OFFICIAL REPORT

OF THE

DEBATES

OF THE

HOUSE OF COMMONS

OF THE

DOMINION OF CANADA

SECOND SESSION—ELEVENTH PARLIAMENT

9-10 EDWARD VII., 1909-10

VOL. XCIV

COMPRISING THE PERIOD FROM THE SEVENTEENTH DAY OF JANUARY TO THE TWENTY-FIRST DAY OF FEBRUARY, INCLUSIVE.

OTTAWA
PRINTED BY C. H. PARMELEE, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1909 10

House of Commons Debates

SECOND SESSION—ELEVENTH PARLIAMENT

HOUSE OF COMMONS.

MONDAY, January 17, 1910.

The SPEAKER took the Chair at Three o'clock.

HALIFAX AND ESQUIMALT NAVAL YARDS.

On the orders of the day being called:

Sir FREDERICK BORDEN. Mr. Speaker, I would like to give the answer which I promised to my hon. friend the leader of the opposition (Mr. R. L. Borden) last Thursday in connection with a paragraph which he read from a statement in the London 'Times,' purporting to have been made by Sir Wm. White. The answer is as follows:

With reference to the matter of the Halifax and Esquimalt naval yards, referred to by the hon. the leader of the Opposition yesterday, and with particular reference to the observations of Sir William White, published in the London 'Times' of November 19 last, regarding the condition of these naval yards, the reply, so far as the Department of Militia and Defence is concerned, is as follows:—

Whatever action has been taken with regard to the armament and works at Esquimalt, has been taken with the full cognizance and concurrence of the Imperial War Office and in furtherance of their policy at the time the fortress was taken over.

With respect to the information which Sir William White stated that he had received that the naval base at Halifax was in a similar condition to that at Esquimalt, the only remark which can be made is that the fortress at Halifax is believed to be in at least as efficient a condition at the present moment, both as regards armament and works, as it was when taken over from the imperial authorities.

So far as the Department of Marine and Fisheries is concerned, the following information has been received from that department:—

With regard to Esquimalt, the naval yard at that station is still under the imperial authorities. The machinery is lying idle, but well looked after. The same is to be said as regards the buildings. The station has, however, been reduced to two gun vessels and one survey ship.

With regard to Halifax, the machinery in the workshops is looked after, though the parts are not assembled for working.

MANITOBA FISHERY COMMISSION.

Mr. CAMPBELL. I wish to ask the minister who is in charge of the Department of Marine and Fisheries, when the report of the fisheries commission that has been working in Manitoba is going to be brought down? It was promised by the Minister of Marine and Fisheries that it would be brought down just as soon as printed. It was printed, I understand, eight or ten days ago, or perhaps earlier, and under those circumstances I would expect to have it brought down. I asked the right hon. Prime Minister (Sir Wilfrid Laurier) the other day and he told me he would attend to it at the earliest possible moment. That was three or four days ago, and I would like to know if it has yet been attended to.

Sir WILFRID LAURIER. The report has been prepared, and I understand has been signed by two of the commissioners. It has been sent to the third commissioner, Mr. Metcalfe, to ascertain if he concurs in it, and if so, for his signature. As soon as the department is informed whether Mr. Metcalfe has signed the report or has signified his assent, the report will be brought down and communicated to my hon. friend.

Mr. CAMPBELL. I would like to ask for further information. I am afraid the acting minister is not up to date in regard to this question. I understand the commissioners' report has been printed and has been signed by the three commissioners. Why has it not been brought down?

Sir WILFRID LAURIER. No, Mr. Speaker, the acting minister is absolutely up to date, although he is something of a novice in the office. The report has been printed, and printed as if the three commissioners had signed it, but it has been ascertained that the third commissioner has not yet signed it, and it has been sent to him to ascertain whether he concurs in it in its entirety, or whether he dissents in any particular. As soon as we have this information, the report will be brought down.

Mr. CAMPBELL. May I again ask what is the harm in presenting that report as

printed and as presumably signed by the three commissioners? I would like to see it.

Sir WILFRID LAURIER. I am sorry to say that my hon. friend is not up to date. It is not the report until it has been signed.

Mr. BRADBURY. I do not wish to discuss the matter, but I think the First Minister is labouring under a misapprehension. The report has been signed by three commissioners, there was a fourth commissioner, the present Mr. Justice Metcalfe, who investigated Lac du Bonnet, and he resigned. The report has been signed by the other man, Mr. Hugg, who was appointed in Mr. Metcalfe's place, and the report as printed is signed by the three commissioners: Mr. Hugg, Mr. Read and Professor Prince.

Sir WILFRID LAURIER. The printed report is signed amongst others by Mr. Metcalfe supposing he would agree. It is understood he does not agree, and the report is held until it is ascertained whether he agrees or not.

Mr. R. L. BORDEN. Were there three commissioners or four?

Sir WILFRID LAURIER. So far as I know there were three. If my hon. friend will come to my office to-morrow afternoon, I will be glad to show him the report.

ST. PETER'S INDIAN RESERVE.

Hon. FRANK OLIVER (Minister of the Interior). Mr. Speaker, I desire to refer to a request made by the hon. member for Selkirk (Mr. Bradbury) last Thursday for information regarding a return that was laid on the table of the House. The reply is as follows:

An account was received on the 21st of October 1907, for $321.70 from Mr. Ernest Raynor for expenditure made by him in connection with the St. Peter's surrender. This account was forwarded to the Indian agent, Mr. J. O. Lewis, who was informed that the department had no knowledge of the authority under which the expenditure was made and he was asked for a report thereon. The agent was further told that if he was unaware of the circumstances in connection with the expenditure, it would be well for him to submit the matter to His Honour Chief Justice Howells who had carried on certain preliminary negotiations with regard to the taking of the surrender and who might be able to inform him as to the authority, if any, under which the expenditure was made by Raynor. No report has, however, been received from Mr. Lewis in regard to this matter.

Mr. BRADBURY. I wish to call the attention of the Minister of the Interior to the fact that the return brought down regarding St. Peter's reserve does not contain the instructions to Chief Justice Howell, nor does it contain his report. I wish these documents to be laid on the table and also the advertisements in the newspapers regarding the sales of land, and which the minister, when in committee, promised he would have brought down.

SECOND READING.

Bill (No. 93) respecting the Vancouver and Coast-Kootenay Railway Company.—Mr. Smith (Nanaimo).

QUESTIONS.

LACHINE CANAL.

Mr. VERVILLE:

1. What is the amount of work in repairs or new work to be done by carpenters on the Lachine canal under the supervision of Denis O'Brien?
2. What is the amount for machinists?
3. Will any moneys be paid for new lumber out of the $22,907.78 still left to Lachine canal work?
4. What is the total estimate for wages for carpenters, machinists, labourers and carters for the balance of the fiscal year, in detail?
5. Has the department any knowledge of the treatment of the carpenters on the Lachine canal under the supervision of Denis O'Brien, and have any complaints been received by the department? If so, of what nature?

Hon. GEO. P. GRAHAM:

1. It is impossible to give any definite figure. A few of the Lachine canal carpenters have been retained during the winter. They are engaged on one pair of lock gates and completing the gate lifter and will be kept on as long as the appropriation will allow, the work being performed by them, being less urgent, than some other work now being done.

2. There is considerable work to be done by machinists, blacksmiths and assistants towards preparing gears for the electric operation of the valves of the supply, regulating and waste weirs, &c. These appliances must be installed while the canal is unwatered next April. It is not possible to state the amount of work to be done by these men, as should it be found necessary, in order to have the weirs equipped in time, to lay off the carpenters, other machinists would have to be employed.

3. The balance of the appropriation for repairs on the 31st December, 1909, was $10,535.41, not $22,907.78, as stated in the question. No lumber or timber will be paid for out of this balance.

4. Approximately as follows:

Carpenters	$2,300 00
Machine shop	2,000 00
Blacksmith's shop	600 00
Carters	800 00
Labourers	3,100 00
	$8,800 00

The balance, or $1,735.41, will be used in purchasing iron, steel and brass castings, bolts, nuts, tools, &c.

5. The department has not received any complaints in regard to the treatment of carpenters on the Lachine canal under the supervision of Denis O'Brien.

REPRESENTATION OF NOVA SCOTIA.

Mr. JAMESON:

1. Have any representations been made by the government of Nova Scotia or any person on its behalf to this government, looking towards the securing of an amendment to the British North America Act, whereby the representation of the province of Nova Scotia in this House as at present, may be maintained by said province?

2. If so, when were such representations made, and what action has been taken thereon?

Sir WILFRID LAURIER. No written representations have been made, but the subject has been discussed between the Dominion and provincial ministers.

BAIT SUPPLY.

Mr. JAMESON:

Have any complaints reached the Minister of Marine and Fisheries regarding the difficulty experienced by Canadian fishing vessels in obtaining a supply of bait in the Bay of Fundy, owing to the practical monopoly enjoyed by the American sardine packers in respect to the purchase of herring taken in weirs in waters contiguous to the county of Charlotte, New Brunswick? If so, what action does the minister intend to take to relieve the situation, and when will he act?

Sir WILFRID LAURIER. Yes; but inquiry did not reveal that there was any difficulty on the part of Canadian fishermen obtaining bait at the prices the fishermen were at the time receiving from sardine buyers.

FARM WEEDS.

Mr. FOSTER:

What has been paid for each edition of 'Farm Weeds,' published by the Department of Agriculture for preparation and printing, respectively, what number of each edition was published, by whom printed, and how was each edition distributed?

Hon. SYDNEY FISHER:

First Edition.

Amount paid for preparation....	$ 116 95
Amount paid for printing..	26,770 49
	$26,887 44
Number published (English)..	20,000
Number published (French)..	5,000

Printed by Toronto Lithographing Company, (through King's Printer). Distribution was made free to public libraries, educational institutions and agricultural societies. Three copies being given to each member of the Senate and the House of Commons. Of course the amount for preparation is exclusive of the salaries of the permanent officers of the department who were engaged in the work. The cost of the work of these officers was not divided from their ordinary work.

Second Edition.

Not yet complete. 12,000 copies in English and 3,000 copies in French are being printed by Mortimer and Company, Ottawa, (through the King's Printer). Distribution to be made by the superintendent of stationery, in single copies at nominal price of $1.

Distribution free to public libraries, universities and colleges of agriculture. Three copies given or to be given to each member of the Senate and the House of Commons.

Amount paid for preparation....$	362 58
Amount paid for printing on account, 10,000 copies.....	13,990 60
Total.....$	14,353 18

Mr. FOSTER. Has the minister any figures as to the contract for printing the whole lot?

Mr. FISHER. No. I think it is printed by numbers, not a lump contract.

Mr. FOSTER. This is only what is paid to date?

Mr. FISHER. Yes.

Mr. FOSTER. The minister might find out what the whole cost is.

Mr. FISHER. Yes.

LANDS ALONG LINE OF GRAND TRUNK PACIFIC RAILWAY.

Mr. FOSTER:

1. What lands have been sold along the line of the Grand Trunk Pacific railway since the sales shown in sessional paper No. 69?

2. To whom sold?

3. At what prices?

4. For what purposes?

Hon. FRANK OLIVER:

1. N.E. 21, 53, 7, W. 5; N.W. 21; S.E. 21; S.W. 21; S.W. 27, 53, 8, W. 5; N.E. 27, 53, 9, W. 5; N.E. 2, 54, 16, W. 5; N.W. 2; S.E. 2; S.W. 2; N.E. 32, 53, 16, W. 5; N.W. 32; S.E. 32; S.W. 32; N. 15, 53, 17, W. 5; N.W. 15; S.E. 15; S.W. 15; N.E. 16; N.W. 16; S.E. 16; S.W. 16; S.E. 21, 53, 17, W. 5; S.E. 22; S.W. 22.

2. The Grand Trunk Pacific Town and Development Company.

3. These Crown lands were sold at $3 per acre, the government, in addition, to receive one-fourth of the net proceeds of the sales,

rentals or other dispositions of all lands comprised within such lands.

The complete schedule of such lands is attached herewith. See answer No. 1.

4. For townsite purposes.

DREDGE 'INDUSTRY.'

Mr. FOSTER:

1. When was the tug 'Industry' reported as ready for work in 1900?

2. What was the total cost to date, including scow repairs and scow purchase?

3. When did she commence work, and where?

4. What has she been doing since, and where is she now?

Hon. WM. PUGSLEY. I think the hon. gentleman means the dredge 'Industry'.

Mr. FOSTER. Yes, but she has had a hard tug to get along.

Mr. PUGSLEY:

1 and 3. The dredge was ready and commenced work at Toronto on 7th June, 1909.

2. $223,990.84.

4. Worked at Toronto from 7th June to 26th June, at Port Burwell from 26th July to 6th October, and from 11th October to end of season at Port Stanley, where she is at present.

CANADIAN COINAGE.

Mr. FOSTER:

1. What is the amount of Canada's copper, silver, and gold coinage, respectively, for each of the last ten years, and the cost and profit of each year's coinage, counting the interest and depreciation of the cost of the Canadian Mint at 6 per cent, and the cost of maintenance and staff for the years during which it has been in operation?

2. How much United States silver, and at what cost, has been deported each year, and what is the estimated amount of United States silver current in Canada from year to year?

Hon. W. S. FIELDING. As this question covers a period of ten years the answer could more conveniently be given by way of a return and if the hon. gentleman will make a motion I will expedite the bringing down of the information.

Mr. FOSTER. I make the motion.

PORT COLBORNE.

Mr. FOSTER:

1. What is the total amount spent to date on the Port Colborne works by the Department of Railways and Canals and the Public Works Department, respectively, and are any further sums necessary to complete?

2. What are the main improvements made and the cost of each?

3. What was the cost of elevator and the equipment of the same, respectively, and what its capacity?

Mr. OLIVER.

4. When was the elevator first used?

5. How much grain was handled there in 1908 and 1909, respectively, and what is the rate per bushel for transfer?

6. What was the cost of operating the equipment in 1909, calendar year?

7. What was the total revenue received in 1908 and 1909, respectively, from all sources?

Mr. PUGSLEY:

For the Department of Public Works:

1. (a) $905,047.82. (b) The works, as they stand at present, are complete; but, eventually, the superstructure of the inner portion of the western breakwater, which was built of wood, will require to be renewed in concrete at an estimated cost of $250,000. Representations have been made by the Department of Railways and Canals as to the advisability of constructing a spur from the western breakwater to the extremity of the Welland canal, which would cost in the neighbourhood of $350,000; the matter is under consideration.

2. Construction of breakwaters, $905,057.82.

3, 4, 5, 6 and 7. To be answered by the Department of Railways and Canals.

Mr. GRAHAM:

. Total spent to date on Port Colborne improvements:

Expenditure Railways and Canals Department only:

1901-2	$202,881.72
1902-3	197,242.95
1903-4	124,296.01
1904-5	239,488.12
1906-7	287,586.16
1907-8	90,031.82
1908-9	60,333.16
1909-10	58,566.17
Total	$1,700,946.73

The amount necessary to complete works now contemplated, not including elevator, $104,000.

2. The main improvements made are: Deepening the harbour and canal entrance to 22 feet, cost $870,602; building docks and piers, $816,571; building elevator siding, cost, $36,707.

3. (a) $817,734.94. (b), 800,000 bushels with provision for increase to 2,000,000 bushels, when justified by sufficient business.

4. October 6, 1908.

5. 1908, 365,033 bushels; 1909, 1,747,550 bushels; 1908, rate per bushel, ⅜c.; 1909, rate per bushel, ½c.

6. $19,310.24.

7. Revenue, 1908, $1,409.04; revenue, 1909, $9,477.00.

COST OF SURVEYS, WELLAND CANAL.

Mr. FOSTER:

What amount has been spent in surveys to ascertain the most desirable route for the possible new or enlargement of the old Wel-

land canal, and are these surveys completed? If not, what amount is estimated to complete?

Mr. GRAHAM:

(a). About twenty thousand dollars have been spent in surveys to ascertain the most desirable route for the possible new, or enlargement of the old Welland canal.

(b). These surveys are not completed. It is estimated that twenty-five thousand dollars will be required to complete them.

EXPENSES RE QUEBEC BRIDGE.

Mr. FOSTER:

What has been the cost for engineering, examination, reports, preparation of plans and specifications incurred, since August 29, 1907, in connection with the Quebec bridge?

Mr. GRAHAM:

(a). The total cost of the commission in connection with the inquiry into the collapse of the Quebec bridge was $31,765.44.

(b). The total cost to December 31, 1909, of the board of engineers in preparation of plans, etc., was $123,469.03.

WHARF AT CANNING.

Mr. TAYLOR:

1. Has the government built a wharf at Canning? If so, when was it finished, and what is the total cost?

2. Has a wharfinger been appointed therefor? If so, when and at what salary?

3. Have any tolls been collected thereon? If so, to what amount each year?

4. Is there a building upon this wharf? If so, by whom erected and at what cost?

5. Is there a public road to this wharf?

6. What vessels touch regularly at this wharf, and how often during the year?

Mr. PUGSLEY:

1. (a) Yes, a wharf is being built affording accommodation for railway as well as general traffic on the Habitant river; total length, including railway and highway approaches along the river bank, about 900 feet; the sum of $2,000 being still required to complete work now under construction. (b) Total cost, $33,867.33. The site was contributed by the riparian owners free of charge.

2 and 3. No. When the work is finished and the spur line of the Dominion Atlantic railway installed thereon, a wharfinger will be required.

4. Yes, a small temporary warehouse built by the Minas Basin Steamship Company at an approximate cost of $100.

5. Yes. Three public roads and an open private way connect this wharf with Main street, and another public road connects it with the settlements to the southward. Besides this, the Dominion Atlantic railway has undertaken to build a spur line or railway from its line to and along the water front of the wharf.

6. A subsidized steamer owned by the Minas Basin Steamship Company runs regularly to St. John, New Brunswick, and Minas Basin ports. Large vessels load potatoes for the West Indies; apples and other products are loaded for various ports and return cargoes received.

KENSINGTON WHARF, DESBARATS.

Mr. BOYCE:

1. Is the Kensington wharf, near Desbarats, West Algoma, the property of the government of Canada? If so, when was it acquired, how much was paid for it, and from whom was it purchased?

2. How much land was conveyed with the wharf to the government?

3. If the wharf was not purchased by the government, is there any contract in writing between the owner thereof and the government with regard to the use of the same?

Mr. PUGSLEY:

1 and 2. No.

3. No.

LOBSTER FISHERIES, DIGBY COUNTY.

Mr. JAMESON:

1. How many lobster cannery licenses for Digby county were issued during 1909, and of these which were renewals?

2. To whom were same issued, and what is the address of each licensee?

3. How many canneries were operated under said licenses?

Sir WILFRID LAURIER:

1. All renewals.

2. A. Boutilier & Company, Centreville; E. W. Morehouse, Sandy Cove; L. H. Outhouse, Tiverton; A. F. Saulnier, Meteghan river; Moses Terrio, Meteghan; Ellis Bros, Cape St. Mary's; J. W. Comeau, Comeauville.

3. Six.

APPLICATIONS FOR NAVAL SERVICE.

Mr. JAMESON:

1. How many applications have been received from persons desiring to serve on the proposed Canadian navy?

2. For what stations were applications so made?

3. How many applications have been received for each of such stations?

4. Upon whose recommendation and by what system will any such appointment be made?

Sir WILFRID LAURIER:

1. 117.

2 and 3. These applications were for general service.

4. Appointments will be according to regulations to be drawn up as provided by the Naval Bill.

INSTRUCTIONS OF CADETS ON CANADIAN BOATS.

Mr. JAMESON:

1. Are there at present any naval cadets or midshipmen receiving instructions on any Canadian government vessel?
2. If so, upon what vessel or vessels is instruction so given, and since when?
3. By whom is instruction given, what is the ordinary station of the instruction on the vessel, and is any extra allowance made in respect to such services as instructor? If so, what allowance?
4. Of what does the course of instruction consist?
5. What are the names, ages, and places of residence of each cadet or midshipman, the date of joining, and by whose recommendation in each case were they shipped?
6. Have any examinations been held? If so, upon what dates, by whom, and what were the results in the case of each cadet?
7. What scholastic standard, if any, is required of cadets when accepted as such?
8. Is any pay allowed such cadets? If so, what is the rate of pay, and how much has been paid to each to date?
9. For how many cadets or midshipmen was accommodation provided when the system was initiated, what is the extent of the accommodation now, and upon what vessels?
10. Was the public informed of the government's intention in this regard? If so, when and by what means?
11. What has been the cost of this branch since its inception?

Sir WILFRID LAURIER:

1. Yes.
2. 'Canada' since June 1908.
3. Instruction is given by the officers of the ship in seamanship, and by the seaman's instructor in gunnery. From May to November, 1909, a tutor was paid $35 per month for instruction in mathematics, previously the parents paid for instruction in mathematics.
4. Practical seamanship and ordinary scholastic subjects, with physical training and rifle drill.
5. C. T. Beard, midshipman, 19, Ottawa, January, 1909; J. Barron, 16, Stratford, O., June, 1908; P. W. Nelles, 17, St. Johns, Q., August, 1908; Victor Brodeur, 17, Ottawa, October, 1909; H. T. Bate, 15, Ottawa, October, 1909. These appointments were made on the instruction of the hon. Minister of Marine and Fisheries.
6. The officer commanding marine service on each of his visits examined the cadets, and is satisfied as to their progress.
7. None required.
8. $15-$18 per month. Mr. Beard, midshipman, at $18 per month, $209.60; Mr. Barron, cadet, at $15 per month, $277.50; Mr. Nelles, cadet, at $15 per month, $240; Mr. Brodeur, cadet, at $15 per month, $24.50; Mr. Bate, cadet, at $15 per month, $32.42.
9. No special accommodation was provided when the system was instituted; the accommodation now is for five cadets and is upon the 'Canada'.
10. No.
11. Total cost for salaries, tuition and uniforms, $1,324.

NAVAL SERVICE.

Mr. MONK:

1. Has the government purchased any warships since the Imperial Defence Conference of 1909? If so, what warships have been so purchased, and from whom?
2. What is the date and cost of construction of each of the said warships?
3. Have they been struck off the effective list? If so, at what date?
4. What are the details of construction, comprising tonnage, dimensions, &c., of said warships, and what is the armament of said warships?
5. What is the price of purchase of said warships, and on what date and through whom was said purchase or purchases effected?
6. Is the government negotiating for further purchases of ships?
7. Was it agreed at the conference of 1909, that the imperial defence plan adopted should only be carried out after its approval by the colonial parliament?

Sir WILFRID LAURIER:

1. No.
2, 3, 4 and 5. Answered by No. 1.
6. Yes. As I stated the other day negotiations are now pending with the imperial government for the purchase of a vessel but these negotiations are subject to the approval of parliament.
7. No.

COLD STORAGE PLANT AT BARRINGTON, N.S.

Mr. JAMESON:

1. Was the government assistance given towards the construction of a bait freezer or cold storage plant, at Barrington, N.S.? If so, what is the nature and capacity of the plant, when was it built, and at what cost?
2. From whom was the application received, and by whom signed?
3. What amount, if any, was paid toward construction, and upon whose recommendations?
4. What quantity of bait has been frozen and stored, by years, since built?
5. What quantity of ice has been stored, by years, and to what use has it been put?
6. Has any bonus been paid on bait? If so, what was the amount paid, the date of payment, and upon recommendation or certificate?
7. Is the plant owned or controlled by fishermen? If not by whom is it controlled?
8. Has the operation of the plant proved satisfactory to the government?

Sir WILFRID LAURIER:

1. Preliminary assistance was given towards the establishment of a fishermen's bait freezer at Barrington Passage, N.S. It was to have been of about fifty tons capacity. March, 1908.

2. From the Barrington Passage Fishermen's Bait Association, through Mr. Peter MacFarlane, the outside officer of the department in charge of the establishment of such freezers. It was signed by William Duff, Wm. Acker, Gilbert E. Atkin, Elijah Ross, Floyd Ross, Joseph Ross, Moses Atkinson, Charles E. Ross, Samuel P. Ross, Ernest Brown, Horatio Brownnen, Henry Ross, Alfred K. Ross, James J. Ross, Archie Scott, William R. Reid, Barkley S. Reid, Warren Ross, Smith G. Penny, and George E. Kenny.

3. The usual advance of $500 was made to the association, on the recommendation of Mr. Peter MacFarlane.

4. The freezer was never completed.

5. Answered by No. 4.

6. No.

7. The provisional directors of the association are William Duff, William C. Acker, Gilbert E. Atkins, Smith G. Penny, and Charles E. Ross.

8. Answered by No. 4.

NEWSPAPER POSTAGE TO UNITED STATES.

Mr. JAMESON:

1. Upon what class of newspapers or publications mailed out to the United States of America is postage charged and not charged, respectively?

2. What number of newspapers, if any, mailed out to the United States of America is exempted from paying postage, and upon what number is postage charged?

3. When was postage first charged on newspapers going to the United States of America?

4. What discrimination has since been made, if any, as to the class to be charged, when did it become operative, and why was it made?

5. What amount has been paid yearly as postage on daily newspapers and other than daily newspapers, respectively?

6. What reduction in the circulation in the United States of America of the class of newspapers on which postage is charged, has followed the imposition of such postage?

Hon. R. LEMIEUX:

1 and 2. Postage is charged on all classes of newspapers and periodicals addressed to the United States.

3. In the year 1783.

4. No discrimination.

5. No separate account of postage collected on papers addressed to the United States is kept at the Post Office Department. The rates applicable to such papers being the same as those charged on some other classes of mail matter, it would be impossible to make any separation at this date.

6. This department has no statistics relative to the matter for the reasons given in answer to No. 5.

MESSRS. SULLIVAN AND LANGDON.

Mr. EDWARDS:

1. How much money has been paid by this government from 1896 to the present time to the firm of Sullivan & Langdon, contractors, of Kingston, or to Mr. Sullivan, contractor, Kingston?

2. What public buildings or other public works have been let by contract to either of the above firms since 1896, what was the contract price in each case, and what was the total amount paid to the said contractors in each case?

3. What was the total cost of each building or public work in which either of the above mentioned firms was interested?

Mr. SPEAKER. Stand as notice of motion.

ELLIOT BROTHERS AND R. CARSON.

Mr. EDWARDS:

How much money has been paid by this government in each year from 1896 to 1909, both years included, to the firms of Elliot Bros., and of R. Carson, of Kingston, Ontario, for supplies furnished to, or services of any kind performed by the government

Mr. SPEAKER. Stand as notice of motion.

TEULON BRANCH C.P.R., MANITOBA.

Mr. BRADBURY:

1. Has the government approved of the extension of the Teulon branch of the Canadian Pacific railway, Manitoba?

2. If so, was such approval made contingent upon the company agreeing to extend the Winnipeg Beach branch northerly by way of Gimli to some point on or near the Icelandic river?

3. If such approval was so contingent, is it the intention of the government to insist on the company extending this branch this year?

Mr. GRAHAM:

1. Yes.

2. When the government approved of the extension of the Teulon branch of the Canadian Pacific railway, it was made contingent, upon the company agreeing to extend the Victoria Beach railway, northerly by way of the village of Gimli. This agreement has been carried out. The above line is also subsidized for a further distance northerly of twenty- five miles from Gimli to Riverton.

WIRE FENCING, I.C.R.

Mr. WILCOX:

1. Did the Department of Railways and Canals, or the purchasing agent of the Inter-

colonial Railway at Ottawa, at any time during the year 1909 ask for tenders for any wire fencing?

2. If so, were any tenders received for such fencing, and from whom?

3. What were the prices quoted by the said parties tendering for the different kinds of fencing??

Mr. SPEAKER. Stand as notice of motion for return.

WM. PAUL—GASOLINE BOAT.

Mr. TAYLOR:

Has the Department of Public Works purchased from one Mr. William Paul a gasoline boat? If so, what was the price paid, for what service is the gasoline boat required, on whose recommendation was the said boat purchased, who valued said boat, and who fixed the price?

Mr. PUGSLEY:

1. Yes.

2. $3,500.

3. Required for towing purposes and general service in connection with the works of this department in the district of Montreal.

4. On recommendation of Mr. James Howden, General Superintendent of Dredging, and Mr. L. J. Michaud, District Engineer, who examined and valued the boat and considered fair and reasonable the price asked by the owner.

J. B. KAINE—TUG 'WITHERBEE.'

Mr. TAYLOR:

1. Has the Department of Public Works purchased from one Mr. J. B. Kaine, a tug, the 'G. J. Witherbee'? If so, at what price, for what service is the tug required, on whose recommendation was the said tug purchased, who fixed the value of said tug and when was it built?

2. Was there any debt or mortgage on said tug when purchased from Mr. Kaine? If so, to whom was the money paid?

Mr. PUGSLEY:

1. (a) Authority was given by order in council, December 30, 1909, for the purchase at $12,000, but no payment has yet been made. (b) Required to tend departmental dredges. (c) Purchase recommended by Mr. James Howden, General Superintendent of Dredging, who examined and valued her, with Messrs. Samson and Duclos, government hull and boiler inspectors. (d) built in 1872.

2. (a) Yes. (b) Payment not yet made.

CHIEF JUSTICE DUBUC, MANITOBA.

Mr. A. HAGGART:

1. On what date was the Hon. Joseph Dubuc formerly chief justice of the Court of King's Bench for Manitoba retired from this office?

Mr. WILCOX.

2. What is the cause of the delay in filling the vacancy?

3. Have any representations been made to the government to the effect that the number of cases ready for trial is said to be increasing, that the present judges cannot overtake the arrears, and that the public and legal profession are suffering serious inconveniences?

4. Have any representations been made to the government that the former chief justice as the only judge of French origin on the Court of King's Bench of Appeal, and claims made that the vacancy on the Court of King's Bench should be filled by appointing one of the French speaking people of that province?

5. Is it the intention of the government to recognize such claim in making the appointment?

Hon. A. B. AYLESWORTH: ,

1. Chief Justice Dubuc was not retired from office, but resigned of his own motion. His resignation was received on November 15, 1909.

2. The subject is one for careful consideration.

3. No.

4. Yes.

5. In considering the appointment the principal object which the government will keep in view will be the importance in the public interest of securing for the position the best man available—giving due weight in doing so to the natural desire of all classes and languages and creeds to have adequate representation on the Bench in every part of Canada.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of all accounts of George Tracy, of Selkirk, against Indians of St. Peter's reserve, Manitoba, now on file in the Department of Indian Affairs here, and of all correspondence of the department in relation thereto.—Mr. Bradbury.

1. For a return showing the name, cost, date of construction, place of construction, and gross tonnage of each of the steam vessels now owned by the Dominion government.

2. The names of those built in Canada.

3. What ones thrown open to Canadian competition.

4. In each case that was open to Canadian competition, the difference between the lowest Canadian tender and the price paid.

5. In each case where a contract was made with a builder for the construction of any of said steam vessels, the month and day when each of said contracts were signed, and when each of said contracts called for delivery of vessels.

6. The price each of the said steam vessels would have cost if the government in each case paid the current Canadian customs duty chargeable on vessels constructed outside of Canada.—Mr. Sinclair.

For a return showing—1. What amount has been annually expended by the govern-

ment since the year 1900 in connection with the Atlantic Fisheries of Canada, apart from sums spent in the fishery protection service and for bounty, in the respective provinces of Nova Scotia, New Brunswick, Prince Edward Island and Quebec.

2. The amount expended in each of said provinces annually for fishery breeding purposes, dogfish reduction plants, bait freezers, cold storage and salaries of officials, respectively.

3. What other general purposes in connection with the fisheries expenditures were made in such provinces within said period.—Mr. Jameson.

For a return showing the foreign exhibitions in which Canada has taken part since July, 1896, the time and place where such was held, the expenditure thereon by the government of Canada, the persons, not common labourers, who had charge of the same or were employed thereat, the sums paid to such severally under the heads of (a) salary, (b) expenses, and the total cost to the country of each such exhibition; also the amounts received as revenue from the sale of articles or commodities, lumber, buildings and other materials, respectively. The whole statement to be made up in tabular form and the additions of money columns to be made.—Mr. Foster.

GOVERNMENT COMMISSIONS.

Mr. FOSTER moved:

For a return showing the various commissions appointed for all purposes by the government since July, 1896, the person or persons composing the commission and the date of appointment, the purpose for which appointed, the date of completion of the work in each case, and the cost of each under the heads, (a) salary, (b) travelling expenses, and (c) printing report, if any; the word 'Commissions' to include the missions of ministers, single or associated, going on public account to countries outside of Canada.

Hon. W. S. FIELDING. I am not sure that, in all cases, the expenses of ministers have been subdivided. However, the motion may go, and, as far as possible, we will bring down the return.

Motion agreed to.

ABOLITION OF THE SENATE.

Mr. E. A. LANCASTER (Lincoln and Niagara) moved:

That an humble address be presented to His Most Gracious Majesty the King, as follows:—

MOST GRACIOUS MAJESTY:

We, your Majesty's dutiful and loyal subjects, the Commons of Canada in parliament assembled, beg leave most respectfully to represent—

That in the year 1867 by Act of your imperial parliament commonly known as the British North America Act, the then existing provinces of Canada, Nova Scotia and New Brunswick were federally united and formed into one Dominion under the name of Canada, and the constitution of the legislative authority of such Dominion provided for and the nature of its executive government declared, and since the said Act other provinces in British North America have also been federally united to the said Dominion and now form part thereof, with representation in this House of Commons, pursuant to the provisions providing therefor in the said British North America Act and amending, and other, Acts subsequently enacted;

That by the said British North America Act the executive government and authority of and over Canada is declared to continue and be vested in Your Majesty and Your Heirs and Successors, Kings and Queens of the United Kingdom of Great Britain and Ireland, and Your Majesty is represented in Canada by a Governor General;

That by the said British North America Act there is also a council to aid and advise Your Majesty, styled the King's Privy Council for Canada, the members of which council are from time to time chosen and summoned by Your Majesty's said Governor General and may be from time to time removed by the said Governor General;

That by the said British North America Act the parliament of Canada consists of Your Majesty, an upper House styled the Senate and the House of Commons, but with powers not to exceed these at the passing of the said Act held and exercised by the Commons House of Parliament of the United Kingdom of Great Britain and Ireland;

That by the said British North America Act it is also provided that Bills for appropriating any part of the public revenue or for imposing any tax or impost shall originate in the House of Commons and that no such Bill or vote, resolution or address for such appropriation or tax or impost shall be adopted or passed that has not been first recommended to that House by message of Your Majesty's said Governor General in the session in which such Bill, vote, resolution or address is proposed;

That by the said British North America Act it is also provided that where any Bill passed by the House of parliament is presented to Your Majesty's said Governor General for Your Majesty's assent, he shall declare according to his discretion but subject to the provisions of the said Act and to Your Majesty's instructions, either that he assents thereto in Your Majesty's name, or that he withholds Your Majesty's assent, or that he reserves the Bill for the signification of Your Majesty's pleasure, and that where he assents to a Bill in Your Majesty's name if Your Majesty in Council within two years after receipt thereof by the Secretary of State thinks fit to disallow the Act such disallowance shall annul the Act, and that a Bill reserved for the signification of Your Majesty's pleasure shall not have any force unless and until within two years from the day on which it was presented to Your Majesty's said Governor General for Your Majesty's assent he signifies to the Houses of parliament or by proclamation that he has received the assent of Your Majesty in Council.

That by the said British North America Act legislatures for the various provinces constituting the said Dominion of Canada are also established, each governed by a lieu-

tenant governor appointed by Your Majesty's said Governor General in Council for five years, and whose salaries are required to be fixed and provided by the parliament of the Dominion of Canada and such provincial legislatures are empowered exclusively to make laws in relation to a large number of matters and subjects of great importance, subject to disallowance by Your Majesty's said Governor General in Council within one year, but not in any way subject to consent also by the said Senate;

That in regard to all matters and subjects not within the said exclusive power of the said provincial legislatures it is provided by the said British North America Act, that all laws to be made by the said parliament of Canada must be consented to and passed by both the Senate and House of Commons, before being presented to Your Majesty's said Governor General for assent and the members constituting the said Senate are appointed for life and not subject to election or rejection by the people, and the members of the House of Commons are elected by the people every five years or at any less period at which Your Majesty's said Governor General may dissolve the parliament;

That during the forty years since the said British North America Act has been in force much dissatisfaction has been caused from time to time to Your Majesty's loyal subjects in Canada by the actions of the Senate in regard to matters dealt with by the House of Commons and the rejection of laws sought to be made by the people through their representatives in the House of Commons and passed by the House, and by reason of the heavy expense and burden of taxation placed upon the people to provide for the maintenance of that two-fold system of dealing with the making of laws by the Parliament of Canada;

That in view of the many other provisions heretofore referred to for guarding against and disallowing any ill-advised or improper legislation which might by any possibility pass the said House of Commons, and of the aforesaid dissatisfaction of the people and heavy burden of expense involved and of the great advance made in education by the whole people of Canada since the passing of the said British North America Act, this House is of the opinion that the Senate is no longer required or advisable for the properly carrying on of responsible government in Canada, or safeguarding of Your Majesty's full rights and prerogatives; and that the abolition of the said Senate would greatly conduce to the welfare of the Dominion of Canada and promote the interests of the British empire.

We therefore respectfully pray that the said British North America Act be so amended as to provide for the abolition of the said Senate.

He said: This motion is in exactly the same language as one which I had the temerity to move at the last session of this parliament. I believe, judging by what has transpired in the meantime, that there is a stronger desire on the part of the country now that such a motion should pass than there was then. That is why I feel it my duty to renew the motion this session. As to the conduct of the motion at the last session of this House, I cannot say that it was satisfactory. An hon. member moved the adjournment of the debate at the hour of half past nine in the evening under circumstances which, I thought, did not call for adjournment at that time. But the House was light and the members who were present did not seem to care for the continuance of the discussion at that time, and I did not demur to the debate being adjourned. It was then early in the session, and I supposed that the discussion could be resumed at a later date and the motion disposed of in some way. However, early as it was when the adjournment of the debate took place, the motion was never called on the order paper again, so was not dealt with by the House. I hope that a different action will be taken by the House this session. It is idle to say that the country is now satisfied with the conduct of the affairs with which this motion deals. The petition here proposed is concrete, and if acted upon it means something. The object is to bring about a great change, and a change, I admit, in the constitution. But it is a change that, I believe, is favoured by the vast majority of the people.

At the outset, let me call the attention of the House to the fact that this is not by any means a new agitation. For a couple of decades, at least, the people of this country have been finding fault with the way in which affairs are carried on so far as the second Chamber of this country is concerned. So great was this feeling sixteen years ago that Senate reform was made a plank in the platform in one of the two great political parties just on the eve of a general election. Various and numerous suggestions have been made from time to time since then looking to a remedy, but no two advocates of change seem to agree on any particular plan. All agree that matters as they are, are not right and that the results are not well for the country. All agree that as things have been going on and are going on the actions of the second Chamber —or the first if you choose to call it so; the other Chamber—are not conducive to the welfare of this country. When, after two decades of agitation, all are agreed that the existing condition ought to be changed, but none agree as to what the change should be, what is the logical conclusion? The conclusion is that the obstruction, that part of the machine which none can make workable and which none can agree upon a plan for improving, should be removed. In 1896, as I pointed out last session, and as I now remind the House, the present Minister of Trade and Commerce, Sir Richard Cartwright, upon the eve of a general election, speaking in Massey Hall, Toronto, used this language:

The Senate was a mill-stone around the neck of the Canadian people which he prayed that Providence would soon remove.

I presume the right hon. gentleman is still praying. But he is not praying in the form in which this House should pray, by a concrete motion to bring about a result. And, if I may say so without being flippant, I do not think that the locality in which he is praying is quite consistent with his prayer, for he is now a member of the Chamber which he hoped Providence would abolish. But here was the statement of a gentleman who was making an appeal to the people as the result of which he hoped and expected—and his hope was realized—that he would have a seat in the cabinet councils of a governing party. And ever since then that gentleman has been in the cabinet of the party in power. Whether it was that the number of people who joined in that prayer was not sufficient, or whether it is that he wants help in regard to it, I know not. But, assuming him to have been sincere in 1896, if he were still a member of this Chamber, I cannot for the life of me see how he could help but second the motion to send this petition to the King, as the practical way to gain the result he wanted of removing this millstone from about the neck of the Canadian people. So, to begin with, I have the authority of the present Minister of Trade and Commerce who, in 1896, made the statement I have just referred to, but after he got into power he neglected absolutely to do anything to supplement his statement made previous to getting into power, in Massey Hall, Toronto. But we ought to do something, it is up to every member of parliament to do his duty in this respect, as in every other. If we find, in the light of the experience of forty-two years, that there was a mistake made by the fathers of confederation in constituting that second Chamber, it is our duty now to pass a resolution in the shape of a petition to the King asking him to have an Act passed in Great Britain by which our constitution would be amended and this evil removed.

Now, following upon that expression of opinion of the Minister of Trade and Commerce, we find that several other members of both political parties in this country have from time to time agitated for some reform in regard to this matter, if not for the total abolition of the Senate, as some of them have suggested, but which has never been, until the last year, put in a concrete form in this House. I think this is the way to settle the question. If a majority of the people in this country, speaking through their representatives, are not in favour of abolition, they can say so, and we will know then what the people want done about it. If, on the other hand, the majority of the people in this country, speaking through their representatives in this House, are against the second Chamber, they can vote for this motion, knowing they are voting on a concrete resolution, and getting a concrete result; knowing that if the majority of them petition for it, the petition goes to Great Britain, and something will be done. Now, we had also from Ontario a very celebrated gentleman, a man highly respected, who has gone to his great reward, Sir Oliver Mowat. He spoke in favour of abolishing the Senate, although some hon. gentlemen may think that he merely wanted to reform it. Let me give the exact language he used in 1893:

We are agreed as to the necessity of a fundamental reform of the Senate, if for any reason it must or should be retained.

Now, the latter part of Sir Oliver Mowat's statement is the strongest argument in the world for its abolition. He says we must have some fundamental reform of it, if for any reason it must or should be retained, clearly admitting that in his opinion it was not necessary it should be retained. Now, in a matter of this kind which deals with the constitution of the country, we do not want to act hastily or thoughtlessly, but with the greatest care. And am I not right in saying to-day that, with the experience of forty years under our constitution, for at least one-half of that time there has been a steady agitation in the country for the abolition of the Senate as absolutely necessary for the welfare of this country? Am I not right then in saying that it is high time now that somebody should move in order that this House may be seized of the question in a concrete form, not by mere academic discussions of resolutions, but by some positive action that will secure a removal of the evil? In my opinion the only way to remove it is either by the abolition of the Senate entirely, or else its reform in some way. As I have said, no two of us can agree upon what would be a practical reform; therefore, the only thing that is left us to do is to go to the foot of the Throne in Great Britain and ask to have the constitution amended so that the Senate may be entirely abolished. Now, Sir, I ask this question: Would those who have since been called the fathers of confederation, who thought they knew what this country needed, and asked for a second Chamber, in the light of the information we have to-day, could they have known what was likely to happen, would the fathers of confederation have done as they did and asked for a second Chamber? Did they not do it rather because, when drawing up the constitution, they were guided by the example of Great Britain, without realizing that her example might not fit this Canada of ours? There was the House of Lords in England and they thought we should also have a second Chamber in this country. But in the very constitu-

tion which they were then establishing, by other sections they took away the necessity for that House of Lords, or Senate, in this country as an obstacle to hasty legislation between the King and the people. By the constitution we are under, the British North America Act, every Bill that passes this House and passes the Senate to-day—and it would be the same if we had no Senate in this country under the amended constitution I am suggesting—such Bill, though it has passed both Houses of this parliament, can have no effect if the King in Council in Great Britain sees fit to disallow it within two years. So there would be no wrench in our constitution if that was done. This is provided for in our constitution by sections 55, 56 and 57 of the British North America Act, that, whether we have a Senate or have not, if there is any hasty legislation passed by this parliament, either by both Chambers, or by this House of Commons alone if the Senate were abolished, if that legislation involved any serious question of the rights of the people, those rights would not be interfered with to any extent worth speaking of, because those who felt aggrieved might go before the King in Great Britain and ask him to veto that legislation. So it is not true to say that our Senate stands in the place of the House of Lords in Great Britain; because the House of Lords in Great Britain is the only guard between the commoners and the King; and if in Great Britain a Bill is passed and becomes law, if both the Commons and the House of Lords assent to it, it seems to me that the King would have to abdicate unless he also gave his assent to that legislation. But in this country, if the Senate were removed, and the House of Commons alone passes legislation to which His Excellency the Governor General gives his sanction, he has only that limited power of attorney, so to speak, given him from Great Britain he does not stand in the place of the King, he only consents to that Bill for the King, and after he has consented, by these sections I have quoted, that legislation does not become operative in Canada if the home government for any reason sees fit to disallow it within two years. So you have the King represented here by the limited authority to the Governor General, who has not the absolute authority of the King in Great Britain. And so to-day we have two checks on any hasty legislation in this country, the one in the Senate of Canada, and after they have consented, the other authority in Great Britain composed of the King's cabinet in council. Therefore, when hon. gentlemen hesitate to vote for the total abolition of the Senate in Canada because they feel there should be some institution interposed between what might be radical legislation and finality, and when they oppose this motion for that reason they oppose it without a correct knowledge of the facts. If we did pass legislation which might be thought to be too radical, or to require to be submitted to a cooling process, or which interfered with rights which were not properly looked after in this House, if those rights were interfered with to any extent, an appeal could be taken to Great Britain and within two years that legislation would be amended, or disallowed, and that without any wrench to the constitution. I am not advocating that that should be tried; I am simply stating what has been the constitution and the practice since 1867. There has always been that protection, and for that reason we do not need the Senate to do less effectively what can be done in the way that I have just indicated.

Let me speak for a minute as to the condition of the people of this country educationally as compared with that of 1867. I may say that with the comparatively low state of education that existed among the masses in 1867 as compared with that which exists now, there might have been some necessity of having learned, college-bred or educated people to control what might be done by some ignorant people who had been elected to parliament. But, what is the condition that we find to-day? Is there not a vast difference to-day? Is not the difference almost indescribable in regard to the state of education as between what it was in 1867 and what it is to-day? Have not the educated people of our country taken good care to see that men are not elected to this House unless they are fully competent to deal with public matters in all their different aspects? Let any hon. gentleman bring a Bill into this House to-morrow that is going to interfere with any corporation's rights on one side as against the rights of the ordinary common people on the other; you will have any number of gentlemen in this House ready to defend the rights of any corporation affected by legislation introduced here and to insist that the Bill must go to a select committee so that their rights may be dealt with and carefully protected. Are they not carefully protected in every piece of legislation that comes before this House. I am not saying that hon. gentlemen are not doing right in taking this course. It is their duty to do it. I would do it myself if some one else was not doing it. We do see to it that all interests, whether they be those of the poorest and humblest or those of the richest, most aristocratic and most powerful, as far as wealth can make them powerful, are fully protected by the legislation that comes before this House. I do not think that any cabinet would last for a year that did not, before they brought down government legislation, consider how it would affect different classes of people. So I say that in the beginning of the twentieth century there

is not the necessity that might perhaps at one time have existed for that protection in regard to what I have endeavoured to describe—the protection of capital, perhaps, as against labour, nor of the rich as against the poor, or of landed interests or proprietors as against casual newcomers who may be asking for some radical legislation to protect themselves or help them in some special and peculiar way. Thus the necessity for these things does not exist to-day with the House of Commons as at present constituted, and I believe that the people will take care, now, with the education that the masses have, to see that the House of Commons is constituted of gentlemen sufficiently educated and able to protect every interest that may be brought in question with regard to any legislation that is proposed. So much for that.

Now, let me say one word with regard to some of the suggestions that have been made other than by myself in sessions gone by. I listened to the discussion of this question, but I never took any part in it until last year. I have had the benefit of hon. gentlemen giving their own opinions, and I have endeavoured to form a correct opinion as to what was best in the interest of the country. Some people have suggested the appointment of senators by the provincial legislatures instead of as they are now appointed. It seems to me that can accomplish no good. That could not make things any better, but a great evil would exist that does not exist now. With the questions that are continually arising as to whether the province or the Dominion has authority to deal with certain matters these senators, appointed by the provinces, would feel it to be their duty to protect the provinces that appointed them, human nature being as it is. The provinces would be found clashing with the House of Commons when the House of Commons undertook to exercise its authority as a federal institution and their legislation would be annulled by a Senate coming from the provinces and which would therefore be provincial in regard to the source of their appointment, and it seems to me they would be guided by this in settling the question as to who they should protect. I never heard any strong argument in favour of appointment by the provincial legislatures. I never heard it suggested with any particularly good reason being given with it, and I never heard any hon. gentleman give any sound reason or his own opinion solidly and unequivocally in favour of such a change. I suggest that it would be an evil, for the reason I have stated, and it would not accomplish from a federal standpoint the object which its advocates have in view. We have the legislatures to deal with local matters, and from the federal standpoint the appointment of senators by the provincial legislatures would result in interference with federal legislation, for the reasons which I have given, and it would bring about no good as far as I can see. While I am speaking about provincial legislatures, perhaps I might point out that the greater number of matters that are dealt with in the shape of legislation in Canada are dealt with by the provincial legislatures, and that what the provincial legislatures do comes home to the ordinary man in his every-day life and affects him more directly than any of the things that we do in this House, important as they may be. Yet, notwithstanding this, no provincial legislature has ever found it necessary to have a Senate to see that it does not go wrong. The provincial legislatures of the great provinces of Ontario and Quebec have no second Chamber, no cooling basins, to save them from the results of passing too radical legislation. Gentlemen are elected to these Houses who take care to look after provincial interests and to protect everybody on fair terms in all legislation that is brought forward. If it has been found that there is no need for any second Chamber where such a multitude of matters is dealt with of such great importance to the ordinary man every day of his life and which affect him to a much greater extent than do the things that are dealt with in the federal arena, it is another good reason why we require no second Chamber in federal matters.

Mr. R. L. BORDEN. They have a second chamber in Quebec and Nova Scotia.

Mr. LANCASTER. My hon. friend says that they have a second Chamber in Quebec and Nova Scotia. They had them in other provinces, but dropped them. That is the best answer to that. There was no earthquake, there was no army called out and there was no trouble in the country when they did drop them. It seemed that the people did not notice them. They had been so inactive that they were not noticed when they were dropped. Their dropping did not make any noise, it hurt nobody and things have gone along in these provinces ever since at least as well as if there were upper Chambers. I do think that the legislative councils in Nova Scotia and Quebec are not accomplishing very much or we would not have to be informed that they are actually in existence to-day. They are such nonentities that I had forgotten about them until I was reminded of the fact. At all events, the fact that the upper Chambers in the other provinces have fallen out of use without anyone noticing it is the very best argument that they were not much use when they existed. Two sessions ago there was a motion made by the present hon. deputy-speaker, in relation to the constitution of the Senate, and the Prime Minister, speak-

ing in that debate, said that he could not suggest any reform which would be wise, although I think we all agree that the conditions are not desirable as they at present exist. It was mentioned by the Prime Minister in that debate that if the Senate saw fit to throw out a Supply Bill passed by the House there was no remedy under the constitution and the country might be starved.

Sir WILFRID LAURIER. That happens in England to-day.

Mr. LANCASTER. Yes, and that might happen in Canada and there would be no remedy. And yet we calmly go on here from year to year with that possibility staring us in the face. Now, I do not speak in any partisan spirit, because what I am going to say might apply in the case of any party which was in power for a number of years. But the right hon. gentleman may not be afraid to-day because there is a majority of his former political supporters in the Senate and from party loyalty they possibly would not reject a finance Bill of this government. But, if the Senate is of any use at all it is as an independent institution and were it really independent it could control the country against the will of the elected representatives of the people, a thing which I do not think was ever contemplated by those who framed the British North America Act. We claim to have responsible government in this country, but let us take a chain of circumstances which might possibly happen and let us see if we actually have responsible government. Suppose the government brings down a Bill to this House and a certain number of its supporters object to it and joining with the members of the opposition there is a majority which amends that Bill in a way which the government does not like. That Bill would go to the Senate and the Senate as at present constituted, having a majority of one political stripe, the Senate might amend that Bill against the wishes of the majority of the elected representatives of the people and in favour of the will of the government which appointed the Senators and this elected chamber would have to submit. We know that in practice the government is supported by those elected to support it in any measure it submits, but in theory the government is responsible to the House of Commons and they have to run the risk of proposing measures which may not meet with the approval of their supporters. But, with the Senate endorsing the action of the government, the government would remain in power in a case such as I have instanced when under all proper constitutional rules it should resign. Now, what has been done by the House of Lords in England may at any time be done by the Senate of Canada. Indeed, the Canadian Senate has already thwarted the will of the Canadian House of Commons. For three years this House unanimously agreed upon a measure for the protection of people at railway level crossings. The influence of the corporations was not sufficient to prevent the House of Commons passing that measure, but through some influence, or in their judgment, or whatever you may call it, the Senate rejected that measure and last session such was the deadlock that the majority of the Commons felt finally obliged to accept the Bill in the mutilated form which the Senate forced it upon us. Speaking from a national point of view that was an evil. The fact was that thirty-five senators constituting a majority in the Senate were able to force their will on the twenty senators who were in the minority and on the two hundred and twenty-one members of the House of Commons combined. That is not right and it shows that the Senate is not serving a good purpose in this country. The ex-Secretary of State, Hon. Sir Richard Scott, moved in the Senate a resolution beginning:

That, in the opinion of the Senate the time has arrived for so amending the constitution of this branch of parliament, as to bring the mode of selection of senators more into harmony with public opinion.

Senator Scott was hardly out of the council chamber until in his capacity of senator he expressed the feeling that the interests of the country required the adoption of some means of bringing the constitution of the Senate into harmony with public opinion. This opinion of a prominent member of the Senate is another evidence that to-day, in the year in which we are now living as distinguished from the year 1867, gentlemen in that branch of the legislature believe that there is a need of bringing that Chamber more in harmony with public opinion. I do not know what suggestions Senator Scott made; I think he proposed something in the shape of an election, but I think it stands almost as a self-evident proposition that the electing of senators would cause no better result. If they did not, when elected, impede the legislation of this House, they would not be necessary. If public opinion was expressed to them when they were elected in the same form as it was expressed to the members of this House from the smaller constituencies, and if they did impede the legislation of the members of the Commons elected from the smaller constituencies, they would be out of place and an obstruction and an ill to the country. So I cannot see that there would be any benefit in electing senators. You would have either two men to do one man's work or you would have one cham-

ber so constructed as to prevent the larger constituted body from acting according to public opinion. The suggestion to elect the senators seems to be nothing but an excuse for the retention of that Chamber.

The argument was advanced last year that they were necessary to protect the minority. I ask when did they protect the minorities. I have never heard of their doing anything to protect the minorities in this country. We have heard discussions during the last 30 years, if not during the whole 40 years since confederation, about the rights of minorities being interfered with, but we have never heard of any occasion when the Senate went into the arena of politics or public life in any sense to protect the minorities. Some gentleman has said that they might be needed at some time because the smaller provinces, having a smaller number of members in this House, would not get justice as between different localities in Canada, and that the Senate might force the House of Commons to give these smaller provinces some greater rights. But the smaller province has also a smaller number of senators and, human nature being as it is, and the number of representatives of the smaller, the majority in the Senate would favour the same legislation as the House of Commons, and therefore the grievance would not be remedied.

Thus, it seems to me to be about almost idle to-day to ask for the retention of this body on the ground that the Senate will protect minorities. Minorities have called out for protection from time to time during the last 40 years, but I do not remember that the Senate itself ever interfered to protect any minority, nor do I think that they could or would do so for the reasons I have expressed. If the home government can, as I have pointed out, interfere in any large matter under our construction, in the case for instance of a small province being unjustly treated, surely His Majesty's government, a council composed of representatives of the Lords and of the Commons, would afford as effective a safeguard as any Senate that could be formed in Canada. So again, I am obliged to say that the Senate is unnecessary.

I wish to place on 'Hansard' a few newspaper quotations. Last year I placed upon 'Hansard' a quotation from the Toronto 'Star' of 1909. I shall again read a portion of it because I intend to make another quotation from that paper and the two are better read together. Shortly before I made my motion last year the Toronto 'Star' on February 4, said:

As the matter now stands the Senate is simply an addition to the patronage of the government. Patronage in the civil service we have learned to endure through custom, but surely it is unwise to extend the system of patronage to the appointment of those who make the laws of the land. Responsible government means the responsibility of the government to parliament, but who can speak seriously of the responsibility of a government to a portion of parliament appointed by the government itself?

The plan laid before the Senate by the Hon. Sir R. W. Scott is good in so far as it proposes to substitute election for appointment. An elected Senate, dealing independently with the measures sent up by the House of Commons, including government measures, might occasionally serve a good purpose. It is doubtful whether such a body could work in harmony with a system which requires that the government of the day shall have a parliamentary majority for the support of its measures, but if it were found unworkable, it would probably be a half-way house on the road to abolition, which to many seems to be the logical solution of the problem.

Since this matter was debated last session, when it had the benefit of what was said pro and con with regard to this motion, that same newspaper wrote another article, dated November 16, 1909. That was written just after this parliament was opened by His Excellency and when notice of this motion was given on the order paper. The Toronto 'Star' then said:

Against the Senate we wish to register several objections. The least of these is that it is a feeble echo of the party in power in the Commons. When the Senate does nothing but ratify the will of the Commons, we see it at its best, for we are then having representative government. The will of the elected parliament is not being frustrated by another body, whose members are chosen for reasons the people know nothing about, and which no amount of study can enable them to understand. At such a time the Senate is only unnecessary, and nothing worse.

Yet we must qualify the statement, for in that case it is even worse than unnecessary and worse than being a profitless expense, because no member of parliament knows just how soon a vacancy in the Senate may occur, and it is not uncommon to find representatives of the people forfeiting their popularity at the polls confident of reaching that Upper Chamber where no poll is long enough to reach them.

At another time the Senate is not the feeble echo of the Commons. We submit that it is seen at its worst when it resists the will of the Commons, or undertakes to originate legislation. In that case it weakens popular government, impedes, and frustrates it. Why should the people support an appointed House to resist and baffle the purposes of an elected one?

Thus we have from that newspaper its confirmed opinion, since the debate of last session—a newspaper not agreeing with me in party politics, but having a large circulation in Toronto and throughout Ontario, and therefore some pretension to voice public opinion. We have

also a large newspaper in Toronto called the 'Mail and Empire', which spoke on this subject in a few words, but all the more effective than any long argument. On the 5th of the present month that newspaper said:

> Canadians are being incited by several papers to indignation against the House of Lords as a political institution. Like other human works, the House of Lords is full of imperfections, but candour compels us to admit that it is both an abler and a more conscientious legislative body than the Senate of Canada or the Senate of the United States. In practice, also, it is more democratic than either of these Chambers.

Under all the circumstances, I shall not weary the House any longer. In the British North America Act we have protection, even without a Senate, for any class or province the need of protection for which is our only excuse for having any second Chamber. Such a Chamber cannot be independent owing to the fact that the party in power can appoint to it their own political supporters, and the senator who owes his appointment to his party loyalty and service cannot be expected to give an impartial vote on legislation introduced by that party. And the converse is true should the government which appointed him go out of office. Those senators who owe their appointments to a defeated government may be naturally expected to veto any legislation introduced in that body by the new government. Therefore, whichever way you look at it, the institution is no good as it stands to-day, and I am satisfied that such is the opinion of the vast majority of the people; and as no remedy is suggested satisfactory to any two persons and as all agree that the institution, as at present constituted, is worse than useless, we ought to do the only logical thing open to us as commoners and humbly petition His Gracious Majesty to remove that section from the British North America Act and let us get along without a Senate. Not that there is anything in the expense alone, but the expense of that body is a serious one. However, if it cost fifty times as much, and was serving a good purpose, I would not mind the expense, but it does cost the country about $300,000 a year, without taking into account other expenses, as to which there is dispute more or less, because they are interwoven with other legislation, such as printing, &c., which you cannot charge entirely to the Senate. But that body costs at least $300,000 a year. That money is needed for other purposes which would better serve the people. It would go a long way to improve the postal service, it would go a long way towards the nationalization or improvement of the telephone or telegraph system, it would not be wasted if it were handed over to the Railway Commission for the purpose of contributing to the cost of protecting railway crossings, which the railways themselves make dangerous, and which is now put upon the municipalities. It would be much more profitably used in any of these ways than in keeping up a second Chamber. I do not think, in view of my extended remarks last session, and of the fact that I am addressing practically the same parliament, that I should trespass upon the time of the House, and will conclude by asking you, Mr. Speaker, to put my motion.

Mr. H. H. MILLER (South Grey). Having been the first member of this House to place on the order paper such a resolution as we have been discussing to-day and having been the first to discuss it, I rise merely to say a few words. Having spoken on two former occasions at considerable length, I do not propose to occupy the attention of the House for more than two or three minutes. I was as I have said, the first member to introduce a resolution similar to the one now submitted. That was some few years ago, and I have not since then changed my mind on the question. In my opinion a very large number of persons in the Dominion would vote in favour of the abolition of the Senate. Some of them for reasons I could not at all agree with. I have met many who speak with derision of the Senate. I am not one of those, I have never seen any reason to speak in that way of the Senate or its members. I am glad to number among the senators a great many personal friends, and there are many in that body whom I regard as very able Canadian statesmen, whose opinion and experience entitle them to a great deal of respect.

Last session when this matter was being discussed, the hon. member for North Oxford (Mr. Nesbitt) said that we could find among the members of the Senate many men who would make most desirable directors on any financial board in Canada. I quite admit that to be true. But I contend that, the Senate, being a body of men not elected by or responsible to the people, has not the confidence of the people that an elective chamber has and its members have not the same influence that the members of an elective body possess. You, Mr. Speaker, or I, or almost any member of this House, could select from the members of the Senate, say, fifteen persons who, placed in this House, would have a greater influence for good than the whole ninety members of the Senate in the place that they occupy. The House of Commons, elected by the people is the Chamber that is primarily responsible to the people for

the work of this parliament. I can see no logical reason why the work done in this Chamber by the members of this House elected by the people, should be revised—nor can I see what is to be gained by having it revised—by the members of the other Chamber who are not elected by or responsible to the people. The members of the other Chamber are not superior—and I am quite ready to admit that they are not in any way inferior—to the members of this House by birth, education, information, experience or in any other way. I would object, and strongly object, to any reform of the Senate. As the hon. member for Lincoln and Niagara (Mr. Lancaster) has said, many reforms have been suggested. I would look upon a Senate such as we should have were we to adopt any of the methods of reform I have heard proposed as not equal in value to the Senate we have to-day. I would be opposed to the Senate reformed in any way I have heard suggested, and I am opposed to the continuation of the Senate as we have it. It is true that, from time to time, the Senate has made many changes—most of them minor changes—in legislation passed by this House. But to say that they have changed legislation is not to show that they have improved it; it is a matter of opinion whether these changes have been improvements or the reverse. It may be that sometimes they have improved legislation, it may be that sometimes the changes made by them have been a detriment. I contend that when the same political party has a majority in the House of Commons and also a majority in the Senate, the Senate is not likely to prove a very great check upon the work of the Commons. On the other hand, if either political party has a majority in the Commons while the opposition party has a majority in the Senate, the Senate may often times, from partisan feeling—because the members of that House are and must be possessed of partisan feeling as are the members of the Commons—become a nuisance and a mischief. Without taking time to repeat arguments that I have stated in this House twice already, I merely state in conclusion that, if this matter comes to a vote, I will vote in favour of the resolution.

Sir WILFRID LAURIER (Prime Minister). I have no doubt whatever, having had the pleasure of listening for the second time to my hon. friend from Lincoln and Niagara (Mr. Lancaster) upon this question, that he is very much in earnest and very sincere in the view which he has advocated. I cannot believe, however, that they are the views of the party to which he belongs, for if there is one thing more certain than another, it is that throughout the constitutional history of Canada the Conservative party has always stood for a second chamber. There is no merit in this, I think; it is merely the maintenance of the tradition of the British constitution that it would be inadvisable to have legislation confined to a single chamber. I would invite the attention of my hon. friend to one most striking fact, and that is that the British constitution has spread throughout the world. It has been adopted, not only by the most highly civilized countries of Europe, but it is now being adopted by the nations of the orient as well. I do not say that these nations have adopted the British constitution in its entirety, but in two characteristic features, the first being ministerial responsibility—adopted even by the French republic—and the other a second Chamber. Does the hon. gentleman believe, in view of this universal testimony rendered to the excellence of the British constitution, that we who pride ourselves on being the banner colony of Britain should go back upon this principle of constitutional government? Does he believe, when the experience of centuries in the wisest country in the world, the wisest in its constitution—has taught the desirability of a second chamber, that a second chamber was absolutely necessary to the adoption of wise and satisfactory legislation, that it would be wise for us in Canada to suppress the second Chamber? It may be that the present action of the Senate is not satisfactory to my hon. friend (Mr. Lancaster). I can remember when the action of the Senate as it existed twenty years ago was not very satisfactory to me, for instance. My scruples are not the same to-day as they were then, and it may be that the time will come when my hon. friend will change his views on this point, and, the composition of the Senate being different, his objection may be removed. But he says that, as no satisfactory reform of the Senate is suggested, there is a general opinion that the condition of the Senate at the present time is not satisfactory and that all heartily desire a change. I agree that there has been a strong suggestion, made at different times and in different quarters, that we should have a reform of the Senate. But those who suggest not a reform of the Senate but its abolition are far less numerous. Canada is not the only country where exception may be taken to the action of a second Chamber. At the present time an election is going on in England upon action taken by the second Chamber. Without expressing an opinion—which, I think, would be very inopportune to say the least—it is clear that the action of the House of Lords is blamed by many, perhaps by the majority of the people of Great Britain, in fact that is the point before them. But whether the Unionists succeed or whether the present government succeed, there is no doubt

that the action of the Lords in rejecting the budget is resented by a very large portion of the people of the United Kingdom. But I have never heard it suggested, even by the most radical of the radicals, that the House of Lords should be done away with and the second Chamber suppressed. Of course, the wish is expresed that there should be a reform of the House of Lords, and, indeed, it is very probable that whichever party succeeds in the present election, whether the Unionists or the Liberals, as a consequence of the elections the House of Lords will in some way be reformed. But I am sure— and I think my hon.friend (Mr. Lancaster) has no doubt either—that there is no suggestion that the House of Lords should be abolished. I think it would be an unfortunate thing if the second Chamber were abolished. The same principle applies here. And now, in going a step further, let me speak more particularly to my hon. friend from South Grey (Mr. Miller) than to my hon. friend from Lincoln (Mr. Lancaster). At the time of confederation the second Chamber was established as a pillar of the constitution; it was established, not only for the general reason for which a second Chamber exists in all countries under constitutional government, but for the additional reason of the protection of minorities. Let me quote on this point to my hon. friend from Grey (Mr. Miller) the very suggestive language of Mr. George Brown, and I know it will be appreciated by my hon. friend:

> And first, it is said that Upper Canada should have had in the legislative council a greater number of members than Lower Canada——
>
> Mr. T. C. WALLBRIDGE. Hear, hear.
>
> Hon. Mr. BROWN. The hon. member for North Hastings is of that opinion; but that hon. gentleman is in favour of a legislative union, and had we been forming a legislative union, there might have been some force in the demand. But the very essence of our compact is that the union shall be federal and not legislative. Our Lower Canada friends have agreed to give us representation by population in the lower House, on the express condition they shall have equality in the upper House. On no other condition could we have advanced a step; and, for my part, I am quite willing they should have it. In maintaining the existing sectional boundaries and handing over the control of local matters to local bodies, we recognize, to a certain extent, a diversity of interests; and it was quite natural that the protection of those interests, by equality in the upper Chamber, should be demanded by the less numerous provinces.

So one of the reasons, one of the inducements given to the smaller provinces, to lower Canada, and Nova Scotia and New Brunswick, was that there should be an upper Chamber as well as equality of representation, and this was for the protection of minorities. My hon. friend asked with some pertinence: What have the Senate done during the forty years that it has existed for the protection of the minorities? He answered, nothing. Sir, I am glad that my hon. friend from Niagara (Mr. Lancaster) can say that the Senate has done nothing in the forty years of its existence for the protection of minorities. But this is not to the discredit of the Senate, it is rather to the credit of the House of Commons It means simply that the House of Commons has done nothing to endanger minorities.

Mr. LANCASTER. Then you do not need a second Chamber.

Sir WILFRID LAURIER. Pardon me, there is always a possibility of the power being abused. If we could depend upon human nature as we can upon my hon. friend, never to do anything wrong, then there would be no reason at all for keeping the second Chamber. But it is because men are fallible, it is because majorities may abuse their power, that it has been deemed desirable to have a control over the majority for the protection of minorities. Without at all going back to the old condition of things, to the old quarrels which happily have disappeared, and of which we have heard nothing for many years past, I may remind my hon. friend that there was at one time a strong effort made under the old union to disestablish the French language. Now it has been embodied in our constitution that the French language should be an official language. It is sometimes used in this House, hon. members speaking the French language keep it as a sacred thing. They do not abuse the privilege, but they sometimes use it, and I am sure no one will find fault with them if they sometimes speak in the French language, because it is one of their rights. But if the majority should take it upon themselves to abolish the French language, then the Senate would justify its existence for the protection of minorities. So it is with respect to the subject of education. There are special clauses in our constitution safeguarding the privileges of minorities in regard to education; and if the majority in this House attempted to do away or to interfere with anything secured to the minority in this matter, then the Senate would exercise its powers. May the time never come, as it has not come during the forty years, when the power of the Senate may have to be invoked to protect a minority against a majority in this House. But it would be a poor argument to say that because no case has occurred during forty years, it may never occur. Therefore it does not seem to me that my hon. friend's argument on this head is a very strong one.

He put forth another argument, that

there is no necessity for this second Chamber to protect the people against hasty or unjust legislation by this House. He says that there is a provision in our constitution —and he cited the articles, 55, 56 and 57— giving the power of veto to the imperial authority. Well, it is true that there is a power of disallowance given to the imperial parliament, it is possible for the imperial parliament to disallow any Act passed by this parliament. It is possible they may do so; but would my hon. friend seriously advise that any legislation passed by this parliament should be disallowed by the imperial government? Would my hon. friend think it conducive to good relations between the colonies and the imperial authorities if, when this House had passed an Act which some parties might deem to be unjust, and if they should petition the imperial parliament to disallow that legislation —does my hon. friend believe it would tend to good relations between the different branches of the empire if the imperial government were to veto that legislation? If his object were to dissolve the British empire, that would be the very way of doing it. We have had some experience in this country as to the effect of the disallowance of provincial legislation by the federal authority. The late Conservative government supported by my hon. friend, exercised the power of disallowance on several occasions; but would my hon. friend, after his longer experience think it conducive to good relations between the provinces, conducive to good results, for the federal government to exercise the power of disallowance and trample upon the action of local legislatures?

Mr. LANCASTER. In an extreme case it would be just.

Sir WILFRID LAURIER. But what might be considered an extreme case by one would be considered a very moderate case by somebody else. I appeal to my hon. friend to say whether the disallowance of provincial legislation by the federal government has been conducive to any very good results. The Conservative party at one time was rather of the opinion that it was wise to disallow provincial legislation. I think they have changed their mind of late years. I do not think that the Conservative party at the present time would believe it conducive to good relations, to peace, harmony and concord among the people of the different provinces, for the federal government to trample upon the will of the legislature in any one of the provinces.

Mr. SPROULE. In looking over the history of Bills which have been disallowed, I find the present government have made no change in that respect, if there has been any change.

Sir WILFRID LAURIER. I think there is a great difference. The present government have been very chary of disallowing local legislation. But the government which my hon. friend supported were prodigal in disallowing local legislation. Let me refer him to the Streams Bill, which was disallowed once, twice or three times in succession; and I could cite several others in which the local legislation of Ontario, under Sir Oliver Mowat, was disallowed by the government of Sir John A. Macdonald. But after a while, I am glad to say, better views prevailed in the Conservative party.

Mr. SPROULE. From 1873 to 1878, when the Reform party were in power, they disallowed as many Bills, in proportion to the time they were in power, as the Conservative government did.

Sir WILFRID LAURIER. The Liberal party disallowed a certain number of Bills which were admittedly beyond the powers of the legislature. But, when the powers of legislation which were strictly within the purview of the local legislature have been properly exercised we have been very chary of disallowing any such legislation. I do not remember of any occasion on which we have disallowed such legislation, whereas, I recall several occasions on which such legislation was disallowed by the government supported by my hon. friend. But I say this to my hon. friend that the remedy which he suggests against hasty legislation would be a dangerous one and not such an adequate remedy as we have at the present time.

Mr. LANCASTER. It is there in the constitution.

Sir WILFRID LAURIER. It is there in the constitution, but it is one of those powers only to be resorted to in extreme cases and which are made more effective by their non-observance than by their observance. My hon. friend gave another reason. My hon. friend said that the character of this House has so much improved from what it was forty years ago that there could be no apprehension whatever of any hasty legislation being passed. Well, I am not so sure that my hon. friend can make that statement with accuracy. I am not so sure that the character of this House is superior to what it was forty years ago. I do not think it is inferior but I do not believe it is so much improved that this would be a measure which the people would be satisfied with. On the whole, Mr. Speaker, I think we had better keep to the old method. I hope my hon. friend will not find fault with me when I say that I am somewhat shocked and horrified and scandalized that I should be called upon to defend Conservative principles against a Conservative member.

Hon. JOHN HAGGART (South Lanark). Mr. Speaker, I desire to offer a few words on the question of the abolition of the Senate which has been introduced by my hon. friend from Lincoln (Mr. Lancaster) and which my right hon. friend the Prime Minister has just been discussing. I noticed that the right hon. gentleman kept himself strictly within the bounds of the question of the abolition of the Senate and that he had not a word to say with reference to the conduct of his former friends and himself in the House when he was in opposition and when he urged upon the House and the country the reformation of the Senate. He does not even propose it at the present time.

Sir WILFRID LAURIER. I keep to the question.

Mr. HAGGART. Well, I am speaking to the question now. Not a word in reference to the reformation of the Senate! Of all the anomalies that were ever imposed upon a country the Senate, as constituted in the past, was one, in the eyes of the right hon. gentleman and his friends. But not a word now, not even now, when his friends over in the old country and all parties there are in favour of the improvement of the upper House—not a word of commendation from the right hon. gentleman, not a word to say that he proposed to carry out the promises which he made to the people of the country again and again with reference to the reformation of the Senate. Oh, the Senate has reformed itself at the present day. There is no danger of anything wrong being perpetrated there. The senators are a different set of men at the present time. What has the personnel of the Senate to do with the question? The question is as to the constitutional foundation of it. Is it right or wrong? Are life senatorships in Canada today in accordance with the democratic principles advocated by the right hon. gentleman and by every one in this House? Is not the feeling nearly universal in this House that there should be not the abolition of the Senate but the reformation or change in the manner in which the Senate is constituted? The right hon. gentleman refers, in contradiction of statements of my hon. friend from Lincoln, to the powers of disallowance. He says that this government ought not to exercise the right of disallowance which was constantly exercised in the past, and he suggests that perhaps there is a change of opinion on the part of hon. gentlemen on this side of the House with reference to that question. Why were these powers put in the constitution? If they are to be useless and not to be exercised at any time, why is it that they are in the British North America Act? The right hon. gentleman says that he has made a change in reference to Acts passed by the provinces in exercising the right of disallowance. He has made no change. If I remember correctly, the order in council which specifies that the power of disallowance shall be exercised is the same at the present moment as it was under the former administration. The right hon. gentleman and his party have not made any change in it. The principles laid down are the principles advocated by a leader of mine, Sir John Thompson, in this House, and embodied in the order in council. The right to the exercise of disallowance was limited by the government itself, and it was only to be exercised under certain conditions. The right hon. gentleman speaks very truly in reference to the Acts that we submit to the imperial authorities. These Acts are submitted to the imperial authorities for the purpose of disallowing any which might interfere with the federal constitution itself or which might interfere with the allegiance which we owe to the imperial authorities or to the Throne. The right is one which will not be exercised unless for very grievous reasons, and it has never been exercised that I know of up to the present moment. The method that is most frequently followed is this: The Governor General sends Acts of parliament over to the imperial authorities. The imperial authorities look and see if any of these Acts interfere with what they consider the imperial prerogative, and if they do, they come back to the Governor General and a Bill may be introduced by the authorities in this country for the purpose of correcting that which requires change. Or, the Governor General may exercise the authority himself. The imperial authorities have never exercised it.

Now let us come to the question that is at present before the House. My hon. friend, in introducing his motion, does not propose a plan for altering or amending the constitution of the Senate, but he brings the question of abolition boldly before the House. No doubt the constitution of the Senate is an anomaly. The present constitution of the Senate is not consistent with the democratic ideas of the people of this country, and some reform is absolutely necessary. My hon. friend who moved the motion has a right to hear from the government of this country what they intend to do towards carrying out the promises they made broadcast throughout the country that they would reform the Senate. There is, I believe, a feeling in the country that there should be a second Chamber, but there is also a feeling that the Senate of Canada as it exists, is an anomaly in a country having such democratic institutions as we have.

Mr. T. S. SPROULE (East Grey). I entertain the same opinions I have ever entertained regarding the Senate. Our own experience and the experience of all the great nations of history has taught

us the advantage of a second Chamber. From the dawn of constitutional government in England there has been a House of Lords and a House of Commons, and when the United States came to form its constitution it created a second Chamber. We hear arguments advanced in favour of amending the system of appointing United States senators but we hear little or no argument in favour of the abolition of that Chamber. France has a second Chamber, Germany has a second Chamber, Japan has a second Chamber, all great civilized countries have second Chambers, and in view of the experience of history it would not be wise for us to recklessly do away with a Senate in Canada even though that body does not fulfil our expectations of what a second Chamber should be. It should rather be our aim to endeavour to devise some means to bring the Canadian Senate into harmony with the spirit of the age and the requirements of the country. We acknowledge our weakness when we say that we cannot accomplish any reform of the Senate. If we give our attention to the task, if this government gives attention to the task as it promised to do, I have no doubt that we can easily bring about reform. Before the Liberals attained power they pledged themselves to reform the Senate and the people believing that they were honest and truthful men, and men of resource returned them to power on that platform, but since the day they assumed the reins of government they have made absolutely no effort to carry out their pledges. There are two reasons, it seems to me, why the Caandian Senate has not come up to our expectations. In the first place the method of appointing senators is defective and I think a great improvement could be made in that direction. In the second place, the class of men who have been called to the Senate for many years past, since the present government came to power—and in this respect their predecessors sinned although not to the same extent—for many years past the men who have been called to the Senate are men who have been discarded by the people as unfit to sit in the House of Commons. That very fact is an evidence to my mind that they are not the best men to select for the Senate. I have always thought that those appointed to the Senate might be men from various walks of life selected for their fitness, their knowledge of affairs and their independence. If that rule were followed the Senate would be independent of the House of Commons and would be better equipped to fulfil the expectations of the people. There can surely be some means devised either of electing or appointing senators which would cause that body to be more beneficial to the country than it is to-day. I am in favour of having a Senate, but I am also in favour of having it reformed. At all events surely it is high time that the government should make some attempt to carry out its pledges. Now, my hon. friend (Mr. Lancaster) has referred to the fact that the province of Ontario has no second Chamber, but in my judgment had there been a well constituted second Chamber in that province, the late Liberal government there would never have dared to perpetrate the things they did. There would be a check upon them, their bad legislation would be rejected, and higher councils might have had a beneficial effect on their policy. The province of Quebec has a second Chamber and whether it is doing good or not I leave it to those who are best informed to say. No doubt, in the smaller provinces which are something like our county councils there is not that urgent need for a second Chamber that there is in a country like Canada and in countries like the confederation of states in South Africa and Australasia. In my judgment the proper thing is to follow the system adopted in the mother of parliaments and to have two Chambers, the one to be a check upon the other. I believe that if we reform the Canadian Senate and adopt some better means for the selecting of its members, the country will not complain of the expenditure of that body.

House divided on the motion (Mr. Lancaster).

Motion negatived.

At six o'clock the House took recess.

After Recess.

House resumed at eight o'clock.

PROVINCIAL REPRESENTATION IN THE SENATE.

Mr. J. D. TAYLOR moved:

Whereas, it is provided by the British North America Act, section 22, that in relation to the constitution of the Senate, Canada shall be deemed to consist of three divisions, viz., Ontario, Quebec and the maritime provinces, which shall be equally represented by twenty-four senators for each division;

And whereas, there is no provision for the creation of additional equal divisions upon the admission or constitution of other provinces, and the provinces west of Ontario have at present representation by only fifteen senators, although in population, size, contribution to the revenue and representation in the Commons, they have attained importance calling for treatment as an equal division;

This House is of the opinion that provision should be made for immediate augmentation of the representation of the western provinces in the Senate, by increasing said representation to six members each for British Columbia, Alberta, Saskatchewan and Manitoba, respectively; and for such further readjustment of the representation of the western provinces in the Senate as may from time to time be called for by reason of development in population and importance of interests.

He said: Mr. Speaker, this being a day devoted to the consideration of the Senate, it seems to me most opportune to go on with this resolution. I may say that I felt myself justified this afternoon in voting for the resolution calling for the abolition of the Senate because, amongst other reasons, the Senate, as at present constituted, does not give the province which I represent the representation to which we think we are entitled. While this resolution covers the four western provinces, of course I speak more particularly for the province of British Columbia, because that province seems to suffer most from insufficient representation in the Senate. We find that in the scheme of confederation provision was made for three units of representation, one for Quebec, one for Ontario and one for the Atlantic maritime provinces the idea being to protect the smaller provinces by giving them an equal division of representation in the Senate. We find this difficulty in the scheme of confederation that no one then seems to have contemplated the inclusion of the great western provinces in the confederation and when one by one the western provinces did come in no general amendment was made to the British North America Act, but in each case, in the separate Act bringing in the province, provision was made for the representation of the new province in the Senate. The representation of British Columbia in the Senate was fixed at three and remains at three to this day, there being no provision for an increase. Manitoba's representation was fixed at four and remains at that figure. With respect to Saskatchewan and Alberta there is a provision that after the next decennial census their representation in the Senate may be increased to six for each province and while, of course, that gives to each of these provinces about what would be a fair representation, the very fact that provision is made for them and no provision is made for Manitoba or British Columbia, makes the deficiency in the representation of the latter two provinces more apparent.

I gathered from the address of the right hon. the leader of the House (Sir Wilfrid

Laurier) this afternoon that he is entirely in accord with the sentiment that the Senate should protect the smaller provinces, that the Senate should be so adjusted as to insure to the western provinces that they shall be represented in all important matters quite as fully as the larger provinces. I gathered from his remarks that he is in favour of the spirit of the resolution now before the House. I gathered also from the records of a few years ago when the question of Senate representation was before the House, that the right hon. leader of the House then realized that something should be done for British Columbia. Therefore, as I do not wish to make this in any sense a political address, but simply wish to bring the question in a formal way to the attention of the House and of the government, I shall not say anything more upon this resolution at present, but leave it with the hope that we may receive some sympathetic assurance from the government that a measure of justice will be done to the provinces of the west.

Mr. A. L. FRASER (Kings, P.E.I.). Mr. Speaker, I am glad of this opportunity to give some explanation of the vote I gave this afternoon in favour of the resolution for the abolition of the Senate. In the province from which I come, we are entitled to four senators, and it has so come about during the last few years that we are now entitled to only four representatives in this House. There has been a vacancy in our representation in the Senate for some time, and if the government really believes that representation in the Senate is of any value to a province, I think it behooves this government to fill that vacancy without delay. The vacancy occurred during last summer, this House has been in session for some time and the vacancies in the Senate representation from other provinces have been filled. The government, however, has not seen fit to fill this vacancy in the smallest province in Canada, and I repeat that the government should at once give us proper representation in that body.

Mr. A. S. GOODEVE (Kootenay). Mr. Speaker, I would like to add a word or two in support of this resolution. We in our province have felt for many years that we have not been quite fairly treated in regard to representation in the Senate. In the last general election, for the first time, the western provinces stood equal in representation to the maritime provinces. Under the British North America Act three units of representation in the Senate were established, each of 24 seats. We feel now that we have reached a time in the west when we should have one unit of representation, namely 24 senators, as we have west of Lake Superior equal representation, namely 35 members, with the maritime provinces. That, I understand, is what this resolution asks for, that the Act shall be so framed that when our population shall warrant it, automatically we shall have the same representation as the other provinces. The new provinces of Alberta and Saskatchewan have four senators each and automatically they will be increased to six each, but there is no provision of that kind in relation to British Columbia, we having only three senators. I shall not advance any argument after the able argument advanced by the Prime Minister himself this afternoon in regard to the resolution upon the abolition of the Senate. He very eloquently stated that the justification for the Senate would be that it afforded protection to minorities. I think that is a very strong argument in support of the resolution we have here. We want protection to minorities, and in this second Chamber which is supposed to safeguard the interests of the people, being an independent chamber, we seek to be duly and justly represented. You will readily see that, under present conditions, instead of being a source of strength, instead of being an assurance of fairness, the Senate might be a source of great danger to the western provinces. If, at any time, a question should arise in which there was a difference of opinion between the western provinces and the other three units that compose this Senate, advantage might be taken of the western provinces. I think that for this, if for no other reason, we might reasonably look not only to the first minister, but to the government also for support of this resolution.

Sir WILFRID LAURIER (Prime Minister). I have no complaint at all to make that this motion has been brought, still less of the manner in which it has been introduced by my hon. friend from New Westminster (Mr. J. D. Taylor). I rather welcome this motion and the expression of opinion which, up to this time, it has elicited in the House. I may say without hesitation that, so far as concerns my own individual opinion, I am altogether in sympathy with the object of the motion. The enacting part of the resolution begins as follows:

> This House is of the opinion that provision should be made for immediate augmentation of the representation of the western provinces in the Senate, by increasing said representation to six members each for British Columbia, Alberta, Saskatchewan and Manitoba, respectively——

In introducing, some five years ago, the Bill for the creation of the two new provinces of Alberta and Saskatchewan, I suggested, if I remember aright, this very idea that it would be advisable, before long,

to give to the new provinces an increase of representation in the Senate. The difficulty, however, is rather in what follows in the resolution of my hon. friend:

—and for such further readjustment of the representation of the western provinces in the Senate as may from time to time be called for by reason of development in population and importance of interests.

My hon. friend, I think, will agree with me that, when we deal with this question, we should deal with it in the spirit of the Confederation Act and at once make a new unit in the west and determine what the representation of that unit should be. It would not, in my juldgment, be in accordance with the spirit of the Confederation Act to leave it to parliament to increase from time to time the representation in the Senate. If there is one thing upon which all agree as to the controlling spirit of the constitution, it is that, in the popular Chamber, representation should be based on population, but in the second Chamber the principle of representation by population should not be followed, but that each sectional unit should be represented by a fixed number. Ontario was made a unit with 24 members in the Senate, Quebec another with 24 and the maritime provinces another with 24. My hon. friend suggests, in effect, a unit of 24 members. But the part of his motion to which I would invite his further attention and ask for his consideration is this: In giving 24 members to the western provinces, six for each of the four, leaving the matter to be changed from time to time, should we be acting according to the spirit of the constitution? If it were declared that the unit should remain at 24, or that, on these provinces reaching a certain population, it should be made a certain additional number, I for my part, would be prepared to consider that view. But I think that the one thing we ought to insist upon is that nothing should be left indefinite, but that we ought to determine at once what is the maximum of representation to be given to the western provinces to make them a unit. The question is not free from difficulty. It is one upon which I should be glad to have the views of my hon. friend. It is a question the consideration of which I should approach sympathetically. If the hon. member (Mr. J. D. Taylor) will allow me, I would suggest that he do not press his motion to a vote, but withdraw it and leave it to the consideration of the hon. members. I assure him, on behalf of the government, that we will give it the best consideration possible.

Mr. T. S. SPROULE (East Grey). It seems to me that the position taken by the Prime Minister (Sir Wilfrid Laurier) is a very proper one under the circumstances. I think it is generally understood that the representation of the country both in the Commons and in the Senate was settled on a basis that was intended to be permanent at that time—though changed conditions may necessitate changes in the future—and that in the House of Commons the basis of representation was population, Quebec being the pivot. I think it was equally intended that there should be no change in the number assigned to the representation in the Senate. With equal propriety, I believe, Quebec might have been made the pivot of representation in the Senate as well as in the Commons, with the provision that when the western country was brought in it should be considered one portion to which similar representation should be given to that given to Quebec. It is a very good plan it seems to me, for us to provide for the present. Let us deal with the conditions of the future as those conditions make change necessary. I do not think that our experience of the past in laying down cast iron rules intended to apply for all time justifies us in believing that we can with safety and propriety repeat that course. So many changes take place that we are obliged to make changes to adapt ourselves to the new conditions. It seems to me wise to deal with the present and practically let the future take care of itself in this regard.

Mr. J. D. TAYLOR. I am sure I could not reasonably find fault with the reception which the right hon. the first minister (Sir Wilfrid Laurier) has given to this resolution. And I may say at once that I am very glad to accept the suggestion which he has made to withdraw the resolution, leaving the matter to his—as I am sure it will be—favourable consideration. Let me say that my reason for suggesting provision for future readjustment was this: We have at present 35 members from the west in the House of Commons. In the next parliament, if the election takes place after the census of 1911, we shall have 65 members at least. Then in the parliament first succeeding the census of 1921, unless all signs fail, we shall have at least 125 members from these western provinces in this House. Therefore I did not suggest as a finality that the west should be content with one unit of 24 senators. I might also point out that western, like eastern Canada, is varied in its interests, and the time may come when we shall have on the Pacific coast sufficient population to justify a unit for purposes of representation equal in importance to the unit of the Atlantic maritime provinces. It may very well be that it will be thought proper to give us a separate unit for the Pacific coast, because our interests differ entirely from those of the

Northwest Territories constituting the central part of Canada. That was my idea when I suggested a further augmentation rather than suggest for the present the two units, as I think will be accorded the west in the lifetime of this generation, or appear to suggest that the people of the western provinces would be content with one unit as a final solution.

Motion withdrawn.

TRIAL OF WALTER BLYTHE.

Mr. T. G. WALLACE (Centre York) moved:

For a copy of all papers, letters, telegrams, documents and correspondence with reference to and in any way concerning the postponement of the execution of Walter Blythe and also of his second trial.

He said: It is only right and just to the constituency I have the honour to represent, where considerable dissatisfaction exists, and having been brought to my attention with the postponement of the execution, that I should move to have the papers brought down.

Hon. A. B. AYLESWORTH (Minister of Justice). For one reason I do not regret that the hon. gentleman has placed this notice of motion upon the Order Paper. That reason is that it gives me the opportunity to explain what possibly may be an entire misapprehension in the minds of some people as to the position of this case. But apart from that reason, I am very sorry to see a motion of this character proposed in the House. There have been two or three previous occasions, during the few years I have been Minister of Justice, upon which similar motions were made; and on each of these occasions I have tried to explain why it was extremely undesirable that papers of this character should be ordered by the House. The relations which necessarily exist between His Excellency the Governor General and his advisers regarding the exercise of clemency are of more than usually confidential character, and I am scarcely able to imagine a case in which it would not be better, in the public interest, that the exercise of clemency or the refusal to exercise it should not be the subject of public discussion. The King, under our constitution, is not only the fountain of justice, but it is his most distinguished prerogative that with him rests the pardoning power. That personal prerogative he delegates to each Governor General by his own letter of instructions and by special directions signed with the royal hand. The power to pardon, the right to exercise clemency, rests entirely with the Governor General of Canada for the time being. In capital cases His Majesty's instructions to the Governor General are not to act except upon the advice of his privy council, but in other cases he does not take that advice. The government as a whole is not responsible for the action which may be taken with regard to any criminal condemned, except in capital cases, but in these the Governor General acts only upon the advice of his cabinet and upon the government of the day rests the responsibility. The case referred to in this motion is of that character, and I think I might content myself, in objecting to the passing of the motion, with the statement of fact that the man who was reprieved was afterwards awarded a second trial upon the ground that there had been a miscarriage of justice in the first, and upon that second trial he was found by the jury not guilty of the capital offence of murder, and as a consequence is now a prisoner in the penitentiary for a term of years. That circumstance surely demonstrates how dreadful it would have been had His Excellency not intervened and granted the reprieve which postponed the execution. I wish to say further that, judging from references to this case which I have seen in the newspapers and reports of statements said to have been made by men of the locality, another very great misapprehension as to the facts seems to exist. It seems to be thought that there had been repeated exercise of the power to reprieve on the part of His Excellency the Governor General in Council. That is a mistake. The prisoner, who had been found guilty of murder and condemned to death, and sentenced to be executed upon a certain day, about the middle of May last, was, on the day previous, reprieved by order of His Excellency. For that reprieve the government necessarily takes the fullest responsibility. That reprieve having been ordered by His Excellency—and I may say at once the reason for it was simply that the House of parliament, being then in session, there was absolute necessity for time to give further consideration to the case, and it was impossible to give that necessary time before the date which was set for the execution—that one reprieve, or postponement of execution, however, having taken place, His Excellency's advisers decided that they could not recommend any interference with the sentence of the court, and there was an absolute end of any further interference with this case, or connection with it, so far as His Excellency's advisers are concerned. There were renewed applications to different members of the council, to myself, and I think to the First Minister and possibly to other members of the council, in an effort, on the part of those who were interested in the prisoner, to secure further delay, or to secure some advice which might lead to a commutation of the death sentence. Those efforts were entirely fruitless. No further advice on the matter was tendered to His Excellency,

and so far as the government is concerned, their final advice, and their only advice, except in regard to the postponement I have described, was that they could not recommend any interference with the sentence of the court.

But under the law, any judge of the court before which a prisoner has been tried, has power, upon good cause, in his opinion, being shown, to postpone the execution of the sentence; and acting under that power there were, from time to time, I do not know how many different postponements of the execution of the sentence in this particular case. For those postponements, no member of the government has the slightest responsibility. His Excellency did not intervene; the decision of His Excellency under the advice of his council was that the law should be allowed to take its course; and no doubt the law would have taken its course, and wrongly, as it afterwards appeared, but for the circumstance that on different occasions some member of the court intervened and ordered another and still another delay of the execution. Ultimately, under these delays, the case was heard before the Court of Appeal when that court reassembled after vacation, I think in the month of September last year, and upon argument before that court, that court ordered a new trial, being of the opinion that the learned judge who had presided at the trial upon which the prisoner was condemned had omitted to charge the jury upon one very important issue in the case. It was entirely within the power of the court, it was the duty of the court, if the court saw error in law in the course of the original trial, to order that a new trial should be had, and the court having so ordered a new trial, its action would seem to have been justified by the fact that upon the second trial, and upon the jury at the second trial having been properly instructed as to the law, the second jury found the prisoner guilty, not of murder but of manslaughter. In the special facts of the case the whole question turned upon that distinct issue. The case was in many respects a very terrible one. The prisoner, in a condition of more or less intoxication, had beaten his wife and she died as the result. The question of his intention in striking her was all important. If he intended to kill, it was murder; if he intended but to chastise and was mistaken, if his blows were more violent than in his drunken condition, he knew, he was not in the eye of the law guilty of the more heinous crime of murder, but guilty of manslaughter. The jury having received from the court the proper instructions as to their duty in the matter, and having their attention drawn pointedly to the question which they were deciding, decided upon the evidence which they heard, and of which they were the proper judges, that the man did not intend to kill. I have not seen the evidence taken upon the second trial. The sentence not having been a capital one, that evidence did not in any way come under review before His Excellency's ministers. With regard to the evidence which was given at the original trial, I have read it, necessarily studied it, with all the care that it was possible for me to apply to it. I had my view, other members of council, upon the report which I made, and upon the discussion which took place in regard to the case around the council board, had their view. I am free to say that there was not unanimity among the individual members of the council on the subject. But that is just the kind of thing that to my mind, shows plainly that it is not in the public interest that the papers should be brought down, and that the advice in matters such as this given by council to His Excellency, should be canvassed, even in this House. I hope my hon. friend, under the circumstances, will not press his motion, but that, having had the discussion that there has been, having heard the explanation of the state of the facts which I have made, will see his way to withdraw the question from further consideration.

Mr. SPROULE. This is not a question upon which a layman would be expected to say anything, and but for the fact that it is equally important to the layman as to the lawyer that the public should have the greatest confidence in the impartiality of the administration of justice, I would refrain from speaking. But I have always held the opinion that one of the safest and surest guarantees for making the people believe that there is perfect impartiality is to give them the ground upon which the reasoned judgment was reached. I have heard the Hon. Mr. Blake say in this House once: 'I care very little for a man's judgment, whether he be high or low; but I care a great deal for his reasoned judgment, for then I can bring my intelligence to bear upon the question, and endeavour to satisfy myself at least whether he reached a sound conclusion or not.' Now I may say what may not be known to the Minister of Justice and the government, that there is a growing impression in the country that certain lawyers have such an influence with the administration of justice, or the government, or the Minister of Justice, that they can get almost any criminal off, or they can get the verdict of the court quashed. Now that impression that certain lawyers, whether it is due to the accident that they happen to be of the same political persuasion as the Minister of Justice and the government who are in power for the time being, or whether it is not, that impression is growing rapidly in the country, and it must be apparent to the Minister of Justice, as well as it is to every member

of this House, that it will ultimately lead to a very bad condition of affairs in any country if it results in destroying that respect which we have for the administration of justice in this country. We expect perfect impartiality. If the giving of publicity to the reasons which enabled the Minister of Justice, or the Governor in Council, who, I presume, was largely guided by the advice of the Minister of Justice, to reach the conclusion he did, results in settling the minds of the people who entertain improper views of the matter, in my judgment, it would not be an unmixed evil if these papers were given to the world. I can see very strong grounds for the contention which the Minister of Justice entertained, but, on the other hand, it seems to me that there are equally strong grounds for making these papers public so as to disabuse the public mind of the impression that there is anything wrong. There is another thing that I think will probably lead to good results; that is the distinction which the Minister of Justice has stated as between the Governor General and the Justice Department, that only in capital cases must the Governor General be guided by the advice of his council but that in other cases he may exercise his own judgment. Let that be known and it goes a long way to satisfy the public mind. If the people are under the impression that a wrong conclusion would be reached the responsibility would be placed on the right shoulders and the government would be relieved of it as a result. But, I think if it would accomplish no other end than satisfy the public mind that the same principles apply and that the same justice is meted out to all regardless of what their political leanings are, or what the political leanings of the lawyer are, or what their religious convictions are, or what their nationality is, it will do a great deal of good in the country, because, just so long as everybody has respect for the administration of justice and believes that every one is treated impartially there will be a good state of affairs in the country, while, if the reverse is the case, it breeds contempt for the law and it makes many men take the law into their own hands believing that they cannot get justice from the Justice Department.

Mr. LEWIS. Mr. Speaker, I desire to agree with the hon. Minister of Justice (Mr. Aylesworth) as regards a great many of his remarks, but I wish to say that there is a strong feeling in this country that a man who, because of the crime committed by him, really deserved to be hung, has escaped the gallows. A drunken man who, while he does not intend to kill the woman, pounds that woman to death, is entitled to suffer the full punishment for his crime. The Minister of Justice will agree with me that, even if he did not intend to murder the woman, the English law says that where a man is committing an unlawful act he is guilty of every act which ensues while he is committing that act. If the evidence adduced in this case only produced a verdict of manslaughter, then I think it is the duty of the Minister of Justice and of this House to have the law changed so that a man who commits the crime that this man did will be really punished and hung as this man should have been.

Sir WILFRID LAURIER. My hon. friend is aware from the circumstances and history of the case, that if a guilty man, a murderer, has escaped the gallows, the blame cannot be brought to the door of the government, but the blame must rest upon the court. The only thing which was done by His Excellency the Governor General in the case of this man was simply to give him a reprieve. He was to have been executed at a certain date and the date was postponed. Numerous petitions were presented to the government in favour of this man asking for a pardon or rather a commutation of the sentence. The advisers of His Excellency did not think it possible that this petition could be granted, but as there was a good reason to know whether or not the man had been properly convicted a reprieve was given and then application was made to the court for a new trial. The court granted a new trial. Now, my hon. friend says there is reason to believe that under the British law, if a man commits a breach of the law, such as was committed in this instance, it follows that it was murder. In the present instance this man committed an offence upon his wife, he committed an assault upon her, he beat her —there is no doubt about that because the fact is admitted—and as a consequence of that treatment his wife died. My hon. friend says it was murder. I do not know that I would differ from him, but the courts say differently. The courts say it was not murder. The case was tried again and the man escaped. Under such circumstances does my hon. friend believe, or is he prepared to say—

Mr. LEWIS. I said that if that did not constitute murder it was high time for the Minister of Justice to amend the law so that it would be murder.

Sir WILFRID LAURIER. Well, we are discussing now another matter. The government has been held to blame, as I gather from the remarks of the hon. member for York (Mr. Wallace) and the hon. member for East Grey (Mr. Sproule), because they granted a reprieve. Does my hon. friend (Mr. Sproule) say that the government did anything wrong? On the contrary, will not my hon. friend admit that the govern-

ment could not do anything else than that which they did and that they acted wisely and humanely in granting a reprieve since the result was to give the man a new trial, the consequence of which was an acquittal? In view of the circumstances in this case, whatever may be the private opinion which any one may have, we must take it that justice has been done to this man. His life was saved and he was found guilty not of murder, but of manslaughter. Under such circumstances would it not have been shocking to believe that if this reprieve had not been given this man would have been executed for a crime for which, after all, he was found not to be guilty? My hon. friend from East Grey says that there is an impression growing that certain lawyers have an influence upon the government and can get almost any sentence commuted. I disagree altogether from my hon. friend. I do not believe there is any such impression abroad in the country. I do not agree that such an impression is growing because there is no evidence to support any such imputation upon the government. Nobody can boast that he has any such influence upon the government. The facts of this case prove to the contrary. Counsel for this man asked for the commutation of the sentence. It was refused. They asked for a reprieve. It was granted and what followed showed that the reprieve had been properly granted. If the second trial, after the reprieve had been granted, had resulted in the same manner as the first, then my hon. friend would have had some ground for his contention, but when the reprieve was granted and the granting of it was justified by the courts my hon. friend has no justification for saying that there was any improper influence brought to bear upon the case.

Mr. SPROULE. The right hon. gentleman improperly accuses me of saying something I did not say.

Sir WILFRID LAURIER. I am very glad to hear it.

Mr. SPROULE. I made absolutely no reference to the case at all although I know something about it. Nor would I pretend to say there was anything wrong. But I did say what I know to be a fact because I move enough around in the world to hear what is current talk; I said there was a growing feeling in that direction, and if giving these papers to the public disclosed the fact that there was nothing wrong, I said it would go a long way to disabuse the public mind of that impression and satisfy every one that the Department of Justice was right. That is the only feature of it I pretended to talk about. I did not accuse the government of anything wrong in this case nor do I pretend to say there was anything wrong. But I desire to impress upon the government that if anything can be done, by giving publicity to these papers or anything else, to disabuse the public mind of that growing impression it would do a great deal of good in the country.

Mr. LANCASTER. I rise to say a word, principally in corroboration of what has been said by the hon. member for Grey (Mr. Sproule). I did not understand the hon. gentleman to say that he thought these things were as common talk makes them, but I am bound to say that we in that district of the province of Ontario not far from Toronto, and on the streets of Toronto, continually hear that a certain half dozen lawyers in the city of Toronto can get anything they want from this government providing the men who want it will give them the money. I am not saying this is so, but I am saying that certain lawyers are taking advantage of that impression in the city of Toronto, and the member for Grey (Mr. Sproule) is right in saying that if these papers are brought down and show there was ground for this reprieve it will go a long way to remove that idea. I do not say it myself, but if people believe these things the country suffers. I have not yet heard any good reason given why these papers should not be brought down. If these papers contain the information that the Minister of Justice and the Prime Minister say they contain everything will be all right and the people can see it is so. The hon. gentleman from Centre York (Mr. Wallace) and his constituents will see if the papers are brought down that things are in a proper condition. I must say that on the main point, the rights of the hon. gentleman are being disregarded by the Minister of Justice. Surely this government is responsible to parliament for their action in advising the Governor General. The Minister of Justice has not said in so many words that they are not, but that is the logical result of his contention. If that is what he means, I must dissent from the view that the cabinet can advise the Governor General in regard to these matters and not be responsible to parliament as to why they gave that advice. There is a very good reason why the papers should be brought down, and it would be for the public good if they were brought down.

Mr. LEWIS. Am I in order, Mr. Speaker?

Mr. SPEAKER. Not except by way of explanation; the hon. member has already spoken.

Mr. LEWIS. I did not say nor do I wish it to be inferred that I thought there was anything wrong at headquarters, but there has been a travesty of justice, there

has been a miscarriage of justice and I say it is the duty of the government and of the Minister of Justice to have the law amended if it requires amendment so that this should not occur again. There is a strong feeling throughout the country that a guilty man has escaped the gallows.

Mr. AYLESWORTH. I would ask permission of the House to say a brief word which is in the nature of personal explanation, in view of the observations which have fallen from some gentlemen with regard to the impression which is said to exist that some lawyer or lawyers can get anything they want from the Department of Justice. With regard to this particular case I understand it has been disclaimed that there was any intention to apply that observation to it. The gentleman who appeared as counsel in this case for the prisoner is a practising lawyer whose practice principally consists in the defence of accused persons and it necessarily results that many of his clients are convicted, and I suppose it results as an equal matter of course that he is a very frequent applicant for clemency. I do not know; I cannot remember taxing my memory to the utmost while I have been sitting here, if that gentleman appeared in this particular case or did not appear upon the application for commutation of the sentence. I can assure you, Sir, that it did not make the slightest difference whether he did or whether he did not. It is the duty of the Minister of Justice in all capital cases to read the evidence with all the care that he can bestow upon it. The responsibility rests I think upon him personally. Certainly that responsibility has not, in the time that I have occupied the position of Minister of Justice been neglected in any single instance. It has made no manner of difference whether the prisoner was defended by a lawyer or was not defended at all; whether the prisoner had any lawyer coming to Ottawa or writing to Ottawa, or whether he was absolutely friendless and had no one interceding or interesting himself on his behalf. How could it in the nature of things? Every word of the evidence has to be real and sifted and weighed, and marshalled one statement with another, in order that an opinion may be formed as to whether or not there is in this particular case or in that particular case any room for doubt. The only action of the government in this particular case, was as I have explained, to advise a postponement of the execution. That proceeded absolutely upon the motion of the government itself and not upon anybody's request. It was for the reason which I have explained, and certainly in that action no lawyer at all intervened. Now, with regard to criminal cases generally in respect to which it is said this impression exists—the same statement was made in this House by the member for North Toronto two years ago in moving for a return which was prepared with great labour and after long examination of the files for the last 13 years to show in each instance where there had been any lawyer intervening on behalf of any prisoner asking for clemency, who that lawyer was and what was the result of the application. That information is before the House. I hope hon. gentlemen will study it, and before any hon. gentleman will again say such a thing on the floor of this House as has been said to-night that the impression prevails or that the impression is abroad that some lawyers can have anything they choose to ask for from the Department of Justice, I hope any hon. gentleman who meditates such a statement will in common fairness examine that return and read, mark, learn, and inwardly digest it. I feel indignation that such a statement should be made here when the facts are before the House and before the public if any one chooses to look at them, and I want simply to say this further: That since I have been administering that branch of the Department of Justice in this country the cases which have passed through my personal hands have averaged from 50 to 60 each week; I have never let a single case pass through my hands without reading every word of every page of every paper on the file in that case. In the vast majority of these cases no lawyer at all intervened. The great bulk of them are cases in which either the prisoner himself applies from his prison or some member of his family writes to ask or some friend calls to see me to ask consideration of the case. I have let no opportunity pass unimproved to impress on every prisoner and on the friends of every prisoner that it is better for him, better for his pocket at all events, that he should have no lawyer representing him before me in the case. I want the assistance of no lawyer in the matter, I see no need of any lawyer in such a matter, it is not a matter for argument as upon legal points, it is simply a question of whether or not facts are presented on which clemency could be recommended, and I have done everything in my power to persuade prisoners not to pay lawyers money for any such offices, which do them no good in the world. If a lawyer comes to me and asks to see me to discuss a case pending consideration I cannot refuse to see him; in common courtesy I see any person, it makes no difference who it is, and any one can do as much good as any lawyer, no matter who that lawyer may be.

Mr. WALLACE. I brought this matter to the attention of the House as I considered it my duty to do so because this murder was committed in my constituency. There was a great deal of dissatisfaction, and I do not know whether the Justice Department or some one else was responsible for the postponement of that first trial. I simply brought it before the attention of the House as I thought it was due to my constituents that I should do so. After hearing the Minister of Justice and the Prime Minister, I do not wish to press the motion. I do not see any reason why the papers should not be brought down, but in view of what they have said I do not think it would be of any use, as they are opposed, to press the motion, and I beg leave to withdraw it.

Motion withdrawn.

STATUS OF ENGINEERS IN CIVIL SERVICE.

Mr. A. B. WARBURTON (Queens, P.E.I.) moved:

For a copy of all papers, correspondence and memorials in the hands of the government with regard to the engineering service of the government, and respecting a high professional standard, a recognized official status by enrolment or incorporation in the Civil Service, and respecting a system of pensions and superannuations in connection with that service.

He said: Mr. Speaker, during the short time I have been a member of this House, and for a good many years before I had the honour of a seat here, I had not been an altogether uninterested spectator of what was going on in the Dominion, and I have not been an uninterested student of public affairs. I have deemed it my duty as a citizen of Canada to know as much as I could of what was going on in this country of ours, and among other things I have thought it well to inquire into some branches of the public service, not that I would pose as a reformer, but that I would wish as a Canadian, to understand what was going on in my country, to understand the position in which the public service was placed, and if it ever were in my power to give credit to any public servant, to be able to give it, or if I could not be of assistance to any of my fellow countrymen, to try and be so. In looking over the public service of this country it has always appeared to me that the engineers who are now perhaps one of the most important parts of that public service, were in somewhat of an anomalous if not a false position. I have in conversation with members of the engineering service of this Dominion and also with many other engineers not connected with the public service, talked over and discussed this matter, and the consensus of opinion, so far as I could gather it, was that the engineers are not in a position in which they ought to be placed. In the early days of confederation it did not appear, I presume, that engineers were of as much importance as we now know them to be. The engineer of that day might be a very accomplished, eminent and skilled engineer or he might be an engineer whose training was the training of the rule of thumb and of experience or none at all. The work they had to do in those days was not the work they have to do nowadays, and consequently many men, and very deserving men, found their way into the public service as engineers, who, in a strict sense, were not qualified for the position they gained, although their old time experience in works throughout the country enabled them in a great measure to succeed in the works entrusted to their hands. These works, however, were very different from the works which must now be undertaken by government engineers. Many of these gentlemen, some quite recently, have asked me to bring this matter to the attention of the government and of this House. so that their position might be placed before the government and before this country in order that such steps might be taken to ameliorate that position as might appear fit in the eyes of the government and of this House. As far back as March, 1901, the petition signed by the engineers in the public service from the Atlantic to the Pacific, was forwarded to the then chief engineer or acting chief engineer of the Public Works Department. That was some seven or eight years before the present minister entered this House, and I am informed on authority which I cannot doubt that no answer was ever received to that petition. In that petition the engineers set out the changes which they would like to have made in regard to that part of the public service with which they were concerned. Let me, before going into these matters, point out for a moment the vast importance which the profession of the engineer in Canada and in the public works in Canada has attained. You have enormous public works, railways, canals, public buildings and innumerable other public works being carried on in this country in which the expenditure of money is simply enormous, and I have no hesitation whatever in saying that the difference in cost of many public works in this country will be very great in accordance with the capacity of the engineer employed. The engineer who thoroughly understands his business and is a man of integrity may save hundreds, thousands or hundreds of thousands of dollars. An equally honest engineer who does not understand his business so well may, with perfect honesty, lose the government and his country equally large sums.

As a very large proportion of the expenditure of Canada has to be made under the supervision of and to some extent through the engineers employed in the various branches of the government, it is, I think, right for us to consider their case. I am informed that in all the branches of the public service of Canada the engineers, perhaps the most important of the whole lot, are not included in the Civil Service of Canada. There are, I believe, one or two exceptions of engineers in some of the departments who are members of the Civil Service, but I am informed that in some of those cases, and they are very few, they are there not as engineers but as clerks, they draw salaries as chief clerks or clerks and not as engineers, not as members of the profession to which they belong and whose duties they perform. If that be correct, and I have the information on good authority, it justifies the statements I have made that the position of the engineering profession in the public service is not only anomalous but to a very great extent a false one. What course should the government take? The members of the engineers association are naturally proud of the profession to which they belong and object to their status not being equal to that of other branches in the public service. It may be gathered, from the few opening remarks I have made, particularly with reference to the past, that not much care is exercised in the admission of gentlemen into our public service as engineers. As I am informed, it has not been necessary for them to produce certificates or diplomas from any recognized engineering institute or credentials of any kind in order to get employment. It has not even been deemed necessary that they should produce any evidence of education, scientific, technical or general. But in saying this, I wish to be distinctly understood as not reflecting on the engineers now in the public service. On the contrary, I have a very high opinion of them, and it has been a source of astonishment to me that the government should have succeeded in procuring and retaining the services of such an excellent staff.

The first requisite for the government service should be high professional standing. That should be insisted on. While, as a rule, the engineers in the public service are well up in their profession, there are some exceptions, and I think that it would be in the interests of the service and of the engineers themselves that a fixed standard of efficiency should be enforced on admission. In other parts of the world, the importance of education, scientific and otherwise, is recognized by governments in the selection of their engineers, and it seems to me that a similar course should be followed here and a high standard insisted on. I know that the great majority of the engineers of Canada are very anxious that should be done. They are not at all anxious that men should be admitted into the service as engineers who have not reached that high standard in the profession which ought to justify their appointment.

I have already referred briefly to the enormous expenditure of public money which takes place throughout the Dominion under the direction of engineers. Take for instance the Grand Trunk Pacific, on which hundreds of millions of dollars are being spent, a great part of it under the supervision of engineers. How vitally important it is in the interests of Canada that the men who superintend that expenditure should be thoroughly competent is self evident. But not only is there the expenditure of money to be considered. Enormous as that expenditure is, it is perhaps not the most important matter. By the expenditure of that money we are opening up and developing this great country, and this country could never have been developed as it has been were it not for the work of these engineers. On that work we have to depend for the opening up of the rich and fertile regions of the west; and unless the men we employ be competent, thoroughly trained to a high standard, it is almost hopeless to expect that the work will be done in a satisfactory manner. Therefore, I would suggest that before a man is admitted into our public service as an engineer, he should be required to possess a high standard of qualification. He should have gone through a proper technical school, a proper school of engineering, or have the certificate of some institute of engineers on which reliance can be placed. A distinguished English engineer, Mr. James Chas. Inglis, the newly elected president of the Institute of Civil Engineers, London, in his inaugural address said:

> Several important departments of state rely to a considerable extent upon the work of the council, and in some cases, upon advice given by it with respect to questions of the qualification of the engineers and of their selection for public services. The result of all this strengthening of the efficiency of the institution is that a higher average technical proficiency is undoubtedly attained by the young engineers attached to it than was formerly the case, and this state of affairs has been notably marked by the action of the India office with respect to engineering appointments in the Public Works department; and, very recently, by the War Office which has entrusted to the council of the institution the important function of selecting and recommending young engineers for nomination to the newly organized reserve of officers for the Royal Engineers. . . . The War Office has assigned to the president of the institution the duty of selecting men for nomination to this reserve, as may be required from time to time.

Thus the contention I am putting forward has already been acted upon by the governments of Great Britain and India. No doubt many of us take some interest in India. I know, that although I have never visited that country, I am much interested in its progress, and I am aware that some of the finest and greatest public works there are carried on under the direction of engineers employed by the government—young men sent out to India, who begin with a small salary and rise to large salaries, and who are noted for their faithfulness to duty and the excellent work they perform. We have in Canada the Canadian Society of Civil Engineers, started in 1867, consisting of 2,000 members from the Atlantic to the Pacific. This institute has for a considerable time past exercised a very potent influence upon the matters which come under its notice. That influence is bound to go on increasing, as I understand—in fact, I know—that that institution takes remarkably good care as to the qualifications of the gentlemen admitted to its membership and as to their character as well. It is an institution whose influence must be for good, its membership and usefulness must increase as the country grows older. I do not suggest that we should go so far as Great Britain or India and ask this institution to supply officers for the service of the government. I think that, perhaps, that would be to abdicate some of our own functions. But it would not be out of place to have the certificate of that institution or some other institute in which confidence could be placed, or the approval of such society based upon examination, as a preliminary before a young man could take a position in the engineering service of Canada.

Then there is the question of the official status of those thus included in the Civil Service. We have reason to believe that, while the pay which the engineers in the outside public service receive is not on a large scale—and I propose to come to that shortly—I have reason to believe that the smallness of pay they receive is not so much a matter of complaint on the part of these gentlemen as that they have no proper status in the public service. When the Civil Service Act of 1876 was passed, the engineers seem to have been overlooked; and, in the different Acts that have been passed since that time, so far as I have been able to see, they still remain out in the cold. Many of these men have been in the public service practically during their whole working lives. You have men in the public service as engineers who have been there for forty years, men who have done good service and remain on simply because they have to. Like the rest of us, they have wives and families and they have a position to maintain. In fact, the engineer, I believe, is more called upon to expend money than almost any other man in the public service, owing to the fact that he is sent about the country a great deal and expenses are practically forced upon him, which, perhaps, he cannot charge in his bill of expenses but which are very real nevertheless. Though the engineers have been left without the scope of these Civil Service laws, I understand that in the schedules of the outside service no provision has been made for engineers as to appointment, promotion, retiring allowance and so on. But the great difficulty, and that to which they take most exception is that while they are a most important part of the public service of Canada, they are not considered part of the Civil Service of Canada but are a sort of outcast people so far as the Civil Servie is concerned. Again, while, in many other departments of the public service provision is made for superannuation and pension, no such provision is made in the case of the engineers. By superannuation I mean an allowance to a man who has served faithfully, and who, owing to old age, accident, or some similar cause must end his service and retire. By pension, I mean provision for the families of those who have spent their lives in the public service and have passed away leaving their families unprovided for. Such provision is made for many other classes of the Civil Service, and the members of the engineering service think that they ought not to be treated differently from others. I think that, rightly and justly, they should form a branch of the public service and that not only should they have the privilege of working for their country as other public servants do, but that when their working days are over they should have the same privilege as other employees have of superannuation and pension allowance.

The engineering service of India, is, perhaps, one of the best. In Australia also, they have taken remarkable care of this service and have brought it to a very high state of efficiency. I have taken some pains to have extracted from the reports bearing on this subject matter relating to the engineering services of India and Australia, which, I think, will be of interest. Here are some of the provisions made in India:

Candidates for appointment must be between the ages of twenty-one and twenty-five, British subjects, of good moral character and sound physique.

They must have passed the A.M.I.C.E. examination (Associate Member of the Institution of Civil Engineers), or have obtained a science or engineering degree in one of the standard universities of Great Britain. He must also have had some practical experience in the design or execution of some engineering work of importance.

The candidate, upon appointment, enters the service as an assistant engineer of the third grade, at a salary of $1,824.

In calculation I have counted the rupee as worth forty cents. I believe the government of India counts it as forty-two cents.

His travelling expenses are paid to India and his salary begins upon arrival.

The salaries of the various ranks of the department are as follows:

Class.	Salary per annum.
Chief engineer, first-class	$13,200
" second-class	12,000
Superintending engineer, first-class	9,600
" " second-class	8,400
" " third-class	7,200
Executive engineer, 20th year of service and following years	6,000
Executive engineer—	
19th year of service	5,760
18th "	5,520
17th "	5,280
16th "	5,040
15th "	4,800
14th "	4,560
13th "	4,320
12th "	4,080
11th "	3,840
10th "	3,600
9th "	3,360
Assistant engineer—	
8th year of service	3,168
7th "	2,976
6th "	2,784
5th "	2,592
4th "	2,400
3rd "	2,208
2nd "	2,016
1st "	1,824

Now, as to pensions:

Pensions.

An engineer is eligible for a pension on voluntary retirement, after completing twenty years' service, or reaching the age of fifty-five years. If, at an earlier date, he is compelled to retire from the service through ill health, he becomes eligible for an invalid pension or gratuity, according to the length of his service, as follows:—

After ten years of service an invalid gratuity of one month's pay for each year in the service.

After ten years or more of service, an invalid pension of the following amounts:—

Years of Completed Service.	Sixtieths of average emoluments.	Limit of Pension.
10	20	$ 400
11	21	560
12	22	720
13	23	880
14	24	1,040
15	25	
16	26	
17	27	
18	28	1,200
19	29	

After a service of not less than 20 years, a retiring pension not exceeding the following amounts:—

Years of Completed Service.	Sixtieths of average emoluments.	Limit of Pension.
20 to 24	30	$1,600
25 and above		2,000

Engineers who have shown special efficiency during three years service in certain appointments may be allowed an additional pension of $400 a year.

Provident funds.

Engineers in the service make a compulsory contribution of five per cent on their salaries, with a voluntary contribution of a further five per cent. Compound interest on these payments is credited, and the whole accumulated sum is handed over to him upon retirement, or, in the event of his death before retirement, to his heir.

Leaves of absence.

Privilege leave (with full pay) is granted to the extent of one-eleventh part of the time that an engineer has been on duty without interruption. It may be accumulated up to three months, earned by thirty-three months duty.

Furlough and special leave are granted of an aggregate maximum of six years during the engineer's service. The amount of furlough earned being one-fourth of an engineer's active service. Furlough is limited to two years at a time. During the first two years of furlough, half pay is granted. After two years furlough, one quarter pay.

For purposes of pension, the rupee is calculated at 1-9 d. equal to 42·58 cents.

I calculate the rupee at forty cents. Now those are the Indian regulations. I would call attention to the leave of absence, because I do not think there will be any need for similar regulations here. The climate of India is such that longer furloughs are necessary than would be necessary in Canada; consequently, not only in the engineering service, but in all the other services of that country, extensive furloughs are the rule, running up to two years at a time. Such long leaves of absence would be altogether impracticable in Canada. At the same time stiff regulations ought to be made with regard to leave of absence, so that there can be no complaining or fault finding when a man seeks for such leave. Now, in Australia also they have taken a good deal of trouble over this matter. I will read from a synopsis I have made of the regulations in Australia:

Candidates for appointments in the professional division (the engineering service of the Public Works department) must be British subjects, between the ages of eighteen and twenty-two.

After passing a competitive examination, a successful candidate is appointed a 'cadet draughtsman'. The first appointment of a successful candidate is probationary and the initial salary is £75 per annum, advancing by annual increments of £15 up to £150 a year.

In due course, the candidate draughtsman may present himself for examination for the office of junior assistant engineer. The examin-

ation embraces mathematics, (including plane and spherical trigonometry, calculus, analytical geometry, algebra, statics and dynamics, and astronomy). Applied mechanics, materials and structures, mechanical, hydraulic, railway and sanitary engineering (any two of these), physics, surveying, drawing and design.

A successful candidate is appointed junior assistant engineer, with initial salary of £175 a year.

Candidates (other than cadet draughtsmen, or engineer cadets), for the position of junior assistant engineer, must have the degree of B.E. or M.E., of the university of Sydney, or a diploma in engineering from some recognized university or school of engineering, and must also produce a certificate from some recognized professional man, of practical work in field and office for a period of not less than nine months, and such candidates are also required to submit to a competitive examination in field instrument work, drawing and design, and the writing of reports or theses.

From junior assistant engineer, promotion is by examination and vacancy, successively to third class, second class and first class assistant engineer, thence to district engineer and 'principal assistant' engineer, in the railway, roads and bridges, water supply and drainage departments, respectively; and finally to chief engineer of railway and tramway construction, and chief engineer of rivers, water supply and drainage.

The following table shows the maximum and minimum salaries of the above grades:—

	From.	To.
Cadet draughtsmen.....	£ 75.....	£150
Junior ass't. engineer..	175.....	230
3rd class ass't. engineer..	230.....	300
2nd class ass't. engineer..	300.....	410
1st class ass't. engineer..	400.....	500
District engineer....	510.....	600
Principal ass't. engineer..	630.....	850
Chief engineer..	825.....	1,000

Leave.

The regulations provide for the granting to every officer of the department leave of absence for eighteen working days during each year. Also for short leave absence for special purposes, not exceeding three days at a time, any excess of the special leave over three days in one year being deducted from the officer's next annual, or accumulated, leave.

Travelling expenses.

Allowances for travelling expenses from 10s. per day up to 17s. 6d. per day, according to the salary of the engineer or officer, are allowed as sustenance allowance, all cost of conveyances being paid in addition by the department.

Living allowances to the amount of 10 per cent of the salary are allowed to engineers residing in certain distant parts of the state.

There appears to be no system of pensions in the department, but pervading the whole public service is a system of compulsory insurance, at standard rates of premium and with policies of a size commensurate with the salary of the officer. In exceptional cases, in lieu of insurance, an officer is permitted to dispense with insurance, and in these cases a percentage is deducted from his salary which accumulates with compound interest, and on his retirement or death is handed over to himself or his heir.

Now, Mr. Speaker, I may have taxed your patience in reading those extracts, but it seems to me they are important, as showing the high standard placed upon engineering service in other parts of the empire. I think it is becoming more and more evident that the government of Canada, or any other government, cannot expect to obtain the service of competent men unless these men get a good remuneration therefor. We have had, within the last few days, a most notable instance in the fact that the Department of Railways and Canals has lost its deputy minister, who had been in the department for seven or eight years, and though he was receiving what the general public looked upon as the enormous salary of $8,000 a year. But a private corporation thought he was worth $25,000 a year, and very properly he decided to throw in his lot with the private corporation. Now, so long as private corporations and private individuals can come in and take away the best men you have, or can induce our best young men in this country to enter their employment, so long will the engineering service of Canada be in the unsatisfactory state in which we find it. Here I wish to recall a remark which I made in opening, that I am not reflecting upon the men who are in the service, because I believe that, considering all things, they are an exceptionally fine body of men. The only wonder is that you have such a good body of men as you have. But make the service better worth entering, and you will get better men to enter it, and when you get more competent men, you will get a more efficient public service, and save money thereby. You will have better men to look after the expenditure of your money, they will do better work, and their labour will procure a better development than you can expect under present circumstances. I have no doubt also that the saving of money will be very great. Now, Mr. Speaker, I did not intend to take up so much time, but this is a matter in which I have taken a great deal of interest, and I thought it worth while to bring it before the attention of this House and of the government. I know instances of men in the public service who themselves wished to be out of it some time ago because of advancing years, but who cannot, in justice to themselves and their family, leave off work; so they have to remain until death calls them away, or until some one else who wants their position succeeds in expelling them from it. That is not right. I have heard it said, and I believe it is true, that the worst thing ambitious young men can do is to take employment under the government. It is true that they get a certain fixed income, and they are sure of it while they

remain in the service, but the stimulus of ambition is taken away from them, they have no broad outlook. They can always depend upon getting enough to eat and to wear, but not much more, under their present salaries. It will be a marvel to me if in the course of a few more years, when the demand for skilled engineers will have increased enormously, as it must and will increase, you can expect to have the benefit of a first rate class of men in the public service and without having a first rate class of men in the public service the public service must necessarily suffer.

Now, I do not propose to take up more of your time. I wish simply to present the case of the engineering branch of the public service to the House and the government in the hope that a higher standard will be insisted upon for admission into the service, that the status of engineers will be improved, that they will be placed on an equal footing with their fellow employees in the public service who have the advantage of being enrolled under the Civil Service Act, that while the salaries and pay in other branches are being increased, consideration will be given to the case of the engineers who are perhaps the most important body of men in the public service, that their needs and claims will not be overlooked, and that they will be treated in such a way that we will not be losing many of our best men.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, speaking for the department over which I have the honour to preside, and with a knowledge of the position which our engineering staff occupies in the department, I can say that I feel that there is a great deal to be said in favour of the view which has been presented by my hon. friend (Mr. Warburton), more especially in so far as the salaries of the engineering staff of the department are concerned. In speaking of the engineering staff, I include not only those who are engaged in the department at Ottawa, but those who are engaged throughout the Dominion, acting as resident engineers in the various important centres of Canada. My hon. friend has said that it is a wonder that we have been able to keep such good men as we have in the department. Sometimes I have entertained the same opinion as that which my hon. friend has expressed. From my observation since I have been minister I am satisfied that the country is fortunate in having in its employ such able and conscientious men as are engaged upon the engineering staff, not only at Ottawa, but throughout the Dominion. When we come to consider what engineers get in the employ of the different railway companies and other corporations engaged in the carrying on of various industries in the country it does seem remarkable that we have been able to secure and retain in the employ of the government so many able and experienced men as we have at the comparatively small salaries which are being paid to them. To that extent I agree with the remarks which have been made by my hon. friend. I also agree with the view that every reasonable encouragement should be extended to the engineers in the employ of the government. But, I do not agree with my hon. friend, that, apart from the matter of salaries, they are treated any way differently from those who are engaged in other departments. My hon. friend says that they are not entitled to superannuation. The same remark will apply to others who are in the employ of the government, and who have come into that employment in recent years. Under the old Civil Service Act, the employees of the government were entitled to superannuation, but there were a great many employees in the Public Works Department, not merely engineers, but architects and clerks in the different branches performing important duties who were equally outside the Civil Service Act. When the present Civil Service Act came into force, out of a total of 230 employees of the Public Works Department at Ottawa, in its different branches, I think there were only some 36 who came within the terms of the Civil Service Act, and, therefore, there are almost 200 occupying the same position as far as the right of superannuation is concerned. My hon. friend is no doubt aware that some years ago the Superannuation Act was repealed, and that those who have come into the department since are not entitled to superannuation. As far as the engineering staff outside of Ottawa are concerned, they are in the same position as many other outside employees in the different departments of the government. The Civil Service Act, it is true, does not apply to them; neither does the Civil Service Act apply to other outside employees in the various departments. Therefore, those who are engaged outside of Ottawa are not in any worse position than the other employees of the government. I think, perhaps, my hon. friend based some of his remarks upon what was the status of the engineers in the Public Works Department before the Civil Service Act came into force. By that Act those upon the staff in Ottawa were all brought under its operation, and while some are named as chief clerks and some as clerks belonging to one division and another, the reason they were so classified was in order that full justice might be done to them, in order that they might go into that class to which the salaries they were receiving entitled them to go, and what we did for them we did in the effort to do complete justice to them and not, as I can assure my hon. friend, with any desire to do

any injustice, or from any failure to recognize the important services which they are rendering to the country. I only wish to make a few further remarks with regard to the way the engineering staff is being implemented from time to time, and I think that our practice is calculated to secure good service to the country just as much as the practice which prevails in other countries. We have, I believe, Mr. Speaker, in the resident engineers throughout Canada—and I am not prepared to suggest now that there is any exception to the remark which I am going to make—men who are a credit to the country, who are capable of discharging their duties well and who, I believe, do discharge the important duties of their positions in the best interests of the country. I believe they are intelligent and what is of even greater importance I believe that without exception they are honest and are endeavouring to get for the country full value for the moneys which are being expended under their supervision. What we are doing from time to time is to give encouragement to young men who are graduates from our various engineering colleges by giving them employment during the season of vacation under the direction of the resident engineers. If these young men show their ability in the work in which they are engaged, we give them encouragement by employing them permanently, and as from year to year they get greater experience, we add to their duties and place them in greater positions of responsibility. In this way the engineering staff throughout the country is being recruited, and so far as my observation goes we have not made many mistakes in the young men we have selected. I shall not refer especially to the work that is being done by the engineering staff at Ottawa and throughout the country, but I may say that any hon. member who keeps in mind the work that is being done by the engineers of the Department of Public Works must feel that these gentlemen are not only capable of doing good work, but that they do bend their best energies to giving entire satisfaction and seeing that the work under their supervision is well and faithfully done. I am very glad my hon. friend has brought this matter to the attention of the House. I recognize with him that the salaries are small, although they are larger to-day than they were some few years ago. Every year we recognize the services of the engineering staff by giving an increase, in some cases of $50 and in some cases of $100, and in a few cases more. We do all that parliament has authorized us to do with the moneys which have been placed at the disposal of the department. It will afford me very great pleasure to have the return prepared upon the motion of my hon. friend.

Motion agreed to.

Mr. PUGSLEY

ANGUS SAUVE.

Mr. GUSTAVE BOYER (Vaudreuil) moved:

For a copy of all correspondence, reports, despatches, documents and other papers relating in any way to the claim for a homestead, by the members of the family of Angus Sauvé, who was in the African campaign, and who died a short time after his arrival in the country.

Sir WILFRID LAURIER. Carried.

Motion agreed to.

RAILWAY ACT—AMENDMENT.

Mr. LOUIS J. PAPINEAU (Beauharnois) moved second reading of Bill (No. 48) to amend the Railway Act.

Sir WILFRID LAURIER. Explain.

Mr. PAPINEAU. This Bill, Mr. Speaker, is intended to repeal one of the amendments adopted last session to subsection 1 of section 298 of the Railway Act, which concerns damages caused to property by fires started from locomotives used by railway companies in the operation of their lines. This section is comparatively recent law, having been first enacted in the Consolidated Railway Act of 1903, as a consequence, I believe, of the decision of the Privy Council in the case of Roy vs. the Canadian Pacific railway, which no doubt is familiar to the hon. members of this House. It enacts first, that railway companies are responsible for damage caused to any property destroyed by fire started from a locomotive, whether guilty of negligence or not, and that it can be sued therefor before any court of competent jurisdiction. Their full responsibility is there well established. But it is immediately altered in the next sentence, which states that if it is shown that the company employs modern and efficient appliances,and is not otherwise guilty of negligence, their liability in such case, for such damage caused by one or more fires on the same occasion is limited to $5,000 without regard to the value or number of properties destroyed. That is, Mr. Speaker, a railway company may set fire by sparks from its locomotive and burn out a whole village or town, and if it is established that it has used modern and efficient appliances, then it will be held to pay $5,000 to be apportioned among the parties who have lost their property on this occasion. This was the law in force since 1903 till last session when a Bill to amend this section was then adopted by this House, which made two amendments to it. The first struck out the enumeration of property for which compensation could be claimed from the company and substituted therefor the words 'any property.' The second added the words 'under this section' after the word 'recoverable' in the

ninth line, and was needed also, and the Bill was then sent to the Senate. When it came back another amendment had been added to it which I consider ought to be repealed. That amendment is as follows:

Provided further that the company shall, to the extent of the compensation recoverable, be entitled to the benefit of any insurance effected upon the property by the owner thereof. Such insurance shall, if paid before the amount of compensation has been determined, be deducted therefrom; if not so paid, the policy or policies shall be assigned to the company, and the company may maintain an action thereon.

By this amendment the railway companies are entitled to claim from the owner a sum equal to the amount they pay him out of the insurance there may be on any property that they destroy by fire started from their locomotives, provided they show that they use modern and efficient appliances and are not otherwise guilty of negligence. As you are aware, Mr. Speaker, the amount of insurance carried on property represents generally but a fraction of its value. In most cases, I dare say, it amounts to one-half or two-thirds of such value. Under the law as amended, and as it now stands, if a property worth $15,000 is insured for $5,000 and it is destroyed by fire caused by a railway locomotive, the owner has practically no recourse against the company because he will have to give the amount he may receive from the insurance to reimburse the company what it has paid him. The consequence of this is that since this amendment came into force, every property which is near a railway line and liable to be destroyed by fire from locomotives, is insured by the owner for the sole benefit of the railway company to the extent of its full limited liability. This law in this case takes away the insurance of the owner, who has paid, may be, for years and years, annual premiums for his own protection and gives it to the railway companies which, though they are solely responsible for the loss of the property, not only pay absolutely nothing, but deprives also the owner of his partial indemnity to help him out in such hard circumstances. I believe, Mr. Speaker, that this amendment should be repealed and the old clause, which in my opinion goes far enough if not too far in favour of the railway companies, should be restored.

Subsection 3 of section 298 states that the railway companies have an insurable interest in the properties that they may damage or destroy by such fires, and if they do want insurance, they can have it and pay for it, as everybody does. The principal objections to this amendment, which I propose to repeal, may be summed up thus:

1st. It practically deprives the recourse against railway companies for partial compensation for damage caused by fires set by their locomotives, and restores the old law in force before 1903.

2nd. It takes away the benefit of a contract of insurance between the owner of property and the insurance company and gives the benefit to the railway company which was not a party to that contract.

3rd. It, as a consequence, makes the owner of property pay premiums of insurance on his property, but for the benefit of railway companies, who get it to the prejudice of the owner.

Such is the object of this Bill, Mr. Speaker, and with these remarks, I have the honour to propose its second reading.

Mr. GRAHAM. As my hon. friend (Mr. Papineau) has pointed out this amendment to which he refers was placed in the Railway Act in 1909 by the Senate. As he has rightly pointed out, the liability of the railway company is limited to $5,000 unless negligence on the part of the railway company be shown. The amendment inserted by the Senate was in brief to the effect that if a property destroyed by fire originating from a locomotive had been insured the insurance would practically be deducted from the amount the railway company would have to pay. In other words the principle was that the man insuring would not get damages from the railway company for his loss and also collect insurance, getting double pay for the same loss, and that the railway company, if it had to pay damages up to a certain amount, would be protected to the extent of the insurance which the man collected. There is some reason for that, but as my hon. friend has pointed out there might be a case where the railway company might benefit rather than lose on account of an action for damages or the result of such an action. At all events it has been represented to me very strongly that if that Act of last session were allowed to remain on the statute-book there might well be some amendment which would provide that the owner of the property who paid the premiums on the policies should get back the premiums he paid. Strong representations have been made to me during the two years I have been a member of the government along the line of the amendment made last year by the Senate, and there is some reason for some clause to that effect. My hon. friend has pointed out circumstances under which it would not be fair. In view of the representations made to me in the past few weeks concerning this Bill, and in order that we may enable those who favour as well as those who oppose the Bill to place their views before the House, I would suggest to my hon. friend that we refer it to either a special committee or to the Railway Committee which is large enough to provide many special committees. If my hon. friend will

agree to that I have no objection to the second reading.

Motion agreed to, and Bill read the second time.

LOAD LINES ON SHIPS.

Mr. LEWIS moved the second reading of Bill (No. 10) respecting load lines on ships. He said: I would be glad to have this Bill and also Bill (No. 11) respecting wireless telegraphy on ships, receive their second reading and be referred to the Standing Committee on marine matters.

Motion agreed to, and Bill read the second time.

WIRELESS TELEGRAPHY ON SHIPS.

Mr. LEWIS moved the second reading of Bill (No. 11) respecting wireless telegraphy on ships. He said: I would be glad to have this referred to the same committee.

Motion agreed to, and Bill read the second time.

INJURIES BY MOTOR VEHICLES.

Mr. LEWIS moved the second reading of Bill (No. 13) respecting injuries to persons due to motor vehicles. He said: I would be glad to have the Bill referred to a committee.

Sir WILFRID LAURIER. It should be referred to the Committee on Miscellaneous Private Bills.

Mr. SPROULE. Is it not adopting a bad precedent to send a public Bill to the Private Bills Committee? It is rather an anomaly. The member has the privilege of moving for a special committee or a Committee of the Whole House.

Sir WILFRID LAURIER. It does not follow from its name that this committee is to deal only with Private Bills; it is to deal with Bills of this nature also. I do not see why the Bill should not go to that committee, who can investigate it. However, we might let it stand and I shall consult the Minister of Justice about it.

Motion agreed to, and Bill read the second time.

BANKING ACT AMENDMENT.

Mr. JOSEPH DEMERS (St. John's and Iberville) moved the second reading of Bill (No. 56) amending the Banking Act. (Translation.) Mr. Speaker, the object of the amendments moved by me is to avert a recurrence of the business misfortunes or rather disasters which have befallen certain parts of our country within a few years past. It is intended to bring about this result through the establishment of a system which, though imperfect it may be, would, I think, materially improve the condition of things actually existing. Now, Sir, I do not for one moment contend that our banking system is not a good one; I am satisfied of the contrary, and would be averse to exchanging it as a whole for any other just now in existence in foreign lands. But with all its good points, it has its defects, its imperfections, which actual practice have brought to light and which we are in duty bound to correct, if possible.

Public opinion is anxious that the Banking Act should be amended, and, if I am not mistaken, amended in the way which I propose in this Bill. What induces me to move these amendments is the fact that I have been in a position to ascertain by myself, under particularly painful and mournful circumstances, the utter impracticability for shareholders to keep track of the business dealings of their various banks, the lack of security for depositors, and the insufficiency of the law as a means for attaining the object which the legislator had in mind, that of ensuring government supervision of the financial status of banks.

I do not propose going very deeply into a consideration of the important part played by our financial establishments, nor do I propose referring to the enormous influence wielded by them as regards the country's welfare and the resulting importance of securing for them a solid, indestructible foundation. Those facts are known to all, so I shall forthwith take up the consideration of the provisions of the Bill of which I have the honour to be the mover.

The first section of the Bill is as follows:—

28a. At the annual meeting for the election of directors, and before such election takes place, the president, or the person acting as such, shall render a detailed account to the shareholders, present at such meeting, of the operations of the bank, and of the loans or advances made by the bank to any person, company or association, exceeding the sum of ten thousand dollars, and give, if required, all information regarding the guarantees of the bank for all such loans or advances.

What reason is there for such a change? I am satisfied, Mr. Speaker, that heavy losses, losses which in many cases have caused the downfall of the firms affected, would have been avoided if the shareholders had been better posted as to the dealings of the bank. I am informed, and I am strongly of the belief that in the case of a goodly number of financial institutions, only the presidents, general inspectors, and general managers are in touch with the actual financial status of the bank. At the yearly meeting there is submitted a report made up of a considerable accumulation of figures, showing assets and liabilities, but these figures have absolutely no meaning, and the shareholders, depositors, and government are bound to rely entirely on the uprightness and honesty of those who

have prepared these reports. Now, at these yearly meetings, if instead of merely submitting figures, particulars were given and if the names of the persons with whom dealings had taken place were mentioned, as well as the nature and amounts involved in each case, securities obtained and held by the bank, such enormous losses could not possibly occur, such large risks would not be taken, while under the present system shareholders are mere figure-heads. These are some of the facts in support of such an amendment. And, Mr. Speaker, with the object of further inducing shareholders to take an active part in the management of the banks, I move that section 31 of the Banking Act be amended in such a way as to facilitate the holding of general meetings at special dates. The law as it is, provides that 25 shareholders will make up the required number for the calling of such meetings, when they are holders of one-tenth of the subscribed stock; while my amendment reduces the number of shareholders required to 15, provided they are holders of one-twentieth of the subscribed stock.

Now, Mr. Speaker, it has been ascertained on several occasions that persons apparently shareholders were not bona fide shareholders, but mere dummies, without responsibility, who never paid a dollar on the shares held in their names, made mock payments by means of notes renewed for the full amount at maturity; and with a view to doing away as much as possible with such grievances the consequences of which might be and, as a matter of fact, have been disastrous to depositors, I move that the Act be amended in such a way to compel directors, who under the present system may abstain if they think fit, to cancel all purchases of shares unless a sum equivalent to 10 per cent on the subscribed amount has been paid at the time of the purchase or within 30 days of it.

Now, Mr. Speaker, I deemed it proper to insert in our Act some new sections providing for a system of inspection of banks by the Dominion Finance department. I need not say that it is in the very best interests of the people that the government should be in a position to efficiently supervise the working of our financial institutions. Our present Act itself is evidence of the primary importance of that principle; the provisions already included in the Act go to show that the legislator has deemed such supervision necessary. To satisfy ourselves as to this, it will suffice to refer to sections 112, 113, 114, 147, 148, 149, 150 and 151 of the Act as it now stands. Besides, section 153 provides the heaviest penalties against any infringement of the Act in this respect. Clearly then, the legislator has grasped the necessity for such supervision and deemed it of the greatest consequence. Now, I have no hesitation in stating that the object which the legislator had in view cannot be attained under the law as it now exists. I contend that it is impossible for the Department of Finance and the public to ascertain what is the financial status of a bank by merely looking over its monthly and yearly reports. I think nobody will contradict that statement, and that being so, if it is admitted that the Department of Finance should be posted as to the actual standing of the bank's accounts, the necessity for amending the law must as a matter of course be acknowledged; and I believe that the proper way of amending the law would be by providing a system of inspection under the control of the Department of Finance. I have witnessed some frightful bank failures; the word is not too strong. For years past, false or misleading annual and monthly reports were issued by the management of such banks. Branches had been established in several cases at a time when the head office was in a state of utter insolvency, and thereby was enabled to drain the savings of people living in the neighbourhood where these branches were established. People holding shares for enormous amounts were and had always been insolvent. Loans aggregating to hundreds of thousands of dollars had been made to utterly irresponsible people, and the outcome of it all was mournfully and terribly disastrous. I am satisfied that such disasters would have been averted, or at any rate greatly attenuated, had there been in force such a system of inspection as I advocate. The people, in view of recent developments demand some such relief, and it is with public opinion at my back that I move the second reading of this Bill.

Mr. FIELDING. There may be some portions of the Bill which may be useful in considering the Bank Act, but there are some features which are very debatable and as to which I shall reserve my judgment. I would suggest that my hon. friend should follow the same course as that adopted by another gentleman, that he should allow the Bill to pass the second reading and then go to the Committee on Banking and Commerce in order that it may be considered at a later stage when the government measure for the revision of the Bank Act is brought forward. I would be happy to let the Bill go with the understanding that it be considered with other legislation before the Banking and Commerce Committee at another stage.

Motion agreed to, and Bill read the second time.

WINDING-UP ACT.

Mr. MEIGHEN moved second reading of Bill (No. 65) to amend the Winding-up Act. He said: Not having anticipated that this measure would be reached this evening, I do not see that I can add anything to the explanation I gave on the first reading. The Bill is not one which requires much explanation. It supplies an omission in the Winding-up Act. In the Act amending the Winding-up Act, it is provided that appeals from a single judge may go to to the new Court of Appeals in Manitoba instead of to the Court of King's Bench en banc as formerly constituted. The new Court of Appeals in Manitoba took the place of the old King's Court Bench en banc, and consequently appeals from the single judge would go to the former instead of to the latter. In the Winding-up Act there is a provision providing that appeal from the King's Court en banc might go to the Supreme Court of Canada. In the amending Act that clause was not amended, so that as there is no longer a King's Court en banc, there is no appeal to the Supreme Court of Canada. It was of course intended by the government that this defect should be covered, but by inadvertence it was not.

Mr. AYLESWORTH. In the Winding-up Act which the hon. gentleman proposes to amend would no doubt be the better by the change, but it occurs to me that there is no reason why the amendment should not include also the Court of Appeal for British Columbia. The Court of Appeal for Ontario has jurisdiction, under the revised statute as it stands. The hon. gentleman is proposing to amend by including the Court of Appeal for Manitoba, but that will still leave British Columbia not provided for. It would be well to include British Columbia. It occurs to me that it would be better to have the matter dealt with by a select committee of say five legal gentlemen than by a Committee of the Whole House.

Mr. MEIGHEN. I have no objection on principle to the suggestion of the hon. Minister of Justice, but at present litigation is pending which will require this amendment before it can be finally determined. I would not like to see the Bill referred to a special committee if that would retard its passage. As to the Court of Appeal in British Columbia, any amendment including it will not be objected to by myself, but would it not be possible to include that at once and have the Bill passed through the Committee of the Whole House?

Mr. AYLESWORTH. There are perhaps a couple of other sections in the Winding-up Act which would require to be amended to make them correspond with this Bill.

Motion agreed to, and Bill read the second time.

Mr. AYLESWORTH. I move that this Bill be referred to a special committee to consist of Mr. Carvell, Mr. H. H. McLean, Mr. Lewis, Mr. Meighen and myself.

Motion agreed to.

OFFENCES AGAINST THE PERSON.

Mr. LEWIS moved second reading of Bill (No. 71) respecting assaults and offences against the person. He said: I would ask that this Bill and Bills Nos. 13 and 14, all relating to offences under the Criminal Code, be given a second reading without comment and be sent to a special committee.

Mr. AYLESWORTH. Possibly the best course would be a similar disposition to that just made of the Bill to amend the Winding-up Act. There are some propositions in this measure that I should not be willing to see adopted. My hon. friend is proposing to make the special offence of rape on a girl under the age of fourteen punishable by the death sentence. Our law already provides the death sentence as the punishment for any rape, and I do not know why it was thought necessary to single out this particular class of that crime. But we all know that although rape is a capital offence, no instance exists in this country where the capital sentence has been carried into execution. Whether there is any object in legislation specially on this particular subject in the way my hon. friend proposes, I feel some doubt. But there are other provisions of the Bill in regard to which there is, no doubt, merit, and probably the best disposition would be to send the whole to the same committee, if that suits my hon. friend (Mr. Lewis).

Motion agreed to, and Bill read the second time, and referred to committee on Bill (No. 65) to amend the Winding-up Act.

Mr. LEWIS. I move that Bill (No. 13) respecting injuries to persons due to motor vehicles, and Bill (No. 14) to amend the Criminal Code respecting offensive weapons and capital offences be referred to the same committee.

Motion agreed to.

INTEREST ACT AMENDMENT.

Mr. H. H. MILLER (South Grey) moved the second reading of Bill (No. 73) to amend the Interest Act. He said: I introduced a Bill in the earlier part of the session having the same object as that

which I seek to accomplish by this measure. Some question was raised as to whether we had jurisdiction, and I withdrew that Bill and introduced another, the one now before the House, to which, I am sure, no such objection can be made. This Bill provides, in effect, that a mortgagor may repay overdue principal on a mortgage at any time by giving one month's notice, or by the payment of one month's interest by way of bonus in lieu of notice. I think that this is a perfectly fair provision and one that no mortgagee or other person can reasonably take any objection to. The Bill as I have introduced it is not retroactive. It provides, however, that though the terms of the contract of mortgage may stipulate that overdue principal cannot be repaid except upon payment of a bonus, yet, notwithstanding that, the mortgagor may pay on giving one month's notice or by paying one month's interest by way of bonus. Now, principal on a mortgage can only remain past due, the mortgage can only be permitted to remain in arrears, by the consent or action of both parties, the borrower and the lender. And, if both parties agree to allow a mortgage to remain in arrears, I think their rights ought to be as nearly as possible equal. What are the rights of the mortgagee? He has the right to take action against the mortgagor to recover payment of his principal without notice at all. Usually, he has power to sell under the mortgage on giving one month's notice. However, most of our loan companies in the province of Ontario—and I think in the western provinces as well—say that if the principal remains overdue for a certain longer period of time the right of sale may be exercised without notice at all. The mortgagee may take foreclosure proceedings without notice. He may bring suit, without notice, for the recovery of past-due principal under the covenants of the mortgagor to pay. The mortgagee, having power to call in his overdue principal without notice, ought to extend the same privilege of repaying overdue principal without notice. I am not asking to go as far in favour of the mortgagor as that, but only that he may be permitted to pay on one month's notice. In the province of Ontario we have a law of the legislature permitting the mortgagor to repay overdue principal on giving three months' notice or on a payment of three months' interest by way of bonus. I seek to shorten that time to one month. Private parties lending money on mortgage in Ontario do not exact the three months' notice or three months' interest by way of bonus. It is, however, the common practice of the loan companies. I may be told that in this Bill I seek to interfere with the contracts of parties and that we ought not to interfere with contracts which parties have chosen to enter into. I say, in reply to that, that a great deal of our legislation does interfere with contracts between parties. Besides, I would point out the manner in which the contract is usually entered into by the mortgagor. He applies for a loan. He usually wants the money at a certain date; he wants to pay off a mortgage, to buy property, or to meet a maturing liability. There is not usually the condition in the application that he would have to pay three months' interest or give three months' notice in repaying overdue principal; he does not discover that condition until he comes to sign the mortgage a few days before he is to use the money. The mortgage form usually used by loan companies is a long form containing many covenants. It would take a long time for a mortgagor to read his mortgage, and the chances are only one in a hundred that he would understand the contract even if he took the pains to read it over. But suppose that if he did read and understand the contract, yet if he refused to execute it would mean delay in getting the money of which, perhaps, he is urgently in need at the time. And he would probably be told, if he refused to sign because of that clause that he would have to pay the expenses of the inspection of his property and of the solicitor in preparing the mortgage as well as the commission to the agent to obtain the loan. So, to avoid expense and delay, and as the misfortune—if it turns out to be one—is five years in the future, he usually signs the mortgage. In reply to this contention that I am interfering in contracts between parties, I would point out that we have on our statute-book a law, introduced by Hon. Edward Blake in 1880, now and for thirty years the law of Canada, that, if the mortgagor borrows money it may be upon mortgage for twenty, fifteen or ten years, yet, notwithstanding that he has contracted to use the money and pay interest for that length of time, after he has used the money for five years, he may repay it by giving three months' interest by way of bonus. So, we have the example of interfering with contracts in exactly the same way. As matters are to-day, a man borrows money: When the principal becomes due, the loan company, if they cannot at the time lend the money in some other place at better advantage, allow the mortgage to remain in arrears until they can call it in and lend the money at a higher rate of interest. Then, at a time when it will be of great disadvantage to the mortgagor, the money is called in to be lent at a higher rate, and the mortgagor, of course, must renew t the higher rate, or get the money from some one else. Now if this Bill becomes law,

the practice then will be that mortgagee loan companies will attend promptly to the renewal of their loans as they become due, and then the mortgagor and the mortgagee will have equal chances, whether the rates of interest go up or go down.

When I introduced the first Bill it was objected to on the ground of lack of jurisdiction, and in order to get over that objection I have used in the Bill I am now discussing the exact language of the Hon. Edward Blake, and it is found in section 10, chapter 120 of the Revised Statutes of Canada, 1906. In the Bill I first introduced I said that the mortgagor might pay off the mortgage upon giving one month's notice of payment, or upon paying one month's interest. But in this Bill I say, as Mr. Blake said in his section, that upon the payment, or upon the tender of principle money with one month's additional interest, or one month's notice, if it be refused, thereafter no interest shall be collected, which is in effect saying that the mortgagor may repay and the mortgagee must accept. But the wording I have used brings the Bill clearly within the jurisdiction of this House, as I am sure the Minister of Justice will say, because under clause 19 of section 91 of the British North America Act, we in this House have the right to deal with the question of interest. I have talked to many members of the House, some of whom are not here to-night, and I met with scarcely any one who has any objection to the Bill, and most of them are warmly in favour of it. Therefore I trust it may receive the support of the House.

Mr. AYLESWORTH. When my hon. friend moved the second reading of the Bill for which the present one is substituted, a good deal of objection seemed to be offered by several members of the House to the proposition, and a grave question was raised by eminent legal gentlemen as to the right of this House to legislate upon such a subject. It was urged that what was really being done by the Bill then under consideration, was to make a new contract for the lender and borrower, and to substitute that new statutory contract for the one which, by the instrument of mortgage, they had entered into. I think there was considerable doubt on the phraseology used in that Bill, whether what was legislated about did fall within the subject of interest, in regard to which of course this parliament has, under the British North America Act, the exclusive right to legislate. No doubt my hon. friend was so advised, because he withdrew that measure, with the leave of the House, and has substituted this one for it. Now, so far as the wording of the present Bill is concerned, I think every one will be compelled to agree that it legislates only with respect to interest, and therefore it would be competent for this parliament to pass the legislation in question, if it was thought right to do so. But while that is probably the case, I think we cannot close our eyes to the fact that the effect of this legislation, if it becomes law, will be to substitute a new contract made in virtue of this Act of parliament, for the contract which the lender and borrower have entered into at the time the money was loaned; and then the question is whether the House is prepared to take that step; or, having the power to do it, whether it is expedient to exercise that power. Now, I quite agree that time was when, under the hardships of usurious contracts, gross impositions were practised upon needy borrowers at the hands of greedy lenders. I doubt if that time is still with us. I think we have come to such a state of things in this country, perhaps in all civilized countries, that at this date money is simply a commodity, and the man who has it charges for its use just what it will bring in the money markets of the world. The man who needs it knows that he is not in any way restricted to one lender. If he cannot get what he wants upon the security which he has to offer in one quarter, he will go to another. No doubt, just to the extent to which the security which he has may be poor, just to that extent he will have to pay a higher price for the accommodation which he desires in the shape of a larger rate of interest. I think it would not be wise to try to control freedom of contract as to the amount of interest, at any rate an amount within reason, which a borrower who requires to use money for a little time, is willing to pay and contracts to pay to the lender. Now, it seems to me that this is a proposition practically of a similar character to a proposition to regulate the rate of interest which a borrower should pay or which a lender should take. It does not seem to me that it is anything unconscionable for a lender to stipulate, when advancing his money to the borrower, that if it is not paid when it is due, he shall have three months' notice before being compelled to take it. I think experience shows that an investor who lives by lending to others the money which his labour, it may be, has accumulated, finds that he cannot secure a new investment, upon the average, in less than three months' time. He may be fortunate in being able to lend his money almost immediately after it is paid, but he is quite as likely, it seems to me, to have to wait longer than three months before he finds a new investment for that money as to find one within less than that time. But, however that may be, if he says to the borrower openly and fairly when negotiating their contract of repayment: Now if you cannot pay me, if you do not pay me on the day that you agree to pay, if you let it

run any longer, you must give me three months' interest, or the equivalent of three months' interest, in lieu of the notice; and if the borrower says, I am quite content, and makes that contract with his eyes open, I do not see why parliament should step in and say: No, we won't allow that bargain to have its course, we force you, Mr. Lender, to take one month's interest, or one month's notice, upon penalty that if you do not do it, you shall get no more interest at all.

That is exactly the substance of my hon. friend's proposition. He says that if the money is not paid when it is due, then, notwithstanding any agreement that the parties may have made between them, if the borrower gives at any time thereafter one month's notice to the lender that he is willing to pay at the expiration of the month, then, if the lender will not take payment, he forfeits all further interest. It is a question whether the House is prepared to interfere to that extent with the freedom of contract that ought to obtain, and which it is in the general interest should obtain between men in ordinary business transactions. For myself, I should doubt very much the advisability of doing it. It seems to me it is going to make money harder to get on the part of the borrower. It seems to me that when the lender sees before him this provision of the law he will say to the borrower: I will not let you have the money at all, or if I let you have it, I will charge you a higher rate of interest, say one half per cent, or something of the sort, by reason of the fact that I shall forfeit all interest unless I take my money at a month's notice. It would strike me that it would be better to leave things to the play of actual business conditions and competition between lenders who are anxious to find places where they can make their money earn interest, and bring them in a return. I am quite aware that we have at present upon our statute-book a provision which my hon. friend has adapted and followed very closely in the framing of this clause. In our present Interest Act there is a provision applicable to mortgages of real estate which have five years and more to run, that whenever any principal money or interest secured by such an instrument is not payable for more than five years after the date of the mortgage, then, if at any time after the expiration of that period, any person liable to pay tenders or pays to the person entitled to receive the money the amount of principal and interest to the time of payment, together with three months' further interest, no further interest shall be chargeable.

Mr. MILLER. I would like to ask the Minister of Justice whether or not the section he has just referred to is not in effect a much greater interference with contracts between parties than the Bill which I am discussing and which I have introduced.

Mr. AYLESWORTH. Very possibly it is, but that is not the point. I am saying that I am quite aware that this section is on our statute-books. It gives the lender three months interest or three months notice. My hon. friend proposes to reduce that to one month and to extend his legislation to all mortgages, whereas the present enactment is limited to mortgages of real estate. But whether or not the present provision of the law is a greater interference with the freedom of contract, I was intending to point out something as to the circumstances under which that provision of the law found its place in the statute-book, as it seemed to me to illustrate the inadvisability of putting anything else upon the same line on our statute-book. That provision of the law was introduced nearly thirty years ago, in the session of 1880, and, referring to the debate upon the subject at that time, it appears that the Bill, introduced by a private member, a supporter of the government of the day, was opposed apparently by every single member of the government. It met with strong objection, with a great deal of opposition and criticism just upon the ground that I have indicated, because it was considered an unwarrantable interference with the freedom and sacredness of a contract solemnly entered into. It was passed, however, notwithstanding the opposition of the members of the government in a body over their votes. It has been law ever since. I do not know what influence it may have had in the framing of contracts since that date, but I think it is very probable that the presence of that enactment upon our law books has been the reason for the very general term of three months' notice or three months' bonus which is to be found to-day in most of the mortgages that are current. Parties have contracted to correspond with that provision of the law, and parties having so contracted, if you are now going to say in regard to future contracts that the time has to be shortened in the interests of the borrower and against the interests of the lender, it seems to me that the result can scarcely fail to be what I have tried to point out.

Let me just say one other thing. I think the conditions were to a marked degree different in 1880 in respect to the ease or difficulty with which money could be borrowed from what they are in the year 1910. At any rate in the part of the country from which I come I know that in those years one great evil which every borrower felt and which was very widespread was the habit which lending companies or building societies had of disguising the true rate of

interest they were exacting from their borrowers by the manner in which they framed their mortgages. Their mortgages calculated the interest along with the principal for the full period the mortgage was to run; then adding the total amount of the interest to the principal, they were in the habit of dividing it up into as many payments as the borrower desired, four per annum, perhaps, and, so dividing it up, they took from the borrower each quarter, from the time that he borrowed the money until he had paid the whole of that money, except the last instalment, the same amount; so that a man, after he had practically paid off the whole, or the greater part of his principal, was in reality paying perhaps fourteen, fifteen, or eighteen per cent, instead of the six, or seven, or eight per cent that he thought he was agreeing to pay, and which upon computation he would appear to be paying. That was an evil and this legislation cured it. There are no more of such mortgages. Now, a man borrows money, whether from a private individual or a company, upon plain straight payments of simple interest calculated at a fixed per cent and payable either annually or semi-annually. If a man, entering into a contract for repayment with his eyes open and in perfect freedom, agrees that he will pay three months' interest in case he is not able to pay at maturity, or give three months' notice, it does not seem that such a man needs the protection of legislation to change his contract and where there is no great evil to be met by the legislation my hon. friend is proposing, it would seem to me to be contrary to good policy to pass it.

Mr. F. B. CARVELL (Carleton, N.B.). When this question was up earlier in the session I took strong ground that the proposition then made by my hon. friend (Mr. Miller) was ultra vires of this parliament, but I am satisfied that the present Bill is intra vires. That is admitted by the Minister of Justice, and I presume it will not be controverted by any member of the House. It, therefore, becomes a question of policy whether this Bill shall become law or not. And, while I am very diffident in dissenting from the judgment of so mature a mind as that of the Minister of Justice, yet, when it is a question not of law but of policy every member of the House has a right to exercise his judgment. The Minister of Justice has advanced somewhat strong reasons against the passage of the Bill, but there are reasons equally strong on the other side and which I think outweigh those given by my hon. friend. The Minister of Justice puts forward the proposition that this is a contract and that we have no right to interfere with it. I admit that if it be purely a question of contract between two parties this parliament has perhaps no right to interfere, although every session of parliament since I have been here we have passed legislation which has interfered with contracts. The lending of money has become so much concentrated in the hands of loan companies in Canada that it is almost a necessity to go to these companies to obtain a loan. They have become practically a public utility, and if the loan companies make unreasonable contracts I see no reason why they should not be curtailed the same as unreasonable contracts made by public utility companies. For instance, within the last year or two the Railway Commission has found it necessary to interfere with contracts made by railway companies and the shippers of goods all over the country. The shipper was compelled to sign an application on the back of which were laid down conditions which for the most part never were read, and which the ordinary man could not understand the legal significance of, and as a result of that contract if the goods were lost or damaged in transit the shipper had no redress against the railway company. These contracts have been interfered with and modified by the Railway Commission. In the same way when one sends a telegram he has to accept a certain contract, and I venture to say that not one member out of 50 in this House has ever read the terms of it. When we go to these public companies they compel us to accept contracts, the true intent of which most people do not realize, and to a very great extent it is the same with a loan company. I may be prejudiced against loan companies. When I first commenced practising law I was looking after all the dollars I could earn, and I accepted the solicitorship of a loan company, but I resigned after a year because in my judgment its proceeding was the most unfair proposition I ever was called upon to sanction. I will not mention any name, but that loan company compelled the borrower to sign a contract and give a mortgage along the lines of equal payments. I admit that a great majority of loan companies at present, or possibly all of them have abolished that form of contract. It was a most unfair contract and the borrower was compelled to sign conditions without knowing their true legal import. The Minister of Justice says it is not fair that a man who has made a contract that he shall not be compelled to take his money without receiving an advance of three months' interest should be compelled to receive an advance of one month's interest. I would like to know wherein a loan company differs from a bank. The loan company lends its money to the public on long terms and the bank lends on short term loans. But what would you think of a bank which would say that because the borrower did not pay his note yesterday when it was due he would have to pay a month's interest in advance be-

fore being allowed to redeem it. A cry would go up against such a stipulation which would soon be heard in this parliament. You know, Sir, the hardest thing in this world is to take from the privileged classes privileges which they have enjoyed in the past. We meet it every day; they are meeting it now in the old country, but from time to time these privileges are curtailed and no great damage is done, and the only wonder expressed is that they were not curtailed long before. If this Bill becomes law now I have no doubt that a year hence people will wonder why such legislation was not passed years before. I do not think a loan company or any one else suffers if a reasonable advance is given when money was not paid on the very day it was due. I do not know whether any members in this House have had experience in trying to get these loan companies to release a mortgage before it became due. It will be found that in many cases where a man may have an opportunity to dispose of a part or the whole of his property, he cannot do it until the mortgage is taken off, and some of these loan companies in order to relieve the property will ask not one month's interest or three months' interest, but I have never known a case where they took less than six months' interest, and I know numbers of cases where they wanted a year's interest. I do not think the loan companies are entitled to very much pity from this parliament if the Bill should pass. I believe in even-handed justice and in treating them fairly, but if ever there was a measure advanced in this House which appeals to my sense of justice and fair play it is the Bill we are now considering and I shall have much pleasure in voting for it.

Mr. MEIGHEN. Before making some very brief remarks on this Bill I wish to premise by giving my interpretation of it, which, I think, does not conflict with that of the Minister of Justice, although it possibly does with that of the hon. member (Mr. Carvell). It does not appear to me that there is any retroactive feature in the Bill. The first sentence strictly confines the operation of the Act to such contracts as are hereinafter entered into. I do not think the placing of the comma in the third line before the word 'after' instead of after the word 'Act' has any other effect. If I thought it had any other effect, and if I thought it had in particular the effect of making this Bill retroactive I could not support that feature of it. Therefore, premising that the Bill can only operate as regards mortgages or renewals of mortgages entered into after the passing of the Act, I wish to state to the House my reasons for supporting it. It seems to me that the principal that should govern this House with regard to all these Bills is that we should ask ourselves whether or not the legislation is in the public interest. If it is in the public interest, then it seems to me this House is justified even to the extent of breaking into contracts already existing. It would, of course, in such instances, take much more to convince this House that such a Bill would be in the public interest, but that is all that should in the ultimate determine any member in his choice. How far does the Bill go? It says that once a mortgage falls due, and is not paid, thereafter, unless the mortgage company or mortgagee says to the mortgagor: Come out into the open daylight, sign a new contract knowing its terms, they must accept the money on one month's notice. If the mortgagor is not in a position to pay, he is subject to the remedies of the mortgage and the mortgagee can insist on those remedies or make it uncomfortable for the mortgagor. If the mortgagor does not pay at the time the payment falls due, the mortgagee is compelled to go to him and explain the facts to him and say: Unless you are ready to pay, you must enter into a new contract. If the mortgagee lies silent, sits by and lets things run, he has to take the consequence and has to say: I must take my money on one month's notice. There is no hardship there; what is the benefit? It strikes me there is a very considerable benefit. In the first place the Minister of Justice argues that conditions now differ very materially from those that obtained years ago when the Act introduced by the Hon. Edward Blake to which he referred was passed. It may be that in Ontario, and particularly within the clientage to which the Minister of Justice was in some degree confined, such conditions have changed, but out in western Canada I do not think I am going beyond the mark in saying that the conditions referred to by him, as existing at that time exist now in even a more marked degree. The average mortgagee throughout the newer parts of western Canada is no more on a par with the mortgagee, and particularly with a mortgage company than the average mortgagor was at the time of the introduction of the legislation referred to by the Minister of Justice with the mortgagee of that day. In a very great number of cases the mortgagor in those parts of the country is now a foreigner. I doubt not but in four cases out of seven the man who signs a mortgage on his land in western Canada has no real appreciation whatever of most of the clauses of the mortgage, and it is impossible for him to form an intelligent idea particularly of the penal clauses of the mortgage. Consequently it is not only within the power but I think it is the duty of this House, wherever it can with advantage, to step in between these parties and make it impossible for an unfair contract to be perpetrated. The Minister of Justice has stated that we

should not stand between the mortgagor and the mortgagee and say to them: You must not enter into a contract whereby you shall penalize a mortgagor and compel him to give three months' or six months' notice in case, on the very day the mortgage is due, he finds he has not paid it or is not able to pay it. I do not see that any great injustice can be done by this. So long as all the remedies exercisable under that mortgage are still allowed the mortgagee, there can be no injustice to him, and at the same time we say that if the mortgagor, who is generally not on a par with the mortgagee, runs over the time he can pay it off on one month's notice unless the mortgagee informs him of all the facts on the day it falls due or shortly after and says: Come and enter into a new agreement. There is no hardship on the mortgagee that I can see. I do not think this House is likely to go too far in protecting the mortgagor. The different provinces have invaded the very field which the Minister of Justice holds so sacred. Throughout Canada, at all events in the province from which I come, recent legislation was passed affecting the relations between lender and borrower, and I must say that that legislation has worked out very favourably in the public interest. To-day in Manitoba any contract whereby the borrower undertakes to pay a greater rate of interest than 12 per cent is declared usurious, penalties are imposed on the lender, and he is unable to collect. That is the field the Minister of Justice holds sacred from invasion. This legislation is along the same lines as the legislation quoted by the Minister of Justice which certainly has been in the public interest, and when the minister acknowledges that in his long experience he has not seen any detrimental effect from that legislation, it seems to me that acknowledgment should go a long way to establish in our minds that no such detrimental effect has ensued. Surely the legislation referred to was in the public interest, but would it be in the public interest to-day to permit mortgage companies to tie up properties for 20 or 40 years, to make it impossible to give clear titles to property for great length of time? The legislation has been taken advantage of on many occasions and very properly, and with good effect. This is along the same lines, a step in the right direction. It does not go very far; I would like to see it go further to the extent of compelling mortgage companies either to take instalments as they fall due or to take payment on one month's notice. If it went to that extent it would seem to me more advantageous than it is, but going to the extent it does, I think it will work for the general advantage of the people and that it should receive my vote.

Mr. MEIGHEN.

Mr. E. W. NESBITT (North Oxford). Mr. Speaker, I can only say that I am going to support the Bill as it is. As it was before, it was retroactive and, as I told the mover, I could not support it for that reason. I do not think it will work any particular hardship; on the contrary a good many mortgage companies and trust companies do not put those clauses in their mortgages. I know that many mortgagors do not read mortgages carefully enough. The difficulty is that they trust to the people from whom they are getting the money to a very large extent, and they do not read the mortgages through at all, but just the amounts and the interest. I do not think it will work any hardship, because lenders will accommodate themselves to this law after it is passed. As my hon. friend (Mr. Meighen) has stated very clearly, when the mortgage is due, if they cannot pay it, it is the lender's option then to make them renew the debt so that he can protect himself in that way. So far as I am personally concerned— and I have a good deal to do with lending money—I have never in ten years asked a mortgagor to sign a mortgage which had a penalty clause of that kind in it, without thoroughly explaining it, and when I explain it, the mortgagor will not sign. There is too much competition for the lending of money now, and consequently, in my section of the country at least, no need for borrowers to sign contracts containing any such clause. If a loan or trust company will not loan to the individual without such a penalty, the borrower can easily get the money from some one else. So far as the people I represent are concerned, they would be satisfied with the Bill as it is, and for that reason I shall certainly support it.

Mr. MILLER. My hon. friend the Minister of Justice says we have no right to interfere with contracts entered into by people with their eyes open and with perfect freedom. I have tried to point out that these contracts are not entered into openly and freely. In 99 cases out of 100 the mortgagors are entirely ignorant that the contract signed contains any such provision. The hon. minister fears that one effect of the passing of this legislation will be to make it harder to borrow money on mortgage and raise the rate of interest. Well, I do not think we need apprehend any danger on that score because there is too much competition in the lending of money. The loan companies are the only ones that insert such a clause as I object to. It is not inserted by the trust companies, the life insurance companies and private lenders, so that there is no danger of any increase in the rates of interest. My hon. friend the Minister of Justice says that we have no

right to interfere with contracts, and he pointed out that the hon. gentleman who introduced section 10 of the Interest Act, which enables a man to pay off a mortgage any time after five years, no matter how long he may have contracted to keep the mortgage alive, was introduced by a private member and carried against the votes of members of the government. But the private member who introduced that Bill, which is still in our statutes, was the Hon. Edward Blake. He introduced it thirty years ago, and it has been the law ever since, and most excellent law it has proved. And although that law was passed in opposition to the votes of gentlemen then composing the government, if any government wanted to repeal that section 10, there would be a row that would cause them a good deal of trouble. If that law be right, then there is no reason why we should not pass the legislation I am submitting. What is the difference between section 10 introduced by Mr. Blake and section 10a of the same Act which I am submitting? Under Mr. Blake's amendment, although a man may have borrowed money for a term of twenty years and agreed to keep paying the interest during that term, and not pay off the capital, he was given the privilege of paying off his debt at the end of five years in spite of his agreement, and thus getting rid of the mortgage. Compare that with the amendment I propose. By my amendment, section 10a, I provide that if the money borrowed be not paid at the time stipulated, the mortgagor may give one month's notice of his intention to pay or pay one month's interest as a bonus, and the creditor is obliged to accept the same. As has been pointed out by the hon. member for Portage La Prairie (Mr. Meighen) this is not interfering with an existing contract at all, but simply provides that certain contracts should not be entered into in the future because they are contrary to public interests. We are passing similar legislation from year to year both in the provincial legislatures and this parliament. In Ontario, and no doubt in the other provinces, we have the Mechanics' Lien Act, which provides that although a mechanic enters into a contract to waive his rights to a lien for the work he has done, that contract is void and null because contrary to public interest. In our Act regarding the water carriage of goods, introduced as a government measure this session, it is provided that although shippers may enter into certain contracts and sign certain bills of lading, they shall not be bound by the same. If, as we have been told to-night by the Minister of Justice, section 10 of the Interest Act was introduced 30 years ago by Mr. Blake, then a private member, contrary to the wishes and passed contrary to the votes of the then members of the government——

Mr. SPROULE. My hon. friend is doing an injustice to another by saying that legislation was introduced by Mr. Blake. My recollection is that it was introduced by Dr. Orton.

Mr. MILLER. Possibly, but it was fathered by Mr. Blake and is commonly called the Blake Act. If that Act, which was introduced and passed against the wishes of the government, has produced excellent results, it is a very good precedent, and I have no doubt that should the Bill I propose become law, excellent results will likewise follow.

Mr. BARKER. Is there anything in it to apply to mortgages now existing or renewed or does it apply only to those hereafter created?

Mr. MILLER. I have no wish to make the Bill retroactive. It will only apply to mortgages hereafter made or renewed.

Mr. BARKER. Better express that more clearly.

Motion agreed to, Bill read the second time and House went into committee thereon.

Mr. PUGSLEY. I would call the attention of the mover of this Bill to this point: What would be the effect of it where there is no agreement at all? It seems to me that the courts would interpret the section to mean that if a man failed to pay his mortgage on the very day it was due he could not redeem it at all without giving a month's notice or paying a month's interest. Surely that cannot be the intention of my hon. friend (Mr. Miller). The section ought to be amended to make it clear that it is intended to apply only to cases where there is an agreement in the mortgage preventing the mortgagor repaying overdue principal without paying three months' interest or giving three months' notice. In the province from which I come a man is entitled, ordinarily, to pay his mortgage at any time after it becomes due, unless it runs on year after year with interest paid on it, in which case the courts hold, that an implied agreement has arisen between the parties which would prevent the money being paid off except upon notice, in some cases of three months, in some cases of six months according to the periods when the interest is payable. But, under this section, as I have said, it seems to me the courts would hold, in the absence of an agreement, that the mortgagor could not pay off except by giving a month's notice or paying a month's interest.

Mr. SPROULE. If the mortgagor does not pay when the mortgage is due, the company can exact the interest for a further term, and they do exact it.

Mr. PUGSLEY. But suppose there is no agreement about three months' notice or

interest, yet the mortgagor neglects to pay the mortgage when due, leaving it to run for a week. Then, under this section he could not redeem except on paying a month's interest. That is a hardship, and I do not think it is the intention of the mover of the Bill to make that the law.

Mr. CARVELL. Could not the object be accomplished by inserting another subsection, providing that section 10a shall not apply to any mortgage in which there is no agreement requiring three month's notice?

Mr. PUGSLEY. Another question which strikes me is whether the section, as framed, would really cover a case where there is a contract. Would not the courts hold that, as the section says nothing about a contract, parliament did not intend to cover a case where there was a contract between the parties? In that case, the section would be barren of results in the direction the hon. member (Mr. Miller) has in view. I may be wrong, but that is the view that presents itself to my mind at this time.

Mr. CARVELL. I cannot take that view. The whole tenor of the section is that, in any case, if the money be not paid when it is due, then, by tendering a month's interest or by giving a month's notice, the payment may be made. It seems to me that would be the case whether there was a contract requiring three months' notice or not. I am inclined to think the hon. Minister of Public Works (Mr. Pugsley) is right in his suggestion that this would apply to contracts where there was no penalty as well as to contracts in which there was a penalty.

Mr. MEIGHEN. As to the first suggestion, with all due deference—for I know the opinion of the Minister of Public Works in a matter of law would be accepted before mine—it seems to me that that hon. gentleman is right and that the courts would be very likely to hold this clause to imply necessarily that notice would be required under all conditions. As to the suggestion that it is doubtful that the courts would hold the section to apply as against express stipulation, I cannot say that I have the same view as the minister. In any case, I think both these points are capable of remedy, and I would suggest the following: —After the word 'then' in the sixth line of the section, add the following words:

Notwithstanding any stipulation to the contrary in such mortgage or renewal.

Mr. PUGSLEY. That would cover it.

Mr. MEIGHEN. Then, to meet the other objection add the clause:

Provided nothing herein contained shall be held to require the giving of notice or paying of interest by the mortgagor which he is not required to give or pay at the time of the passing of this Act.

Mr. PUGSLEY. Or it might be:

Where he is not required by the mortgage or any agreement in respect thereto to give.

It requires careful drafting.

Mr. MILLER. I think it would be as well for the committee to rise and report progress, and we will consider the Bill at another meeting.

Progress reported.

SECOND READING.

Bill (No. 75) to amend the Criminal Code. —Mr. Harris.

BOUNTIES TO VOLUNTEERS IN SOUTH AFRICAN WAR.

Mr. TURRIFF moved second reading of Bill (No. 87) to amend an Act to authorize a bounty to volunteers who served the Crown in South Africa.

Mr. FIELDING. I question whether my friend (Mr. Turriff) can introduce this Bill dealing as it does with bounties. In the absence of the Minister of the Interior (Mr. Oliver), I would prefer that he should let it stand.

Mr. TURRIFF. There was no objection taken when I introduced this Bill. I introduced another Bill at the same time, which was allowed to stand, and in which the same question was brought to your attention and to the attention of the law clerk, who decided that it was a Bill that a private member was competent to introduce. This Bill is exactly on the same line.

Mr. FIELDING. I do not want a formal decision of the Speaker on the point, but in the absence of the Minister of the Interior, I would prefer if my hon. friend will let the Bill stand for its second reading.

Mr. SPEAKER. Stand.

On motion of Mr. Fielding, House adjourned at 11.55 p.m.

HOUSE OF COMMONS.

TUESDAY, January 18, 1910.

The SPEAKER took the Chair at Three o'clock.

COMBINES INVESTIGATION ACT.

Hon. MACKENZIE KING (Minister of Labour) moved for leave to introduce Bill

(No. 101) to provide for the investigating of combines, monopolies, trusts and mergers which may enhance prices or restrict competition to the detriment of consumers.

Mr. HENDERSON. Carried.

Mr. R. L. BORDEN. Did the hon. gentleman give any explanation?

Mr. KING. The somewhat lengthy title of this Bill may help to explain its scope and purpose. The short title is the Combines Investigation Act. As human ingenuity has devised a great many forms of combination for the purpose of effecting an increase in prices, or the restriction of competition, an effort has been made in this measure to give a definition of the word 'combine' sufficiently comprehensive to embrace all forms of combination which may have this effect, and in particular to make it clear that this measure shall have reference to all such forms of combination as are popularly known as monopolies, trusts, mergers and combines. The legislation differs in some particulars from legislation of a like nature which has been introduced in other countries in that it is not aimed against combines or mergers as such, but rather against the exercise on the part of combines, mergers or monopolies, in an unfair manner, of the powers which they may get from that form of organization. This is an age of organization and not merely of local or national competition but of world-wide competition and any industry or any nation which wishes to hold its own in the field of competition must do much in the way of perfecting organization. A highly organized industry should, from the facilities it has of improving production, lead to greater efficiency and economies of one kind and another, which should, on the whole, benefit the consuming public. But, we know that in other countries, and possibly also in this country, organizations have not always used their corporate powers to the advantage of the consumers, but have taken, in some cases, possibly, an unfair advantage to themselves. This measure seeks to afford the means of conserving to the public some of the benefits which arise from large organizations of capital for the purpose of business and commerce. It is organized society which alone makes the organization of capital and industry possible, and the people have a right to expect, and to look to the government to see that their rights shall be conserved and that their liberties shall not be curtailed by privileges which they permit others to enjoy.

Mr. R. L. BORDEN. Who is to initiate the investigation?

Mr. KING. Perhaps it would be well if I were to explain somewhat in detail the procedure suggested by this measure. It is provided that the Act shall be under the Minister of Labour and that in connection with the administration of the Act a registrar of boards of investigation shall be appointed.

In all measures of this kind that affect private interests and at the same time public rights there are two factors which have to be kept constantly in mind. There is first of all the desirability of securing the minimum of interference with private business where that business is conducted in a fair and proper way, and on the other hand the desirability of providing a ready and efficient means for individuals or the public to secure their due rights where these rights are interfered with or encroached upon by any corporation. These two objects, have, it is hoped, been kept in mind in the drafting of this measure. It is believed that the Bill as introduced will afford a ready and convenient means whereby parties who have reason to believe that any combination is unduly enhancing prices or unfairly restricting competition, may obtain an investigation, and an effective remedy against evils which may be found to exist. This, it is sought to obtain in the first place by providing that six or more persons who feel that a combine exists and that prices have been enhanced or competition restricted by reason of such combine to the detriment of the consumer, may make application to a judge of the high court for an order to grant an investigation. The judge may, if he so desires, call before him witnesses, but all that is necessary is for the judge to assure himself before granting such order that a prime facie case has been made out. The judge, if satisfied there is reasonable ground for believing that a combine exists which is injurious to trade or which is operating to the detriment of consumers, and that it is in the public interest an investigation should be held, may direct or rather shall direct an investigation under the provisions of this Act.

When the judge issues an order for an investigation the order is to be directed to the minister who is thereupon to call each of the parties concerned to name a member on the board of investigation. The Act in this particular proceeds along lines somewhat similar to the procedure under the Industrial Disputes Investigation Act. The parties who have made the complaint are called upon to name a representative on this board of investigation, the parties concerned in the alleged combine are called upon to name a representative on their behalf, and the two gentlemen thus chosen are given opportunity of confering together with a view of selecting a third person (who

must in this particular case be a judge) to act as chairman of the board of investigation. Failing agreement the minister appoints the chairman. The board thus constituted shall have all the powers of a court of record; it shall have power of summoning witnesses, of ordering the production of documents, of taking evidence under oath. When the board has duly investigated the matters before it, it is the duty of the board to draw up a report and submit that report to the minister who is obliged to give it publicity by publishing it in the 'Canada Gazette,' by sending copies to the parties concerned, by distributing copies to the press if so desired, and by supplying copies to any other parties who may make application. Perhaps it would be well to read the section which refers to the board of investigation:

The board shall expeditiously and fully and carefully inquire into the matters referred to it and all matters affecting the merits thereof, including the question of whether or not the price or rental of any article concerned has been unreasonably enhanced or competition in the supply thereof unduly restricted in consequence of a combine, and shall make a full and detailed report thereon to the minister, which report shall set forth the various proceedings and steps taken by the board for the purpose of fully and carefully ascertaining all the facts and circumstances connected with the alleged combine, including such findings and recommendations as in the opinion of the board are in accordance with the merits and requirements of the case.

There are certain classes of evils in the remedying of which it is believed publicity is more effective than penalty. It may not be that publicity will in all cases prove an effective remedy, but certainly in industrial matters it has many times in the past proven to be effective. While this Act provides machinery of a nature calculated to let in the light on the workings of these large corporations when it is believed they are operating in a manner unfair to the consumer, and while it is believed that much good will be accomplished in this way, the legislation does not rely entirely upon publicity to bring about the desired remedy. There are other remedies proposed, and one is the remedy already existing in connection under other legislation with respect in certain cases to such articles as are protected by the tariff. The statute in this particular gives authority to the Governor in Council where the board reports that prices have been unduly enhanced or that competition is being unfairly restricted in virtue of the protection given to a particular article to reduce the tariff on that particular article or to remove the duty altogether.

Then, there is another class of combination which it is hoped this measure may be the means of preventing. I refer to the case of persons holding patents and who exercise their exclusive rights and privileges to restrict competition. In section 22 of the Act there is this provision:

In case the owner or holder of any patent issued under the Patent Act has made use of the exclusive rights and privileges which, as such owner or holder he controls, so as unduly to limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article which may be a subject of trade or commerce or so as unduly to restrain or injure trade or commerce in relation to any such article or unduly to prevent, limit or lessen the manufacture or production of any article or unreasonably to enhance the price thereof, or purchase, barter, sale, transportation, storage or supply of any article such patent shall be liable to be revoked.

The clause then sets forth the steps that may be taken for the revoking of the patent where an adverse report has been made by a board in such a case.

Then there is a further clause which provides that where a board finds any combination has been guilty of enhancing prices or unfairly restricting competition to the detriment of the consumers, if the guilty parties persist in the conduct which has been reported against, they shall be guilty of an indictable offence and liable to a penalty not exceeding $1,000 and costs for each day that they continue to offend after the expiration of ten days from the date of publication of the report of the board in the 'Canada Gazette.'

These are the main features of the measure, Mr. Speaker. A good part of the Bill is taken up with the setting out the machinery for investigation, a part of it relates to the meetings of the board, the remuneration and expenses of the board and the taking of evidence, and there are a few miscellaneous clauses. I think, however, what I have said will be sufficient as an outline of the Bill.

Motion agreed to, and Bill read the first time.

LONG SAULT RAPIDS.

Mr. J. D. REID (Grenville). I would ask the government if the rumour is true that a deputation from Montreal waited on the government yesterday to ask that they be granted the privilege of placing a dam across the St. Lawrence river. If so, has any decision been arrived at?

Mr. PUGSLEY. There was a deputation consisting of representatives of the company which proposes to develop the power, and that deputation presented certain statements to the Committee of the Privy Council.

Mr. J. D. REID. Was any decision arrived at?

Mr. PUGSLEY. No, it was understood that they would present the modified plans to the International Waterways Commission, and that commission would give an opportunity to the navigation interests and those who might naturally be opposed to any obstructions to navigation, to be heard. After that the matter would come again before the government for consideration.

Mr. LALOR. Has a day for hearing that deputation been arranged for?

Mr. PUGSLEY. No, the commission will arrange that.

MANITOBA FISHERY COMMISSION.

Mr. R. L. BORDEN. Referring to the request preferred yesterday that the report of a certain fishery commission should be laid on the table, so far as I understand the case, it is this. Three commissioners were originally appointed. One of them was afterwards elevated to the bench and consequently ceased to act as a commissioner. Another was appointed in his place, and these three commissioners, duly constituted, made their report. The cause of the delay, as I understand it, is that the commissioner, who was elevated to the bench, has not signed the report. I do not see that he has any jurisdiction to sign, and therefore the reason given by the Prime Minister yesterday is not a good one for withholding the report.

Mr. FIELDING. I am not personally familiar with the matter, but will draw the attention of the right hon. the Prime Minister to it.

Mr. R. L. BORDEN. I am glad my hon. friend will do so because there has been unreasonable delay.

BANK ACT AMENDMENT.

Mr. R. L. BORDEN. When does my hon. friend the Minister of Finance expect to introduce his Bill for the continuance of bank charters and the revision of the Banking Act?

Mr. FIELDING. The matter is very well advanced in the department, but could not at present fix a date. It will however, be early in the session.

WAYS AND MEANS—THE BUDGET.

House resumed the adjourned debate on the proposed motion of Mr. Fielding that Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider the Ways and Means for raising the supply to be granted to His Majesty.

Hon. WM. PATERSON (Minister of Customs). The House has been favoured with a very gratifying budget statement this session, much the same as statements presented in sessions gone by. I think it has given universal satisfaction to the House and country to have heard and read the truthful recital of the favoured conditions of trade and commerce and the prosperity throughout this country. There is no difference of opinion regarding the fact that we are in this respect a highly favoured people, but there is this distinction between the members on the two sides of the House. Our opponents claim that this prosperity in which we all rejoice, is not due in any measure at all to any action or policy of this government. As the hon. member for North Toronto (Mr. Foster) has said, our Finance Minister is not to be credited with any portion of the benefits we are enjoying, as none of these benefits is due to his management of our financal affairs, but is due solely to the good harvests and the industry of our people. No one will doubt that we have had good harvests; no one will doubt that we had a good harvest last year and that we have an industrial people. But what puzzles one is this. If these are to be accepted as the sole reason for our prosperity, and if the government have had nothing whatever to do with bringing about the condition of things which prevails, did we not have good harvests when our Conservative friends were in power? Did we not have fruitful fields then as now? Did we not have an industrial people then as now? Therefore, if the prosperity now abounding in Canada is due to these causes alone, how is it that we had such a period of depression, when precisely the same causes were at work under the old Conservative administration? That there was stagnation and depression and anything but a feeling of buoyancy when our friends opposite were in power, every one knows. That there is a buoyant feeling now and abundant prosperity every one likewise knows. How then do you account for the depression which then existed? How do you account for the prosperity which now prevails? The difference can only be due to the fact that the Liberal party know better how to utilize the benefits which a kind Providence has given us than did our opponents. I know of no other reason. If there be any other, will hon. gentlemen opposite give it?

Mr. LALOR. Did the same conditions prevail?

Mr. PATERSON. The same conditions prevailed—good harvests and an industrial people.

Mr. LALOR. Did the same conditions prevail from 1874 to 1878?

Mr. PATERSON. We had abundant harvