand that this expert is to give an opinion also as to the merits of the eight hour day?

Mr. KING. He will go through the discussions on that subject in other countries and the legislation adopted by these countries.

Mr. MAGRATH. Is it the intention of the government to have this Bill dealt with this session? I want to see the matter settled. It is not a party question, but the hon. minister is endeavouring to shunt the Conservative party into it by saying that his views coincide with those of the hon. member for North Toronto (Mr. Foster). But I assume that the minister has views of his own, and if so we ought to have them. I want to know if we are to have the Bill before the House this session, as I want to vote for it.

Mr. KING. The intention is to get the Bill before the House as quickly as possible. Whether the government will be able to carry out that intention depends on the attitude of hon. gentlemen opposite.

Mr. MEIGHEN. The reply given by the hon. minister to the question of my

hon. friend from Cumberland (Mr. Rhodes) puts the whole question on another footing. I apprehend that the hon. member for South Toronto (Mr. Macdonell) when, as a member of the committee, he acceded to the position taken by that committee, did so on the understanding that whatever expert was employed would be employed to procure details for the purpose of drafting a measure rather than for the purpose of deciding on the principle of the Bill. I have a very distinct recollection of the discussion on the resolution when first introduced and a still more distinct recollection of the position then taken by the minister. After one of his supporters had affirmed, in the strongest possible terms, that the minister had acceded to the principle of the Bill, the hon. gentleman took good care not to recede from that position but gave the impression to the House that he had acceded to it and that all that remained to be settled were questions of detail. I put the question to the hon. minister myself the night of the discussion. I said that he had not acceded to the principle and was contradicted by the minister himself. Well, if he has accepted the principle of an eight hour day, in so far as government work is concerned, why employ an expert now? I took the position that night that the reference of the Bill to a committee was simply a convenient method of shelving it for the rest of the session, and I now find that not content with shelving it to a committee, the chairman of the committee asks that it shall be referred to Kingston college. The only purpose the Minister of Labour has in view is to avoid the responsibility of saying now what he was compelled to say then, namely: That he was in favour of the principle of eight hour labour on government works, and so, he wants to shield his responsibility behind the august imprimatur of a Presbyterian professor. I hold that the government of this country must take their stand now and not later on the question of eight hours labour. I challenge the government to now declare whether they are in favour of the principle of the eight-hour day on government works. If the Minister of Labour thinks he was wrong when he spoke during the first discussion of this Bill let him come forward to-day and say that the policy of the government is wholly different now. Let him take that responsibility himself, and let him not pave the way for going before the electors three years hence and saying that the government took the advice of this university professor and are to be congratulated for doing so. I cannot conceive that the member for South Toronto or the member for Macdonald ever took the position that the object of employing this scholarship in the matter was to gain information as to the principle of the Bill. I believe that if they had understood that the Minister of Labour was going to bring the principle of the Bill into question in this House they would not have acceded to that unanimous report. Therefore, this unanimous report of the committee is not entitled to that deference which under ordinary circumstances such a report would be entitled to. I for one will have to cast my vote absolutely against the proposition.

Mr. BURRELL. It seems to me that the position the House is in now is plain and simple. So far as I remember the former discussion on this Bill the difficulty that presented itself was the bearing it would have on large contracts now pending with the government, and a great many hon. members who felt that was a questionable feature in the Bill would have been gratified if that difficulty were set aside and the principle of the Bill applied to the employment of labour on public buildings. That would have been a fair compromise, and I believe that many of us wanted to see the Bill based on that principle. I must confess that we have had an extraordinary exhibition on the part of the Minister of Labour this afternoon. He did not answer the questions put to him by my hon. friend from Nova Scotia (Mr. Rhodes) and his utterances were particularly cloudy and ambiguous. As to the hon. member for Nanaimo (Mr. Smith) surely his experience must tell him that this proposal of the minister is not calculated to expedite the deliberations of the committee or to expedite embodying the principles of the Bill in legislation, but rather to retard it. As the ambiguous utterances of the Minister of Labour goes, they remind me of the lines of Hosea Bigelow:

> For when you've done all your real meaning to smother,
> The darned thing'll up, and mean something or nuther.

I thoroughly agree with hon. members who have said that the Department of Labour which has been for years thrashing out this and similar questions, ought to be if it is not, in a position to give the necessary information to the House to enable them to decide on this Bill.

Mr. EDWARDS. As I opposed the Bill when it was first brought up on the ground that it was contrary to the best interests of the agricultural class I feel that I cannot consistently support the present resolution. I wish now, Mr. Speaker, to put myself on record as being opposed to this Bill as I am opposed to anything which makes in the direction of interfering with the interests of the agricultural classes of our community.

Mr. MADDIN. For information, I would like to know from the hon. member (Mr. Verville) who introduced the Bill; who drafted the Bill in the form in which it was presented to the House.

Mr. VERVILLE. I do not know that I have any right to answer that question.

Mr. J. D. REID. Was it the Minister of Labour?

Mr. VERVILLE. I may state for the information of the hon. gentleman that the Labour Department had nothing whatever to do with it.

Mr. MADDIN. It is quite evident, Mr. Speaker, that the Labour Department intend to have nothing to do with the Bill yet.

Mr. SPROULE. Many good reasons have been given why the House should not assent to this motion, but there may be other reasons why we should assent to it. The Department of Labour was originally constituted just for the purpose of collating such information as would be useful to parliament in considering a Bill of this kind, and the acknowledgment that the Department of Labour has now to go to the expense of calling in an expert to advise it is an acknowledgment that the Department of Labour is no good. I remember very distinctly the eulogies that were expended upon the Minister of Labour when he first took office. We did not know much about him when he entered the House, but we were told he was an educated man, a man who had shown great ability and industry, a man who had travelled through different countries of the world for the purpose of gaining information of an expert nature on sociological questions, and that he had devoted his life to this work. We were told we could not afford to do without his services, and that for that reason he was brought here and placed at the head of the department. We were told that he had experience as deputy Minister of Labour, that he had published the 'Labour Gazette' for some years, that he had studied these questions in Germany and other parts of the world, and we gave him a large staff of employees to assist him. Now we are told that he is not able to furnish information with regard to a very simple labour problem. This is an admission that all the eulogies bestowed on him were not deserved. If they were deserved, then there must be a strike on in the Labour Department and they wont do their work. Now, the minister seeks to engage the services of a university professor to assist him in the work which he himself ought to do, and I am quite sure that if this professor were not a native of the country the provisions of the Alien Labour Law would be invoked to shut him out. But as he happens to live in the country he may be used notwithstanding. In view of all these admissions from the Labour Department and from members of the government, that if the department is absolutely unable to cope with this important question and incapable of giving the required information let us pass this motion and incur the expense and get some one who will give us the information that is so much needed.

Mr. M. CLARK (Red Deer). I am surprised at the large number of speeches that we have heard on the Conservative side of the House against what seems to me to be a very simple and innocent proposition; perhaps I ought rather to say the large number of times we have had practically the same speech delivered. I am surprised in view of the fact that we are asked to endorse a report of a committee which was unanimous and represented both sides of this House. If I rightly gather what fell from the lips of the leader of the opposition, I think he said that to reject such a report is a very unusual course of procedure. I am surprised further because of the extreme gravity of the question we are discussing. For the House of Commons to take the course of driving a hard and fast iron ramrod into the delicate machinery which should regulate the arrangements between employer and employee is a grave course, whatever measures we may take in regard to it, and something of a new departure in this country. The gravity of this course of procedure being admitted, I think we surely should not take such a course without having the fullest possible information. I thoroughly endorse what has been said by the hon. member from Toronto (Mr. Claude Macdonell) that the more information we have on this subject the less likely we are to go astray and the more wisdom we are likely to display in the decision we finally come to.

Mr. STANFIELD. As a member of the committee, I feel it my duty to say a word in reference to the engagement of Professor Skelton. As the House is well aware, the Bill is very broad, it takes in such a large scope that I, as one of that committee, felt it my duty to see that we should have all the information we could possibly gather on the matter. If this was a plain eight-hour day for public works only, it would not require an expert opinion, because I think the majority of the House are in favour of such a measure. But this Bill goes further. It covers sub-contracts and also covers manufacturers, where they come in as sub-contractors. As I said before, this Bill is so broad that in my opinion it is far better to get all the information possible before reporting to the House, and then we will be able to give the House every information it is possible to gather. I shall, therefore, vote in favour of the resolution.

Mr. MARSHALL. I am also a member of this committee, and I realize it is a very serious matter. I think we are justified in getting all the information we can. I am not prepared to say where that information should come from, but I must say that the information we are getting is very valuable to the committee, and I think it is due to the Minister of Labour to say that the committee is entirely to take the responsibility of asking Professor Skelton to undertake this work. The minister, in my judgment, has acted fairly in the matter, and I am quite in sympathy with the course proposed.

Mr. J. P. TURCOTTE (Quebec County) (Translation): Mr. Speaker I am not a member of the special committee which has this Bill under consideration. However, I have had occasion to express my views in this House when the Bill was first introduced. I was then, and I am still, of opinion that the government should give a fair trial to such legislation as regards public works, I have followed the meetings of the special committee and have realized the difficulties in the way of carrying out such a proposal, and, on the other hand, its paramount importance to all members of the House.

This very day an expert was heard on the subject, and his statement goes to show that there is such a variety of interests concerned in this labour question, that too much care cannot be taken in working out its settlement. I think the conclusion arrived at by those hon. members who make up the special committee, is based on a sound view of the public welfare, and the country as a whole will profit by a thorough investigation of the subject. In that way, will a proper settlement of the question be effected, a settlement which will be beneficial to the labouring classes as well as to all others.

I understood an hon. member to say that the farming community is not specially interested in such a question. I believe, on the contrary, that in determining what are the rights and obligations of the government in a matter of this importance, we are doing something which is serviceable to the farming community, and as representing an agricultural constituency, I cannot but approve of the suggestion made by the special committee.

Mr. BRODER. Mr. Speaker, to my mind it is a question whether it would not have been wise to have first brought in representatives of the manufacturing interests and of the labour interests, to have secured their evidence and then have the expert give his information and answer questions that might arise from their evidence. Anyway, I am satisfied that the members of that committee are approaching the question with every intention of doing everything they can for the public interest, and as far as I am concerned, that is the way I approach it. The labour element does not affect me at all, because I have no manufacturing centres to interfere with my political interests in that sense at all, but the country generally are interested in the outcome of this whole measure, whatever effect it might have. I do not wish to discuss that to-day, because I do not think that it is pertinent, but from what I have seen of the committee and learned, I feel it my duty to at least vote for the resolution.

Mr. DEVLIN. I wish to suggest to the minister in charge of the legislation under consideration that in the study of the labour problem, it will be absolutely necessary that the one who is charged with the work should understand both languages. If he is to study the conditions of labour abroad, he will of necessity have to study the conditions which exist in France, and for that purpose he will have to know the French language. Therefore, I would suggest to the hon. Minister of Labour (Mr. King) that, if possible, instead of naming one expert, a professor from Queen's University, Kingston, he should name two, one an English speaking man, and one a French Canadian, or at the very least, that the one to be named, should be thoroughly familiar with both languages.

Mr. BARKER. I do not wish to vote upon this question without stating in a few words why I am disposed to comply with the unanimous request of the committee. I have had very considerable experience in expert testimony. If anything in this world is not satisfactory, it is the evidence of expert witnesses; and I think that if any evidence could be unsatisfactory, it would be that procured by the expert this committee has, in its wisdom, recommended to collect evidence as to legislation of this character in foreign countries. The committee has recommended that a professor of Queen's University should be employed to do this work. My own conviction is that what evidence he may procure will not have the slightest weight upon the opinions of any people in this country, either labour men or employers, and I certainly think it will not influence the judgment of this House. I do not wish, however, to stand for a moment in the way of testimony being procured. I have no doubt that the minister knows perfectly well the leanings of the particular gentleman he refers to on this question.

Mr. KING. I know absolutely nothing about his leanings.

Mr. BARKER. Then I am very much mistaken in my estimate of the minister's

knowledge of the subject, because I doubt very much whether there is any one in the position of the professor he has referred to, who has formed any opinion or acquired any knowledge or experience in regard to the subject that the hon. gentleman does not know.

Mr. KING. If I understand the hon. gentleman rightly, he has said that I was aware of the leanings of this gentleman. I know of his professional standing and exceptional ability and capacity to deal with this question in a very efficient manner, but I do not know in what way his leanings are.

Mr. BARKER. The hon. gentleman in that regard is in just about the same position as he is, in his department, with regard to the subject generally. He is what they used to call in the States, 'a know nothing.' I have no doubt that if the evidence this professor may procure in foreign countries should not be satisfactory to the labour men, they will want another professor employed to get the other side of the question; and if the evidence be not satisfactory to the capitalists they will say that the report is a one-sided one and does not amount to anything. The only question here, outside of the question whether this is a useless expenditure of public money, is whether we should override the unanimous recommendation of the committee. I do not like to vote against such a recommendation, and for that reason alone I shall support this motion.

Mr. CROCKET. Ordinarily I would be disposed to stand by the unanimous report of a select committee of the House, and would have done so in this instance had it not been for the statements which I have heard from the Minister of Labour. Those statements have convinced me that this proposal is simply for the purpose of further shelving this question and of shirking a responsibility which properly attaches to the Department of Labour. For these reasons, I intend to vote against the motion for the adoption of this report.

Mr. RHODES. I wish to place myself fairly on record.

Mr. SPEAKER. The hon gentleman has spoken already.

Mr. RHODES. I only asked a question. After the answer given by the hon. minister, I can consistently only vote against the adoption of the report, and for these reasons: When this question was discussed on the second reading of the Bill, the House gave the Bill its second reading unanimously, and referred it to a special committee. I then stated that, in so doing, we had endorsed the principle of an eight hour day. But when the Minister of Labour, in answer to my question, told us to-day that it is the intention of the committee to select an academic gentleman, who will investigate into the merits of the eight hour day, and asked us to agree to that recommendation, he asked this House to stultify itself. After we had affirmed the principle, he asks us to employ an expert in order to find out whether we were right or wrong in so doing. As one who has taken strong ground on the question I would be rather inconsistent if I were to vote for this motion. My hon. friend from Portage Laprairie (Mr. Meighen) has given expression to my sentiments to the letter, and I wish only to add my endorsement to what he has said. For these reasons I propose to vote against this motion.

Mr. BEATTIE. I do not think I would be justified in voting for this motion especially after the declaration we have had from the Minister of Labour. Judging from what he has said, I can only come to the conclusion that the object of this motion is to shelve the question and prevent our doing anything. I charge the hon. member for Montreal (Mr. Verville) with rank insincerity. He introduced a similar Bill last year and then withdrew it without giving any sufficient reason for so doing. That hon. gentleman charged me with not keeping faith with the workingmen although he knew I supported his eight hour Bill. Two years ago he travelled all the way from Montreal to London to oppose my election, but the workingmen were so disgusted by his tactics that they would not go to his meetings. At one meeting he managed to collect together some thirty men, although he had engaged a brass band as an attraction, he was no more successful; and the result of his agitation against me was that I was elected by about 1,200 majority, pretty nearly all workingmen. As the object of his motion is evidently to shelve the measure, and thus deceive the working people whom that hon. gentleman pretends to represent, I shall vote against it. If instead of getting a college professor to report on the question of labour, the government would secure six good manufacturers, who had succeeded in building up their business by the sweat of their brow, and six good respectable, honest, mechanics, who are still earning their living by their hard day's toil, I think that these two representative bodies, seated around a table, would be able to come to a satisfactory settlement of this eight hour question without very much difficulty or delay?

Mr. NORTHRUP. It seems to me that if there is one member of this House who should rise and protest against the passage of this question, it is the hon. gentleman

who fathered the Bill (Mr. Verville). One would have thought that no member of this House would dare ask hon. members to adopt a measure which he had not considered sufficiently to enable him to give reasons why it ought to pass. Yet we have the singular spectacle of the hon. member for Montreal (Mr. Verville) wanting the reference of the eight hour day Bill, which he introduced in this House, to an expert in order that he may obtain from this expert information which will enable him to decide whether the measure he himself introduced is a proper one or not. But perhaps the hon. gentleman is not so much to blame for making blunders of that kind, since evidently it is only from members on this side that any information on the labour question can be expected. We had the right hon. the leader of the House declaring to his own supporters that he could not find any one sitting behind him who was competent to preside over the labour bureau and give an intelligent opinion on questions affecting labour; and to make it more clear and positive to the people that the men behind him do not understand questions affecting labour, the right hon. gentleman brought in an outsider, who was supposed to be peculiarly fitted for the post by a lifetime spent in the interests of the workingmen. We had the Minister of Labour (Mr. King) brought in from the outside and put at the head of the labour bureau. What are the duties of that department? On referring to the statute, under which it exists, I find this laid down:

With a view to the dissemination of accurate statistical and other information relating to the conditions of labour, the minister shall establish and have charge of a Department of Labour, which shall collect, digest and publish in suitable form statistical and other information relating to the conditions of labour.

I find it in the revised statutes of 1906. So that for years we have had a department established for a particular purpose, presided over by a gentleman selected on account of his technical fitness for the position; and yet after all these years, we have the singular combination of a labour representative bringing a Bill into the House, without even having in his own mind any reason to justify it, and we have the Minister of Labour, whose duty it was to collect the very information which should be at the service of the labour representative, actually asking the House to allow him to employ another expert to instruct the House on the very questions he is supposed to know all about. It seems to me, Sir, that the American poet must have had just such a case in mind when he wrote:

In short, I firmly du believe
In Humbug generally,
Fer it's a thing thet I perceive
To hev a solid vally;
This heth my faithful shepherd ben,
In pasturs sweet heth led me,
An' this'll keep the people green
To feed ez they hev fed me.

Mr. MADDIN. I addressed a question to the hon. member for Maisonneuve (Mr. Verville) who introduced this Bill to the House. I asked the hon. member who had drafted the Bill in the form in which it was originally presented. I submit that when a Bill of such importance as this is introduced, the member who presents it is responsible to some extent for the contents of the Bill, and if, as in this particular case, he being a representative of labour in this country, presents the Bill on behalf of organized labour throughout the Dominion, he should be able to point with some pride to the terms in which it is drawn. But, strange to say, the hon. member does not feel like taking the House into his confidence and telling us who drafted the Bill. He is only willing to tell us that it was not drafted by the Labour Department. Perhaps by a process of exclusion, he might lead us to infer who really did draw this Bill. Mr. Speaker, the Bill as presented to this House embodies all the objectionable features that have characterized eight-hour Bills in their introduction to the different law-making bodies of the English-speaking world. This is not a new question; from time to time Bills have been brought up in the law-making bodies of this and other countries, from which the objectionable features formerly characteristic of such legislation, have been, to a great extent, eliminated. And I would like to draw the attention of hon. members to the fact that this Bill is word for word, the Bill presented to the Congress of the United States, with the exception that the Bill presented in the United States negatived certain cases in which the law should not be operative. In the United States, the Act was not to apply to contracts of transportation by land or sea; it was not to apply to military matters—

Mr. SPEAKER. The hon member (Mr. Maddin) cannot discuss the Bill now; the Bill is before the committee and it is not in order to discuss it at this stage.

Mr. MADDIN. I am not discussing the merits of the Bill.

Mr. SPEAKER. The Bill having been referred to committee, it is out of the House. The motion now before the House is the only matter that can be discussed in this debate.

Mr. MADDIN. With regard to the resolution now before the House, that an expert be employed to inquire into this Bill, I wish to point out that, as this is not new

legislation, and had the Bill been properly framed and presented, had it been drafted in the light of recent legislation which is within the knowledge of nearly every member of this House—knowledge which every member could gather from the library here or from the ordinary publications of the country—it would perhaps not be necessary to call in an expert in connection with the matter. However, this resolution to appoint a professor from Ontario to cull information for the members of this special committee, leads to but one conclusion. It seems to demonstrate that the Labour Department has failed in the purpose for which it was instituted. I would like to know what object this department has to serve in the interests of the people? We have an industrial struggle going on in the county of Cape Breton, which commenced in July 6, 1909. Representations were made to the Minister of Labour, and his reply has been that, the matter in dispute having been submitted to a board of conciliation, it is not the policy of the government to inquire into a struggle of this kind. The result is that this strike has been continued since July 6, last, and is liable to go on indefinitely. When the Department of Labour washes its hands altogether of industrial struggles and finds its sole excuse for existence in the publishing of the Labour 'Gazette' and compiling statistics pursuant to the statute read by the hon. member for East Hastings (Mr. Northrup)—when that is their only service to their country—the minister has failed in his duty if he cannot submit to this seleect committee all the facts essential to the intelligent consideration of the Bill. As I have said, this matter of the eight hour Bill is not a new matter. For some eight or nine years the gentleman who enjoys the portfolio of labour has been employed in the department and the matter of an eight hour day is not a new thing to him. It has been the subject of consideration by legislatures and parliaments for the last forty or fifty years. Why, it is at least twenty years since the English labourer began to look forward to the eight hour day and when organized labour in England published on their posters and correspondence, the old lines:

> Eight hours for work,
> Eight hours for play,
> Eight hours for sleep,
> And eight shillings a day.

It cannot be said for a moment that the Minister of Labour would be taken by surprise with the introduction of a Bill regulating the hours of labour. Ever since labour was organized to defend its own interests, Bills to shorten the hours of labour have always received the greatest consideration from its representatives. It is a subject that has been formulated in legislatures and parliaments in many countries. I submit that this proposal to shift the responsibility from the minister to a professor is really an avoidance of the issue. This country wants to know, and particularly does organized labour want to know, where the parliament of Canada stands in regard to this question. Do they accept or reject the principle of an eight hour day? Or are they going to shift the responsibility to a professor in an Ontario university when they themselves should assume it, and answer the question, yes or no?

Mr. BARNARD. The discussion to-day has demonstrated to me that the opinion I held when the Bill was up for the second reading, was the correct opinion, namely, that there was never any necessity to send this Bill to a committee of the House. It was done merely to avoid a straight issue raised by some members of the House to the effect that the Bill should be limited to contracts on public works. The very fact that the committee, in order to gain time, is coming now and asking for the appointment of an expert shows that they have had but little difficulty with the subject they were expected to deal with. The hon. member for Wright (Mr. Devlin) suggests that there should be a second expert appointed. I have not the slightest doubt that if the Minister of Labour finds that the first expert gets through his work before the end of the session, a second expert will be appointed. After hearing the remarks of the hon. member for Nanaimo (Mr. Ralph Smith) with regard to the appointment of this expert, I had an open mind upon this question, but I feel that in his heart he will now agree with me when I say that the evident insincerity of the replies of the minister to the different questions put to him, has shown beyond question that it is the intention of himself and his department to shelve this Bill. Therefore I propose to vote against this motion.

Mr. HUGHES. Before the minister speaks I want to ask him a question.

Mr. SPEAKER. If any other gentleman wants to speak, he must do so before the minister speaks.

Mr. HUGHES. Is the minister in a position to give a definite statement to the House as to the cost of this officer, and how long he will be employed?

Mr. KING. I think the cost will be determined by the committee. I think the intention is simply to retain this gentleman to give such information as he can within a short time. It is not the intention of the committee to send him abroad any where, it is our desire to get the information that he has already in his possession. The amount to be paid him, I am

sure, will not be considered by the House excessive. I presume it will be on a basis arranged after consultation between the members of the committee themselves.

Mr. BOYCE. As the minister says it is not intended that this gentleman shall travel and obtain by actual experience a knowledge of the condition of affairs on the eight hour day question in other countries, might I ask him whether he has not at his disposal now the same information which is obtainable by the services of this so-called specialist?

Mr. KING. Perhaps I have not made myself sufficiently clear to the House. This gentleman has been making a special study of this question for some time, he has all the information at his fingers' ends. The Department of Labour has in its library a great deal of information which will be brought before this House, but it will take an officer of that department considerable time to go through that information and classify it and bring the results to the House in a form as convenient as this gentleman is prepared to do immediately.

Mr. BOYCE. Could not all that be done by the minister's department? He says he already has it at his disposal in the department.

Mr. KING. I think I have answered that question. I explained to the House that the staff of the Department of Labour is not a very large staff, and the work is very considerable. I am sorry to see that hon. gentlemen opposite, apparently, have not looked over the annual report of the department, or they would know how extensive that work is. To take gentlemen of the Department of Labour off the work they are doing at present, would throw into confusion some of the work of the department, which I think it is desirable should be carried on as efficiently as it can be done with the staff we have at present.

Mr. BOYCE. I had not intended to address myself to the question——

Mr. SPEAKER. The mover of the motion closes the debate, and the hon. gentleman cannot speak now.

Mr. BOYCE. I understood the minister was answering questions, I only rose for the purpose of asking a question.

Mr. SPEAKER. The debate is concluded, I cannot allow the hon. member to speak now. The minister is allowed to reply, but I warned hon. gentlemen that if any one wished to speak, he must do so before the minister spoke.

Mr. BOYCE. At that moment the hon. member for Victoria and Haliburton rose, and said that before the minister spoke he would like to ask a question. The minister answered that question, and in the course of his answer I took it upon myself to ask his leave to ask him a question. I was not going to address myself to the subject until I heard the remarks he has now made. It does seem to me, after hearing his remarks, that if we had any doubt before, we can no longer doubt now that there is an Ethiopian in the fence somewhere. This Bill was introduced by the hon. member for Maisonneuve (Mr. Verville) and was discussed in the House, and unless I am mistaken, my hon. friend the Minister of Labour committed himself to the principle of this Bill, if he did not in so many words, by allowing it to go to a second reading, and by referring to to a select committee. Now, as has been said by the hon. member for Hastings, what is the position of the hon. member for Maisonneuve, who introduced this Bill, what is the position of the minister, and what position does he ask this House to take? Here is an hon. gentleman who represents the whole labour organizations of Canada, asking this House to commit itself to the principle of a Bill, and then when the minister proposes that the committee be authorized to employ an expert to advise them upon questions relating to the very principle of the Bill, the hon. gentleman from Maisonneuve, the head of the Trades and Labour Congress, sits silent, and allows that motion to go unchallenged. Why does he do it? Why does the member for Maisonneuve consent to that? If he is sincere in his desire for an eight-hour day, if he really intends to push through his measure, why does he consent to have his Bill knocked about from this man to that man, from this select committee to that travelling investigator, with the result, of course, that his Bill will have to go over until another session? I cannot believe, from the attitude of the hon. member for Maisonneuve, that he is sincere. I think he does not want this House to tackle this question upon its merits, he is anxious to relieve the Minister of Labour from difficulty, to shelve this question, to prevent it from being dealt with at this session. How does he try to square himself with the men whom he is sent here to represent? I think it will be difficult for him to go back and tell them that he fought in the House of Commons for the Eight-hour Bill, but was unable to get it through. Now, by some arrangement with the Minister of Labour, by some promise, something that is not made clear, he simply sits quiescent while the minister hands over to a so-called expert the investigation of a principle, the acquisition of information which, if he was worthy to hold the position of the Minister of Labour, he ought to know already.

Mr. VERVILLE. Does the hon. gentleman mean to say that I had a promise or

anything of that kind from the Minister of Labour?

Mr. BOYCE. No, I do not think that.

Mr. VERVILLE. I hope my hon. friend will do me the honour to——

Mr. BOYCE. I think my hon. friend is quite too astute for that, but I certainly think that if there has been no arrangement expressed or implied beween my hon. friend and the Minister of Labour it shows that he is a very tame representative of labour. The position that the minister takes upon this question is absolutely untenable. Upon his own admission, what does he want to do? He is going to employ a specialist, a technical man, to go and investigate and acquire information which my hon. friend admits he has now upon the shelves of the department. There is no question as to what should be done with this motion. With regard to the insurance legislation before the House would the Minister of Finance (Mr. Fielding) accept a similar resolution relegating the Insurance Bill to the investigation of professional experts, who might go around the country, acquire information and give us their opinions? Would such a resolution as that be accepted simply upon the flimsy and miserable excuse that the Minister of Labour puts up, that this man is so well versed in the subject and has such a wide experience upon it that he is in a position to advise the committee? Would the Minister of Finance adopt such a principle, and if he would not—and it applies to any other department of the government, why should we be asked to accept it from the Minister of Labour? This proposal is made for the purpose of assisting the Minister of Labour and the member for Maisonneuve out of some difficulty in which they appear to be. But I say that we ought not to delegate the powers of this House by accepting this resolution.

House divided on motion (Mr. King).

Motion agreed to.

QUESTIONS.

DOMINION LANDS FOR HOMESTEADS.

Mr. MACDONELL:

1. What is the estimated acreage of the Peace river, Mackenzie river and other unorganized districts?

2. How much of it is arable?
3. How much of it has been surveyed?

Hon. FRANK OLIVER:

1. There are no districts legally known as 'Peace River District' or 'Mackenzie River District.' The portion of country lying generally along and in the vicinity of Peace river and commonly known as 'Peace River District' is wholly within the province of Alberta. That portion of the Northwest territories formerly known as the 'Mackenzie River District' and which forms part of the Northwest territories contains an area of 333,861,760 acres approximately, exclusive of water.

2. No definite information can be given about the proportion of arable land, as the portions of country above referred to are largely unexplored.

3. See No. 2.

Mr. MACDONELL:

1. What is the total acreage of Manitoba?
2. How much of it is arable?
3. How much of it is under cultivation?
4. How much is held, untilled, by railways, land companies and other private owners?
5. How many acres have been free homesteaded?
6. How many acres are still open to free homesteading?

Mr. OLIVER:

1. 41,169,280 acres approximately, exclusive of water.

2. The total area surveyed—25,150,000 acres. No definite figures can be given as to the proportion of unsurveyed land which is arable.

3. 5,061,503 acres.

4. About 10,000,000 acres.

5. 5,475,760 acres.

6. 6,725,837 acres approximately. (Area surveyed and ready for homesteading at the present time.)

Mr. MACDONELL:

1. What is the total acreage of Saskatchewan?
2. How much of it is arable?
3. How much of it is under cultivation?
4. How much is held, untilled, by railways, land companies, and other private owners?
5. How many acres have been free homesteaded?
6. How many acres are still open to free homesteading?

Mr. OLIVER:

1. 151,900,000 acres approximately.

2. The total area surveyed — 66,600,000 acres. No definite figures can be given as to the proportions of unsurveyed land which is arable.

3. 5,814,723 acres approximately.

4. About 37,100,000 acres.

5. 20,828,320 acres approximately.

6. 21,690,297 acres approximately. (Area surveyed and ready for homesteading at the present time.)

Mr. MACDONELL:

1. What is the total acreage of Alberta?
2. How much of it is arable?
3. How much of it is under cultivation?
4. How much is held, untilled, by railways, land companies and other private owners?
5. How many acres have been free homesteaded?
6. How many acres are still open to free homesteading?

Mr. OLIVER:

1. 155,400,000 acres approximately.

6. The total area surveyed — 52,200,000 acres. No definite figures can be given as to the proportion of unsurveyed land which is arable.

3. 1,483,400 acres approximately.

4. About 32,760,000 acres.

5. 11,886,280 acres approximately.

6. 21,703,571 acres approximately. (Area surveyed and ready for homesteading at the present time.)

RABIES.

Mr. J. A. CURRIE:

1. How many cases of suspected or identified rabies were reported to the Department of Agriculture during the years 1909 and 1910?

2. Where were these cases reported from, and what action was taken by the government to prevent the spreading of this terrible disease?

3. Were any farms quarantined by order of the department? If so, where?

4. Were any domestic animals other than dogs ordered to be destroyed by the department or its officers to prevent the spread of the disease or danger from infection, under clause 5 of the Animals Contagious Diseases Act? If so, where?

5. Is it the intention of the government to withhold compensation from owners of such animals, thereby putting a premium on the secret spreading of this terrible disease, or will the owners be compensated as provided by section 6 of the said Act?

Hon. SYDNEY FISHER:

1. 157 outbreaks involving 760 animals most of which, however, were simply placed in quarantine as contacts but did not develop the disease.

2. From the following electoral districts: Welland, Ont.; Wentworth, Ont.; Hamilton, Ont.; Norfolk, Ont.; Brant, Ont.; Brantford, Ont.; Waterloo South, Ont.; Waterloo North, Ont.; Wellington North, Ont.; Perth North, Ont.; Perth South, Ont.; Huron West, Ont.; Oxford South, Ont.; Middlesex West, Ont.; Middlesex North, Ont.; Kent West, Ont.; Simcoe North, Ont.; Red Deer, Alberta; Assiniboia, Saskatchewan.

Immediately on receiving reports of rabies, or suspected rabies, an inspector was sent to investigate. All animals bitten or known to have been in contact with a rabid or suspected dog were quarantined.

All contact or suspected dogs were isolated and ordered to be securely chained until danger of infection was past.

A bulletin giving a full description of the disease and also including the regulations relating to rabies was freely distributed in each district where the disease was found or suspected. Copies of this bulletin were sent to medical health officers and other medical officers.

The existence of rabies was demonstrated in thirteen cases by animal inoculations from specimens sent to the biological laboratory.

3. (a) Yes. (b) In the localities mentioned above.

4. No.

5. No compensation will be given.

IMPORTATIONS OF MILITARY ARTICLES.

Mr. WORTHINGTON:

1. Is the government prepared to favourably consider the importation, free of custom duty, of special articles of uniform, arms, or accoutrements, for the use of the Canadian militia, and for authorized cadet corps, respecting which it is established to the satisfaction of the treasury board that such are not manufactured, and that facilities for the manufacture thereof, do not exist in Canada?

2. What amount of money has been collected as customs duty on Windsor uniforms imported by Canadian Privy Councillors during the five years ended 31st March, 1909?

3. Have any such Windsor uniforms been imported free of Custom duty? If so, under what authority?

Hon. WM. TEMPLEMAN:

1. No. The government do not propose any amendment of the law in that respect.

2. Uniforms and other clothing are classified together in the tariff, so that the customs statistics do not show separately the amount of duty collected on any particular uniform.

3. Uniforms of all kinds arriving with the owner have been admitted free of duty as travellers' baggage, under the provisions of tariff item No. 703.

LACHINE CANAL—T. EVERS.

Mr. VERVILLE:

1. What was the total amount of money received by T. Evers as expenses, employed on the Lachine canal, from April 1, 1909, to date?

2. What was the nature of the work that brought about those expenses?

3. How many times during the same period was T. Evers called for repairs of telephone, and what was the nature of those repairs?

4. Who is the proper authority to judge of the competence of electricians or any other persons who may have anything to do with electricity on the Lachine canal?

5. Is the government obliged to furnish the light to the establishment of the Inland Navigation Company? If so, on what condition?

Mr. FISHER.

Hon. GEO. P. GRAHAM:

1. Thos. J. Evers received from the Department of Railways and Canals the sum of $131 for transportation allowance in connection with his duties. He is allowed a fixed monthly allowance of $15, dated from July 1, 1909.

2. Thos. J. Evers has charge of the repairing and maintenance of the telephone instruments, interior switches, and inside wiring, in connection with the private telephone system, along the entire line of the Lachine canal, also the superintendent's office and government stores, Mill street.

3. Mr. Evers makes the required visits along the line of the Lachine canal whenever his duties demand it; sometimes complaints are made through no fault of Evers, as the telephone wires are strung on the same poles as the electric light and power wires of the Lachine canal.

4. D. O'Brien, the officer in charge of the operating and maintenance of the Lachine canal staff and repairs, certifies to the competency of the electricians on the Lachine canal. All matters requiring expert knowledge in this connection are referred to Mr. John Murphy, electrical engineer, Department of Railways and Canals.

5. The Inland Navigation Company of Hamilton, Ontario, made application in the regular way to have the wire system run through the sheds which are on the lighting circuit of the canal at basin No. 1; this was granted in the interest of canal navigation, and no charge is being made. The other sheds on the Lachine canal are treated in the same manner.

MARITIME DREDGING AND CONSTRUCTION COMPANY.

Mr. CROCKET:

Referring to the answer given by the Minister of Public Works on the 27th January, instant, to a question as to what payments had been made to the Maritime Dredging and Construction Company for dredging at Gaspereaux, New Brunswick, in which the minister stated, 'No dredging was done by the company at Gaspereaux during the present fiscal year, as by reason of the alleged difficult and exposed location where the work was being performed, they declined to return to it last spring at their tender price of the previous year. They also gave as a further reason for declining to accept an extension of their contract and as evidence of the unusual difficulties attending this work, that one of their tugs had been wrecked, resulting in large financial loss'—

1. On what date respectively was the work of 1908 begun and concluded, for which the payment of $33,969 was made?

2. What is the date of the contract under which the above payment was made?

3. What is the date of the order in council authorizing said contract to be entered into?

4. Did said order in council authorize a contract for work to be done beyond the close of the calendar year 1908?

5. Was the company asked to accept an extension of their contract last spring?
6. If so, was the request in writing or verbal, and by whom and to what officer of the company was it communicated?
7. If in writing, will the minister lay the correspondence on the table of the House without notice of motion?

Hon. WM. PUGSLEY:

1. Work started August 17, 1908. Dredge ceased operations October 29, 1908.
2. First contract by letter of superintendent of dredging to the company, dated August 10, 1908, authorizing company to commence work provided they would accept the lowest price per cubic yard, scow measurement, to be obtained by tenders, which were then being called for. Formal contract being executed by the contractors. November 6, 1908; by the department November 23, 1908.
3. November 20, 1908. Delay in passing order in council was due to the fact of the chief engineer requiring reports of experts independently of the resident engineer as to the value of the work before recommending the execution of a contract agreeing to pay the tender price of 90 cents per yard. These reports were made by the late W. J. McCordock, superintendent of dredging, and J. K. Scammell, resident engineer at St. John, and were only received in October, the last one—that of Mr. Scammell—being dated October 19.
4. No.
5. The company was asked if they would accept an extension of their contract last spring in case an order in council was passed granting such extension.
6. Verbal. By myself to the president or one of the directors of the company, and, I think, to both.
7. Answered by reply to No. 6.

TORONTO HARBOUR.

Mr. J. D. REID:

1. What is the name of the contractor or contractors for the extension of the breakwater and work in connection therewith at the eastern entrance, Toronto harbour?
2. What is the amount of contract, or contracts, for said work?
3. What is the name of the sub-contractor, or contractors, of such contracts?

Mr. PUGSLEY:

No contract has been awarded for the extension of the breakwater at the eastern entrance, Toronto harbour; but the department is rebuilding, by day labour, the superstructure of the piers at the said eastern entrance, under the supervision of the district engineer.

SALMON RIVER POSTMASTERSHIP.

Mr. JAMESON:

1. Is there a vacancy in the postmastership at Salmon river, Digby county?
2. If so, when did it occur, and who has since been acting?
3. Has any petition been received signed by residents of Salmon river, asking for the appointment of a postmaster?
4. If so, when was it received, who did it recommend, and why has the appointment not been made?
5. What action does the minister propose to take, when will he act, and upon whose recommendation?

Hon. R. LEMIEUX:

1. Yes.
2. The office has been vacant since the death of the former postmaster, Mr. H. C. Perry, on the 16th September last. Mr. Edward T. Doucette has been placed in charge as acting postmaster.
3. Yes.
4. Petitions were received on or about the 9th November last, in one of which a Mr. H. J. Foley was recommended. The other asked for the establishment of a post office at some distance from Salmon river, which would involve either a change in the location of the Salmon river post office or the establishment of another post office in too close proximity to the Salmon river office. No action has been taken on these petitions.
5. A decision has not yet been made in the matter.

WINDYGATES POST OFFICE.

Mr. SHARPE:

1. Why did the government change the post office at Windygates, Manitoba?
2. Was there a petition from the people served at that post office? If so, how many names were on it?
3. If there was not a petition, who recommended the change, and what reasons did they give for asking for a change?

Mr. LEMIEUX:

1. The post office having been rendered vacant by the death of the postmaster, it became necessary to make a new appointment to the postmastership.
2. A petition containing 34 signatures, asking that the location of the office might not be changed, was received at the department.
3. The change was recommended by Mr. J. F. Greenway, who, having made special inquiry, found that it would be in the best interests of the community.

PURCHASE OF GOVERNMENT VESSELS.

Mr. MONK:

1. Has the government purchased or agreed to purchase or lease any ships in connection with the proposed Canadian navy?
2. Have any orders in council been passed in connection with the purchase, lease or construction of said ships? If so, at what date or dates?

3. Have any sums of money been paid in connection with the acquisition of ships in connection with the Canadian navy? If so, what sums?

Sir WILFRID LAURIER:

1. Negotiations have been going on for the purchase of one steamer for the protection of the fisheries in British Columbia and for the purchase of another ship in connection with the navy, the latter subject to the approval of parliament.

2. Order in council has been passed authorizing the purchase of one steamer, subject to the approval of parliament.

3. No money has been paid.

NAVAL SERVICE OF CANADA.

On orders of the day being called:

Mr. FOSTER. I wish to ask the Prime Minister if he is able to lay on the table of the House correspondence with reference to the purchase or the proposed purchase of a vessel for the Canadian navy. I understand that the debate takes place to-morrow and I think this correspondence ought to be in the hands of the House.

Sir WILFRID LAURIER. This correspondence has not yet been completed and it is not therefore in a position to be brought down. I hope to be able to satisfy my hon. friend as to what there is in it.

Mr. FOSTER. Of course the whole thing is not contemplated, but what objection on earth can there be if there is an agreement and that agreement is in form to be brought before the House, to bringing down the correspondence?

Sir WILFRID LAURIER. The only objection is that it is a matter not completed on this side, it is subject to the approval of parliament and we cannot pay a dollar until we have brought it before parliament. On the other side it has to be subjected to some authority which I do not know at the present time.

Mr. FOSTER. It is not confidential I suppose?

Sir WILFRID LAURIER. It is not confidential.

SUNDAY POSTAL SERVICE.

Mr. NEELY. I wish to call attention of the House and particularly of the Postmaster General to a matter of public importance brought to my attention quite recently. It affects the people of the west if not of the whole of Canada to quite a considerable extent. An item appears in the Manitoba 'Free Press' of June 31, headed 'Post office will close on Sundays'.

Mr. SPEAKER. Hon. gentlemen cannot discuss that question now.

Mr. MONK.

Mr. NEELY. I was going to put a question to get information in connection with this point. The item refers only to the order that had come to the local postmaster of the city of Winnipeg, and I am anxious to find out if all postmasters throughout Canada have received a similar order. If that is the case, personally I am called upon to protest very strongly against the action of the Post Office Department in connection with the matter.

Mr. LEMIEUX. This question is a very vexed one. During last summer we were asked at the Post Office Department to get the views of the people especially in the western provinces, as regards the partial closing or opening of post offices on Sunday. Feeling exists on the same subject in the province of Ontario. I directed two officers of the department but chiefly one, the superintendent of post offices in Canada, Mr. Ross, to go into this matter very deeply. He went to the west and I must say that the consensus of opinion as gathered by Mr. Ross and my officer in the west is to the effect that there should be a strict Sunday observance in post office matters. However, I have not yet had time to read the whole report, which is very voluminous, and I expect that within a few days I will be able to give the House the decision of the department in the matter. It is a very difficult and a very vexed question, and I must say from what I hear in the western provinces, that the sentiment seems to be practically unanimous in favour of Sunday closing in the various post offices.

Mr. SPROULE. Has the minister issued any order regarding it?

Mr. LEMIEUX. The matter is at present being studied by the department. It may be in some instances the officers may have given orders which I did not know personally, but the ordinary regulations of the department are to the effect that post offices should not be open on Sunday. But, in some cities, where the trains arrive on Sunday it has been found necessary to keep the offices open during a certain portion of the day for the mails. It has been the custom of the department not to interfere in such cases, but even in regard to them, judging by the report I have read, the opinion in the west seems to be against the opening of these offices.

Mr. CONMEE. I would like to ask the minister what evidence he has of that opinion?

Mr. SPEAKER. I am afraid the question cannot be discussed now.

Mr. CONMEE. Very well.

SUPPLY.

House again in Committee of Supply.

Railways and canals—capital—cut-off at Moncton, $100,000.

Mr. GRAHAM. The estimated cost of this is $215,751.

Mr. CROCKET. How is the work being done?

Mr. GRAHAM. We will ask for tenders when we come to do the work.

Mr. JOHN HAGGART. Is this work intended to be a portion of the Grand Trunk Pacific?

Mr. GRAHAM. We will no doubt have to handle some of their business there and this will be a facility, but whether or not we need it for our own business.

Mr. CROCKET. When will it be completed?

Mr. GRAHAM. It will take two years. It is intended to commence during the coming summer.

Mr. FOSTER. If the Grand Trunk Pacific had not been built would this expensive cut off have been constructed in the interests of the Intercolonial railway?

Mr. GRAHAM. My information from the chief engineer is that he would advise it in our own interest had there never been any Grand Trunk Pacific.

Mr. BARKER. Does the recently appointed Board of Management recommend such a matter as this before it is presented to parliament?

Mr. GRAHAM. As a matter of fact this work was projected and approved of by the House before there was any board. $50,000 was appropriated but we have not yet secured the right of way.

Mr. BARKER. Where you are expending large sums of money on work of this kind which will be for the benefit of other railways an effort should be made to get these other railways to divide the cost.

Mr. CROCKET. Has any portion of the right of way been acquired?

Mr. GRAHAM. Not yet.

Mr. HUGHES. Will this run through the city or outside the city?

Mr. GRAHAM. Outside the city. There are grades in the city and we want to avoid them.

Moncton locomotive and car shops, &c., $343,825.

Mr. GRAHAM. This is intended to complete the very large expenditure at Moncton in this connection. Last year I gave the figures for everything done at Moncton and they amounted to about $3,000,000. This is a very large expenditure, but I think I am safe in saying that while the Moncton shops are not as large as some others on the continent which I have visited, in many respects the lay out of our shops is better than in any others, and there ought to be more economy in doing the work. We have already had some improved results from the new machinery and the general lay out of the shops, even with the small staff of men we have employed.

Mr. CROCKET. Can the minister tell us how much the machinery cost and how much the building cost?

Mr. GRAHAM. This is not for machinery, but for shops, yards and tracks. There is an item further on for machinery.

Mr. CROCKET. Do I understand that the shops, yards, etc., exclusive of machinery, will cost $3,000,000?

Mr. GRAHAM. Yes, the new shops, round-houses, terminal facilities, and so on, will cost $3,000,000 before they are completed.

Mr. CROCKET. And the machinery is in addition?

Mr. GRAHAM. Yes. The machinery, I think, will cost, probably, half a million dollars.

Mr. CROCKET. Are the new buildings now completed? There was to be a passenger car repair shop, a freight car repair shop and a number of other buildings. Are they completed now?

Mr. GRAHAM. The ones that were under contract are completed. These are practically additional buildings.

Mr. CROCKET. Is the engine house under contract?

Mr. GRAHAM. No, a contract will be let.

Mr. BARKER. There is now a new commission practically managing the road. Have they any control over expenditures such as are here shown? Does the minister get from them a report recommending estimates, or is that done, as in the past, from the minister's own office?

Mr. GRAHAM. The estimates for the Intercolonial are practically all prepared under the advice of the board. The deputy being the chairman of the board, of course, it all comes through him. My experience is that the management, even before there was a board, discussed these matters and recommended estimates. The general manager had a large say in preparing the estimates. The board, while it has no

supreme power, and while we might cut out something it recommends—for people who do not have to provide the money are apt to be liberal in their requests—has much to do with preparing the estimates.

Mr. BARKER. The hon. minister has not explained what I want to know. It is very important that we should know, for the future, whether everything of this kind that is recommended to parliament, is based upon a formal written report of the board. I can understand, of course, that the minister is not bound to accept their recommendations. But it would be a prudent thing for him to get their recommendation upon every item, and these should be open to this committee.

Mr. GRAHAM. My information is that these estimates were discussed before the board. I think the hon. member (Mr. Barker) is right—if we are to have a board that board ought to make recommendations. As the hon. member says, the minister is not bound to accept those recommendations, but the board should make representations, these to be considered for what they are worth. I think that is very reasonable.

Mr. FOSTER. Then, that will be done.

Mr. GRAHAM. Yes.

Mr. JOHN HAGGART. The other day the Minister of Railways spoke of the items charged to capital account. I would like to get from him a precedent, either in the Baltimore and Ohio, the New York Central or the new rules adopted by the Interstate Commerce Commission concerning charges to capital account for a case where a station-house or workshop has been burned down and the cost of replacing it charged to capital.

Mr. GRAHAM. I think I can get that for my hon. friend before we get through. At least, I can get cases where these buildings have been pulled down, and I suppose that will be the same thing.

Mr. JOHN HAGGART. No. This is a case where the buildings were burned down and the whole cost of restoration is charged to capital.

Mr. GRAHAM. It was not all burned down; there is quite a shop standing and the government still own it.

Mr. JOHN HAGGART. This money is supposed to be used to replace buildings that were burned.

Mr. GRAHAM. A good deal more than replace them.

Mr. CROCKET. Is the department abandoning the old buildings left by the fire?

Mr. GRAHAM. We have not done so. There was a proposition to lease them, but it did not materialize.

Mr. CROCKET. As I understand, it is proposed to abandon these shops and do all the work——

Mr. GRAHAM. Far more economical work can be done in the new shops, so that we can soon earn the value of the old shops.

Mr. CROCKET. What is the valuation of the old buildings?

Mr. GRAHAM. I have not the figures here.

Mr. RHODES. What is to be done with the old building?

Mr. GRAHAM. Well, that depends on finding the party of the second part. I thought at one time that we could get an industry to lease this building, but the amount they offered was not worth while.

Mr. RHODES. Is it intended to use the ground space for yard-room, or is it still in the market?

Mr. GRAHAM. Personally, I am a bit averse to disposing absolutely of government property, particularly at Moncton, where, as my hon. friend suggests, we need the land for some purpose—the Grand Trunk Pacific may need it. I am free to say that we have not yet a definite policy on that subject.

Mr. CROCKET. What has become of the property bought from Mr. Lodge? No use has ever been made of that property.

Mr. GRAHAM. It has been used, I believe, as part of the old yards.

Mr. FOSTER. I think the minister will agree that this is a very important matter. I understood him to say yesterday that the Interstate Commerce Commission had laid down principles as to charges to capital, which, after conference with the great railways in the United States, were accepted and are now being acted upon, and I understand that the minister intends to adopt the same plan in connection with the accounts of the Intercolonial. I was glad to hear him say this, because I thought it provided a solution for two things, one the subject of the old controversy that has gone on for some several years as to expenditure on capital and on income, and the other in the interest of honest book-keeping and good accounting. Now, if we can have those principles, so adopted and carried out in the United States and which are henceforward applicable to the Intercolonial, put in black and white where we can get at them, it would be a great benefit, and it would tend to honest accounting. I am not pressing this for the sake of contro-

versy, but I have no doubt that some principle is necessary. I should hope that under the new departure the minister is now willing to enunciate those principles and put them into strict operation on the Intercolonial.

Mr. GRAHAM. I have taken pains to get the decision my hon. friend has spoken of; here it is:

A number of points have been raised by correspondents relative to depreciation that call for the following general statements, all of which bear upon the manner in which depreciation accounts should be treated:—

1. The question of depreciation is fundamentally a question of operating efficiency, or of keeping full the numbers in equipment series.

2. The depreciation rules may be worked either on the basis of the value of individual cars and locomotives, or on the basis of the value of series of cars and locomotives. On this point, accounting officers are at liberty, until advised to the contrary, to follow whichever method seems to them the more appropriate.

3. The basis of accumulation—that is to say, the amount to which the percentage rate is applied—ought, in strict theory, to be the original cost. For the current year, however, accounting officers are at liberty to accept original cost estimated, if not known, record value, or purchase price. The term 'record value' should not be interpreted to mean the value of the equipment as it stands in the capital account unless that account represents the original value of the equipment on hand, but the actual cost or value of all equipment, regardless of where charged when purchased; and in case purchase price be accepted as the basis of the percentage charge to depreciation, the percentage rate should be limited to the rate required to replace the price paid. A second-hand locomotive, for example, is not called upon to provide for its replacement, when abandoned, by a new locomotive. As stated above, it is values and not locomotives with which depreciation charges deal.

4. The application of depreciation charges for the current year and subsequent years must not be influenced by the practice of years past. In case property has been appreciated by excessive charges to operating expenses in years past, the value thus placed on the property must be regarded as a permanent undivided asset to the stockholders. On the other hand, in case property has depreciated on account of insufficient charges to operating expenses in years past, this fact must not be permitted to influence the determination of the depreciation rate for the current year.

5. The monthly charges to operating expenses for 'depreciation' in the several classes of equipment, will, of necessity, create or require corresponding liability accounts to which such depreciation may be credited. To that end, carriers will be required, beginning July 1, 1907, to set up an appropriate liability depreciation account for each of the several classes of equipment upon which depreciation is charged. These accounts should be designated as follows:—

(a) Locomotives — replacements (including both steam and electric),
(b) Passenger-train cars—replacement,
(c) Freight-train cars—replacement,
(d) Electric equipment of cars—replacement,
(e) Floating equipment—replacement,
(f) Work equipment—replacement (except locomotives).

To these replacement accounts should be credited monthly the amount of accrued depreciation on each class of equipment, respectively. Such credits should invariably equal the gross charges to maintenance for depreciation.

To these several replacement accounts under their appropriate heads should be charged, at cost, all equipment purchased, built, or otherwise acquired for purpose of maintaining the value of a carrier's equipment.

The monthly charges to operating expenses for 'renewals' of the several classes of equipment will be similarly treated.

It is not intended that these accounts should be restricted to individual cars or locomotives, or that carriers are not at liberty to renew or replace equipment upon which depreciation has accrued prior to the retirement of such equipment. On the other hand the several amounts standing to the credit of those replacement accounts should be available to carriers for the purpose of replacement of equipment to the extent of such credits; however, all replacements in excess of such credits must be considered as betterments or additions, and charged either to income or capital.

I have also a classification of expenditures for additions and betterments, for steam roads, adapted by the Inter-state Commerce Commission, and which the Intercolonial has adopted as their standard. Then I have a classification of the road and equipment for original construction which we have adopted. I will lay these two statements on the table.

Mr. CROCKET. Is any portion of this amount applied to the payment of the sewer, the contract for which was let to Mr. E. A. Walberg? I understand that there is a claim against the government for something over $100,000 for the construction of a sewer. The work was let under a purely verbal contract, entered into with the local engineer.

Mr. GRAHAM. That is in the courts yet. The referee gave a certain figure, Mr. Walberg appealed to the Exchequer Court, and got another judgment. I have now under consideration the advisability of appealing from that judgment.

Mr. J. D. REID. Are you giving him any more contracts?

Mr. GRAHAM. I do not think he has any at the present time.

Mr. CROSBY. I want to ask the minister what the department is doing with regard to the Cunard property which they

acquired in Halifax some years ago, and when they intended to make use of it?

Mr. GRAHAM. There are plans under consideration for building a freight shed at that end of the city, and a new wharf, and I think a flour shed on the wharf. But the plans are not yet completed, and we have nothing in the estimates this year. We have a large capital account and we are going as slowly as possible in order not to unduly increase it.

Mr. CROSBY. I think the people in Halifax were willing that the department should acquire this property, but they expected that the department would use it. They expected that within a reasonable time some construction would take place; it was understood that a flour shed and a new wharf would be built. I think the time has now come when the work should be carried on. Can the minister give us some definite intimation as to when this work will be begun? I think the property was acquired six or seven years ago.

Mr. GRAHAM. I understand that the front part of the stone building is now occupied by the Cunards under lease, and the other part is occupied by Halifax merchants, and the whole is in use. I understand the property was bought only a short time before I became minister. It was offered cheap; the government thought they would eventually need it, and they took advantage of the opportunity and purchased it. We require it, and we intend to go on and utilize it. But I do not think it was bought with the intention of immediate use.

Mr. CROSBY. Does the minister mean to say that they bought it on speculation, and they are going to keep it for some time? If that is the intention, I am sure it will not meet with the approval of the people of Halifax.

Mr. GRAHAM. Nobody could buy it from us.

Mr. CROSBY. If the Railway Department is going to keep it in the shape they have got it now, we would like to have some use made of it. We don't want the Railway Department or anybody else to come into Halifax and buy up a valuable piece of water front, and hold it without making some improvements. I understand the minister to say that he does not know what they are going to do with this property, they have made no plans; he has not made up his mind what he is going to do with it.

Mr. GRAHAM. I think my hon. friend has rather overstated what I said. We bought the property because it was a good thing to buy, and we will need it. The department has of course considered several things in connection with it, but at the present time we have formed no plan, and we are not asking this year for any appropriation.

Mr. CROSBY. Then I will ask the minister something easier. I would like to ask him how much accommodation there is at the round-house for locomotives, and how many they can put in there? I would like to ask the minister if it is intended to do the same amount of work in that shop as has been done in the past. There is quite a large amount of ground although the roundhouse does not seem nearly as elaborate as I would like to see it. I would like the minister to give me some idea of how many locomotives can be stored in the round-house at one time?

Mr. GRAHAM. The roundhouse at Halifax will be used for repairs just as other roundhouses are. There is a car repair shop there as well. Arrangements were made some years ago for the construction of central shops at Moncton, where all the heavy repairs could be done. The board is carrying out that plan which was adopted by the then management and approved by parliament. The roundhouse at Halifax is like the roundhouse at other places and the same kind of work is being done there.

Mr. CROSBY. Will all cars that go into Halifax be repaired there? We are not jealous at all of Moncton, nor are we jealous of any other place, but we feel that we should have what belongs to us and we do not believe that a locomotive or a car should be taken from Halifax to any other part of the Intercolonial to be repaired.

Mr. GRAHAM. I do not think I can add anything to what I have said. The road is under the management of expert railway men who know more than I do about where these things ought to be done. A very large amount has been expended at Halifax for giving exceptional facilities for shipment, and we have made provision for these heavy repairs to be done at Moncton. I cannot say how big a hole there should be in a boiler before it will go to Moncton rather than stay in Halifax, but we must leave it to the management to look after these details.

Mr. CROSBY. That answer will hardly satisfy me. I am quite satisfied that the minister is going to leave things to the board which he does not want to deal with himself, and take things to himself that he does not want the board to interfere with. While there has been a considerable expenditure at Halifax I am proud to say that with the exception of acquiring the roundhouse site, you have got pretty good value for your money. There has not been any evidence of any money being squan-

dered there except in acquiring the roundhouse site. Of course, I need not tell you anything about that, because you know how you got your friends fixed up in that regard. There has not been very much spent in Halifax for the Intercolonial. The road has its terminus at Halifax, and you have a perfect right to spend a lot of money there to facilitate its operations.

Mr. GRAHAM. How much would my hon. friend call a lot of money? Suppose we spent it in Hamilton. How much does he think has been spent in Halifax for the Intercolonial — $4,379,000? I think that is quite a lot of money.

Mr. CROSBY. Since when?

Mr. GRAHAM. Up to the present time.

Mr. CROSBY. Since 1867?

Mr. GRAHAM. I have not the date, but we keep the expenditure in every place in Canada. That is a lot of money.

Mr. CROSBY. It might be a lot of money if it had been spent last year, but if it has only been spent since confederation it is not very much. I presume that for every dollar you spent there you have got value.

Mr. FOSTER. Except the Henderson property.

Mr. CROSBY. The minister would not even admit that he did not get value for the Henderson property. But, I am not worrying about the Henderson property; I am worrying about getting fair play for Halifax as a part of the Intercolonial railway. The minister states that there is a machine shop there, and all the equipment necessary for the repair of cars and locomotives, and I want to know whether the minister would be in sympathy with the idea of taking a car from Halifax to Moncton to be repaired. I can quite understand the statement of the minister that they have made provision for construction at Moncton. I want to be fair to the minister, and I am sure he would be as fair to me, and if he has the facilities at Halifax to do the work I want to know if it would not be fair and reasonable to ask that it should be done at Halifax?

Mr. GRAHAM. No jealousy is allowed to exert any influence upon these matters, even if such a thing did exist. But, the practical work of the Intercolonial railway will have to be left to the men who are employed and paid to give us advice as to what should be done. I think it is fair to say that such repairs as are made in the roundhouse at Halifax, which is not what is known as a machine shop, as the Moncton one is, will be done at Halifax.

Mr. DANIEL. Perhaps it will satisfy my hon. friend from Halifax if the minister would send to Halifax to be repaired the sleeper that I had the misfortune to come from St. John in the last time I came. I think it would give a good deal of work for a good deal of time at Halifax to put that sleeper in good condition. Either the sleeper was very bad or the roadbed was very bad, and from what we heard from the minister yesterday I presume it would be rather presumptuous to blame it on the roadbed. So, we have to blame it on the sleeper and I would suggest that the sleeper be sent to Halifax, because in this way you will perhaps find it necessary to spend a good deal of money there.

Mr. CROSBY. I will second that motion.

New machinery for locomotive and car shops—$38,700.

Mr. RHODES. What is the nature of this machinery?

Mr. GRAHAM. I will read the list.

1 6-inch. track machine, 1 rivet and track bolt machine, 1 double car axle lathe, 1 cold saw to saw off to 12-inch diameter, 1 100-inch. wheel lathe, 1 48-inch. tire-turning boring mill, 1 42-inch. car wheel borer, 1 6-foot radial drill, 1 6-spindle arch-bar drill, 1 1,200 lb. steam hammer, 1 quartering machine.

Mr. RHODES. I would like to ask the minister whether this machinery is purchased by the purchasing agent of the Intercolonial railway or by tender.

Mr. GRAHAM. It has not been purchased yet.

Mr. RHODES. I would like to put in a plea in favour of having this machinery, so far as practicable, purchased from Canadian manufacturers. I believe the Prime Minister laid down the policy that we should build our own steel ships even though they should cost 33⅓ per cent more than on the other side of the water. Representations have been made me by people who should know, that a very large proportion of the new machinery at present in the new shops at Moncton was purchased in the United States, although a large part could have been purchased in Canada at very little, if any, increased cost.

Mr. GRAHAM. The great bulk is of Canadian manufacture. I agree with my hon. friend absolutely, and perhaps would go further. I have given instructions that we purchase Canadian machinery whenever possible, if anything nearly equal can be got. Some times we come across machinery which our experts require and which cannot be got in Canada, and we have to go outside. But the rule is to buy Canadian machinery whenever possible.

Mr. RHODES. I am pleased to hear this statement, because I was led to believe by competent machinery men that a large pro-

portion of our machinery had been bought in the United States. Of course a good deal was purchased before the present minister took the office.

Mr. CROSBY. Is the minister providing at Halifax such machinery as this item is intended to provide at Moncton?

Mr. GRAHAM. We are not doing the work at Halifax for which this machinery is required, and consequently it is not required there.

Original construction, $800.

Mr. GRAHAM. This is an item which has been in the estimates from time immemorial. It is for the purpose of meeting land damages and claims not settled.

Mr. FOSTER. What was paid last year?

Mr. GRAHAM. I do not think anything was paid out of it last year.

Mr. STANFIELD. I would suggest to the hon. minister a method of getting rid of this $800, and at the same time of doing an act of justice. In 1902, a man was killed in the Truro yards. He was working on the coal chutes when an engine started up and the man got jammed in a coal shed and was killed. The department offered the widow, who has ten children, $100 to settle the claim. Had it been the case of an ordinary company, the widow could have sued and got heavy damages. I would ask the minister to take this case into consideration and see if he cannot do anything. It is certainly one which calls for compensation. The name of the widow in question is Mrs. Charles MacNutt.

Mr. GRAHAM. I do not know anything of the details, but I should imagine that there was no legal liability and that the $100 paid was for two months salary usually given servants of the railway in such cases.

Mr. STANFIELD. If a cow were killed on the track, the government would give as much compensation as it did in this case. I am asking that something should be done in justice to this poor woman whose husband lost his life in the government service.

Pintsch gas apparatus, $6,000.

Mr. DANIEL. Is this considered perfectly safe apparatus or is it liable to cause fire? I notice that in the case of the terrible accident out west, two or more cars caught fire. Whether that was due to the Pinstch gas apparatus or not, I do not know. If anything can be done to prevent cars taking fire in case of accident, it ought to be done.

Mr. GRAHAM. This is a matter to which I have given some little attention. In every train I go on and every car I enter, I first try to investigate the light. Railway experts tell me that outside of electricity, which at present seems impracticable for general use, the Pinstch gas is the safest light known.

Mr. DANIEL. What caused the cars to catch fire after the accident out west?

Mr. GRAHAM. I do not know, but that accident occurred in the day time when there was no light burning.

Mr. CONMEE. Was there not a stove?

Mr. GRAHAM. There may have been.

Mr. RHODES. Is this light safer than what is used by the Canadian Pacific railway?

Mr. GRAHAM. It is the same gas.

Mr. RHODES. In travelling by the Intercolonial railway, one cannot read at night. The Pintsch gas system installed on that line is not a good light, and many travellers take the Canadian Pacific railway in preference, because the light is better.

Mr. GRAHAM. I believe there is an improved mantle on the Canadian Pacific railway, but we are seeking to improve the system on the Intercolonial railway. We have been studying the question of improving the lighting of the cars. It will make the cars lighter, but there is another feature that with the mantles the consumption of gas is not so great, so that it is an economy.

Mr. STANFIELD. I would like some light on this question of compensation of the widow of whom I have spoken.

Mr. GRAHAM. I do not know anything about the case at all, but I will go through the files and investigate if my hon. friend thinks I should. It has no doubt been dealt with by the Railway Department and the Justice Department before our day.

Mr. STANFIELD. The unfortunate part is that the accident happened in 1902 and before it was handed over to me it was outlawed. If the minister will allow me I shall send him a full statement and he can take it up.

Mr. SCHAFFNER. Has the matter of the lighting of cars by electricity been carefully considered. I understand that it is expensive.

Mr. GRAHAM. Some individual cars are lighted by electricity—generating their own electricity as they move, but it is a bit unreliable, it is expensive, and makes the hauling of the car a little more difficult. It is really impracticable for general use on a whole train.

Mr. SCHAFFNER. There is no doubt that as the cars are now lighted there is great danger from fire. In case of accident

where a car, pullman or otherwise, is thrown off the track, fires often occur from this cause.

Mr. GRAHAM. Experts tell me that very few fires can be traced to the Pintsch gas.

Mr. SCHAFFNER. I do not know about that, but I think there have been cases where cars have been fired from the light. If there is any means of avoiding fires of this kind it is a matter that should engage the attention of the government.

Mr. GRAHAM. I think that is so.

Rivière du Loup—engine house, &c., $63,720.

Mr. GRAHAM. This is a revote of an unexpended balance. The proposed outlay was $158,500, but that was reduced to $113,000.

Mr. CROCKET. Does that cover the whole expenditure for this work?

Mr. GRAHAM. Yes.

Robinson's Crossing—subway at, $6,000.

Mr. GRAHAM. This is to get rid of a dangerous level crossing at this particular point. Careful estimate makes the cost $5,040.

Mr. BARKER. On a public road?

Mr. GRAHAM. This is on a much travelled public highway in Nova Scotia.

Mr. RHODES. I asked the minister yesterday to have his deputy in passing through Amherst look into the question of a crossing there.

Mr. GRAHAM. We work in our department even more rapidly than that. We have written to get particulars and see if it will be feasible.

Mr. STANFIELD. I asked the deputy minister to look into a crossing at Densmore.

Mr. GRAHAM. The deputy tells me he has some notes, but he will look the matter up and let my hon. friend know.

Side ladders for box cars, $1,000.

Mr. LENNOX. Are not all the cars now equipped with ladders?

Mr. GRAHAM. You can only put the ladders on the cars as you get the cars in the shop, and this is about as many as we can get in during the year. It costs about $2.50 a car, and of course the side ladders go on all new cars.

St. John—to increase accommodation at, $46,150.

Mr. DANIEL. Where is that to be spent?

Mr. GRAHAM. Freight car repair shops, addition to freight sheds, steam heating for office, and granite paving for roadways around station. The expenditure to date at St. John by the Intercolonial railway has been $2,681,941.26.

Mr. DANIEL. Since confederation. That is about one-half the amount spent at Halifax.

Mr. CROSBY. We are not a bit jealous of St. John, but I see here you are having repair shops put there. You intend them to repair cars at St. John and not take them to Moncton? That is exactly what I asked in regard to Halifax.

Mr. GRAHAM. While we call it a repair shop, it is only a rough building to enable light repairs to be made that cannot be made in the open.

Mr. CROSBY. Just so that St. John can get in out of the rain; that is all right.

Ste. Rosalie—improvements at, $8,500.

Mr. BARKER. Will that complete?

Mr. GRAHAM. Yes.

Sydney Mines—diversion, $100,000.

Mr. GRAHAM. This is the item to which my hon. friend from Sydney (Mr. Maddin) referred yesterday. He was evidently under the impression that we had not an item to provide for this. This is a diversion of some 8¾ miles. It is proposed to run the trains back from George river to Sydney mines. It will get rid of one of the worst grades we have on the line and also of a branch line. The expenditure last year was $2,500 but this year we intend to proceed more vigorously and are asking $100,000.

To increase accommodation and facilities along the line, $38,700.

Mr. GRAHAM. This is to provide for an engine house at Blackville, a station at Little Metis, yards for feeding cattle at Ste. Flavie, a station at Cape St. Ignace, snow fences at several points, a track scale, $2,500.

Mr. BEAUPARLANT. Although the hour is rather late, I would ask the indulgence of the committee while I make some observations which I think may properly be made on this particular item. According to a statement made by the minister recently he is giving some consideration to the providing of a remedy to the present system of prosecuting claims for damages against the Intercolonial railway by people living along the line—damages caused by fire, killing of cattle, &c. I understand that I cannot move an amendment at this moment, but what I wish to do is to make a suggestion for the avoiding of useless costs which are specially regrettable in claims for damages to small

amounts. I would sugggest the following amendment to the Government Railway Act, after art. 60:

60a. The action may be taken and decided before the court of the district or the county where damages occurred and having jurisdiction to the amount claimed.

The object of this suggested amendment is to relieve claimants from the necessity of paying law costs in excess of those allowed by the Exchequer Court. At present any one who has a claim of the character I have mentioned must either come to Ottawa himself or be represented by an attorney or by an agent, whose charges will, in most cases, exceed the amount of taxed costs allowed by the Exchequer Court, even should the claimant win his suit. The plaintiff has thus, under the present system, even when he wins his suit, to pay out in costs more than the court allows him; and as claims of this kind are very numerous all along the line, it seems to me that the government ought to provide some remedy to the present system, and I trust the hon. minister will take my suggestion into his favourable consideration.

Mr. GRAHAM. I am very pleased to have that suggestion from my hon. friend. The difficulty he points to is one concerning which I am endeavouring to get a satisfactory solution. What he suggests is part of what I have in mind, and the only thing to be decided is whether it can be satisfactorily worked out, as the matter is a little more difficult than it appears on the surface.

The only item left is the one we discussed yesterday with regard to Chatham. My hon. friend from York (Mr. Crocket) asked me about the right of way. We have not really purchased any property at all yet along the right of way. We had our man making certain valuations and have outside valuators going over his figures to see if they are approximately correct. If we cannot decide on a proper valuation, we will expropriate.

Mr. CROCKET. Were there two surveys through the town of Chatham?

Mr. GRAHAM. Yes.

Mr. CROCKET. Were both surveys made by the same engineer?

Mr. GRAHAM. They were both made under the direction of the engineer of the Intercolonial railway.

Mr. CROCKET. Has the government determined upon the route to be adopted?

Mr. GRAHAM. We expect the plans in two or three days. For all practical purposes, I think the chief engineer has made up his mind as to what the route will be. We shall have to decide in a very few days.

Mr. CROCKET. The reason I ask is that there have been some property transfers taking place in Chatham within a very short time. I understand that one gentleman very prominent in politics there has purchased the old foundry property, anticipating that the government will require it. If the minister is not able to tell what location it is proposed to adopt, some people at Chatham seem to have ascertained the fact and have scooped some of the property the department will have to buy.

Mr. GRAHAM. I have tried to make it clear, and emphasize the point again that we are going to buy these properties irrespective of any transfers that may have been made, and will buy them at their proper value. If the owners do not consent to a fair value, we shall expropriate.

Mr. CROCKET. Have negotiations been had with the present owners of the property?

Mr. GRAHAM. I think an effort has been made to get the several owners of the property to name a price. That is the first step. Some of them have declined to name a price.

Mr. BARKER. I would remind the minister of our experience in the Halifax roundhouse property. The government sent down people to value the property there, and these people would not inquire what had been paid for property within thirty days.

Mr. GRAHAM. We try to bring our best judgment to bear on the opinion of the valuators.

Mr. BARKER. I mean more than judgment. Sitting here, your best judgment on a matter of that kind is not enough. I have found that, again and again, the valuators sent to look into the valuation of property, have declined to ask what a man had paid for the property, even if he had bought it within a month or so.

Mr. CROCKET. Who is the valuator who has been sent down?

Mr. GRAHAM. The man originally sent was our own engineer, Mr. O'Dwyer. He has taken the preliminary steps. To make sure that his valuation is right, we will have other valuators check it. The public interest will be protected in every way. We desire to get the property at a fair value.

Mr. BARKER. I hope and expect so, now that you have a board. But it was not so a year ago.

Mr. SPROULE. Surely, if property has changed hands recently, the actual price paid is the best evidence of value, and it would seem that the best course would be to ascertain the facts concerning such transactions.

Mr. GRAHAM. I think that the safest way is for the government to expropriate the property, and then there can be no question. We intend to take all the precautions necessary, as we want to get full value. My hon. friend from South Simcoe (Mr. Lennox) asked yesterday about the expenditure on the Canada Eastern. I gave that information last year. It is quite a long statement, and I hope he will not mind if I send him the number of the page on which it appears in 'Hansard.'

Mr. CROCKET. As to the Chatham diversion, the minister promised to bring down a plan. That can be seen at the department, I suppose?

Mr. GRAHAM. Yes, we have it.

Some resolutions reported.

Mr. SPROULE. What business will be taken up to-morrow?

Mr. FIELDING. The Naval Bill.

House adjourned at six o'clock.

HOUSE OF COMMONS.

THURSDAY, February 3, 1910.

The SPEAKER took the Chair at Three o'clock.

MESSAGE FROM THE GOVERNOR GENERAL—FURTHER SUPPLEMENTARY ESTIMATES.

Mr. FIELDING presented a message from His Excellency the Governor General as follows:

The Governor General transmits to the House of Commons, further supplementary estimates of sums required for the service of the Dominion for the year ending March 31, 1910, and, in accordance with the provisions of 'The British North America Act, 1867,' the Governor General recommends these estimates to the House of Commons.

Mr. FIELDING moved that His Excellency's message together with the estimates be referred to the Committee of Supply.

Motion agreed to.

NATIONAL TRANSCONTINENTAL RAILWAY—CLASSIFICATION OF MATERIAL.

Sir WILFRID LAURIER moved:

That the committee ordered by this House to investigate certain matters in connection with Mr. Lumsden's resignation as chief engineer of the National Transcontinental Railway be composed of seven members instead of five, namely, Messrs. Geoffrion, Macdonald, Clarke (South Essex), Wilson (Laval), Lennox, Barker and Crothers.

Mr. J. D. REID. I would like to ask the right hon. gentleman, the Prime Minister, if it is the intention to allow this committee to investigate the charges made by Mr. Lumsden of over-classification?

Sir WILFRID LAURIER. It is the intention that the charges ordered to be investigated by the House shall be investigated.

Mr. J. D. REID. The Prime Minister did not state the other day definitely whether his resolution really referred to the charge of over-classification, as made by Mr. Lumsden.

Sir WILFRID LAURIER. If I have not succeeded in convincing my hon. friend of what I meant I am afraid that anything I might add will not do so.

Motion agreed to.

QUESTIONS.

BRANDON AGENCY.

Mr. LAKE:

1. How many persons are employed in the office of the inspector of agencies at Brandon?
2. How many days were they absent from the office during the period commencing 1st April, 1907, and ending 31st March, 1909, on duty and on leave, respectively?
3. How many days was the inspector of agencies absent from his office during the same period on duty and on leave, respectively?

Hon. FRANK OLIVER:

1. 3.
2. As the duties of the inspector are chiefly outside the office no account is kept of the period of their absence.
3. Answered by No. 2.

THE BANKING ACT.

Mr. BEATTIE:

1. Is it a fact that the Banking Act of Canada will expire shortly?
2. If so, has the government obtained any reliable information regarding the Banking Acts of other countries? If not, will the government endeavour to secure such information in the near future?
3. Does the government intend to allow that portion of the existing Banking Act to remain in force, by which the banks of Canada are said to issue nearly one hundred millions of dollars of currency; thereby making, as alleged, enormous profits, for which privilege the people of Canada do not receive one cent of interest in return?

Hon. W. S. FIELDING. It is contemplated to provide a Banking Act during the present session. I cannot add anything to that statement at present.

PRE-EMPTIONS AND HOMESTEADS—ALBERTA AND SASKATCHEWAN.

Mr. LAKE:

1. What was the total acreage of pre-emptions and purchased homesteads sold in each of the provinces of Alberta and Saskatchewan, respectively, from the 1st November, 1909, to the 31st December, 1909?

2. What total amount of money receivable by the government does this represent in each province?

3. How much has been received by the government on account of pre-emptions and purchased homesteads in each of the provinces from the date of the passing of the Dominion Lands Act, 1908, to the 31st December, 1909?

Mr. OLIVER:

1. Alberta, 153,600 acres; Saskatchewan, 287,360.

2. Alberta, $460,800; Saskatchewan, $862,080; exclusve of interest and entry fees.

3. Alberta, payments on pre-emptions, $50,114.75; payments on purchased homesteads, $82,515.30; Saskatchewan, payments on pre-emptions, $71,838.96; payments on purchased homesteads, $208,618.96.

Exclusive of entry fees (these figures show an increase over those furnished on the 18th January, in answer to Mr. Foster's question of that date, which is accounted for by the fact that the complete returns for the month of December, 1909, had not reached the accounts branch when the answer to Mr. Foster's question was prepared).

BRITISH COLUMBIA RAILWAY BILL—TITLE TO STREAMS.

Mr. J. D. TAYLOR:

1. Has the government leased to any person the right to take gravel from lot 379, on Coquitlam river, at New Westminster Junction, British Columbia? If so, to whom, for what period and on what terms?

2. Does the government claim title to the beds of non-tidal and non-navigable, except for canoes, streams in the railway belt of British Columbia?

Mr. OLIVER:

1. No.

2. The government is advised that so far as the beds and banks of rivers in the railway belt in the province of British Columbia are Crown property, they are Dominion lands, and may be administered by the Department of Interior.

POST OFFICE, NEW WESTMINSTER, B.C.

Mr. J. D. TAYLOR:

1. Is the post office at New Westminster about to be placed on the basis of a city office, with appointments to the staff directly from the government rather than from the postmaster?

2. If so, to whom should applications for employment be addressed, and what endorsement is required to secure consideration by the department?

Hon. RODOLPHE LEMIEUX:

1. and 2. No. The office is, however, being changed to a semi-staff basis by which the salaries of the clerks will be paid by the department direct. Applications for employment should be addressed to the Postmaster General. The endorsement required is qualification and ability to do the work of the office.

STANLEY BARRACKS.

Mr. WALLACE:

If the Baby farm is to be sold, is it the intention of the government to buy other property in or near the city of Toronto on which to build a new barracks in place of Stanley barracks?

Sir FREDERICK BORDEN. Yes.

SOUTH AFRICAN PATRIOTIC FUND.

Mr. WALLACE:

1. Has the government any control of the South African Patriotic Fund? If not, who has?

2. Have any complaints been made to the government that certain persons who are entitled to receive benefit from the fund, have not received any consideration?

3. Has the government any knowledge of how much was paid into this fund?

4. What persons have received benefit from this fund, and what amount in each case?

Sir FREDERICK BORDEN:

1. (a) No. (b) It is controlled by the Canadian Patriotic Fund Association.

2. No.

3. No.

4. The government has no information on this point.

NAVAL SERVICE OF CANADA.

Sir WILFRID LAURIER moved the second reading of Bill (No. 95) respecting the naval service of Canada. He said: When, three weeks ago, I had the honour of presenting this Bill to the House, I entertained the hope that by this time my hon. colleague, the Minister of Marine and Fisheries (Mr Brodeur), would be sufficiently restored to health to permit him to undertake the duty which now devolves upon me. To my deep regret, this hope has not been fulfilled. It is the misfortune of the House that it has to be deprived of the wealth of information, attention and care which had been accumulated by my hon. colleague in the preparation of this measure and for the exposition of the policy of which it is the expression, from its basic principle to the minutest detail. Perhaps the House will agree with me at the outset that it would not be amiss to cast a retrospective glance

upon the attitude which has been maintained up to the present by the two parties that now stand face to face on this question. In so far as the present government and the Liberal party are concerned, that question arose for the first time at the imperial conference of 1902. At the conference the subject of defence was very carefully discussed. The discussion revealed the fact—which indeed was not unnatural, which had often taken place before—that between the advisers of His Majesty the King in Great Britain and His Majesty the King in the dominions beyond the seas, there was a divergence of views. The Secretary of State for War requested—or I should say suggested—that the dominions beyond the seas should equip and maintain a body of troops for Imperial service, which, in case of war, would be turned over automatically to the war office. Some of the Dominions, through their representatives, to this agreed; others disagreed, among the latter being Australia and Canada. The Secretary for the Navy suggested—I don't say requested—that the dominions beyond the seas should contribute yearly to the maintenance and equipment of an imperial navy. Most of the dominions there represented to this agreed, but the ministers who represented Canada could not give their assent to this proposition. They gave expression to their views respectively before the conference, and embodied them in a state paper with which the House and the country have long been familiar. They recognized at once the obligation of Canada to relieve to a large extent in so far at all events as the means of Canada would allow—the burden which has hitherto been on the shoulders of the British tax-payer alone. They declared that as Canada increased in wealth and population it would go further in the matter of defence, and that in everything that we would undertake in that direction, whatever might be done would be done in co-operation with the imperial authorities, but always and ever under the control and responsibility of the Canadian authorities, in accordance with our right to self-government in this as in all other matters.

This was in 1902, nearly eight years ago, and for eight years this policy of the present government has been before the country. From this policy the present government has never deviated. This policy we affirmed again at the imperial conference of 1907. We affirmed it again last year in this House when the question came up for concrete and immediate action. This policy is embodied in the Bill now before this House, and by this policy the present government stands or falls. But fall we shall not. This policy is in the best traditions of the Liberal party. This policy is the latest link in the long chain of events which following the principles laid down by the Reformers of the old times, Baldwin and Lafontaine, step by step, stage by stage, have brought Canada to the position it now occupies, that is to say, the rank, dignity and status of a nation within the British empire. This policy is the full maturity of the rights asserted, the obligations assumed, by Canada, which inspired the imperial poet whom, after Canada had given a preference in her markets to the products of the mother country, he put in her mouth these proud words:

> Daughter am I in my mother's house,
> But mistress in my own;
> The gates are mine to open,
> As the gates are mine to close,
> And I set my house in order.

Sir, if we adopt to-day this policy, if we have put it in the form in which it is now before the country, it is because we lay it down that Canada is a nation, but a daughter nation of England. Such has been the strong and consistent course of the Liberal party from the time this policy was initiated.

And I may ask now, what has been the policy of the Conservative party? I think I am not offensive or unjust to the Conservative party when I say that upon this question their attitude has been what it is to-day—divided in counsel and divided in action. So far as this House is concerned, our policy more than once has received the assent, at least, the tacit assent, of the members of the Conservative party. It has been more than once reviewed or commented upon, but never challenged or dissented from. Outside of this House it has received the open commendation of the best and most experienced minds in the party. I am bound to say at the same time that it has been censured and criticised — severely censured and severely criticised—by those who within the party boast of their imperialism, who carry abroad upon their foreheads the imperial phylacteries, who boldly walk into the temple and there loudly thank the Lord that they are not like other British subjects, that they give tithes of everything they possess, and that in them alone is to be found the true incense of loyalty. Was it, Sir, because of the proddings of these very zealous and very officious men that my hon. friend from North Toronto (Mr. Foster) brought up this question of imperial defence last year? I know not? But on the first day the House met my hon. friend gave notice of a motion designed to bring the matter in concrete form before parliament and the people. I understood the motion of my hon. friend to be an endorsation of the policy which we had always pursued, and in so understanding it I do not think I did him an injustice. I

meant to pay him a compliment. At all events, this is the motion he offered:

That in the opinion of this House, in view of her great and varied resources, of her geographical position and national environments, and of that spirit of self-help and self-respect which alone befits a strong and growing people, Canada should no longer delay in assuming her proper share of the responsibilities and financial burden incident to the suitable protection of her exposed coast line and great sea ports.

I repeat that as I construed the language of this motion—unless my hon. friend is a disciple of Tallyrand, who said that language had been given to man to disguise his thoughts—this meant nothing but an endorsation of our policy. It was so interpreted on the other side of the House. If we are to believe the tardy disclosure that we heard the other day from my hon. friend from Jacques Cartier (Mr. Monk), who told us that this motion created some stir in the ranks of the party, and that he at once had taken the position that he could not support it. Whether it was for this or some other reason, the fact is that my hon. friend from North Toronto, whilst he had been hasty in putting this motion on the notice paper, was very slow to move it.

Mr. FOSTER. My hon. friend knows exactly the reason why. Will he state it?

Sir WILFRID LAURIER. I do not know; perhaps my hon. friend will tell me.

Mr. FOSTER. My right hon. friend knows quite well that the motion was postponed from time to time because of conference with my right hon. friend.

Sir WILFRID LAURIER. I am not aware that my hon. friend—

Mr. FOSTER. Then my right hon. friend had better refresh his memory before he makes the statement.

Sir WILFRID LAURIER. Pardon me—I have not finished my sentence. I am not sure that my hon. friend ever spoke to me about it, but if he did, it was simply to suit the convenience of the House, and not because there was on this side any opposition to his motion.

Mr. FOSTER. I did not say there was.

Sir WILFRID LAURIER. Neither did I imply anything derogatory of my hon. friend because he postponed moving it. But the fact is that he postponed it for two months; I do not know what the reason was. My hon. friend suggested to my hon. friend from Jacques Cartier that if they agreed the matter could be put over.

Mr. MONK. My right hon. friend's memory is evidently deceiving him in saying I opposed the motion. I stated the other day that I thought it was inopportune.

Sir WILFRID LAURIER. Yes, and my hon. friend is still of the same mind. My hon. friend from Jacques Cartier thought it inopportune, my hon. friend from North Toronto thought it opportune, many other members on that side of the House thought it opportune, and we on this side of the House all thought it opportune. Be this as it may, it is not worth while having any discussion on this point, why the motion was not moved at the first opportunity. The fact is that it was not moved for two months, until the 29th of March. At that time the atmosphere had become very much charged with electricity. A debate on the condition of the British navy had taken place in the Imperial House of Commons; attention had been directed to the armament going on in Germany, and the news had been flashed across the ocean that New Zealand had made the offer of a Dreadnought to the imperial government Then it was that for the first time we heard in this House the suggestion of an offer of a contribution to the imperial navy. That suggestion came from my hon. friend from North Toronto, but it came in a very mild and tentative manner. I will give to the House the very language my hon. friend used on that occasion. This is how he spoke:

To-day peril stands at the gateway. It is not for me to say how great it is, but I cannot brush it aside. To-day it impresses itself upon the greatest statesmen of the old country; to-day it appeals to Australia until public subscriptions are taken, and the government is being importuned to do even more than its settled policy to meet the emergency; to-day little New Zealand gives one Dreadnought and offers a second, and to-day Canada faces that position of peril and emergency. Let me say to my right hon. friend, that if after careful consideration he proposes to this parliament a means for meeting that emergency adequately, now and as it should be, whether it be by the gift of Dreadnoughts or the gift of money of this country, this side of the House will stand beside him, and stand for Canada in supporting that measure.

Some hon. MEMBERS. Hear, hear.

Sir WILFRID LAURIER. This was not very effective language coming from my hon. friend from North Toronto (Mr. Foster), it was not as incisive as his sentences generally are. I do not think he had yet found his sea legs. My hon. friend spoke rather tentatively, simply suggesting a contribution, and adding that if we proposed it he would agree. We did not think it was advisable to depart from the policy we had laid down. We said that we would maintain the position we had taken, and after some consideration the

House agreed by a unanimous resolution upon the line of our policy of 1902, and in order that there may be no misgivings or misunderstandings upon that, in view of the cheers from the other side a moment ago, I shall once again read this motion:

This House fully recognizes the duty of the people of Canada, as they increase in numbers and wealth, to assume in larger measure the responsibilities of national defence.

The House is of opinion that under the present constitutional relations between the mother country and the self-governing dominions, the payment of regular and periodical contributions to the imperial treasury for naval and military purposes would not, so far as Canada is concerned, be the most satisfactory solution of the question of defence.

The House will cordially approve of any necessary expenditure designed to promote the speedy organization of a Canadian naval service in co-operation with and in close relation to the imperial navy, along the lines suggested by the admiralty at the last imperial conference, and in full sympathy with the view that the naval supremacy of Britain is essential to the security of commerce, the safety of the empire and the peace of the world.

The House expresses its firm conviction that whenever the need arises the Canadian people will be found ready and willing to make any sacrifice that is required to give to the imperial authorities the most loyal and hearty co-operation in every movement for the maintenance of the integrity and honour of the empire.

When this resolution was moved, and accepted by a unanimous vote, we believed that it would be binding upon the other side of the House as it is binding upon this side, but in this we made a mistake. We supposed when this resolution had been solemnly adopted, gentlemen on the other side of the House who had given their assent would at least have the small merit of consistency, but in this we were deceived. It never entered our minds that men on the other side of the House would go back on the opinion they had solemnly recorded. In this again we made a mistake. We paid them too great a compliment. The session had hardly closed when the terms of this resolution were attacked and challenged by gentlemen who had voted for it, attacked in the press, attacked in conversation with reporters, attacked on the public platform. Thus the summer went on, everybody, almost, on the other side spoke upon this resolution, discussed it and controverted it. The leader spoke, his first lieutenant spoke, the rank and file spoke, and they all spoke together and all spoke differently, their fiddles were singularly out of tune.

This was the condition of things when this House met on the eleventh of November and we were the witnesses of a curious spectacle. The men who had been so loquacious during the recess suddenly became dumb, the men who had discussed and debated this resolution, the moment they passed that bar yonder, the moment they came into this House at the time and place appointed for debate, became as mute as oysters. With a demure face and without a smile they told us they could not debate or discuss this question until they knew what had taken place at the conference at London, until they had all the papers, although during the recess, without knowing what had taken place at the conference, without having the papers, their nimble tongues had been wagging, wagging, wagging, in all the tones of the gamut, and in resonant cacophony. This sudden prudence and caution after so much extravagance of language did not deceive anybody; it was very transparent, although a somewhat clumsy attempt to hide the difficulty which, it had been apparent to all observers, would meet them as soon as they came together. When they were talking among themselves, one here and one there, one in Alberta, the other in Winnipeg, one in Toronto and one in Quebec, they could all speak differently, each one trying to appeal to the passions and feelings of his immediate audience; but when they came here they had to try to speak to the country, and speaking to the country, they had to speak something at all events like unanimous language. There was the difficulty. Hence the silence, hence the demand for papers, and in the meantime they met and deliberated. They deliberated in the morning, they met in the evening and again deliberated and the result of their meetings and their deliberations, if we are to credit the reports in opposition newspapers, although they are not always the most reliable, was the appointment of a committee with the object of trying to frame a policy, trying to reconcile the irreconcilable, trying to find a platform or something on which the bold lion from East Grey and the gentle lamb from Jacques Cartier could roar and bleat in unison. The task was rather a difficult one and how far the committee succeeded we know by what took place within three weeks, when this Bill was introduced for the first time. Three members of the opposition then spoke and all three spoke differently. My hon. friend the leader of the opposition (Mr. R. L. Borden), if I understood his speech aright and I think I did, agreed to the principle of this Bill, but thought it did not go far enough. My hon. friend from Jacques Cartier (Mr. Monk)—there was no hesitation as to what he meant, he is opposed to this Bill and to everything of that kind. My hon. friend from Digby (Mr. Jameson) also spoke; I do not know that I exactly apprehend his meaning, but

I think he was not so very sure of his ground and he wanted to have a referendum.

Sir, the result of all this is plain: on the other side we have a House divided against itself. At one end we have the negative extremists represented by my hon. friend from Jacques Cartier. On the other end we have affirmative extremists, those who desire a navy, but an imperial navy to be maintained by contributions from the self-governing dominions, those who believe that if we have a navy it should pass automatically, in time of war, under the jurisdiction of the admiralty; those who believe one project of a navy is not sufficient, that we should also vote an emergency contribution.

Sir, all these forms of opinion are simply different forms of a respectable, though misguided, imperialism. And it is to that view I wish to address myself at first. If I may say so,—if I may be permitted to speak of myself personally—I do not pretend to be an imperialist. Neither do I pretend to be an anti-imperialist. I am a Canadian, first, last and all the time. I am a British subject, by birth, by tradition, by conviction—by the conviction that under British institutions my native land has found a measure of security and freedom which it could not have found under any other regime. I want to speak from that double standpoint, for our policy is an expression of that double opinion. Let me say at once to gentlemen who differ from me, to those who pretend to be imperialists, to those who pretend that the British empire must be the first consideration that, in my judgment, the policy which we advocate, the policy which I have the honour to place before the House at this moment, is in better keeping with the true spirit upon which the British empire was founded, upon which it exists, and upon only which it can continue to exist. There is a difference of opinion upon this, and it is to this difference of opinion that I desire to address myself at this moment. This is not the first time in history that men who have conceived a new idea and have felt very strongly upon it have made a sad failure when they have attempted to carry it into effect. Peter the Hermit preached the first crusade, and his voice aroused Europe. Under the influence of his impassioned words, men abandoned their avocations and took up arms for the deliverance of the tomb of the Saviour from Mohammedan desecration. But Peter the Hermit proved to be a most unfortunate leader. Thousands of men flocked to his banner, but the eloquent preacher was unable to direct their movements. Under his direction, the expedition of which he was in command moved on from disaster to disaster. And so it is with the shortsighted men who believe that their policy of centralization would unite the British empire. Mark the difference. Their policy is centralization; our policy is autonomy. And let the tale of the past tell the tale of the future. Sir, of all the phenomena of history, I do not know any that carries with it a greater lesson than the existence of the British empire, composed of young nations scattered all over the earth, with no force binding them, but attached to the motherland simply by their own devotion. If, in the days of the Emperor Augustus, when Rome had reached the summit of her power, when after generations of conflict that empire had at last reached a condition of peace, when her dominions extended all over the basin of the Mediterranean, but when thirty legions were necessary and were kept moving all the time from one end of the empire to another to keep in subjection rebellious races—if then some one had said to the strong Roman statesmen of that day: The time will come when the small island of Britain, now the most distant of Rome's possessions, will itself establish an empire which will extend to the confines of the earth and will be maintained, not by force but by a new principle discovered by her people, the principle that government must rest on the consent of the governed, these great Roman statesmen would have laughed at the idea; they would have said: That is Utopia; force and force alone, can build and maintain an empire. If, without going so far back, we go no further back in history than the first year of the reign of the late queen when Upper Canada annd Lower Canada were in the throes of rebellion, if some one had then said the day will come when these two provinces, now kept in subjection and obedience by force of arms, will reject force, will become obedient and devoted subjects, and will extend the Dominion of the Queen from ocean to ocean—the answer would have been that it was the maddest of all conceptions. Well, Sir, this maddest of all conceptions has become the reality of the present day. And now, Sir, I pause to ask: What is the principle, what is the inspiration, what is the one thing that quelled rebellion in Canada, that brought Canada to the position that she occupies to-day ?—what is the principle, the inspiration which has made Australia what it is, which has made New Zealand what it is, and which to-day, in South Africa, torn by war only ten years ago, is building up a nation under the British flag? What is it, but the principle of autonomy, the principle of self-government? Yes, it was when Lord Durham, speaking from Canada, then still in the throes of civil war, said that the only manner in which the colonies could be kept loyal and

devoted was to give them self-government—it was then that the principle was announced upon which the British empire is founded. My hon. friend the leader of the opposition (Mr. R. L. Borden) the other day, in his speech on the first reading of this Bill, said that the British empire is of recent date. He is right, it is of recent date ; the date was the day when the principle was adopted of self-government for the colonies. Consider, for a moment, what would be the position of Canada if we had continued to be governed, as we were in 1837, simply by irresponsible ministers in Downing street—irresponsible, I mean, to the people of this country? Should we have content, devotion, loyalty? No, we should have to-day what we had then—discontent, and dangerous dissatisfaction. Sir, the history of all countries which have had colonies is the same, with the exception of Britain in the nineteenth century. In every case there arose in the colonies a class of different interests from that of the mother country; the mother country would not yield; discontent crept in and led at last to estrangement. Lord Durham was the first statesman of all the ages to recognize this truth. And he proclaimed it boldly. And bolder yet was the remedy he suggested—give to the colonies the same rights and privileges and powers as are exercised by British men in their own islands, the power to govern themselves according to their own rules and notions The conclusion of Lord Durham was so strong that there was nobody to combat it. But it was so much at variance with the practice of all the ages that there was no one to apply it. When the constitution of 1841 was ostensibly established upon the report of Lord Durham, there was no acknowledgment of the principle of self-government, and the instructions given by Lord John Russell to Mr. Poulett Thomson, the first governor under the new system, was to govern, not according to the views of ministers responsible to the people but in the manner directed by himself alone. And this is the manner in which Poulett Thomson carried out his instructions. In a letter to a friend he said:

> I am not a bit afraid of the responsible government cry. I have already done much to put it down in its inadmissible sense; namely, the demand that the council shall be responsible to the assembly, and that the governor shall take their advice, and be bound by it. In fact, this demand has been made much more for the people than by them.

It was not until there was sent from England a man as broad in genius as Lord Durham himself—Lord Elgin—that, with the assistance of Baldwin and Lafontaine, we had responsible government in this country. And it was from that date that the British empire started upon its triumphant march across the ages. I again pause to ask: When these great men, Durham, Elgin, Lafontaine and Baldwin, laid down the principle of responsible government in this country, did they set a limit upon its potentiality ? No, they launched it out, untrammelled and unfettered, to inclose the earth in a bond of union and liberty. They did not tell the people that the principle could be trusted for a certain distance, but that it would have to be abandoned the moment they came to the ultimate result of its operation.

But now we are told that in matters of naval defence we are to abdicate the principle of responsible government; we are told that we can have responsible government in everything else, we can make our own laws, we can administer our own affairs, and even have control of our land forces, but that in matters of naval defence we should have no powers of our own. I need not say that this principle is one to which we on this side of the House cannot agree. We are told that the only way in which naval defence can be carried on is by contributions to the imperial navy. I have to submit that this idea of contribution seems to me repugnant to the genius of our British institutions; it smacks too much of tribute to be acceptable by British communities. The true conception of the British empire is the conception of new, growing, strong and wealthy nations, each one developing itself on the line of its own needs and conditions, but all joining in the case of common danger, and from all points of the earth, rushing upon the common enemy. But, Sir, the point is no longer arguable. The point has been settled at the last conference.

Many and many a time upon the floor of this House, in the press of this country, we have been assailed, and our action has been compared with the action of Australia, who, in 1902, agreed to give a contribution for the maintenance of the imperial navy. But, Sir, let us look and see what has recently taken place in Australia. Australia has abandoned the position it took in 1902, and it has come to the position taken by Canada. Australia to-day, like Canada, is building a fleet of her own. And, Sir, there is something still more significant; it is not Australia which is paying a contribution to Great Britain for the purposes of the Australian navy, it is Great Britain which is paying a contribution to Australia for that purpose. Need I say more? All the best men, even in the ranks of the Conservative party, who have given any attention to this question have come to the way of

thinking of the present government. That veteran statesman, Sir Charles Tupper, once the pride and strength of the Conservative party, has given unqualified adhesion to our policy. Need I say more? If there is an imperialist of the imperialists now living, it is Lord Milner. Lord Milner was here last fall, and you will pardon me, Sir, if I recall to the attention of hon. gentlemen opposite what were the opinions of Lord Milner upon this question. In Vancouver he spoke as follows:

I have said that Canada is not unique in being a great country. But she is unique in being one of a group of countries, which has a strong foothold in every corner of the world. That group only needs to hold together and to be properly organized, in order to command, with a comparatively small cost to its individual members, all the credit and all the respect, and, therefore, all the power and all the security which credit and respect alone can give a nation among the nations of the world. No doubt Canada, if she is to take her place in such a union, will have to develop, as I believe she will desire to develop, her own fighting strength. But not to a greater extent than would be necessary in any case for the adequate development of Canadian self-respect, or beneficial to the manhood of her people, and certainly nothing like to the same extent as would be absolutely inevitable if she desired to stand alone.

Again at Toronto he made use of language even more significant:

But no doubt the general position would be much stronger if all the self-governing states were to adopt the course which Australia seems disposed to adopt of creating a national militia, and laying the foundations of a fleet. And I for one should welcome such a policy, wherever adopted, not as affording relief to the United Kingdom, but as adding to the strength and dignity of the empire as a whole, its influence in peace as well as to its security in case of war.

It is not a question of shifting burdens, but of developing fresh centres of strength. For this reason I have never been a great advocate of contributions from the self-governing states to the army and navy of the United Kingdom, though as evidences of a sense of the solidarity of the empire such contributions are welcome, and valuable, pending the substitution of something better. But I am sure that the form which imperial co-operation in this field will ultimately take, and ought to take, the form at once most consistent with the dignity of the individual states and most conducive to their collective strength and organic union, is the development of their several defensive resources, in material and in manhood. I know that it may be argued—it has been argued—that individual strength would make for separation. But I have no sympathy whatever with that point of view.

Later he goes on:

The profession and technical, not to say the strategic, arguments for a single big navy of the empire are enormously strong, so strong that they might conceivably overcome, as they have to some extent overcome in the past, the political objection. But without wishing to be dogmatic on a subject which requires a great deal more careful study on all hands than it has yet received, I must say that, speaking as an imperialist, I feel the political objection very strongly.

If the self-governing states were going, under our present constitutional arrangements, merely to contribute to a central navy, whether in money or better still, in men and ships. I do not think they would take that interest and pride in the matter which it is essential they should take. They would continue, as now, absorbed in their local affairs, and, even if they felt their obligation to the empire as a whole, they would rest content to have discharged it by such a contribution. The contribution, under these circumstances, would probably not be large, but that is not really the weakest point in such a system. Its fatal weakness is that the participation of the self-governing states in imperial affairs would begin and end with the contribution.

Now, Sir, from all this I think I can safely conclude that the true policy which should be followed, even from the primary point of view of the British empire, is not a contribution, but the development of our naval strength, as we contemplate to do under this Bill.

This point being settled, I now come to another which has been a source of strong objection made against us, that is to say, who should have control of our navy. Upon this point I stated the other day that the parliament of Canada would have control of the navy, and would declare when it should or should not go into war. Upon this point we have been assailed right and left, assailed in Quebec and assailed in Ontario. We have been assailed in Quebec because there it is said that under no circumstances should Canada ever take part in any war of England, assailed in Ontario, because there it is said that under all circumstances Canada should take part in all the wars of England. The position which we take is that it is for the parliament of Canada, which created this navy, to say when and where it shall go to war. The other day when introducing this measure, I stated that when England is at war we are at war. In saying that I have shocked the minds and the souls of many of our friends in Quebec.

Some men tore their hair and their garments as if I had uttered blasphemy, as if I had uttered some new and fatal proposition which never had been heard before. The truth is that in making the statement that when England is at war we are at war, I was simply stating a principle of international law. It is a principle of international law that when a nation is at war all her possessions are liable to attack. If England is at war she can be attacked in Canada, in Australia,

in New Zealand, in Africa, in the West Indies, in India, and, in short, anywhere that the British flag floats. If France is at war she can be attacked not only in France but in her possessions in Cochin-China. If Germany is at war she can be attacked not only in Germany but also wherever the German flag floats. It does not follow, however, that because England is at war we should necessarily take part in the war ; I will come to that presently. But, as that proposition which I laid down has been challenged in some parts of my native province, may I be permitted to recall to the memory of the members of this House an incident which is hardly ten years old? In 1898, the United States declared war upon Spain. The object of the war was to free Cuba from Spanish domination. The Cubans had been insurgent for many years. The congress of the United States decided to come to their assistance and they sent an army to Cuba in order to help the Cuban insurgents to free Cuba from Spanish domination and they did free Cuba from Spanish domination. But, at the same time, they sent a squadron to the Philippine Islands in the Pacific, a Spanish possession, and took possession of those islands. The same thing can be done again. If England is at war we are at war and liable to attack. I do not say that we shall always be attacked, neither do I say that we would take part in all the wars of England. That is a matter that must be determined by circumstances, upon which the Canadian parliament will have to pronounce and will have to decide in its own best judgment.

Some hon. MEMBERS. Oh, oh.

Some hon. MEMBERS. Hear, hear.

Sir WILFRID LAURIER. Can it be that there are men in this House so lost to the sense of responsible government that they will deny such a proposition? Let me illustrate my point by history. I appeal to history and I trust that I will be able to satisfy every hon. gentleman in this House. During the nineteenth century England has been more than once threatened with war. In 1861 she was nearly at war with the United States—luckily Providence averted it—when the United States ship 'San Jacinto' took from a British mail steamer the two delegates, Slidell and Mason, who had been sent to Europe as the agents of the southern confederacy. It was an act of war on the part of the United States, so interpreted and rightly interpreted, but luckily the United States gave way and war was averted, If war had been declared immediately we would have been drawn into it and it would have been our duty at once not only to defend our territory but to help England in that struggle. There was another instance. England was at war in the Crimea with Russia. For myself I do not hesitate to say that if that war were to be undertaken by England under similar circumstances, I would hesitate very much before I would give my consent that we should take part in any such war if conditions were the same as they were then. But, they are not the same now as they were then because at the present time we have British Columbia to look after and if war were declared between Great Britain and Russia our first duty would be to look after British Columbia which might be attacked by Russia from the Pacific ocean.

I am well aware that for expressing the opinion which I did express the other day and which I repeat on the floor of this House I have shocked many and many a good Conservative mind. I was accused of treason. Charges of treason are familiar to me. I have heard them in my own province time and again, and I have heard them in the province of Ontario. Charges of treason are very easily manufactured. The other day I was speaking in Toronto. I was saying that we were British subjects, subjects of His Majesty the King, and in speaking of the sovereignty of the King I called in the use of the word suzerain and in doing this I find that I shocked many a tender soul. I shocked the tender soul of the hon. member for North Toronto (Mr. Foster) for one. When reviewing my speech a few days afterwards, he spoke as follows:

> Some rather foolish, even mischievous talk, has been indulged along these lines. It has been asserted that we have wrested our fiscal autonomy, our political autonomy, even our naval autonomy, from Britain, and the latest addition is practically our autonomy in our international relations. After this, all we have to do in bowing our knee and saluting King Edward is to call him, not sovereign, but suzerain. It is a mistake which creates false impressions.
>
> If these utterances are merely for the sake of rhetorical adornment they are but foolish. If, however, they are studied and serious, they are revolutionary. We cannot have absolute autonomy in any of these and remain in the empire.

Well, is my hon. friend in this, merely playing on syllables? If I had said 'sovereign' that was all perfectly loyal, but I said 'suzerain' and that smacks of disloyalty! Sir, I am sorry to say to my hon. friend that I rather rubbed my eyes when I saw his criticism. I do not pretend to be a master of the English language, but I think I know something of it, and I have always understood that if there is any difference between 'sovereignty' and 'suzerainty' it is merely a shadow and that it is used by men of greatest eminence indif-

ferently as applying to the same condition of things. I am sorry that I have to ask my hon. friend to brush up his classics. Would he be satisfied with the authority of Sir Walter Scott? Would Sir Walter Scott satisfy his literary aestheticism, or would he be satisfied that Sir Walter was sufficient of a Tory not to harrow his imperial soul? Let me ask my hon. friend, as I said a moment ago, to brush up his classics. Let me ask him to read again 'Quentin Durward' and he will find on the same page Sir Walter Scott using the expression 'sovereign' and 'suzerain' as applying to the same condition of things and to the same man. In the thirty-fifth chapter of 'Quentin Durward' my hon. friend will find that Lady Isabelle, addressing the Duke of Burgundy, uses this language:

'My lord, duke and sovereign,' said Lady Isabelle, summoning up all her courage, 'I observe your Grace's commands, and submit to them.' . . . 'My submission,' she said, 'only respected those lands and estates which your Grace's ancestors gave to mine, and which I resign to the house of Burgundy, if my sovereign thinks my disobedience in this matter renders me unworthy to hold them.'

Again:

'My Lord, 'she replied, still undismayed, 'I am before my Suzerain, and, I trust, a just one.'

I think that after this I can be freed from the hypercritical fastidiousness of my hon. friend both in point of philology and imperialism.

Mr. FOSTER. Will you let me see the 'Durward' extract?

Sir WILFRID LAURIER. Yes. The great mistake which is made by those imperialists of the school of my hon. friend is to confound the condition which exists in Great Britain with that which prevails in the colonies. England belongs to the circle of nations which is known as the European concert, it is one of the four or five nations of Europe that are always watching one another. There are no public works to carry on there, and she can devote herself and her resources to armaments. But, the colonies are not in that condition. Our chief consideration is public works, to develop the resources of our country, and therefore I say that this is a mistake which should not be made by hon. gentlemen on the other side of the House? They are not the first ones to make that mistake. England made the same mistake in the eighteenth century when she tried to force the American colonies to contribute to her armament by taxation. They protested, but their protests were not heeded, They protested again and at last, though they were a loyal population, they were driven to distraction and they severed the tie that connected them with the mother country. Benjamin Franklin was one of the leaders of the movement in the colonies at that day, yet it is on record that he was a most devoted loyalist. He went to England to try and prevent the mischievous course which was being followed by the British government, but his visit was to no purpose. He was heard before the bar of the House of Commons. There the question was put to him whether or not, in case of war the colonies would contribute to assisting England and this is what he answered:

I do think they would so far as their circumstances would permit. They consider themselves as part of the British empire, and as having one common interest with it. They may be looked on in here (in London) as foreigners, but they do not consider themselves as such. They are zealous for the honour and prosperity of this nation; and while they are well used, will always be ready to support it, as far as their little power goes.

If I quote this language, it is not because there is complete analogy between the conditions which exist to-day in the self-governing colonies of Great Britain and that which existed in her American colonies of that day. There is no danger to-day that England would impose taxation on her colonies without representation, or that her colonies would go into rebellion, but I read this because there are men here, who, like the Bourbons, have forgotten nothing and learned nothing, and who do not appreciate the present conditions existing between England and her colonies.

There is another point to which I should give some attention. Great objection has been taken in the province of Quebec because there is in this Bill a provision, that, in an emergency the Governor in Council may call out the fleet and put it at the disposal of the War Office. Section 18 is in these words:

In case of an emergency the Governor General in Council may place at the disposal of His Majesty, for general service in the Royal navy, the naval service or any part thereof, any ships or vessels of the naval service, and the officers and seamen serving in such ships or vessels, or any officers or seamen belonging to the naval service.

Section 19 is in these words:

Whenever the Governor in Council places the naval service or any part thereof on active service, as provided in the preceding section, if parliament is then separated by such adjournment or prorogation as will not expire within ten days, a proclamation shall issue for a meeting of parliament within fifteen days, and parliament shall accordingly meet and sit upon the day appointed by such proclamation, and shall continue to sit in like manner as if it had stood adjourned or prorogued to the same day.

Great objection has been taken in my province because the power is there given the Governor in Council to call out the fleet before summoning parliament. It is said that this is a derogation from the rights of parliament and that parliament should exercise its control first. Well, Mr. Speaker, the answer is obvious. The conditions may be such that the government may be forced to take immediate action. Parliament will be called immediately to approve or disapprove, but the conditions may be such as to compel us, without the loss of a minute, to avail ourselves of all our resources in order to come to the rescue of a part of the country which might be threatened. British Columbia, for instance, is exposed to attack from the Orient. I do not think there is any danger at present, because British diplomacy has secured us an alliance with Japan. Nor do I think there is any reason to fear an attack from Russia, because Russia has been crippled by her war with Japan. But all these things may change. Japan may cease to be an ally, Russia may recover her strength; and if we have to wait until parliament meets before we can act in conjunction with the British forces, the results may be disastrous. Circumstances may be such as to force us to do what Japan did—strike the enemy before the enemy strikes us.

I now come to the composition of our fleet. Here again we have not had the good luck to satisfy our friends opposite. It is said in the press, and no doubt will be repeated here, that we should have followed the advice of the admiralty and put a fleet unit on the Pacific ocean. Is there a man who will blame us because we said to the admiralty that we could not agree to put all our forces on the Pacific ocean, that we have also a large sea-board on the Atlantic and must divide our forces between the two. But we are asked why did you consent to such an insignificant navy as the one you propose. Well, we thought it prudent, for reasons I shall explain in a moment, to commence moderately. Two plans were proposed to us. One was to have a fleet of seven ships and another a fleet of eleven ships. The seven ships were to be composed of three Bristols and four destroyers; the eleven were to be composed of four Bristols, one Boadicoa and six destroyers. For the reason that we have to protect our coasts on the Pacific and the Atlantic and consequently to divide our fleet, we thought it better to have eleven rather than seven ships. In this we acted on the advice of the admiralty. Still we are blamed because we are not to have an armoured cruiser of the 'Dreadnought' type. Perhaps I can quote an authority on this point which will satisfy hon. gentlemen opposite. Those staunch imperialists will not be satisfied unless we have a 'Dreadnought' in our navy. While that view is respectable, it does not compare with the opinion of a competent man qualified to speak on the question. I am sure every one will agree that I could not quote a better authority than the old tar, Lord Charles Beresford—as good a sea-man as there is in the British navy. In an interview published in the 'Times' of last summer, Lord Charles Beresford said:

> His view of the situation was that our great Dominions could best help us, not by spending two millions on battleships to serve in British waters, but by making proposals for defending themselves.
>
> But he questioned the wisdom of their putting money into torpedo vessels and submarines and sending a large amount over here to build a battleship, the life of which was only twenty years, with luck, and might be only twenty months. If they invested two millions in home defence, and in having cruisers which could go out and protect their trade routes, he thought it would be a better investment than in helping to defend the shores of this country.

That, Sir, is what we are doing under this Bill. In another interview, also in the 'Times,' Sir Charles Beresford spoke as follows:

> For the colonies, cruisers are much better, as the idea of protecting Britain and weakening the defence of the colonies is all wrong.

These were the reasons which actuated us, and I think they are of such a character as will command the approval of this House.

With regard to our scheme, as I stated on the first reading, it is our intention to build eleven ships—four Bristols, one Boadicea and six destroyers. I have given the character of these ships. It is our intention to have them, if possible, built in this country. That will cost a little more and we are prepared to pay a little more provided the difference is not extravagant. We intend to call for tenders as soon as this Bill becomes law, in order to see whether we can have this plant put in this country with the view of building these ships. I have been asked also how long it would take. I must say that I am not able to-day to give these details; I shall be better informed when we come to the committee stage. My colleague, the Minister of Marine and Fisheries, has been unwell, and I have not been permitted, to have as many interviews with him as I could wish; but giving the matter the best attention that I can, I may say that it would take probably one year to complete a plant for building the ships in this country, and then probably four years to complete these eleven ships. As I said at the first reading of the Bill, the cost of these ships would be a little over $11,000,000, and the total cost of mainten-

ance, including upkeep of hulls, machinery, sea stores, fuel, interest and depreciation is estimated at $4,253,000.

Mr. FOSTER. I did not understand my right hon. friend clearly. Do I understand him to say that it will take one year to construct a plant which will be sufficient to build this fleet, and then four years to complete the vessels?

Sir WILFRID LAURIER. That I understand.

Mr. FOSTER. The Prime Minister gives that to the House, of course, as sufficiently certain, to base the judgment of the House upon.

Sir WILFRID LAURIER. I would not say that.

Mr. FOSTER. That is what we really want.

Sir WILFRID LAURIER. It would be difficult to give more than an approximate idea upon that until we know exactly the proposition made to us. Then we can speak accurately. I give these figures as the result of the best inquiry I can make, no more.

Mr. FOSTER. Who is the authority upon whom my right hon. friend depends?

Sir WILFRID LAURIER. I cannot give that to my hon. friend to-day.

Mr. FOSTER. We might get into the same difficulty we did in regard to the Grand Trunk Pacific. We want to avoid that, if possible.

Sir WILFRID LAURIER. That is no doubt a laudable object; but I am sure that my hon. friend himself would not regret the construction of the Grand Trunk Pacific even if it cost more than it has, and I think perhaps it will be the same with the navy.

Mr. FOSTER. I would not have my right hon. friend take silence as consent. I am altogether opposed to that view. Can he tell what the plant which would be suitable to construct these vessels would probably cost?

Sir WILFRID LAURIER. I am not able to give my hon. friend more information than I am giving to-day, I am discussing this matter from a general point of view. When we come to the committee stage, I will endeavour to satisfy his curiosity as to these details.

Mr. W. F. MACLEAN. May I ask the right hon. gentleman a question? The interpretation clause of the Bill says that 'emergency means war, invasion or insurrection, real or apprehended.' If it requires one year to construct the plant and four years to construct the navy, what would he do if such an emergency arose in the meantime?

Sir WILFRID LAURIER. I think, Mr. Speaker, we are getting pretty far from the question we have in hand just now.

Mr. J. A. CURRIE. Might I ask the right hon. gentleman a question? It is simply this: does that plant include machinery for the manufacture of guns and machinery? —because seventy per cent of the cost of these ships consists of guns and machinery.

Sir WILFRID LAURIER. I think ships and guns are different things. But I am only at present giving a general outline of the policy; I do not think the details are a part of the present discussion on the second reading of the Bill; they can all be asked for in Committee of the House. I may say that it is the intention of the government to establish a new department for this service—not under a different minister, but to have a deputy minister charged with the duty of looking after this naval expenditure and this naval construction. On this point I will give further explanations when we are in committee.

There is one other observation I should make. My hon. friend the leader of the opposition, in the course of his observations the other day, if I understood him aright, whilst approving of the principle of this measure, thought it did not go far enough, but that we should also make an emergency contribution on account of the apprehended danger to Great Britain from Germany. I do not know whether I have apprehended rightly the position taken by my hon. friend on this point. I think I did. At all events, if he did not take this position, it has been taken very generally by the press of the country speaking for the other side of the House. For my part, I do not see any cause of danger to Great Britain at the present time. Let me say further that if Great Britain were engaged in such a contest, a wave of enthusiasm to assist her would sweep over this country and all other British countries. It is true, Germany is creating a navy, but I see no reason whatever for supposing that Germany is creating a navy for the purpose of attack or that England is increasing her navy for the purpose of attacking Germany. The fact is that all the nations of Europe at the present time are arming: England is arming, Germany is arming, France is arming, Austria is arming; but I do not believe any of these nations is arming with any intention of attacking its neighbour, but all are arming simply because they are afraid that they will be attacked by one of their neighbours. I was impressed by one statement of my hon. friend the leader of the opposition. though I do not share in the conclusions which he implied from it. He said that if war came between England and

Germany, it would come within the next three or four years. I have not been able to get any satisfactory answer to this query: what is the reason for supposing that war from Germany is to come within the next three or four years? Germany commenced to build a fleet in 1900; but, as my hon. friend rightly said, no European nation, commencing with nothing, as Germany has done, can create a fleet inside of fifteen or twenty years. If that be so, it is not to be expected that Germany will be in a position to attack England within the next three or four years. What will be the position of things in 1912? The figures of comparison between the German and British navies will be as follows: The total tonnage of displacement of the British navy will be 20,000,000 tons, and that of the Germany navy 890,000 tons, a difference of 1,100,000 tons. Under such circumstances danger is not to be apprehended within three or four years. Moreover, I call attention to this fact. No one knows exactly what is in the minds of the German government, but everybody knows that between the people of England and the people of Germany there is no cause of war. They have always been fast friends so far back as contemporary history goes. In the Seven Years' war England and Prussia were fast allies; in the Napoleonic wars Germany and England were fast allies. And there is another feature; democracy is coming to the front in all the countries of the world, and all the democracy of the world is opposed to war, because it is well known that war falls upon the masses of the people. War may come, I do not say it will not come, but I was impressed by a statement made the other day by my hon. friend opposite. He stated that England had subsidized the nations of Europe time and again to enable them to defend their liberty or their independence, or their autonomy against foreign aggression. England subsidized Prussia under Frederick the Great, when Prussia was engaged against France and Austria in the Seven Years' war. England subsidized all the nations of Europe during the Napoleonic war when all the nations of Europe were defending their autonomy, their independence, against the Colossus. She was able to do so, why? Because, of all the nations of Europe, England was the nation which had spent least upon armaments. She had never spent any of her resources as the other nations did, purely upon her armies. she had extended her trade and her commerce, she had developed her resources, and in time of war she was able to assist other nations with money, which, as we know, is the nerve and sinew of war. Napoleon, in a fit of anger, called England a nation of shop-keepers. No higher compliment was ever paid to England than this, if it were meant as an insult, because it was these same shopkeepers who grappled with the Colossus and were able to bring him down and make him bite the dust. For Canada, for my country, I would desire no better title than also to be called a nation of shop-keepers—and to be able to supply the sinews of war.

Sir, up to this moment I have endeavoured to meet the arguments of those who in this controversy say that our policy is wanting in the duty which we, as part of the British empire, owe to England. But, Sir, there are also on the other side of the House those who arraign our policy because, as they say, we sacrifice by it the interests of our native land to the interests of the empire. There are the two extremes, they are there, sitting together, side by side, cheek by jowl, blowing hot and cold. I have endeavoured up to the present time to deal with those who blow hot; let me try a word now with those who blow cold. Need I say that this applies chiefly to the hon. member for Jacques Cartier and to those who think with him upon this question. The policy which they have taken in the province of Quebec is that our attitude at the present time is uncalled for and unnecessary, that it is a surprise upon the country, that we never had a mandate to carry it on. Sir, is it possible that such an argument is heard in this House? Have these men been asleep for eight years? Are they Rip Van Winkles? Must I call their attention to the policy we laid down, which has been communicated to this House and to the people and which for eight years has been before the people of this country? At the conference of 1902 we laid this paper before the conference:

> At present Canadian expenditures for defence services are confined to the military side. The Canadian government are prepared to consider the naval side of defence as well.
>
> On the sea coasts of Canada there is a large number of men admirably qualified to form a naval reserve, and it is hoped that at an early day a system may be devised which will lead to the training of those men, and to the making of their services available for defence in time of need.
>
> In conclusion the ministers repeat that while the Canadian government are obliged to dissent from the measures proposed, they fully appreciate the obligation of the Dominion to make expenditures for the purpose of defence in proportion to the increasing population and wealth of the country. They are willing that those expenditures shall be so directed as to relieve the tax-payer of the mother country from some of the burdens which he now bears, and they have the strongest desire to carry out their defence schemes in co-operation with the imperial authorities, and under the advice of experienced imperial officers, so far as is consistent with the principle of local self-government which has proved so great a factor in the promotion of imperial unity.

This paper has been before Canada for the last eight years, and we are told in the province of Quebec that this policy of ours is a new departure. Canada has progressed since 1902. We stated in 1902 that, as Canada advanced in wealth and population, we would advance in our defences. The population of Canada in 1902 was 5,400,000 souls; the population of Canada in 1910 is at least 7,400,000 souls. The revenue of Canada in 1902 was $58,000,000; the revenue of Canada in 1910 is at least $100,000,000. We, therefore, think that the time has come when, as was stated in 1902, we should take a step forward, and this is what we are doing. Upon this men can differ, although in my opinion they should not differ; but to tell us that this is something unheard of, a new policy, is simply trifling with common sense. But, Sir, that is not all. They took another position, that the naval service is absolutely uncalled for and unnecessary. Why do we ask parliament to vote for this naval service? It is simply because it is a necessity of our condition and the status we have reached as a nation. Do these gentlemen forget that, as I stated a moment ago, the revenue of Canada is to-day $100,000,000, and the population over 7,000,000? Do they forget that our country extends from one ocean to the other, and from the American boundary to the Arctic ocean, not on the map only but in actual and ever-increasing settlements? Do they forget that there are growing up on the Pacific coast, cities fast approaching in strength and wealth, eastern cities, that Vancouver to-day has a population of 100,000, that Victoria has a population of 40,000? Do they forget that Prince Rupert is also fast advancing to the front? Do they forget that we are going to build a railway from the interior to Hudson bay? Do they forget that we have gold mines under the Arctic circle? Do they forget that Canada is expanding like a young giant, simply from the pressure of the blood in its young veins? Are we to be told under such circumstances that we do not require a naval service? Why, Sir, you might just as well tell the people of Montreal, with their half million population, that they do not need any police protection.

But that is not all, there is something coming yet, and the position is taken by gentlemen on the other side of the House, speaking in the province of Quebec, that we are not to risk one man or one dollar for the maintenance, the preservation of British supremacy on the high seas. We took the position last year that we should endeavour and we would endeavour to maintain British supremacy on the high seas. We are told in the province of Quebec that we are not to risk one dollar or one man in order to carry out this object. Sir, I have only to say this, that this service will not be compulsory. No one on the other side of the House, no one in any part of the country will be bound to serve in this navy of ours. It will be the free will of any body who wishes to risk his life for his King—it is his privilege, and who will deny it to him? Those who object will not have to lift a finger if that fleet is called out. Their part will be simply to enjoy the security, the ease, the comfort, gained for them by the sacrifice of other and better men. We are told that we should not risk one dollar for such a purpose. Sir, if it be the will and wish of the parliament of this country that this navy of ours should engage in war, whose liberty will be affected by it, whose right jeopardized, whose privilege interfered with? This is a constitutional country and the majority have the right to speak and to dispose, and it is the part of the minority to agree and to accept, unless, of course, rights, privileges and liberties are interfered with; but there is no question in this policy that any man's liberty will be interfered with or his rights endangered.

There will be Canadians of French descent in that fleet. And if, which God forbid, this fleet should ever engage in war, my hope is—nay my certainty is—that these men will fight for the King of England, as their ancestors fought against the King of England when under the gallant Montcalm they repelled attack after attack, when, in the summer of 1759, they kept at bay for three long months on the rock of Quebec the flower of the British army and the flower of the British navy under the command of the young hero, Wolfe. Later, on this same rock of Quebec, they fought for the King of England against American invasion. And, still later, on the banks of the Chateauguay river, they fought under that true soldier, Salaberry, to keep the flag of England floating over their homes. All these many events have had their part in making my country what it is. And now, when I review the long conflicts between the French and the English, I follow the events without any sense of shame or humiliation. For history attests that my ancestors fought with all the prowess of their race, a prowess equal to that of their opponents; and, if they lost, they lost because England was at that time under the leadership of one of the ablest men of that generation, the first William Pitt, whereas France was under the influence of the King's mistress. My ancestors lost on that occasion, but it simply transferred their allegiance from one sovereign to another. They lost in the final the battle, but they did not lose anything of their independence, of their liberty, of their rights and privileges; and to-day the sun in his daily career

does not shed its light upon any people on the face of the earth enjoying more liberty than my fellow countrymen of French extraction. And my last words to the doubters, to the scoffers, is that freedom is worth fighting for and worth dying for.

But, Sir, these men will not be reached by any noble sentiment; perhaps we can reach them by appealing to their selfish interests; perhaps they will be found sensitive in their pockets if they are not sensitive otherwise. What would be the condition of Canada to-day, and of the province of Quebec in particular, if England were to lose the supremacy of the seas? Canada to-day is a prosperous country. Quebec is a very prosperous province; but is not that prosperity due to our trade with England? Let the market of Great Britain be lost—and it would be lost if the British supremacy on the sea were lost—and the prosperity of Canada and the prosperity of Quebec would be affected for years, if not for ever.

Sir, in the settlement of political problems it is very seldom that a solution can be reached on pure abstract principles. When a conclusion is arrrived at, it is reached by taking into consideration several points of view and a common ground has to be found upon which the different schools of thought, the different prejudices and passions, and the different shades of public opinion can be united. That is true everywhere, it is truer in Canada perhaps, than in any other portion of the earth. I stated a moment ago that it was the report of Lord Durham which had been the foundation of the system of local self-government. It may be considered a singular fact that the report of Lord Durham was received by the French Canadians of that day with pained surprise. The reason is known to those who have studied the history of that period. Friend of liberty as he was, broad as he was in his conceptions, farvisioned as events showed him to have been, Lord Durham himself did not appreciate the whole effect of liberal institutions. Coming to Canada at a time when the very atmosphere was reeking with rebellion, he formed a hasty judgment upon the French population of that day, which he expressed in vehement and somewhat haughty language. He thought they could not be reconciled to British rule, and stated in his report that the conditions were such that the two provinces should be united, so that French Canada should be ruled by the stern and relentless hand of an English-speaking majority. It is not to be wondered at that when the report was made known in Canada it not only caused, as I have said, pained surprise, but produced a feeling of injustice and wrong. Sir, I repeat that Lord Durham, friend of liberty as he was, did not realize the full force of free institutions, did not perceive, as other men perceived at that time—men who, on this subject had a better conception of things than he had—that there are principles superior to race feeling, that there are principles that can unite men or all origins in a common aspiration for the welfare of their common country. Such a man was Louis Hippolyte Lafontaine; such a man was Robert Baldwin. When the provinces were united, Lafontaine, speaking of the Act of union, characterized it:

> As unjust and despotic in this that it was imposed on us without our consent; in this that it deprives lower Canada of its legitimate number of representatives; in this that it deprives us of the use of our language in the proceedings of the legislature against the justice of treaties and the pledged word of the Governor General; in this that it forces us to pay against our consent, a debt which one had not contracted; in this that it allows the executive power to take illegal hold, under the name of civil list, of an enormous portion of the revenues of the country.

This was a severe arraignment, and unfortunately it was only too true, but what was the conclusion arrived at by Lafontaine? Did he say that the French Canadians should not accept the Act of union? No. Men there were at that time who immediately started an agitation for the repeal of the union, and those men were joined some years afterwards, when he came back from exile, by Papineau, a strong man, an eloquent man, a man of intense nature, and whom the very intensity of his nature always carried beyond the point into impracticable conclusions. Lafontaine was a different man, he was a broad man, he understood the situation. The Act of union was not satisfactory to his fellow-countrymen, he thought it was an injustice, but he accepted it, because principles there were by which every injustice could be rectified. It is upon those principles, Mr. Speaker, that we rely. In the address which I have just read, addressed to the electors of Terrebonne, he continued as follows:

> The reformers in the two provinces are an immense majority. . . . Our cause is the same. The interest of the reformers in the two provinces is to meet in the legislative ground, in a spirit of peace, of union, of unity, of fraternity. Unity of action is more than ever necessary. I have no doubt that the reformers of Upper Canada, feel, as we do, the need of it, and that in the first session of the legislature, they will give us unequivocal proof of it, which, I hope, will be the pledge of a confidence both reciprocal and durable.

Sir, in these noble sentiments he found an auxiliary in that other great and true Canadian and British subject, Robert Bald-

win. The confidence which he had looked for, he found; it turned out to be as he expected. It was not only reciprocal and durable. Above all it was fruitful. That policy obtained for the French-Canadians the restoration of the rights of which they had been deprived by the act of unions; it removed the dissensions, which up to that time, had rent the land; it introduced amity and concord among the different races and branches of the Canadian family; it established a permanent and ever-growing prosperity; it increased loyalty to the Crown and brought it to its highest pitch of enthusiasm and devotion; it brought up Canada, step by step, stage by stage, to the high position which it occupies at this moment; and as I said at the beginning, so I say in conclusion, this is the last and crowning effort of the policy which was then happily inaugurated. Sir, we must advance, we cannot remain stationary. We must advance. To remain stationary in this age is to retrograde; we must advance. And again on this occasion, as in the days of Lafontaine and Baldwin, we appeal to moderate men in all parts of the community. We appeal as they did appeal, in a spirit of amity, of union, of fraternity; we appeal, as they appealed, in the highest conception of the duty which we owe to our country and to the mother country. It is the tradition of these great men, which is our supreme inspiration to-day in turning this page of the history of Canada.

Mr. R. L. BORDEN. I join most sincerely in the regret which has been expressed by the Prime Minister at the continued illness of the hon. the Minister of Marine and Fisheries, which prevents him from addressing the House upon the second reading of this Bill. However, my right hon. friend the Prime Minister has taken up that task. He has addressed to the House a very long speech, more than three-fourths of which had absolutely nothing to do with the subject which is now occupying the attention of the House and of the country. The right hon. gentleman seems to think, for some reason, that this is the year 1837. This is not the year 1837, and we are not engaged to-day in a discussion as to whether this country shall have autonomous rights and privileges. That question was settled 75 years ago. It is significant that when my right hon. friend finds himself in circumstances of peculiar difficulty with his own party, he always goes back to the days of 1837, and quotes to us, not only from the speeches of Lord Durham, but from the eloquent orations of Mr. Lafontaine and Mr. Baldwin. It is an old piece of tactics on the part of my right hon. friend, and I sincerely condole with him to-day in the circumstances in which he finds himself. Why, Sir, he told us in the first place, that he had an absolutely united party behind him; and then, not very long afterwards, we found him dealing at great length with criticisms which had been made upon his course in the province of Quebec, and presumably from members of his own party.

The right hon. gentleman has seen fit to introduce a great subject most profoundly affecting, not only Canada, but the whole empire, in a highly controversial and partisan spirit. He has indulged in what he calls a retrospective glance, accompanied by observations more or less dignified as to the supposed divisions in the ranks of the Conservative party. Well, Sir, there is no attempt to gag any one in the Conservative party, and there never will be, I hope.

But my right hon. friend has invited some remarks which otherwise I would not have felt impelled to make to-day; he has given us a retrospective glance, but his retrospective glance does not go back to some periods that perhaps he might be well inclined to forget, and he has conveniently forgotten them to-day. He speaks of criticism from the province of Quebec. Sir, I venture to tell him this, that if he has received any criticism from men who, in the past at least, have been his followers in the province of Quebec, that criticism and that feeling are due to himself more than to any other man in Canada. A retrospective glance seems to suit the humour of the right hon. gentleman to-day. Well, Sir, what was his own aspiration in the days of 1891 and 1892? His teaching in regard to this matter in the province of Quebec was summarized in his own hearing, in this House, only three years ago, by one of his own followers, and it was in words which are to be found in 'Hansard' of the 29th of November, 1896. It is the language of Mr. Bourassa, a disciple and follower of the right hon. gentleman; and here is Mr. Bourassa's language, which was not called in question by the right hon. gentleman at the time it was uttered:

> Well, sir, what was the language of Mr. Laurier in Boston in 1891: that Canada would never consent to imperial federation even on commercial lines alone, because the consequence would be the participation of Canada in British wars, and Canada would never consent to participate in British wars.

Was that or was that not the teaching of my right hon. friend in 1891 and 1892? Does he now deny that summary of his position which was given by his own follower in this House and which was not denied by him at that time? Well, Sir, we may go on to a little further retrospect since my right hon. friend is anxious for retrospects.

Here is his own language recorded in the pages of 'Hansard' and I am anxious to observe whether hon. gentlemen on the other side of the House who applauded with such vigour the speech just delivered will applaud the words which I shall proceed to quote, used by the right hon. gentleman as the leader of the Liberal party in this country, which,, as he declares has an absolutely consistent record in this matter:

I hold out to my fellow countrymen the idea of independence, but, whenever the day comes, it must come by the consent of both countries, and we shall continue to keep the good feeling and the good-will of the mother land. If we are true to our record, we will again exhibit to the world the unique, the unprecedented example of a nation achieving its independence by slow degrees, and as naturally as the severing of the ripe fruit from the parent tree.

Then, further, in the course of the same remarks——

An hon. MEMBER. What date?

Mr. R. L. BORDEN. 'Hansard' 1892, page 1142. If any hon. member desires to examine the remarks of the right hon. gentleman he will find them there and further at page 1143:

Is there a Canadian anywhere who would not hail with joy the day when we would be deprived of the services of British diplomacy?

As he has invited controversy with respect to the matter, although I had hoped that he would have elevated the discussion somewhat more above controversial lines. I have to tell him that in my judgment, since he has held the reins of government, British diplomacy has more than once got this country out of difficulties in which it has been involved by the blundering of himself and his colleagues. Further, at page 1144, since my right hon. friend desires a retrospect, I find him using this language on the same occasion:

The hon. gentleman (Mr. Foster) no doubt would prefer an English shilling to a Yankee dollar; but for my part I am differently constituted. I am ready any day, whether I am charged with annexation or not, to take a Yankee dollar in preference to an English shilling. . . . I have again and again repeated that the goal of my aspiration is the independence of Canada, to see Canada an independent nation in due course of time.

Well, my right hon. friend may have recanted that opinion. I am not aware that he has ever publicly recanted that aspiration and it would seem to me, having regard to some of the provisions of this Bill that he has not, and, if I may indulge in the tactics of my right hon. friend, rumour reaches us from some sources in the country that this very measure now presented to the House in so eloquent a speech is being held out as an important step in the direction of that independence which was at one time at least the aspiration of my right hon. friend.

Now, Sir, the right hon. gentleman declared to us that he has been told from some source in criticism of this measure that aid should be given by Canada to the mother country in respect of the naval defence by means of annual contributions. I have already expressed my opinion on that point, and as I spoke in this House at great length on the first reading of this Bill I shall be enabled to curtail my remarks to-day. As far as I am concerned, while the system of annual contributions might be best, and, no doubt, would be best from the purely strategical standpoint, I firmly believe that no such system could be adopted, but that eventually and permanently the basis upon which Canada must contribute to the defence of the empire will be by employing our own material, our own men, our own resources and the skill of our own people. But, Sir, we have to consider to-day some of the propositions of the government not only as embodied in this Bill, but as embodied in the speech of my right hon. friend. He told us on the first reading of this Bill that Canada must be at war when the empire is at war. Any man who has the slightest acquaintance with international law knows that that is absolutely the case. Yet, my right hon. friend has somewhat receded from that opinion to-day, because he has told us that under conceivable circumstances the rest of the empire might be at war while Canada was at peace. Such a proposition is absolutely impossible. So long as Canada remains in the empire, Canada is at war when the empire is at war. So long as the English flag floats above Canada, Canada is at war when that flag is attacked. The moment a shot is fired or a blow is struck at that flag, Canada is at war with the nation or country which fires that shot or strikes that blow. In view of the fact that the right hon. gentleman recedes, as I understood him to recede to-day, from the position which he took on the first reading of the Bill, we must understand that some very strong compulsion has urged him to take that course, and that difficulties within the ranks of his own party have compelled him to recede from what was in the first place the true and correct declaration of the position of this country. I shall not stop to dwell upon the argument of my right hon. friend based upon the authority of that great constitutional work, Quentin Durward, as to the exact similarity of meaning between sovereign and suzerain. Every one knows that the term 'suzerain' is a term which has come down to us from the old feudal days. I have not had an opportunity of examining the book, but I would not be very much surprised to find that my

right hon. friend, in consulting this eminent constitutional work, has, after all, misread it and that its authority might be turned against him.

Let us look for a moment at the position of affairs to-day. The question which we have to consider is undoubtedly a very important one. It is the question of organizing the forces of the empire for defensive purposes in naval warfare. The question which is before the House to-day is simply as to whether the proposition as embodied in the policy of the government and as embodied in the Bill is one which can fairly recommend itself to the people of the country. In the first place, my right hon. friend has referred to the resolution of March, 1909. I distinctly understood from the clear terms of that resolution that any proposal to this government should follow the suggestions of the admiralty made in the year 1907, and I say without the slightest hesitation that in the most important respect of all, the control of the naval forces of the empire in time of war, the Bill of the government absolutely departs from the suggestions of the admiralty and therefore absolutely departs from the resolution unanimously agreed to in this House in 1909. What was the suggestion of Lord Tweedmouth, First Lord of the Admiralty, on that occasion? The suggestion—indeed it was more than a suggestion, it was an absolute declaration—was that, so far as the naval forces are concerned, there must be unity of control in time of war. It does not require experience, it does not require naval knowledge to understand that in time of war the whole integrity and future of its empire may depend upon that unity of command and control. What did Lord Tweedmouth say in his address to my right hon. friend and the other delegates? He said this:

I have only one reservation to make, and in making it I ask that, as we have proved ourselves successful in the past, you should put your trust in us now. The only reservation that the admiralty desire to make is, that they claim to have the charge of these strategical questions which are necessarily involved in naval defence, to hold the command of the naval forces of the country, and to arrange the distribution of ships in the best possible manner to resist atack and to defend the empire at large, whether it be our own islands or the dominions beyond the seas. We thoroughly recognize that we are responsible for that defence. We want you to help us in that defence. We want you to give us all the assistance you can, but we do not come to you as beggars; we gladly take all that you can give us, but at the same time, if you are not inclined to give us the help that we hope to have from you, we acknowledge our absolute obligation to defend the King's dominions across the seas to the best of our ability.

Mr. R. L. BORDEN.

Could there be anything more definite, specific or emphatic than that declaration. But that is not all. Let us take the declaration of Mr. McKenna, First Lord of the Admiralty at the recent defence conference to be found in the English state paper brought down, pages 22 and 23:

If the problem of imperial naval defence were considered merely as a problem of naval strategy, it would be found that the greatest output of strengh for a given expenditure is obtained by the maintenance of a single navy with the concomitant unity of training and unity of command. In furtherance, then, of the simple strategical ideal, the maximum of power would be gained if all parts of the empire contributed, according to their needs and resources, to the maintenance of the British navy.

Further on he said:

If the fleet unit maintained by a Dominion is to be treated as an integral part of the imperial forces, with a wide range of interchangeability among its component parts with those forces, its general efficiency should be the same, and the facilities for refitting and replenishing His Majesty's ships, whether belonging to a Dominion fleet or to the fleet of the United Kingdom, should be the same.

And I especially invite the attention of the right hon. gentleman to this:

Further, as it is a sine qua non that successful action in time of war depends upon unity of command and direction, the general discipline must be the same throughout the whole imperial service, and without this it would not be possible to arrange for that mutual co-operation and assistance which would be indispensable in the building up and establishing of a local naval force in close connection with the Royal navy.

I also invite the particular attention of my right hon. friend to what follows:

It has been recognized by the colonial governments that in time of war the local naval forces should come under the general directions of the admiralty.

Not only in 1907, but also in 1909 we have the clearest and most specific statements from men who know infinitely more about these matters than any man in this House, that unity of control and unity of command in time of war are absolutely essential to successful action. There cannot be any question about that. There are many continents in the world, but only one sea. That sea is a great highway. It is the highway of British commerce. It is the highway of the commerce of Canada because the greater part of our exports are sea borne. It is the highway of the world and especially of the British empire. That sea is one, and it would be absolutely impossible for the different local units of the empire to cooperate successfully under any circumstance, in time of war, unless there was absolute unity, command and direction.

If the right hon. gentleman had spent more time on section 18 of his Bill, I think he would have better justified the expectation of this House. Clause 18 is as follows:

18. In case of an emergency the Governor in Council may place at the disposal of His Majesty, for general service in the Royal navy, the naval service or any part thereof, any ships or vessels of the naval service, and the officers and seamen serving in such ships or vessels, or any officers or seamen belonging to the naval service.

What is the meaning of that? The plain and direct meaning is that the Governor in Council may refrain from exercising the discretion which is there provided for. If the government should so refrain, what will be the result? Are we to be face to face with the condition which the hon. gentleman says is demanded by our autonomy—that Great Britain being at war we shall declare that we are not at war and that our fleet shall not take any part in it. If the clause does not mean that, I would like to know what it does mean. So far as I can understand the English language, it means just what I have said. I have just this to add, that when Great Britain being at war, the Governor in Council shall declare that our fleet shall take no part in it—and they may do that simply by inaction, by standing still, by making no order in council—I say that when that occasion comes then, such inaction or declaration will amount virtually to a declaration of independence.

I have the further objection that unity of organization is not effectually provided for. The Prime Minister of Great Britain used this language in announcing the results of the Defence Conference:

It was recognized that in building up a fleet a number of conditions should be conformed to. The fleet must be of a certain size, in order to offer a permanent career to the officers and men engaged in the service; the personnel should be trained and disciplined under regulations similar to those established in the Royal navy, in order to allow of both interchange and union between the British and the Dominion services; and with the same object, the standard of vessels and armaments should be uniform.

As a matter of fact, there is no unity of training. The men to be engaged in the Canadian navy are to be three-year men; and, if I understand rightly the lessons I have endeavoured to learn in regard to naval training, it takes at least six years to make a sailor efficient in these complicated and mighty engines of war used on the high seas at the present time. So there will be no unity of organization, and apparently there is to be no unity of training, because the officers are to depend for their training, not so much on the British service as on the schools which it is proposed to establish, and I have not observed any very distinct provision in the Bill as to the character of the training which is to be given in those schools.

Now, I would like to read one other extract upon that point. The admiralty most distinctly recommended a fleet unit. It declared:

In the opinion of the admiralty, the Dominion government desirous of creating a navy should aim at forming a distinct fleet unit; and the smallest unit is one which, while manageable in time of peace, in capable of being used in its component parts in time of war.

The fleet unit to be aimed at, should, therefore, in the opinion of the admiralty, consist at least of the following:—

1 armoured cruiser (new 'Indomitable' class) which is of the 'Dreadnought' type.
3 unarmoured cruisers ('Bristol' class).
6 destroyers.
3 submarines, with the necessary auxiliaries, such as depot and store ships, etc., which are not here specified.

Such a fleet unit would be capable of action not only in the defence of coasts, but also of the trade routes and would be sufficiently powerful to deal with small hostile squadrons should such ever attempt to act in its waters.

Then in paragraph 11:

As the armoured cruiser is the essential part of the fleet unit, it is important that an 'Indomitable' of the 'Dreadnought' type should be the first vessel to be built in commencing the formation of a fleet unit.

On that I would like to remark that Australia accepted at once the proposal for the establishment of a fleet unit and did it under the conditions which I find set out on page 26 of this blue-book in the following words:

The Australian fleet unit should form part of the eastern fleet of the empire to be composed of similar units of the Royal Navy, to be known as the China and East Indies units respectively and the Australian unit.

So that Australia has not only carried out the recommendations of the admiralty in that regard, but has gone further: it has distinctly declared, if I may rely on the blue-book, that its fleet unit shall be a part of the eastern fleet of the empire.

Sir FREDERICK BORDEN. Will my hon. friend look at the bottom of page 25, where it is said:

When placed by the Commonwealth government at the disposal of the admiralty as in war time, the vessels should be under the control of the naval commander-in-chief.

It would seem as if the commonwealth government had the power to place them under the control of the admiralty or not.

Mr. R. L. BORDEN. As far as that is concerned, my position is as distinct as I can make it. I say that any proposals for the establishment of a naval unit of

the imperial navy will be absolutely useless, and worse than useless—I would go further and say dangerous—unless it is expressly stipulated that in time of war there shall be but one navy under one central command and direction. We might repeat in the British navy the history of the 'Invincible Armada,' which was composed of five or six different Armadas of distinct organization, different training, different equipment; and we know what the result was in that case. My right hon. friend referred, for some reason that I could not comprehend, to the adventures and crusades of Peter the Hermit. I could not see the exact line of argument by which he introduced Peter the Hermit, or a great many other things, into his speech; but he could not have given a more apt illustration of the argument I am making. What was the cause of the failure of that crusade? The fact that it was composed of a heterogeneous assemblage of men of different countries, without any unity of organization, without any unity of training, without any unity of command; and the same result which befell the crusade of Peter the Hermit would be likely to befall the navies of the empire if they should be organized on any such basis as that which my right hon. friend has proposed to the House.

What further does the right hon. gentleman propose? He proposes that we should build a certain number of cruisers of the Bristol type and of some other type. What will these cruisers amount to as an effective fighting force in time of war? At the highest you might say they will be commerce protectors. I do not know that you could say that. They might be useful as scouts, or be of some advantage to this country in protecting our fisheries. But what would be the result in time of war? I will tell my right hon. friend what the result would be. An Australian or New Zealand Dreadnought would be called on to protect these Canadian cruisers from attack by the enemy. Surely that would not be a very proud position for the people of Canada to occupy in the day of stress and trial.

As far as any effective fighting force is concerned, it is not supplied by any proposals of the government. I believe the empire is confronted with a serious situation. I gave my reasons for that belief a few days ago, and I will not repeat them to-day. I believe that the duty of Canada is not to be occupied in shaping its policy to meet conditions which are largely the creation of my right hon. friend, but rather to do something immediate and effective in order that we may at least stand side by side with the other great dominions of the empire in the day of trial.

Sir, I have another observation to make.

Mr. R. L. BORDEN.

We all did agree, at least I did agree, to the resolution of March, 1909, but every man in this House who since that time has given the slightest consideration to this question will realize that when we talked about the speedy organization of a Canadian naval unit of the imperial navy —because that is the way I prefer to express it—we are speaking of something that cannot be brought about in ten, fifteen or twenty years. Why, my right hon. friend to-day has even a vaguer idea of what he proposes to do than he had in respect of the National Transcontinental railway. I did not like to interrupt him; he was being interrupted a good deal; but there was one question which I would like to have put to him, and I shall take the liberty of putting it now. He says these vessels are to be built in Canada. I would like to know whether they are to be built in a private shipyard or in a government shipyard? Has the government come to any conclusion in regard to that?

Sir WILFRID LAURIER. In a private shipyard.

Mr. R. L. BORDEN. Then I will venture to say that when my right hon. friend intimates that a private shipyard capable of constructing these ships and of providing the guns, armament and all the equipment which are the most essential parts of such war ships, can be established in this country in one year, he convinces me that he has not given very much consideration to the subject. I venture to suggest to the right hon. gentleman that at the very earliest possible moment he should revise his estimate in order that he may not incur criticisms of the character which have been justly made in this House with respect to his predictions concerning the National Transcontinental railway, to which I have just alluded.

I was referring to the resolution of 1909. We spoke about a speedy organization of a Canadian naval force. I do not believe that that force or that service can be brought about, can be effectively organized, in less than 15 or 20 years, probably it will take longer. I say to my hon. friend that inasmuch as he cannot do that in less than the time I have mentioned, there is another consideration which I would like to bring to his attention. My hon. friend has some recollection of the attitude he took in 1899 with respect to the participation of this country in the South African war. In the 'Globe' of October 4, 1899, he expressed himself in this way:

As I understand the Militia Act, and I may say that I have given it some study of late, our volunteers are enrolled to be used in the defence of the Dominion. They are Canadian troops, to be used to fight for Canada's defence. There is no menace to Canada, and

although we may be willing to contribute troops I do not see how we can do so. Then again how could we do so without parliament granting us the money? We simply could not do anything. In other words we should have to summon parliament.

There was not a very great delay before my hon. friend altered his opinion in that regard, but I would like to interject this observation that a delay such as that which then occurred might spell ruin to the empire if it took place with regard to the employment of our naval forces. I venture to recall to my right hon. friend the reason which he gave in a speech delivered at Sherbrooke, in the province of Quebec, in the month of January, 1900, that was after he had reconsidered his attitude with regard to the participation of this country in the South African war. His words are as follows:

We believed it our duty as a British colony to take part in the war, and permit two thousand Canadian volunteers to enlist in the English army and to fight for the mother country. We did it because we believed it our duty to do it, in response to the unanimous sentiments of the people of this country. We are a free country; ours is a constitutional government, and our duty is to put into execution the popular will, and the moment the popular will was known to us we had but the duty to discharge, and we discharged it of our free will. There was no power to constrain us to act as we did; but in the plenitude of our legislative independence we had the right to reply to the popular will.

I would invite my right hon. friend to-day to respond again to the popular will, and the will of this country to-day is that these different proposals ought to be submitted to the people and the people ought to be permitted to pass upon them before any permanent policy of this kind is engaged in. I think there is a great deal to be said in favour of that course. I am as strong as any man in this country in the belief that it is the duty of Canada to participate upon a permanent basis in the defence of this empire and to do our reasonable share in that regard. But I say that to attempt to force a policy of this kind upon the people of this country without giving them an opportunity to say yea or nay with regard to it, would be one of the worst mistakes that could be made by any man who really favoured that policy. If my right hon. friend was able, in very short meter indeed, in 1899, to respond to the popular will, there seems no reason he should not to-day be equally ready to respond to the popular will upon this question. What the people of this country want, as far as any man can judge who has observed the currents of public opinion, what the people of this country desire, is immediate and effective aid to the empire, and to have any proposals of a permanent character very carefully considered and matured, as they ought to be considered and matured, before any such policy is embarked upon, because there are a great many considerations that must be taken into account. There is the consideration, and not an unimportant one, to which I alluded, in speaking on this subject on the 12th of January, as to the voice of this country with regard to matters of international concern. These matters must be dealt with and considered by the great dominions of the empire before any permanent basis of co-operation by those great dominions in the naval defence of the empire can become thoroughly established. That is a question which must be taken into consideration and must be faced.

Inasmuch as the proposals of the government are weak and ineffective, as they afford no immediate aid and assistance, as they could not be carried out for ten or fifteen years so as to become efficient, I say it would be the proper course to mature more thoroughly those proposals, to take up all matters that concern our relations to the empire in respect to co-operation in imperial defence, and in the meantime to do that which, after all, is the most important thing, stand side by side with the mother country under the conditions which confront her at the present time. The needs of the empire are before our very eyes to-day. We have the splendid example of the other great dependencies of the empire. Are we of less faith and of less courage than they? Shall an Australian fleet and a New Zealand Dreadnought defend the flag which floats above us while our little cruisers are fleeing helpless before an enemy? I do not so understand the spirit, the intention, or the desire of the Canadian people. I believe they are ready to assume their full share of meeting any peril that shall assail the empire, come when it may. Their hearts and their hands are as strong to will and to dare as were those of their fathers before them, and I do not doubt that, as my right hon. friend (Sir Wilfrid Laurier) has eloquently expressed it, the men of French descent in this country will be as prompt and ready to do their share with the English speaking citizens of Canada, as they have proved themselves in days gone by. Thus, let our aid be prompt and generous, so that it may bring to the motherland the assurance not only of material support but of a courage, a faith and a determination which shall proclaim alike to friend and foe that whether in peace or war, the empire is one and undivided.

I therefore move:

That all the words after the word 'that' be left out and the following substituted therefor:—

The proposals of the government do not follow the suggestions and recommendations of the admiralty and, in so far as they empower the government to withhold the naval forces of Canada from those of the empire in time of war, are ill-advised and dangerous.

That no such proposals can safely be accepted unless they thoroughly ensure unity of organization and of action without which there can be no effective co-operation in any common scheme of empire defence.

That the said proposals while necessitating heavy outlay for construction and maintenance will give no immediate or effective aid to the empire and no adequate or satisfactory results to Canada.

That no permanent policy should be entered upon involving large future expenditures of this character until it has been submitted to the people and has received their approval.

That in the meantime the immediate duty of Canada and the impending necessities of the empire can best be discharged and met by placing without delay at the disposal of the imperial authorities as a free and loyal contribution from the people of Canada, such an amount as may be sufficient to purchase or construct two battleships or armoured cruisers of the latest Dreadnought type, giving to the admiralty full discretion to expend the said sum at such time and for such purposes of naval defence as in their judgment may best serve to increase the united strength of the empire and thus assure its peace and security.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. F. D. MONK (Jacques Cartier). I think those of us who have given some attention and some study to the important matter which is now submitted to the House, will readily admit that never, in this or any other parliament since confederation, indeed I might say never at any time since we have possessed the privilege of self government in this country, has any question of this magnitude and of such vast consequences, been discussed in the free assemblies of this country. The Bill in itself outside of section 18 does not present to my mind any very striking feature; it is the extension, if I may use such an expression, of legislation which we have had in a diminished form upon our statutes ever since the mother country called upon us to assume our proper share of the burden of defence. Therefore, I think one may say with the exception I have just pointed out, this legislation is not in any sense extraordinary. But it must be viewed, I submit, under all the surrounding circumstances, and particularly, as a first step towards the execution of a policy or what I called at another stage of this Bill, an agreement arrived at with the imperial authorities. At that time my right hon. friend stated that what he was endeavouring to carry out was not an agreement but a policy, and that statement was covered by the applause of those who sit behind him. But I see no material difference between the two names, what we are doing now, as I understand it, is carrying out a policy of defence, that was laid down at the last imperial conference held during last summer. It therefore seems to me of the utmost importance that we should all understand clearly what is the course upon which it is sought to have the country embark. My right hon. friend might have given that to us in a very few words this afternoon; but so far as I was able to apprehend the meaning of his speech, he confined himself, as he usually does, to brilliant generalities, speaking with the eloquence that characterizes him. But is this a proper occasion, I would ask, on which to deal in generalities? Was it not more fitting, at this important stage of the measure when we are asked to affirm the principle, that he should leave aside those historical allusions to the greatness of the empire, to the long forgotten career of Peter the Hermit, and such things as that, and tell us clearly what it is to which he is now asking us to commit ourselves.

My hon. friend has spoken of differences of opinion in the ranks of the party on this side of the House. They may exist, but they are acknowledged. Let me say to him that, when, on a question of this magnitude, we do not find it possible to see eye to eye on all phases of the question, we acknowledge it openly, instead of trying to cover it with a veil, and to convey in a different manner, in different places, and at different periods, the meaning of a policy which it seems impossible to grasp and to thoroughly understand. Therefore I say it is incumbent upon us to take all proper means that there shall be no mistake on that point. That is the reason why there is, on the ministerial side of the House, that apparent acquiescence and unanimity which, as every body knows, merely conceals the grinding of teeth which otherwise would be apparent among them. How, I ask, are those gentlemen held together? No doubt what the government organs and my right hon. friend himself have stated at different times and at different places, explains it; no doubt, in the confusion which reigns among them, they do not fully apprehend the real aspects of this question, and I have heard muttered here a moment ago that patronage possibly is the explanation. I told my hon. friend from Toronto (Mr. Foster) a day or two ago that I was sorry I could not be here, through illness, to uphold by word of mouth and

by my vote that very appropriate motion which he presented to this House in regard to the curse of patronage. That curse I think, explains the apparent indifference and the alleged acquiescence which we find among those hon. members who come from my own province of Quebec, because I know what is their private opinion upon this subject. I say more. As long as that curse exists and is maintained by this government, as long as we have here men who hold promises of position, and who have held out to them the prospect of petty grants of money to be made within the limits of their county, so long shall we not see in this parliament that free expression of opinion which we find in the British parliament at the present time.

But, let me particularize, because, although I want to be as brief as possible and merely upon this occasion lay some of my views in support of my opinions before the House, I will not on that account diminish what I have to say upon these preliminary and important points. From the beginning of this controversy the organs of my right hon. friend in the province of Quebec have laid before the public what seems to me to be absolutely the contrary to what this Bill and this policy are. I could quote from the accredited organs of my right hon. friend. I could quote from other newspapers in my own province, which, although they are not the properly accredited organs of the government, have been brought by influences which I suspect, but the extent of which I do not know, to support in a general way the policy of a Canadian navy. My quotations in that respect might be infinite in number. Let me quote an article published a few days ago, on the 29th January last, in 'Le Canada,' my right hon. friend's own organ in the city of Montreal, upon this question, and let the members of this House judge whether this exposition is a truthful one, is the truth, the whole truth and nothing but the truth. After enumerating what this newspaper calls the diversified views of the opposition, after having given us the views of the Conservative members from the west, given us their own private, individual view, or what purports to be the view, of the leader of the opposition, and after having given a garbled view, an insincere and untrue aspect, of what it calls the Monk-Bourassa policy, it goes on—I will not detain the House with it—to tell us what is the policy of the government. I will give it in English:

Canada must gradually take charge of the defence of its own territory on land and on sea.

It refers to New Zealand and Australia, and continues:

We are less exposed and we have no business to prepare a defence against attack from the United States, our friends and allies. A powerful hostile fleet could not attack up coming from Europe without having vanquished the imperial fleet—an impossible contingency. Therefore, we are only exposed to raids of hostile cruisers, isolated, or, at least, very few in number, that would have been left outside of any naval concentration to run upon the seas and harass British commerce. Therefore, we must indeed content ourselves with rapid cruisers and torpedo boat destroyers small vessels armed to attack, and whose extreme rapidity enables them to elude pursuit.

I may say to my right hon. friend that what he called some days ago the shivering electors of Jacques Cartier are indignant at this expression.

Therefore, we must do something in order to bear the burden of British defence. This something we will do in full harmony with the British admiralty by constructing ships for our own defence, if needed. These ships will be at our expense and under our control, but if we are asked for them we may——

'may' is marked in specially heavy type.

—lend them to Great Britain. The imperial authorities accept this programme with gratitude, as representing our full share of the imperial defence.

First point.

Our fleet being essentially defensive, we do not cause any damage to anybody, and our act is as far from militarism as the organization of a police force differs from the creation of a permanent army which is destined for the offensive.

Second point.

This navy we are constructing will not in any way cause us any expense to this extent that we will not be obliged to borrow a single cent.

Third point.

Our readers have here, shorn of all useless verbosity, of all declamation, of all appeals to public sentiment, the exact expression of the four policies that have been produced in Canada on this question of an imperial navy.

This has been dinned into the ears of our population for months, and I ask the House again: Is this the true expression of the policy that underlies this Bill along with the authentic conclusions arrived at by the Imperial Defence Conference of 1909 which we are now about to carry out? In the same city, but speaking to different readers upon the same subject, what do we find in another organ of my right hon. friend, the Montreal 'Herald'? Commenting upon the very able speech delivered in Montreal some days ago by a gentleman who was formerly

a member of this House, Mr. Bourassa, it says:

We do not mind confessing that Mr. Bourassa is largely right when he says that the Canadian fleet would almost as a matter of course take part in the empire's naval struggles. In other words, the theory of national control, exercised dispassionately, would in any imperial emergency prove but a fiction. Yet that fiction, like many a legal fiction, would shelter a mine of practical wisdom, and enable us to avoid many of the difficulties that would arise under the application of the more logical suggestion of Mr. Bourassa. For organic union we are not yet ready. But we are ready or should be, to take some share in the naval defence of the empire. By the creation of a Canadian navy we can fulfil our duty in that regard, and at the same time preserve ourselves from all the perplexities, at home and abroad, that would follow either the policy of direct cash contributions to the British navy, or the creation of a federation of British states. Our fleet would be in our own hands, to go or not to go to the empire's wars. That in practice it would no doubt inevitably go to any major war would not destroy the value of the freedom from entanglements that the Dominion would possess under this policy. Under it, the question of participation may be put off for ten, twenty, fifty, or a hundred years, if war should not ensue. Britain has not had a great naval war for a century. The creation of new centres of imperial naval strength in Canada, Australia, New Zealand and South Africa may help to make such a war improbable for a century to come.

This is the view presented to the English electors of my own province. But let us look for further differences and we will find some equivocation in a letter which the right hon. the Prime Minister himself wrote to an elector of the province of Ontario who was seeking information upon this subject and who, a farmer, wrote to the Prime Minister disapproving entirely of this expenditure. The right hon. gentleman wrote on the 8th of November last in reply to the very emphatic letter which he had received:

I have very little exception to take to your letter, and I am sure that when our policy has been laid before parliament there will not be much difference between your opinion and ours, and I do not think there should be any.

He did not want any expenditure at all for the construction of a navy, or any contribution. On writing this as his view, the Prime Minister tells him that there is very little difference between them.

I would respectfully call your attention to the fact that you are in error in saying that this is a new matter. On the contrary it has been before the Canadian public since the conference of 1902, when an attempt was made to force us into a policy which you might properly call militarism and against which we dissented. I would draw your attention to the paper which was laid before the imperial conference at the time by the ministers who attended it, that is to say Mr. Fielding, Mr. Paterson, Sir Wm. Mulock, Sir Frederick Borden and myself, and in which we thus declared our policy:—

At present Canadian expenditures for defence services are confined to the military side. The Canadian government are prepared to consider the naval side of defence as well. On the sea coasts of Canada there is a large number of men admirably qualified to form a naval reserve, and it is hoped that at an early day a system may be devised which will lead to the training of these men and to the making of their services available for defence in time of need.

In conclusion the ministers repeat that while the Canadian government are obliged to dissent from the measures proposed, they fully appreciate the obligation of the Dominion to make expenditures for the purpose of defence in proportion to the increasing population and wealth of the country. They are willing that these expenditures shall be so directed as to relieve the taxpayer of the mother country from some of the burdens which she now bears; and they have the strongest desire to carry out their defence schemes in co-operation with the imperial authorities, and under the advice of experienced imperial officers so far as this is consistent with the principle of local self government which has proved so great a factor in the promotion of imperial unity.

You will therefore see that we refused to go in for any larger expenditures than would be warranted by our development as a nation. This policy has been before the people for several years and it has never been challenged so far as I know, by any one.

I overlooked that I am no more in sympathy than you are with militarism in any form, but the question of defence is one which cannot be altogether overlooked.

Mr. LEMIEUX. Hear, hear.

Mr. MONK. My hon. friend the Postmaster General says hear, hear. He has been saying hear, hear, all afternoon. Surely he deserves the knighthood and I hope I will be present when he receives the accolade.

It is the penalty of becoming a nation and which all nations have to bear and which, in course of time, I hope they may dispense with.

Without going any further, because I might multiply these examples, I say it is important to show that in reality there has been an attempt on the part of my right hon. friend the Prime Minister and his friends to veil and disguise their policy in grandiloquent expressions of all sorts instead of putting it fairly and frankly befor the people. We have, therefore, the right to ask in the first place what is that policy. Now, I lay this as the basis of my argument. It is absolutely impossible to pursue even the very meagre report of the imperial conference, and there can be no doubt that report is incomplete; in fact it was decided at the conference that only such papers as were agreed upon would be put on record—I say it is impossible to read

that blue-book through and have any doubt whatever that the policy is absolutely new and novel, differing in every respect from any policy enunciated or suggested before by either the imperial or this government. There can be no doubt that the policy is entirely novel, and that the people have so far been kept in the dark as to its real meaning and import. Let me point out what in reality is the proposal which was laid before the imperial conference in 1909 and agreed upon by our delegates and the others, and I will do it in connection with this proposition, which it is also necessary in the interests of truth to elucidate, and which is this. A local navy or a contribution of ships and money is attended with precisely the same political consequences, because, in my province at any rate, it has been held out to the people in a deceptive way, that what the government proposes to do is to organize a naval defence uniquely and solely for our own protection, and it has been hinted every where that this was the first step in the direction of a far larger emancipation than we have hitherto enjoyed. I say that in the first place, it is suggested that in the case of the navy we are arming for our own protection. The responsibilities, however, are precisely the same, as far as political consequences are concerned, as if we were contributing in money or ships to the British navy. In the first case, as they are, we are arming for our own protection; in the second, we are making common cause with the imperial fleet for imperial defence. That is the pretension set forth in my own province, this view has been systematically advanced in the province of Quebec by people who are interested in deceiving the electorate. But in either case, the consequences, now I say, are the same. The only variation lies in the mode of assistance. That was what was advanced at every stage of this discussion as far as the British government was concerned. Of course, my right hon. friend did not agree to that. He who makes such terrible attacks on this side of the House, because there are on this side honest and sincere differences of opinion, has differed so often with himself on this very subject that he thinks he can escape by playing the role of the tadpole which throws mud all round it in order to escape. I am prepared under any circumstances to respect the opinions of my fellow citizens on this subject and that does not seem to be the disposition of the right hon. the Prime Minister or the future Knight of the Bath, my hon. friend the Postmaster General (Mr. Lemieux). As soon as he is knighted, he will, like the errant cavaliers of ancient times, put a patch on his eye until he has met with some man of noble blood and slaughtered him.

What I say is that this proposition which I venture to lay before the House was abundantly proved by the proceedings of the conference itself in regard to which if my hon. friend, instead of giving us the story of Peter the Hermit, had explained those things, as he should have done, on the second reading of the Bill, I might have been spared the trouble of detaining the House on this point.

In support of this, let us take in the first instance the declaration of the results of the conference made before the House of Commons by the Prime Minister, the Right Hon. Mr. Asquith, and set out in the proceedings of the conference—a declaration which was absolutely approved by the conference itself, and after one of our own delegates, my hon. friend the Minister of Militia, had moved a vote of thanks to the British government. This is the statement made by the Prime Minister:

> The conference, which has just concluded its labours, was convened under the terms of Resolution I of the conference of 1907. In the invitation sent by His Majesty's government at the end of April to the governments of the dominions, it was stated that the object of the conference would be to discuss the general question of naval and military defence of the empire, with special reference to recent proposals from New Zealand and Australia, and to the resolution passed on March 29, by the House of Commons of the Dominion of Canada. It was further stated that the conference would be of a purely consultative character, and that it would be held in private. It follows that all resolutions come to and proposals approved by the conference which has now been held, must be taken, so far as the delegates of the dominions are concerned, to be ad referendum, and of no binding force unless and until submitted to their various parliaments.
>
> I should add, in special reference to the delegates from South Africa, that they did not feel themselves in a position, in regard to either naval or military defence, to submit or to approve positive proposals until the union of South Africa was an accomplished fact. With this preface I will briefly summarize the main conclusions of the conference in regard, first, to military, and next to naval defence.
>
> After the main conference at the foreign office, a military conference took place at the War office, and resulted in an agreement on the fundamental principles set out in papers which had been prepared by the general staff for consideration by the delegates. The substance of these papers, which will be included among the papers to be published, was a recommendation that, without impairing the complete control of the government of each dominion over the military forces raised within it, these forces should be standardized, the formation of the units, the arragements for transport, the pattern of weapons, etc., being as far as possible assimilated to those which have recently been worked out for the British army. Thus, while the dominion troops would in each case be raised for the defence of the

dominion concerned, it would be made readily practicable in case of need for that dominion to mobilize and use them for the defence of the empire as a whole.

The military conference then entrusted to a sub-conference, consisting of military experts at headquarters and from the various dominions, and presided over by Sir W. Nicholson, acting for the first time in the capacity of chief of the imperial general staff, the duty of working out the detailed application of these principles.

I may point out here that the creation early this year or an imperial general staff, thus brought into active working, is a result of the discussions and resolutions of the conference of 1907. Complete agreement was reached by the members of the sub-conference, and their conclusions were finally approved by the main conference and by the committee of imperial defence, which sat for the purpose under the presidency of the Prime Minister. The result is a plan for so organizing the forces of the Crown wherever they are that, while preserving the complete autonomy of each dominion, should the dominions desire to assist in the defence of the empire in a real emergency, their forces could be rapidly combined into one homogenous imperial army.

Naval defence was discussed at the meetings of the conference held at the Foreign Office on the 3rd, 5th and 6th August. The admiralty memorandum, which had been circulated to the Dominion representatives, formed the basis of the preliminary conferences.

The alternative methods which might be adopted by Dominion governments in co-operating in imperial naval defence were discussed. New Zealand preferred to adhere to her present policy of contribution; Canada and Australia preferred to lay the foundation of fleets of their own. It was recognized that in building up a fleet, a number of conditions should be conformed to. The fleet must be of a certain size in order to offer a permanent career to the officers and men engaged in the service; the personnel should be trained and disciplined under regulations similar to those established in the Royal navy, in order to allow of both interchange and union between the British and Dominion services; and with the same object, the standard of vessels and armaments should be uniform.

A remodelling of the squadrons maintained in far eastern waters was considered on the basis of establishing a Pacific fleet, to consist of three units in the East Indies, Australia and China seas, each comprising, with some variations, a large armoured cruiser of the new 'Indomitable' type, three second-class cruisers of the 'Bristol' type, six destroyers of the River class, and three submarine of 'C' class.

Further on:

Separate meetings took place at the admiralty with the representatives of Canada, Australia and New Zealand, and general statements were agreed to in each case for further consideration by their respective governments.

Further on:

Mr. MONK.

As regards Canada, it was considered that her double sea-board rendered the provision of a fleet unit of the same kind unsuitable for the present. It was proposed, according to the amount of money that might be available, that Canada should make a start with cruisers of the Bristol class, and destroyers of an improved River class—a part to be stationed on the Atlantic sea-board and a part on the Pacific.

In accordance with an arrangement already made, the Canadian government would undertake the maintenance of the dockyards at Halifax and Esquimalt, and it was a part of the arrangement proposed with the Australian representatives that the Commonwealth government should eventually undertake the maintenance of the dockyard at Sydney.

Will my right hon. friend or any of the gentlemen who sit behind him, from the province of Quebec at any rate, state that even this has been laid before the people of our province. They have never heard of it, in that shape or in any shape, and have never had any occasion to pronounce their opinion upon so important a matter.

Let us look a little deeper into this matter and see what was laid down in regard to this policy at this conference. The admiralty memorandum—I am now speaking of naval defence—was fully approved by our delegates. I will quote from it as briefly as possible. But I appeal to the good sense and good faith of the House to say whether any man who takes the trouble to read through this blue-book can arrive at any other conclusion than that which I laid down a few moments ago, that under the terms of this agreement we undertook to accomplish the duty that our delegates subscribed to, either by building a fleet of our own, or by contributions of ships or of money. In either case the principle is the same.

In the admiralty memorandum in respect to naval defence, I find this laid down:

Separate meetings accordingly took place at the admiralty with the representatives of Canada, Australia and New Zealand, when the following general statements were agreed to in each case, it being recognized that in the time available it was impossible that all details should be thoroughly gone into and settled. Several administrative and financial points remained still to be decided.

And in the admiralty memorandum, which has our approval entirely so far, this is said at page 23:

2. If the problem of imperial naval defence were considered merely as a problem of naval strategy, it would be found that the greatest output of strength for a given expenditure is obtained by the maintenance of a single navy with the concomitant unity of training and unity of command. In furtherance, then, of the simple strategical ideal the maximum of power would be gained if all parts of the empire contributed, according to their needs and

resources, to the maintenance of the British navy.

3. It has, however, long been recognized that in defining the conditions under which the naval forces of the empire should be developed, other considerations than those of strategy alone must be taken into account. The various circumstances of the oversea dominions have to be borne in mind. . . .

4. The main duty of the forthcoming conference as regards naval defence will be, therefore, to determine the form in which the various dominion governments can best participate in the burden of imperial defence with due regard to varying political and geographical conditions. Looking to the difficulties involved, it is not to be expected that the discussions with the several Defence Ministers will result in a complete and final scheme of naval defence, but it is hoped that it will be found possible to formulate the broad principles upon which the growth of colonial naval forces should be fostered. While laying the foundations of future dominion navies to be maintained in different parts of the empire, these forces would contribute immediately and materially to the requirements of imperial defence.

I pass certain paragraphs which go to maintain absolutely the contention which I am endeavouring to support, and I come to the close of the memorandum:

13. Pari passu with the creation of the fleet unit, it would be necessary to consider the development of local resources in everything which relates to the maintenance of a fleet. A careful inquiry should be made into the shipbuilding and repairing establishments with a view to their general adaptation to the needs of the local squadron. Training schools for officers and men would have to be established; arrangements would have to be made for the manufacture, supply, and replenishment of the various naval, ordnance and victualling stores required by the squadron.

14. All these requirements might be met according to the views of the dominion governments, in so far as the form and manner of the provision made are concerned. But as regards shipbuilding, armaments and warlike stores, &c., on the one hand, and training and discipline in peace and war, on the other, there should be one common standard. If the fleet unit maintained by a dominion is to be treated as an integral part of the imperial forces, with a wide range of interchangeability among its component parts with those forces, its general efficiency should be the same, and the facilities for refitting and replenishing His Majesty's ships, whether belonging to a dominion fleet or to the fleet of the United Kingdom, should be the same. Further, as it is a sine quâ non that successful action in time of war depends upon unity of command and direction, the general discipline must be the same throughout the whole imperial service, and without this it would not be possible to arrange for that mutual co-operation and assistance which would be indispensable in the building up and establishing of a local naval force in close connection with the Royal navy. It has been recognized by the colonial governments that in time of war the local naval forces should come under the general directions of the admiralty.

All this was fully approved by our own delegates. Their conclusions, their decision as to what was going to be built, are to be found fully given at page 26 of the printed report.

But I have said that in order to fully understand the extent of this new scheme, one must also take into consideration what seems to have been lost sight of, and was never alluded to in any way, so far as I know, by my right hon. friend, a most important part of the conference which concerns military defence. I do not wish to quote at length although I have marked certain parts of what has reference to that portion of the conference. The military memorandum is absolutely agreed to by our delegates, and I say it results clearly from that military memorandum that if it is carried out, before long what military forces we have in this country will be absolutely at the disposal of the imperial authorities in case of war. I do not wish to quote at length. I affirm that even for a layman like myself, it is impossible to read over that military memorandum approved of by our delegates without arriving at the conclusion that the whole of this scheme exhibits the constant carrying out of what has been characterized in a vague kind of way since some years, in this country and elsewhere, as the imperialist scheme, the putting into execution, the carrying out of what has been for a long time the dream of some people to which I shall refer presently, of a political union, practically, of the empire and the abolition of what is most important in the autonomy of the dependencies, reducing them in a certain sense to mere municipal institutions and conferring upon the imperial authorities at home, without any corresponding privilege, without any granting of further privilege to ourselves, of the absolute right of control without any consultative voice on our part whatever. All this is most important, all that is most precious in the privileges of self-government which we have acquired under circumstances of great stress and difficulty years ago—

Sir FREDERICK BORDEN. I do not wish to interrupt, but I know the hon. gentleman does not wish to mislead the House. I would ask him to return to the statement made by the Prime Minister of England from which he read a little while ago in which the premier uses these words:

The result is a plan for so organizing the forces of the Crown wherever they are, that while preserving the complete autonomy of each dominion, should the dominions desire

to assist in the defence of the empire in a real emergency.

Etc., they can do so.

Mr. MONK. I read that.

Sir FREDERICK BORDEN. Yes, but the hon. gentleman did not apparently heed it, did not seem to have understood it.

Mr. MONK. Oh, I understand it. I intend touching on that point in a moment, but I say at once, in order to answer my hon. friend, that if this scheme of centralization of military and naval power is put into execution, that part of the memorandum upon which the minister lays such great stress will become practically inoperative.

Sir FREDERICK BORDEN. Oh no, it is the basis of the whole scheme.

Mr. MONK. I can imagine it goes on a par with the lame excuses advanced by the Prime Minister, betraying to my mind his absolute ignorance of our situation, that in case war broke out under these circumstances, with our naval organization brought absolutely under this policy and everything laid down in this blue-book being carried out, the general staff, with its branches all over the empire having fully organized, he will summon parliament to know if our people are ready then to fight. I think I know the people of Canada well enough that, if all this is carried out they will not take refuge under that most unconstitutional argument which is on a par with what my right hon. friend said in Toronto the other day about the King of England being a suzerain. If the right hon. gentleman is correct in that interpretation, what I learned when a boy about the Crown of England, and what I taught in the university as a professor of constitutional law for many years, would have to be taken back as absolutely erroneous. I do not know what the heroine of Quentin Durward, a very pleasant novel, understood by a suzerain. She was speaking at a time of feudal tenure when suzerains existed. I am not aware that they exist now. But, if I understand the rights and privileges of the British Crown, it is subject to no such accident; it is continuous, it is absolute, it is sovereign; it goes on without any special transmission or succession. The King of England is the King of Canada practically. He concentrates in that power which we call the Crown all executive power, all the power that makes the laws, all the administrative power, subject, of course, in regard to the executive power to the limitation that now he acts through ministers who are responsible to the representatives of the people—a very important provision and, though he concentrates within himself the legislative power, and though all laws are really made by him, these laws are made with the consent and advice of both Houses of parliament. The legislative power is in him, as are the executive and judicial powers, and particularly with respect to the armed forces of the Kingdom wherever they are. I speak subject to correction, but I understand that this is a prerogative which has never been diminished in any way. The King is the chief commander of the military and naval forces. The House of Commons, in its widest aspirations, has never thought of depriving him of this special prerogative, nor have the people of England done so, being controlled by that wisdom which has ever characterized them. The King is the master of all armed forces—no suzerain there. But, as we all know—it would be taking up the time of the House uselessly to discuss the matter—the exercise of that power was held under control of the people for a long time in England by the Mutiny Act. This Act was passed every year. Hon. members of this House are familiar with the peculiar machinery which enabled parliament, although the command of the forces was in the hands of the Crown, by this yearly passage of the Mutiny Act to curb and restrain the exercise of that power. This continued until, I think, the year 1881, or thereabouts, when we had in England a regular military law. Moreover, parliament always exercised a very strong control over the military and naval forces by the annual voting of money. To-day, in England, as here, money is voted yearly, and without money you cannot have soldiers or navies. But the right, the prerogative, is in the King. If the King had the money, as he used to have in the old Plantagenet and Lancaster days, he would not require the annual vote of parliament to direct the army and navy as he chose. I may be mistaken, but that is the way I look at it. Therefore, I say this section 18 enunciates a new principle, when it says that the Governor in Council, may if it chooses, place the navy at the disposal of the British government. That is something new. If we could say that it was intended to facilitate the carrying out of the agreement as arrived at in London, if we could say it was in order to remove all doubt with respect to the principle which I enunciated a moment ago, well and good. But my right hon. friend (Sir Wilfrid Laurier), who is a master of circumlocution and deceit, has, I think, placed this proviso in this Bill in order to be able to say to the people what 'Le Canada' printed in such heavy type, and I cited a moment ago, that in reality we—

parliament—control this naval force and it could only engage in war after it saw fit.

Now, I am extremely sorry to take up the time of the House, and I will not insist further upon that point, though I should like to have done so; not in order to instruct the members of this House—I have no desire to take that position—but in order that the people of this country should see behind this measure, which is apparently rather inoffensive, and see what the policy is concerning which my right hon. friend did not make in those explanations which seemed to me to be due, in the first place to this House, and in the second place to the nation at large. What, I say, are the consequences of this policy? If we have, or are about to undertake that we will build a navy or make contributions upon the understanding laid down in good faith by the British government and by the delegates at this conference, if we are going to move beyond the defence of our own country as a legitimate part of our burden—a part that has never been denied by Canadians, never from the first day, never, even at a time when they had against the mother country most serious grievances—I say, if that is the policy, as I claim it is in the very words laid down in this document, what are the consequences? Let me sum up these consequences briefly:

1. We become more strictly bound by the foreign policy of the British government, its alliances offensive and defensive, for the reason that we engage to support by force the empire's exterior action.

This, I say, is the first consequence: We enter actively into the exterior policy of the British government. We no longer say: We are a dependency; we are a possession; we will not attack, we will continue the role we played for more than half a century and will undertake that burden which will otherwise rest upon you, the defence of this country.

2. If the scheme of the imperial defence conference is approved by us, we are bound to participate as belligerents in all British wars.

I say it is impossible for us, under the agreement arrived at, to avoid this; it is a necessary consequence. My friend, Mr. Bourassa, pointed out in Montreal the other day what a number of wars had taken place even since we had undertaken the defence of our own country. On no occasion, except under the peculiar circumstances of the South African war, was it thought by the mother country that we should participate in those wars. We were entire strangers to those countries, entire strangers to the causes that led up to those wars. Some of them were wars of conquest, I do not say unjust conquest; perhaps some of them were necessary on the part of Great Britain, but we were never asked to take part in them.

3. We become parties to all British guarantees to foreign nations.

Great Britain has undertaken very serious responsibilities, involving possibly very extensive wars, towards those foreign nations. I say that we in Canada, under pain of being branded as unfaithful to this agreement, and worse than that, as cowards, would be obliged to take part in those wars, and in those terrific conflicts which may be occasioned by her guarantees, and which may be brought on at any moment. Let me point out what those guarantees are. They result from treaties which, from time to time, Great Britain has entered into, treaties with which we have nothing whatever to do. But they are binding all the same, and I venture to say that, with my small knowledge of history, and of the circumstances which surround these agreements, they will have to be performed, and they will be the occasions of war, and in those wars we must participate. We cannot possibly and honourably avoid them so long as we are bound by this agreement. Let me refer the House to a work by Mr. Thomas Gibson Bowles, 1856, in which he says:

It is sometimes assumed that the responsibilities of Great Britain begin and end with the defence of her islands against invasion. This is far from being the case. She is in no whit less responsible for the defence of India and of her other possessions and colonies scattered throughout the world. Besides that moreover, she is bound by the most solemn engagements, some of them of great antiquity, with reference to the territories of other countries which she has guaranteed.

She could not allow those guarantees to fail, and we could not allow her to stand alone isolated, after having made this agreement in defence of these guarantees.

Thus she has guaranteed that Belgium shall form an independent and perpetually neutral state by article 7 of the treaty of 1839.

She has undertaken, in case of the attack of an invader, to protect Chusan (an archipelago off the east coast of China) and its dependencies and to restore it to the possession that end, by the treaty of 1885.

She has guaranteed that the Grand Duchy of Luxembourg shall henceforth form a perpetually neutral state, by the treaty of 1867.

She has guaranteed the integrity and perpetual neutrality of Switzerland by the declaration of 1815.

She has guaranteed, as against Russia, the territories of Norway and Sweden, undertaking to furnish naval and military forces to that end, by the treaty of 1885.

She has guaranteed the independence and territorial integrity of the Ottoman (Turkish) empire in Europe, by the treaty of 1856.

She has guaranteed Greece as a monarchical and independent state by the treaty of 1832 and 1863 and the perpetual neutrality of the Ionian islands also by the treaty of 1863.

She has especially guaranteed as against Russia all the Ottoman (Turkish) possessions in Asia, engaging to defend them by force of British arms, in the treaty of 1878.

She has engaged to 'respect the independence' of the Sultan of Muscat (on the south short of the Gulf of Oman, near the Indian ocean) by the declaration of 1865, and to 'promote the integrity and independence' of Persia by an agreement with Russia embodied in correspondence extending from 1834 to 1888.

And most especially and most repeatedly has Great Britain guaranteed her most ancient ally, Portugal, to defend and protect that country itself as well as 'all its conquests or colonies'—an obligation which seems to extend to Delagoa bay in Africa—by various treaties beginning as far back as 1373 and coming down to 1703.

'Thus,' says Mr. Bowles, 'singly or together with other powers, Great Britain is under the most serious and solemn treaty engagements with respect to Belgium, Luxembourg, Switzerland, Sweden, Turkey, Portugal, Greece, Muscat, Persia and China—engagements which might at any time only be capable of being carried out by force, and for the forcible carrying out of which all her power might not be too much.

I mention these things because, so far as I know, they present a feature of the case which has not been insisted upon during the discussion up to the present moment. Now, I say that we guarantee the integrity of the empire—that is the way I understand this agreement—that is what we do, and why endeavour to conceal the existence of the obligations we are assuming? We receive no guarantee as to the maintenance of the integrity of our own Dominion. Most important of all, we have no voice of any kind in the conduct of imperial affairs, while being bound by imperial obligations towards foreign countries. We become liable to the political and financial results of those obligations, without any representation, or administrative responsibility. I say, therefore, that, by this policy, we associate ourselves with Great Britain as a world power, deeply interested in and responsible for international happenings in every part of the world, and obliged to exercise continual vigilance upon our part. Let me quote to the House what is said on this point by a newspaper of Ontario, 'The Weekly Sun,' of the 26th of January last:

Some points arise out of the discussion that call for special consideration.

The first was contained in the speech of Sir Wilfrid Laurier; the second in what was said by Mr. Monk.

The premier said that when Britain is at war Canada is at war as well. This has always been true in a theoretical sense, but it will become most emphatically true, in a very practical way, if the proposal to build a Canadian navy is gone on with. During the present generation Great Britain has been engaged in a dozen petty wars without so much as creating a ripple on the surface of things in this country. This was because the scene was far away, and Canada was not directly engaged. So long as we confine our forces to land forces Britain may engage in a very considerable war, with a distant country, without Canada also becoming directly engaged unless our parliament and people deliberately decide that Canadian troops shall be moved to the scene of conflict. If we create a navy the situation will be wholly different. A naval force will necessarily be on the sea; its officers, bearing the King's commission, will be under the same direction and control as officers in the royal navy bearing a like commission. The consequence will be that the moment Britain engages in any future war, that same moment, if a Canadian warship is within reach of the field of operations, Canada will, through her navy, become engaged as well.

The consequences arising from this situation were well stated by Mr. Monk. Canada will thus, without any control whatever over British diplomacy or British treaties, become liable to find herself at any moment plunged into war because of this diplomacy or as a result of these treaties. In other words, statesmen in Britain, who are not responsible to our people, who cannot be called to account at polls held in Canada, will be placed in a position to use forces armed and paid for by this country in any war Britain may choose to wage. We may at any time find ourselves actively engaged in conflict without our consent, and in a conflict, too, of which the Canadian conscience would not approve.

That is possible. The members of this House have heard of the China war which has been called the opium war. It was a war which was waged by England in order to oblige China to open her treaty ports to the opium dealers of India. There may have been some treaty obligation on the part of China, but, at any rate, that was the object of the war. Applying what I have just read to the case would it be with enthusiasm, that, having convoked parliament, the people of this country would engage in a war which must necessarily cost us at the very least some $15,000,000 or $20,000,000 for the purpose of forcing Ching-Ching-Chinaman to eat opium? I doubt it. To continue the citation:

Another consequence will arise from this situation, and one that was not spoken of either by Mr. Monk or the premier. Because Canada will be thus made responsible for British policy the attention of our people will be constantly diverted from our home affairs to British affairs. Canadian people are sufficiently complicated already. We have a wide stretching territory; the interests of one section of Canada are not always in accord with other sections; we have representatives of all races under the sun; we have enormous resources to develop. We require the wisest statesmanship and the most carefully thought-out-constructive policy for the purpose of meeting the problems presented. If we are to be continually distracted by old-world poli-

tics and disturbed by old-world quarrels, it will be impossible to give to the home situation the careful, painstaking attention that situation calls for.

I must quote also from another article from the same paper on the same date entitled 'Part of a General Scheme' for it goes to support what I stated a moment ago as the result of a general view of what had taken place at the conference.

This proposal to create a Canadian navy is but one part of a general plan now being put into operation. It was preceded by a change in the Militia Act giving to the government power, which it did not before possess, to order Canada's land forces on service outside the borders of Canada. It is being accompanied by a reorganization of these same forces which will make these correspond with the organization of the British army to the end that British and Canadian troops may fit in together when called upon for joint action in foreign war. The intention on the part of those behind the new movement, is to gradually develop very considerable naval and military forces in this country that will be part of a world-wide war power, and available on call for service in any country to which they may be called by the central authority.

Such a scheme cannot be carried out in its entirety without effecting a fundamental change in the character and ideals of our people.

The writer goes on to point out very correctly and I think wisely that the whole course of thought, the idiosyncrasy, if I might use the term, the mental structure of the people of this country will be completely changed and this transformation will be from a new world and a young nation suddenly to the old world with all the vices, embarrassment and troubles that attach to that sudden change.

Therefore I say we have no control over the government and no representatives in the parliament which makes and unmakes wars and controls our destiny.

Now I wish to say a word or two in regard to the character of this contemplated change and I shall say it briefly. Up to 1894 and even to a later date the British government never for a moment intended that Canada should do more than provide for its own defence. Never up to 1894 was that contention put forth, although the matter had received the constant attention of the imperial government, and although on more than one occasion that government had given to us in authoritative and official form communication of the conclusions at which it had arrived. With regard to defence, we have never, as I stated before, shirked the duty which seemed to be imposed upon us properly of attending to the defence of this country We gave proof of that in 1776. The right hon. Prime Minister alluded to what we did at that time. We gave further proof of it in 1812 and 1814. No sacrifice was spared by the people of Canada to provide as far as we possibly could against American invasion and we did our full duty at that time as history proves. After we succeeded in obtaining responsible government in 1848, the British government began insisting—I do not say improperly—I say properly—that as a corollary duty of the liberty we then had acquired we should provide for self-defence and that duty should be performed. I stated, that when I, in answer to a call from my electors, gave them my opinion on this question. We took in this country at that time the ground that we must organize our own defence and the attitude of Cartier and his associates is not open to any doubt upon that point. No suggestion was ever made at that time that we should go beyond that. The utterances of Cartier and Macdonald go to prove that. I do not fear to assert that the traditions of the Conservative party, as I read them, point to the fact that that was the policy of the party. It started from the principle that having local self-government we must be ready to assume the duty of self-defence. These statements never went further than that; and when allusions are sometimes made to strong expressions by Sir George Cartier and Sir John Macdonald on the necessity of maintaining British connections, these expressions were always used in reply to the outpourings of friends of the Prime Minister, of the Prime Minister himself, when they ventilated policies such as those my hon. friend the leader of the opposition described to-day, and when they spoke of breaking down the barriers existing between us and the United States and pointed to the inevitable destiny of being absorbed by the great republic which awaited us. But nowhere will you find in the utterances of these great forerunners of the present Conservative party, nowhere will you find in the speeches of Sir John Macdonald or Sir George Cartier or of their successors the formulation of any such ideas as that we should go beyond the maintenance of our actual position. I had the honour, although I was very young at the time, of knowing the late Sir John Macdonald and also the late Sir George Cartier, who was an intimate friend of my family, and of whom I may say with the poet that he danced my infancy on his knee, and I am aware that these men were loyal subjects of the Crown and opposed to any policy which would lead to the severing of the tie that bound us to the mother country and which they deemed so essential to our welfare. But everybody who has studied history, everybody who has read the imperial state papers referring to Canada, from 1860 to 1867, everybody who has read the life of Sir George Cartier knows that he never went beyond that, and

any attempt to prove that he did must necessarily fail.

I said a moment ago that England herself had laid before us in an official way her contentions with regard to defence; I would like to refer to what occurred in this country more than half a century ago at the time of the American war. At that time the Duke of Newcastle proposed to the Canadian government—it was during the union of the two Canadas—that we should do three things. He proposed that we should organize in Canada a force of 50,000 men, that we should place it under imperial direction and vote the necessary supplies for five years. Let me point out how that proposition was received by the Canadian government; and I cannot better do this than by referring to a memorandum prepared by the Canadian cabinet in October, 1862, to be handed to His Excellency the Governor General for transmission to the Duke of Newcastle. This memorandum proves that the men of that day, who are taking part in the conquest of our political liberties, were men who realized better than do those who are now controlling the government of this country, what that demand meant. Let me quote from the memorandum:

Another suggestion embraced in his Grace's despatch is well calculated to excite surprise. Your Excellency's advisers allude to that portion of the despatch in which his great purposes to remove the control of funds required for military purposes from the domain of parliament. His Grace is evidently aware that the proposition wears the aspect of 'an interference with the privileges of the representation of the people,' and it is certain that any measure liable to this construction never will be and ought not to be entertained by a people inheriting the freedom guaranteed by British institutions. The imperial parliament guards with jealous care the means of maintaining the military and naval force of the empire. Its appropriations are annually voted and not the most powerful minister has dared to propose to the House of Commons the abandonment of its controlling power for a period of five years. If the disturbing action of ordinary politics is a reason for removing the final direction of military preparation from parliament, it is in every sense as applicable in England as in Canada. What the House of Commons would not under any circumstances of danger entertain, is not likely to be entertained by the legislature of Canada. Whatever evils are incident to representative institutions, the people of a British province will not forget that they are trivial in comparison with those which are inseparable from arbitrary authority. Popular liberties are only safe when the action of the people restrains and guides the policy of those who are invested with the power of directing the affairs of the country. They are safe against military despotism wielded by a corrupt government, only when they have in their hands the means of controlling the supplies required for the maintenance of the military organization.

'A union for defence' is proposed by His Grace the Secretary of State for the colonies. A union of the British North America provinces for the formation and maintenance of one uniform system of military organization and training, having a common defensive fund, and approved by Her Majesty's government; a union whose details would emanate from the Secretary of State, and whose management would be entirely independent of the several local legislatures. Your Excellency's advisers have no hesitation in expressing the opinion that any alliance of this character cannot at present be entertained.

Your Excellency's advisers now turn to the general principle which underlies the argument of His Grace. That the right of self-government has for a co-relative duty the maintenance of provision for the defence is a proposition which, in the abstract, is indisputable; but it is only indisputable in the case of government of states which are sovereign in themselves, as between a colony and the parent state it cannot be said to exist in the same sense.

The whole memorandum is pregnant with protest against any application of the principle that the military or naval forces of this country should be controlled by any other power than the legislature which established them.

Let me now refer to a memorandum prepared not so very long ago—not by any conference, but by a special committee of the Imperial Privy Council itself. That council itself took this matter into consideration in 1896, and made a report regarding the defences of the empire, to which the Duke of Devonshire alluded when he spoke at the meeting of the British Empire League on the 3rd of December, 1896. This is what the Duke of Devonshire said:

I have found with very great satisfaction on my return to office, after an absence from official life of a good many years, the large progress which has been made in the consideration of the great question of imperial defence. A body is now in existence, and has been for many years called the Colonial Defence Committee, composed of representatives of the admiralty, the war office and the colonial office. That body has made a complete study of the question of colonial defence as it effects every colony of the British empire. It has studied the question from the point of view of each colony, and every colony, whether it be a Crown colony or a self-governing colony, is now in possession of the views of Her Majesty's government as to the nature of the attack—the possible attack—to which any of them may be exposed, and as to the means of defence which it is possible to oppose to such attacks. Every colonial government now knows what the imperial government is prepared to undertake in their defence, and what must be left to themselves to undertake. Now, although the instructions to this committee, and the plans which this committee has prepared, are, and must be, to a very great extent, of a confidential character, yet I am permitted to make a public announcement of the principles upon which

those plans are based; so that not only the public at home, but every one of our colonial fellow-subjects should know how much it is that the government are prepared to undertake in the defence of the colonies, and the duties which in their turn they think ought to be undertaken by the colonies themselves. These principles are as follows: The maintenance of sea supremacy has been assumed as the basis of the system of imperial defence against attacks from over the sea. This is the determining factor in shaping the whole defensive policy of the empire, and is fully recognized by the admiralty, who have accepted the responsibility of protecting all British territory abroad against organized invasion from the sea. To fulfil this great charge they claim the absolute power of disposing of their forces in the manner they consider most certain to secure success, and object to limit the action of any part of them to the immediate neighbourhood of places which they consider may be more effectively protected by operating at a distance.

It is recognized, however, that Her Majesty's ships engaged in hunting out and destroying the squadrons of the enemy may not be in a position to prevent the predatory raids of hostile cruisers on British ports. The strength of such an attack will vary in the different parts of the world according to the strength of possibly hostile navies, the proximity of their bases and the troops that are or could easily be brought there in anticipation of war. It also varies from time to time with changing political combination. But it is improbable that this raiding attack would be made by more than a few ships, nor could it be of any permanent effect unless troops could be landed. In no case could a greater force than a few thousand men be collected and conveyed without such arrangements and preparation as would bring the operations under the category of those which the navy has undertaken to prevent.

Against a raid of the nature indicated, it has been considered necessary to make secure those places which are essential to the navy for coaling, refitting, and repairing. Ports for this purpose have been selected by the admiralty, and imperial resources in men and money available for use abroad have been concentrated on their defence. Apart from the harbours fortified for the navy, there are other ports which, though they do not enter into what may be called the general strategic scheme, are also liable from their commercial importance to predatory raids, and which require measures of defence for the protection of the special interests involved. The resources of places which, in the opinion of an enemy, would justify the very considerable risks which a raid on them would involve, are generally sufficient to admit of the provision of local defence by local means; and where the liability to attack and the resources to resist attack co-exist, it has been held to be the duty of the colony to make provision for adequate defence. In dealing with places of this nature the committee have advocated the creation of sufficient fixed defences to prevent their unmolested occupation by hostile cruisers, but more especially the provision of troops sufficient to deal effectually with such forces as an enemy must put on shore to enable him to secure any permanent advantage from his attack. Troops without works may detect an enemy and frustrate his object. Works without troops are useless and delusive. It is necessary to lay stress on this fact, as fortifications give an appearance and feeling of security which is not justified unless they are fully garrisoned by well-trained men and supported by mobile forces, and because expenditure on defences involving a heavy outlay at one time and little at another, can be more easily fitted into the exigencies of fluctuating budgets than expenditure on troops which must be constant to be effective.

I will not continue this quotation, but it results therefrom that the British government itself, in 1894 or thereabouts, formulated a plan which was based on close application and study; and the Duke of Devonshire stated: 'We communicated officially this plan to the colonies in order that they might govern themselves accordingly.' That was one clearly enunciated plan under which we did not depart from the policy we had always followed of defending our own shores. But there ought to be added to that the proper equipment of dry-docks and coaling stations and such armaments as would enable us fully to defend ourselves against sudden raids. Nobody that I know of in this country is opposed to that, or would deny—because a raid is always possible—that we should guard against any attack of this nature. What I say is this: That at the conference of 1907, which my right hon. friend attended, and in which he denied absolutely that we should accept any scheme of this kind, no very different plan from this very one was laid before the conference. There was a small addition. Lord Tweedmouth, in addressing the conference, stated first and foremost, and as the representatives of the British government had always stated: We demand as a sine qua non the complete control in time of war of all naval forces, whether colonial or otherwise; but he stated there, what the Duke of Devonshire had stated to the British League in 1897, and what he stated also on a memorable occasion in the House of Lords, when questioned by Lord Minto, that all they asked from us was this very thing. Lord Tweedmouth added that we should have light torpedo boats or destroyers, which he said could not cross the ocean under any circumstances, but which might be used as a complement to this scheme of defence. He did not go any further. And let me point out this to my right hon. friend, who used such violent language in regard to myself at the time of the first reading of this Bill—very violent language. In fact, to use the words of the rhymster:

There never was heard such a terrible curse;
But what gave rise
To such a surprise
Was that nobody felt a penny the worse.

What the resolution of the 29th of March last stated was that we should proceed to organize the defence of the empire—how? On the lines laid down at the last imperial conference. Well, the lines laid down at the last imperial conference, with the exception of the light craft to which Lord Tweedmouth alluded, were precisely those of the scheme which was proposed by the Duke of Devonshire, and which I am not prepared to combat. It was a reasonable scheme, I think. At any rate, I am not against our assuming that part of the common defence of the empire. But what we have to-day, I submit, is a totally different scheme, which has never been discussed before in this parliament and never has been discussed before the people. I, therefore, say that it is safe to conclude that this is an innovation, a complete change has been contemplated. And who are the originators of that change? Who, I ask this House, has been so earnest in promoting this gradual advance until at last we are face to face with this scheme, which is totally different from the two others and from the third more ancient, which began in 1862? To my mind it is largely the work, in the first place, of the Imperial Federation Society, which failed because it had no representative character and had proposed boldly in the beginning a scheme for which we were totally unprepared, political union, which is virtually comprised in this present project, and when that society failed and the new one, the British Empire League, was organized, they took it up and the members of that anti-Canadian society, I will call it such, have been ever since moving heaven and earth to bring about this very policy to which many of us at present object. Look at the active members of that league. You will find they are not representative men; they are very respectful men, but if you read their speeches you will find that they have gone to England and stated that this very scheme is popular and accepted with joy throughout the country. What authority have they for that statement? Col. Denison or Mr. Small, at one of their meetings, after congratulating the meeting that it was not open to the press, stated that it was known that war decimates sailors, the British have great difficulty in finding complements of men for their navy, and they could easily recoup themselves here, there were 75,000 men at their disposal as a naval reserve, and the people were anxious to place them at the disposal of the British empire. I say that in making these statements they had no

authority and did not represent the sentiments of our people.

I have alleged and it has been said that this scheme, if it is properly shown to the people, will prove that it bears in its flanks the destruction of our right of self-government. I say in the first place it tends to deprive us of control of our land and sea forces. It binds us to the consequences of the external policy of the Downing street government, which we cannot control or hold responsible. It leaves us, I say, practically with large municipal powers. If you take away from a country, from any nation, the right to control, at any rate as free nations usually do, its relations with other nations, I say you deprive it of one of its most valuable inherent rights as a nation. I say in respect to this policy that it differs from the suggestion which began when we obtained responsible government in 1848; it differs essentially from the Imperial Defence Committee's report and it differs entirely from the suggestions made by Lord Tweedmouth in 1907. It is, in fact, a scheme which might be called the scheme presented to the last imperial conference by the Right Hon. Mr. McKenna, which was far more extensive and was never heard of or discussed by our own people.

There are many other things to be said in reference to this question, and if I am able to do so I shall express those views at the proper time. But I wish, before resuming my seat, to say one word in regard to the reproach which has been addressed to us in all or nearly all the newspapers of this country, a most unjust and unfair reproach, to my idea. We have been branded, those who hold the views I have just expressed to the House, as ingrates, as wretches with no other sentiment than that of selfishness and egotism, and it has been claimed that what is asked from us to-day, this, to my judgment, unjustifiable sacrifice of our liberty, we owe to the mother country. Without them we would be nothing at all in this country, nothing whatever, and I heard it said to-day that if British supremacy upon the sea was to fail we would disappear at once. It reminded me of the old saying of the fates in Rome: 'While stands the Colosseum Rome shall stand; when falls the Colosseum Rome shall fall, and with Rome the world.' I think the members of this House will admit that during weeks of denunciation, a public man cannot with equanimity see himself charged with these grave failings, of ingratitude and selfishness, and although I do not want to open or unduly extend the chapter I would say one word on this subject.

Is our indebtedness so very great? Do we owe all this to the mother country, and have we done nothing for ourselves in re-

spect to external affairs or in respect to our own political development? Have we been like sponges or jelly fish, occupying a merely passive role in that regard, and has everything that could be done been done by the mother country? One word as to that. Look at the diplomatic handling of our affairs by the mother country ever since 1782, to begin at the beginning. I do not pretend that for what was done there was not fair justification. We had an immense territory, we were a small people, and the government of those days had to look after the interests of a vast empire, and it was then, be it said, under the control of foreign nations with regard to its dependencies which it very soon was obliged to abandon, and had it not abandoned that policy and those notions, not one, I venture to say, of those dependencies would have the British flag over it to-day. I shall not allude to what took place in 1782. Most of the gentlemen who sit in this House have read the story of our negotiations with the revolted American colonies, when the British government sent to Paris to meet such men as Adams, Benjamin Franklin and Jay, Mr. Oswald and Mr. Vaughan, who had no knowledge whatever of this country, no diplomatic experience whatever, and who, if they had had their own way—and I think if Lord Shelbourne himself had had his own way—would have taken a course which would have resulted in there being no Canada at all. Had not Mr. Strachey, as every one knows, the special diplomatic envoy of England, arrived at the last moment to save the shreds of British territory which exist on this continent to-day, everything would have gone by the board. Mr. Oswald was anxious to give up the whole of Canada, Nova Scotia and all the rest of it; he called this country the back land, a swamp that was of no value whatever, and when Mr. Vaughan saw that, he ran to Franklin, that keen old fox, and his associates, who were more than a match for these two men, and induced them to give up most valuable territory.

As I say, the two negotiators at that time were anxious to obtain the consent of the British government to give up Nova Scotia and Canada as of no value whatever. I do not wish to enter into details, but they gave up a territory of over four millions of acres, constituting to-day seven of the most fertile and magnificent states of the American union, to which Jay Adams and the others recognized that they had no right whatever. Thus to-day we are deprived of that fertile region communicating with our northwest and are bound to traverse an arid desert which will ever remain a barrier between our fellow citizens in the west and ourselves. They gave up the Indian territory; that is history familiar to all. And when they did that, everybody knew, except these two innocent gentlemen themselves, that the ultimatum of the American congress was reduced to this: Give us independence for the thirteen colonies and ask for no indemnity for the loyalists who have suffered through this war. That was the ultimatum: But Benjamin Franklin and Jay took it upon themselves, as they themselves afterwards explained and as is explained by their biographers, to insist upon this piece of precious territory which had been conquered by our ancestors, which belonged at one time to France and was ceded by France to England. This was given up in spite of the fact that the American congress never wanted it. I do not see anything in that that greatly shows anxiety to protect our rights. If you go further, what about the sacrifice involved in the Ashburton treaty? Lord Ashburton said it was a mere marsh of the state of Maine, and said in the British House of Commons that it would have been absurd to go to war about that territory. Or about the western territory belonging to us, the state of Oregon. If any man wants to know the value of this territory in Maine, let him read the history of the Intercolonial, by Sir Sandford Fleming, and learn what a sacrifice on our part was involved. I say that anybody who looks carefully through these negotiations will arrive at the conclusion that England was governed at that time by principles of expediency and not purely by a desire to maintain integrally the territory that belonged to us and our descendants. And, as to the Washington treaty, is there anybody in this House, who, knowing what has been published since that time, has any doubt but that there was then seriously debated—even when we had acquired importance, when this country was a confederation and was extending westward and intended to cover the whole of the northern part of this continent—is there any doubt in the mind of any man that the question of ceding Canada was discussed as a complete settlement of the Alabama claims and the claims resulting from the civil war? Is there any man who doubts that the British plenipotentiary at Washington—I think it was Sir Edward Thornton—stated that he was ready to give up Canada but did not like to do it without the consent of the people? If it were necessary to prove this, I would take up time quoting the authorities. But we need not go back even so far as this. Everybody knows, as a matter of the present generation, the history of the Alaska difficulty. We abandoned all our rights under the Clayton-Bulwer treaty for valuable privileges at the very time that this Alaska

difficulty was under consideration and when, as was pointed out, I think, by my hon. friend from East Grey (Mr. Sproule) we should hold to all these privileges until we on our side had obtained a just and fair treatment of our claims. Everything was given away without equivalent obtained. And I am wondering this evening after what has been told us, if what happened in regard to the Alaska boundary is true. Is it true that Lord Alverstone, after having agreed with our own Canadian representatives as to the judgment that they were about to give, went, the day after to the final meeting of the Joint Commission, and there to the intense surprise of Sir Louis Jette and Mr. Aylesworth, changed his award and gave out two valuable islands—valuable from a strategic point of view—without having re-conferred with his fellow delegates. How can we explain such a thing as that? Certain it is, in regard to that transaction, that the Prime Minister (Sir Wilfrid Laurier) himself stated that our representations were ignored, that the three men named by the United States government were not, as the treaty required, impartial jurists. My right hon. friend stated in this House that his government made representations at that time, and yet the British government proceeded to accept the nomination of these three representatives of the United States without paying any attention to our protest. Members of this House will recollect what the Prime Minister said at that time in a moment of, to my mind, just irritation. I merely mention these facts, and have no wish to go into detail. There are many other facts that might be cited to prove this claim that any man who says that we owe a debt of gratitude to the mother country in respect to these many transactions under which our territory has been greatly fragmentized, is speaking of what he knows nothing about. But let us look for one instant at the internal work that has been done here. What of this pretension that if British supremacy is not maintained upon the sea, we cease to exist? I think that is carrying assertion a little far. Whatever we have in this country in the way of economic development or in the way of free political institutions is our own work. We built it up ourselves. And my right hon. friend will admit that, in the early days, we had to wrest concessions from the mother country. The Act of 1774, the Constitution Act of 1791, the responsible government of 1848, the different Constitutional Acts of a later day, confederation itself—were these things originated in England and brought out here for execution? Let us be fair; they were carried out by our own people. Our own people framed the confederation and brought it to England for sanction. Our own people extended the confederation from one side of the continent to the other. And the merit of England is that she recognized, as Spain did not, that, unless she entered upon a Liberal policy with her great dependencies she would have to submit to the fate that ultimately overtook Spain itself.

I would not open the chapter of 1837 as my right hon. friend has done. But I must confess to my friends from the province of Quebec, on the other side, not that I think them more intelligent than my friends of English origin on this side, that it is a surprise to me that they who know what it has cost us in blood, and sacrifices, and money, the liberties which we have earned, should treat so lightly, in such a childish manner, the scheme which has been brought before us to-day, and which, to my mind, inflicts a grievous wound upon the self-government which cost us so dear in the province of Quebec. I say that is to me a subject of surprise. It is not so long ago that men were thrown into jail for claiming just such things. There is not a man in this House who would continue to live in this country if he did not enjoy what was asked for by the ninety-two resolutions. I would not live in a country which did not possess the full enjoyment of what was claimed by those resolutions. Yet men were thrown into jail for claiming that which we could not live without to-day—no accusation, on suspicion, respectable men, honest men, put in jail for more than a year, and then released with nothing against them. Others were sent to the scaffold. I have been intimately connected and related with men who were not French Canadians, the counsel and defenders of those men at that trial, and I can say this from information received from them, men who have obtained a high judicial position in this country, that that trial left upon them many bitter reflections. Think of an officer, being a good hand at sketching, sitting down and sketching with levity a picture of one of those men hanging on a scaffold, showing it to his neighbour, before the trial was terminated. But I do not want to enter upon those events to-day. I will say this, however, that if this system of branding a public man of honest convictions as an ingrate, as a coward, continues, I will reopen that chapter, and say things which I believe will silence them for ever.

In all those discussions at the imperial conferences it has struck me that our representatives seem to have been impressed with the desire of giving every thing and claiming nothing. Whether my hon. friend the Minister of Militia and Defence, and my hon. friend the Minister of Marine and Fisheries, who I regret to see is not here,

were hypnotized and put into a trance I do not know. But at those conferences nothing was claimed. You would imagine that people accustomed to British liberty, to British privileges, when proposals of this kind were laid before them, would ask for some correlative privileges, which every Britisher is proud to possess throughout the world. But no. At one conference there is a resolution proposed by an Australian delegate, and carried, to the effect that in so far as diplomatic and confidential relations would allow, it was proper for the British government to communicate commercial treaties to the colonies. Lord Tweedmouth, Mr. Chamberlain, and other English public men, imbued with the broad principle that responsibilities of this kind carried representation, had stated, as Lord Tweedmouth did at the conference of 1907: We dont ask you to do this without inviting you to share in the representation. That proposal was in harmony with British ideas. But on our side nothing was asked, nothing was claimed. I do not mean to say that if these things were in that shape before us, I would adhere to them. I think that 'sufficient to the day is the evil thereof'. But I am impressed with the idea that nothing seems to have been asked, and that we entered into this unlimited scheme of responsibility in such a manner as to distinguish us completely from the British subject who lives in the British isles, and who himself controls the foreign policy of the empire.

Now, I notice that at a meeting of the Women's Canadian club at the city of Quebec His Excellency the Governor General, in a very interesting speech, spoke as follows, after having devoted his attention for a considerable time to a justification of imperialism:

(Translation). Is there in the world a people more privileged than the people who inhabit the fine province of Quebec? Your laws, your language, are under the special protection of the British Crown. In return for so many privileges and advantages, the Crown exacts nothing from you except sentiments of loyalty. The word 'imperialism' does not imply active intervention from England in the government of this country; the word 'imperialism' symbolizes the power of each of the units of the empire and absolute liberty in each of these units.

Now, I do not for a moment apprehend that these remarks of Lord Grey before the ladies of Quebec would have any practical result upon this very important political question. We have not reached that stage which gave rise to the old French saying, 'Le royaume est tombé en quénouille.' But I would be curious to know in what respect this scheme increases the amount of liberty that we enjoy at present, and in what respect it increases the happiness we have succeeded in obaining in this country, and which we at present enjoy.

Mr. Speaker, I said a moment ago that I thought from their position and from what I know they know, my friends from the province of Quebec who sit on the other side of the House would look at this question more seriously than they seem to have done. I have been several years in this House and I have been astonished at their conduct sometimes, I am bound to say after what I have alluded to, as to the struggles which took place in our province for the obtaining of the liberties which we now all enjoy and for which I think some credit is due for what was done in the province of Quebec. I have seen these gentlemen in this House vote against the maintenance of the rights that were claimed for the minority in the organization of the new provinces of the west, I have seen them vote against the maintenance of the right which all parties in this House admitted to exist with regard to the French language in these provinces when at one time I moved for the maintenance of the strict right of the French Canadian to speak—only to speak—in that language in both of the assemblies of these provinces. They voted against it when it was admitted in this House by every jurist that that right stood exactly upon the same plane as the right to free education. I have seen them remaining during all these years utterly indifferent to the denial of the rights of the minority in Manitoba after having heard them say what they said in my province before the elections in 1896. I must confess to these gentlemen that their final cheerful adhesion to the scheme now submitted to this parliament is an additional, and I may say, a somewhat painful surprise, I would like to move, Mr. Speaker, although I agree with something that is contained in the motion moved by my hon. friend the leader of the opposition, a subamendment as follows:

This House, while declaring its unalterable devotion to the British Crown, is of opinion, that the Bill now submitted for its consideration changes the relations of Canada with the empire and ought in consequence to be submitted to the Canadian people in order to obtain at once the nation's opinion by means of a plebiscite.

After the long explanation that I have given I think the House will realize that it is the right of the people of Canada to be consulted upon this new policy. I think it is an infamous denial of the rights of the people to pass on and carry through this scheme without even giving them a chance, they, who are the absolute masters, of expressing an opinion with regard to a policy which is new to us, new to them, has never been even mentioned before the people of this country and upon which they have the right without any doubt of expressing their free opinion

Hon. RODOLPHE LEMIEUX (Postmaster General). Mr. Speaker, it is with a deep sense of emotion that I now rise to give my earnest support to what I believe to be one of the most important pieces of legislation that has ever been introduced into this parliament, since it has been in existence. I hope I will be brief in the remarks which I intend to offer, I hope I will be clear and that I will treat this subject, not with levity, but with the gravity which it imposes upon one. Sir, I have listened with great pleasure to the speeches which have already been delivered by my right hon. friend the Prime Minister (Sir Wilfrid Laurier) by my hon. friend the leader of the opposition (Mr. R. L. Borden) and by my hon. friend the member for Jacques Cartier (Mr. Monk). I have listened to what has been said and I believe that as regards the policy of the government, no clearer, no more eloquent statement could be made than the one which was made this afternoon by the Prime Minister of Canada. Let me say, in justice to my hon. friend the leader of the opposition, with whom I may differ, that he has placed himself squarely before the House, and that he has presented in a concrete form, the policy of his party. I have listened courteously, I believe, to the statement which has just been made by my hon. friend from Jacques Cartier, who represents one wing of the Conservative opposition. I say that I have listened courteously to him, as I always do. I can never forget one thing. When my hon. friend speaks, I always remember that he was my old professor at Laval University, and I owe him the courtesy which a pupil owes to his professor. I did not interrupt him when he began his remarks and he should have spared me his sneers when he referred to a knighthood dangling before the eyes of the Postmaster General. Mr. Speaker, remember that this is intended for Quebec consumption; it is not for Ontario consumption. I have only this to say in answer to my hon. friend that he might have offered to his pupil a little more of the milk of human kindness and a little less of the cup of bitterness. Sir, I am a reformer, I do not belong to the party which by divine right is called upon to govern all the peoples of this world. I am a reformer, I am a plain man. Unlike my hon. friend, I am not a seigneur, no blue blood about me. Speaking as such, as belonging to that vast army of common people so well described by the late Abraham Lincoln as the race beloved of God, since they were so numerous on the face of the earth—yes, as a plain man and a reformer, with the deep sense of the duty which devolves on me on the present occasion, let me say to my hon. friend that if, forsooth, I am a knight, I am a knight of labour, nothing more and nothing else. And when I shall have said this evening what I intend saying, my language may be repeated in the smallest hamlet of the province of Quebec. And whether in the province of Quebec or in any of the other provinces, I will tell to the face of my hon. friend, who indulges in sneers at my expense, that let my right hand forget its cunning and my tongue cleave to the roof of my mouth if ever I sell my birthright and that of my fellow countrymen for a mess of pottage.

Sir, we had a right to expect that, on a question of this importance, the two great traditional parties in this parliament would have given to the people of Canada an example of union. This is a matter of the gravest interest, and after the resolution which was adopted unanimously on the 29th March, 1909, one would have expected that we would have united on the principle of a Canadian navy. But the right hon. the Prime Minister and the Liberals have on this, as on other questions, to face the same old opposition. 'Too much' my hon. friend from Jacques Cartier (Mr. Monk) will shout to his faithful electors at Lachine, 'too much' will he shout to the electors of Gaspé, when I suppose he will represent me as being a slave of the King and as having sold myself to His Excellency the Governor General for a knighthood; 'too much' will he shout in the province of Quebec. 'Not enough,' my hon. friend the leader of the opposition (Mr. Borden) will say in Ontario; 'not enough' will he shout in the English provinces of the Dominion. Sir, it is the privilege of the Liberal party to aim always at a happy medium and to steer through the shoals a middle course in questions of this nature. Of course, the loyalty of that party is always impeached when a policy of this kind is presented before the electors. This reminds me of what happened at the time of the French revolution when that famous lady, Madame Roland, was brought to the guillotine. On her way, as she passed before the statue of liberty, she bowed reverentially, and turning to the people, exclaimed: O Liberty how many crimes are committed in thy name! Could we not with equal reason exclaim, when we hear those shrieks of loyalty from hon. gentlemen opposite: O Loyalty, what many crimes are committed in thy name! Sir, who would seriously impeach the loyalty of the leader of the Liberal party or that of the vast majority of Canadians, who to-day compose the reform party? Were we disloyal when in 1897, of our own free will, as the first act of the Liberal administration, we granted to Great Britain what is called the British preference? At the time of the

South African war, were we disloyal when, in spite of trying circumstances, we sent to South Africa the young men of this country to fight the battles of Greater Britain? Are we disloyal to-day when we are the first in the history of this Dominion to give His Majesty the King a navy, as the Conservative party of old gave Her Majesty the Queen an army? Mr. Speaker, let us not talk of loyalty, but let us practice loyalty. We are denounced as ultra loyal in the county of Jacques Cartier, and as ultra disloyal in the county represented by my hon. friend from Grey (Mr. Sproule). In the province of Quebec, already, my hon. friend and his allies have started meetings of indignation against what they are pleased to call the great treason of the Liberal leader. The Blue press, which has been quoted this evening by my hon. friend from Jacques Cartier (Mr. Monk), is stirring up the worst prejudices of our people against this policy. The leader of the Liberal party is represented as sacrificing his compatriots, the French Canadians, on the altar of Moloch, meetings have been organized and resolutions have been passed protesting against the navy. Sir, it is the same old story. At the time of the Boer war, these shouts and shrieks were heard, as they were again heard when the Autonomy Bill of 1905 was introduced. But, thank heaven, there is a majority in this country of men of common sense.

I shall not delve into old books, I shall not quote to the House what happened fifty or sixty years or a hundred years ago. The privilege of a reformer is to face every difficulty as it presents itself and it is the beauty of the British constitution, that while it is based on precedents, it adapts itself to every circumstance and difficulty. Sir, why a navy for Canada? Because it is a natural evolution of the country. Take the marvellous increase of our population—thanks to the wise policy of the Liberal party, the population of Canada since 1896 has nearly doubled. Thanks to the Liberal party—thanks to Providence first and to the Liberal party afterwards.

Some hon. MEMBERS. Oh, oh.

Mr. LEMIEUX. There has been an enormous increase in our natural wealth. I have it from the hon. gentleman who presides over the Census Bureau, the Minister of Agriculture, that at the time of the next census, a year from now, the population of this Dominion will be nearer 8,000,000 than it will be 7,500,000. Our vast territories have become the refuge, the happy refuge, of thousands and hundreds of thousands of settlers. Do not our hon. friends opposite, who I verily believe are as patriotic as we are on this side of the House, not agree that it is good policy to instil into the minds and hearts of the new settlers who come from the United States, the idea that this country should defend and protect herself? The financial position of this country is extremely sound. As was stated this afternoon by the Prime Minister, the revenue of this year has reached the high-water mark of over $100,000,000; surpluses have followed each other since 1897, since we established the British preference. Our total trade, which in 1896 was $249,000,000, has reached the enormous figure of $750,000,000. The savings banks deposits, which in 1896 were only $250,000,000 have reached in 1909 the sum of nearly $800,000,000. The production of western grain in 1900 was only 32,000,000 bushels; in 1909 it reached 330,000,000 bushels. The mineral production of this country has also far exceeded our expectations. So I am not amiss when I say that our population has doubled, that our wealth has trebled, that our trade and our industry have increased by leaps and bounds since 1896. To use the language of the Toronto 'News,' I can say:

> Unexampled prosperity has dawned upon this confederacy. Our foreign trade surpasses $700,000,000 annually, our railway mileage is enormous, our prairie lands are filling up rapidly, our financial institutions are strong and vigorous, our industries are growing enormously.

From an economic point of view the Dominion of Canada of 1896 is represented by the value of two Dominions of Canada. It is not, I suppose, contrary to any constitutional doctrine of which my hon. friend from Jacques Cartier is such a brilliant exponent, to say that Canada has become the leading overseas dominion of the British empire. We make and unmake our tariffs; we control our defences; we practically make our own treaties. Not later than the first of February last came in force the Franco-Canadian treaty, which was negotiated through the diplomacy of our own Canadian statesmen, the Minister of Finance and the Minister of Marine and Fisheries. Sir, I can repeat the words of the right hon. the Prime Minister, who said in the presence of His Majesty the King in 1897: Canada is a nation within the empire. There was no question at the time as to whether or not the Prime Minister had used the words equivocally, whether he recognized the sovereignty or the suzerainty of the King. On this point let me say one word. My hon. friend from Jacques Cartier has been a professor of constitutional law. It so happens that in the same university I myself was a professor of the history of law, and I happen to know the difference between suzerainty and sovereignty. In England, in France, in Germany, the King is the suzerain—why? Because they were feudal countries. Under the feudal system, barons, mar-

quises and counts had become very powerful, until in France for example, the day came when Louis XIV. became the suzerain of all his grand vassals, the barons, marquises and counts. So it was in England and in Germany. It is silly indeed to pick a quarrel over the use of the word suzerain or the word sovereign. Sir, we are a nation within the empire, and why I pray, should we not have a navy of our own? Does any one dispute the right of this country to have a militia of her own? If there are objections to a Canadian navy, are there not also objections to a Canadian militia? My hon. friend from Jacques Cartier excited the merriment of his friends opposite when he opened his remarks; but I must say that when he concluded it looked as if the other side of the House was rather gloomy. Let me say to my hon. friend that he has not played the game fair. He has represented the thousands and hundreds of thousands of readers of the daily press in the province of Quebec as an ignorant lot. He insinuates that we, on this side of the House, have been bluffing the electorate of the province of Quebec, and he has quoted partially from a leader published in 'Le Canada' newspaper. Mr. Speaker, I wish I had time to translate that leader. Not a word can be found in it that is a reproach to the man who wrote it. It is ably written, and to every word in it any man could subscribe. It is written in French, and my hon. friend translated it into English only partially. I hope that some of my friends who will speak on this question will read the translation of this article. It is headed 'Les Quatre Manieres de Voir,' 'The Four Different Views.' and explain the policy of the Liberal party. as voiced this afternoon by the leader of the government. The editor states that in case of an emergency it is in the power of the Canadian parliament to say whether or not the navy can be used by His Majesty the King. My hon. friend excited hilarity of that side of the House on the word 'may.' 'May,' he said with emphasis, the Canadian government 'may' lend that tin-pot navy to the King of England. Mr. Speaker, the hon. gentleman was in the House some years ago when the Minister of Militia (Sir Frederick Borden) introduced his Bill to revise the Militia Act. Did he play with the words used in that Bill? Had he scrutinized the various clauses of that very important Bill he would have read a clause quite similar to the clause referred to. Clause 69 of the Militia Act reads:

> The Governor in Council may place the militia or any part thereof on active service anywhere in Canada and also beyond Canada for the defence thereof at any time when it appears advisable so to do by reason of emergency.

Mr. LEMIEUX.

Mark well: not the House of Commons but the traitors, who compose the cabinet. Yes, Mr. Speaker, we traitors may, if we so choose, lend the militia of Canada to the King of Great Britain. Has my hon. friend read that Act? Did he move any amendment when it was proposed in the House of Commons? Did he notice it? Was he absent? I believe he was not present and judging by the language he used this evening, to say the least, he was deficient in his duty.

Sir, it is of this argument of my hon. friend from Jacques Cartier, as regards the words: 'They may lend the navy to the King of England' that we shall hear in the present debate, particularly from my hon. friend from North Toronto (Mr. Foster), thundering denunciations, because forsooth the Canadian parliament is to meet and to deliberate whenever an emergency arises. But, Sir, this principle is in the Militia Act: parliament, according to clause 71, must meet when there is an emergency and when our militia is on active service. There are things which are said in the province of Quebec, and others in the province of Ontario and thus, various comments are made on the clauses of the Militia Act. My hon. friend from Jacques Cartier referred to the heroes of 1837 and 1838. He appealed to the French Canadian members in the House of Commons, he, the descendant of one who was fighting against the patriots of 1837. In his historical reminiscenses, has the hon. gentleman forgotten that the father of the Militia Act was a great leader and a knight at that, of the French-Conservative party, Sir George Etienne Cartier? Has he forgotten that Sir George Cartier was on the battlefields at St. Charles and St. Denis with the grandfather of the Hon. Mr. Brodeur, the present Minister of Marine and Fisheries, who signed with his own blood the Magna Charta of not only the French Canadians but also of the English-speaking Canadians of this country? Sir, the Thirty Seveners as they call them in the county of York, did not fight only in the Queen's bush of Quebec, but fought also for the same cause not very far from Toronto. But this is not only a question of sentiment, it is above all a question of business and hard facts and I hasten to revert to hard facts and business. Why should we not have a navy as we have an army? En passant, it is well to remember, that our militia force is not the skeleton of an army. I have heard more praise to the Canadian army during my peregrinations abroad, and from higher authorities than my friend suspects, certainly more praise than I have heard falling from the lips of my hon. friends opposite. Who were the men who thus praised the

Canadian army? His Royal Highness the Prince of Wales, the old General, the hero of South Africa, Lord Roberts. I say there is a beginning to everything. My hon. friend quoted a French axiom a moment ago. Let me quote another: 'Rome ne s'est pas bâti en un jour.' 'Rome was not built in a day.' The Canadian militia was organized fifty years ago. It is now a fighting force. It is a credit not only to Canada but to the empire, and when the time of danger comes, the Canadian militia will give a good account of itself. Might I not prophesy the same happy results for a Canadian navy? Sir, speaking for my country, I do not shrink at being great. No, I do not shrink at being great. My hon. friend, a moment ago, quoted the words of His Excellency the Governor General of Canada in Quebec the other day. He did not say what he had in his mind; he simply gave expression to a few flighty, elastic, pliable thoughts. I know, Sir, what will be said. Nay, I know what is already being said in the province of Quebec by my hon. friend's friends, about His Excellency. He is represented, very courteously, very chivalrously, by my hon. friend's companions and knight errants, as the commercial traveller of the empire. Sir, His Excellency the Governor General took occasion the other day, speaking before the Canadian club of Quebec, to define what the word 'imperialism' implied. I was very pleased to be present to applaud, and to see many of the leading citizens of Quebec, Conservatives and Liberals applauding also and cheering His Excellency. Let me translate into English what His Excellency said on that occasion. It is a lesson which should have been read by my hon. friend for his own benefit, and, now that I translate it, it will be a lesson to all those who misrepresent the attitude of the Governor General of Canada:

> Is there in the world a people more privileged than the people who inhabit the fine province of Quebec? Your laws, your language, are under the special protection of the British Crown. In return for so many privileges and advantages, the Crown exacts nothing from you except sentiments of loyalty. The word 'imperialism' does not imply intervention from England in the government of this country; the word 'imperialism' symbolizes the power of each of the units of the empire and absolute liberty in each of these units.

Sir, speaking the language of the old Normans, which is still spoken in the British House of Commons, I say: J'assente. If that is the bogey represented by my hon. friend to the electors of Lachine and Jacques Cartier, I say: Happy electors of Lachine and Jacques Cartier, to be powerful as a unit of the empire, and also absolutely free as a unit of that empire! Sir, have we not a sea-board to protect? Nay, we have two sea-boards to protect. We have also trade routes to look after. We have a sea-board on the Atlantic ocean with its prosperous and thriving cities; we have a sea-board on the western coast at Vancouver, at Victoria, at Prince Rupert, where, before many years have elapsed, marts of commerce and industry will develop. Not to speak of as possible conflicts with the United States of America—for I may well echo to the sentiment expressed by the Prime Minister of England, when, in a very recent debate he stated that, in his two-standard-power policy he never contemplated the possibility of conflict with the United States of America,—and neither do we contemplate the possibility of conflict with the great nation to the south. We would not, however, be true to ourselves, true to our traditions, if we did not exhibit to the Americans the same traits of courage, the same fighting qualities, that our ancestors have shown, should the hour of danger arise. We desire as a colony—nay, as a Dominion—we desire to be respected: let us begin by respecting ourselves and thus obtain the respect of the great neighbouring republic. But, Sir, not to speak of the United States of America, I say there is on the Pacific ocean a great power—two great powers. There is Japan, whose navy at the present hour—a navy organized by a Quebecker, Sir Archibald Douglas—is second only to that of Great Britain. As the Prime Minister stated this afternoon, fortunately for us, England in her many blunders—if I should use the word of the hon. member for Jacques Cartier—has secured a treaty of alliance with Japan. We have nothing to fear from Japan so long as that treaty lasts. But treaties do not last for ever, they are, so to speak, negotiable instruments: they change hands; and it is well to be prepared lest a change should take place. There is also a great power, China, which is looming large in the world's affairs, which sent, no longer ago than during the month of November last, a dozen picked naval officers to study in England the conditions of the British navy. Therefore, Sir, as I stated a moment ago, every one who does not shrink from thinking of his country being great, should think of our future and not cast aspersions on our efforts to build a navy. Mr. Speaker, I stated a moment ago, that we had trade routes to protect. I notice that some gentlemen are referring to resolutions which were adopted by the Grain Growers and the Grangers against the expenditure for a Canadian navy. Let me say this: I do not wish to lecture the Grain Growers and the Grangers, but some facts should not be ignored. If there is one class of people in this country

who, in case of war, would require the protection of the Canadian navy, iti s the farming community. I speak from a purely material point of view, because from the national point of view, I assume that we would all be happy to defend this country and to co-operate loyally with the imperial navy if need be. Let me give a few figures. In the calendar year 1908, the Canadian farmer sold his products outside of Canada to the extent of about $308,100,000. Briefly, if you took it in bulk to Great Britain in that year, we sold to the value of $97,400,000; to the United States, $3,200,000; to other countries, $7,350,000. In other words, the mother country took from us 90·2 per cent of all our agricultural exports. In view of these figures, does not the security of the British market mean something to us, and especially t› our farming community? Great Britain takes from us nine-tenths of the products of our farms. Those who believe that the farmers will be led astray by the do-nothing policy, are strangely astray themselves. I know that the farmers of this country are intelligent enough, in case of danger, to defend the trade routes, so as to protect the cargoes of food supply conveyed from Canada to the mother country.

Now, what are the objections made to the naval policy of the government?

1. It is stated in the province of Quebec by the friends of my hon. friend, that there is no need of a navy for Canada, because we are protected by the United States through the Monroe doctrine;

2. That we have no obligations towards Great Britain;

3. That the Prime Minister of Canada and his party have not kept their pledge on the question of militarism;

4. That Canada will not control her navy;

5. That there should be a plebiscite before any policy is affirmed.

Let me answer briefly to the objections I have enumerated. It is contended in Quebec that we do not require any protection because in case of war, we will be protected by the Monroe doctrine; if we were attacked, Uncle Sam would come to our rescue.

Mr. MONK. Would my hon. friend mention the name of anybody who has advanced that theory?

Mr. LEMIEUX. I read it, in the first place, in the Blue press of the province of Quebec; in the next place, it was expounded the other evening, during a three hours' speech, by the ally of my hon. friend, the ex-member for Labelle, Mr. Bourassa. If that is the policy of the little Canadians, how undignified that language is, especially if it is endorsed by a gentleman in whose veins runs blue blood; how undignified it is that we, a free people on this continent, should dream of relying upon the United States for defence in case we were attacked. Mark well, Sir, those who invoke the Monroe doctrine claim that they are better Canadians than we are; they denounce us as traitors to our country and our constitution. What is the effect of the Monroe doctrine? Does it apply to Canada? Every one who has read history knows that between 1811 and 1823 the Spanish dependencies of South America and of Central America declared their independence. That was at the time of the congress of Vienna, quite an historical event, at the beginning of the last century, in Europe. Then, was formed among the large nations of the world what has been called in history, the Holy Alliance. It was feared in the United States that the Bourbon dynasty, which had been ousted from its throne in Spain, might be represented in South America or Central America by one of its descendants. Then it was that President Monroe, backed by the diplomacy of Great Britain, through the strong hand of one of her best diplomats, Canning, issued the famous message which has since become historical. Let me quote from that message to see how it would apply to Canada:

> The citizens of the United States cherish sentiments the most friendly in favour of the liberty and happiness of their fellowmen on that side of the Atlantic. In the wars of the European powers, in matters relating to themselves, we have never taken any part nor does it comport with our policy so to do. It is only when our rights are invaded or seriously menaced that we resent injuries or make preparation for our defence. With the movements in this hemisphere we are, of necessity, more immediately connected and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different in this respect from that of America. The difference proceeds from that which exists in their respective governments. And to the defence of our own, which has been achieved by the loss of so much blood and treasure, and matured by the wisdom of their most enlightened citizens and under which we have enjoyed unexampled felicity, this whole nation is devoted. We owe it therefore to candour and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any position of this hemisphere as dangerous to our peace and safety.

And then the President adds:

> With the existing colonies or dependencies of any European power we have not interfered, and shall not interfere.

So, if the Monroe doctrine is the consolation of the so-called anti-militarist party, let me say to them that in case of the invasion of Canada by a foreign power, we could not rely on the help of the United States. There is nothing

in the message of a nature to guarantee to European sovereigns the maintenance of their American possessions intact against any possible attacks from the others in the event of a European war. There is no warrant is history and it is a simple distortion of the facts to pretend that we are in the least protected by the Monroe doctrine. The acceptance of that doctrine under such circumstances would be unworthy of any true patriotic Canadian. In case of war, say, between Germany and England, we would be belligerents according to international law, Monroe doctrine or no Monroe doctrine. Our young men would enlist, and Canada would be the chief source of food supply to the mother country as she partially is to-day. We all know that the food supply of a fighting nation is contraband of war, and therefore we would find that our ships would be seized or attacked and we could not rely upon the Monroe doctrine to protect these ships carrying the food supplies of Canada to the mother country. There is no warrant in history for the assumption that the Monroe doctrine protects us and it is, I repeat, unworthy of any true, patriotic Canadian to utter such a fallacy. It has been stated that we have no obligations towards Great Britain. My hon. friend said in so many words that what we have secured, we have secured through our own energy, through our own courage, through our own blood and through our own grit. I admit that our ancestors fought, but did they fight against Great Britain? My hon. friend referred a moment ago to 1837 and 1838. The patriots who rebelled in 1837 and 1838 did not fight Great Britain, or British institutions, or the British Crown. They rebelled against the Family Compact. They were only too prone and too happy to claim their privilege of British citizenship and if my hon. friend the member for Jacques Cartier will read one or two of the first paragraphs of the famous 92 resolutions presented to parliament by Papineau and Bédard he will see that the men of '37 and 38' were only claiming their rights as British citizens. I say, Sir, that we have obligations towards the mother country, that we are interested primarily to see her in the future, as she has been during the last century, the mistress of the seas. We are interested primarily in maintaining her supremacy, because we know that that supremacy has been the means of vindicating throughout not only the British dominions, but throughout the civilized world, wherever there were small nations curbed by tyranny, the principles of right, of justice and liberty. We pay no tribute. We contribute nothing towards her navy. We enjoy absolute autonomy, and it is through that autonomy, and of our own free will, that we to-day undertake to build this Canadian navy in order to help the mother country in first defending our own coasts and co-operating loyally with her in case of emergency. The Conservatives say that the Liberal party and the Prime Minister have altered their policy. They quote in the province of Quebec, one line from a speech delivered by the Prime Minister in 1902 in which he stated that this young country was not to be drawn into the vortex of militarism. To that expression of the Liberal policy I assent as I assented a moment ago to the words spoken by His Excellency the Governor General. We are not a military party. We are a Canadian party. If we were for militarism we would accept the doctrine propounded by some of the hon. gentlemen opposite. We would throw our money into the British exchequer without counting, without discussing; we would send our men, without calling parliament, and without putting the regulations of our militia and of our navy under the control of the Canadian government. But, Sir, the Canadian constitution, give us, as British subjects, a salutary check—a check which we can impose even on His Majesty the King. Yes, Sir, that is no new doctrine. Let me quote from Lord Camden:

> I will maintain it to my latest hour; taxation and representation are inseparable. This position is founded on the laws of nature; it is more, it is itself an eternal law of nature; for whatever is a man's own is absolutely his own; no man has a right to take it from him without his consent, either expressed by himself or his representative.

That is sound British doctrine, the doctrine for which Hampden fought, but I suppose he was only a pedant according to my hon. friend. Hampden and Pym stood and fought for such a principle and it is embalmed and ingrained in the British constitution of to-day. Yes, parliament can impose a salutary check even on His Majesty the King. I am not disloyal, Mr. Speaker, in uttering such words. Let me read again from Lord Camden:

> To fix the era when the Commons began is perilous and destructive; to fix it in Edward's or Henry's reign is owing to the idle dreams of some whimsical, ill-judging antiquaries; but this point is too important to be left to such wrong-headed people. When did the House of Commons begin? When, My Lords? It began with the constitution. There is not a blade of grass growing in the most obscure corner of this kingdom which is not, which was not ever, represented since the constitution began. There is not a blade of grass which when taxed was not taxed by consent of the proprietor.

Lord Camden must have been a very disloyal subject indeed, and I am surprised he did not leave his head on the block in those dark days of despotism. Happily, the doc-

trine he propounded is engraved in the British constitution.

We are told in the province of Quebec that this naval policy is a new idea, that it is being sprung on the electors of the Dominion. My hon. friend made that statement in the county of Jacques Cartier. Sir, I read the other day, on my return to Canada, with the greatest pleasure the very able speech—worthy of being called an essay—in which my hon. friend from North Toronto (Mr. Foster) gave a synopsis of the various imperial conferences held in London since 1887. I read that speech carefully and would like to have it read by every youth in this country. I commend it not only to the young men of the English speaking provinces but to the young men in the province of Quebec. They will there learn that the idea of a Canadian navy is not a new one, that it is not a new fancy of the Prime Minister. They will see that as far back as 1887 the question was mooted at the imperial conference. It was not discussed at Ottawa in 1893, because, as stated by my hon. friend, that conference had been summoned, not by the British government, but by the colonies. But it came up very prominently at the conference of 1902, and in the light of that conference, those who say that this policy of a Canadian navy is a new one and that the people ought to be consulted regarding it, are singularly ignorant of the facts. Why, the policy embodied in the Bill we are now discussing, the very ideas expressed in that Bill, are to be found in the declaration made in the name of Canada during the imperial conference of 1902. I hope I am not detaining you too long——

Some hon. MEMBERS. Go on.

Mr. LEMIEUX. But as I intend this speech of mine to be circulated among the French Canadians of the province of Quebec, I wish to make this quotation which is to be found in the appendix page 73 of the return for 1902:

> The Canadian ministers regret that they have been unable to assent to the suggestions made by Lord Selborne respecting a navy, and by Mr. St. John Brodrick respecting the army. The ministers desire to point out that their objections arise, not so much from the expense involved, as from a belief that the acceptance of the proposals would entail an important departure from the principle of colonial government. Canada values highly the measure of local independence which has been granted her from time to time by the imperial authorities, and which has been so productive of beneficial results, both as respects the material progress of the country and the strengthening of the ties that bind it to the motherland. But while, for these reasons, the Canadian ministers are obliged to withhold their assent to the propositions of the admiralty and the War Office, they fully appreciate the duty of the Dominion, as it advances in population and wealth, to make more liberal outlay for these necessary preparations of self-defence which every country has to assume and bear.
>
> At present Canadian expenditures for defence services are confined to the military side. The Canadian government are prepared to consider the naval system of defence as well. On the sea coast of Canada there is a large number of men admirably qualified to form a naval reserve, and it is hoped that at an early date a system may be devised which will lead to the training of these men and to the making of their services available for defence in time of need.
>
> In conclusion, the ministers repeat that while the Canadian government are obliged to dissent from the measures proposed, they fully appreciate the obligation of the Dominion to make expenditures for the purposes of defence in proportion to the increasing population and wealth of the country. They are willing that these expenditures should be so directed as to relieve the taxpayer of the mother country from some of the burdens which she now bears; and have the strongest desire to carry out their defence schemes in co-operation with the imperial authorities, and under the advice of the experienced imperial officers, so far as this is consistent with the principle of local self-government, which has proved so great a factor in the promotion of imperial unity.

Reading that state paper, left in the hands of the secretary of the imperial conference of 1902, one can find the very principle, the very theory of the Bill we are now discussing.

I say that my hon. friend from Jacques Cartier (Mr. Monk) when he declared to his electors, a few days before the session that the country had been taken by surprise, either had not read the statement made by the right hon. the Prime Minister in 1902 or laid himself open to that other reproach of having assented during the session following the imperial conference of 1902 to the policy then advocated by the Prime Minister.

Mr. MONK. I have read very carefully not only that, but the different views expressed by the Prime Minister during the conference of 1907.

Mr. LEMIEUX. In this document, the right hon. the Prime Minister anticipated, so to speak, the legislation being presented to the House to-day. In 1907, he refused to be led by the Hon. Dr. Smart and by Mr. Jameson who were then propounding a militarist policy. The right hon. gentleman differed from them, but he adhered firmly to his declaration of 1902, and when the affairs of this country became more prosperous, when he found that the financial crisis and its effect had passed away, he came out boldly with the policy advocated in 1902. I say further that the resolution unanimously adopted on the 29th March, 1909, is based on that state

paper. My hon. friend should blush before declaring war on the government, as he is doing in the province of Quebec, when he himself was here and agreed to that resolution. My hon. friend says and his friends in the province of Quebec contend that we should submit this question to a plebiscite. Sir, I have only one answer to make to my hon. friend, and it is the answer of the knight-errant of whom he spoke a moment ago. When there is arising in this country a question of duty, not only towards the Crown, but towards the native land, there is no need of a plebiscite. A knight-errant is impelled by a deep sentiment of loyalty and chivalry to accomplish his duty, and has not to consult the country, because he knows fully well that the country is at heart with him, just as the city of Ottawa was at heart with the government on Saturday last.

Mr. SPROULE. Was not the argument the hon. gentleman advanced some time ago, when he read some remarks of Lord Camden, to the effect that nothing should be taken from the individual without his consent and that representation went with taxation, contrary to the argument he is presenting now?

Mr. LEMIEUX. My hon. friend is generally fair, and I must pay him this compliment, that he is sincere and honest. There is no discrepancy between the two statements. A moment ago, in answer to the reproach which is being hurled at us in the province of Quebec, that the navy was at the beck and mercy and fancy of the imperial authorities, I said that it was not—that we were British subjects, possessed of rights and privileges; that we had a parliament, and that parliament would say whether our navy would serve the imperial ends or not. Then I quoted Lord Camden as my authority, and I believe that the principles laid down by him are at the very foundation of the British constitution.

Mr. SPROULE. Might I ask the hon. gentleman this? Provided we go on and carry out this policy, and are prepared to take part in all the controversies of Great Britain from year to year, shall we not be doing it in violation of the very principle the hon. gentleman lays down, because we have no representation in the British House of Commons, to say whether the wars are proper or improper according to our judgment, though we contribute to them?

Mr. LEMIEUX. I will answer that question in a moment. But we are told by some of our hon. friends that our navy is not worthy of that name. It is the laughing-stock of the Conservative press in the country. Do you believe, Sir, that Dreadnoughts or battleships alone are required by the British Admiralty? I do not claim to be an expert; far from it. But since this question has been before the country, I have taken the trouble to read a little of what has been said in this country and abroad by experts. What is the opinion of Sir Wm. White, who, as we all know was the chief naval instructor of the Admiralty of Great Britain until very lately. He made a speech not very long ago before the Royal Society of Arts in London, and what did he say? He said:

> 'Showing the flag even in small vessels' has been and is no empty or merely ceremonial custom. It has done much to maintain British prestige, to promote and protect British commerce, and to make more real the recognition of British sea-power all over the world; while the small vessels employed on these services have furnished excellent schools of training and opportunities for gaining experience and lessons in direct responsibility by younger officers. There has been a tendency in recent years to minimise these results, and to treat as 'worse than useless' the smaller classes of vessels which from time immemorial have been so engaged. It is satisfactory to note that wiser counsels are again prevailing, and the necessity for employing vessels of many classes in an imperial navy is recognized.

This is the opinion, not of a humble parliamentarian like my hon. friend from East Grey or myself, but of an expert. He would not characterize the Canadian navy, with its eleven ships, as a tin-pot navy. He would say that it is a necessary adjunct to the British navy and a great helper in time of war.

Mr. SPROULE. He says they are useful for training ships.

Mr. LEMIEUX. And also for the protection of British commerce I will quote further:

> Every care ought to be taken to avoid inferiority in types and numbers of ships, and to provide all classes required to make up modern battle fleets,—ships fit for the fighting line, cruisers, torpedo craft, submarines and special vessels used as colliers, store ships, repair ships, and for other subsidiary but important duties. Battle-fleets are essential to the maintenance of supremacy at sea, but it is necessary also to provide for the protection of British commerce and communications.
>
> In addition to regularly built cruisers, lightly armed mercantile vessels possessing high speed and large coal supplies will certainly be used in future for commerce destruction. During the last two years a fresh start has been made in the construction of commerce-protecting cruisers of moderate size, and all who have the interests of the empire at heart must rejoice at this return to a saner policy, which has been justified by long experience.

The scheme for Canadian and Australian navies contemplates the building of a number of swift cruisers of this class for use in the approaches to great ports where trade routes converge and the chances of injury to merchant ships attain their maximum if an enemy possesses vessels suitable for employment in those regions.

This is the opinion of an expert and I am glad my hon. friend gave me an opportunity of further quoting what has been stated by so great a military authority on the British navy.

Now, shall I speak of the German scare? I think I need not refer to it. The British electorate have just answered the insinuations which were made on the platform in England to the effect that the German navy was every morning leaving the Baltic sea and ready to land on British soil and get possession of London itself.

Mr. FOSTER. Is it not claimed that the British electorate got a whack at the Lords?

Mr. LEMIEUX. My hon. friend knows better. He knows that in this election there were three issues, one as regards the Lords. It was a very strong issue which was somewhat obscured by my hon. friend's friends on the other side, by tariff reform and the German scare. Did not the great leader of the Conservative party in England, in the very last days of the election, have resort to some of the words used by a certain Socialist by the name of Blatchford? Yes, Sir, even Mr. Balfour himself stated in so many words that there was fear of a German invasion and that the British electorate should repulse that old enemy, the Radical party in England, because, forsooth, British institutions were not in safe hands. It is about the same story in England as it is in Canada.

Mr. FOSTER. By what process does my hon. friend find out what caused the remaining majority of the Liberal party, which of these three things was it that brought it about and which of the three things was it that gave the Unionists so large a gain over them? I know he has been there and understands all that—he is the one who did the business.

Mr. LEMIEUX. In 1906, when the hon. gentleman with his well known eloquence went to England to help the cause of tariff reform, the Liberal party abnormally secured a majority of over 200. My hon. friend came back to Toronto and other issues were discussed in England and the parties took to their normal level in British politics. I am in earnest in what I am saying. My hon. friend knows as a matter of fact the majority the Liberal party secured in the election of 1906 was abnormal, owing to circumstances that we know too well. At this last election the Liberal party came back to power with a working majority, with a substantial majority, but it is the aim of the Tory press in this country to distort the facts. Every day we hear of a coalition ministry. But Mr. Asquith is quietly resting on the continent, he is enjoying his villegiature there. He will come back in a few days. His majesty, the King, will open parliament, the budget will be adopted even by the Lords and the Liberal party, aye the Labour party which after all is only the vanguard of the Liberal party, will continue to govern Great Britain. I am, I believe, just as much a Unionist, in the better sense of the word, as my hon. friend is. I am a true Unionist, and when I speak of a Liberal majority in Great Britain, whether that Liberal majority comes from the Radical party, from the Whigs, from the Labour party, or from that island whence the ancestors of my hon. friend from Montreal Centre (Mr. Doherty) came, it is nevertheless a Liberal majority, it is a reform majority.

Mr. DOHERTY. The hon. gentleman has appealed to me as being in some way able to speak for a certain portion of that majority. I desire to say most emphatically that so far as I know them, they form part of no Liberal and equally of no Conservative party in England.

Mr. LEMIEUX. The hon. gentleman knows a great deal, but I can tell him that during the last parliament the Irish party voted on nearly every question with the Liberal party. They would be very ungrateful indeed if they did not vote with the successors of Gladstone, but they were not ungrateful. During the recent contest, after the speech delivered on the 12th of December last, by Mr. Asquith at Albert Hall in London, we received the echo of another speech delivered the day after by Mr. Redmond, in which he pledged the support of his party to the Liberal majority in the House of Commons because he knows that with the Liberal party in England they will secure home rule for Ireland.

Mr. SPROULE. May I ask my hon. friend—

Mr. LEMIEUX. Oh, I did not speak for Ulster.

Mr. SPROULE. Who was responsible for the German scare which he says the Unionists used so effectively during the elections?

Mr. LEMIEUX. I will say that the German scare is the work of a very thrifty journalist by the name of Lord Northcliffe.

Mr. SPROULE. It was started in the House of Commons by the present leader of the Reform party, Mr. Asquith himself.

Mr. LEMIEUX. I will answer my hon. friend by the words of Mr. Asquith and of Mr. McKenna, the present Lord of the Admiralty. I quote, from 'Public Opinion', Mr. McKenna's words:

At this moment, Great Britain has got seven Dreadnoughts in commission, Germany has got two. When Germany has four in commission, Great Britain will have ten; when Germany has five in commission, Great Britain will have twelve; when Germany has nine in commission, Great Britain will have fourteen; and when Germany has eleven in commission, Great Britain will have sixteen; and when Germany has thirteen in commission, Great Britain will have twenty.

And further:

The navy scare has not the slightest foundation in fact.

That is the statement of the first Lord of the Admiralty, Mr. McKenna. And what does Mr. Asquith say? He stated, at Birkenhead, on the 21st December last:

With regard to our defensive forces, the navy and the army, I do not hesitate to say that they never were in a more efficient, a better equipped or a more highly organized condition than they are to-day.

Mr. SPROULE. That is not what I was asking. What was this statement in the House of Commons when he was asking for the naval estimates?

Mr. LEMIEUX. I am not aware of that statement, but I take the statement made publicly on the platform by Mr. McKenna, the first Lord of the Admiralty, Mr. Asquith, the prime minister, and Sir Edward Grey, the secretary for Foreign Affairs. Sir Edward Grey said:

The British navy is being maintained in a position to protect the country from any probable combination of fleets.

Again, the right hon. Reginald McKenna, first Lord of the Admiralty, said on January 5th last:

This navy scare is absurd and ridiculous. No attempt has been made to argue the question seriously. How can we reason with rumour or reply to shrieks?

Mr. McKenna may have used other language, but I quote his latest statements. I do not deny the statement alluded to by my hon. friend from East Grey (Mr. Sproule), but we all know that this German scare exists only in the imagination of party politicians. It was started by the party press of Great Britain, controlled by Lord Northcliffe, and was written up during the elections by the well-known socialist, Mr. Blachford, in the pay of a certain party in Great Britain. But, Sir, who will ever believe that Britons are scared by a 'German terror?' Sir, I am of French descent, but I know something of the history of England, and I say that no country in this world can abate the well-known and well-founded pride of British valour.

We are told that the building of this Canadian navy will give rise to graft, and that we in Canada are too ignorant to build a navy. The charge of graft is beneath contempt. Let the hon. gentleman who believes that Canadians are unable to build a navy go up from the bar of this chamber to the library, and he will see on the wall the following inscription:

In honour of the men by
Whose enterprise, courage and skill,
The 'Royal William,'
The first vessel to cross the Atlantic by steam power, was wholly constructed in Canada and navigated to England in 1883.

I claim—and I know that my hon. friend from East Grey (Mr. Sproule), after all, is too good a Canadian not to say—that if Canadian energy and enterprise in the city of Halifax in 1833 was able to accomplish this, the Canada of 1910 is able to construct the modest—I admit, but very efficient—navy which is in germ in the Bill presented to this House. Sir, I have the pride of my country. I do not belong to the racial majority and may not have the same ideals as they have. But it seems to me there should be in this country common ideals on questions of this nature. If Canada has been able to build a Canadian Pacific railway, and if the enterprise of two men of the province of Ontario, Messrs. Mackenzie and Mann, is duplicating that road in the Canadian Northern to-day; if the Canada of 1903 was able to remove, so to speak, further north, the boundaries of Canada by building another Transcontinental; if we are able to undertake the Hudson Bay railway, and to construct the Georgian Bay canal, it seems to me that it is not beyond our reach to build a Canadian navy. And we have in the maritime provinces, nay, we have in the old section of the province of Quebec, in the county which I have the honour with you, Mr. Speaker, to represent in this House, a thrifty and skilful people whose ancestors were all sailors, who were building ships, and the best ships of the empire, at the time of the ship-building industry in this country. May not we hope and expect that the descendants of these sailors and shipbuilders will be able to accomplish to-day what their forefathers were accomplishing sixty or seventy-five years ago?

But the experts of the British navy themselves are in favour of a Canadian-built navy. Sir William White, chief of naval construction of Great Britain, says this:

By many leading Canadians whose opinions are entitled to respect, it would be preferred to follow the course recently adopted by New Zealand, and to make a money 'grant-in-aid' of British navy estimates, leaving the decision as to the use made of the money to the Admiralty, who would be free to construct what numbers and types of ships they thought proper, to arrange for manning them, and to employ them in whatever service they chose as units of the Royal navy. This would be a simple plan, no doubt, would involve a minimum expenditure on construction, armament, manning and maintenance, and would secure early completion of these additions to the fleet. On the other hand the plan favoured by the Canadian government and (as I believe) supported by a preponderating opinion amongst the people of the Dominion is natural in the circumstances, has some distinct advantages, and tends to cultivate a national interest in the fleet, while it gives opportunities for the personal service of Canadian citizens in the naval defence of the empire. The government of the Australian Commonwealth is acting on lines similar to those favoured by the Canadian government, and has decided on the creation of its own navy before the Imperial Defence Conference of this year was aranged. In doing so Australia abandoned the plan of an annual cash payment (or subsidy) to British navy estimates, which had been in force since 1888.

I say that a Canadian built navy would be much more acceptable to the Canadian people than cash contributions to the British exchequer. The Canadian national sentiment would be much feebler if Canadian money was invisibly spent in England, instead of having a navy of our own, of having the ships under our own eyes, manned by our own people and built in our own yards. At first the navy would not be built as well as it would be in England, granted. The cost may be greater, granted again. But we must begin. I believe we will become a great nation, and we must arouse the pride of the Canadian people. If we were to argue, as some of my hon. friends argue on the other side of the House, we might bring back to this country the British garrisons. The British garrisons have departed, and we have assumed the care of Esquimalt and Halifax. We have now our own militia. Is it not better to form our own seamen instead of hiring, not Hessians, as in the days of old, but our sailors from the mother country, who, otherwise, would be of service to the motherland in the North sea and the British channel? Is it not better that we should have Canadian sailors on both the Atlantic and the Pacific oceans? Shipbuilding should not be confined to England, it should be extended to Canada. That was the view taken by Lord Milner when he came to this country a few months ago. That is the view of the grand old Canadian statesman, Sir Charles Tupper, in a letter he addressed to the Canadian press a few months ago, wherein he expressed his hope that the leader of the opposition would remain faithful to the policy unanimously adopted in this House on the 29th of March, 1909. Let me also quote the words of a Conservative paper, a patriotic paper, I mean the Ottawa 'Evening Journal':

Canadian navy built in Canada means the spending of the money in Canada, the establishment of shipyards and naval training schools in Canada, the building of ships in Canada, the employment of men in Canada, the purchase of material here, the encouragement of other Canadian industries. It means a stimulus to Canadian towns and cities, a new development of national self education and confidence, the avoidance of possible causes of friction with the mother country. The contribution policy means that Canadian taxes are spent in England, and they may become a source of friction and irritation, a source of dissatisfaction, here and there, as to the amount, and the way it should be expended. There will be no continuity to the system.

These are all strong reasons for adopting the policy propounded this afternoon by the right hon. gentleman. We are reminded by some that ours is only a tin pot navy, whilst in the province of Quebec it is regarded as a luxury. Sir, I thought my hon. friends had more pride. I have here a list of independent countries, and self-governing colonies, whose population does not exceed 10,000,000 people, and is in many cases less than that, who have navies of their own:

NAVIES OF COUNTRIES HAVING LESS THAN 10 MILLION INHABITANTS.

Argentina.—9 cruisers and armoured cruisers, gunboats and torpedo boats. Population, 7,000,000, 6,000 men. Naval policy, $35,000,000. 3 Dreadnoughts under contract.

Brazil.—15 armoured cruisers, 5 dockyards.

Chile.—7 armoured cruisers, 3 Dreadnoughts under contract. Population, 3,750,000.

Columbia.—3 cruisers on the Atlantic; torpedo boats; 2 cruisers on the Pacific. Population, 2,500,000.

Costa Rica.—1 torpedo boat, 1 gunboat. Population, 350,000.

Denmark.—9 armoured criusers and monitors. Population, 2,500,000.

Equator.—1 torpedo boat, 1 transport, 250 men. Population, 1,250,000.

Greece.—3 armoured cruisers and 20 torpedo boats; 4,000 men. Population, 2,000,000

Haïti.—6 warships, 3rd class cruisers, gunboats. Population, 1,500,000.

Mexico.—10 gunboats, 1 training ship, 6 protected cruisers, 198 officers, 965 men. Population, 13,000,000.

Holland.—17 cruisers, 8,000 men. Population, 5,750,000.

Norway.—5 cruisers, 1,000 men. Population, 2,500,000.

Paraguay.—5 transports and coast defence ships. Population, 700,000.

Peru.—5 armoured cruisers, 2 cruisers. Population, 5,000,000.

Portugal.—8 armoured cruisers, 5,687 men; Population, 5,500,000.

San Domingo. — 1 gunboat. Population, 610,000.

Sweden.—15 armoured cruisers. Policy, fortification works to last twelve years. Population, 5,500,000.

Sir, if we were to follow the advice of my hon. friend from Jacques Cartier we would have the province of Quebec in the position in which my hon. friend from North Toronto (Mr. Foster), a few years ago, said England was: in a splendid isolation; we would have the province of Quebec in this confederation, where all of the other English-speaking provinces on this question are one, although differing in details, we would have the province of Quebec in a position of splendid isolation.

Mr. Speaker, I am against the splendid isolation of the French Canadian race. I say to my hon. friend and to his ally, the ex-member for Labelle, Mr. Bourassa, one of the most talented men that the French Canadian race ever produced, that in propounding this policy of splendid isolation for the French Canadians in this confederation of ours, they are not true to the traditions of their race. No, my hon. friend from Jacques Cartier does not respond to the national traditions of the race which he and I represent. He does not even respond to the political traditions of the French Conservative party of old. Let me give a few glimpses of the history of the province of Quebec, My hon. friend seems to infer that we, in Quebec, are naturally against any movement in favour of either a militia or a navy. In 1759, when the last act took place of that sombre drama on the Plains of Abraham, my forefathers passed under another domination. Under the French regime our forefathers had not known what liberty and free institutions were. We were governed by a bureaucracy and there was no such thing as parliamentary institutions. But, as Aeneas came from Troy to Rome and brought with him his customs and his laws, so, the British and the Scotch grenadiers, who vanquished the French on the Plains of Abraham, brought with them, so to speak, the British constitution and all that it implies. We were left a few thousand French, led by the Roman Catholic clergy, and abandoned by the seigneurs, who at that time returned to France. We were left a minority of 60,000 people on the two shores of the St. Lawrence, almost lost in the Anglo-Saxon continent of North America. We would have been submerged if the British parliament of 1774 had not, under the most generous impulse, given to the French Canadian Roman Catholic minority, its laws, its language, its customs and its religious freedom. Does not my hon. friend, whose allies are invoking the Monroe doctrine as a protection for us in case of attack, remember having read in the history of the thirteen colonies, that one of the grievances adduced by the revolutionists against the mother country was that very fact that the mother country had given the French Canadians and the Roman Catholics their religious freedom, their French laws and their national customs? In the light of history, would my hon. friend believe that if we were once launched on the American ocean, our laws, our schools, our usages and customs would be protected by the United States Congress? Let him remember the history of Louisiana. There was in Louisiana a French minority. It had the civil laws of France as we have the civil laws of France embalmed in the Canadian statutes. It professed the Roman Catholic faith. Let him go to Louisiana today; let the clergy; let the bishops of the province of Quebec go to Louisiana and what will they find? They will find many French names in the directories, but they will hear very little French spoken. They will see that while twenty or twenty-five years ago, French was taught in the schools, to-day there is only one language, and that is the English language. French laws were preserved. They are in their code, but they are printed in English and before the courts they are cited in the English language only. My hon. friend stated a moment ago that we had nothing to care about British supremacy, that if perchance British supremacy was a bygone thing, what we had gained, we would still keep. I say to my hon. friend that his language does not voice the sentiment of the far-seeing men of his race, and of his province. It is, on the contrary, of the most vital interest to the French Canadian citizen, whether he be a layman or a priest, whether a priest or a bishop, to stand up for the maintenance of British supremacy in order to preserve the rights, the privileges and the franchises which were obtained from the British parliament in 1774. My hon. friend says that we owe nothing to British statesmanship. As a Liberal, as a Canadian, I cannot forget that it is due to Charles James Fox, to the great Pitt himself, that the Canadians of 1774 secured what I have called on many occasions, the Magna Charta of the province of Quebec. What we obtained in 1774 was secured again under the constitution of 1791 and a few illustrations will show that the role of the French Canadian clergy has always been one of grateful and loyal adhesion to the British Crown just on account of the privileges enjoyed under it. What did Mgr. Briand, Bishop of Quebec, say? In May, 1775, at the time of the American invasion, he used this language:

The singular favour and kindness with which we have been governed by his most

Gracious Majesty King George the Third, since by the fortune of war we have been subject to his rule, the recent favours which he has just shown us in granting us the use of our own laws and the free exercise of our religion, and in allowing us to share in all the privileges and advantages of British subjects, should assuredly suffice to excite your gratitude and your zeal to sustain the interests of the Crown of Great Britain.

I may say to my hon. friend that Monseigneur Briand was a humble priest. He had seen this country passing from the French régime to the British régime, and he was full of the traditions of the past, but he had learned to appreciate what it meant for French Canadians to live under British institutions. He was not a sycophant or a jingo. He was a Canadian. He was not looking for honours or favour, for titles or knighthood, but he was simply voicing the sentiments of his people and expressing their gratitude to the British Crown. My hon. friend says we owe nothing to the British Crown, that we have wrested from Britain what privileges we possess. This is not exactly the language used by another distinguished prelate in the long line of French Canadian bishops. What did the Rev. Joseph Octave Plessis, afterwards bishop, and recognized as such by the British sovereign say? Sir, remember that in those days there were Catholic disabilities in England, but as far as Quebec was concerned those disabilities were wiped out by the British Crown, and the Roman Catholic church of Canada became practically an established church. What did this Catholic bishop of Quebec say? This is the language he used:

Our conquerors were looked upon with jealousy and suspicion, and inspired only apprehension. People could not persuade themselves that strangers to our soil, to our language, our laws and usages, and our worship, would ever be capable of restoring to Canada what it had lost by a change of masters. Generous nation, which has strongly demonstrated how unfounded were those prejudices; industrious nation, which contributed to the development of those sources of wealth which existed in the bosom of the country; exemplary nation, which in times of troubles teaches to the world in what consists that liberty to which all men aspire and among whom so few know its just limits; kind-hearted nation, which has received with so much humanity, the most faithful subjects most cruelly driven from that kingdom to which we formerly belonged; beneficent nation, which every day gives to Canada new proofs of liberality. No, no, you are not our enemies, nor of our properties which are protected by your laws, nor of our holy religion which you respect.

Sir, let me quote again what Monseigneur Plessis said on September 16, 1907. Speaking to the French Catholics of Quebec he said:

You have understood that your interests were not apart from those of Great Britain.

Thus he was speaking against the policy of isolation propounded by my hon. friend from Jacques Cartier (Mr. Monk), and by Mr. Bourassa. He continued:

You are convinced, as we are, that it is impossible to be a good Christian without being a loyal and faithful subject; that you would be unworthy the name of Catholics and Canadians, if, forgetting the rules of your holy religion and the examples of your ancestors, you should show disloyalty or even indifference when it is a question of doing your duty as subjects devoted to the interests of your sovereign and the defence of your country. You have not waited until this province should be menaced by an imminent invasion, or even until war was declared to give proofs of your zeal and of your good-will for the public service.

This language applies as much against the reliance on the Monroe doctrine as against the splendid isolation preached by my hon. friend from Jacques Cartier. Sir, what benefit could French Canadians expect from annexation with the United States or from isolation in this confederation of ours? What would become of our language, our laws, our schools? As I said a moment ago, remember Louisiana! I repeat it again, my hon. friend does not represent the national aspirations of the province of Quebec in this matter. He does not even represent the French Conservative traditions. Sir George Cartier, whose name he mentioned, was the man who introduced in parliament the Militia Act of 1862. The Bill brought about the defeat of the government. What did Sir George say:

But I must at the same time confess that the question upon which we fell—the motion of Tuesday last (20th May, 1862) was a severe blow to us; in fact, it defeated us as responsible advisers to His Excellency. If, however, that blow had been aimed against us only, we should not have expressed regret, but I cannot help saying I apprehend—I sincerely apprehend—that vote will be hereafter invoked by those—and they are numerous who are hostile to the institutions of Lower Canada, and particularly to the French Canadians. But I hope that the noble conduct of our clergy, and the manifestation of the population of Lower Canada last fall, will mitigate any aspersion unprincipled men may be disposed to cast upon us.

In 1867, what did Sir Geo. Cartier do? In order to impress his fellow countrymen with the necessity of joining hands with the English-speaking Canadians, he demanded from his colleague, Sir John Macdonald, the portfolio of Militia. Why? Because he knew he could make that military policy popular with his own countrymen when they came to understand it. He

wanted the two races to be united in order to carry out the work of confederation.

It was necessary to prepare for the defence of the land, in the firm determination of the country to remain British. And so long as there was a British nation existing, the people of this dominion were resolved to remain a portion of it. He was certain that even if the expense were heavy for such a purpose, it would not be repudiated. He was almost ashamed to state before the great House of Commons of the Dominion of Canada that he required so little money to carry out so great an organization. (From the speech of March 31, 1868, before the House of Commons.)

On the first of May, 1868, when moving the House into Committee for the consideration of the resolutions respecting fortifications, Sir George Cartier said:

While it was conceded that Canada could always claim the aid, in emergency, of all the resources of the empire, it had been thought only just that the dominion should share the expenses necessary to make this assistance effectual. . . . If it be contended that such works are unproductive, it may be said in reply that Canada has now reached a stage of development, when following the example of other nations, it may oppose a barrier to invasion. By thus raising a barrier between Canada and its neighbours, Canada solemnly declares before the whole world that she desires to remain united to Great Britain. When the great fortifications previously mentionned, are built. English capitalists will be still more firmly convinced that their funds are secure in this country, and Canada will then become a field of profitable investments for British capital. Thus falls the objection to a measure which is nothing else but the very measure proposed by the imperial government itself. That objection that I foresaw, and which consists in saying that the country is going to spend large sums of money on unproductive works cannot stand.

What he said about fortifications and the Militia applies with greater force to the conditions with which we are confronted to-day. But Cartier spoke also about a Canadian navy. It must not be supposed that he was opposed to it. At the sitting of the 31st of March, he intimated that this policy would be taken up later on. He said:

I do not contend that the present Bill provides for the organization of the naval militia. That is left to the Governor General in Council.

Speaking of that isolation policy, which is being preached by my hon. friend in the province of Quebec, may I not remind him of the language used by his former leader, Sir George Etienne Cartier:

Isolation can never lead to our national glory; that is to be found in effort and in fight. In days gone by, we arose in arms to resist despotism and tyranny, and later on generously to defend the flag of the motherland. Now in peaceful emulation and rivalry through the paths of business we strive with our fellow-countrymen for the first place. Any race of men having overcome so many difficulties, fought so many battles, and suffered with such constancy in resistance to monopoly and tyranny, must be a fighting race, able honourably to hold their own with any other.

Let us beware of belittling the minds of our fellow-countrymen by the narrow views we may ourselves take of political and social questions. The idea will perhaps be derided, but deep thinkers have held it to be true that the citizen of an independent nation is morally and intellectually greater than the inhabitant of a colony. His intellectual vision ranges over a broader expanse, he having to study graver questions and to deal with more serious interests.

Let us therefore avoid surrounding our nationality with the mental disabilities which exclude success and greatness. The sphere of our activity should be constantly enlarged, that we may become great and noble by the works of our children and our champions.

Confederation will extend that sphere, while also giving to our inner life, to our family life, a happiness and a joy to us hitherto unknown. We will be free and absolute masters in the administration of our own patrimony.

But I have already spoken at too great length, and I must crave the indulgence of the House while I offer a few more remarks. My hon. friend from Jacques Cartier, when concluding his speech the other day, referred to the rhetorical delusions of the Prime Minister of Canada. My hon. friend himself indulged in a few literary reminiscences. He spoke of Paul of Tarsus. He also quoted Byron, who, describing the agony of the Dacian gladiator dying in the arena at Rome, said:

He heard it, but he heeded not—his eyes
Were with his heart, and that was far away;
He recked not of the life he lost nor prize,
But where his rude hut by the Danube lay,
There were his young barbarians all at play,
There was their Dacian mother—he, their sire,
Butchered to make a Roman holiday—
All this rush'd with his blood—shall he expire
And unavenged? Arise! ye Goths, and glut your ire!

In the province of Quebec—because this is for Quebec consumption—the Dacian gladiator, whose blood is oozing from him, butchered in the arena, is the French Canadian fighting for the British flag, and the young barbarians are supposedly our sons. We, the French Canadian members of the House are, of course, responsible for that state of things. Who are the Goths? I suspect that in my hon. friend's mind, the Goths are the Yankees beyond the boundary who would, no doubt, invoke the

Monroe doctrine in case of aggression—'arise, ye Goths, and glut your ire.' Mr. Speaker, is that patriotic language—language befitting a seigneur belonging to the great feudal aristocracy of lower Canada?

I cannot close my remarks without also indulging in some literary reminiscences. As I said a few moments ago, I had the good fortune of studying under my hon. friend, who was my professor of constitutional law at Laval university. From his lips I learned to love, admire and appreciate British institutions; and looking at my copy-book the other day, I found on one of the pages—the ink was dry—I am speaking alas! of nearly twenty years ago—the definition of the British constitution imparted by my hon. friend to his students. He used the words of Edmund Burke, that great luminary of the British parliament, who was one of those statesmen who defended Canadian liberty at Westminster in days gone by. My hon. friend, the member for Jacques Cartier waxed very eloquent when addressing his students in those days. In order that we might fully appreciate the value of British institutions, he concluded his lecture with the following definition:

If the standard of moderation be sought for, I will seek for it. Where? Not in their fancies nor in my own—I will seek for it where I know it is to be found, in the constitution I actually enjoy. Here, it says to an encroaching prerogative—Your sceptre has its length. You cannot add a hair to your head, or a gem to your crown, but what an eternal law has given to it.

Here, it says to an overweening peerage: Your pride finds bank—there is a bound to the raging of the sea. Our constitution is like our island, which uses and restrains its subject sea, in vain the waves roar. In that constitution I know, and exultingly I feel both that I am free and that I am not free dangerously to myself or to others. I know that no power on earth, acting as I ought to do can touch my life, my liberty, or my property. I have that inward and dignified consciousness of my own security and independence which constitutes and which is the only thing which does constitute, the proud and comfortable sentiment of freedom in the human breast. I know too that I cannot by royal favour.

Knighthoods,

Or by popular delusion,

Monk's speeches.

Or by oligarchical cabal, elevate myself above a certain very limited point so as to endanger my own fall, or the ruin of my country. I know there is an order that keep things fast in their places; it is made to us, and we are made of it.

This is the clearest definition ever given of the British constitution and all that it conveys. I think my friend from Jacques Cartier (Mr. Monk), my heart is full of gratitude to him. He, with the right hon. gentleman who leads the government, in my younger days taught me to love and to revere British institutions. How amazed I am to find him speaking on a subject and advocating a policy which if it were carried through—but thank Heavens it will not be—would go against the very principles enunciated by him twenty years ago. The French Canadians in the province of Quebec are the proud possessors of all the advantages described in the words of Burke. They intend to maintain and to treasure those advantages and privileges by doing their duty like men and like patriots towards their country and towards their King. Doing their duty towards their King and towards their country, I claim, Sir, that they are also doing their duty towards God Almighty.

On motion of Mr. Middlebro, the debate was adjourned.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. SPROULE. The debate, I presume, goes on to-morrow?

Sir WILFRID LAURIER. No. To-morrow the Minister of Railways, who is very anxious to finish his estimates, as the Deputy Minister is leaving the service, will proceed with them. The debate will not be resumed until Tuesday.

Mr. FIELDING. To-morrow we might also take up the item for French relief.

Motion agreed to, and House adjourned at 12.50 o'clock a.m., Friday.

HOUSE OF COMMONS.

FRIDAY, February 4, 1910.

The SPEAKER took the Chair at Three o'clock.

OFFICIAL REPORT OF DEBATES.

Mr. GERVAIS moved that the second report of the Select Standing Committee to supervise the official report of the Debates of the House be concurred in.

Sir WILFRID LAURIER. Explain.

Mr. GERVAIS. This is the report of the Debates Committee recommending the appointment of Mr. Desaulniers as translator in place of Mr. Laferrière who died a few days ago. The Debates Committee make the recommendation to the House and hope that it will be concurred in.

Sir WILFRID LAURIER. I understand that, according to the present law of the Civil Service—with which I do not profess to be familiar—this appointment cannot be made on the recommendation of a committee. I understand, however, that the gentleman who is recommended for appointment is acceptable and is to be appointed, but by the regular authority that has power to deal with such matters under the law.

Mr. HUGHES. Inasmuch as there is a divergence of opinion, as I understand it, as to the competent appointing body, would it not be well to have the matter looked into? As far as I am concerned, if the Committee on Debates is only an ornament, not being much of an ornament, I must decline to continue to act on it; and I am satisfied that that is the feeling of the other members of the committee. If one committee of this House can engage a young professor to perambulate the country for another purpose, I cannot see why a standing committee of this House should not have the authority to recommend the appointment of an officer to carry on the work of which that committee has charge.

Sir WILFRID LAURIER. I can only say to my hon. friend (Mr. Hughes) that I should be sorry to lose his services on this committee. I could better dispense with his services in some other matters. He is right sometimes, especially in military affairs—

Mr. HUGHES. This is not a military committee.

Sir WILFRID LAURIER—and I understand that, in this case, the gentleman he recommends is quite acceptable.

Mr. HUGHES. That is not the point. This is a question of principle—

Sir WILFRID LAURIER. That is it; have we or have we not this power?

Mr. HUGHES. That is what we want to find out.

Sir WILFRID LAURIER. I understand that the authorities deny that we have the power.

Mr. HUGHES. Would the Prime Minister mind giving the authority to the House?

Mr. FIELDING. It is provided under the Civil Service Act.

Mr. SPROULE. The Act provides how appointments shall be made to the Civil Service. And, while, as I understand it, it was not intended to take from the House any of its rights in the management of its affairs, still it was agreed that appointments should be made according to the Act, and by the same authority that makes appointments in other portions of the Civil Service—that is, the Civil Service Board. If that be correct, I do not think that this is the way to do it. This involves a charge on the revenue, and is not in order for that reason. But there is the other objection that appointments are to be made by the Civil Service Board and not on recommendation of this committee.

Mr. GERVAIS. Under the Civil Service Act, action with regard to the appointment of an officer of the House of Commons must be taken by the House of Commons. And, in the case of the appointment of an officer of the Senate, action must be taken by that House. I understand that, by the passing of the Civil Service Act, the House has not been deprived of its power of expression which it gets from the law of nature and not from any enactment. And it has power to express itself to the Civil Service Commission in relation to an appointment. The Debates Committee are simply making a recommendation to the Civil Service Commissioners that Mr. Desaulniers be appointed; that is all we are now doing. If the appointing commission do not want to deal with our recommendation, the time will come to decide whether their action is legal or illegal, right or wrong. But I do not think for a moment that the House of Commons should refuse to recommend a first-class man, who has passed his examination three years ago—before the Board of Civil Service Commissioners was established—and come out of the examination with the highest marks, who has been on the waiting list for three years and has been employed as spare translator at an occasion during that time, and who also is declared by the government as perfectly capable of doing his work. We propose, that, and I think the House of Commons should express its opinion that Mr. Desaulniers will be a fit and suitable person to be translator of debates. It will rest with the Civil Service Commission to accept the expression of opinion of the House of Commons. That is all we are asking of the House. We may make the recommendation—

Mr. SPROULE. I would like to ask the hon. member (Mr. Gervais) a question. He recommends to the House thus and so; the House agrees to the recommendation—is not that practically carrying it into effect?

Mr. GERVAIS. It is not the same thing at all. Under the new Civil Service Act, the commissioners may declare that our recommendation is not in conformity with all the requirements of the formalities provided for under the Act, and may refuse to accept our recommendation. That will end

the matter, unless some other action is taken by this House. But I do not see why this Debates Committee, entrusted by this House at the opening of the session with the supervision of the official report of the debates, should be treated in this way. If so, there will be only one thing to be done, and that is for every member of the Debates Committee to hand in his resignation. We are making the recommendation; that is all. We are simply making a recommendation, which we thought the Civil Service Commission might accept or ignore.

Mr. SPROULE. To settle the question, I rise to a point of order. I ask your ruling, Mr. Speaker, if this motion is in order in the face of the law.

Mr. ETHIER. Although I am a member of the Debates Committee, I was not present when that recommendation was adopted, and I think the committee has not taken the proper step to obtain the appointment of a translator. I understand that the translators of the debates are governed by the Civil Service Act and that they are under the control and authority of the Speaker as head of the Department of the House of Commons. According to the Civil Service Act, I understand that the head of the department, on the certificate of the deputy head, who in this case is the clerk of the House, may ask the Civil Service Commission to appoint such an officer, and, thereupon the Civil Service Commission has power to appoint him, and this in accordance with section 21 of the Civil Service Act amendment, with or without examination. I have no doubt that Mr. Desaulniers who has passed the required examination before the Civil Service Act was in force, if appointed, would fulfil the duties of the position satisfactorily. But I do not think the proper course under the Civil Service Act is for the Debates Committee to recommend the appointment of such an officer. I think this is a case in which the Civil Service Act must apply.

Mr. FIELDING. Might I suggest that instead of asking for the ruling of Mr. Speaker, we might accept the suggestion of the hon. member for Victoria and Haliburton (Mr. Hughes), that, if there be a doubt as to the legal interpretation of the Act, we endeavour to have that doubt removed by obtaining the opinion of the Department of Justice. Happily, there is no difference of opinion as to the man recommended. The understanding, however, is that the House has agreed to permit its officers to be treated in the same way as officers of the Civil Service; and in the case of a technical officer to be appointed under the Civil Service Act, the commission would have to be satisfied that he was qualified, and that the nature of his services came within the scope of the class to which it was proposed to appoint him. Applying that rule to this case, it is suggested that the Civil Service Commission must deal with this application.

Mr. HUGHES. Under the law, how could the matter be brought before the Civil Service Commission? We must look at that commission through smoked glasses.

Mr. FIELDING. I do not wish to interpret the law, but rather to act upon my hon. friend's own suggestion. This same question may come up again, and it is as well that we should have a clear understanding of the application of the new Civil Service Act to the officers of the House of Commons. I would therefore suggest that my hon. friend do not press his motion today; and as we all have the same object in view, every good end will be served by adopting the suggestion which has been made.

Mr. GERVAIS. Acting on the suggestion of the Minister of Finance, I beg leave to move the adjournment of the debate.

Mr. FIELDING. Let the motion stand for another day.

Mr. GERVAIS. Let it stand for another day.

Mr. R. L. BORDEN. Wherever in one of the departments an officer is to be appointed by order in council, similarly, an officer of this House; but as an order in council can only appoint a person who has been recommended by the Civil Service Commission, so this House can only appoint one similarly recommended. I do not know anything about the action of the committee. In one sense it may be all right, but still I think it is extremely desirable that the provisions of the law should be observed, and I concur entirely in the view expressed by the Minister of Finance that the opinion of the law officers of the Crown or of some legal authority should be obtained for the guidance of the House.

Mr. SPROULE. I take it that that opinion will be communicated to the House when it is obtained.

Mr. FIELDING. The clerk of the House will comply with the wish of the House in that respect.

Motion withdrawn.

GAS INSPECTION ACT AMENDMENT.

Hon. WM. TEMPLEMAN moved for leave to introduce Bill (No. 132) to amend the Gas Inspection Act. He said: The most important amendment is in section 3. Under the present law there is a percentage of allowance made for errors in the inspection of meters. That percentage is reduced,

thereby assuring greater accuracy in the meters in use. It is largely on the recommendation of the officers of the department and the city of Toronto that this amendment is proposed. Under another amendment power is taken to test gas for its calorific qualities. At present it is tested only for its illuminating qualities. The other amendments are not very important. In several clauses the word 'district' is inserted in place of the words 'city, town and place,' as the work of the department is regulated by districts.

Motion agreed to, and Bill read the first time.

ROCKY MOUNTAINS PARK.

Hon. FRANK OLIVER moved that the House go into Committee on Tuesday next to consider the following proposed resolution:

Resolved, that the regulations of the 21st day of June, 1909, intituled: 'Regulations of the National Parks of Canada,' which were passed on the date above mentioned by His Excellency the Governor in Council, under authority of section 4 of the Rocky Mountains Park Act, being chapter 60, R.S.C., 1906, copies of which regulations, as well as the necessary order in council, have been laid before this House, are, in so far as they relate to the Rocky Mountains Park of Canada, approved by this House, in accordance with provisions of subsection 3 of section 5 of the said chapter 60.

Motion agreed to.

ASH WEDNESDAY ADJOURNMENT.

Sir WILFRID LAURIER moved

That when this House adjourns on Tuesday next, the 8th instant, it stand adjourned to Thursday, the 10th.

Motion agreed to.

ALLAN STEAMSHIP COMPANY.

Mr. CROSBY. Before the orders of the day are taken up, I want to ask if the Allan line of steamers, which have a subsidy from the government for carrying the mails via Havre, have given up calling at Halifax. I should like to know whether they are compelled to call at Halifax or not

Sir WILFRID LAURIER. I am sorry I cannot give the information at the moment, but will get it on Monday.

Mr. CROSBY. I might say that the last Allan steamer, the 'Corinthian,' arrived at St. John the day before yesterday, and did not call at Halifax.

BOY SCOUTS.

Mr. SAM. HUGHES. The following clipping has been sent me, taken from the Toronto 'Globe':

Arrangements are being made, says the London 'Daily Mail,' by which a number of boy scouts will be enabled to visit Canada during the ensuing summer, and so have the opportunity of practising scouting under conditions which would be impossible in this country.

Red Indians will be employed to lay trails and also to teach the boys the art of tracking on a scale which could not be attempted in England. Canoeing, fishing, and following the slot of the wild deer will also form part of the scheme, which is a sequel to the interchange of the visits between English and German boy scouts last year.

The boys, who will be under the care of scout-masters, and for whose welfare the most precise arrangements will be made, will be selected by competition. The trip will be quite free of cost to the participators.

Has the Minister of Militia any information concerning this?

Sir FREDERICK BORDEN. I have not. This is the first I have heard of it.

FISH FRY.

Mr. EDWARDS. Owing to the regrettable illness of the Minister of Marine and Fisheries (Mr. Brodeur), I addressed about ten days ago a letter to the deputy minister asking for application forms for fish fry. I have not yet had a reply, and should like to know to whom I ought to address a communication in order to get a reply within a reasonable time.

Sir WILFRID LAURIER. I am surprised that the hon. gentleman has not received any answer. I shall make inquiries at once.

UNITED STATES MINIMUM TARIFF.

Mr. FOSTER. Has the Minister of Finance (Mr. Fielding) any information yet as to whether a decision has been come to by the United States authorities to admit Canadian exports under their minimum tariff, or whether he has had any communication at all with these authorities on that subject?

Mr. FIELDING. We are only aware of what is currently reported in the public press as to the proceedings of the United States authorities in these matters. I have no official information.

GOVERNMENT EMPLOYEES HAVING CROWN RESIDENCES.

Mr. BLAIN. Might I ask when I may expect a return to an order of the House of December 6, promised for the early part of last week, respecting the number of officials of the Senate and House of Commons, who have residences supplied them by the Crown?

INTERNATIONAL FISHERIES COMMISSION.

Mr. JAMESON. When will the report of the International Fisheries Commission be laid on the table? I see by a despatch from Washington that President Taft has transmited the report of Professor Starr Jordan to congress.

Sir WILFRID LAURIER. My hon. friend refers to the commission about the international waters and lakes. This report ought to be laid before this parliament and congress. It has been laid on the table here.

SUPPLY.

House in Committee of Supply.

Mr. FIELDING. Before my hon. colleague the Minister of Railways proceeds with his estimates, I would ask the approval of the House to a proposal to grant the sum of $50,000 from the treasury of Canada towards the fund organized in France for the relief of sufferers from the recent floods. We are glad to know, from the latest information, that the waters are receding and conditions improving. Nevertheless, the information available to us, both official and unofficial, shows that there has been very great distress and misery, and that there is much need of relief. Generous citizens of all nations are contributing, and in some instances governments have contributed. I am sure it will be the wish of this parliament and the people of Canada, irrespective of class, creed or nationality, that the Canadian people should show sympathy with the government and people of France in this trying moment. I propose that we should ask the French government to accept the sum of $50,000 as a practical expression of our sympathy and desire to assist the suffering.

Mr. FOSTER. Could the minister give us an idea of the losses and the degree of distress being suffered?

Mr. FIELDING. It is difficult to obtain anything like an official estimate. We have to rely to some extent on the public press. We have communicated with our Paris agents to ascertain whether foreign contributions would be desirable and acceptable, and we are assured that such contributions will be gladly accepted by the French government. What we intend is that this amount should be forwarded to the French government through our Paris office and the British ambassador at Paris, who has kindly consented to communicate with the French authorities.

Mr. R. L. BORDEN. This is a course which has been taken more than once where the people of foreign countries have suffered from great disaster, and it seems to me eminently fitting that a similar course should be followed in this case, more especially as the country to which this offering is made is the ancestral home of a very considerable part of our population. It is also appropriate for the further reason that the relations between the British empire and the French republic are at present of the most cordial and satisfactory character, as we believe they will continue to be in the future.

Mr. CROCKET. Would the minister state whether some other governments have contributed?

Mr. FIELDING. Yes, our Paris office informs us that the government of Turkey has contributed $10,000 and New Zealand $2,500. I think the United States government is contributing in a less formal way, and judging from the public press, through the Red Cross Society very large sums are being contributed by individual citizens of the United States and foreign countries. I notice that the German Emperor has sent his personal contribution of $5,000, but at the moment of our latest information the only governments to contribute are Turkey and New Zealand.

Mr. CAMPBELL. Like the Minister of Finance, I believe in charity being the greatest virtue, but while I do not want to speak in any way against what he has brought before the House, I want to remind him that charity begins at home. I have brought to the attention of the government on various occasions cases in my own riding where, owing to floods, farmers have not been able to reap the benefit from their operations which they should reap. No attention whatever has been paid to that by the government, and I want to again impress on the government that we ought to take care of our own people whenever we have an opportunity. In saying this I do not want any one to misunderstand me or to think for a moment that I desire to do anything less than the Finance Minister in aiding these poor unfortunates in France. I believe, Sir, that charity, while a good thing, ought to be reciprocal at all times. We all remember of the disaster here in Hull and Ottawa in 1899, when so many of our French Canadians were left absolutely destitute on the streets as a result of that fire. At that time various nations of the world came to our aid. I shall give a summary of the cash subscriptions that were sent from various sources to aid the Hull sufferers. They were as follows:

Received from	Canada..	$500,781 00
"	Great Britain..	363,248 00
"	British Colonies..	53,605 00
"	United States..	33,505 00
"	France..	1,036 00
"	Chili..	4 86

I hope that the government will remember at this time the action of France at the

time of that disaster and reciprocate to the very fullest extent the kindly aid we received from the motherland of the ancestors of the people who were the sufferers from the disaster I spoke of.

Mr. FIELDING. My friend has laid down two principles, neither of which I entirely concur in. In the first place, in the sense in which he uses the words, I cannot agree with him that charity begins at home. It is particularly the business of the Dominion of Canada to attend to the giving of foreign charity if a case may be worthy of charity, but the government of Canada is not a body for distributing charity at home. We have organizations, provincial and municipal, for the granting of charity at home, and the fact that the Dominion government did not grant charity in any particular case where disaster has arisen at home would by no means be evidence that the Dominion parliament was lacking in liberality or had in any respect failed in its duty. We are the proper dispensers of charity for a foreign country if Canada desires to give such charity, but this parliament is not the proper dispensing body for charity at home.

Mr. HUGHES. Are we to understand that the hon. member for Dauphin (Mr. Campbell) is to apply to a foreign government for charity in his locality.

Mr. FIELDING. No; but I have such faith in the provincial and municipal organizations of Manitoba that I would say that with these provincial and municipal organizations, in 19 cases out of 20 there would be no need of any foreign charity assisting the people of that section. But if there be any exceptional and unusual case of need, then it is a question whether the Dominion parliament shall grant it. We have sometimes had embarrassing questions as to whether we should grant relief in the cases of fires in Canada, and I think on the last occasion when we were considering a grant of that kind, the hon. member for North Toronto (Mr. Foster) pointed out, and reasonably, that it was very difficult to lay down any principle upon which we should aid funds of that kind from the Dominion treasury. However, if there should be anything of that kind exceptional and unusual, I have no doubt the parliament of Canada would respond.

My hon. friend's second thought was that charity should be reciprocal. 'And now abideth faith, hope and charity, but the greatest of these is charity.' It does not add that it must be reciprocal; charity must be voluntary in every case.

Mr. SPROULE. I do not subscribe to the principle that charity begins at home in such a case as this. There is but one idea that should animate the human breast in making gifts of this kind, it is that of humanity. A great calamity has happened, humanity is suffering, humanity is in need and I think that neither relationship, nationality or anything else should actuate us beyond the tie of human brotherhood that binds us to the human race. I think it should be given on that line and on that line alone.

Mr. EDWARDS. I do not propose to say anything against the resolution introduced by the Minister of Finance. If there is suffering and want in Paris because of the unusual floods that have taken place, there, it is quite proper for the Dominion government to give out of its plenty something for the relief of those sufferers. But I wish to call the attention of the government to a case in my own county—not that I want to ask for any charity from the funds of the Dominion of Canada for the people in a portion of the county of Frontenac, but I want to ask for consideration of the rights of the people of the township of Bedford who suffer every year owing to floods caused by a certain government dam, known as the Wolf Lake dam. These people have had to meet the damages thus caused, and I think that this is a proper occasion to call the attention of the government, and particularly of the Minister of Railways, to this case.

Mr. FOSTER. I would like to ask whether the Prime Minister has considered this question? This must be, unless there is a string to it, a severe jolt to the autonomy of which the government speak.

Sir WILFRID LAURIER. I fail to see the joke.

Mr. HENDERSON. It is not my intention to take any exception whatever to the grant of $50,000 to aid the sufferers in France; but it has occurred to me that possible we ought to learn some lessons from what has occurred in the old lands which may be useful to us in this country. If the flood has been caused, as some suggest, by the meandering of the comet which has been roaming around the world for the last 70 or 80 years, of course we can take no action, we cannot defend ourselves. But it is alleged that the clearing away of the forests in the north of France, where the river takes its source, has largely been the cause of the flooding of the country. Rains were plentiful, and there was nothing to hold back the water. The natural forests had been cut away, the result being that the water came down with greater rapidity, and caused the overflow which has brought about so much trouble. Now, in this country are we doing our part

to prevent an occurrence of that kind? Is it not a fact that we are not taking measures to prevent such a thing? I have no doubt that it is felt throughout the province of Ontario that the waters in the spring of the year come down much more rapidly from the unorganized districts to the lakes, and cause flooding, which would not take place if the forests were maintained. I think there is a lesson here for one of the commitees of the House which has to deal with the conservation of our natural resources. I have heard it said, and I presume correctly, that the reasons for the floods in France has been the cutting away of the forest around the sources of the river. If that is the case, I think there is a lesson for us, to take warning, because we might not find France and other countries so willing to come to our aid as we, in our good heart, propose to come to the aid of the people of France.

Prince Edward Island railway—branch line Harmony to Elmira, $150,000.

Hon. GEO. P. GRAHAM (Minister of Railways). This branch line was undertaken two years ago. It is ten miles in length, and is estimated to cost $315,000. The House will remember that I gave the estimate off-hand at something like $400,000.

Mr. CROSBY. Does this complete?

Mr. GRAHAM. No. We have spent on it so far only $25,000, and we are asking $150,000 to spend this year.

Mr. CROSBY. What is the gauge?

Mr. GRAHAM. It is a narrow gauge.

Mr. FOSTER. Who has the contract?

Mr. GRAHAM. Whitehead Brothers, the lowest tenderers.

Mr. SPROULE. That would be about $40,000 a mile for a narrow gauge railway.

Mr. GRAHAM. I always like to be safe. The estimate given by the engineer is $315,126, considerably less than I mentioned last year. Tenders were asked for in the usual way, and these were received, at these amounts: $142,911; $175,219; $146,036; $148,811; $135,835. The latter was received from the Whitehead Brothers, who got the contract. It was awarded on schedule prices. I am giving what they called the quantities moneyed out by the engineer. His estimate was $315,126.

Mr. FOSTER. Has the minister the estimates of the quantities so far as they have gone?

Mr. GRAHAM. The work is only starting, we have not yet much data of the quantity, and how it will work out.

Mr. HENDERSON.

Mr. FOSTER. The minister might read some of the larger items, showing the rates upon which they moneyed out the different quantities.

Mr. GRAHAM. Common excavation, including material, 17 cents; solid rock, $1.10; loose rock, 17 cents; foundation excavation in water, 70 cents; foundation in air and water, solid rock, $1.50.

Mr. FOSTER. That would seem as though it would cost $135,000 the way they moneyed it out. Where does the minister get the difference between that and his estimate of $315,000.

Mr. GRAHAM. I am giving the estimate of the engineer on the $315,000. He makes an estimate as to what it will cost, and that is the engineer's estimate. The contractor comes along, and he makes an estimate of $135,835, that is, for the quantities only in the contract. The other includes rails, clearing, close cutting and grubbing. $315,000 includes all these things.

Mr. FOSTER. Will the minister get it down to what is included in the contract or estimated for by the engineer and see how it moneys out? I want to see how near the engineer came to the contractor's price.

Mr. GRAHAM. The estimate for the items in the contract as made by our own engineer is $139,506.40 and the tender is $135,835. The items estimated for the balance amount to $176,016.

Mr. CROCKET. Progress estimates, I suppose, are paid upon the certificate of the resident engineer?

Mr. GRAHAM. Yes.

Mr. CROCKET. Who is the engineer in charge there?

Mr. GRAHAM. Laurence is his name.

Mr. CROCKET. Is he a Prince Edward Islander?

Mr. GRAHAM. Yes, he is a Prince Edward Island man under Mr. McKenzie at Moncton.

Mr. BARKER. I would like to call the minister's attention to this fact that if, when these tenders had come in he had asked for the estimates in the office, he would not have to make them up here. Does the minister, when he is letting a contract, inquire what the engineer estimates the work to be worth?

Mr. GRAHAM. Every detail is set out in the order in council, and I have it all in my hand.

Mr. FOSTER. Does the contract fix a time for the completion of the work?

Mr. GRAHAM. The contract fixes a time, but, as in most cases, the time under the contract is likely to be extended. We usually fix, approximately, the end of the year for which the vote is taken. This amount will not finish the work; the whole estimated cost is $315,000.

Mr. CROCKET. How much has been paid to the contractors up to this time?

Mr. GRAHAM. Engineering and everything else has cost $28,618, of which practically all but $1,000 has gone to the contractor.

Increased accommodation at Charlottetown, $79,320.

Mr. GRAHAM. This finishes the work. The entire item is a re-vote. The amount to be spent is not so much as originally intimated.

Mr. FOSTER. What is the work?

Mr. GRAHAM. Additional sidings, new rails, stone-filling, concrete curb, new 20-stall engine house, and items of that character.

Mr. CROCKET. Who has the contract for the engine house?

Mr. GRAHAM. The contract was awarded to Clark & Morrison, the lowest tenderers for $44,400. The contract for the freight-sheds was awarded to Mr. Clark of Summerside, at $8,140; the turntable to the Canada Foundry Company.

Mr. BARKER. Had there been a turntable there before?

Mr. GRAHAM. Yes. It was removed to some other place and a new one put in.

Georgetown—engine-house at—$5,000.

Mr. GRAHAM. This is absolutely new. There has not been an engine-house there up to this time.

National Transcontinental railway — surveys and construction, $27,000,000.

Mr. GRAHAM. This is a vote for the Transcontinental Commission. The amount asked last year was $20,000,000. I laid a statement on the table the other day carrying every item of expenditure practically up to the end of the calendar year, 1909, and showing a total expenditure of something over $15,000,000. The statement showed also the amount of work that has been done on the eastern section this year, and the amount done up to date.

Mr. FOSTER. How much was spent on surveys in 1909-10?

Mr. GRAHAM. I laid on the table a duplicate of the statement I have now before me.

Mr. JOHN HAGGART. We have not seen it. Of course, the minister must know that we require a statement of the expenditure, and how it compares with the estimate, how much work is done, and how much remains to be done. We do not ask for details, but we do need totals of the several items.

Mr. GRAHAM. If my hon. friend (Mr. John Haggart) would consult the copy of the report which I laid on the table, he would have the matter pretty well in hand.

Mr. JOHN HAGGART. We have had no opportunity to look at it, even if we had seen it. It would be better to let the item stand, or, at least, some item on which we may be allowed a full discussion later on.

Mr. GRAHAM. That is unreasonable. But this interim report is merely for the accommodation of members of the House. The report required of the commissioners by law is the annual report, and that I laid on the table almost the first day of the session.

Mr. JOHN HAGGART. But of the work for nine months we have had no information whatever.

Mr. GRAHAM. That is the way the matter is left by the requirement of the law—that the work done for the year ending March 31, shall be shown in the annual report. But, for the convenience of the House, I gave this interim report of which I have spoken, and I gave amounts also in the statement made in the House the other day.

Mr. JOHN HAGGART. In that statement, the minister gave figures only for the fiscal year.

Mr. GRAHAM. No, in many cases the statement was brought down to December 31, 1909, and in others to November 30.

Mr. FOSTER. In the estimate now under discussion, there are two items—surveys and construction. How were they divided in last year's expenditure?

Mr. GRAHAM. In engineering and supplies, $6,935.59. The rest went to construction.

Mr. FOSTER. How much of the $20,000,000 has been spent?

Mr. GRAHAM. Altogether $15,939,985.67.

Mr. JOHN HAGGART. Did I understand the minister to say that the statement of expenditure for the nine months ending the 31st December, 1909, has been published?

Mr. GRAHAM. No. The commissioners must make a report annually at the end of the fiscal year. I asked for an interim report, which would show what has been done for the nine months, but that is not published unless the House so orders.

Mr. JOHN HAGGART. This is the first I have seen of this statement. I have not had an opportunity of looking at it.

Mr. GRAHAM. I have been rushing to get all the information possible, and the reason I am bringing these estimates so early is that in the peculiar position in which I am placed, I want to get them through while my deputy is with me, for the new deputy would not know anything about them.

Mr. R. L. BORDEN. So far as that is concerned, this interim report is practically non-existent, because nobody can examine it for the purpose of making any criticism or any recommendation. No one would desire to embarrass the minister under the peculiar circumstances in which he is placed; but as a matter of fact, the construction of the Transcontinental railway is not especially under the charge of the deputy minister, but is under the commission appointed for that purpose; so I would not think that the absence of the deputy minister would make a great deal of difference in that regard. At all events, I think the item had better stand for the present.

Mr. GRAHAM. I have no objection. I placed a copy of this statement on the table of the House.

Item allowed to stand.

Hudson Bay railway—to provide for the survey and location of a line of railway from the Saskatchewan river to the Hudson bay, $180,000.

Mr. GRAHAM. This item is only to complete the location of the line. Although there is a difference of opinion as to the better harbour, the location of the line for 260 miles from the Pas to Split lake is a common location, no matter which harbour is selected. This item is for the location of the line up to this point. When that is done, we may possibly have the other question settled.

Mr. R. L. BORDEN. What are the proposals of the government with respect to construction? Is the railroad to be constructed by the department, or is it to be let by contract, or is a charter to be given to some private corporation?

Mr. GRAHAM. I expect to bring down an item for construction in the supplementary estimates, when I hope to be able to give the information which my hon. friend asks for. A bridge is to be constructed across the Saskatchewan at the beginning of the line, which would have to be done whether the work were given to a company or carried on by the government. It would not affect this item, which is merely for the survey and location of the line.

Mr. FOSTER. What is the total cost of the survey?

Mr. GRAHAM.

Mr. LENNOX. Has the minister anything to tell us with reference to letting the contract to Mackenzie and Mann? It is stated in the press that the government is about to let the construction of this railroad to that firm, and that Mr. Mann was down here the day before yesterday. Perhaps the minister would tell us whether that is well founded or not, and how far the negotiations have gone.

Mr. GRAHAM. Mr. Mann was down on some other business. He did not discuss this with me at all. We have no agreement with any one for the construction of this line. It is absolutely an open question, so far as I know.

Mr. SCHAFFNER. Is it the intention to construct a portion of that line this year?

Mr. GRAHAM. It is the intention of the government to start construction, and I hope to give more details when I ask for an appropriation for construction. A bridge might be constructed or a portion of the line, but whatever may be done will only be to save time and not delay the work. If the work be given to a company, whatever be done can be taken into consideration in any arrangement made.

Mr. BARKER. I understood the hon. minister the other day to say that Mr. Armstrong had demonstrated that Nelson harbour was a very superior one. I do not find that to be the case. The remarks of Mr. Armstrong are not based on his own surveys, but on various reports issued by the Department of the Interior and on information supplied by Hudson Bay Company officers. If that is all there is in Mr. Armstrong's report, for which we are paying all this money, I am afraid we are not getting much in return.

Mr. GRAHAM. Mr. Armstrong has made a report since the departmental report of March 31, 1909. He made a later report in a small volume which was laid on the table some weeks ago, and accompanying that report is a chart showing the soundings taken by Mr. Armstrong himself.

Mr. ROCHE. Is it not a fact that the Canadian Northern has a line constructed as far as The Pas, and has not the government an idea of that company undertaking the construction of the road? If not why has the government selected The Pas as the starting point?

Mr. GRAHAM. That seems to be the natural point at which to start. It is the nearest to the existing system and to Hudson bay, and the idea of the government was to make connections from the nearest point to Hudson bay.

Mr. HUGHES. Any other system would have to go near it too.

Mr. GRAHAM. The total spent on the survey is about $157,000. That will be to the end of the year.

Mr. JOHN HAGGART. Does that include the vote you are getting this year?

Mr. GRAHAM. No.

Mr. JOHN HAGGART. What is the total cost?

Mr. GRAHAM. The amount this year and the amount already expended would be a little over $500,000.

Mr. JOHN HAGGART. Is not that an enormous sum for the purpose of locating a road like that?

Mr. GRAHAM. My deputy says it is very moderate. It is really an investigation during the last few years, instead of location. The country is pretty far from home.

Mr. CROCKET. That amount is all practically for preliminary surveys?

Mr. GRAHAM. The $180,000 we are asking for location, and the $187,000 for preliminary surveys.

Mr. FOSTER. Who has control of this, and who is responsible?

Mr. GRAHAM. Mr. Armstrong is the engineer directed by the deputy minister, and the business management is under the deputy head of the department.

Mr. FOSTER. Who makes the appointments?

Mr. GRAHAM. Mr. Armstrong himself, and Mr. Butler together, selected the men for the different parties.

Mr. FOSTER. Who buys the supplies?

Mr. GRAHAM. Mr. Armstrong.

Mr. FOSTER. How are they bought?

Mr. GRAHAM. The great bulk are bought from the Hudson Bay Company because that company has better facilities for delivery than any body else.

Mr. FOSTER. What supervision is there as to accounts and prices?

Mr. GRAHAM. Every account is checked by the chief engineer or some one under his charge.

Mr. FOSTER. Is there any departmental audit?

Mr. GRAHAM. Yes, there is a very careful departmental audit of everything. Mr. Bell is the head of our audit department, made so under our reorganization.

Mr. FOSTER. Are none of the supplies purchased by tender?

Mr. GRAHAM. I am informed that wherever practicable tenders were called for and prices obtained from different parties and the lowest taken.

Quebec bridge construction, $1,000,000.

Mr. GRAHAM. I imagine that hon. gentlemen know a good deal about the situation of this bridge.

Mr. CROSBY. Is it possible to state when the bridge will be completed?

Mr. GRAHAM. I said the other day that I thought it would be at least four years from the time the contract was let. The contract cannot be let until next autumn, and I am of the opinion that unless greater progress is made, and that is not likely while parliament is sitting, this $1,000,000 will be all we will be able to spend in the meantime.

Mr. J. HAGGART. At what time does the contract call for the completion of the foundation piers?

Mr. GRAHAM. One next fall and the other the year following. There are two piers which will be required whether it is a cantilever or a suspension bridge. Another will be required if it is a cantilever. This is included in the Davis contract, but the contract is so drawn that it can be struck out if it is not required.

Mr. FOSTER. What if the old foundations are not being utilized?

Mr. GRAHAM. One pier in its entirety. The foundation of a very large pier is being used on the south side but it will be enlarged. The old pier was 150 by 50 feet and the new one is to be 180 by 80 feet. They have taken it down to low water mark and are using the foundations and enlarging them.

Mr. CROCKET. When does the minister expect to have Transcontinental railway trains running in Quebec? That is of great interest to the maritime provinces.

Mr. GRAHAM. The railway from the east will be constructed before the bridge. I think it will be at least four years from the coming autumn before it is completed.

Mr. CROCKET. What about the Transcontinental trains to Quebec?

Mr. GRAHAM. I am informed that if it is found advisable a ferry can be established to carry quite a number of cars at that point. There is a car ferry now between Quebec and Levis, with provision on the boat to meet the rise and fall of the tide.

Mr. J. HAGGART. Can the minister give details as to the estimated amount which will have to be expended on the bridge and its approaches?

Mr. GRAHAM. The other day my hon. friend (Mr. J. Haggart) estimated that the bridge would cost between $8,000,000 and $10,000,000. That is money yet to be expended. My own opinion, without being absolutely tied to this figure, because everything is not completed to make a full estimate on, is that my hon. friend was perhaps $1,000,000 under the right amount, that we will have to spend $11,000,000.

Mr. BARKER. Not including what you have paid to the Quebec Bridge Company.

Mr. GRAHAM. No.

Mr. R. L. BORDEN. I would like to understand the situation with regard to the piers. I understand that the superstructure of the bridge gave way from some defect in design and was precipitated into the water and remains there. I was not aware until the minister made his statement a few days ago, that there was anything wrong with the piers.

Mr. GRAHAM. No, there is absolutely nothing.

Mr. R. L. BORDEN. Then why have they to be increased or strengthened?

Mr. GRAHAM. My hon. friend struck it in his opening remarks. The piers of the old bridge were too light. The new structure will be nearly twice as heavy as the old one, and the piers have to be enlarged to meet the new design.

Mr. R. L. BORDEN. It amounts to this, that the piers were quite sufficient for a bridge which would fall down, but they are not sufficient for a bridge which is to be permanent. The design of the piers was wrong, because the design of the superstructure was wrong.

Mr. CROSBY. We are very much interested in the east in the construction of this bridge. The minister says it will take about four years to complete it. Is it the intention of the railway to facilitate transportation in any way by means of a ferry across the St. Lawrence? Do the government propose to help us out in that particular, and is it not possible to press the work along and bring it to a conclusion within four years?

Mr. GRAHAM. My hon. friend will see that I am very careful in what I say. While we want the bridge done as rapidly as possible, a structure of this magnitude must be done very carefully. I think there is brought to bear on it as fine a quality of engineering skill as there is in the world. These men will only go so far as they can feel their way at every inch, because it is something new, nothing like it has ever been undertaken.

Mr. J. G. HAGGART.

Mr. JOHN HAGGART. Is it a suspension or a cantilever bridge?

Mr. GRAHAM. This design is a cantilever. I had hoped to go to Quebec and look over that ferry, as they use it now. But my experience of the Intercolonial convinces me that we cannot hope to carry traffic by a ferry as well as a bridge. But it will do until the bridge is constructed.

Mr. CROCKET. The minister has not answered the question I put, as to when he expects Transcontinental trains to be running from the west to Quebec.

Mr. GRAHAM. I am not in a position to answer that. My hon. friend asked me when I expected trains to be running from the east into Quebec in connection with the bridge.

Mr. CROCKET. No, I said trains running from the west to Quebec, or from Quebec to the west, because this bridge is a very important link in the system upon which the eastern provinces are depending. If, in the meantime, traffic is going to be carried by the Grand Trunk to Portland, Maine, and it gets settled in that channel, it will be very difficult to get it back to the maritime ports.

Mr. GRAHAM. I would not like to say when the Transcontinental would be running into Quebec. We are making fair progress with the construction. But I would not care to express an opinion, because I cannot do so upon any authority.

Mr. CROCKET. Will it be before the completion of this bridge?

Mr. GRAHAM. I imagine it will.

Mr. SCHAFFNER. Is that road hauling wheat now from Winnipeg to Port Arthur?

Mr. GRAHAM. I think not. Mr. Gordon Grant informs me that, except for speed of the trains, which, of course, is of great importance in the present transportation problem, they are using the road now, and any ordinary traffic could be carried over that line now. His recent report to me is that it will be practically complete and ready to carry wheat almost in another year. But trains can be run, and the contractors have offered to run a train a week over that line at 25 miles an hour, with safety.

Mr. SCHAFFNER. The minister stated about the middle of November that wheat was being hauled over that road. I would like to know to what extent. I put a question on the order paper, and I was told that ten carloads had been hauled. I presume there have been none hauled since.

Mr. GRAHAM. I gave the answer as received from the engineer. But I think they are not yet doing a regular traffic business on the road. Of course it will only be run

as the contractors run it, and they have offered to put on trains, but I understand there is some difficulty in coming to an agreement with the Grand Trunk Pacific.

Mr. BLAIN. Who is responsible for the insufficient piers and the light superstructure of the Quebec bridge, to which my hon. friend has been making some reference this afternoon? We were told when this scheme was first launched that the government were engaging the very best engineers. They had before them all the construction work of the Grand Trunk Pacific, the weight of rails, the kind of engines that were to be run upon the road, the kind of cars that were to be used, capable of carrying the heaviest freight. But with all that before them, the engineers of the government planned an insufficient bridge. Surely there must have been some great blunder on the part of some person. While I am not going to censure the minister, because he was not in the department at that time, somebody certainly is responsible for that blunder. I think it is fair now that the minister should say who was responsible, so that the country may know where to place the blame.

Mr. GRAHAM. It might take the Judicial Committee of the Privy Council to decide that question. There was a very long report made, largely technical, in regard to the fall of that bridge. It was planned by a gentleman who was supposed to be the best bridge expert on this continent, if not in the world. There is no question that some one bungled, because the bridge went down. A royal commission investigated it thoroughly, and brought in an exhaustive report, but it is so technical that I would prefer that my hon. friend would read it for himself. It is difficult to say where all the responsibility lies. In engaging an expert so eminent, the government supposed it was protecting itself and the country as well as it could. However, the bridge has fallen down. It is a great calamity, but it strikes me as a layman that this bridge was beyond the calculations or the principles that any engineers had yet attempted to apply to bridge construction.

Mr. BLAIN. Has any of the superstructure that fell down been taken out of the water?

Mr. GRAHAM. There is a contract let for removing it as far as may be necessary. I think none of it has been removed yet, but they are working at it now. I went out on the fallen bridge or on the debris lying in the water, as far as they would allow me, and the material appeared to me almost perfect as far as the material itself was concerned. The steel was not broken; it was twisted. A gentleman who was with me and who claimed to know something about it, in passing his judgment, said that the quality of material in the bridge was as good as it could be.

Mr. BLAIN. Who was responsible for the lives that were lost?

Mr. GRAHAM. The Phoenix Bridge Company settled the damages for the loss of life.

Mr. BLAIN. Did it cost the government any money?

Mr. GRAHAM. We have never paid anything in that respect.

Mr. BLAIN. No claim against the government?

Mr. GRAHAM. There has none been made. Occasionally I had some letters, but the Phoenix Bridge Company settled all claims that were made.

Mr. J. HAGGART. But if they settled the claim the government took over all their responsibilities?

Mr. GRAHAM. We took over the Quebec Bridge Company but not the responsibilities of the Phoenix Bridge Company. The Phoenix Bridge Company were the contractors really.

Mr. BLAIN. Are we to understand that for the lives that were lost no responsibility rested upon the government and no money was paid by the government?

Mr. GRAHAM. Yes.

Mr. HUGHES. How much money had the Phoenix Bridge Company been paid by the government?

Mr. GRAHAM. The Quebec Bridge Company paid them.

Mr. HUGHES. But we paid the Quebec Bridge Company.

Mr. GRAHAM. The Quebec Bridge Company paid them something over $3,000,000 which we afterwards took over as a liability of the Quebec Bridge Company.

Mr. R. L. BORDEN. I would like to know where the responsibility is ultimately to be found. This, as the minister very truly says, was a gigantic undertaking, therefore, it should have been preceded by precautions as great as were necessary in respect of any such engineering project. But, the situation was this, as far as I understand it, that the government, although practically financing the whole work, left all the contracts to be made by the Quebec Bridge Company, a corporation with a very small capital and utterly unable to proceed with the enterprise without the aid of the country. Eventually the government is obliged to take over the enterprise and in doing so it is sufficiently generous with the people's money to hand back to these gentlemen all

the money they had put into the enterprise together with directors' fees and a ten per cent bonus on the stock.

Mr. LENNOX. With interest.

Mr. R. L. BORDEN. My hon. friend from South Simcoe (Mr. Lennox) informs me that I have omitted one item and that I should have included the item of interest which was also allowed to these gentlemen. In the course of these proceedings they had made a contract with some person for the construction of the bridge, and some person must be responsible for the defective design. The fact that there was a defect in the design, represents, I suppose, $5,000,000 or $6,000,000 to this country, and I think it might be a very legitimate inquiry by the people's representatives in parliament as to whether or not there is some remedy to the people in respect of the undoubted defects which did exist in the design. If the Quebec Bridge Company had proceeded with ordinary business precaution and prudence, they would have had a contract under which some remedy might have been asserted if the design or the execution of the work proved defective, and they should have had that contract with some company which would be responsible in damages to the Quebec Bridge Company and through them to the people of this country for any loss which might be occasioned by reason of a defect either in the design or the carrying out the design. I would like to know exactly what the position is in that regard. I would like to know whether the government have suffered this project to proceed under such conditions that $5,000,000 or $6,000,000 of the public money of this country is represented only by a mass of twisted steel in the bottom of the St. Lawrence river, under such conditions that we have absolutely no remedy at all against any person, or body corporate, or company, for one single dollar of the moneys which had been lost. I think the minister ought to give a very clear and lucid statement of what the situation is in that regard.

Mr. GRAHAM. Mr. Chairman, my hon. friend has outlined the history of the case pretty accurately. There was in the contract a clause providing for penalties in case of failure, but one regrettable part of it is that it is not so easy to enforce these penalties under the conditions as they exist. The Phoenix Bridge Company is not the original Phoenix Bridge Company that is worth such a large amount of money. The Phoenix Bridge Company is capitalized at $50,000.

Mr. FOSTER. Is that paid up?

Mr. GRAHAM. I am not sure. It is a limited liability company.

Mr. BLAIN. Was it created for the purpose of constructing this bridge?

Mr. GRAHAM. My own opinion is that it was created for the work of the construction of bridges. It seems to be the practice of these large companies on the other side to organize subsidiary companies for certain work. I admit that when I came to Ottawa, I thought at first blush that we were dealing with the big strong Phoenix Iron Company, which is a rich company, but when I got a little further along I found we were dealing with the Phoenix Bridge Company, which is only a subsidiary company with a capitalization of $50,000.

Mr. CROCKET. Was there any security put up by the Quebec Bridge Company to the government for the fulfilment of the contract?

Mr. GRAHAM. There was a $100,000 bond given on behalf of the Quebec Bridge Company by a regular corporation. An attempt was made to realize on that bond, but up to date if I am correctly informed it has not been successful. Negotiations are proceeding between the Department of Justice and the company, but the company claim that they were not informed before the expiration of the time when such notice should be given under the terms of the bond.

Mr. FOSTER. Who was responsible for the information being given?

Mr. GRAHAM. It would be the Quebec Bridge Company, I would think.

Mr. CROCKET. The $100,000 is lost.

Mr. GRAHAM. I have not given up all hope of getting it yet. It is in the hands of the Justice Department. We have from the Phoenix Bridge Company a drawback of, I think, $100,000, and there is a lot of scrap metal. I have had for some weeks negotiations through the Justice Department with the Phoenix Bridge Company. But I may say to the committee frankly that, with a capital of $50,000, I have no great hopes that I can collect any great amount of money from the Phoenix Bridge Company, even if we have a case, and, of course, there is always danger in a lawsuit of being thrown out on some technicality.

Mr. FOSTER. Is this an American company?

Mr. GRAHAM. Yes. It is a company that has done splendid work. If I had work of my own to do, and could get security of any fair value from them, I would expect to get as good a quality of work from them as from any other concern on the continent —or any other continent.

Mr. FOSTER. That is the Phoenix Iron Company?

Mr. GRAHAM. The Phoenix Bridge Company, I undersand, has done good

work also. I have recommendations from engineers showing that they have done splendid work.

Mr. BARKER. I think the minister ought to have gone a little further in his description of the way this contract was entered into. He knows that it was entered into with the Quebec Bridge Company, composed of some lawyers and merchants in Quebec who had this charter. They were utterly bankrupt as a company; but, just before the end of a long session preceding a general election, they came forward with a contract made with this small Phœnix Bridge Company for the construction of a bridge satisfactory to these lawyers and merchants of Quebec. Absolutely no care was taken by the government to see that the plans were what they ought to be. The engineer of the Quebec Bridge Company was a very respectable engineer, who had been employed upon the railways of the country, but who, probably, had never been engaged in the construction of a bridge of over two hundred feet—a very respectable gentleman; I know him; but a man utterly inexperienced in this sort of work. In the railway offices they had a very good man on the staff who declined to say that he was responsible for what was done. Within three days of the closing of a long session, the government rushed through an agreement with the Quebec Bridge Company, guaranteeing over $6,000,000 of expenditure that that company had undertaken.

Mr. GRAHAM. In what year was that?

Mr. BARKER. In 1903, I think. The government brought in a Bill to validate that agreement, and, within the last three days of the session they rushed it through the House of Commons and the Senate, and it became law. The next thing we heard of it particularly was that the bridge was in the river.

Mr. R. L. BORDEN. It does seem to me that this is the most extraordinary tale of negligence in the management of public affairs that the history of this country can show.

Mr. FOSTER. Or any country.

Mr. R. L. BORDEN. I am perfectly willing to amend it,—this is the most remarkable instance of negligence in the conduct of public affairs that any country has ever known. The mere recital of the circumstances, without any comment at all, is enough to stagger one. The minister has pointed out that this was an undertaking which was almost beyond the limits of engineering skill at that time. The government must have known as well then as they know it now.

Mr. GRAHAM. I do not think the engineers knew it.

Mr. R. L. BORDEN. At all events, it was perfectly apparent to the government, the engineers and every one else, that it was a tremendous undertaking. In the first place, they hand over the control and management of that undertaking, they hand over charge of the construction, to a company which practically puts no capital into the enterprise. They exercise no care with respect to the contract; they do not even see that the contract is made with responsible persons or that any adequate security for carrying out the contract is given by the persons who undertake the work. The work goes on. It is work that requires the very highest order of engineering skill. In the end the whole thing falls into the river. The only thing left for the government to do is to pay off the Quebec Bridge Company, take over their liabilities—not to receive their assets, because they have no assets of any account—and to proceed with the construction of this work under greater disadvantages than would have affected the undertaking if the Quebec Bridge Company had never intervened at all. The simple statement of the fact that $5,000,000 or $6,000,000 of the money of the people of this country has been spent without any adequate supervision or precaution and is represented solely by the superstructure of this bridge lying at the bottom of the river, with probably no remedy against the Quebec Bridge Company or the Phoenix Bridge Company or any one else, is sufficient without any comment at all. My hon. friend the Minister of Railways and Canals (Mr. Graham) is wise in not attempting to make any defence of it. Even he, with all his ability and ingenuity, could not make any defence —no man could make any defence of such a transaction. And it does seem to me that the government, in this particular instance above all others, has shown the most remarkable and unheard of disregard of the public interest and more complete negligence than could possibly have been imagined.

Mr. LENNOX. And I would like to bring to the attention of the committee, on this point, the actual figures in connection with this matter. My leader (Mr. R. L. Borden) has referred to the extraordinary negligence of the government as regards proper precautions to see that a proper structure should be erected and proper engineering skill employed—to see, in fact, that such measures were taken as would have prevented this deplorable loss of money and, worse by far, this deplorable loss of life. In this connection, it might be a little interesting to note for a moment how generous the government is after the event. A month or two ago, I

got the information from the government, and I will give it as it is returned. The total that we have paid to the end of the last financial year in connection with the taking over of this work is $6,424,728, according to the Auditor General's Report. I asked certain questions and the answers were very significant. A large proportion of the money shown to have been spent was utterly unjustifiable expenditure, as I submit. I will read the answer after each question. And I wish, by the way, that the government could arrange to have each answer as it appears in 'Hansard' put immediately after the question to which it relates.

Mr. GRAHAM. The answer is always given after each question.

Mr. LENNOX. I mean that it would be well if they could appear in that way. I do not want, in saying this, to get into any quarrel with the 'Hansard' reporters, because they do their work exceedingly well. I asked:

1. In the total sum of $6,424,718 paid by the government to, or for, the Quebec Bridge and Railway Company during the financial year ending 31st March, 1909, were the following items and sums included and paid, namely:—

Interest to the Bank of Montreal on various amounts advanced to the company..	$889,687 81
Interest to shareholders in company..	65,209 07
Bonuses to shareholders in company..	26,370 00
Making a total for these items of..	$981,266 88

The answer to that given by Mr. Fielding was very concise: 'Yes'. Then I asked:

2. What was the rate of interest paid to the bank?

The answer was:

2. 5 per cent was the rate of interest payable to the Bank of Montreal by the Quebec Bridge Railway Company upon advances made to the company.

The next question was:

3. Was the interest to be paid by the company to the bank in arrears at the time the government assumed payment of the account?

The answer is: 'Yes', emphasizing the fact that has been referred to frequently, that this was a paper company only, and that when we took over the account we had to pay the arrears of interest which these gentlemen had allowed to accumulate during the time they were nominally building this great national work, and drawing their salaries. I next asked:

4. Did the bank claim to be entitled to be paid the sum $75,673.18 or any sum, as interest on accrued interest, and did the government pay the sum of $75,673.18, or any sum, to the bank as interest upon accrued interest, or compound interest?

Mr. LENNOX.

The answer to that is:

4. Interest on such advances fell due half yearly, and when unpaid carried interest at the same rate as the principal. The government, in taking over the undertaking paid the Bank of Montreal the sum of $75,672.58 on this account.

Then I asked:

5. In the interest and bonuses paid shareholders as aforesaid was there included and paid as interest and bonus the sum of $3,304.84 to Hon. S. N. Parent, chairman of the National Transcontinental Railway Commission, and the sum of $17,901 to Mr. M. P. Davis, one of the contractors for construction of said railway?

6. How was the interest paid shareholders made up, from what date and at what rate was it computed, and was it compounded? If so, how often, or at what intervals?

The answers to five and six are as follows:

5 and 6. Simple interest at 5 per cent was paid shareholders from the respective dates of payment by them on account of their stock until December 1, 1908, when the undertaking was taken over in accordance with the statutory agreement of October 19, 1903.

Hon. S. N. Parent received interest, $2,600, and a bonus of 10 per cent on $7,000 capital stock owned by him, and Mr. M. P. Davis received interest, $8,411, and a bonus of 10 per cent on $94,900 capital stock owned by him, in accordance with such agreement.

Then I asked:

7. Have all the rights of the company been acquired and paid for?

The answer was: 'Yes'. As to the answer to questions 5 and 6, let me observe that while it might be argued that it was very equitable and fair that these gentlemen should be paid bonus and interest, it should be remembered that at the time they were drawing interest from us we were paying their interest in arrear while their capital was unpaid. It was a most remarkable transaction. The most glaring feature of it was the deplorable destruction of the bridge because of the absolute lack of care on the part of the administration in seeing that proper engineering skill was in charge, while, as a matter of money, we were not only losing all the money that was properly put into the bridge, but were paying these gentlemen the bonuses and interest for looking on and doing nothing.

Mr. BARKER. I want to say one word more. We paid the interest and bonuses that have been allowed by the government upon the payments into the company by the shareholders. Now, the government, when they allowed that, had the evidence in their hands that the money that was supposed to have been paid into that company by these shareholders was nearly altogether not cash, but direc-

tors' fees for attending meetings. You paid interest on the directors' fees and a bonus, and that was known to the government.

Mr. GEO. GORDON. I would like to ask the minister if it is the intention of the government to use nickel steel in the superstructure of the new bridge?

Mr. GRAHAM. I am informed that it is, so far as it is possible to use it, in the compression members and in the principal cords.

Mr. BLAIN. The minister has stated that when he came to Ottawa to take his new position as Minister of Railways, he understood that the government had a contract with this strong financial company, the Phoenix, and that if we had any difficulty with that company we would get some redress. My hon. friend has had a very large experience in politics. He was a very prominent member of the Legislature of Ontario and in the government.

Mr. GRAHAM. Not very long.

Mr. BLAIN. That was a matter left in the hands of the electors of the province.

Mr. GRAHAM. They did not act very well that time.

Mr. BLAIN. However, that is another matter. I want to congratulate the government on their ability to put through a scheme of this kind while leading my hon. friend, a very prominent supporter in the province of Ontario, to believe, until he became a member of the government that they had a contract with this strong company. When he came here and made an investigation he found that the contract was only with a very weak company. With that confession from my hon. friend, surely no one will wonder that the ordinary elector should be deceived. My hon. friend was a student of Dominion as well as provincial politics; he has taken part in all these discussions; and yet it was only after he came here and made investigation that he found that the contract to build this structure, costing many millions of dollars, was given not to a strong company, but to a very weak company. All I can say is that I compliment the government on their ability to deceive the conntry.

Mr. GRAHAM. My hon. friend was in the House all the time with these documents under his eyes, and he will not take refuge now under the plea that he did not know it was a weak company.

Mr. BLAIN. It was like the North Atlantic Trading Company.

Mr. GRAHAM. I was merely an outsider, an ordinary elector, whereas my hon. friend was here all the time.

Mr. R. L. BORDEN. I understand that even the minister did not discover it until after the bridge fell down.

Mr. GRAHAM. The difficulty is the bridge fell down the night before the hon. gentleman referred to became minister.

Mr. R. L. BORDEN. Was there any connection between the two events?

Mr. GRAHAM. Nobody would be sufficiently cruel to say so.

Mr. FOSTER. Did the minister say that the road between Winnipeg and Lake Superior Junction was not regularly running?

Mr. GRAHAM. There is no regular traffic over it. The engineers say that the contractor offered to put on a certain service. It would have to be run as a contractor's service until taken over.

Mr. FOSTER. I want to call attention to what is certainly a grave abuse—the putting of a misrepresentation into the mouth of His Excellency the Governor General in the speech from the Throne. Here is what His Excellency was made to say:

> The construction of the Transcontinental railway has made substantial advance during the year. The western division has been extended 66 miles beyond Edmonton, completing a total distance of 861 miles west of Winnipeg. Contracts have been let for 399 miles in the Mountain division; good progress was made on this work. The eastern division is now open for traffic from Winnipeg to Lake Superior Junction and thence, by the Grand Trunk Pacific branch, to the lake itself. The whole of the work between Winnipeg and Moncton is now under contract.

If that conveys any meaning at all, it is an announcement that the road from Winnipeg to Lake Superior Junction is open for traffic, whereas in reality it is not finished or opened for traffic. That was certainly a grave abuse, and the right hon. the Prime Minister went far beyond what he should have done when he made that statement and made the Governor General responsible for it. We have just found out, some three or four months later, that it was simply a piece of deceit.

Mr. CROCKET. Has the government a contract for the removal of the scrap from the river, and what is the nature of the contract?

Mr. GRAHAM. A contract has been let, after asking for tenders, for $45,000, and the debris taken out belongs to the contractor.

Mr. BARKER. He gets $45,000 and the stuff taken out?

Mr. GRAHAM. Yes.

Mr. FOSTER. Was the debris in the way of navigation?

Mr. GRAHAM. Some of it had to be removed on account of navigation and some on account of the construction of new piers.

Mr. FOSTER. There are now four piers, two on land and two in the river. Do these occupy the same positions as the old ones?

Mr. GRAHAM. The south pier occupies the same position, but is enlarged. The main pier on the north side is shifted.

Mr. FOSTER. The pier on the south side war partly useful; that on the north side was absolutely useless. What was the cost of the one on the north side?

Mr. GRAHAM. I have not got that.

Mr. FOSTER. Do the two in the river itself occupy the same positions?

Mr. GRAHAM. I am talking about the two in the river.

Mr. FOSTER. Then the two on land, are they in the same position as the old ones?

Mr. GRAHAM. The two anchor piers have to be taken down.

Mr. FOSTER. The old piers then were useless and had to be removed?

Mr. GRAHAM. They have to be taken down. They will not fit into the new plan.

Mr. SAM. HUGHES. Part of the bridge did not fall. Will that part be used?

Mr. GRAHAM. It will have to be taken down. The material may be used for another purpose.

Mr. CROCKET. Is the board of engineers to be employed until the completion of the bridge?

Mr. GRAHAM. Yes, they are engaged until the bridge is completed, and they are responsible for the engineering department until then.

Mr. CROCKET. What is their remuneration?

Mr. GRAHAM. $1,000 per month while employed, and a less amount as consulting engineers. During the construction perhaps two may remain as consulting engineers. The engineer who is permanent will be paid $1,000 a month.

Mr. BARKER. I understood the minister to say there had been a board of three engineers appointed, and the government called in two others to confer with them, and that the whole five had agreed in what should be done.

Mr. GRAHAM. I do not think I exactly said that.

Mr. BARKER. What will the minister say now, because it is important to know whether there are any differences of opinion?

Mr. GRAHAM. My hon. friend, as a practical man, will know that you cannot get two engineers or two architects in the building of a house to absolutely agree on all the details. When the board was appointed, it was provided that should they disagree, they would have the power to call in two other men to confer with them. They have all agreed on the substructure. As to the superstructure, on the great principles they are agreed, but on some details they disagree, and they have the power to call in two other experts to confer with them. If it came to an absolute disagreement, I suppose the majority would rule.

Mr. BARKER. I understood the minister to say the other day that there was practical agreement of the three.

Mr. GRAHAM. On the substructure there was.

Mr. BARKER. Only on the substructure? Is there disagreement on the bridge itself?

Mr. GRAHAM. The board are working away. They had differences, these two men were called in, they have given their ideas and the reasons for them. It is likely before they get through that they will absolutely agree on all these things.

Mr. BARKER. They have not agreed yet?

Mr. GRAHAM. Not on every thing in connection with the superstructure.

Mr. MONK. It is rumoured in Montreal that there is an absolute disagreement among the three engineers in regard to the superstructure and for that reason these two additional engineers, Mr. Holgate and another, were called in. Is that the case?

Mr. GRAHAM. If the three had agreed, there would be no need to call in the other two, but they did not agree. I may say frankly it has been no easy task to get along with these three prominent engineers. Of course their reputations depend on their making a success of this bridge. If they make a failure of it, they are ruined professionally. They understand that, they hold very strong views along certain lines, they expressed them strongly and when they first met they were quite a way apart. Each belonged to a particular school, and we have been trying to get the result of the skill of each of them.

Mr. BARKER. I suppose the hon. minister will say that is what the government ought to have done in the first instance.

Mr. GRAHAM. That is what I am doing.

Mr. JOHN HAGGART. Why does the minister not have the whole bridge constructed of nickel steel? It would be less

work and require no painting. The model modern bridge is the nickel steel one.

Mr. GRAHAM. I am informed, not altogether. There are certain portions of the bridge in which it is of no advantage to have nickel steel, but where it will be any advantage nickel steel will be used in its construction.

Mr. MONK. The minister says there is still not absolute harmony on all details. What we understood in Montreal was that a part of the commission wanted a suspension bridge and another part a cantilever bridge.

Mr. GRAHAM. The difference does not exists there. We are preparing plans for both. The difference is rather on details of construction which I would not dare to attempt to explain, but I think there will be no difficulty as to disagreements as we proceed.

Mr. MONK. Have tenders been invited for the superstructure?

Mr. GRAHAM. Intending tenders have been invited to examine the plans as far as they have gone and to study the plans and specifications for both cantilever and suspension designs. After so many months, in which they will have a chance to study these plans as they go along, we will give them a certain length of time in which to put in their actual tenders.

Mr. CROCKET. To whom was the contract for removing the fallen superstructure given?

Mr. GRAHAM. Charles Koenig, of Quebec.

Mr. BLAIN. Are we to understand that there will be no action or responsibility on the part of this government towards the widows and orphans who suffered in this disaster?

Mr. GRAHAM. I could not say what will happen in the future about any thing. The Phœnix Bridge Company, I understand, assume all responsibility and have settled the claims against them for loss through this great calamity.

Mr. BLAIN. Are there any threatened suits against the government?

Mr. GRAHAM. I have not heard of any.

Mr. BLAIN. In looking over the debate I see that the Finance Minister said that this bridge would be ready complete in December, 1906.

Mr. FIELDING. I was not informed then that it was going to fall.

Mr. BLAIN. Neither was the opposition, because we had my hon. friend's statement that the very best engineers would be engaged, the greatest caution would be exercised, my hon. friend would deal with this matter as if dealing with his own affairs. Instead of that we find now that the minister himself says: Of course the superstructure was altogether too light and insufficient for the work and as for the abutments, they have to be added to and strengthened. When we keep in mind the fact that there is no change on the National Transcontinental railway in respect to weight of engines or traffic, we come to the conclusion that my hon. friend and his government blundered and the people of the country are of the same opinion.

Mr. FIELDING. If you can conceive of such a transaction as that being my own, I could not have dealt with it in a different way. We had the most eminent bridge engineer on the American continent dealing with the matter, I do not know where a better one could be obtained.

Mr. BLAIN. Have you a better one now?

Mr. FIELDING. I cannot say.

Mr. BARKER. You had a gentleman from New York, Mr. Cooper, to give advice.

Mr. FIELDING. Mr. Cooper was chosen as the engineer to have direction and charge of the whole work. But there was no question at that time as to his capacity or his eminence.

Mr. MONK. It was proved at the enquiry held in the first instance by a committee of the House of Commons that when the plans were finally prepared they were sent in for the government's approval, and Mr. Collingwood Schreiber obtained authority from the government to have the plans examined by an American expert. He sought out that American expert, the construction company heard of it, and they protested that they would not allow the work that had been performed in the way of plans and specifications by Mr. Cooper, who was their engineer, to be supervised by anybody else. That was abundantly proved in the investigation, and the correspondence is in evidence in both committees of this house. Then the Prime Minister said that if Mr. Cooper had approved of the plans it would not be necessary to go any further. So there was really no government examination of the plans, and they were approved under those circumstances. Those are the uncontroverted facts.

Mr. FIELDING. I do not admit they are uncontroverted facts. I regret that I am obliged to speak from memory, to some extent, on a question of this importance; but my recollection is that Mr. Cooper

was chosen by the bridge company as their engineer, and when it was proposed that there should be another engineer chosen to represent the Department of Railways and Canals, Mr. Cooper objected; and then Mr. Schreiber gave us the advice that, inasmuch as the interests of the bridge company and the interests of the government were the same, the opposing interests being those of the construction company, there was nothing to be gained by undertaking to put another engineer there as against Mr. Cooper, who was representing the bridge company. But when Mr. Cooper objected to being associated with some other engineer, Mr. Schreiber said: Mr. Cooper is a most eminent engineer, and his interests as representing the bridge company are not at variance with the interests of the government. And I think Mr. Schreiber advised that the matter should be left in Mr. Cooper's hands. I believe the papers will show that to be the fact.

Mr. MONK. I think my hon. friend is absolutely wrong. It is true that Mr. Cooper was the advising engineer of the bridge company. But who suggested Mr. Cooper to the bridge company? It was the construction company itself, the Phoenix Construction Company. At any rate, the government had nothing else to do, when the plans were sent in for final approbation, than to rely upon those plans after approval by its own engineer. This Mr. Schreiber would not undertake to do. He was called upon to approve of the plans, and he represented to the government that he had not the expert knowledge, the latest expert knowledge as a bridge builder which was necessary to enable him to pass upon so important a matter. When we voted the last sum of money to the bridge company we insisted and the government gave us an assurance, that there would be competent examination by an independent authority. Mr. Schreiber then suggested to the government that he be allowed to employ an expert, and the name of the expert whom he recommended is given in the evidence. Mr. Schreiber had correspondence with that gentleman, who, I think, was from Philadelphia, at any rate he was a man of equal reputation to that of Mr. Cooper. When the company became aware that their plans were going to be examined by an independent authority, they came here and made representations and succeeded in defeating the intentions of the government of having this expert from the United States examine the plans. The Prime Minister himself told Mr. Schreiber, what the Finance Minister has just said, that Mr. Cooper was a perfectly competent man, and if he had found no fault with the plans, then he might affix his signature to those plans. My hon. friend from Hamilton (Mr. Barker) and myself were sitting on that committee, and we obtained from Mr. Holgate, one of the Royal Commissioners who had conducted the first inquiry, the assurance that the examination by an expert would have allowed them to see what escaped Mr. Cooper, that is to say, a defect in the construction. Mr. Holgate found at once that any independent expert would have detected that defect.

Mr. FIELDING. My hon. friend's remarks imply that the government and the company were at variance with the recommendations of their chief engineer, Mr. Schreiber. Am I right in saying that he meant to convey that impression?

Mr. MONK. Certainly.

Mr. FIELDING. Then I state unhesitatingly that in that respect my hon. friend is wrong. I say that no step was taken regarding the engineering matters in connection with that enterprise without the cordial approval and support of Mr. Schreiber; and no other engineer was called in to be associated with Mr. Cooper, it was because Mr. Schreiber himself advised that such was not necessary.

Mr. BARKER. Have you got his written advice?

Mr. FIELDING. I am speaking entirely from memory, but I venture to say that Mr. Schreiber will confirm that statement. I was for a short time in the Railway Department, during a portion of the period these negotiations were going on, and I would not have dreamed of taking any step in relation to a work of so great importance, without Mr. Schreiber's advice. I know that Mr. Schreiber was of the opinion that we were getting the best available advice, and that nothing would be gained by insisting on another engineer. I am sure that Mr. Schreiber will say that that is a correct account of what occurred.

Mr. MONK. It is a question of memory. But I will endeavour to get the absolute proof of what I am saying.

Mr. BLAIN. We have been endeavouring to ascertain from the Minister of Railways who was responsible for this blunder.

Mr. FIELDING. My hon. friend might ask who is responsible for any great disaster which occurred. It is easy to find fault afterwards. He might ask who was responsible for the falling of the Tay bridge, who is responsible for the loss of life on the Canadian Pacific railway a few days ago. These things occur in the ordinary way in the management of a great public corporation. Whenever they happen in great corporations little comment is made; but when an accident happens upon

a government work we have 200 odd critics in the House of Commons finding fault which is sometimes unreasonable.

Mr. BLAIN. I am not trying to hold the government responsible altogether for the accident. But we on this side have been contending this afternoon that the government were aware that this was a very important work. My hon. friend himself is fully aware that the government was responsible altogether for the payment of money, and for guaranteeing the bonds, because the Finance Minister himself had charge of it in 1903, and came down with a statement in 1904 for the guaranteeing of the bonds. I am not holding the government responsible for the accident. This side of the House has never made any severe criticism of the government on that point. But we are now asking the government, who is responsible for the design of a bridge that was absolutely insufficient for the work for which it was intended? That is the position. It was insufficient, the design was altogether wrong, and that is the reason why this country is put to such enormous expense, and I suppose that is the reason why the bridge fell into the river. As a proof of that we find the government now coming forward and making the statement that the superstructure was altogether insufficient. They have now prepared for a very much stronger and heavier superstructure. I would point out to the Minister of Finance that had there been a change in the Grand Trunk Pacific by which larger and heavier engines and trains were to go over this bridge, that would have been one reason why there should be a heavier superstructure. But, there was no change in that respect and therefore, my hon. friend and his government must be and are held responsible for this accident in so far as that is concerned. The minister can say that the responsibility rests with the engineer if he wishes. That may be his statement, but the people of the country and we of the opposition must seek our redress as against the government.

Mr. FIELDING. I entirely disagree with my hon. friend as to what the people of the country think on this subject. I do not believe that the people of the country expect the members of this government to be engineers. What they do expect is that in a great engineering matter they shall select good professional advice and if it turns out that the engineer made a mistake and if an accident happens on government work, which is just as likely as on any other great work, I suppose that is proof that the eminent engineer was wrong in his judgment. But if the government selected the best engineer that could be found I think the people of the country are reasonable enough to give the government credit for having taken every precaution in the matter.

Mr. R. L. BORDEN. He had never seen the work.

Mr. FIELDING. If so, that does not necessarily prove anything.

Mr. R. L. BORDEN. He was never on it.

Mr. FIELDING. I do not know that that is correct.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

THIRD READINGS.

Bill (No. 89) respecting the Calgary and Edmonton Railway Company.—Mr. Douglas.

Bill (No. 82) to incorporate the Merchants and General Insurance Company.—Mr. Monk.

PATENT OF MOND NICKEL COMPANY.

House in Committee on Bill (No. 92) respecting a patent of the Mond Nickel Company, Limited.—Mr. McGiverin.

On section 1,

Mr. BLAIN. What is the explanation of this?

Mr. GRAHAM. This Bill has been reported without amendment by the committee. I do not know the Bill myself.

Mr. BLAIN. Is the promoter in the Chamber?

Mr. PARDEE. The promoter is, unfortunately, absent. But the fact that the Bill is reported without amendment indicates that the committee was satisfied.

Bill reported.

Mr. GRAHAM. The next items on the Order Paper are Bills to be considered in Committee of the Whole. But they have been amended by the several standing committees that dealt with them. They are not railway Bills, or I would be ready to go on with them. But, as I do not know the nature of the amendments, I move that the committee rise, report progress and ask leave to sit again.

Motion agreed to.

SECOND READINGS.

Bill (No. 127) respecting the Grand Trunk Pacific Branch Lines Company.—Mr. Turriff.

Bill (No. 128) to incorporate the James Bay and Eastern Railway Company.—Mr. Girard.

Bill (No. 129) to incorporate the Ontario and Ottawa Railway Company.—Mr. Low.

Bill (No. 130) respecting the Vancouver Island and Eastern Railway Company.—Mr. Smith (Nanaimo).

SUPPLY.

House in Committee of Supply.

Collection of revenue—Intercolonial railway, $9,000,000.

Mr. BARKER. I wish to say that some hon. gentlemen who were not present this afternoon wish to discuss some items which are covered by the general summary then before the committee, and would like to have an understanding with the minister that this will be open to them. It will not be a matter of detail requiring the presence of the Deputy Minister, but they would like to have left open for further discussion the items of the Intercolonial railway and the Quebec bridge.

Mr. GRAHAM. I will not object. With regard to this item, hon. gentlemen will notice that we are asking for $250,000 less this year than we asked for last year.

Mr. CROSBY. I would like to have an explanation from the minister as to how he has made this reduction—whether it is by cutting down the number of regular hands or otherwise. As a matter of fact, a great many men have been laid off, particularly in the city of Halifax and its vicinity. I also understand that a number of high class men have been engaged at large salaries. I would like to have some idea of how this saving is made.

Mr. GRAHAM. There has been a general reduction all round. The amount we ask for is based on the experience of the past year; in fact, we think we shall hardly reach an expenditure of $9,000,000 this year, which has been an especially good one for operation during the winter. Next year, of course, something extraordinary might happen, and we might have a deficit. I will give my hon. friend some items showing how the expenses were cut down last year: steam locomotive repairs, $114,242; passenger car repairs, $1,903; freight car repairs, $114,643; floating equipment repairs, $3,999; shop machinery and tools, $10,566; heating and lighting, $6,493; traffic expenses, $9,637; dispatching trains, $11,882; and various other items of this kind. We did dispense with the services of a large number of men. Quite a number have been taken back, as vacancies occur, and I am asking that the old employees be taken back to fill them.

Mr. GRAHAM.

Mr. BARKER. I quite appreciate, from some personal experience, how impossible it is for the head of a railway system of some 1,400 miles to put down approximately, as he can do in capital expenditure, what his working expenses will be for the coming twelve months. It is a variable item, and must depend not merely on the number of men employed, and the rate of wages paid, but also on the amount of business done. I desire here to express my great gratification at the departure which has been made by the government from the practice of the past. We have had, year after year, the painful experience of seeing a great public work managed politically. On our side, regardless of whether we should be in power, we desire that this great Canadian institution should be worked for the benefit of Canada, particularly for the benefit of the eastern provinces, regardless of politics. We quite appreciate, I think, the difficulty of hon. gentlemen opposite in restraining their political friends in the interest of economy, and have tried to make some allowance for that. But there can be no question that so long as a railway like the Intercolonial is worked on political lines, there can be nothing but extravagance and waste. It was for that reason, although I would have liked to have seen the railway removed even farther from the political influence of the government, that I heartily welcomed the appointment of the board of railway men who are now in charge of its operation. I have the more pleasure in saying that much, because in the few months during which these gentlemen have been in charge, we have seen an approach to better things. Year after year, since I have had the honour of being in parliament, I have endeavoured to impress upon the government the absolute necessity of keeping the accounts of this railway as every railway company keeps its accounts—not merely for the purpose of reducing expenses, but for every consideration that applies to any business corporation.

One of the great difficulties we have had in discussing the affairs of the Intercolonial railway has been that we have never been able to compare the results of its operation with those of the operation of other great railways. It has been absolutely impossible for us to take the results of the year's working and compare them with those of any other large concern, for the simple reason that deliberately, wantonly, in the face of every experience, the government have insisted upon keeping their accounts on a different basis from that on which other railway companies keep their accounts. If the Intercolonial railway accounts had been kept as are those of the Grand Trunk railway or the Canadian Pacific railway, all the discussions in this

House, which have taken up our time from day to day and from week to week, could have been dispensed with, and the year's operations discussed in two or three hours. Take such a company as the Grand Trunk railway whose accounts are reviewed 3,000 miles away from here by the men whose money is invested in the enterprise, in a few hours they get at the bottom of the year's work, while it takes us weeks in the case of the Intercolonial railway. Why is this? It is because the accounts of the Grand Trunk railway and these other railway companies are kept on a practical system and basis, so that when you find that the working of either of these companies takes a certain percentage of the profits, you have a fair idea whether it is being operated in an economical and business-like manner. Can we say this of the Intercolonial railway? On that road there has not been any system for charging expenditure as between capital account or working expenses. The system adopted by the government would be laughed to scorn in any business corporation. It is one which conceals the actual results of the work. How can you expect the management to be careful to keep down the expenditure if all the manager has to do is to charge 25 or 30 or 40 per cent more to capital account and thus show better results? Yet that system has been absolutely fostered, and in fact recommended, by the Department of Railways. The minister wants to show a surplus, and it is the easiest thing in the world to do so, if you take 10 or 20 per cent out of the working expenses and transfer that to capital. We can see in the last nine months the beginning of a different system. We find an effort on the part of the management to know precisely what they are doing. For the first time we find these gentlemen setting aside a round sum out of revenue and charging it against the earnings of the road for the purpose of renewing in the future the rolling stock which is wearing out. I would like the minister to show us any such item in the past. These gentlemen have had very little time to show what they can do, but I feel certain that as they go on, further improvement will be shown and, whether the Intercolonial railway shows loss or profit, we shall know the truth. It is absurd for hon. gentlemen from the eastern provinces to tell us from Ontario or elsewhere that we are prejudiced against the Intercolonial railway. We have no desire whatever to belittle or misrepresent the Intercolonial railway. We do not desire that the Intercolonial railway shall make money unjustly or unfairly to them. We want the road worked honestly; what we want is to know the truth, whether there be a profit or a loss, and we shall be content. What more can the people from Nova Scotia or New Brunswick ask? We are not going to complain if the railway does not make a profit, but we do say that in the interests of honesty and of the country at large, we should know the truth. How can you expect the staff to care whether they are doing their best for the railway or not, if it makes no difference whether the railway is really gaining or losing, if they can gain the approval of their employers simply by misrepresenting the actual working expenses of the road? Why, every time you claim credit in this House by showing a pretended surplus, you hold out temptation to your officers to misrepresent; because it is very easy for the manager or the engineer or other departmental head, who knows that his reputation in the minister's eyes depends on showing a surplus—it is very easy for him to show one, and he will take care by every means in his power to do so, especially as he knows that he cannot be subject to criticism, because his accounts are kept differently from those of any other railway management in America. Who in the world can tell whether a railway man has been a success or a failure if his accounts are kept differently from the accounts of every other railway man in America? There can be no greater temptation to wrong-doing on the part of a great staff of employees than to put them in the position they have been in for years. I have great confidence in railway men. I have had nearly forty years experience of them, and I say there are no men who are more loyal to honest, good working, to the true interests of their employers, than the railway managers and officers. The railway man's whole reputation depends upon it. He knows that whatever clap-trap may be uttered on the public political platform, there is a great mass of experienced men over this whole continent who laugh at cooked returns such as we have presented to us. He knows that if he hopes to rise in his career, the worst place he can go to is a concern which keeps its accounts differently from other railways. I am glad this advance has been made. I can see in these few months' accounts an advance in the right direction. I do not want to criticise, and it is useless, in my opinion, to criticise this round sum set down as the estimtaed amount you may probably have to pay for your working expenses, which, as I have said before, depend upon your traffic. I hope that the minister will be able to go further in the right course he has taken. I hope he will put the administration of this road more and more in the hands of the professional men, as I may call them, who have been bred to the business, and take it more and more out of the hands of the politicians.

Mr. GRAHAM. I know my hon. friend will agree with me that it is easier to speak from his standpoint than from the stand-

point of the man who has to do these things. He must have heard some criticism, not unkindly criticism, rather intimating that the appointment of a board was to escape responsibility. I may say that is not my view. I wanted to escape first an enormous amount of detail about which I knew nothing, but which came to my office every day only to be returned to the management and perhaps returned to my office again. I sought, in the first place, a way to get rid of innumerable details and to let them all be settled by men who knew something about that kind of work. However, I am obliged to my hon. friend for his kind words with reference to what I think is an improvement. So far as I am concerned personally, it would be much more comfortable and far easier in one way to continue the old system and have no board. But having undertaken——

Mr. BLAIN. What way is that?

Mr. GRAHAM. I will not put that on 'Hansard' because we never can get it out of there. I am frank in saying and hon. gentlemen will agree with me, that it is a difficult position, a difficult problem to work out. But the board, I think on the whole, has given good results. I am not so anxious to have the Intercolonial railway pay a lot of money, we want to give a good service and the road has been established under conditions that have not allowed it to make much money, but we want to maintain the standard of the road. We want to maintain the service as far as possible, but I do say that at the present time the Intercolonial railway ought to be able to at least pay its own way. It has not any dividend to pay, it has no interest to pay and I think it should be able to support itself. One year we may have a surplus, the next year we may go a little behind.

As to the keeping of the accounts, some three years ago the present deputy minister engaged an expert to go through our books and reorganize the accounts of the Intercolonial railway and get them on the same basis as the books of a company. That cannot be all done in a moment, men who have been working one way all their lives cannot change quickly, but at present our returns are kept on the standard classification of the railways of America. Our reports are made under the head of maintenance of way, maintenance of structure and maintenance of equipment, traffic expenses, transportation expenses, just as returns are made to the Railway Department from all railways operating in Canada. As to charges to capital and revenue we have adopted the standard of the Inter-State Commerce Commission and whether it be a surplus or a deficit accounts are being kept absolutely as they are kept by a railway company. This year we have charged everything to capital just as a a company would. We have been putting aside $25,000 a month for renewal of equipment since 1907, but not for renewal of rails. This year we are placing $100,000 to one side for rail renewal account and I think that whatever the reports to the House may be they will be shown exactly how the matter stands and will be exactly as the accounts of a company would stand doing the same business.

Mr. BLAIN. I am much interested in the remarks of the minister. Whatever may be said, it is certainly a departure. For many years we have been listening to the predecessors of the Minister of Railways stating to this House that there was absolutely no political patronage in the management of the Intercolonial railway. After the minister had made this statement year after year, he would be endorsed by the hon. gentlemen from eastern Canada emphasizing the fact that whatever other defects there might be in respect to the management of the railway there was no political patronage. We would gather from the remarks of my hon. friend, coupled with the fact that they have changed the policy and have now transferred the management to a board, that there had been some political interference. Now the government is being complimented because of the change that has taken place. I want to direct my hon. friend's attention to this remark made in the House a few days ago by a gentleman who lives down in the province where the Intercolonial railway runs, and who is a prominent supporter of my hon. friend's government:

> I would like to know if it is in the interest of the people that the commissioner takes a big stick and threatens a newspaper if it criticises the management that it will get no more patronage, and not only threatens but carries out his threat. That is the way the people's railway is managed for the people. God save us from the people's railway.

That is not a criticism by a gentleman from the province of Ontario, that is not a criticism of the old policy, but it is a criticism of the new board of management by the hon. member for Hants (Mr. Black), showing that there certainly is some interference, that the commissioners do take up the big stick; and if a newspaper down there attempts any criticism of the management of the road, the commissioner says: No more money from the government until you stop that kind of criticism. Now I do not altogether agree with my hon. friend from Hamilton (Mr. Barker). Of course he is a railway man, and his experience is very valuable; but I would hesitate to compliment this new board of management until we see what they are going to do.

Mr. BARKER. I only said I was gratified with what they had done in the way of improvement, but I expected a great deal more.

Mr. BLAIN. Improvement in lessening the number of employees. It was charged from this side of the House that they had altogether too many employees on that railway, and we were answered by their saying that, in comparison with other railways in Canada, there were no more employees on the Intercolonial than were required for the passengers and freight. Now we find a number of men have been dismissed. For what reason? Times are prosperous. Surely that is an answer to the criticism on this side. The fact is that a commission appointed by themselves declares there has been altogether too many put on there for political purposes. And now they are dismissed by the railway board, dismissed by the hundreds. A certain great man said that people are bundles of inconsistencies, and I think that remark would apply very well to my hon. friend's department. We have not much to say about my hon. friend, we are waiting until his record is made. My hon. friend from Hamilton thinks he is doing pretty well, but I am not so well acquainted with his achievements. But to-day we have a complete rebuttal from the government side of the policy that they declared was the policy of managing the Intercolonial without any political interference at all. Now I am sorry to have to sit in the House and to find that a criticism, keen and cutting, comes from a gentleman on their own side of the House, who says the management is not a bit better. The commission takes up the stick the same as the government did, and as soon as any criticism comes from a newspaper in eastern Canada about the management—no more support from the government until you stop that sort of criticism.

Mr. GRAHAM. My hon. friend complains of political interference. He won't feel so badly when he knows that it is a Liberal newspaper that is under discussion.

Mr. BLAIN. I was reminding my hon. friend of a criticism of one of his own supporters, and perhaps he would tell us whether that is true or not.

Mr. GRAHAM. My hon. friend contended that the same political interference was being exercised by the commission as there was before by the minister when they took up the big club.

Mr. BLAIN. The hon. member for Hants said that.

Mr. GRAHAM. No, the hon, member for Hants did not mention political interference. I am pointing out that this cannot be political interference, because it is a Liberal newspaper that is under discussion. As a matter of fact I believe the board did have some disagreement with a newspaper in the east, because the board represented to me, and I saw some of the statements myself, that this paper was making a campaign against the Board of Management of the Intercolonial which I have no hesitation in saying was absolutely unfair and based on untruths: and in my private capacity I would not give any business to my best friend if he told what was not true. Of course we have criticism of the Intercolonial management more or less, but no charge of political interference can be made against the board. There would have been political interference if I had said to the board: 'You must not do that; you must keep on giving this Grit paper business.' But I try to keep my fingers out of the trouble. I hope my hon. friend will see the point.

Mr. BLAIN. It certainly could not have been any criticism of a Conservative newspaper, because my hon. friend knows well the Conservative newspapers do not get any pap from the government.

Mr. GRAHAM. My hon. friend is wrong again, because he does not keep track of things. One of the complaints occasionally made by strong Liberals is that we do give advertisements to Conservative newspapers. That is true. The Halifax 'Herald' for instance, which the leader of the opposition will recognize, gets advertising; so does the Montreal 'Gazette', so does the Quebec 'Chronicle,' and I could name others, where we get good value. My hon. friend also referred to dismissals. Now, as a matter of fact, the traffic on all roads fell off immensely; every company road, I understand, dismissed their men by the dozens, by the hundred, by the thousand. Wisely or unwisely, I kept our men on. But when the board came in they said there were too many, and they did what a company road would have done a year before. I hope that the Intercolonial will get so much business back that we will have to reemploy some of the men who have been dismissed.

Mr. ARMSTRONG. Do I understand that the minister has given the board perfect liberty to advertise in whatever papers they choose, in the eastern provinces or the western, for railway supplies?

Mr. GRAHAM. For everything in connection with the Intercolonial. The board is doing this now, I could not give you tonight a list of the Liberal or Conservative papers in which they are advertising.

Mr. ARMSTRONG. Do I understand that, so far as the minister is concerned, he gives absolute freedom to the board to advertise in whatever papers they choose?

Mr. GRAHAM. So far as the Intercolonian railway is concerned.

Mr. A. HAGGART. There is a certain amount of politics, of course, in connection with the road. But I suppose the minister will not deny that, now when we are two years further away from the general election, the department might exercise some more economy with regard to this $250.000.

Mr. GRAHAM. This $250,000 is really not in question. The expenditure has been reduced. This year there will be less than the $9,000,000. We took a vote of $9,250,000 last year so as to be sure to cover all contingencies. I am not asking that much now for the experience of last year proves that we will not need it.

Mr. CROSBY. How many freight passenger cars and locomotives are idle at the present time by reason of the fact that they require repairs? I do not know whether the minister will be able to-night to give me an answer to another question which I desire to ask, but if not I would like him to give it at some other time. I would like to know what the difference is between the number of men getting from $1.25 to $2 a day on the Intercolonial railway in 1907-8, and the number of men receiving that wage on the road at the present time. I would also like to know the difference in the number of men getting $2,000 and upwards as between the present year the year 1907-8, together with their salaries.

Mr. GRAHAM. It would be impossible to get the details that my hon. friend asks for as it would take weeks and weeks to procure the information. In our higher offices we pay our men much less than the railway companies do. There has been a good deal of talk to the effect that we pay certain men high salaries and take it out of those receiving smaller pay. The ordinary man on the Intercolonial railway is paid as high, on the average, as men on any railway, or higher, whereas the officials filling the higher offices are paid less than men filling similar positions on other railways in Canada. The criticism of railway men—and we have heard it in connection with the retirement of Mr. Butler from the Railway Department—is that we do not pay sufficiently high salaries to our officers on the railway, and that we do not have enough of these officers. That is the professional criticism on the Intercolonial railway. Just before I came into the department my predecessor took occasion to get the opinion of an expert and his opinion was as I have expressed it. The criticism is heard that we possibly have too many in the lower grades and too few in the higher, and that while we pay good salaries to the ordinary employees we do not pay our higher officials a sufficient amount of money to keep them and to get the best out of them. As to the number of cars, there are about four hundred freight cars ready for repairs and we are turning a greater number out of the repair shops every day than ever before in the history of the road. There are about 5 or 10 per cent of the locomotives ready for repairs, but I find that our percentage of locomotives requiring repairs is less than the average in the Dominion of Canada to a considerable extent. I do not think there are any passenger cars, except those that are always going through the shops.

Mr. CROSBY. Last year we had in this House a report from a commission which had been delegated by the government or this House to ascertain whether the clerks in the employ of the Intercolonial railway were getting fairly paid or not.

Mr. GRAHAM. That was not a commission but a conciliation board agreed to by the men themselves and the management. The House had nothing to do with it.

Mr. CROSBY. For the purpose of my argument it does not make any difference. That board went out to ascertain whether the employees on the Intercolonial railway were paid by the standard of other employees on other railways in Canada. They came back with their report, and it was to the effect that they were paid 15 or 20 per cent less.

Mr. GRAHAM. That was not the report.

Mr. CROSBY. Well, what was it?

Mr. GRAHAM. The report was that we should reduce the staff of clerks and that by this reduction we could pay the balance of the staff a certain percentage of money as recommended by the commission. They recommended that we have a classification something like the Civil Service classification. There were great discrepancies. Some of the clerks were paid too little and others too much, or more than their jobs were worth. We have undertaken to classify these clerks, not by reducing the salary that any person then had, but if a man is getting $1,000 now in an office that under the new classification ought to be worth $750, the old man will retain his classification, but when he goes out his successor will get $750.

Mr. CROSBY. That is very good as far as it goes, but I remember when speaking of the matter in the House last session, that a different answer was given to me from that given to-night by the minister. A few days after, when the minister came down with his speech on government railways, he tried to satisfy the House that the Intercolonial railway was run at a

cheaper rate per mile than any other railway in Canada. Then this board went out for the purpose of ascertaining whether the men were overpaid or underpaid, and they reported that there was an over abundance of employees, a matter which was none of their business, because they were not sent out for that purpose. I tried to uphold the minister on that occasion because they were not doing him justice. If they had more men on the road than they should have it was not fair to him. But the minister came in and proved beyond a shadow of a doubt that the railway was not over-manned. I had no reason to doubt the figures which he presented to show that that was the actual condition. That being the case, and the management having dismissed as many men as we are informed have been dismissed, we must have a railway which is not sufficiently manned at the present time. I did not have the pleasure of listening to the speech of the hon. Minister of Railways this session, and I have not had an opportunity of reading it, although I hope to do so. Now, I would like to ask the minister what difference there is in the number of men of the working class employed on the Intercolonial railway in 1910-11 as compared with 1907-8, or in 1909-10 as compared with 1908-9. I am sure the minister will be able to give me that information. Then I would be glad if he would give us the information with regard to the number of officials. I understood him to say that the technical men, as he called them, were paid less on this road than on other roads, while the labouring classes were paid as well on the Intercolonial railway as on other roads. No doubt, there are some men on the Intercolonial railway who should not be on the road at all, but if so, that is the fault of the management. Speaking particularly of the men in my own locality, including those engaged in connection with the terminal facilities, I do not think they are getting better pay than men who are engaged in other work in that city. In what he said, I suppose, the minister had in mind the fact that his deputy minister has been called to a very high position, at a salary, I believe, three times as much as he was getting here. I want to tell the hon. minister there are not many Butlers in Canada.

Mr. GRAHAM. Only the first families can have a butler.

Mr. CROSBY. I sympathize with the minister in losing his deputy, but we are all pleased that that gentleman has been called to so important a position. If the minister wants to hold his good men, all he has to do is to raise their salaries. Treat the good men well, and do not let them suffer for the bad ones. I suppose the minister will send me the information as to the number of workingmen on the railway.

Mr. GRAHAM. I will try to send that to-morrow.

Mr. CROSBY. I understand the minister to say that there are about four hundred freight cars of every description now idle. He says also that the number under repair is from five to ten per cent. That is not very definite.

Mr. GRAHAM. Of course, in our change from the old shop to the new there was some delay of work. But, with the facilities of the new shops, we are effecting a greater quantity of repairs than ever before and are catching up rapidly. I do not take credit for that; it is due to the new shops which were designed and practically constructed by my predecessor.

Prince Edward Island railway, $400,000.

Mr. BLAIN. The minister has some explanation to give of this.

Mr. GRAHAM. I gave that at length the other day. Prince Edward Island is one of the most beautiful spots in Canada. But, so far as railways are concerned, it is isolated. We have a narrow gauge railway there, about 260 miles in length. You cannot give a fair service there and come out even, much less make money. The people of Prince Edward Island have always complained to me—and their complaint is not without reason—that they do not get the train service they ought to get. They certainly do not begin to get the service that is given on the Intercolonial railway. It is for parliament to look at the matter sympathetically. We must make up our mind that, each year, a certain amount must be contributed out of consolidated fund to maintain the service of the Prince Edward Island railway, for the traffic is not there to keep the road on an even basis financially. But Prince Edward Island is part of the Dominion; the people were brought into confederation expecting great things, and, for my part, I sympathize with the view that we ought to go on and give on that railway a better service than we do now, even though we know that it will increase the amount which must be taken from the consolidated fund.

Mr. BLAIN. How much is taken from the consolidated fund for this purpose now?

Mr. GRAHAM. Last year, $90,000; this year it will be about $70,000. We must make up our minds that, if we are going to have the service we ought to have, the service that the rest of us enjoy and would make a fuss if we did not have, it will cost us, say, $100,000. I regard sym-

pathetically the idea that we should give Prince Edward Island a fair service.

Railways and canals—chargeable to capital —canals—Lachine canal — concrete vertical wall, $165,000.

Mr. GRAHAM. This is for a concrete vertical wall on the south side of the Lachine canal. The slope walls made during the last two years were carried up only to the water line. The portion above water is to be vertical to increase the width of the bank eight feet to twelve feet. Another section of vertical wall is to be built from the top of the rock from the Canadian Pacific railway bridge to the guard lock, where the dry wall is tumbling down. This wall is similar to the northern wall on the same section. This is a new vote. The items of this expenditure include $22,000 for concrete under water, for the vertical wall $80,000 and for cement about $30,000. Purchases will be made by tender in every instance.

Lachine canal—towards completion of wharf and basins, $135,000.

Mr. GRAHAM. The tenderers in this case were George Goodwin, the Canadian General Development Company, Downey & O'Brien and Michael Connelly. The contract was awarded to the lowest tenderer.

Mr. CROSBY. I would like the minister (Mr. Graham) to notice that when the canal question comes up, he finds that the men of the east are always prepared to see that the money necessary is provided. All they ask is that that money shall be properly spent. The men from the east are anxious to have every facility provided for the transportation of the commerce of this Dominion. So, I am glad to say, you do not find them trying to interfere with these estimates in any way.

Mr. BLAIN. Were tenders asked for in all the cases the minister has mentioned?

Mr. GRAHAM. Yes.

Mr. BLAIN. By advertisement in the newspapers?

Mr. GRAHAM. Yes. Formerly, we sent circulars to the cement manufacturers, but now we advertise in the papers for cement also.

Mr. BLAIN. I do not wish to criticise too closely on this point, but we ought to understand the policy of the department. Are we to understand that advertisements are given to the newspapers having the largest circulation regardless of party. Or what is the policy of the department on that point?

Mr. GRAHAM. So long as men are human there will be humanity in all these things, I suppose. The policy of my department, in regard to large works like the Quebec bridge, is to advertise in all the trade papers and engineering papers, which will reach particularly the men who would be able to undertake the work. General work we advertise in papers of good repute, and I am free to confess that they are mostly Liberal papers.

Mr. BLAIN. For instance, looking over the list of papers in Toronto, I find in connection with one item that $228.60 was paid to the Toronto 'Globe' and $228.60 to the Toronto 'Star'; but I look in vain for any advertisement given to any other of the leading papers in Toronto.

Mr. GRAHAM. Upon the basis of my hon. friend's suggestion, it is said by those who know that the Toronto 'Globe' has the largest circulation, inside and outside, of all the Toronto papers. It is said that the 'Star' has the largest circulation of the evening papers. So that outside of politics these would be the two papers that would reach the most people.

Mr. BLAIN. Accepting my hon. friend's policy of selecting the papers having the largest circulation—

Mr. GRAHAM. I did not say that.

Mr. BLAIN. There can be no other inference from his statement that the Toronto 'Globe' has the largest circulation of the Toronto papers and the 'Star' has the largest evening circulation. Keeping that in view, I want to direct his attention to the fact that when advertising is done in the city of London, in western Ontario, my hon. friend does not select the paper there having the largest circulation, because in the London 'Free Press', which is recognized as the leading newspaper in that section, you cannot find any government advertisements. Therefore, the policy which my hon. friend has laid down applies to the city of Toronto, but not to the western part of the province. I am not complaining particularly. I merely want know exactly what the policy of my hon. friend is. My hon. friend says, therefore we may expect that in the future advertisements will appear only in papers that support my hon. friend and his government, and therefore the patronage list, which we have heard so much about lately, is not going to disappear altogether from the government, even from my hon. friend's department.

Mr. GRAHAM. I may be blunt, but I am not hypocritical. As long as I find a friend who gives me good service, I am inclined to lean a little towards that friend, and I am inclined to think that my hon. friend would do the same.

Mr. CROSBY. I am very glad to hear that that is the minister's policy, because it means that he will do all his advertising in the Halifax 'Herald' and 'Evening Mail,' which I think have the largest circulation east of Montreal, if not in the whole Dominion. They are also perfectly independent. No man can have their support unless he is worthy of the support of the people. Therefore, these papers, having been brought to his notice, being perfectly independent, and having a sworn circulation, I hope that the minister, whenever he wants to let the people know what he wants, will advertise in them.

Mr. R. L. BORDEN. How much will this item cost altogether?

Mr. GRAHAM. $241,319.50.

Mr. R. L. BORDEN. What is the cost of the other item?

Mr. GRAHAM. It is expected that the vote will cover the entire cost; but we have not yet let the work.

Soulanges canal—purchase of tool grinder, &c., $850.

Mr. BARKER. How are articles of this kind bought?

Mr. GRAHAM. All by tender. I have a list of 300 of the leading machinery men, irrespective of politics, and I write to all of them for tenders. It is cheaper than advertising.

Mr. BARKER. What we have had to complain of is that the government bought through middlemen.

Mr. GRAHAM. We do not buy any tools from middlemen, unless they are recognized agents of their respective companies. In every case we try to buy direct from the manufacturer. In fact, in some cases I have told the manufacturer that he must tender direct.

Mr. BARKER. I believe that the minister means what he says, but in the Merwin case we found that the manufacturer was willing to sell and deliver at his price to the middlemen, but the government bought in preference from the middleman and paid him 87 per cent extra..

Mr. GRAHAM. There is nothing of that kind in my department.

Soulanges canal—stopping leaks, trimming slopes, &c., $100,000.

Mr. GRAHAM. Last year we asked for $160,000 and spent $60,000. The Soulanges canal is built through soft soil, which is very treacherous, and we are trying to improve the banks so that it will be impossible for us to experience the trouble we had in the Cornwall canal. The work we have done has proved very efficacious, the bank being dry where it used to be wet and spongy. We are completing that work, which must be done in the interest of shipping.

Mr. CROSBY. Will that cover all the work to be done?

Mr. GRAHAM. It will cover this particular work and overcome what appears to show signs of difficulty. We have to take the responsibility of keeping up the work to prevent any recurrence of this kind.

Sault Ste. Marie canal construction, $70,000.

Mr. GRAHAM. This work is under contract. It is for deepening and widening the channel at the upper entrance. We let this by tender to C. S. Boone, of Toronto, who made the lowest bid. Contract dated 12th March, 1907, value of work done to October last, $200,380. We hope that this $70,000 will complete the work.

Trent canal construction, $1,750,000.

Mr. GRAHAM. Last year we had a million dollars. This year we expect to let two more sections, which will bring us from Lake Simcoe to Lake Ontario. We expect to have all that under contract this year. My trip through the various canals in the old world convinced me that the Trent canal will be of real advantage to the Dominion. Quite a lot of water-powers will be developed along the way, and the dams constructed by us will assist in the development of more power. We have made arrangements with people who own the land along the banks wherever we could, and we expect that there will be developed altogether in that part of the province some 60,000 horse-power. Some two years ago, in order that the rates might be right, I amended the Act of the Board of Railway Commissioners and placed the rate to be charged by the people who develop these powers under the control of the board.

Mr. ALEX. HAGGART. How much still remains to be done after these contracts are completed?

Mr. GRAHAM. From Simcoe to Georgian bay, there is one route by Nottawasaga bay and the other by the Severn river. I expect to meet a deputation concerning these routes in a few days. One part of the people desire the canal to go by Nottawasaga, and the other by Orillia, taking the Severn river.

Mr. ALEX. HAGGART. It will be of no use for the craft that sail on the upper lakes?

Mr. GRAHAM. No, it will be for canal barges drawing eight to nine feet of water. I look to a good deal of development of traffic that will come through in these barges. The opening of this canal will make that part of Ontario one of the paradises of Canada for summer tourists.

Mr. ARMSTRONG. How many locks? And is there any estimate of the cost of the work?

Mr. GRAHAM. The engineer has not yet finished his report as to these two routes, the Severn river and the Nottawasaga. My hon. friend from Simcoe (Mr. Currie) looked over part of the report in my office. I do not know whether it pleased him or not. My hon. friend from Muskoka (Mr. Wright) was looking at it to. The report will be completed and give a full estimate of all my hon. friend asks.

Mr. ALEX. HAGGART. The Newmarket canal no doubt will get its full share.

Mr. GRAHAM. My hon. friend from York (Mr. Wallace) is waiting for that.

Mr. WALLACE. What is the hon. gentleman appropriating for the Newmarket canal?

Mr. GRAHAM. Last year we did not spend much on it. I sent for Mr. Grant, the engineer of the department, who is a first-class man, and we discussed the Newmarket canal very thoroughly. He assured me that I can state to the House on his reputation that there will be plenty of water in that canal. Before the summer is over, you will find that the stretch then completed will have water in it.

Mr. WALLACE. It has none now.

Mr. GRAHAM. Yes, they are skating on it. I am giving you what my engineer says. This year we intend to spend about $150,000 on that portion of the Holland river canal. Of course that is the portion in the vicinity of Newmarket. There is another section east of that called No. 2, Holland river, which requires dredging, but we have not done anything on that yet.

Mr. WALLACE. Last year you spent about $192,000.

Mr. GRAHAM. $57,000, I think.

Mr. WALLACE. You were to have spent the same as the year before.

Mr. GRAHAM. I did not do it.

Mr. WALLACE. The year before most of the money was spent during August, September and October, 1908. That is the reason I thought this work was mostly political. Does the minister really intend finishing that canal, and has he any idea that it will be of any use whatever

Mr. GRAHAM. I do intend finishing it.

Mr. WALLACE. And you will get water?

Mr. GRAHAM. Not the faintest question about it.

Mr. WALLACE. Where do you expect to get it?

Mr. GRAHAM. I am giving Mr. Grant's opinion. In Germany last year I visited one canal owned by a county council. The canal was 26 miles long, and it was supplied entirely from the drainage of the country. In Germany last year I visited one canal 29 miles long supplied absolutely by the drainage of the country. It joined a river, but the county council was precluded from taking any water from the river because a rival company had the monopoly of the water from the river. They made provision that in case the water supply ran low they can pump the water back into the canal and use it again. They have a system of double locks by which a boat goes through on one side and the same water is used for another boat on the other side of the canal. They have never used the pumping device as they get enough water from the drainage. It is one of the most beautiful places in Germany, and is a fashionable summer resort. Mr. Grant says that by a system, I think, of two dams and reservoirs they can provide ample water, and after discussing it with him I have not a lingering doubt in my mind that there will be plenty of water for the Newmarket canal.

Mr. WALLACE. What is the estimated cost of the canal with the water? Last year you said $982,000 without the water.

Mr. GRAHAM. Unlike my hon. friend, I always include water when I give an estimate for a canal. The estimate will be as I said last year, at least $1,000,000 in my opinion.

Mr. WALLACE. When do you expect to have the canal finished?

Mr. GRAHAM. If my hon. friend is in a hurry, I can spend some more money.

Mr. WALLACE. I do not think you should spend any.

Mr. GRAHAM. I have taken that we should not construct more branches until we finish the main work. When existing contracts have been completed, I intend to stop toying with this project and go on and complete it. This year I intend to spend $150,000 on it.

Mr. R. L. BORDEN. Has the government come to a conclusion as to the best means for irrigating the Newmarket canal?

Mr. GEORGE GORDON. I could understand the necessity for a canal where water had to be pumped in and out if after having it in the shape there would be any traffic. I know that vicinity and I know that there is very little water to be got to go into that canal. I would make a special appeal to the minister to stop spending money on a useless work like that. I am appealing to the minister as a business man on a business proposition even in the

face of the report of the chief engineer. If the minister would go there himself and look into the proposition and come back and tell us that he thinks it is feasible to keep that canal supplied with water, and that when completed there would be any business or traffic, I would be willing to put up some money. You should stop building this canal, it is a work which should not go on because there are so many necessary works all over the country that are not being gone on with. I am satisfied that the minister feels he should not go on with it, but something is compelling him to make the expenditure. I am sure that if he had his own way he would not do it.

Mr. EMMERSON. If the hon. member had been in Ottawa some years ago and had had the privilege, which was my privilege of listening to a very large and representative delegation from that section of the country, headed by Mr. Lennox, a member of the legislative assembly of Ontario, I am sure his faith in the Newmarket canal would have been strengthened, and he would have been convinced beyond all question that it was a work in the interest of Canada, as well as in the interest of that section of the country, that there was abundance of water, that traffic was there waiting only to be carried, and that unless this parliament acceded to the very reasonable request of these gentlemen, parliament would be doing an outrage on the people of that section and on the people of Ontario generally. I was impressed by the earnestness of the appeal made and the representation with respect to the project.

Mr. ARMSTRONG. Did not the minister make any investigation?

Mr. EMMERSON. There was a very thorough investigation.

Mr. ARMSTRONG. What amount of traffic was stated to be likely to go through the canal?

Mr. EMMERSON. I cannot recall now, but it was a number of years ago, and I am speaking of the impression made on my mind as to that. It was said that this traffic would mean a traffic to the city of Toronto as well as the country near the canal.

Mr. ARMSTRONG. What class of goods was it expected would be carried?

Mr. GRAHAM. Very largely lumber and materials that were to be brought down from the central point there in Haliburton through Lake Simcoe, through the Kirkfield lock, and on towards Aurora, and thence carried to Toronto. It was said that the manufacturing interests of Toronto would be largely advantaged, and that the resources surrounding these interior lakes would be given life, and the people of that section of the country would reap the benefits which are denied them today by reason of the lack of transportation.

Mr. GEORGE GORDON. Did you ever see the feeder where the water is to go through for the Newmarket portion?

Mr. GRAHAM. I have never personally seen it.

Mr. WALLACE. Does he remember the first estimate that the deputation asked the government for?

Mr. EMMERSON. I do not carry it in my memory.

Mr. WALLACE. That deputation did not ask the government to build a canal from Lake Simcoe to Newmarket, but for a small appropriation to deepen the Holland river from Lake Simcoe to Holland Landing. In former days boats used to go from Lake Simcoe to Holland Landing. The chief reason why the Prime Minister and the Minister of Justice justified that canal was that a deputation came down from North York, and there happened to be three or four Conservatives among them. Well, if that circumstance is a sufficient reason for this government to spend $1,000,000 on that canal, I am not able to see it myself. The deputation asked for a small expenditure, and the premier said that because Mr. Lennox was on the deputation, who he supposed was a member of the local House, that justified him in spending a million dollars. But I would remind the committee that the deputation did not ask for any such thing, they only asked for about $100,000, just enough to deepen the canal. It was Sir William Mulock who brought that deputation down here; he invited a few of his friends to come down to Ottawa. You can get any number of people to come down here on a little trip like that.

Mr. BLAIN. That was his own county.

Mr. WALLACE. Sir William Mulock was the representative of North York at that time, and he got this deputation to come down here. It was a little pleasure jaunt for the purpose of seeing the capital. But that is the reason the government gave for spending a million dollars there. That is the minister's estimate here to-night, but I am sure that by the time they get through with it it will cost $2,000,000. Before that time there had not been a dollar spent on that canal, except in survey work, according to figures brought down by the Minister of Railways last year. I do not think it is fair to try to make the country believe that Mr. Lennox, because he happened to be the local Conservative member, would come down here and ask the government to spend $1,000,000 on a useless work like that. The ex-Minister of Railways says he

does not remember what the first cost of that was. But all they asked for was a small sum of money, which has now grown to $1,000,000, and will probably be $2,000,000 before they get through.

Mr. EMMERSON. I happened to be Minister of Railways at the time this delegation came. I cannot speak as to the politics of those gentlemen, but I remember that the delegation was headed by Mr. Lennox. I assumed that they came as business men, and not as politicians, and I did not treat with them as politicians, but as a representative delegation from that section of the country, coming here for the purpose of impressing upon the government the necessity of this work. I remember that they emphasized the fact, they claimed it to be a fact, that it would be a very easy matter to clear out the Holland river to Holland Landing, which they said was the old route to the Georgian bay, and they only required a comparatively small sum of money to build that portion of the work. But they laid stress upon the necessity of extending that work up from Holland Landing to the interior, to Newmarket.

Mr. GRAHAM. Clear through to Aurora.

Mr. EMMERSON. Yes, that far. Now, I am sure this delegation were in earnest. Subsequently I had the matter inquired into by an engineer, one who was not connected with the department at that time, and he made a report with regard to the estimated cost, and the traffic as well. I cannot carry in my memory, of course, what the report was. It is true that the then Postmaster General, who represented that constituency, took a deep interest in the work, and he and the local representative in the Ontario legislature seemed to be united in an effort to secure the construction of this work for that section of the country.

Mr. R. L. BORDEN. Perhaps the hon. member for Westmorland could tell us whether any estimate was made by the department in his time of the probable traffic that would be carried over this canal?

Mr. EMMERSON. I cannot give any details, and I only speak from memory as to the importance of the traffic, and from their representations. They convinced me, at least, that a traffic would come from the section to which I have referred, from the lakes away up to the Haliburton country, and from the Black river, and from the Georgian bay. They represented that material would be brought from the shores of the Georgian bay through the Trent Valley canal to Lake Couchiching, and from Lake Couchiching to Lake Simcoe, thence into Aurora, and thence on to Toronto.

Mr. WALLACE.

Mr. GEO. GORDON. Then the hon. member himself is practically responsible for the canal being started?

Mr. EMMERSON. I certainly am, and I take all the responsibility that belongs to me. There is one thing I am always ready to do, I am always disposed to lend a listening ear to the people, to gentlemen coming here on the part of the people, seeking the people's interest, and I have yet to be convinced that it was not in the interest of the people to begin that work.

Mr. HENDERSON. Year by year we are told by the government that this Newmarket canal was built in response to the request of a deputation that accompanied Sir William Mulock and Mr. Lennox, who at that time, or subsequentliy, became the local member for that county.

Mr. EMMERSON. He was at that time.

Mr. HENDERSON. Perhaps the hon. member could tell us what year that was in, so that we may know whether he was the local member at that time.

Mr. EMMERSON. He was introduced to me as the local member for that constituency in the Ontario legislature.

Mr. HENDERSON. I infer from what the ex-Minister of Railways has said to-night. that the object of that deputation was not to get a grant of money to construct this canal. What these people wanted at that time was something different, a sum, as he has told us, for deepening the Holland river, which would be a small part of this canal, and would cost but very little money.

Mr. EMMERSON. I do not wish my hon. friend to be under any misapprehension as to what I stated. I said that they had spoken of the deepening of the Holland river as far as Holland Landing as a work that would not be very expensive. They emphasized the fact that it would not cost very much to do that, but that the important work and that which they sought, urged and solicited was the extension of that canal to Newmarket and Aurora.

Mr. HENDERSON. What I have heard in the discussions in this House in reference to the whole matter was that the deputation did not have in their minds the extension of the work which the government is at the present time undertaking. I do not think it ever entered into the minds of the people who came down at that time that the work was to spread out into a section of country where no water could be found for canal purposes, where practically no traffic sufficient to warrant the expenditure could be obtained. I am still under the impression it was only the small part that the people at that time asked for, namely the deepening of the Holland river.

I do not think that the ex-minister will succeed in convincing this committee that the larger project was ever thought of by that deputation. I have never been able to accustom myself to the idea that that was the real intention, nor can I imagine that the ex-Minister of Railways and Canals was so extremely liberal, even to help the few Conservatives who accompanied that deputation, that he would at once jump into an expenditure that was going to amount anywhere from $1,000,000 to $1,500,000. I do not think it ever entered into his mind that he was going to do that. I do not think he ever contemplated anything of the kind. I do not think that he ever asked this House for an initial appropriation that was going to spread out to such a large sum. I think we might as well drop the idea that when the matter was initiated in the first place by the deputation which came down from the northern part of the county of York, headed by Sir William Mulock and Mr. Lennox, the local member, they ever had in contemplation any such outrageous expenditure. The ex-minister, I think, must see by this time that he made a mistake in venturing on such a broad scheme with the limited information he had. I confess that this is the talk all over that part of the country. It is the wonder of the people who go to see the Newmarket canal. They laugh at the idea. It is simply a matter of ridicule and no one who looks at the work ever thinks of justifying the government in this annual expenditure that is going on. I would appeal to the minister, as other hon. members have done, just to drop this matter of the Newmarket canal. Enough money has been spent on it. I do not think the country will lose anything if we just sink what has been spent and pay no more attention to the undertaking. Now, I have one question to submit to the minister. He informed us a short time ago that the engineer had assured him of the possibility of securing water for the canal.

Mr. GRAHAM. I said the probability—the surety—not the possibility.

Mr. HENDERSON. Possibility.

Mr. GRAHAM. No not the possibility.

Mr. HENDERSON. The absolute certainty?

Mr. GRAHAM. Yes.

Mr. HENDERSON. Is that strong enough?

Mr. GRAHAM. Yes. That is his opinion.

Mr. HENDERSON. There is no doubt that you can make anything absolutely certain if you spend enough money—almost anything; I will not say anything.

Mr. EMMERSON. There are some limitations.

Mr. HENDERSON. I do not doubt that if the minister puts pumps at work some where about Lake Simcoe he can provide enough water to fill this canal. That would be an absolute certainty, but what I want to know is whether the engineer gave him any estimate as to the possible annual cost of keeping this canal filled, and, if so, what that estimate is. How much are we to vote year after year for the purpose of supplying water for this canal? Will it be $50,000; will it be $100,000? Would it not be cheaper for this government to hire ox teams and convey the traffic over this route along which it is expected to build this canal than to expend money for the purpose of supplying water for the canal? I would like to know if the minister has any estimate of what it will cost yearly to supply water?

Mr. EMMERSON. I cannot permit my hon. friend (Mr. Henderson) to take his seat without making one statement. I have made the statement that this delegation came here, that it did not come here as a political delegation, as far as I recognized it at least, and that it pressed upon the department and myself as representing the department the absolute necessity, in the interest of that section of the country, of not only deepening the water-way of the Holland river as far as Holland Landing, but of extending the canal to Newmarket and Aurora. I have made that statement in the presence of my hon. friend. If, personally he cannot believe it, under the rules of the House he is constrained to say that he must accept it. These are the facts. It is not a matter of any moment to me now. I am speaking of it as an occurrence that transpired. I have a very distinct recollection of the circumstances of the delegation. I was impressed, in the first place, by the size of the delegation. We are not accustomed to have, in our eastern country, very large delegations. They usually send two or three men as spokesmen on behalf of a section of country. There is a different custom pursued in Ontario. I remember being assailed by a good many delegations not assailed, but I had the honour of meeting a very large number—I remember, in connection with the Trent Valley water-ways. I had great faith in the advantage that is to accrue to Ontario in connection with the Trent Valley water-ways, and that faith was strengthened by a close study of the conditions in that section of the country and by going over the route. Now, in connection with that, I looked upon the extension of the water of Lake Simcoe, up through the Holland river and on to these other points, as a work that was incidental to the comple-

tion of the Trent Valley water-ways. If there is not that traffic for the canal, if there is not that wealth of resource that was represented, so much the worse for that section of the country, but it seems to me that if the Trent Valley water-way is of any advantage to the interior of Ontario, if it is any advantage to the city of Toronto, and to the cities, towns and industrial centres along the shores of Lake Ontario to secure the development of the resources in that region, surely as a preliminary condition it is necessary not only to complete the Trent Valley canal, but it is as well a necessity to extend this canal up through the Holland river and beyond.

Mr. HENDERSON. I am not sure that there is very much difference between the ex-Minister of Railways (Mr. Emmerson) and myself touching this question. What I said, or intended to say, was that the primary object of that deputation was to secure the deepening of the Holland river.

Mr. EMMERSON. That would be a necessary incident of the extension of the canal.

Mr. HENDERSON. I never understood that the deputation at that time contemplated the large expansion of work that has since been proposed. And I cannot think that the ex-Minister of Railways would have entertained the proposition at that time if he had thought that it was going to expand so as to call for an expenditure of a million or a million and a half. The ex-minister adheres to the point that he understood that their primary object was the deepening of the Holland river, but that they did make reference to the expansion of the work.

Mr. EMMERSON. That they pressed it.

Mr. HENDERSON. But I have always understood that what they were in search of was, mainly, money for the deepening of the Holland river, not that they expected the minister to extend the work all over the country and involving such vast expenditure.

Mr. EMMERSON. They only limited it to Newmarket and Aurora.

Mr. HENDERSON. It is a matter of memory; it is unwritten history; but the people in that section have the impression that the work, whether undertaken in response to that deputation or for any other reason, is a work that is absolutely useless, that it is unworthy the expenditure that the minister is asking to make upon it. I simply give my understanding of it. I am not going to dispute the ex-minister's memory in the matter. I take my information from general inferences and what I think to be reasonable conclusions. Now, I would like to know from the minister how much it is going to cost yearly to supply this canal with water.

Mr. GRAHAM. The county of York is a very advanced county, so I suppose that when the hon. member (Mr. Henderson) speaks of ox-teams, he speaks metaphorically. Water for this canal will be supplied as water is supplied for other canals, by storing water naturally flowing on the watershed. The engineer tells me that the location is excellent and that the construction of one or two dams will have the effect of maintaing a fair water supply. As to the traffic, if we had stopped to discuss the traffic along any part of the Trent canal, and be guided in our determination by the traffic in sight, we should never have constructed any part of that canal. The probability is that, had a similar test been applied, the Rideau canal would never have been built. Had the traffic in sight only been discussed, many railways would never have been constructed. Certainly, had the authorities of Ontario stopped to discuss the traffic in sight in the north country, there would have been no Toronto and Northern Ontario railway. The question of traffic is alwavs problematical, but these lines of transportation do seem to develop traffic for themselves.

Mr. R. L. BORDEN. That is a rather comprehensive rule that the minister lays down—that in deciding upon the construction of a canal you do not need to consider either the cost or the traffic.

Mr. GRAHAM. I did not say that.

Mr. R. L. BORDEN. But what the minister did say amounts to about that. Would he be good enough to say how much of this vote represents work on the Newmarket canal to be done during the coming year?

Mr. GRAHAM. I think that we expect to spend $150,000.

Mr. GEORGE GORDON. This is a proposition that every person who goes near it knows is utterly unworthy of completion. I am sorry that the ex-Minister of Railwavs (Mr. Emmerson) has stated that he is practically responsible for it. He has told us that Mr. Lennox and others came down here and made certain representations. It seems to me that it was his duty at that time to find out more about this matter than he did. I do not like to say anything unkind at any time, but I cannot but feel that, if he was to be so easily imposed on as this, we need not be surprised that he lost his job. Anybody knows that, in order to get water into a canal, unless you depend upon the rain, you must have some

feeders. I would ask the ex-minister and the minister also what lake there is to feed this canal; and, if there is no lake, where can the water come from except by pumping it back from Lake Simcoe?

Mr. HENDERSON. And I would remind the minister (Mr. Graham) before he speaks that my question was: How much will it cost annually to provide the water for this canal? I am not asking simply how it is to be done. The minister used a great many words, beat about the bush, and told us about their plan to have reservoirs, and about the practicability of that plan; but he evaded the point as to how much it is going to cost. Are we going to get value for the money we are to spend?

Mr. GRAHAM. I have tried to make it clear to my hon. friend, but I am afraid he is bound that he will not understand. He suggested that I said that we would have to pump the water, and he wanted to know how much it would cost to get the pumps. I told him that the water for the Newmarket canal would be supplied in the same way as water for all canals where rivers are united, by a system of storage dams and reservoirs; and my engineer tells me that there is not the slightest doubt that there will be plenty of water if it is properly stored. That is on the word of one of the best engineers we have in the service in regard to hydraulics, and a most reliable man, and I think his assurance is worth more than my private opinion or that of any one else on that point.

Mr. EMMERSON. An engineer, Mr. Walsh, made a report before this work started, as to the ample water facilities for the canal.

Mr. ARMSTRONG. It seems as if the minister has gone to Germany to gather information to enable him to come back and spend more money on the Newmarket canal. I would like to ask him whether, in sending his engineer to investigate the water supply of the canal, he instructed him also to investigate the amount of traffic that would likely be on that canal after it was completed?

Mr. GRAHAM. I have made the statement in a general way as to the traffic. I did not send an engineer to report on the canal. The engineer to whom I refer was the resident engineer of the Trent canal system, who has had charge of all the dams and reservoirs which have been constructed, and he says that with storage provided there will be ample water for the Newmarket canal. He has made no mistake on any other part of the Trent canal system with regard to storage, and I have not the slightest doubt that he is perfectly correct as to this.

Mr. ARMSTRONG. The present statement of the minister is most indefinite and unsatisfactory, and must bring us to the conclusion that we should vote directly against this amount of money being passed at the present time. If the minister will go into that country and investigate for himself, I am sure that he will come to the conclusion which I came to long ago. I was born within 30 miles of Newmarket, and know that country thoroughly, and there is no way possible to get water for that canal except to build large dams and reservoirs to hold the water, or else to pump the water up. And when the canal is built, how much traffic will it get from that district? The ex-Minister of Railways told us it was a timbered country. If he went there, he would find that it is the very opposite. I plead with the minister, that before he spends another million dollars on this useless work, which will have no traffic worth speaking of and little or no water, he should make use of the money in another direction. It was only last fall that I had the opportunity of looking at the canal that was being built, and I cannot too strongly condemn the expenditure of such a large amount of money for such a useless purpose.

Mr. EDWARDS. I think it must be evident to every man of this committee that this project was undertaken without going carefully into the matter and obtaining such information as would warrant an undertaking of this kind. There does not appear to be any person here ready to defend it. We can hardly dignify with the name of defence the statements put forward by the minister this evening. I would suggest to the minister that instead of asking the House to vote this money for this purpose, he take a portion of it and expend it on a canal that will give tangible results, namely, the Wolfe Island canal. Let him deepen that canal, which will shorten the distance between Kingston and Cape Vincent by between 15 and 20 miles; and I can assure him that he will have any amount of water for that canal, as long as Lake Ontario remains as it is.

Mr. WRIGHT. I wish again to enter my vigorous protest against this expenditure on the Newmarket canal. The minister has associated this work in some manner with the Trent Valley canal system. It does not seem to me to be the part of wisdom to open up doubtful tributaries for the Trent canal when you have no outlet for that canal at either end. In building a railway, you build the main line before the branches; and it seems to me that the same principle should apply to a canal. The first thing to do with the Trent Valley canal, if it is ever to be made effective, is to complete it through to the Georgian bay. In that way it might be made of some benefit to the

people of Canada, in affording an outlet for the grain delivered at Midland and other ports on Georgian bay. With regard to the deputation that came to the ex-minister, as the name of Mr. Lennox, the local member, has been mentioned in connection with it, I want to say that I interviewed him with regard to this matter not many months ago, and he emphatically informed me that when that deputation was arranged for, and he was invited to join it, it was only intended to ask the government to deepen the Holland river. The building of the Newmarket canal was an after consideration and no part of the original scheme; and if some members of the deputation undertook to enlarge it when they came here, they got up the deputation under false pretenses, and got men to come down in support of a scheme that was not placed fully before them before they left home. A great deal has been said with regard to the water supply of this canal; but no water will be needed, because no vessels will ply up or down that canal. It will do as well dry as wet. So I do not see that we need trouble ourselves with the question of water for the Newmarket canal. They may cut it up and make pig pens out of it for the farmers when completed, but otherwise I do not think it will be of any value to the people. However I do not want to bother about that phase of the question. The minister ought first to open up the Trent Valley canal, and then, if he has money to waste, take up the Newmarket canal.

Mr. WALLACE. I beg to move that item 113 be reduced by $150,000.

Mr. BLAIN. May I ask the hon. minister if, during his many visits to Toronto since he has become a minister, and in view of his statement that it is his policy to visit our public works from time to time, which are under the control of his department, he has gone over this work himself and satisfied himself that it is a proper and wise expenditure of public money. He knows that there has been a great deal of vigorous criticism against this enormous expenditure, and I should have expected that he would have visited this work and found out for himself whether it was a proper expenditure or not.

Mr. GRAHAM. I have seen the work, but I did not visit it for the purpose of investigation, because any information I could give would be based absolutely on the advice of experts whom we pay for that purpose.

Mr. WRIGHT. How much of that total vote will be spent on the western outlet of the valley of Georgian bay?

Mr. GRAHAM. I have already explained that nothing will be spent on that western section outside of the cost of survey. We expect to let two sections at the eastern end. We want to have connection between Lake Simcoe and Lake Ontario, and later we shall go on with the other section.

Amendment negatived.

Mr. BLAIN. How much has already been expended on this Trent Valley canal?

Mr. GRAHAM. $6,514,787.84. Of this amount $309,371.31 was spent prior to confederation.

Mr. BLAIN. What may we expect the total expenditure to be when completed?

Mr. GRAHAM. I am not in a position to give that because one very important section west of Lake Simcoe we have not estimated on yet. Approximately speaking about $3,500,000 to $4,000,000 without the western extension.

Trent canal—to pay damages to property by flooding, $30,000.

Mr. GRAHAM. We have spent about $100,000 now on claims for damages to land caused by the flooding of the reservoirs where we store the water. Claims are coming in as the work goes on, and I am asking for $30,000 more. The settlement is made by valuators.

Mr. BLAIN. Are the claims likely to continue every year?

Mr. GRAHAM. Yes, until we get the work done.

Welland canal—land purchases and damages, $2,500.

Mr. HENDERSON. There is no one in the House from that section of country through which the Welland canal runs, and I would ask the hon. gentleman not to press these items through to-night. Why not wait until the beginning of the week when the hon. member for Lincoln (Mr. Lancaster) and the hon. member for Welland (Mr. German) will be here? I am sure the minister would appreciate their assistance.

Mr. GRAHAM. This is the last day my deputy will be with me. He has information about all these items; notice was given that I would go on with my supply to-day, and I would like to finish it if possible. I will leave an item over or anything that can be discussed on motion for supply.

Mr. HENDERSON. I thought that the deputy's expert knowledge applied more particularly to railway matters. As to the offer to hold over an item, my experience is that when items are passed in this way they are never heard of again. However, I have done my duty in making the request for delay.

Mr. ARMSTRONG. Why is $66,000 being expended on the Port Colborne elevator

when he is contemplating a new Welland canal and the abandoning of the elevator. Only a small part of its capacity is being used?

Mr. GRAHAM. This is for work that has been done on the elevator, extras over and above the contract. The contract has been let to Messrs. Hogan and McDonald, the lowest tenderers. The amount of work done there up to the present time under these tenders is $1,193,475. This is expected to complete the work during the coming season.

Mr. STAPLES. As this is a government-owned and operated transfer elevator, I wish the minister would give, for the advantage of the House and the grain producers of the west who have been pressing for government ownership of all terminal elevators, a statement of how this elevator is operated, how many officials are employed and any other particulars.

Mr. GRAHAM. The staff of the Port Colborne elevator is:

Name.	Capacity.	Rate.
J. A. Jamieson, supt. engineer (per month)		$416 66
W. F. Fawcett, superintendent		150 00
D. S. Harvie, foreman		125 00
Chas. Aston, weighmaster		100 00
Wills Maclachlan, electrician		100 00
John Glen, mechanic		75 00
Jos. Hanhan, mechanic		75 00
Jesse Lambert, mechanic		65 00
Robert Blackhall, mechanic		65 00
D. I. Robins, mechanic		55 00
James Roach, mechanic		55 00
Charles Augustine, oiler		60 00
Thomas Heffron, watchman		50 00
Frank Wilson, shovel foreman (per day)		3 00

The result of the operation from a money standpoint has not been a success directly. It is a question in my mind whether it will not take a good many years to get the trade in a government-owned elevator of this kind, because all the other interests will do their best to keep grain away from a government elevator if they can go somewhere else. I am informed that having that elevator there this year with all the facilities for transferring cargoes has kept down the rates from the west to the east.

Mr. STAPLES. What is the rate per bushel?

Mr. GRAHAM. One half cent. Last year we experienced with three-eighths of a cent, but this year we charge one-half.

Mr. STAPLES. Has it been able to pay interest on the money invested?

Mr. GRAHAM. Oh, no, we have not been able to pay running expenses, handling one and a half million bushels did not pay the expenses.

Mr. SCHAFFNER. I would suggest that the way to get out of the difficulty mentioned by the minister would be for the government to take over all the elevators as the farmers ask.

Mr. ARMSTRONG. What is the total cost of the elevator to-day?

Mr. GRAHAM. Approximately, three quarters of a million dollars, perhaps a little less. Including this $700,000 we are asking for.

Welland canal—to straighten channel at head of lock 2, $10,000.

Mr. GRAHAM. The engineer reports that there is a sharp curve going into this lock, and we must straighten it for large vessels. It is lock No. 2, from the Port Dalhousie end. Vessels are getting larger all the time.

Extending Chambly Canton wharf, $4,120.

Mr. GRAHAM. We are repairing old wooden bridges and culverts. We have not got our tenders in yet.

Mr. BLAIN. Would the hon. gentleman explain how the advertisements reach the public for those tenders?

Mr. GRAHAM. By newspaper advertisements. They are placed largely in sections of country where we hope contractors will see them.

Mr. BLAIN. Have you any patronage list?

Mr. GRAHAM. I never saw the list; I do not know what papers get the advertisements.

Quebec canals—macadamizing two miles of public road, Hungry bay dyke, $14,000.

Mr. HENDERSON. Is it customary for the government to build macadamized roads for the people?

Mr. GRAHAM. Where the government is responsible for destroying them. We raise a dyke, and it keeps the water off. Where the department damages a road, we leave it in as good a shape as we found it.

Mr. J. A. CURRIE. $7,000 a mile would build an electric road.

Mr. GRAHAM. The road is on the top of the dyke. It is not like an ordinary macadamized road. There are six miles and a half altogether, the total cost of which it is estimated will be $32,500.

Mr. J. A. CURRIE. How many yards?

Mr. GRAHAM. It is not a question of macadamizing the road, it is raising the road high enough to get it away from the water, and then making a substantial road on top.

Mr. J. A. CURRIE. We would like to know the cost per yard.

Mr. GRAHAM. An hon. friend behind me says it was $1.95 for rock. The balance is done by day work. The stone work was done by contract to the lowest tenderer.

Protection wall, north side of Lake St. Francis, $4,500.

Mr. SEXSMITH. What is that for?

Mr. GRAHAM. This is to raise the old wall above the new flood level on the north side of Lake St. Francis. We had a higher flood a couple of years ago than we had had in a good many years.

Cornwall canal—extension of concrete wall across washout above lock 18, $25,000.

Mr. GRAHAM. This is to strengthen the weak places in the wall. We have had one break there and we want to strengthen the wall as much as possible.

Improving upper entrance to lock 17, $55,000.

Mr. GRAHAM. There is no place at the lock where boats can tie up. This is a very difficult place to get into, and as we had a request from the vessel men with respect to this matter we have decided, for safety, and because we are convinced of the necessity of this work, to improve this upper entrance. The estimate is $55,000. We expect to do the work this year. Tenders have not been asked for, but they will be advertised.

Improving upper entrance, lock 19, $5,000.

Mr. R. L. BORDEN. Why is there such a discrepancy between the two amounts?

Mr. GRAHAM. One is a very large improvement while the other does not call for so much work.

Removing high spots from prism of canal, $10,000.

Mr. GRAHAM. This is to clean up the bottom of the canal. After a canal has been constructed for a few years it is found that there are high spots where the boats strike.

To repair north bank between locks 18 and 19, $5,000.

Mr. HENDERSON. Is this where the break occurred a few years ago?

Mr. GRAHAM. This is below it a little. Now let us go back to the item under the heading of Quebec canals:

Macadamizing two miles of public road, Hungry Bay dyke, $14,000.

My hon. friend from Peterborough (Mr. Sexsmith) asked for some information in regard to that item. First there is crib work filled with stone up to top of loose course, 4,500 cubic yards and, second, stones piled on top of crib work 1,630 cubic yards.

Mr. HENDERSON. What do you pay per cubic yard?

Mr. GRAHAM. For cribwork filled with stone up to top of loose course $2.15.

Mr. HENDERSON. What kind of stone is that?

Mr. GRAHAM. Boulders.

Mr. HENDERSON. Not crushed stone?

Mr. GRAHAM. No. For stones piled on top of cribwork 85 cents.

Galops canal concrete superstructure for piers, lock 27, $24,000.

Mr. GRAHAM. We took an appropriation of $40,000 for this, but we cut it down to $30,000. I think that is the amount that it will take to do this work. We are asking for $24,000 now and $14,000 of it is a revote. The work will cost about $30,000 instead of $40,000.

Mr. SEXSMITH. That is for the superstructure?

Mr. GRAHAM. The piers are all right but there is a wooden structure on these piers and it is in very bad shape.

Mr. SEXSMITH. You are making the superstructure of concrete?

Mr. GRAHAM. Yes.

Mr. SEXSMITH. Is the substructure wood?

Mr. GRAHAM. Wooden cribs filled with stone.

Sault Ste. Marie canal—iron mooring posts, $2,000.

Mr. GRAHAM. We are getting rid of the wooden posts and putting in iron and concrete for snubbing posts.

Mr. J. A. CURRIE. This is on account of that accident, I suppose?

Mr. GRAHAM. I do not know, but we are doing it as wood is not safe and it rots away.

Mr. SEXSMITH. How many mooring posts will that cover?

Mr. GRAHAM. I have not the number here. The lock is about 900 feet long.

Mr. J. A. CURRIE. While we are on this item will the minister give the committee some information as to what consideration has been given to the question of building another lock at the Sault before all water and power are taken by the locks on the other side? I saw an item in the papers and I think there was a statement made by the minister that we were going to have another lock on the Canadian side. The lock on the Canadian side is getting very busy.

Mr. GRAHAM. This is a pretty large question. I made a statement the other

day. We have received quite a number of petitions from shipping men in reference to it. They think we ought to have another lock on the Canadian side. There are so many large things looming up all at once that I have hard work to form a decision. I have not brought it before my colleagues in a definite shape yet. We have a construction engineer at the Soo, and I have asked him, as soon as he can find time when he is not really busy, to get into shape an estimate of what the lock will cost. The chief engineer, though he has not the information at all complete before him, thinks that a new lock such as we ought to have—with a depth from 25 to 27 feet and built to carry large vessels—will cost close upon $10,000,000. We have not done anything in the matter. We have received a petition in favour of building such a lock

Mr. J. A. CURRIE. How will that compare with the cost of the present lock?

Mr. GRAHAM. It is considerably greater, but I cannot give exact figures. It will be both wider and deeper than the present lock. And besides everything costs more now than it did when the present lock was built.

Mr. J. A. CURRIE. I understand that the minister was there when an accident took place last summer?

Mr. GRAHAM. Yes.

Mr. J. A. CURRIE. Was his attention called to the fact that they let the ships into the lock with a good deal of water, the 'wash' as they call it? I see this item speaks of 'iron mooring posts.' It would be impossible to carry on this practice, as I understand, without iron mooring posts. Is it the intention of the government to stop this practice?—for, I am told, if it is allowed to continue, some day two or three of these large vessels will go right down through the canal gates.

Mr. GRAHAM. The engineer tells me that it is practically impossible to carry through these very large boats if this is not done. They are getting a trifle beyond the present standard in their draught. Of course, the difficulty would be obviated if we had the new lock.

Mr. J. A. CURRIE. I sincerely hope the minister will consider it. Of course, $10,000,000 must appear a very large sum to us on this side. But in proportion to the hundreds of millions we are spending on other things, it is not a very large item. The large locks on the Canadian and American sides were each out of commission this year. Had both been out of commisison at the same time, the traffic between the east and the west would have been tied up. As I understand it, our lock is the favourite lock. But the Americans are considering the construction of a third lock.

Trent canal—improvements, $62,500.

Mr. GRAHAM. This is the ordinary annual vote. Among the works proposed to be done out of this vote are: New concrete dam on White lake, new concrete dam on Devil's lake, and another on Jack's lake, dredging Lake Simcoe, Balsam lake division, dredging Cameron lake, dredging Sturgeon lake, Bobcaygeon and Lindsay river, dredging Peterborough and Lakefield section, dredging Otonabee river, new dredge, rip-rapping Balsam lake, Lake Simcoe division, duplicate lock gates and installation of electric lighting at hydraulic lift locks. These are the main items, and the work will be carried on by our own staff.

Mr. J. A. CURRIE. My hon. colleague from South Simcoe (Mr. Lennox) is not present. And it may be the minister has not been asked an explanation of the work intended to be done on this canal between Lake Simcoe and Georgian bay. If there is another item, either in these estimates or in the supplementary estimates on which that matter can be discussed, we do not need to go into it now. Otherwise, I would like to get the information.

Mr. GRAHAM. The engineer is having his report completed on the Severn route and the Nottawasaga route. My hon. friend (Mr. J. A. Currie) can come to the department and see what he is proposing. As soon as the report is completed, it will be laid before the House.

Mr. J. A. CURRIE. Was it the same engineer who made the estimate on these who made the original estimate on the Newmarket canal?

Mr. GRAHAM. Yes, Mr. Walsh.

Mr. SEXSMITH. How many are there on the permanent staff in the Peterborough-Lakefield division?

Mr. GRAHAM. That will come up under the revenue items. I am not sure that the division are kept absolutely separate. And, of course, the employees are not the same in winter as in summer, though some remain all winter.

Mr. WRIGHT. As the minister has adverted to the western outlet, I would like to ask if the Severn route has been surveyed all the way down and if a report is on file?

Mr. GRAHAM. I have just stated that the engineer is completing a report. He will make two different reports of the two different routes.

Mr. J. A. CURRIE. I do not wish to challenge the standing of the engineer who made the report, but, as the minister was so misled with reference to the Newmarket canal, I think it would be advisable for

him to have these figures checked up by some other member of the staff, as, for instance, Mr. Riley, who appears to be able to come within a few dollars of the value of work to be done.

Mr. GRAHAM. Any estimate of these routes, before anything is done, will be reviewed by Mr. Grant, the engineer of the Trent, whom I will make responsible for all the figures.

Miscellaneous — arbitrations and awards, $4,000.

Mr. GRAHAM. We take this vote every year, and if there are arbitrations, the expenses are thus provided for. This year, I am glad to say, we did not spend anything out of this appropriation.

Attendance, repairs and alterations to Governor General's cars, $2,500.

Mr. GRAHAM. This is a vote we take each year. Last year the expenditure under this head was $646.40.

Maintenance and operation of the Board of Railway Commissioners of Canada, $121,400.

Mr. R. L. BORDEN. What is the reason of the increase?

Mr. GRAHAM. There are several reasons. The staff is a little larger. The chairman has established an operating branch, with a practical operating man at its head, for the settlement of disputes between railways in regard to operation. The staff being larger, the travelling expenses are necessarily greater in addition to the salaries.

Mr. HENDERSON. Is there not a vacancy on the commission, and is there a possibility of that being filled in the near future? Are there no applications?

Mr. GRAHAM. There are a good many recommendations for a new man. He must be a man from the west. Several men have been recommended, but we have not yet made the appointment. I have discussed it several times with the chairman of the commission. He tells me that the work is not suffering—that it is up to date. He has a great avarice for work himself, and up to the present there has been no urgent need. If I come across the right man, I want to appoint him.

Mr. HENDERSON. I do not wish to find any fault with the chairman of the board. We all know that he is a hard working man, and does his work well; but the public suffer a good deal of inconvenience, I think, for the lack of more members on the board. I have known of men having to wait four days at considerable expense, either with a solicitor or without one, for a case to be dealt with. When the board was enlarged, it was intended that it could sit in two sections. That would certainly be a great advantage, and if matters were so arranged that only sufficient business to last for one day, or for two days at the outside, were brought before the board at one time, I am convinced that it would receive the approval of the public. I myself have sat for four days waiting for a case to be tried. I do not wish to differ with the chairman, but it seems to me that the country is losing money by not making up the full complement of the board.

Mr. BLAIN. This vacancy is, I suppose, that caused by the death of the Hon. Mr. Greenway. The minister states that as soon as he gets his eye on the right man, he will appoint him. Are we to understand that not one of the gentlemen from the west who have been applying, is the right man?

Mr. GRAHAM. I have not appointed any.

Mr. BLAIN. It is rumored that there are some from the west now here waiting for the appointment. Perhaps my hon. friend has not got his eye on them yet.

Mr. GRAHAM. I have not seen them.

Mr. BLAIN. Perhaps the minister will tell us what qualifications are required for a position of this kind. Perhaps we could assist him in getting the right person.

Mr. GRAHAM. I think I will get along with it. While there are many qualifications required, the chief one is good horse sense.

Mr. ROCHE. If that is the case, I should imagine that a farmer would be the right man. I understand that the grain growers of the west, to the number of hundreds, possibly thousands, have petitioned the government to appoint a certain gentleman to the position. I do not know whether it is the minister's modesty that prevents him appointing this gentleman, inasmuch as he bears the same name as himself, and is a distant relative. At all events, the grain growers have asked to be represented by one of their number on the board. I would make a plea for the farmers of the west, whose interests are so frequently involved in cases that come before the board, and I think that a man resident in western Canada and acquainted with western conditions should be appointed. If the chairman of the commission says that there is no necessity for the appointment at present, I do not wish to urge it; but if the minister means to appoint any one, I think the farming interests of the west should be represented.

Mr. BLAIN. My hon. friend from Marquette should not forget that a resolution was moved in the House calling on the government to appoint a farmer, and our hon. friends opposite voted it down. Are we to understand that they have changed their

minds, and now intend to appoint a farmer?

Mr. GRAHAM. That is hardly fair. We did not vote it down. An amendment was moved that the vacancy should be filled by a man having a knowledge of railway conditions in the west. The original motion was to appoint a farmer. We changed that because we did not want to confine the appointment to one particular class, but to be enabled to get a good man from any class.

Mr. BLAIN. The resolution from this side asked for the appointment of a farmer. My hon. friend differed from that and had an amendment moved from his side of the House, and the first resolution was voted down. The first resolution was to the effect that as a farmer occupied the position, Mr. Greenway, the government ought to put a prominent farmer from the west in his place; and to assist the government, this side of the House moved the resolution.

Mr. GRAHAM. Are you sure that was the reason?

Mr. BLAIN. Well, the government had been making such professions on behalf of the farmers throughout the west that we thought we would point out that, so far as our side was concerned, we were favourable to the farmers. But my hon. friend differed from us and had the motion amended. When may we expect the appointment to be made?

Mr. GRAHAM. I would not like to name the day. I have my own views as to the work of the commission. My opinion is that we ought to have a man from the west, and when the vacancy is filled, it will be by a western man.

Mr. BLAIN. Will he be a farmer?

Mr. GRAHAM. Not necessarily, but we will take a good man, no matter what his calling may be. I have had very prominent farmers there recommending a professional man, and giving reasons why it would not be wise to appoint a farmer.

Mr. ROCHE. Perhaps the minister is waiting for the photograph of the Calgary applicant.

Mr. ARMSTRONG. Will the Minister of Agriculture tell us whether he has urged on the Minister of Railways the necessity of appointing a farmer or whether he intends doing so?

Mr. FISHER. I voted for the resolution that passed the House.

Mr. BLAIN. The Minister of Agriculture recorded his vote against the farmer.

Mr. FISHER. No.

Mr. BLAIN. He voted for the amendment of the government.

Mr. FISHER. Hear, hear.

Mr. BLAIN. And the original resolution was that the government should appoint a farmer. That did not suit the Minister of Agriculture. He said we must not bind ourselves to appointing a farmer and he voted to enable the government to appoint another man. He will not say that, in that respect, he was very enthusiastic for the farmers.

Mr. FISHER. I am always enthusiastic for the farmers.

Mr. J. A. CURRIE. The Minister of Agriculture was out west last summer among the farmers and he must have handpicked a number of them and selected one he could recommend to his colleagues. I am surprised that the Minister of Railways should still adhere to the position taken by that side, that the new commissioner must not be a farmer.

Mr. GRAHAM. I did not take that position.

Mr. J. A. CURRIE. And unfortunately a relative of the minister seems to be a favourite in the west for the position, and the minister is blocked from appointing him by last session's resolution.

Mr. HERRON. I think that professional men are well represented on the Board of Railway Commissioners, and that it is due to the farmers that they should have a representative on that board. I do not think that the minister could do better than appoint a farmer thoroughly acquainted with the conditions out west, and I would strongly urge him to do so.

Mr. SEXSMITH. I wish to press the view of my hon. friend who has just sat down. I think the board is well filled with professional men, and there is no class of people who do more for the country than the farmers. They are well entitled to representation on the board, and I am satisfied that the minister can find many able farmers in the west who could fill the vacancy very successfully.

Mr. BLAIN. I think we are entitled to some expression of opinion from the Minister of Agriculture. He will no doubt be going around the country next summer saying that this matter was not drawn to his attention. We wish to give him the opportunity of saying whether he still believes a farmer should be appointed. Has he made any recommendations to the minister on behalf of any farmer for that position?

Mr. FISHER. No.

Mr. J. A. CURRIE. There are so few positions to which farmers can be appointed that I think we should leave them this one. Everything else in the service is blocked out for professional men, so that when a farmer makes application he is met with the statement you are not a graduate of any university and you have not professional training, &c. I really think that, in all fairness, as a matter of justice to the farming community, especially in the west, who have such vital interests at stake, the minister should be frank enough to tell the House that, all other conditions being equal, a farmer will be given the preference for this position.

Remuneration to government directors, Grand Trunk Pacific, $2,000.

Mr. J. A. CURRIE. I would like to ask a question. Are the officials of the Railway Commission allowed transportation under the Railway Act like members of parliament? It is vitally important they should be, if not.

Mr. GRAHAM. I think they are provided for in some way. I know they do get transportation. I will look into that. I think they are included in the class that the statute provides the railway shall carry free.

Mr. J. A. CURRIE. The reason I ask is that it is rumored that such is not the case, and it would be very unfortunate if it were not.

Mr. GRAHAM. I shall make a note of it. I see the distinction.

To pay expenses in connection with cases before the Railway Commission, $10,000.

Mr. GRAHAM. We spent last year $5,470.77. We have cases come up in which the department is interested, and we sometimes initiate cases on behalf of the government. Take, for instance, the express investigation.

Railways and canals—collection of revenue —canals—statistical officers, $37,506.

Mr. J. A. CURRIE. I hope the minister will look up some of the statistical records. He will find they are borrowed mostly from American publications.

Mr. GRAHAM. We get all our own original returns and abstract the American returns as well.

Mr. WRIGHT. How many officers are permanently employed?

Mr. GRAHAM. On the canals, all told, about 3,000. This is paid to certain officers for collecting statistics in addition to their regular salary.

Mr. FISHER.

The CHAIRMAN. The clerk is not sure whether the item for the Quebec bridge was passed or not.

Mr. GRAHAM. The item for the Transcontinental railway remains over and any other items may be discussed on it. We kept it open with the distinct understanding that anything else could be discussed on it.

Mr. HENDERSON. I understood from the member for Hamilton (Mr. Barker) that the items for the Intercolonial railway and Quebec bridge were to stand over. I do not wish to commit myself for the member for Hamilton in any way if these items are allowed to pass.

Mr. GRAHAM. We have gone through the Intercolonial for two or three hours, and if we left it stand now fifty hon. members may discuss it. I may have to bring back my staff and the whole matter be gone into again.

Mr. J. A. CURRIE. I would suggest that on the understanding the minister leaves an item over in order that discussion may take place on any point in his estimates if any member wishes to discuss any of these items. It would be only fair on account of the deputy minister being about to leave the department, that the member should give notice to the minister of what questions he wanted answered so that the rest of the staff could get the answer. It would simplify matters.

Mr. R. L. BORDEN. The member for Hamilton (Mr. Barker) told me that the Intercolonial railway would stand over and also the Quebec bridge. The Transcontinental railway item was not touched at all. He said, however, that in dealing with these items it would not be expected that discussion would be raised that would require the presence of the deputy. They were not to go into details although there might be some broad matters on which discussion could take place.

Mr. GRAHAM. Suppose we leave the Transcontinental, and any discussion that any hon. gentleman wants to take up on any other item of my estimates can be fully discussed on the one item of the Transcontinental. We will have a full understanding that they can discuss anything they like.

Mr. J. A. CURRIE. And any information about any other item on notice?

Mr. GRAHAM. On notice I shall be glad to give any information.

The CHAIRMAN (Mr. Miller). The Quebec bridge is passed.

Mr. R. L. BORDEN. Let the member for Hamilton and the minister settle that.

Mr. GRAHAM. Pass them and if the member for Hamilton wants them re-opened I will be perfectly willing to re-open them.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. R. L. BORDEN. I suppose the debate on the Naval Bill will be resumed on Tuesday?

Mr. FIELDING. On Tuesday.

Motion agreed to, and House adjourned at 11.50 p.m.

HOUSE OF COMMONS.

MONDAY, February 7, 1910.

The SPEAKER took the Chair at Three o'clock.

MARINE AND FISHERIES COMMITTEE.

Mr. SINCLAIR moved:

That the second report of the Marine and Fisheries Committee be now concurred in.

He said: This report recommends that 4,000 copies of the evidence taken last summer by Commander Wakeham, in connection with the lobster industry, be printed for distribution.

Mr. E. N. LEWIS. In reference to the report of the Marine and Fisheries Committee, I wish to ask the government a question; and in this connection I wish to call the attention of the hon. minister in charge of the Marine Department to the recent saving of life off Cape Hatteras which was reported in the daily papers.

Mr. SPEAKER. That is not relevant to the question before the Chair.

Motion agreed to.

FIRST READINGS.

Bill (No. 133) to incorporate the Merchants' Bank of Canada Pension Fund.—Mr. Doherty.

Bill (No. 134) for the relief of Hope Eileen Moreland Drinkle.—Mr. McCarthy.

IMMIGRATION ACT AMENDMENT.

Mr. E. N. LEWIS moved for leave to introduce Bill (No. 135) to amend the Immigration Act.

Sir WILFRID LAURIER. Explain.

Mr. LEWIS. The first section directs that immigrants when they land in this country shall be examined for weapons which the citizens of Canada are not allowed to carry, and that each immigrant shall be furnished with a printed document in his own language explaining to him, as shall also be done viva voce, that he shall not be allowed to carry such weapons. The first thing an immigrant after landing sees displayed in the windows of the second-hand stores of the port, are rows of revolvers, dirks, knives, and other weapons which ordinary Canadians are not permitted to use; and consequently he imagines that in this to him wild western country it is necessary for him to be armed with some of these weapons. The second section is an addition to the Bill I brought in before, and is in the line of the few remarks I made in the debate on the address at the beginning of this session, as to the class of immigrants that should be allowed to land in this country; and it reads as follows:

From and after the first day of January, 1911, natives of Europe south of 44 degrees north latitude and east of 20 degrees east longitude, and natives of Turkey in Asia, shall be prohibited from entering in and settling in Canada.

I contend that this country should in this respect take warning by the example of that great country to the south of us. Originally the slavery question was a very heavy and dark looking question to the citizens of the United States; but that question is overshadowed by another serious menace in the immigration of people from Southern Europe. Reports state that the average citizen of the United States is deteriorating physically, mentally and morally, of course on the average taking in all foreigners. Sir, we do not want immigrants to come here to hew our wood, draw our water, plough our fields and dig our coal alone. We want them to be one with the happy, free and independent citizens of Canada in forming a nation; and I contend that the only way to do this is to keep out all people except those of western Europe who have the same hereditary as ourselves.

Motion agreed to, and Bill read the first time.

PARTY PATRONAGE.

Mr. FOSTER. Before the orders of the day are called, I would like to ask the Minister of Railways if he has inquired with reference to the return which was ordered by the House some time ago for papers relating to the alleged securing of distribution of patronage.

Mr. GRAHAM. I expect to have it in a day or two. I have wired for all the information.

WINNIPEG POST OFFICE.

Mr. A. HAGGART. I wish to put a question to the Postmaster General with re-

gard to the post office in Winnipeg, the outer door of which has been closed. The latch string has hung on the outside for 20 years, and it has been a great convenience for the people to get their mail on going to and coming from church on Sunday. It is announced by a Winnipeg newspaper that it was closed yesterday for the first time, and remains closed. I would like to ask the Postmaster General if that is the case, and if it is the intention to keep it closed?

Mr. LEMIEUX. I received a telegram the other day from some Winnipeg gentlemen protesting against the change that has taken place. I must say that it is a regulation which is in force in all the large cities in the west, and is done at the request of various religious organizations.

Mr. A. HAGGART. The Winnipeg post office has been closed?

Mr. LEMIEUX. I am informed it has.

Mr. A. HAGGART. Is it the intention of the government to keep it closed in spite of the protest of the people?

Mr. LEMIEUX. The matter is under consideration just now.

Mr. A. HAGGART. But in the meantime it is closed.

Mr. LEMIEUX. It is closed on Sunday.

Mr. A. HAGGART. How long will the department keep the matter under consideration? This is a serious matter because it is the centre of a large commercial population. People who go to Winnipeg on Sundays——

Mr. SPEAKER. The hon. gentleman cannot discuss the question at this stage.

Mr. A. HAGGART. I am not discussing it, but I would like to get a more definite answer from the minister.

WIRELESS TELEGRAPHY.

Mr. LEWIS. Representing, as I do, one of the largest upper lake ports in Canada, and being greatly interested in the traffic of the port of Montreal and the channels of the St. Lawrence river——

Mr. SPEAKER. The hon. gentleman can only put a question at this stage.

Mr. LEWIS. I want to ask the government whether——

Mr. SPEAKER. It must be an urgent question, or one referring to the business of the House. At this stage, only questions of urgency are allowed, or those relating to the business of the House. Of other questions notice must be given, in order that the minister may be prepared to answer.

Mr. LEWIS. In the papers last Saturday there appeared an account of saving through wireless telegraphy of a great loss of life off Cape Hatteras, and I would ask the government if they will now take means to protect our great trade route, the channel of the St. Lawrence, and other great routes. It seems to me very important that we should put on shore wireless telegraphy stations, because it will be very much against the interest of Canada for loss to occur.

Sir WILFRID LAURIER. It is our intention to protect the trade route of Canada by means of the telegraph, and a navy also.

THE DAUPHIN POST OFFICE.

Mr. CAMPBELL. The closing of this post office at Winnipeg reminds me of a question.

Mr. SPEAKER. The hon. gentleman must confine himself to the rules of the House.

Mr. CAMPBELL. I wish to ask a question of the Postmaster General.

Mr. SPEAKER. I have warned the House under the rules what questions can be put at this stage.

Mr. CAMPBELL. Am I not in order, Mr. Speaker?

Mr. SPEAKER. The hon. gentleman knows the rules of the House.

Mr. CAMPBELL. I wish to ask the Postmaster General with regard to the opening of the post office in Dauphin. The building has been completed, and when is the office going to be opened?

Mr. LEMIEUX. If the office has been completed, it should be opened very shortly. Is my hon. friend informed that the building is completed?

Mr. CAMPBELL. I understand so.

Mr. LEMIEUX. If it is, it will be opened immediately.

DRY DOCK AT PORT ARTHUR.

Mr. BOYCE. I wish to ask the Minister of Public Works when we may expect the return of the papers concerning the application of a western delegation of shipbuilders for a dry dock, that is the application for a bonus or a subsidy for a dry dock at Port Arthur. The order of the House was issued about the 25th of November.

Mr. PUGSLEY. The return with regard to the Sault Ste. Marie dry dock has been

brought down. I will inquire as to the other, I hope to have it within a few days.

THE MARKHAM POST OFFICE.

Mr. WALLACE. I wish to ask the Minister of Public Works when he expects to hand the Markham post office over to the department. I understand it has been finished about eight months.

Mr. LEMIEUX. Is my hon. friend aware that the fittings are all in yet?

Mr. WALLACE. I am aware that it has been finished eight months.

Mr. LEMIEUX. I will look into the matter. Of course, the building is not finished until the fittings are all in.

THE LACHUTE POST OFFICE.

Mr. PERLEY. I wish to ask the minister with reference to the post office at Lachute. It has been completed for several weeks, the fittings are all in, and the whole building was ready for use a month ago. When is it intended to use it?

Mr. PUGSLEY. I think it would be much more convenient if questions of this character were put on the notice paper, in order that we may have time to obtain the information from the department. But I will have that looked into.

MAIL SERVICE IN SYDNEY.

Mr. MADDIN. I desire to ask the Postmaster General when we may expect a return to the motion for all the papers, correspondence and documents in connection with the free mail delivery service in Sydney, the order for which was granted by this House on the 6th of December, last.

Mr. LEMIEUX. I will take note of my hon. friend's question. I think we have to get the consent of the Secretary of State.

IMPROVED PAPER MACHINERY COMPANY.

House in Committee on Bill (No. 67) respecting the Improved Paper Machinery Company.—Mr. Worthington.

On section 1,

Power to Commissioner of Patents to receive fee and extend duration of patent.

Mr. CARVELL. Unfortunately I was not present when the Bill was before the Committee on Private Bills. May I, therefore, ask the hon. member who has charge of this Bill (Mr. Worthington) to explain the reasons for asking for this legislation. Perhaps I may be permitted to say, we have a great many applications to parliament in recent years to renew patents which have become void for one reason or another. A Bill was passed a short time ago concerning a case in which the trouble, I am told, arose from the fact that, though the amount necessary for the renewal had been sent to the bank of Montreal, yet, through the mistake of a clerk, it was not forwarded to the patent office. In such a case, it is only reasonable, perhaps, that the patent should be renewed. What I particularly would like to know, in the present case, is whether the patentee commenced manufacturing within two years, and otherwise complied with the patent law. And, was the difficulty simply an omission to pay the fee within the time—which, I understand, expired on January 26, 1909—or is this a case in which a patent has become void, making this a Bill merely to give back rights which the patentee has forfeited through his own negligence to comply with the law?

Mr. WORTHINGTON. This Bill was before the Committee on Private Bills at its last meeting and was accepted by the committee with the concurrence of the Minister of Agriculture. This was an exceptional case in which the holder of the patent was not responsible for the lapse of the patent.

Mr. EMMERSON. What were the circumstances?

Mr. WORTHINGTON. This is a very large company which has a solicitor employed especially for the purpose of keeping these patents in force. Through the negligence of this solicitor, one patent was allowed to lapse—it was misplaced. The solicitor recognized that the fault was his own, and offered to compensate the company. The company has built a large plant at Sherbrooke—it is one of Sherbrooke's largest industries—and is now prepared to manufacture this improved paper machinery, in fact has begun to do it.

Mr. CARVELL. Did they begin the manufacture within two years from the granting of their patent?

Mr. WORTHINGTON. Yes.

Mr. CARVELL. In Canada?

Mr. WORTHINGTON. Yes.

Mr. FOSTER. If this has passed under the cognizance of the Minister of Agriculture, I think that is the main thing.

Mr. WORTHINGTON. The Minister of Agriculture took the case into consideration and decided that it was an exceptional case in which the company was not to blame, and for that reason the Bill should be allowed to pass, with the understanding that a proviso at the end of the Bill should be withdrawn.

Bill reported, read the third time and passed.

L'INSTITUT DE NOTRE DAME DES MISSIONS.

House in Committee on Bill (No. 80) to incorporate L'Institut de Notre Dame des Missions.—Mr. W. M. Martin.

On section 7, subsection 2, as amended:

The annual value of the real estate held in Canada by or in trust for the corporation shall not exceed fifty thousand dollars.

Mr. FOSTER. What does that mean—'the annual value of the real estate?' Will the hon. member who has charge of the Bill please explain?

Mr. W. M. MARTIN. In the Committee on Miscellaneous Private Bills it was pointed out that the power to hold real estate to the value of only $50,000 was very little in the case of a corporation such as this. Especially is this the case when you consider the relative values of real estate in western Canada and in eastern Canada. The object of the amendment in this case, as I understand it, is to allow the corporation to hold property which will produce an annual revenue of $50,000.

Mr. FOSTER. That would be a pretty large estate.

Mr. W. M. MARTIN. When it is considered that this corporation, or voluntary society, at the present time holds real estate in something like eleven different places in the provinces of Manitoba and Saskatchewan, it will be seen that it does not need to hold much in each place to make a total holding of $50,000 annually. And, from my own personal knowledge of this society, I can say that it will not take very many holdings such as they have at the present time to make a total value of three or four hundred thousand annually.

Mr. JOHN HAGGART. An annual value of $50,000 represents about $1,250,000 capital value.

Mr. W. M. MARTIN. Money in the west is worth 7 per cent if not 8 per cent, and if you figure it on that basis it only makes about $700,000.

Mr. FOSTER. This is not a land company, is it?

Mr. W. M. MARTIN. In order to carry out the purposes for which they are incorporated it is necessary for them to hold land. I know they have acquired land in Regina, worth many thousand dollars and they have lately let a contract in that city for the building of a convent which will cost probably $50,000 or $60,000.

Mr. BLAIN. Under what charter have they been conducting their business in the other western provinces?

Mr. WORTHINGTON.

Mr. W. M. MARTIN. I am informed they have a charter in Manitoba which was granted about 1882 and under which they have been operating up to the present time. They have no charter in Alberta or Saskatchewan, and it is the intention to operate under the proposed new charter in all the western provinces.

Mr. BLAIN. Why should it not come under the provincial government?

Mr. W. M. MARTIN. They would have to have three or four different charters.

Mr. HUGHES. Inasmuch as the control of education belongs to the different provinces, should not this charter be obtained from the provincial government? I ask the Prime Minister what the rule is?

Sir WILFRID LAURIER. I have not looked into the Bill and I am not prepared to express an opinion on it. It is private legislation.

Mr. BLAIN. Was the question of provincial rights brought up in the committee? Would it not be better in matters of this kind that are purely within the jurisdiction of the provinces, that the local legislatures should deal with them? As I understand, the Bill simply asks authority to do business in the new provinces, not in any other part of Canada, and if that be the case why should they not obtain a charter from the provincial legislature?

Mr. HUGHES. All these institutions are after government grants for education; they will naturally be under the control of the provinces in relation to education; they should be inspected by provincial inspectors, they are subject to provincial laws in relation to provisions for safety, &c., and if we grant charters to institutions of this kind, we are trespassing on the rights of the provinces in these matters. The whole control of matters relating to education should be left in the hands of the provinces as it is a provincial matter relating to the education of the youth of the country. I think the Bill has no place in this parliament.

Mr. W. M. MARTIN. This is clearly an interprovincial Bill. This corporation, as it will be, is not asking anything more from this parliament than any railway corporation does when it asks for the privilege of building lines connecting two or three provinces. We cannot be expected to go into every province in the Dominion where we want to carry on business and ask a charter. We decided to come to this parliament and ask a Dominion charter. There is nothing in the Bill dealing with provincial rights, and if my hon. friend from Peel will go into the western provinces, he will find there is no question of provincial rights there to-day.

Mr. BLAIN. I am not stirring up any question of provincial rights, my hon. friend is doing that by the manner in which he refers to it. This should come clearly within the province of the provincial government, and the Dominion parliament should not be asked to grant charters of this kind.

Mr. EMMERSON. My hon. friend will see by section 11 that is all provided for.

Mr. BLAIN. Yes, I saw that.

Mr. CONMEE. My hon. friend will see that this company must come here to get this charter, they cannot get it elsewhere. No legislature can give a charter for the incorporation of a company to operate in another province, that is interprovincial. This corporation propose to operate in three different provinces, and therefore must come here.

Mr. BLAIN. I understand they have been doing business in Manitoba under a local charter.

Mr. CONMEE. Yes, but now they want to extend and they have a right to come here and get this charter.

Mr. DANIEL. In section 7 power is asked to purchase or otherwise acquire certain kinds of property, and it speaks of real or personal and corporeal or incorporeal property. What is incorporeal property?

Mr. W. M. MARTIN. I suppose what is usually meant, bonds, securities and mortgages.

Mr. DANIEL. Would that not be considered personal property?

Mr. W. M. MARTIN. I have no objection to changing the word to personal.

Mr. DANIEL. It looks as though it might refer to angels floating in the air, or something of that kind. I do not see what kind of property could be called incorporeal, when you have real and personal and almost every other kind mentioned.

Mr. FOSTER. It would seem to me that the proper wording for subclause 2 would be to state the amount of real estate they may hold. You introduce an element of difference and possibly of some difficulty by not giving a statement of the annual value of the real estate they may hold. If you have any basis on which to calculate it, calculate it on that basis.

Mr. EMMERSON. Say not exceeding $1,000,000.

Mr. FOSTER. And I think you should say the value of real estate 'so held.' That is for the purposes of the corporation as shown in the preceding clauses. I do not suppose you intend this to become a land dealing company.

Mr. HUGHES. Under this clause they could become a banking or loan society or a land speculating institution, they could do anything they had a mind to. I would move that this Bill stand over in order that it may receive more careful consideration than it has. It is a very dangerous Bill from many points of view. In the first place I maintain it conflicts with provincial rights, inasmuch as it is incorporating by the Dominion government an institution for the education of the youth of the country. That is clearly in violation of provincial rights. They can go to the provincial government and obtain their charter. Personally I have objection to incorporating any institutions of this kind under Dominion charters; the province is the proper place for that, in order that they may be subject to proper provincial inspection. All schools are supposed to be subject to provincial inspection, whether they are private or public schools. If we grant this charter we place this school outside of the control or discipline of the province and they will be under no obligation to observe the laws of the province except under one clause, in relation to the control of property. I do not think the Bill should pass until it has received more careful consideration. We all know that when Bills affecting any religious corporation are brought before the House, like this Sunday Observance Bill that we had before parliament a few days ago, we are told that the church is behind them and we stand to one side. I do not think that a Bill of this kind should be allowed to be enacted by this House and I therefore oppose it.

Mr. MONK. I do not see how the reasoning of my hon. friend (Mr. Hughes) would apply to a case like this. The moment the fact is indicated to us that this society intends extending its operations beyond one province, we have the jurisdiction to incorporate it.

Mr. FOSTER. It has institutions in two provinces.

Mr. MONK. It has institutions operating in two provinces, as my hon. friend from North Toronto (Mr. Foster) says, and it may wish to extend its charitable and religious institutions beyond the limits of one province. Therefore, why should we not have power to incorporate it here? We could not incorporate, strictly speaking, a society of that kind intending to operate only in one province. I do not think we could give it legal entity. As a matter of fact we are incorporating this society and placing it under the clear jurisdiction of the province with respect to educational matters. Surely my hon. and gallant friend from Haliburton and Victoria will not deny that? What is the object of this society? Its object is to do educational,

charitable and other eleemosynary work. Would my hon. friend say that this places it above the laws of the province in respect to education? Surely it is absolutely subject to its laws in the same way as an individual or a purely provincial creation would be. Therefore, it seems to me that the objection of my hon. and gallant friend is not well taken. There is no privilege conferred by this Bill beyond it. It indicates the object of this new creation. It falls consequently under all the laws of the province respecting education, and if it went beyond in any respect it would be unconstitutional.

Mr. CARVELL. I am very much impressed by the statement of the hon. member for Jacques Cartier (Mr. Monk). I think that if the hon. member for Victoria and Haliburton (Mr. Hughes) would consider the course he is taking in this matter he would see that this is not education as it is referred to in section 93 of the British North America Act. That refers to public education; this is a purely private matter. The applicants for this Bill wish to educate their children, or rather provide institutions at which children may be educated, but it is purely private. It has nothing to do with public education and it has nothing to do with education in the sense in which it is referred to by the British North America Act. I would call my hon. friend's attention to the fact that many bodies have been incorporated by this parliament with practically the same objects in view as those for which this Bill is introduced, and if it be true that these applicants wish to do business in all of the provinces of Canada excepting Manitoba, they are practically compelled to come here. The society might possibly get one charter in Saskatchewan and another in Alberta, but there would be no possibility of working them under one general head. It would be two distinct corporations. In going over the provisions of this Bill it will be seen that they are similar to the provisions of a Bill passed by this parliament in 1884, one with which the hon. member for Victoria and Haliburton will not quarrel, and that was a Bill for the incorporation of the Methodist Church of Canada. The Methodist Church of Canada consisted probably of corporations in each of the provinces as far as I know. All these different corporations were banded together in one and very much the same provisions were incorporated in the Bill as were asked for in this Bill. This Bill gives this corporation the right to hold property.

Mr. BLAIN. As I understand that Bill was to amalgamate certain different religious bodies into one.

Mr. CARVELL. Exactly, and so does this.

Mr. BLAIN. No.

Mr. MONK.

Mr. CARVELL. Absolutely so. There is a body in Manitoba that has a corporate right, there is a body in Saskatchewan which has no corporate right, and there is property held by different persons in trust for these bodies. There is another body in Alberta holding property in trust. But the same principle is involved in each case; they are trying to get these three bodies incorporated under a general head and there is provision by which they may hold property, borrow money on their property, and the parties who hold property in trust are authorized to convey it to this corporation. It seems to me that is exactly the power that the Methodist Church got. I think that the hon. member for Victoria and Haliburton, if he considers these matters, will say that if it is fair in one case it is fair in the other. The only thing I would suggest would be an amendment to clause 2 of section 7. It is, to my mind, unreasonable to limit the holdings of this society to $50,000. I do not know what amount would be proper, but the hon. gentleman who has charge of the Bill can state what, in his opinion, would be a proper amount. With that change, it seems to me, the Bill is not only necessary for the work, but it is perfectly legitimate and it should pass.

Mr. HUGHES. The parallel which has been drawn by the hon. member for Carleton, New Brunswick, (Mr. Carvell) does not hold. Unless I can get some further legal knowledge from the two brilliant legal minds which have just preceded me, I must still hold to my view that this Bill clearly trangresses the rights and duties of the provinces. The Bill declares that:

The objects of the corporation shall be the instruction and the Christian education of children and other works of charity, such as work rooms——

This is a bad piece of composition, I should imagine, but the objects can be very well understood——

—orphanages, refuges and other similar undertakings, and the advancement, in other ways, of education and religion, charity and benevolence.

These are all very proper, but the education of the youth of the land comes clearly under the power of the provincial authorities, and the point I want made clear to my mind is that if this Bill is passed in its present form will the provinces have any——

Mr. CARVELL. Does the hon. gentleman mean to convey to the committee the idea that the private education of pupils, or the conduct of private schools, comes, under the British North America Act, within the jurisdiction of the local government?

Mr. HUGHES. There is no private educational institution in Ontario, or in any other province of the Dominion of Canada, but is under inspection by the——

Mr. CARVELL. I would like my hon. friend to answer the question.

Mr. HUGHES Just let my hon. friend wait until I am finished and he will get his answer. There is not one which is not, under the law, under inspection for fire purposes, for educational purposes and for other purposes.

Mr. EMMERSON. Look at section 11.

Mr. HUGHES. For educational purposes they are under the control of the provinces

Mr. CARVELL. Section 11 says that all provincial laws apply.

Mr. EMMERSON. My hon. friend from Victoria and Haliburton seems to conjure up something that is not here at all. I know he has strong views with respect to education, but he would deprive school children of a christian education because he will not permit it in the public school, and he wishes to shut out such education from private schools. We have these private schools in every province in Canada under all denominations. These applicants are here simply to ask for incorporation.

Mr. BLAIN. Are the private schools to which my hon. friend refers under Dominion charter?

Mr. EMMERSON. Some might very well be.

Mr. CARVELL. Mount Allison is.

Mr. EMMERSON. We have in New Brunswick, as my hon. friend from Carleton says, Mount Allison in Sackville, in the county of Westmorland. I see no reason why any of them should not come to this parliament and ask for incorporation. Such an institution as the University of Acadia in Wolfville, in Nova Scotia, does not operate beyond the confines of that province. They do not need any Dominion charter, but, this society purposes operating in at least three of the provinces and, therefore, they should have incorporation from this parliament. In section 11 we say that the exercise of its powers shall be subject to the laws of any province it may operate in, as to the acquisition and holding of land by religious corporations in so far as such laws apply, but even without that I think it would be subject to provincial laws in that respect. It does seem that the point taken by the hon. member (Mr. Foster) with respect to the extent of the value of the property is opportune and that there is ambiguity as to what 'annual value' means.

Mr. HUGHES. After such a disquisition from the learned authority on divinity matters——

Mr. EMMERSON. You are convicted.

Mr. HUGHES. A gentleman who is so well posted on all the needs of religious corporations, who has gone to Sunday School, and has had all the benefits of a christian education as exemplified in his life and bearing, I would be bold indeed to appear to hesitate to accept his conclusions. But, section 11 only applies to the holding of land by religious corporations, and I am not speaking of the holding of lands at all. What I want to know is: If these institutions are formed in a province and should there be public schools, will the children attending them be subject to inspection under the laws of the province? If that is made clear, I have no objection to the Bill. But I require something better than the authority of the learned law lecturer from Laval, or of the luminary from the valley of St. John, or of the divinity expert from Westmorland, to convince me of that.

Mr. CARVELL. These are private schools, and should they become public schools, it is for the people of the western provinces to look after them. Until my hon. friend can show that they are public schools, his argument amounts to nothing.

Sir WILFRID LAURIER. Education is under the control of the provinces in relation to public schools which are maintained by taxation. But, in all British countries it is the privilege of British subjects to maintain their own schools if they do not want to send their children to the public schools. In some countries children are compelled to go to public schools, but in British countries parents have the privilege of sending their children to private schools, and that right has never been denied. There are many such private schools in the provinces where nothing but public schools prevail under the authority of the province. But with those voluntary private schools there is no interference, and I do not think this Bill departs from the principle acknowledged in all British countries.

Mr. HUGHES. I am content if there is nothing in this Bill which will interfere with these schools being liable to the province just the same as if they had a provincial charter.

Sir WILFRID LAURIER. If these schools become public schools they will be under the control of the province, and so far as education is concerned, no authority other than the province has a right to control them.

Mr. DANIEL. I am not a lawyer, but I do feel that the arguments of the hon. member (Mr. Carvell), and the hon. mem-

ber (Mr. Emmerson) have not convinced me. The hon. member (Mr. Carvell) said that Mount Allison University had a Dominion charter because it operates in more than one province.

Mr. CARVELL. The hon. gentleman misunderstood me. I say that the Methodist institution at Sackville is managed under a Dominion charter because it is the property of the Methodist Church of Canada, which is incorporated by this parliament. The Mount Allison institution is controlled by Dominion charter in that way, and not because it operates in different provinces.

Mr. DANIEL. As I understand it the Universities of McGill and Laval have provincial charters and yet they operate throughout the whole Dominion. I was not aware that Mount Allison University is incorporated by Dominion charter, but I suppose I will have to take the word of the hon. gentleman (Mr. Carvell) for that.

Mr. CARVELL. I have not said that Mount Allison University was incorporated by the federal parliament.

Mr. FOSTER. We all thought you did.

Mr. CARVELL. I say it is the property of the Methodist Church of Canada, and as the Methodist Church of Canada has a Dominion charter the university is operated under a Dominion charter.

Mr. DANIEL. Does the hon. gentleman say that Mount Allison is operating under a Dominion charter?

Mr. CARVELL. Yes, so far as it is the property of the Methodist Church of Canada.

Mr. DANIEL. It either has a Dominion charter or it has not. Does the hon. gentleman say it has a Dominion charter?

Mr. CARVELL. I have said it is controlled by the Methodist Church which has a Dominion charter.

Mr. DANIEL. I am referring to the university and not to the church. I have been trying to get a straight answer, but the hon. member (Mr. Carvell) appears to be too good a lawyer to be able to give me such an answer. Perhaps his experience up above in another part of this building has made him so apt that he is able to give what we might call an evasive answer. Does the hon. gentleman refuse to answer the question, yes or no?

Mr. CARVELL. I have answered it three times already.

Mr. DANIEL. As to the merits of this Bill, I have nothing to say, but I do believe that if there is nothing to be said in its favour other than what has been said by the hon. members for Carleton and Westmorland, then, the reasons for its incorporation by this parliament are very weak indeed. I would still like to inquire what is the nature of 'incorporeal property,' because I think that if there is no such thing we had better strike out these words.

Mr. CARVELL. I would suggest that if the hon. member sends to the library for any law dictionary, he will have no difficulty in the finding the meaning of 'incorporeal property.' It is elementary.

Mr. DANIEL. If it is elementary, the hon. gentleman might give us the information. I have read in Shakespeare of 'incorporeal spirits,' but I have not heard of incoporeal property.

Mr. HUGHES. Might I ask if it is within the authority of this parliament to incorporate incorporeal property? I did not know that our authority extended beyond the confines of the nether world.

Mr. DANIEL. I do not think there is anything in the British North America Act about incorporeal property.

Mr. HUGHES. The language of subsection 1 is very broad and very peculiar. I beg to move that it be amended so as to read in the last line: 'for the uses and purposes of the corporation.' This would make the meaning clear. Will the promoter please explain the meaning of the word 'whatsoever' which appears so frequently in this clause?

Mr. PUGSLEY. It is like many words lawyers use—it does neither harm nor good.

Mr. FOSTER. That is when they charge by the word?

Mr. PUGSLEY. Yes. They are like chips in porridge.

Mr. HUGHES. Suppose property were willed to this institution in opposition to the laws of a province, would its charter override the laws of the province?

Mr. DANIEL. I have been looking up the word 'incorporeal,' and I wish to give the House the authority.

Mr. CARVELL. What is the authority?

Mr. DANIEL. Webster's Dictionary.

Mr. CARVELL. You should get a law dictionary.

Mr. DANIEL. This is from the library, and therefore, I presume it is authoritative. The meaning given of the word 'incorporeal' is, first, 'not corporeal'; second, 'not consisting of matter, not having a material body, immaterial.' I do not see any good in putting anything immaterial into this Bill. Then, as relating to law, it says: 'Existing only in contemplation of law, not capable of actual visible seizing or

possession, not being an object of sense, intangible.' If that is the meaning of the word, I think we might better leave it out entirely, and let the rest of the clause translate itself.

Mr. HUGHES. Will the promoter of the Bill please explain the meaning of this term? We should treat all these corporations on the same basis, as they are neither kickable nor damnable.

Mr. DANIEL. I move that the words 'corporeal or incorporeal' be omitted from clause 7.

Mr. W. M. MARTIN. I object to the usual legal phraseology that is used in granting powers to corporations being cut out of this particular section. These words are found in many similar Bills, as I could show if I had time to look them up. There is certainly no harm done in leaving them in the Bill.

Mr. HUGHES. There are a number of minor legal authorities in the House. There is the law lecturer for Laval; I would like to hear his view on the matter.

Mr. MONK. I am not prepared to take part in the discussion.

Mr. HUGHES. I am informed on good authority that the young legal luminary from Regina, brilliant as he may be in politics, is not an authority in law, when he says that 'corporeal or incorporeal' are words used in a Bill in relation to property.

Mr. W. M. MARTIN. If my hon. friend will take the trouble to post himself, he will find that all property is divided into corporeal and incorporeal, and that division has existed for a thousand years. I object to striking out legal phraseology which is used in other acts of incorporation.

Mr. DANIEL. If the legal members of the House, or any other members, will tell us what these words mean, I have no objection to withdraw my amendment. But nobody seems able to tell us that they mean anything. The dictionary says they mean nothing. They are immaterial.

Mr. JAMESON. In a Bill of this nature we should not attempt to split hairs. While these words may have no meaning to the lay mind, as a matter of fact they have a very important place in the legal vocabulary, and I think the Bill should go through as it has been drafted.

Section agreed to.

On section 8,

Mr. FOSTER. The words in the fourth line 'or not' should come out.

The corporation may also sell, convey, exchange, alienate, mortgage, lease or demise any property, real or personal, held by it, whether by way of investment for the uses and purposes mentioned in the next preceding section or not.

They are confined absolutely to certain purposes; therefore there is no reason why we should extend their powers in giving aid, and in buying and selling, not for the purposes of the corporation.

Mr. W. M. MARTIN. I agree that those words 'or not' should come out; also the word 'whether' in the third line.

Amendment agreed to.

Bill reported, read the third time, and passed.

CANADIAN PACIFIC RAILWAY COMPANY.

House in committee on Bill (No. 96) respecting the Canadian Pacific Railway Company.—Mr. German.

On section 11:

11. Section 2 of chapter 55 of the statutes of 1900, section 2 of chapter 74 of the statutes of 1907, and section 2 of chapter 95 of the statutes of 1908 are repealed.

Mr. GRAHAM. This is one of those sections repealing certain Acts. It is a little difficult to know at all times how far-reaching these are. It was agreed by the committee, I believe, that this section should be added to the Bill.

The CHAIRMAN (Mr. Nesbitt). We asked the law clerk to examine it.

Mr. GRAHAM. The Senate has introduced several amendments repealing certain sections, and such amendments may be more far-reaching than they seem to be. For instance, the Act of 1904 may be repealed. But, some work may have taken place under that Act, and if we repeal the Act in its entirety we may be doing something, the effect of which we hardly understand. But I think we discussed this with the Canadian Pacific railway representative, and it was agreed that no interest was injuriously affected. But these repealing clauses are dangerous sometimes.

Bill reported, and read the third time and passed.

CANADIAN NORTHERN RAILWAY COMPANY.

House in Committee on Bill (No. 61) respecting the Canadian Northern Railway company.—Mr. Cash.

Mr. GRAHAM. It may be as well to mention a formal point in case somebody should bring it up later. In the orders of the day there is a misprint under which this Bill is spoken of as 'An Act respecting the Canadian Northern Ontario Railway Company.' The word 'Ontario' is there

by mistake. This Bill relates to the Canadian Northern Railway Company.

Bill reported, and read the third time and passed.

INTERNATIONAL WATERWAYS CANAL AND CONSTRUCTION COMPANY.

Mr. CONMEE moved the second reading of Bill (No. 119) to incorporate the International Waterways Canal and Construction Company.

Hon. WM. PUGSLEY. I think that as I raised some objection to this Bill when it was last under consideration, I ought to make a reference to what I understand is the present position of the Bill so far as the promoter is concerned. My hon. friend who has charge of the Bill (Mr. Conmee) has recognized the force of some of the objections which I raised to the Bill and he has authorized me to state to the House, and has said that he would state it also if necessary, that when the Bill goes to the committee he will state that he is quite willing to withdraw some of the objectionable provisions of the Bill, more particularly with regard to the Saskatchewan river being included, and also in regard to the definition of the word 'canal' which he admits is altogether too broad. As there are some features of the Bill which might with advantage be adopted, and as the public interest may be served by incorporating a company with proper safeguards, I think it might be as well to let the Bill pass the second reading and go to a committee where all parties interested may be heard. I have had a communication from the secretary of the board of trade of Fort William. They are desirous of being heard and before the committee they and all other parties interested will have that opportunity. Having made these remarks I shall not further press any objection to the second reading.

Mr. PERLEY. I would like to have a definite announcement of the time when the Bill will come before the Railway Committee because the people have been writing and telephoning to me, objecting strongly to the passing of the Bill. I notice the minister referred particularly to the Saskatchewan end but these objections come from the Fort William end. They object seriously to it and claim that it will interfere with water-power and other rights in connection with Fort William and Port Arthur.

Mr. PUGSLEY. I have no doubt that the chairman of the committee and the Minister of Railways will see that ample opportunity is given for all parties to be heard.

Mr. CONMEE. I am sending copies of the Bill with the proposed amendments to both Port Arthur and Fort William and will be glad to send them to any other places or interests of which I can learn.

Mr. HUGHES. Why not send one to each member?

Mr. BOYCE. I entirely agree with what the hon. Minister of Public Works (Mr. Pugsley) says with regard to the objection that he has to this Bill from several points of view. Coupled with the interference with the Saskatchewan river there are several interests which are affected by some of the extraordinary powers asked for by this Bill, and, therefore, I would ask the Minister of Railways and Canals (Mr. Graham) to see that the date for the hearing of the Bill in committee is so fixed that all parties may have an opportunity to be heard. The powers asked for are of the widest possible nature, very much too broad, and inasmuch as the public and other interests do not seem to be safeguarded in any way, I think that the Bill calls for the severest criticism and the greatest caution. I would ask whether the Bill containing the amendments will be reprinted and distributed amongst members so that we can judge of the extent to which the hon. member for Thunder Bay and Rainy River proposes to moderate his Bill, because I hope the amendments will have the effect of moderating and not enlarging the scope of the powers asked for.

Mr. BLAIN. I do not think it would be fair to ask the House to allow this Bill to go to the committee without an explanation from my hon. friend from Thunder Bay and Rainy River (Mr. Conmee). We know nothing whatever about these amendments. The most important clauses of the Bill were objected to by the hon. Minister of Public Works when it was before the House some time ago. I think my hon. friend who has charge of the Bill should state to the House now the changes that he is willing to allow in the Bill and the proposed amendments that he wishes the committee to consider.

Mr. CONMEE. I did not go into an explanation of the Bill to-day because I thought it was not necessary to take up the time of the House.

Mr. BLAIN. Explain the changes in the Bill.

Mr. CONMEE. One change is to meet the views of the Minister of Public Works. He was of opinion, when the Bill was up a few days ago, that it might mean that the company would be given some control over waters that are now navigable that the company did not themselves improve. An amendment will be put in to make it cer-

tain that the company cannot have any such control. Then, the Bill extended the powers of the company to the Assiniboine river. That was an error in any case. It was copied from an old Bill introduced a few years ago.

Mr. HUGHES. What is wrong with the Assiniboine river?

Mr. CONMEE. It was never the intention of the company to extend their works to the Assiniboine river, and they do not ask for that power.

Mr. HUGHES. In what section is the Assiniboine river mentioned?

Mr. CONMEE. Subsection d of section 8. That subsection is struck out altogether. To meet the views of the Minister of Public Works in regard to the Saskatchewan river, in which he stated that the government were likely to make some improvements, the company have cut out of the Bill all reference to the Saskatchewan river. Now, their western limit is Lake Winnipeg. Their operations do not go beyond that point.

Mr. HUGHES. What change is made in subsection c?

Mr. CONMEE. Part of the second last line and the last line are stricken out: 'Winnipegosis and Manitoba, and in and along the Saskatchewan river.' In section 12, with regard to plans, before the company commence work provision was made that they should have the assent of the Governor in Council. Now, it is proposed that they shall have the approval of the Waterways Commission and also the Governor in Council.

Section 14 is struck out. Hon. gentlemen will see that section 14 was put in as a safeguard to prevent the company from getting any control over water-powers. Now, that section is struck out and a wider section is put in which, I think, will meet with the approval of the House. The proposed new section reads as follows:

Nothing in this Act shall be held to give the company a power or exclusive right to or over any water area, river, stream, lake, channel, or over any water privilege not made, erected or constructed, or in course of construction by the company. All water areas, lakes, rivers, streams or water privileges affected by this Act that are not made, constructed, or in course of construction by the company shall remain in the same position in every respect as if this Act had not been passed.

I think that will remove any ground for such observations as fell from the hon. member for Algoma (Mr. Boyce) to the effect that the Bill gives this company too wide privileges. I venture the statement that he will not find on the statute books anywhere a Bill incorporating either a railway or a canal company which has as many good safeguards as are to be found in this Bill.

Mr. BLAIN. What provision is made as to the waters of Lake Manitoba and Lake Winnipegosis?

Mr. CONMEE. It does not go near the waters of Lake Manitoba. The company have no control over any waters at all.

Mr. PUGSLEY. It is proposed to strike out Lake Manitoba?

Mr. CONMEE. I will read section 1, which gives the interpretation of the word 'canal.' This Bill has been amended so as to remove the objections which the Minister of Public Works mentioned. Perhaps the language was too wide—I am not lawyer enough to say—I could not see any objection to it, but the minister did see something in it. Section 1 is now amended to read as follows:

'Canal' includes lift-locks, channels, canal approaches, or other waterways excavated, erected or made by the company, and also includes every kind of work necessary to be done in respect to the canals, waterways or channels for the purpose of carrying out the objects of this Act.

It is there limited to the works that the company may themselves construct to whatever artificial work they may do. They get no control over any water-power. That interpretation of the word 'canal' removes beyond all doubt any possibility of the effect being as it was interpreted the other day when the Bill was before the House. If it does not, I may say to my hon. friends that this Bill has to go before the committee and that is the proper place to amend it. If there is any amendment that can be put in to protect the public with respect to powers or any suggestion that will improve, so long as it does not destroy the Bill, I will be glad to have it carried out no matter from what member it comes.

Mr. HUGHES. Is the hon. member going to have his amendments printed?

Mr. CONMEE. I think I can get a dozen copies of the Bill amended just as I have it here for distribution amongst members of the committee, if that will be satisfactory.

Mr. BOYCE. I think the Bill should be re-printed so that the amendments will be available for general distribution. My experience has been that with regard to any Bills my hon. friend (Mr. Conmee) introduces or any amendments he may make it is in the public interest to give them the widest circulation possible. Therefore I think this Bill should be reprinted and circulated widely. Does the

hon. gentleman amend the definition of the word 'power' in the Bill?

Mr. CONMEE. I have struck out the words ' or supply ' in clause H.

Mr. BOYCE. My hon. friend gives to the word 'power' a special and somewhat generous and general interpretation.

Mr. CONMEE. I do not care whether that interpretation is there or not. I do not see what good it is; the lawyers put it there; I did not.

Mr. GRAHAM. I am probably as familiar as any hon. member in the House outside of my hon. friend (Mr. Conmee) with the differences of opinion that have arisen as to water-powers in that vicinity. In the provincial legislature we had for a good many years disputes as to certain companies incorporated to develop Kekebeka Falls and the Kaministiqua river, and I point that out as a reason why the people in that vicinity might like to be heard on a Bill such as this. I have expressed no opinion on this Bill; I shall defer that until it is considered in committee, but I think we had better have the proposed amendments reprinted so that we will all know what they are. It will not take long and it will not cost much and it will be in the public interest. I have gone further than some gentlemen in the House may think proper in having Bills that are of a public nature referred to some committee so that the people interested may get a chance to be heard. I have not followed parliamentary practice in that respect, but we are representing all the people here, and where there are interests involved it is well to give the people a chance to express their views. The chairman of the Railway Committee has taken that view and has fixed days for hearing the people interested in a certain Bill before the committee even though they themselves have not asked to be heard. I think you will find that the chairman of the committee will invite the representatives of any municipality interested to be present at a certain day so as to enable them to state their views. Already we have had communications from Fort William with respect to this Bill, and I think it would not be wise to proceed with it until that municipality has an opportunity to be represented, if it so desires. I think the Bill should be reprinted.

Mr. HENDERSON. Do I understand the minister to say that this Bill shall be reprinted before it comes before the Railway Committee. Why not have it reprinted before it is referred to the committee so that we may know what we are doing?

Mr. BOYCE.

Mr. SPEAKER. The question before the House is shall the Bill be referred to the committee?

Mr. GRAHAM. I would make the suggestion that the clerk of the House should have the Bill reprinted and then we will have it in its reprinted form in the committee. That can be done without any red-tape.

Motion agreed to, and Bill read the second time and referred to the Select Committee on Railways.

QUESTIONS.

COURTENAY BAY.

Mr. DANIEL:

1. Has the government made any arrangement in relation to a terminus for the Grand Trunk Pacific at Courtenay bay or elsewhere in or near the harbour of St. John?

2. Have plans and reports been made of the required dredging, with the wharfs, docks, breakwaters and terminal facilities necessary at Courtenay bay? If so, will the government lay the same on the table of the House?

3. What is the extent of the dredging required, and what is the estimate of the quantity of earth excavation and rock excavation, respectively, required to be made?

4. What is the estimate of the total cost of dredging, and what estimate is made of the cost of the wharfs, docks, warehouses and terminal facilities generally, apart from the estimated cost of dredging?

5. Which predominates, rock or earth excavation?

6. Have specification and plans for the dredging of Courtenay bay been prepared, and have any tenders been asked for the performance of such work? If so, what was the amount of deposit required to accompany tenders?

7. Were any tenders received? If so, will the government give the names of each tenderer with the figure of each together with the amount of deposit accompanying each tender, respectively?

8. Has any tender been accepted and a contract entered into? If so, will the government lay on the table of the House a copy of such contract, together with a copy of notices of call for tenders, setting forth terms, with the plans and specifications upon which such contract was based?

Hon. WM. PUGSLEY:

1. No.

2. Instructions were given to Engineer H. M. Davy to make some test borings in Courtenay bay, in order to ascertain the nature of the materials existing to a depth of 32 feet below lowest water; a report on these borings, accompanied by a plan, is in possession of the department. Preliminary studies for wharfs, &c., have been made, but the plans are not sufficiently determined upon to be submitted to parliament.

3. About 8,000,000 cubic yards, of which there is very little rock.

4. (a) $2,000,000, work to be done by suction dredge. If work is done by means of one or more of the departmental dredges, it is estimated that the cost may be considerably less than this. (b) No definite estimate has been made, as it will depend on the extent of the wharfs, docks, warehouses and terminal facilities generally, which would naturally be a matter of development extending over a number of years.

5. Earth.

6. (a) No special specification was prepared; it was decided by the department that the specification for St. John harbour and plan and report above mentioned were sufficient to give all the information which it was intended to convey to the tenderers (b) Yes. (c) $6,000.

7. (a) Yes.

(b)

Names and Addresses of Tenderers.	——	Price per Cubic Yard.			
		Scow Measurement.		Material Cast Over.

Ledge or solid rock blasted, 28.00 "; All other materials, 0.79 "; Cast over. Boulders from 1½ to 2 cub. yds., $9.00 "; Boulders excavated 2 cub. yds., 19.80 "; Ledge or solid rock blasted, 28.00 "; All other materials, 0.79 "			
	Area commencing at C. P. R. wharf and extending 1,600 ft. southwardly towards Beacon Light, being C.P.R. property.	Scow measurement, towed to dumping grounds. Boulders ½ to 2 cub. yds., $ 9.00 per c. yd.; Boulders exc., 2 cub. yds., 18.20 "; Ledge or solid rock blasted, 27.00 "; All other materials, 0.74 "; Materials cast over, same prices.			
	Area from lighthouse northerly to end of C. P.R. 1,600 feet strip above-mentioned.	Same prices as for Courtenay bay area.			

(c) The Maritime Dredging Company stated, when submitting their offer, that they had on deposit with the department a cheque for $6,000 for dredging in the province of New Brunswick and that they understood said cheque would cover the security for the present tender. In view of the extent of the work to be done, the company was asked to furnish a special deposit of $6,000, which was done. Other tenders were accompanied by an accepted bank cheque for $6,000.

8. (a) Action was taken on the offer of the Maritime Dredging Company and a con-

tract was entered into with them for the dredging on the west side of the harbour. No contract was entered into for dredging Courtenay bay, but the company covenanted to also perform the dredging there at the price named in their tender, if called upon by the government to do so. (b) Yes, if moved for.

GRAND TRUNK PACIFIC—ENTRANCE INTO BRANDON.

Mr. ROCHE:

1. Has the government or any member thereof received a copy of a resolution passed by the Manitoba Grain Growers' Association at their recent convention held in Brandon re the entrance of the Grand Trunk Pacific railway into Brandon?

2. If so, has the government taken any steps to further the request contained in said resolution, and what action has been taken?

Hon. GEO. P. GRAHAM:

1. Yes, a copy of the resolution was received by the Department of Railways and Canals on 27th December, 1909.

2. The resolution was acknowledged by the department and a copy of the same forwarded to Mr. E. J. Chamberlain, vice-president and general manager of the Grand Trunk Pacific Railway Company.

DREDGE CONSTRUCTION.

Mr. MONK:

1. Is the government at the present moment constructing, or has it constructed, at Sorel, a dredge, under the direction of Engineer Kennedy, formerly of the port of Montreal?

2. If so, what is the cost or estimated cost of the construction of said dredge?

3. Is it the case that the said dredge was found to be incapable of carrying its anchors without sinking, even before it had any coal placed on board?

4. Has the said dredge been found defective? If so, in what respect, and for what reasons?

5. Have orders been given to lengthen or widen or change the said dredge, and in what particulars?

Sir WILFRID LAURIER:

1. The government is constructing a dredge at Sorel from plans prepared by Mr. John Kennedy, formerly chief engineer of the Montreal Harbour Commissioners.

2. Estimated cost, $230,000.

3. No.

4. The freeboard of the dredge was considered insufficient for work in heavy currents.

5. The dredge is being lengthened 25 feet to increase the floating power and the freeboard.

THE PROPOSED WATERWAYS TREATY.

Mr. MAGRATH:

1. Would the United States, under the proposed Waterways treaty, have the absolute right to the use of the Georgian Bay canal, if constructed, and on the same terms as Canada?

2. And, under that treaty, would Canada have similar rights to the use of the waterways connecting Lake Michigan with the Gulf of Mexico via the Chicago drainage canal?

Hon. A. B. AYLESWORTH. The proposed Waterways Treaty dealing with boundary waters, and with streams or canals connecting boundary waters, would not seem to affect any use by the United States of the Georgian bay canal, if constructed, or any use by Canada of waterways connecting Lake Michigan with the Gulf of Mexico via the Chicago drainage canal, but it may be that the provisions of the treaty of Washington (1871) would have application to one or both of the subjects mentioned.

COMMISSION ON TECHNICAL EDUCATION.

Mr. GUTHRIE:

1. What communication was addressed by the government to the premiers of the several provinces with reference to the appointment of a Commission on Technical Education?

2. What replies were received from the premiers of the several provinces?

Hon. MACKENZIE KING:

1. The following communication was addressed by the government to the premiers of the several provinces:

Minister of Labour, Canada.
Ottawa, December 13, 1909.

Dear Sir,—The Dominion government is considering the advisability of appointing a Royal Commission to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education, and into the systems and methods of technical instruction obtaining in other countries, particularly in Great Britain, France, Germany and the United States. It is intended that the commission shall be solely for the purpose of gathering information, the information when obtained, to be published in a suitable report to be at the disposal of the provinces and available for general distribution.

I may say that the view of the government is that a commission of the kind suggested might render valuable services to the Dominion as a whole, since it would be in a position to conduct an inquiry on a wider and more comprehensive scale than might be considered desirable or possible in the case of the different provinces, and which if undertaken by the provinces individually must lead inevitably to the duplication and reduplication of energy and expense.

It is recognized, however, that the work of such a commission, to be of national service, should have the hearty endorsation of the governments of the several provinces of the Dominion, and I am, therefore, writing to ask if the appointment by the federal authorities of a commission of the character and scope suggested would meet with the approval of your government, and to inquire, in particular, inasmuch as some doubt has been expressed on the point, whether exception to

such a course would be taken on any ground of jurisdiction.

Yours faithfully,
(Sgd.) W. L. MACKENZIE KING.

The following replies were received:

Premier of Nova Scotia,
Halifax, N.S., December 23, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I beg to acknowledge the receipt of your letter of the 13th inst., on the subject of the advisability of appointing a royal commission to inquire into the needs of technical education.

I would be delighted to see such a commission appointed by your government; in fact, I have long advocated such a course being taken and you can accept my assurance that such a course, if adopted, will meet with the hearty approbation of the government of Nova Scotia.

Yours truly,
(Sgd.) G. H. MURRAY.

Prince Edward Island, Premier's Office,
Charlottetown, December 18, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I beg to acknowledge receipt of your letter of the 13th instant regarding the advisability of the Dominion Government appointing a royal commission to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education and into the systems and methods of technical education obtaining in other countries, etc., with the request that the matter should be considered and approved of by the government of this province, and whether exception to such a course would be taken on the grounds of jurisdiction.

In reply, I beg to say that your proposal meets with the approval of our government, and I wish to assure you that no exception will be taken upon the grounds of jurisdiction. We believe it would be in the interest of the country at large that such a commission should be appointed, and that all possible information be obtained upon a subject of so much importance.

Yours faithfully,
(Sgd.) F. L. HASZARD.

New Brunswick, Premier's Office,
St. John, N.B., December 16, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I beg to acknowledge receipt of your favour of the 13th instant, informing me that the Dominion Government is considering the advisability of appointing a royal commission to inquire into the needs and present equipment of the Dominion as regards industrial training and technical education, and into the system of methods of technical instruction prevailing in other countries, specially in Great Britain, France, Germany and the United States.

I entirely agree with the view of the government to the effect that a commission of this kind might rénder valuable service to the Dominion as a whole, and I have no hesitation in saying that the appointment by the federal authorities of a commission of the character and scope suggested in your letter would meet with the approval of my government, and no exception would be taken to such a course on any ground of jurisdiction.

Yours very truly,
(Sgd.) J. D. HAZEN.

Cabinet du Premier Ministre, Province de Québec,
Québec, 30 décembre 1910.

L'honorable M. W. L. Mackenzie King,
Ministre du Travail,
Ottawa.

Monsieur le Ministre,—J'ai soumis à mes collègues du conseil exécutif la lettre que vous avez bien voulu m'adresser le treize de ce mois pour demander si le gouvernement de la province de Québec approuverait la nomination, par les autorités fédérales, d'une commission chargée de faire enquête sur l'enseignement technique en ce pays.

Nous sommes d'opinion, mes collègues et moi, que tout ce qui touche à l'instruction publique, qu'il s'agisse d'enseignement spécial ou d'enseignement général est du ressort exclusif des provinces, et je tiens à vous l'écrire afin qu'il n'y ait pas de malentendu à ce sujet. D'autre part, comme vous me donnez l'assurance que les autorités fédérales, en insitiuant une commission d'enquête, n'auraient tout simplement en vue que de prêter leur concours aux gouvernements provinciaux en faisant recueiller des renseignements qu'elles mettraient ensuite à la disposition de ces derniers, nous ne voyons pas d'objection à la nomination d'une telle commission.

Veuillez agréer, Monsieur le Ministre, l'expression de mes sentiments bien distingués,

Le Premier Ministre,
(Sgé.) LOMER GOUIN.

(Translation.)

Office of the Prime Minister, Province of Quebec.
Quebec, December 30, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Sir,—I have submitted to my colleagues of the executive council the letter you were kind enough to write to me on the 13th inst., asking me whether the government of the province of Quebec would approve the appointment by the federal authorities of a commission to make an investigation concerning technical instruction in this country.

We are of the opinion, my colleagues and myself, that anything pertaining to public education—whether the subject be special teaching or general teaching—belongs to the provinces exclusively, and I want to write you so, in order that there may be no misunderstanding on that point. As, on the other hand, you give me the assurance that the federal authorities, in instituting a commission of investigation, would simply do it with a view to help the provincial governments, by having collected information which they would later on put at the disposal of the latter, we see no

objection to the appointment of such a commission.

Please accept, sir, the expression of my highest regard,

(Sgd.) LOMER GOUIN,
Prime Minister.

Office of the Prime Minister and President of the Council, Ontario.
Toronto, December 16, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I have your letter of the 13th instant.

I understand the object of the proposed commission, to inquire into the needs and present equipment of the Dominion as respects training and technical education and into the system of methods for technical instruction obtaining in other countries, will be solely for the purpose of gathering information. This being so, I see no objection to the creation of the commission, and no exception will be taken to it on the part of the province of Ontario.

Yours very truly,
(Sgd.) J. P. WHITNEY.

Province of Manitoba, Premier's Office,
Winnipeg, December 16, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Sir,—I have the honour to acknowledge receipt of yours under date of December 13th, regarding the advisability of appointing a royal commission to inquire into the industrial training and technical education of Canada.

I appreciate the fact that education is a matter under the constitution entirely vested in the provinces and realize that it is a delicate question on which to give advice such as you solicit.

The matter is an important one and I think, in view of the rapid strides along industrial lines that the Canadian people are making, there is necessity for more attention being given to technical education than what has been the practice or custom in the past.

I shall certainly be pleased to see more interest taken in this matter and our young men better qualified for the opportunities that are offered along industrial lines by having a first-class technical education to qualify them for the responsible and important positions that are awaiting men of that quality.

I have the honour to be, sir,
Your obedient servant,
(Sgd.) R. P. ROBLIN,
Premier.

Executive Council, Saskatchewan,
Regina, December 21, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Mr. King,—I have duly received your letter of December 13 on the subject of technical education and the proposal now under consideration by your government for instituting an inquiry by a royal commission and which asks whether the proposal meets with the approval of the Saskatchewan government and whether any exception would be taken by us on the ground of jurisdiction.

I may very readily state that the Saskatchewan government will raise no objection against the proposed inquiry by the Dominion government on any grounds; on the contrary we believe that the federal government is the proper authority to proceed in the matter in the way proposed, that it is a subject which can be more efficiently, economically and effectively dealt with by the central government than by the various provincial governments; and, in addition that, inasmuch as industrial training and technical instruction intimately affect trade and commerce, these branches of education ought to be viewed from the national rather than from the provincial standpoint.

Believe me,
Very sincerely yours,
(Sgd.) WALTER SCOTT.

Premier's Office, Alberta,
Edmonton, Alta., December 28, 1909.

Hon. W. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I am instructed by the Hon. Premier Rutherford to acknowledge receipt of your letter of the 13th in reference to the advisability of the Dominion government appointing a royal commission to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education.

I am directed by the premier to say that this project meets with the hearty endorsation and approval of his government.

Yours faithfully,
(Sgd.) M. J. MACLEOD,
Clerk Executive Council.

Government of the Province of British Columbia, Premier's Office,
Victoria, January 15, 1910.

Hon. W. L. Mackenzie King,
Minister of Labour,
Ottawa, Ont.

Dear Sir,—I beg to confirm my telegram to you of January 10th as follows:—

Owing to absence of Minister of Education with whom I wished to confer, regret being unable to reply sooner to your favour regarding technical education. He has now returned and an answer will be sent you promptly.

Having since then had an opportunity of consulting with the Minister of Education, I beg to state that the appointment of a commission by the Dominion to inquire into the subject of industrial training and technical instruction meets with the approval of this government.

It is not the intention of the government of this province to take exception to the course you propose on any grounds of jurisdiction.

I might add that this government will gladly afford any facilities in its power to assist in carrying out the object in view.

Yours very truly,
(Sgd.) RICHARD McBRIDE.

DAM ON THE MONTREAL RIVER.

Mr. WRIGHT:

Has the contract for the dam on the Montreal river, near Latchford, been let? If so, to whom, and when is it expected to be finished?

Hon. WM. PUGSLEY:

1. Yes.
2. W. H. Sinclair and D. B. Campbell.
3. The contract stipulates that the work must be completed by April 1, 1911.

NATIONAL TRANSCONTINENTAL RAILWAY—COMMISSION ON SUPPLIES.

Mr. J. D. TAYLOR:

1. Has the government or any member thereof, or have the Transcontinental Railway Commissioners or any of them received information, or intimation that any person or persons now or heretofore in the service of the government or of the commission have profited or sought to profit by the financial transactions with contractors or subcontractors, or any other persons connected with the construction of the said railway, or with the furnishing of supplies therefor, or have received or sought from such sources any money for property, transferred or proposed to be transferred during the period of their employment in connection with this work?
2. If so, were said persons in position to influence reports on quantities or classification in connection with any contract or contracts?
3. When and in what manner, was such information communicated, and what action has been taken or is proposed to be taken therewith?

Hon. GEO. P. GRAHAM:

1. The department has no knowledge of any such information.
2. Answered by No. 1.
3. Answered by No. 1.

WM. ANGUS, MERIDALE, MANITOBA.

Mr. ROCHE:

1. Has Wm. Angus, of Meridale post office, Manitoba, been appointed a commissioner under the Naturalization Act for naturalization purposes?
2. Is he in the employment of the Interior Department as fire ranger, or in any other capacity? If so, what salary does he receive?

Hon. CHARLES MURPHY:

1. Yes.
2. No.

DOUGLAS ISLAND, DALHOUSIE, NEW BRUNSWICK.

Mr. CROCKET:

1. When did the government acquire Douglas island, at Dalhousie, New Brunswick?
2. From whom was it bought, and at what price?
3. What was the object of the purchase?
4. How many acres does the island contain?

Sir WILFRID LAURIER:

1. The government acquired the eastern end of Douglas island, containing 1-28 100 acres, with right of way thereto, by expropriation on December 21, 1908.
2. When the expropriation plans were filed the island belonged to the Dalhousie Lumber Company, Limited. No compensation has up to date been paid to the company.
3. To secure the site of the lighthouse maintained on the island.
4. Approximately three acres.

TRANSCONTINENTAL RAILWAY—ENGINEER BENJAMIN BOURGEOIS.

Mr. LENNOX:

1. Has Mr. Benjamin Bourgeois, a government engineer upon the eastern division of the Transcontinental railway, been dismissed? If so, when and for what cause?
2. Has Mr. Bourgeois resigned his position of engineer? If so, when and for what cause?
3. By whom was Mr. Bourgeois recommended for employment?
4. By whom was his dismissal demanded, and for what alleged cause?

Mr. GRAHAM:

1. Mr. Bourgeois' services were dispensed with after investigation.
2. Answered by No. 1.
3. Benjamin Bourgeois was appointed engineer in charge of party on recommendation of H. D. Lumsden, chief engineer, September, 1904. He was appointed division engineer, district 'B,' on recommendation of H. D. Lumsden, June, 1906.
4. Answered by No. 1.

EXTENSION OF PROVINCIAL BOUNDARIES.

Mr. JAMESON:

1. Was notice of the resolution adopted by this House in 1908, whereby it is proposed to add to the province of Quebec a portion of the district of Ungava, and to the provinces of Manitoba and Ontario a portion of the district of Keewatin, given to the governments of Nova Scotia and New Brunswick, or either of them? If so, when was notice given?
2. Was any objection to such proposed transfer to the provinces of Quebec, Ontario, and Manitoba, raised by either of the governments of Nova Scotia and New Brunswick, or any conditions as to the terms affecting said provinces, proposed by either of said governments?
3. If so, has any action been taken thereon, or reply made thereto, and what, if any?
4. Does the government recognize that the four original provinces of confederation, namely, Ontario, Quebec, New Brunswick and Nova Scotia, have partnership interest in the territory of Keewatin or Ungava?
5. In any disposition of such territory, will recognition be given to the interests of the provinces of New Brunswick and Nova Scotia? If so, in what way; and if not, why not?

Sir WILFRID LAURIER:

1. No.
2. No.
3. No action was taken.
4. It does not appear that the four original provinces have any interest different from the interest of other provinces that have entered since confederation.
5. In the resolution of the 13th of July, 1908, the principle was laid down that in any legislation for extension of the boundaries of the provinces of Quebec, Manitoba and Ontario, nothing should be done to impair the representation of any province in this House, and the government is bound by this resolution.

SUBSIDY PAYMENTS TO SASKATCHEWAN.

Mr. LAKE:

What is the aggregate of the subsidy payments made to the provincial government of Saskatchewan from the 1st July, 1905, to the 31st December, 1909, under section 20 of the Saskatchewan Act?

Hon. W. S. FIELDING:

$2,109,375.

SITE FOR BARRACKS ON HUMBER RIVER.

Mr. MACDONELL:

1. Has the government disposed of the site on the Humber river, near Toronto, purchased some years ago by the government, upon which it was proposed to erect new barracks? If so, when, to whom, and for what consideration, and was competition invited by public advertisement or otherwise for the said sale?
2. If the said site has been sold, upon whose advice or opinion was the decision arrived at to change the location of the said barracks, and what was the reason for the said change?
3. If a change of location has been decided upon, what site has been secured, what is the acreage, the price, from whom purchased, and all other particulars of the purchase?

Mr. PUGSLEY:

1. No.
2 and 3. Answered by No. 1.

SALARY INCREASES TO POST OFFICE INSPECTORS.

Mr. ARMSTRONG:

1. Have the post office inspectors sent petitions and delegates to the Postmaster General asking for increases in salaries? If so, has the government granted their request? If not, why not?
2. Have said officials received any advance since confederation? If so, at what date was increase given, and the extent of the increase?
3. Were said officials formerly given any allowances which are not at present granted to them?
4. Has their work increased in the past ten years? If so, to what extent?
5. Do the inspectors belong to the inside service, or are they part of the parliamentary machinery, collecting facts and reporting direct to the minister?

Hon. R. LEMIEUX:

1. Applications have been received from a number of inspectors for increases in salary, and these applications have not yet received consideration.
2. The scale of remuneration was changed from the 13th August, 1903. The old scale of remuneration was as follows:

2nd class, on appointment..	$2,000
After 10 years service..	2,200
After 20 years service..	2,400
1st class, on appointment..	2,200
After 10 years service..	2,400
After 20 years service..	2,600

In 1903, the statute dividing inspectors into two classes was repealed, and the scale of remuneration was fixed as follows:

On appointment, $2,000, with an increase of $50 a year for the first six years, and $100 a year thereafter, up to a maximum of $2,600.

3. No, except that formerly they were allowed a per diem allowance to cover travelling expenses, whereas now they are paid the actual amount of expenses incurred. This change was made in February, 1893.
4. With the growth of the country this branch of the work has increased in like manner with all other branches of the postal service.
5. Post office inspectors are classified under what is known as the 'outside service.'

POST OFFICE AT WINDYGATES.

Mr. W. H. SHARPE:

Did the government receive a petition from the settlers at Windygates against the moving of the post office? If so, how many names were on said petition?

Mr. LEMIEUX:

A petition containing 34 signatures, asking that the location of the office might not be changed, was received at the department.

EXPENDITURES ON ST. LAWRENCE SHIP CHANNEL.

Mr. SINCLAIR:

1. What is the gross amount that has been expended by the government of Canada in (a) deepening, lighting and otherwise improving the St. Lawrence ship channel (b) improving in any way the harbour of Montreal; (c) improving in any way the harbour of Quebec?
2. What is the gross amount of the present loan by the government to the Commissioners of the Montreal Harbour Board?

Sir WILFRID LAURIER:

St. Lawrence Ship Canal.

1. (a) Cost of dredging to end of fiscal year 1908-9.. .. ..$7,208,543 50
Expenditure for plant, shops, surveys, &c., up to end of fiscal year 1908-9.. .. .. 3,501,449 96

$10,709,993 46

The cost of lighting the St. Lawrence Ship Channel has not been kept as a separate item, these lights forming part of the general division of lights for the province of Quebec below Montreal.

(b) $1,064,240.91.

(c) $1,691,026.46.

2. $10,870,000.

DISPOSAL OF LANDS IN NEW WESTMINSTER DISTRICT.

Mr. J. D. TAYLOR:

Are there any proposals now before the government, or any department, for the disposal of lands or other property in New Westminster district, on terms varying in any respect from those available to applicants generally, and defined by statutes or regulations which have been published in the 'Canad Gazette,' and which it is desired to have determined without opportunity for public competition? If so, what are the names of the applicants, and the properties applied for in each case?

Hon. FRANK OLIVER:

The commissioners for the Chilliwak-Sumas Drainage and Dyking district are applying for the ungranted Dominion lands surrounding Sumas lake together with the bed of the lake.

The Vancouver Power Company is applying for certain lands as a site for a dam at the port of Coquitlam lake.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a return showing all written objections to classification upon the Transcontinental Railway made since July 28, 1908, and in reference to overbreak or other over-expenditure since October 2, 1908.—Mr. Lennox.

For a return showing the total cost to Canada of the military college buildings and grounds, and the amount furnished each year by the government towards its maintenance.—Mr. Armstrong.

For a copy of all correspondence respecting the Central Park post office during the year 1909, and including particularly a copy of:—1. Representations made to the department that by changing the location of the office and establishing a post office at Collingwood East, the interest of the majority of the residents would be best served.

2. The evidence taken at the inquiry following such representations, and the official report upon such evidence.

3. Communications from residents of Central Park and others with respect to the closing of the post office there, and the answer made thereto in accordance with the facts.

4. The information upon which it was determined that the removal of the post office would be a greater convenience.

5. The largely signed petition from patrons of the Central Park post office complaining of the management, etc.; and the report of the inspector who investigated the same.—Mr. J. D. Taylor.

For a return showing the number of chartered banks that have gone into liquidation since 1888, the date of the charters of each, the date of suspension, the capital stock, assets and liabilities, respectively, at date of suspension, and the per cent of dividends paid to both holders and depositors, respectively. Also, what other banks have disappeared by amalgamation or otherwise, with similar information as above in respect to them.—Mr. Foster.

For a copy of all papers, affidavits and correspondence between the Interior Department and John A. Dunn, or any one in his behalf, and any official of the department, concerning the application for patent of the N.W. ¼ sec. 34, tp. 35, range 16, west of the 2nd M.—Mr. Roche.

For a return showing the number of persons appointed as temporary employees of the Civil Service in the several departments since the present Civil Service Act came into force, the date of the appointment of each, their names, their salaries while employed, as such temporary employees, the department in which such employee was placed, the duration of their employment, whether in one department alone or in case of transfer to another or other department, with total length of time employed, the names of those who in consequence of having passed the Civil Service examination have been employed permanently, the names of those who while temporarily employed failed to pass the required examination and are still employed in the service, the names of those who are or have been employed over the statutory six months as temporary employees, and the reasons for such continued employment in each case.—Mr. Hughes.

For a copy of all correspondence relating to all coal lands reserved for as well as those acquired by the Bow River collieries by direct application or assignment.—Mr. Northrup.

For a copy of all correspondence between the District Officer Commanding Military District Number 11 and the Department of Militia, with reference to the battery of 12-pounder B.L. guns recently sent to Esquimalt, or with reference to the proposal that No. 1 Company of the 5th regiment, C.A., should train on said guns.—Mr. Barnardo.

For a copy of all reports of surveys of any projected railway lines or routes in the province of Prince Edward Island during the years 1908 and 1909, and particularly reports of the surveys of any such line from Royal Junction, or thereabouts, to Kensington or thereabouts; also of all correspondence, recommendations, documents and papers of every kind, nature and description relating to or concerning the said projected railway lines or routes or the surveys therefor.—Mr. R. L. Borden.

For a copy of all correspondence, advertisements, tenders and other documents, in con

nection with a proposal or proposals to lease a part or the whole of the Black Foot reserve.—Mr. Magrath.

For a return showing: Since the beginning of the autumn train service of 1909 on the Intercolonial railway, at what time the train which leaves Oxford Junction every week day morning for Pictou is due to leave Oxford Junction and arrive at Pictou; the actual time at which the train departed each day from Oxford Junction; the actual time at which it arrived each day at Pictou; the causes of the delay, if any; and what efforts are being made to improve the service in respect of time.—Mr. Rhodes.

WINTER COMMUNICATION WITH PRINCE EDWARD ISLAND.

Mr. A. B. WARBURTON (Queens), moved:

For a copy of all memorials, reports, correspondence and documents not already brought down, including report of survey made during the past summer and autumn of the harbour at Cape John and Tatamagouche bay, in the counties of Pictou and Colchester, in the province of Nova Scotia, relating to the route of the winter steamers between Prince Edward Island and the mainland of Canada, and suggesting and recommending a change or changes in the said route, and an increase in the number of trips daily of such winter steamers; and also, a copy of all memorials, reports, correspondence and documents relating to the route of the summer mail steamers between Charlottetown and the mainland of Canada, and suggesting a change or changes in that route, and an increase in the number of trips daily of such summer mail steamers; and also with regard to connecting such suggested new summer route or routes with a point or points on the Intercolonial railway, and also, for a copy of all memorials, and correspondence, asking for additional and improved aids to navigation of the harbour of Charlottetown and in Tatamagouche bay and harbour.

He said: Mr. Speaker, before the Christmas vacation I had several short interviews with the Minister of Marine and Fisheries (Mr. Brodeur) in connection with this route and the steamer service. It was the desire of that hon. gentleman to be present when this motion came up, but, owing to his very regrettable illness, it will not be possible this session, I take it, for him to be present within the time when this motion must be brought forward, if it is to be dealt with at all. The importance to us in Prince Edward Island of this matter of winter communication can hardly be realized, perhaps, by those who do not labour under the disadvantages to which we are subjected through the lack of communication which sometimes exists. I spoke on this question last session, on motion to go into supply, and pointed out that the several governments that had existed since we came into confederation, Conservative and Liberal alike, have made repeated, sincere and energetic efforts to overcome the difficulties with which they have to contend in regard to winter communication. Briefly, I may say that these efforts began almost the very year—if not the very year—when we entered into confederation. The Mackenzie government put on the route a vessel called the 'Albert,' as a test. It was not possible at that early period to procure a boat built for the purpose of ice breaking, and the 'Albert' was a test pending the time when a proper boat could be procured. The 'Albert', which was not much of a success, was succeeded by the 'Northern Light,' built at Quebec, built of wood, sheathed with green-heart wood. The 'Northern Light,' while not well adapted to the work, proved, nevertheless, a very excellent experiment, because, while she was not able to do the work very well, the experience gained from her performances enabled the government, or the government's marine advisers, to design a vessel which did good work later on; and so the 'Northern Light' may be called a very successful experiment. She was followed by the 'Stanley.' This was under the Conservative government. This vessel did good work. Ten or twelve years ago the 'Minto' was put on, and both these vessels continued on the route up to last year. Both these vessels did very good work, but they were not sufficiently strong to maintain the service during certain seasons of the year and under certain weather conditions. Last year, a new ship, the 'Earl Grey' was put on. She is a much larger and more powerful vessel than the others, a vessel to which a good deal of attention had been given and in the production of which great care had been taken in order to embody in her all the best ideas of the time. She cost over half a million dollars, and there can be no question that she is a very excellent ship. She was put on the route this season for the first time. This has not been as difficult a season as some others have been. Still, notwithstanding the mild weather we have had, the 'Earl Grey' has had to contend with a good deal of very heavy ice. She is a splendid ship and ought to be able to do the work if any vessel that can be constructed at this time could do it. I crossed in her myself in the early part of last month on the way back from Prince Edward Island to Ottawa. There was not much ice in the harbour, but there was much ice off Point Prim, on Prince Edward Island, ice so heavy that, as the captain told me, it would have stopped either of the other vessels. But the 'Earl Grey' was able to make her way through it without difficulty, at the rate of four or five miles an hour. I have mentioned these vessels, not because I am going to discuss very much or at all the class of vessels we required on that route. I think the government have now given us

a vessel as good as they could well give. But, boats are like other things, they cannot perform impossibilities. We have to consider the various routes between Prince Edward Island and the mainland, and here we strike upon a rather vexed question. There are a number of proposed routes between Prince Edward and the mainland, each of which has its advocates who insist upon that particular route as the one best adapted for winter communication. I think it fair to assume that we in Prince Edward Island, to whom this matter of winter communication is a matter of very vital importance, and who are therefore compelled to pay attention to it, are possibly in a better position to form an opinion upon this matter than are those who are not forced to consider it so carefully.

Now, I do not propose to describe the various routes at length, but I may mention them.

Beginning at the western end of the island there is a route that the people of Summerside and Prince county insist on very strongly, that is between Summerside and Cape Tormentine. That route has been tried once or twice and the Summerside people say it has not been sufficiently tried, but so far I do not know that the experiment has been an unqualified success. If that route could be made a success I for one would be quite satisfied to accept it.

Further down you have the route between Cape Traverse and Cape Tormentine, that is the route of the old winter ice boats which we used sometimes to help haul over with a strap. This is also the site of the proposed tunnel; it is the narrowest place between Prince Edward Island and the mainland, the distance from shore to shore being 7½ to eight miles. If communication could be kept up there it would seem to be the natural connection between the mainland and Prince Edward Island, because it is so much narrower than the other passages. Very strong objections are, however, raised to it by many people. One is the enormous cost of the piers to be constructed there, and in addition to that you have on the New Brunswick side reefs running out 1½ or 2½ miles from the shore, which it is contended would be very dangerous. On the island side there are also flats running out a long distance. The ice between them is always on the move and the current runs about 4 miles an hour. The contention is that a ship might be carried a little out of her way by these currents and touch a reef or flat, which would be the last we would know about that ship.

Further to the east there is a route between Souris or Georgetown and Cape George in Nova Scotia. This route has strong advocates, and if it could be made permanent and could have continuous communication I do not know that I would raise objection to it. It would be at the extreme end of the island and would necessitate more railway carriage than some of the other routes, but we would look on that as a small matter if the route could be established and continuous communication maintained. On that route we have a good harbour on the Prince Edward Island side, at Souris. Although it is not very deep it is generally accessible in winter by craft of this nature, and has frequently open water. Georgetown harbour is one of the best harbours to be found anywhere, a magnificent harbour, and no fault could be found with it. But I do not know what could be done at Cape George because, so far as I know, there is no harbour there, or a very inferior one, and it would require a somewhat extensive breakwater to provide an artificial harbour. I am informed by those who say they know that there is always open water there at the change of the tides, and I presume they are correct. I shall not express an opinion of that route because I have not been able to get as much information about it as I have about some of the others.

Then we have the two routes to which I wish especially to call attention. We have the route which has been used for the last third of a century between Georgetown in Prince Edward Island, and Pictou in Nova Scotia. Georgetown, as I have already said, is an exceedingly good port, we have little or no fault to find with it. It has deep water and is very accessible. But when we come to Pictou we have a different story to tell. In order to understand the objection to Pictou I wish to call attention to the configuration of the Straits of Northumberland. The eastern end of the strait is open to the northeast winds, which blow right into the eastern end of the straits and fill them with ice. There is a space of 250 miles through which that northeast wind blows directly from the Straits of Belle Isle into Pictou harbour, and when that wind is blowing, and it is a prevailing one, it fills the entrance to Pictou harbour full up, it packs it from side to side, and the ice grounds and is packed from top to bottom. It makes a solid and impervious mass through which no ship ever built or ever to be built can force a passage. That state of affairs has continued for a greater or less length of time during different seasons. The longest time I remember was five years ago when one of the winter steamers was shut inside of Pictou harbour for 59 days and the other was shut out of Pictou harbour for 59 days. But while that was the longest it was not the only instance of vessels being unable to make Pictou harbour. I happened to be over there myself in that

particular season, and the ice was so jammed and grounded on the bottom that even the tides were affected by it. No ship that could be built can go through ice if it cannot dispose of the ice as it breaks it. You can put a ship into heavy ice if it is floating and she can break it if there is sea room to let the broken floes of ice be disposed of, or in some sorts of ice if the boat can pass the ice under her, although that, of course, requires plenty of depth. You cannot do that when the ice is jammed between two coasts and grounded on the bottom, and that is the case in Pictou.

I wish to call attention to one or two extracts which I gave last year upon this subject, but which I think are of sufficient importance to be repeated. Owing to the difficulties we had five years ago, surveys and reports were ordered to be made by the Dominion government. Among those who took this matter up under the instructions of the government was Mr. Shewan, the resident engineer of the Department of Public Works in St. John, New Brunswick, who, in his report speaks as follows:

Up to this time the winter steamer has been crossing from Pictou to Georgetown, a distance of about 42 miles, with more or less irregularity occasioned by the ice.

He speaks of more or less irregularity and refers to the ice being driven into the eastern end of the straits by the northeast wind. I am anxious to emphasize this fact that the ice which causes our troubles, with which we have to contend, which the government steamers have to fight against and which the government have to deal with in trying to keep up continuous communication with the mainland, is not ice produced there, that ice does not originate in the straits or Pictou harbour, but to the north up towards Belle Isle and in the sea between Belle Isle and Pictou. It is brought down by the wind and is driven in as I say.

When the ice is packed as in this manner, it is almost impossible for a steamer to force her way through, as will be seen from the following from Admiral Makaroff's description of the voyage of the 'Ermack,' who found it easier to break the ice in the Polar seas with that vessel than in the Baltic, because in the Arctic seas the ice is broken, which in the Baltic is extended from land to land.

That is exactly a parallel case with what happened at the harbour of Pictou. As a matter of fact, Pictou with a northeast wind is simply an ice pocket or rather an ice bottle, in which there is a very tight cork, and I doubt very much if even a corkscrew could go through that cork. Admiral Makaroff, in describing the voyage of the 'Ermack' says:

Floes of ice might be several miles or several fathoms in length. Between the ice floes are the lanes, which are very irregular. Sometimes the ice-floes are pressed against each other and sometimes not. When the ice is not pressed, the progress of the ship is very easy. Floes of ice even nine miles long move away and give passage to the ship. But the fact is that even ice 14 feet thick cracks when charged by the ship, provided there is room to remove the broken parts.

There is where the whole question comes in. You must have room for the removal of the broken parts. A report was also made by Mr. Gobeil, formely deputy minister of Public Works. In the course of his report he says:

From an inspection of the charts it appears that the line from Pictou to Georgetown is where, probably, the ice masses in the greater quantity, and from the direction of the currents, is likely to remain a longer time to prevent the passage of the ferry steamer.

He adds, and this covers a great part of the opposition that may be offered to the change of route:

Of course there is a disposition always to accept whatever is as immutable, and in changing the establishment of anything that has become, worthily or unworthily, by lapse of time an institution, local prejudices will be met.

This will prove the great difficulty now, as, not unnaturally, there will always be opposition to a change, by the port or ports to and from which the service is now carried. This should not affect the question.

I think that the remark of Mr. Gobeil will be accepted as correct, that a matter of that kind should not affect the situation. If the service cannot successfully and continuously be performed on the route where it has been during the last 34 or 35 years from Georgetown, surely it is time to make a change and see if we cannot find a route somewhere else. In regard to Pictou I will also read from a report made by Mr. F. W. Hyndman, who was formerly an employee of the British government and who was a first-class hydrographer. He says:

In order that my remarks may be intelligently understood, it is necessary that you have two charts before you, one of the St. Lawrence and another of Prince Edward Island and the Straits of Northumberland. Both these charts are published by the Hydrographic Office, London, and can be had for a small sum at some of our stores in this city.

If you will glance at the chart of the Gulf of St. Lawrence and get your eye on Pictou, you will see at once that it is open to the northeasterly winds right up to the Straits of Belle Isle, a distance of some 250 miles. Those winds largely prevail in the winter and the consequence is that Pictou is merely a pocket for the drift and rafting ice of the gulf. Only two years ago——

That is five years ago.

—this was shown by both winter steamers on this route being tied up for fifty-nine consecutive days, leaving no means of transporting freight, and forcing passengers and mails to be carried across the straits at Cape Traverse in open boats, a distance of 8 to 10 miles, with much risk and great discomfort on all occasions, and no improvement on the means in use a full century ago.

I referred to one of the stoppages which have taken place there. In the winter of 1898 I was stuck at Pictou ten days and was kept there by a northeast wind which blocked the place with ice. Many other stoppages have taken place. I looked up the other day in the reports of the department to see the record of a few more of these stoppages and I found that in 1898:

The steamer entered upon the winter mail service on the 25th December. It was not considered prudent to continue the 'Stanley' on the Charlottetown and Pictou route; the steamer therefore kept up communication between Georgetown and Pictou until the 22nd of January, 1898, when the ship was hemmed in by heavy packed ice off Pictou island; in trying to get through between Pictou island and the ice jam the ship ran aground on the reef. After emptying the after-ballast tank the steamer was backed off without damage on the 23rd of January. The ice loosening up, the steamer returned to Georgetown, finding it impossible to get into Pictou. On the 24th January the steamer left for Pictou again, but could not get in. The passengers and mails were landed by ice boats. The mails were transferred to the Capes route on the 26th January. The steamer was jammed in the ice at Pictou from the 27th of January to the 2nd of February.

Again in 1901:

The winter service between Charlottetown and Pictou began on January 7, the 'Stanley' running in conjunction with the steamer 'Minto,' each boat making bi-weekly trips. On February 5, the 'Stanley' got caught in the ice off Pictou harbour and remained in the ice until February 20, and did not arrive at Georgetown until February 21.

Again, the same year:

Owing to the heavy ice in the harbour of Pictou between February 5 and 21, and also on account of the shoal water on the bar the steamer was unable to move out of Pictou harbour until February 19. This matter was made more serious by the fact that the steamer 'Stanley' was at the same time ice-bound six miles out of Pictou harbour.

Again, in 1902:

The service between the two latter places was begun on January 10. The service was fairly regular until February 12, when the 'Minto' was caught in heavy ice off the end of Pictou island and remained fast until February 15. She was then able to get into Georgetown.

In 1905:

In leaving Georgetown on January 25, 1905, the ice was found to be very heavy and the 'Stanley' returned to Georgetown, and although repeated attempts were made to force the steamer through the ice, it was found impossible to cross to Pictou until March 3, when the 'Stanley' forced her way to the Pictou ice barrier, and the passengers and mails were transferred over the barrier to the steamer 'Minto' two miles way. The 'Stanley' then returned to Georgetown. It was found impossible to make another crossing until March 16, when the ice barrier, off Pictou, was reached and the cargo transferred to the 'Minto.' On March 21, the 'Stanley' reached Pictou harbour.

I know about that because I was there.

On February 25, 1907, on a trip from Georgetown the 'Minto' was caught by a heavy ice-jam, in a strong gale and thick snow storm, and did not reach Pictou until March 2, and from that date until March 19 it was found impossible to reach Georgetown again, although several attempts were made. The return trip to Pictou was accomplished only on March 26.

Last year was a very good year, but even last year passengers left Georgetown on Monday and got back to Georgetown on the following Saturday. Several other cases occurred in which passengers were prevented for several days from getting across. I have gone into some detail with reference to this question because I wished to emphasize the fact, which I mentioned in my opening remarks, that our difficulties are due not to ice that is made in the straits but to ice that is driven down and fills up the harbour and straits. It is practically polar ice that is driven in there. That ice does not go through the straits. It is held up, to some extent, by Pictou island, and to some extent, by Cape Bear. Some of it passes these two points and is held up at Point Prim which is a long narrow point running out three or four miles from the Prince Edward Island shore. This polar ice does not get beyond that. In Charlottetown we have often complained, and complained without reason, of the steamer not getting backwards and forwards. We knew the condition of the ice in Charlottetown harbour and between Charlottetown and the mainland to be all right, but we could not see over Point Prim to discover what was there. We invariably found that the difficulty lay east of Point Prim where the ice was massed. You cannot judge of the conditions upon the state of the weather there. If you know the direction of the wind you may form an opinion. If it is northeast you may make up your mind that there is going to be trouble. After giving the Georgetown-Pictou route a trial for over a third of a century, and having proved successfully and absolutely that it is impossible to keep up winter communication by that route I do say that it is fair, it is right and that it is reasonable to

ask that some other route should be tried to find whether there is a possibility of keeping up that communication.

We believe, after years of experience, that we have the most simple and direct route between Prince Edward Island and the mainland. Efforts have been made to show that Charlottetown harbour is blocked up in the same manner as Pictou during the winter months, but that is absolutely incorrect, and the fact is that the channel route into Charlottetown harbour was never known to be blocked with ice. There are, of course, flats on both sides of Charlottetown harbour and points running out upon which the ice grounds and stays, but we never purposed running steamers over these flats or over these points. Our purpose is to navigate the deep and splendid channel between these points. I may say that the question of the ice in Charlottetown harbour has been investigated time and time again. Even since I brought the matter up in the House last session there are those who have insisted that the channel leading into Charlottetown is too narrow to make in winter. I have here a copy of the admiralty chart and it shows that where the main channel debouches from the deep water of Northumberland straits towards Charlottetown some three or four miles out the entrance to the channel between the eighteen-foot marks—on these admiralty charts—I believe they give the low water so that the figures I shall read are taken between the eighteen-foot marks—this shows that the entrance to the harbour on the outside is three and one quarter miles in width.

At six o'clock, the House took recess.

After Recess.

House resumed at eight o'clock.

Mr. WARBURTON. When the House rose at six o'clock I was making some reference to the harbour conditions of Charlottetown during the winter season, and I proposed to make some references to the admiralty chart of the harbour, a portion of which, covering the entrance to the harbour, I have had copied. I may say that the soundings of which I propose to give the figures, were taken at the lowest spring tide, the lowest water to be found, according to the custom of the admiralty, so that the soundings will be accurate and safe, and a vessel cannot be misled in accepting them. At the extreme outer end of the channel extending from the harbour, where it breaks away from the deeper water of the straits, the measurement between the 18-foot lines—the two lines on opposite sides of the channel, where the minimum depth is 18 feet—the width across the channel is three and one-quarter miles. We are sometimes told that the entrance to Charlottetown harbour is so narrow that a vessel cannot make it in the winter time, or, some people say, at any other time, without special aids to navigation. Across the channel at that point the depth of water varies from the minimum of 18 feet on the one side to 21 feet, 34 feet, 34 feet again, 35 feet, 31 feet, and back to 18 feet on the other side. About two miles farther in other measurements were taken. There the channel passes between the island of St. Peter and Governor's island, which lie on either side of the entrance, but at some distance from it. From these islands shoal water runs out for a considerable distance; but there the width of the channel between the 18 feet lines is one and three-quarter miles; and any sailor who cannot make his way through a channel of that width ought not to be let off dry land. At that point the depth varies from 18 feet on one side to 26 feet, 34 feet, 32 feet, 28 feet, and back to 18 feet on the other side. Towards one side of the channel at that point there is the Fitzroy rock about which some trouble has been made. Some have said that it is impossible to navigate the channel with that rock there. It is not a very large rock, and I find that the lowest water over it is 20 feet at low spring tide, and the depth varies from that to 21 feet, 27 feet, 28 feet, 25 feet, 22 feet which shows that vessels could sail over it with perfect safety. At about three miles from that point the channel suddenly narrows off from the reef that runs about three miles from St. Peter's island and another from the mainland of Prince Edward Island, but even there it is three-quarters of a mile wide, and the depth of water is 72 feet. At a distance of another mile and a half the channel becomes one-third of a mile wide and there the depth of water is 57 or 58 feet. That width continues right to the mouth of the harbour between the Blockhouse light and the land on the other side. There, between the two points forming the entrance, which is the narrowest part, the channel is one-third of a mile wide, and between these two points there is deep water almost up to the shore, so that it would be almost impossible for any man to get out of his course there. At that point the water is 73 feet deep. From there the channel continues for a couple of miles to the basin of Charlottetown harbour on a straight line according to the range lights; and in it the depth of water varies from 73 feet to 77 feet. About half way to the wharf there is a short bend to the right, and then a straight line to the wharf. From the point where this change is made the channel continues of a uniform width of about one-third of a mile. Inside there is a large harbour of deep-water varying from 61 feet to 44 feet, and the wharf will

accommodate a vessel drawing 26 feet of water, while 100 yards from the wharf there is a depth of 58 feet. It is said that this channel gets filled with ice. To begin with, there is no wind that can drive ice into that harbour. We who have spent our lives at Charlottetown know that; but people who desire to deflect the vessel from her present course there try to make out that ice drives into the channel. The mere fact that the channel has a depth of 70 feet and has two inward and two outward tides every day, with a tremendous current which would prevent the ice getting very thick, is sufficient to convince any man that that channel could not get blocked with ice. At the narrow entrance at the Blockhouse light there is no difficulty, because the only ice to be encountered there is harbour ice, which is never more than from 18 inches to 2 feet thick, and the 'Earl Grey' will go through that at the rate of from six to eight miles an hour. The 'Minto' or the 'Stanley' going through such ice was a sight worth seeing, but this much more powerful ship goes through it at much greater speed.

We have taken the precaution for many years to have this thing tested, because I do not pretend to come before this House without being able to put the facts before you, which we have proved to be true. The board of trade in Charlottetown took measures to test this for a number of years, and they employed Captain John Gillies, an old experienced sea captain who has been residing in Charlottetown for a great many years, to make observations of the harbour ice, and of the channel ice, particularly of the channel ice leading into the harbour. I will read from a part of his report:

I have been asked by Mr. L. B. Miller, secretary of the board of trade here, to give a condensed report of the conditions of the ice in the Hillsboro' bay and Charlottetown harbour during the three years (winters) 1904-5-6 that I was engaged to make actual surveys of the same.

In each of the aforementioned years the surveys were made during the month of March, when it was considered the most ice would be found, and the hardest task to make the harbour.

I would call attention to the fact that that year was the year in which steamers could not get in and out of Pictou for 59 days.

From the reports submitted at various times the ice varied in thickness from 28 inches to 18, and the average ice in 'the ship's course' was 24 inches, covering from 7 to 9 fathoms of water.

While it is true the 'Minto' tried to make Charlottetown in March 1905, and got stuck off St. Peter's Island bar in a reported thickness of 15 feet of ice, it is equally true that I was almost immediately sent to make a survey and found, by actual measurement, there was only 5 feet where she stuck. I can account for the discrepancy in one way only: In my case the ice was measured, and in the other case it must have been judged from the bridge of the ship. Only one week after my survey was made and reported the 'Minto' made another attempt to reach Charlottetown and was successful.

In making the aforesaid survey, I found where the 'Minto' had stuck, there being 5 feet of ice and 9 fathoms of water. I then measured 40 yards from this spot toward St. Peter's island and I found 2 feet of ice with 7 fathoms of water, and 60 yards nearer the island I got the same thickness of ice with 5 fathoms of water, while at the block-house (entrance to the harbour) there was but 18 inches of ice.

This is a point I wish to emphasize, because that is the point made by those who are opposed to this route:

As the ice does not raft in this bay to any appreciable extent owing to the board ice and the prevailing northeast winds, it is my belief that with better aids to navigation there should be but little difficulty in making this a winter port, there being plenty of sea-room and water, and ships will have to centend with no running ice.

Again last year, although it was a mild winter, we had difficulty getting into Pictou harbour. There was no ice-breaker. The 'Earl Grey' was not ready, and this work was done by the old vessel. In some cases last year passengers got on board at Georgetown on Monday and were out all the week trying to get to Pictou and back to Georgetown on Saturday, without having reached their destination. The last time that occurred, passengers were delayed from three to five days, though the winter was a favourable one; there was not one day last winter in which those steamers could not have got in and out of Charlottetown harbour. Now, last year,—and I suppose it was done at my request—and in view of the fact that I had brought this matter up in the House, observations were ordered to be made, and the board of trade sent two master mariners to investigate, Captain John Gillies, whose earlier report I have already read, and Captain C. E. Myers, who has been living in Charlottetown for the last 15 or 20 years. On March 16 they made a report to the board of trade, of which the following is an extract:

Having been commissioned by you in your capacity as president of the board of trade, to secure data of the conditions of the ice between this harbour and Point Prim, we beg to report as follows:—

We began our survey of the ice in the harbour this morning, and found open water from Murphy's point (red buoy) to Trout point at harbour's mouth. At the latter place, in range with Brighton light ranges (ship's course), we found open water 12 fathoms deep. From that point we proceeded due south 100 yards with only 4 inches of

ice continuing on same course another 100 yards we found 6 inches of ice with 12 fathoms of water. We kept on the same course for 150 yards and found 8 inches of ice alongside a vein of open water in channel. We then made a circuit around the open water a disance of about 150 yards, estimated—the ice being too dangerous to carry us for actual measurement—and came in line with the range lights and again found 6 inches of ice with 11 fathoms of water. Proceeding 200 yards on the ranges (about south) we got 4 inches of ice and 10 fathoms of water. Continuing on ship's course seaward 200 yards we measured 5 inches of ice and sounded 11 fathoms of water. On the same course and distance we found 4 inches of ice and unsafe to take soundings. Ice from this point unsafe to continue in channel to St. Peter's Island bar, consequently we left the centre of the channel and proceeded to the east edge of same until we came to 6 fathoms of water and found 4 inches of ice. We continued on south by west in order to get into deeper water for a distance of 400 yards. Here the ice was parted in line with Lowther's point, south shore, and Pownal Head.

Those are two points 8 or 10 miles outside the harbour.

Beyond this it was unsafe to proceed any further for the ice was only 2 inches thick.

We found open water from the black buoy extending seaward past St. Peter's Island bar, Point Prim, and as far seaward as we could see with glasses.

From our survey we are in a position to state there is no ice from Point Prim to Charlottetown to hinder a steamer making this port. In fact, following the ship's course from the three tides out the ice mentioned in the foregoing report was of such a nature as not to present a serious obstacle to many of our summer boats.

Now, Mr. Speaker, it does appear to me that these facts ought to satisfy any reasonable person that Charlottetown harbour is quite accessible during the winter season. I wish also to say something about the harbour across the straits at Tatamagouche, or Brulé. But first let me speak of the work that has been done this season. The 'Earl Grey' and the 'Minto' were put upon the route between Charlottetown and Pictou. The 'Minto' made the trip and changed to Georgetown. The captain of the 'Minto' could not be induced to get away from Charlottetown, but the captain of the 'Earl Grey' kept on the route—I crossed over with him myself. The ship passed backwards and forwards from Pictou, making the trip one way each day; she used to make the trip in three or four hours, and the last day in five hours. There was no difficulty whatever. On one occasion, on the 17th of January the 'Earl Grey' left Charlottetown intending to return. The harbour ice presented no difficulties, but when she got round Point Prim she struck, some miles down the straits, the Polar ice which had filled up the eastern end of the straits. The Polar ice does not drift past Point Prim. Point Prim is the farthest western point where that ice reaches. So once you are west of Point Prim you are sure to have water and ice conditions through which the vessel can go without much difficulty. But this time when the vessel was going to Pictou she got into this heavy ice and was stopped three times. She kept on to Pictou, and the captain was afraid to risk the new vessel without instructions, and decided to go to Georgetown next day. But he made that trip to Pictou notwithstanding the fact that he met this heavy ice east of Point Prim, and where he had to stop the boat and butt the ice three times. He had to go round the eastern entrance to Pictou, which lengthened the route to over 60 miles, and he did it in five hours. Captain Brown, the captain of the vessel, was empowered to make the effort again. I thought this matter of sufficient importance to Prince Edward Island for me to get such information with regard to it as I could, so I telegraphed and wrote to the secretary of the Board of Trade and to this same Captain Myers, who wrote the report a few years ago, asking particulars of the cause of the 'Earl Grey' being transferred to Pictou, when, I understood, the entrance to Charlottetown harbour, the harbour itself and the straits outside the harbour were in the best condition for the steamer to get through. The report I had here, indirectly, as I mentioned, was that the vessel had met with heavy ice. However, I thought it better to be definite. So, I wrote to Mr. Miller, the secretary of the Board of Trade. I now quote his reply so far as it relates to this matter:

I have taken considerable pains to ascertain the facts in connection with the sudden change in going to Georgetown and find the captain acted solely on his own judgment. When he left Charlottetown he intended returning, but when he got round Point Prim and down towards Wood Islands he met such heavy ice that even the 'Earl Grey' had to make three smashes to penetrate it. As it was a very cold day and the ice was making fast, the captain concluded it would be best to go to Georgetown. Under the circumstances, I do not think any person could blame him.

I agree with that.

To-day he is back again in Charlottetown, and may be depended upon to give this port a fair trial.

He came back to Charlottetown on the 25th having been away a week. And, from that time until now, he has been making his regular trip. And the 'Minto' has joined in the service and both are making the trip. And they will be able to make the trip so long as there is no continuance of northeast winds. We are liable to have an

east wind, which will fill up the eastern end of the straits and Pictou harbour, so that the vessels will again be unable to make their course. Captain Myers, the man who made the report and survey a few years ago, gives me as the reason the following:

The boat made the time to Pictou (from Charlottetown) in five hours, very good time for mid-winter, but she had to go round Pictou island at least fifteen miles further, the reason was that the ice was packed in Carribou channel, and between the Indian Rocks and Carribou the ice stopped the boat three times and was very much rafted together. She left here (Charlottetown) and never stopped until after she rounded Point Prim. The trouble all lies between Carribou channel on account of the scarcity of water and the ice around Indian Rocks, that lies straight across the straits. The boat could cross from here to Cape John any day since she had to leave here.

It seems to me that the reports of men who know what they are talking about, thoroughly sound and accomplished men, ought to carry weight and convince every reasonable man as to how matters stand in this regard. Before leaving Charlottetown harbour again, I wish to point out that, in order to make Charlottetown harbour, a perfect winter port, some effective aids of navigation must be provided. When the ice comes in the autumn, the buoys are taken up, so, when the ships come into the harbour, they have to depend entirely upon the lights. Again, in winter, especially when there is ice, there is at times a haze rising from the water, and this haze prevents the men on board the steamers from seeing the lights which are four or five miles away. What is needed in order to make the harbour accessible in any weather is a lighthouse on St. Peter's island bar outside of Charlottetown. This bar runs out from St. Peter's island, and is a sandstone bar, and at low tide there is a depth of five or six feet of water on it. There should be a light there and also a steam whistle. Once the vessel picked up the whistle or the light it would have no difficulty in getting into Charlottetown, because these aids to navigation will overcome the trouble arising from the haze. Of course, there is no difficulty at all so long as the weather is fair. These important aids to navigation are not required solely in the interests of the winter service; they have been looked for by shipowners and others for some time. I have here a copy of a memorial presented to the Charlottetown Board of Trade on this point. It is as follows:

Charlottetown, Prince Edward Island,
February 9, 1909.

To the President and Council,
Charlottetown Board of Trade,

Gentlemen,—The undersigned master mariners and owners of sailing vessels sailing to and from the port of Charlottetown respectfully request your board to use its influence in having a lighthouse with a steam whistle attached—erected on the end of the bar extending from the east end of St. Peter's island—outside Charlottetown.

Now that very large steamers sometimes visit our port, this light has become a necessity, and if built with a steam whistle attached, vessels could make the harbour without difficulty, whereas at present, especially after the buoys are lifted, Charlottetown is an extremely difficult place to make, owing to this long bar.

Charlottetown has one of the finest harbours in the lower provinces, and is a superior and safe port for shelter. With the requested aid to navigation installed—lighthouse and steam whistle—it would not only facilitate ordinary trade, but would be of inestimable benefit to the shipping interests in stormy weather.

This is signed by a number of vessel owners and agents of steamship lines. I think this is sufficient with regard to Charlottetown harbour. The most likely harbour on the mainland coast would be situated in Tatamagouche bay. I cannot say whether it would be best to place it inside Cape John on Tatamagouche bay or the peninsula sometimes called West Brulé point; or it might be on the Tatamagouche side. My opinion is that in one of these sections you will find plenty of water on which to make a pier. After last session, being very much interested in this matter, I went over with some others to look at the bay. We sounded off Peninsular point at half tide and found 27 feet of water. Also we found deep water on the Cape John side and on the other side. When we spoke of this matter last year, the Minister of Marine and Fisheries (Mr. Brodeur) said that he would take measures to have a survey made. He carried out his promise, and men have been there surveying the county to ascertain where the pier could best be built. To carry out the idea would require a pier and a short spur of railway. The Oxford branch of the Intercolonial is within half a mile of the Tatamagouche side and within three miles of the Cape John side. The pier would be, perhaps, 900 feet long. I do not think it would be more; 900 feet is what I estimated roughly. Again, if the line of railway were built through to Truro—and it has been mooted for some time and it will certainly be built—it would afford the most direct line, at a distance of from 30 to 32 miles, for a connection with the main line at Truro and with the Dominion Atlantic railway, giving the shortest route by 100 miles or more between Prince Edward Island and Boston and other eastern ports of the United States. If the government were to undertake the building of that line, it would seem the businesslike thing to do. But there is strong reason to believe that, if the government do not want to build it, the Dominion

Atlantic would be ready to do so. I believe that the Nova Scotia government would be ready to give a bonus of $5,000 a mile, and I am under the impression that the Dominion government would pay $3,200 a mile. There would be no difficulty in building the road, and there can be no question that, when running, it would increase the Dominion Atlantic receipts very much. The only question is whether it would not be wiser, as it is close to the Intercolonial and will connect at Truro, for the government to build a branch if it is to be built. However, that is a matter for them to decide, on which I do not propose to offer an opinion. Then at the mouth of Tatamagouche bay, almost exactly in the centre of a line crossing the mouth, is Amlet island, on which there is a lighthouse now. It is a small island, not much larger than these buildings. That lighthouse ought to be equipped with a steam whistle, and that I think would be all the additional aid required on that side. The more inquiry there is made about the Tatamagouche bay site, the more satisfied people must become that it is an ideal winter port. No wind that blows can block it; it is near the centre of the strait where the tide meets so that there is little fluctuation and the current is only about half a mile an hour; it is protected on the east by Pictou island, and by Cape Bear on the Prince Edward shore. On the north it is protected by Prince Edward Island itself. The western ice never gets up to the middle of the straits, it blocks at the western end. The western end of Prince Edward Island looks like part of the mainland; in fact, when Jacques Cartier discovered the island he sailed around there and not finding a harbour sailed back, he did not see where the entrance to the straits was, and did not know he had discovered an island. Then the western ice is never as heavy as the ice from the east that causes the difficulty at other places. Last year at the board of trade of the maritime provinces this matter was taken up, and after thorough discussion the following resolution was passed:

Whereas, the terms of union made and entered into between Canada and the province of Prince Edward Island in the year 1873, provided for continuous steam communication winter and summer, between the said province and the mainland.

And whereas, the routes hitherto in use by the winter steamers have failed to fulfil that condition—resulting in serious loss and inconvenience to the people of the province, and considerable loss to the Dominion by way of compensation for said non-fulfilment of the terms of union.

This board of trade of the maritime provinces desires to express its opinion that in justice to the province, as well as to the whole Dominion, an attempt should now be made by the new winter steamer 'Earl Grey' to solve the question of continuous winter steam communication, and recommend to that end that a complete survey of the approaches and possible pier sites in the Bay of Tatamagouche be made by the Dominion government without delay; and that if found feasible and practicable that route should be adopted hereafter, being considerably shorter in distance, and very much less liable to be packed with gulf ice than Pictou harbour, as found by actual and long experience of over thirty-six years.

That survey has been made and for that report among other papers, I am moving.

The officials of the Department of Marine and Fisheries have taken considerable trouble in this matter; they sent their representative down to make a thorough and accurate survey of this section. His instructions were to survey only inside of Cape John, but I suggested to the department that while they were about it they should survey all around and I believe that was done.

In speaking of the summer route I shall not refer to the steamship service at the western end, between Summerside and Point du Chêne. They provided an excellent service and I do not know that any one has found fault with it. The Steam Navigation Company of Prince Edward Island have two fine steamers running between Charlottetown and Pictou and Summerside and Point du Chêne. But like many people who have been for thirty or forty or fifty years in one groove, it is hard to get them out of that groove. Forty-five or fifty years ago the summer steamer was run between Charlottetown and Brulé in Tatamagouche bay, but when the railway was built to Pictou she transferred from Brulé to Pictou to make connection with the railway which of course was the most sensible thing to do at that time. Had the railway been built to Brulé at that time, they would not have left Brulé, because it is more convenient. The Brulé route would shorten the distance materially. As we are now situated in summer it takes three days to get to Halifax and do a day's business and return, unless you leave Halifax at seven o'clock in the morning which is too early to do any business, you cannot get away until the next day, so that it takes three days no matter how short the business may be. Taking the other route it would be practicable to make two round trips a day between Charlottetown and Brulé. The distance is twenty-five miles while the distance to Pictou is fifty-four miles, and the distance on land is also somewhat shortened. By the present route from Charlottetown to Pictou and from Pictou to Halifax we have to travel 170 miles. Crossing over to Tatamagouche and going by Brulé, you cut sixty miles off that distance, making the trip 110 miles. It will at once be seen what a handicap this distance is. The service is not run to

accommodate our people at all, they have to stop at Pictou and other places and we do not think that this delay is right, fair or necessary. If the route I suggest is adopted for the summer steamers there would be no difficulty, with proper connections, in doing business in Halifax, which ought to be our principal winter port, within a reasonable time. I brought this matter to the attention of the Department of Trade and Commerce and also of this House last session, and pointed these things out to them. They brought the matter to the attention of the Steam Navigation Company. I pointed out that the reason there was so little trade and passenger communication with Halifax was that the means of communication were so poor that the transportation facilities were so bad and slow that we simply went elsewhere, and I thought it was in the interests of our friends in Halifax and along that line to back us up in getting an improvement made. I put down the smallness of the traffic then at Halifax to that fact of the deficient accommodation, but when the department applied to the Steam Navigation Company the secretary wrote and said it would not do at all as only 3 per cent of their passenger traffic was to Halifax. In other words they gave the reason why they did not do business as a reason why they should not attempt to do business. No business man who is alive and looking after his own interests would make that as an excuse; he might know that the reason he did very little business was that the facilities were not afforded. Give the facilities and the business will be done. That could almost be called a business maxim, improve the transportation and you will improve the trade. The Steam Navigation Company have splendid ships and do good work on their line, but you cannot get them out of their groove. They have a contract to carry the mails and carry them well, they treat you well on board and it is hard to say anything against them, but I am talking business.

They say there is no reason why they should make two trips a day backward and forward, and they say it is not required all the time. I think it is not required all the time, but it is required part of the time. They say that they have to take in freight and that it is impossible for them to make two trips a day each way. To a certain extent I admit that. There are certain times of the year when they are handling a great quantity of freight and therefore what they say at that time will be perfectly true. At that time we do not want them to make two trips a day. There is no passenger traffic in the spring and fall when the steamers are leaving Charlottetown and Summerside loaded down with freight, but, in the summer months, from June until the latter part of September, they have very little freight, and they are carrying a very large and rapidly increasing number of passengers. The passenger traffic on these boats during the summer months is such that the boats are absolutely over-crowded. The crowd is so great that it is almost impossible to get a seat. The saloons and every place where people can find standing room are crowded, but that does not last the whole season. We do not ask them to make two round trips in the spring and fall when the press of freight traffic is on, but all we ask them to do is to make two trips a day when the big passenger and tourist traffic is on. Not only has the passenger and tourist traffic increased rapidly, but it is bound to go on increasing. Prince Edward Island is becoming rapidly recognized as one of the most desirable summer resorts during the mid-summer months, the number of tourists last year was greater than ever before, and I expect that the number during the present year will be greater than that of last year. So that, as far as that contention goes, I think there is nothing in it. If, when tenders are next called for the carrying of the mails, and you give the companies the alternative of running between Brulé and Charlottetown and between Pictou and Charlottetown, the contention is set up that the companies find it impossible to give a good service between Brulé and Charlottetown, I will undertake to say that I will find a company to do it.

I understood from the minister before Christmas that it was the intention to send an inspector to Tatamagouche bay to inspect the ice conditions there during the present winter. I understand that a man is down there and I hope in the not distant future to have his report. I have gone into this matter somewhat exhaustively and at greater length than I had intended to, but I thought when I was about it that I would like to make a clear statement of the conditions as far as I was able to do it. I wish to refer to a statement I made last year about which I was hauled over the coals at a local election in Prince Edward Island and also in the press. I am not looking for the pound of flesh; I am not one of those who believe in the pound of flesh theory. It has been the custom for Prince Edward Islanders to look for the pound of flesh, or rather, for members who represented the people of Prince Edward Island, or papers who pretended to represent them, to insist upon their pound of flesh. It was not the true voice of Prince Edward Island and I do not propose to speak in that way. I think it is a poor way of going about this business. What I want to do is to take a fair and reasonable view of this matter. I believe that

anything that tends to the improvement of transportation between different ports of the Dominion tends to build up the Dominion, and I like to place anything in the shape of a public work on the principle of the general good of the country, not upon the principle of the pound of flesh, not upon any hard and fast, cut and dried resolution, but on the ground that it is going to be for the general good of Canada. Improvements in transportation between Prince Edward Island and the mainland, while almost vital to us, are of very great importance to the people of the mainland. There is no part of Canada in which the merchants and manufacturers like better to sell their wares than in Prince Edward Island. Prince Edward Islanders have the reputation of being the best payers there are; they are the largest buyers per head and the farmers, taking them man for man, are the best off amongst the farming population of Canada. There are no wealthy men, there are no poor men, but they all buy and use manufactured goods. An enormous quantity of manufactured goods is sold and paid for in Prince Edward Island considering the population of the island. It is upon that ground and upon the ground of union and consolidation that I wish to place this matter before the House. Mr. Speaker, I apologize for taking up so much of your time, but I now close by moving the resolution which stands in my name.

Mr. E. M. MACDONALD (Pictou). Mr. Speaker, I have not had the pleasure of listening to the long and interesting statement of the case presented by my hon. friend from Queens, Prince Edward Island (Mr. Warburton). Those who are interested in the advocacy of the cause which he presents cannot say that my hon. friend has not brought to bear upon his proposition a great deal of industry, a great deal of care and that he has not presented it with some elaboration. I do not propose to follow him through the various phases of the subject as he has discussed it, and there are one or two points only to which I would like to refer. My hon. friend has spoken of the fact that the boats of the Prince Edward Island Navigation Company do not give that service to the people of the island which is desired or which he thinks is in their best interests. I have taken occasion in a previous discussion of this question, to point out that the solution of the inconvenience which my hon. friend complains of would be arrived if by these boats, instead of running from Charlottetown to the mainland in the morning and returning at night, would start from the mainland in the morning and return there at night. The result would be, in so far as connection with Nova Scotia is concerned, that not only would the outside world be able to get on this tight little island very much more expeditiously than they now do, but the people there could get away from it and get back whenever they had business to do very much more satisfactorily than they can under the present arrangement. I am surprised that my hon. friend should once more undertake to entertain the House about this imaginary ice bar that forms in front of the mouth of the Pictou harbour. I was born in the little town of Pictou and have lived there some forty years. Only once in all the years during which communication has been maintained from that place with Prince Edward Island has an ice barrier existed there at the time of winter navigation. Since that accidental circumstance which occurreed some years ago hon. gentlemen in discussing this question have talked about as if it were a permanent and continuous obstruction that came as sure as the winter came. Any hon. gentleman who wants to make an argument for better facilities for Prince Edward Island, whether by increased facilities or a change of route, and who rests his argument upon the basis which has no existence in fact and which is an accidental circumstance which should not be used as the basis of any argument for a change in the conditions of affairs. The unfortunate thing for my hon. friend's proposition is that other hon. gentlemen from Prince Edward Island do not agree with him. I have not heard the remarks of the hon. gentlemen who come from the east of the island, but I venture the prediction that they will not agree with my hon. friend from Queens in the proposition that the present winter port should be changed and that a new and experimental route should be established between Charlottetown and Tatamagouche.

There are some things in my hon. friend's proposition which are worthy of consideration, but the government and the country would naturally expect that before conditions are to be changed there should at least be absolute unanimity on the part of the people who are making the request. At Pictou you have had for years large sums expended on terminal facilities. We have had facilities existent there for almost half a century, and an established trade, and before all that is abandoned there must be some good reason given for a large expenditure elsewhere. When the hon. gentleman talks about Tatamagouche and Brulé, those of us who live on the mainland, whose judgment is formed not by theory or on the strength of the accidental visit of a gentleman who goes over on a junketing excursion in the summer time know that it would cost $1,000,000 to the people of this country to provide at Tatamagouche and Brulé the facilities that

the hon. gentleman speaks of. The dredging that would have to be done to enable you to reach either of these points, outside of every other consideration, would be so vast that hon. gentlemen on the other side who sometimes think that the Minister of Public Works is very enterprising, would stand aghast at it. There is only one possibly feasible point on the mainland in Tatamagouche bay, with deep water and possible conditions, and that is Cape John. If my hon. friend (Mr. Warburton) can induce the good people of Prince Edward Island, who are interested in this matter, to press for communication there in the summer time at least, before we make experiments in the winter, I would be glad to aid in anything that can be done in furthering a favourable consideration of that proposition. But, the proposition as advanced by my hon. friend (Mr. Warburton) is one that should be approached with the greatest possible care. Communication between Charlottetown and Cape John is the only phase of the proposition made by my hon. friend (Mr. Warburton) that is worthy of consideration or investigation, and that may be feasible. But there are difficulties in the way; difficulties with regard to expenditure and with regard to changing existing conditions, and these would have to be considered. The proposition to go to Tatamagouche bay or Brulé cannot be considered as a reasonable proposition. I would like my hon. friend (Mr. Warburton) to get the people of Prince Edward Island to agree on his proposition before he attempts to dangle it before the eyes of the people of Nova Scotia. We on the mainland have practical knowledge of the conditions, and we would like to see some unanimity and consensus of opinion with regard to these suggestions in order that they may be fully and fairly considered, and in order that the country might look upon them as worthy of consideration.

Mr. J. W. MADDIN (Cape Breton South). Mr. Speaker, I draw the attention of the House to the fact that as an inducement to Prince Edward Island to enter confederation, the parliament of Canada promised the people of that province continuous communication between the island and the mainland. For over 40 years the harbour of Pictou has been used as a port of entry from Prince Edward Island, but I would point out that Pictou harbour is open to the northeasterly gales which prevail during the spring months and is but a pocket for the drift ice which is carried from Hudson bay and the Arctic into the Northumberland straits. For the last 36 or 37 years the port of Pictou has been tried and found wanting. It was promised to the people of Prince Edward Island that under this administration the communication would be made at Brulé or Tatamagouche bay, the distance from which across the Straits of Northumberland is less than the distance by the present Pictou route. It must also be remembered that the tide flow at Brulé is considerably less, and that the drift ice cannot form as it does at Pictou harbour. As was pointed out by my hon. friend (Mr. Warburton) such is the formation of drift ice in Pictou harbour that in the winter of 1905 communication with the island was cut off for a period of 59 days. It is not alone the concern of the people of Prince Edward Island that there should be continuous communication by steam navigation throughout the year, because the people of Nova Scotia and New Brunswick are also interested. Prince Edward Island can produce all the meats and vegetables that are necessary to supply us, and we should naturally get our supplies from the island, but on account of the uncertainty of communication we are obliged to buy from Ontario during a large part of the year. But the supply is not continuous, the people of Nova Scotia are obliged to buy from the people of Ontario. There is no assurance that purchases made in Charlottetown or in Sydney for delivery during the winter months will be delivered, there being no continuous communication between Prince Edward Island and the mainland. I wish to point out that the harbour of Pictou lies directly exposed to the gales of the northeast and to the flow of ice from the straits of Belle Isle, which retard the spring. This ice field, becoming embanked behind the island of Pictou, and in the Strait of Northumberland behind the island of Prince Edward, lies in such a way that the prevailing temperatures congeal it into hard ice; and I regret that the hon. member who moved this resolution did not press the question on the government as to how often the boat leaving Pictou was obliged to exchange its passengers with the boat leaving the island by reason of the formation of ice between the two. If the hon. member for Colchester (Mr. Stanfield) were present he would be able to point out to this House that so favourable was the Liberal government of Nova Scotia to the purport of this resolution that in the elections of 1906 such members of that government and supporters of it as the Hon., now Mr. Justice, Lawrence, and the Hon. B. F. Pearson, pledged themselves to insist upon the permanent route between Prince Edward Island and the mainland being by Brulé or the harbour of Tatamagouche, or they would resign their seats. They said that a line of railway constructed from Tatamagouche bay to the town of Truro would save passengers from the island to the mainland at least twelve hours. In view of the fact that the currents in Northumberland strait move in an easterly direction, and the fact that the dist-

ance between Georgetown and Brulé, although greater in miles, is in such a geographical position as to exclude the drift ice which comes down from the Strait of Belle Isle, it is up to this government to make an effort towards keeping their pledge by installing a steamer between Prince Edward Island and Brulé. At the time the province of British Columbia came into confederation the parliament of Canada promised it continuous communication by rail between the Atlantic and the Pacific. At that time there were only 11,000 people living westward of the Rocky mountains, yet the government of that time, under the late Sir John A. Macdonald, with Sir Charles Tupper as Minister of Railways, did not hesitate to make good their pledge to the people of British Columbia by securing the construction of the Canadian Pacific railway. Efforts were made from time to time by the late Conservative administration to connect Prince Edward Island with the mainland. It was hoped that this might be done by means of an ice-breaking steamship. The 'Stanley' was introduced. She has been tried and found wanting. Since that effort, which was a progressive effort on the part of the Liberal-Conservative administration, great innovations have taken place. It remains for this government either to grant a tunnel to the people of Prince Edward Island or to change the route for steamship travel from Pictou to another and more favourable route, which will maintain continuous steam communication between the island and the other provinces of the Dominion. In the province of Nova Scotia there are many consumers of such products as are produced on the island of Prince Edward. There are people who bring to Nova Scotia during the summer months, Prince Edward Island beef, eggs, butter and other farm products. These people would be glad to continue their patronage to the island during all the twelve months of the year; but this bar of non-continuous communication with the mainland prevents them doing so. If this resolution were given effect to, and if Tatamagouche bay instead of the harbour of Pictou were made the point of arrival, with a branch line of railway to the town of Truro, the people of Nova Scotia would consume, during the winter months, Prince Edward Island beef instead of Ontario beef, as they do now, and Prince Edward Island would be placed in a position that would enable it to compete with the western provinces of Canada all the year round.

Mr. L. E. PROWSE (Queens, P.E.I.). I desire to add a few words to the discussion of this very important question. It may not appear very important to other parts of Canada, but to the province I have the honour to represent, with my colleagues, it is a vital one. The transportation question for our farmers has been for many years a burning question, and I congratulate my hon. friend and colleague from Queens, P.E.I., (Mr. Warburton), on the diligence with which he has collected data, and the ability with which he has presented it to this House to-day. I was a little surprised to hear the hon. member for Pictou (Mr. Macdonald) say that after having lived in Pictou for so many years he had never seen barrier ice there but once in his life. Well, Sir, I can say for my part that I have waited outside Pictou harbour for a week or several days at a time, without being able to land. On one occasion the steamer was held in the ice outside Pictou harbour for fifty-nine consecutive days, and at that time it was estimated that the farmers of Prince Edward Island lost over $200,000 on their potatoes alone. They had large quantities of potatoes which they were obliged to leave in their cellars to rot; they could not ship them on account of the steamer being tied up by the ice. I admit that this government has made some honest efforts to improve our transportation facilities. But there is one thing that this government and no other government can do, and that is to change the conditions of the harbour ice. Of course I do not blame the hon. member for Pictou for defending his local harbour. I do not know of any representative in this House that works harder for his constituency than does that hon. gentleman. Sometimes we have to run up against him, because we think that he works a little too hard for the interests of Pictou and incidentally against those of Prince Edward Island. I am sorry the hon, gentleman is not present at this moment, because I do not want to say anything about him in his absence that I would not say in his presence. I was hoping that the Minister of Marine and Fisheries would see his way clear this winter to have left the 'Stanley' there, so that a thorough test could be made of this new route, and that the government could have all the information they need as to the feasibility of this route. No doubt it would be a great advantage to the people of Prince Edward Island if this new route were adopted, because it would do away with the three short hauls which are now an obstacle to transportation. The freight costs almost three times as much as it does from Montreal. Let me give the House a few figures. From Montreal to St. John it costs ten and a half cents per 100 pounds for 735 miles. From Montreal to Halifax ten and a half cents per 100 pounds for 832 miles. From Montreal to Sydney sixteen and a half cents per 100 pounds for 977 miles. The regular rate on grain carloads from Tignish, P.E.I., to St.

John, is twenty-six cents per 100 pounds for 432 miles. From Tignish to Halifax it is twenty-three cents per 100 pounds for 309 miles; from Tignish to Sydney, twenty-six cents per 100 pounds for 308 miles. So you see that the farmers on the island are greatly handicapped on account of the excessive rates of freight. I believe that if this new route could be adopted there would not be any trouble. A company could be formed that would put a large car-carrying steamer on the route, and that would do away entirely with the three short hauls, because the large cars of the Intercolonial could be brought over and placed on the wharf and reloaded on island cars. This would be a great convenience to our population over present conditions.

Mr. A. L. FRASER (Kings, P.E.I.). The importance of this subject to my province justifies me in making a few remarks. Year after year this House has listened to a discussion of this question, and it is still necessary to recur to it frequently. While I am pleased to say that some progress has been made during the last few years in giving us better transportation facilities, much remains to be done in that line. I think if this government put forth a little more effort and paid a little more attention to this question than they have been doing, that without much expense they could considerably increase our transportation facilities. I will not say much as to the relative advantages of the different ports on the mainland, because I do not pretend to have as much knowledge of the Brulé route as those gentlemen possess who have made a special study of this question. But I want to tell the hon. member for Pictou (Mr. Macdonald), who I see is not in his seat, that if there is one thing upon which the people of Prince Edward Island are united, it is in the opinion that the Pictou harbour is the poorest harbour on the mainland for winter navigation. Let the government make no mistake on that point. The hon. member for Pictou almost taunted us to-night because we were not unanimous upon any route; but we are unanimous in the belief that the Pictou harbour offers the poorest harbour for winter navigation of any that can be mentioned. Let the government take that much for granted. Then I trust they will go on and make a good survey, and obtain sufficient knowledge to enable them to give us a better harbour. This is not my opinion only. I have studied the records and the reports of the surveyors that have been sent down by this government and by other governments, and I find there is a unanimous expression of opinion from these surveyors in their reports that Pictou harbour, on account of its shape and its situation, is certainly the least feasible on the mainland for winter navigation. It is a V-shaped harbour, opening towards the northeast, and without any protection whatever. When the northeast and easterly winds blow the ice into that harbour, the whole harbour is blocked with ice, and navigation is completely stopped.

As to whether the people of Prince Edward Island are entitled to continuous navigation with the mainland, I do not think that question needs to be debated to-night. I was surprised on a recent occasion to hear the Minister of Finance, who I regret is not in his seat, though he seldom is absent, express the opinion that he did not believe it was binding on this government or on any government to give us continuous communication with the mainland. But I believe it is. The obligation is surely in our contract, and it would not be there if it was not meant to be valid. It surely must mean something or it would not be there, and if it means anything, it means that this government is obliged to give us continuous communication with the mainland in winter and in summer. A large percentage of the people of Prince Edward Island are united on this point also, that a tunnel will be the only complete and satisfactory solution of the difficulty. When this subject was before the House on a previous occasion, the Finance Minister (Mr. Fielding) promised as much perhaps as he could in anything, that during the coming summer, or in the near future, and of the advisability and possibility of the tunnel would be thoroughly gone into. Speaking on behalf of those who have placed their hopes of the solution of this difficulty in the construction of a tunnel, I hope and trust that this government will, at an early day, make a proper survey of the Straits of Northumberland with a view to having a tunnel constructed if possible. This would obviate the difficulty we have in winter navigation.

Our difficulties of winter navigation are not our only difficulties. We have at present great drawbacks in our summer navigation. At present, the transportation of our mails and passengers and of a great deal of our freight is in the hands of a concern called the Steam Navigation Company. The people of Prince Edward Island, in the last few years, have become dissatisfied with the rates and with the service of that company. For my part, speaking as a passenger, I have no fault to find with the passenger service given by that company. But the rates charged and the facilities offered for transportation of freight are not up to date and not such as will satisfy the people. So that to-day a large percentage of the people of Prince Edward Island are thoroughly dissatisfied with the summer navigation of the Straits of Northumberland as conducted by the Steam

Navigation Company—almost as large a percentage as are dissatisfied with the winter navigation. And, as the hon. member for Queens county (Mr. Warburton) has said, I hope that when tenders are again called for, this matter will be earnestly considered by this government, with a view to giving the people better transportation rates and facilities.

I was surprised to hear the hon. member for Pictou (Mr. E. M. Macdonald) say, as I understood him, that the solution of the difficulty would be to send all steamers from the mainland in the morning and get them back in the evening. That, as I understood him, would solve the question of the navigation of the straits in winter.

Mr. E. M. MACDONALD. In summer. They do it now in winter.

Mr. FRASER. I cannot see how navigation could be made better, winter or summer by the steamers leaving one particular side every morning. I am aware that the government has spent a great deal of money in Pictou. No doubt it has inured to the benefit of the hon. member for that county. No doubt he is one of those who, in the last election, said to the people: See all the money I have got for the county; see what I have done for you. But that is not saying the money was spent all for the public benefit.

Mr. E. M. MACDONALD. The hon. member (Mr. Fraser) intimates that the money was not spent for the public benefit. I think I have a right to ask what he means by that. Has he any statement to make with reference to the money spent in Pictou or the results to the country?

Mr. FRASER. I do not understand the question.

Mr. E. M. MACDONALD. The hon. gentleman undertook to say that the money spent in Pictou was not spent for the public benefit. Will the hon. member state to what expenditures he refers?

Mr. FRASER. I did not say it was not spent for the public benefit; I said that the hon. member (Mr. Macdonald) himself received a great deal of benefit from it.

Mr. E. M. MACDONALD. In what way?

Mr. FRASER. Politically.

Mr. JAMES W. RICHARDS (Prince, P.E.I.). The question of transportation between Prince Edward Island and the mainland is, no doubt, one of very great importance, not only to the people of the island, but to the people of New Brunswick and Nova Scotia as well. The question of winter navigation has been so completely dealt with by my hon. friend from Queens, Prince Edward Island (Mr. Warburton) that I shall not repeat what he has said. There is no doubt that a great improvement has been made along these lines from the time when the 'Albert' was the only vessel on the winter route. We now have the 'Earl Grey.' With such improvements in the past, there is every reason to hope that there will be further improvement in the future. But we must take into account the fact that our province is an island and that it is surrounded with ice for a certain portion of the year. In some seasons we have much more difficulty in keeping up communication than in others. For instance, the present season is a very favourable one, and the winter steamers have been able to make their trips very regularly. But there can be no doubt that in the time to come we shall have severe winters, when possibly no boat ever built will be able to make the trip every day. With regard to the different ports that could be selected for the winter service, I am not prepared, for my part, to say which is best. My hon. friend from Queens has explained very fully the position of Charlotetown harbour and Tatamagouche. I have no personal knowledge of Tatamagouche bay, or Brulé, or whatever it is called. But, if that route, after investigation, proves practicable and the best route, I would not for a moment put any obstacle in the way of adopting it. The route that can be used most regularly and with the least difficulty is the best, not for one section only but for the whole province. It is true that we have had to fall back upon the Georgetown-Pictou route when other routes are abandoned. Georgetown is a very fine harbour. It is said that there is sometimes difficulty in entering Pictou harbour on account of the ice. I have no personal experience of this condition in crossing. But we have in the county which I have the honour to represent the harbour of Summerside, and many men in that town and in that county who are qualified to give an opinion about such matters, are firmly convinced that the best winter route is between Summerside in Prince Edward Island, and Cape Tormentine in New Brunswick. The distance there is no more than about seventeen miles, and at Cape Tormentine there is a pier which was built by the government of Canada.

The run is made very quickly, in something over an hour when there is no very heavy ice in the way. That route has never been thoroughly tested, but we have had the winter boat there at the close of summer navigation, and for some time afterwards, in order to take away the freight that had accumulated after the summer boats had stopped. I contend that that route has never had a fair trial and, as I have stated, men who have given the matter serious consideration and are qualified to pass an opinion are firmly convinced that that is the shortest, the most direct

and the surest route to make connection with the mainland. In 1909 the steamer 'Minto' was there for two or three days carrying frienght and passengers. It appears that the arrangement made was that the 'Minto' should join the 'Earl Grey' on the eastern route as soon as the summer boats ceased running between Charlottetown and Pictou. That was the understanding as stated by the Marine Department here, although some of my good friends in Summerside took the view that the steamer 'Minto' was to remain in that port for some time longer, until it would be necessary to abandon the Charlottetown Pictou route an go in the Georgetown-Pictou route. However, the boat coming there in the fall of the year, just about when the summer boats are obliged to lay up, is a great advantage not only to the county of Prince, but also to a large section of Queens county represented by my two hon. friends who sit beside me. I may state, on what I believe to be good authority, that nine-tenths of the freight from Prince Edward Island goes out of the port of Summerside in the summer months, and that if that route were fairly tested and found practicable there would be a large trade from that port in the winter. From Cape Tormentine there is a railway running up to Sackville some forty miles, and for people travelling to or from Montreal or western Canada that shortens the route very greatly as compared with the journey via Charlottetown and Pictou.

I might go on to show many reasons why that route should have a fair trial, because if it is feasible it is the shortest and the best and the natural route. Then I think some steps should be taken in in order to give it at least a fair chance when another winter comes. At any rate, in order to give us the transportation we need in the town of Summerside, we should have a boat there every year after the summer boats stop running in order to carry away the freight that accumulates there as it generally does after the close of navigation. We, particularly on the western part of the island, had hoped that the 'Stanley' which is a good ice breaker would have been left with us in the island this winter as we were anxious to have the different routes tested. We have two boats there now it is true, the 'Earl Grey' and the 'Minto,' but they are required on the service on which they are now engaged and there was a strong expectation that the 'Stanley' which was built as an ice-breaker would be kept there in order to test some of the new routes proposed, thus affording the Marine Department some trustworthy information as to the best route to adopt permanently. There was a considerable feeling of disappointment and regret that this boat had been taken away from the island service. However, the department in consequence of having, I think, lost a boat somewhere in the Bay of Fundy, found it necessary to take the boat there, but I do hope that another year they may either be able to send the 'Stanley' back to test these routes or give us another boat for the purpose. Our people are looking forward anxiously to having the different routes thoroughly tested with a view to deciding which is the best, and, having found that, to stick to that route. I do not think, as I said before, that in very severe winters with the heavy ice coming in from the north, we can keep up regular communication by boat. To my way of thinking the only plan by which continuous communication can be kept up throughout the year is by the construction of a tunnel. We are looking forward to the day, and I hope it is not far distant. when we shall have a tunnel. At any rate we expect that we shall have a survey for that purpose in order that our people may know whether or not the tunnel can be built at a reasonable cost, at such cost as we think we would be justified in considering as a not extravagant price or one beyond the needs of the trade and resources and importance of the business from Prince Edward Island. We are anxious to have this matter taken in hand in order that that great question may be settled and after that is done our people will be satisfied. They will then say if the surveys prove it: This work is going to cost us more than we have a right to expect or there may be such difficulties in the way that it is not practicable to build it at anything like a reasonable or moderate cost. I am quite in sympathy with my hon. friend from Queens in bringing this matter so fully and prominently before this House, because I can assure you, Sir, and the hon. members of this House that this question of transportation is a very live question in the province of Prince Edward Island. For a small province, the products are very large, not only in the agricultural line but in the fishing business and in the export of sheep, horses and cattle and other commodities. We feel that although the government has done a good deal in giving us a new winter boat and all that, yet something further can be done in order to meet our transportation needs, and I hope and trust that out of this discussion something will come that will help to improve the conditions as regards transportation between Prince Edward Island and the mainland of Canada.

Mr. WM. CHISHOLM (Antigonish). Mr. Speaker, I shall not take up the time of the House in discussing this matter. As a matter of fact, I had not anticipated taking any part in the discussion, and would not

but for some observations that were made. I desire to call the attention of the government and of the House to the fact that there is still another route that has not been emphasized by hon. gentlemen who have spoken, a route that I claim will furnish a solution of the whole difficulty. It is idle to say that there is no grievance, that the people of the island are satisfied. All one has to do is to look at the 'Hansards' ever since Prince Edward Island became a part of confederation and he will find year after year complaint on the part of the people of the island because of the treatment they were receiving in the matter of winter communication particularly. In the mass of information that was brought down last session, the session before last and in previous sessions, you will find resolutions of the Charlottetown Board of Trade, of the Maritime Board of Trade, of the Halifax Board of Trade, of the legislature of the province of Prince Edward Island, all bemoaning the treatment that Prince Edward Island was accorded in the matter of communication. The difficulty should be easily solved. It is a question of what is the best route, of ascertaining which is the most feasible route to maintain communication. Several routes have been tested. The Capes route, to which reference has been made by the hon. member for Prince, has been tested and has been declared to be 'a political and not a practical route.' There was a great deal of information brought down two years ago in reference to that route. Tests were made in the winter seasons of 1901, in 1902, and in 1903, and after it was tested the route had to be abandoned. Then, you have in summer time, the Charlottetown and Pictou route. When navigation closes, Charlottetown has to be abandoned, and it struck me as rather extraordinary when I heard my hon. friend from Queens advocating the Charlottetown-Brulé route. If the Charlottetown-Pictou route has to be abandoned as soon as winter opens, how is the Charlottetown-Brulé route going to meet the requirements? If Charlotteown is not available as a winter port, then I contend that connecting it with Brulé or Tatamagouche bay, is not going to better the situation.

Mr. WARBURTON. The northern ice that is driven down the straits by the northeast wind is stopped up short at Point Prim, ten miles east of Charlottetown, and it does not interfere with the Charlottetown route.

Mr. WM. CHISHOLM Yes; but as I read the documents that have been brought down upon this subject, they state that Charlottetown is not a good winter port. On the contrary, it is very much the opposite. It is approached by a long, winding, narrow channel, and although they have spent a great deal of money in the way of improvements and aids to navigation, and have done a great deal to improve Charlottetown harbour, it is conceded on all sides that Georgetown is the only winter port on the island. It is true that this year they have been running between Charlottetown and Pictou late in the season, and perhaps up to this date, but at any moment Georgetown is liable to be substituted for Charlottetown. Every one admits that Georgetown is one of the best harbours in Prince Edward Island. No one has every thrown any doubt upon the fact that Georgetown is open the whole winter long. The winter port on the island side is Georgetown. What you want to do is to test the various routes suggested by speakers on this subject and adopt whatever route proves to be the best. I submit that as far as Brulé, or Tatamagouche bay, is concerned, we have not very much to hope for there because the conditions, if I understood the Minister of Marine last year aright, are very much the same as those which are found in Pictou harbour, and it would take an immense amount of money to have piers built and provide the accommodations that will be necessary, and even then it is very doubtful if a satisfactory winter route can be found. There is, however, another route, the route which I suggest, and it is the Georgetown-Cape George route. This is a most desirable route by reason of the fact that there is plenty of sea room, and by reason of the condition of the tides and currents between Georgetown and Cape George ensuring open water all the year round. Three years ago, some time in March or April, when Pictou harbour was blocked for about ten days and was inaccessible, a schooner laden with coal went from Hastings across to Georgetown, and I am told by sea captains and people who have spent all their lives along the coast, that Cape George has at all times open water. Two years ago when the ex-member for Kings, Prince Edward Island, was coming up here to Ottawa he was detained five or six days at Pictou harbour, while there was no difficulty about landing along the coast near Cape George. This is not a new route. This was suggested as far back as 1874 by the hon. member representing Kings at that time (Mr. McIntyre). He stated, what is generally conceded in the locality, that there is always open water between Georgetown and Cape George. During that same session the then member for Antigonish county (Mr. McIsaac) pointed out that to his own knowledge, passengers had been landed at Malignant Cove, Arisaig and Cape George, when they could not get near Pictou. I know that a few years ago, when Pictou harbour was inaccessible, they had

to land their passengers and mails somewhere near Cape George. I wish to direct the attention of the government to the necessity of properly testing this Georgetown-Cape George route, and if it is found to be what we claim for it, by all means adopt it. A promise was made by the late Minister of Marine and Fisheries, in a letter to me, dated November 3, 1905, that this route would be tested at the proper time. I had a similar promise from the present minister, whose absence we all regret, in a letter dated the 28th August, 1906, in which I called his attention to the rumour in the newspapers that there was a test to be made of the Brulé route. He promised then that he would see that the Georgetown-Cape George route was tested when the proper time came. In view of what has been done in the way of surveys of Tatamagouche bay, I think the time has come when the promise of the minister should be taken seriously to heart. Representations have been made regarding the proposed route on the floor of this House time and again, almost as far back as 1874. These representations were made by the member for Kings to whom I referred, by the member for Antigonish, my predecessor, and by his predecessor. I think that these representations and the representations made by me to the department verbally and in writing are sufficient to justify a test being made, and I hope as I sincerely believe the government will carry out the promise that was made by the Minister of Marine and Fisheries and his predecessor and have this test made as soon as possible.

Motion agreed to.

ADJOURNMENT—CO-OPERATIVE LOAN AND CREDIT BANKS.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. MONK. Mr. Speaker, before the House adjourns I would like to ask the Prime Minister (Sir Wilfrid Laurier) if it would not be possible to give a second reading to Bill (No. 26) on Co-operative Loan and Credit Banks. The reason I am asking this is that throughout the course of the discussion on the first Bill presented respecting co-operation, the hon. Postmaster General (Mr. Lemieux) will remember, that there was no objection whatever as to the feature of co-operation. There was strenuous objection to productive and distributive co-operative societies, but no objection was made at any stage of the Bill to small banks, and loan and credit societies. Under these circumstances this year I presented a Bill for the purpose of legally organizing loan and credit societies feeling certain that upon that feature at any rate there would be no opposition whatever. The hon. member for Brantford (Mr. Harris) has presented a general, comprehensive co-operative Bill which, I understand, is opposed by certain interests, but there are no interests whatever that have any such opposition to these credit banks. They have been approved of by the bankers association. Under these circumstances and as that feature of co-operation has developed very much in the province of Quebec principally, and as there has been no objection to the first Bill in regard to that particular aspect of it. I think my request commends itself to the right hon. the Prime Minister. If my Bill were read a second time now and even a third time, if possibly there is any opposition, it might be offered in the Senate.

Sir WILFRID LAURIER. I understand it is the wish of the House that this Bill should be considered, I have no objection at all that it should be read a second time and submitted to the committee, I cannot agree that it should be read a third time because I know there are some persons who want to be heard in opposition to it. I withdraw my motion that the House adjourn.

SECOND READINGS.

Bill (No. 26) respecting co-operative credit societies.—Mr. Monk.

Bill (No. 50) respecting co-operation.—Mr. Monk.

On the motion of Sir Wilfrid Laurier, the House adjourned at 10 p.m.

HOUSE OF COMMONS

TUESDAY, February 8, 1910.

The SPEAKER took the Chair at Three o'clock.

HUDSON BAY RAILWAY.

On the orders of the day being called.

Hon. G. P. GRAHAM. Mr. Speaker, I wish to make clear a statement in the report presented to the House in reference to the estimate of the Hudson Bay railway project. Hon. gentlemen will have noticed that although the amount for elevators, docks, &c., appears in the items, it does not appear in the totals. In order to make it clear I wish to put the following statement upon 'Hansard':

HUDSON BAY RAILWAY SURVEYS.

Churchill Route.

Railway construction..	$11,351,520
Railway shops and accessories.. ..	7,757,152
Port work..	6,675,000
	$25,783,672

Nelson Route.

Figures are shown as $16,426,340 and should read:—

Railway construction..	$ 8,981,800
Railway shops and accessories.. ..	7,444,540
Port work..	5,065,000
	$21,491,340

FEDERAL AND PROVINCIAL JURISDICTION RE COMPANIES.

Mr. MONK. Is it the intention of the government to refer the Insurance Bill which is now being considered by the Senate to the Supreme Court in order to obtain a decision as to its constitutionality? There was a rumour to that effect when a judgment was rendered by Mr. Justice Leith at Montreal a couple of months ago in the case of King vs. Witlis, Fabre & Company to the effect that that legislation was unconstitutional. It seems that it would be an advantage to find out the opinion of the highest court on that subject before we go more fully into the study of the proposed Act.

Hon. A. B. AYLESWORTH. Mr. Speaker, the interesting question to which the hon. member has called your attention is but one phase of a larger question as to the powers respectively of the Dominion parliament and of the local legislatures in regard to the incorporation of companies. That question was not long since raised for the decision of the Supreme Court, and the members of that court differed among themselves very decidedly in the opinions they expressed. The question being of such large practical importance, communication was had from the department of which I am in charge with the Attorneys General of the various provinces with a view to arriving, if possible, at some means by which these difficult and very weighty questions of the construction of the British North America Act may be definitely settled. That correspondence has resulted in a proposition from several of the provinces that a conference on the subject be had between representatives of the provinces and representatives of the Dominion government and such a conference is being arranged for. Communications are now being addressed to the various lieutenant governors of the different provinces proposing a meeting of representatives of the provinces and of the Dominion government to discuss the whole subject, not the mere question of insurance legislation but the larger one as to the right to incorporate companies in the provinces and in the Dominion respectively.

THE NATIONAL ANTHEM.

Mr. BURRELL. As the naval debate is to be resumed to-day I beg to call the attention of the Prime Minister to the following paragraph in the Toronto 'Globe' of February 4, referring to the Prime Minister's speech:

Its conclusion was marked by the inspiring spectacle of the whole House rising and singing the National Anthem.

The House knows that the inspiring spectacle referred to took place at the conclusion of the speech of my friend the leader of the opposition (Mr. R. L. Borden). I am not saying for one moment that this statement was sent out intentionally, but in view of the fact that it was given prominence not only in the recognized organization of the Liberal party but also in the Hamilton 'Times', the St. John 'Sun'. the St. John 'Telegraph', the Halifax 'Chronicle', the Montreal 'Daily Herald', the Belleville 'Daily Ontario', the London 'Advertiser', the St. Thomas 'Journal' and the Winnipeg 'Free Press' and in view also of the fact that the Prime Minister was very severe last session on the immorality of false telegrams, I think I am voicing the sentiment of everybody on this side, and I am sure also of many on the other side, when I say we should be glad to have some little statement from the right hon. gentleman.

Sir WILFRID LAURIER. I do not understand what my hon. friend means. What have I to do with that?

TECHNICAL EDUCATION.

Mr. CROSBY. I find in the Ottawa Evening 'Citizen' of February 5, a statement made, at Hamilton, Ontario, on the 4th of February, to the Trades and Labour Council.

A letter was read from Hon. Mackenzie King, stating that he had not moved postponement of government action in regard to technical education, but the protest came from the opposition.

I want to ask the Minister of Labour (Mr. King) how that letter came to be put in that shape in view of what had taken place in that debate, and of the fact that he himself moved the adjournment of the debate on that occasion.

Mr. KING. I have written no such letter. I should be pleased to lay before the House any letters I have sent to the Hamilton Trades and Labour Council. I take it that the hon. member (Mr. Crosby) is reading from a press report which does not

do justice to any communication I have sent.

Mr. CROSBY. Is the report I have read wrong?

Mr. KING. Yes.

THE EDWARD MEDAL—HEROISM OF CONDUCTOR REYNOLDS.

Mr. R. L. BORDEN. I desire to point out to the government that by warrant under the Royal Sign Manual of the 13th day of July, 1907, His Majesty created a new medal to be entitled the Edward medal to be awarded for heroic acts performed by miners, quarrymen and others who endanger their own lives in endeavouring to save the lives of others from perils in mines and quarries. And, by a further warrant, under His Majesty's Royal Sign Manual, on date of 1st of December, 1909, it is provided that this medal shall be awarded to those who, in the course of industrial employment, endanger their own lives in endeavouring to save the lives of others from perils incurred in connection with such industrial employment. I would ask the government whether this medal can be awarded to those who perform acts of heroism in saving the lives of others who are engandered in connection with the work of the railways of this country? The reason why I ask is that a very notable act of heroism has been performed by a conductor of the Canadian Pacific railway, Conductor Thomas Reynolds, who, at the risk of his own life and with unexampled courage, succeeded in saving the lives of nine others who had been imprisoned in the dining car which fell into the river and through the ice in the recent accident on the Sault line. If this medal could be awarded in connection with such acts of heroism, I earnestly hope that the government will bring Mr. Reynolds' signal heroism to the attention of the imperial authorities.

Sir WILFRID LAURIER. I am sure that hon. members will agree that, if any are entitled to medals for heroism, Conductor Reynolds stands at the head of their number. There is a society which generally looks after these things, and calls the attention of the government to acts of heroism. As soon as we have received such recommendation, we shall be glad to call the matter to the attention of the proper authorities.

ALLAN STEAMSHIP SERVICE.

Mr. CROSBY. On Friday last, I asked a question with reference to the line of Atlantic steamers running via Havre, calling at Halifax. The first minister promised me an answer on Monday. I desire to ask if he has that answer?

Sir WILFRID LAURIER. I have the information for my hon. friend. I have to inform him that, under the contract with Messrs. H. & A. Allan for the Canada-France service, the call at Halifax or St. John is optional with the contractors. Recently, however, to meet the view of the Department of Trade and Commerce and the Halifax Board of Trade, the Allans advertised calls at that port on eastbound voyages for the remainder of the winter season in order to carry forward lobsters and such other export traffic as might offer. Such call, however, is contingent on there being something to carry. With reference to westbound voyages, the Allans claim there is little or no westbound freight offering for Halifax; but they state that should there be a reasonable amount of westbound freight offering to at least pay the cost of such a call, they will make a call at that port; but that at other times, should they have any freight for Halifax but not sufficient to warrant a call at that port, such Halifax freight will be forwarded from St. John without further charge.

THE NAVAL SERVICE OF CANADA.

House resumed the adjourned debate on the motion of Sir Wilfrid Laurier for the second reading of Bill (No. 95), respecting the Naval Service of Canada, the proposed amendment of Mr. Borden, and the amendment to the amednment of Mr. Monk thereto.

Mr. W. S. MIDDLEBRO (North Grey). In rising to address the House on a subject of such vital importance to Canada, involving, as it does, not only our present status, but our future relation to the empire, I believe, upon the conclusion of this debate, we will have reached and passed an epoch marking mile-stone in the history of the Dominion of Canada; and I believe that it is our bounden duty, our paramount duty, indeed, to consider not only whether the Bill before the House meets the requirement of the naval defence of Canada, but also whether it will tend to lead either to the consolidation or disintegration of the empire. A word or two first with reference to the question of militarism. I desire to place myself on record as not being in any manner a champion of the spirit of militarism. The question we are considering is simply a question of defence; it is not a question of aggression; it is not a question of doing anything towards the acquisition of territory; it is purely and simply a question of strengthening the central armament of the empire, for the purpose of preserving peace as we have had it preserved during the last hundred years. And I make the statement that, the supremacy of the British navy, the unchallenged supremacy of that navy, has been the cause of our peace

for over a century. We know that peace has been the constant and devoted companion of Great Britain's supremacy on the sea of time for the greater part of a century; and we know that so soon as the supremacy of Britain upon the seas is menaced upon the international horizon appear war clouds and rumours of war. We know that because of the threatening of that supremacy through the naval progress of the greatest military power in Europe to-day, we have, for the first time, the threatened Armageddon. We have New Zealand making a magnificent offer of a Dreadnought' ; we have Australia contributing to the empire a unit of the imperial navy. And it is because of these circumstances that we to-day are considering the question of naval defence. So, in speaking of this matter, in defending any form of naval defence, I am doing it because I believe that in strengthening of the forces of the empire we are maintaining the peace not only of the colonies of Britain, but of the nations of the world. It has been the expressed policy of British statesmen, time and again, that the object of their navy is not for territorial aggression or anything of that kind, but simply for the preservation of peace. I would like to read to the House the words of the British Foreign Secretary, spoken last June before the imperial press conference to show what the foreign policy of Great Britain is on this question. Sir Edward Grey said:

> And I would say this: the foreign policy of this country is to keep what we have got, to consolidate it, and develop it, to quarrel as little as possible with other people in doing so, and to uphold in the councils of the world in diplomacy those ideals in every part of the world by which we set so much store at home.

This is nothing more or less than the policy of, 'what we have we'll hold.' And I think we are quite justified in contributing in some measure to a policy of that kind.

The first question that occurs to one is what have we to hold? We have, I think I am safe in saying, an empire unrivalled in the history of the world. It is an empire of 400,000,000 souls, that is to say one-fifth the population of the globe; an empire that covers 12,000,000 square miles, or one-fifth the area of the globe. Of the entire population, 60,000,000 are Anglo-Saxon; 44,000,000 reside in the 'little isles in the foggy sea,' and 16,000,000 are scattered throughout the colonies of the empire. And, of the whole territory of 12,000,000 square miles, only 120,000 square miles are comprised within Great Britain itself. In that respect it is entirely different from all other empires of ancient or modern times. It is an empire of all climes, of all races, of all classes, of all creeds, of all longitudes, of all latitudes, of all seas, and in that respect it is entirely different from any of the empires of ancient or modern times. The Macedonian empire, the Assyrian empire, the Roman empire, the Russian empire and all other great empires were contiguous and continuous. Their geographical position was such that an army could be landed on one portion of the empire and could march to any other portion. How different it is with the British empire to-day, which is divided by so many seas. But notwithstanding the fact that it is separated by these seas, there is no doubt that the various portions of the empire to-day are four or five times nearer to Great Britain than they were a hundred years ago, because time and distance have been almost annihilated by reason of present facilities of intercommunication in the shape of steamships, telegraphs, cables, wireless telegraphy, and probably in a short time, by reason of an aerial communication. For these reasons then we have the more cause for upholding that which is the all essential to the preservation of the empire, namely, naval supremacy upon the sea. Now, I make this formal statement that the existence of the British empire and of all her colonial dependencies depend upon the actual supremacy of the British navy upon the seas.

We are apt to forget what it is costing Great Britain to maintain that supremacy, we forget it because we do not pay a single cent towards the maintenance of that supremacy, either on land or sea, although we obtain all the advantages, and all the benefits and all the prestige and protection which we would obtain were we citizens of Great Britain herself. We are apt to forget, I say, what it is costing the mother country to-day in order to maintain that supremacy. Take the case of the British navy. What is Great Britain paying to-day for the maintenance of her navy? I think the annual naval estimate for 1910 is $75,000,000, that is $480,000 for every single day of the 365 days of the year. Now, I maintain that we, as a colony of Great Britain, are getting the advantage and protection of that expenditure of money just as fully and just as effectually as any citizen of Great Britain herself, and we are not contributing one cent thereto. In addition to that, she is maintaining a great standing army which is costing her $430,000 a day. It may be said, perhaps, that we do not get the same benefit from that army as do the citizens of Great Britain herself. But we must remember that it is the British navy that bears the British army upon its back; and if we were attacked in Canada by any great power, say that of the United States, for instance, we could depend upon the British navy to bear the British armies to our defence. So in that respect, without the supremacy of the British navy, the British army is of

no practical use to this country. With the supremacy of the British navy we receive the same benefit from her army as any other portion of the empire or as Great Britain herself. Moreover, it is a matter of history that for the last 150 years, all the wars which Great Britain has fought have been fought across seas, and its troops have been borne across seas on the back of the navy, and all this money and treasure have been expended in fighting the battles of distant portions of the empire.

We do not lack for illustrations of that. We have seen Great Britain send out into Persia an army for the purpose of relieving certain of her citizens who had been maltreated and imprisoned by the Persian emperer. When Canada herself was faced by the first rebellion in the Northwest, Great Britain sent out a body of troops wholly at her expense for the purpose of suppressing that rebellion. We know that when the rights and privileges of a certain number of citizens in South Africa were menaced, Great Britain did not hesitate at once to send out an army of 300,000 men from her shores; with the assistance and by means of British naval supremacy the navy was able to carry upon its back that army of 300,000 men, and to protect the ships and transports bearing provisions for them into South Africa. Of those troops, 18,000 never came back, and 65,000 or 70,000 bear to-day upon their persons the scars of that war; and not one cent was contributed before that time by South Africa towards imperial defence. Now, Sir, we know that Great Britain would do exactly as she did in South Africa in case Canada were menaced in like manner; in other words, we would receive the benefit of the army and navy upon which she expends over $900,000 a day for the purpose of maintaining the integrity of the empire of which Canada forms a part.

Now let me illustrate that in another way. Supposing you went into the office of the British Chancellor of the Exchequer, and you wanted to know what that war in South Africa has cost. You look upon the credit side, and you see a precedent created that, no matter where a British subject is found, once his rights have been invaded, Great Britain will at all costs fly to his rescue. On the debit side you will find 18,000 men who have lost their lives, and you will find throughout Great Britain many a hearth and many a home that now

Long for the touch of the vanished hand,
Asd the sound of the voice that is still.

You will find in addition to that, 65,000 or 70,000 men who went out to fight the battles of the empire, bearing upon their person the imperial phylacteries of devotion and loyalty to the motherland. You will find in addition that, in the office of the Chancellor of the Exchequer, on the debit side, a war costing $1,000,000,000, and you will find the Chancellor of the Exchequer raising at three per cent $30,000,000 every year for the purpose of paying the interest on that part of the national debt incurred by the South African war. Is that not a proof that we would derive the same benefit, and would derive the same material assistance, were national complications to arise between Canada and any foreign nation? We have that precedent of British assistance in South Africa, and we have the right to assume that she would do the same thing for Canada.

Then, if we consider the matter from a totally selfish and material standpoint as it affects our own country, what do we find? We have here a coast lying on the Atlantic and on the Pacific oceans wholly unprotected. We have a number of thriving cities upon those two coast lines, wholly unprotected except by virtue of the supremacy of the British navy to-day. We enjoy the advantage, the prestige and the protection of all the diplomatic and consular service throughout the world, and it is unnecessary to say that such service is the greatest in the world. We know that Great Britain is paying to-day over $3,000,000 a year for her diplomatic and consular service alone, and we are getting the benefit of that as effectually as any other citizen of the British empire, while not contributing one cent towards it. Now, I make this broad statement, that Canada is rapidly growing, and as the increase in her commerce is going to be to a large extent an increase in her natural products, and as in that respect Canada will have a surplus of agricultural products, and as that surplus would go, not to the United States, but to countries beyond the seas which cannot now raise enough agricultural products for their own needs, it follows that as our trade increases, and as our export of agricultural products increases, the surplus for export must cross the seas, and in order to protect that vast commerce, we must have the supremacy of the British navy. The whole question resolves itself into this, that an invincible imperial navy is nothing more or less than an insurance policy insuring every portion of the empire against the contingency and horrors of war, and is a guarantee to each part of the empire of its peace, progress and prosperity.

Now let me say a word or two in reference to the speeches of the Right Hon. First Minister (Sir Wilfrid Laurier) and the hon. Postmaster General (Mr. Lemieux). As to the character of the speeches, were I to look upon them from the standpoint of eloquence and rhetoric, I would say that they were par excellence. Both of these hon. gentlemen read quotations and extracts from the speeches of many eminent politicians, statesmen and

ecclesiastics. No doubt they did this for the purpose of suiting the political exigencies of these hon. gentlemen in various parts of the country. I do not know that it was necessary to go back and read these quotations from these gentlemen, many of whom had been dead for generations, some of whom have been dead for centuries, and I think it was rather a rude thing that they should go back and disturb Peter the Hermit from the peaceful hermitage where he has so long slumbered. What had all this to do with the question at issue? The question at issue is whether Canada, by reason of its position in the empire to-day, or by reason of the impending difficulties and necessities which beset the empire, is going to make a contribution to imperial defence, and, if so, what is to be the manner of making that contribution? Upon that aspect of the case I say that the precedents which the First Minister and the Postmaster General have quoted are wholly irrelevant to the matter at issue, because the matter at issue is simply the question of a voluntary gift by this government to the mother country for the purpose of assisting her in the difficulties which have beset her, and there is no constitutional authority which has anything to do with the question of whether we choose to make a gift to the mother country for the purpose of strengthening our national defence. I see upon the order paper a resolution authorizing the government to make a grant of $50,000 to the city of Paris for the purpose of aiding those who have suffered by reason of the recent flood which has taken place in that city. With that I am quite in accord, but why would it be necessary for any one to get up and cite constitutional authorities as to whether we should or should not grant to the city of Paris something to relieve the present situation? Yet, such an argument would be on all fours with the argument put up by these hon. gentlemen in regard to the navy.

But, I would not have found so much fault with the speeches of these hon. gentlemen, and especially with the speech of the right hon. the First Minister, if the right hon. gentleman had confined himself to what was the policy of his own party, though, no doubt, there was great reason to find fault with that. What did the First Minister say? He said:

> This policy is in the best traditions of the Liberal party. This policy is the latest link in the long chain of events which followed from the principles laid down by the reformers of the old times, Baldwin and Lafontaine, which, step by step, stage by stage, have brought Canada to the position it now occupies, that is to say, the rank, dignity and status of a nation within the British empire.

He was not satisfied with that, but further he went on to say:

Mr. MIDDLEBRO.

I am bound to say at the same time that it has been censured and criticised—severely censured and severely criticised—by those who within the party boast of their imperialism, who carry abroad upon their foreheads the imperial phylacteries, who boldly walk into the temple and there loudly thank the lord that they are not like other British subjects, that they give tithes of everything they possess, and that in them alone is to be found the true incense of loyalty.

The right hon. gentleman has been leading the Liberal party for about twenty years, and had the policy which he has advocated been carried into effect it would have led us, according to the right hon. gentleman, to the position we occupy to-day as the first colony in the British empire, the brightest jewel in the British Crown! Well, I think that the right hon. gentleman, having made this statement, it is only fair and just to this side of the House that I should see whether the policies which he heretofore advocated would have led us to the position we occupy to-day. I do not need to go back a century, I do not need to go back more than twenty years, it is within the memory of the youngest member of this House, to compare the policies which the right hon. gentleman has enunciated within the last twenty years with the position we occupy to-day. Less than twenty years ago the right hon. gentleman advocated several distinct anti-British trade policies. The right hon. gentleman first advocated continental freedom of trade, then unrestricted reciprocity, and then commercial union. We all remember that upon the platforms of this country the right hon. gentleman said time and again: Place me in power and I will give you continental free trade, unrestricted reciprocity, or commercial union. We know that if the country had taken him at his word and placed him in power we would have had either commercial union or unrestricted reciprocity. It goes without saying that had the right hon. gentleman thrown down the customs barriers which then existed and which exist now between this country and the great nation to the south of us, the first step would have been commercial union, and the next step would have been political union. During all that time, while these anti-British policies were being advocated by the right hon. gentleman and his followers, the Conservative party, led by that grand, old, patriotic, loyal chieftain, Sir John A. Macdonald, said: We will have none of it. Sir John Macdonald consistently and persistently argued and preached the gospel that the destiny of this country was inseparably bound up with that of the motherland. It was upon that policy, upon that issue that he uttered those famous words: A British subject I was born, a British subject I will die. Imbued with these anti-British policies the right hon. the leader of the government passed over to the

most literary city upon the other side of the line, to the city of Boston, and he gave utterance to his opinion eighteen or twenty years ago. What was his opinion there? Were his opinions there such as, had they been carried out, would have led us to the position we occupy to-day as the brightest jewel in the British Crown, or were they such as, had they been carried out, would have made us an independent nation? I will quote what the right hon. gentleman said:

The conduct of England and Canada during the civil war of 1861-66 was a disgrace to the civilization of England and Canada. . . It is a great, a fatal mistake to make allegiance, British allegiance, the basis of trade. . . The present position of Canada cannot last, even at this day England and Canada have interests totally apart, and that the time will come when in the very nature of things separation must take place. I am a subject of the British Crown, but whenever I have to choose between the interests of England and of Canada, it is manifest to me that the interests of my country are identical with the interests of the United States of America.

Then, Sir, being subsequently twitted with these assertions by the hon. member for North Toronto (Mr. Foster) on the floor of this House, being asked if he still maintained these views, because there are occasions sometimes when a man will say in the heat of the moment and before a public audience perhaps what he does not really mean; but, when these statements were cast up to the right hon. gentleman on the floor of this House did he repudiate them? I say: No, and we will see what he said on the floor of this House. He said:

He (Mr. Foster) speaks as if Canada were to remain for ever a colony. Light as our dependence may be on the mother country, that dependence is not to remain for ever. If we were to admit that, if we were to say that we were always to remain in a dependent condition we would be the scorn of the world and it would be scorn well deserved. . . It is the destiny of the colonies to become nations as it is the destinty of a child to become a man, and while no doubt the idea of separation from the motherland causes a pang in the heart no doubt of every one, yet there is not a child who leaves his father's house who does not do so without a pang if his heart is in the proper place. . . I have again and again repeated that the goal of my aspiration is the independence of Canada, to see Canada an independent nation in course of time. If we were true to our record we will again exhibit to the world, the unique, the unprecedented example of a nation achieving its own independence by slow degrees and as naturally as the severing of the ripe fruit from the parent tree. . . The Minister of Finance reproached me a moment ago, that I had stated at Boston that the Canadian people had commercial interests different from the British people. Sir, I said so in Boston and I say so now on the floor of this House.

That was the policy advocated by the right hon. gentleman away back in these days. Let us follow him down to the present day. The next instance that arose to elicit an expression of the right hon. gentleman's imperialism was the South African war. Remember, he has just a few days ago said on the floor of the House: 'I do not pretend to say that I am an imperialist,' and that is the frankest admission we have had from him so far. Now, when the trouble broke out in South Africa, when little New Zealand was the first to make her offer to send troops to assist the motherland, when Australia and all the other colonies followed suit, men were wondering what was the matter with Canada and the answer from the right hon. gentleman was: 'I do not think I can send troops to South Africa, I do not think I have the power.' But, the newspapers of this country reflected public opinion, and to them great credit is due, and I particularly mention the Montreal 'Star,' because the Montreal 'Star' sent telegraphic despatchees to the mayors of every city and town in the Dominion with the purpose of ascertaining the true sentiment of the Dominion, and the practically unanimous answer was: By all means send troops to South Africa and assist the mother country for there may come a day when we ourselves will need just such assistance. From the confines of the two oceans there started a great wave of patriotic loyal sentiment gathering force as it went along, until finally it thundered against the doors of this parliament, and then and then only the right hon. gentleman awoke from his imperial slumber to find that he could do what he before said it was impossible to do under the constitution, namely send a contingent to South Africa. He realized then that the question was of such magnitude that if there was not a precedent, Canada was bound to create a precedent, and I say Sir, at the present time if there is no precedent for what the Conservative party propose should be done, we are bound to create a precedent. So that whatever credit or prestige and advantage which Canada obtained from her participation in the South African war is not due to the right hon. gentleman himself, but to the patriotism, loyalty and devotion of the Canadian people, and to that irresistible wave of loyal sentiment which passed over this country and which forced the right hon. gentleman against his own convictions to send Canadian troops to South Africa. We now pass to the imperial conference of 1907. Up to that time the right hon. gentleman was free to act as he chose; if he were an imperialist and desired to do something which would show his practical interest in the motherland and his desire to contribute towards the defence of the empire he could have moved

in that direction at this conference. But, not only did he not move, but he took a step which clearly expresses the sentiment which he himself has stated a few days ago in this House, namely: 'I do not pretend to be an imperialist.' What occurred at that conference? Dr. Smart introduced a resolution. If that resolution had said that the overseas Dominions must contribute in a certain manner; if the resolution had said: You must give so much money, or you must build a local fleet, or you must give two 'Dreadnoughts' to the British navy, there might be some excuse for the right hon. gentleman not agreeing with the resolution. But, the resolution was so fair and so reasonable that I shall read it:

That this conference, recognizing the vast importance of the services rendered by the navy to the defence of the empire and the protection of its trade, and the paramount importance of continuing to mainain the navy in the highest possible state of efficiency, considers it to be the duty of the dominions beyond the seas to make such contributions towards the upkeep of the navy as may be determined by their local legislatures—the contributions to take the form of a grant of money, the establishment of local naval defence, or such other services, in such manner as may be decided upon after consultation with the admiralty and as would best accord with varying circumstances.

That is the resolution and it says in effect, that it is the duty of the different portions of the empire to do what they may deem the best in the way of a contribution towards assisting the motherland in the imperial defence, and yet the right hon. gentleman dissented and said he would have nothing to do with it. It is in line with the sentiment he expressed in the House the other day when he said: I am not an imperialist. Well, matters remained in that position until something occurred and when that something occurred did the right hon. gentleman act on his own volition? No. The hon. gentleman from North Toronto (Mr. Foster) put upon the order paper a resolution, which said in effect: it is time we should do something towards assisting the motherland in relieving her of the burden of defence. It was a move from this side of the House, and following it came the emergency and the pressure of public opinion again. The newspapers, reflecting public opinion, showed that Canadians believed that Canada must do something to assist the motherland in the crisis, and under pressure the right hon. gentleman consented to the adoption of a resolution having for its object the giving of a contribution to the motherland for the purpose of assisting in the defence of the empire. That resolution was passed in March, 1909, and the right hon. gentleman sent over delegates to the conference in the old country and they brought back the proposition which we have before the House. When he submitted that proposition to the parliament in the first place he said: This navy shall not go to the assistance of Great Britain until the parliament of Canada is called. Again public opinion as expressed in the press demonstrated that the people of Canada would not stand for that, and when the right hon. gentleman came before us next time his declaration was: This navy may go to war and parliament need not be called but it shall not go to war until this government says it shall, and if it does go to war then parliament shall be called. To that extent he receded from his former position, but he gave way mightly little, because it simply means that if the right hon. gentleman sits still, as he did in the South African war, if he does nothing, as he said he would have done in the case of the Crimean war, then nothing is done and parliament is not called and Canada does not go to the assistance of the empire. I would like to put this proposition to the right hon. gentleman: Suppose Great Britain took the same stand he has taken; suppose Great Britain said to us exactly as he has said to Great Britain I do not pretend to be an imperialist, the inevitable conclusion is that if Canada should get into difficulties we would not or could not expect to receive one particle of assistance from the motherland. Now, what is the position of Australia? The other day when our honored leader was making some remarks, on the position Australia had taken with reference to her naval unit, the Minister of Militia rose in his seat and said, that from the report contained in the imperial conference it appeared that the Australian parliament had to consent to its fleet going to war before it could go to war. Am I right in that? At any rate while I do not pretend to be as familiar with this question as the hon. Minister of Militia is, I take it that the passage to which the Minister of Militia refers is that contained at page 57 of the imperial conference report:

In peace time and while on the Australian station this fleet unit would be under the exclusive control of the Commonwealth government as regards their movements and general administration, but officers and men should be governed by regulations similar to the King's regulations, and be under naval discipline, and when with vessels of the Royal navy, the senior officer should take command of the whole. Further, when placed by the Commonwealth government at the disposal of the admiralty in war time, the vessels should be under the control of the naval commander-in-chief.

Now, because this memorandum says that the Australian fleet unit may in war time be placed by the Australian Commonwealth at the disposal of the admiralty,

the hon. Minister of Militia says that the parliament of the Commonwealth must first consent to its being placed on actual war service, if I may so put it. What I say is that that means when so placed in the manner mentioned in paragraph 8 of the memorandum submitted by Australia to the conference, which paragraph is to be found at page 5, and reads thus:

8. In time of war or emergency or upon a declaration by the senior naval officer representing British government, that a condition of emergency exists, all the vessels of the naval force of the Commonwealth shall be placed by the Commonwealth government under the orders of Lords Commissioners of the admiralty. The method by which the vessels shall come under the orders of the senior naval officer would be by furnishing each commander of an Australian vessel with sealed orders and instructions (to) the effect that upon the declaration to him by the senior naval officer representing British government that a state of war or emergency exists, such sealed orders shall thereupon be opened, and, in pursuance of their provisions, he shall thereupon immediately place himself under the orders of the senior naval officer representing the British government.

Now, to prove that that is correct, I read the next paragraph, which states the only exception made to that provision:

It is, however, to be understood that if the services of any of the coast defence vessels be desired in seas remote from Australia, the approval of the Commonwealth government shall first be obtained to their removal.

In other words, the approval of the Commonwealth government is not to be first obtained for the service of any vessels except coast defence vessels. An armoured cruiser is not a coast defence vessel, it is intended to go on the high seas and make an aggressive movement. Therefore, the hon. gentleman is not right in his contention that the assent of the Commonwealth government is to be obtained before the Australian unit can be used in the defence of the empire, because the memorandum which was placed before the conference by Australia says that in case of war it shall be immediately placed under the command of the senior officer of the admiralty.

I sometimes wonder whether hon. gentlemen on the other side of the House really understand the meaning of this Bill. As I understand, the right hon. leader the government's position is that this is purely a voluntary gift on the part of this country, and that we may accompany it with any conditions we choose. The right hon. gentleman says, I will not now agree to trust to Great Britain for one hour as to whether or not we shall assist her in case of war; I reserve to myself the absolute right and privilege of saying, after the war has commenced, whether it is such a war as I can countenance, and whether, in view of the circumstances, I can come to the assistance of the mother country. I say that that position taken by the right hon. gentleman is a less loyal and less patriotic position, and displays less trust and confidence in the motherland, than the position of an ordinary independent ally, who says: In case of war I will trust you and come to your assistance. Here is the position of Japan in the treaty made with Great Britain five years ago and which is in force to-day:

The governments of Great Britain and Japan, being desirous of replacing the agreement concluded between them on the 30th of January, 1902, by fresh stipulations, have agreed upon the following articles, which have for their object—

If by reason of unprovoked attack or aggressive action, wherever arising, on the part of any other power or powers, either contracting party should be involved in war in defence of its territorial rights or special interests mentioned in the preamble of this agreement, the other contracting party will at once come to the assistance of its ally, and will conduct the war in common, and make peace in mutual agreement with it.

Here is Japan, on the 12th of August, 1905, going to Great Britain and saying: I have enough trust and confidence in you now, that for the period of ten years I am going to bind myself, if you become involved in war at any time during that period, to come to your assistance. In that respect I say the proposition of the Prime Minister is less loyal and less patriotic than the position of Japan in that treaty. The right hon. gentleman charges us with bearing imperial phylacteries on our brows and walking boldly into the temple and there proclaiming that we are not as other British subjects are. I can only say that we are willing to go into the temple and proclaim that we are not as other British subjects are if that is the kind of imperialism with which right hon. gentleman is imbued.

Now, let us come to the question of emergency; and I want to point out that in the Bill before the House, and in the speech he made on that Bill, the right hon. the Prime Minister has entirely overlooked the circumstances which have brought that Bill to this House. That Bill would not have been before this House to-day, I venture to say, unless a condition of emergency had existed in Europe; and yet the right hon. gentleman, in bringing the Bill into the House, totally disregards the very reason for that Bill, by failing to make any provision whatever for the emergency which has caused it. He admits himself that it will be five years—I venture to say that it will be ten years—before a single ship of the Canadian navy will be completed, equipped, manned and ready to do her part in active service. According to the best experts in Europe the crisis is going to come within the next ten years, and we are making no provision to meet

it, although it is the very reason for this Bill being before this House. By an emergency I do not mean a present actual crisis. I mean a condition of things which, if allowed to proceed in the manner determined upon, will eventually and inevitably lead to the destruction of that which is all-essential, both to ourselves and to the British empire, the supremacy of the British navy at sea. If we find a condition of things existing to-day which, if allowed to continue, will bring us to that culmination, I call that an emergency, and it is upon that I propose to make my argument now. Let me point first of all to this fact, that ten years ago the German nation decided that they should have a very powerful navy. A Bill was brought into the Reichstag appropriating $1,000,000,000 for the purpose of starting their naval programme. Since that time they have not only kept up that programme, but have accelerated it by increasing the appropriation by $500,000,000, part of it in 1906 and part in 1908. Since that time there has arisen in the Reichstag what is known as the 'Expansionist party,' who are in favour of increasing German armaments. We know they are increasing German armaments. We know that the German nation is to-day increasing in population at the rate of about 900,000 every year. I do not mean to say that the German people are not right in taking the stand they do. If by their sacrifice, their perseverance and their energy they are able to place the German fleet on a par with the British fleet, they have a perfect right to do so, and looking at the matter from their standpoint, it is a credit to them that they do so. At the same time the same reasoning applies to us; and if we are weak enough to allow them to do that we have nobody to thank but ourselves.

Now take the German construction; compare the German construction to-day with the German construction ten years ago, and what do we find? We find that the German construction to-day is $36,000,000 more than it was ten years ago. The British construction to-day is only ten millions more than it was ten years ago. The total annual naval expenditure of Germany has increased in the last five years by $47,000,000. The total annual naval expenditure of Great Britain has increased only $10,000,000. Then we have this very significant fact that by reason of the advent of the Dreadnought type of armoured cruiser, all types prior to that have been practically relegated to the scrap heap. We have the authority of the Rt. Hon. Reginald McKenna, First Lord of the Admiralty, for that statement. He said in the imperial House of Commons:

> There will come a day when, by an almost automatic process, all ships of an earlier type than the Dreadnought will be relegated to the scrap heap. The maintenance of our superiority then will depend upon our superiority in Dreadnoughts alone. The German power of constructing this particular type of vessel is at this time almost if not fully equal to our own, owing to their rapid development within the past eighteen months.

If that is the case, it means that the greater part of the German navy will be essentially more powerful than the British navy, because the greater part of the German navy not being as old as the British navy will be constructed of the modern type.

I wish to refer to a speech made by the right hon. the Prime Minister in Toronto not long ago, I think on the 6th of January, 1910. He said:

> However, in the province of Ontario another position is taken—I will not say by the whole of the Conservative party—that we should make at once a contribution to the British navy, that we should contribute at once, one to three Dreadnoughts, that we should contribute at once thirty million dollars. The cause, they say, for this urgency is that danger is imminent for Britain. Danger? Where is it coming from? They tell us from Germany. Let us look at this. We know that the displacement of the British navy is nearly two million tons, and that of the German navy is six hundred thousand tons. In 1912 the British navy will have a displacement of more than two million tons, and the German navy one of about a million tons. So that the disparity is too great to say that danger is imminent.

The right hon. gentleman brushes aside the question of emergency with the statement that because in 1912 the German navy will have a tonnage of only 1,000,000 tons, whereas the British navy will have a tonnage of 2,000,000 tons, therefore, the question of emergency cannot arise. I would point out to the right hon. gentleman that according to his own statement there will be a difference of 400,000 tons between the German navy now, and the German navy in 1912. That means that in the space of two years Germany will have added to her navy 400,000 tons. Divide that into Dreadnoughts, that is by 20,000 tons, and it means 20 Dreadnoughts. Now, supposing I cut off 25 per cent of that and make it 15, it will mean that Germany will have 15 Dreadnoughts built in the next two years. Then I take the statements of the Rt. Hon. Mr. McKenna, First Lord of the Admiralty, and the Rt. Hon. Sir Edward Grey, who say that if you build 15 Dreadnoughts you must relegate to the scrap heap all of the pre-Dreadnought type, and so the 400,000 tons which the Germans will add to their navy in the next few years will be worth four or five times the same tonnage of the old obsolete British warship. It is not tonnage that counts, it is the class of vessel, the range of guns, the protection of the cruiser,

and last but not least, the efficiency of officers and men. We have abundant illustrations of that. It was not because the Russian fleet in the Japanese sea was so inferior in tonnage, it was not inferior, but it was that the Japanese fleet was modern, up to date and equipped with modern guns. That battle as we know lasted only forty minutes. It was not that the tonnage of Spain was so inferior, it was the superior guns and arms and the efficiency of the officers and men of the United States navy that sent the Spanish fleet to the bottom of the sea in a few minutes. So it is no argument to say that because the tonnage of the British fleet is greater than the tonnage of the German fleet there is no danger of war. The tonnage of the German fleet may be only half that of the British fleet, and still it may be a more eective fighting force than the whole British fleet.

Let us see what authority there is for the statement that there is an emergency. I do not think it is fair to the people of Canada for the Prime Minister and the Postmaster General to brush aside in a light manner, and with the levity displayed by them on this occasion, the question of emergency. Let us see what the greatest authorities in England themselves think of the emergency, let us take the opinion of men who know what they are talking about and who have given this matter serious consideration. You have heard our leader, in his speech on the second reading, state that Mr. McKenna had said in the House of Commons that all vessels prior to the Dreadnought type would be obsolete in a very short space of time and would have to be relegated to the scrap heap, and that Germany's power of construction is almost equal to our own. You have heard it stated that when the German programme is carried out she will have 33 Dreadnoughts, the most powerful fleet in the world, and as to the necessity of the entire rebuilding of pre-Dreadnought fleets. You have heard the Liberal Prime Minister (Mr. Asquith) admit that by 1912 Germany would have at least 13 Dreadnoughts ready for service. I propose now to give you some information given prior to the British elections. I do not propose to read, as the Postmaster General did, any utterance of the statesmen of Great Britain during the elections. Three months after the British House of Commons closed, at the Imperial Press Conference in June last, Lord Rosebery said: '

> Now gentlemen, you will forgive me if I come next and at once to what is by far the most vital topic that you will have to discuss at this conference, or which concerns our empire as a whole—I means that of imperial defence. (Cheers.) I do not know that in some ways I have ever seen a condition of things in Europe so remarkable, so peaceful, and in some respects so ominous, as the condition which exists at this moment. There is a hush in Europe, a hush in which one might almost hear a leaf fall to the ground. There is an absolute absence of any questions which ordinarily lead to war. One of the great empires which is sometimes supposed to menace peace is entirely engrossed with its domestic affairs. Another great eastern empire which has furnished a perpetual problem for European statesmen has taken a new lease of life and youth in searching for liberty and constitutional reform. All, then, forbodes peace, and yet, at the same time, combined with this total absence of all question of friction, there never was, in the history of the world, so threatening and overpowering a preparation for war. That is the sign which I regard as most ominous. For forty years it has been a platitude to say that all Europe is an armed camp, and for forty years it has been true that all the nations have been facing each other armed to the teeth, and that has been, in some respects, a guarantee of peace. And now what do we see? And now, without any tangible reason, we see the nations preparing new armaments. They cannot, indeed, arm any more men upon land, so they have to seek new armaments upon the sea, piling up this enormous preparation, as if for some approaching Armageddon. And yet this is in the time of the profoundest peace. We live in the midst of what I think was called by Petrarch a 'latens bellum'—a silent warfare, in which not a drop of blood is shed in anger, but in which the very last drop is extracted from the body by the lancets of the European statesmen. I admit there are features of this general preparation for war which must cause special anxiety to the friends of Great Britain and of the British empire.
>
> When I see one country alone asking for 25 millions of extra taxation for warlike preparations; when I see the unprecedented sacrifices which are asked from us on the same grounds, I do begin to feel uneasy as to the outcome of it all, and to wonder where it will stop. . . . Gentlemen, we can and we will build 'Dreadnoughts' or whatever the newest type of ship may be as long as we have a shilling to spend on them or a man to put into them. All that we can and will do, but I am not sure that even that will be enough, and I think it may be your duty to take back to your young dominions across the seas this message and this impression: that some personal duty and responsibility for national defence rests on every man and citizen of the empire. Yes, gentlemen, take that message back with you. Tell your peoples—if they can believe it—the deplorable way in which Europe is relapsing into militarism and the pressure that is put upon this little England, to defend itself, its liberties—and yours! But take this message also back with you—that the old country is right at heart; that there is no failing or weakness in her; and that she rejoices in renewing her youth in her giant dominions beyond the seas. For her own salvation, she must look to herself, and that failing her she must look to you.

I cannot add anything to that. But I will quote now the opinion of Sir Edward Grey, who, as you know, is foreign secre-

tary. He spoke at this same conference. This was after the British parliament rose last March, and I may say that all these speeches were revised by the speakers themselves, except that of Right Hon. Arthur J. Balfour, as stated in the preface of this Imperial Press Conference report itself, so that these are matured and clear expressed opinions of these eminent gentlemen:

Take the question of expenditure upon armaments. The other day, when we expressed our views of how serious the expenditure on armaments was becoming, there came at once, and in a way which admitted of no mistake, a response from other parts of the empire which made us feel that the empire beat with one heart. I would refer for a moment—merely to emphasize it—to the serious way in which Lord Rosebery spoke the other evening on this subject. I endorse every word he said. We are in comparatively calm weather, not in stormy weather, in foreign politics at the present moment, but the excessive expenditure on armaments makes the weather sultry. And the seriousness of that expenditure cannot be over-rated; but you should know to-day how conscious we are at home that we have far too much at stake to allow our naval expenditure to fall behind, however great the burden, and you from beyond the seas have made it clear to us how great the resources of the empire are. In upholding the empire surely we are going more and more towards the ideal to which Mr. Kirwan referred in his speech yesterday —of a union of allies—of self-governing dominions.

Then, Right Hon. Reginald McKenna, First Lord of the Admiralty, speaking at the same conference, said:

We look to the future and we see growing difficulties surrounding our empire. We foresee possibilities in which we should be called upon to unite our whole strength in a common defence.

Right Hon. Alfred Lyttleton, who was colonial secretary in the previous government, said:

Well, my belief is, the actual position, the actual situation of affairs at this moment is different from that which it has been since the battle of Trafalgar. We are in the presence for the first time of powers equal to ourselves in wealth, equal to ourselves in mechanical skill and efficiency, equal to ourselves in national self-consciousness and aspiration, unhappily superior to ourselves in population. As these things stand, unless fortune takes some unusual turn, I believe that Lord Rosebery spoke the absolute truth, and I was delighted to hear Sir Edward Grey on this occasion endorse what he said—that this country may always be relied upon to spend her last shilling if it is necessary for her own defence and for the defence of the empire, but that a time might come when it would be necessary for her own safety and for their own safety that the dominions over seas should assist her in a tremendous struggle. I firmly believe myself that the ultimate destiny and fate of this empire will depend—

must depend—upon the achievement of a really closer and more consolidated unity and a more perfect organization of defence.

Now, I will take the speech of the Right Hon. Mr. Balfour, which appears at page 170 of the report of this Press Conference:

The fate of Australia, the fate of New Zealand, of Canada, South Africa, India, that is not going to be decided in the Pacific; it is not going to be decided in the Indian ocean; it is going to be decided here—and everybody who attempts to read the signs of the times will, I think, agree with the weighty words which fell from Lord Rosebery less than a week ago, and from Sir Edward Grey yesterday, and will recognize that no man can now speak on this subject of imperial defence without some note of anxiety in his voice. Not panic! There is no question, gentlemen, of panic, but we all have to look around us at the gathering forces, the arrangement of possible foes, the strategic import of possible combinations—we have got to look at them, not with a frightened but with a careful eye and, so looking at them, everybody, I think, will be impelled to recognize that the language of the foreign secretary—unusual, let me say, in the mouths of foreign secretaries—does not go beyond the necessities of the situation.

Now, take the great military authority, Lord Roberts, who is reported at page 179 of the report of this conference as saying:

Recent events, however, prove conclusively that a new era has commenced, and that our whole empire may again have to fight for its own, as the people of these islands have many times had to do in the past. The question is: Are we prepared to do this? Fleets and effective armies cannot be improvised to meet the rapid movements of modern times. Nothing but forethought and preparation, extending over years, can give us a naval or military strength which may be relied on in any great emergency, and which is in itself the greatest guarantee of that peace which we desire and need more than any other nation. I think I know what your main difficulty will be. It is not easy to convince the mass of the people in this country of the existence of real danger. It may be even less easy to convince the populace of colonies that have enjoyed for a century protection, which has given them security from attack, that real dangers threaten them also. . . The growth of the colonies in wealth makes them more and more objects of envy to nations which do not possess such valuable areas of the world. So, if we are to be secure, we must stand side by side in common effort and common sacrifice.

I will give only one more authority. I quote from the speech of Admiral Beresford, delivered in July last:

The first grave warnings that came before the public came from the lips of the Prime Minister and the Foreign Secretary, and those of the foreign secretary were even more serious than the Prime Minister. These warnings were often repeated by those respected and esteemed statesmen, Mr. Balfour and Sir Edward Grey. Sir Edward Grey considered the situation so grave and serious that

we must rebuild the whole fleet. In those words I agree, and I will endeavour to prove the Foreign Secretary was right.

And, after all this, we have the word of the right hon. Reginald McKenna, the Foreign Secretary Sir Ed. Grey and the Premier Mr. Asquith spoken in the House of Commons itself. After all these opinions, we come back again to the First Lord of the Admiralty speaking on July 26, 1909 in the House of Commons:

> After very anxious careful examination of the conditions of shipbuilding in foreign countries, the government have come to the conclusion that it is desirable to take all necessary steps to ensure that the second four ships referred to in the programme shall be completed by March, 1912.

Now, I do not ask you to accept my word, but I say that we are bound to take the opinion of these gentlemen who know what they are talking about in preference to the opinion of the Postmaster General (Mr. Lemieux) and the right hon. leader of this House (Sir Wilfrid Laurier). We find the Postmaster General stating this in his speech the other evening:

> But we all know that this German scare exists only in the imagination of party politicians. It was started by the party press of Great Britain, controlled by Lord Northcliffe, and was written up during the elections by the well-known Socialist, Mr. Blatchford, in the pay of a certain party in Great Britain.

Well, does the Postmaster General honestly think that Sir Edward Grey, Lord Roseberry, Right Hon. Mr. Balfour, Prime Minister Asquith, Right Hon. Mr. McKenna, the first Lord of the Admiralty, Lord Roberts, probably the greatest military authority in the world, and Lord Charles Beresford, the greatest naval authority in Great Britain—does the Postmaster General really say now, after hearing the words of these gentlemen, that this scare was started for party purposes? But, in order to justify himself the Postmaster General goes on to say that the result of the British elections has answered the war scare.

By what manner of mathematical computation does the Postmaster General conclude that the British elections have answered the war scare, that the British elections do not show a popular belief in the existence of an emergency to-day? Take it any way the hon. gentleman chooses and he cannot show that. According to the press reports that have come back to this country, within the last few days his contention is not correct. Now, what do we find? The latest cable reports disclose that, excluding only those Irish constituencies in which a Nationalist was running against a Nationalist, or a Nationalist against a Unionist, the result of the polling in Great Britain shows that the Socialists, the Liberals and the Labourites and Nationalists together obtained 2,847,893 votes, and the Unionists 3,080,072. So the whole electorate of Great Britain voted by a majority of 235,000 that there is something wrong with the administration of the admiralty of Great Britain. They have said by a majority of 230,000 that there is an emergency. But I will take as further proof the candidature of Lord Charles Beresford himself, and every body knows that he was and is a very vigorous exponent of the defects in the government's navy policy. It was in consequence of his advocacy that the British government accelerated its naval programme. Lord Charles Beresford condemned the government for the inaction they had taken, as I have before pointed out and further, he said: We should spend $275,000,000 to $300,000,000 to increase the navy, and he went to the country upon that platform, and what was the result? He went to the constituency of Portsmouth where he and his running mate advocated the policy I have outlined, and what was the result? Not only in Portsmouth, but in the surrounding British cities on the coast opposite the continent of Europe the electors spoke. In Portsmouth they converted a government majority of 4,796 into an opposition majority of 7,575. The Postmaster General must not forget that the issue which Lord Charles Beresford presented to his constituents was the naval question almost exclusively, and upon that issue the people said by a turn over of 12,000 votes, we agree with him. In the two Davenport seats there was a reversal of 3,722 votes. In the three Bristol seats a former Liberal majority of 10,440 was changed to a minority of 3,338. In West Bristol the Unionist majority of 365 was increased to 1,278. In Plymouth a Liberal majority of 2,857 was pulled down to 311. The government's majority in Southampton was curtailed, while the Unionist vote in Dover was increased. So wherever the test was applied upon the naval question, and the necessity of maintaining naval supremacy, the British electorate said in an unmistakable manner: We believe there is a crisis, and we believe the navy of Great Britain ought to be strengthened.

Now, what is the best means of strengthening the navy of Great Britain? I think I have proved that there is an emergency, I think I have shown a condition of things which, if not remedied, will culminate in the overthrow of British supremacy at sea. That being the case, what is the best means of meeting that emergency? Let me quote what Mr. Balfour says upon that question. On page 167 of the proceedings of the imperial press conference, 1909, Mr. Balfour expressed himself in this manner:

> I think it is desirable and necessary that each of the self-governing constituents of the empire should consider whether it ought not, whether it must not, provide both land and sea forces to prevent raids, to prevent insults

to their ports, and to see that they do not fall an easy prey to the first comer. But after all, gentlemen, local defence, though it be necessary, is really subordinate to imperial defence, and it is subordinate from the point of view of the localities themselves, not merely from the point of view of the empire as a whole. The individual constituents of the empire never can be safe, never can be powerful enough, never can be strong, whatever their local defence be, if that defence is only local. On the other hand, a serious menace to their independence is, I believe, quite impossible as long as the imperial system of defence is adequate, as long as we retain, as I hope we shall ever retain, that maritime predominance which is the very condition of our being.

Again at page 169:

The fate of the empire is not going to depend on that. The fate of the empire is going to depend upon the fleet power that we can bring against other fleet power, and that gives, if I may say so, to this country and to this quarter of the world, a strategic importance which otherwise it might not possess. We must—we inhabitants of these islands—we must for many years to come bear the main burden of imperial defence, because we are the largest population at present, and at present the wealthiest portion of the empire. We shall bear that burden cheerfully. But in addition to that reason for our special and peculiar position in the system of imperial defence, there is another depending on purely strategical and geographical considerations. If I am right—and I think all will agree I am right—that the fate of the empire depends on fleet superiority, that superiority must be shown in home waters. The German ocean, the channel, the neighbourhood of these islands, possibly the Mediterranean—those are the places at which, if there is to be an Armageddon, the Armageddon will take place, and it is folly for us to attempt, to dare, to dissipate these fleet constituents, so that when the time of crisis arises we shall not be able to have that concentration upon which our whole imperial destinies, and the destinies of each separate portion of the empire, really and substantially depend.

Now let us see what Mr. McKenna the First Lord of the British Admiralty, says upon this question of concentration. He says:

You will have your own views as to the proper development of defensive forces in your dominions. It is only by your working out your problems for yourselves that you can ever gain the experience which we have had to gain, and lessons that were told you from the experience of others would never come home to you with the same force as lessons that can be learned for yourselves, even though you have learned them through your own mistakes. We will assist in every way in our power, and whatever be the method by which we are asked to assist. And we are sure that in the long run out of this process of self-development every dominion will come ultimately to the same conclusion, that the naval problem of defence is one and the same the whole world over, and that the maintenance of supremacy in all seas alike.

Mr. MIDDLEBRO.

Now let us see what Sir Edward Grey, Britain's Foreign Secretary, says:

The navy is the common security of the whole empire. If it ever fails to be that it will be of no use for us to discuss any other subjects, and the maintenance of the navy in that position, therefore, must be the first care, not only of us at home, but of the self-governing dominions beyond the seas.

Can there be any doubt then as to the opinion of these eminent gentlemen upon that point? But, because the right hon. the Prime Minister the other day quoted the opinion of Lord Milner with respect to the question of local defence, I will now quote from a later speech made by Lord Milner on the 20th of April, 1909:

It is a real imperial navy, a navy constituted by the combination of the forces of the self-governing colonies, forces organized at the outset on a common pattern and controlled ultimately, as I hope, by a common authority. That is the goal towards which we should ultimately strive.

That being a later speech than the Prime Minister quoted, I think it would carry greater weight. Now let us see what the British admiralty themselves suggest as to the best means of meeting the emergency. Take first what is contained in the report of the imperial conference last July and I will read from page 23 to see whether this government have followed the suggestions of the admiralty:

In the opinion of the admiralty, a Dominion government desirous of creating a navy should aim at forming a distinct fleet unit; and the smallest unit is one which, while manageable in time of peace, is capable of being used in its component parts in time of war. Under certain conditions the establishment of local defence flotillas, consisting of torpedo craft and submarines, might be of assistance in time of war to the operations of the fleet, but such flotillas cannot co-operate on the high seas in the wider duties of protection of trade and preventing attacks from hostile cruisers and squadrons. . . . The fleet unit to be aimed at should, therefore, in the opinion of the admiralty, consist at least of the following: 1 armoured cruiser (new 'Indomitable' class, which is of the 'Dreadnought' type), 3 unarmoured cruisers ('Bristol' class), 6 destroyers, 3 submarines.

Then at page 25:

As the armoured cruiser is the essential part of the fleet unit, it is important that an 'Indomitable' of the 'Dreadnought' type should be the first vessel to be built in commencing the formation of a fleet unit.

In not one single one of these respects have the government followed the suggestions of the admiralty. They have not followed the suggestions of the admiralty as to a contribution which, if they were looking at the matter from a purely strategical standpoint, would be the best way of assisting to imperial defence. I do not blame

the government for not doing that, because I am not in favour of a fixed and stated compulsory contribution towards the maintenance of the British fleet. The next request is: If you will not do that, give us a fleet unit having at its head one of the most modern armoured cruisers of the Invincible and Dreadnought type. Have they done that? No, they have shorn the fleet unit of that which gives it its imperial aspect and that is the armoured Dreadnought. The little colony of New Zealand did follow the advice of the admiralty; she did give a Dreadnought. The Commonwealth of Australia did follow the advice of the admiralty, and she did give a fleet unit. Canada is the only colony that did not follow the advice of the admiralty. We gave neither a contribution, nor a fleet unit, nor a Dreadnought. In that respect we have neither followed the advice of the admiralty, nor that of the best men in the motherland who know what they are talking about and who say that we should at least contribute a fleet unit. Now, what have we got? We have got, or we are going to get, or it looks as if we were going to get, four Bristols, a Boadicea and some destroyers and submarines. The four Bristols that we are going to provide do not equal in tonnage, the one Dreadnought which we should have given. The four Bristols are not equal in fighting capacity to the one Dreadnought that New Zealand is giving, because the Bristols have only a tonnage of 4,800 tons as compared with one Dreadnought with a tonnage of 20,000 tons. There is no comparison between the guns of a Dreadnought and the guns of a Bristol. A Dreadnought will stand out there in the ocean while the four Bristols dare not go within firing distance. She is absolutely impregnable to the attack of a vessel of the Bristol class. Practically the only thing that the Bristol is good for is to act as a scout and see that the enemy is coming, and, if the enemy is coming. get out of her way as quickly as she can. Let us see exactly where we are. The minute that this fleet proposed by the right hon. gentleman comes into view the absence of an armoured head in the shape of a Dreadnought means: 'I do not pretend to be an imperialist.' 'Res ipse dixit.' The thing itself speaks. It says in effect: I do not pretend to be an imperialist, because the head and shoulders and fighting qualities of an imperial fleet have been lopped off by the right hon. gentleman. Notwithstanding this though the idea of the right hon. gentleman, according to his speech, was that in case of danger, from all points of the earth, the fleets of the colonies would rush upon the common enemy. We will suppose that the Armageddon has arrived. The call goes to Australia and up comes her fighting fleet unit with its armoured head; the call goes to New Zealand and up comes its Dreadnought with its 20,000 tons armoured Dreadnought capable of putting our four Bristols out of commission. Then the call comes to Canada and up slinks her four unarmoured cruisers of the Bristol type to take their places in the battle line. We see Australia and New Zealand in the fore front, but where do we see Canada? We hear the officer in command of the naval squadron saying: Where are the armoured cruisers of Canada, where is the portion of the fleet which is going to do service on behalf of the empire?—and the answer of Canada is: It is here. Where are Canada's Dreadnoughts? Not here. Where is the balance of the fleet; where are the Bristols? The answer is: They are not here, either; they have slunk behind to get out of danger. Well, they cannot take any part in the battle. They are no match for Dreadnoughts, and because we cannot afford to waste the fighting power of our Dreadnoughts in their protection, they had better go back at 25 knots an hour from whence they came. If that Armageddon results in British victory they will be safe from further attack; but if the Armageddon results in disaster to our naval supremacy, then the victor will come to the shores of Canada and our fleet will have to show its heels at the rate of 25 knots an hour until it can show them no longer. But, as a matter of fighting force and efficiency in the defence of the empire these four Bristols are actually a negative quantity and, as our leader has said, in time of war, they are positively a danger and they would be better to be as far removed from the fighting line as possible. Then, the Postmaster General, for some reason—I do not know why—gave us a list of eighteen independent nations and self-governing colonies which have a population of less than 10,000,000 that have navies of their own. His illustration would have been good, I admit, if he could have pointed to self-governing colonies that have navies of their own. I do not know whether it was a mistake or not, but the statement made by the Postmaster General was this:

> I have here a list of independent countries, and self-governing colonies, whose population does not exceed 10,000,000 people, and is in many cases less than that, who have navies of their own.

Then he gave a list of eighteen countries. On examining the eighteen countries he referred to as independent countries and self-governing colonies, I find that there is not a self-governing colony in the whole eighteen. If he cited that illustration for the purpose of proving that a self-governing colony ought to have a navy of its own, since there are no self-governing colonies in this list, the conclusion is that we do not need a navy; or, to put it in another way, we do need a navy because we in

Canada are going to be an indepedent nation. His illustration is absolutely without force unless he puts it on one of these two grounds, either that self-governing colonies have navies, and I have proved that there is no self-governing colony in this list, or that we are going to be an independent nation and need a navy.

Now, in conclusion, let me say that I have read very carefully the resolution which has been placed on the order paper by my honoured leader in amendment to the proposition of the government. I am thoroughly in accord with every proposition contained in that amendment. It repudiates the idea of non-imperialism and independence that pervades the whole policy of the hon. gentlemen opposite and also pervades the premier's speech in the introduction of the Bill. It makes provision for the impending necessities of the empire, which is the very reason that we are considering the Bill in question. It embodies the principle of effective co-operation on imperial lines, which is the only salvation of the empire, and, having satisfied the emergency, it gives the people the right to say what they shall do as to the permanent policy of this country with respect to naval questions. This is in line with the loyal, patriotic policy that has been advocated by the Conservative party within the memory of the oldest member of this House. So far as I know that policy is distinctively in line with the policy of the Conservative party on imperial matters. It is a policy which has for its hope and aspiration, not as the right hon. the Prime Minister says, that this country should sever its relations from the motherland as naturally as the ripe fruit falls from the parent tree, not that the goal of our ambition should be the independence of Canada, not that we as a child should leave the parent with a pang in her heart; not that, but it is in line with the idea that the undoubted position of this country should be that we should cultivate a sentiment of loyalty and devotion to the motherland, not only in ourselves but in those who shall succeed us, so that beyond all peradventure they will recognize that the destinies of this country are inseparably bound up with those of the empire. We have sufficient confidence and trust in the motherland to know that in her foreign policy she will always act in the same generous, magnanimous spirit which has actuated her in the past, and that she will never do anything that we need be ashamed of. We know that wherever the British flag floats order is restored, liberty is established, religious toleration prevails, education is fostered, and that peace, progress and development with their beneficial results inevitably follow in its wake. We know that the proudest boast of the Roman citizen in the days when the world acknowledged the supremacy of Rome was: 'Civis Romanus sum.' I am a Roman citizen, and if that was the proudest boast of a citizen of an empire far less great and noble than the British empire of to-day, how much prouder ought not we subjects of Britain be when we are able to say: 'Civis Brittanicus sum.' I am a British subject. But apart from all that there is this object lesson we ought to teach: That who ever meddles with the child meddles with the parent, and who ever meddles with the parent meddles with the child. That principle, Sir, is inconsistent with the declaration of the Prime Minister when he says: I do not pretend to be an imperialist. I say, Sir, that we cannot set a better example or precept than by passing the resolution proposed in amendment by my honoured leader, because its passage by this parliament will show the nations of the world that who ever meddles with the motherland must reckon with every part of the empire, and when that is thoroughly understood hostile nations will realize they are undertaking a herculean task. Let me conclude by quoting a few lines which I have taken the liberty to slightly paraphrase so as to adapt them to this phase of the question:

> Ye who would reckon with Britain,
> Ye who would sweep from the seas,
> The flag that Rodney nailed aloft,
> And Nelson flung to the breeze,
> Count well your ships, and your men,
> Count well your arms, and your guns,
> For they who reckon with Britain,
> Must reckon with Britain's sons.

Mr. F. L. FOWKE (South Ontario). Mr. Speaker, I regret that my necessary attendance at a meeting of a sub-committee of one of the committees of the House prevented me from having the privilege of listening to the opening sentences which fell from the lips of the hon. member (Mr. Middlebro). But, I came into the chamber in time to hear him attempt to define to this House the policy of the Liberal party and of the Liberal government, and I am bound to say that in that attempt I found the hon. gentleman in the position of one sparring with rather soft gloves. That is not surprising, however, in view of the fact that his restricted vision, owing to the political school in which he has learned his lesson and grown up in until this hour, prevents him from enjoying a proper appreciation of the life and purpose of the Liberal party in this great country. We are now in the last year of the first decade of the twentieth century, and during these ten years, and in fact for a bakers' dozen of years, the Liberal party has been in power in Canada under the leadership of the Rt. Hon. Sir Wilfrid Laurier, and, if the hon. gentleman

wants to know what is the policy of the Liberal party, I would refer him to the history of Canada during that period to which I have referred. Let him go to the statutes of this country, let him consider the marvellous development which has taken place in Canada in progressive legislation, in developing the natural resources of the country, in extending commerce, in attracting the attention of the British empire to our country; let him take into account the prominent place which Canada holds to-day, not only in the estimation of her own people, but in the estimation of the British public, and he will have something of a better definition before him of the life and labours of the Liberal party in Canada and the policy of that party as administered under the Prime Minister of to-day. Now, Sir, while Canada in one respect has a very short history, for our history proper began only in 1867 at confederation, we nevertheless have a history antedating that by some 300 years. And, let me say that if to-day we rejoice, as we have for some years past, in the possession of a free constitution—as free perhaps as that enjoyed by any people in the world—that constitution did not rain down from Heaven upon us. Sir, we have that constitution, and we enjoy it to-day because of the struggles of the Canadian people and largely because of the sacrifices of that portion of the Canadian people who have always been found within the bounds and limits of the Liberal party of Canada. Now, Sir, in this country we have had influences coming upon us from without as well as from within; we have not always had an easy course. We have gained our present position through stress and strain and struggle; we have had foes from without and sometimes enemies from within. 1776 is a date familiar to the members of this House as is 1812 and 1837-8 and 1866 and 1870, and the meaning of these dates have not been lost upon the people of Canada. Let me say, Sir, that because of the struggles, largely of those who stand as fathers of Liberalism in Canada we enjoy the free constitution under which the laws of this nation are being administered at this very hour, and one of the very distinctive principles of the Liberal party in the past has been that this nation should enjoy its freedom and autonomy within the empire and in the face of all the world. And, if to-day we stand as a growing and prosperous nation within the bounds of the British empire, no one presuming to dictate to us as to what our course shall be in any given particular, it is largely because of the fidelity of the Rt. Hon. Sir Wilfrid Laurier to these principles of Liberalism which are embodied in the lives of those who are known in history as the founders of the Liberal party. Now, Sir, the hon. gentleman (Mr. Middlebro) has undertaken to defend the loyalty of the Canadian people, and he has spoken in particular of the loyalty of His Majesty's opposition in this House, and by inference he has endeavoured to create the impression that the Prime Minister of Canada is lacking in a proper spirit of loyalty towards the mother country at this present time. Sir, that hon. gentleman (Mr. Middlebro) will find that the task of Mrs. Partington with her broom endeavouring to sweep back the waves of the ocean, was a very pleasant pastime indeed in comparison with the efforts that he or others may engage in to endeavour to convince the Canadian people that the leader of the Liberal party is anything but a devoted subject of King Edward, as he is to-day the first son of Canada. And in no single particular is that fact more brilliantly displayed than in relation to this very naval programme which is under discussion at this moment.

Now, Sir, what are some of the things which help to determine a nation's destiny? One of these things surely is the possession of a national purpose. Have the Canadian people a national purpose? I feel that they have, and that national purpose is to achieve greatness in this greater half of the greatest continent of the world, with the government of which they are specially charged, and to maintain those ties and connections which have always in modern times bound us to the throne of England, and bind us at this hour. It was only yesterday that we passed from a state of tutelage, from a system of authority to a system of liberty. It is only very recently that we have felt our feet as a nation, and have begun to feel that we have a right to exercise all the privileges, duties, and responsibilities of nationhood; and to-day we stand on our own feet, 'the heirs of all the ages in the foremost files of time,' and are willing to be judged on our merits. This is the spirit of the Bill submitted to the House by the premier. In the introduction of that Bill the other day by the premier, in a speech which I have no doubt will remain classic in the literature of Canada, which will be read by the youths of this country in days to come, when they wish to understand all the influences which led to the securing of a free constitution by this people, as the Gettysburg speech of Abraham Lincoln is read by the youth of the United States to-day, and will be prized most highly because of the manner in which it gives us a proper conception of the place and importance of this young giant nation of the north, not only in the discharge of its own internal duties towards itself, but in relation to the duties and responsibilities it feels towards the empire and towards the great world at large. We are very delighted to-day to feel that, as a result of the legislation of the admin-

istration of the day, we have a prosperous and growing country a country possessing a great foreign trade, a trade which is reaching out towards the east and towards the west, a trade which it will be the bounden duty of this country to protect as well as to foster and enlarge; and one of the great purposes in the construction of a Canadian navy to-day ought to be, that we are prepared to protect our own trade routes and our own coasts to assume the duties and responsibilities of nationhood in this regard; and in order to do that we accept the principle that we should on our own account commence the construction of a navy, that we should have navy yards of our own, that we should man that navy, and that the control of that navy should be subject to the will and authority of this Dominion. Briefly this is the attitude we assume in this regard. The hon. gentleman (Mr. Middlebro) spoke very eloquently of the place and importance of the British empire in the affairs of the world, and of what he regarded as our proper place in that empire. No one in this House will be at all inclined to dispute the fact of the greatness of the British empire, nor our share in that empire, but every one will rejoice in all that that empire has accomplished in the last three hundred years in propagating and protecting a grand and noble civilization in the various parts of the world where her interests are to be found. That British empire has grown and strengthened until to-day she controls probably one-fifth of the area of the world and governs probably more than one-fourth of the population of the world. We are not at all disposed to minimize the effect of the British empire as a great world force. If the hon. gentleman would desire that the British people should control the whole world, we have to admit that never in the history of this world has any one people been able to achieve that position; but we do rejoice that Great Britain has controlled the seas and the trade routes of the world, and for that reason has to a large extent controlled and dominated for their good the civilization of the various peoples of the world; and to-day, by the very purpose of the Bill before us we are planning not only to look after the interests of Canada, as we are bound to do, but also to manifest to Great Britain and to the whole world, that if there be any disposition to beard the lion in his den, to try issues with the British lion in his home, then we with the other colonies of Great Britain say that they certainly must expect to reckon with the lion's whelps as well. This is all included in the proposition brought down to us by the government of the day. Some one has said, and I think said very properly, that if you would know the times in which you live, you must know your Canada, your South Africa, your Australia and your New Zealand; and if you would know your Canada, your South Africa and your New Zealand, you must know the times in which you live; and it is a fact to-day, which no hon. gentleman will dispute, that the chief glory of Great Britain is regnant, not only in the power she must exercise over foreign affairs, but in the possession of overseas dominions which are loyal to her and part and parcel with her in all that goes to make up that which is best in human civilization in this twentieth century.

Now, I had no thought of trespassing at length upon the attention of the House in reply to the hon. member for North Grey; but I do not wish to let pass the opportunity for a brief discussion of the policy of hon. gentlemen opposite, as well as that of the third party, as submitted in the amendments proposed to the Bill before the House. One of the propositions is involved in the idea that instead of acting the part of a nation, and doing things in a national way, in a way that will be permanent—instead of establishing a navy of our own, we should out of hand grant to Great Britain two 'Dreadnoughts' at a cost of perhaps $25,000,000. I would like to ask on what theory is that suggestion based? Sir, it is based on no other theory than this, that at the moment the empire is in danger. And yet the hon. gentleman puts the danger ten years in the future; and some one has said that the life of one of the very Dreadnoughts which he would present to the British government at this time is only ten years at the most. So that by the time the boats would require to be put into commission they would have gone to the scrap heap.

We have all heard more or less of the German scare. Hon. gentlemen may entertain such opinions as they choose in relation to the truth or falsity of the German scare. For my own part I do not know why the German people should not be allowed to have a German navy as they have a merchant marine if they choose; and having made up their minds that as the Emperor of Germany expresses it, as in the case of Britain so for themselves, their future lies upon the water, why should their desire to have a navy then be understood as a menace altogether to Great Britain? Great Britain, I am willing to think, is abundantly able to take care of herself as her statesmen have very well demonstrated, but there has undoubtedly been a German scare, if that scare does not exist to-day. One year ago the German scare was rampant in Great Britain. I am sorry to believe that in Great Britain as in the republic to the south of us there is such a thing as yellow journalism. That

yellow journalism devoted itself to the work of creating a scare in the minds of the British public and some British people became susceptible to the influence of that yellow journalism and absolutely I fancy believed that the nation was endangered by reason of the undertakings of the German people in the construction of their navy. That question was imported into the politics of Great Britain, and in the course of time a British statesman answered the plea for more Dreadnoughts and the answer came in a very unexpected way I have no doubt to those who were promoting the German scare and who claimed that if there were to be further Dreadnoughts the money for them must be raised by a change in the fiscal policy of Great Britain. We are asked to have a great deal of sympathy for the poor tax-payer of Great Britain. To change the fiscal policy of Great Britain would certainly be shouldering the burden of taxation still further on the now oppressed tax-payer of that country; but the Chancellor of the Exchequer had views of his own as to how the taxation of Great Britain should be regulated in order that a fuller measure of justice might be meeted out to all the tax-paying portions of the British people, and so you have the Lloyd-George budget which proposes that the classes who hitherto have escaped their fair share of taxation shall do the honest thing and ameliorate the position of the struggling masses in relation to this matter of paying taxes. So fully have the privileged classes of Great Britain been seized of that fact that they no longer clamour for Dreadnoughts, but only that the present administration may be put out and those who favour the parsons, publicans and peers may take their places in order that if possible the privileged classes may maintain their privileges, and the masses may still further have shouldered on them the great burden of taxation in relation to their relief from the German scare and all other costs of government in the motherland. I am very pleased to believe that the result of the appeal to the electors in the mother country has eventuated very satisfactorily and that the German scare has very largely become a thing of the past. That is, has become a thing of the past is made amply clear to us by the sayings of British statesmen. Let me read the remark of Dr. McNamara, parliamentary secretary of the admiralty on this subject:

He says in relation to the German scare and the ability of the British people to meet it:

> In Dreadnoughts we have at present seven, against Germany's two, and, in addition, three more were rapidly approaching completion. In April, 1912, the so-called point of danger, we should have twenty Dreadnoughts to Germany's thirteen.
>
> At the same date we should have forty pre-Dreadnought battleships, under twenty years of age, with an aggregate displacement of 585,000 tons, mounting 656 guns from 6-inch. to 12-inch., including 152 12-inch. guns. At the same date Germany would have twenty pre-Dreadnoughts under twenty years of age, with an aggregate displacement of 241,000 tons, and mounting 384 guns from 5-inch. to 11-inch.
>
> In the matter of cruisers, and leaving out the Invincibles, which I have counted with the Dreadnoughts, we should have in April, 1912, 35 cruisers of an aggregate displacement of 416,000 tons, and mounting 470 guns of from 6-inch. to 9·2-inch., while Germany would have eight cruisers, with an aggregate displacement of 78,542 tons, and 112 guns of 5·9 inch. to 9·4 inch.
>
> Of docks big enough to take Dreadnoughts we have to-day twelve in home waters, against Germany's six.
>
> To this may be added the statement made in the 'Navy League Annual' (1909-10) giving the personnel of the navy at 128,000 of all ranks. This number does not include the reserves.
>
> The same publication gives the German navy's personnel as 53,769.

As usual you find that the Britisher at home feels that he is quite able to take care of himself whether it be against the German aggressor or against the aggressor from whatever quarter he may appear on the scene.

Mr. ARMSTRONG. If there is no emergency what is the need for building a Canadian navy at the present time?

Mr. FOWKE. I am not at all sorry that the hon. gentleman has put that question. Let me say to him and to this House that the question of building a Canadian navy is not merely one of yesterday. Since 1902, that question has been under advisement. A year ago the subject was debated in this House, and when last year the conference met in London, and it was attended by our representatives, it was only in pursuance of a well-defined policy which was in the minds of British statesmen as well as in the minds of the statesmen of Canada and all other portions of the empire. At that conference these three propositions were submitted for the consideration of the conference and of the Canadian delegation. One of the these propositions was a fleet unit. This government chose to accept one of the other two propositions as that best adapted to the requirements of Canada and to the purposes of Canada in relation to her desire to be of assistance to the mother country and other parts of the empire. What were those two propositions? One was:

> It was represented on the part of the admiralty that it would be difficult to make any suggestions, or to formulate any plans, without knowing approximately the sum of money which Canada would spend. The Canadian

representatives then suggested that two plans might be presented: one incurring an annual expenditure of £400,000, and the other an expenditure of £600,000, omitting in both cases the cost of the present fishery service and hydrographic surveys, but including the maintenance of Halifax and Esquimalt dockyards, and the wireless telegraph service, estimated at some £50,000 a year.

Sir, it is in every way creditable, as I am very pleased to think, and as I believe the Canadian people will think, that the government chose the middle course in dealing with this question. I am glad that in this country we have a statesmanship which does not struggle after the impossible but which is willing to apply itself to the accomplishment of the practical and the possible. Therefore it was that the government decided that they would not adopt the principle of very large expenditure which would be involved in the creation of a fleet unit, and which for other reasons was thought not exactly suitable to our requirements in the matter; nor did they choose a cheese-paring policy and say: We will render as small a service as possible to Canada and to the empire in respect of this matter of navy building. They decided to take an intermediate course, and they pledged the Canadian people to an expenditure of £600,000 per annum in addition to the £50,000 per annum of which we have already relieved the imperial authorities in undertaking to care for the dockyards at Halifax and Esquimalt. And, Sir, I say in all candour and sincerity as a member of this House of Commons, that, in my belief, the government have acted wisely, they have propounded a sane policy, a policy which will meet with the approval of the great mass of the Canadian people, as do the other great policies of this government put into effect during the last dozen years in the administration of the affairs of the nation.

Now, Sir, gentlemen opposite have proposed that we vote a large sum of money for the building of two Dreadnoughts, that we levy upon the taxpayers of this country for perhaps twenty-five millions of money, in regard to the expenditure of which they shall have no determining voice whatever. I say that would be an undemocratic and un-Canadian policy. Therefore, I am not surprised that the government refused to countenance a proposition of that sort. I was delighted, on the other hand, when I heard from the Prime Minister's lips that it is the purpose of the government, as far as possible, to build the proposed navy in Canadian waters, with Canadian capital, by Canadian labour. This is one of the great evidences of the fact that we are a power in the twentieth century. It will be a navy constructed on Canadian ideas, and Canadian principles and by the Canadian people, to be owned and operated by them, and to be held subject to the control of this parliament. Now, Sir, why is it that parliamentarians in this House are so seriously objecting to control of the navy being vested in this parliament? Is it that they are distrustful of themselves? Is it that they are afraid to trust the Canadian people? Is it that they have greater confidence in Britishers because they happen to live in the British islands, and have so small opinion of themselves as to desire to divest the Canadian parliament of the control, not only of the expenditure of money in building the navy, but of power to say how, and when, and under what conditions, that navy shall take part in the defence of the nation and of the empire? Sir, one great cardinal principle for which the people of this country stand is that they will not submit to taxation where there is no representation. And it is because we here represent the Canadian people that we say we will control the revenues derived from the Canadian people. And so I rejoice in the fact that control of the navy is to be vested entirely in the parliament of Canada. The hon. member for North Grey (Mr. Middlebro) a few moments ago quoted a line of poetry that, I believe, finds an echo in his own breast, but with a different application entirely from that which he gave it. Sir, I can well imagine the Conservative party of Sir John Macdonald—if there be such a Conservative party in Canada to-day—crying out:

> Oh, for the touch of a vanished hand,
> And the sound of a voice that is still.

But, Sir, the windowless house of Cataraqui gives out no sound, no sign of motion. If to-day, you could have the motion of the hand, the sound of that voice, of the old chieftain of other days who was ever a true Canadian as well as a true Britisher, I am sure it would be to counsel the party that sits at your left, in this House to-day, Mr. Speaker, to show themselves worthy of their Canadian citizenship by standing for the principle of a proper autonomy, for the control of the expenditure of Canadian money by the Canadian parliament and for the direction of the proposed Canadian navy by the representatives of the Canadian people. And, Sir, I have a right to conclude that that is the sentiment which would animate the great chieftain if he were here to-day, for we have it from his first lieutenant of those days. Surely, I am right in saying that Sir Charles Tupper was Sir John Macdonald's angel; and if Sir Charles Tupper is to be credited with having manifest sanity and with giving good political advice it was in the advice he tendered to the leader of the opposition (Mr. R. L. Borden) when he told him distinctly that his duty to his party and his country lay in supporting the principles of the policy of the right hon. leader of the House as he

enunciated them the other day in moving the second reading of the Naval Bill.

Now, I should be wrong in trespassing further on the time of the House than to say that I view the policy of the government as a thoroughly Canadian policy, a Canadian policy altogether in keeping with the aspirations of the Canadian people towards nationhood within this great empire of which we form a part. It is a great thing to be able to stand before the world to-day and to assert that we are citizens of Canada and of the British empire. And it is a fine thing to reflect that we occupy no inconsiderable place in the development and life of the British empire. One-third of the area of the empire is comprised within the boundaries of the Dominion of Canada. More than one-half the white population of the British empire outside the British islands reside in this Dominion of Canada. To-day, our population is increasing by leaps and bounds, as is also our national wealth. We should be lacking in self-respect, in that proper dignity which ought to be ours as a people, were we to divest ourselves of the right to decide for ourselves how we should act in relation to our own affairs and how we should act in determining our relations to the empire. And if to-day, we stand before the world rejoicing in the double position which we hold as a nation and as part of the empire, it is because we feel that, as a nation and as part of that empire we are exercising in a large way a controlling influence in determining the progression of events towards the creation of the highest possible civilization to which the world may look forward or to which Canada may ever attain. I stand here to-day with a great deal of pleasure, indeed, to support the naval policy of the government, and to say that, in my humble judgment, it ought to commend itself alike to the judgment of this parliament, of the Canadian people and of the people of the empire at large.

Mr. MARTIN BURRELL (Yale-Cariboo). Mr. Speaker, under our representative system of government every man who sits in the House and who regards with any degree of seriousness his duty to those who have delegated him as their representative and his duty to the state at large must, or should, experience a constant sense of responsibility in the discharge of those duties, even during what may be called the routine work of parliament. But there comes times, and this essentially is such a time, when a peculiar and unusual responsibility rests on him. The party banner, the party cry, the party vote, necessarily, though perhaps too often dominate and determine the discussions in this Chamber. But there are some questions, and I think this is one of them, that should lose their party aspect when they come to be discussed.

This question, Mr. Speaker, was brought before this House on Thursday last by the leader of the government, and his speech in upholding the government policy was accorded a thoughful attention by members on this side of the House. I may perhaps be allowed for a moment to refer to a matter that I touched on in an earlier part of the afternoon. At the conclusion of the right hon. gentleman's speech outlining the policy of the government on the Naval Bill, the leader of the opposition also in a powerful and closely reasoned speech, at its close moved an alternative proposal which represents, as we believe, the best interests and wishes of the people of Canada. When he closed that speech, as we all very well remember, there was a spontaneous outburst of sentiment in this House, presenting a very unusual spectacle, namely, that hon. members stood up on their feet and sang the national anthem. Well, Sir, as we also know, this incident was described, I will not say intentionally, in a leading organ of the Liberal party on the next day as occurring at the close of my rignt hon. friend's address, and intimating therefore that that address was so powerful so moving, so much in line with the sentiments of this House irrespective of party, that the imprimatur of the whole House was put upon it in that extraordinary way. That report in the recognized organ of the Liberal party in Canada, and in a great many affiliated papers, went out through the length and breadth of Canada; and it is perfectly natural for the people to think, assuming that that report was true, that my right hon. friend's speech was a speech not only of extraordinary merit, but that it must have created a great deal of enthusiasm on the opposition side of the House. Now, I am not taking the ground that because that report was incorrect the fault should be laid at the door of the press gallery in this House, because it may have been unintentional. But, we do claim from the right hon. gentleman and his party, as this matter was given such extraordinary prominence in the papers throughout the country, he should have used his undoubted influence to have got, in an equally prominent position, a correction of the report and a true statement of what took place in this House. When I put that question to the Prime Minister this afternoon what was his answer. His answer was! What have I got to do with it? Well, let me say that the right hon. gentleman had far more to do with that question than he had with another question on which he expended a great deal of power and energy last session. Everybody remembers the occasion last session when British Columbia affairs

came up, that there was introduced a garbled telegram, and the Prime Minister waxed indignant upon the immorality of publishing a telegram of that character, though it had not half as much to do with the right hon. gentleman as this particular episode has to do with him at the present time.

Mr. M. Y. McLEAN. If the hon. gentleman will allow me—the report he has referred to was corrected by the paper he alludes to on the following day.

Mr. BURRELL. I have just intimated that I knew that. It was corrected, but we all knew that the correction appeared on the fifth page, an inside page, in a small paragraph, with no heading to indicate that it was there.

Mr. M. Y. McLEAN. It was corrected at the close of the parliamentary report of that day.

Mr. BURRELL. I am not denying that, but I say it appeared on the fifth inside page, at the bottom of a parliamentary report dealing with routine proceedings, with nothing in the shape of a heading showing its nature. Of course the question has its amusing side. I have in my pocket here a letter sent from a gentleman in Winnipeg who had seen this same report in the Winnipeg 'Free Press,' another organ of the Liberal party, which paper, so far as I can see, did not correct the statement that was sent out. This gentleman says that he sees the Prime Minister has made a wonderful speech, and that there was so much enthusiasm that the House sang 'God Save the King.' And he says, 'I would like very much to get a copy of that speech.' Now, Mr. Speaker, I think the Prime Minister can be content with the merits of his speech as they exist, without attempting to put upon them such a seal as this, and allow it to go out to the country that such a seal of approval was set on it that the members had to get up in their seats and sing the 'National Anthem.' This shows the false impression that is created throughout the country by the erronous report to which I have alluded. So I say that I was surprised at the right hon. gentleman at taking me up so sharply in that matter this afternoon.

Now, I think we all have a right to expect that the Prime Minister of Canada, in opening this debate, would have spoken in a manner worthy of the high subject with which he was dealing; but I say, and I say it emphatically, that it was amazing, it was disappointing, to find that, instead of starting out on that high plane showing a proper realization of the magnitude of the subject, he at once launched out in a manner so partisan, so small, that upon him must rest the responsibility of injecting into this debate the party virus in its worst form. Now on that occasion, and on other occasions in dealing with naval matters, he has said a good deal about Rome. Let me bring to his notice a well worn word that describes the lofty patriotism which made Rome great in an hour of supreme danger, and will make any nation great:

> Then none were for the party,
> Then all were for the State,
> Then the great man helped the poor,
> And the poor man loved the great.
> Then lands were fairly portioned,
> Then spoils were fairly sold,
> The Romans were like brothers
> In the brave days of old.

Well, was that the spirit in which the right hon. gentleman made the greater part of his speech? There was ridicule of our silence from the start, ridicule of the attitude taken by this side of the House, ridicule at our alleged indifference, spiced with jests to create laughter and applause, I was going to say upon his back benches, but it is rather significant that three of those back benches were empty during the whole of his speech. I say that nothing more narrow, more far removed from the spirit of true statesmanship, has been heard in this House than the speech of the right hon. gentleman. What do these tactics mean? Why does the Postmaster General follow suit? Why do they taunt us with being—I think the expressions used were Pharisees of imperialism, superloyalists, and the Postmaster General paraded his mock heroics about 'crimes committed in the name of loyalty.' We are familiar with these methods. Their unworthiness and their meaning cannot be hidden by floods of rhetoric in the peroration of minister's speeches. These tactics were adopted deliberately as a means of closing up their own ranks. Not once or twice, but many times we have seen the same thing. When lack of unanimity prevails amongst their followers when fatal weaknesses are exposed in a policy or in administration, my right hon. friend is astute enough to see that a wholesale charge that the Conservatives are attacking the great Liberal party is the best rallying cry to whip his own followers into line. Yet we must realize that a solemn and imperative duty faces every man, whether on the government or opposition benches, of deeply weighing the effect of his spoken works on this question, or even his silence, and of the vote which forms the final expression of his convictions.

The Bill now before parliament is a formal pronouncement of the government policy on a question of infinite importance —a question, which, in one shape or another, has been agitating the mind of the country for some time past. Above conflicting cries—and in spite of divergent

opinions, one great fact stands out strongly; Canada has evidently felt, and openly acknowledges, the vital—the paramount importance to Canada, of British naval supremacy, and the great need of a broad imperial unity.

Time was, and not so long ago, when he who raised his voice to urge Canadian duty in this high matter of assistance by the Dominion in the imperial naval defence was as one crying in the wilderness. It is now clear that in the hearts of a people, crowded with other pressing duties, this sense of responsibility this high sentiment did exist and in that moment when the note of danger, of trouble, was sounded across the seas a response was evoked from the Atlantic to the Pacific which expressed in unmistakeable language the strength of the popular convictions. This one thing then, amidst the many divergencies of opinion is at least clear gain. But Sir, the question, while in some respects concerned with the present day and hour, is not solely so concerned. To the rise, the development, the decadence of nations a vast number of factors, great and small, contribute, and as in the upper range of the mountains a pebble may deflect the course of a rivulet and determine its final destiny, so small, so obscure may be the causes which shape a nation's course and fate. But the student of history also knows that sometimes in national discussions the parting of the ways lies plain to the eyes, that some questions are so inevitably bound up with great issues that to fail to recognize their gravity is impossible.

Such a question is this now before the parliament of Canada. It is a time to speak out, a time to welcome the most absolute frankness of expression. There are some people—my right hon. friend the Prime Minister has expressed such an opinion—who believe that Britain's great colonies are destined to drop like the ripe fruit from the tree—a process of separation. I like better to take the simile of the family —the clan—to believe that manhood reached, the son while managing his personal affairs, is still of the family and the clan and inspired by a deep fealty springing from the ties of love and blood will unhesitatingly, in the face of a common danger, take his place by the side of his sire against even a world in arms.

The attitude of every man in this House towards the government proposals must naturally be affected and his course in regard thereto be determined, first, by his views as to the imminence or non-imminence of danger to British naval supremacy and, second, by his views on the general question of empire and Canada's part and lot therein, or whether indeed she is to deliberately shape her policy so as to remain a permanent factor in that empire or assume a position of independence. One thing we have all agreed on, viz.—that the supremacy of the empire is essential, not only to its component parts but to the civilization for which that empire stands. The stability of England is the security of the modern world. Is that stability then threatened, and if seriously threatened, what is to be our attitude?

And, first, let me say, Mr. Speaker, that I do not share the anxieties of those who fear that the present time is marking the first steps of a decadent period in British history, that the old spirit which drove England to first place amongst the world powers is weakened; that her civilization, her polity is, in any sense of the word, moribund. It is true her problems are changing. We have witnessed a national struggle, indeed are still witnessing it, in which certain hysterical features seem to be noticeable, and prominence has been given for political purposes to phases in the national life far from beautiful, far from comforting. Nevertheless, those of us who have been long enough there to read beneath the surface of things realize the amazing vigour which characterizes the people of those small islands. It is treason to doubt, nor can we doubt, that the spirit which lies behind English liberties and English progress is as strong to-day as in past days. In the fiercest shock of adversity the cry will still be:

> In the fell clutch of circumstance
> I have not winced nor cried aloud,
> Under the bludgeonings of chance
> My head is bloody but unbowed.

Sixty years ago, in a time of trial, depression and fierce stress, England was visited by a clear-eyed, keen-brained son of the great republic to the south, probably her greatest son, as great at all events in intellectual as was Lincoln in state affairs. I refer, of course, to Ralph Waldo Emerson. His message, his words then have an absolute fitness to the present hour and are as true to-day as when he delivered them in Manchester in 1847.

> And so, gentlemen, I feel in regard to this aged England, with the possessions, honours, and trophies, and also with the infirmities of a thousand years gathering round her, irretrievably committed as she now is to many old customs which cannot suddenly be changed; pressed upon by the transitions of trade, and new and all incalculable modes, fabrics, arts, machines, and competing populations—I see her not dispirited, not weak, but well remembering that she has seen dark days before; indeed, with a kind of instinct that she sees a little better in a cloudy day, and that in storm of battle and calamity she has a secret vigour and a pulse like a cannon. I see her in her old age, not decrepit, but young, and still daring to believe in her power of endurance and expansion. Seeing

this, I say. All Hail, mother of nations, mother of heroes, with strength still equal to the time; still first to entertain and swift to execute the policy which the mind and heart of mankind requires in the present hour.

But, Sir, though acquiescing in this great tribute to a great people we cannot shut our eyes to the far-sweeping changes which have come over the political and industrial map of the world since those words were spoken. The marvellous expansion of overseas Britain which has made the empire at once more strong and more vulnerable; the rise of an eastern nation to the rank of a first-class naval and military power, the tremendous development of the Pan-Germanic nations; these things necessitate a new review of the world forces, and we in this great and growing Dominion have recognized at last that we cannot longer remain passive spectators, cannot longer abstain from offering our willing assistance in the work of consolidating the defences of the empire against any or all foes who might threaten that empire's integrity. First, then as to the question of whether there is imminent or real danger, for the answer to this practically determines our views as to what Canada should, or should not do at the present time. I take it that most of the members in this House have read the verbatim reports of the speeches delivered in the British House of Commons in March, 1909, the speeches especially of Mr. McKenna, the First Lord of the Admiralty. Mr. Balfour, and Sir Edward Grey. Any man who has done so and attached the weight to those grave and deliberate utterances, which they deserve, can hardly come to any other conclusion than that there was indeed an imminent danger to the empire, and I am aware of nothing having occurred since that time to make the situation less grave. Mr. McKenna's speech was delivered on the 16th of March, 1909, on the occasion of announcing the naval estimates, which were given as being in round numbers $175,000,000. His speech was the first official utterance following a certain unrest in the public mind as to a vastly increased naval programme on the part of Germany and following some expressions which suggested inadequate naval defence on the part of Great Britain. I quote one or two brief excerpts as bearing on this debate:

Our island position, the extent and dispersion of our empire; and the magnitude of our trade oblige us, as long as we are equal to the task, to maintain a navy adequate in strength to insure our shores from invasion, our empire from hostile attempts, and our trade from destruction in war.

In expressing his alarm at Germany's naval programme he added significantly:

We do not know, as we thought we did, the rate at which German construction is taking place.

Then, in relation to battleship construction, he further adds:

There will come a day when by an almost automatic process all ships of an earlier type than Dreadnoughts will be relegated to the scrap heap.

Mr. Balfour replied, couching his remarks in a manner, as admitted by the Prime Minister, entirely freed from party spirit and worthy of the occasion. He stated:

We are face to face with a situation so new, so dangerous that it is very difficult for us to realize all that it imports.

Mr. Asquith followed, and hoped that the government would be able to lay down twenty Dreadnoughts to Germany's seventeen, by 1912.

In a leading article next day the 'Times' referred to these speeches as containing 'utterances all serious and disquieting.'

These speeches were reported in the British press of March 17. On March 18, there appeared in the London 'Times' a letter which not only by its power and ability, but from the fact that it came from the pen of an anti-militarist. a man well known in literary and philosophic circles, drove home the lesson of the day before with extraordinary force to the minds of the people of Great Britain. I refer, of course, to the letter of Mr. Frederick Harrison. Mr. Harrison starts by saying that his views were formed long before the recent discussions and were formed as the result of a long and careful study of European politics, and he explains with extraordinary power why he considered the problem facing the country as vital and urgent. In a brilliant and searching analysis Mr. Harrison pointed out that the Pan-Germanic ideal and its aim at hegemony was the obvious result of the European situation and of the history of Germany since the rise of Bismarck in 1864. He said:

The danger of collision lies not in any hostile disposition of the German people, but in the manifest tendency of the two dominant factors in world-politics—the military ascendancy and resources of the German empire face to face with the British empire based on command of the sea.

And he utters in conclusion this pregnant warning:

If ever our empire or our dominion of the seas is challenged, we now see that it will be no desultory attack in distant waters, not on India, South Africa, nor Australia——

And he might have added Canada.

——but by direct plunge at the heart of the empire, on our arsenals, our ports and the capital.

Events followed in rapid succession. On the 22nd of March New Zealand, to her everlasting honour, cabled an offer to bear

the cost of building and arming a first-class battleship, and offered a second one if subsequent events showed it to be necessary. On the 25th of March that offer was accepted. On March 29th, the very day in which a memorable debate took place in this House, Mr. Balfour moved a vote of censure on the government for not making adequate preparations, and though the government could not do otherwise than take the position that it was making due preparations, yet Sir Edward Grey, a statesman who commands in an exceptional degree the confidence and respect of the people, only confirmed general feeling as to the imminence of danger. We must all agree with his words that if the extravagant military and naval expenditures of Europe went on at the rate at which it had recently increased, it would sooner or later submerge the civilization on which it was a satire, and that the hopes and aspirations of the best men in the leading countries are devoted to trying to find some means of checking it. But we must also assent to his deliberate statement that to give up competition would be to sink into a position of inferiority, and if so, he added:

> We should cease to count for anything in Europe; we should be fortunate if our liberty were left, and we did not become the conscript appendage of some stronger power.

In the closing words of his appeal to those on the ministerial benches not to oppose a generous naval programme, he admitted that:

> We may be entering on a stage more grave, more serious, requiring greater care, greater effort than anything we have yet known.

Mr. Speaker, it is singular that at this very time, on the very night, as a matter of fact, that these grave warnings were uttered by one of England's most responsible statesmen, the Prime Minister of this government should have so little realized the gravity of affairs that he could speak as follows:

> Let us not disguise the fact from ourselves that at present there is a passing wave in which we can trace anger, enthusiasm and fear, and which may be calculated by some to force us to depart from our policy, and to contribute at once to the British navy. Let us view the question as it is, let us not blink at it, let us realize that it is not the way in which in the past we have understood our duty. This question is not new; we are familiar with it, it is not of to-day or of yesterday. I will not say it is old as the hills, but it is as old as confederation itself and it comes to the front periodically.

At six o'clock, the House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS—SECOND READINGS.

Bill (No. 133) to incorporate the Merchants Bank of Canada Pension Fund.—Mr. Doherty.

Bill (No. 134) for the relief of Hope Eileen Moreland Drinkle.—Mr. McCarthy.

NAVAL SERVICE OF CANADA.

Mr. MARTIN BURRELL. Mr. Speaker, this afternoon I had stated that there were two phases of this naval question—one, the question of the imminence or non-imminence of the danger to the naval supremacy of the empire, and the other, the particular question of the empire and Canada's part or lot therein; and just according as each member regarded the weight to be attached to these particular questions, so would his whole attitude be on the proposals of the government. I had also quoted the utterances of responsible old country statesmen which were calculated to make the world at large, and especially us in Canada, believe that there was a serious menace to British naval supremacy; and I had further stated that while nearly everybody was persuaded of this fact, while New Zealand had responded by presenting a battleship to Great Britain, the Prime Minister alone had remained practically unmoved. The right hon. gentleman did, it is true, acknowledge in a way that he has never done before, the obligations of this country to the empire and the necessity of upholding imperial supremacy, though even here his utterances were unnecessarily loaded with cautious warnings to preserve our autonomy. But it is apparent that he did not grasp then, nor has grasped since, the vital fact of immediate danger and the accompanying necessity and duty of immediate assistance. Even the official organ of the Prime Minister's party, the Toronto 'Globe,' has said on March 24, that German unfriendliness and aggression were apparent. 'War is deprecated,' said the 'Globe' in its editorial:

> But as a matter of fact war is in progress. The contest in shipbuilding is war. If the mother country were engaged in a deadly conflict Canadians could not get across the ocean fast enough to the aid of the motherland. But we must remember that our aid is as much needed now as if a physical war instead of a shipbuilding war were on. It is Canada's duty from every point of view, from our affection for the land of our fathers, and for our own self interest to take prompt and practical action.

Everybody sees imminent danger except the Prime Minister. He for his part said: 'I may say that we are not to be carried

away, we are not to be stampeded from what has been the settled policy and deliberate course which we have laid down, by any hasty, feverish action, however spectacular such action may be.' Well, Mr. Speaker, if the prompt giving of a battleship in the hour of English peril by the small colony of New Zealand be feverish and spectacular, thank God for a patriotism so spectacular, and let us all pray that we may be infected with a fever so sane and uplifting. And here a word may be said in regard to the resolution passed by this House on March 29, last, and which has been so much discussed since. It has been truly said by the leader of the opposition that unanimous action on the part of this parliament was so much to be desired, that it was eminently desirable that no vote should be taken which might seem to indicate a division on a subject of so much moment. It was a worthy sentiment, worthy of the lofty stand always taken by the hon. gentleman, who leads his Majesty's loyal opposition. But, Sir, it must also be said that though concurring with this view there were many members of this House who had a strong desire to go much further than that resolution, to put matters in such shape that immediate practical help should be at once forthcoming. I believed then, as I believe now, that the day will come when Canada might well undertake to do some efficient work in constructing or having constructed in her own ports, from her own wealth of natural resources, some substantial vessels to swell the fleet which patrols the empire, but I also believed then as I do more firmly now, that immediate effective help to the empire to which we are so passionately attached could not come in that way. Much self-imposed restraint was necessary to avoid giving prompt expression to those views. But, while we did refrain from generous motives, it has remained for the government and for the government press to make political capital out of that generosity by the attempt to pin us down to the narrowest meaning of that resolution and to meanly intimate to the country that we are at one with the government in its policy.

I have endeavoured to show that strong reasons existed for believing that British naval supremacy was threatened a year ago. The reasons are no less strong at this day and hour. The German naval budget estimates for 1910 are 443,000,000 marks, the largest in the history of the country, and they have within the past two weeks decided to borrow money to carry out with iron resolution and at all costs the enormous programme mapped out. It is singular, too, that within the last few months Britain has again been warned in impressive terms of her danger. In the heat of a political contest the writings of Robert Blatchford have been lightly dismissed by those who had political reasons for so doing. But the message, graphic, stern, mercilessly logical in its marshalling of the facts, has gone home, and went home with additional force from the fact that again the sender of the message, Robert Blatchford, was not a jingo, not a panic monger, but a life-long anti-militarist. The Postmaster General has delivered some ex-cathedra utterances on the meaning of the late elections in Great Britain, and if he expressed himself half as freely in England as he has done in this House, one might have no difficulty in giving a local habitation and a name to the unknown, but semi-official authority quoted by the Manchester 'Guardian' as expounding Canadian views on behalf of the Liberal party in Great Britain. The Postmaster General saw fit the other day in his speech to make the gratuitous and puerile statement that the German war scare only existed in the imagination of party politicians. 'It was started,' he said, 'by the party press of Great Britain controlled by Lord Northcliffe, and was written up during the elections by the well known socialist, Mr. Blatchford, in the pay of a certain party in Great Britain.' Well, Sir, the minister, who seems to have taken such a keen interest in party politics in the old country, and whose 'peregrinations' were paid for by the whole people of Canada regardless of party, will acknowledge that any word spoken by Lord Cromer is to be accorded some weight. Lord Cromer should command the peculiar sympathy of my hon. friend, who I take it may be called a free trade anti-budget politician during his stay in England, as Lord Cromer, the great pro-consul, was one of the Lords who did not vote for the rejection of the budget, and who has always preached free trade doctrines. But Lord Cromer speaks with peculiar authority on all questions affecting the empire and in reference to the genuineness of Mr. Blatchford, of whom the Postmaster General has disposed so airily, he said, speaking at Sheffield on December 18:

> It would be difficult to find any two men who hold more discordant views on some important subjects than Mr. Blatchford and myself. But there is common ground on which we can meet. Mr. Blatchford is worth listening to on this subject.

It is rather amazing to hear a Canadian minister, who professes to have followed British affairs closely, impugn the bona fides of a man whose whole career and record, whether we agree with him or not, relieves him of any suspicion of insincerity of purpose. Let those who have carefully read Mr. Blatchford's utterances judge on this point. I quote one of the passages which closed one of the strongest of his articles:

This is not a party question. It is an imperial question. Let every commercial man in the empire understand that unreadiness for war means bankruptcy and panic and such suffering as this favoured people have never known. If I did not feel this strongly I would not say it. I am no longer young. I have had more than my share in unpopular causes. I would like to live a quiet life. I am reluctant to offend and oppose my own party (the Socialist) and my own friends. But I have never shrunk from a duty because it was unpleasant or unprofitable and I will not begin now. The empire is in danger. It cannot be saved by talk; it can only be saved by sacrifice and work!

Both the Prime Minister and the Postmaster General very laboriously endeavoured to show that no empire danger existed, precisely because they knew that their whole policy of to-day was and is a sham and a delusion in the face of actual danger to British naval supremacy. They are deliberately and purposely blinding their eyes for fear they shall see what every one else sees. The Postmaster General quotes the utterances of Mr. Asquith, Mr. McKenna and Sir Edward Grey on political platforms. No one knows better than the minister that in the heat of an election when the government are attacked for not apprehending a great danger, they will naturally assert that no danger exists. But we have in this case to appeal from Philip drunk to Philip sober. We have to regard the sober, serious utterances which I have already quoted. As to the popular voice: The total popular vote on the Unionist side was 3,080,072; that for Liberals 2,847,303, and Liberal and Labour combined exceeded the Unionists by less than five per cent. Not only do the whole of the Unionist votes testify to the truth of the facts as to danger to the empire, but it is unquestionably true that thousands also of those who support the Liberal or Labour party for other reasons would assent and do assent to the pressing need of strengthening British and imperial naval defence. I cannot see that there is offence to the German people in our position. My right hon. friend was a great admirer of Cobden, the man of peace. In the face of a threatened danger from another country, not half so serious as that which exists at present, Mr .Cobden said in 1861:

I will vote a hundred million pounds rather than allow the French navy to be increased to a level with ours, because I say that any attempt of that sort, without legitimate grounds, should argue some sinister designs on this country.

But if grounds existed then for anxiety, how much greater are they to-day? But I may tell the Postmaster General that one of the most prominent Berlin papers has recently said that Mr. Balfour's warnings as to a menace from Germany, if unpleasant to the German people are certainly equalled in unpleasantness by the statements of the Postmaster General's friend, Mr. Lloyd George, who, to use the expression of the Berlin 'Tageblatt, 'holds us up to contempt as a race of eaters of black bread, horse and dog.' The Prime Minister and the Postmaster General have not only shown strong sympathy with the free trade ideas of the Liberal party in England, but have, during the debate, made very long appeals, in fact I am hardly overstating the case when I say that the greater part of their speeches has been such an appeal—to their French Canadian friends. The Postmaster General said:

Sir, who will believe that Britons, that the English people are scared by a so-called 'German terror.' Sir, I am of French descent but I know something of the history of England.

To these gentlemen of French descent let me commend the words of a French publicist, M. Judet, in an article in the 'Eclair' of January 16. He looks at the political situation in Great Britain with different eyes to those of the ministers here. Recognizing that a Unionist victory would mean a breaking of the free trade system, and consequently entail financial loss to France in her export trade, he yet adds that French sympathy must go to the Conservatives because they stand for a supreme navy. A strong Britain and an all-powerful British navy, he argues, are so absolutely essential to France, that Frenchmen must not grumble if through a tariff they are asked to pay for them, and concludes that the unconcealed preference of the Germans for the British Liberals is a good reason why French support and sympathy should be given to the other party. The right hon. the Prime Minister, much of whose speech was directed to his compatriots of French descent, would do well to bear these things in mind. The Postmaster General started out with the pious aspiration.

I hope I will be brief in the remarks which I intend to offer.

Like Carlyle, who preached the gospel of silence in forty volumes, so the minister has preached brevity in a speech of two hours and three-quarters. At one time it smacked singularly of a budget oration, with endless examples of the country's progress under Liberal rule, and was like a budget speech also in its extraordinary irrelevancies. However, he also dealt very exhaustively with the Quebec situation—wrestled mightily to convince his countrymen there that the government policy was sound and frankly stated that his speech was intended for circulation in Quebec. He, too, would do well to ponder what the French people, in an infinitely better position than he to judge of the trend of events, think and say of the conditions existing at the present time. Mr. Speaker, the sane, sober judgment of this country, of the other

over seas dominion, and of Great Britain is that a critical state of affairs exists—that the naval supremacy of Great Britain is threatened—and feeling this we have to ask ourselves what is our position?

The Prime Minister does not contend, cannot contend, that his proposals provide the slightest help on Canada's part if that crisis should become acute in two, three, four or five years. His statement as to the time when this Canadian navy was to be ready was of the loosest and vaguest character. He piously hopes that five years may see these vessels afloat, but admits frankly that he does not know whether an adequate shipbuilding plant could be laid down in a year, and, judging by other great works which the government has had a hand in, we are not encouraged to think that they can be turned out in twice the time the First Minister mentions. Meanwhile the shock of battle may come and Canada witness what transpires during the dread arbitrament of war, powerless to assist, seeing everything that we value jeopardized and endangered while we stand by with hands tied by the short-sighted and totally inadequate policy laid down by this government.

Much has been said about the British admiralty and its views. The Prime Minister states, to buttress up his own position, that owing to Canada's double seaboard a fleet unit was undesirable for the present. This was said in August at the conference. But on July 20, Mr. McKenna, First Lord, says definitely and emphatically—section 5 of the Admiralty Report:

> In the opinion of the admiralty a Dominion government desirous of creating a navy should aim at forming a distinct fleet unit; and the smallest unit is one which, while manageable in time of peace, is capable of being used in its component parts, in time of war.

That fleet unit must contain a battleship. But the Prime Minister says: No, we will not include the most effective part of the unit—a battleship. It is the old story, the play of Hamlet, with the part of Hamlet left out by desire!

The country will not forget, either, that upon the admiralty must not be saddled the responsibility of such an affair as this. The Prime Minister in his speech said: 'Two plans were proposed to us. One to have a fleet of seven ships, and another a fleet of eleven ships.' On page 26 of the Conference report are these significant words:

> It was represented on the part of the admiralty that it would be difficult to make any suggestions, or to formulate any plans, without knowing approximately the sum of money which Canada would expend. The Canadian representatives then suggested two plans.

One $2,000,000 a year, the other $3,000,000 a year. What sort of a position is the government trying to place the admiralty in? No British statesman, no British naval lord would dream of saying to Canada: 'You must do this, or that.' To their honour they wish, they earnestly desire that our assistance should be willing, the free expression of a free people. It is all very well for the Postmaster General (Mr. Lemieux) to say that when he was in Great Britain the Prince of Wales commended this and Lord Roberts commended that. Any of these distinguished gentlemen would commend anything that Canada was doing on behalf of the empire, be it little or great. We need not try to make political capital out of that. But the admiralty did plainly intimate that 'the maximum of power would be obtained if all parts of the empire contributed according to their needs and resources to the maintenance of the British navy.' They did indicate the necessity of the battleship. Sir, the right hon. gentleman (Sir Wilfrid Laurier) is fond of quoting scripture. Let me remind him that the Lord loveth a cheerful giver. But, instead of giving cheerfully the government has laboriously struggled to see how little it could give. He has harped upon the policy laid down in 1902. The policy as interpreted by the government has been a laisser faire policy, a policy of masterly inactivity, a policy of words. He has been forced into doing something at last, and here again we have a striking manifestation of the vast difference between opportunism and statesmanship. If I were to cite a noble example of statesmanship I would cite the honoured name of Lincoln, who with firm convictions as to the integrity and wisdom of his own course yet waited till the policies which he was advocating had been sufficiently seized by the popular mind to warrant him carrying his great ideas into effect. How vast a gulf separates this from the opportunism of the right hon. gentleman who leads this government! To-day he and the Postmaster General and others of their followers are, with marvellous insolence arrogating to themselves credit for sending Canadian troops to South Africa.

> But man, proud man,
> Drest in a little brief authority,
> Most ignorant of what he's most assured,
> His glassy essence like an angry ape,
> Plays such fantastic tricks before high heaven
> As make the angels weep.

At that time it was, as at this time. Averse to move, loth to strengthen the imperial sentiment, or consolidate imperial action, this government moved only when inaction meant that they would have been swept from power and office by an indignant people, a people now derided by the Prime Minister and his colleague the Postmaster General as 'pharisees of imperial-

ism' and 'super-loyalists'; derided by gentlemen the measure of whose regard for Britain and British institutions is exhibited by ornate phrases, and by the determination plainly expressed by the limitations of this naval programme, that they will not stand at once by Britain's side in the hour of danger. It is true that, so far as the administrative power is concerned, the Conservative party is practically helpless at this time. The party led by the right hon. Prime Minister has in its hands the reins of power. We have the ardent desire, without the power to help Great Britain and the empire in this time of stress. But I would infinitely rather have the desire to help without the power than have the power without the desire.

Mr. Speaker, the Prime Minister asks 'What would be the condition of Canada to-day and of the province of Quebec in particular if England were to lose the supremacy of the seas?' He asks and may well ask. But, in the face of possible, if not actual, danger we may also well ask: What is this government doing to aid in the maintenance of that supremacy? Nothing, absolutely nothing, as far as any help for many a long year goes. What is the proposed Canadian navy going to do for us when these gallant ships are finally turned off the stocks? Few of us in this House will have the hardihood to pose as naval experts. But, it does not require an expert to know that an unarmoured cruiser of the Bristol type is meant for scouting purposes and is built for speed and, as has been well put to elude pursuit. If this be their chief end and aim, to elude pursuit, the prospect is not encouraging. The Prime Minister and his colleague have expressed some pious sentiments in regard to their duty of defending British Columbia. It is pleasant to think that they are experiencing a solicitude about British Columbia's welfare. Hitherto, in some grave matters, they have shown a marked disregard of the best interests of the people of British Columbia. But, if, unfortunately, at some distant day, we should be at war with Japan the government is anxious to defend us. The Prime Minister says—and this is surely one of the humorous touches of this debate—'Circumstances may be such as to force us to do what Japan did—strike the enemy before the enemy strikes us.' I do not know whether the First Minister has 'mountains of information,' as to the difficulties ahead of him in such a task. If he knows anything of the Japanese navy, it must require a very large sleeve indeed to conceal all the laughter the right hon. gentleman is putting up it as he contemplates a Canadian Bristol cruiser built to elude pursuit, striking first one of the many armoured cruisers or battleships of our oriental friends. However, it is possible, as the leader of the opposition suggested that the New Zealand Dreadnought might come up in time to save us, though the process would not be without its humiliating side for a self-respecting Canadian.

Sir, in the face of the critical conditions now existing—in the face of impending danger, the proposed scheme of the government entirely fails to meet the case. The contribution of two battleships would not only be a far more effective aid to British naval supremacy, but would fit naturally into a broad scheme of naval defence of a permanent kind if the Canadian people pronounced themselves in favour of such a scheme. There would be no difficulty in associating Canada with the future of those two vessels. The admiralty would without doubt willingly man them with Canadian officers and men if, and when Canada can provide the men. It would stimulate Canadian interest and Canadian pride if the battleships were named on our suggestion. We would gladly see one of them named 'British Columbia', and the Prime Minister, if he likes, could name the other 'Quebec'. I can assure the government that in this whole matter the people of British Columbia will be keenly disappointed if nothing more substantial is done at this juncture than is at present proposed. Why should we in Canada, who have absolutely no experience in naval construction, to whom the path is so strange, hastily rush in where others have feared to tread? Let me point out that Germany herself and various nations have all first adopted the plan proposed by the leader of the opposition, viz.:—that of getting their first warships built in the great British yards where years of experience, and thousands of skilled workmen guarantee not only efficiency but expedition? Japan has been mentioned—Japan's first fighting vessel was a wooden frigate carrying 26 guns, ordered in Holland. This was barely fifty years ago. When Japan seriously entered on the task of creating a navy, her first step was to establish a naval college and barracks for training her men; and again in 1877 when she concluded to place ironclads on her waters, the first ship of this kind was designed by Sir Edward Reed and launched on the Thames in England.

In any event the people of this country have an absolute right to be consulted in a departure so grave and so radical as the initiation of a permanent policy of naval construction.

The Prime Minister says: 'Outside of this House it (his policy) has received the open commendation of the best and most experienced minds in the party'. We challenge the statement and ask him to put it to the test. The government knows just as clearly as everybody else knows that

they are absolutely unwarranted in committing the country to this scheme without the country being allowed to utter a word either of assent or dissent. But ministers are reaching out everywhere for excuses for not so consulting the people. The Postmaster General, in his desire to stifle the popular voice, hastily pleads that there is no need of a plebiscite when the loyalty, duty and chivalry of the Canadian people are in question. I do not know how the people of Quebec, for whom this speech was intended, will interpret these sentences, but in the west we should call it a flagrant example of side-stepping. Is there less loyalty, less chivalry, do we less perform our duty, if Canada, out of her riches and her affection, sends two giant battleships to reinforce the British fleet instead of withholding help for at least five, and probably for ten or fifteen years? Surely the minister does not intend this clap-trap for serious argument?

Mr. Speaker, I have endeavoured to show that a critical juncture of affairs exists. Even the ministers indirectly have to acknowledge its existence. What then does the government propose to do to meet it? The Prime Minister, when the question of emergency was baldly put to him the other day remarked: 'We are getting pretty far from the question we have in hand just now'. But we have his answer in another place:

> For my part, he said, I do not see any cause of danger to Great Britain at the present time. Let me say further that if Great Britain were engaged in such a contest, a wave of enthusiasm to assist her would sweep over this country and all other British countries.

Yes, thank God, that is true. But under our proposals if Great Britain were engaged in a life and death struggle in three years, two Canadian battleships would be in the foremost line of battle. Under the government plan, there would be a wave of enthusiasm, but no battleships. Even the 'Bristols' would not be ready to sail on any kind of waves, even waves of enthusiasm. But one inspiring spectacle we should have at that dread time, for on March 29 last, the Prime Minister told us that if that time of storm and stress should come:

> I would stump the country and endeavour to impress upon my fellow countrymen, especially my compatriots of Quebec, my conviction that the salvation of England is the salvation of our own country.

He doesn't need to stump Canada on such a mission. Canada knows these things, and demands and insistently cries out that the government of Canada shall do its duty and do it now—Now!

Mr. Speaker, in my opening remarks I urged that every member's attitude to this great question before the House must be determined by two things. One by the matter of imminence or non-imminence of danger to naval supremacy, and the other by the broad question of empire and Canada's part and lot therein. The first I have dealt with. The second I propose to deal with for a few minutes.

Those great words, patriotism, loyalty, duty, have been heard much of during this debate, and certainly if there ever was a question before the Canadian parliament which called for true loyalty and true patriotism in its discussion, this is one.

The Prime Minister says he is not an imperialist, not an anti-imperialist, but a Canadian. Sir, one does not like a personal note. But like thousands of my fellow-countrymen, I was born in England. More than a quarter of a century ago, out of all the world, I deliberately chose Canada as my country. For twenty-seven years, east and west, I have amid varying conditions, lived my life; like myself thousands of others have endeavoured faithfully to interpret the messages which our common country breathes in our ears from time to time; have loyally tried to translate those messages into practical work for the betterment and development of this great British Dominion beyond the seas. We are Canadians in every sense of the word; our patriotism is not less pure, our devotion to Canada not less sincere than those whose eyes first opened on Canadian scenes, and we speak with no less authority on these high matters which affect Canadian citizenship and Canadian destiny. Passionately as we are attached to Canada, proud as we are of the strengthening opulence of her life, assured as we are of her great future, we, Canadians too, have also a deep-rooted affection, not only for the motherland, but for all those over-sea sister states whose people are gloriously perpetuating in the twentieth century British institutions, and daily carrying into effect the noble ideals so long associated with British traditions and British liberty!

Feeling these things so deeply as we do we cannot help feeling that there is a tremendous, a grave, responsibility on us at this time. We ought not, we dare not, think only of ourselves. What we do, or do not do, may have a profound effect on others. South Africa, shortly to commence its formal career as a federated state within the empire, will anxiously watch to see the steps we take, and it is because so many of the arguments advanced to support the government policy, and because of the policy itself, that we urge the binding necessity on the government at the present time to move in a direction which makes for the solidarity of the empire, and not for its

future disintegration. The word autonomy has been strained to the breaking point. The Prime Minister has laboriously worked up the case of Canadian historical development and sees autonomy thrusting up its head on every page. There is an old saying that we get out of the Bible what we take into it. A lofty and noble message will be of noble and lofty import to one man. Another may read into the same words, and read out of them, simply an application to a local political condition. Similarly with history. It is one thing, as Whately said, to want to be on the side of truth, and another thing to want truth to be on our side. The Prime Minister appears to assume that we are even to this day in the position of having to wrest our autonomy from Great Britain, and it might be almost logically inferred from the whole tenor of his argument that the wresting process ought not to cease until we have achieved final autonomy in the shape of independence. The right hon. gentleman may comfort himself that in this view he was in line with an older and small school of English thought —now happily dead.

We are two peoples to all intents and purposes——

Wrote Cobden years ago,

—and it is a perilous delusion to both parties to attempt to keep up a sham connection and dependence which will snap asunder if it should ever be put to the strain of stern reality. I have felt an interest in this confederation scheme, because I thought it was only a step in the direction of an amicable separation. We have recognized their right——

—The right of the colonies

—to control their own fate, even to the point of asserting their own independence whenever they think fit, and which we know to be only a question of time.

Does the Prime Minister subscribe to these opinions? No one doubts that we can assert our independence. Great Britain, as we read things, gives us full liberty, but earnestly asks full co-operation in welding the empire together. No longer dependence, but inter-dependence. The South African war was the final answer to those who shared or yet share Cobden's views. We want not a separated country, not a fleet which in the hour of danger may or may not lift a hand, or fire a gun, whose vessels according to a significant hint may be flying a distinctive flag, but we want one King, one fleet, one flag. I was amazed at a statement of the Postmaster General when he argued out these things. In his speech, arguing for the government programme, he said:

I have here a list of independent countries and self-governing colonies whose population does not exceed 10,000,000 people, who have navies of their own.

Sir, a review of that list is significant, for not a single self-governing colony is to be found in all the eighteen cases cited. Leaving out China, which the minister stated was contemplating a naval programme, we have the seventeen countries quoted. Of these Norway, Sweden, Denmark, Portugal, Holland, and Greece are monarchies. Let us glance at the rest and see how this argument works out—an argument singularly unfortunate and even sinister: The Argentine Republic; Brazil, formerly a monarchy, but becoming a republic in 1889; Chili, which threw off the yoke of Spain and became independent in 1818; Colombia, which became a republic in 1819; Costa Rica, which took a similar course in 1829; Ecuador, a republic in 1830; Hayti, which asserted its independence in 1804, and whose unhappy and stained history we all know; Mexico, which became independent in 1857; Paraguay, which threw off its allegiance to Spain in 1811; Peru, which also did so in 1821, and San Domingo, which became independent in 1844. Where are the self-governing colonies here? My hon. friend accused the member for Jacques Cartier (Mr. Monk) of not playing the game fairly. What about this? Let it also be remembered that in becoming independent these countries, as far as naval services go, have found the result to be vast and ever-increasing expense, weak and inefficient navies and in many cases universal service.

Does the minister imply that we should cast off our allegiance as these countries have theirs? The term is of different import to us. Ours is not a yoke under which we give grudging service to tyranny, but an allegiance and a loyalty willingly given, willingly received and to sunder which would mean not independence, but final absorption by the great country to the south, whose history and development we admire, but whose problems are not ours, and whose political destinies we do not wish to share.

The Prime Minister has paid a tribute of admiration to Lord Milner and has sheltered his policy behind the words of that great imperialist. Long passages were read from Lord Milner's addresses in this country, addresses with which most of us are thoroughly familiar. My right hon. friend remarks:

Lord Milner was here last fall, and you will pardon me, Sir, if I recall to the attention of hon. gentlemen opposite what were the opinions of Lord Milner upon this question.

He then cites amongst others the following passages from Lord Milner's Toronto speech:

It is not a question of shifting burdens, but of developing fresh centres of strength. For this reason I have never been a great advocate of contributions from the self-governing states to the army and navy of the United

Kingdom, though as evidences of the solidarity of the empire such contributions are welcome and valuable pending the substitution of something better. But I am sure that the form which imperial co-operation in this field will ultimately take and ought to take, the form at once most consistent with the dignity of the individual states and most conducive to their collective strength and organic union, is the development of their several defensive resources in material and manhood.

Well, Sir, we too believe that regular and periodic contributions of money to Great Britain are not the most desirable way of performing our duty, and the leader of the opposition has said so very emphatically. We too believe that ultimately Canada should, and no doubt will, strengthen and develop her own defensive resources. But let me emphasize one thing. Lord Milner was not in Canada last fall. This very address was delivered in October, 1908, and it is necessary, therefore, to clearly bear in mind, in arguing from the passages that the Prime Minister quoted, that Lord Milner was emphatically dealing with the ultimate policy, and not with what was Canada's best course at the present time.

What did Lord Milner, whose authority the Prime Minister invoked, say, when speaking on this question at Stockport on December 20 last? These words he uttered, and those who call him to their aid and shelter themselves behind his name and prestige would do well to bear them in mind:

> The great position which this country occupied in the world—a position won for us by the enterprise, sacrifice, industry and courage of our forefathers, though still held is being more menaced every day. The undoubted supremacy which this country at one time possessed at sea, if it has not gone, is seriously challenged.

We cannot doubt what the attitude of Lord Milner would be in the present case, nor can we doubt that he passionately hopes for a strengthening and not the weakening of imperial ties. My right hon. friend quoted a passage also from Lord Milner's speech in Vancouver in 1908. Here again it applies to ultimate action in defence and as the Prime Minister left off just where the passage became most interesting, I will finish the paragraph:

> Without any loss of individuality, without any excessive strain on her resources it is within her power to enjoy all the benefits of that great position not only on this continent, but throughout the world, in which every self-governing community under the British Crown is equally entitled to participate. Canada would be greater, far greater, as a member, perhaps in time a leading member of that group of powerful though pacific nations, than she ever could be in isolation.

With that proposition we on this side of the House entirely agree, and it is because we agree to it that we cannot support a policy which so obtrudes a false idea of autonomy as to say that a navy having been built, not a gun shall be fired until the Governor in Council or this parliament says so. The fundamental difference between military and naval matters in this connection are too obvious to be pointed out. Every one knows that on its naval side the issue between Japan and Russia was decided in the first hour of attack. The position taken by the government is impossible and repugnant to the feelings of the whole country. The moment, in the face of war, that question is debated that moment we cease to belong to the empire in any real sense. We cannot be of the empire and yet not of it. To say as prominent Liberal organs have said that we may lend our ships to Great Britain—with emphasis on the may—is to admit the point is an arguable one, a distasteful and dangerous admission.

Mr. Speaker, in concluding this expression of my own feelings on this great question. and also I believe the opinions of the vast body of my constituents, I can but again repeat my belief that the step proposed by the leader of the opposition is the wise, the patriotic, the right step and the people of Canada will so regard it.

We cannot lightly talk of war, or lightly consider the infinite miseries that follow it. Grant's words that 'war is hell' must remain true for ever. But there is another kind of war, a war which, to use the glowing words of Ruskin:

> In which the natural instincts of self-defence are sanctified by the nobleness of the institutions, and purity of the households, which they are appointed to defend. To such war as this all men are born; in such war as this any man may happily die; and forth from such war as this have arisen throughout the extent of past ages, all the highest sanctities and virtues of humanity.

We owe it to ourselves to help the coming of that day when every state in the empire shall be worthily represented in a council of imperial defence. Such a step would in itself be the surest step towards the securing of peace. We owe it to ourselves in Canada at this time and hour to see that we linger not behind others in the defence of the empire.

On this grave matter, of a permanent naval policy, fraught with far-reaching results, the government ought and should consult the people who are the final authority. We know not whither it will lead, or what consequences will follow: 'Once to every man and nation comes the moment to decide'. If the Prime Minister will not refer the issue to those who placed this government in power, we can at least tell him what we feel to be the absolute truth: that Canada,

if it were given its rightful opportunity of expression, its choice between the government proposals and the patriotic plan of the leader of the opposition—would unhesitatingly choose the latter, and, out of its riches, and out of its strength, sustain a policy which makes for the speedy and effective strengthening of that navy which has guarded our liberties in the past, and which alone can guard them effectually in the future.

Mr. MICHAEL CLARK (Red Deer). Mr. Speaker, I must say that my hon. friend (Mr. Burrell), for a gentleman who bestows so much contempt upon waves of enthusiasm, certainly to my mind gave undue importance at the beginning of his remarks to the exact chronological moment at which he and his followers in somewhat discordant tones, so far as I can remember, sang the National Anthem. I have been accustomed to hear Tories on both sides of the Atlantic claim a monopoly of loyalty and patriotism, and it would now seem as if they claimed a monopoly of the National Anthem. I am one of those, Sir, who do not believe that the main strength and enduring greatness of a people depend upon armaments. The world is full of decayed civilizations, but every one of these civilizations died first from within. The real strength of a people is in the strong arm, the healthy body, but far more than that in a healthier mind and good morals. And, I am bound to say that the people of Canada, following as they have followed, the advice of the right hon. the Prime Minister —which has been suitable for Canada up to this period of her history—the advice to keep out of the vortex of European militarism, have not lost but gained in the process. Does any one pretend that Canada has been weaker because she has followed that policy hitherto? No. With no desire to interfere with others and yet with a quiet determination that others shall not interfere with her, the strength of Canada has been as the strength of ten because her heart was pure. But, having said this much I am bound to admit that we live in a practical age and that the resolution of last March really narrows this discussion down to a very fine point indeed. It narrows it down to two definite lines of policy upon which we must decide. As the House, most unfortunately as I think, upon a question of foreign policy is to be forced to a division. Now, I think it would be regarded as a presumption on my part were I to make a long speech. I do not think that the House or the country is looking for long speeches from private members after the extremely exhaustive speech of my right hon. friend the Prime Minister on the second reading of the Bill and the equally exhaustive speech of my hon. friend the leader of the opposition on the first reading. I would like, however, to say a few words on the points which have been raised in the speeches of the two gentlemen who have spoken for the opposition to-day; and at the outset I wish to say that I am in perfect agreement with the main position taken by the hon. member for North Grey (Mr. Middlebro) and by the hon. member for Yale Cariboo (Mr. Burrell) as to what ought to determine, or largely determine, the attitude of members on this question. The question, is there any immediate peril to the empire? Is that peril imminent or non-imminent? as my hon. friend from Yale-Cariboo put it, is a question upon the answer we give to which will depend largely the attitude of members who want to give a rational vote at the end of this discussion.

Now, both my hon. friends have based their case for a present imminent peril of the empire very largely upon what I may call authority. One of the authorities was quoted with very great surprise to me. I am surprised that my hon. friend from Yale-Cariboo attached the importance he did to the writings of the quondam Socialist, Mr. Robert Blatchford. Why, Sir, if he were well acquainted with the former writings of that gentleman—perhaps he is, I do not know, but it does not seem to me as if he were—he would remember that Mr. Blatchford, when he was the editor of a paper called 'The Clarion,' eight or ten years ago, was writing in that paper the very stuff about a German invasion which he has been trying to frighten the British public with during the general election. If that be the kind of authority on whom my hon. friend bases his effort to prove that the German menace is imminent, and if that gentleman has been blowing his clarion off and on for the last eight or ten years, and we are still living free from a German attack, I am bound to say that my logical faculties are such that I cannot be worked into a state of panic over anything that emanates from the pen of Mr. Robert Blatchford. However, there were very much more eminent authorities quoted by my hon. friend from North Grey as well as by my hon. friend from Yale-Cariboo. A great deal was made by the hon. member for North Grey of the speeches delivered to our own delegates and the delegates from the rest of the empire on the occasion of the press conference in Great Britain last summer. But as I listened to the quotations from those speeches, so far as I could gather the object of the various statesmen speaking to those press delegates, they did not want to convey to them for a moment that there was any particular peril to Great Britain at the hands of Germany. I think they rather wanted to impress upon them a thought as old as Adam Smith, that the time had come when the whole burden of imperial defence could no longer be allowed

to rest on the mother country. Take the language that was used. The members of the press conference were asked to exercise a forethought extending over years, to look forward, and Mr. Balfour was careful to say to the delegates that there should be no panic.

A great deal was made by both of my hon. friends of the utterances of Sir Edward Grey. I quite agree with them that no British statesman could be quoted whose language ought to be listened to with greater respect or consideration than that of Sir Edward Grey. But I think that where my friends have made a mistake is that they have not seen the most recent utterances of that right hon. gentleman. Speaking when the election was almost over, at Hexham, in my native county, after seven seats fought there had gone Liberal, and contributing his quota to the eighth one going Liberal, he referred to his speech of last March, which my hon. friends have quoted, and referred to it in this language:

> There was not a word to take from anything from which they said in March last with regard to the navy, and not a word to be unsaid. Was there anything to be added? Yes, this, that during last year they gave orders for the ships which were necessary to be built to be put in hand in the course of this year in order to maintain our naval position. In March they said that it might require to be done; they were now in a position to say that they had done it.

Well, that is one member of the British Cabinet; and let me say at this point that I cannot confine myself in what I quote to utterances preceding the late general election. I was astonished at my hon. friend the leader of the opposition taking that attitude, because it surely created the inference that no men of front rank in British politics are quite sincere at election times. Well, I do not concede that. I think I can furnish evidence that some candidates in the recent campaign were sincere; and, while we may believe in the sincerity of Mr. Robert Blatchford, I do not think we need attach much importance to what he said. But when Mr. Lloyd-George, who was the leading figure in the recent contest, and who will continue to be a leading figure in political life in England for years to come, described this, like other British panics, as 'manufactured cries of national danger,' I think we should attach some importance to his language. Mr. Asquith, shortly after the speech on which my hon. friends base so much of their reasoning, went on to add that old ladies of both sexes might rest quietly in their beds, because the empire was perfectly secure. Now, I contend that such a description, applied to the scare mongers is sufficiently strong, and comes from a sufficiently high authority, for a country with our broad prairies and our clear air and our self-reliant people not to pay too much attention to these scare-mongers. Mr. Churchill, another prominent member of the British Cabinet—and these are men who know the real condition of the navy—has referred to the scare-mongers of last spring as 'March hares and April fools running about the country creating an unfounded panic.' But before this House had broken up in the month of May last, another prominent member of the British Cabinet was doing what many of the British people were doing at intervals during the most of last summer—interchanging ideas with their fellows of the same race among the great German people. The right Hon. John Burns was addressing a large number of German trades unionists who were visiting Great Britain, and he used this language:

> Your visit is timely. It coincides with the collapse of an attempt to foment mischief between the two great branches of the same race. I have seen a few scares in this country come and go, but I never saw one more hollow and less decent than the last. It has hardly lasted the traditional nine days. It was confined to a small section of people, and I may say, with few exceptions, to the least reputable of our journals, to the most unreliable of our precocious politicians, and to a few socialists who ought to have known better.

That was very strong language to have come right on the back of the scare on which we carried the resolution of last March and on which scare, I understand, the whole defence of the amendment of the leader of the opposition (Mr. R. L. Borden) is being based by the two speakers who have preceded me to-day. But we are not dependant on British authority in this matter. I hold in my hand the account of the Press Conference, by one of the ablest journalists in Canada, who was present at that conference, written in England in the shape of letters to his own newspaper while there. And what had he to say about the scare in the country last summer while the conference was going on? If the speeches quoted by the hon. member for North Grey (Mr. Middlebro) had the significance which he attached to them, surely that significance would have found its way into the head of this journalist.

Mr. BRADBURY. Who was that journalist?

Mr. M. CLARK. Mr. John Dafoe, the editor of the Manitoba 'Free Press.'

Some hon. MEMBERS. Oh, oh.

Mr. M. CLARK. My hon. friends laugh at the name. I suppose that is because he belongs to a different political party than themselves. I described him as a great journalist, and if I want to justify

my description of him I could surely do it up to the hilt when I mention that there was scarcely a committee of the journalists for whatever purpose of that conference appointed by themselves on which Mr. John Dafoe was not placed, and let me say to my hon. friends that when we have the good opinion of our peers and fellows with whom we work we have the highest testimony that we are men of reputation and of worth. Mr. Dafoe said:

The panic, of course, has quite passed away, leaving behind it a fixed resolution in the minds of Englishmen, of all classes, that in a matter of such supreme importance to them as the supremacy of the seas, they will take no chances.

Might I offer the testimony of another journalist who has passed through the recent election. I think that, as Canadians, we cannot afford not to pay attention to the journalists who are over there. Something was said by the hon. member for North Grey (Mr. Middlebro) in criticism of the Postmaster General (Mr. Lemieux) for a remark he made about the last elections having settled the war scare, and the hon. member for Grey in regard to that, quoted Portsmouth as a place where the scare was evidently believed in. In Portsmouth and the other dockyard towns it is not so much belief in the scare as our old and well known friend, patronage, which affects an election. It is a cure for the scare that the people of Portsmouth and Davenport are interested in, because they get their living by building ships, and, of course, they listen to any one who goes there and promises an enlarged naval force. Mr. Joe Clark is the correspondent to whom I refer. I do not remember even the papers which he represented, but I read all his letters, and his forecasts of the campaign seem to me to indicate a journalist of an alert mind to whose word we should attach a good deal of importance. He said:

The navy scare will probably pass away. In fact it has been almost impossible to find anybody not on the stump afraid of Germany and one feels that such talk would not be used except in a country too strong to care whether a neighbouring nation took offence or not.

Mention was made of Lord Beresford's attitude. This same journalist quotes some words of Lord Beresford, and I am bound to believe he would only have done so on the best of authority. He states that Lord Beresford said after the contest, and I think these words indicate the exact importance he attached to the scare:

I do not wish to make a party thing of the navy, but you have got to get into parliament somehow.

Taking these views of the journalists who have been there and the leading members of the British cabinet, I am bound to say that I do not see there is much evidence that they believe in any imminent danger from Germany at all. I would like to quote the language of Mr. Balfour, the prominent statesman on the other side of politics. He was taken to task by Mr. Asquith for referring to an opinion among the statesmen and diplomatists of the lesser powers of Europe. Mr. Balfour said:

You will find among them absolute unanimity of opinion that a struggle sooner or later between this country and Germany is inevitable.

Yes, but Mr. Balfour was careful, with the sense of responsibility which naturally is felt by a man who might conceivably have had to go into office and hold diplomatic relationships with the great country of Germany, to immediately add:

I do not agree with them, that is their opinion.

So that every leading member of the government of England, at the present moment, has thrown doubt upon the motives and the reality of the scare of last spring, and Mr. Balfour, the leader of the opposition, agrees with them.

But, as I said, my friends have rested mainly upon authority in this matter. I, Sir, have other methods by which I judge of the importance of these panics into which the British people go from time to time. A little history is a splendid cure for a good deal of hysteria. I am old enough, I regret to say, to remember when the word 'jingo' first became a current word in British politics. In 1878 Lord Beaconsfield and the Marquis of Salisbury returned from the Berlin congress, and the Prime Minister made the famous speech in which he said: I bring you peace, and peace with honour. The London crowd went crazy and broke Mr. Gladstone's windows. Yes, but the London crowd was not then representative of British opinion, and in 15 or 16 months after that event, so far from the British people being carried away by that panic and entering or rather coming any nearer to war with Russia—it was Russia that the scaremongers were frightened of at that time—Mr. Gladstone won the country by a majority of 120, and that scare, for the moment, was forgotten, indeed it has been forgotten ever since because we have had no war. It is over half a century ago since the British people were similarly excited over the absurd rumour that the French people were building ships secretly in the harbours of Toulon and Cherbourg. There is no one to whom we ought to pay the attention that we do to the successful prophet, the man who sees the meaning of those things at the time. As I said, a little history is a splendid cure for a good deal of hysteria. Mr. Richard Cobden said at that time:

There is something very puerile in the recent attempts to frighten the country with stories about secret preparations in the French dockyards.

Yes, and how puerile it looks to us to-day, 50 years after the event, when we reflect that from that moment to this there has grown up between the great French and English nations the entente cordiale unbroken by a single warlike act during half a century.

It is absurd to have any fears of a war between Germany and England at the present time, owing to the relative strength of the two peoples and the two fleets. Why, I do not understand the make-up of the Jingo. It is beyond all possible doubt that the British seamen in the British navy at the present time number two and a fraction to one in the Germany navy. Britain is equally superior in the matter of ships. What is the attitude of hon. members towards the Englishman's fighting power anyway? The people who made the charge at Balaclava did not ask to be twice as strong as their opponents? I have never heard that Nelson and Wellington made it a sine qua non of their fighting that they should be two and a half times as strong as the enemy. I cannot understand the make-up of the Jingo. Have hon. members no belief in the might of England? Have they no knowledge of her history? I cannot for the life of me see why we should insist on Britain being two and a half times as strong as Germany, and, when we fear that it may be otherwise, to get into a state of hysterical excitement and do things that we shall be sorry for six months after when we have recovered from our unworthy panic. But I rest more on the good-will that prevails between the two peoples. And I am bound to say that, while I think a number of my fellow countrymen have been—to use the old American phrase—twisting the tail of the German lion, a trick that used to be played regularly in elections in the United States with regard to Great Britain herself, it redounds greatly to the credit of the German people that they have taken it all calmly and quietly. The trade relations between the two peoples make it the most unthinkable thing in the world that there could be war between them. Let me read what John Burns said on this subject upon the occasion to which I have referred:

> On the ground of race, religion, ideals and aims, Europe and the world would be the poorer if Germany and Britain were involved in a war. Germany was England's best customer and he was not a wise shopkeeper who advocated the blacking of the eyes of his best customer as a means of advertising his business. England sent Germany over £41,000,000 of goods and Germany sent England £57,000,000 a year, £12,000,000 of which was in food, whilst the British empire sent to Germany goods to the value of £90,000,000.

It is inconceivable to me that the two foremost nations of the world to-day are going to stop the whole beneficial service of commerce in the North Sea to fight it out like two school boys to see which is the stronger of the two.

Now, Sir, I think I have furnished sufficient ground for holding a different view from that of these two hon. gentlemen to whom I have referred as to the imminence of the German peril. But, we are face to face with the situation, peril or no peril, and there are two methods of handling it before the members of this House. Now, I must say that I was immensely disappointed when my hon. friend the leader of the opposition (Mr. R. L. Borden) tabled his amendment. Having regard to the speeches which he had been delivering all summer and during the fall, I anticipated that he would allow this question of the foreign policy, this question of such immense importance, to pass the House without a division. We have heard, however, Sir, that the tail sometimes wags the dog. When three tails of extraordinary activity get wagging all at one time the result is likely to be serious. The result was the production of what I would call an omnibus resolution—an omnibus with compartments. Into one compartment was hustled the hon. member for Digby (Mr. Jameson) and those who agree with him, singing: 'We don't know where we are, but we're going to the country to find out'. Into the more roomy compartment of the omnibus were crowded the larger number of those who sit behind the leader of the opposition, singing, as befitted them, the old Jingo refrain:—

> We don't want to fight,
> But, by jingo, if we do,
> We've got the men, and we've got the ships,
> And we've got the money, too!

Until my hon. friend resumed his seat, I thought there would have been a compartment for the hon. member for Jacques Cartier (Mr. Monk), but he struck on the business and switched off on a little conveyance of his own. The main omnibus was driven, I need not say, by the leader of the opposition with every apparent encouragement from his chief lieutenant, and the whole party raced off as fast as they could from implementing the resolution for which they were, equally with the other side, responsible last March.

What is it that the amendment proposes, Mr. Speaker? It proposes to carry out at once the policy of the opposition and propose to refer the policy of responsible government to the people. Well, that is a shifting of governmental respon-

sibility. But, if a referendum is good for the Liberal policy, which happens to be the policy of the majority of this House, surely it will be equally good for the policy of the minority, especially as there is no great panic, as I have tried to prove. Surely, the referendum policy would apply to the policy of providing Dreadnoughts as well as to the proposal to build a Canadian navy? There are one or two questions which I would like to ask about the giving of these Dreadnoughts. How often would hon. members propose this policy? Are these Dreadnoughts to be the finish, the final policy of Canada? Is that all they propose to do towards saving the empire in the midst of the terrible peril to which she is exposed in the pages of Mr. Robert Blatchford's writings? If not, and if there is to be gift of Dreadnoughts, when? I wish to push these questions upon the opposition. I judge that there will be plenty of members from that side following me, and I want them to explain to the House and country just how this thing is going to work out. How many Dreadnoughts are we going to give? Perhaps I could help to answer that question. These delegates of ours to the imperial conference saw a wonderful sight in the Solent last summer. The British fleet was there assembled, 144 battleships, covering eighteen miles of water. And the thing which bears upon the question I am putting to my hon. friends of the opposition is this—that only one of these battleships had been in existence twelve years before. You are going to give two towards one hundred and forty-four—not an almighty contribution, but probably sufficient There are a great many questions that the opposition have been directing to the government side of the House about the government policy that are equally applicable to their own. What is the empire going to do, we have been asked, during the time the ships are building? All I have to say is that if the empire, with 144 ships of her own on the Solent, depends absolutely for her salvation upon the two Dreadnoughts of the opposition, she will be in a worse place still. But the point I wish to urge upon my hon. friends is that this fleet was new within twelve years. You give your two Dreadnoughts, at a cost to Canada of about $25,000,000. Then, about time when the British fleet is rebuilt, you have to give two Dreadnoughts again. But if, long before that, Mr. Robert Blatchford and the yellow press of England agree to raise a scare, are you going to propose a policy of this kind every time such a scare is raised? There is a great deal to be said in support of my hon. friend the Postmaster General (Mr. Lemieux) when he said that the yellow press was at the back of this whole policy. I hold in my hand a telegram sent February 29, 1909, from the 'Standard' newspaper in England to the 'Evening Journal' of this city:

Build your navy. The rest must come. Build and your claim to a share in controlling imperial defence cannot be evaded, but build.

Now, I would like to know if, every time the English yellow press gets into this particular mood, and sends a telegram to the 'Evening Journal' of Ottawa, we are going to give another couple of 'Dreadnoughts'? Unless we are to withdraw from the empire altogether, you are not going to stop with the two, you will give another couple at least in eight or ten years when the present vessels of the British navy have become obsolete, and you have to replace them. But during that time you will not have taught a single Canadian to go to sea without being sea-sick, you will not have taught a single Canadian youth to walk the decks, you will have remained a nation of land lubbers—that is the practical outcome of the policy of the opposition. Contrast that with the plan of the government. The panic on one side, what we are concerned with is, not the giving of 'Dreadnoughts,' not a policy which is so ill thought out as that, but we are concerned with the orderly development of Canada as a portion of the empire.

Now what are the merits of the government plan? I want to state them in a couple of sentences. In the first place, the government plan is at least on an equality, for emergency purposes, with the opposition plan, because, if we are going to have a war with Germany next week, it is clear that any money we send to build 'Dreadnoughts' could not be used in that time. So that so far as emergency goes, the one plan is as good, or as poor, as the other. If emergency comes upon Britain quickly, we should at any rate be in quite as good a position as the opposition, or as we have been at any past period in British history. But I would say in criticism of the hon. leader of the opposition at this point that the very objection he made to the government plan is equally applicable to his own: it either goes too far, or not far enough. For my part, if the empire were really in danger, I do not believe Canadians would be content with giving a couple of 'Dreadnoughts.' The real asset which the empire has in Canada is in the knowledge of the fact that behind her, if the worst comes to the worst, she has all the material and moral resources of the people of Canada; and when that is made known to her it is better than giving a couple of 'Dreadnoughts.' So far as emergency goes, that is all the knowledge that Britain would want. I have some young fellows myself who can handle a rifle fairly well, and if the old land was really exposed to danger from a foreign foe, those young fellows, and others in the west, could not be restrained, and I think

I should have to put a sticking plaster on myself. 'Give a couple of Dreadnoughts.' I have heard of little Englanders in England, and I think I have discovered some little Canadians in Canada.

Not only is the government plan at least on an equality for emergency purposes with the opposition view, but it guarantees the autonomy of Canada. Now, disguise the contribution plan as you may, it gives away that autonomy, and if you repeat your contribution from time to time, it becomes equivalent to taxation. If you do not repeat it, then I think you would be little Canadians. Disguise it how you may, a cash contribution for 'Dreadnoughts' would amount to taxation without representation. Now, my hon. friend the leader of the opposition, running away as he was from his resolution of last March—because it was his just as much as the Prime Minister's—he did what is very uncommon with him, but he did what people very often do when they are going to do a foolish thing, he rather lost his temper, and he charged the right hon. gentleman with great heat, with having talked two-thirds of the time he was on his feet, wide of the subject. Mr. Speaker, I cannot agree with that view. I think that the magnificent argument we had, the history we had of the rise of Canadian autonomy, and the need of preserving it, was absolutely pertinent to that point. What is the history of the colonies of the empire in that respect? From the time of Lord Durham's memorandum and the repeal of the navigation laws by Lord John Russell, the attitude of the old country has been under the aegis of British Liberalism; the policy of the old country has been to produce, not so much an empire, as an alliance of free nations, independent for a great many purposes, but connected for others. That is the history of autonomy, and I should think that our Tory friends would have had enough of the other policy when they reflect upon what happened to the United States of America. That good old Tory, Lord North, believed in running the colonies from Downing street, and he tried it with the American colonies, with the result that they are gone. Well might Lord Beaconsfield call the Tory party the stupid party, because they are talking the same imperialsm to-day, they are building the same kind of a Tower of Babel, that will end in the same confusion, and chaos, and failure that attended that memorable building.

Not only is the government plan on an equality for emergency purposes with the opposition plan, not only does it guarantee the autonomy of Canada, but as I have said, it takes its place naturally in the national development, and it keeps hold of the purse strings. Let me say, Sir, that this is a point of very great importance. My hon. friend from Yale-Cariboo said just now that the Lord loveth a cheerful giver. Well, it is as well that he quoted that text for the benefit of my right hon. friend the Prime Minister, because I am sure it would never have any effect upon the Minister of Finance. 'The Lord loveth a cheerful giver' may be a very good maxim for people to carry out in their private enterprises, but I do not think it would be a good maxim for those responsible for taxing the country, and governing the people with the proceeds of their taxation. The Lord may love a cheerful giver, but I do not think the taxpayer has the same affection for him. I am bound to say that the resolution of last March could not leave this country where it had been, because we were bound after that resolution to do something. A great deal of the growth of this nation's responsibility in the empire is based upon the possibility of paying our own obligations as we go along, and retaining some of the benefit by giving fresh outlets to the enterprise of our people; and if we are ever to be a sea-faring people, teaching our young generation, those of them who want to go to sea, to learn to be sailors, would seem to be an essential part of a sound policy upon this question. I have endeavoured, as far as might be, to argue this question, free from partisanship.

Some hon. MEMBERS. Oh, oh.

Some hon. MEMBERS. Hear, hear.

Mr. M. CLARK. Well, if a man be a partisan when he proves that the authorities of those who build up a panic are not quite what they expected they were themselves, then I have been a partisan. I have taken one side of the argument, but it happens to be the right side. I have, at least, been non-partisan in this that I have never hinted, nor would it be fitting to hint, at the want of loyalty on the part of a single member of the Conservative party. Be he French or English, I give him credit for as good citizenship as I possess myself, and I must say that it would redound greatly to the credit of the Conservative party if they would follow my example in that respect. I marvel at any member of the Conservative party trying to cast doubt upon the First Minister of the Crown of this great country. I marvel at it for this reason that for two generations Liberalism has been teaching that the peculiar glory of the British people has been that they are colonists and that they can take Frenchmen and, by giving them their freedom, make them good citizens of this great free empire. It is still the glory of British statesmen and of British Liberalism to believe in freedom as the cement of empire, witness the giving of freedom recently to South Africa. I marvel at this want of courtesy and want

of faith. However, I recollect that before I became a citizen of Canada I used to see that when the Prime Minister visited Britain, at least, his loyalty was believed in there by all classes of the people. I tell my hon. friends with all due deference to the talent which is on their benches, that it will be a long time before the same kind of a reception is given to any man outside of the right hon. gentleman himself in Great Britain.

Sir, if, after over 200 years of freedom from war in Great Britain, the smoke of battle were to be seen there again instead of the much more beneficent smoke of industrial enterprise which has prevailed for a couple of centuries, and if the land of this sacred island were to be stained again with human blood, from all I have seen of Canadians, I believe there would be aroused the cry from the whole Anglo-Saxon population of Canada: Hands off the cradle of our race, but I believe there would be mingled with that cry the equally patriotic and strong cry from every one of our French Canadian citizens: Hands off the mother of our liberties.

Mr. T. S. SPROULE (East Grey). Mr. Speaker, at the outset I may say that I do not propose to treat this subject at any great length, but there are a few points to which I desire to direct attention. I listened somewhat attentively to the hon. member for Red Deer (Mr. Clark) who has just taken his seat for the purpose of jotting down points that I might answer, but I regret to say that the paper is yet a comparative blank. Although he travelled over ancient, medieval and modern history, political economy and the abstract questions of government, nearly four-fifths of his speech, I thought, had very little to do with the question before the House. He did say before he sat down that the Canadian people were loyal. Well, I agree with him in that. I think there is no doubt about that. The Canadian people as a whole are loyal. There may be individual cases of disloyalty. There may be policies propounded for Canada that, if carried out, would lead to disloyalty, but I think the great heart of the Canadian people is loyal. The hon. member for Red Deer finished by saying that the government proposal or plan had two merits. What were they? One was that it was quite as good as that proposed by the leader of the opposition (Mr. R. L. Borden). Well, that is an admission that there is some merit in the proposal contained in the amendment moved by my hon. friend the leader of the opposition. He did not claim that the government proposal was any better, but at least that it was as good. The other merit was that it preserved the autonomy of Canada. Does that imply that the amendment which was proposed would not preserve the autonomy of Canada? That is the only and natural inference to be drawn from the hon. gentleman's remarks. There is no man in this House who will read the resolution calmly and dispassionately, or analyse and criticise it fairly, who will reach the conclusion that there is anything in it that would lead to a sacrifice of the autonomy that we enjoy at the present time. The hon. gentleman went over a lot of ground and what occurred to me as a fair summing up of his speech as a whole was what I heard once from a very young professor who was asked if he could give a clear and logical demonstration of chemistry. Well, he said, the shortest and best that I know of is about this. I will give you an example of it:

> You take an effervescent
> And add a deliquescent,
> There will be a precipitation
> That is a conglomeration
> That amounts to a demonstration.

His statement was just about as clear and just about as logical. The first observation made by the right hon. Prime Minister (Sir Wilfrid Laurier) when moving the second reading of the Bill, which attracted my attention, was the positive and emphatic statement, as he turned around to look at his friends, that the government intend to stand or fall by this policy. What did he intend that to be? It could not be addressed to members of the opposition because they are generally found opposing the government, but it was a very strong and vigorous threat addressed to his own friends. Why? Because forsooth there must be a very great diversity of opinion and strong opposition to the policy which the government has propounded. That is the only conclusion to reach from that observation. I am justified in reaching that conclusion as well, because farther on, in answer to the question I asked him: Do you mean to say that when England is at war, Canada is at war?—he said: Certainly he did. Then he went on to say that when he made that statement he shocked his friends in Quebec until they rent their garments and tore their hair. These remarks were addressed to his friends in Quebec, and it, therefore, would not seem that they were standing as a solid phalanx behind his back; they could not have been addressed to the opposition in this House because he does not stand or fall by the power of the opposition, for were they strong enough they would vote him out of power. Then his next observation was that there was no emergency between Germany and England. Surely to arrive at this conclusion he must have ignored the calm and deliberate statements made by Sir Edward Grey, by Mr. Reginald McKenna, by Mr. Asquith, by Lord Roberts, by Lord Char-

les Beresford, and every one of the public men of England who gave their views as to the necessity for a strong naval construction policy by Great Britain. True, the Postmaster General told us, when I questioned him across the floor, that he was ignorant of the statements made by these gentlemen last spring, but he had heard the matter discussed during the election. However that may be, surely the Prime Minister was aware of the statements of British statesmen that there was a grave crisis at present in the British empire. The right hon. gentleman told us that if there was any emergency the Liberals would be as ready to assist in the time of need as the Conservatives would be, but if all he has heard and seen will not convince him that a crisis is upon the empire, then it would be a waste of time for us to try to convince him. The right hon. gentleman told us there was no danger because the navy of England represented 2,000,000 tons displacement, whereas the German navy represented only 890,000 tons. That may be all very well when you apply it to each of the navies as a whole, but if you take from the British navy such ships as are not considered of any great value as a fighting force, and then compare the Dreadnoughts of the two countries, the difference will not be found to be nearly so great. If Germany should continue her activity in building Dreadnoughts for the next three or four years, and if England should make no more progress than she has made for some years past, then Germany would have a fighting force equal to that of England. And, if this great German navy is not intended against England, what does she want it for? No other naval power than England begins to compare with her. England is the only country that has a navy superior to that of Germany, and if Germany did not design her ships against England she would have no nation with which to claim rivalry on the seas. The right hon. gentleman told us that it was trifling with common sense to say that this policy now announced by the government was a new policy, and he added that it had been clearly before the people since 1902. Well, there were three distinct colonial conferences attended by representatives of Canada. At the first conference all that was done was to agree to have another conference in three years. The second conference was largely taken up with discussion as to the trade relations between the different portions of the empire, and although defence was mentioned there was nothing formulated except the assistance offered by the Australian colonies to the motherland. At the conference of 1902 there was a proposal made in regard to naval defence, and one of the authorities who made the statement before the conference said:

Mr. SPROULE.

Sir Wilfrid informed me that His Majesty's government of the Dominion of Canada are contemplating the establishment of a naval force in the waters of Canada but they were not able to make any offer of assistance analogous to those enumerated above.

That was all there was about it. We had an election in 1904, but the government of Canada did not propound their naval policy, and they did not ask the people to sanction it. So far as I am concerned I never heard it discussed on a Canadian platform. And, what has this government done up to the present time with regard to carrying out any naval policy? They have boasted that they have taken over the naval stations at Esquimalt and Halifax, and to that extent relieved the mother country of the expense of their maintenance, but what money has Canada expended to provide any ships to defend these naval bases? None at all. We are absolutely without any defence even so far as Canada is concerned. Of course, the Minister of Marine has told us that we have built some fishery protection cruisers and established certain aids to navigation, and built the Canadian Pacific railway to transport troops across the continent, and in that way we have given aid to imperial defence. But, I have no knowledge that we have done anything to relieve the mother country of the heavy burden of naval expenditure which she has been constantly bearing outside of what we have done at Halifax and Esquimalt. But whatever was proposed then, it was said that the other colonies were doing something. While the United Kingdom was spending 15s. 2d. per head for naval defence, Cape Colony was spending 1s. 10d. per head, Australia 1s. 0¾d. per head, Natal 10s. 9d., Newfoundland 6s. 7½d., and New Zealand 1s. 0¼d., the Dominion of Canada is marked 'nil'—not a farthing, either to help the empire or to help ourselves. What was done at the conference of 1907? Practically nothing. There were discussions as to what might be done, but there was no practical scheme evolved that was submitted for the approval of the Canadian people. Then we come down to the conference of 1909, which evolved the naval scheme which we have to-day. It was not until then that any proposition had been crystallized into concrete form that could either be understood or submitted to the Canadian people. And yet the right hon. the First Minister says that this is an old question, that the Canadian electors knew all about it, and had assented to it again and again. We had an election in 1904, but not a word was heard about it, and no policy was laid down by the government. We had another election in 1908, and again no policy of naval defence was submitted to the Canadian people. There-

fore I am justified in saying that this is a new policy that was never submitted to the Canadian people. That is one of the reasons why we say that before we commence an undertaking that is going to be financially so great and so far-reaching in its results, and that may change our relationship to the mother country, it ought to be submitted to the Canadian people, so that they may have an opportunity to express their views upon it. That is one of the features of our resolution.

I am opposed to this policy because it means a heavy initial expenditure and a constantly increasing expenditure in the years to come. The right hon. the First Minister told us that the vessels he outlined would probably cost to construct about $15,000,000, and afterwards about $4,000,000 per year to maintain. If we judge what the naval force of the country will cost by what the militia force has been costing us since it was reorganized, we must come to the conclusion that $4,000,000 a year will not be half the outlay the Canadian people will be obliged to make to maintain that force. Let us compare this initial expenditure with the expenditure we make in other lines. I take up the estimates submitted for our consideration, and I find that we are asked to vote for the coming year the following sums: Civil government, $4,587,000; arts, agriculture and statistics, $1,114,000, which includes practically everything we spend for the farmers of the whole country; for every dollar we spend in the interest of the great agricultural class, the farmers of the country, we propose to spend fifteen for naval purposes, this is what is proposed by this Bill; railways and canals, $899,000; public works for the whole country, $8,104,000; mail subsidies and steamship subventions, $1,860,000; naval service—I do not know where it is unless it is on the fishery protection boats—$855,000; ocean and river service, $1,025,000; lighthouse and coast service, $2,321,000; subsidies to provinces, $9.117,000; Indians, $1,368,000. Take any one of these important lines and put it alongside of the expenditure proposed by this Bill, and it is a mere trifle; and these are the lines along which we must have increasing expenditures in our growing country. I have said that to judge what this proposal means to us in the future we can only calculate what we do not know from what we do know. We know that our militia was organized a few years ago. We were told that it was going to be valuable, that while it would cost a little more money, it would be worth while to make the additional expenditure. We consented to it. What has been the result? In 1896, when the present government came into power, the militia of Canada cost $2,193,000. We organized it according to the new plan of the Minister of Militia. In 1906, ten years after, it cost $5.664,000. and in 1908 $6,526,000, or even three times as much as in 1896. Now then, if our expenditure on militia can be taken as our guide, the expenditures on our naval forces will run up in about the same proportion or very much higher. There is no doubt about that whatever, and therefore I say we have a right to look upon this project with a little suspicion, and to fear that it is something we do not want. Let me give a few items to show how the militia expenditure has run up and we will have the same thing in the naval forces. If we start it, I claim it is the commencement of militarism, which the Canadian people dread; from the history of European and continental countries they know what it means. The hon. member for Red Deer (Mr. M. Clark) knows what it means. He is prepared to assent to supporting the same principle here which I have heard him decry strongly in this House. Let us see what it has meant in the case of the militia of Canada. The permanent force of Canada was looked after in 1896 by the following staff, with the salaries stated:

Officer.	Salary.
1 major-general commanding..	$ 4,000
1 adjutant-general..	3,200
1 quartermaster-general..	3,200
1 inspector of artillery..	2,300
1 assistant adjutant-general..	1,800
1 A. D. C..	1,000
2 clerks of military stores..	800
Total, 8 officials at..	$16,300

Under the new organization that was made some two years ago we have the following staff:

Nowadays it is supposed to require to do the same work, the following officials:

Officer.	Salary.
1 chief of general staff..	$6,000
1 inspector-general..	6,000
1 master-general of ordnance..	4,000
1 quartermaster-general..	4,000
1 adjutant-general..	4,000
1 director-general of medical service..	3,400
1 director of clothing and equipment..	3,200
1 assistant director of operations.. ..	2,400
1 asst. adjutant-general for musketry..	3,200
1 intelligence staff officer..	2,165
1 director of transport and supplies..	3,200
1 director of artillery..	3,200
1 director of engineer services..	3,200
1 asst. adjutant-general..	2,800
1 asst. director intelligence..	2,400
1 staff officer to inspector-general.. ..	1,200
1 intelligence staff officer..	2,400
3 staff lieutenants..	3,660
1 director operations and staff duties..	3,200
1 medals board officer..	2,600
1 asst. to A.A.G.M..	2,000
1 rifle factory inspector..	2,800

The old staff cost $16,000, while this costs $73,425. In 1896 it took only eight officers, but now it takes 23 officers and in addition

to these there is an army of clerks attached to the department involving an expense of several thousand dollars each year in addition.

I have given these figures to show what the new undertaking will involve in a few years. Instead of being able to handle that militia force with $16,000, we now require $73,000. I believe to-day it is over $100,000 and is increasing every year. When I first spoke on this I said it was the commencement of militarism, and I repeat the same thing with regard to the present proposal of a naval force. It is the commencement of militarism that the Canadian people dread because of the expense involved in it and the little result that will accrue to the country. For that reason, I say, I am opposed to it because, I believe, it is radically wrong. I am opposed to it because it does not meet the present emergency. What did the people in England say was required to meet the present emergency? They said:

> If the problem of military and naval defence were considered merely as a problem of naval strategy——

And naval strategy is what gives them control of the high seas to-day, with a force standing at their back.

> —it would be found that the greatest output of strength for a given expenditure is obtained by the maintenance of a single navy with the concomitant unity of training and unity of command.

That is what would be the most valuable.

> In furtherance then of the simple strategical ideal the maximum of power would be gained if all parts of the empire contributed, according to their needs and resources, to the maintenance of the British navy.

That is what would do the most good. If our desire is to do the most good to strengthen the British navy, surely we ought to have some regard to their expert knowledge, to their judgment and to their views, and they tell us that is what they desire; but we are told Canada will never consent to that. It is said that if we gave in that way it would be taxation without representation. Perhaps it would be and yet after all it might not be a bad thing, and we might be able to do that without any injustice to Canada and with great good to the British empire. But that is the judgment of the British people and I say I am opposed to this because it does not meet the present emergency. In no sense or in no way can it meet the present emergency. Now it is said that the emergency is on, we must either deal with it or do nothing, and that if it matures at the present rate it must come to a head within a few years. The Prime Minister himself said that these ships could not be built, we could not have a ship ready to go into commission before at least five years. But a navy to be of any value would take at least 15 years to build. What is to become of the emergency in the meantime? What assistance are we giving to the British fleet in the meantime? None whatever, and that emergency is on, that emergency must be met.

England said: If the colonies will not assist we are bound to do it ourselves. She accepted courteously and thankfully the offers made by New Zealand, Victoria and the Australian Commonwealth generally when they offered 'Dreadnoughts' and money—but Canada made no offer, Canada stood aloof from it. Therefore, I say, I am opposed to the proposal because it does not meet the present emergency. I have no doubt many in this House have noticed that for several years past a proposal has been made by the foremost minds of the world, that the different nations should have a conference and agree to a limitation of their naval and military forces, and their expenditures for the development of these forces. Almost every nation in the civilized world has offered to agree to it except Germany. While Germany has said she was willing to agree to it, she was never prepared to do it. In the meantime, while she was professing a desire to control her naval expenditure, she was still going on spending more and more each succeeding year.

She must have had some purpose. What was that purpose? England was ready to go into that conference, France proposed to go into it; even the United States was prepared to go into it—all civilized countries were prepared to enter the conference except Germany. But Germany was going on building her Dreadnoughts and preparing for her naval battle whenever it came. If, to-day, the colonies of the empire came to the assistance of England with a gift of money which she could use in accordance with the well-matured plans that her naval experts have evolved from generation to generation, her force would be increased to the greatest extent and in the quickest way, and England would be ready to cope with Germany. Germany then might regard it as useless to go on developing her naval forces as she has been doing. And, if she reached that conclusion, she might go into that conference and decide to limit her naval and military expenditure. If this were done, the emergency would be over. Giving once, we might not be called upon to give again. This would be a free gift, on the same lines as our sending men to take part in the South African war. It would not be taxation without representation; it would be a free and voluntary gift, and, as the emergency might not arise again for many years, we might save ourselves the millions upon millions which we must

spend to go on with a navy as proposed at the present time.

I am opposed to this policy, because it was not what the British naval authorities suggested would be of the most use to them. They said that a naval unit would be the best contribution outside of money. The fighting they said must be done by Dreadnoughts, while the smaller craft are good in their way they are practically of no value in the work for which the Dreadnought is needed. Therefore, we are not preparing to give what the naval experts of England said every colony should give that wished to help the empire in the best way. It is suggested that with Esquimalt and Halifax to care for, if we want to have a naval force of any value and to look after these ports, we must have a force on the Pacific and one on the Atlantic. But, because the government is not prepared to undertake that expenditure, it cannot provide a single unit, the only fighting force that Britain thought would be of great value. But a money contribution would meet the emergency. Therefore, I would favour a money contribution, which, as I have said, might be required only once in a generation.

And lastly, I am opposed to this policy because the Canadian people have not had an opportunity to express their views upon it. The government has never submitted their policy to the people either by referendum or at a general election. I hold that we should not commence such an undertaking without asking the judgment of the Canadian people upon it, and if the government is not prepared to evolve a policy and submit it to the Canadian people at the next general election, they are not the kind of statesmen as are to be found in every other portion of the British empire except Canada. For this would be in accordance with the principle of our form of constitutional government—the government propounds its policy crystallizes it into form and submits it to the people and asks for their approval.

Sir FREDERICK BORDEN. Might I ask my hon. friend (Mr. Sproule) if he would propose to put off submitting the question until the next general election?

Mr. SPROULE. What I would propose to do is exactly what I have said. The government should give a contribution either in money or in vessels in order to meet the present emergency. We might not require to do that again for a long time. Then, they should evolve a policy and submit it to the Canadian people, either by calling a general election, or by making it an issue in the next general election, and let the people express their views upon it. When that is done, when the Canadian people endorse the policy, the administration will be justified in going on with it; if they do not endorse it, it will have to be abandoned for the future. For these reasons, I am opposed to this Bill and in favour of the amendment moved by the leader of the opposition.

On motion of Sir Frederick Borden the debate was adjourned.

On motion of Sir Wilfrid Laurier, House adjourned at 10.35 p.m.

HOUSE OF COMMONS.

THURSDAY, February 10, 1910.

The SPEAKER took the Chair at Three o'clock.

CUSTOMS AND FISHERIES PROTECTION ACT AMENDMENT.

Hon. A. B. AYLESWORTH moved for leave to introduce Bill (No. 138) to amend the Customs and Fisheries Protection Act. He said: This Bill proposes to amend the Act so as to prescribe the method of proceeding where steps are taken to condemn a ship which has been seized and where such proceedings are taken, not in the Exchequer Court but in the Superior Court of a province. There is provision in the law as it stands that such proceedings may be taken either in the Exchequer Court or in the Superior Court of a province, but in some of the provinces no rules are prescribed for the taking of such proceedings in the provincial court and practical difficulty has resulted in endeavouring to get on. The proposal is to remove that difficulty by providing that, unless and until rules of procedure are prescribed by the provincial courts, the rules of procedure existing in the Exchequer Court shall be followed.

Motion agreed to, and Bill read the first time.

QUESTIONS.

DOMINION LAND OFFICES REVENUE IN ALBERTA AND SASKATCHEWAN.

Mr. LAKE:

1. What was the aggregate revenue received in money and scrip by Dominion Land Offices in each of the provinces of Alberta and Saskatchewan, respectively, from the 1st July, 1905, to the 31st December, 1909?

2. Were any amounts additional to the foregoing collected at Winnipeg or Ottawa during the above period on account of the public lands and other natural resources comprised within the area of the said land offices? If so, what was the aggregate additional amount for each province?

Hon. FRANK OLIVER:

1. Province of Alberta, $1,531,275.67; province of Saskatchewan, $1,939,271.02.

2. Collected at Ottawa: province of Alberta, $2,181,672.92; province of Saskatchewan, $470,983.60. Total: province of Alberta, $3,712,948.59. Total: province of Saskatchewan, $2,410,254.62.

COMPENSATION TO ALBERTA AND SASKATCHEWAN FOR PUBLIC LANDS.

Mr. LAKE:

What is the aggregate amount of the compensation paid to the provinces of Saskatchewan and Alberta respectively for public lands under section 20 of the Alberta and Saskatchewan Acts from the 1st July, 1905, to the 31st December, 1909, distinguishing between that paid under subsections 1 and 2 of the said section 20?

Hon. W. S. FIELDING:

Amount paid to the province of Alberta under subsection 1 of section 20 of chapter 3 of the Acts of 1905, 'The Alberta Act'	$ 1,687,500 00
Amount paid to the province of Alberta under subsection 2 of said section	421,875 00
	$ 2,109,375 00
Amount paid to the province of Saskatchewan under subsection 1 of section 20 of chapter 42 of the Acts of 1905, 'The Saskatchewan Act'	$1,687,500 00
Amount paid to the province of Saskatchewan under subsection 2 of said section ..	421,875 00
	$ 2,109,375 00

NATIONAL TRANSCONTINENTAL RAILWAY—O'BRIEN, FOWLER & McDOUGALL CONTRACT.

Mr. LENNOX:

1. Referring to the O'Brien, Fowler & McDougall contract on the National Transcontinental railway, mile 1,534·04 to 1,558·17 from Moncton—

At the date of the latest estimate, what quantities of solid rock, loose rock and common excavation, respectively, had been taken out?

2. What was the rate of payment, and what was the amount paid for each of the classes of material taken out down to date of this estimate?

3. What was the date of this estimate and by whom was it made?

Hon. G. P. GRAHAM:

	Cu. yds.
1. Solid rock..	344,377
Loose rock..	331,802
Common excavation	129,057

As the classification has been found to be different from that originally estimated, it is impossible to give the quantity of each class of material yet to be taken out without having a special estimate for the purpose made in the field.

2.

		Amount paid.
Solid rock, per cu. yd..	$1 45	$499,346 93
Loose rock, per cu. yd..	0 55	182,491 10
Common excavation.. ..	0 25	32,264 25

Amounts actually paid are 10 per cent less than above, viz:

Solid rock..	$449,412 24
Loose rock..	164,241 99
Common excavation..	29,037 83

3. The date of this progress estimate is December 31, 1909, and it is in two parts, that for the easterly thirteen miles, being made by Howard Brunlees, assistant engineer, and approved by F. J. McIntosh, assistant district engineer, and S. R. Poulin, district engineer; the remaining westerly part made by J. A. Rogers, resident engineer, and approved by H. J. McKenzie, division engineer, and S. R. Poulin, district engineer.

INTERCOLONIAL RAILWAY—ALLEGED USE OF STOLEN PASSES.

Mr. RHODES:

1. Has the government any knowledge of stolen passes said to have been used on the Intercolonial railway within the past three years? If so, was any investigation held, by whom, and what was the finding?

2. What measures have been taken to prevent a similar occurrence?

Mr. GRAHAM. On this question, perhaps I may be allowed to explain that the hon. member for North Toronto (Mr. Foster) has asked for some documents in connection with the matter. There are practically no documents so far as I can ascertain, but I am having a statement made that will cover both this question and the motion of my hon. friend from North Toronto.

Mr. FOSTER. No correspondence?

Mr. GRAHAM. No.

BOAT FOR HALIFAX HARBOUR QUARANTINE SERVICE.

Mr. CROSBY:

Does the contract for the construction of a boat for the quarantine service, Halifax harbour, cover the cost of bringing the boat out from England and delivering her in Halifax? If not, what will be the cost of bringing this vessel across from the place of construction to Halifax?

Mr. FIELDING. Yes.

LIGHTHOUSE AT SPENCER'S ISLAND, NOVA SCOTIA.

Mr. RHODES:

1. What was the total cost of the lighthouse at Spencer's island, Nova Scotia, and was it built by contract or day labour?

2. If by contract who were the tenderers and what was the amount of each tender?

3. If by day labour, what amounts were paid for labour, teams and materials, respectively, and who were the persons receiving pay for same?

4. Does the government own the site? If so, how much land was bought and from whom?

5. If owned by the government, is it under lease, what quantity of land is leased, from whom, and on what terms?

Sir WILFRID LAURIER:

1. Total cost $654.65; built by day labour.

2. Answered by No. 1.

3. Labour, $227.62.

B. McLellan	$ 62 00
M. Morris	43 75
G. Porter	43 75
J. Dunbar	23 62
S. McKeen	41 00
G. Morris	4 50
R. Lambert	4 50
G. Murphy	4 50
	$227 62

Teams, nothing charged.

Material, $398.03.

C. R. Hoben, lamp	$ 9 50
Longard Bros., rail	55 63
Magnus & Lourdes, ventilator	19 50
Holland & Kuhn, shades	3 30
Haley Bros., lumber	85 69
McAvity & Sons, hardware	130 85
Walsh Bros., glass	26 00
B. McLellan, lumber	58 78
	$389 25

4. The light house was placed on the beach and no site was purchased or leased.

5. Answered by No. 4.

POST OFFICE AT DIXON.

Mr. ARMSTRONG:

1. Was the post office at Dixon, Ont., removed about one year ago? If so, what were the reasons for its removal?

2. Has the Postmaster General received a petition requesting that it be left where it was formerly located? If so, how many signatures were on the petition, and what distance is it from the old site to the new one?

3. How many years was the post office in operation on the old site?

4. Was the old site convenient to a factory and school and the centre of a division?

5. Is the government in possession of affidavits to the effect that the petition asking for the removal of the post office was a false petition?

6. Will the Postmaster General, in view of the petition of April 20, 1908, and the affidavits of March 29, 1909, restore to the people their right of a post office centrally located?

Hon. RODOLPHE LEMIEUX:

1. Yes. The post office became vacant by the resignation of the postmaster. In making a new appointment it became necessary to make a change in the location of the office.

2. Petitions for and against the change were received. A petition in favour of another location has some fifty-three signatures, but it was considered that this location was in too close proximity to the Northfield Station post office and would deprive the residents west of the present location of postal facilities. The distance of the present site from the former site is one-third of a mile.

3. The former postmaster had been in charge of the office from June, 1885, to August, 1907.

4. The department has no specific information on these points.

5. An affidavit to this effect was received from one person, a Mr. Simon Bartle. The change in location of the office had been carried out some time before.

6. The department decided, after careful consideration, that the public generally would be best served by having the office at its present location and that a large portion of the community to the west would be seriously inconvenienced if it were retained in its former location. It is not considered advisable, therefore, to make any further change in the site of the office.

BRIDGE OVER MUD LAKE.

Mr. GEO. TAYLOR:

1. Was a survey or estimate made by any officer of the Public Works Department during the last year as to the cost of a bridge or crossing over Mud lake, in the township of Tay, county of Simcoe?

2. If such survey work was done, what was the cost of same, and what was the name of the official or officials who performed the work?

3. If an estimate was made of the probable cost of such work, what was the figure or cost estimated?

4. Is it intended to proceed with the work? If so, when?

Hon. WM. PUGSLEY. There was no survey or estimate made by any officer of the Public Works Department during the last year as to the cost of a bridge or crossing over Mud lake, county of Simcoe.

GOLD SPECIE IN HANDS OF GOVERNMENT.

Mr. LENNOX:

1. Is there any statutory provision in the Audit Act or elsewhere to empower or direct the Auditor General, or any other person or persons, outside of the Receiver General's office or staff, to ascertain, at stated intervals and report to the House the actual amount of gold specie at such dates found to be in the hands or under the actual control of the Minister of Finance, or in the hands or control of the several assistant receivers general.

2. Does the government propose during the present session, by amendment of the Audit Act or otherwise, to make provision for hav-

ing the actual amount of the gold or other specie reserve ascertained at regular stated intervals by counting, weighing or otherwise, by the Auditor General and his staff, or other independent capable officials?

Mr. FIELDING. The long established practice of the government in this matter has been that the specie in the hands of the assistant receivers general is counted and checked by the inspectors from the Finance Department. The Auditor General is not specifically required to take part in this work. It is, however, a service that he may properly be required to perform under the provisions of subsection (j) of section 63 of the Consolidated Revenue and Audit Act. The Minister of Finance has informed the Auditor General that he desires him to participate in the examination and counting and that every facility will be afforded him and his officers for this purpose.

RAILWAY TO ELEVATOR AT PORT COLBORNE.

Mr. FOSTER:

1. What amount of money was expended in the construction of the railway to connect the Grand Trunk railway with the elevator at Port Colborne?
2. What was the object of constructing this railway?
3. When was it finished and what traffic has gone over it?
4. In what condition is this road at present, and is it to be repaired? If so, what is the estimated cost of repairs?

Mr. GRAHAM:

1. $34,000 was expended in constructing a siding to connect the Grand Trunk railway with the elevator at Port Colborne.
2. The object was to provide railway facilities to the government elevator at Port Colborne and all railways are allowed to connect with it.
3. It was finished in November, 1909, and the traffic over it to date amounts to 323,022 bushels of grain.
4. The road is in good condition at present, but requires about 200 cubic yards more ballast. The estimated cost of repairs will be about $400.

THE PARIS FLOODS.

Hon. W. S. FIELDING. Before the orders of the day are called, I desire to communicate to the House a telegram which I have received from Sir Francis Bertie, the British Ambassador at Paris, with reference to the appropriation of $50,000 made by parliament to assist the sufferers from the French floods. The money was conveyed to His Excellency, Sir Francis Bertie, through our financial agents, and I have now received the following communication from him:

Mr. LENNOX.

Paris, February 10, 1910.

Minister of Finance,
Ottawa.

Your telegram of February 7, money handed to French Minister for Foreign Affairs; also requests that deep gratitude of government of Republic, who are much touched at this generous mark of sympathy, may be conveyed to Canadian parliament.

(Sd.) BERTIE.

FIRST READINGS.

Bill (No. 137) respecting the Erie, London and Tilsonburg Railway Company.—Mr. Clarke.

Bill (No. 136) respecting the St. Clair and Erie Ship Canal.—Mr. McColl.

INQUIRY FOR RETURN.

Mr. BLAIN. I desire to ask when we may expect a return to an order of the House of December 6, to which I made some reference in the House a few days ago; a return in respect of the officers of the government having residences in the House of Commons.

Mr. PUGSLEY. The information has to be procured from several different sources. I made inquiry the day before yesterday regarding it, and I hope that by to-morrow, or next day, or on Monday next, the information will be furnished.

THE NAVAL SERVICE OF CANADA.

House resumed the adjourned debate on the motion of Sir Wilfrid Laurier for the second reading of Bill (No. 95) respecting the naval service of Canada, the proposed amendment of Mr. Borden thereto, and the amendment to the amendment of Mr. Monk.

Sir FREDERICK BORDEN (Minister of Militia and Defence). In resuming the debate upon the motion for the second reading of the Bill to provide for a Canadian navy, I shall find it necessary to review, to some extent, a debate which took place in this House somewhat less than a year ago. In doing so I can hardly bring myself to believe that the opposition of to-day is composed of practically the same gentlemen who were in this House and took part, some of them at any rate, in that debate in March, 1909. The hon. leader of the opposition and his deputy, the hon. member for North Toronto (Mr. Foster), waxed eloquent in that important discussion; in fact the hon. member for North Toronto introduced a resolution, which was afterwards changed into the resolution which finally and unanimously passed this House. I did not observe that any one of the opposition dissented, not even my hon. friend from Jacques Cartier (Mr. Monk); he acquiesced, at any rate by his silence, in the terms of that resolution. It cannot be said

that the resolution was passed hastily. My hon. friend from North Toronto told us on that occasion that he wrote out his resolution before he left Toronto, at any rate, that he placed it in the hands of the clerk on the very day this House met. My hon. friend did not move the resolution for some time afterwards, but I do not question in any way his motives, I am simply pointing out the fact that there was no hurry, no undue haste, that my hon. friend took all the time that he required before bringing the important matter to the attention of the House. Without detaining the House I shall proceed to read that resolution. It is as follows:

That all the words after 'that' be struck out and the following substituted thereto:

This House fully recognizes the duty of the people of Canada, as they increase in numbers and wealth, to assume in larger measure the responsibilities of national defence.

The House is of opinion that under the present constitutional relations between the mother country and the self-governing dominions, the payment of regular and periodical contributions to the imperial treasury for naval and military purposes would not, so far as Canada is concerned, be the most satisfactory solution of the question of defence.

The House will cordially approve of any necessary expenditure designed to promote the speedy organization of a Canadian naval service in co-operation with and in close relation to the imperial navy, along the lines suggested by the admiralty at the last imperial conference, and in full sympathy with the view that the naval supremacy of Britain is essential to the security of commerce, the safety of the empire and the peace of the world.

The House expresses its firm conviction that whenever the need arises the Canadian people will be found ready and willing to make any sacrifice that is required to give to the imperial authorities the most loyal and hearty co-operation in every movement for the maintenance of the integrity and honour of the empire.

I may call attention to the fact that in this resolution there occurs the word 'speedy,' 'the speedy organizations of a Canadian naval service,' and that my hon. friend the leader of the opposition (Mr. R. L. Borden) was the man who suggested that some word of that kind should be introduced into the resolution. He has taken great credit, properly enough, for having done so in the speeches he has made in various portions of the Dominion and in the heart of the empire itself, in the city of London. Sir, can any one believe for a moment that the hon. gentlemen who lead the Conservative party to-day are the same gentlemen who moved, who acquiesced in, who took an active part in and boasted of the active part they had taken in the passing of that resolution, and who supported it in every sense for many months after the resolution was passed? But some change has come over the spirit of their dreams. It is difficult to understand what could have happened. We know that the leader of the opposition (Mr. R. L. Borden) took his vacation in the summer in England. There is an old saying that when the cat is away the mice will play, and so it would appear that the mice possibly played during the visit of my hon. friend to England in the summer, and they seemed to have played to some purpose, because I shall now read, and I wish to contrast with the one I have just read, the resolution which the leader of the opposition moved here on February 3. It is as follows:

That all the words after the word 'that' be left out and the following substituted therefor:—

The proposals of the government do not follow the suggestions and recommendations of the admiralty, and in so far as they empower the government to withhold the naval forces of Canada from those of the empire in time of war are ill-advised and dangerous.

That no such proposals can safely be accepted unless they thoroughly ensure unity of organization and of action without which there can be no effective co-operation in any common scheme of empire defence.

That the said proposals while necessitating heavy outlay for construction and maintenance will give no immediate or effective aid to the empire and no adequate or satisfactory results to Canada.

That no permanent policy should be entered upon involving large future expenditures of this character until it has been submitted to the people and has received their approval.

That in the meantime the immediate duty of Canada and the impending necessities of the empire can best be discharged and met by placing without delay at the disposal of the imperial authorities as a free and loyal contribution from the people of Canada such an amount as may be sufficient to purchase or construct two battleships or armoured cruisers of the latest Dreadnought type giving to the admiralty full discretion to expend the said sum at such time and for such purposes of naval defence as in their judgment may best serve to increase the united strength of the empire and thus assure its peace and security.

Mr. Speaker, the hon. the leader of the opposition is apparently delighted at the reading of his resolution, much more so than he was at the reading of the resolution in the framing of which he was so proud to claim a part, and which was passed here in March, 1909. I propose to read shortly some of the arguments which were presented in 1909 in favour of the resolution then unanimously carried. I shall begin by reading an extract or two from the speech of the hon. the leader of the

opposition (Mr. R. L. Borden). Referring to the leader of the government, he said:

Now the right hon. gentleman has spoken of the relations of Canada to the empire and I for one am prepared to go as far as he, as far as any hon. gentleman in this House, in absolutely maintaining in this country of ours the full control of our own affairs, which we have enjoyed for many years in the past. I do not think there is any difference of opinion between the two political parties in Canada in that respect. It might be wise to refer for a moment to the circumstances that Great Britain by giving to Canada and the other great dependencies of the empire, absolutely full control of their own affairs, and absolute autonomy in respect of self-government, has, I believe, increased and strengthened the ties which bind these great dependencies to the empire as a whole.

Again he said:

I understand also that in Great Britain the King has, as a matter of formal law, of strict legal right, the power to impose his veto upon any statute of the United Kingdom; but I also understand that by means of that which Mr. Lowell, the new president of Harvard, has called custom superimposed upon law, and which Mr. Ansen, another great constitutional writer, has called law overgrown by custom, the parliament of Great Britain today, although it has legal power, has not the constitutional right to alter the British North America Act without the consent of the people of Canada. So we understand that we have in this country full powers of self-government, and that those powers of self-government depend, not upon the written but upon the unwritten law, that has so largely moulded British institutions and the relations of the great dependencies to the empire in the past.

And again:

It is of no use for us in Canada to speak of this country as a nation, and to shrink in any manner from the discharge of our national responsibilities. What are those responsibilities? Acknowledged in every civilized nation, recognized among all the civilized nations in the world, is the defence of their territories and the protection of their commerce.

And yet to-day the leader of the opposition goes back on his policy.

Some hon. MEMBERS. No, no.

Some hon. MEMBERS. Yes.

Sir FREDERICK BORDEN. He goes back on his policy and he proposes to tax the people of this country some $25,000,000 to send Dreadnoughts he knows not where, and to place them utterly beyond and outside of the control of the taxpayers of Canada. Now, Mr. Speaker, there is one more quotation from the hon. leader of the opposition.

Some hon. MEMBERS. Read it all.

Sir FREDERICK BORDEN. It is not often that one has the extreme pleasure of being able to read quotations which are alike popular on both sides of the House and agreeable to all. My hon. friends opposite affect to enjoy these utterances of their leader, and I am sure my hon. friends on this side will be delighted to hear them, although we are sorry that the hon. gentleman has changed his mind. Let us hope that he may return some day to the sound opinions which he held in 1909. The hon. gentleman (Mr. R. L. Borden) continued to say:

In so far as my right hon. friend the Prime Minister to-day outlined the naval defence of this country I am entirely at one with him. I am entirely of opinion, in the first place, that the proper line upon which we should proceed in that regard is the line of having a Canadian naval force of our own. I entirely believe in that.

And yet he no longer believes in it, because he now proposes to take $25,000,000 out of the pockets of the people and send it away where the people of Canada will have no control over it. Then, the hon. gentleman (Mr. R. L. Borden) said:

The other experiment has been tried as between Australia and the mother country and it has not worked satisfactorily in every respect. In Great Britain the contribution has perhaps been regarded as rather unsatisfactory. In Australia it, in the end, failed to meet with the approval of the people for the reason that Great Britain felt constrained to ask Australia that the field of operations of the squadron should be extended to the China and Indian seas, and if the operations of that squadron were so extended the Australians felt that the contribution which they had been making for some years past was not really being used to give that protection to Australia which they felt it should have. So that, the policy of Australia at the present time is the policy of the submarine and torpedo boats which, in case of war, would cooperate with the armed cruisers and battleships of the British navy. It was pointed out in discussing this question that although the people of Australia provided a force of that kind they would provide a force which it would be very difficult if not impossible for Great Britain to send across the seas, and that when they were protecting themselves they were providing the best possible force for the protection of the empire.

Nine or ten months ago the hon. gentleman sympathized with Australia, which had found that to tax her people large sums of money for contribution or tribute for ships which would not be near the shores of Australia, but might be in the China seas, was no longer popular or proper. My hon. friend agreed with that view then; but to-day he wishes to tax the people of Canada $25,000,000 and to send it away out of sight of Canada where Canadians could have no possible interest in it. The hon. gentleman (Mr. R. L. Borden) further said:

I am at one with the Prime Minister as far as that is concerned. I am one with him in this respect also that I think that an expenditure of money designed for that purpose, as far as possible, ought, in the main at least, to be under the control of our own parliament and that by making an appropriation of that kind and attending to the defence of our own coasts, by co-operation and co-ordination with the imperial forces, we would be rendering a real service in the defence of the empire and we would be doing only our duty not only to Canada alone but to the empire as a whole.

It will be seen, therefore, that the hon. gentleman expressed himself as being in entire accord with the sentiments expressed by the Prime Minister, and so it will be instructive to see what were the sentiments of the Prime Minister with which the hon. the leader of the opposition was in absolute agreement as he said over and over again in his speech. Here is what the right hon. the Prime Minister said:

The empire of Britain has been founded less on war than on discovery and colonization, and wherever founded in any part of the world, whether by war or colonization or discovery, it has been maintained only by the free will and consent of the peoples who now acknowledge British supremacy. To-day the British empire is composed of a galaxy of young nations proud of their allegiance to the British Crown and proud also of their own independence. And though they may have a common aim, each has reserved to itself the duty and the right to develop its own resources and to attain its aim according to its own views, and by its own methods which may be best suited to the peculiar circumstances of each.

Now, it may be said that defence which is the duty of all nations is a matter as to which there should be a common aspiration. Yes, I agree in that, but at the same time the young daughter nations of England have insisted that even in the matter of defence they should preserve in its entirety local autonomy, and that each should approach this subject according to its own lights. Let us not disguise the fact from ourselves that at present there is a passing wave in which we can trace anger, enthusiasm and fear, and which may be calculated by some to force us to depart from our policy and to contribute at once to the British navy. Well, Sir, let us view this question as it is, let us not blink at it, let us realize that it is not the way in which in the past we have understood our duty.

And the hon. the leader of the opposition acquiesced in every word of the statement of the right hon. the Prime Minister on this line of his argument. The right hon. the Prime Minister continued:

This question is not new; we are familiar with it, it is not of to-day or of yesterday. I will not say it is as old as the hills, but it is as old as confederation itself and it comes to the front periodically. It presented itself in a concrete form in the imperial conference of 1902 to those who were there assembled from all parts of the British empire conferring with the government of the mother country. The proposition was placed before us that all the self-governing dominions of the British empire should contribute to the army and to the navy. The Canadian ministers who were present attending that conference did not view that project with any favour. They received it with respect but they declined to accept it and they presented their views in another form and they stated what they were prepared to do so far as Canada is concerned. Their views on that occasion were stated in a paper which has often been quoted in this House, but which I think it is opportune that I should quote to-day.

A paper I will not quote from, as it is very familiar—the memorandum which was placed in the hands of the conference of 1902 by the Canadian ministers. These are the sentiments, Mr. Speaker, which the leader of the opposition approved of in March, 1909. If they meant anything, they meant that the only self-respecting means by which Canada could in any way add to the responsibilities of defence which she was already bearing, was by the organization of a Canadian navy, but on lines which would enable it, if the people of Canada so desired, to co-operate with the great imperial navy.

Mr. FOSTER. Does my hon. friend mean to affirm that, from what my hon. friend the leader of the opposition said as to his agreement with the Prime Minister, that binds the leader of the opposition to an agreement with the memorandum placed before the imperial conference of 1902?

Sir FREDERICK BORDEN. The right hon. the leader of the government stated that that memorandum had been before the people of Canada from 1902 down to that moment, and that no one on either side of the House had ever dissented from its terms.

Mr. MONK. The resolution of March last undertook to carry out the plan of defence as defined by the imperial conference of 1907. That is what it said in very words.

Sir FREDERICK BORDEN. I am afraid my hon. friend has not grasped the point which the hon. member for North Toronto was trying to make. The hon. member for North Toronto, as I understood him, asked me if I thought it was right to make the leader of the opposition responsible for that memorandum because it had been read by the Prime Minister, and because the leader of the opposition had approved of the Prime Minister's words in that regard; and I told my hon. friend from North Toronto, and I repeat it now, that that memorandum of 1902 has been before the people of this country for seven years, and has never been dissented from by any member of the opposition, nor by anybody in this country, so far as I know.

Mr. R. L. BORDEN. Perhaps the hon. gentleman would not think it unfair if I

called his attention to another part of my speech to which he has made no allusion.

While I venture to think that a system of torpedo boats and submarines such as has been adopted by the Commonwealth of Australia would be perhaps the most effective way in which we could assist Great Britain in a stated policy of naval defence, yet I agree that the Canadian government ought to have the advice of the British admiralty and lend itself to such co-operation and co-ordination as will be best for the whole empire.

Sir FREDERICK BORDEN. I do not think the interruption was at all pertinent. The hon. gentleman was discussing the question of autonomy, and I did him the justice to read every word he said about it; and the beginning and end of his observations was that he approved of every word the right hon. leader of the government had said:

But, Mr. Speaker, there were other notable speeches made. The hon. member for North Toronto, during the vacation, after his leader had gone away, showed that he was still firm in the faith in a speech which he made at Halifax on the 25th of August, 1909. In that speech—and I quote from the Halifax 'Herald,' which he will not dispute—he said:

This is the greatest step forward we have ever made in Canada. We must be prepared to defend ourselves——

Not the British empire, but ourselves; it was Canada he was thinking about then. He forgot about it since.

—Canada has a mighty future before her as a maritime power.

He was thinking about the future of Canada then, and he uttered some fine words and some splendid periods in regard to it. But to-day he and his party have become so dwarfed by this narrow policy which they have adopted that he sees nothing but blue ruin, Germany and hostile fleets, and nothing will avert that but the people of Canada putting their hands deep down in their pockets and taking out $25,000,000 and sending it away never to be seen again.

Mr. GEO. TAYLOR. Nothing small about that.

Sir FREDERICK BORDEN. The crisis had not arrived then; there was no emergency; everything was going on placidly and smoothly, and he could think of other things besides the danger of the German navy. Another remark of the hon. gentleman:

One effect of Canada's making a navy will be to give an impetus to steel shipbuilding in this country of ours, which will make immense employment and cause immense development in this country. One navy for the whole empire, though you may have several fleets, one flag, one history in the past, one grand mission.

The hon. leader of the opposition, at the Canada club banquet in London on Dominion day, said:

The establishment of a Canadian navy, upon which both parties were united, would serve a more practicable purpose than any such offer of Dreadnoughts.

And after he had returned and had heard of the capers which the mice had been performing in his absence, but still firm in the faith, he went to Halifax, where his deputy had been, and made a speech in October. He said:

There is not and never has been for the past forty years any constitutional or other objection to the establishment of a navy by Canada whenever its people think they should adopt that course. Nationhood involves certain responsibilities from which we cannot escape. One of these is the duty of defending our borders and of taking effective steps to protect our commerce and our trade routes.

That is forgotten. Nothing now but the policy of spending $25,000,000 for Dreadnoughts or ships to be sent to the other end of the world. Canadian commerce and trade routes and harbours are forgotten; under the overwhelming dread of the impending crisis. He said:

In this connection may we not hope that there should be given a stimulus and encouragement——

This is from the leader of the opposition. He was in his own constituency then:

—to the shipbuilding industry in Canada which has long been lacking. To-day should be Nova Scotia's opportunity in that regard.

That is what he said at Halifax. What did he say at Toronto? On November 1 or thereabouts, he said in that city:

Our actions should be inspired and characterized by neither hysteria nor indifference—

Mr. R. L. BORDEN. Hear, hear.

Sir FREDERICK BORDEN. Is it now being characterized by hysteria?

—but by a solemn and abiding sense of national responsibilities.

Mr. R. L. BORDEN. Hear, hear.

Sir FREDERICK BORDEN. Efforts no doubt were made of a very serious character to heal up the differences within the ranks of our friends opposite. My hon. friend the leader of the opposition (Mr. R. L. Borden) stuck to his guns nobly all through the months of October, November and even December. But on the 12th of January, while I do not think he had thoroughly decided to make the new departure, he was evidently considering it. The pistol had been held to his head, and

in his speech of the 12th January, 1910, it was quite evident that he was considering what course he should pursue. Well, there was an attempt made to provide a compromise. A blanket resolution was offered, the one which I have read and of which my hon. friends opposite are so proud, but which was a complete backdown from everything they had said and done.

Some hon. MEMBERS. No.

An hon. MEMBER. Take it back.

Sir FREDERICK BORDEN. I am afraid I cannot however much I might like to. But there was one hon. gentleman who could not be kept within the fold. No blanket that could be prepared by my hon. friend the leader of the opposition, and the member for North Toronto (Mr. Foster) and my hon. friend from East Grey (Mr. Sproule), particularly my hon. friend from East Grey—no blanket resolution was big enough to include in it the hon. member for Jacques Cartier (Mr. Monk). So we had to have another resolution, regarding which I shall not trouble the House at any length, but content myself with pointing out that after the speech my hon. friend from Jacques Cartier (Mr. Monk) made in this House in which he quarrelled with British diplomacy and everything British, in which he gave no credit to British institutions or the mother of parliament for any liberties we enjoy. After speaking for two hours in that vein my hon. friend thought he would square himself by moving a resolution, which began in the following words:

The House, while declaring its unalterable devotion to the British Crown—

After my hon. friend had denounced everything British, he thought he could square himself perhaps with the friends of my hon. friend from East Grey (Mr. Sproule)——

Mr. SPROULE. Do you object?

Sir FREDERICK BORDEN. I do not, nor does my hon. friend from East Grey (Mr. Sproule), but I find that introduction most inconsistent with the speech I listened to. My hon. friend the leader of the opposition did not find it necessary to begin his resolution in that way, but the hon. member for Jacques Cartier did. It is quite evident that while this trouble was going on they thought that perhaps some of the artful dodger's methods, some of the peculiar methods of statesmanship which used to characterize the Conservative party in the good old days, might be brought to bear on this occasion, and one element of the country in the province of Quebec be harnessed up by my hon. friend from Jacques Cartier (Mr. Monk), while the friends of the hon. member for East Grey (Mr. Sproule) would be kept straight and right by the course that hon. gentleman was pursuing.

My hon. friend the leader of the opposition (Mr. R. L. Borden) saw fit—but in this I do not think he was very serious—to cast some reflection upon the loyalty of the leader of the government by reading some extracts from speeches made by my right hon. friend many years ago, in which there were references to independence and freer trade with the United States. Well, the day has gone by in this country when the methods which were potential in former years in the Conservative party, when they could bring two extremely discordant elements together by playing on the prejudices of both—I say that the day has gone by when such methods could be of any avail, and the reason is the well known devotion, loyalty and unswerving patriotism of my right hon. friend the leader of the government. Sneers may be cast at our right hon. leader but they will be entirely innocuous. I say that when the name of every other man who sits in this House to-day is forgotten, the name of Wilfrid Laurier will stand upon the annals, not only of Canada but of the empire, as that of a man who gave his life service for the best interests of his country, and through whose efforts a reconciliation and a better understanding of the duties of, at any rate, his friends, has been made, and to-day it would be impossible to stir up strife such as was frequently stirred up in the past.

Mr. MEIGHEN. May I ask a question? Will the hon. gentleman (Sir Frederick Borden), while he is on the subject, say whether or not he is in accord with the sentiments concerning independence expressed by the Prime Minister in 1892?

Sir FREDERICK BORDEN. I am generally in accord with the views of my honoured leader, and I have absolute confidence in his leadership. Now, Mr. Speaker, viewing the condition of our friends opposite, the domestic infelicity in their political home—I do not wish to go into the internal economy of their establishment, but evidently there is trouble there—when I read the resolution of last session in which my hon. friend the leader of the opposition and my hon. friend from North Toronto took such a conspicuous part, and contrasted it with the one which they have now placed before the House for its consideration—I could not but think—how applicable to the situation of these hon. gentlemen were a couple of verses in Lowell's works that I happened to read the other day: These verses are found in ' The Pious Editor's Creed ':

I du believe in bein' this
Or that, ez it may happen
One way or t'other hendiest is
To ketch the people nappin';
It ain't by princerples nor men
My preudunt course is steadied,—
I scent which pays the best, an' then
Go into it bald-headed.

In short, I firmly du believe
In humbug generally,
For it's a thing thet I perceive
To hev a solid vally;
This heth my faithful shepherd ben,
In pasture sweet heth led me,
An' this'll keep the people green
To feed ez they hev fed me.

The resolution of the leader of the opposition, I presume, may fairly be considered to embody the policy of the opposition of to-day. The first paragraph of that resolution reads as follows:

The proposals of the government do not follow the suggestions and recommendations of the admiralty, and, in so far as they empower the government to withhold the naval forces of Canada from those of the empire in time of war, are ill-advised and dangerous.

The hon. gentleman (Mr. R. L. Borden) says that we have not followed the proposals of the admiralty, and he spent a good deal of time in endeavouring to enforce that proposition. I have not been able to discover in his remarks, which I have carefully read, anything in the shape of argument. A good deal was said about Australia, and we were told, and the country was given to understand—for, I suppose the speech was made largely for the country—that, while Australia and New Zealand had done everything that daughter-nations of the mother country ought to do and had followed obediently the direction of the admiralty, we Canadians had failed to do so. Well, now, take the case of Australia. One of the great difficulties which my hon. friend the leader of the opposition sees in our policy—or claims to see, for I do not understand how he can see it—is that we do not automatically place the control of our navy under the British admiralty. Is that the objection?

Mr. R. L. BORDEN. If the hon. gentleman desires to know what the point I made was, I can tell him in a few words. I say that the resolution of March, 1909, declared expressly and explicitly that any naval service to be established should be in accordance with the suggestions made by the admiralty in 1907, and I read—as the hon. gentleman will find at page 3061 of 'Hansard'—the words of Lord Tweedmouth, the First Lord of the Admiralty, in which he expressly declared that command must be reserved to the admiralty of all such forces.

Sir FREDERICK BORDEN. And nobody objects to that. When any Canadian fleet or any Australian fleet is serving with the British navy, of course it will be under the command of the senior officer of the British navy. That is one thing. But it is quite another thing to say that, the Canadian fleet shall automatically serve whenever war is declared. The Canadian Bill reserves the right to the Governor in Council——

Mr. FOSTER. Who would have command in that case?

Sir FREDERICK BORDEN. In that case, I suppose, the command would remain as it was.

Mr. R. L. BORDEN. It is for that reason that I say it does not follow the suggestions of the admiralty.

Sir FREDERICK BORDEN. The admiralty has never suggested that the fleet of one of the Dominions shall pass automatically under the control of the admiralty. It remained for the super-loyal opposition in Canada to make the suggestion, for nobody else ever thought of such a thing. Let me prove that. But, first, my hon. friend (Mr. R. L. Borden) says that he read from Lord Tweedmouth. I know he did, and it was not very much in point. If there was any point to it at all, we were directed to follow the lines laid down in the conference of 1907, which were that we should build the smallest class of cruisers, and not even as large ships as we are building now, no large cruiser or battleship was ever thought of. But Lord Tweedmouth said other things which my hon. friend did not read. I did not intend to read this, but I have it here. He said:

Gentlemen, what I have to say is that the admiralty and His Majesty's government are perfectly ready to meet these contributors to admiralty funds in a liberal and conciliatory manner.

Speaking of Australia and New Zealand:

We do not wish to insist that the contributions from the colonies should necessarily be in the form of money only. We are quite ready to enter into any arrangement with the colonies that may seem most suitable to them, and which may seem to bring advantage to the navy and advantage to the colonies themselves.

He was thinking of the colonies, something which the new fangled policy of the opposition does not think of:

I have here a short statement of what may be called the general principle on which the admiralty desires to meet the representatives of the self-governing dominions of the King beyond the seas.

Then he goes on:

In the opinion of the government, while the distribution of the fleet must be determined by strategical requirements of which the admiralty are the judge, it would be of great

assistance if the colonial governments would undertake to provide for local service in the imperial squadrons the smaller vessels that are useful for defence against possible raids, or for co-operation with a squadron, and also to equip and maintain docks and fitting establishments which can be used by His Majesty's ships. . . . I understand, that in Australia particularly, and in South Africa, it is desired to start some naval service of your own. Perhaps I might suggest that if the provision of the smaller craft which are necessarily incident to the work of a great fleet of modern battleships could be made locally, it would be a very great help to the general work of the navy.

What navy? The British navy. That provision should be made locally, and in time of stress and emergency in the quarter in which those ships are, they could be of immense assistance to the British navy.

You cannot take the small craft such as torpedo boats and submarines across the ocean, and for war ships to arrive in South Africa, or in Australia, or in New Zealand, or in Canada, and find ready to their hand well trained men in good vessels of this kind, would be an enormous advantage to them.

Are we not following the directions of the admiralty as proposed in 1907? It seems to me we are.

There is, I think, the further advantage in these small flotillas, that they will be an admirable means of coast defence——

We have coasts on both oceans which require defence. The British fleet has been withdrawn from Halifax and Esquimalt and we propose to take its place with small vessels which the British admiralty kept at those two places, by a navy of our own, and in that way to relieve the mother country of further responsibility for our own local defence.

—that you will be able by the use of them to avoid practically all danger from any sudden raid which might be made by a cruising squadron.

Is that not of some use? A word now about Australia. I do not care to make comparisons, but comparisons unfavourable to Canada have been made over and over again in this debate, comparisons and inferences which are entirely unfounded. Now I asked the other day from the Department of Marine and Fisheries some information as to what was understood in Australia with reference to bringing their ships automatically or otherwise under the control of the admiralty, and I find the following facts. In the proceedings of the imperial conference and the Imperial Parliamentary Sessional Papers, 19th August, 1909, paragraph 3 says, after stating that the commonwealth government have exclusive control in time of peace, and while on the Australian station:

Further, when placed by the Commonwealth government at the disposal of the admiralty in war time, the vessels should be under the control of the naval commander-in-chief——

Mark the words:

--when placed by the Commonwealth government.

Nothing automatical about that. I find in the Australia Defence Act, read first in September, 1908, cited as the Defence Act, 1906:

In time of war, the Governor General may——

The very words used in our own Act.

—subject to the provisions of this Act, place the defence force or any part thereof under the orders of the commander of any portion of the King's regular forces, or the King's regular naval forces, as the case may be.

But note in the interpretation clause of this Act what war means:

Any invasion or apprehended invasion, or attack or apprehended attack on the Commonwealth or any territory under the control of the Commonwealth, by any enemy or armed force.

That is the law of Australia, and if my hon. friend had looked up the law he would have saved himself a great deal of trouble.

Mr. COWAN. May I ask the hon. gentleman whether the Act he has read just now provides in any way for a navy, whether it is not merely an Act for a naval militia?

Sir FREDERICK BORDEN. No, it is the Defence Act of Australia, which includes both the military and the navy.

Mr. COWAN. The hon. gentleman has not answered my question. I asked if that Act from which he has quoted provides in any way for a navy. I know it provides for a naval militia, I know it provides for a military militia, and I know too, that it does not provide for a navy.

Sir FREDERICK BORDEN. I have no doubt about it. Of course I do not want to speak too positively, but this is the information which I have, and which was prepared for me by the naval experts of the Marine and Fisheries office. Now what about an emergency?

In time of war or emergency, or upon a declaration by the senior naval officer representing the British government, that a condition of emergency exists, all the vessels of the naval force of the Commonwealth shall be placed by the Commonwealth government under the orders of Lords Commissioners of the Admiralty.

Paragraph 9, says:

It is, however, to be understood——

This is not the law, this is only a memorandum.

—It is, however, to be understood that if any of the coast defence vessels be desired in seas remote from Australia, the approval of the Commonwealth government shall first be obtained to their removal.

But I was not satisfied with all this and so having learned that Admiral Kingsmill had a code with the authorities in Australia, I asked the admiral to send this message:

February 5, 1910.

Captain in charge,
Sydney, Australia.

Please inform me by telegraph as soon as possible whether, in the event of war, vessels of Australian navy pass automatically without any action under control of admiralty.

(Sgd.) KINGSMILL.

The answer came on February 8 as follows:

Kingsmill, Ottawa.

With reference to your telegram, transfer control to the admiralty is not to be automatic but subject to approval of Commonwealth government on declaration of war.

Perhaps that may possibly satisfy my hon. friend the leader of the opposition (Mr. R. L. Borden) that this first paragraph of his resolution was quite unnecessary, and that the deductions suggested by it are absolutely unfounded.

What evidence is there that there was any difference of opinion between the gentlemen who were sent to the conference to represent Canada and the admiralty, or any representative of the admiralty participating in that conference. At any rate, Mr. Speaker, Canada boasts of independence, of autonomy of nationhood. Surely when she solemnly sends a deputation to the mother country on the invitation of the mother country to take part in a conference, she is not to go there with her ears and mouth closed. They wanted consultation and they had the opportunity of consultation; we wanted advice, they wanted to know what the conditions were, their statesmen, admirals, men anxious to do the thing which would be the best for Canada, and the best for the empire. But taking the lowest point of view and looking carefully at every word in this blue-book, there is not a single word there to indicate that there was any difference of opinion whatever between the members of the British government or the representatives of the admiralty, and the Hon. Mr. Brodeur and myself. What did Mr. Asquith, the premier of England, say in the statement which he read to the House of Commons? On August 26 he said:

The conference, which has just concluded its labours, was convened under the terms of resolution 1 of the conference of 1907. In the invitation sent by His Majesty's government at the end of April to the governments of the dominions, it was stated that the object of the conference would be to discuss the general question of naval and military defence of the empire, with special reference to recent proposals from New Zealand and Australia, and to the resolution passed on the 29th March, by the House of Commons of the Dominion of Canada. It was further stated that the conference would be of a purely consultative character and that it would be held in private. It follows that all resolutions come to and proposals approved by the conference which has now been held, must be taken, so far as the delegates of the dominions are concerned, to be ad referendum, and of no binding force unless and until submitted to their various parliaments.

Mr. FOSTER. It speaks there of certain resolutions come to, and proposals accepted and to be referred to parliament. Were not certain resolutions accepted, and if so why have they not been brought down to parliament?

Sir FREDERICK BORDEN. No, there was no resolution at all. It was found at the second meeting of the conference in reference to naval matters that an agreement was impossible as to a line of policy in which all of the dominions could agree. New Zealand, as will appear from the papers, declared her unwillingness to agree to a policy of building up a navy of her own. She was determined to adhere to the plan of an annual contribution. So soon as that fact was ascertained, it was agreed that each one of the dominions should meet with the First Lord of the Admiralty and his advisers, to arrange each by itself the policy it would follow, and that is what was done, and every resolution and every decision that was reached is recorded in this Canadian blue-book.

To resume the reading of Mr. Asquith's official statement:

I should add in special reference to the delegates from South Africa that they did not feel themselves in a position, in regard to either naval or military defence, to submit or to approve positive proposals until the union of South Africa was an accomplished fact.

With this preface I will briefly summarize the main conclusions of the conference in regard, first to military, and next to naval defence.

I shall read the conclusions as to military defence, because I think they throw a distinct light upon the general policy of defence, which has been adopted by the mother country and by the colonies.

Military defence. After the main conference at the foreign office, a military conference took place at the war office, and resulted in an agreement on the fundamental principles set out in papers which had been prepared by the general staff for consideration by the delegates.

The substance of these papers (which will

be included among the papers to be published) was a recommendation that, without impairing the complete control of the government of each Dominion over the military forces raised with it,——

That is the underlying principle of everything that has been done with reference to both military and naval defence:

—these forces should be standardized, the formation of units, the arrangements for transport, the patterns of weapons, being as far as possible assimilated to those which have recently been worked out for the British army. Thus, while the Dominion troops would in each case be raised for the defence of the Dominion concerned, it would be made readily practicable in case of need for that Dominion to mobilize and use them for the defence of the empire as a whole.

If they saw fit to do it, and not unless they saw fit; the force should be so arranged and so organized that it could be done, not that it must be done:

The military conference then entrusted to a sub-conference consisting of military experts at headquarters and from the various dominions, and presided over by Sir W. Nicholson, acting for the first time in the capacity of chief of the imperial general staff, the duty of working out the detailed application of those principles.

I may point out here that the creation early this year of an imperial general staff, thus brought into active working, is a result of the discussions and resolutions of the conference of 1907. Complete agreement was reached by members of the sub-conference, and their conclusions were finally approved by the main conference and by the committee of imperial defence, which sat for the purpose under the presidency of the Prime Minister. The result is a plan for so organizing the forces of the Crown wherever they are, that, while preserving the complete autonomy of each Dominion, should the Dominions desire to assist in the defence of the empire in a real emergency,——

In a real emergency, not in a fancied one.

—in a real emergency, their forces could be rapidly combined into one homogeneous imperial army.

Naval Defence.

Naval defence was discussed at meetings of the conference held at the Foreign Office on the 3rd, 5th, and 6th August. The admiralty memorandum which had been circulated to the Dominion representatives formed the basis of the preliminary conference.

The alternative methods which might be adopted by the Dominion governments, in cooperating in imperial naval defence were discussed. New Zealand preferred to adhere to her present policy of contribution; Canada and Australia preferred to lay the foundation of fleets of their own.

To lay the foundation of fleets of their own, mark that:

It was recognized that in building up a fleet a number of conditions should be conformed to. The fleet must be of a certain size, in order to offer a permanent career to the officers and men engaged in the service. The personnel should be trained and disciplined under regulations similar to those established in the Royal Navy,——

And that is the intention with reference to the Canadian fleet, as the Bill itself will show:

—in order to allow of both interchange and union between the British and the Dominion services; and with the same object, the standard of vessels and armaments should be uniform.

A remodelling of the squadrons maintained in far eastern waters was considered on the basis of establishing a Pacific fleet, to consist of three units in the East Indies, Australia and China seas, each comprising, with some variations, a large armoured cruiser of the new 'Indomitable' type, three second-class cruisers of the 'Bristol' type, six destroyers of the 'River' class, and three submarine of 'C' class.

The generous offer, first of New Zealand and then of the Commonwealth government, to contribute to imperial naval defence by the gift each of a battleship was accepted with the substitution of cruisers of the new 'Indomitable' type for battleships—these two ships to be maintained, one on the China and one on the Australian station.

Now, in the debate on the resolution which was passed here in March, 1909, there was not a suggestion from any of these gentlemen opposite.

Mr. R. L. BORDEN. Yes, there was.

Sir FREDERICK BORDEN. No, Sir; it was not suggested that we should at that moment do anything more than we did, and there is nothing in the resolution except to take the power, at any time in the future, to give if we saw fit. But there was not a word spoken to indicate that it was in the mind of any of my hon. friends opposite that it was our duty at that time to give one dollar towards a Dreadnought for the British navy.

Separate meetings took place at the admiralty with the representatives of Canada, Australia and New Zealand, and general statements were agreed to in each case for further consideration by their respective governments.

We had no power to settle anything. We followed, so far as we could, what we thought were the instructions contained in the resolution unanimously passed by this House. That is what we did. We stated frankly to the conference that we had no power whatever to go beyond the policy laid down there.

As regards Australia, the suggested arrangement is that with some temporary assistance from imperial funds the Commonwealth government should provide and maintain the Australian unit of the Pacific fleet.

The contribution of the New Zealand gov-

ernment would be applied towards the maintenance of the China unit, of which some of the smaller vessels would have New Zealand waters as their headquarters. The New Zealand armoured cruiser would be stationad in China waters.

As regards Canada, it was considered that her double sea-board rendered the provision of a fleet unit of the same kind unsuitable for the present.

Is there any indication in that statement that there was any difference of opinion? There was none.

It was proposed, according to the amount of money that might be available, that Canada should make a start with cruisers of the 'Bristol' class and destroyers of an improved river class—a part to be stationed on the Atlantic sea-board and a part on the Pacific.

That is the course that is to be followed:

In accordance with an arrangement already made, the Canadian government would undertake the maintenance of the dockyards at Halifax and Esquimalt, and it was a part of the arrangement proposed with the Australian representatives that the Commonwealth government should eventually undertake the maintenance of the dockyard at Sydney.

Canada immediately, Australia eventually. Canada immediately took charge of the two dockyards and assumed all expense in connection therewith; Australia would eventually undertake the maintenance of the dockyard at Sydney.

Papers containing all the material documents will be laid before parliament in due course, and, it is hoped, before the conclusion of the session.

Now, Mr. Speaker, perhaps at this point it is just as well to refer a little more in detail to some of the hostile criticisms which have been levelled against—by imputation at any rate—the representatives of Canada, or, perhaps more correctly speaking, against the government. The accusation which has been over and over again made that little New Zealand, and I suppose big Australia, have done very much more than great Canada. Well, if our hon. friends would take some trouble, some reasonable pains, to look into the facts before being so anxious to bring accusations against the government, they would find, I think, that such is not the case. What is Australia doing? She is to give a Dreadnought, but that Dreadnought becomes a part of her fleet unit. She is not sending $10,000,000 or $25,000,000, as the case may be, away never to see it again or to get any direct benefit from it, as the resolution of the opposition proposed that we should do. It was a condition that the Dreadnought to be built for Australia, with Australian money, should be at the head of Australia's fleet unit. But what more? While Canada immediately takes charge of two dockyards and maintains them, Australia will 'eventually' undertake the maintenance of one. 'Eventually' is a very indefinite word, implying a rather long way off. It is, however, in accordance with the opposition's naval policy. According to the terms of their resolution, we shall eventually have a navy in Canada, but it is a long way off. Now, Australia is to have a fleet unit, and she is taking back the ship she gave, to be a part of that unit. She is to have three unarmoured cruisers; we are to have five, or rather four protected and one unarmoured, in the Canadian navy. Australia is to have six destroyers, and Canada is to have the same; and Australia is to have three submarines, which are not in the Canadian unit. But does Australia find the money to do all this? Not at all. The British government contributes £250,000 a year, out of the hard earnings of the people of Great Britain, towards the maintenance of her fleet unit. Canada does not get, or ask, anything of that kind.

But New Zealand, 'little New Zealand,' gives a Dreadnought. What does she get? She gets an agreement that it shall be made a portion of a fleet unit, a large part of which shall remain in New Zealand waters, and that the flagship of the China unit shall be the Dreadnought which she contributes. The whole arrangement is to be found in a letter from Sir Joseph Ward to Mr. McKenna. I will not read the whole of it, but here is a part of it:

I however consider it is desirable that a portion of the China-Pacific unit should remain in New Zealand waters, and I would suggest that two of the new 'Bristol' cruisers, together with three destroyers and two submarines, should be detached from the China station in time of peace and stationed in New Zealand waters; that these vessels should come under the flag of the admiral of the China unit; that the flagship should make periodical visists to New Zealand waters; and that there should be an interchange in the service of the cruisers between New Zealand and China, under conditions to be laid down.

The ships should be manned, as far as possible, by New Zealand officers and men, and in order that New Zealanders might be attracted to serve in the fleet, local rates should be paid to those New Zealanders who enter, in the same manner as under the present Australian and New Zealand agreement, such local rates being treated as deferred pay.

The termination of the agreement with Australia has of necessity brought up the position of New Zealand under that joint agreement. I therefore suggest that on completion of the China unit, the present agreement with New Zealand should cease, that its contribution of £100,000 per annum should continue, and be used to pay the difference in the rates of pay to New Zealanders above what would be paid under the ordinary British rate. If the contribution for the advanced rate of pay did not amount to £100,000 per annum, any balance to be at the disposal of the admiralty.

The whole of this fleet unit to be taken in hand and completed before the end of 1912, and I should be glad if the squadron as a whole would then visit New Zealand on the

way to China leaving the New Zealand detachment there under its senior officer.

I have nothing to say against the arrangements which were made with Australia and New Zealand; but Canada did not ask, did not want, and would not accept, any terms of that kind; and I think our hon. friends opposite should put a stop to the reflections which they are casting upon those who attended the conference and upon the government, in this matter.

Before leaving the question of control in time of war, I would like to add one or two words. In the Militia Act, as the hon. leader of the opposition pointed out, there is a clause similar to the one to be found in the Naval Act. His Majesty has power, in the event of Canadian troops being engaged with imperial troops, to place a British officer over the whole force. But the situation is entirely different in the case of the militia. Under the Militia Act there is no power to call out the militia for any other purpose than the defence of Canada; that is absolutely specified. But the hon. leader of the opposition, as I understand, objects to the calling of parliament as being equivalent to delay. Well, it must be very clear, in the case of the navy, as is the case with the militia, that the Governor General in Council, in time of emergency, would not wait until parliament had been called before taking action. That is not necessary; that is not intended. Action would be taken, if it were found necessary in the emergency to do so. The militia would be called out, and would be sent to do its duty, whatever it might be. But under the terms of the Act it would be necessary to call parliament, and then should parliament, in its wisdom, see fit to disapprove of what the government had taken the responsibility of doing, the government would be removed from office. So it would be in the case of a navy. Clause 18 or 19 does not mean that no action can be taken until parliament can be called—15 days hence. On the contrary, such action as the Governor in Council might think it their duty to take would be taken at once, but parliament would be called to approve or disapprove. That is responsible government, the principles of which I am beginning to think my hon. friends opposite do not entirely comprehend. It seems to me that no proper exception can be taken to that part of the Bill.

The second part of the resolution objects to want of unity or organization and action. But if my hon. friend had taken the trouble to examine the Bill, he would have found in it provisions for this unity of organization. The intention is to follow precisely the lines followed now in the case of our militia. Organization would take place on the lines of the organization of the British navy and nothing else. Take sections 45, 46, 47 and 48, I shall not read all these clauses, but just as full provision is made for the organization of the navy as exists in the Militia Act for the organization of the militia. My hon. friend says that, so far as he can see, the provision with regard to service is for three years. That only shows how carelessly he has read the Bill. There is nothing of the kind. There is a provision for the navy itself, or what is called the permanent force, and there is a provision for a reserve, and also a provision for a volunteer service. In the case of a volunteer service, which may not be organized for years, it is provided that the length of service shall be three years, but the term in the permanent force is to be fixed by the Governor in Council, and no doubt it will be fixed on the lines of the permanent service in the British navy. My hon. friend will see provision for that in section 10—engagement of officers and seamen. So that all this storm and fury about the lack of provision for organization on proper lines, is absolutely without foundation. But, of course, my hon. friend had to oppose this Bill. The edict had gone forth, the pistol was at his head, something had to be done, and he worked out ingeniously this resolution without the slightest ground or semblance or reason for it. I have here some quotations from the speech of the hon. gentleman, but I do not know that I need detain the House by giving them at length. He has the further objection, he says, that there is absolutely no unity of organization provided for. But I have shown that we have provided for it. Then he went on to say that the men, are to be engaged for three years. I have shown, however, that in that he was entirely mistaken. They are to be engaged the same number of years as the men in the British navy.

Mr. R. L. BORDEN. There is no provision to that effect.

Sir FREDERICK BORDEN. It is left to the Governor in Council.

Mr. R. L. BORDEN. Left entirely open?

Sir FREDERICK BORDEN. But the navy is to be organized on the lines of the British service, and common sense, if there were no other motive, would naturally cause the government to provide the same number of years. The British navy has had the experience of hundreds of years, and it contains the best organized fleet of any navy in the world to-day

Mr. R. L. BORDEN. Hear, hear.

Sir FREDERICK BORDEN. And no government of any British dominion would be so foolish as to organize its fleet upon any other lines. With regard to the third resolution, we are told that there is heavy outlay and no results:

Such proposals, while necessitating heavy outlay for protection and maintenance, would give no immediate or effective aid to the empire and no adequate or satisfactory results to Canada.

And in order to get results to Canada, my hon. friend proposes that we should vote $25,000,000 of money and hand that money over to the British admiralty. Well, it does not seem to me that such a policy would bring about results of any great consequence to Canada. Canada can afford to do it if she likes, but what the hon. gentlemen wanted, as I have proved by quotations from their speeches ten short months ago, was speedy action towards the organization of a navy. But it takes something besides ships to make a navy. The most important is the personnel, and we have none of that to-day in Canada. Men and officers are required to make a navy. The machine, as compared with the man, is a small matter, and can always be got. But educated seamen are the work of years. My hon. friend has reminded us of that, and he proposes to get over the difficulty by putting off the day and marking time. In fact, the policy of the Conservative party seems to be: Two 'Dreadnoughts' and mark time.

My hon. friend from North Toronto (Mr. Foster) in March last objected very strongly to any contribution. This is what he said:

The first and greatest objection which I have to a fixed money contribution is that it bears the aspect of hiring somebody else to do what we ourselves ought to do; as though a man, the father of a family, in lusty health and strength, should pay his neighbour something per month for looking after the welfare and safety of his home instead of doing that duty himself. That seems to me, when you work it out, to be a basic objection to this form of aid. It goes still further than that. Suppose you contribute this year your sum, and next year your equal sum, and thereafter year after year. After ten or twelve, or twenty, or thirty years, you will have paid out an immense amount of money. You will have been protected in the meantime; but in Canada itself there will be no roots struck, there will be no residue left, there will be no preparation of the soil, or beginning of the growth of the product of defence. Yet some time or other, no one can doubt that with resources and with a population constantly increasing, we must and will have in this country a naval force of our own for our coast and home defence.

And yet, to-day, ten months later, the hon. gentleman wishes to put it off indefinitely and to get rid of all this responsibility by giving $25,000,000 to hire somebody else to do that which he admitted ten months ago was the first duty of this country.

And, going on, he says:

The second policy to which I would refer is the assuming by ourselves of the defence of our own ports and coasts, in constant and free co-operation with the imperial forces of the mother country. Let us see what are the objections to and what may be urged in support of that second policy. It has its advocates and its opponents. In the first place we begin with no plant, no expert skill, no trained cadets, no trained sailors. In those respects, Canada is a blank sheet. Whatever may be necessary has to be collected and assembled and developed with such expedition and in such abundance as circumstances will allow. Under that system our first vessels would be British built, British equipped, British manned, British officered from stoker to captain. There is no other way in which we could proceed.

I hope we have found a better way

We are absolutely bare of the skill, the experience, the training and the machinery necessary to put one single war vessel on a proper footing; but—and it is but the beginning of a circle—the first Canadian owned vessel, built and equipped in Britain, and sent out to defend our coasts would become the nucleus and the training ground of Canadian stokers, Canadian sailors, and Canadian officers, and by and by perhaps, of a Canadian admiral on the Canadian coast. How much time would be taken in completing that circle none of us can say, but if we begin the tracing of it and follow it fairly and faithfully, the time must come when we get a complete circle and have an imperial adjunct to the British navy for the defence of Canada and the defence of the empire, in which Canada has some of her body, her bones, her blood, and her mental power.

Those were splendid words; that was a splendid policy. My hon. friend had taken days and weeks to think that out and it does him credit. But what shall be said of him now that, within ten months, he absolutely turns his back upon that splendidly-outlined policy?

I will not detain the House much longer, but I would like to say a word as to what is proposed. Very much which my hon. friend disclosed as his vision of what should be the Canadian navy will be undertaken. The first thing is to secure the personnel. It will be the duty of the department which presides over this work to at once secure ships sufficiently large for the purposes of training ships. Arrangements have been made, I understand, which will shortly result in one ship being brought to some point on the Atlantic coast and another on the Pacific coast, and then the training of the men and the officers on the lines laid down by the British admiralty will shortly be begun. I have here some notes which have been prepared by Admiral Kingsmill, from which I might read a few words, describing the uses and the character of the different vessels. I might begin by saying that the unit or parts of units which were agreed to by Canada are composed of, four Bristols, one Boadicea and six destroyers—eleven vessels in all.

Mr. J. A. CURRIE. Does the hon. gentleman call that a fleet unit?

Sir FREDERICK BORDEN. Yes.

Mr. J. A. CURRIE. He might as well call a section of infantry a company.

Sir FREDERICK BORDEN. I know the hon. member (Mr. J. A. Currie) is a great authority on naval matters. I would point out that the Bristol is a cruiser of the very latest pattern, a vessel of somewhere about 5,000 tons and now being constructed for the first time—that is, the new pattern for the British navy; in fact, so new is it that the full description is not yet at hand. The Canadian Bristols will be built precisely on the lines laid down by the admiralty. The Boadicea is another vessel of latest type, which will be the parent ship of the destroyers which are also of the latest type, river type.

Mr. J. A. CURRIE. Does the hon. gentleman refer to the river type as the latest type of destroyers?

Sir FREDERICK BORDEN. I understand that it is.

Mr. J. A. CURRIE. If the minister (Sir Frederick Borden) will merely look at the annual and other publications, he will see that the river type is spoken of as the type of 1906. There is a more recent type.

Sir FREDERICK BORDEN. Of course, I bow to my hon. friend's (Mr. J. A. Currie) superior knowledge. I am giving the best information I have. The uses of these ships have been mentioned incidentally in the observations I have made—mainly the protection of harbours and coasts and of lines of commerce also. But, in the early stages, before the ships are completed, there will be, as I have said, two training ships, and it is proposed to substitute for the Boadicea, a ship of somewhat older type a ship of larger tonnage and which will accommodate more men, probably all the men that can be secured at first for the purpose of training, the object being that the two ships, one on the Pacific and one on the Atlantic, shall be ready, at the time the other ships are completed, with a portion of the personnel, of men at any rate, necessary to man those ships.

Mr. MONK. These two ships that are going to be acquired, in the first instance, to be placed on each ocean, are training ships, simply, are they not? They are not to be ships of the Boadicea type, but merely training ships.

Sir FREDERICK BORDEN. No, the ship which is to be placed on the Pacific is not one of the eleven, it is a ship called the 'Rainbow.'

Mr. J. A. CURRIE. Is that a battleship?

Sir FREDERICK BORDEN. No, I think not; she is a small cruiser.

Mr. R. L. BORDEN. It is not a fighting ship at all?

Sir FREDERICK BORDEN. Oh, yes; but she will be used in connection with others for the purpose of training.

Mr. BOYCE. Has the 'Rainbow' yet been purchased by the government?

Sir FREDERICK BORDEN. Negotiations are now proceeding with reference to it. The ship which will be used on the Atlantic is known as the 'Niobe,' of the 'Spartian' type, a ship of some 11,000 tons, which is offered at a low price, and which, if purchased, can be substituted to advantage for the 'Boadicea,' because, as pointed out by Admiral Kingsmill, she will be extremely useful as a training ship.

Mr. GEO. TAYLOR. Have these steamers been ordered to the scrap heap by the British government?

Sir FREDERICK BORDEN. Well, it is difficult to see the particular cleverness of that observation; I dare say my hon. friend is proud of it. We are trying to discuss a serious subject seriously.

Mr. FOSTER. We are also interested in getting some information about these things.

Sir FREDERICK BORDEN. Well, if hon. gentlemen will wait and not interrupt, possibly they will get some; though I admit at this stage it may be difficult to give such definite information as one would like. But I am doing the best I can. This project of a navy is not an old one, and whatever is done should be proceeded with carefully. As I say, we will have on the Atlantic and on the Pacific two ships within a very short time, to be used at first for the purposes of training ships. I was about to say that a considerable proportion of the men who will be required for the 'Bristols,' and the destroyers, when they are ready some years hence, will be in training.

Mr. BOYCE. How long will that be?

Sir FREDERICK BORDEN. The Prime Minister said that if the ships were built in Canada it would probably take one year for the contractors to get ready; and in four years thereafter, all the ships would be completed.

Mr. BOYCE. Will they be manned, and so forth, in four years?

Mr. EDWARDS. How many of these vessels do you propose to put on the Pacific coast?

Sir FREDERICK BORDEN. There will be two 'Bristols' on the Pacific coast, two of the eleven ships, and two 'Bristols' on the Atlantic coast.

Mr. BARNARD. These two ships that are to be stationed on the Pacific, are they to be used when a strike occurs, as mentioned by the Prime Minister the other day?

Sir FREDERICK BORDEN. Well, really, if the hon. gentleman thinks that is quite consonant with his dignity as a member of parliament, I must say I do not.

Mr. BOYCE. What is the tonnage of the 'Rainbow'?

Sir FREDERICK BORDEN. 3,600 tons. Now I will read a few extracts from what Admiral Kingsmill has said:

Taking into consideration the matter of training, the importance of commencing at once, also the fact that building the vessels in Canada would necessitate a training ship for some time, I laid before Mr. Brodeur a memorandum as to the advisability of obtaining, if possible, a larger ship.

I have already stated that the 'Niobe' was suggested, and negotiations are now proceeding with reference to the purchase of that ship. That ship has been recommended strongly by the admiralty.

Mr. FOSTER. What is the age of the vessel?

Sir FREDERICK BORDEN. Ten years.

Mr. FOSTER. What is her gun power?

Sir FREDERICK BORDEN. About 16 guns.

Mr. FOSTER. What kind of guns?

Sir FREDERICK BORDEN. 16 6-inch guns. She is a ship of 11,500 tons. Her speed is about 20 knots.

Mr. FOSTER. What is she to cost?

Sir FREDERICK BORDEN. $1,075,000. Now as to the Bristol cruisers:

They would fill an important duty in warding off attacks against commerce or against the coasts of Canada of any enemy's raiding cruisers, and would also act as commerce destroyers. Their first duty is to seek out and destroy the enemy's destroyers. It is most imperative for a battle fleet cruising to know, when night comes on, that the ground they have to go over has been cleared of the enemy's destroyers. . . . In the event of a British fleet coming over, these cruisers would have gleaned information of the movements of an enemy's fleet, and so act as an advanced screen after which they could join up with the British fleet.

Mr. HUGHES. How many knots an hour can these ships make?

Sir FREDERICK BORDEN. The Bristol 25 knots and the destroyers 27 knots.

Mr. FOSTER. The minister has not given the gun power of the Bristol.

Sir FREDERICK BORDEN. These vessels are of the newest type and the details of their gun power are not published; it is not considered desirable to publish them. I think it will be evident from what I have said that the ships which have been selected for us by the British admiralty are ships of the latest type, and that the arrangement which has been made with reference to the fleet unit adopted for Canada is of a kind which takes cognizance of the geographical position of this country, and the fact that we have two large oceans separated by a distance of some 4,000 miles, the idea being, and it is the only ideal that would be considered by the people of Canada, that we should begin at one and the same time the development of our navy on the Pacific and on the Atlantic. I may say that it did not appeal to Mr. Brodeur and myself as being desirable or at all in accordance with the views or with the ambitions of the people of the whole of Canada that we should place one unit upon one of the oceans; we held it was much better to begin more gradually, to begin to develop the personnel, which as I have said, is the very foundation of a navy, and to do it upon both of the great coasts of Canada, and later on it will be open to whatever government is in power in Canada to take such course as it may see fit as to the future development of the Canadian navy.

Mr. BOYCE. How would the minister provide for an emergency in the meantime?

Sir FREDERICK BORDEN. We are quite satisfied with the provision which is now made for an emergency.

Mr. BOYCE. I ask my hon. friend how long this naval service would take to equip and make effective?

Sir FREDERICK BORDEN. I quoted what the Prime Minister said.

Mr. BOYCE. Has the minister any proposal to make in regard to providing for an emergency in the meantime?

Sir FREDERICK BORDEN. Our friends of the opposition are doing that.

Mr. BOYCE. Then I have to ask my hon. friend if the proposals of the opposition are satisfactory to him?

Sir FREDERICK BORDEN. I am not aware that the members of this side of the House have treated any of the opposition

speakers, particularly leading members of the opposition, in this way. I can stand any amount of heckling or nonsense, but I did not come here for that purpose to-day, and I think perhaps I might be allowed to get through with my statement and allow somebody else to follow.

Mr. BOYCE. I must beg the hon. minister's pardon; I had no desire whatever to embarrass him in his speech. I asked him a question and had it not been for his answer nothing further would have been said.

Sir FREDERICK BORDEN. I think the question he put as to an emergency is not a proper question to interject.

Mr. BOYCE. I can understand that if the minister did not want to answer it.

Sir FREDERICK BORDEN. Now with regard to the cost, I have two statements here which I shall not read in detail, but I think it is perhaps desirable that a few words should be given on this point. I have here a paper prepared by Admiral Kingsmill from which it appears that the cost, exclusive of construction, would be for the first four years as follows: For the first year, $1,250,000; for the second year, $1,247,000; for the third year, $1,704,000; for the fourth year, $2,250,000. Admiral Kingsmill said this estimate is only approximate and that it will probably be found rather an over-estimate than an under-estimate. It does not allow for any of the ships proposed in the government programme being completed in the four years. Should any of them be completed and commissioned within this period, account would have to be taken of their upkeep.

Mr. FOSTER. As I understand these sums do not include anything for the upkeep of the proposed new vessels.

Sir FREDERICK BORDEN. No. I have also a statement of the estimated annual cost of maintenance, when the ships are completed, commissioned and fitted out. This estimate, including $100,000 for contingencies, is $3,680,000.

Mr. FOSTER. Does that take into account interest and depreciation?

Sir FREDERICK BORDEN. No.

Mr. MONK. My hon. friend has referred to the memorandum of Admiral Kingsmill. Would it be convenient, if it is too long to read, for my hon. friend to hand it in to 'Hansard' so that we could get the entire memorandum?

Sir FREDERICK BORDEN. I will see whether that can be done.

Mr. MONK. As my hon. friend has quoted from it I suppose it is right to have it put on 'Hansard'.

Sir FREDERICK BORDEN. What happened was that Admiral Kingsmill gave me data and I took them down, so it was perhaps scarcely correct to say it was Admiral Kingsmill's memorandum but I think I can hand it in; I shall endeavour to do so.

Mr. MONK. It seems to be a memorandum connected with this matter, and as it is probably lengthy we can claim that it should be laid on the table of the House. I think it would be a convenient way for the minister to hand it in to 'Hansard', otherwise I would insist on my right to see the memorandum itself.

Sir FREDERICK BORDEN. There is no objection to the hon. gentleman seeing it. It is chiefly notes which I have made.

Mr. MONK. Will my hon. friend lay it on the table?

Sir FREDERICK BORDEN. Well, I will see.

Mr. MONK. I think that document is necessary for our information, my hon. friend has referred to it.

Sir FREDERICK BORDEN. There is no objection, but I would not like to hand it in immediately until I have looked it over.

Mr. MONK. My hon. friend must really excuse me. This is a question of order and I would like my hon. friend to let me know before he has finished his remarks if he intends to give us communication of that memorandum.

Sir FREDERICK BORDEN. The memorandum which I hold in my hand from which I gave a few extracts is a memorandum prepared by the Admiral and which I intend to place on the pages of 'Hansard'. I have given the annual expenditure for the first four years, the estimated cost of maintenance after the ships are in hand and completed.

Mr. FOSTER. I would call the hon. gentleman's attention—because it is important—to the estimated cost given by the Prime Minister on authority, when he moved the second reading of the Bill. He makes the annual cost, after the construction is done, and the work going on, at four

and a quarter million dollars. There is a large disparity between the two.

Sir WILFRID LAURIER. These figures which I gave were in the blue-book; I gave no other figures than those in the blue-book.

Mr. FOSTER. It is impossible that the up-keep should be in the blue-book, because there is no blue-book data for that kind of a unit.

Sir FREDERICK BORDEN. I thought the House would desire more details than had been given, and with the best intention and in the best spirit I got what information I could. My hon. friend (Mr. Foster) can understand how difficult it is to get down to very exact figures in a matter of this kind.

Mr. FOSTER. I know.

Sir FREDERICK BORDEN. I am doing the best I can to give the estimate, and I am placing this memorandum on 'Hansard' so that hon. gentlemen will have an opportunity of examining it.

APPROXIMATE EXPENDITURE ON NAVAL SERVICE DURING THE FIRST FOUR YEARS.

—	First Year.	Second Year.	Third Year.	Fourth Year.	Total.
	$	$	$	$	$
'Niobe' and 'Rainbow' —					
Cost of nucleus crew and training personnel	267,000	272,000	277,000	282,000	1,098,000
Victualling and medicines	60,000	60,000	60,000	60,000	240,000
Clothing gratuity	15,000	15,000	15,000	15,000	60,000
Upkeep of 'Niobe'	140,000	145,000	150,000	150,000	585,000
" 'Rainbow'	110,000	110,000	115,000	115,000	450,000
Recruits—					
(a) Pay, victualling and medicines	51,000	200,000	370,000	550,000	1,171,000
Clothing	30,000	43,000	56,000	70,000	199,000
Recruiting expenses	2,000	2,000	2,000	2,000	8,000
Dockyard Canstruction					100,000
Upkeep of naval college	35,000	80,000	80,000	80,000	275,000
" barracks		50,000	60,000	75,000	185,000
(b) " dockyards	210,000	270,000	300,000	350,000	1,130,000
Headquarter staff	60,000	70,000	75,000	80,000	285,000
Reserve stores	50,000			100,000	150,000
Ordnance stores	100,000			200,000	300,000
Contingencies	120,000	130,000	144,000	155,000	549,000
Total	1,250,000	1,447,000	1,704,000	2,284,000	6,685,000

This estimate is only approximate, but it will probably be found that it is rather an over-estimate than an under-estimate.

It does not allow for any of the ships proposed in government programme being completed within this four years; should any of them be completed and commissioned within this period account would have to be taken of their upkeep, &c.

(a) Annual increase due to the increased numbers entered annually.

(b) As the ships near completion the dockyards must expand.

Other increases due to expansion of the service.

ESTIMATED ANNUAL COST OF MAINTENANCE.

"		400,000

11 ships costing	$ 11,690,000
*Less difference in 'Niobe'	675,000
	$ 11,015,000
Building for naval college	150,000
Furnishing same and workshops	50,000
Two houses, captain of college and director of studies	15,000
Barracks, including drill shed	200,000
Battery for heavy and light guns	20,000
Arming same	110,000
Alterations of Admiralty House for officers of barracks	70,000
Dockyards	100,000
Total construction works	$ 715,000
Total cost of construction of ships and buildings	$ 11,730,000

Now, with regard to the cost of construction. The cost of construction is at British prices. Of course the prices I have been giving for victualling and up-keep and all that are at Canadian rates, but the estimate of construction is at British rates, and that should be understood. I am not in a position to say how much more the ships will cost if built in Canada, but they certainly will cost more. I think, from a Canadian standpoint—as had been pointed out by so many hon. gentlemen on both sides of the House—it would be very desirable, if possible, that they should be constructed in Canada, if the excess of price involved is not too great. That can only be ascertained by asking for tenders, which of course will be done. It appears that the ships would cost $11,015,000, substituting the 'Niobe' for the 'Boadicea,' which appears in this memorandum as costing $1,750,000. The 'Niobe' is to be a training ship, and is to be procured very shortly, and she will cost $1,075,000. The difference of $675,000 between the cost of the 'Boadicea' and 'Niobe' will reduce the estimate, which is $11,690,000 to $11,015,000. Then there are estimates for the construction of a naval college, furnishing the same, workshops, two houses, barracks, &c.—I need not read the items, amounting to $715,000.

Mr. FOSTER. Canadian figures?

Sir FREDERICK BORDEN. Yes. The $715,000 would be Canadian figures. It is for the construction of buildings to spread over several years. The total cost of construction, therefore, would be of ships and buildings, $11,730,000, about $11,000,000 of which is estimated at British prices.

Now, Mr. Speaker, I had intended to say a single word as to the annual cost. My hon. friend from East Grey (Mr. Sproule) referred to the inauguration of what he called the era of militarism, and he thought that this expenditure would be sure to run up from year to year as our military expenditure had, and he believed that eventually the tax would be very high. Now, the military expenditure of Canada amounts to about 80 cents per head of the present population, and I take it that when construction is completed, the naval expenditure combined with the expenditure on militia would not amount to more than $1.25 per head of the present population of Canada, and I believe that the annual increase of population will keep the figure at about that per capita rate. It does not seem to me that for a country like Canada, rich and prosperous and rapidly becoming great, an expenditure of $1.25 per head for its total cost for defence would be a very high rate. I, therefore, think my hon. friend from East Grey may possess his soul in patience and need not worry over the expenditure.

Mr. SPROULE. Is it not a fact that since the militia was reorganized the expenditure has increased to $6,500,000 per annum, when it was formerly only $2,500,000? That being so, may we not reasonably expect a somewhat proportionate increase in the naval expenditure?

Sir FREDERICK BORDEN. I do not think so. The hon. gentleman stated the other night, and he stated correctly, that the expenditure on militia had increased, but he did not state that a very large part of that increased expenditure was due to taking over the garrisons of Halifax and Esquimalt and to increasing the permanent force of 800 or 900 men up to practically 3,000. That accounts for a large part of the increase in the militia expenditure, and I am sure the hon. gentleman does not object to our relieving the British taxpayer to that extent.

Mr. SPROULE. What I did object to, was that while in 1896 the officers and those who controlled the force cost the country $16,000, the men who do the same work to-day cost us $73,000.

Sir FREDERICK BORDEN. I am not going to be turned aside now to deal with that question, because I have stated over and over again the reasons for that, and I have laid on the table of the House a memorandum from Major General Sir Percy Lake explaining fully every dollar of the increase.

Mr. SPROULE. Does the minister object to my endeavouring to get a clear understanding as to that matter?

Sir FREDERICK BORDEN. I think I might be allowed to finish my remarks. I have never known a similar case of interruption in my parliamentary experience of thirty-six years. When a minister is attempting to make a statement upon an important subject, whether his statement is acceptable or not, it is usually listened to. With regard to the per capita charge I shall say no more. The hon. gentleman, in the fourth part of his resolution, says:

> That no permanent policy should be entered upon involving large future expenditure of this character until it has been submitted to the people and has received their approval.

This is rather an astounding proposition, Mr. Speaker, after what took place ten months ago. Parliament was then fresh from the people. The hon. member from North Toronto (Mr. Foster) scarcely waited until the ink was dry upon the returns of the elections before he took up the question of considering and bringing before parliament our duty in the matter of providing for naval defence. It was seriously considered, and a certain line of policy was unanimously agreed to. At that time the question that there was any duty devolving upon us to go to the country on

this subject was never raised by anybody. I will venture to say that no such misconstruction of responsible government was ever heard of in the British parliament or ever before suggested in this parliament. The people sent us here for the purpose of dealing with all important public questions. Is it to be said that every time an important question comes up, we shall go back to the people, particularly after parliament has unanimously agreed to a certain line of policy? Who would think of putting forward such a monstrous proposition as that? I think the hon. gentleman surely cannot be serious. I am reminded that the hon. gentlemen themselves suggested the addition to the resolution of March last, of the words to the effect that we should not wait, but get to work on a navy at once; and I have read extracts from the hon. gentlemen's speeches to prove that they were the most enthusiastic advocates of the immediate construction and organization of a navy. Yet we are told to-day that we should go back to the people. But I do not observe that the hon. gentleman thinks it at all necessary to go to the people for their approval of the proposal to tax them to the extent of $25,000,000 to buy two Dreadnoughts. Why, Mr. Speaker, everybody knows that the Militia Act of Canada for the last fifty years, and I dare say ever since Canada has had responsible government, has made provision—and it is there to-day—for the organization of a militia navy. So this is no new policy. It is there authorized by the people; and it has always been perfectly understood that Canada had there the authority at any moment she felt financially able to undertake the additional responsibility of naval defence.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Sir FREDERICK BORDEN. I wish simply to add to what I have said with reference to the remarks of the hon. member for East Grey (Mr. Sproule) that I observe he is opposed to military expenditure or defence expenditure of all kinds. As I understand him he is against militarism, and seems to think that any expenditure of the kind is to be classed under that head I can understand therefore why my hon. friend from East Grey (Mr. Sproule) should support this resolution. The other evening he said that he favoured our expending $25,000,000 on Dreadnoughts, and doing nothing else, because possibly that would be all the expenditure necessary. In his view, that would be a happy way of escaping from all future expenditure because perhaps another call would not be made on us for at least a generation or twenty years. Therefore it was from motives of economy that my hon. friend supports the resolution of the leader of the opposition. The gift of $25,000,000 might be a cheap way of getting out of our obligations because we might never have to put up any more, and in any case there would not likely be another call for the next twenty years.

The last part of the resolution of my hon. friend the leader of the opposition reads as follows:—

That in the meantime——

That is before the creation of a navy was submitted to the consideration of the people——

—that in the meantime the immediate duty of Canada and the impending necessities of the empire can best be discharged and met by placing without delay at the disposition of the imperial authorities, as a free and loyal contribution from the people of Canada, such an amount as may be sufficient to purchase or construct two battleships or armoured cruisers of the latest Dreadnought type, giving to the admiralty full discretion to expend such sum at such time and for such purposes on naval defence as, in their judgment, may best serve to increase the united strength of the empire and thus insure its peace and security.

So that it is not necessarily Dreadnoughts which the hon. gentleman advocates—it is anything on which the British government may choose to expend money for the British navy. My hon. friend and his supporters based this resolution upon the idea that a crisis or an emergency exists. Otherwise there is no ground or excuse for putting such a proposal before this House. Because there is an emergency, the hon. gentleman proposes that we shall hand over $25,000,000 as a present to the British admiralty to buy two Dreadnoughts or anything else they might see fit in the way of naval defence. But when did this crisis or emergency arise? I have pointed out that in the mind of the hon. gentleman and of his lieutenant, the hon. member for North Toronto (Mr. Foster) there was no crisis or emergency in March last. I have read the speech of the leader of the opposition delivered in London in July last, from which it would appear that, in his opinion, there was no crisis then. Was it because my hon. friend had been looking at that magnificent array of battleships in the Thames which he spoke about so eloquently here a few weeks ago, that his mind was then kept in the due equipose which it enjoyed in March last? Was it on that account that he did not see any crisis then although he was in London, the very heart of the empire, where it might be supposed to be found if it existed anywhere. On the contrary, the hon. gentleman then said he was for a Canadian navy and against a contribution of Dread-

noughts. Was it in August? Certainly not. The hon. member for North Toronto (Mr. Foster) told us, as late as August last in Halifax, that the proper policy was the building of a Canadian navy. There was no indication then of any impending danger. Neither was it in October, because in Toronto both these hon. gentlemen assured the people that they were still strong in the belief that a Canadian navy was the proper thing. It was certainly not in November, because we had the same assurances then. Nor was it in December because in the city of Montreal I had the honour of listening to my hon. friend, the leader of the opposition, making a strong and effective speech in favour of the adoption of a Canadian policy and the creation of a Canadian navy. When then did it come and whence did it come? As I have said, it showed its first symptoms on the 12th of January last when my hon. friend indicated that there were in his mind some germs which indicated a coming attack of blue funk—shall I say?—or the dread of some impending crisis. We have in England in the navy what has been known a long time as the blue sea school, and I have observed during the recent elections there that somebody has said that another school has taken its rise in England, and that is the blue funk school. The threat of German invasion was used, as we know, during the recent elections in England.

Well, Sir, the hon. gentleman has seen fit to launch his policy. That policy is, to give the admiralty of the mother country a sum of money sufficient to buy two Dreadnoughts. Now, what does that policy involve? It certainly involves delay in the matter of proceeding with the real work of beginning, constructing and organizing a Canadian navy to co-operate, when required, with the British navy. But more than that is involved. As I have pointed out, it involves a heavy expenditure without any direct benefit whatever to Canada in the way of building up a navy. We are a people of seven and a half millions. Years ago we undertook the defence of this country on land. Everybody agreed ten months ago that the time had arrived when we should undertake that defence upon the waters adjacent to our country. But this proposition of hon. gentlemen opposite means a begging of the question, it means expending $25,000,000 without contributing in any way whatever—as to personnel, as to shipbuilding, as to docks or anything else which is important—to building up a navy or educating the people of Canada towards co-operation with the mother country in our own defence.

Now, I ask your indulgence, Mr. Speaker, for a few moments while I read some authorities upon this question of whether or not there is an emergency. It seems to me to be a very important question. For, if there is not an emergency, then my hon. friend's resolution is not to the point. And I think I can show without very great difficulty that there is no emergency. This is a serious question and one which we should approach seriously. We should make the effort by every means in our power to inform ourselves with reference to this question. I propose first to read briefly from a statement of Sir William White, who is ex-constructor of the British navy, a man who might be presumed to have very considerable knowledge as to the power of the British navy itself and as to the strength and character of the other navies of the world. Sir William White said:

> German activity in warship building attracts most attention for the moment and there is a tendency to treat existing conditions as if they were unprecedented. Every one familiar with the events of the last half century (since the iron-clad area began), knows that this is not true. That period has been marked by a succession of struggles for supremacy in sea power, and more critical situations have occurred in the past than that which now exists. From 1857 to 1870 France was a formidable competitor; indeed, for the first ten years of that period, her war fleet was stronger, relatively to the British navy, than any single power has been since. The combined strength of French and Russian fleets furnished the standard of strength adopted by British governments from 1887 onwards; and the great programmes of ship-building embodied in the Naval Defence Act of 1889, the Spencer programme of 1893, and the Goschen programme which followed, were frankly based on that consideration. There were times when the relative strength of the royal navy and of the allied fleets of France and Russia gave more reason for anxiety than any present or immediately prospective condition would justify.

Then, I propose to read a passage or two from the London 'Times'. For many weeks past, at any rate during the election in England, the London 'Times' has been publishing articles calculated as far as possible to alarm the people of England and to make them believe that the British government of to-day had not done and was not doing all that it ought to do and that there was a certain amount of peril in the preparations being made by Germany. I have here an article by a very able writer, written upon the occasion of the sixty-ninth birthday of Lord Fisher, who has recently passed out of the navy, and who, as everybody knows, was the first sea lord, for five years. I quote from the 'Times' of January 28, last.

Mr. FOSTER. Not an editorial?

Sir FREDERICK BORDEN. No, it is not an editorial. But it is written by a

well known writer who is constantly writing military and defence articles for the 'Times':

The most striking, though, in our judgment, by no means the most important, achievement of Lord Fisher has been the introduction of the Dreadnought type of warship. Not much need be said upon this subject. It is full of technicalities little fitted for popular discussion, and it positively bristles with controversy. There are those who hold that the introduction of the Dreadnought type in 1905 was premature, that it was too hastily adopted—as is held to be shown by the large modifications introduced into the succeeding vessels of the same type both in this country and abroad—and that it has involved this country in a vast increase of naval expenditure which might have been postponed, if not avoided altogether. It would carry us too far into the kind of controversy which we desire to avoid on the present occasion to discuss these criticisms. The broad facts are indisputable—first, that all the great naval powers have now adopted the Dreadnought type with no greater modifications than time and experience have suggested to ourselves as well as to others; secondly, that the introduction of the type effected a marked pause in the development of the constructive programme of other powers; and, thirdly, that the duration of this pause gave this country a lead in the construction of Dreadnoughts which we still retain and can lose only by our own craven default.

And again from the same article:

Any one who takes the trouble may, by consulting the navy list and other official documents accessible to all the world, institute for himself a comparison between the strength of the naval forces actually in commission in home waters at the end of 1904 and at the beginning of 1910. These dates cover the whole period of Lord Fisher's tenure of office. The figures are as follows. A similar examination of intervening periods would show that the development has been continuous throughout:—

	1904.	1910.
Battleships..	16	44
First-class cruisers..	13	37
Smaller cruisers and gun boats..	30	58
Destroyers..	24	12
Torpedo boats..	16	88
Submarines..		50

Here we must make an end, though we have by no means exhausted the tale of reforms effected by the admiralty in nearly all departments of naval administration during Lord Fisher's tenure of office.

That is the position which England occupies to-day in comparison with the position which she occupied in 1904.

Mr. FOSTER. Who is the author?

Sir FREDERICK BORDEN. The article is not signed, but I fancy it is written by Mr. Amery. We may accept it, I think, coming from the 'Times' as a reliable authority, and this is a table which the 'Times' would not publish if it had not verified the figures.

Mr. MIDDLEBRO. Was not the person who wrote that article a Mr. Amery and who advocated those views, defeated at the last election?

Sir FREDERICK BORDEN. I cannot tell what views he advocated; but I know the London 'Times' did all it could to excite public opinion in England to the view that all was not being done that ought to be done for the navy, and that there was some danger from Germany. Now I propose to read some other authorities, and I intend to begin with the Prime Minister of England. On the 10th of November at the Lord Mayor's banquet, Mr. Asquith said:

When I addressed your predecessors in this place last year the internation sky here and in Europe was somewhat clouded and there were signs in the horizon which might well have seemed to foretell a spell of stormy weather. I am happy to be able to speak to you to-night without any lurking apprehensions which it was then not wholly possible to lay aside.

My hon. friends ought to have introduced their resolution last March and got ahead of this trouble which the Prime Minister says existed about that time but fortunately had disappeared. He goes on:

If I speak for one moment of Germany, it is to say again that I know of nothing which need stand in the way of a full and friendly understanding which it is, I believe, a cherished object of the wisest statesmanship and of the best moral and social forces in both countries to promote.

That was at the Lord Mayor's banquet. And again on the 21st of December, Mr. Asquith said:

Let me say once for all that the navy is able to maintain not only now, but in future years, our supremacy at sea, and to guarantee the integrity of our shores, the protection of our commerce, and the inviolability of our empire. I do not believe that ever since the close of the great war nearly a century ago the navy and the army have been better organized than they are to-day.

And again Mr. Asquith, on the 19th of January:

Let me say once for all, and I speak with full deliberation and after careful and prolonged inquiry, that the navy of to-day is able to maintain, not only this year, but in the years that lie before us, our supremacy at sea, and, should the necessity arise, which God forbid, to guarantee the integrity of our shores, the protection of our commerce, and the inviolability of our empire.

Mr. McKenna, the Frst Lord of the Admiralty, has expressed himself recently as follows:

It is said that we are being left behind in comparison with Germany. At this moment Great Britain has got 7 Dreadnoughts in commission; Germany has got 2. When Germany has 4 in commission, Great Britain will have

10. When Germany has 5 in commission, Great Britain will have 12. When Germany has 9 in commission, Great Britain will have 14. When Germany had 11 in commission, Great Britain would have 16. When Germany had 13 in commission, Great Britain would have 20.

That carries us up to March 31, 1912.

Up to the present no programme in other countries has gone beyond that period. Next year will see its own programme, and I have no doubt that the figures will be equally satisfactory, and equally giving absolute security to this country with regard to subsequent years.

Sir Edward Grey, as late as January 11, said:

As far as relations between the British and the German governments were concerned there never had been less reason to talk about the prospects of war than there were at the present time.

It is the Secretary for Foreign Affairs in England who says that:

At no time have we found a greater disposition on the part of the German government to handle these questions which arise between us in a friendly spirit than we have found during the last year. It may be that in time there will be some agreement of a perfectly voluntary nature, but if any such is arrived at, it cannot be the result of pressure on either side. It must be simply the result of an equal amount of free will on either side.

Then I have here an extract from a leading German newspaper:

If we had not taken to ourselves a good measure of Shakespeare's world of humour, who knows whether we should not long since have sent a diplomatic hint to Downing Street asking politely that the German 'bogey' might be omitted in these domestic party conflicts; but on our side of the channel we have long perceived the aim of this English election manœuvre, and only thank the leaders of the present British government for the honourable endeavour to place all the Conservative and Unionist allegations as to Germany's nefarious designs in their proper light, and to expose them as a dubious election dodge not quite worthy of gentlemen.

Next I have here the Edinburgh 'Review' containing an article from which I would like to read. It is an article reviewing several German works and entitled 'Anglo-German Relations.' The fact that it is published in the Edinburgh 'Review' is, I think, a sufficient guarantee for its respectability. The writer says:

Nothing therefore so cut and dried as a convention between two nations is required, since we have no actual dispute to settle. What is chiefly needed to induce better relations are—more insistence on the interests and glorious memories that we have in common, and a fuller comprehension of each other's history, of our good as well as bad qualities, and even the real grievances each has against the other.

Sir FREDERICK BORDEN.

Above all we should avoid thinking that each nation is plotting against the other. There are, no doubt, people in England anxious to destroy Germany's fleet and smash her commerce, just as there are people in Germany who would like to do the same to England. But in every country there are generally to be found people of the same extreme views. Every Russian has certainly not yet given up the dream once cherished of annexing the Indian empire, and there are plenty of American citizens still anxious to twist the Lion's tail. In the same way there are still Canadians——

Not many now, I hope.

—who feel no loyalty to the British empire, and a few back-country Boers who would hoist the republican flag to-morrow if they could. But it is undignified for a great people to take all such vapourings or such sullen discontents as the expression of another country's deliberate ambition, or to treat the theories of Pan-Germanism or Pan-Slavism or of British imperialism in their most blatant forms as constant menaces to one's own security. Moreover, it is well not to take every extreme expression of national ideals too seriously, even when uttered by a Bismarck. No doubt every considerable nation thinks or has thought that it would be better for the world if its own influence were supreme, and theoretically would be prepared to secure this supremacy. It is a natural and very pardonable instinct. But its existence by no means implies that such a belief would at any given moment necessarily manifest itself in action, even if such action might conceivably be successful. Our extreme jingoes themselves would not be such fools as to paint the map of the whole world red, even if they could; much less the average Englishman.

We have heard, and I think it is well to go as far as we can to the bottom of this scare question. I wish to quote from an extremely able article from which the leader of the opposition quoted in his speech on January 12 last. It appears in the last Navy League Annual, edited by Alan H. Burgoyne, and is written by a distinguished German, Graf Ernst Von Reventlow. It is entitled 'the Naval Policy of Germany and her Relations with England.' The writer says:

I now return to the main question—the object which is pursued in the German shipbuilding programme, viz., the protection of commerce the colonies and oversea interests; this, of course, includes the protection of our own coasts. The words in the preamble of the Navy Bill: '.....that even the greatest sea-power must hesitate to attack us unless she is prepared to jeojardize her international position,'——

Words which the leader of the opposition quoted for a different object:

—do not in any way assert that our fleet requires to be equal or superior to the British fleet. If we desire fully to comprehend the sense of this sentence, we must consider it

from two points of view, viz., in the event of war, and, secondly, as a means for the avoidance of war.

And then again:

The relation between our fleet programme and warfare itself we might in broad lines describe in the following words: it is sufficient for us Germans if England recognizes that she cannot in the long run carry out a blockade of the German coasts. This object of ours is thus also purely a defensive one. At the same time, however, there appears at first sight to be an irreconcilable duality of conception and view, for England regards it as her defensive right to push forward her line of defence as far as the coasts of the opponent. It was recently even stated in an English paper that in the future European war the line of defence of British interests would have to be pushed forward as far as the valley of the Meuse. We Germans, on the other hand, cannot accept that view, and on our part consider it to be a defensive action to make preparations in order to make it impossible in a future war for the line of defence of an enemy to be brought up to our coasts. I am of opinion that the uneasiness and apprehension of prominent British politicians and experts is precisely based on this idea. None of these prominent and experienced men will ever have believed in the nonsense about invasion, excepting, perhaps, a few fanatics. It is, after all, only a right of politicians if in England the spectre of invasion is made use of for purposes of agitation and in order to influence public opinion in favour of the navy; it becomes a wrong only where it produces greater harm than good. At all events, in England the fear of invasion has proved an effective means of agitation in favour of the navy, and, strangely enough, many people in Germany think that even admirals and statesmen seriously believe in this spectre, whereas it is probably only the blockade question that occupies them. It is well known that the prevention of a blockade, or the harassing of a blockading is not the work of small ships; the defending party must have at its back a strong fleet of battleships. An example of this on a small scale was furnished at the time by Port Arthur, where the Russian torpedo boats never approached the enemy's fleet, as they themselves were not backed by a fleet of battleships.

I wish now to read a very short quotation indeed from a speech made by the German ambassador in London only a few days ago on the occasion of the Emperor's birthday. As reported in the 'Times' of the 29th of January, Count Wolff Metternich said:

We are building our fleet in accordance with the programme which has been known for ten years, and which has been fixed by Act of parliament. In spite of the commercial reasons which impel us to wander far abroad, the pivot of our existence is in the Fatherland, which the army is called upon in the first place to protect. It is, therefore, neither necessary for us, nor have we any pretentions to be or to become the strongest on the sea. The ocean is free and according to the conceptions of all civilized nations, belongs to no single power alone. We do not wish to rule the seas, but we desire to occupy a position commanding respect commensurate with our commercial and colonial interests. But neither our fleet nor our army threatens any one so long as we are not threatened ourselves. And since we have no intention of competing for supremacy on the sea, is it reasonable to suppose that we seek to become involved in a naval quarrel, while we know that we are much stronger on land?

If we stop for a moment to reason, it seems to me that we should admit that Germany, with its great interests, its rapidly expanding trade, its vast commerce, is doing nothing but what any great power should do, looking to the necessity of defending her lines of commerce and her great and vast development. That is what Germany should do as a matter of duty, and it is what Germany has an absolute right to do. In view of these authorities, which I respectfully take leave to consider are superior to any in this House at least, in view of the reasons set forth by them, in view of the statements of the Prime Minister of England, of the First Lord of the Admiralty in England, of the British Foreign Minister: that there is no danger, and that the British navy was never stronger or better able to compete with the navies of the world than it is to-day, it seems to me we should accept these assurances in preference to the scare resolution of my hon. friends opposite.

Now, Mr. Speaker, I wish to say a single word in conclusion. Nobody on this side of the House doubts; we have affirmed it over and over again, and we believe that British naval supremacy is in the first degree essential not only for the maintenance of the British empire, but for the maintenance of peace and for the best interests of the world at large. I have spent some time, which I hope has not been lost, in endeavouring to establish that British naval supremacy is not in danger at the present moment, nor for many years to come. Now, Sir, we wish to assist in every way in our power the mother country, upon whom unquestionably the strain of maintaining her position, which is essential to our existence as well as to hers, has become very, very great. It is for us to consider how we can best do this. Is it by the means suggested in the resolution of the hon. gentlemen opposite, spending $25,000,000 now and receding from the proper policy and effort which we should make to build up a line of defence upon the sea which will be of some use immediately, but which will be of greater and greater use as the years go on when perhaps it will be more needed than it is now or during the next ten years? The suggestions made by the statesmen of the mother country, and her admirals and generals for years past all tend to show that the true way of as-

sisting the mother country in the matter of defence is by making each one of the great nations which form part of the British empire strong within itself. That is the line which has been followed in this country, to some extent at any rate so far as our land forces are concerned. It has been in contemplation to organize gradually a naval force, and we believe the time has come now. We are 7,500,000 people with an annual revenue of $100,000,000, and we should be prepared, we should be anxious to relieve the mother country from the responsibility of defending our coasts and our harbours. Let us then take this moderate step which we have proposed, of carrying out lines of local defence, a policy which is no new policy here, and which after years of experience of the other methods has been returned to and is now being followed by the great sister dominion of Australia. And so, my suggestion would be, and I think it will meet with favour among the great majority of the people of this country: that we should take up seriously the question of local defence of the sea, that we should follow it on the lines of local autonomy so ably pointed out by the right hon. the leader of the government in March last and so cordially approved then by the leader of the opposition. It seems to me that autonomy cannot be best utilized by the course which hon. gentlemen opposite now suggest. Autonomy does not consist simply in possessing the power to govern ourselves; it consists in utilizing that power and these rights and these privileges to develop ourselves in everything which goes to make up nationhood. It is no use to boast that we are autonomous if we do what the hon. gentleman from North Toronto so deprecated, and spoke of in such contemptuous manner a few short months ago: if we go and hire somebody to do the thing which, as free and independent and autonomus British subjects we should do ourselves. That, Sir, would mean, not autonomy; it would mean atrophy in the worst sense of the word.

Now, we hear in these days a great deal about imperialism. I have not been in the habit of boasting very much about it, although I may have as good right to do so as any man in this House, or any man in Canada. I have made some sacrifices, and I have endeavoured to do some work for the empire, and in the cause of imperial defence. But, Mr. Speaker, my notion of the way to build up the empire, my idea of true imperialism is for each one of the great dominions that make up the galaxy of nations constituting this great empire, to enter upon the task of developing itself to the utmost. Let each one of these dominions make itself strong by improving its trade connections and its trade routes, and by developing the great natural resources within its limits, and, not forgetting at the same time its duty in reference to defence. In that way we will make ourselves strong. I go so far as to say that I believe in Canada first; I believe that idea should stand out prominently in every mind in this country; I believe that all our children should be taught that it is their first duty to make their own country strong. If that course is followed, in Canada, in Australia, in New Zealand, and in the Dominion of South Africa—which is one of the greatest triumphs of British diplomacy and British institutions—if we cultivate a better acquaintance with each other and with the mother country; if we close up the ranks in friendly rivalry, in commerce and in the arts of peace, not forgetting to make all reasonable provision for emergencies, along the line of co-operation with the great centre and heart of the empire, our watchword shall be 'local autonomy with imperial unit'; for imperial unity, mark my words, depends absolutely and entirely upon local autonomy.

Hon. GEO. E. FOSTER (North Toronto). I am sure my hon. friend will not take it amiss of me if I do not commence and continue in a seriatim reply to his somewhat long and, I am afraid I shall have to say, not very illuminating address. All that I have been able to pick out that I think needs answer I will try not to miss as I carry along my remarks in a more connected way than I could do if I followed seriatim my hon. friend, for I have a little to say about the remarks made by the right hon. gentleman who moved the second reading of this Bill, who Lincolnized himself, according to the sane and judicious judgment pronounced upon the matter by the member for South Ontario (Mr. Fowke), and whose speech, no doubt, is to be the pièce de resistance in this Dominion generally, in the province of Quebec especially, during the campaign which is now opening, and which may continue for a greater or less length of time. I thought, as I looked at my right hon. friend and listened to him, that his speech was, after all, an apology addressed to different wings of sentiment or opinion in this country, as to which of the two were the stronger he himself was in doubt. It had to me the semblance of a speech made by a man who feared on the one hand that he was offering too much, and on the other hand that he was offering too little, and expected animadversion on both sides. It seemed to me the halting step of a man who had not based his policy on deep and long abiding conviction, but who trod the shifty ways of compromise, and consequently, instead of drawing upon the founts of strong and deep feeling and sentiment, had to seek the flimsy consolations of a rhetoric often glittering, and as deceptive in many points as it was glit-

tering. Consequently my right hon. friend involved himself in contradiction, and descended to devices of argument which would do credit to the everyday hustings man, but which certainly to my mind does little credit to a statesman of twenty-five or thirty years' standing. If that appears to be a somewhat strong word, let me point out what I mean. Here was a man of long experience, putting, as he said himself, the capstone on to the many stories of the policy which he and his party had advanced in the Dominion of Canada. The final, the crowning stone was to be laid. Whatever he may try to persuade others, he himself knew quite well that he was standing in an epochal period in this House of Commons and this Dominion of Canada. He was proposing a policy which was absolutely new to the people of Canada, say what he may to try to convince others that it was old and well known. To-day, Mr. Speaker, there is no subject of importance which is less understood and which has been less thought out and less canvassed in this wide Dominion of intelligent electors than this very question, which, launched by the Prime Minister some few weeks ago, is to be decided in the space of as few weeks to succeed. One would have expected, when a Prime Minister, under these circumstances, stood before a House of Commons and before a people like the Canadian people of seven and a half millions, he would in statesmanlike way have gone directly to his subject, have pointed out the necessity of his policy, have noted its strong points, and, as he laid before his fellow members of the House of Commons and his fellow electors of the Dominion of Canada and asked for these wide powers and this departure, would have given to them solid and well based reasons why they should support that policy. Did he do it? There was no shifty device that the shiftiest of politicians could have recourse to, that my right hon. friend did not have recourse to. It is an old and well known design and usage of the man who occupies a weak position, to endeavour to put up bogies and suppositions and men of straw, and fight old battles that have been fought half centuries ago, in order to distract the attention of people from the real weaknesses developed in his plan.

My right hon. friend did that to perfection. In the first place instead of advocating his own policy, he, the premier of this Dominion, he, the statesman, on the subject of national and imperial defence, on which there should be no party division, on which all men should be approached in the most non-partisan manner—forgot his duty in that respect and launched at once, hot under the collar, into a tirade against members on this side for lack of consistency and of unity. Consistency—great Heaven! If there be any man in this wide Dominion who has the right to talk about political consistency, it is certainly not my right hon. friend. What difference did it make, as to the strength and soundness of his policy, whether A, B, or C, on this side had different opinions with reference to the policy that ought to be pursued? Did that add intrinsically to the strength of the right hon. gentleman's case? No, but he brought it up, as the wily politician, in order to produce an effect in favour of himself or at least to the disadvantage of the party opposed to him. Let me say to my right hon. friend, when he talks about unity and diversity of opinion, that I would rather have diversity and difference of opinion coupled with manhood and individual independence than uniformity of opinion coupled with servility and loss of independence. One thing let me tell my right hon. friend and that is that upon one point there is no division on this side of the House, and that point is a complete and unanimous disagreement with the policy proposed by the right hon. gentleman.

Some hon. MEMBERS. Oh. oh.

Mr. FOSTER. That, I think, will be quite well understood and agreed to. There are ways in which uniformity can be brought about. This afternoon when the First Lord of the Admiralty or the Minister of Militia (Sir Frederick Borden) was making his most important speech, and when I looked over the multiplicity of vacant seats on the other side of the House, I could only draw one of two inferences. Either there was a total lack of heart in the matter on the part of the supporters of my right hon. friend or else there was a very deep disagreement among them with reference to his plans and policies. One or the other must be true. But there are ways of producing uniformity, and my right hon. friend knows them quite well. He has the caucus; he has the thumb-screw; he has the rack; and he has the composing room. If the composing room does not make uniformity, the thumb-screw is applied. If neither be effective, the rack is used and the man is stretched. 140 men at the back of my right hon. friend, once independent men; many of them educated men; sturdy men coming up from their individual constituencies where they stand for much, trooping into caucus have, I should think, some differences of opinion, but when they come out of caucus, there is none. Look into the register, if you please, examine it, tote up the results of your examination, and in ten long years, how many of the 140 men—take all the iniquitous measures proposed, all the rights denied, all the investigations refused, during those ten long years—how

many of these 140 or 150 men have been down in the register for a single protest at any single time? The composing room or the thumb-screw or the rack has done the business. Although the dogs may troop into the caucus yelping as loudly as they please, silent back to the kennels they go, and they are mum and bay not by a single sound. There is the composing room—some one is recalcitrant is taken in. 'I understand you would like a judgeship; sometimes there are judgeships; I think you are a likely looking man.' This takes place in the composing room, and the recalcitrant comes out perfectly in accord with the most objectionable proposition. To another: 'You are looking for a commissionership, well you are a very likely man; there are commissionerships occasionally and wise caution may bring its reward.' The composing room does its work, and so the pressure goes on throughout the whole list. But I find I have made one mistake. I said that not one man had registered as an independent; not one had registered a single protest. I was wrong, there was one, Frank Oliver, a sturdy independent from the wild and woolly west. Oliver was quickly placed in office and ever since has uttered no protest. Richardson was another, also from the wild and woolly west. He spoke out his opinions, and he was cast into the outer darkness, where he has ever since remained. Lavergne was another who had a mind of his own on some things and ventured to express it. He was stripped, as naked as when he came from his mother's womb, from all patronage, and is to-day in the dark shadows of opposition. Bourassa had a mind of his own.

Some hon. MEMBERS. Question.

Mr. FOSTER. I shall have to appeal to you, Mr. Speaker. These gentlemen, usually silent, are learning to bay now. Bourassa had a mind of his own and spoke it. Bourassa is outlawed, and to-day every one of the minions of my right hon. friend has a commission to hunt him as they might hunt partridge, on the mountain side.

So I say that my right hon. friend was unwise in raising the question of division or otherwise.

Well, Sir, he brought out another favourite bogey of his. He knows quite well that there is, or has been, fostered a feeling of dislike and suspicion of what they call the imperialists in certain parts of this country. And so he next attacked the imperialists: they were shortsighted, they were wrongly led, they were Pharisees, who broadened their phylacteries and worshipped in the temple thanking God they were not like other men. What quarrel has he with the imperialist? Does he himself know? He thanked God that he was not an imperialist; and yet, being afraid that he had for once taken too solid and uncompromising a ground, he immediately thanked God that he was not an anti-imperialist. Who is the imperialist, and what does he profess? The imperialist is a man who, while doing all his duty to his own country, always remembers that his country is part of an empire into which it was born and in which he desires it to remain for ever. The imperialist is not the shortsighted creature that my right hon. friend would have us believe. He is a man who loves his country, gives up not one whit of its proper responsibility and proper obligations and proper autonomy, but at the same time does not go down to the market places of Boston and New York to declare that he is in favour of independence for this country of ours. But my right hon. friend was wise in his generation; he lifted this bogey in order to influence votes in the province of Quebec, and wherever else it might be possible, against the resolution introduced by my hon. friend (Mr. R. L. Borden) and so to bring men to his own side in regard to the policy of naval organization. That was his purpose and that alone.

The right hon. gentleman went on to argue that this policy which he has launched and which is embodied in his Bill has been before the country for at least eight or ten years, and that consequently there is no reason to give the people time to consider it and make up their minds with regard to it. What policy has been before the country for eight or ten years? The policy, says the right hon. gentleman, embodied in the memorandum which was presented to the delegates of the imperial conferences of 1902 and which is embodied in the report of the conference. That memorandum was the embodiment of no active policy, but was merely an expression of opinion and the negation of certain things—and that is all it was. I have it here in my right hon. friend's speech of last year. At a certain time in the conference of 1902—towards the end of it—my right hon. friend and his colleagues had this memorandum prepared, and it was read and embalmed in the records of the conference:

> At present Canadian expenditures for defence services are confined to the military side.

That was the first item.

> The Canadian government are prepared to consider the naval side of defence as well.

That was the second.

> On the seacoast of Canada there is a large number of men admirably qualified to form a naval reserve, and it is hoped that, at an early day a system may be devised which will lead to the training of these men and to

the making of their services available for defence in time of need.

In conclusion, the ministers repeat that, while the Canadian government are obliged to dissent from the measures proposed, they fully appreciate the obligation of the dominion to make expenditures for the purpose of defence in proportion to the increased population and wealth of the country. They are willing that these expenditures shall be so directed as to relieve the taxpayer of the mother country from some of the burdens which he now bears; and they have the strongest desire to carry out their defence schemes in co-operation with the imperial authorities, and under the advice of experienced imperial officers so far as this is consistent with the principle of local self-government, which has proved so great a factor in the promotion of imperial unity.

And this is dignified as a policy. It is simply an expression, partly of facts, partly of abstract opinions and partly of hopes and aspirations which have never been framed in any policy. That is the policy, and it is on all fours with the measure produced before this House and country and which the Prime Minister says is therefore justified because it has been for eight or ten years before the country. I deny that it has been before the country. It is embalmed in the English blue-book which was presented to parliament here in 1902. But I would like my right hon. friend to point out to me any discussions which took place upon that memorandum in this House, or any policy that was founded upon it for the consideration of parliament or any discussion that has taken place upon it in this country. I make the assertion that there is not one person in a hundred thousand in the Dominion of Canada that ever saw that memorandum or that knew or knows anything about it. And yet, my right hon. friend (Sir Wilfrid Laurier) a democrat of democrats, thinks that this is sufficient reason for saying that his plan of building an independent Canadian navy has been before this country since 1902, and that no time need be taken to consult the opinions of the electors upon it.

But he goes on then to charge us with broken faith, and my hon. friend the Minister of Militia and Defence (Sir Frederick Borden) has repeated the same argument. Let us see on what this charge of broken faith really rests. In 1909, I introduced a resolution which it might be just as well to read now:

> That in the opinion of this House, in view of her great and varied resources, of her geographical position and national environments, and of that spirit of self-help and self-respect which alone befits a strong and growing people, Canada should no longer delay in assuming her proper share of the responsibility and financial burden incident to the suitable protection of her exposed coast line and great seaports.

This resolution related to matters absolutely inside of Canada's own borders; it has not the slightest thing to do with the duties of this country with reference to sharing the burden of defence of the empire at large. That and that alone was in my mind when I drew the resolution, and that and that alone was the burden of my discourse in support of the resolution. As to the question I said:

> It is therefore not one which has arisen out of the later events and circumstances which are in the minds of all present.

It related to the duty which I thought was incumbent upon Canada. Having seaports on the Pacific and seaports on the Atlantic at the present time, entirely at the mercy of the smallest armed gunboat of a hostile power, I thought that was an unworthy position, an unsafe position, and that what Canada ought to do was to assume her own proper work, and make some provision, some adequate provision, for the defence of her seaports and her exposed harbours and coasts. That is all that I argued for. In the last part of my address on that occasion, and in the light of the events which had afterwards occurred, that is after my resolution was put on the order paper, I alluded to the question of emergency, and to the duty of Canada in that respect towards the empire as a whole, and I challenged my right hon. friend to stand up as a Canadian and to lead this Canadian parliament in making a contribution of Dreadnoughts, or of what was equivalent to it, at a time of crisis, and to meet the emergency; and that being so, I for one, and I thought every member on this side of the House, would stand in support of him if he undertook to carry out such a policy as that. Now, my right hon. friend and others may misrepresent that position as much as they please. I have carefully read that speech, I have carefully gone over those arguments; my position is absolutely tenable, and absolutely consistent with the position I take to-day.

Now, when it came towards the close the larger question intervened, and my right hon. friend moved an amendment which practically cut out my motion. That afterwards was amended and in the end the resolution was passed, which I will read. Now, Mr. Speaker, bear in mind that the motion which was ultimately passed was carried upon absolutely different data and conditions than the motion which I introduced, that it introduced broader and wider issues than I pretended to discuss in my resolution, and that it affirmed and conveyed the opinions of the members of both sides of the House as to our duty,

not only to Canada herself, but to the empire at large, and that was a very different thing. Now, Sir, what are the terms of that resolution which finally passed?

That this House fully recognizes the duty of the people of Canada as they increase in numbers and wealth to assume in larger measure the responsibilities of national defence.

By national defence I understand the defence of Canada. That, then, covers the gist of my resolution, the part of it that relates to Canada and Canada alone. It goes on to say.

The House is of opinion that under the present constitutional relations between the mother country and the self-governing dominions, the payment of regular and periodical contributions to the imperial treasury for naval and military purposes would not, so far as Canada was concerned, be the most satisfactory solution of the question of defence.

We agree to that. By implication, if not stronger, that means that the question of emergency remains absolutely open and free to be dealt with at any time this House thinks it ought to provide for it. That the policy of regular and stated contributions is not the best, is what is in the body of that resolution and upon which the two sides of this House agree. There is no difference of opinion between the two sides of the House, on the whole, upon that. Upon both sides we do not believe that regular and stated contributions continued from year to year, is the best method and the best means, and I elaborated that in my address. I said: You may give this year your contributions, and next year your contributions, and the year after your contributions, and after ten or twelve years of giving contributions you have founded nothing that has taken root. I gave the reasons why I did'nt like that. But there is an express reservation there—who will deny it?—that if an emergency should arise we are free to meet it with a contribution adequate to the purpose, and we do not break faith with the resolution when we do it. Let my right hon. friend deny that. The Minister of Militia and Defence has argued for that to-day, my right hon. friend has argued for it. And he did declare, with all apparent good faith and sincerity, that if a time of emergency did arise in future he would meet it as an emergency by stumping the province of Quebec and other parts of this country. Therefore, there is no breaking faith with reference to that; my right hon. friend himself will not say so, it is undeniable, there is no repudiation of faith. Equally with reference to the first clause, that of national defence, there is no repudiation or change on my part and the part of others. Regular contributions as a policy I do not believe in; emergency contributions I do, and that resolution affirms the right of this parliament to make emergency contributions to the defence of the empire when necessity arises.

The House will cordially approve of any necessary expenditure designed to promote the speedy organization of a Canadian naval service in co-operation with and in close relation to the imperial navy——

That is one condition.

—along the lines suggested by the admiralty at the last imperial conference——

That is a second condition. But there is another:

—and in full sympathy with the view that the naval supremacy of Britain is essential to the security of commerce, the safety of the empire and the peace of the world.

You cannot leave out a single one of those conditions, you cannot leave out one and ignore another. Now, Mr. Speaker, who has broken faith with reference to that part of the resolution? My right hon. friend who sits there, and his party, and I will show that before I get through with my remarks.

The House expresses its firm conviction that whenever the need arises the Canadian people will be found ready and willing to make any sacrifice that is required——

There are emergent contributions of many kinds and forms with which to meet the need when it arises.

—to give to the imperial authorities the most loyal and hearty co-operation in every movement for the maintenance of the integrity and honour of the empire.

Sir, I say that in the light of that they cannot accuse my hon. friend here or myself, or any member on this side of the House who thinks with us, of breaking faith. We have taken the ground and will maintain it, that the proposals of my hon. friend do not square with those resolutions. The resolutions themselves are abstract, and to the test of these resolutions must come the proposals of my hon. friend. Are we to take any proposals that he makes simply because if we do not take them we might feel that we would be accused of breaking faith? The faith-keeping is the fidelity of the proposal to the principle which is laid down in the resolution and, as I shall show this House and my right hon. friend, he has negatived the spirit and intent of those resolutions and is himself the faith-breaker.

Then my right hon. friend had a tilt with sundry windmills. He knows the story of the old knight and his doughty squire, filled full of the spirit of battle if not of conquest, bound for adventure, if not for human gore, who went around tilting at windmills. My right hon. friend tilted be-

fore this audience and the wider audience of Canada, and he did it to perfection. What were the windmills with which he tilted? He tilted, Sir, against the windmill which he took as an enemy to responsible government, and he drove his spear through all the wings of the mill. He then went to the next windmill which represented in his mind's eye a sturdy opponent of Canadian autonomy, and he pierced the wings of that mill. He proceeded until he met another enemy, conjured up, on the shape of centralization of power in Downing street, and he tilted against that, and then, filled with a lust for still further battle, he found another windmill which was taxation without representation, and he glutted his desire for warfare until he had demolished that one. There are some few things about which my right hon. friend ought to be careful; they are the statements that he makes. At page 3040 he makes these statements. Mr. Speaker, are they true?

But now we are told that in matters of naval defence we are to abdicate the principles of responsible government.

Who told him so? Did the British government tell him so? Did my hon. friend the leader of the opposition (Mr. R. L. Borden) insinuate that? Did any man anywhere in this House make a statement of that kind? And yet, Sir, to the men who read that speech, and it is his design that hundreds of thousands of people shall read it, he represents that somebody in power and authority has made it a sine qua non that the principles of responsible government shall be abdicated in the matter of naval defence.

We are told that we can have responsible government in anything else, we can make our own game laws, we can administer our own affairs and even have control of our land forces, but on matters of naval defence we should have no power of our own.

Who made that statement? The British government, the British admiralty, any person in a responsible position in this House or in the country? My hon. friend knows that when he made that statement it was a complete fiction of imagination. But he went further; he did exactly the same with reference to autonomy, he did exactly the same with reference to centralization, and he did exactly the same with reference to taxation without representation. He trotted out the old ghosts of Baldwin and Lafontaine, overworked already by my right hon. friend. Will he ever give them a rest? He trotted them out and went over the whole course of the history of responsible government and the acquirement of English liberties. Then he raised the idea that there were some men somewhere responsible for wishing to smother and destroy all those things. Autonomy, he said, is ours. That is true. Responsible government is ours. That is true. But both the autonomy and the responsible government have their orbits and apply in these orbits and in these orbits alone. When responsible government was granted to Nova Scotia or New Brunswick, or Ontario and Quebec, it was granted by the Crown, but it did not give either of those provinces under the exercise of responsible government any claim to exercise for themselves the prerogatives of the Crown which were not included in the grant of responsible government. Autonomy, said my right hon. friend, was given to us, and when it was given to us, no bounds were set to it, and to-day it is free to inclose the whole world. Fine as a figure of speech, but utterly fallacious as a statement of principle or of law. Autonomy for your province and for our Dominion is autonomy with an orbit of its own, complete therein and legitimately opposing any that would gainsay or cross it within its own orbit; but the very moment that it goes further, it is no longer autonomy; it becomes something very different. it may become separation, independence, rebellion even. So, when my right hon. friend talks about centralization, there are some things in which it is sensible to centralize, and if there is any one thing on which competent opinion declares that it is sensible and economical and only safe to have centralization, it is the matter of defence of the empire. My hon. friend the Minister of Militia (Sir Frederick Borden) knows that, because from the time that these conferences commenced until to-day that has been the one steady principle held in view, enunciated over and over again. What folly it is to try to persuade any thinking people that the battle of responsible government, that the battle of autonomy, that the battle of centralization in the authority of Downing street has to be fought over again to-day and is involved in this question which is before the House. These are only bogies that have been raised by my right hon. friend to prejudice his opponents and if possible draw support to himself.

Then, Sir, he went a little further; he quoted naval experts, he quoted Sir Charles Tupper. Since when has Sir Charles Tupper held such sway and power with my right hon. friend and his colleagues that to-day they swear by his wisdom and by his opinion? I am quite willing that Sir Charles Tupper should look at this abortion for imperial assistance and even for local defence as it has been brought down, and I am very certain that Sir Charles Tupper would not put his imprimatur upon it. Who else has been called in witness to-night by the Minister of Militia, as previously by the First

Minister? Sir William White. But, Sir William White, I believe, expressed an opnion with reference to Esquimalt and Halifax that my hon. friend (Sir Frederick Borden) repudiated and paid no countenance to. Sir William White may be a good expert in his way, but there are others. Lord Charles Beresford is quoted, and the right hon. gentleman said that no better authority than Sir Charles Beresford could be found. But if you take Lord Charles Beresford's advice on one point because he is a good authority, how can you refuse to take his advice upon another point? He is the same Lord Charles Beresford. And, Lord Charles Beresford does not tell the quiet and pleasing tale that was told us to-night by the Minister of Militia. Sir Charles Beresford announced it as his opinion, and he is ready to maintain it: That the British navy is not to-day where it ought to be, and that many tens of millions of pounds must be spent just as soon as it possibly can in order that the British navy may take its rightful position. And, on the matter of control, where is Lord Charles Beresford? In London, on June 29, 1909, Lord Charles Beresford said:

> The vessels should be under the administration and control of the Dominions, but in case of war ready to join the imperial fleet.

There is no better authority than Lord Charles Beresford, says the right hon. gentleman, and that is what Lord Charles Beresford said, and he said further:

> Remember the best defence is the defence that can be used as an attack. Your defence should be one that can instantly be turned into attack. There is one point, I think, you should insist on: when it comes to war you must act under the great strategic bureau which will be at the admiralty.

Now, I apply that to my right hon. friend in two ways—you are talking about making an adequate defence of Canada. But, the vessels that you propose some time to have completed, complete them all and put three of them on one coast and the rest on the other coast of this Dominion, and you have absolutely no force with which you would dare to attack, and consequently you have not an adequate force to defend. Lord Charles Beresford's authority is as good on one point as on the other. But, leaving these quotations of authority, the resolution of 1909 and the speech of my right hon. friend do not affirm that it was necessary to go to Lord Charles Beresford, and to Lord Milner, and to Sir William White, to find out what is best to be done. That resolution and the whole spirit of last year's talk on the resolution, sent this government direct to the admiralty of Great Britain. They were your experts, and they were your specialists. It was their opinion that you were to take, and the very fact that my right hon. friend and the Minister of Militia have quoted these men to support their case is because they cannot get the support of the admiralty. My hon. friend (Sir Frederick Borden) to-night said that the British fleet was the greatest fleet of history. It is. He said it has in it the best personnel that the historian has ever recorded. It has. It has the best experience, and the best matured regulations of any fleet that ever existed in the world. There in that repository is to be found the expert knowledge of long experience, and I tell my right hon. friend there is where you were sent to get your instructions, and there is where you were sent for opinions on what you should do. You went there, you got their opinions, you told them flatly to their face: We know more about it than you do, or, if we don't know more about it than you do we are not going to do as you tell us we ought to do. That assertion cannot be denied, as I shall show. All this quoting from these individual scattered experts does not amount, Sir, to the mist of a summer morning. What you were told to do, what you pledged yourself to this parliament to do, what was the faith and pledge of that resolution that was passed by this House: That you should go to the admiralty, that you should find out what the admiralty thought was best and that you should conform your plans to that. Is there any doubt about that? There is one expression of my right hon. friend that I got from him after the resolution was passed, and I will read it. In answer to a question of mine as to the conference and what they proposed to do, the right hon. gentleman said:

> I quite realize that Canada has reached a period in its history when as a nation and as a part of the British empire we should acknowledge the fact squarely and prepare as far as we can for our own defence, and that we should make all adequate preparation to that effect. I am not prepared to say to what extent we should go, I do not think it would be wise for us to take isolated action.

Mr. FOSTER. The resolution forbade that, really.

Sir WILFRID LAURIER. I am not prepared to say that we should go in and construct our navy apart from the imperial navy. It would be very unwise that we should take any isolated action without conference with the admiralty so that our action——

Mark this, Mr. Speaker:

> —so that our action should be in accordance with the plan laid down and approved by the admiralty.

I deny that the right hon. gentleman has that plan or can produce it. You have an abortion of a plan which your own narrow and petty ideas of patronage and geography with no eye fixed upon the great imperial issue, led you to adopt instead of that which you were instructed to adopt

by the resolution of this House. Let me go a little bit further; a word or two more with reference to the admiralty proposals, because it is very important. Now, I ask my right hon. friend what he meant by this passage in his speech of February 3? He said:

Well, we thought, it prudent, for reasons I shall explain in a moment, to commence moderately. Two plans were proposed to us. One was to have a fleet of seven ships and another a fleet of eleven ships. The seven ships were to be composed of three Bristols and four destroyers; the eleven were to be composed of four Bristols, one Boadicea and six destroyers. For the reason that we have to protect our coasts on the Pacific and the Atlantic and consequently to divide our fleet, we thought it better to have eleven rather than seven ships. In this we acted on the advice of the admiralty.

Now, I ask my right hon. friend, as a fair man, to put that statement before any man any where in Canada, and ask him to give you the meaning he takes out of it. What meaning can he take out of it but one? The British admiralty, out of the fountain of its experience and knowledge, proposed two plans to us. One was to have eleven ships, and the other was to have seven. We took the one involving the eleven, and there it is in black and white; in this we acted on the advice of the admiralty. Now, is that true? It is absolutely diametrically opposed to the truth in every way. Why should the Prime Minister endeavour to give that version to the people at large? He surely is bound, when he treats this House and this country to a premier's statement, to see that it is accurate. This is absolutely inaccurate. What the admiralty put before you—and I call my friend to witness, in this memorandum—was this: What is best, from a strategical point of view, is to have all give money contributions or ship contributions, and put them entirely under our control; we recognize, however, that the dominions may not be favourable to that—in some cases they are not. What is the next view of the admiralty? That if any dominion proposes to go upon the line of constructing a navy for itself, the least it can have is the unit, and the unit we declare to be certain vessels and certain classes of vessels. Did you take the unit? You refused it. They made a proposition anterior to that, which tested the good faith of Canada, and proved it not to be what they had thought. The admiralty had worked out an admirable scheme. A few years ago they drew their war vessels from every part of the ocean and massed them around Britain's home and Britain's heart for their protection. But they had to keep certain vessels on the far-off seas to show the flag and to be prepared for small emergencies. The Pacific ocean has been revolutionized in the last ten years. On the Pacific ocean Britain's fleet is not numerous; it is weak; and facing fleets are daily growing stronger. Britain, in conjunction with Australia and New Zealand, and, as she fondly hoped, with Canada, made this proposition first—and I bring the recollection of my right hon. friend to it. She said: join with Australia and New Zealand and the British government, and let us build four units, fifty-three vessels, and place them, with their four Dreadnought leaders, in the Pacific ocean. If you do that, you will confer an absolute favour upon the British empire. You will put in those unprotected seas a strong fleet that will be amply able to hold those waters against all comers, until, if it were necessary in a great emergency, British aid should come from other quarters to help you in your conflict. What a splendid idea! Australia with its unit; New Zealand and Britain combined with their unit; India and China and Britain with their unit; Canada with its unit; sailing the broad waters of the Pacific for the defence of the Canadian shore, and the shore of New Zealand's little island and of the great continent island of Australia—one fleet of four participants, strong with their Dreadnoughts and strong with their equipment for effective naval warfare. There, said the British government and admiralty, is what will suit us best and what will do the empire most good. You refused it. If your eye had been single to the defence of the British empire, whose supremacy you say is absolutely necessary for the peace and security and permanence of this country and its interests, that was a proposition which you could have taken, and in taking which the people of Canada would have stood by you to a man. Then, when you refused that, the admiralty said: The least you can do is to build the unit. Did you do it? No, sir. You flatly told them: We cannot do any such thing. Then you went to them in private or individual conference, and you said: We cannot accept your proposition as to a Pacific unit; we cannot act on your advice as to a unit such as it has been defined; what can you advise us to do for £400,000 a year? What can you advise us to do for £600,000 a year? Just tell us what advice brimming over from your fountains of knowledge you can give to us to help shape up some little makeshift of our own. Was it proposed to you, as the Prime Minister said? The very opposite: it was proposed by you, as the only step you would take towards helping in the defence of the empire; and in the long last. when your own proposals, reduced to a minimum, were accepted, as they would have accepted the offer of a single coaling station from Canada, if she felt she could not give any more,—when that was agreed

to, what do you do with it? You so arrange it, that it is not now, nor ever can be, in the shape in which you propose it, of any earthly advantage in the arbitrement of the fate of the British empire. You do still less. You get an expensive toy, which, in the course of twenty years, when your vessels are ready for the scrap-heap, will have totalled up in cost from $90,000,000 to $100,000,000 against this Dominion. And not a single arm of that fleet on the Pacific or the Atlantic will ever dare face a contest on the seas with a war vessel of any other nation armed and ready for action.

I wish now to come to a more important matter, but before doing so, I want to jog the memory of my hon. friend the Postmaster General. I want to compliment him, I want to tell my young friend that he shows up splendidly as compared with the right hon. gentleman, his leader, and the Minister of Militia and Defence. What did my right hon. friend the Postmaster General say? He said that the Munroe doctrine was a myth, and worse, it was an unpatriotic myth. He declared that Canada could not rely on it in the case of any invasion, that it was simply a delusion and distortion of facts to say that any obligation rested on the United States in virtue of the Munroe doctrine, and that the man who advocated it for Canada was unpatriotic as well as foolish. Well, Sir, I have two of those unpatriotic men in my eye now. The right hon. gentleman who leads this government, when in the city of Boston, in the home of men at that time not very well disposed to this Dominion or the British empire, told them that he subscribed to the Munroe doctrine; and the Minister of Militia and Defence (Sir Frederick Borden), who first apologized for the independence sentiments of his leader——

Sir FREDERICK BORDEN. Oh, no.

Mr. FOSTER. And then, when asked whether he would stand by them or not, swallowed it all and said: Yes, whatever may be the opinion of my leader, I have such confidence in him, that I will back them all—I commend specially the Minister of Militia and Defence (Sir Frederick Borden) to the tender mercies of my hon. friend the Postmaster General (Mr. Lemieux), for in the city of Ottawa, discussing the Munroe doctrine, on the heels of a lecture delivered by Professor Leacock, the Minister of Militia and Defence, (Sir Frederick Borden) said:

Behind that doctrine were the guns and warships of the United States and the whole power of 80,000,000 souls.

Sir FREDERICK BORDEN. Hear, hear.

Mr. FOSTER (reading):

Surely that doctrine, if it meant anything, meant that Canada was safe from foreign aggression. It meant that neither Germany nor Russia, nor any foreign power would for one moment, whether England were strong or weak, be permitted by the United States to place a hostile foot in this country.

Does my hon. friend still hold to that?

Sir FREDERICK BORDEN. I am very much of that opinion.

Mr. FOSTER. Here is a division, here is a scandal spread out before everybody. Two members of the King's cabinet, showing that delightful solidarity that is inherent in constitutional government by cabinets, have on the greatest question that possibly could be raised, the defence of their own country, opinions diametrically opposed to each other, and not satisfied with fighting like blazes about it in the cabinet, they bring their differences into the House of Commons. There is something to be settled among hon. gentlemen opposite.

Leaving that however, I wish to go, for a few moments, to what I think is a more important part of the question and to ask you to do what I think we have failed in our duty in doing in this House, and what I hope we shall not hereafter fail in doing. I endeavoured the other day to give a bird's eye view of these imperial conferences, and did it in a brief and I am afraid, not very effective way. What I mean to say is this, that we have failed in our duty on both sides of this House in not making a subject of thorough examination and discussion in this House of the attitude of Canada and other parts of the empire towards the empire itself. I am as certain as one can be of anything, that had this been done, had the position of Canada from conference to conference, been fully exposed and debated, there would be far different opinion in this country to-day in matters of imperial concern than that which exists. There are two striking sentences by my right hon. friend the Prime Minister. If he asks me when I began to be a little dubious as to whether he meant to carry out the spirit of the resolution of the 29th of March, it was when, after that debate was over, I sat down and read consecutively his statements and then read the references to which he drew attention, and I came to the conclusion that it was not so sure that the resolution meant what it said after all. Here is what my right hon. friend said:

We are not to be stampeded from what has been the settled policy and deliberate course we have laid down.

That was on the 29th of March, 1909. Again he said:

Well to us it is an open question and we see no reason in anything that has taken place recently to depart from the policy we laid down in 1902.

Sir, if I had taken in the purport of that statement before that resolution was passed, I would have asked the right hon. gentleman to give his interpretation of the resolution in the light of that statement. What was this policy laid down in 1902? It was a policy of absolutely no aid to the empire, under any consideration or circumstance. That was the policy laid down in that obscure memorandum which never met the gaze or challenged the consideration of the people of this country. Might I recall that conference of 1902, that grand historical occasion in which there was the first virtual parliament of the Dominions and the empire called together for counsel and advice. It was summoned by Mr. Chamberlain, at that time, secretary for the colonies. Every British colony, every part of the British Dominions was there represented. Serious men, statesmen, patriots and magnates from all parts of the empire—before these, Mr. Chamberlain came with his plea.

And what was his plea? The burden of the defence of the empire; the community of interest of all parts of the empire; the growth and development of the over-seas dominions; the advisability of sharing in some way the increasing burdens of defence;—that was the pronouncement of the Right Hon. Mr. Chamberlain. The paper of Sir John Forrest, Minister of Defence for Australia, was then read, and it was a great paper in every acceptation of the term. Lord Selborne's pronouncement from the admiralty was read, and it was a great and notable pronouncement. A memorable discussion on these followed. Then, sub-conferences took place. Then, agreements were made. And then Lord Selborne came to the assembled conference and intimated to that conference what had been done. Mind you, Mr. Chamberlain had made no beggar's plea; he had uttered no dictatorial word. He was neither an autocrat nor a suppliant; he simply placed the issue before the assembled magnates and asked for their consultation and advice. It was all done, and the advices came; and Lord Selborne's report showed what they were. Cape Colony, with five to one and more blacks than whites within her borders, and all the expense and worry that that entailed, raised her contribution from £30,000 a year to £50,000 a year. Australia raised her contribution from £106,000 to £200,000 a year. Little Natal raised her contribution from £12,000 to £35,000. Newfoundland, whose contribution had been £3,000, supplemented it by an additional £1,800. New Zealand, which had hitherto given £20,000, raised it to £40,000. And then Lord Selborne read out the report with reference to Canada. Listen to it:

> Sir Wilfrid Laurier informs me that his government was contemplating the establishment of a local naval force in the waters of Canada, but they were not able to make any offer of analogous assistance to those enumerated above.

Is there any Canadian who has the heart of a man who relishes prosperous, favoured Canada in 1902, under that plea of the burden of empire, doing nothing then and 'contemplating' the thing which my right hon. friend never intended to carry out? For, eight years have passed since that time and never the first step was taken to carry out what was contemplated. But there was a sense of shame —I think it must have been a sense of shame—in the delegates from Canada, for they tried to cover themselves up with that memorandum which I read a little while ago, full of pious nothings and formulation of facts which had long since transpired, but with not one word of sympathy, one iota of help—a bare, blank denial; they would do nothing to help the empire; they might, maybe, do something to help Canada, and they might take imperial officers to help them in the doing of it. And, in that memorandum, they said; it is not the expense involved that we object to, but autonomy; we are afraid we shall lose our autonomy. Not the expense, oh, no—Canada is rich—but this rag baby of autonomy. It is a rag baby. Autonomy was born and grew to manhood and has been a man in this country for forty or fifty years. This is but a make-believe—a rag baby. The man Autonomy, once an infant, has grown to stature, strength and power, and there is none who will menace his existence. For this Autonomy I have respect. But for the presentment of it, long after the struggle has gone and the battle absolutely won and ended, to be trotted out in the face of an empire! This is but child's fancy, playing dolls. Had not Australia autonomous ideas—responsible government—manhood? Does not the Australian love his own country? Not a man from Australia raised the cry of autonomy. We have developed a militia, the memorandum went on; we have sent contingents to South Africa. Sent contingents to South Africa! My right hon. friend (Sir Wilfrid Laurier) knows exactly what took place. He knows that he set out with the idea that no Canadians should go to South Africa, just as he sets out now with the idea that this fleet should not go to war. And yet he sat there and excused Canada from doing anything towards lightening the burdens of the empire by saying that we had sent contingents to South Africa. Yes,—and when they did go, when their going was forced upon my right hon. friend, they found Australians there ahead of them, they found New Zealanders there ahead of them; the men from Natal and Cape Colony were mustered into the ranks and were fighting before the Canadians embarked, even sikhs from India, men from

every quarter of the British world were there before the Canadian was there. And not one of these dominions piped up the cry, 'Autonomy,' and said: 'We cannot do anything now because we helped in the South African war.' And the memorandum goes on, 'We are prepared to consider the naval side of defence as well.' What defence? The defence of Canada and nothing else. Good material on our sea coasts, says the memorandum; hope that at an early day some system may be devised by which they can be utilized. That was eight years ago, and until this resolution came up not a thought of doing anything. More hazy and indefinite than Halley's comet to-night is the prospective and contemplated naval militia, which my right hon. friend in 1902 promised in a way to the assembly of magnates from all parts of the empire. And last, but not least, we will carry out a scheme for our own defence in co-operation with your advice and with what help you can give us. That was the spectacle in 1902. It is not refreshing to a Canadian. Then, after that, my right hon. friend rose in this House. There was some talk about the matter. And what did he say?

It is no use whatever at this stage of proceedings, on the floor of this Canadian parliament, to try to deceive ourselves as to what is intended by this subject of imperial defence. If it be intended simply to discuss what part of Canada is prepared to take in her own defence, what share of the burden must fall upon us as being responsible for the safety of the land in which we were born and to which we owe our allegiance, in which all our hopes and affections are centered, certainly we are always prepared to discuss that question.

But there is a second school abroad in England and in Canada, a school represented, perhaps, on the floor of this parliament, which wants to bring Canada into the vortex of militarism, which is now the blight and curse of Europe.

There is my right hon. friend's declaration that he would discuss Canada's defence, but he will not lift one finger for imperial defence. That is the ground he took in 1902.

We come now to 1907. There is another assembly, more imposing and more largely representative than the one of 1902. Of course, the Prime Minister did not want to go to that, as we all know. He took exception to the name Council, which meant nothing to quarrel over. The time came, and the time passed, or was rapidly passing, and it was rumoured that the Prime Minister was not going. We had to bring pressure upon the Prime Minister from this side of the House to go; we had to promise him that we would bring up no contested subjects while he was away, and we urged him to go. He was loath to go, he did not want to go; no one would have been better pleased than the Prime Minister if he could have got out of it. But general opinion was too strong, and he went. The first thing that came up was the establishment of a secretariat; that was meant to be the working arm of the conference, which would give it permanence and give it power. The right hon gentleman was opposed to that. After long discussion, he assented to it, on condition that it should be joined with the Colonial Office. I am not going to quarrel with him about that, it is not worth quarrelling about. He did not like frequent conferences, he thought once in six years was quite enough. Ultimately he was overborne, and it was agreed it should meet once every four years. Lord Tweedmouth was then Lord of the Admirality, and here is in brief what Lord Tweedmouth said to the assembled representatives of the empire in effect:

We ask you to take some leading part in making the national defence of the empire more complete. We thank you and recognize the free unstinted help already given.

What significance that must have had in the ears of my right hon. friend.

One reservation we make, and one only, that we hold the command of the naval forces for the defence of the empire for which we are responsible. Unity in action, unity of command. We want you to give us all the assistance you can. But we do not come to you as beggars. Whether you help or not, we are still bound to protect the King's dominions across the seas to the best of our ability.

No dictation, no whining, no supplication; a square presentment of the facts to the representatives assembled. Please consult with us. Can you help? If so, to what extent will you help? Advise with us, and let us know your minds. Was ever a scene more dramatic? The old mother speaking to her assembled sons, those whom she had borne in pain and nurtured with care, and welcomed to the old home again, and told them in no beggar's tones just the difficulties of the old homestead, and the troubles, and trials and burdens. There was the mute appeal of the weary titan whose every muscle was corded, and whose every bone was set to the strain, under the mighty and constantly increasing burden of the defence of the empire. That mute appeal, looking into the faces of the sons returned. There were forty millions of British taxpayers responding to the appeal of the old mother, to the mute appeal of the weary Titan, paying their hard earned taxes year after year in increasing quantity to keep the homestead intact, and to keep the empire free from the marauder. What is the response? Australia comes to the front and says: Yes, we are giving now £200,000 a year; that we will continue, and we will

do more. We will look after our dockyards and our coaling stations; we will go further, and make provision for the defence of our coasts. New Zealand comes forward and says: Yes, £40,000 a year we give now, we will make it £100,000. That is the loyal little islands with less than 900,000 of a population. Now comes Canada. The Prime Minister sits silent. Mr. Brodeur speaks for Canada. Will you listen to the tale? Not a word of recognition of responsibilities from beginning to end, no single expression of sympathy, and seemingly no sense of shame. My Lords and gentlemen, I have excuses to make. I am busily engaged, and at a great cost, in protecting our fisheries. I have now another duty put upon me, that of watching the Yankees along the great lakes. They have got an armed fleet there, they have spent $15,000,000 on it. By day I hear them drilling, by night I hear the splash of paddles and the evolutions of their screws, as they glide over the water of the great lakes. My lords and gentleman, I am puzzled and strained to the utmost to protect Canada from these Yankee marauders. Navies of their own they have there; one of Canada's first duties, he says, is protection of our interests on the great lakes. We have had invasions from the United States, so we have to look after ourselves and see to our protection. How pitiful! But how false, absolutely false. Not a man, not a gun, not a gunboat did Mr. Brodeur or this country ever put upon those lakes, nor any adjunct of them, for the sake of counteracting the naval armament of the United States. My right hon. friend knew that, and he sat there and heard that falsehood retailed to the empire. Then he goes on:

To a certain extent we have formed a naval militia.

To what extent has he formed a naval militia? 'To a certain extent we have formed a naval militia'; also I am building wireless telegraph lines, I am carrying on hydrographic surveys, and I have naturally to build lighthouses. I do not charge British traders any lighthouse dues when they come up the St. Lawrence. Then we are taking over Esquimalt and Halifax, and he ends up as he began—not a word of sympathy or recognition of responsibility.

I do not think for a moment it will be necessary for me to discuss the question further.

Not one sympathetic word, not one shade of an expression of a desire to help. Lord Tweedmouth follows. Listen to what he says. Referring to Canada he said:

We hope to have their help, but still they are quite right to look after their own interests, in the full security that so far as the British government can be of use to them in their defence in time of need, they may depend in any circumstances on our giving that aid with the greatest joy and without any sort of drawback whatever.

Later, Mr. Brodeur speaks again. He actually took that as a compliment, and in making his second speech before the assembled congress, he says:

Lord Elgin and gentlemen, I have nothing to say except to thank heartily Lord Tweedmouth for having been good enough to recognize what Canada has been doing in regard to its defence.

He took it seriously; he did not see the polite way in which Lord Tweedmouth had let him down to save his face as far as he could, before the assembled representatives of the empire. Then Mr. Brodeur went on and spoke about contributions. He said:

There was a discussion in previous years to the effect that we should contribute something directly to the British navy. I may say with regard to that, there is only one mind in Canada on that question.

The mind being that nobody was in favour of a contribution. Then he went on to speak about his going to get another cruiser for a protection fleet and he ended up by saying:

We are very glad to see that Lord Tweedmouth has recognized that in this matter it should be left almost entirely to the colonies. I may say, in conclusion, that we will be very glad to work in co-operation with the imperial authorities, and under the advice of an imperial officer, so far as it is consistent with self-government.

That, Sir, is all that Canada did in that conference, under the plea of the motherland and the empire. Every other colony came to the front. Canada made an exhibition of herself in the person of her delegates at that conference. But there was something else and I do not wonder that there was something else. Besides the delegates from Canada there were delegates from every other part of the British empire sitting there, watching this whole thing, taking it all in, and one can easily imagine their feelings and their feelings at last found voice. Dr. Smartt seemingly had had about enough of that kind of thing, and so he said to himself: Well, I will see whether or not there is any sand in this man and at the latter part of the conference he moved this resolution:

That this conference, recognizing the vast importance of the services rendered by the navy to the defence of the empire and the protection of its trade, and the paramount importance of continuing to maintain the navy in the highest possible state of efficiency, considers it to be the duty of the dominions beyond the seas to make such contribution towards the up-keep of the navy as may be determined by their local legislatures—the contribution to take the form of a grant of

money, the establishment of local naval defence, or such other services, in such manner as may be decided upon after consultation with the admiralty and as would best accord with their varying circumstances.

Could anything be broader, could anything give greater freedom, could anything get further away from trenching on responsible government and the autonomy of the Dominions? One would have thought that such a resolution would have been acclaimed by everybody. It was acclaimed by everybody but one. Sir Wilfrid Laurier said:

I am sorry to say, so far as Canada is concerned, we cannot agree to the resolution. We took the ground many years ago that we had enough to do in that respect in our country before committing ourselves to a general claim. The government of Canada has done a great deal in that respect. Our action was not understood, but I was glad to see that the First Lord of the Admiralty admitted we had done much more than he was aware of. It is impossible, in my humble opinion, to have a uniform policy on this matter.

It was not a uniform policy, it gave to each of the Dominions the right to make a contribution in any way it liked, all it called for was to do something.

The disproportion is too great between the mother country and the colonies. We have too much to do otherwise; in the mother country, you must remember, they have no expenses to incur with regard to public works; whereas, in most of the colonies, certainly in Canada, we have to tax ourselves to the utmost of our resources in the development of our country, and we could not contribute, or undertake to do more than we are doing in that way. For my part, if the motion were pressed to a conclusion, I should have to vote against it.

Dr. SMARTT. But the public works to which you refer are of a reproductive character which are vital to the interests of your Dominion.

Sir WILFRID LAURIER. Some of our railways have never paid a cent of interest or expenses.

Dr. SMARTT. Still, it is developing and opening up the country to an enormous extent. All the colonies are building developing railways of a character which may not be revenue producing for years. I thought the wording of this resolution would have specially met your views, because towards the up-keep of the navy it may take the form either of a grant of money or the establishment of a local defence force or other services. I understand Canada suggested strongly the other day that some of their other services were in the nature of local defence.

Sir WILFRID LAURIER. I have said all I have to say on the subject.

Dr. SMARTT. I should like very much to hear the opinions of the representatives of the other portions of the empire.

Mr. DEAKIN. I have no hesitation in entering into the discussion if desired; but if we are not going to pass the resolution, is it worth while?

Mr. FOSTER.

Dr. SMARTT. I think it is a great pity we do not pass something. We have done so much in the way of pious affirmation, that I am anxious we should do something of a practical character.

Sir WILFRID LAURIER. It can be passed if there is a majority. For my part I must vote against it.

Sir JOSEPH WARD. To do any good we would require to be unanimous about it.

Dr. SMARTT. Yes, I suppose so.

Mr. WINSTON CHURCHILL. It is not much good to have a resolution at all if we cannot be unanimous.

The CHAIRMAN. I think we had better not proceed any further just now.

Sir WILFRID LAURIER. We, of the different dominions beyond the seas, have tried to be unanimous up to the present time. I am sorry to say this is a question upon which we could not be unanimous. Therefore, Dr. Smartt can move it if he chooses or withdraw it, but if he presses it I should have to vote against it.

Dr. SMARTT. I am absolutely in the hands of the conference. I do not want to press a resolution that is not likely to meet with the general approval of practically everybody on the conference, especially a resolution of this particular character. We might, perhaps, let it stand over until the next sitting. Between this and Tuesday I may be able to modify it in some way to meet Sir Wilfrid's view.

And Dr. Smart withdrew it. Are we proud of Canada as thus exhibited?

Some hon. MEMBERS. Yes.

Mr. FOSTER. Are hon. gentlemen opposite proud of Canada?

Some hon. MEMBERS. Yes.

Mr. FOSTER. Are they?

Some hon. MEMBERS. Yes.

Mr. FOSTER. They are?

Some hon. MEMBERS. Sure.

Mr. FOSTER. I don't believe it—at least they were not until after they had gone through the composing room.

Mr. CONMEE. We have heard that before.

Mr. FOSTER. Now, Sir, what I have said about these two conferences brings me down to this: That the policy of 1902, the settled policy of Sir Wilfrid Laurier is: That not one man, not one dollar, not one ship of Canada shall go towards imperial defence, and that whatever is done must be done in Canada and for Canada alone And not only the right hon. gentleman but the men upon whom he relies for support say the same thing. The statesman from the Yukon declared:

Even though Great Britain should lose her navy and be in such a position that the New Zealander can stand on London bridge and view the remains of this old Dreadnought grounded on the Thames, I do not be-

lieve that Canada would be in the slightest danger from foreign aggression.

The member for Nicolet, Mr. Turcotte, put the case thus:

I am in favour of having a sufficient fleet for protecting our fisheries and for nothing more.

Mr. Earnest Roy of Dorchester said about the same thing and then he added:

The Monroe doctrine imposes upon the United States the obligation of protecting us against the attacks of conquering spirits either from the east or from the west.

I hand him over to the tender mercies of the Postmaster General (Mr. Lemieux). The composing room may bring him in all right or it may take the thumb screw or the rack. Mr. Beauparlant agrees largely with the others and he says:

I would agree to a Canadian fleet but only for the purposes of the creation of a navy to remain under our own exclusive control and for us alone.

And, Mr. Ecrement, I forget his constituency, who so eloquently moved the reply to the address, gave his version of what it meant, saying that:

He had the assurance that that was the meaning, that this was to be a fleet 'Canadienne dans sa construction, son utilisation et sa direction.'

Which means: It must be built in Canada——

Some hon. MEMBERS. Hear, hear.

Mr. FOSTER. That it must be under the control of Canada.

Some hon. MEMBERS. Hear, hear.

Mr. FOSTER. And that it must do nothing outside of Canada——I notice the 'hear, hears' stop just there. And Mr. Brodeur who spoke afterwards made precisely the same statement if not in exactly the same words. He said: What we were to do we would do for Canada; Britain and her supremacy was safe, and we could go along very well developing our country and making progress ourselves.

Now I come to the conference of 1909 and I am not on exactly the same ground there. I have only what I can read between the lines as to the conference of 1909 and what is expressed in the documents that have come to us, and my knowledge of the preceding conferences. This conference of 1909 was an important one. It met on July 28, Mr. Asquith was in the chair, Mr. Asquith announced the purpose for which the conference was called:

The grave condition; the response of New Zealand and Australia, which has filled their hearts with gratitude.

And he asked:

What can be done to complete and perfect the system we have at present. We wish your advice and co-operation.

—thus re-echoeing almost exactly what Lord Tweedmouth and Mr. Chamberlain at the preceding conferences had said; and so they were invited to a discussion and a discussion took place, and reading between the lines it must have resulted in something like this. Australia after hearing the presentment said: Yes, we will give a Dreadnought, or, if there is any way under the advice of the admiralty that is better we will do what the admiralty think best. The admiralty thought a unit was best and Australia accepted the unit then and there. Sir Joseph Ward for New Zealand, said: Yes, we have been giving £100,000 a year; I have with the consent of my government promised one Dreadnought and two if they are necessary, and New Zealand would implement that; or, if the admiralty think that some combination is better then we will advise and act together. Natal, Cape Colony, renewed their old subscriptions and the South African Commonwealth takes them over and becomes responsible for them so that they are continued. And Great Britain says: To help in the fleet of the Pacific so necessary and so vital, we will join in with New Zealand and we will put our hands in the treasury for India and for China and we will together make three fleet units with three Dreadnoughts as their leaders and 39 vessels which shall watch over, protect, and defend, the south western Pacific ocean, and in time of war when the emergency comes will find their way to a decisive point and throw their guns and their force into that deciding contest. What does Canada say? We had two representatives there. We do not know exactly what they did say but reading through the lines I think they said something like this, after Mr. McKenna had declared the admiralty memorandum, after he had explained the wisdom and the advice of the greatest naval board in the world, after he had declared that no navy apart from the British navy which was not able to form a part of it and work with it in unison was of use; after he had said that if any dominion wished to have a navy it must have a unit for the training, the personnel, and the effective work both at home and abroad; after Australia and New Zealand and all the others had given their assent and their adhesion, after Canada was asked to supply the fourth unit on the Pacific, and Canada refused in the person of the Minister of Militia and Defence and of the Minister of Marine and Fisheries, after he had told them that the next best thing was to make a unit if you

are going to have a fleet of your own and will not join with your sister colonies. Canada refused the unit, and then went to the conference and asked this pitiful question: 'Can't you rig up something for us on £400,000 a year? Can't you rig up something for us on £600,000 a year?' And I can almost hear the voice of my hon. friend the Minister of Militia as he stood before that conference and told them that Canada proposed to go it alone; told them of what he had done with the militia, how long he had been at it, and what a force he had made of it; told them that Sir Wilfrid had sent over by him a resolution, and that they might keep it if they wanted it as a keepsake; but that Sir Wilfrid had told him to be very careful and not bind Canada, and above all, to keep the beloved autonomy safe and sound. And then I can imagine the Minister of Marine and Fisheries standing up before the assembly and saying something like this: Oh, I am so glad, my lords and gentlemen, that you have not taken away our autonomy from us—I was afraid you were going to. Don't let New Zealand and Australia carry you off your feet. See what I am doing. I am protecting our fisheries; am spending a lot on it; I have to put some more vessels on the Pacific or somewhere else; I do not mind putting them on—for Canada's advantage. I would be willing to buy them and pay for them, for ourselves; I have started the nucleus of a naval militia—invisible yet to the naked eye, amounting absolutely to nothing. At a pinch I might make this naval militia a little bit bigger, and in the end, if it came to be absolutely necessary, I might lend it to the British government, in case anything serious occurred. In fact, I have been commissioned by Sir Wilfrid Laurier to tell you that you need not be fearful if the German Emperor or any one else should come against you, for while you are spilling blood at the scene of the decisive battle, he will be busy with his coat off down in the province of Quebec stumping the counties. And with that they had to be content. And the gentlemen come back and put their policy before this House and the country, and that policy absolutely negatives any efficient help of any kind whatever to the British empire. What is worse, although great expense will be incurred, it is absolutely useless either for effective defence or for attack on the coasts of Canada itself.

Contrast that with what the other dominions are doing. My right hon. friend led this House to believe, and he is leading the country to believe, that Australia has seen the error of her ways and is building a fleet, as Canada is; and, mark you, he says, instead of Australia now making a contribution to Great Britain, Great Britain is making a contribution to Australia. Well, that representation could scarcely be more misleading. My right hon. friend ought to know that, and my hon. friend the Minister of Militia knows that if he has read the documents. I have gone through the whole debate on the Defence Bill, on the Loan Bill and on the ratification measure, in the House of the Commonwealth of Australia, and I have done the same with reference to those of New Zealand. I have the Acts and have gone through them, and I know their conditions; and if the House will bear with me for a few moments, I will tell them what those conditions are. In the first place, there is in New Zealand and Australia no question, nor the shadow of a shade of a doubt, that their fleet is meant for the defence of the empire, and will go to the defence of the empire whenever war or emergency calls for it. Mr. Foxton, from Australia, and Sir Joseph Ward, from New Zealand, made that absolutely clear at the conference in London, as they made it absolutely clear in the parliaments of those two countries. Australia's Naval Defence Bill was introduced on the 21st December, 1909, by Joseph Cook, the Minister of Defence, and this is what he said:

> Great Britain has been paying the bills, and we have been enjoying the benefits. It is time to change. The three great naval powers have arisen—the United States, Japan and Germany. The Pacific is especially bare, facing Japan. Two things we must lay down: (a) We must accept the principle that the burden of defence must be borne by the whole empire; (b) that a fuller imperial partnership, particularly in defence, is indispensible to the security of the imperial fabric. Systematic and efficient combination is needed, and I hope that the present conference (which was then sitting) will give us that systematic and efficient combination. Australia has bound herself to build a unit—an armoured cruiser, three unarmoured cruisers, six destroyers and three submarines. The Australian is to be one of three units which make up the eastern Pacific fleet. We do not propose to go it alone. We do not propose to sit around our own waters and hold our hands. New Zealands unit, our own unit and the other unit shall form part of one great Pacific fleet, which shall visit the waters of each in time of peace and which shall be at the command of the admiralty in time of war.

What are the terms? Australia does not intend to build those vessels in Australia She does not intend for a moment to lose the time, to incur the expense, to run the risk of inefficiency, by attempting to build them in Australia, which is bare, just as bare as Canada is, of facilities to build. She proposes to build them in Great Britain, and they are to be ready by June, 1912, the whole unit; and already the first of their fleet has been launched and has been christened by Mrs. Asquith, the wife of the Premier of Great Britain.

My right hon. friend says that Great Britain is reversing the operation and giving

a subsidy to Australia. For the last ten years, Australia has been paying from £100,000 to £200,000 per year and that continues until 1913. By the end of 1913, Australia will have paid in over £2,000,000 as her contribution to the up-keep of the fleet of the empire for the ten years. Australia gives £200,000 per year, the up-keep is £950,000 per year. Consequently, under the present arrangement, Great Britain pays £950,000 per year, but receives from Australia £200,000, so that the net cost to Great Britain is £750,000 per year. This arrangement has been in existence since 1902 and continues until 1913. Now, what happens? Under the new arrangement Australia builds a unit, she assumes the up-keep, and Great Britain gives £250,000 per year, and thus saves £500,000 per year. She also takes over the naval base at £50,000 per year. In the House of parliament the responsible minister declares that as soon as that fleet unit was equipped and ready for action, Australia proposed to maintain the whole thing herself and not to take the £250,000 per year from Great Britain. That is the difference between the two. What said Mr. Fisher, the leader of the opposition, when the matter was under discussion. Mr. Fisher agreed with the Minister of Defence. He said:

> This is not a party matter. I never favoured the view that the fleet should not fight outside Australian waters. Co-operation with the imperial fleet is absolutely necessary.

What said Mr. Deakin? Here it is in substance:

> Upon the sea the future of the empire lies. They are not in fleets owned and manned entirely by the mother country but in a great imperial navy embracing the fleets of the mother country and subsidiary fleets built and manned and in times of peace controlled by the dominions which make them their care and charge. Each unit must be sufficiently strong and self-supporting to provide for adequate training of the officers and men employed in them. I look upon the condition as serious and urgent and the relations between the great powers are critical and within a few years likely to be more critical. We cannot afford to postpone the construction of our unit. We need it now. We need it without delay. We cannot afford six month's delay. You cannot buy naval efficiency on the market but you must prepare for it. That fleet, with its three units, will operate, as its name implies, as one fleet, under one flag and one control, to defend Australia and New Zealand and India. Australia building being impossible, that vessel (the Indefatigable) will have to be obtained in the great steamship building yards in the world, under most skilled supervision. In the present special condition, the naval resources of Australia are barely able to build a destroyer.

In fact three of them are now being built in Great Britain. Young men from Australia are learning there the art of building, so that it is hoped one or two of these destroyers may be put together in Australia and perhaps the last one built in Australia. There is common sense, there is a disposition of money which brings its return. They passed a Bill to borrow £3,500,000 to build a fleet unit, and they provided a sinking fund which would wipe that out in sixteen years. The orders are given and in 1912, the Australian complete unit, built with her own money in British shipyards, under the best supervision in the world, will be ready to defend the coasts of Australia, New Zealand and India. In time of peace, that unit will show the flag to these young countries; and in time of war, will go to the defence of the empire, as loyal sons of the mother that bore them and has cared for them. Mr. Foxton said:

> In our unit, we have practically within it every branch of specialized work which is to be found in the British navy itself. It is in fact a segment of the British navy.

There is the admiralty's advice carried out. My hon. friend knows that Mr. McKenna said that if you want to do anything you must have a unit which will give you the range of the fleet. Otherwise, you will make no career for your young men. You will not get the personnel and the training which alone can place you in a position in which you will not jeopardize the greater fleet, but work in with it. Mr. Merriman, Mr. Fisher, and all the others from South Africa want no local fleets. They are willing to do their own part for land defence, but they say a united navy and one navy for the British empire. That shows you, I think, pretty well the position of Australia. Compare that with what the Prime Minister said and find out how absolutely wide of the mark he was. I am not concerned as to the outcome of the investigation—as to which of the two is correct.

Sir WILFRID LAURIER. Hear, hear.

Mr. FOSTER. The Minister of Militia has very accurately defined the position of New Zealand. She will give a Dreadnought—two if necessary. In that conference, when the idea of a fleet for the Pacific came up, New Zealand fell in with it. Her Dreadnought is to be the flagship of the China squadron, and the vessels are to be interchangeable. Sometimes, you will have a part of the Chinese fleet in Australian waters and sometimes a part of the Australian fleet in Indian waters. They are interchangeable, they have the complete power of evolutions, and by complete range of practice, they are able to make themselves ready for conflict. The old times of wooden vessels are gone for ever. Some of us scarcely realize it. We speak of our hardy sailors, and we think that we can pick up

from amongst our fishermen and our lakemen men ready to go on board one of these cruisers or Dreadnoughts and do sailors' work. That, of course, is not true. It takes at least six years to drill a boy to make him efficient for such service. Watch these divisions of the English fleet as they are perfecting themselves for war. How do they perfect themselves? By scrubbing clean and keeping polished the decks of their vessels? That is one thing. By turning out in clean and natty uniform? That is another thing. By drilling on deck? that is another thing. But to find out the secret of efficiency, consider the fleet when inky blackness envelops the sea, when all lights are out, and when every ship is in its place with its servers and satellites in their proper places, and, in the inky darkness going full steam ahead. That is where they get their training, that is where they perfect themselves to steal upon the enemy and strike first. Could you get anything like this out of these vessels that these gentlemen pretend to build? The natty uniform, the well-filled table, the drilling on deck, the manning of the guns to a certain extent—these things can be taught, but these vessels would no more be allowed to go in as a portion of the British fleet going into war than you, Sir, would be taken as the general of an army. And my right hon. friend (Sir Wilfrid Laurier) agrees with that.

Now, I approach another subject. I propose to speak what I think. I have shown this House that, from the entrance of my right hon. friend into these conferences, commencing with 1902, on the question of defence, he has taken one position and one only, a position of absolute antagonism to any effective help of the British empire as a whole. I have followed the history of this branch of the navy which he proposes to build for Canada itself and have shown by his own expressions and those of his followers that it is to be built in Canada, kept in Canada and used for Canada and Canada alone—an utter negation of anything like contribution or help for imperial defence. And he says that, unless you can prove an emergency, you should not get anything else. I take exception there and then. I say that, if for nothing else but the almost intolerable burden which the British taxpayer has been carrying and is to-day carrying, and which will be made heavier upon him with each succeeding year, for which he and he alone pays, but as the result of which we have the security of our commerce, the security and peace of our country, the peace of the empire and the world;—I say that, for this reason and, outside of all emergencies, Canada with her one hundred millions of revenue, with her strength and wealth and power, ought to contribute immediately toward that navy from which she has taken the benefits and to which she has given nothing in men or money. Well, I am led to conclude that my right hon. friend has taken this stand from the old-time conviction personal to himself. I do not think you can separate a man from his whole political experience. In Australia no man on either side has piped up with this tune of 'invasion of responsible government' or 'maintenance of autonomy.' No statesman on either side of the Australian House could be twitted with having spoken independence sentiments of having given utterance to any other sentiment than that of loyalty and fealty to the empire. Their men stand on the platform and in the House of parliament and declare that their fleet goes to the empire's support when the empire calls. Whatever order in council we have to pass, they say, whatever pro forma authority we have to give, these vessels shall go when the mother country needs them. If we had a government in Canada such as they have in Australia, we should have little doubts upon this matter. But, under the present government of Canada, led absolutely as it is by one man, we have a right to ask ourselves something as to the past history and past public record of this gentleman.

And first I have a quarrel with my right hon. friend, this pink of a British citizen, this example of an English Liberal, for doing what no British statesman, no English Liberal that I ever heard of, would do—going to a foreign country and animadverting unfavourably upon the conduct of his own country and of the motherland. Sir, in the city of Boston, over and over again, my right hon. friend, though he was under the oath of a privy councillor, stood before audiences and criticised the conduct of Canada and England in the civil war of the United States. And, in that troublous time, when we were asserting with courtesy and perfect fairness the rights of Canada to the waters that were given to her by the treaty of 1818, what did the right hon. gentleman say?

> In the civil war the English people and the Canadian people did not show then the least sympathy.
>
> England fitted out armed cruisers to prey upon and destroy American commerce.
>
> We allowed American filibusters to raid Vermont and New York frontier towns.
>
> Canada failed in her duty.
>
> In my opinion the conduct of England, of Canada, towards the United States during the war was a disgrace to the civilization of England, of Canada. The American people could fight their own battles; they required no help, but when they were engaged in a supreme struggle for the life or death of this great nation; when they were fighting for a cause as great, as holy, as ever engaged the devotion of men; when they had reason to expect the outspoken sympathy of those nearest to them, it was galling that southern privateers could be built, manned and equipped in England,

with the passive connivance of the British government, to destroy American commerce on the high seas; it was galling that rebel refugees could find shelter in Canada, and there, with impunity and without provoking condemnation, plot abominable crimes to help secession.

I find no fault with my right hon. friend for holding these sentiments if he so reads history. What I say is that you would search far and long to find a British statesman who would take such an occasion, before a people that were not over-friendly at that time, to call in question the acts of his country.

Well Sir, I have another thing to say with regard to my right hon. friend. His frantic attempts to tack Canada on to the United States in its fiscal policy, and in 1891, to drive the wedge of discrimination and of separation between the mother country and Canada in favour of the United States, does not show to my mind that he is very much in favour of British connection. 1891 has a history fore and aft. It was preceded by continental union and commercial union, in both of which my hon. friend participated, it was preceded by statements made in the province of Quebec when my right hon. friend said of Mr. Mercier, 'Mr. Mercier is the greatest Canadian since the time of Papineau. I believe with Mr. Mercier, and I am here to make Mr. Mercier prevail.' And Mr. Mercier did prevail in 1890; then Mr. Mercier turned around in 1891, and he says to his people. 'I am fighting for the supremacy of Mr. Laurier my friend in the Dominion House. When we put him there, Quebec will get all that she asks.' If there ever was a treaty entered into and publicly ratified, it was between Mr. Mercier and Mr. Wilfrid Laurier of that time. Now what happened in 1885? A memorable day was seen in the city of Montreal, and on the Champs de Mars, Mr. Mercier, and a gentleman by the name of Wilfrid Laurier, both spoke; and this gentleman by the name of Wilfrid Laurier, who was a sworn Privy Councillor at that excited period, and before that excited congregation declared that if he had been on the banks of the Saskatchewan he would have shouldered his musket and would have levelled it at the soldiers of the Queen. Immediately after that, two things took place. Mr. Mercier became an apostle of independence, and travelled the United States in 1892 and 1893, delivering hundreds of lectures, all in favour of the independence of Canada, declaring that only by being independent could we get our rights, amongst others the right to make treaties with such countries as we wished. He, (Mr. Mercier), was allied with men in the United States of America, he drew his salary from them, he paid his expenses out of their collections. He travelled the country, as I said, enlisting French Canadians, and men of other nationalities, prominent American citizens, all in favour of the independence of Canada; and along with it was the propagation of continental union, and the union of Canada with the United States. While this was going on, where was my right hon. friend? In Boston preaching the same doctrine in 1892; in the House of Commons preaching the same doctrine in 1891 and 1892, the doctrine of separation and independence. You have heard his words read, I need not read them again. Mr. Mercier's cardinal doctrine was: 'What we want is the power to make our own treaties.' He was outside parliament. My right hon. friend was inside parliament, and my right hon. friend was doing inside parliament what Mr. Mercier was doing outside parliament. In 1892 he advocated and tried to have passed by this House the following resolution:

> It is expedient to obtain the necessary powers to enable Her Majesty the Queen through her representative, the Governor General of Canada, upon the advice of his ministers, to appoint an agent to negotiate commercial treaties with other British possessions or with foreign states, subject to the prior consent or subsequent approval of the parliament of Canada.

And the parliament of Canada alone. Now, I ask my right hon. friend, and I ask this House: What would have happened in this country if my right hon. friend had been successful, and Canada had demanded and had obtained that power? There would have been no guarantee for the union of Canada with the empire for a single five years. It was a demand, not for autonomy, it was a demand for sovereignty, and a sovereignty which, if it were exercised, would make two nations where now there is the mother country and the Dominion under the mother country. They were working together, and in those ways. Well Sir, what more? We find that my friend, before confederation, was inoculated with this same virus. Here is what he wrote in 1866:

> We (of the Papineau school) do not care a fig for the English colonies. When any change whatsoever is proposed in our political or social institutions, we do not look to see whether this change will be of use to the English colonies or to any other neighbour; we think only of Lower Canada and the French race. What have we in common with the English colonies? What interest, what relations bind us to them? Is it a matter of origin, religion, language, national aspirations? No, not at all.

In 1888 in the House of Commons he says:

> The time is coming when the present relations between Great Britain and Canada

must either become closer or be severed altogether.

At the Club National, on the 2nd of July, 1890, he made another profession of faith:

I do not mean to say that we should always remain a colony; on the contrary, the day is coming when this country will have to take its place among the nations of the earth. But I do not want to see my country's independence attained through the hostility of one race to another.

That was directed against the attempt to form the Parti National.

I do not want my country's independence to be conceived in the blood of civil war. I want my country's independence to be reached through the normal and regular process of all the elements of its population towards the realization of a common aspiration.

Well Sir, when we come down to 1892 he says:

I hold out to my fellow countrymen the idea of independence. But whenever the day comes it must come by the consent of both countries, and we shall continue to keep the good feeling and the good will of the mother land.

If we are true to our record we will again exhibit to the world the unique and unprecedented example of a nation achieving its independence by slow degrees and as naturally as the severing of the ripe fruit from the parent tree.....I have again and again repeated that the goal of my aspiration is the independence of Canada, to see Canada an independent nation, in due course of time.

These were not the outpourings of a youthful and immature imagination, these were the studied statements of an old and seasoned public man, uttered in Boston, and repeated in the House of Commons of Canada, and up to this day my right hon. friend has not disavowed that that is still his goal. I invite him to do so now.

He will not do it, he still maintains that opinion; that is still his goal. We can quite well see why in 1902, in 1907, in 1909, and now in 1910, he refuses absolutely to link up with the British empire, he declines absolutely to do anything else than to build what he builds in Canada for Canada, and to be used alone in Canada, with the exception of words—and of words my right hon. friend is prodigal. He makes his declaration that that is his settled policy, settled in 1902, settled to this day; yet on the face of it, he declares that the supremacy of the British empire is necessary to the security of this country, as well as to every other part of the empire. He declares that it is the only security for the commerce and the peace and prosperity of the British empire and the peace of the world. These are his words; those that I have been describing are words plus deeds and deeds in the tenor and line of the words.

And to-night, when I put his record before him and challenge him as to whether or not as Prime Minister of this country, leading the foremost Dominion in this empire of ours, he still adheres to his statement of doctrine, over and over made, that he believes and cherishes as his goal the independence of this country and a severing of the ties that bind us to the old land, I think this House and I think this country will come to its own conclusion.

Sir WILFRID LAURIER. Hear, hear.

Mr. FOSTER. But that is not all. My right hon. friend has never missed an opportuntiy of belittling and deriding the diplomacy of the British empire, never.

Is there a Canadian anywhere who would not hail with joy the day when we would be deprived of the services of British diplomacy?

Mr. right hon. friend is responsible for that statement.

What has been British diplomacy to us, Sir? British diplomacy, so far as Canada is concerned, has been a record of failure, of surrender, and of sacrifice.

Up and down this country he has preached that doctrine. Why? To lessen the respect of a British country for its home country and its home government, to instill the insidious poison into the minds of young and growing citizens that the old country does not know what it is doing and has not treated us fairly. To-night, Sir, I cannot go into the matter of the record of British diplomacy, but I am willing to do it at any time, and I have not much use, I say it straight, I have not much use for a public man representing the highest position in this country who finds nothing better to do than to go up and down this country deriding and misrepresenting British diplomacy and wishing for the day when we may be rid of it. My right hon. friend will not deny that.

But he has done more than that. He has never given up an opportunity, during the last 10 or 15 years, of representing Canada as engaged in deadly conflict, wrenching from the British government tyrannical government, rights and privileges, and he has stretched to the very verge of a very vivid imagination the rights and privileges which we to-day enjoy by virtue of the concessions of the British prerogative. And so his Minister of Marine afterwards comes back from the conference of 1909 and says: We have wrenched from Great Britain our political autonomy, we have wrenched from Great Britain our treaty-making autonomy, we have wrenched from Great Britain our fiscal autonomy, and now I come back with our naval autonomy. All these things my right hon. friend speaks, lesser men echo

what he says. These are but the results of teaching. The Postmaster General said the other day that a bad canvass was being used against the government in Quebec, that the government were represented as sacrificing on the altar of Moloch the youth and vigour of the country for the sake of European wars. I think I am not misrepresenting my hon. friend. My hon. friend knows the story of old, about the one who ploughed the furrow and who sowed the dragon's teeth therein and found himself straightway confronted by armed men. These are the armed men which were sown by my right hon. friend and his colleagues in 1896 and later. Don't I know it, don't I know that the present Minister of Marine and Fisheries (Mr. L. P. Brodeur), and Mr. Monet, since translated to his reward, and sundry others, went up and down the lines in the province of Quebec and represented to audience after audience that we had actually made a grant to get rifles for our soldiers and artillery for our troops, and that the babes were to be torn from the mothers' breasts, and the lovers to be torn from their sweethearts' arms and carried away to be sacrificed in this vortex of militarism? It was all very nice to erect Moloch's altars then and sacrifice on them, but the armed men have sprung up and they are confronting my right hon. friend and his lieutenants at this very moment.

But what more, Sir. Not only that, but then comes this last straw which breaks the camel's back. We have a good old song which often we have sung, thousands of throats have sung it throughout the length and breadth of the empire and delighted to do it: God Save Our King. But, now, we have got to substitute another word, and hereafter our song will be: God save our suzerain, long live our suzerain, God bless the suzerain. That may be a light thing for my right hon. friend, but it is exactly in line with every other effort to weaken the respect for sovereignty and the respect for the ties that bind us to the old land. Are these things of little moment coming from a man of high degree and of high place? I do not think so. This country is filling up with men who are foreign to our institutions and who have to be taught to become good British subjects. Is this the way to teach them? I do not think so. This may be a little thing to my right hon. friend, but is one of the things which in unison with the others shows the trend. Now, my deduction from all this is simply: If in Australia and New Zealand there is no unrest in the public mind, that when war time comes their fleets will go to the defence of the empire, it is because they have not been blessed with public men who have given utterance to diverse sentiments such as these I have been quoting. In 1899, this country knows what took place. It knows that the deliberate intention of my right hon. friend was to prevent a single Canadian being sent to South Africa. We were the laggards, and if it had not been for the power of public opinion outside we would have been so far laggard that we would never have been in the race at all. I listened the other night to the hon. member for South Ontario (Mr. Fowke) in his desire to Lincolnize the head of the government, and I asked myself what in the world is he after that he puts it on so thick and so often. My hon. friend from South Ontario in comparing the Prime Minister to Lincoln, said that all the progress of this country in all its great epochs was due to the policy and the effort of my right hon. friend.

Mr. CONMEE. Quite correct.

Mr. FOSTER. Quite correct says the hon. gentleman. Now, to this eminently sane and sound and unprejudiced hearer, let me invite the consideration of four dates. There is the date of 1878, there is the date of 1882, there is the date of 1891, and there is the date of 1899.

Mr. TALBOT. And there is the date of 1896.

Mr. FOSTER. I never have treated my hon. friend (Mr. Talbot) who has just interrupted me as being a serious subject; he is so good natured and has been so often through the composing room that I will not lose time dealing with him.

1878 saw the institution of the industrial life of this country under the influence of protection, which alone brought into existence and kept in its development to 1896. In 1878 where was my right hon. friend and the Liberal party? If they had had their way in 1878 would you have had industrial Canada as it is to-day? That is one epoch. The other date is 1882. In 1882 the splendid project of uniting this country from the Atlantic to the Pacific with a great transcontinental railway was launched, and it took stress and strain and money hardly to be got to carry it through. Does anybody dispute the proposition that the construction of the Canadian Pacific railway and its work has been one of the prime elements in the progress of Canada? Where would that railroad have been if my right hon. friend and his party had had their way?

In 1891 it was a struggle, life and death, for the perpetuation of British connection in this country. There is no doubt about it. My right hon. friend laughs at British connection. Edward Blake was a man intellectually far superior to my right hon. friend. He had so much imagination, he was not gifted with so

much levity of thought, he did not depend so much on airy rhetoric, but Edward Blake had a brain of tremendous power; Edward Blake was loyal. And when the 1891 propaganda of the right hon. gentleman was driven to its conclusion, Edward Blake left him and his reasons for leaving are on record to this date. He left the right hon. gentleman, because, he said, that if the right hon. gentleman's policy were to be successful it would end in severing the bonds that bound Canada to the empire. And, that the right hon. gentleman was not successful was due to the work of the Liberal Conservative party. The last date is 1899, and what happened in 1899? The Boer war broke out. The other colonies jumped into the field, the governments trying to keep ahead of their people and the people trying to run close to their governments. There was no schism between them. But in Canada the constitutional bogey was put up. Parliamentary sanction was invoked. There was no power to do this and do that, and if my right hon. friend had his way not a Canadian would have been sent to South Africa. Now, Sir, I hold that taken by and large, no one event that ever happened in the Dominion of Canada has done so much to elevate Canada in the plane of action, to widen its horizon and win it greater place and prominence in the wide world than resulted from Canadian volunteers going to South Africa and fighting as they fought on the plains of Africa for the old flag. For many a long distant day Canada will not cease to find the beneficial effects accruing to her from our part in that transaction. And, Sir, if my right hon. friend had had his way that would never have happened. Therefore, these four dates may well be conned over by hon. gentlemen and may well be thought out by the people of this Dominion. Now, Mr. Speaker, I have spoken longer than I intended.

Some hon. MEMBERS. Go on.

Mr. FOSTER. I have other things I would like to say.

Mr. SAM. HUGHES. Adjourn the debate.

Mr. FOSTER. No, I do not think I will adjourn the debate. What I wanted to say in brief was this. I wanted to take up that question as to the emergency. My right hon. friend knows very well what there is in that. He knows how vital it is to his plan. He knows that if the people of this country believe that there is an emergency, his plan is damned from the time it gets before the country. The only hope of my hon. friend and his government is to persuade the people that there is no danger, that all is at peace in the borders of Israel, that there is no emergency, that we can all sleep in our beds and feel perfectly secure. Now, Sir, I do not feel that way. I do not need to ask Sir William White; I do not need to go to a writer in the 'Times'; I do not need to take excerpts from a column of matter in a review. I do not need to trot up and down election platforms of England during one of the most heated elections that country ever had. I do not want to go a bit farther than to the responsible heads of the government, who are in close touch with the admiraltv, the executive power of the empire, who sit on the very topmost heights of international outlook, and who know and feel the pulses of the nations and the throb of every menace and every danger. When those men, enjoying a majority of 350 in the House of Commons, are represented to me as engineering a scare against themselves, it falls awfully flat. And that is where it all commenced. That is where Sir Edward Grey spoke in words more momentous, I am bound to say, than a foreign secretary ever before used in the British parliament; that is where Mr. Asquith took his stand, and told the people of the British empire just where they were; and you cannot get me to believe that those men spoke before they ought. If anything, they spoke many months after they should have spoken; and the very subject of discussion which was prominent then, namely, by one party that the extra Dreadnoughts should be put down, and by another party that they should not be put down—that very question was answered by Mr. Asquith but a few days ago, when he informed an audience whom he was addressing that not only had they put down the four Dreadnoughts that were delayed, but that between the last of 1909 and the first months of 1910 the other four that were demanded by Mr. Balfour and by the country would be laid down as well. More than that, he said: Whatever is necessary to complete security and complete confidence we will be disposed to ask at the hands of parliament. I have no desire to pose as an authority on these matters. I am no authority—not a bit more than my hon. friend the Minister of Militia. All we can do is simply to read, to think, to inquire, and then come to our conclusions. I do not set up my conclusions. I take the word and the testimony of the men who are on the inside, and who know what is going on. When I read the history of Germany, I learn of the marvellous progress she is making, I see that she has the greatest army in the world—4,000,000 and more of men that she can call to arms, and with a fineness of detail, a perfection of drill, with plans and methods of mobilizing, furnishing and marching, with an intelligence department than which there is none superior. You cannot tell

me that it signifies nothing when a nation like that, bursting with a population that is now 303 to the square mile, and must have vent; full of workmen and factories that cannot find the market for their products in their own confines, and must seek it abroad, with few colonies and wanting more, suddenly undertakes with surprising rapidity and wonderful minuteness of detail, worked out to the very last degree, the construction and equipment of a fleet which in four short years has waked up old England, and which comes close indeed to rivalling her in the effective counting power of war to-day, the Dreadnought and the super-Dreadnought. When I look at all that and see Germany's allies, and see how few Britain has, and recognize that within sight of the homes of Britain all that immense fleet, like hounds in leash, are held together, sheltered by their mighty army and compact dominions behind whilst the British dominions circle the globe and are exposed in every quarter of the earth, and have to be watched and guarded and warded by the British fleet, it makes me think that the time now is and should not be delayed longer, when it should concern every man who believes in the continuance of the empire, every Caandian who believes in peace and strength and safety for the future of Canada—for at the moment the sea power of the British empire is broken, that moment Canada is submerged in a sea of difficulties, at the mercy of any conqueror who wishes to make the conquest—I say that it behooves every Canadian, outside of imperial considerations, to ponder seriously, think often and deeply, and consider this matter carefully. If they do, I believe they will come to the conclusion that it is not manly, it is not safe, it is not for the best future of this country that we, French or English, Irish or Scotch, men on the prairie or men in the ocean sea-port, should be left with a single shadow of a doubt in our minds. I put it to my right hon. friend, who made light of emergency and difficulty, and in the same breath declared that the supremacy of the British fleet was vital to Canada as well as to the rest of the empire. I ask my right hon. friend if he had better not err on the right and safe side. I ask him if, after he has put this policy of his into execution, and the quick years pass by and nothing comes of benefit or of help, and if some day Armageddon is fought out on the North sea or elsewhere, and the fate of the empire and of Canada hangs in the balance, and if—which God forbid—the scales should lower on Britain's side and the conqueror should take her place on the sea, where will my right hon. friend go for consolation in that time? I would not like to be in his place. Our counsel is that you stop this costly and ineffective project which adds no strength to the empire's defence and little to our own, that you take further time for consideration and for finding out the people's wishes as to this independent fleet policy, and that in the meantime you take the most effective means of meeting the present emergency, for it is an emergency, by strengthening the fleet of the British emipre. Here in Canada with her $100,000,000 of revenue, with all that has been given her and kept for her by the hardworking taxpayers of the British isles, in the way of protection and security, how is it that we can for a moment refuse to play the manly part, the Canadian part and the imperial part, and go to the present defence of the empire and ourselves in the quickest and most effective way.

Mr. E. M. MACDONALD (Pictou). Before moving the adjournment of this debate, I think that the remarkable speech which has fallen from the hon. gentleman who has just sat down (Mr. Foster) deserves a word or two of comment from hon. gentlemen on this side. I want to say a few words regarding the unique position he occupies to-night. I have heard him on numerous occasions since I have had the honour of a seat in this House, but rarely have I seen him in a more desperate frame of mind. After having been compelled to eat every word he said a year ago, when, with all the adjectives and invectives he had at his hand he declared that it would be unwise and improper thing for Canada to give a contribution, and that the proper thing for her was to build her own navy,—after he had been compelled to do this by the men who supply the sinews of war during election times and who applied the thumb screw and the composing room to himself and his leader in order to make them withdraw from the position they had taken —after he and his leader had performed a feat, the like of which has only been heard of in history once before when 'the King of France with twice ten thousand men marced up the hill and then marched down again,' the hon. gentleman sought to cover his disgraceful retreat by endeavouring to discredit the right hon. gentleman who has guided the destinies of Canada so successfully since the Liberal party took office in 1896. If I wanted to go into ancient history, I could tell some home truths about the man who was premier of this country and leader of the Conservative party and who declared himself in favour of annexation, I could bring into prominence again the Pacific scandal and the notorious nest of traitors and moments of weakness, but I shall not be lead away by the example of the hon. gentleman. I say that it was undignified and unbecoming for a gen-

tleman occupying the position the hon. gentleman does, to talk as he did about the man who governs this country and whom every Liberal in Canada is proud to follow—to talk about his being an enemy of the empire and a separatist. Why, the fourteen years of his administration is a sufficient answer to the slander. What record has the hon. gentleman to show? When he was Minister of Finance did it ever enter into his head that Canada should show some slight appreciation of England's great watchfulness over her by giving a preference in the Canadian market? No, that was left for the Liberal leader to do. When there was a war in the Soudan, what course did the Tory government, of which my hon. friend was then Finance Minister, take? They said to the English government: We will allow you to enlist our young men in this country, but we will not give you a dollar. And yet this hon. gentleman talks about his party having forced Sir Wilfrid Laurier to send Canadian troops to South Africa. Sir, we all know it was left to a French Canadian, at the head of the Canadian government, to see that Canadians, for the first time in the history of this country, were sent by their government to fight the battles of the empire.

Let me give you an evidence of the opinion in which the right hon. the Prime Minister (Sir Wilfrid Laurier) is held in England. You have all heard of Mr. Richard Jebb, the gentleman who ran as a Liberal Unionist in St. Pancras and whom the imperial federationists of this country asked Mr. Balfour to select as a candidate. Well, Mr. Jebb says, in his 'Sketches of colonial nationalism,' speaking of the Prime Minister of Canada:

> Reviewing the events which have taken place since the passing of the Transvaal resolution by the Dominion parliament in the summer of 1899, Canadians, after all, have no reason to think that their country has failed to keep her accustomed lead in the steady movement towards imperial co-operation. On the contrary, in the end as at the beginning, Canada figures as the resolute guardian when others were tempted to turn aside of that mutual independence which is the sure foundation of imperial union. Prominent amongst nationalist statesmen stands Sir Wilfrid Laurier successfully applying to the constructive problem of the empire the fearless and progressive spirit of this political tradition.

When Mr. Jebb, with his record on imperial subjects gives that certificate of character to the leader of the Liberal party in Canada, my right hon. friend need not care about what the hon. member for North Toronto (Mr. Foster) says. One remark more before I move the adjournment. When listening to the hon. member (Mr. Foster) talking about the motherland and what Canada owed the empire, I asked myself whether his judgment would be as good as that of a young man, a son of Nova Scotia, who led the Nova Scotians at Paardeberg, who wears the decoration of Her Majesty for the distinction he won in fighting the battles of the empire in South Africa. Would not the judgment of such a man be worth far more than that of the hon. gentleman who has used up the time of this House for purely partisan purposes? To-night I received this letter from the young gentleman in question, whose devotion and patriotism cannot be gainsaid:

> Dear Mr. Macdonald,—Canadian attitude on the naval question being in the forefront, I hope you will not think me presuming upon your time and patience if I venture to place before you the situation as it appears to one who is not in the active political field.
>
> The first thing to be settled is to find out at what objects we are aiming.
>
> It seems to me that the only contribution truly acceptable to the Canadian mind must be in the form of Canadian flesh and blood, that is to say in trained Canadian seamen. If Canada is to pay Englishmen to do Canada's share of the fighting, we had better step down and out.
>
> Our immediate object should be to commence the training of a body of, say 2,000 Canadian sailors. These men can be drawn from inland cities and counties of Canada just as well as from the maritime ports, because the crew of a modern warship are not so much sailors in the usual sense of the word as they are artillerymen, riflemen, mechanics and engineers of all kinds, and the inland cities and towns can furnish their quota just as well as the maritime provinces.
>
> The reason that the South African War was of such vital interest to Canada, was because she had some 8,000 men there, all of them writing home, and every city, town, county and street in Canada could say that it had a representative fighting in South Africa.
>
> Had the contribution of Canada in the South African War taken the form of a cash contribution or the contribution of magnificent batteries of inanimate guns, Canada's enthusiasm would have been insignificant.
>
> Canada's proper contribution to imperial defence must be in trained Canadian men, and to train these men we must commence a navy.
>
> If war should be declared to-morrow, a contribution of $10,000,000 or five times that amount, if you like, can be voted by the Canadian parliament and placed at England's disposal.
>
> Outside of all this there is the constitutional question, and the Liberal government deserve the thanks and the everlasting gratitude of every member of the British empire in its refusal to be stampeded into committing a false step in our imperial relations.
>
> The surest and quickest way to an effective form of imperial union is the maintenance by Canada of a dignified attitude, and there is no occasion for us to lapse into the colonial position which our ancesters did so much to extricate us from.

If the process of giving Dreadnoughts is commenced the English people will expect a continuation of such policy, and its discontinuance will cause more friction than ever exists at present.

I entirely disapprove of any action which will lead to condition of affairs from which Canada will find it difficult to withdraw, and have not the slightest hesitation in saying that Sir Wilfrid Laurier's policy is merely a logical step in the process of colonial and imperial development at which we have been busy for so many years.

The surest aid which Canada can give to the development of the empire is the establishment of a robust Canadianism, able to place in the fighting line of the empire trained Canadian seamen as it has already placed trained Canadian soldiers.

And, after all this long harangue in which my hon. friend descended to the old game of abusing those who did not agree with him—because he had a poor case—and before moving the adjournment of the debate, I wanted to give the opinion of Richard Jebb, the imperialist, as to the estimation in which Sir Wilfrid Laurier is held in England—aye, and wherever the English language is spoken; and I wanted to give the answer from a man who knows—a man who went out and fought the battles of the empire, not one who stayed at home and dotted 'i's' and crossed 't's' and twisted words and distorted ideas. These are an answer sufficient for to-night to the address of my hon. friend, and so I move the adjournment of the debate.

Motion agreed to, and debate adjourned.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. R. L. BORDEN. What business will be taken up to-morrow?

Sir WILFRID LAURIER. To-morrow is Friday and it is not likely that we shall have a full House. We will not take up this debate, but will go on with estimates.

Mr. FOSTER. What estimates?

Sir WILFRID LAURIER. Public works.

Motion agreed to, and House adjourned at 12.23 a.m., Friday.

HOUSE OF COMMONS.

FRIDAY, February 11, 1910.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 139) respecting the Bay of Quinte Railway Company.—Mr. Talbot.

Bill (No. 140) to relieve Frederick Joseph Gustin McArthur.—Mr. Wallace.

INDIAN ACT AMENDMENT.

Hon. FRANK OLIVER moved for leave to introduce Bill (No. 141) to amend the Indian Act. He said: There are only three clauses in the Bill. The object is to give definite effect to what has hitherto been understood to be the law, and in regard to which there seems to be some doubt which it is desirable to remove. The first clause relates to the occupation of Indian lands by others than Indians, and provides a mode of procedure whereby the rights of the Indians may be established in case of their lands being entered upon by those who are not entitled to do so. The other two clauses are merely to protect the right of the Indians in any moneys that are due to them from the government.

Motion agreed to, and Bill read the first time.

WATERWAYS COMMITTEE.

Mr. G. V. WHITE. Before the orders of the day are called, I wish to ask the government when the committee on the various waterways and water-powers will meet? This is a very important committee, and there has not been any meeting of the committee during the present session.

Sir WILFRID LAURIER. I will call the attention of the chairman to it.

THE 'SCIENTIFIC AMERICAN' AND THE QUEBEC BRIDGE.

Hon. GEORGE P. GRAHAM. My attention has been called to a criticism of the plans of the Quebec bridge by the 'Scientific American', which is a leading scientific paper. The writer seems not to be aware of the fact that the plans provide for a suspension bridge as well as a cantilever bridge. I presume some hon. gentlemen may have seen this article, and I have referred it to the chairman of the board of engineers, who have charge of the construction of the bridge.

TRACHOMA IN REGINA SCHOOLS.

Mr. SCHAFFNER. I wish to call the attention of the Minister of Interior to a matter which I consider of great urgency. I see a despatch in the 'Citizen' of to-day, from Regina, to the effect that trachoma has broken out in the schools of that city:

At present there are some ten cases discovered, but careful examination of all the children in the schools is to be made. The city health officer in reporting the matter to the city council attributed the outbreak to

laxity on the part of immigration authorities in permitting those infected with the disease to land in the country.

I think this is a matter that demands the immediate attention of the Minister of Interior.

Mr. OLIVER. I can only say that every care is taken at the ocean ports to prevent the entry of immigrants suffering from this disease. But it is like all other diseases, it may pass inspection at a time when it is not in evidence, and break out later on and be communicated. I might mention that it is becoming a practice to attribute every form of disease that may occur in any part of Canada, to the laxity of the immigration authorities. I would suggest with all due respect that the municipal and provincial authorities would do well to assume their own share in the suppression of contagious diseases.

MANITOBA FISHERIES COMMISSION.

Mr. BRADBURY. I wish to call the attention of the acting Minister of Marine and Fisheries to the fact that apparently no action has been taken on the fisheries report laid on the table. I have had communication from some of the Selkirk fishermen asking if there are going to be any changes made, if the report is going to be implemented by new regulations. At this time of the year it is necessary that the fishermen should know if they are going to be allowed to fish next year.

Sir WILFRID LAURIER. I will give an answer to my hon. friend on Monday.

SUPPLY.

House in Committee of Supply.

Harbours and rivers, New Brunswick—Dipper harbour—extension of breakwater—pier, $14,000.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Chairman, the object of this vote is to provide for the extension of the breakwater pier at Dipper harbour. Dipper harbour is in the county of St. John. The total estimated cost is $19,530 for 186,000 cubic yards of cribwork and contingencies to be added making $21,500, of which we are asking $14,000. That is what we expect to expend during the coming year.

Mr. CROCKET. Is the work under contract?

Mr. PUGSLEY. No, we have not done anything and will not until we get the vote.

Dorchester wharf—level bed at outer end for vessels to lie on at low tide, $1,000.

Mr. PUGSLEY. This is to provide a bed outside the wharf at which vessels may lie in safety at low tide. As the hon. member for York (Mr. Crocket) knows, the river is a tidal river and while vessels will lie afloat at high tide, at low tide they have to ground, and it is very desirable to have a bed on which the vessels may lie. The estimated cost is $1,000. There is to be something in the nature of cribwork, 2,500 lineal feet, and some excavation, ballast poles and the like of that.

Harbours, rivers and bridges generally—repairs and improvements, $21,000.

Mr. PUGSLEY. This is a vote that is usually taken to make repairs to wharfs and bridges generally for which there is no special appropriation. We took an appropriation last year of $24,000 of which we expended, up to the 1st December last, $10,975, leaving a balance of $13,000. Of course, whatever of that remains unexpended will lapse at the end of the year and we are taking the usual vote for the new year.

Kouchibouguac harbour—to complete work of closing new gap through beach and preserving the latter with breakwater, $1,500.

Mr. PUGSLEY. This amount, we had hoped would be sufficient to complete the work, but I am sorry to say that I cannot give that assurance now, because by reason of a very violent storm recently I believe the work has been damaged, and I am not able to say to the committee just what amount we will require to finish it.

Mr. CROCKET. What is the total cost up to the present time?

Mr. PUGSLEY. The total cost has been $6,300. We had hoped that the total expenditure would not have exceeded $7,800.

Mr. CROCKET. How long has the work been in progress?

Mr. PUGSLEY. It was commenced in 1908.

Mr. R. L. BORDEN. What is the object of it?

Mr. PUGSLEY. There is a long bar extending right in front of the harbour of Kouchibouguac. There is one channel running through this bar into the harbour, but some years ago the tide broke through at another part of the bar and that interferes with the current of the main channel. It was damaging the harbour as it appeared to be likely that it would silt up, and the object of this is to close that unnecessary entrance which was broken through by the tide.

Mr. R. L. BORDEN. In what county is this harbour?

Mr. PUGSLEY. In the county of Kent. Kouchibouguac is quite an important place. It is not only an important fishing locality

but other business of considerable importance is also carried on. It is in the centre of an important lumbering district, and my report is that the value of the fisheries is about $50,000 annually. There has recently been erected a freezer of quite large dimensions and there are three lobster factories in the locality.

Mr. CROCKET. Has the work been done by day labour?

Mr. PUGSLEY. Yes.

Mr. CROCKET. Who is the foreman?

Mr. PUGSLEY. Mr. Atkinson.

Lameque wharf—improvements, $2,000.

Mr. PUGSLEY. This is to complete the enlargement of the wharf and the erection of a warehouse at Lameque in the county of Gloucester. The total estimated cost of the improvements is $7,000 of which we expect we will have expended by the 31st March, $4,999.63. We are now asking for $2,000 to complete the work.

Mr. CROCKET. What depth of water will be provided?

Mr. PUGSLEY. I regret that I am not able to give the depth of water, but I may say that passenger steamers go through. There has been established a line of steamers between points on the mainland of Gloucester and the islands also going over to the Quebec shore. and the steamers will call at this point, The water is deep enough for the steamers. The steamer will call at this point, so that the water is deep enough for that steamer. Lameque is an important place for shipping; it is estimated that the exports of fish alone amount to about $80,000 annually. There is a population of about 400.

Leonardville, Deer island — reconstruction and extension of wharf, $7,000.

Mr. PUGSLEY. This is to complete the contract. It is for the extension of a wharf formerly owned by the provincial government. The contract is for $9,895, and contingencies are estimated at $1,105. We estimate we will have expended up to the 31st March next $4,000, leaving a balance of $7,000, which we are now asking to complete the work.

Lorneville—breakwater wharf, $10,000.

Mr. PUGSLEY. This is to make a payment on the breakwater at Lorneville in the city and county of St. John, a very important fishing village. The contract is let by tender for $27,000. We add for contingencies $800 and for right of way $200, and owing to a change in site an additional payment is made to the contractor of $1,150. Since these estimates were made up a very unfortunate accident has happened to the Lorneville breakwater. In a recent storm, perhaps the most violent ever known in that locality, the outer end of the breakwater was carried away and broke through an apparent crust under the water, and settled down, leaving a place between the head of the wharf which was carried away and the main body which will have to be filled in and for which we will have to ask a supplementary vote. Part of the wharf was on rock and a part was supposed to be on the bed of the ocean. In this violent storm, either the foundation was undermined by the storm or it sank through by reason of the heavy weight. It is one of those unforeseen accidents which sometimes will occur.

Mr. CROCKET. What is the extent of the damage?

Mr. PUGSLEY. $15,000 or $20,000.

Mr. CROCKET. The work had not been taken over by the government from the contractor?

Mr. PUGSLEY. No; but the work was finished. I think we shall have to pay the contractor for it.

Mace's bay—connection of pier-head with shore—to complete, $1,150.

Mr. PUGSLEY. This is to connect the pier head now partly completed with the shore, a distance of 150 feet.

Moncton wharf—enlargement of, $14,500.

Mr. PUGSLEY. This is for cribwork construction, 160 feet long by 50 feet wide, and an approach from the shore of cribwork 90 feet long by 20 feet wide. The amount of the contract is $17,600 and, adding contingencies, we estimate the total cost will be $19,200.

Mr. CROCKET. Did this government build the wharf that is being enlarged?

Mr. EMMERSON. It is a wharf that has been in existence since prior to confederation. It has always been a public wharf, recognized as such, and looked after by the Dominion. It is in close proximity to what is known as the wharf railway track at Moncton. I trust that the Minister of Public Works will expedite the completion of this work, the delay of which has been the cause of serious complaints on the part of shippers and others who have to use the harbour of Moncton.

Mr. CROCKET. Who has the contract for this work?

Mr. PUGSLEY. Downey Bros., of Albert county.

Mr. CROCKET. How many tenders were received?

Mr. PUGSLEY. Seven. The amount of Downey Bros. tender was $17,600.

Neguac—extension of wharf on Miramichi bay, $2,000.

Mr. PUGSLEY. This work is proposed in order not only to give more wharf accommodation, but greater depth of water at the outer face, which is very much needed to accommodate the steamer which runs down the Bay from Newcastle and Chatham.

Mr. CROCKET. Will this cover the whole expenditure?

Mr. PUGSLEY. No, it will leave a balance of about $800 for which we will have to make further provision. $2,800 is the total estimated cost.

Mr. CROCKET. Was the original wharf built by the federal government?

Mr. PUGSLEY. Yes, it was built between 1892 and 1894.

New Mills wharf, $5,000.

Mr. PUGSLEY. This is to build a wharf at an important point in the county of Restigouche where a large lumbering business is being carried on. The total cost of the wharf is estimated at $12,000.

Mr. DANIEL. What depth of water will there be?

Mr. PUGSLEY. Five feet at low water and twelve feet at high water, spring tide.

Mr. DANIEL. Will any dredging be required?

Mr. PUGSLEY. We do not anticipate that any will be required.

Mr. HUGHES. What is the population of New Mills?

Mr. PUGSLEY. About 1,500.

Mr. CROCKET. Will this work be let by contract?

Mr. PUGSLEY. Yes.

Mr. CROCKET. Has the government secured the title of the site on which it is proposed to build the wharf?

Mr. PUGSLEY. No.

Mr. CROCKET. I suppose the site has been determined on?

Mr. PUGSLEY. We have an offer from a party to sell for $100 the land for the site which has been selected. I have no doubt we shall accept the offer.

Mr. CROCKET. How much land does the offer include?

Mr. PUGSLEY. I cannot tell my hon. friend how much, but it includes what will be required for the right of way and the site of the wharf on the shore.

Mr. PUGSLEY

Petit Rocher—roadway to breakwater pier and repairs to approach, &c., $1,200.

Mr. PUGSLEY. This is to grade and fence the right of way to the breakwater, and also to repair the approach, which has been damaged by storms.

Mr. DANIEL. How long is this roadway?

Mr. PUGSLEY. About a quarter of a mile.

Mr. DANIEL. Is the roadway on government property?

Mr. PUGSLEY. It was bought from the authorities of the Roman Catholic church, and the title was vested in the Crown. We paid to Valerie Frenette the sum of $100, but we have not settled yet with the church authorities, who are asking $500 for their portion. The balance of the appropriations is for repairs to the approach.

Mr. CROCKET. What was the original cost of the breakwater?

Mr. PUGSLEY. The total expenditure on it up to the 31st of March last year was $63,277.13.

Mr. CROCKET. When was it originally built?

Mr. PUGSLEY. It was begun in 1903 and was completed in November, 1908.

Mr. CROCKET. What was the contract price?

Mr. PUGSLEY. There was one contract to Mr. McGregor for $24,150, and another to the same man for $32,900.

Mr. CROCKET. That makes $63,000 for this breakwater. What was the length of this breakwater?

Mr. PUGSLEY. An isolated breakwater was begun in 1904 and finished in 1905. To enable this work to be used as a wharf and to give better protection to the area inside, a second contract was entered into on September 4, 1907, for an extension to the shore. The construction was begun December 11, 1907, and finished March 31, 1908. I take it the length will be 450 feet in addition to the length of the isolated breakwater, which I am told by my hon. friend from Gloucester (Mr. Turgeon), is about 400 feet, making a total length of 850 feet.

Mr. CROCKET. How is it there were two contracts, first one for $25,000 and then another for $32,000?

Mr. PUGSLEY. The first was for the isolated breakwater which had no connection with the shore. Subsequently it was decided to make connection between the breakwater and the shore so as to enable the breakwater to be utilized as a wharf and give better protection to the harbour.

Mr. DANIEL. Is there any revenue from this?

Mr. PUGSLEY. That would belong to the Department of Marine and Fisheries. So long as the wharf remains in the Public Works Department no revenue is collected. The transfer of this wharf was made some time last year.

Mr. DANIEL. What depth of water?

Mr. PUGSLEY. 18 feet at low tide.

Pink Rock wharf, Shepody bay, New Brunswick—extension of, $5,500.

Mr. PUGSLEY. This is to complete work now being carried on under contract. It consists of an extension of the wharf of 47 feet, also the construction of a pier head 75 feet by 28 feet, also the construction of a detached breakwater, 100 feet by 25 feet, the object being to break the seas and protect the harbour. Amount of contract, $10,440, and superintendence, $560, making total estimate of $11,000, of which we expect to spend up to the 31st of March this year, $5,500. This will complete.

Mr. CROCKET. Did not the government make an extension of the wharf before letting the contract of which the minister speaks?

Mr. PUGSLEY. Yes, there was some work done of an extension of the wharf, I think about 70 or 75 feet, but it was found that that was not sufficient to give accommodation for the vessels going there, and I decided to do the additional work provided in the contract.

Mr. EMMERSON. I think that was under a former appropriation. The present work has very little to do with that except in so far as that completed a certain work, and this is additional and other work.

Mr. CROCKET. How much will this make the total expended by the government?

Mr. PUGSLEY. About $15,000.

Mr. CROCKET. $11,000 under the contract?

Mr. PUGSLEY. And $4,479 previously.

Mr. RHODES. Does the government collect any revenue on the traffic over this wharf?

Mr. PUGSLEY. No, it has not yet been transferred to the Department of Marine and Fisheries.

Mr. RHODES. Is it the intention to do so?

Mr. PUGSLEY. When completed, it will be transferred to the Department of Marine and Fisheries, and they will collect wharfage.

Mr. CROCKET. This is the wharf concerning which I took occasion to say some days ago, when some other item was under discussion, that it was being built by this government for the exclusive benefit of the Albert Manufacturing Company and another company, of which Mr. C. J. Osman, a friend of the minister, is managing director. That statement aroused the minister to that indignation he so frequently displays.

Mr. PUGSLEY. My hon. friend said something more than that. He said he presumed this was the result of a bargain with Mr. Osman, under which the Albert company were to give land over at Hillsborough for a public building and get this improvement in return.

Mr. CROCKET. I made a very innocent statement, I thought. We were discussing an appropriation for a post office at Hillsborough the minister announced that Mr. Osman had generously donated the site. I remarked that perhaps Mr. Osman was doing that in return for the wharf.

Mr. PUGSLEY. Does the hon. gentleman call that an innocent statement?

Mr. CROCKET. I suggested simply that probably the honourable minister's friend was giving the site for the post office, in return for the wharf which the government was constructing for his benefit at Pink Rock. The minister characterized that suggestion as gross and vile concerning a man of the highest honour and integrity—expressions we hear so frequently from the hon. minister. I say that not only was the suggestion I then made that the wharf was built exclusively for the benefit of the firm of which Mr. Osman is managing director, absolutely true, but that the wharf is the property of the Albert Manufacturing Company. Furthermore, that a large portion of the expenditure was made by Mr. Osman under his own direction and control—he simply turned the bills in to the Department of Public Works, and some $2,000 or $2,100 was paid out of the treasury of this country to recoup Mr. Osman for this expenditure made by himself on his own wharf. So, when the hon. minister (Mr. Pugsley) seeks to discredit the hon. member for York (Mr. Crocket) by intimating that he makes suggestions very recklessly, the hon. minister at least will not be able to rely upon the suggestion made in this case, for I have the proof at hand

not only to fully bear it out, but to prove much more than I suggested. And this is the kind of thing that is going on all over this country. The other night I referred to dredging done at Dalhousie, New Brunswick, to the extent of thousands of dollars for the improvement of the shipping facilities of the Dalhousie Lumber Company, of which the minister himself is a stockholder. I have returns from the minister's own department which show that conclusively, and in such manner that the minister himself cannot controvert the statement that thousands of dollars have been expended from the public treasury to dredge the wharf of the Dalhousie Lumber Company. The dredge was kept there in the summer of 1908, and again last year dredging along the front of that property at the public expense.

I desire to refer to the return which I obtained in connection with this matter of the improvements at Pink Rock, so that the committee may see that the statement that this so-called public work was not in reality a public work, but was for the improvement of private property and paid for out of the public treasury was strictly correct. I find, by the correspondence brought down, that on July 6, 1907, a letter was written by Mr. Geoffrey Stead, the resident engineer of the department, to the chief engineer, in which he states:

I have your letter of the 13th June instructing me to prepare a contract plan for the extension of the wharf at Pink Rock, Westmoreland county, New Brunswick, at a total cost of $16,700.

The wharf is intended for the shipment of gypsum, and the length of the proposed extension is 275 feet.

I have just been in communication with Mr. C. J. Osman, M.P.P., owner or manager of the gypsum quarries at Pink Rock, who states that the 275-foot extension would be unnecessarily long and that 100 feet would be sufficient.

The 100-foot extension would require 69,000 cubic feet of cribwork, and at 7 cents per foot would cost $4,830.

Would you kindly authorize the construction of the shorter work instead of that originally proposed.

The extension could then be built by day's labour during the present season, which would avoid delay and enable the appropriation for the present fiscal year—$5,000—to be used.

Now, though the original estimate was for an extension of 275 feet, that was changed at Mr. Osman's request, he having stated that an extension of 100 feet would be sufficient. This enabled the appropriation for that year to be expended, and it was expended by day labour—day labour done under Mr. Osman's own direction. And, notwithstanding that Mr. Osman there stated that 100 feet would be sufficient, and that the original estimate was too much, the minister has now communicated to the House the fact that Mr. Osman is getting just exactly what was originally proposed. And it would seem that the change was made simply to enable this work to be carried along by the day labour system, with a foreman appointed by Mr. Osman and the expenditure made by him.

Mr. MEIGHEN. How long has the work been going on?

Mr. CROCKET. Three or four years. Here is another communication which will bear out the statement that this work was for Osman's benefit. It is from the hon. member for Westmoreland (Mr. Emmerson) to 'My Dear Pugsley,' under date 4th April, 1908, and reading as follows:

You will remember that Mr. Osman has urged the construction or extension of a breakwater at Pink Rock, in Westmoreland county. If the work goes on, I would like Gideon S. McFadden of Johnston's Mills post office, Westmoreland county, appointed to the position of inspector.

Will you please give instructions so that this may not be overlooked when the time comes.

Then, there is a memorandum from the minister to the deputy minister dated April 7, as follows:

Kindly let me know if the work of constructing breakwater at Pink Rock, Westmoreland county, New Brunswick, is yet under way.

Then, on 21st April, 1908, there is another letter from Mr. Geoffrey Stead, resident engineer, to Mr. Lafleur, which is in part as follows:

I have received your letter of the 14th April, asking a report as to how the work at Pink Rock, New Brunswick, stands at present.

I inclose a photograph which shows the whole wharf—the inner part 250 feet long, built by Mr. Osman, manager of the Albert Manufacturing Company and the New Brunswick Gypsum Company, and the outer section 75 feet long which is not yet complete.

The cost of the 75-foot section has been assumed by the department, as I have your authority to certify and forward the bills, but though I have asked for them several times I have not yet received them. The foreman has been away and I have just heard that the accounts will be sent to me in two days.

The cost of completing this section——

He then details an estimate amounting to $1,850. So, this work was in progress and paid for out of the public treasury without the resident engineer of the department having any knowledge whatever of the accounts, the whole matter placed in the hands of Mr. C. J. Osman, who made——

Mr. PUGSLEY. Not at all, but of Mr. G. S. McFadden.

Mr. CROCKET. If the minister will only be patient for a few minutes, I think I can show him that he is a little previous in

that statement. Consider the statement in this letter:

But though I have asked for them several times I have not received them.

Mr. PUGSLEY. From the foreman—read it all; he has not received them from the foreman.

Mr. CROCKET. Here is a further letter from the resident engineer to the chief engineer, dated 7th May, 1908:

Sir,—I have received your telegram stating, 'At request of minister, have wired Mr. McFadden, care of Johnston's Mills, Dorchester, New Brunswick, to go to work at once as inspector at Pink Rock, instructions to follow later. Please give Mr. McFadden whatever instructions may be required.'

The work at Pink Rock has been done by day labour under Mr. Oscar Downey, the foreman appointed by Mr. Osman of the Albert Manufacturing Company, before I had received instructions to certify the accounts.

Mr. Downey is now about to resume construction and complete the work by day labour. Would you kindly inform me whether Mr. McFadden will act as conductor, with Mr. Downey as sub-foreman—which would be satisfactory to Mr. Osman—the pay-lists being fairly large, as many as twelve men being employed at once; or is Mr. McFadden to act as inspector on the work as he would in case of a contract and send in his account apart from the pay-rolls?

So there we have a statement from the resident engineer of the department that the work at Pink Rock had been done by day labour under Mr. Downey, the foreman appointed by Mr. Osman of the Albert Manufacturing Company, before the resident engineer had received any instructions from the department. Mr. Osman sent in to the Public Works Department accounts amounting to upwards of $2,000 expended by himself, a good part of it for goods furnished by himself, while the expenditure was entered in the Auditor General's Report as if the work had been done under the direction of the department. On the 13th of May, 1908, there is another letter from Mr. Geoffrey Stead:

I inclose herewith accounts amounting to $2,018.96 in favour of the Albert Manufacturing Company for the construction of a 75 foot extension to the wharf 226 feet long which they had already built at Pink Rock, N.B., and am requested by the company to ask that the accounts be paid at an early date as the work was done some months ago and money is scarce.

There is a letter from the resident engineer of the department, in which he states that he is inclosing accounts of the Albert Manufacturing Company for $2,018.96 for extension of this wharf.

The accounts were paid immediately, and it was entered, as I have stated, in the Auditor General's Report as if the extension had been made under the direction of the Public Works Department, and many of these accounts, as I have said, being for supplies furnished by the company itself. Here is a letter from C. J. Osman to the Hon. Mr. Emmerson, dated June 26, 1908:

Dear Mr. Emmerson,—I am sorry to have to make further demands upon you in connection with the wharf at Pink Rock, as I confidently expected that the expenditure already made by ourselves and the government would be sufficient for all requirements.

I have, however, taken down three of our steamboat captains to inspect the wharf and bed before putting their vessels on to load, and they all declined positively to risk their vessels unless the wharf was extended and a 'T' or 'L' built out to break the swell which is quite heavy at this place even with a southwest wind.

You will perhaps remember that this was the plan originally proposed in the first survey made by Mr. Scammel, C.E.

We have now over 2,000 tons or rock quarried and piled on and near the wharf and cannot induce a vessel to go for it.

Will you therefore try and get enough appropriation included in the supplementary estimates to extend the wharf 75 feet, and an 'L' or 'T' about 60 feet added to this with a small block or crib on the roof just above the wharf end. This would then make a perfect little harbour, and I think can be all done for the original estimate of cost which was, I think, about $14,000 or $15,000, and up to this time only about $3,000 has been expended.

This matter is of very great importance, and, therefore, I venture to ask you to take immediate action.

And we have this appropriation going through now, the balance of the appropriation, just on the lines requested by Mr. Osman, and to the full amount of the original estimate which was altered at Mr. Osman's request, to enable the appropriation to be expended by himself without any check of any kind under the day labour system. So the total expenditure as stated by the minister will amount to fully what it was estimated to be in the first instance. Then, here is a letter from Mr. Osman to the Hon. Wm. Pugsley, dated 26th June, 1908:

Dear Mr. Pugsley,—I find that the work as now completed at Pink Rock is insufficient for the requirements of the locality.

We have over 2,000 tons of plaster rock quarried and piled on the wharf and near it, and are very anxious to get it shipped, but we have been unable to induce the captains of the steam vessels now under charter with us to place their vessels in the berth, as they state that they would be in considerable danger; that before they would take the risk of loading at this place the wharf would have to be further extended about 75 feet, with a protecting L on the end, and a small breakwater on the reef a little above the wharf.

When Mr. Scammel made the first survey of this work, the wharf extension, an L was

included and the total estimate of cost was about $6,000, but being desirous of having the work done at as little cost as possible, I decided to excavate the bed alongside the wharf built by us, and save a good deal of the proposed extension. This has been done as already stated but is not acceptable to the vessel masters. The extension demanded now is considerably less than the work first proposed, and I should be much obliged if you can see your way clear to make provision for this further work in your supplementary estimates.

I have written to Mr. Emmerson upon the matter and am quite sure that he will give his warm and earnest support.

Perhaps you would also arrange for Mr. Stead to go over the work again, in which case if he will communicate with me, I will take him down in our boat and explain exactly what is now required, and I beg to assure you that every effort will be made to cover absolute requirement with as small expenditure as possible.

Requesting your favourable consideration of this matter,

I remain yours sincerely,

(Sgd.) C. J. OSMAN.

To that there is a very courteous reply from the minister to Mr. Osman, dated June 30:

Dear Mr. Osman,—I am in receipt of your favour of the 26th inst., having reference to extension of wharf at Pink Rock, and have referred the matter to my chief engineer, with directions that Mr. Resident Engineer Stead look into same and report.

Mr. PUGSLEY. What is wrong with that?

Mr. CROCKET. Oh, nothing. The government did not lose much time, for on June 30, 1908, I find a memorandum from the minister to the chief engineer:

Kindly note letter of Hon. Mr. Osman, re extension of Pink Rock wharf, and direct Mr. Resident Engineer Stead to examine the work at once and report as to necessity for and cost of proposed addition.

Then, on September 11, the chief engineer writes Resident Engineer Stead as follows:

I enclose herewith file No. 321777, containing your report regarding the extension of the wharf at Pink Rock, N.B., the cost of which you estimated at $2,830, and would ask to let me have an answer to the deputy minister's query, as to whether this work would be done by day labour.

I may say that the vote of $5,000 in the estimates is for the building of an extension of 75 feet to the wharf at Pink Rock, built by the Albert Manufacturing Company and the New Brunswick Gypsum Company. This is the work for which you were authorized on the 10th August last, to prepare contract plans and specifications. Kindly let me know if the work mentioned in the inclosed report, the cost of which you placed at $2,830, forms any part of the proposed 75 feet extension.

Then comes a letter from Mr. Osman of the 12th of November, 1908, to the minister:

Mr. CROCKET.

Hon. Mr. Pugsley,
Ottawa, Ont.

Dear Mr. Pugsley,—I am getting quite anxious about the wharf at Pink Rock, as we have a large cargo ready for shipment there, and have had it there all this season, but owing to the insecurity of the place, we have not been able to induce any of our steamers to go there to load.

Mr. Stead has, I believe, prepared plans for a small extension and breakwater block, which, I think, will make the place perfectly safe, and this work ought to be done as early as possible next spring, and as some funds from the old appropriation are available, perhaps you could see your way clear to instruct him to have the work finished by day work the same as the other work was done at this place, as it will be necessary to get timber out this winter, and have it ready for early rafting, in order to get the place available for use next year. If you will be kind enough to interest yourself in this matter, I shall feel very much obliged to you.

Yours sincerely,

(Sgd.) C. J. OSMAN.

On November 24, 1908, the minister wrote to Mr. Osman as follows:

Dear Mr. Osman,—I am in receipt of your favour of the 12th inst., and in reply beg to say that I have given directions to have the work at Pink Rock done without delay.

Yours very truly,

(Sgd.) WM. PUGSLEY.

There is a further letter from Mr. Stead on the the 27th November, 1908, to Mr. Lafleur, the chief engineer at Ottawa:

Sir,—I have received a letter from Mr. C. J. Osman, of the Albert Manufacturing Company, of Hillsborough, stating that he is very anxious about the Pink Rock wharf, as the company have a large cargo of gypsum tied up there which cannot be shipped till the proposed extension is built.

Mr. Osman writes. 'I would like also for you (if possible) to obtain the consent of the department to carry on this work by day work, and authorize Downey (the former foreman) to go ahead with it, in which case we will arrange with him so that he can get the timber in Hillsborough off our own land, which is the most convenient point at which suitable timber can be obtained, and we will make the cost to him much lower than it could be procured anywhere else. If, on the other hand, a contract is to be let, it is of great importance that it should be let at once. Perhaps you will be good enough to communicate with the department, and find out exactly how the matter stands.'

I have read your instructions of the 24th September to proceed immediately by day labour with the construction of a 47-foot extension at a cost of $2,830—the balance of the appropriation for this year being $2,839.51—and I informed Mr. Osman of this, but on account of the difficulty of procuring lumber and working at the site of the wharf late in the season, I have not been able to have the work started.

The first work was done by Mr. Osman with his own men, he charged actual cost, and at the Hon. Mr. Emmerson's suggestion, I en-

deavoured to have the work on the extension carried on in the same way.

It would be very desirable to procure lumber for the extension early this winter, i.e., before the heavy snowfalls, as it can then be bought most cheaply. Would you kindly inform me, therefore, whether I may procure only sufficient lumber for the 47-foot extension, or expend the balance of the appropriation for lumber for the whole proposed work —the estimated cost of which is $13,000; and also what answer I can return to Mr. Osman.

Yours obediently,
(Sgd.) GEOFFREY STEAD,
Resident Engineer.

The following is the chief engineer's reply to Mr. Stead, dated 30th November, 1908:

In reply to your letter of the 27th inst., regarding the work at Pink Rock, I have to inform you that you may procure sufficient lumber for the 47-foot extension which you were authorized on the 24th September last to construct by day labour, but not for any other work.

There is another letter dated December 12th, from the chief engineer of the department of the deputy minister, Mr. Hunter, as follows:

Sir,—I have the honour to inclose herewith a memorandum from the hon. the minister asking that attention be given to the work required at Pink Rock, as requested by Mr. C. J. Osman in the accompanying letter. The matter was referred to Mr. Geoffrey Stead, resident engineer, whose report I now have the honour to transmit.

Mr. Stead states that what is necessary is an extension of the wharf 47 feet long and 28 feet wide, with a pier-head or 'L' 75 feet by 28 feet, and a detached breakwater 100 feet from the end of the 'L,' the estimated cost of the work being $13,000.

The estimated cost of the 47-foot extension is $2,830, and by your instructions Mr. Stead was informed, on the 30th ult., that he might procure sufficient lumber for this extension, which he was authorized on the 27th September last to construct by day labour but not for any other work.

So that I think, Mr. Chairman, it must be evident that the statement which was made that the extension of this wharf at Pink Rock was made for the benefit of the company of which C. J. Osman is a director has been pretty well confirmed by the quotations I have made from this return. Not only that, but far worse than the statement I made, it appears that the first year's expenditure of over $2,100 was made by Mr. Osman himself, who employed his own men to do the work, who purchased his own supplies, and who simply sent up to the Department of Public Works here these bills amounting to that sum of money which were paid out of the public treasury—

Mr. PUGSLEY. He charged actual cost without any profits at all.

Mr. CROCKET. I am not, at the present moment, discussing actual cost. I may have occasion to show what Mr. Osman's idea of actual cost was before I get through, by reference to some items in his accounts. This amount was paid out of the public treasury to Mr. Osman for work done by him without reference to the government and before the Department of Public Works had given any directions or instructions in the matter at all.

Mr. J. HAGGART. Who certified to the amount that was paid to Mr. Osman?

Mr. CROCKET. Mr. Stead. He simply forwarded the accounts. Mr. Osman sent his accounts in to Mr. Stead.

Mr. PUGSLEY. The hon. gentleman knows more than that. Mr. Stead certified to the accounts.

Mr. CROCKET. I said, that.

Mr. PUGSLEY. No, the hon. gentleman said that Mr. Stead simply forwarded the accounts. He certified to the correctness of the accounts.

Mr. CROCKET. The hon. member for Lanark (Mr Haggart) asked who certified the accounts and I said Mr. Stead.

Mr. PUGSLEY. No.

Mr. CROCKET. I said that Osman forwarded the accounts to Mr. Stead, that Mr. Stead forwarded them to the department at Ottawa and, of course, a certificate 'fair and reasonable' can always be got in every case in New Brunswick—just such a certificate as we had in connection with the Richibucto wharf, and just such certificates as we had in many other cases in New Brunswick which were not in accordance with the facts.

Mr. J. HAGGART. Would that not be a criminal act?

Mr. PUGSLEY. What would be a criminal act?

Mr. BOYCE. Falsifying a certificate.

Mr. PUGSLEY. Who said it was falsified?

Mr. J. HAGGART. The money was paid through the Auditor General's Department on a false statement of facts.

Mr. PUGSLEY. Even the hon. member for York (Mr. Crocket) has not made such a statement.

Mr. J. HAGGART. Then I make the statement based upon his statement of the case.

Mr. PUGSLEY. The hon. gentleman has no foundation for making that statement, because, even according to the statemen

of the hon. member for York, what took place was that Mr. Osman furnished the accounts showing the material and expenditure on day labour, item by item.

Mr. J. HAGGART. Do you mean to say that the Auditor General had any knowledge that he was paying over money that had been expended on this man's own wharf?

Mr. PUGSLEY. It just shows that my hon,. friend has been entirely misinformed as to the ownership of the wharf. If my hon. friend will look at the agreement which is on file in the Department of Public Works he will see that the right to the wharf and the right to collect wharfage on this wharf, which was built by the Albert Manufacturing Company, was taken over by the Crown and that the Crown owns all this extension which was made to it. This is the property of the Crown and the work was done properly in connection with this Crown wharf.

Mr. J. HAGGART. But there was no agreement by which moneys were being expended under the direction of the owner of the wharf.

Mr. PUGSLEY. This wharf is not owned by Mr. Osman. It is owned by the Crown.

Mr. J. HAGGART. It is the extension that he owns.

Mr. PUGSLEY. No. Under the agreement on file all the rights of the Albert Manufacturing Company in this wharf, except the solitary right to have their own vessels lie there, were transferred to the Crown. The right of way of the public and everything connected with it are vested in the Crown and this was an extension of a wharf owned by the Crown.

Mr. J. HAGGART. I do not understand it.

Mr. PUGSLEY. Of course you do not, because the hon. member for York has not explained it.

Mr. DEPUTY SPEAKER. The hon. member for York has the floor.

Mr. J. HAGGART. I beg the hon. gentleman's pardon.

Mr. CROCKET. I was going to deal with that question. I made the statement that it appeared that that extension was built for the benefit of the Albert Manufacturing Company, of which Mr. Osman was the managing director, and that the first year's expenditure was made by him without any direction at all from the Public Works Department and that the money was paid out of the public treasury to pay his bills before there was any foreman representing the government or any inspector or anything else. In addition to that fact it appears that this property is not the property of the Crown, and if the minister made that statement this afternoon, he states what is incorrect. This wharf was the property of the Albert Manufacturing Company. It is quite true that there was a sort of sham agreement entered into to give this thing some colour, an agreement with Osman that he would graciously allow His Majesty the King to charge wharfage on all vessels other than his own, when the fact is that the wharf is so situated that there never had been and never will be any other vessel there, but the vessels of the Osman concern. That agreement that the minister speaks of is quite transparent, and any one reading it will see that it is of absolutely no avail. The minister stated in answer to my hon. friend from Algoma in reference to another proposed wharf extension in Ontario, that the government could not extend the wharf or make any expenditure upon a wharf without first acquiring a title to it. He made the same statement this afternoon before this item was reached that my hon. friend would understand of course, the government could not do such a thing unless it had acquired a title. In this case they have not acquired the title and there is no other agreement except the one I have named which amounts to nothing at all except that it provides that Mr. Osman will allow the King to charge wharfage, but the property remains in the Albert Manufacturing Company just as it did at the beginning, so that this is an absolute case of the public moneys of the country being used for the improvement of the private property of companies and of private friends of the Minister of Public Works. I referred the other night to the matter of the work at Dalhousie. These are only two samples; this thing is going on I have no doubt in the other provinces of this Dominion.

Mr. PUGSLEY. Mr. Chairman I must ask you to see that my hon. friend confines himself to the item under discussion. We will come to Dalhousie later, and I will be glad to discuss it with my hon. friend to his heart's content.

Mr. DEPUTY SPEAKER. I do not think the reference so far to Dalhousie is out of order, but a prolonged discussion would be.

Mr. CROCKET. I can quite understand that the minister does not want to hear more than one thing at a time.

Mr. PUGSLEY. It tends to a clearer discussion and to coming to an issue.

Mr. CROCKET. I wish I had the time to give a series of the things of this kind that are going on in New Brunswick, but I ask the House and the committee to consider this as a sample of what is going on. It is time for the Committee of Supply of this House to shut down on this

kind of thing. There are hundreds of places in Canada urgently requiring money for legitimate public works. I have them in my own constituency. I referred to the case of a station required in Fredericton. The Minister of Finance admitted the absolute necessity for it, the Minister of Railways admitted its necessity, but last year we were told there was no money for it. Yet here are $15,000 or $20,000 going into the pocket of the Albert Manufacturing Company to improve their property, and $25,000 or $30,000 going into the pockets of the Loggies' to improve the property of the Dalhousie Lumber Company in which the Minister of Public Works is a shareholder. I do not object for a moment to legitimate expenditures. I believe whereever there are cases in which expenditure is required, parliament should make liberal appropriations, but I do object to expenditures of this kind being made simply for the benefit of friends of the ministry and to improve private property at the expense of the taxpayers of the Dominion. The minister has referred to Mr. Osman's statement that his accounts were actual cost. I notice in the Auditor General's Report of last year a bill of the Albert Manufacturing Company to the Department of Public Works for work and supplies furnished for this work which was for the benefit of this company and among the items are: June 21, to towing thirteen small rafts of timber from Sodom Creek to Pink Rock at $12, $156; lumber at $9 to $16, $563; 3,866 iron bolts at four cents, $154.66; in all $873.74. The Albert Company there charged for towing $563 worth of lumber a distance of three miles, $156. I suppose that would be actual cost according to Mr. Osman's statement. The fact need only be stated to show that this is a most outrageous charge for the Public Works Department to pay—and that was certified by Mr. Geoffrey Stead, as so many other things have been certified from the province of New Brunswick. It is only one of many instances, but a very instructive one for the people of New Brunswick who are familiar with the locality and will be very much surprised to learn the full facts of the case.

Mr. EMMERSON. I am very sorry to have to puncture the very nice little bubble my hon. friend has created in respect to this matter. Did the facts in the case justify it there would have been some excuse for the language which he used, but I think my hon. friend has jumped at a conclusion. The facts are these, that the Albert Manufacturing Company, a company composed of American gentlemen very largely, if not wholly, have been operating gypsum quarries in the county of Albert for a great many years, I think somewhere about half a century. Within recent years Mr. Osman has been their manager and they have very successfully operated these plaster or gypsum mines in that county. Some few years ago over in the county of Westmorland, which I have the honour to represent, there was discovered at Hard Ledge, near what is known as Pink Rock, a show of gypsum, and the people in that community were naturally very much excited and very hopeful as to results. The Albert Manufacturing Company went over and prospected the ground and took leases I think of the quarries. At that time the vessels which were in use in conveying this plaster from the quarries or wharfs at Hillsboro, at the head of the Bay of Fundy to Newark and other ports in the United States, were very small and no steamers were used to freight this plaster.

When the quarry was first opened it was only a prospecting operation, and the Albert Manufacturing Company, not Mr. Osman, expended a large sum of money in endeavouring to discover the extent of the gypsum deposit. Satisfied with the results, they built a small wharf for small vessels and scows, so that they might ship this material from the Pink Rock quarry to their wharfs at Hillsborough in order that it might be marketed in the United States. They made some shipments in this way, but the people in Hard Ledge, where this Pink Rock quarry is situated, were not satisfied with this, as they were hopeful of the development of the gypsum quarrying interest at Pink Rock. It had been demonstrated that the quarry was rich in this product, and the first essential after that was to have transportation facilities; and to that end the people of that community circulated a petition, which I fancy is among these papers, asking the government of Canada to construct a wharf at that point. That petition was circulated to show that there was nothing political in this matter, that it was simply a business proposition and something in the interests of the people; and I want to tell my hon. friend from York that Mr. C. Lionel Hanington, whom he knows as being identified with the Conservative party, with others circulated this petition, which was sent to me as member for the county of Westmorland, with the request that I would use whatever influence I could to induce the Department of Public Works to come to some arrangement whereby the wharf could be built. Now, although that work has gone on and has reached a certain stage of completion, I want to say that it is not solely in the interest of the Albert Manufacturing Company. During the past season, incomplete as it is, it has afforded protection for many fishing boats, vessels and scows. In that immediate vicinity there are also grindstone quarries which are only awaiting development and transportation facilities. The first grindstones ever quarried in Canada were

quarried in that section of the Dominion. Those used around Hamilton, Oshawa and other places in Ontario in the early days came very largely from that section. It was upon the strength of this petition that the work of exploiting this gypsum industry was commenced. It is now an established industry, affording employment to a number of men in a community where previously there was little employment. If this wharf and this harbour were not used by any other firm than the Albert Manufacturing Company, the facts would justify the government in constructing that wharf and creating that harbour in order that there might be established an industry of the size and character of the one which I have attempted to describe. Surely it is important, in the interests of that community, in the interests of the province of New Brunswick, and in the interests of the Dominion, that our gypsum trade shall grow and develop, that our export of gypsum alone should be expanded if it is possible to expand it. To show the extent of this business and of the export traffic connected with the plaster quarries of the Albert Manufacturing Company, I will read an extract from a paper which my hon. friend from Carleton (Mr. Carvell) hands to me, that seems to be apropos, that almost dropped from the clouds at this moment in order to demonstrate the importance of this industry:

Another section of New Brunswick enjoying development is Hillsboro, in Albert county, where gypsum is quarried. Last year was a most prosperous one for this industry, over 85,000 tons of crude gypsum being taken from the quarry and shipped to American ports, whilst 125,000 barrels of plaster were sent broadcast over the Dominion. Hillsboro is growing, and new public buildings of stone, besides residential and commercial structures are in process of erection or in prospect.

What has been realized in Hillsboro in connection with the plaster industry can reasonably be hoped for in the Pink Rock section, and the people were justified in having hopes and aspiration in the same direction, in order to develop this industry, in order that this gypsum quarry might be worked, it was necessary that this wharf should be enlarged and this breakwater constructed. If that were done alone for this industry, it could be justified. My hon. friend has sought to create prejudice against Mr. Osman. Well, take Mr. Osman's letters and there is not a sentence or an expression in them which does not indicate that he was simply anxious to serve the public interest by the development of this industry, and no one who knows Mr. Osman—and I appeal from one end of New Brunswick to the other—will speak of him as other than a most upright, good citizen and very able man. I am sure that my hon. friend the Minister of Public Works (Mr. Pugsley) is to be congratulated on being able to call Mr. Osman his friend. In this matter, with which I have been connected from the beginning, Mr. Osman had to be urged, in the first instance, to develop this industry at Pink Rock. Naturally, he was interested in the development of the quarries at Hillsboro. That business has been growing for years, and its character has changed. A few years ago small schooners came there and carried away their plaster. Now, large steamers are brought there and the wharfs at Hillsboro had to be reconstructed and changed in order to afford accommodation for these steamers. It must be borne in mind that the waters of the Shepody bay are not always to be seen in the river. They have a habit of slipping away and leaving the vessels high and dry on the mud banks, and it is very difficult to induce steamship owners to have their vessels lie aground. The change in the class of vessels which carry away this gypsum made it necessary to change the character of the wharf. Had there been no change in the character of the vessels, the wharf as completed in 1908 would have been amply sufficient, but since that time larger steamers have been found necessary, and it has become imperative to enlarge the wharf and give greater protection. As a matter of fact they could not induce steamers to go in there last year. The urgency of the case was such that Mr. Osman asked me to endeavour to induce the department to commence this work there and then by day labour in order that he might secure all the development of that industry at that particular place. Every letter from Mr. Osman shows him to be a man who is not working simply from selfish motives. Though the manager of the company, and naturally concerned in advancing the interests of the company, he could at the same time ask for these privileges without in any way interfering with the public interest. My hon. friend has spoken much of the charge for towing from Sodom creek to Pink Rock. If he knew the conditions as I do, he would say that the charge is only reasonable. Remember that Sodom creek lies away over what was known as Shepody flats, and you can only reach that creek at high water of the highest tide, and then, after you secure your load, you are kept there a tide, for you must have the top of deep high water in order to have egress from the creek. The mere matter of distance is nothing compared with the conditions, and it is these which make the charge very reasonable. My hon. friend read letters from me. I recommended a very excellent man, Mr. McFadden. He was a very good friend of mine, and I would not recommend any other. He was an excellent man, not only familiar with the construction of the wharfs and breakwaters, but also a good carpenter,

who had some 30 years' experience in the business. He was recommended as a foreman to see that this work was carried on in accord with the specifications and plans, and I venture to say that McFadden saw that the work was properly done. The original work was done under the charge of Mr. Isaac Downey.

Mr. FOSTER. Who appointed Downey?

Mr. EMMERSON. He was accepted as foreman by the department.

Mr. FOSTER. While the work was going on?

Mr. EMMERSON. No. The facts are these. Downey had done the work originally for the Albert Manufacturing Company. Mr. Downey is a man of many years experience in constructing wharfs and breakwaters on the mud flats of the Shepody river and Bay of Fundy. Mr. Osman secured him as a foreman, knowing his qualifications and ability. There is not a man at the head of the Bay of Fundy more capable in work of that character. When I was consulted, I felt it would be to the advantage of the department, if that work were carried on by day labour, to have a man of the standing and character of Mr. Downey in charge. The money was not forthcoming, and the Albert Manufacturing Company did pay it, and it was recouped to them.

Mr. FOSTER. While the work was being carried on, and Mr. Downey was supervising it, was he supervising it for the company, or had he been already appointed, and was he supervising it for the department?

Mr. EMMERSON. He was accepted as head workman for the department.

Mr. CROCKET. In the following year, after the payment of the two thousand dollars.

Mr. EMMERSON. Not in connection with that; that was in connection with the first work that was done and paid for by the government The original work, the nucleus of a wharf, was constructed by the Albert Manufacturing Company, and as I understand it, that has never been paid for by the government. That is an investment that they made, that is a contribution that they made towards the development of this industry at that place, and they have never asked to be recouped. I think they might have fairly done so, I think if justice were done them in the matter of the development of this work, that amount should be recouped to them. But the additional work is being constructed, and it is proposed to build a further work, not only in the line of an L, but in the line of a breakwater to break the seas from the southwest that roll in there from the Bay of Fundy. There are fishing establishments there, there are lumber mills, and they have never had the facilities for shipping. This is the first of the kind. There is not from the extreme point of the Cape Meranguin, which separates Chignecto basin and the Shepody basin, clear around the shores to the waters of the Dorchester river, there is not to be found any shipping facilities for either stone or lumber, or agricultural products, or anything of the kind. In a distance of some 12 of 15 miles, this will be the only harbour, and will afford the only shipping facilities, or wharf facilities, or breakwater. I am sure that this is in the general interest of the country, I am sure that it is a work that can be justified. It is not in any sense, I say it in all sincerity, a work for a private individual or a private corporation. It is not so recognized in the county of Westmorland. I make this challenge, that there is not a man on either side of politics in that section of Westmorland, either in the parishes of Dorchester or Sackville, who would hint at such a thing, much less approve the statement or the insinuation thrown out by the hon. member for York (Mr. Crocket) this afternoon. It is not necessary that I should defend the department; they need no defence, and if they did, the hon. the minister can attend to that part of the business. I am speaking here as a citizen of Westmorland who knows the facts and conditions, and I think it is but fair that hon. members of this committee should know the facts. There is nothing political, there is nothing savoring of favouritism to any friend, individual, or corporation.

Mr. CROCKET. It is not surprising that the hon. member for Westmorland (Mr. Emmerson), who has been in this thing from the beginning, should attempt to defend this transaction in the House. He started out by saying that he was going to refute some of my statements, but I leave it to this committee to say whether a single statement of mine has been refuted by the hon. gentleman. It is true that he has elaborated upon the development of the industries of the province of New Brunswick, and has shown how important it is that assistance should be given to the development of such industries as that of the Albert Manufacturing Company. What has that to do with this case? My statement was that this expenditure was made for the benefit of the Albert Manufacturing Company—

Mr. EMMERSON. And my statement was that it was made for the benefit of the people in that section of the country wherein the industry was being developed, and which could not have been developed without the construction of this wharf.

Mr. CROCKET. I was proceeding to say that this expenditure was made for the benefit of the Albert Manufacturing Company, and I relied for proof of that statement upon the returns which I obtained from the Department of Public Works itself. I have shown, all through the correspondence, that it was at Mr. Osman's request that the work was done; it was for the shipment of gypsum for the company and not only that, but the first expenditure that was made was made by the company themselves, and it was recouped to them out of the public treasury, for work performed entirely under Mr. Osman's direction before any inspector or contractor had been put upon it to represent the Public Works Department. So far as the member for Westmorland's statement is concerned that this wharf will be used by fishing boats in Shepody bay, that is entirely beside the question, because it is not such a wharf as would have been built for the accommodation of fishing boats. Is there any question, from the return I have read, that this wharf was built to suit the particular purposes of the Albert Manufacturing Company? I am as anxious as any body to see industries in the province of New Brunswick developed, we are all anxious to see industries developed; but when companies are promoted to establish industries which are presumed to be profitable, is it the policy of this government to build wharfs for such companies? If that is their policy, then let us go on and grant bonuses out of the public treasury for these companies. But that has not been the policy heretofore—avowed, anyway, although it is the practice that has been adopted in many places, to make these grants for the promotion of the interests of private companies. Now my hon. friend sought, as has been sought in so many other cases, to justify this by stating that some Conservatives approved of this expenditure. I do not care whether any Conservative carried around a petition or not. The hon. gentleman sought to justify the Newmarket canal appropriation the other night, upon the ground that there was a Conservative or two in the delegation that appeared before him as Minister of Railways. Is that all the evidence this House wants to dispose of a statement of this kind, that some Conservative was in favour of the work?

Mr. EMMERSON. That is to show that it was non-political.

Mr. CROCKET. I have never been able to find in the returns any petition, it may be there is such a petition, but I am quite sure it is not in the return that has been brought down. But surely it is not enough to defend a transaction of this kind to say that some people petitioned for it. I say there is no manner of doubt, I make that statement upon the return furnished by the Department of Public Works, that the wharf extension was built primarily at the request of Mr. Osman for the benefit of the company of which he is a director, and this is what the hon. member has not been able to refute. But surely the hon. member for Westmorland does not seriously expect this House to take the statement he has made this afternoon with reference to this question as a refutation of the statements which are contained in an official return brought down by the Department of Public Works. Now my hon. friend has referred to Mr. Osman, following the line of his friend and successor in the Cabinet, and has spoken eulogistically of Mr. Osman.

I am not saying anything in criticism of Mr. Osman; I am criticising the Public Works Department. Mr. Osman, I assume, is like many other people—if they can get their property improved out of the public treasury they will do it, particularly if they have a pull with the minister in charge. The hon. member (Mr. Emmerson) has referred also to Mr. Downey. I was not making any reference to Mr. Downey's experience or capacity. I simply stated what the return showed—for I have my information, nor from any communication from that section but from the files of the department—that this work was carried on for the first year absolutely under the management and control of Mr. Osman and a foreman appointed by him. The expenditure was incurred in that way, much of it for supplies that appeared, from the Auditor General's Report, to have been furnished by the company itself. The accounts for these supplies were sent by the company to the Department of Public Works. Just as if the work had been carried on under the direction of the government which was not the fact. The hon. member for Westmorland (Mr. Emmerson) referred to the fact that Mr. McFadden was a very estimable gentleman. Of course, all these inspectors are very estimable gentlemen and are always able to get certi ficates of character from the member for the county and also from the minister re sponsible for the appoitment. I know nothing about Mr. McFadden except that the hon. member for Westmorland recommended him as inspector on a work long after it was begun, and that the minister of the day had him appointed as inspector and then, to suit Mr. Osman, a foreman whom he had appointed and who had carried on the work solely under his direction, was appointed as conductor or foreman of the work just as before. The engineer reported that this would be satisfactory to Mr. Osman and it was done to suit Mr. Os-

man's purposes. I read a letter asking if, when Mr. McFadden was appointed as inspector, he would go on and act the same as though a contract had been let, or act as foreman. And, though the practice is to appoint inspectors only where contracts are let, they appointed in this case Mr. McFadden the inspector to inspect the work which was going on by day's labour, with a foreman under him and a subforeman under him. So, the whole matter was worked through exactly as Mr. Osman, the friend of the Minister of Public Works, and of the hon. member for Westmorland, desired. Mr. McFadden got his job as inspector and Mr. Downey held on to his as foreman, just as before. The hon. member for Westmorland stated, and hon. members generally must have observed the statement that the company had built the wharf in the first instance at their own expense to develop their own property as they should have done. Why, then, should this House be called upon to furnish means to extend that property without, at least, the property being taken over and conveyed to the Crown as in other cases? I say that the transaction is indefensible, and notwithstanding the statement of the hon. member for Westmorland, is one which not only the members of the Conservative party but many Liberals in that district will disapprove. The hon. member (Mr. Emmerson) said that I could not find a man, Liberal or Conservative, in Westmorland who would find fault with this transaction. I have many communications on this matter, from responsible people, calling my attention to the case and urging it as a case that should be brought to the attention of the House. It is very easy for the hon. member to make such sweeping statements, but those statements are not in accordance with the facts; and I believe he knows it. In any case, the statement of the hon. member does not affect in the slightest degree the proof adduced from the official file that this work was entered upon at the request of Mr. Osman or the manufacturing company of which he is the managing director, that it was for their benefit, and that the work was carried on practically by them and under their direction and control and yet paid for out of the public treasury.

Mr. JOHN HAGGART. I have listened carefully to this debate. I know nothing about whether this wharf was necessary for the locality or whether it is only to suit private parties. What I was concerned in was the statement made by some hon. members in reference to the payment of money on the wharf. It seems that a certain sum of money was voted to be expended on a wharf in this locality. The gentleman who owns the wharf employed a foreman, Mr. Oscar Downey, to extend the wharf or make repairs upon it.

Mr. PUGSLEY. Not to make repairs, but to build an addition.

Mr. JOHN HAGGART. At any rate, he makes an expenditure of $2,100 upon the wharf for labour and supplies on this work. That expenditure was not under the control of the department. I would ask, is there any confirmation of the statement of the hon. member that Mr. Downey was appointed superintendent of this work by the department?

Mr. PUGSLEY. Yes. I will explain, as the hon. gentleman has asked the question. When it was proposed to undertake this work by the day, Mr. Osman was requested to take steps to get material and proceed with the work, and Mr. Downey was suggested by him as foreman and approved by the department. What Mr. Osman did he did for the department, and not upon his own property or upon the property of the Albert Manufacturing Company, but upon the property of the Crown.

Mr. JOHN HAGGART. My information is, as shown by the report, that $2,100 was paid out by Mr. Osman, part of which was in the payment of Mr. Oscar Downey, the foreman, and other men employed in the work, and part for supplies. Mr. Downey was confirmed by the department after the expenditure of the $2,100.

Mr. PUGSLEY. I do not think that is correct. I may say, it is extremely inconvenient to argue in this Committee of the Whole matters relating to accounts which are now before the Committee on Public Accounts. It is contrary to the rules to do it. My hon. friend (Mr. Crocket), I am sure, has been speaking of matters which do not appear even in the copy of the papers which he has submitted to the hon. member for Westmorland (Mr. Emmerson). I have looked them over carefully and find no statements to corroborate what he has said. The hon. member must have got some information from the examination of accounts which are now before the Public Accounts Committee. In that committee, witnesses can be called and the facts brought out. It is exceedingly inconvenient to discuss the matter when we have not the facts before us. I am sure that my hon. friend from South Lanark (Mr. John Haggart) will see that. It is exceedingly inconvenient to me, because my attention has not been called to the matter. It seems to me that the Committee on Public Accounts, to which these accounts have been referred, is the place where these matters should be discussed.

Mr. CROCKET. As to the statement of the minister that these things do not appear in the papers, I have the letter of Mr.

Geoffrey Stead in which he makes the statement specifically that this expenditure was made by Mr. Osman, that Downey had been appointed by him, and that the accounts, aggregating upwards of $2,000, he had sent to the department to be paid, and a subsequent letter asking that the work be allowed to go on in that way.

Mr. PUGSLEY. Am I not right in this, that in the copy of the papers which the hon. gentleman handed over to the hon. member for Westmorland there is no account contained?

Mr. CROCKET. The account itself is not there, but he says in his letter that he is inclosing the amount, and here is the account in the Auditor General's Report. Mr. Downey was not appointed until after the expenditure was incurred and paid by the department.

Mr. JOHN HAGGART. Here is an expenditure of $2,100 paid in some way by the department. There must have been collusion between some of the officials, or the accounts could not have passed the Auditor General's Department. An improper payment comes under the criminal law. Any party can be prosecuted and punished for the payment of any sum of money out of the treasury of the country in such a manner as this has been paid. The Auditor General's Report would lead you to believe that this $2,100 was paid in the ordinary form. The Auditor General must have believed that Downey and the other parties were employed under the direction of the Public Works Department, and their payment authorized in the regular way, or he never would have paid the account. If this account is paid, it was because he was deceived by the Department of Public Works, or by some one who gave him the information. The point I want to emphasize is the improper payment of this sum of money. It is claimed that Mr. Oscar Downey was appointed before the expenditure was made. If he was paid before, why does Mr. Osman pay him his wages? Why does he not come to the Department of Public Works for payment? Here we have the payment of the accounts of private individuals amounting to $2,100, and what I object to——

Mr. PUGSLEY. The payment to Downey and others does appear in the Auditor General's Report. I find in the report:

Conductor, Oscar Downey, 32 days at $2.50, $80.

Mr. J. HAGGART. Exactly. It appears in the Auditor General's Report as a payment by the Crown to these individuals, when the fact is, if the statement of my hon. friend from York is correct, the payment was made by Mr. Osman before Mr. Stead issued the instructions from the department to commence the work. I am protesting against the irregularity of this payment. I am not saying whether this public work is necessary or not, because I am not acquainted with the locality. An expenditure for the benefit of a private individual may benefit to a large extent the country around. I am not criticising that at all, but what I am criticising is the expenditure of money voted by this House in the manner in which it has been expended by the Public Works Department.

Mr. PUGSLEY. I think perhaps I ought to say a few words in reply to my hon. friend. I do appeal to him, and I ask him whether he has any facts before him, or are there any facts before this committee, which would warrant him in saying that there has been some criminal conduct on the part of the officials of the department?

Mr. J. HAGGART. Yes.

Mr. PUGSLEY. Has my hon. friend seen the accounts?

Mr. J. HAGGART. I saw the accounts in the Auditor General's Report.

Mr. PUGSLEY. Here is the Auditor General's statement:

Pink Rock, Shepody bay, New Brunswick: Extension of Wharf.	
Inspector, G. S. McFadden, services during May and June, 29 days at $2.50	$ 72 50
Conductor, Oscar Downey, 32 days at $2.50	80 00
Sub-conductor, Warren Downey: 10 days at $2; 4-in. planks, 10,477 ft. at $12; 10x10 hemlock, 1,728 ft. at $13; ballast, 44·3 yds. at 80c.; scow and 2 men, 19 days at $8; sundry outlay, $1.50	357 14
Carpenters, 88·4 days at $2, 91 at $1.75; labourers, 24 days at $2, 237·5 at $1.50	740 30
Albert Mfg. Company: rd. hemlock timber, 43,429 ft. at $9; sq. spruce and hemlock, 10,054 ft. at $13; bolts, 3,866 lb. at 4c.; towing timber, 13 rafts at $12; sundries, $41.54	873 74
Small payments: rope, 20 lb. at 18c., 110 at 16c.; spikes, 3 kegs for $10.50; sundries, $5.11	36 81
King's Printer	17 25
	$2,177 74

Let me ask my hon. friend what there is either in this account or in the copy of the papers which the hon. member for York has produced that shows that there is a single false or erroneous statement as to the expenditure or payment?

Mr. J. HAGGART. The hon. gentleman seems to have misunderstood what I said. This $2,100 was expended by a private individual on that wharf before instructions were issued by the department for the commencement of the work.

Mr. PUGSLEY. The hon. gentleman is entirely mistaken.

Mr. J. HAGGART. Well, then, there is a letter read by my hon. friend from York in which Mr. Osman sends these accounts to the department and asks for the payment of them.

Mr. PUGSLEY. I know my hon. friend is wrong in this——

Mr. J. HAGGART. Let us hear how I am mistaken.

Mr. PUGSLEY. When he says that this work was undertaken by Mr. Osman without the consent of the Department of Public Works.

Mr. J. HAGGART. There is no evidence of the department's consent.

Mr. PUGSLEY. I beg my hon. friend's pardon; there is. It is contained in the copy of a letter from Mr. Osman, which is on file, and which the hon. member for York had the opportunity of reading, but which he did not read. In that letter Mr. Osman asks to be relieved from the duty and that somebody be appointed to take charge of the work. My hon. friend from Lanark perhaps could not be expected to take the trouble to examine that letter. Perhaps he thought that he could rely on the statement made by the hon. member for York.

Mr. CROCKET. So he could.

Mr. PUGSLEY. If he had taken the trouble to read these papers he would have seen the statement that Osman, who had been authorized to take charge of these works, prayed to be relieved of the work and asked that somebody else be appointed to take charge of it.

Mr. J. HAGGART. Will you state another instance in the history of the department in which the owner of a wharf was told to go on with the extension of that wharf, hire labourers and do it at the expense of the government?

Mr. PUGSLEY. There is where my hon. friend has been misled again. My hon. friend treats it as if this extension were on the property of Mr. Osman, that it was work which was being done for Mr. Osman, or for Mr. Osman's company. As to this my hon. friend is entirely mistaken. When I became Minister of Public Works I found these facts: The Albert Manufacturing Company had built a wharf 225 feet in length and 20 feet in width. I found that there had been a petition presented on behalf of the residents of Rock Port, Hard Ledge, Grand Anse and Pink Rock, in Westmorland, representing that this wharf should be extended and that greater accommodation and greater facilities should be given to the public. I found that petition had been presented by the hon. member for Westmorland, who had urged very strongly that this improvement should be made. Now, then, I determined that I would act upon the request of these petitioners, and I may say that as long ago as 1906 or 1907, before I became Minister of Public Works, there appeared an appropriation in the estimates for this purpose. I decided to carry that out. It was supposed that the cost would be $13,000 or $14,000 or $15,000. Mr. Osman was of the opinion that by making a short extension of some 47 feet the necessary public accommodation would be got, and he suggested that instead of going to the larger expenditure we should make this smaller expenditure. What did we do before we undertook it? I felt that it was not proper that we should make any extension or addition to this wharf unless we had control over it on behalf of the Crown. Mr. Osman, on behalf of the Albert Manufacturing Company, did not feel that they should deed to the Crown, free of charge, this large wharf, 225 feet in length, and in the end this agreement was made. My hon. friend will find it in the copy of papers submitted to the House. What was the agreement? It was that the Albert Manufacturing Company should give to the public a free right of way over this wharf and that the Crown should be entitled to collect wharfage from all vessels except the company's vessels using this wharf, and that, so far as this 225 feet was concerned, the company bound itself for all time to keep that part of the wharf in repair and as a return for that use of their wharf it was agreed that the company should be free from wharfage so far as the government wharf and the old wharf were concerned.

Mr. SPROULE. Is it an agreement of purchase and sale?

Mr. PUGSLEY. It is a very good agreement from the standpoint of the Crown. The result was that instead of paying out any money for the 225 feet of wharf the Crown gets it for nothing; it builds its end as an addition and the public get a free right of way over the other part, which the company keeps in repair, and all the Crown does is to build the extension.

Mr. SPROULE. Was there a conveyance to the Crown or only an agreement of the two parties to the contract that one shall do certain things and the other certain other things?

Mr. PUGSLEY. It is a conveyance of an interest, a free right of way to the public over this wharf.

Mr. CROCKET. A conveyance of a right of way?

Mr. PUGSLEY. Yes.

Mr. CROCKET. There is an agreement?

Mr. PUGSLEY. It gives a free right of way.

Mr. CROCKET. And the right to charge wharfage on all other vessels except their own?

Mr. PUGSLEY. Yes, not only vessels lying at the new wharf, but lying at the old wharf, except those of the company.

Mr. hon. friend from York (Mr. Crocket) with that unhappy faculty he has of seeing something suspicious in everything which is done by a political opponent, suggests this extraordinary fact that Mr. Osman after it had been supposed it would be necessary to build a wharf which would cost $15,000, actually suggests it would be well to reduce it and bring the cost within the appropriation of $5,000 for that year. And so, said the hon. member, that that work might not only go on at once and be done by day labour——

Mr. CROCKET. That is what the correspondence says.

Mr. PUGSLEY. My hon. friend knew perfectly well that Mr. Osman gives an explanation in one of the letters he had in his hand. He said that at that time he supposed the extension of 47 feet would be sufficient by dredging out a berth for the vessels beside the wharf, and that it would not be necessary to go to the further expense, but he says that the masters of three ships which the company had chartered to load plaster refused to go to the wharf because it was not extended out far enough and did not afford sufficient shelter, and that is the reason and the only reason why the plans were afterwards changed, and we went back to the original design to build out 75 feet and also build a breakwater to make a safe harbour. And yet with the copies of the letters in his hand, the hon. member thought it was proper to make the insinuation——

Mr. CROCKET. I read the very letter.

Mr. PUGSLEY——and that is the time I was obliged to ask the hon. member to raise his voice so that we on this side of the House could hear him.

Mr. FOSTER. Could the minister give the dates when the extension was asked, when the department decided to carry out the extension of the work, when the work commenced, and when Mr. Downey was appointed?

Mr. PUGSLEY. I have not all these particulars now but can procure the dates. The application was made in 1906; the project was submitted to the chief engineer to build an extension on July 30, 1906. The work was begun in 1907, and 1908 when I think it was decided to build only the 47 foot extension.

Mr. FOSTER. When was that order given.

Mr. PUGSLEY. Some time in the fiscal year 1907.

Mr. FOSTER. These dates will tell the whole story.

Mr. PUGSLEY. Later on, I think in the following year, it was decided to build the extension when it was represented by Mr. Osman that vessel owners had refused to come to the wharf. I think the reasons given by Mr. Osman were amply sufficient and that we were justified in deciding to make the extension because it would be useless to expend that money unless the public could be accommodated. I do not intend to go into the details of these accounts beyond saying that it will be found there is a letter from Mr. Osman, in which, speaking of the timber, he says that if the timber is cut off the company's land it will be got at a lower cost than elsewhere, and I am sure that those who know Mr. Osman will corroborate what the hon. member for Westmorland (Mr. Emmerson) has said that he would not have any desire that he or his company should make a dollar out of supplying timber or anything else for this wharf.

I invite members of the committee who feel an interest in this matter to take the account to be found at page V-187 of the Auditor General's Report and look at the prices charged and then determine whether or not any excessive price has been paid. I find that for hemlock, 10 x 10, we paid $13 a thousand. I think no one will say that that is not a reasonable, that it is not a cheap price.

Mr. SPROULE. It is not the price that is paid but the principle, the man buying from himself.

Mr. PUGSLEY. Round hemlock timber at $9 a thousand. I venture to say $3 a thousand less than it could be bought from any one else. Square spruce and hemlock, 1,054 feet at $13. No one will say that is not a reasonable and fair price. It does seem to me that when you bear in mind that Mr. Osman undertook this work at the request of the responsible head of the department, that he undertook it, as we then thought, in the public interest and that it is not suggested that a single dollar has been paid beyond a fair and reasonable price, and when it is remembered that every account was certified to by the resident engineer in the usual way that the prices were fair and reasonable, I do not see what my hon. friend from York (Mr. Crocket) has to complain of. He says that this is a sample of what is going on in New Brunswick. Let me say to my hon. friend that if he is not able to produce any stronger testimony that

there is any improper expenditure on the part of the department he will make but little headway in the province from which we both come, and where we are both reasonably well known. I see nothing in this account in regard to which any reflection can be made on the department.

Just a word in regard to another suggestion made in reference to myself. He thought it necessary in the discussion of this item to go a good many miles away to Dalhousie in the county of Restigouche, and to state that the Department of Public Works was dredging out and improving a wharf property which belonged to the Dalhousie Lumber Company of which I happen to be a shareholder. I can appeal to my hon. friend who represents the county of Restigouche (Mr. Reid), a gentleman who stands as high as any other member of this House, as to whether or not the dredging work which was done there was done solely for the benefit of the Dalhousie Lumber Company. The dredge employed by the department was doing the work of improving the harbour of Dalhousie. Well, it is not my fault that I happen to be interested in the Dalhousie Lumber Company. It happened that some years ago I did take some stock in that company. It is my misfortune that, as I have made a little money from time to time, I have not laid it up in savings banks or bought bonds with it, but have invested it in industrial enterprises and in property in different parts of the country. Let me give to my hon. friend a pointer of which he may avail himself when we come to discuss harbour improvements for the city of St. John. Let me tell him that I happen to own property in that city, and he can make as strong a point in regard to the improvements there as he does in regard to the improvements in the port of Dalhousie. From the fact of my owning property in the city of St. John, improvements made in that port will to a certain extent benefit my property as that of every other citizen of that city. Let me give him another pointer. I happen to own property in the Northwest, and when my hon. friend goes back to his constituents, let him tell the people in the back country that all this development which the Minister of Public Works is seeking jointly with his colleagues to bring about in the Northwest, is really going to confer a benefit upon him, and that it is a dreadful thing that he should be interested in properties in various sections of the country which are likely to be benefited by the development which is taking place. But let me tell my hon. friend I am not going to stop making improvements in my department wherever I can develop trade, improve the facilities for doing business, make the people more prosperous and enable them to carry on their undertakings to better advantage, because those improvements may indirectly benefit myself as one interested in the community where the work is going on or having some interest in the country at large.

Mr. CROCKET. The minister in reply to a statement made by the hon. member for South Lanark (Mr. Haggart) asked what evidence there was that the $2,018.96 set out in the Auditor General's Report had not been paid in the regular way to the parties therein named. I have already laid before the committee the evidence from the files of the department, namely, a letter from Geoffrey Stead of the 13th of May, 1908, in which he incloses the company's account, amounting to the very sum set out in the Auditor General's Report, and calls attention to the fact that the expenditure was made by the company who were asking the payment to be made to themselves.

Mr. PUGSLEY. In this very return which my hon. friend had in his hand, does not Mr. Osman say that he had undertaken this work at the request of the minister, and then asks to be relieved of it and to have some one else take it?

Mr. CROCKET. If there is such a statement, it did not come under my notice. It is entirely new to me that Mr. Osman was asked by the Department of Public Works to construct the extension of their own wharf. If he was, it is very much worse than the case already presented. If the Department of Public Works, without calling for tenders, simply authorized the owner of the wharf to build an extension of his own wharf, and placed the matter absolutely in his control, how is it that the account is set out as it is in the Auditor General's Report? Surely the minister must be mistaken, because if Mr. Osman had authority to do that, the payment would appear as made to him. There is no question, from the return brought down, that this money was expended by Mr. Osman or by the company of which he is managing director, and that account was forwarded to the Public Works Department, and was paid out of the public treasury just as if the work had been constructed under the direction and supervision of the department. The minister has taken occasion to refer to the statement I made in reference to the dredging that was done at Dalhousie, and has stated that he is the owner of considerable property at St. John and in the Northwest, and that there would be just as much justification in my making the statement that he was benefited by the expenditure of his department in the city of St. John and in the Northwest as at Dalhousie. Surely the minister does not expect to deceive this House by such a

statement as that. At Dalhousie the dredging was done in front of and beside the wharf of the Dalhousie Lumber Company of which the minister is a stockholder, while other work was neglected.

Mr. PUGSLEY. What other work was neglected?

Mr. CROCKET. The dredge was employed month after month in 1908 and in 1909 dredging at the wharf of the Dalhousie Lumber Company, while the dredging at the deep-water public wharf was neglected to the detriment of the public interest.

Mr. PUGSLEY. I just wish to tell my hon. friend—and if the hon. member for Restigouche (Mr. Reid) be here, he will corroborate me that no other work of equal or greater importance has been neglected. I know that the Dalhousie Lumber Company ships from fifteen to twenty five million feet of lumber every year. They have a large mill and employ quite a large number of people. I do happen to know that they have an enemy there, a man who tried to block their enterprise from the time they started, and who is allied politically to the hon. member for York. He is possibly the man from whom my hon. friend has been getting certain information, but I can assure the committee that it has never been brought to my notice that any dredging of any kind in the harbour was of more importance to the public interest generally than the dredging done since I have been Minister of Public Works.

Pointe du Chêne, New Brunswick—repairs to and stone slope along base of breakwater, $3,000.

Mr. PUGSLEY. This is the point of connection between the railway and the island steamers. This is work which has to be done every year.

Mr. CROCKET. How much was spent last year?

Mr. PUGSLEY. I have reason to suppose that the whole $5,000 has either already been spent or will be spent by the 31st March next. That is the estimate of the chief engineer.

Quaco harbour—part reconstruction and extension of east pier, $15,000.

Mr. PUGSLEY. This includes reconstruction of the head block of the pier at the east side of the entrance, also an extension of the pier, and a further length of sixty feet of crib-work.

Mr. FOSTER. What will be the whole cost?

Mr. PUGSLEY. About $50,000.

Mr. FOSTER. What is the business done there now?

Mr. CROCKET.

Mr. PUGSLEY. General business—lumber, fish, manufacturing, and this is required as a harbour of refuge.

Mr. CROCKET. Is the work under contract?

Mr. PUGSLEY. Yes, to Charleson and Burns of Ottawa. The amount of contract is $32,900.

Mr. CROCKET. How much has been paid on account?

Mr. PUGSLEY. There was expended to the 31st September, 1909, $25,633.

Richibucto Cape—breakwater wharf, $5,000.

Mr. PUGSLEY. This is for building a breakwater about six miles above the mouth of the river. The breakwater is 375 feet long, of which 225 feet is 15 feet wide and 150 feet is 20 feet wide; pier head 200 feet long on the inside face, and 30 feet long. The inside face is 25 feet in width. Crib-work estimated 220,000 cubic feet. Cost $17,600 when completed. Total estimated cost with contingencies $20,000. The expenditure last year was $9,080, we expect to spend this fiscal year $5,000, and are asking $5,000 more, making a total of $19,-118.

Mr. FOSTER. What public purpose will this work serve?

Mr. PUGSLEY. It will afford safe anchorage and give a landing place at a point nearest to a very valuable fishing ground. It will be the best harbour of refuge in that vicinity. It is also the centre of a good farming country. The yearly catch of lobsters is about $15,000 to $16,-000 and herring about $12,000. There are forty-one boats engaged in the fishing industry, and they require a harbour of refuge.

Mr. CROCKET. Was not the work done last year, completely washed away?

Mr. PUGSLEY. I have no intimation to that effect.

Mr. CROCKET. My information is that the whole work done last year was completely washed away by a storm, and furthermore that the work done the year before was washed away last year.

Mr. PUGSLEY. The hon. gentleman is misinformed entirely.

Mr. CROCKET. I have a letter to that effect. The work of last year was completely destroyed by a storm, and every year's work is regularly swept away the following year, so that this expenditure is simply a waste of public money. This letter was written very shortly after the storm occurred. If the department wants to construct something, it would do better to

take a large appropriation and put up something that will stand the test of the weather and not go on making these expenditures from year to year to no purpose. This is like other expenditures made in that county—simply to put into the hands of political heelers public money. The object of the appropriation seems to be more for the purpose of circulating money among those who are doing party service than for any public benefit. It is very remarkable, if this work has been swept away by a recent storm, that the department has not heard of it. Although in one sense it is not so surprising, since the work has been in the hands of the persons who have been desirous of seeing it carried on simply for the purpose of participating in the expenditure. Mr. J. D. Irving has also been receiving large amounts of money on account of this work. Reference has been made to the fact that this same gentleman has been drawing $2 a day for a scow worth $50. He had been receiving that rental year after year, for a scow which cost hmi $150; in four years he has received over $600 rent from the government. This same gentleman has been selling hemlock stumpage for the purpose of this work. I understand the logs are cut by men employed by the government, and paid by the government, and Mr. Irving receives $4 for what he pays the local government 40 cents for. The men employed by the government do all the cutting and do all the work that is involved in the removal of the logs, which means that he gets $4 for stumpage for which he pays only 40 cents to the government.

Mr. PUGSLEY. I hope my hon. friend will seek to verify the statements, which may come to him from time to time. I am sure he has been the victim of a good deal of exaggeration. Now he made a similar statement with regard to Richibucto Cape some days ago, and my deputy informs me that he has made inquiry and he finds my hon. friend was entirely misinformed with regard to it; and he is not unlikely to have been misinformed also with regard to the breakwater at Richibucto Cape. We have no information in the department that the breakwater has been washed away. With regard to Mr. Irving selling material for a breakwater, I make the same remark. This is before the Public Accounts Committee. It appears in the reports of 1908, and if the hon. gentleman thinks that too much money has been paid to Mr. Irving or anybody else, I would invite him to have witnesses before the Public Accounts Committee to that effect.

Mr. CROCKET. With regard to the statement I made, I received it from the largest property owner at Richibucto Cape.

Mr. PUGSLEY. What is the name?

Mr. CROCKET. Mr. Richard O'Leary. He would have more interest in this work than any one else.

Mr. PUGSLEY. Is that the gentleman who wrote that letter to Mr. Waterbury?

Mr. CROCKET. It is the same Mr. O'Leary, from whom Thomas O. Murray bought the sawdust wharf for $700, to sell to the government for $5,000.

Mr. PUGSLEY. A wharf in respect of which no man from Richibucto, with the exception of Richard O'Leary, could be produced and swear that the property was not worth $5,000.

Mr. CROCKET. I do not propose to discuss the Richibucto wharf now, we will have occasion to discuss that in more detail later on. But the minister asked me to verify these statements. I have made statements here in reference to expenditures in Kent county, based upon information received from that county. I have afterwards had the opportunity of examining witnesses, upon oath, in reference to those statements, and in every case, I may say the information which I had received was completely borne out by sworn evidence, even though some of it had to be extracted from unwilling witnesses. Unfortunately when Mr. Irving was on the stand, I omitted to question him about the item of hemlock stumpage, but I have no doubt had I done so, my information in this matter would also have been verified.

At six o'clock House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

MANITOULIN AND NORTH SHORE RAILWAY COMPANY.

House in Committee on Bill (No. 113) respecting the Manitoulin and North Shore Railway Company.—Mr. Tolmie.

On section 2,—time for construction of railway, Sudbury to Little Current, extended.

Mr. W. R. SMYTH. I opposed this section as it was introduced in committee. My reason for doing so was that I thought the time should be made in accordance with the provisions of a Bill passed in the Ontario legislature, at its session of last year, relating to this company, which limited the time for the completion of the entire line from Sudbury to Little Current to not later than the 31st of December, 1911. Before the committee I urged the modification of the Bill, and the promoters, I am glad to say, saw the reasonableness of my contention and acceded to the view that the time should be extended only two years. I make this remark because of the fact that in a

newspaper that published the proceedings of that committee it is stated that I opposed the granting of the extension for two years and wished to have it made three years. Of course, exactly the reverse was the case.

On section 12,

Mr. SPROULE. Is it intended that they should be controlled by the Railway Act with regard to the commencement and completion of the railway? There is nothing in the Bill as to when they shall commence.

Mr. GRAHAM. That is covered by the General Railway Act.

Mr. SAM. SHARPE. Would not that include the bridge and tunnel as well?

Mr. GRAHAM. The Railway Act might not cover the bridge and tunnel.

Mr. EMMERSON. Is there a clause declaring this to be a work for the general advantage of Canada?

Mr. GRAHAM. No, this is a new charter. There is provision in the Railway Act that they shall commence within two years, complete within five and make an expenditure of fifteen per cent.

Mr. SPROULE. What about it being declared a work for the general advantage of Canada? It crosses from Quebec to Ontario, and you do not give it any powers of amalgamation.

Mr. GRAHAM. There is a difference of opinion as to the necessity of that, particularly with reference to a new charter. I do not think it makes a great deal of difference whether you declare it to be a work for the general advantage of Canada or not. If you were taking over a provincial road and making it a Dominion road it might be necessary to declare it, but we are giving a new charter, and I do not think it is necessary to make such a declaration.

Mr. SPROULE. Suppose we chartered a short road within a province, would you regard the fact that we were giving it a federal charter as bringing it under the provision which would declare it to be a work for the general advantage of Canada without saying so? The giving of a federal charter does not make it a work for the general advantage of Canada. Its crossing from one province to another might probably do that, but the giving of a federal charter would not.

Mr. LENNOX. In the British North America Act I think it is declared that a work which is interprovincial, is, without any declaration whatever, a work for the general advantage of Canada. Where it is not clear we may make a declaration when we find the facts warrant it. In this case it would not appear to be necessary.

Mr. GRAHAM. There is apparently a good deal of difference of opinion among legal gentlemen as to the necessity of making a declaration even when a road is all in one province and where we are giving it a Dominion charter. We have been in the habit, where it was in one province, of declaring it to be for the general advantage of Canada.

Mr. SPROULE. We do that where it is crossing two or three provinces as well.

Mr. GRAHAM. When we are taking over a provincial undertaking we always do it.

Mr. LENNOX. We do it lots of times, any way, whether it is necessary or not.

Mr. GRAHAM. Yes. There is a question whether it is necessary or not, but perhaps it gives greater security.

Mr. EMMERSON. I think we do it uniformly in almost every Bill.

Mr. SPROULE. In almost every Bill, and it seems to me that it would be better to adopt one principle or the other. If it is unnecessary to say so we should keep it out of all; if it is necessary to say so in all we should put it in all.

Mr. GRAHAM. As there is a difference among legal men concerning it, the question might be raised when the company went to finance its road that there might be some trouble between the provincial and the federal jurisdiction. When the clause is in there cannot be any difference of opinion.

Mr. SAM. SHARPE. What supervision will the department have with regard to the construction of the bridge? It might interfere with navigation.

Mr. GRAHAM. Under the Act no bridge can be constructed over a navigable stream until the plans are submitted to the Department of Public Works.

Bill reported, and read the third time and passed.

WESTERN POWER COMPANY.

House in committee on Bill (No. 86) respecting the Western Power Company, Limited.—Mr. J. D. Taylor.

Mr. J. D. TAYLOR. I would ask that the Bill stand.

Mr. AYLESWORTH. The language of this Bill, as it is reported by the Railway Committee, seems to be unusual and objectionable. The frame in which the Bill is cast presents, to my mind, still more objectionable characteristics, and I should hope that it would be possible to meet the views of the promoters without adopting this form of legislation. The situation is that this Western Power Company is incorporated under letters patent of the Dominion. I have not seen the letters patent and they are not recited with any fullness

in the preamble of the statute, but I assume that the reason for obtaining letters patent to incorporate this company from the Dominion, was that its operations were not intended to be limited to any one province. At the present time all the operations of the company, I understand, are within the territorial limits of British Columbia.

What the company desires is to obtain power to carry on in connection with its undertaking the construction and operation of a line of railway or tramway, with the accompanying telegraph or telephone lines, for some 6 or 10 miles, between the powerhouse and other works of the company. The way in which it is proposed to accomplish that purpose by this Bill is to authorize the company to lay out, construct and operate these proposed additional works, as the company may from time to time be authorized to do so by the legislature of British Columbia. In other words, the form which this proposed legislation takes is that parliament here should empower this company, its own creature, to take powers from the provincial legislature such as that legislature might choose to confer upon it. I think that would be an altogether anomalous, and to a great extent a contradictory proceeding. My idea is that when any company is incorporated by this parliament, no matter for what purpose, that company must thenceforward look to this parliament alone for any legislation it may need for the purposes of its undertaking. Certainly no provincial legislature could diminish or cut down the powers which this parliament might confer upon a company which it incorporates. No more could it extend such powers. This parliament, having created a corporate body, this parliament alone, in my opinion, must thenceforward have legislative jurisdiction with regard to that corporate body. This company, it is true, was not incorporated by special legislation of this parliament; but it is to all intents and purposes in the same position, having been incorporated by letters patent of the Dominion; and in my view it is a matter of propriety, if it is not a question of jurisdiction, whether any other legislature than this could give to the company so brought into existence any enabling legislation. However, that may be, if I am wrong in that view, and if it can be that a company incorporated under Dominion authority may still receive something in the way of additional powers from a provincial legislature, it would certainly be improper that we should authorize the granting of such additional powers by a provincial legislature without knowing beforehand what those powers were to be—that we should confirm beforehand, as it were, and without seeing what we were confirming, legislation hereafter to be passed by some provincial body. The Bill as it comes before us proposes that this parliament should empower the company in question to lay out, construct and operate railway lines according as the company may from time to time be authorized so to do by the provincial legislature. I think we certainly ought not to legislate in the dark, and to empower a company to operate lines that we know nothing about, and that may or may not be of such a character as would commend themselves to this parliament if the particulars of the proposition were before the House for consideration. In that situation I certainly should press that this legislation receive further consideration, and that it should be studied by those who are promoting this Bill, with a view to finding some other shape in which the company which desires this additional power should be given it than in this particular form, which to my mind has so many objectionable features.

Mr. BARKER. I think the Minister of Justice did not hear what I am told was said by the gentleman whose name is on the back of the Bill, that he was willing to allow it to stand. I think we all, after what we have heard, would desire the promoters to consider the matter further before the final discussion on the Bill. I say that more particularly because some years ago I took similar objection to a Bill introduced by a gentleman on the other side of the House who wanted powers adopted by this parliament which had been conferred by the provincial legislature, and who rather objected to our inquiry as to what those powers were. I objected to it very strongly, and in the sub-committee on that Bill I was found fault with because I did so. The question was afterwards submitted to the Prime Minister, who found, on looking into the whole question, that the powers asked for were so objectionable that the Bill had to be withdrawn. I do not know anything about the merits of this particular Bill; but having taken that stand at that time, I agree with the Minister of Justice that we ought to be careful, and I understand that the hon. gentleman whose name is on this Bill is willing that it should stand.

Mr. EMMERSON. I took practically the same objection before the Railway Committee as that taken by the Minister of Justice to-night, and my suggestion was that the Bill should be referred to a sub-committee, having in mind the very Bill referred to by my hon. friend from Hamilton (Mr. Barker). It seemed to me that would expedite the passage of the Bill, and I think it would expedite it now to refer the Bill

back to the Railway Committee rather than to allow it to stand on the order paper.

Mr. J. D. TAYLOR. I did suggest, before the discussion commenced, that this Bill should stand. My object being to make just such an arrangement as has been suggested. I may say that the promoters of this Bill are in the rather embarrassing position of the old gentleman in the fable who tried to please everybody and pleased nobody. I hope the same result will not follow. The object of the promoters is very simple and very innocent. They have, as has been stated, a charter under the Companies Act, and they are dealing with power secured from the federal government. They want to construct and operate a tramway which is essential to the carrying on of their construction works. Their whole desire is to arrive at that object in the simplest way.

Mr. SPROULE. Why do you not give them power to build under a federal charter?

Mr. J. D. TAYLOR. I may say that when this Bill was before the Railway Committee, the suggestion was that they should be empowered to build such lines as they might be authorized to construct by legislative or other competent authority, and with the desire to satisfy the committee, that was changed to read 'under the authority of the legislature of British Columbia'. All that the company desire is that they may be put in the position that any private individual would be in who had money enough to build that railway. Such private individual would not require to come to this parliament at all; but this being a corporate company, and not being empowered to engage in the construction or operation of railways, they took this step. I may say that I entirely concur in the suggestion of the Minister of Justice that the Bill should stand in order that an arrangement satisfactory to everybody may be arrived at.

Mr. CONMEE. I think there are other objections. It would create a precedent that I think should not be created. We give to this company power for all time to get such additional powers as the legislature may give to them. It is true, the legislature may guard the public interest. but the undertaking is entirely out of the control of this parliament. The Board of Railway Commissioners have not that control over it that they have over other lines. I think the best plan would be for the promoter of the Bill to refer it back to the Railway Committee to deal with it as was suggested in that committee before.

Mr. GUTHRIE. An amendment to the clause has been drawn by the promoters and has been submitted to my hon. friend the Minister of Justice, and I believe it is satisfactory to him. It practically strikes out the whole of clause 1 and enacts that subject to the provisions of the Railway Act the company may lay out, construct and operate a line of railway. They also insert the usual clause which makes this practically a railway Bill, declaring it to be a work for the general advantage of Canada. Perhaps the minister will express an opinion on the proposed amendment, as I understand he will not be here next week.

Mr. AYLESWORTH. This proposition, so far as the form of the legislation is concerned, is entirely free from the objections which I have just been suggesting to the Bill as it came from the committee, and so far as the merits of the legislation go, I have no word of objection to offer to the company obtaining the additional powers it desires. With reference, however, to the proposal to insert in the Bill the declaration that the undertaking of the company is a work for the general advantage of Canada, that is a declaration which I think we are all agreed had better be sparingly made. With regard to a company which is incorporated by the Dominion, I cannot see how it has any appropriate place. It is, of course, only this parliament which can make that declaration. No provincial legislature can make it. This parliament must be its own judge of the propriety of making that declaration with regard to any undertaking; but the whole effect of making it is that from the time it is made, no other body than this parliament has any power to legislate with reference to that particular company. Therefore, it is a declaration which it is appropriate enough to make when we are transferring some provincial undertaking to our jurisdiction, but which has no propriety whatever in the case of a company which we are incorporating, and which, therefore, never was under any other jurisdiction than that of this parliament. I cannot see any use that it has, because without it any legislation which this company was at any time to obtain would have to be obtained from this parliament, because it is a Dominion company, and if it is useless and inappropriate, I scarcely see the object of inserting it even though it might be unobjectionable.

Mr. BARKER. I hesitate to say a word against the opinion expressed by the Minister of Justice, but there seems to me to be this question involved in what he has just said. We sometimes pass Acts of parliament relating to companies, with power to construct railways wholly within a province, almost local concerns; but we have been in the habit, a very bad one, I think, of taking a railway which upon the face of the charter is a local railway under the

jurisdiction of a province, and removing it to the jurisdiction of the Dominion, by simply declaring it to be a work for the general advantage of Canada. We have done that deliberately, wantonly, and, if I were to use a legal term, I might say maliciously. If we are to understand that hereafter no Bill shall pass the Railway Committee merely because these magical words are put into it, and that every applicant for a railway charter shall be required to show that the railway is a work for the general advantage of Canada, I should be very glad to know that and to follow it up, But I am afraid we shall have to go back a great deal on the legislation that we have been enacting in the past, and will have to forget that for years we have been creating corporations to build railways that we have no right whatever to deal with.

Mr. CONMEE. Do I understand the hon. member to contend that this parliament has not the right to incorporate a railway within a province unless we declare it to be a work for the general advantage of Canada?

Mr. BARKER. I assert, without a shadow of doubt, that again and again we have taken upon ourselves in this parliament to deal with undertakings which we have no more right to deal with than the declaration of faith. We have been creating companies to construct railways over which we have no right or jurisdiction whatever, and have enabled ourselves to do that by declaring the work to be for the general advantage of Canada.

Mr. CONMEE. Suppose we gave a charter without making that declaration?

Mr. BARKER. In many cases it would not be worth the paper it is written on.

Mr. CONMEE. I do not agree with you.

Mr. GRAHAM. Possibly I may be charged with being somewhat of a sinner in that respect, but there is only one body I know of in Canada which really regulates the rates of railways, and that is the Board of Railway Commissioners, and it has been my desire, so far as possible, to bring any railway that was going to do any kind of general traffic under that board. A question has been raised as to jurisdiction, but my standpoint is to get the greatest benefit to the public; and wherever it is possible to have a railway doing a general traffic brought under the control of the board, I shall go as far as I can to have that done.

Mr. ROCHE. There are provincial boards.

Mr. GRAHAM. They have not regulated many rates so far.

Mr. ROCHE. They are created for that purpose.

Mr. GRAHAM. The Board of Railway Commissioners are doing good work along that line. I am under the impression that a decision or an opinion has been given recently that it is questionable whether the board has the right to regulate the traffic, even if it be through traffic, when the charter was granted by a province. If that be the case, we ought, whenever possible, to bring these railways under federal jurisdiction and get control of their rates and operations.

Mr. SPROULE. Do you not think that, under our authority to control trade and commerce, we would have the right to build a railway between two points, though both were in one province, to carry on a through route trade? We have specifically provided that we shall have control of trade and commerce; and it seems to me, from the arguments I have heard, over and over again, in this House by very eminent legal men, such as the Hon. Edward Blake and the late Hon. David Mills, that we have a perfect right to build a railway anywhere, even if it were only five miles long and in the centre of a province.

Progress reported.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 110) respecting the Algoma Central and Hudson Bay Railway Company.—Mr. Tolmie.

Bill (No. 97) respecting the Pacific and Atlantic Railway Company.—Mr. Tolmie.

Bill (No. 90) respecting the Central Ontario railway.—Mr. Stratton.

Bill (No. 107) to incorporate the Ottawa, Montreal and Eastern Railway Company.—Mr. Gladu.

SECOND READINGS.

Bill (No. 136) respecting the St. Clair and Erie Ship Canal Company.—Mr. McColl.

Bill (No. 137) respecting the Erie, London and Tillsonburg Railway Company.—Mr. Clarke (Essex).

SUPPLY.

House in Committee of Supply.

Richibucto wharf—reconstruction of approach and headblock, $5,000.

Mr. PUGSLEY. This amount is required to make further provision toward the repairs necessary to render safe this wharf which was purchased from the municipality of the county. It was purchased for $1,500, but was not in good state of repairs. The total estimated cost of the improvements is $11,500. Expended in 1908-9, $2,299, and there will be expended to the 31st March next, $3,156, and we are asking now $5,000, leaving $1,000 more to complete the work.

Mr. CROCKET. It is not intended to complete it during the present year?

Mr. PUGSLEY. We could not do so unless we asked an item in the supplementary estimates. We may possibly do that.

Mr. CROCKET. I would like to know from the minister if it is the intention to continue Thos. O. Murray as the foreman of this work?

Mr. PUGSLEY. It is too far ahead to determine as to that. We shall not determine it until toward the spring when we make our preparations for continuing the work.

Mr. CROCKET. The reason I ask is that, Thomas O. Murray, I have no hesitation in saying, perpetrated a fraud upon the public treasury as conductor of that work. We have the proof of the fact that Mr. Murray, when conductor of the work, sent in a bill to the government for 60,000 feet of logs in the name of John Dumas, at $12 per 1,000 feet, half of which he purchased from Richard O'Leary, of Richibucto—

Mr. PUGSLEY. I call my hon. friend (Mr. Crocket) to order, Mr. Chairman. If the committee have finished and made their report, he can discuss the matter, but while it is before the Public Accounts Committee, I submit, it is not in order to discuss it here. Certainly it is very inconvenient to attempt to discuss it here for we have not the papers. I ask your ruling, Mr. Chairman.

Mr. CROCKET. Allow me to say, Mr. Chairman, that if the minister takes that ground the item will have to stand.

Mr. DEPUTY SPEAKER. It is a well known rule that when a matter is under consideration of a committee by action of the House, it is not in order, in other proceedings, to discuss the procedure of that committee. I have no official knowledge that any such matter is before the committee. The hon. member (Mr. Crocket) has not proceeded far enough in his remarks to enable me to judge whether they are pertinent to the question or not, so I do not, for the present, rule him out of order.

Mr. PUGSLEY. I am ready to be guided by the statement of the hon. gentleman (Mr. Crocket) himself. If he says that the matter is not before the Public Accounts Committee I will take his statement. But my information is that it is before the committee and the committee has not reported upon it.

Mr. CROCKET. That does not debar me from making this statement—that Mr. Murray, the conductor of this work, sent in a bill to the Public Works Department in the name of John Dumas for 60,000 feet of lumber——

Mr. PUGSLEY. Order. I will take your ruling upon the matter, Mr. Chairman. The hon. gentleman (Mr. Crocket) admits that the matter is before the Public Accounts Committee.

Mr. DEPUTY SPEAKER. So far as I have heard the hon. gentleman (Mr. Crocket) I am not yet in a position to rule his remarks out of order. But I would ask him to make his remarks as relevant as possible and to bring them to bear upon the item before the committee.

Mr. CROCKET. It is this very item that I am discussing. I say, in the presence and hearing of the minister, that Mr. Murray, the conductor, or foreman of this public work, has perpetrated a fraud —a criminal offence upon the government of the country—that he sent in a fictitious bill to the Public Works Department for lumber for which he paid only $6 and $7 a thousand, and for which he received $12 a thousand. I am simply astonished at the statement of the minister that, having that knowledge—as he must have it; as I know he has it—he will not be able to determine for a year or two whether Mr. Murray is to be continued—

Mr. PUGSLEY. I did not say a year or two, I said a month or two.

Mr. CROCKET. I understood that the work was to go on—

Mr. PUGSLEY. It will be during the spring of the present year.

Mr. CROCKET—that he would not be able to determine until the work was to be resumed whether this man was to be continued. I ask members of this House what they think of this government employing men capable of such conduct as that? I make this statement now so that the minister will understand that he takes the full responsibility if he is going to allow this kind of fraud to be continued in the province of New Brunswick. This is the same Thos. O. Murray who bought the Richibucto wharf, the 'sawdust wharf' which has been mentioned, at $700, and immediately turned it over to the Public Works Department for $5,000.

Mr. PUGSLEY. My hon. friend (Mr. Crocket) certainly will not help his cause, as a man never helps any cause by distorting the facts. He has made the statement that Mr. Thomas O. Murray immediately turned over this wharf to the government for $5,000. That, Sir, is absolutely incorrect. It is true—although it is out of order to refer to what has taken place in the Pub-

lic Accounts Committee—it is true that it appeared that Mr. Murray had bought the wharf property for $700 from Mr. O'Leary, and that the government, having in view the possibility that it might be required, had the chief engineer make an examination of the property. Mr. Murray gave to the engineer an option on the property. But the government did not determine to buy it for several months after that, and not until it was twice reported on, and not until the chief engineer of my department and myself were perfectly satisfied that the property was a good bargain at $5,000. I do not hesitate to say here to-night, and I do not hesitate to say anywhere, that the government got a good bargain for the sum of $5,000. And I want to repeat a remark I made before the recess, that it is an extraordinary thing that, although the hon. gentleman had all the witnesses here from Richibucto, although he had here one of the most prominent citizens of Richibucto, he did not venture to produce a single witness to testify to the value of the property except Mr. Richard O'Leary, although witness after witness was produced to testify that the property was well worth $5,000, one witness put in the value as high as $10,000. It is a fact which, I think, ought to have great weight with this committee that the hon. gentleman was not able to produce a single witness from the town of Richibucto, with a population of about 1,000, except Mr. O'Leary, who would question the value of the property, and who was prepared to say that it was worth one dollar less than $5,000. So far as that property is concerned, I have no hesitation in defending anywhere the purchase which was made by the government. That, however, is beside the question.

The hon. gentleman has asked me to give an assurance to-night that Mr. Thomas Murray will not be appointed foreman of this work. The hon. gentleman has chosen to make a statement as to what took place before the Public Accounts Committee, he has made a charge based, as he says, upon evidence before that committee, that Murray has been guilty of a fraud and a criminal act against the government. Sir, I have learned during the course of my public career, not to judge people until the tribunal which is called upon to try them has made its report, and I decline to-night, until that committee has reported the evidence, until I have had an opportunity of examining it, and until this committee has had an opportunity of examining it, I decline to express any opinion as to the conduct of Mr. Murray, who was the foreman of the work. I have not made any appointment of a foreman, I have not decided to make Mr. Murray foreman of the work for the coming year. When I do so, if I act improperly, my conduct will be open to question by the hon. gentleman, as well as by other hon. gentlemen. Now then, my hon. friend states that Mr. Murray fraudulently put in bills for $12 per thousand for lumber which only cost $7. I do not know what is the evidence before the committee; I was not present at all the meetings of the committee, though I was at one or two of them, so I did not hear all the evidence. But I have been informed that the average cost of the lumber was $12 per thousand, that some of it was bought at the lower price of $7, some of it cost $15, but it was all put in at the average price of $12 per thousand, which would be the average cost of the total quantity of lumber. I do not know whether that statement is true or not, and I am not prepared to discuss it until the committee makes its report and has been discharged from the performance of its duty in connection with that matter. As I have already said, I have come to no conclusion to appoint Mr. Murray. The matter has not been up for consideration. All I am asking now is a vote for the continuance of the work. When the time comes to appoint a foreman, I can assure my hon. friend that no one will be appointed against whom there can be a shadow of suspicion, so far as integrity is concerned.

Mr. BARKER. I do not intend to go into the question of the other work as to which Mr. Murray was charged with impropriety as an officer of this government; I propose to confine my remarks to the item before the House. I understand that the person alluded to has been doing certain work in connection with the item now before the House, and an hon. member of this House says that that person an officer of the government has been cheating this country in connection with that work, has been deliberately and wilfully defrauding the government by charging up an article as costing $12 when he only paid $7. That is the point. We are asked to give the hon. minister further money to go on with that work, and he is asked whether he is going to continue as foreman this man who is under that charge. He says, I will consider that matter at the proper time. Now I do not mean to say that because an hon. member of this House has made so grave a charge, upon his responsibility as a member, as that an employee of the minister has been robbing this country, that necessarily that charge should justify us in withholding the money from the minister; but I do say that it is a proper question for the members of this House to consider, to discuss, and it is proper to drag, if necessary, from the minister a clear, business-like answer. The minister knows that that charge has been made, I think he has known it, certainly he knows it now. I ask him now if, in the interest of this country, he thinks it right to continue that man in

the service of the department, in the expenditure of money on behalf of this country, so long as that charge remains against him. I say it is a most improper thing; no official of a corporation would dare to continue such a man in such a position; he would suspend the man until he had investigated the charge to the bottom.

Mr. PUGSLEY. I do not at all complain of the spirit in which my hon. friend has addressed the committee. I quite agree with him that when a member of this House states that the evidence before the committee shows that a foreman has been guilty of improper conduct, it is the duty of the minister to investigate the matter, to go through the evidence carefully, to weigh it, and if the evidence shows any improper conduct on the part of the foreman, then it is the duty of the minister not to retain him. That is the very course I intend to pursue.

Mr. BARKER. I intended to say that it was the minister's duty to suspend this man until the charge has been investigated.

Mr. PUGSLEY. I may say that that man is no longer in the employ of the government, he ceased to be employed at the close of the season. I shall feel it my duty to do exactly what my hon. friend from Hamilton (Mr. Barker) suggests. But I am not prepared to-night, simply upon the ipse dixit of any member of this House —I will not say, least of all, of my hon. friend from York (Mr. Crocket), it would not be courteous to say that—but I am not prepared, until I read the evidence and have an opportunity of judging for myself, to pass judgment against any man who has been in the employ of the department. But as I have said, Mr. Murray is no longer in the employ of the government, and before we make a new appointment I should feel it my duty to investigate very carefully the evidence, and then determine as to whether he has been guilty of improper conduct; and if there is a shadow of suspicion against him, I shall feel it my duty not to re-employ him.

Mr. CROCKET. The minister has not, up to the present time, read the evidence taken before the committee.

Mr. PUGSLEY. No, I have not.

Mr. CROCKET. I am satisfied that if the minister reads this evidence which I have in my hand now, and applies a fair unbiased judgment to that evidence, he will not assume the responsibility of retaining, Mr. Thomas Murray in this position any longer. I do think that there ought to be not only a dismissal, but it is very questionable to my mind if some criminal proceedings should not be taken in such a matter as this. If the employees of the government are to be allowed to perpetrate criminal offences, and I say here that Mr. Murray did obtain money from the government under false pretenses, with impunity, the public cannot be expected to have much confidence in the honest administration of their officers. I have made this statement to-night solely for the purpose of drawing the minister's attention to it so that he will understand that he will have to take the responsibility if Mr. Murray is longer continued as foreman of this work.

Richibucto harbour—breakwater—piers on north and south sides, $9,000.

Mr. PUGSLEY. This is an amount required to complete the extension of a section of 140 feet of the north breakwater begun in 1908, and also to complete the first 200 feet of the south breakwater. We are building two breakwaters, upon the north side and one upon the south side. This amount of $9,000 will not complete the whole work but it is expected that it will complete these sections.

Mr. CROCKET. How much additional will it take to complete it?

Mr. PUGSLEY. It depends upon the extent to which the breakwater is carried. If it is carried out as far as it is recommended that we should go the cost will reach about $58,000. That is to do a thoroughly complete job, but we do not propose to do anything like that in the immediate future.

Mr. CROCKET. Has the department any plans of the work proposed?

Mr. PUGSLEY. Yes, but it is proceeding by sections.

Mr. CROCKET. Is that part of the Jardine contract?

Mr. PUGSLEY. This was a work done by Mr. Jardine.

Mr. CROCKET. The Jardine contract is still running?

Mr. PUGSLEY. No, his contract is completed.

Mr. CROCKET. Who is doing this work?

Mr. PUGSLEY. We will let a new contract for this work.

Mr. CROCKET. When was the Jardine contract completed?

Mr. PUGSLEY. August, 1908.

Mr. CROCKET. How much was paid under the Jardine contract?

Mr. PUGSLEY. The contract was $17,000, and I think it was all paid—I am not sure as to that.

Mr. CROCKET. He was paid more than $17,000, was he not?

Mr. PUGSLEY. Perhaps he was. There was some extra work which he was paid for.

Mr. CROCKET. How much was he paid in extras?

Mr. PUGSLEY. I am sorry to say that I have not a memorandum of the amount but I think it was some $3,000 or $4.000. I am speaking now from my memory. I can get that for my hon. friend and give it to him later.

Mr. CROCKET. Is the minister able to give any explanation of the extras?

Mr. PUGSLEY. I have not a memorandum of them. I will undertake to get that information for my hon. friend before we get through with the items of some of the provinces and he can discuss it.

Mr. CROCKET. This $9,000, I understand, is for the commencement of a new work, for the extension of the work performed under the Jardine contract?

Mr. PUGSLEY. Yes, we will let a new contract for the work.

Mr. CROCKET. What is the estimated cost of the work to be done under the new contract?

Mr. PUGSLEY. We propose only letting a contract at the present time for $9,000.

Mr. CROCKET. Will this work be completed during the coming year?

Mr. PUGSLEY. Yes.

River St. John, including tributaries, $6,000.

Mr. PUGSLEY. This is to do work, no separate portion of which is large in extent. Last year it amounted to $2,670. We did not expend the whole $6,000. We are asking for $6,000, which is the amount usually taken. This is to make improvements in various parts of the river, principally in the upper waters.

River St. John and tributaries—construction of wharfs in tidal waters, $20,000.

Mr. PUGSLEY. This is to make provision for the construction of a number of wharfs in the tidal waters of the river St. John and tributaries. I will give a statement of the expenditures for the construction of wharfs under the vote that we are now asking in 1908-9 and 1909-10, or up to the 10th of the present month:

—	1908-09.	1909-10 up to February 10.	Total expenditure up to February 10, 1910.
	$ cts.	$ cts.	$ cts.
Long Island, Kings Co	894 31	298 07	1,192 38
Kennedy's Flat	237 00	.....	237 00

			28,393 49

Mr. DANIEL. Is that all new construction or repairs?

Mr. PUGSLEY. There are some of the smaller amounts that I think would be for repairs, but all the larger amounts are for new construction. Mather's island, Chase wharf, Chase's point. Oromocto, McGowan, Sheffield and Rothesay, are all new. Rothesay was the wharf that was purchased from the Almon estate and rebuilt. Burton court house, Barker's,

Jemseg and Scotchtown, are all new. A very large number of them are new works.

Mr. CROCKET. Are these wharfs all completed?

Mr. PUGSLEY. I could not at this moment say whether they are all finished or not. We are getting that work done at considerably less than the estimated cost.

Mr. DANIEL. The minister should alter the item and call it construction and repairs. It is simply down as construction. That, I take it, means new construction.

Mr. PUGSLEY. The suggestion is a very good one, and in making up the statement another year, I shall have it so made that we can see exactly what is for new construction and what for repairs.

Mr. DANIEL. What wharfs does the hon. minister expect to construct with this $20,000?

Mr. PUGSLEY. I could not give my hon. friend just what number will be undertaken. We have demands for quite a number. Application has been made by the mayor of the city of Fredericton, and I think also by the Board of Trade for the taking over by this government of a wharf which belongs to the city on condition that we rebuild it and make it a government wharf. I have that matter under consideration, and it is not unlikely that a considerable amount of the vote of this year will be used towards the rebuilding of that wharf.

Mr. BARKER. Are you buying the wharf?

Mr. PUGSLEY. The city will convey the wharf free of charge. It is an old wharf, owned by the city, which requires rebuilding. The city offers to hand it over to us provided we rebuild it. I think the claim which the city makes is well founded. The Dominion government has not spent any money in building wharfs in the city of Fredericton. The city has done the whole of that work itself. There is scarcely a city in Canada, situated as Fredericton is, in which the government has not expended some money in the form of wharf accommodation. But that has not been done in Fredericton, and I think its claim well founded.

Mr. BARKER. Is the city giving to the government that property in absolute ownership?

Mr. PUGSLEY. Yes.

Mr. CROCKET. What is the estimated cost?

Mr. PUGSLEY. About $20,000 to rebuild.

Mr. CROCKET. I suppose that is the wharf the minister promised during the election campaign two years ago?

Mr. PUGSLEY. Is the hon. gentleman proud of that statement?

Mr. CROCKET. I am not particularly proud of it, neither am I ashamed of it. It is simply the statement of a fact. The minister did, just in the midst of an election campaign, make such a promise, and no doubt for political effect.

Mr. PUGSLEY. Does my hon. friend urge that the item be struck out?

Mr. CROCKET. No, but I was going to complain that the hon. minister had been very slow in carrying out the promise he made during that election campaign. It was expected that it would have been done last year. But last session he had to announce that the government had not the money to provide for that improvement, and I am glad to have his statement that at last we are to have the work. I agree with the minister that the city of Fredericton occupies a very unique position so far as wharf expenditures are concerned. I have been in this House a number of sessions, and have seen vote after vote going for wharfs in all parts of the country, but no appropriation at all, though I have several times asked for one, for such an important city as Fredericton. That city has maintained all wharfs at its own expense during all these years. I trust that the minister will see that work is put through as quickly as possible.

Mr. PUGSLEY. The hon. gentleman can rely upon the minister doing this, as he endeavours to do everything else, in a proper manner and with no unnecessary delay. I am glad that for once my hon. friend and I agree.

Mr. CROCKET. Will there be a contract?

Mr. PUGSLEY. Yes, as usual.

Mr. CROCKET. The work will not be done by day labour with these so-called conductors in charge?

Mr. PUGSLEY. It will not be done by day labour.

Mr. CROCKET. I hope not.

Mr. PUGSLEY. My hon. friend's hope is well founded.

Sackville—wharf on Tantramarre river—revote of $6,000 lapsed, $10,000.

Mr. PUGSLEY. This is to provide for the construction of a public wharf at Sackville upon the Tamtramarre river. The wharf will cost about $17,000, and we are asking now for $10,000. We have made some expenditure in the year which ended

the 31st March, 1909. That was for the purpose of acquiring land for the site and approaches for the wharf and incidental expenses.

Seal Cove, Grand Manan island—breakwater pier—to complete, $5,000.

Mr. PUGSLEY. This is to complete work under contract for the construction of a breakwater and pier 388 feet long and 35 feet high at the outer end, extending to 15 feet depth at high water. The amount of the contract is $29,000, and I think this will complete it.

Mr. DANIEL. You have already expended $32,000 on it?

Mr. PUGSLEY. No; we will have expended altogether, on the 31st March, $27,000. The hon. gentleman is confounding the vote with the expenditure. There is a revote of $5,000.

Mr. DANIEL. Is this to be cribwork?

Mr. PUGSLEY. Yes.

Mr. DANIEL. Is the timber creosoted?

Mr. PUGSLEY. No.

Mr. DANIEL. Some time ago the minister told us that he had rather improved on the plan of his predecessors because they used ordinary timber and he was using creosoted timber.

Mr. PUGSLEY. I did not say in all cases.

Mr. DANIEL. But where the teredo worm was likely to attack the wharf. The hon. gentleman must know that it does its business all right in the Bay of Fundy.

Mr. PUGSLEY. I have not understood that at the island the teredo is as destructive as in other places. At all events the engineering branch of the department did not think it necessary to use creosoted material at this point. I quite agree that it is better as far as possible to use creosoted timber. In some places the teredo worm is much more destructive than in others. In St. John harbour it is not destructive owing to the volume of fresh water running into the salt.

Shediac wharf — revote of $2,000 lapsed, $10,000.

Mr. PUGSLEY. We propose building a wharf 1,100 feet long, stone block, 210 feet long, twenty-two spans of twenty feet and twenty-one blocks of twenty feet square, also pier head thirty feet square. Depth six feet at low water and ten feet at high water of ordinary tide. This is sufficient for fishing boats and small schooners. In connection with this we propose using creosoted timber, but nothing has been done as yet. Total estimated cost $19,000. That was the original estimate. Since then a further estimate has been made of $2,000, and the probable cost will be $21,000. That is the estimate of the resident engineer.

Mr. BARKER. Why take a revote of $2,000 for a $21,000 vote on which nothing has yet been spent?

Mr. PUGSLEY. The reason is we had an appropriation of $2,000 the year before last. We took a vote of $2,000 for the purpose of beginning the work, such as purchasing the site, right of way, and possibly calling for tenders. But owing to the fact that the wharf will cost such an amount as we would not be justified in entering on its construction, having the vote of only $2,000, we made no move and allowed the vote to lapse. We are now asking for $10,000, but we will go ahead in a substantial way for the purpose of building the work.

Mr. SPROULE. Why should such a vote come under the heading of a revote? If the vote was for last year, it could be properly called a revote; but if not used within the year at all, it lapses and goes back to consolidated revenue, and after that should not come up as a revote but as a regular vote.

Mr. PUGSLEY. My hon. friend is quite right, but if he will look at the item, he will see it was not put in the revote column, but we put it in as a revote lapsed so that the committee may see it is not new.

Mr. SPROULE. I do not think it should be called a revote at all.

Mr. PUGSLEY. It is more for the information of the committee.

Shippigan harbour—improvements and repairs at Shippigan gully, $3,000.

Mr. PUGSLEY. This is to continue the improvements. These are general repairs to the west breakwater.

St. Andrews wharf—to complete, $7,000.

Mr. PUGSLEY. The contract was for $15,900 besides contingencies. The estimated expenditure to 31st of March next is $11,000 and we shall require $7,000 to finish.

St. John harbour—improvements, repairs and renewals,—$25,000.

Mr. PUGSLEY. This is for improvements and repairs to the breakwater which have to go on from year to year.

St. John — Partridge Island quarantine wharf, $13,500.

Mr. PUGSLEY. This is to build the wharf. It has been urged upon us for some time by the Department of Agriculture, and there was a vote for it for the year ending 31st March, 1909. We did not do anything under that vote and are asking for this amount.

Mr. DANIEL. Will this enlarge the old work?

Mr. PUGSLEY. No, we are building a little to one side. This is a new work.

Mr. BARKER. There will be a contract?

Mr. PUGSLEY. Yes.

Mr. DANIEL. Has the contract been put up for tender?

Mr. PUGSLEY. Upon the vote for the fiscal year ending 31st March, 1909, plans and specifications were prepared and tenders were recalled for the work. I decided to award the contract to the lowest tenderer. Then, owing to the depression which came and the declining revenues, I decided to let the construction stand over, and so informed the contractor. I am inclined to think it would be fair now not to call for new tenders, but to give the contract to the lowest tenderer.

Mr. DANIEL. Who is he?

Mr. PUGSLEY. Mr. John E. Kane, a very reliable contractor.

St. John—to provide for the purchase and improvement of property for wharfs for the accommodation of government vessels (a vote for the same amount was taken in 1909-10 under lighthouse and coast service), $50,000.

Mr. PUGSLEY. This is to purchase property and make improvements so as to give very much needed accommodation to both the Public Works Department and the Marine Department by supplying a place for repairs, for building scows and for making repairs to vessels and buoys.

Mr. DANIEL. I can quite understand that a wharf and property of that kind is very much needed for the government vessels. Can the minister state where this wharf is to be?

Mr. PUGSLEY. That is not yet decided.

Mr. DANIEL. Have there been any negotiations? This item has been in the estimate for two years under another heading.

Mr. PUGSLEY. Yes. There have been no negotiations, but there have been some suggestions and some offers of property.

Mr. DANIEL. The hon. minister has had offers of property for this purpose?

Mr. PUGSLEY. Yes, there have been offers in a general way. I do not know that prices have been made, but certain properties have been offered.

Mr. DANIEL. Has the hon. minister any objections to say what properties they are?

Mr. PUGSLEY. One which was offered was on the northern side of the harbour. That was offered to the Department of Marine and Fisheries.

Mr. DANIEL. About Hilliard's block?

Mr. PUGSLEY. Somewhere in that vicinity, but that was not in my department. There was a property, where the Maritime Warehousing Company is, offered my department. I am not aware of any other.

Mr. DANIEL. The department has not yet made up its mind as to any definite location?

Mr. PUGSLEY. No, there is just the possibility that might be placed in Courtenay bay.

Mr. BARKER. Why should there be any negotiations with the Marine Department?

Mr. PUGSLEY. Because the vote previously made came under the Marine Department items. We are now putting it under Public Works.

Tracadie—improvements and repairs, $4,000.

Mr. PUGSLEY. This is to provide for repairs.

Mr. CROCKET. Will this complete the work?

Mr. PUGSLEY. It is expected it will.

Traynor's Cove—wharf, $2,800.

Mr. PUGSLEY. There is an old provincial government wharf at this point, about 50 feet by 40 feet, built many years ago; but it is beyond repair, and must be removed. This is to build a new wharf to take its place.

Mr. CROCKET. What is the estimated cost of the work?

Mr. PUGSLEY. $2,800.

To purchase creosoted timber for works in the maritime provinces generally, $20,000.

Mr. PUGSLEY. At present we are obliged to import all this timber from the southern states, or rather it is imported by the agents of the two companies engaged in that work. Quite recently I have been interviewed, as has also the Department of Railways, on the subject of establishing works in the city of St. John for the purpose of creosoting timber for wharfs and for railway ties. It is proposed, I think, to bring the material from Sydney. If we had creosoting works along the line of the Intercolonial railway, I believe that a great deal of birch would be used for railway ties. It has been demonstrated that birch takes the creosoting quite as well as soft timber, and it would give an extra market for birch, of which there are large quantities in New Brunswick. The creosoting adds greatly to the life of the timber. An English company is anxious to obtain a site for the purpose of establishing these works.

Mr. McCALL. How much per thousand feet does this creosoted timber cost?

Mr. PUGSLEY. From $50 to $56, according to the place where it is delivered.

Mr. McCALL. What does ordinary timber not creosoted cost?

Mr. PUGSLEY. I could not say offhand. Our department has never purchased southern pine which is not creosoted.

Mr. McCALL. I am not disposed to criticise the department. Unquestionably there are processes for preserving timber; but it is a question whether the cost of preserving it might not be equal to the cost of buying the timber two or three times over. Southern pine should be delivered at $16 or $17 a thousand feet. For creosoting timber a very extensive plant is required, and many of the railways are hesitating to put in plants on account of their great cost. While the process will preserve timber for a considerable length of time, it will not protect it from ordinary wear where it comes into contact with iron.

Mr. PUGSLEY. I may say that the late deputy minister of railways, Mr. Butler, who has given a great deal of thought to this question of creosoting railway ties as well as other timber, expressed the opinion to me very strongly that it would be greatly in the public interest if creosoting works were established and if all timber used for railway ties and in the construction of wharfs were creosoted.

Mr. DANIEL. Will the minister state of whom the company he spoke of is composed, and whether this industry is to be established or not?

Mr. PUGSLEY. All I can say is that it is an English company, which was represented by two engineers who were introduced to me by the late deputy minister of railways, Mr. Butler. They were negotiating with me, and the question with them was as to whether they could get a site near the Intercolonial railway. I do not know that they have succeeded in acquiring a site, but it was represented to me that, if they could get a site, they were prepared to establish the works.

Mr. DANIEL. In what way does the minister propose to purchase this creosoted timber? Has he a purchasing agent, or does he get tenders, and, if so, from whom?

Mr. PUGSLEY. The purchases are made through the engineers, and the directions given are to get prices from the agents of the different concerns that sell this creosoted timber. There are not many of them.

Mr. DANIEL. That is, the local agents in Canada?

Mr. PUGSLEY. Yes.

Mr. BARKER. I suppose the minister is aware that for more than twenty years this question of creosoting timber for ties has been before the railway companies, but not a railway company, so far as known, has yet gone into this business, because the officials have never been able to satisfy themselves that the very large expense is justified by the extension of the life of the tie. Has the minister gone into that question before expending $50,000 on behalf of a couple of gentlemen from England who want to establish an industry here at the expense of the government? What efforts has the minister made to ascertain whether this is really a thing that we ought to spend so much money upon, or whether it is simply a little bonus to some English gentlemen who are coming out here to try what they can do in Canada in the way of an experiment that is about twenty years old?

Mr. PUGSLEY. We do not propose, out of this vote, to pay any bonus. This is simply for the purchase of creosoted timber. At present the intention is to buy it as we have bought it hitherto—from the companies in the southern states that creosote timber. But, if works are established for the production of creosoted timber in Canada, and if it offers timber on favourable terms, we would naturally prefer to buy our creosoted timber in Canada rather than from the southern states.

Mr. BARKER. I am aware of that. But it was said that some gentlemen were going into the establishment of works for creosoting timber. Has the hon. gentleman (Mr. Pugsley) ascertained whether the Grand Trunk, for example, or the Canadian Pacific railway, who have had this question before them for twenty years have determined to go into it, or is he going it blind because he has $50,000 of public money?

Mr. PUGSLEY. I cannot understand what the hon. gentleman (Mr. Barker) means. We are only asking the vote that is taken year after year for the purchase of creosoted timber to be used in certain waters where the teredo worm is very destructive. Incidentally, I mentioned the fact that there was a company which was contemplating the establishment of creosoting works in the maritime provinces, and said that, if these works were established, we would expect to be able to obtain the creosoted timber—or have timber which we should buy in its crude state creosoted—at a cheaper price than we now obtain material for from the southern states. As to railway ties, I have not gone into the matter fully with Mr. Butler. But I would take his opinion on this subject as quickly as I would that of any railway manager in Canada. And I know that he is strongly of opinion that it would be

greatly to the public interest if creosoting works were established, that treating adds very much to the life of railway ties, and that it would bring into use for ties many varieties of timber which, when not treated, are not suitable for that purpose.

Mr. BARKER. The minister says that this vote has been passed year after year. What has been the experience heretofore? Has the minister tried this timber?

Mr. PUGSLEY. Yes.

Mr. BARKER. With what result?

Mr. PUGSLEY. Good.

Mr. BARKER. The minister has that from the officers of his department?

Mr. PUGSLEY. Yes.

Mr. DANIEL. The creosoted timber has been used by the Department of Public Works, I understand, for building piers which are subject to the action of the teredo worm, and not for building on land?

Mr. PUGSLEY. No, only to protect the wood from the teredo.

Mr. A. McCALL. The American railway companies, I understand, are using creosoted timber to a certain extent. Has the minister inquired with a view to ascertaining whether he has been paying a fair or an excessive price?

Mr. PUGSLEY. There is pretty keen competition between the agents of the several companies which are dealing in creosoted timber, and the instructions to the engineers are to obtain material at the lowest possible price, and always to get prices from the different agents.

Mr. A. McCALL. By tender?

Mr. PUGSLEY. Yes—not by advertising in the newspapers, but by asking agents for their prices.

Harbours and rivers—Ontario—Brockville—reconstruction of superstructure of dock on south side of Tunnel bay, $9,500.

Mr. PUGSLEY. We have been urged very strongly by the town of Brockville to make this improvement, and it seems a desirable work in the public interest.

Mr. SPROULE. Is it to be of stone?

Mr. PUGSLEY. It is not entirely of stone. The top is to be of concrete, but the foundation under the water will be of timber. It is a public dock. Part of it is owned by the Canadian Pacific railway and part by the Crown, and we propose to have it all vested in the Crown. We have been urged strongly by representatives of the council and board of trade to construct this work, and an influential delegation was here not long ago urging it.

Mr. SPROULE. I am not aware of any docks being built upon wood.

Mr. PUGSLEY. The chief engineer tells me that the wharfs at Montreal and Quebec are built upon a wooden substructure and then from a little below the water line they are carried up with concrete.

Burlington channel piers—reconstruction, $40,000.

Mr. PUGSLEY. This is to continue the work of reconstructing in concrete the wooden superstructures of the north and south piers of the Burlington channel. We have been urged to continue this work, but we hesitated to do so last year because of the state of the revenue. The work is urgently needed in order to prevent considerable injury to the harbour. Of this $40,000, $15,000 is a revote. In 1908-9 we spent $34,000, in 1909-10, $36,000.

Mr. BARKER. I would like to know what the whole expenditure in connection with this work has been, and will be. I understand that there has been a good deal of bad work done there.

Mr. PUGSLEY. I have not heard of that.

Mr. BARKER. I have heard so. I understand that the amount appropriated is not more, and has not been more, than was necessary for the work, but the money has not been judiciously expended. I would like to know what the original estimate of this work was, and what it is going to cost.

Mr. PUGSLEY. The estimate submitted by the chief engineer included reconstruction of wooden superstructure, $37,500; reconstruction of wooden superstructure in concrete, $15,000; reconstruction of wooden superstructure of north pier in concrete, $49,900; superintendence and contingencies, $8,600. Total estimate cost, $111,000 of which there has been expended during the two last years $70,000 leaving a balance of $40,000.

Mr. BARKER. Will that $40,000 complete all the work that was originally contemplated?

Mr. PUGSLEY. The chief engineer tells me it is supposed to complete the work.

Mr. BARKER. Has the chief engineer made an estimate that $40,000 will do all the work originally contemplated?

Mr. PUGSLEY. He has made such a report to me.

Mr. HENDERSON. I understand that a deputation waited upon the hon. gentleman's department asking for the construction of an embankment along the water side of the beach, extending northerly from Burlington bay towards the village of Burlington, with a view of preserving the beach and widening it. Has the hon. gentleman any intention of proceeding with that work this year?

Mr. PUGSLEY. We have a report on that work, but it has not yet been decided to undertake it during this year. That is as far as I can say to-night. The hon. gentleman understands with reference to any work not in the estimates, that I would not be able to say what the government would do until the matter has been considered in council.

Picnic islands—improvement of northern channel in Georgian bay, $45,000.

Mr. W. R. SMYTH. Is it the intention of the government to deepen the channel opposite Picnic islands? I asked the same question last year. I understnad that the channel has a depth of 24 feet up to that point, and it is almost useless, the same depth is provided opposite Picnic islands.

Mr. PUGSLEY. The hon. gentleman is quite right, and the object of this vote is to deepen the channel at that point, to straighten it, and make it available for navigable purposes.

Providence bay, Manitoulin island—extension of wharf—revote of $4,500 lapsed, $5,000.

Mr. W. R. SMYTH. Has this wharf been completed?

Mr. PUGSLEY. This is to make provision towards extending outward the stem of the present government wharf on the east side of the bay. We propose, in making this extension, to add ballasting and cribwork 300 feet long in a northwesterly direction.

Providence Bay wharf, Manitoulin island—warehouse built on stone embankment protected by cribwork, $3,650.

Mr. W. R. SMYTH. Is that work going on?

Mr. PUGSLEY. No, but we will put it under construction the coming season as early as possible.

Blanche river — improvements on main stream and south branch, $7,000.

Mr. SPROULE. What improvements are you making there?

Mr. PUGSLEY. This is to improve the navigation of the channel. There is a good deal of traffic on this river. It is to complete improvements, remove snags, do dredging work and to maintain the plant which we have there.

Mr. S. SHARPE. Is there any navigation on the Blanche river?

Mr. PUGSLEY. Yes, there are some small boats.

Mr. S. SHARPE. I would like to ask the minister if he has received any complaints lately in connection with the lowering of Lake Couchiching and Lake Simcoe? There has been considerable public money spent at Washago, taking rocks out of the channel and putting in stop logs, and there is a great deal of difficulty in regard to the regulating of these waters, farm lands being submerged on account of the stop logs being kept in too long. I received a letter the other day complaining that the stop logs are in now. There is no necessity for these stop logs being kept in now because they should let the water out and allow it to run away in order to avoid the spring freshets. If the water is kept in the land is submerged and the farmers cannot get on their land in the spring. I understand there is a man in attendance, paid by public money, for the purpose of regulating these stop logs. There are some interests desiring to have the stop logs kept in continuously. I would like to ask the minister if there have been any complaints received by the department lately, in connection with this matter, who is in charge of the stop logs and why the logs are kept in during the winter season. The object and purpose of keeping the stop logs in is to keep up the water and thereby improve navigation, but there is no possible excuse for keeping the stop logs in at the present time. They should be left out until after the spring freshets are over so that the farmers can get upon their land in spring. There have been several thousand dollars spent in opening up the channel and blowing out rocks in order to lower the water and the stop logs, of course, have been put in for the purpose of regulating the depth of the water. You are defeating the purpose of the spending of this money by keeping the stop logs in.

Mr. PUGSLEY. I am very glad the hon. gentleman called the matter to my attention a few days ago by sending me a letter bearing on the subject. I sent it to the chief engineer with directions to have it looked into at once, and the chief engineer tells me that he will see that the matter is inquired into to see exactly whose fault it

is that the water is not properly regulated. We have a man in charge of the dam. There is no reason why these stop logs should not be so handled as to preserve navigation there during the season and to prevent lands from being overflowed in the spring.

Mr. S. SHARPE. The stop logs should not be in during the winter.

Mr. PUGSLEY. No, there is no reason why they should be in in winter. They should be taken out in the fall and put in in the spring. Of course I can quite understand that there may be some diversity of interests, and that in the interest of navigation they may try to keep the stop logs in. But, it is our duty to take all possible means to prevent lands from being flooded.

Mr. SAM. SHARPE. The navigation of Lake Couchiching and Lake Simcoe is not to be compared with the importance of the farming community. The navigation interest is infinitesimally small compared with the great interest of the farmers. There are thousands and thousands of acres being submerged.

Mr. PUGSLEY. I believe there is a power interest as well at Orillia.

Mr. SAM. SHARPE. I do not think the interest of Orillia enters very materially into the question of the stop logs being maintained at Washago.

Mr. PUGSLEY. The chief engineer will look into it carefully.

Byng inlet, improvements—revote of $10,000 lapsed, $30,000.

Mr. PUGSLEY. For the year ending March 31, 1909, there was a vote of $10,000, which we did not use. The Canadian Pacific railway are contemplating making very considerable improvements at Byng inlet, and this is for the purpose of doing work which fairly belongs to the country. It is for improving the harbour, and these improvements will go on in conjunction with those made by the Canadian Pacific railway company.

Mr. SPROULE. What kind of improvements are you going to make?

Mr. PUGSLEY. We propose to dredge a passage 20 feet deep with a minimum width of 100 feet and to remove shoals in the steamboat channel. There will be a basin with a minimum width of 500 feet and a length of 2,500 feet opposite the site of the projected coal dock. Officials of the Canadian Pacific railway assure me that there is likely to be a very large business developed there as a result of the improvements contemplated.

Mr. PUGSLEY.

Mr. SPROULE. Is there any contract let for dredging?

Mr. PUGSLEY. No.

Mr. SPROULE. Do you propose to do it by contract?

Mr. PUGSLEY. Yes.

Mr. BARKER. What is the object of this vote from the public point of view?

Mr. PUGSLEY. Byng inlet has been selected by the Canadian Pacific railway as one of the harbours of their Toronto-Sudbury line. They propose to erect large coal unloading docks there and they will connect with the Sudbury line by a spur two miles in length. It is represented to me that a very large business will be done when the necessary improvements are made. The Canadian Pacific railway are going to do their share in the way of building docks upon which they purpose spending a considerable sum of money and we have thought it not unreasonable that we should go to the expense of doing the dredging for the purpose of improving the entrance and making the channel navigable.

Mr. BARKER. What public needs are there, what is the population and what is the nature of the place which requires you to expend all this money in the public interest? I can understand that a railway company wants to have coal and wants the facilities to get in, but the government does not usually supply the money for that.

Mr. PUGSLEY. My own vieiw is that we can fairly as a government co-operate with a railway which is prepared to develop any place along its line, any harbour or any navigable water, to the extent of doing the dredging work. I know that wherever a railway, particularly a large railway like the Canadian Pacific railway, establish coal docks it means the gathering there of a large number of men, it means the building up almost immediately of a thriving town or village and it adds in that way to the prosperity of the country. In accordance with the policy that has been pursued for some years past we feel that it is not unreasonable that we should co-operate to the extent of doing the dredging.

Mr. BARKER. There is no population there at present?

Mr. PUGSLEY. Not at present, I understand. The Canadian Pacific railway have given me the assurance that they propose to do a large business there which will convert Byng inlet into a thriving place.

Mr. SEXSMITH. Is this in the interest of some private company that is doing business there?

Mr. PUGSLEY. No, it is in the interest of the traffic that is to be brought over by the Canadian Pacific railway.

Mr. SEXSMITH. What is the traffic created by, there is nobody living there

Mr. PUGSLEY. If the Canadian Pacific railway establishes large coal docks and makes that the point of transfer for the coal for that part of the country it must lead to the establishment of a town. That is the manner in which communities are being built up all over this country.

Mr. SEXSMITH. Is there not a large lumbering company interested chiefly in this dredging?

Mr. PUGSLEY. I am not aware of that.

Mr. McCALL. It is fair to say that there is a large mill at Byng Inlet which would be served by the intention of the railway at that point to give a rail outlet as well as a water outlet.

Mr. S. SHARPE. Is the railway company the only interest that has asked for this expenditure?

Mr. SEXSMITH. So far as I recollect, yes.

Mr. BARKER. Does the minister believe that the railway company will not take its coal there for the purpose of its own operation unless the government gives that $10,000?

Mr. PUGSLEY. I am not prepared to say that, nor would I say that the company would not create a harbour at Victoria, but we have thought it not unreasonable that we should do our part in assisting them in their important work by doing the dredging, they undertaking at their own expense to build the docks. The operation of such works by a railway company gives employment to a large number of people, and I believe it is fairly within the duty of the federal government to do its part in the way of improvement, particularly in reference to navigation.

Mr. EDWARDS. If, as I understand, the minister feels that this appropriation is justified because of the benefit that will accrue, not only to the railway but to the people who are living there or will likely live there, I would urge on him the claims of the people of Wolfe Island to have some dredging done along the side of their dock. Some dredging was done at the end of the dock where the passenger steamers call, but a few hundred dollars' worth of dredging along the side of the dock would enable coal to be unloaded there and would save to the people from 60 cents to 70 cents a ton on their coal. Can the minister give me an assurance that an appropriation will be put in the estimates this year for that work?

Mr. PUGSLEY. The statement which my hon. friend makes does appeal to my judgment. I believe there is no better work the government can be engaged in than the deepening of navigable channels to enable vessels to get to wharfs and to enter rivers and so give to the people cheaper transportation. I will have the matter looked into by the chief engineer; it will not be necessary to have a special vote because that work can be done out of the general vote for dredging in Ontario.

Mr. EDWARDS. I brought this to the attention of the minister near the end of last session and I accepted in good faith the reasons then given by the hon. gentleman.

Mr. PUGSLEY. Money was pretty scarce then.

Mr. EDWARDS. For the sake of the people of Wolfe Island I am glad it is more plentiful this year, and I hope the minister will see his way clear to expend this small amount.

Mr. PUGSLEY. I could not give my hon. friend the assurance that it will be done, but I will give him this assurance: I have asked the chief engineer to make a note of it to have it examined and see what the cost would be, and if it can be done for any thing like what my hon. friend has stated, I can assure him it will be done. It will be money well expended.

Mr. EDWARDS. Has the minister an estimate furnished by the reeve of Wolfe island as to the depth to be excavated, and as to the nature of the bottom along side of the dock?

Mr. PUGSLEY. We may have that in the department, I shall ascertain.

Mr. SAM. SHARPE. It seems to me there are objectionable features about this vote of $30,000. It is a case of getting the cart before the horse. I could understand $30,000 being spent in dredging where there are centres of population, but spending $30,000 to attract population and build up centres of population strikes me as an extraordinary expenditure. It is serving no great interest, but serving the private interests of a corporation, which in the coarse of events, will have to make this expenditure on its own account. Surely it is an objectionable grant. Is the minister sure that this is serving the public interest, or is it the private interest of some dredging company that wanted work up there?

Mr. PUGSLEY. No dredging company made any suggestion of any kind in regard to it. The application for the grant

was made by the Canadian Pacific railway, and they have given me the assurance that they propose constructing large docks at Byng Inlet, and making that the principal coal depot for all that section of country. If they do that it will mean the handling of very large quantities of coal. My hon. friend says that we have no right to undertake dredging for any railway company until you get a population. Does my hon. friend not know that it is as the result of giving these facilities that population comes, and that business comes, and that if the Canadian Pacific railway establish these large coal docks they will necessarily employ a large number of men, which will lead to the building of houses and of stores and the development of a very considerable business. There was no population at Victoria harbour when we undertook to create the harbour. The Canadian Pacific railway came to us and said that if we would do the dredging they would build docks, and we felt that in the great transportation interests of this country, it was desirable that we should co-operate with an enterprising railway like the Canadian Pacific railway.

Mr. SAM. SHARPE. What will be the nature of the dredging?

Mr. PUGSLEY. Clay and mud altogether, about 280,000 cubic yards of clay and mud.

Mr. SPROULE. I do not see any serious objection to this vote. Byng Inlet is quite an important place; I was there thirty years ago and there were people there then. I see it has a postal revenue of $800 and $1,000 of money orders. Has the government any provision by which the public will be able to use the docks without paying a consideration to the Canadian Pacific railway?

Mr. BOYCE. I presume the government would only keep the channel open, and could not have any thing to do with the fees on the dock.

Mr. SEXSMITH. Will the minister make the extension to the wharf at Lakefield, which he visited last year?

Mr. PUGSLEY. I was very much pleased with the wharf we have already built there. It is a fine concrete wharf and for the comparatively small amount of money expended we have splendid results. I was also impressed with the desirability of making the extension, but I have not yet succeeded in getting the money for it. That is the most I can say. It will continue to have, as it has and has had, my best attention in connection with other important works. Most of the items in these estimates are for works which were in the estimates for the fiscal year ending March 31, 1909. I would ask whether there has been any communication sent or any arrangement made in respect to the Grand Trunk railway extending its tracks down to the wharf, which would be necessary if the wharf was to be a public convenience.

Mr. SEXSMITH. I was informed last summer that the Grand Trunk railway was ready at any time to make an arrangement if assured that this wharf would be extended.

Mr. PUGSLEY. Why did they not write the department to that effect?

Mr. SEXSMITH. I shall have to look into the matter. Now that money is plentiful, the hon. minister might take an amount out of the general estimates, or have a sum put in the supplementaries. These people do not give him much trouble with regard to their port.

Mr. PUGSLEY. I would like if the hon. gentleman would get the Grand Trunk railway to send to my department that agreement.

Mr. SPROULE. The hon. minister has not answered the question I put to him. I asked him if he had made any provision whereby the public would have the use of the docks without paying.

Mr. PUGSLEY. I do not see how we could very well do so, as we are not building the wharf.

Mr. SPROULE. You are improving the harbour, and in consideration of your spending so large an amount of money, could you not reach an understanding with the company to give the public some consideration in the use of that dock?

Mr. PUGSLEY. I would rather assume that the Canadian Pacific railway would make arrangements with vessels, and I would take it for granted that they would not charge any dockage tolls on these whatever. The suggestion of my hon. friend, however, like all his suggestions, is worthy of consideration, and I shall consider it, but I do not see at present that we could say to the Canadian Pacific railway: As we are going to dredge the channel for you, you will allow all vessels to use your docks free of tolls. They might feel we were imposing some obligation on them that we have never done in respect to any other railway company.

Mr. SPROULE. I was not thinking so much of the vessels as the people in the district who go there to load coal. Has the Canadian Pacific railway intimated any intention of building grain elevators there?

Mr. PUGSLEY. They have not.

Mr. McCALL. I wish to say a word on behalf of Port Dover harbour, Lake Erie. The hon. minister has given the committee

abundant reasons why harbours with railway connections should receive public aid, and I would ask if he could see his way clear to meet the views of the people of Port Dover by repairing theirs and doing some dredging at that port. The piers are in very bad condition and dangerous to life. Port Dover is a harbour in which there is a great deal of excursion business. Two large railways carry people there and there are excursion boats from the American side, and the harbour is not in a condition to properly handle that traffic. I would also ask the minister what has been done by the International Waterways Commission with regard to the maintaining of the water level of the harbours upon Lake Erie. The American shipping interests desire to dam Lake Erie at the mouth near Buffalo for the purpose of maintaining a uniform water gauge in all the harbours on the lakes. I have not heard what action has been taken by the commission.

Mr. PUGSLEY. With regard to the raising of the level of Lake Erie by means of a dam, I have received a very interesting, exhaustive and valuable report from the International Waterways Commission, and that report is adverse to the building of the dam. In a general way their opinion is that it would not accomplish the purpose intended unless it will have the effect of lowering the waters of Lake Ontario. Holding back the waters by means of a dam to raise Lake Erie would necessarily lower the waters of Lake Ontario and the canal system as well, and of course that could not be thought of for a moment. For these reasons the commission concluded that it would not be advisable to attempt anything of the kind. With regard to Port Dover, I have been a good deal bothered as to what ought to be done there. That port is in the same unfortunate situation as several other harbours which, before confederation, were handed over to private companies. That was the most extraordinary legislation I ever heard of. Private companies were made harbour companies and given control of the harbours. I believe that to-day the harbour of Port Dover, including its wharfs and waters, is owned by the Grand Trunk railway, and it is difficult for the government to undertake to improve wharfs which are owned by a private company or to undertake even the dredging of a harbour owned by a private company.

Mr. McCALL. In what respect is Port Dover different from Byng Inlet?

Mr. PUGSLEY. Byng Inlet is a public harbour, and in a very different position from a private harbour. What my hon. friend ought to direct his attention to, and what the city council of Port Dover and the board of trade—with whose aspirations I heartily sympathize—ought to seek to accomplish is to get the Grand Trunk railway to hand over these wharfs, which are in a state of decay, to the Crown, free of charge, and then it will give me great pleasure to do something for the improvement of Port Dover. While on my feet, I may say that Port Dover is in the position of many villages situated upon ports on the Great Lakes, which used to do a thriving business, but whose business has been taken away from them by the building of railways, in many cases a few miles back from the lake shore. When the great movement for building railways was started, some of our people had the idea—which has prevailed down to a comparatively recent date—that the railways would give to the people of the country all the means of transportation they desired, so that water transportation has been neglected by the local authorities, and, I am bound to say, more or less neglected by public men. But the time has come when the people are being aroused to the necessity of better water transportation, the improving of harbours and the furnishing of facilities for the traffic of the lakes and great rivers. I sympathize entirely with the feeling now manifest in many parts of Ontario fronting on the Great Lakes, that the work of improving the harbours should be more generally taken hold of. So far as Port Dover is concerned, I throw out this suggestion with the hope that some effort will be made to get the Grand Trunk to hand over these wharfs and the harbour to the Crown, and then I shall feel it my duty to take the matter up in earnest to see what I can do to give the people of Port Dover the facilities to which I think they are fairly entitled.

Mr. A. McCALL. Port Dover was once a government harbour, but, about thirty-five years ago, the Grand Trunk extended a line of railway to the harbour and bought control from the government of that day. Since then, very little repairs have been made.

Mr. PUGSLEY. What an absurd thing for a government to sell out a whole harbour to a private corporation?

Mr. A. McCALL. Still, I cannot quite understand why this harbour should not receive government assistance merely because the Grand Trunk railway owns these rights. Wherein does this harbour differ from any other on the lake? If in a given harbour the Grand Trunk railway builds piers and runs tracks upon them, the government would still do the dredging. And that is the condition at Port Dover. The railway, are not using it for anything, and, in the meantime, the public service is suffering. About eight or ten years ago some repairs were made and the piers were put into condition to make them safe for travel. But I do not think that any dredging was done. The expenditure required

is not large. I do not wish to limit what the minister might, in his generosity, think he could do there, but to repair the piers and give the harbour a depth of say, ten feet would be sufficient for the time.

Mr. PUGSLEY. Does not the hon. member (Mr. A. McCall) see that if I undertook to repair piers owned by the Grand Trunk, the very first people to criticise me would be the gentlemen sitting on his own side of the House? The question would be: What business have you to spend public money to repair wharfs belonging to the Grand Trunk? And I could not justify it.

Mr. A. McCALL. It has been done by the hon. minister's predecessor.

Mr. PUGSLEY. Many things have been done, and some of them, perhaps, ought not to have been done.

Christian Island wharf—repairs, $3,000.

Mr. HUGHES. What is going on at Christian island?

Mr. PUGSLEY. This is for the renewal of the crib-work and superstructure.

Mr. HUGHES. Who owns this wharf?

Mr. PUGSLEY. The government.

Mr. HUGHES. Now, does the minister know anything about it?

Mr. PUGSLEY. I know positively that we do not build any wharf on property that is not owned by the government. These are positive instructions.

Mr. SAMUEL SHARPE. Who live on this island?

Mr. PUGSLEY. It is an Indian reserve.

Mr. SAMUEL SHARPE. Is this for the benefit of Indians particularly?

Mr. PUGSLEY. It is used largely by a number of fishermen.

Mr. HUGHES. Summer tourists.

Mr. CONMEE. Some, perhaps; but it is used extensively by the fishermen of Georgian bay.

Mr. HUGHES. It is nothing of the kind. It is just a little bunch of islands at the entrance to Midland harbour. We have had this thing up in the House before, and we know all about it.

Collingwood harbour — additional shipping and landing facilities, including extension of entrance channel and enlargement of deep-water manœuvring area, $75,000.

Mr. HUGHES. Has this anything to do with the dock?

Mr. PUGSLEY. It is to widen and straighten the approach. The channel is quite narrow and shipping is congested.

Mr. HUGHES. What depth will this give?

Mr. PUGSLEY. About 22 feet, we are aiming to get.

Mr. HUGHES. Where is the vote for the dock?

Mr. PUGSLEY. One dock is built. Which dock does the hon. member mean?

Mr. HUGHES. The dry dock.

Mr. PUGSLEY. We don't require a vote for that. It is provided for by a subsidy.

Goderich—harbour improvement, $80,000.

Mr. PUGSLEY. This is very necessary. Goderich is one of the most important harbours on the lake.

Mr. SPROULE. The hon. member who is most interested in this matter is not here.

Mr. PUGSLEY. He will regret very much if the vote stood over. He is very anxious to have it passed.

Mr. HUGHES. What is the expenditure on Goderich harbour up to date?

Mr. PUGSLEY. The hon. member means from the beginning of the world? The expenditure has been $1,031,751.23.

Grand Bend—approach to piers—revote of $1,000 lapsed.

Mr. HUGHES. What is the explanation of the need of this?

Mr. PUGSLEY. This is to pay for the land required for the approach from Huron street to the Grand Bend pier, 381 feet long by 40 feet wide. Mr. Charles A. Gibbs is the owner.

Mr. HUGHES. Has the government done anything with some wharfs between Goderich and Grand Bend lately?

Mr. PUGSLEY. We are not doing anything there this year.

Gravenhurst—wharf on Lake Muskoka—revote of $4,000 lapsed, $4,000.

Mr. PUGSLEY. This seems to be a very necessary work. There is a great deal of traffic on these Muskoka lakes, and there is no public wharf there. The present wharf is owned by the Grand Trunk, and does not accommodate the public.

Haileybury—harbour improvements — revote of $3,400 lapsed, $17,500.

Mr. PUGSLEY. This is to extend the south wing 156 feet long and to widen the west side at an estimated cost of $14,000; protection of approach on the south side to permit of dredging, 172 feet long by 24 feet wide, estimated cost at $3,500; dredging work, estimated to cost $5,500.

Mr. HUGHES. I thought the minister was using concrete wherever it was possible below water.

Mr. PUGSLEY. We are beginning to use concrete.

Juniper island, Stony lake—wharf—revote of $1,470 lapsed, $3,400.

Mr. PUGSLEY. Juniper island is in Stony lake, and I believe is quite a centre. During the summer season two or three thousand people live there, or in the vicinity. Juniper island is a distributing point.

Mr. HUGHES. Does the minister know who owns the island?

Mr. PUGSLEY. I think it is owned by an association of people, and they are giving to the Crown a conveyance of a site for a wharf.

Mr. HUGHES. I will give the minister a splendid site for $1, if he will build a wharf there of $3,000.

Mr. PUGSLEY. But Juniper island is a very central island.

Mr. HUGHES. Not half as central as my island; it is on the same water.

Mr. SAMUEL SHARPE. Surely a wharf should not be constructed on this island if it only serves the owner of the island.

Mr. PUGSLEY. It serves about 3,000 people.

Mr. SAMUEL SHARPE. My information is that it is owned by a private individual who has his summer residence there, and it will only serve his private convenience. There is no hotel there. How could an island in Stony lake be a distributing point for other islands? The lake is studded with islands owned by private individuals who erect summer residences there. I understand the hon. member for West Peterboro (Mr. Stratton) owns this island.

Mr. PUGSLEY. The information given to me by the gentleman who formerly represented that constituency was that there are three steamers passing Juniper island every day. Juniper island is essentially a central point of distribution for the people of hundreds of islands. There are 2,000 or 3,000 people in that vicinity who will be convenienced by this wharf. The request for the wharf was strongly endorsed by both Mr. Hall and Mr. Finley, who were representatives of the two constituencies bordering upon that lake.

Kensington wharf—additions and repairs, $3,300.

Mr. PUGSLEY. I was impressed with the observations which were made by the hon. member for Algoma (Mr. Boyce) with regard to Kensington wharf. He said he had been informed by the owners that they were not desirous of selling, from which I took it for granted they are prepared to improve the wharf themselves; therefore, I prove to strike out this item.

Mr. BOYCE. I would like to know what the situation is. I think the owners want to come to some understanding with the government. I would like to see Kensington wharf put in proper shape, but the owners say they object to the government taking hold of their wharf and spending $3,300 upon it without some understanding with them. This is not a private wharf in the sense of serving only the interests of private individuals, but it serves a settlement that is tributary to it. If the government will consider the advisability of taking over that wharf as they have taken over Fort Finley wharf above it, it would be a very suitable arrangement. But I think it would be objectionable to spend $3,300 upon a wharf which is entirely a private wharf without any arrangement with the owners. I hope the minister will see his way clear to take over this wharf as a public wharf.

Mr. PUGSLEY. This wharf belongs to the Hiawatha Land Company, and some time ago I was urged to make provision for improving it. I took it for granted that the owners were not in a position to put it in repair, and were willing to convey it to the government. But my hon. friend has stated that the Hiawatha Land Company are not prepared to convey it to the government, and, as under this vote, we would have no power to purchase the property, I could not think of spending money upon it unless the title is vested in the Crown.

Mr. BOYCE. Would you take into consideration the purchase of this wharf?

Mr. PUGSLEY. I could not if we struck out the item.

Lion's Head—wharf repairs, $5,000.

Mr. SPROULE. What repairs are you doing there?

Mr. PUGSLEY. We are renewing the superstructure of the old wharf. It is all right below the water line but above the water line it has decayed and we are putting in a concrete superstructure.

McGregor's creek—to complete sheet pile protection work on south bank of creek, $3,000.

Mr. PUGSLEY. This work is necessitated by reason of dredging work done by the government.

Mr. HUGHES. Where is McGregor's creek?

Mr. PUGSLEY. Near Chatham.

Michipicoten, Lake Superior — wharf on Michipicoten river—revote of $2,600 lapsed, $5,000.

Mr. SPROULE. What are you going to do there?

Mr. PUGSLEY. This is to construct a public wharf, close faced, strongly built, 207 feet in length, 25 feet in width and 20 feet in height.

Mr. BOYCE. What is the estimated cost?

Mr. PUGSLEY. $20,000.

Mr. BOYCE. Where do you propose to place this wharf?

Mr. PUGSLEY. We propose placing it along the south side of the ledge at the foot of the road leading to the village. It will be about 500 feet north of Michipicoten.

Mr. BOYCE. Are you going to commence work during the present season?

Mr. PUGSLEY. That is the intention.

Montreal river—improvements above Latchford, $25,000.

Mr. PUGSLEY. This is to continue the construction of the Latchford dam. We have called for tenders and a contract has been let for this work.

Mr. HUGHES. This is only for the revote; we are not giving an extra $25,000?

Mr. PUGSLEY. No. This is to raise the water and to improve navigation by means of flooding the rapids. It is really a very important work.

Mr. HUGHES. You are going to put a dam below the rapids?

Mr. PUGSLEY. Yes.

Mr. HUGHES. You will not require to spend a large amount for buying flooded land?

Mr. PUGSLEY. Not a great deal. We have had to pay something in Latchford. We bought from the Ontario Railway Commission there.

Mr. HUGHES. Have you paid the Ontario government for land taken there?

Mr. PUGSLEY. Yes.

Port Burwell—improvements to harbour works—revote of lapsed amount, $50,000.

Mr. PUGSLEY. This is an important work. Port Burwell is the point to which the car ferries come.

Port Hope—repairs to piers—revote of $3,300 lapsed, $5,000.

Mr. HUGHES. Who owns that harbour?

Mr. PUGSLEY. The chief engineer tells me that we have taken it over.

Port Stanley—harbour improvements, $9,000.

Mr. HUGHES. What about the life buoy service there? Was there not trouble about the time of the wreck, or is that under the Department of Public Works?

Mr. PUGSLEY. No.

Mr. HUGHES. Was not the lighthouse out of operation?

Mr. PUGSLEY. That is under the Department of Marine and Fisheries.

Rainy river—improvements at Long Sault rapids—revote of lapsed amount, $50,000.

Mr. PUGSLEY. I explained to the House the other night in regard to this item. I do not know whether we will require to use it or not. We must get the consent of the United States before it can go on.

Mr. BOYCE. There is some international difficulty?

Mr. PUGSLEY. Yes.

Mr. BOYCE. That has been a long standing difficulty?

Mr. PUGSLEY. Yes.

Mr. HUGHES. Has it been taken up by the Waterways Commission?

Mr. PUGSLEY. No, they said they could not deal with it, and asked us to refer it to Washington. The United States government do not feel that they could allow a foreign government to build a work in their territory.

Mr. HUGHES. Is it the rule that no government is allowed to do work in another's territory?

Mr. PUGSLEY. Yes.

Mr. HUGHES. Well I take it for granted that the minister is opposed to damming the St. Lawrence at Cornwall?

Mr. PUGSLEY. That might be different. Suppose parliament gave the authority?

Mr. HUGHES. But the minister would certainly oppose it?

Mr. PUGSLEY. That would depend on what his view might be of the whole question. The minister is not yet prepared to support it.

Mr. HUGHES. I understood the minister was one of the leaders in the movement.

Mr. PUGSLEY. No, you could not have understood that.

Rainy river — improvements at mouth, $60,000.

Mr. PUGSLEY. The mouth of the Rainy river is filling up. Strange to say there is not as much water in the mouth of the Rainy river by five or six feet as there was ten years ago. I suppose that owing to the clearing of the forests, silt is coming down more rapidly, and as the current is becoming more sluggish where it joins the lake waters, the silt is being deposited.

Mr. HUGHES. Why has the water gone down if the level is maintained at Keewatin?

Mr. PUGSLEY. As the forests are cleared away silt and mud come down the Rainy river with greater force each succeeding spring, and as the river flows out into the lake it naturally becomes more sluggish and has made a bar across the mouth of the river.

Mr. HUGHES. Is not this in American territory too?

Mr. PUGSLEY. No, this is a boundary river.

Mr. HUGHES. It is in American territory.

Mr. PUGSLEY. No, it is a boundary river.

Mr. HUGHES. Half of it is in American territory.

Mr. PUGSLEY. That is right, but we are doing the dredging in Canadian territory at the Lake of the Woods.

Mr. HUGHES. Does the minister know where the boundary really is? From the mouth of the Rainy river where does the boundary line run? It runs from the northwest angle to the lake.

Mr. PUGSLEY. Yes.

Mr. HUGHES. The minister should be sure that he is not dredging in American territory.

Mr. PUGSLEY. By damming the outlet of the Lake of the Woods it was supposed it would improve navigation, but as a result of the raising of the waters of the lake and as a result of the storms which arose an island which was at the head of the lake was washed away.

Mr. HUGHES. Then you need the dredging.

Mr. BOYCE. How will the minister protect the channel when it is dredged, it is very sandy.

Mr. PUGSLEY. We propose having very extensive pile work which the engineer thinks will be effective protection.

River Sydenham—second outlet from Chenal Ecarte to Mitchell's bay—protection of banks at Martin island with pilework, $2,500.

Mr. PUGSLEY. This is to provide for the protection of this island. Erosion has taken place on the island which is alleged to be due to the diversion of the channel by reason of works carried on by the department. That is the only reason why we admit any responsibility. Several owners of property have protested vigorously and claimed that we should take steps to protect the island.

Mr. HUGHES. Is this not a wharf for duck hunters?

Mr. PUGSLEY. Oh, no, it could not be used as a wharf.

Mr. BEATTIE. There is a large sugar beet business there, where beets come down to the main land.

Rondeau harbour—improvements, $200,000.

Mr. PUGSLEY. This is under contract to Mr. Birmingham of Ottawa, the lowest tenderer. This work has been before parliament for some time. A vote was taken the session before last, but as the amount was too small for the large improvements which were contemplated we did not proceed with the work. The object is to build break-waters to afford protection and harbour accommodation called for by the largely increasing traffic at the port.

Mr. SAM. HUGHES. What riding is this in?

Mr. PUGSLEY. In East Kent. It is supposed that by building the breakwaters we will establish a very good harbour of refuge and a very important harbour. The north shore of the lake is singularly deficient in harbours of refuge for a long distance and I think it is regarded as essential by everybody that this work should go on. There was expended up to December 1, $21,000 and the total contract price of the work is $229,000. Then we have to do the dredging as a separate item.

Sault Ste. Marie wharf—addition to return on west side, $10,000.

Mr. PUGSLEY. This is to add an extension westerly on the 'L' of the government wharf for 100 feet.

Mr. BOYCE. Does this include any dredging?

Mr. PUGSLEY. No. There will be a concrete superstructure.

Mr. BOYCE. There is a nasty jog on the east side of the wharf which wants some

dredging. The Canadian Pacific railway and all big boats have to make a nasty turn there and the utility of the wharf is impaired.

Mr. PUGSLEY. We are doing a good deal of dredging.

Mr. BOYCE. I hope the minister will see his way clear to get that straightened out.

Mr. PUGSLEY. I will give it consideration.

Sibley harbour, $2,000.

Mr. PUGSLEY. This is to repair an old wharf to make it serviceable for traffic and to afford shelter to steamers. It will be a harbour of refuge on the north shore of Lake Superior. It was strongly urged by the member for the constituency, Mr. Conmee.

Mr. BOYCE. There are boats running out every week.

Mr. CONMEE. There is a good deal of mining going on there; it is a public harbour not owned by any one. It is a harbour of refuge for a line of vessels which run down the north shore to Nipigon and other ports and is a great resort for the fishing vessels of that section. This amount, I think, is hardly enough. I think the minister might double the amount, because it is a meritorious work. Three lines of steamers call regularly there. The people have for many years maintained a light there at their own expense. and I think it is time the government did something decent for that harbour.

Thornbury—addition and repairs to wharf, $5,000.

Mr. PUGSLEY. This is to provide for the construction of 200 feet of cribwork as an extension of the wharf.

Mr. SPROULE. What kind of cribwork?

Mr. PUGSLEY. Timber and stone.

Mr. SPROULE. What is its width?

Mr. PUGSLEY. I cannot tell my hon. friend, but I assume that it would be the same as the other—24 feet.

Mr. SPROULE. There must be some mistake, for this amount will not build a fraction of that.

Mr. PUGSLEY. If we have to get more, we will come back.

Wiarton—extension to breakwater pier, $15,000.

Mr. PUGSLEY. This is to provide for the extension of the breakwater pier, to complete repairs and renewals to the shore end, and also for the removal of a wreck. The total cost of the extension is estimated at $21,000, and the removal of the wreck at $3,000.

Some resolutions reported.

On motion of Mr. Fielding, House adjourned at 11.45 p.m.

HOUSE OF COMMONS.

MONDAY, February 14, 1910.

The SPEAKER took the Chair at Three o'clock.

CONTROVERTED ELECTION.

Mr. SPEAKER. I have the honour to inform the House that I have received from the Hon. Mr. Justice Pelletier and the Hon. Mr. Justice Lemieux, two of the judges selected for the trial of election petitions, pursuant to the Dominion Controverted Elections Act, a judgment and report relating to the election petition for the electoral district of Bellechasse, by which the election petition was dismissed and the sitting member declared duly elected.

CERTIFICATE OF ELECTION.

Mr. SPEAKER. I have the honour to inform the House that the Clerk of the House has received from the Clerk of the Crown in Chancery a certificate of election and return of Albert Allard, Esquire, for the electoral district of Ottawa City.

QUESTION OF PRIVILEGE.

On the orders of the day being called,

Mr. O. S. CROCKET. Mr. Speaker, I rise to a question of privilege. The Toronto 'Globe' in its report of the discussion which took place in the Committee of Supply of this House on Friday last, upon the subject of the extension of the wharf at Pink Rock, in the province of New Brunswick, has this to say of myself:

By reading extracts from some documents and carefully refraining from reading others he sought to convey the impression that money was being taken from the public treasury and spent upon a wharf at Pink Rock owned by a company managed by a political friend of the Minister of Public Works.

Hon. Mr. Pugsley destroyed Mr. Crocket's pretty little piece of political patchwork at one blow by producing an agreement which showed that the wharf had passed from the hands of the company referred to by the member for York into those of the Crown, and that the expenditures complained of were for the improvement of a public work in the public interest.

I desire to say that the statement that this wharf, to which the government is building an extension, had passed from the hands of the company into the hands of the Crown, is untrue. The wharf still re-

mains the property of the Albert Manufacturing Company.

Mr. PUGSLEY. I desire to ask if this is a question of privilege. My hon. friend (Mr. Crocket) is making statements which are unwarranted by the evidence, and it would seem to me that there is no question of privilege in what my hon. friend is now stating.

Mr. CROCKET. I submit that it is a question of privilege. This statement made concerning a discussion and concerning a statement which I made in the House surely is a matter of privilege and one that I have a right to correct. I am saying that the statement that the wharf which was under criticism the other day had passed into the hands of the Crown is an untrue statement. I say that the title to that wharf is still vested in the Albert Manufacturing Company, and in the New Brunswick Gypsum Company, of which Mr. Osman is manager, subject only to an agreement which was entered into by the company giving a right of way to and upon the wharf to the public and allowing His Majesty to charge wharfage upon all vessels other than their own vessels, or vessels chartered by the company, which agreement, Mr. Speaker——

Some hon. MEMBERS. Order, order.

Mr. CROCKET. —is nothing more nor less than——

Some hon. MEMBERS. Order, order.

Mr. SPEAKER. The hon. gentleman (Mr. Crocket) has read an article and has stated that the article has misrepresented him. He proceeds now to give an explanation. I do not know how far the hon. gentleman may be allowed to go, but he understands clearly that it is a question of privilege, and he can merely make a statement in reference to what he objects to in the paper. I do not suppose that to enter into a discussion of the matter now would be regular.

Mr. CROCKET. I have a right to show that this statement is untrue, and I say that the agreement which was referred to is nothing more nor less than a sham agreement inasmuch as the wharf is so situated——

Mr. PUGSLEY. Mr. Speaker, I rise to a point of order

Some hon. MEMBERS. Order, order.

Mr PUGSLEY. I rise to a point of order.

Mr. SPEAKER. The hon. gentleman (Mr. Pugsley) rises to a point of order.

Mr. PUGSLEY. I think that when the hon. gentleman rises to a question of privilege he is certainly going beyond the privilege when he enters into a lengthy statement in regard to evidence which is before a committee of this House. This whole question of the Pink Rock wharf is before the Committee on Pubic Accounts. My hon. friend is certainly making a statement the truth of which I cannot admit and which will not be verified by the evidence before the Public Accounts Committee.

Mr. R. L. BORDEN. My hon. friend from York (Mr. Crocket) is accused of misrepresentation and surely he has the right of showing that he is not guilty of misrepresentation.

Mr. FIELDING. Would it be correct for every member of this House, when he is accused in some statement in the public press, to come here and make it a question of privilege? I would hardly think so.

Mr. FOSTER. If he is accused of falsehood?

Mr. FIELDING. No, almost every day, I am sorry to say, we find some statement in the public press to which we could take exception. I think my hon. friend should confine himself to a correction of the misrepresentation of his own speech.

Mr. SPEAKER. I think that is the proper attitude. As far as discussing a matter that is now before the Public Accounts Committee is concerned, I suppose the hon. gentleman (Mr. Crocket) has no intention of doing that?

Mr. CROCKET. No, I have no intention of doing anything farther than discussing the statement which was made. Surely an hon. member, in discussing a question of privilege, when he has been misrepresented in the public press, is not confined to the simple statement that the statement concerning himself is untrue? He can go further and show in what respect the statement is untrue.

Mr. FIELDING. The House will be kept busy.

Mr. CROCKET. In so far as the statement that this question is before the Public Accounts Committee is concerned, I say that this question is not before the Public Accounts Committee. It is true that the return from which I adduced the proof of this statement I got by a motion before the Public Accounts Committee. But the matter has not been under investigation by the Public Accounts Committee. I do not intend discussing the proceedings of the Public Accounts Committee, but I merely wish to add to what I have already said of this agreement that it is nothing more nor less than a sham—

Some hon. MEMBERS. Order.

Mr. CROCKET. Inasmuch as the wharf is——

Mr. PUGSLEY. Mr. Speaker, I rise to a point of order.

Mr. SPEAKER. The hon. gentleman (Mr. Crocket) must be allowed to say something. He takes exception to a newspaper paragraph and says that the newspaper misrepresents him. He proceeds to give an explanation, and I do not know that he has given any reason so far why I should prevent him.

Mr. CROCKET. Inasmuch as this wharf is so situated that no other vessels than the company's own vessels or vessels chartered by them are using it or will ever use this wharf. The statement that the wharf has been transferred to the Crown is absolutely untrue and the Minister of Public Works knows it.

Mr. SPEAKER. That last remark is out of order.

Mr. PUGSLEY. That is a figment of the imagination of the hon. gentleman (Mr. Crocket).

Mr. SPEAKER. The last remark of the hon. gentleman (Mr. Crocket) is out of order.

Mr. CROCKET. I am discussing a statement which appeared in the 'Globe,' newspaper. I say that that statement is untrue. I say furthermore that the Minister of Public Works knows that the statement that this wharf has been transferred to the government is untrue. I am not saying that the statement he made in the House is untrue. I am saying that the statement which this paper makes is untrue, and I say that the Minister of Public Works knows that the statement is untrue.

Mr. SPEAKER. Order.

THE BANK ACT.

Mr. FOSTER. I ask the Minister of Finance when we are to expect the Banking Bill? We are getting along well in the session, it is an important Bill and we should have as much time as possible to consider it.

Mr. FIELDING. I had contemplated introducing an amending Act, but I have concluded it would be much more convenient to present a revised Act, and my officials are now arranging it accordingly. Inasmuch as there is an abundance of important matter on the order paper, I have thought that probably no disadvantage would be suffered if there was a few days delay in bringing forward the Banking Act. I am giving it my best attention and it will not be much longer delayed.

Mr. FOSTER. So far as the action of the House is concerned there probably would be no disadvantage, but the sooner it is down the more quickly will members be able to make themselves acquainted with it.

Mr. FIELDING. I quite understand that.

UNITED STATES MINIMUM TARIFF.

Mr. FOSTER. Has the Minister of Finance any further information with reference to the inclusion or otherwise of Canada in the benefit of the minimum tariff rates of the United States to which it appears Great Britain has been admitted. I see also that Germany has been admitted although her colonies are still under consideration.

Mr. FIELDING. I think it is quite clear that the arrangement with Great Britain does not include Canada and that Canada will have to be dealt with by a separate proclamation.

Mr. FOSTER. None such is issued?

Mr. FIELDING. None such has issued.

Mr. FOSTER. Has the Minister of Finance had any negotiation in any way to find out what is going on, or, is he simply waiting?

Mr. FIELDING. We have no official negotiations, but we manage to find out what is going on in a general way. The public press, in regard to the United States affairs, generally keep us well posted; they tell us all that is going on and some things that are not.

MANITOBA FISHERIES COMMISSION.

Mr. BRADBURY. I wish to ask the First Minister when the fishery report will be brought down?

Sir WILFRID LAURIER. I regret to say that the deputy minister is confined to his bed by illness and I could not have an interview with him.

RESIGNATION OF CHIEF ENGINEER LUMSDEN.

Mr. LENNOX. I wish to ask the Prime Minister when we may expect that the committee appointed to investigate the resignation of Mr. Lumsden will be called together? The committee was named on the 3rd of this month, eleven days ago. Is there any reason why the committee should not be called together and the inquiry proceeded with; the session is getting on?

Sir WILFRID LAURIER. If there is any reason, I do not know of it. I see no reason why the committee should not be called for to-morrow or the day after.

Mr. R. L. BORDEN. It is a curious thing that the committee has not been called together long before this.

PURCHASE OF THE 'NIOBE.'

Mr. FOSTER. I direct the attention of the Prime Minister to a question which has been up two or three times, and as to which the Prime Minister promised an answer would be given in the course of the explanations upon the Naval Bill. It would appear from the statement made by the Minister of Militia that the government has already purchased the 'Niobe' for over $1,000,000. Parliament has been sitting here since November, the government has not a shadow of a vote for any such expenditure, and the Prime Minister has not seen fit to acquaint the House with what he is doing. He seems to be entering into an arrangement to spend the people's money without having had any parliamentary authority and he has been doing it for two and a half months while the members of parliament, who ought to have something to say in what is going on, are deprived of all information. The Prime Minister promised that full information would be given, but he omitted to do so when moving the second reading of the Bill, and the Minister of Militia did not deal with the question either.

Sir WILFRID LAURIER. My hon. friend will see when the correspondence has been brought down, that it is subject to the approval of parliament. The correspondence is now completed and it will be brought down at an early date, perhaps to-morrow.

WATERWAYS TREATY.

Mr. R. L. BORDEN. Has the Prime Minister anything further to announce with regard to the present position of the waterways treaty?

Sir WILFRID LAURIER. No; it is in the same position.

PRIVATE BILLS.

FIRST READING.

Bill (No. 142) to incorporate the Congregational Union of Canada.—Mr. A. Haggart.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 27) respecting the British North American Mining Company.—Mr. Geoffrion.

Bill (No. 133) to incorporate the Merchants Bank of Canada Pension Fund.—Mr. Doherty.

Bill (No. 117) for the relief of George Robert Buttonshaw.—Mr. Campbell.

Bill (No. 134) for the relief of Hope Eileen Moreland Drinkle.—Mr. McCarthy.

Bill (No. 43) respecting the Hudson Bay Insurance Company.—Mr. Knowles.

DOMINION MILLERS' ASSOCIATION.

House in Committee on Bill (No. 111) respecting the Dominion Millers' Association.—Mr. Harris.

On section 2, subsection (b).

Mr. LENNOX. I observe that the words 'for the purposes of its business only' are introduced in this section. That phrase differs from the phrase regularly used in railway Bills 'for the purpose of its undertaking.' This may lead to doubt as to the precise meaning of the phrase used here, and I would suggest that the Bill be allowed to stand for further consideration.

Mr. HARRIS. I understand that this Bill was referred to a special subcommittee and the amendments proposed were brought in by that committee. I believe the subcommittee considered that, with the amendments added, the section sufficiently limited the charter.

Mr. LENNOX. I do not see why we should use one phraseology as regards railway Bills and another phraseology as regards private Bills of this kind, and I would move that the committee rise, report progress and ask leave to sit again.

Progress reported.

SECOND READING.

Bill (No. 139) respecting the Bay of Quinté Railway Company.—Mr. Talbot.

QUESTIONS.

LA REVUE HEBDOMADAIRE—WEEKLY REPORT.

M. G. BOYER asks: (Translation).

1. Is it a fact that the interesting weekly review called Weekly Report, is not published in both languages?
2. If so, will the Government have this remedied?

Sir W. LAURIER (Translation).

1. Yes.
2. Yes.

GRAIN SUPERVISION AT FORT WILLIAM AND PORT ARTHUR.

Mr. SCHAFFNER:

1. How many men are employed by the government as grain supervisors at Fort William and Port Arthur.
2. What is the total cost per annum of the supervision?
3. What are the names of the men employed, and the salary of each?

Sir WILFRID LAURIER:

1. 24 at present; but he number is always increased when navigation opens.
2. About $18,000 per annum.
3. The list of names with salaries cannot be given, as changes are taking place more or less all the time. The men are paid $60 a month when working.

PUBLIC BUILDING AT LACHUTE, QUEBEC.

Mr. PERLEY:

1. When was the new public building at Lachute completed?
2. When were the fixtures installed in it?
3. Has it yet been opened to the public? If so, when? If not, why not?
4. Is it the intention of the government to arrange for a customs officer and service in this building?

Hon. WM. PUGSLEY:

1. The building is virtually completed; a slight change has to be made to the electric lighting and is now being attended to.
2. Early in January, 1910.
3. No, owing to the change to electric lighting.
4. To be answered by the Department of Customs.

POST OFFICE AT HALIFAX.

Mr. CROSBY:

1. At what time did the Post Office Department decide to reconstruct the inside of the post office at Halifax, and in what way did they arrange to have it done?
2. Was it done by contract or by day work?
3. If by contract, how were tenders asked, who were the tenderers, what were the conditions imposed upon the contractor, when was the work done, what was the penalty, if any, how much work has been done, how much money paid to the present contractor, and when may we expect the work to be done so that the Post Office Department may get the building back for the benefit of the public?
4. How many men are at work on the building at present, what has been the average number of men per month working on that building since the contract has been let, and what was the rate of wages paid?

Mr. PUGSLEY:

1. In 1907-08, through the Department of Public Works.
2. By contract.
3. (a) By public advertisement;
(b) M. E. Keefe.. .. .. $ 94,000
Doran & Devlin.. 114,000
J. McInnes & Son, Ltd.. 145,000
(c) Work to be completed according to plans and specification.
(d) March 18, 1910.
(e) Clause 21 of contract is as follows: Contractor shall be liable for and shall cause to be paid to His Majesty all salaries or wages which shall become due to person or persons superintending the work on behalf of His Majesty from the above named period of completion until the same shall be actually completed and received; unless reason for such delay satisfactory to the chief architect and approved by the minister shall be given by the said contractor.
(f) About ¾ completed.
(g) $31,710.
(h) About July 1, 1910.

Sir WILFRID LAURIER.

4. (a) 23 to 25.
(b) Average number of men weekly from beginning to date, 26.
(c) The wages to be paid are included in the specification, in the Fair Wages Schedule under labour conditions; the schedule is furnished by the Labour Department.

VESSELS PURCHASED BY MARINE DEPARTMENT SINCE 1896.

Mr. BLAIN:

How many vessels have been purchased by the government since the year 1896, what are their names, the cost of each and where purchased?

Sir WILFRID LAURIER. 1. Thirteen vessels were purchased.

Name.	Where Purchased.	Cost.
'Princess,'	Charlottetown, P.E.I..	$45,000
'Restless,'	New Westminster, B.C.. ..	18,000
'Hudson,'	St. John, N.B..	3,600
'Newington,'	Victoria, B.C..	38,000
'Falcon,'	Vancouver, B.C...	9,000
'Scout,'	Kingston, Ont..	16,669
'Reserve,'	Ottawa, Ont..	3,300
'Bayfield,'	Quebec, Que...	50,000
'Gulnare,'	Charlottetown, P.E.I.. ..	36,000
'Shamrock,'	Quebec, Que..	21,500
'Lady of the Lake,'	Selkirk, Man.. ..	8,000
'Maisonneuve,'	Ottawa, Ont..	8,500
'Christine,'	Halifax, N.S..	17,000

WINNIPEG POST OFFICE

On the order: Question by Mr. Haggart (Winnipeg) as to keeping open for boxholders Winnipeg post office.

Mr. LEMIEUX. I shall be prepared to answer this question to-morrow. But as to sub-question 11, concerning representations made by citizens of Winnipeg on this subject, I would suggest to my hon. friend that he should move for a return, because the answer is very bulky and voluminous.

Mr. SPEAKER. Subsection 11 of this question stands as a notice of motion for a return.

GREAT LAKES DREDGING COMPANY CONTRACT.

Mr. RALPH SMITH:

1. What dredging has been done since April, 1909, at Fort William to improve the harbour accommodation, and also deepening the Kaministiquia river, under contract given to the Great Lakes Dredging Company?
2. What is the total yardage dredged during that period, and the amount of earth and rock?
3. What price has been paid for the same, and has the said work exceeded the appropriation for the same?
4. What amount of moneys have been paid over to the company, when was the last payment made, and what amount is still due the company?
5. Is the contract to be extended? If so, for what term of years?

Mr. PUGSLEY:

1. Dredging Kaministiquia and Mission rivers and Grand Trunk Pacific terminal basin at Fort William.

	Cubic yards.
2. Earth	3,362,661
Rock	36,765
Total	3,399,426

3. (b) Prices under contract dated June 27th, 1906:

Kaministiquia and Mission Rivers:

Scow measurement: $2 per cubic yard for rock and 9 cents per cubic yard for other material.

In situ: $3 per cubic yard for rock and 9 cents per cubic yard for other material.

Above rates include towing 3½ miles; if towed further, 1 cent per cubic yard per mile to be added.

Prices under contract dated June 4, 1909:

Kaministiquia and Mission rivers:

(For complete areas, to dredge an additional 3 feet beyond the depth of 22 feet as per original contract.)

Scow measurement: $2.85 per cubic yard for rock and 22½ cents for other material.

(For uncompleted areas under contract dated June 27, 1906, to an additional depth of 3 feet.)

Scow measurement: $2.40 per cubic yard for rock and 10½ cents for other material.

Prices under contract dated February 27, 1909:

Grand Trunk Pacific terminal basin, Mission river:

Scow measurement: $2.85 per cubic yard for rock and 16 cents for other material.

Cast over: Same prices.

Additional prices for dumping material in structures or back of cribs, when rehandling is required, 18½ cents per cubic yard.

Measured in situ: $4 per cubic yard for rock and 25½ cents for other material.

3. (b) Work has exceeded amount of appropriation.

4. (a) $315,017.72. (b) November 6, 1909. (c) $379,200.46.

5. The original contract was enlarged June 4, 1909, and the amount of work still to be done will necessarily require a longer period than that specified by the said original contract.

QUEBEC BRIDGE COMPANY'S FINANCES.

Mr. LENNOX:

1. What amount of money or its equivalent was in the hands or control of the Quebec Bridge Company at the time of the collapse of the Quebec bridge?

2. What became of the money?

3. Was any of the money paid to the directors of the company? If so, what sums, to whom and on what account?

Hon. G. P. GRAHAM:

1, 2 and 3. There was no money in the hands or control of the Quebec Bridge Company at the time of the collapse of the Quebec bridge.

THE WHITBY POST OFFICE.

Mr. SAM. SHARPE:

1. What is the total cost of the Whitby post office to date?

2. What was the original estimate?

3. Who is superintendent of work, what salary is he being paid, and how long has he been engaged?

Mr. PUGSLEY:

1. $23,727.77, including site.

2. $33,000, exclusive of site.

3. (a) W. H. Bradshaw; (b) $4 per working day; (c) Since July 1, 1909.

PAYMENTS TO NEWSPAPERS IN CITY OF QUEBEC.

Mr. CROCKET:

1. Have the 'Soleil' Publication Company, the 'Vigie' Publication Company, and the 'Daily Telegram' Publication Company, of Quebec, received any sums of money from the different federal departments and from the Transcontinental Commission, since the first day of March, 1908?

2. If so, what amount of money has each of these companies received, and on what dates, respectively?

Hon. CHARLES MURPHY. I would ask the hon. gentleman to let that stand as a notice of motion.

CONSERVATION COMMISSION AND THE FISHERIES.

Mr. JAMESON:

1. Has the Commission for the Conservation of Natural Resources the oversight of or the advisory powers, as to the regulation or control of the fisheries of Canada or any branch thereof? If so, what is the scope of their duties?

2. What action, if any, has been taken, or is in contemplation, with reference thereto?

Hon. WM. TEMPLEMAN:

1. The duties of the commission in this regard are defined by section 10 of the Act to establish a commission for the conservation of natural resources, chapter 27, 8-9 Edward VII.

2. The commission has appointed a Committee on Fisheries, Game and Fur-bearing Animals under the provision of section 10 of the Act. This committee will make investigations, and in due course, send recommendations to the government.

CREW AND WAGES PAID, ON STEAMER 'EARL GREY.'

Mr. STANFIELD:

1. What is the name, place of residence, occupation on ship and wages paid to each person employed on the government steamer 'Earl Grey?'

2. Are they on ship's articles, where was each one engaged, and at what port did he sign contract?

Sir WILFRID LAURIER:

2. (a) Yes; (b) Charlottetown, Prince Edward Island; (c) Charlottetown, Prince Edward Island.

POST OFFICE BUILDING AT PICTOU, N.S.

Mr. STANFIELD:

1. Who was the contractor for the work of copper roofing the post office building at Pictou, Nova Scotia, in 1909?
2. Who supplied the material for said work?
3. What was the quantity and weight of copper plate supplied, and what was the price paid for same?
4. What was the total cost of the work?
5. Who inspected the materials and work, and what was he paid for inspection?
6. Was the work done and material supplied under public tender and contract? If so, who were the tenderers, and what was the amount of each tender?

Mr. PUGSLEY:

1. W. C. Wetmore & Company.
2 and 3. The contract was for a bulk sum of $1,500, the contractor furnishing his own material; 16 oz. cold rolled copper specified.
4. $1,590.
5. D. H. Waterbury, who is on the permanent staff of the department at an annual salary.
6. Tenders were invited from W. C. Wetmore & Company and from Scott Brown, but the latter declined to tender owing to pressure of work.

TRANSFER OF MR. JUSTICE PRENDERGAST.

Mr. A. HAGGART:

1. Has Mr. Justice Prendergast been transferred from the Saskatchewan Supreme Court bench to the Court of King's bench for Manitoba?
2. If so, was there any lack of legal talent in Manitoba, making it advisable to resort to another province for a judge?
3. What was the reason for the action of the government in this case, in departing from the usual course of appointing judges from the bar of the province in which they are to be judge?

Hon. A. B. AYLESWORTH:

1. Yes.
2. The legal talent of the Bar of Manitoba is beyond question—the hon. gentleman is himself a member of the Bar.
3. Mr. Justice Prendergast was a Judge in the province of Manitoba before going to Saskatchewan. He now returns to Manitoba.

INTERNATIONAL FISHERY COMMISSION.

Mr. J. D. TAYLOR:

1. Is it intended that the regulations adopted by the International Fishery Commission shall become effective on the date therein stated, without action on the part of this parliament?
2. Has there been any undertaking on the part of the Canadian government to make or maintain supplementary regulations with respect to fisheries in Canadian waters adjoining the international waters governed by the treaty? If so, what is the undertaking?
3. Has there been any similar undertaking on the part of the United States government?

Sir WILFRID LAURIER:

1. Parliament will be asked to pass legislation to effect these regulations.
2. Yes; but only so far as the Fraser river is concerned, and Canada has already there, as elsewhere in Canada, not covered by the treaty, adequate regulations in operation.
3. No.

TRANSCONTINENTAL RAILWAY—CONTRACT OF O'BRIEN, FOWLER AND McDOUGALL.

Mr. LENNOX:

1. Since the letting of the contract for the construction of a portion of the Transcontinental Railway to O'Brien, Fowler and McDougall, have estimates been made of the quantities of work yet remaining to be done and of the material yet to be furnished?

2. If so, at what dates have these estimates been made, and by whom? If not, why not?

Mr. GRAHAM:

1. No estimates have been made of the quantities of work yet remaining to be done nor of the materials yet to be furnished.

2. Engineers have not had time to cover the line to revise the original estimate, work on some portions having just begun.

TRANSCONTINENTAL RAILWAY—McARTHUR CONTRACT.

Mr. LENNOX:

Who signed the September estimates on McArthur contract, 244 miles east from Winnipeg, for September, 1907?

Mr. GRAHAM:

C. O. Foss, acting district engineer

ROYAL CANADIAN DRAGOONS—ST. JOHNS.

Mr. WORTHINGTON:

1. Has the government under consideration the question of transferring the Royal Canadian Dragoons from St. Johns to some other point? If so, what point, and when will the transfer be made?

2. Has the government under consideration the question of transferring the barracks of St. Johns to the authorities of the Merrivale College?

3. Is the government considering the question of erecting barracks or other buildings for military purposes at or near St. Lambert?

4. Is it the intention of the government to use the quarters of the Governor of New Brunswick in Fredericton for military purposes? If so, under what conditions?

Mr. PUGSLEY:

1 No.
2. No.
3. Yes.
4. No.

VALUATION OF IMPORTED BINDERS.

Mr. STAPLES:

1. What valuation is placed on a McCormick 6 feet, 7 feet and 8 feet cut binder for customs purposes coming into Canada?

2. Is the same valuation placed on a Deering binder of the same size? If not, what is the valuation?

3. What is the valuation placed on a 4 feet, 5 feet and a 6 feet cut mower for customs purposes?

4. What was the valuation placed on the above-mentioned machines in 1896, 1900 and 1904?

Mr. TEMPLEMAN:

1 and 2. The valuation now placed for duty purposes on McCormick and Deering binders (imported wholesale) is as follows, viz.: 6 feet binder with carrier $107.50; 7 feet binder with carrier $110.50; 8 feet binder with carrier and T truck, $130.

3. The valuation now placed for duty purposes on 4, 5 and 6 feet cut mowers imported wholesale is as follows, viz.: 4 feet mower for one horse, $34 and $35; 4½ feet mower, $38.50; 5 feet mower, $41; 6 feet mower, $42.

4. The valuation placed on the machines above mentioned in 1896, 1900 and 1904 was as follows, viz: Binders, 1896 in quantities 1 to 25, $100 (Carriers $5 extra; 26 to 50, $97.50 (Carriers $5 extra); 51 to 75, $95 (Carriers $5 extra); 76 to 125, $92.50 (Carriers $5 extra); 126 and over, $90 (Carriers $5 extra).

Binders, 1900 for all quantities and sizes including bundle carrier, $102.

Binders, 1904 for 6 feet and 7 feet cut including bundle carrier, $97; for 8 feet cut including bundle carrier and truck, $110.

Mowers, 1896 for 4½ and 5 feet cut in quantities 1 to 25, $34 each; 26 to 50, $33 each; 51 to 75, $32 each; 76 to 125, $31 each; 125 and over, $30 each.

Mowers, 1900 for 4 feet cut, one horse, $33; for 5 feet cut, $37; for 6 feet cut, $39.

Mowers, 1904 for 4 feet cut, one horse, $32; for 5 feet cut, $36; for 6 feet cut, $37.

IMPORTATIONS INTO YUKON TERRITORY.

Mr. McCARTHY:

1. How many dollars worth of goods came into the Yukon territory, duty free, under item 460 of the tariff since the beginning of 1906?

2. How many dollars worth of goods came into the Yukon territory, duty free, under item 461 of the tariff since the beginning of 1906?

3. How many dollars worth of goods came into the Yukon territory and paid duty under item 461a of the tariff since the beginning of 1906?

Mr. TEMPLEMAN:

1. The value of the importations into the Yukon territory during the calendar years from 1906 to 1909, inclusive, was as follows, under tariff item 460:

1906	$ 37,690
1907	10,404
1908	142
1909	
Total	$ 48,236

2. The value of the importations into the Yukon territory during the calendar years from 1906 to 1909, inclusive, was as follows, under tariff item 461:

1906	$ 65,388
1907	124,372
1908	387,997
1909	239,735
Total	$817,492

3. The value of the importations into the Yukon territory during the calendar years from 1906 to 1909, inclusive, was as follows, under tariff item 461a:

1906	
1907	119,674
1908	16,850
1909	47,380
Total	$183,904

PETROLEUM LOCATIONS ON THE ATHABASKA RIVER.

Mr. McCARTHY:

1. What petroleum locations have been made on the Athabaska river between Athabaska Landing and the Athabaska lake to date?

2. How many of these locations have been proved up by the discovery of oil, what licenses have been granted to date, and upon whose reports were these licenses granted?

3. When were these reports made, and in what way would an intending locator get possession of copies of them in order to obtain information with regard to the resources of the country already proven?

4. What regulations, if any, are in force for the location of tar-sand?

5. What applications has the department for extensions of time in which to carry out the exploratory duties on petroleum or tar-sand locations in that district?

6. Is the department making any effort to prove the existence or extent of petroleum, tar-sand, gas, salt or asphalt in this district?

Hon. FRANK OLIVER:

1. In all some 280 applications have been received and dealt with for the reservation of petroleum locations on both sides of the Athabaska river, from a point about three (3) miles above the mouth of Horse creek to the mouth of Tar river. All of these applications with the exception of fourteen (14) have elapsed.

2. Six. No licenses have been granted, as the regulations only provide for sale, and no sales have been made. Reports were made by S. T. Blackwell, Alfred Von Hammerstein, Robert Volkoffsky, William Dwyer and F. B. Smith.

3. During the year 1909. These reports refer only to the particular location in respect of which the same were made. They can be made public on motion for a return.

4. No such regulations are in force.

5. W. A. Campbell applied for extension of time on petroleum location, claiming to have machinery on the ground.

6. Not at present.

Note.—The tar-sands were mentioned in the report of the Geological Survey for 1873-4 (page 22), and described in the report for 1875-6 (page 92). They were investigated by Bell in 1882 (Annual Report Geological Survey, 1882-4, part CC), and by McConnell in 1888 (Annual Report, volume V., part D). McConnell estimates the tar-sands to cover at least 1,000 square miles, and to contain 28·4 cubic miles of material having a bitumen content of 6·5 cubic miles. From 1894 to 1900 the Geological Survey spent $38,-501.24 in experimental boring in Alberta, and since that date have spent $11,500 in assisting in that work. It may now be left to private enterprise to prospect and develop these resources.

GOVERNMENT LANDS AT ST. JOHNS.

Mr. HUGHES:

1. How many acres of land are owned by the government of Canada at St. Johns, Quebec?

2. Are these all in military use, and what troops are now there?

3. Is it proposed to sell these lands?

4. What buildings are thereon?

5. To whom are the properties to be sold, and were public tenders asked for?

6. If not sold, before being sold, will public tenders be called for, or will the sale be by public auction or by private sale?

Mr. PUGSLEY:

1. 99 acres.

2. (a) No; they are not all in military use; (b) the following troops are stationed at St. Jean, province of Quebec: 'A' Squadron Royal Canadian Dragoons, 90; No. 4 Detachment Permanent Army Medical Corps, 6; total number of officers, non-commissioned officers and men, 96.

3. No.

4. St. Johns barracks, including:

	Buildings.
Men's quarters	2
Officers' quarters	1
Married quarters	1
Hospital	1
Guard room	1
Drill hall	1
New stable	1
Engineer shops	1
Sheds	2
Fairbank's scales	1
Old drill hall	1
Oil store	1
	14

5 and 6. Answered by No 3.

MOTIONS AGREED TO WITHOUT DISCUSSION.

Copy of all papers and instructions given to A. S. Williams, law clerk of the Department of Indian Affairs, and to S. Swinford, inspector of Indians, Winnipeg, in connection with their work among the St. Peter's Indians in Manitoba; also a copy of the report of these gentlemen in connection with the work they have been engaged in during the last few weeks among the St. Peter's Indians.—Mr. Bradbury.

Return showing the amounts that have been paid to the 'Whig' Publishing Company for printing and advertising by or for any departments of this government other than Militia and Defence and Marine and Fisheries, each

year from 1896 to the present time.—Mr. Edwards.

Copy of all correspondence with Major Lydon, or other persons, respecting an application on behalf of the Highland Cadet Corps of Montreal, for permission to import, free of customs duty, certain articles of uniform and equipment, the manufacture of which is not carried on in Canada.—Mr. Worthington.

Copy of all orders in council, correspondence, reports, documents and papers, relating to the right or privilege to raise the waters of Clear lake, province of Manitoba, application for which was made by a company to develop power on the Little Saskatchewan river.—Mr. Roche.

Copy of all pay-sheets, accounts and vouchers for wages, material and expenditure in connection with work on Skinner's Cove, Boat Harbour, Pictou county, Nova Scotia, in the years 1907, 1908 and 1909.—Mr. Stanfield.

Copy of all pay-sheets, accounts and vouchers for wages, materials and other expenditures in connection with work on the Causeway between Cariboo and Cariboo Island, Pictou county, Nova Scotia, in the years 1907, 1908 and 1909.—Mr. Stanfield.

Copy of all pay-sheets, accounts and vouchers for wages, materials and other expenditures in connection with work on the Toney river, Boat Harbour, Pictou county, Nova Scotia, in the years 1907, 1908 and 1909.—Mr. Rhodes.

Copy of all correspondence, submissions, references, reports, returns and orders in council, in reference to the adjustment of the disputed item of 581 cubic yards of excavation, claimed at $10 instead of $2.50 a cubic yard, referred to in a letter of the Auditor General to the Secretary of the Transcontinental Railway Commission, dated the 18th August, 1909.—Mr. Lennox.

GEORGIAN BAY CANAL.

Mr. G. V. WHITE (North Renfrew) moved for:

A copy of all orders in council, reports, correspondence, documents and papers, not already brought down, relating to the construction of the Georgian Bay canal, or any portion thereof, or relating to the surveys thereof, and all offers, proposals and written negotiations not already brought down, with respect to the construction of the said canal or any portion thereof by any company, corporation or syndicate, or with respect to the guarantee by the government of bonds or debentures for the purpose of raising the necessary capital for the construction of the said canal.

He said: Mr. Speaker, in arising to address the House on the important question of transportation, dealing particularly with the advantages to commerce which Canada will derive by the construction of the Georgian Bay canal, I recognize my inability to deal intelligently with this subject. However, I realize the importance to Canada of cheap transportation, and I also feel the duty which devolves upon me as a member of this House of bringing to the attention of parliament matters which not only appertain to the constituency which I have the honour of representing, but also to the welfare of the Dominion in general. The right hon. the Prime Minister (Sir Wilfrid Laurier), a short time ago, in the city of Toronto, made the statement that as a young nation we had far more important questions than defence to deal with, and the all important one was this question of transportation. I think it was Macaulay who said that of all the inventions, the alphabet and printing press alone excepted, these inventions which abridge distance have done most for civilization. Especially do these words apply, Sir, to a country of the magnitude of ours. A glance at the map will demonstrate that Canada, from her geographical position, holds the key to the solution of the water transportation problem of the North American continent. This is a fact which is not only recognized by ourselves, but also by our neighbours to the south of us. As regards railway transportation we are, for a young country, pretty well supplied. By the completion, in 1885, of the Canadian Pacific railway, recognized to-day as one of the greatest railway systems in the world, and having a gross revenue equal to the revenue of the Dominion during the last fiscal year, communication was established between the Atlantic and the Pacific oceans. In 1908, according to the Year-book, I find that there were some 23,000 miles of steam railway lines in operation in Canada. To-day we have in course of construction two other transcontinental lines, the Grand Trunk Pacific and the Canadian Northern, besides many branch lines, and the hon. Minister of Railways and Canals (Mr. Graham) stated the other day that within a short time work would be commenced on the Hudson Bay railway. We need our railways, but we also need to develop and improve our waterways which are the natural means of communication placed at our disposal, especially adapted to the carriage of large and bulky commodities. It is a mistaken idea, which seems to be more or less prevalent, that the improvement of our waterways will retard railway development.

To verify my contention I need simply call the attention of the House to the fact that such men as Sir Thomas Shaughnessy, president of the Canadian Pacific railway, Sir William Van Horne and James J. Hill, probably the three best authorities on modern transportation requirements have announced themselves as favourable to the construction of the Georgian bay canal. At a banquet tendered to him by the Toronto Board of Trade, on the 15th June, 1908, Sir Thomas Shaughnessy said:

But while we are giving attention to our agricultural interests, and encouraging the development of our farms and our fruit lands, and our mining and lumbering operations, we have other things to do in Canada, which we must carry out if we are properly to fulfil our destiny. We have our internal water-

ways. We must endeavour to shorten the distance between the Georgian bay and the seaboard, and improve the routes so as to make traffic cheaper.

Now, Sir, I have here some statistics as to the development of waterways in European and other countries, and it would appear that while these other countries have been making use of their natural means of communication by water, Canada has apparently been at a standstill in this direction. Let me quote from Mulhall, the eminent British statistician; he gives the mileage of existing canals and rivers in use in Europe at over 77,000 miles, of which 13,293 miles are canals. The total mileage of the world's canals reaches 26,000 miles, costing in excess of two billion dollars. The British isles have some 4,000 miles of canals, Germany has 10,000 miles of internal waterways, including 3,000 miles of actual digging, and Germany has spent $60,000,000 on canals alone, and has under way a programme of waterway improvement which runs into an expenditure of hundreds of millions of dollars. Mr. Mason, one of the German consuls-general to the United States, says:

Germany foresaw that in a fully developed transportation system the proper role of the railways would be to carry passengers and the higher classes of merchandise manufactured from the raw staples which the waterways had brought to their doors.

France has some 3,000 miles of canals. Since 1814 France has spent $750,000,000 for harbours and waterways, $700,000,000 on railways, and $600,000,000 for wagon roads. M. Defreycinet, when a member of the French Cabinet, having control of transportation matters, said:

It is conceded that the waterways and railways are destined, not to supplant, but to supplement each other. Between the two there is a natural division of traffic. To the waterways gravitate the heavy commodities of small value, which can only be transported where freights are low. In procuring for manufactures cheap transportation for coal and raw materials, they create freights whose subsequent transportation gives profit to the railways.

It will be seen, therefore, that both Germany and France are one in believing that the improvement of their waterways does not hamper railway extension. China has a system of canals comprising some 5,000 miles; Belgium has 1,240 miles of internal waterways on which she has spent from $80,000,000 to $100,000,000; Austria-Hungary has within recent years spent on rivers and canals $200,000,000, and she has 1,700 miles of canals and over 5,000 miles of natural waterways. The Corinth canal in Greece which is four miles long, cost $500,000, and it saves ships a distance of from 100 to 175 miles. Russia purposes building a 27 foot waterway 1,000 miles long, from the Black sea to the Baltic, and costing approximately $100,000,000. Now, in reference to the United States, while the United States has actually 4,000 miles of canals, about 2,000 miles of these have been abandoned, and to show the reason for the abandonment of these canals,I shall quote from the last message to Congress of ex-President Roosevelt in December, 1908, in which he said:

Action should be begun forthwith during the present session of the congress, for the improvement of our inland waterways, action which will result in giving us not only navigable but navigated rivers. We have spent hundreds of millions of dollars upon these waterways, yet the traffic on nearly all of them is steadily declining. This condition is the direct result of the absence of any comprehensive and far-seeing plan of waterway improvement. Obviously we cannot continue thus to expend the revenues of the government without return. It is poor business to spend money for inland navigation unless we get it.

Inquiry into the condition of the Mississippi and its principal tributaries reveals very many instances of the utter waste caused by the methods which have hitherto obtained for the so-called 'improvement' of navigation. A striking instance is supplied by the 'improvement' of the Ohio, which, begun in 1824, was continued under a single plan for half a century. In 1875 a new plan was adopted, and followed for a quarter of a century. In 1902 still a different plan was adopted, and has since been pursued at a rate which only promises a navigable river in from twenty to one hundred years longer.

Such shortsighted, vacillating and futile methods are accompanied by decreasing water-borne commerce and increasing traffic congestion on land, by increasing floods, and by the waste of public money. The remedy lies in abandoning the methods which have so signally failed and adopting new ones in keeping with the needs and demands of our people.

In the report on the measure introduced at the first session of this present Congress, the Secretary for War said:

The chief defect in the method hitherto pursued lies in the absence of executive authority for originating comprehensive plans covering the country or natural divisions thereof. In this opinion I heartily concur. The present methods not only fail to give us inland navigation, but they are injurious to the army as well. What is virtually a permanent detail of the corps of engineers to civilian duty, necessarily impairs the efficiency of our military establishment. The military engineers have undoubtedly done efficient work in actual construction, but they are necessarily unsuited by their training and traditions to take the broad view, and to gather and transmit to the congress the commercial and industrial information and forecasts upon which waterway improvement must always so largely rest. Furthermore, they have failed to grasp the great underlying fact that every stream is a unit from its source to its mouth, and that all

its uses are interdependent. Prominent officers of the engineer corps have recently even gone so far as to assert in print that waterways are not dependent upon the conservation of the forests about their head waters. This position is opposed to all the recent work of the scientific bureaus of the government, and to the general experience of mankind. A physician who disbelieved in vaccination would not be the right man to handle an epidemic of small-pox nor should we leave a doctor sceptical about the transmission of yellow feved by the stegomyia mosquito in charge of sanitation at Havana or Panama. So with the improvement of our rivers; it is no longer wise or safe to leave this great work in the hands of men who fail to grasp the essential relations between navigation and general development and to assimilate and use the central facts about our streams.

Until the work of river improvement is undertaken in a modern way it cannot have results that will meet the needs of this modern nation. These needs should be met without further dilly-dallying or delay. The plan which promises the best and quickest results is that of a permanent commission authorized to co-ordinate the work of all the government departments relating to waterways, and to frame and supervise the execution of a comprehensive plan. Under such a commission the actual work of construction might be intrusted to the reclamation service, or to the military engineers acting with a sufficient number of civilians to continue the work in time of war, or it might be divided between the reclamation service and the corps of engineers. Funds should be provided from current revenues if it is deemed wise—otherwise from the sale of bonds. The essential thing is that the work should go forward under the best possible plan and with the least possible delay. We should have a new type of work and a new organization for planning and directing it. The time for playing with our waterways is past. The country demands results.

I have also an extract from a recent report of the commissioner of corporations on transportation by water in the United States giving further reasons for the abandonment of certain canals in the United States. This report says:

Among the causes for the abandonment of canals have been the original improvident location of some canals, mismanagement, the adverse control of strategic connections and terminals, and above all the inability of shallow towpath canals to adopt their physical conditions to the demands of modern transportation. Practically all the canals now in most successful use are ship canals, forming comparatively short links between important natural waterways and opening up extended routes of transportation by water for large vessels.

Then I find that the North American Conservation Conference which met last year at Washington calls the attention of the country to our waterways. It says:

We recognize the waters as a primary resource, and we regard their use for domestic and municipal supply, irrigation, navigation and power, as interrelated public uses, and properly subject to public control. We therefore favour the complete and concurrent development of the streams and their sources for every useful purpose to which they may be put.

The highest and most necessary use of water is for domestic and municipal purposes. We therefore favour the recognition of this principle in legislation, and, where necessary, the subordination of other uses of water thereto.

The superior economy of water transportation over land transportation, as well as its advantages in limiting the consumption of the non-renewable resources, coal and iron, and its effectiveness in the promotion of commerce, are generally acknowledged. We therefore favour the development of inland navigation under general plans adapted to secure the uniform progress of the work and the fullest use of the streams for all purposes. We further express our belief that all waterways so developed should be retained under exclusive public ownership and control.

Before discussing the report of the Georgian Bay canal survey, which was laid on the table of the House last session, I wish to offer my congratulations to the board of engineers in charge of this survey work. The report which they have presented to the House contains a mass of valuable information compiled in such a manner as to make it both interesting and instructive reading. Having had the advantage of a course in engineering myself, I feel that I can appreciate the value of this work. I shall take up simply the results and conclusions submitted by the board appointed to investigate the feasibility and probable cost of a deep waterway from the Great Lakes to the sea-board via the French and Ottawa rivers. The first conclusion at which the board arrive is as follows:

That a 22-foot waterway for the largest lake boats (600 ft. x 60 ft. x 20 ft. draft) can be established for one hundred million dollars ($100,000,000) in ten years, and that the annual maintenance will be approximately $900,000 including the operation of storage reservoirs for the better distribution of the flood waters of the Ottawa river.

This board of engineers investigated the cost of two routes the results being as follows:

SUMMARY OF COST.

Route A.—Via Montreal, Lake St. Louis, Ste. Anne de Bellevue, Ottawa, Rocher Fondu Channel, Coulonge, Pembroke, Des Joachims, Mattawa, Talon Lake, North Bay, Lake Nipissing and French river.

Locks, dams, channels, piers, lighting, damages..	$88,626,108
Contingencies, engineering, administration, &c..	8,862,892
Storage of flood waters, regulation basins, telephones, &c..	2,200,000
Total..	$99,689,000

Feeder at summit when required..	$ 987,485

Route B.—Same as route A excepting that Rivières des Prairies (Back river) one of the branches of the Ottawa river, north of Montreal Island, is followed instead of Lake St. Louis and the St. Lawrence river from Ste. Anne to Montreal as in route A.

Locks, dams, channels, piers, lighting, damages..	$83,354,508
Contingencies, engineering, administration, &c..	8,335,492
Storage of flood waters, regulation basins, telephones, &c..	2,200,000
Total..	$93,890.000

With an extra amount of $987,485 for feeder at summit, as in the previous case. They have figured out the cost of maintenance, and it amounts to, as I have already stated, some $900,000.

Distance from Montreal harbour to French river village on Georgian bay equals 440 miles. The rise from Montreal harbour to the summit of 659 feet can be overcome by 23 locks, ranging from 5 feet to 50 feet in lift and that the descent of 98 feet from the summit to Georgian bay can be made by four locks ranging from 21 feet to 29 feet in height of lift,—27 locks in all, connecting twenty-three navigable pool levels of various lengths.

That sufficient water may be stored within its own and adjacent watersheds to operate a summit level above Lake Nipissing. That to use the Lake Nipissing level as a summit would increase the cost by at least $10,000,000, and introduce twelve additional miles of canal cutting.

The reports point out that there were two alternate methods of getting over the summit level:

1st. By carrying the Lake Nipissing level through to the Paresseux locks, making a raised summit of Lake Nipissing the summit level.

2nd. By raising all the lakes between Lake Nipissing and the Paresseux locks to a common level, thus making a summit level above that of Lake Nipissing.

3rd. By augmenting the supply of the watershed of the second or adopted condition from outside sources.

The first establishes the summit level at elevation 648·0 feet over a distance of 56½ miles from the Chaudière Falls at the outlet of Lake Nipissing to the Paresseux locks at the foot of Talon lake, and whose supply is derived from the watersheds of Lakes Nipissing, Trout, Turtle, Talon and Nosbonsing, the combined area being 4,420 square miles. These watersheds would together yield a minimum outflow in excess of 4,500 cubic feet per second, with control at the present outflow of Lake Nipissing at the Chaudière Falls. This outflow is obviously much beyond the limit of any canal requirement, so that further discussion of this level with regard to supply is unnecessary.

So that as regards getting a sufficient water supply, there is no doubt so far as the first method is concerned but on account of the extra cost, the engineers saw fit to adopt the second method:

The second is that which applies to the project as laid down and calls for a summit level at elevation 677·0 or 29 feet over the raised Lake Nipissing level, and extending from the small upper lakes or sources of the Ojibwaysippi creek at the west end, to the lower end of Talon lake at the east end, and embracing Trout and Turtle lakes, the Little Mattawan river and Talon lake, a distance of about 24 miles.

This will be accomplished by ten small puddle core earth dams at the west end, and a concrete overflow crest dam just above the present overflow of the Talon chute at the east end. The effect of this will be to raise Talon lake 41·7 feet, and Trout and Turtle lakes 14·3 feet above their present levels, thereby creating a summit basin of 22·4 square miles in area.

This elevation of 677 feet is the most economic height to raise the water now contained in these lakes, in order to use them as a summit level from the comparative standpoint of increased height and consequent cost of the lock structures at either end and the minimizing excavation to obtain grade between them.

By fixing the summit grade at elevation 651·0 a storage of six feet is obtained in the summit basin over the minimum projected draft of 20 feet on the upper sills of the summit locks.

So it will be seen that by saving some ten miles of excavation they got sufficient water for canal purposes by adopting the second condition. The report goes on to say:

That the natural low water flow from the Ottawa and French rivers is most ample to meet all the requirements.

With regard to the flow regulation, the report says:

The Ottawa valley or watershed is bounded toward the north by the height of land, or west of the ridge which marks the commencement of the slope to Hudson bay along the west and south the ridge marks the slope towards the Great Lakes and St. Lawrence. The encircled valley is 55,700 square miles in area, all of which drains through creeks and rivers eventually into the main stream. The rain and snowfall within this area alone has to be considered. Of the total area 45,000 square miles lie to the north of the river and 10,000 —practically all in Ontario—to the south. The northern area from Montreal to Mattawa forms a rectangle 300 miles east and west by 150 miles north and south. Roughly speaking, this rectangle is divided in half by the Gatineau valley.

The western half or upper Ottawa basin contains the large lakes—Victoria, Expanse and Quinze, with an expansion of the Ottawa on its way westwards into its north and southlying expansion—Lake Temiscamingue. Here the Blanche and Montreal rivers enter, and the whole continues south to Mattawa.

That the spring flood in the Ottawa river can be restrained by storage throughout its watershed so that, under extreme conditions, the reaches will not overflow; currents therein will not be over three miles per hour, and locks will be workable, that is to say, prac-

tically slack water navigation will obtain.

That ordinary lift locks are best suited to the conditions found. That their minimum length should be 650 feet between the inside gates, with 65 feet clear width, and 22 feet clear depth throughout.

That the gates should be of steel, and for safety, there should be two pairs of upper gates, and two pairs of lower gates, with additional lower unwatering gates, if necessary. That the locks should be constructed of concrete with long approach piers of continuous cribwork at each end.

That all locks will be in secure rock foundation.

The fact that all locks will be in secure rock foundations is to my mind very important.

On the route the number of reaches is twenty-three, a flight of two locks being provided for at Roche Capitaine rapids, and at the lower and upper Paresseux falls.

The lock channels are to have a clear length of 650 feet and a clear width of 65 feet, with a depth of 22 feet over the mitre sills. These dimensions will accommodate vessels of the largest tonnage on the great lakes and will provide reasonable accommodation for any probable increase in the size of these boats. Duplicate pairs of gates are provided at both ends of the locks and, should a longer chamber be required occasionally, a clear length of 707 feet would be available by leaving the inner pair of lower gates open. Some of the lake boats for the iron ore trade, as has been stated, have attained a length of 605 feet. The common lake carriers of 6,000 to 10,000 tons are from 350 to 500 feet and over in length.

Conclusion No. 5 deals with the dams:

There will be 18 main dams required, some of considerable size, all being on secure rock foundations.

That regulation by stop-log sluices is amply efficient in most of the cases encountered, and 'Stoney' sluices and overflow regulation are adapted to the remaining reaches.

6th. That excavated channels with sides showing above water should have a minimum width of 200 feet at bottom, and submerged channels a minimum width of 300 feet at bottom, with marking piers at intervals, and that the minimum depth throughout should be 22 feet. That the project presented contemplates: 28 miles of canal excavation, 66 miles of channel dredging, and 346 miles of river and lake with a width of 300 feet to a half mile.

That is 6·36 per cent of the total route is of canal excavation, 15 per cent of channel dredging and 78·64 per cent of river and lake requiring no improvements. You will see, Mr. Speaker, what a small percentage of this waterway is to be improved in any way.

Conclusion No. 7 deals with the time of transportation.

Mr. G. V. WHITE.

That the total time taken by a lake freight boat of 12-mile maximum speed, without delays at locks or in meeting other boats, from French river harbour to Montreal would be 70 hours. That the season of navigation will average 210 days from May to November.

This is one of the objections which have been raised to the construction of the Georgian Bay canal by parties opposed to the scheme—that the short season of navigation would be a hindrance. But, when we consider that the time occupied in the trip from the mouth of the French river to Montreal would be only 70 hours, we can see that, in a navigation season of say 210 days, which means 5,040 hours, there would be 72 trips of seventy hours each. I compiled figures of the reports of the Buffalo Chamber of Commerce, showing the opening and closing of navigation at different points along the great lakes for ten seasons from 1898 to 1907, and I find that the number of days during which navigation was open averages 214. During last season, navigation on the great lakes, as stated in the report of the Trade and Commerce Department, opened on April 28 and closed on December 10, making 226 days in all. So, we find that the season of navigation of this Georgian Bay canal route will be practically the same as the season of navigation on the St. Lawrence at Montreal.

Conclusion No. 8 says:

That the proposed reaches will be generally held at about the ordinary high-water level of their vicinity, and much of the area to be flooded is now inundated each spring, so no extensive damage to the farming districts will occur.

Conclusion No. 9, in my opinion, is one of the most important arrived at by this board of engineers. It deals with the question of water-powers and is as follows:

That with a storage system as planned, and the tributary basins thereto required for the navigation project, a reliable water-power supply is secured at various dams amounting to 1,000,000 horse-power, which can be developed at $50 per horse-power.

I have gone pretty fully into the question of water-powers, for, as I have stated, it is, to my mind, one of the principal questions to be dealt with in connection with this important project. Water-powers, as we all know, will play a very important part in the future development of our country, and it is pointed out that the force unused on the Ottawa river at present is enormous. Through the construction of dams and locks, the water-powers will be concentrated at various points along the route. The first essential in water-power development is an average flow, such as can be accomplished by the construction of a perfect system of reservoirs. For example, we find that, in Minneapolis, they

have installed a storage or reservoir system to govern the flow. In the report of the United States chief of engineers, it is stated that the reservoir system has already directly benefited the milling interests of Minneapolis to the extent of $500,000 annually, the production of flour by water-power amounting to 16,000,000 barrels at less than 1 cent a barrel, which by steam would cost 5 cents. The preservation of our forest areas at the head of the streams is also essential to the maintenance of our water-powers. Power will be required along the route for canal purposes, for lighting, for the operation of the locks, &c. The plans which have been presented create at least 12 water-powers, which consume the entire head of the river from Mattawa to the Lake of Two Mountains, aside from the possible two powers on the Back river should that route be selected for the waterway. It is also pointed out that this water-power would materially assist in paying interest on the total cost of construction.

It is clear that, ultimately, owing to the work of the federal government, the energy available will be from 15 to 20 times more valuable than it is at present, and it would seem to be good business for the Dominion to acquire the powers now if they could be reasonably purchased.

The industries which would utilize the water-powers: Pulp and paper mills. Electric smelting. Electrification of railways, Chemical works.

On page 295 of the report I find the following with regard to this waterway:

Ideal sites for the location of flour mills for milling in transit will also be available and, no doubt, many other manufacturers will be attracted by the combination of cheap power and transportation. The advantages of these two combined have been shown particularly at the Soo and Niagara. In neither of these cases can the power be considered as cheap as can be developed in other portions of the country. But the advantage of cheap transportation and local market has developed these before the other cheaper powers have been touched.

The construction of the canal will furnish one of the principal reasons for the development of the powers by giving cheap transportation both for the raw material and the finished product. The powers will be still better adapted for the manufacture of paper and pulp with a waterway both to the American and European markets.

It would seem advisable, in view of the above circumstances, that if there is a probability of the canal being constructed, that immediate control of the various water-powers be acquired by the Dominion government.

A study of the intimate relations between the proper development of the powers and the construction of the canal will show the truth of this statement.

Then I have here some figures with regard to the powers along the route in their present condition, and what they could develop after the canal was constructed:

Proceeding by way of Ste. Anne, the first power will be located at Pointe Fortune, near Carillon, 49½ miles from Montreal. The present low water head is 13½ feet, which, with a discharge of 17,400 cubic feet per second, is capable of developing 19,300 electrical horse-power. After the canal is constructed, there will be concentrated here the fall of the series of rapids above, making a head of 40 feet, which with a regulated discharge of 43,950 cubic feet per second is capable of developing 148,000 electrical horse-power. This power would, undoubtedly, be of great value as being in such close proximity to Montreal, where the market for electrical energy is rapidly increasing.

The next power site is situated at Hawkesbury, which is 60 miles from Montreal and 10½ miles from the Pointe Fortune power just described. On the Quebec shore, the Hawkesbury Lumber Company have developed some 1,200 horse-power under an 8-foot head. Canal regulation works will maintain a maximum fall of 25 feet, but, allowing six feet for slope of the water surface in the 67 miles above, friction, losses, &c., an effective head of 19 feet can be utilized and 71,800 electrical horse-power developed. The large cost of this development, as tabulated, is owing to the heavy expense in the construction of outer works, the main channels of the river being taken up by sluice-gates for the proper maintenance of the canal levels; also the head being comparatively low, the adoption of smaller electrical units is necessary. This improved power at Hawkesbury would most likely be used in different lumber and pulp manufactories for the district below Ottawa.

The next lift at the Chaudière Falls is 126·8 miles from Montreal. There is at present a turbine installation of about 50,000 horse-power under heads varying from 16 to 27 feet. Those present powers are being greatly improved by the construction of a massive stop-log dam across the river, just above the falls. The canal dam will, probably, be placed about three-quarters of a mile above the falls, and, in order not to interfere with the present interests, a development has been figured on with a twenty-foot head which will be the difference in the level between the water in the reach above Ottawa, and the water surface to be maintained by the power owners' dam. Hence, with a regulated discharge of 28,000 cubic feet will be an additional 45,000 electrical horse-power available at the Chaudière after the canal is constructed. This increase of power would be welcomed, as even at the present time the supply of hydro-electrical power is insufficient.

By the erection of the canal dam at Ottawa, the Deschenes rapids will be drowned out.

The Chats Falls is the next power site situated twenty-eight miles above Ottawa and 155 miles from Montreal. A thorough study being made of a development here, it is proposed to raise the head water sufficiently to drown out the Chats rapids above. Under a 48-foot head, there is at present 43,300 horse-power available here. In contrast to this, the conditions when the canal is built, will be a regulated low water flow of 27,400 cubic feet per second which, with on effective head of 48·5 feet is capable of generating 113,500 horse-power. For both present and future developments, it is proposed to construct a canal head race, 2,100 feet in length on the Quebec side. The Chats Falls are situated within

comparatively short transmission distance of numerous cities and towns, which would, no doubt, flourish if the canal were built and consequently, greatly increase the demand for power.

Passing up the river twenty miles further, the Chenaux rapids are reached. The available power at present is practically negligible owing to the fall being very small, but the canal will concentrate here a head of 35 feet and of 68,300 horse-power capacity. Besides the Chenaux lift being a power directly created by the canal the other sites on this reach of the river will be greatly increased in value. From the Chats to Pembroke there are long stretches of shallow rapids, &c., where frazil and anchor ice troubles would abound but which will be eliminated by the raised canal levels.

At mileage '183' the Ottawa river is divided into two channels by Calumet island. The south channel consists of a series of pitches and rapids, twelve miles in length. By the canal, these rapids will be concentrated into two lifts three miles apart, and of 35 feet each, called the Rocher Fendu No. 1 and the Rocher Fendu No. 2 with a total of 78,000 electrical horse-power available.

The Grand Calumet falls are situated on the north channel caused by Calumet island. In a distance of a mile there is a drop of 56 feet made up of a number of cascades of great turbulence. Taking the present extreme low water flow of 4,635 cubic feet per second, there could be developed here, 20,100 horse-power. As the proposed canal route will most likely be through the Rocher Fendu channel, it will be necessary to put a dam in the Calumet channel for the proper maintenance of the canal levels. Properly placed, this dam, together with the other canal works could be utilized to develop a most valuable power site, with the following governing conditions: a maximum effective head of 69·5 feet and a regulated low water discharge of 9,700 cubic feet per second, making an available capacity of 56,000 electrical horse-power. The Grand Calumet is an excellent site for a pulp and paper industry, as a large timber country is available through tributary streams situated short distances further up the river.

The next fall will be at Paquette, 209 miles from Montreal. At present there is a maximum available head of 16 feet, capable of developing 8,700 horse-power. Extensive works are necessary to obtain this power which presents a great contrast with the power which can be obtained after canalization. By the latter, there will be concentrated here a head of 20 feet, making available 24,900 electrical horse-power.

Culbute chute is a small power situated on the north channel caused by Allumette island.

Fifty-six miles from the Paquette lift are the Des Joachims falls, 266 miles from Montreal. With a head of 35 feet, the present low water capacity is 22,740 electrical horse-power. The available head after the canal is constructed will be 40 feet, developing 60,400 horse-power.

Eighteen miles further, or 284 miles from Montreal, are the Rocher Capitaine falls. This is another of the large powers of the Ottawa river. The present physical conditions are favourable to development. The river swings around a neck of land across which a canal head-race one and one-half miles in length could be constructed—thus, to utilize an effective head of 59 feet, and develop 38,400 electrical horse-power. The same scheme of development could be adopted after the canal is built. The available head would also be 59 feet but with the increased regulated low water flow of 16,200 cubic feet per second, a capacity of 82,000 horse-power could be obtained.

The next fall at Deux Rivières has a present maximum head of 15 feet, with a capacity of only 9,360 horse-power. This could only be developed at a large capital cost. The canal will concentrate here a fall of 30 feet, making 38,400 horse-power available.

The last three water-powers, viz.: Des Joachims, Rocher Capitaine and Deux Rivières, are situated within a stretch of 31 miles and would aggregate a total of 180,800 electrical horse-power after the canal is constructed, as against 70,500 horse-power if developed fully for present low water. It is not probable that any improvement of these sites would be attempted under present conditions, as the country in the vicinity is sparsely settled and the land is very rough.

From Mattawa to Lake Nipissing, the various lifts which will be created by the canal will not be available for power purposes as the water supply of the Summit will be practically required for lockages and storage.

The water-powers of the French river are, at present, many in number but of small capacity. The Big Chaudière, Five-Mile rapids and the Dalles are the largest and most suitable for power purposes, especially so as the canal lifts on the French river will be concentrated at these three places.

However, with regard to this section of the route there is not sufficient data upon which to found any accurate statement regarding the power to be developed there.

Five-Mile rapids are situated forty-five miles from North Bay; the total low water flow is 5,000 cubic feet per second. A total effective head of 24 feet and 10,000 electrical horse-power is available. The capacity of this power being the same before and after the canal is constructed, the cost of development with the canal built is decreased only by the cost of the dam, which would be borne by canalization.

The Dalles falls are situated about a mile from Georgian bay. In order to obtain a head of 21 feet and utilize a low water discharge of 4,000 cubic feet per second, it is necessary to dam the four channels. Only 6,700 horse-power could be developed at Dalles falls.

There are many other features which are taken into account in the study and valuation of the water-powers, such as run-off flow at all stages, &c., but these are given elsewhere and it is deemed unnecessary to repeat the same here.

The report goes on to say:

Upwards of 1,000,000 horse-power can be developed along the Ottawa and French rivers by the improved regulated conditions proposed for canal purposes. It is doubtful if more than 150,000 horse-power at minimum conditions could be developed at present. Under present conditions the powers will not be developed for more than 150,000 horse-power, and the capital cost per electrical

horse-power at the out-going terminals of the power-house would average $75 per electrical horse-power.

With construction of the canal, this amount would be increased to 1,000,000 horse-power and the capital cost per horse-power exclusive of the works, which are constructed for canal purposes, would average $48 per electrical horse-power.

Considering the reduced price per horse-power resulting from the decreased capital cost and the improvement due to cheap transportation, it would appear that it would not be an improbable hypothesis as a basis of calculation to assume that the 1,000,000 theoretical horse-power would be developed in as short a time as 150,000 horse-power, under present circumstances.

Different methods might be followed in case of construction such as:—

1. The power might be leased on the basis of the reduced capital cost per horse-power of the development. The proceeds to be used in paying the interest on the investment and reducing the tolls of the canal. An annual rental of $5 per horse-power would result in an eventual revenue of $5,000,000 per year.

2. The power might be granted at nominal figures to attract manufactories from which the transportation of the raw material and manufactured articles would repay the privileges granted.

No. 10 refers to the alternative route:

10th. That an alternative route behind Montreal is entirely feasible and would cost $5,000,000 less that the front or St. Lawrence river route; the time of transit by the back route being less than one hour longer than by the front of Montreal, and having one lockage less.

11th. That locks 800 feet long and 75 feet wide would increase the total cost by $5,000,000 That building all locks to a depth of 24 feet so reaches might afterwards be deepened, would cost another $6,000,000. That a depth of 25 feet along the route behind Montreal for 16 miles to Sault au Recollet would cost $7,250,000, nearly $2,000,000 more than the 22-foot depth for the same distance. That increased depth up to 26 feet can be secured temporarily by filling the reaches above ordinary working level, and in a case of emergency will pass boats of 24 to 25-foot draft, if the terminal locks and those into Lake Nipissing are given a 25 foot depth, and slight additions made to the overflow dams.

The 12th and last result pointed out by this board is that no international waters are affected which is very important. I have an extract here which I have taken from a work by Mr. Herbert Quick on American inland waterways. It is probably one of the most recent works on American waterways it having been published in July, 1909. Mr. Quick, referring to the Georgian Bay canal, says:

That twenty-one feet of water through this channel means much of prejudice to us in a military way any one can see. That it imperils all our foreign bound and much of our domestic trade on the lakes where most of our merchant marine is to be found, ordinary common sense must make plain, leaving out of account the deliberate utterances to the same effect of statesmen and publicists on both sides of the line.

I have read most of this work of Mr. Quick and he admits that Canada is practically the greatest competitor which the United States have in so far as water transportation routes are concerned. He pays particular attention to the Georgian Bay canal scheme and points out that it would be of immense advantage to the North American continent in the movement of large and bulky commodities.

I have compiled some figures to show the sources of trade for this route should the Georgian Bay canal be constructed. In answer to a question placed on the order paper a few days ago by the hon. member for South Toronto (Mr. Macdonell) the hon. Minister of the Interior (Mr. Oliver) gave the following figures. The question dealt with the amount of arable land and the amount of land under cultivation in Manitoba and Saskatchewan and Alberta at the present time. The figures are as follows:

	Total area.	Arable land.	Under cultivation.	Per cent. *
Manitoba ..	41,169,280	25,150,000	5,061,503	2·0
Alberta.. ..	155,400,000	52,200,000	1,483,400	2·8
Saskatchewan.. ..	151,900,000	66,600,000	5,814,723	7·8
Total..	348,469,280	143,950,000	12,360,000	8·5

*Per cent of arable land under cultivation.

So, we can look forward to the day when practically all of the arable land is under cultivation and like the Minister of Railways and Canals I view the future of Canada very optimistically. I believe that in a very few years the West, instead of contributing some 160,000,000 bushels of grain, as it has done this year, will contribute from 250,000,000 to 500,000,000 bushels and there will then be freight for all routes, the Hudson Bay railway included. In 1909 the wheat crop of Canada amounted to 166,744,000 bushels as against 112,434,000 in 1908. The average yield per acre in 1909 was 21·51 bushels as against 17 bushels in 1908. Therefore, there was an increase in the yield of 54,310,000 bushels or 48·3 per cent, practically 50 per cent of an increase. The total value was $141,320,000. Of this amount the provinces of Manitoba, Saskatchewan and Alberta contributed 147,482,000 bushels as against 106,000,000 bushels in 1908, or an increase of 38·6 per cent. The report of the Trade and Commerce Department for December, 1908, shows that Canada ranks tenth in the wheat producing countries of the world for 1906 and 1907, sixth in the production of oats, and eighth in the production of barley. In 1903 the crops in the west amounted to 56,000,000 bushels, and in 1908 they amounted to 106,-

000,000 bushels. Taking the average yield per acre at 19 bushels the crop in Saskatchewan and Alberta trebled in the five years between 1903 and 1908. Assuming the same proportion of increase during the next five years, say in 1913 the provinces of Alberta and Saskatchewan alone would produce at least 150,000,000 bushels of wheat. As to the prospect for this season's crop I quote from the Toronto 'Globe' of January 3, 1910, the statement of Mr. Wm. Whyte, vice-president of the Canadian Pacific railway:

The area under crop in Manitoba will not be largely increased in 1910 but in Saskatchewan the increase will amount to 20 per cent of the whole. Within a short time the province of Saskatchewan will be producing more wheat than any state in the union and in less than a decade it will produce more wheat than all the United States combined. In a paper read last summer before the British Association by Mr. W. B. Lanigan, assistant freight traffic manager of the company, he stated that all the land under cultivation in Saskatchewan taken altogether did not amount to more than the road allowances of the province.

Now, Mr. Speaker, I want to point out by what routes most of our grain is taken to the markets. I have before me figures of the shipments of grain from Fort William and Port Arthur for the seasons, 1906, 1907, 1908 and 1909, and as these figures are taken from the government reports they are probably as correct as we can expect to find them:

Shipments of Grain from Fort William to Port Arthur for Season of Navigation 1906-7-8-9.

	Canadian Ports.	American Ports.	Total.	P.C. via American Ports.
1906..	34,634,674	16,451,909	51,086,583	32·2
1907..	44,426,428	15,384,381	59,810,809	26·0
1908..	48,319,113	19,875,187	68,194,300	28·6
1909..	54,816,798	23,089,304	77,906,102	29·6

You will see, Mr. Speaker, that during the last four years practically thirty per cent, of our grain from the west went by way of American ports, when, not only all our own grain should have been sent by Canadian ports, but we should have as well a large percentage of American grain through these ports. On pages 1858-1859 of the government report on grain, I find that the quantity of wheat exported from Canada in 1908 was as follows:

	Bushels.
Total to British empire	43,102,240
To foreign countries (including the United States)	552,428
To the United States	114,926
Total..	43,654,668

Deducting the 114,926 bushels that went to the United States we had 43,540,742 bushels of grain going to other foreign countries. Now, on page 1847 of the same report I find that for the year 1908 the export of Canadian grain from Canadian ports is as follows:

	Bushels.
Montreal	19,552,752
St. John, N.B..	5,845,073
Halifax	4
Total exported from Canadian ports	25,397,829

Montreal also exported 10,900,000 of foreign wheat in 1908. We, therefore, find that from American ports during 1908, there must have been shipped via American ports the difference between 43,540,742 bushels, the total exportation, and 25,397,829 bushels which went through Canadian ports, leaving 18,142,913 bushels to go through American ports, or, 41·7 per cent of the total Canadian grain exported to foreign countries that year went via American ports.

The trade area of the great lakes includes an area of agricultural and industrial activity of over 2,000,000 square miles, with a population of over 25,000,000. In this area over two-thirds of the iron production of the United States is manufactured. I wish to submit the following estimate of the traffic available for the Georgian Bay canal:

	Tons.
I. Through freight comprising chiefly wheat, corn and other cereals, flour, beef and hog products, cattle and live stock, and other farm products from the Canadian Northwest and the Western States en route for transatlantic markets or to eastern Canada and New England..	11,000,000
II. Sawn lumber and other forest products, including firewood, railroad ties and sleepers, posts, poles, staves, heading, pot and pearl ashes, &c..	3,000,000
III. Coal, including both the Nova Scotia product in bulk cargoes by vessels carrying grain or lumber as return to Sydney, and American anthracite from Lake Erie ports to which shipments of return cargoes of lumber and pulpwood can be made..	1,500,000
IV. Pulpwood, pulp, spruce, &c.. ..	1,500,000
V. Ores, minerals, building stones, marble, lime, clay, sand, brick, cement, peat, fuel, &c..	2,000,000
VI. General merchandise..	1,000,000
Total estimated annual traffic.. ..	20,000,000

With regard to the first item, the wheat raised during the year 1908 in the country

tributary to the great lakes, which area would be directly benefited by the construction of the Montreal, Ottawa and Georgian Bay canal, was about 580,000.000 bushels, or 17,577,000 tons. The shipments of wheat from this tributary area were over 9,000,000 tons. The shipments eastward from Chicago, Milwaukee, Duluth, Port Arthur and Fort William, of wheat alone, during the year 1908 amounted to 132,001,285 bushels, or over 4,000,000 tons.

Of corn, the country tributary to the great lakes, during the year 1908, raised 1,770,000,000 bushels, or 50,610,057 tons. Chicago alone has shipped in a single year upwards of 3,700,000 tons.

Of flour, Minneapolis alone shipped, during the year 1908, 14,156,164 barrels of flour, or about 1,575,000 tons. The export of flour to Great Britain and Europe from Atlantic ports in 1908 totalled 11,644,400 barrels, or 1,300,000 tons. The consumption of flour in eastern Canada and the New England states, the great bulk of which is supplied by the area tributary to the great lakes, amounts to about 9,000,000 barrels, or 1,000,000 tons.

Of other grains, the receipts of grain other than wheat and corn, at five northern Atlantic ports, for domestic consumption and export, in 1908 amounted to 58,606,000 bushels, or over 1,670,000 tons.

From the above it is evident that the item of grain alone furnishes a present volume of traffic, as follows, for which the Ottawa is the shortest route, and the great bulk of which it is bound to attract:

	Tons.
Wheat for export..	3,600,000
Wheat for domestic consumption ..	1,000,000
Corn for export..	2,200,000
Corn for domestic consumption.. ..	1,000,000
Flour for export..	1,300,000
Flour for domestic consumption.. ..	1,000,000
Grains other than wheat and corn, export and domestic..	1,600,000
	11,700,000

For meat products, live stock, &c., the Georgian Bay route, being in a northern climate, would be especially adapted. Shipments of live stock and dressed meats from the west reach an enormous aggregate and constitute a most important traffic, a single Chicago firm paying out as much as $800,000 per month for freight charges. Chicago alone, according to the latest report of the board of trade of that city, ships annually upwards of 1,000,000 tons of dressed meats, and 200,000 tons of lard, besides 4,439,166 head of live stock. During the year 1908 the receipts of live stock from the west at three Atlantic ports were 8,953,899 head. The exports of hog and beef products from Atlantic ports in 1908 amounted to 631,948 tons. It may be safely asserted that almost the entire bulk of the export trade of western farm produce will be diverted to the Ottawa route, as well as a large proportion of the traffic for domestic consumption.

The following shows the extent of the export of farm produce from Atlantic ports during the year 1908. In many other years this amount has been greatly exceeded, and with the favourable rates and great shipping facilities afforded by the Ottawa water-way a great increase in this export trade is assured:

EXPORT FROM ATLANTIC PORTS.

	Tons.
Wheat..	3,600,000
Corn..	2,200,000
Flour..	1,300,000
Grains..	250,000
Meats..	1,000,000
	8,350,000

Practically all of which would be routed via the Ottawa water-way.

Lumber will undoubtedly furnish a great amount of traffic for the canal. The pine cut annually in the Ottawa district represents an annual freight of not less than 2,000,000 tons sawn lumber. Including hardwoods, rough lumber, firewood, ties, posts, poles and other forest products, the output without any increased cut of pine will probably not fall short of 4,000,000 tons yearly, and may greatly exceed that amount.

During the year 1908, the lumber output of the Ottawa valley amounted to 475,000,000 feet board measure. In 1909, it increased to 500,000,000 feet board measure. I have taken the trouble to get some figures regarding the quantity of lumber shipped from Montreal to England in 1908 and 1909. In 1908, there was exported 94,397,894 feet; in 1909, 102,499,883 feet, or an increase for 1909 of 8,101,989 feet. With regard to the lumber on the Ottawa, I have a letter from one of the large mill owners there, in which he says in a postscript:

> If we had water shipments, I think that fully one-half of our output could go to water points, perhaps more.

So that you see that from the Ottawa valley alone, the lumber trade would be a very important factor. At present, as we all know, there is any quantity of hardwood in the Ottawa valley which has to be left rotting in the woods for the simple reason that it is impossible to bring it down in tows as we float soft wood.

The quantity of coal, is another important matter. I find here that 9,902,460 tons of coal passed through the Sault Ste. Marie canal in 1908. I got some figures of the imports of coal in reply to a question I put on the order paper, and I find that there was imported into the Dominion from the United States during the fiscal year ending 31st March, 1909, 10,142,798 tons of coal, and of this amount the province of Ontario alone consumed 8,670,505 tons or about 85½ per cent. Taking the

figures for the last five years, I find that during those five years, Ontario alone, imported from 85 per cent to 90 per cent of the total quantity of coal brought into Canada from the United States. It seems to me that we ought to endeavour as much as possible to encourage our own industries. Would it not be possible for us to use Nova Scotia coal instead of coal from the American side? Perhaps, my hon. friend the Minister of Customs (Hon. Wm. Paterson) if he were in his seat, would not altogether agree with me, because, as I understand, most of this coal is subject to an import duty of 53 cents per ton.

With regard to the contention that there would be no return cargoes, on this route I have looked up the coal question and would like to give the House some figures which I have been able to obtain. Coal, which is imported from the United States, is imported principally to operate railways, and supply industrial plants. Suppose, for some unforeseen reason, our coal supply from that source were cut off, we would be in a somewhat embarrassing position for this reason, that many of our industries are depending on United States coal and consequently would have to close down. Therefore, would it not be advisable for us to develop our own mines by using our own coal and thus give employment to our own people instead of to people on the other side of the line? Here are the figures of Nova Scotia coal productions:

Output of Nova Scotia coal mines for year ending September 30, 1907.

Production was 5,730,660 tons (2,240 pounds). Shipments, 5,046,690 tons (2,240 pounds), at $2.25 per ton.

Of this amount 616,312 tons went to the United States (12·3 per cent) (2,240 pounds).

In 1867 import duty of $1.25 per ton killed our (Nova Scotia) trade to United States, which dropped from 338,492 tons to 16,099 tons in 1893.

In 1894 duty was changed to 40 cents per ton for screened coal and 15 cents per ton for slack, the former being raised to 67 cents in 1897. Shipments increased until in 1903 they were 968,832 tons, chiefly slack entering under the low rate of 15 cents per ton.

Under the Taft tariff recently the duty was again lowered to 45 cents 1907 exports were 616,312 tons which shows a decrease of 350,000 tons compared with 1903. Of this amount nearly 500,000 tons were shipped by the Dominion Coal Company comprised largely of shipments to the Everett Gas Works of coal classed as culm or slack and paying only 15 cents per ton duty.

Under a proviso of the new tariff much, if not all, of this would now be subject to a duty of 45 cents per ton.

The falling off in the trade has been very marked lately and prospects are that on conclusion of existing contracts the amount exported will be very small.

Let us open a market in Ontario for Nova Scotia coal and patronize home industries.

Mr. G. V. WHITE.

For year ending September 30, 1907:

1,709,592 tons (2,240 pounds) or 33·87 per cent was shipped up the St. Lawrence to Quebec and Montreal.

If Georgian Bay canal was built coal could be shipped by steamer direct from the mines in Nova Scotia to Fort William, and such shipments could be the return cargo for vessels bringing down grain and other commodities.

I have here some figures from a reliable American coal firm with regard to the cost of American coal:

	Per ton.
Average cost of Pennsylvania and Ohio bituminous coal, screened 3-4 inches mesh., f.o.b. mine, per ton of 2,000 pounds..	$1 10
Railway freight to Lake Erie 70 cents to..	88
Transfer..	07
Lake freight to Fort William..	30
For unloading, including interest on investment in equipment, &c., they allow..	25
And for degradation due to handling..	15
To which must be added import duty of.	53
Making total cost from $3.10 to.. ..	$3 28

A recent government report, the report of the Department of Mines, for the year 1907-8, estimates the cost of coal f.o.b. Sydney at $1.39 per long ton; say $1.25 per 2,000 pounds. Now, a comparison of the time from the mine to Fort William by the two routes is as follows:

	Hours.
Average time of steamer, Sydney to Montreal..	85
Average time of steamer, Montreal to Fort William via Georgian Bay canal..	100
Total..	185

A lake freighter takes 65 hours from Erie to Fort William. At the same rate of compensation as on the lake the freight charge to Fort William should not exceed 85 cents to $1 per ton. Nova Scotia coal should, therefore, be laid down in Fort William, irrespective of coal tolls, at a cost of $2.50 to $2.65 per ton, giving an actual advantage over American competition with the existing tariff. We have indication of this in the fact that for some years the Dominion Coal Company supplied coal to a railway company in Boston, Mass., at $2.80 per ton against an import duty of 67 cents, giving a net price, $2.13 per ton in Boston. Assuming that Nova Scotia should capture 25 per cent of the existing coal supply of Ontario or approximately 1,500,000 tons. In 5,000 ton barges this equals 300 cargoes, or two cargoes per day for five months of the year, each boat having a capacity of six trains of freight cars, each train being made up of twenty-eight 30-ton cars. The carriage of such a traffic would, in itself, require a fleet of thirty or more of these large vessels in constant operation during the season.

So we see that in this one commodity alone, if we undertook to develop our own mines, there would be no question about a return cargo. Besides, there are large quantities of pulpwood which could be exported by this route, and also, as I stated before, the establishment of pulp and paper industries would result from the development of the water-powers on the route. Then, there is the question of iron. The total quantity of iron ore passing through the Soo canal in 1909 was 39,994,693 tons. Without cheap water transportation, it is doubtful if one-hundreth part of this enormous output would be moved. Then, there are other minerals such as marble, which is found in large quantities along the route, at Portage du Fort, Arnprior and other points, also phosphate, peat and many other minerals. The general merchandise would consist of traffic between eastern Canada and the Northwest, local traffic between points along the route of the waterway, and also the traffic between New England and the western states, for which this is the natural route, all of which would help to build up traffic for this canal.

Now, I have taken from the government reports of 1908 the following statistics:

Welland Canal.

Total quantity of freight passed on the Welland canal during season of 1908:—

1,292,493 tons eastward,
410,960 " westward,

1,703,453 " total.
8,024 " were way or local freight.

1,695,429 " east and westbound through freight.

Of this quantity—

767,118 tons eastbound through freight carried by Canadian vessels.
518,111 " eastbound through freight carried by American vessels.
154,203 " westbound through freight carried by Canadian vessels.
255,997 " westbound through freight carried by American vessels.

1,695,429=total of 921,321 tons by Canadian vessels,
and " 774,108 tons by American vessels.
1,695,429

Or, in other words, of the eastbound traffic, American vessels carried 40·3 per cent of the total, and of the westbound traffic, American vessels carried 62·4 per cent of the total. Of total east and westbound traffic, American vessels carried 45·6 per cent.

St. Lawrence Canals.

Total quantity of freight passed through these canals in 1908 was:—

1,424,646 tons eastward,
584,456 " westward,

2,009,102 " total.

East and westbound through freight—

1,315,682 tons eastbound,
257,317 " westbound.

1,572,999

Or, in other words, only 16·3 per cent of the total was westbound traffic.

So, those who use the argument with regard to the Georgian Bay canal that there will be no return cargoes may well look at the statistics shown in the government reports with regard to the St. Lawrence canals, and consider what a small part of that traffic is westbound.

Welland and St. Lawrence canals.—Through traffic beween Montreal and ports on Lake Erie, 1908. Michigan, &c.

The total quantity of through freight passed eastward and westward through the Welland and St. Lawrence canals from Lake Erie to Montreal was:—

864,926 tons eastward to Montreal.
3,472 " westward from Montreal.

868,398 " total.

Welland and St. Lawrence canals.—Through freight from United States ports to United States ports, 1908:—

209,518 tons eastward.
239,136 " westward.

448,654 " total.

The total quantity of freight passed through the Welland canal from United States ports to United States ports in 1908 shows an increase of 51,997 tons as compared with the previous year, 1907.

Comparative statement of the traffic of all canals for the years ending December 31, 1907 and 1908:—

Freight.	1907.	1908.
Grand total ..	20,543,639 tons.	17,502,820 tons.

Decrease over 1907 of 3,040,819 tons.

According to these figures, Canadian traffic through these canals has decreased, while American traffic has increased.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. G. V. WHITE. At six o'clock, Mr. Speaker, I was pointing out to what extent our American neighbours were using the Welland and St. Lawrence canal systems. I have here some extracts from a report by Mr. F. C. Stevens, Superintendent of Public Works for the State of New York. In a recent report to the government of that state, he advocates the construction of a 21-foot canal connecting Lake Erie and the Hudson river at a cost of $198,000,000, and he also advises the government of that state to build this canal before the Georgian Bay canal is started. I will just quote here a short extract from that report:

If this plan could be brought to fruition, it is my belief that not only would New York State be in a commanding position so far as commercial shipments go in the event of the completion by the Dominion government of the Ottawa-Georgian Bay canal, but it is not impossible that if the construction of the ship canal across New York State were authorized in the near future, the construction of the Ottawa-Georgian Bay canal would be abandoned altogether for the time being. The net result to the State would be a 21-foot canal from the Hudson river to Lake Ontario instead of a 12-foot canal, a completion at an earlier date than may be hoped for in the case of the barge canal as now planned and finally a solution of the water traffic problem as far as New York is concerned for all time to come.

In looking up the treaty of Washington of 1871, I find, by article 27, that the United States has equal rights with Canada to the use of the Welland canal. We have expended on that canal, $28,000,000 up to the present time. Our American neighbours use that canal; yet they do not contribute one cent towards the maintenance of it. If this scheme which Mr. Stevens proposes goes through, that is, the building of a canal from Oswego to Albany, in the event of the Canadian government deepening the Welland canal, the American government will be saved an expenditure of $30,000,000 or $40,000,000 in this connection. In other words, so long as the enlarged Welland canal was sufficient for the American trade, the Americans would not be called upon to contribute one cent towards the construction or maintenance of this portion of the canal. In the report of the Department of Railways and Canals from April 1, 1907, to March 31, 1908, I find that in 1906 the traffic through the Canadian canals was 10,523,185 tons, while in 1907 it was 20,543,639 tons. However, Sir, it is rather disappointing when, further on in the report, we find that some 8,464,073 tons of the increase was due to the American coasting trade, which means that the United States took advantage of the free use of our canals, to the extent of eight and a half millions tons more in 1907 than in the previous year. In the bumper year for waterways Canada only had a gain of 1,217,251 tons. The fact is that we have subsidized American trade on the Great Lakes and the St. Lawrence just to the extent that they have used our canals. The trade from Canadian ports to Canadian ports through our entire canal system was 1,491,027 tons in 1887, while in 1907 it was 4,196,891, or about treble what it was twenty years ago. I take this from the Year-book of 1908. The American coasting traffic during the same period increased from 344,333 tons in 1887 to 13,052,837 tons in 1907, or nearly 38 times what it was 20 years ago, and more than treble our own trade. It will thus be seen that whereas we built our canals to capture the American trade they are using them to beat us out of our own. At the same time the American people are fearful lest Canada should go ahead with the construction of the Georgian Bay canal. I find in the report of the Committee on Railways and Canals of the 52nd Congress, 1892, the following:

On the day that it becomes possible to send ships direct from the great lakes to the ocean, by way of the St. Lawrence river, while they are unable to go by the Hudson, the sceptre of commercial supremacy will begin to pass from New York to Montreal, and the merchant marine of the United States, which has had a new birth on the lakes, will receive its death blow from Canadian competition.

In Mr. Quick's book on 'American Inland Waterways' I find the following:

The farmers of the Mississippi valley find their hardest competitors in the Canadian Northwest. Winnipeg is the greatest wheat market in the world. The sceptre passed from Chicago to Minneapolis, then to Duluth, and now has gone to the young giant of Manitoba. In 1907 Winnipeg exported 20 per cent more wheat than West Superior and Duluth combined—and the flood of grain from the new Northwest has only begun. One cereal competes with all the others. The grains of the Saskatchewan basin will displace the corn of the Mississippi valley; and when it goes to the sea in ships, while ours, if in American bottoms, must go in barges, shall we not be indebted to Canadian generosity if we stand on an equality with Canadian farmers?

From the Bently Congressional report I quote:

When we come to complete it says. 'with men of our own race, with a soil just as productive, and with transportation facilities immeasurably superior, the farmers of—our western states are going to have an agricultural depression such as they never knew before, unless our own nation shall give us a way to the sea, so that our ships can go and come as freely as they do on the ocean.'

Further on this report says:

It is not a question whether the products of the West and Northwest shall go by way of the Erie canal, or by rail from Buffalo or not go at all; but whether the transportation of these products shall be retained in American hands, on American soil and reach an American port, or whether it shall be surrendered to Canada.

Now, Sir, discussing for a moment the enlargement of the Welland Canal system I will simply say that the late George Y. Wisner, consulting engineer United States Department of Interior, before the Royal Commission on transportation in 1904, stated that it would probably cost twice as much to enlarge the Welland canal for twenty feet navigation and to deepen the St. Lawrence canals, as to build the Georgian Bay canal. It seems certain that if the Welland canal is to be deepened the whole St. Lawrence system must be deep-

ened, and on the authority of Mr. Wisner that would cost in the neighbourhood of $200,000,000. If we are simply to deepen the Welland canal system it only means that we will move the port of transhipment from Port Colborne to Prescott or Kingston, and what great advantage there would be in that I fail to see. With regard to rates by rail, and water transportation, I quote from the Georgian Bay canal survey report page 398 as follows:

It is well known now, that transportation by water on a first-class shipway is not only cheaper than by rail, but often much quicker.

It is recognized in the United States that the average movement of freight by rail is only twenty-five miles per day, or about one mile per hour, including of course all delays at stations and at terminals, where cars are frequently side-tracked for several days. Any one conversant with the movement of freight on the great lakes can see that the average there is considerably above this figure——

Mr. Joseph E. Randsell, president of the National Rivers and Harbours Congress in the annals of the American Academy of political and social science states:—

As to the relative cost by the two methods, there can be no difference of opinion. The interstate commerce commission reported that the average cost of moving freight by rail in 1906 was 7·48 mills per ton per mile. The statistical report on the lake commerce for 1906 by Colonel Davis, U.S.E.C., shows it cost to move over 51,000,000 tons through the Sault Ste. Marie canal last year ·84 mills of one mill per ton per mile or one-ninth of the average rail rate. . . .

From the best information I can get after a careful study of the subject, I am convinced that waterway transportation in this country, under favourable conditions, costs only about one-sixth as much as the average cost by rail. The above remarks apply to the lakes and rivers and furnish unanswerable arguments for their improvement.

He further states that practically all expenditures on waterways have been profitable investments. They have returned in reduced freight rates to the United States people from 100 to 200 per cent yearly.

The contrast of the estimated cost of transportation via the Ottawa water-way to the present or lowest possible rates by existing routes will demonstrate the certainty of the diversion of the bulk of through traffic to this route on its completion.

The competing routes with which the comparison of cost of carriage must be made and which routes now control the trade are:

From Upper Lake Ports.

1. Via the lakes to Buffalo and thence by rail to New York and New England points.

2. Via the lakes to Georgian bay ports and thence by rail to Montreal and New England points.

3. Via the lakes to Buffalo and thence by Erie canal to New York.

4. Via the St. Lawrence all-water route to Montreal.

The bulk of through traffic from the great lakes to the sea-board has for many years been routed via the lakes to Buffalo and thence by rail to New York (route 1), but the almost prohibitive cost of carriage by rail and the extravagant transfer charges at Buffao have deterred the growth of through traffic and impeded its movement so much so that our American competitors have long been fully alive to the necessity of a through route with greater facilities and economy of carriage and have expended much time and money in their investigations of possible solutions of the problem.

The grain traffic with its prevailing and possible costs of carriage will be employed as a standard in the following comparisons.

During the season 1908 the average cost of carriage of wheat via the lakes from Chicago to Buffalo, a distance of 891 miles, was 1·1 cents per bushel.

The minimum rate during the same year was ¾ cents per bushel.

The same freight was carried to Georgian Bay ports at an average of 1·17 cents per bushel.

The average rate for carriage of wheat from Chicago to New York via lake and rail routes, for the ten years 1898-1908 is 6·15 per cent. These rates do not include the cost of transfer at Buffalo for which an additional ¾ cents must be added making a total including transfer charges of 6·90 cents per bushel.

The lowest rail rate possible, according to high authority, under most favourable conditions, a rate which has never yet been reached, is 2·2 mills per ton mile.

The average rail rate on grain from Buffalo to New York, a distance of 440 miles, during the year 1908 was 5·2 cents per bushel or 4⅛ mills per ton mile.

The lowest rail rate was in 1904 when the rate fell to 4 cents per bushel or 3 mills per ton mile.

Following are the prevailing rates for carriage of wheat during 1908:

1. Chicago to Buffalo by lake.. .. 1·1
   Buffalo to New York by rail.. .. 5·5
   Buffalo transfer.. .. .. ·75
   7·35 cents per bushel.

2. Chicago to Georgian bay by lake. 1·17
   Thence to Montreal by rail.. .. 5·5
   Intermediate transfer.. .. .. .. ·75
   7·42 cents per bushel.

3. Chicago to Buffalo by lake.. .. 1·1
   Buffalo to New York by Erie canal.. .. .. 5·
   Buffalo transfer.. .. .. ·75
   6·85 cents per bushel.

4. Chicago to Montreal via St. Lawrence canal system (quoted rate) average.. .. .. 5·52
maximum 6·75 cents per bushel.

Following is a statement of the movement and distribution of the wheat from several upper lake ports, 1908:

From—	Duluth.	Chicago.	Fort William.
	Bushels.	Bushels.	Bushels.
Route 1 and 3 to Buffalo...	37,530,021	6,733,246	13,952,111
Route 2 to Georgian bay..	1,471,495	.....	20,823,337
Route 4, St. Lawrence, Montreal	4,825,473	.....	6,733,246
	43,826,989	6,733,246	41,508,694

Through Shipments of Wheat, 1908.

	Bushels.
Route 1, from Buffalo..	53,384,866
Route 3, from Buffalo via canal..	4,063,934
	57,448,800
Route 2, Montreal via Georgian bay..	10,353,476
Route 4, Montreal via St. Lawrence..	20,492,797
	30,846,373

For purposes of comparison using the lowest possible rail rates the rates between terminals with which the Ottawa waterway must compete, would be:

1. Chicago to Buffalo by lake.. .. 1·1
Buffalo to New York by rail.. .. 3·33
Buffalo transfer.. .. .. ·75

5·18 cents per bushel.

2. Chicago to Georgian bay ports.. 1·17
Georgian bay ports to Montreal (365m.).. .. .. 2·77
Intermediate transfer.. .. .. .. ·75

4·69 cents per bushel.

Comparing this with the rate via the Ottawa waterway to Montreal, the time in transit of a lake carrier from Chicago to Buffalo is approximately 80 hours. From Fort William to Montreal via the Georgian Bay canal it would be 100 hours. Therefore the estimated rate based on the ratio of time during which a carrier would be employed, would be by the Georgian bay route 1·4 cents per bushel. It is, therefore, evident that the traffic would stand a toll of at least 50 cents a ton, or 1½ cents a bushel, making the total cost of carriage with toll 3 cents per bushel as against 4·69 cents per bushel by the Chicago-Georgian bay-Montreal route and as against 5·181 per bushel via Chicago to Buffalo by lake and Buffalo to New York by rail. Thus there is no question but that the rate via this route would be considerably less than any existing rate.

Mr. G. V. WHITE.

Judging by the report which was laid before parliament last session, I think there is no doubt that the engineers came to the conclusion that this is in every way a feasible route. They point out and lay special stress on the fact that if the canal is to be constructed, it should be at least a 22-foot canal for the simple reason that in order to compete with the lake freighters of the present day the canal must be of such dimensions as to permit of these freighters travelling over this course. Mr. J. J. Hill, who is an authority on railway transportation, pointed out before the Rivers and Harbours Congress of 1907 that no vessel of 1,000 tons burden can compete with a box car; with 10,000 tons burden the problem is mastered. Therefore, we can understand why we should make this canal at least 22 feet on the sills.

May I read a few extracts in support of this waterway project, both by men of the present day and by men who have gone hence. Sir John A. Macdonald in 1865 said that:

Just as sure as Ottawa will be the capital of British North America, just as surely as it will be the capital of all the British possessions in America, just as sure as the legislature is settled here, just as surely will be carried out the great scheme of connecting Lake Huron and the Ottawa river.

Sir George Etienne Cartier, another great Canadian, declared that the route from Ottawa to the great lakes would of necessity be constructed sooner or later.

The right hon. the Prime Minister of this country has on several occasions declared himself in favour of this great project. Speaking in Ottawa within the last few weeks in the course of the by-election campaign, he made particular allusion to this great work. He said:

If I were to tell you my own thought, I would say that the financial condition of this country would warrant the commencement of the building of the Georgian Bay canal this very year. But we must above all things, be careful of our credit, and it would be prudent to complete the immense undertaking that we have now under way before starting out on this other giant work. But I hope the day is not far distant when we will begin. I will make a little confession. I am anxious to take it up. I would like to have my name and the name of the Laurier government connected with this enterprise. You know I am getting to be an old man. I have not many years to live and I want to make the best possible use of them.

The hon. Minister of Railways and Canals is quoted as follows:

I hope to live long enough, yes, long enough to see the Georgian Bay canal constructed.

The Hon. Charles Murphy, Secretary of State, is also quoted as favouring this scheme. At a meeting held in Montreal

last spring, he paid particular attention to it. He then said:

The deepening of the Welland canal and the construction of the Georgian Bay canal were two national works which would be accomplished at the moment when Canada was creating her navy.

I have many other extracts here, not only from Canadian but also from American sources, but I shall not take the time of the House in reading any further. I submit that if the government be not in a position at present to go ahead with this work, they should allow some company to take it up. I do not mean that I would be in favour of a company controlling and owning the canal in the future, but I understand that a company, called the Montreal, Ottawa and Georgian Bay Canal Company, has made certain proposals to this government. This company is, I think, financially in a position to carry through this great work, I would judge so by the fact that the name of Sir Robert Perks, who is at the head of this company, is connected with some of the greatest works of this description ever undertaken. Let me just mention a few of them:

Severn tunnel under the river Severn, connecting the railway systems of south and west England with those of South Wales. This tunnel is 4½ miles long and involved an expenditure of $12,000,000.

Barry docks, South Wales, built chiefly to accommodate the coal export and lumber import trades, equipped with the latest appliances for handling this traffic, and cost $10,000,000. These docks handle some 8,000,000 tons of coal per annum and the population of the town has risen, since their construction, from 100 to 40,000.

Buenos Ayres harbour works constructed for the Argentine government. These works were constructed at a cost of $50,000,000.

The Manchester ship canal, extending from the Estuary of the Mersey to Manchester, 25½ miles. This has reduced the freight rates between Liverpool and Manchester one-half. It has 26 feet depth of water and is 120 feet wide at the bottom, and cost $78,000,000.

The Rio Janeiro works, now under construction for the Brazilian government, consisting of several miles of quay walls in Rio Janeiro harbour, with attendant dock facilities, such as shed, electric cranes, &c., and involving an expenditure of $35,000,000.

And there are many other works with which the name of Sir Robert Perks and those of his associates are connected. Therefore I think that if Canada is to take advantage of the position she occupies geographically with regard to transportation it is time she undertook to improve this great water-way with which nature has endowed us. Along this water-way, many industries could be built up, and along it are to be found many of the most valuable resources of this country. I do not know that there is anything further I can say except to urge on the government the necessity of undertaking this work at the earliest possible moment or of allowing some private company to undertake it. The construction of this canal would not only help the territory through which it runs but be of the greatest national importance to the whole Dominion.

Mr. JAMES ARTHURS (Parry Sound). In view of the very able speech, Mr. Speaker, made by my hon. friend from Renfrew (Mr. White) and the many exhaustive speeches which have been delivered upon this subject in other parliaments as well as this, and which have demonstrated clearly the great importance of building this canal, I shall not take up the time of the House by going into details. I simply wish to call attention again to a few of the reasons why this canal should be built at once and to reply to a few of the objections made against its construction. The first survey for the canal up the Ottawa and down the French river was made in 1837, 73 years ago, by direction of the parliament of Upper Canada. In 1859, a report was made of a survey on a nine foot basis to the parliament of Canada, and since then many surveys have been made over this route. In each and every case we find that the engineers reported that the scheme was entirely feasible and recommended it as one which would be highly beneficial to Canada. The fact that these reports were so unanimous in favour of the building of this canal is the more remarkable when we consider that when these surveys were made, the great northwest was almost entirely unknown, and in fact the buffalo were about the only inhabitants of those regions in which are to be found to-day the finest towns in western Canada. The coal mines of Nova Scotia also were then very little worked and the manufacturing establishments of Ontario were practically unknown. We know what great changes have since taken place and we look forward to seeing our shipments of grain from the west continue to multiply. We believe also that our mines in Ontario, great as they are at present, will continue to develop and furnish, through the operation of our railways, a home market for our coal from Nova Scotia and provide return cargoes for vessels from the maritime provinces using this canal.

It is not necessary that I should prove that this canal will give the shortest route between Fort William and Montreal—shorter by 280 miles than any other—as this will be admitted by any one who has made a study of the facts. It is also admitted, even by American authorities, that its completion would place the grain carry

ing trade from the west to the east almost entirely in the hands of Canada, and thus build up our great ocean ports on which we have spent so many millions. It has also been repeatedly proven that this canal would reduce the cost of carrying grain 3 to 4 cents a bushel, which would mean millions to the farmers of our northwest. To every farmer shipping 3,000 bushels of grain, that would mean about $100 per year, and in a great many cases, the difference of 3 or 4 cents per bushel is the actual difference between profit and loss. Coal from eastern Canada could be carried to Ontario at from 45 cents to 65 cents per ton less than it can be brought from Pennsylvania.

In addition to this, the consumer would save the duty of fifty-three cents per ton. This is not a small item by any means. For, as pointed out by the hon. member for North Renfrew (Mr. White) our coal importation for Ontario alone amounts to 8,500,000 tons, and there were carried to the port of Port Arthur alone, 1,500,000 tons for use on the various railways. There are large tracts of timber along or near the route of the Georgian Bay canal, which, at present are almost entirely worthless, or are being destroyed by fire or otherwise. This applies to hundreds and probably thousands of millions of feet of hardwood, and thousands of cords of pulpwood and ties. The increase in the value of this timber to Canada would of itself almost justify the building of the canal. Then, we have the matter of the power available and which would be made valuable by the construction of the canal. This is by far the greatest question connected with the opening of this route. This power is estimated at 1,000,000 horse-power, to be developed at an average cost of $50 per horse-power, or, in other words, about $2 per horse-power per year. A great deal of this power will not be required for many years, and I have no doubt, knowing as I do many of the situations, that a number of these powers could be developed for about half this estimated cost. The advantage of developing this power can hardly be over-estimated. Canada should be, and with this power developed would be, in a position to control almost entirely the paper and furniture trade of the world, for we should have the supply of raw material and the power at the same point, and we should have reduced cost for the transportation of the finished article. As an example, we have the cities of St. Paul and Minneapolis whose prosperity is entirely owing to the fact that they have cheap power at their door.

We find then, that all reports on this canal have been favourable; that almost all parts of Canada would be directly benefited; that the cost of transportation would be reduced from the west and the use of Canadian coal made possible in Ontario; that timber would be made valuable which is now almost worthless; that power would be developed to afford opportunities for Canadian factories. Any one of these would justify as a business proposition the building of this canal.

The question of building this canal should not be made a party question, and it is a matter of regret that in the past both parties have used it to a certain extent at election times. But I believe that the people interested are united in declaring that the canal should be built at once; they are tired of having canals on paper, and surveys of canals, and they believe that at present the proper course is to build without delay a canal that will float a ship.

However, the question at the present time is whether or not it is advisable to spend the money necessary for so great a work. In this connection, I would call the attention of the House for a moment to a few remarks made by the Minister of Customs (Mr. Paterson) on the debate on the Budget. On January 18, as reported at page 2151 of 'Hansard', the hon. gentleman used these words:
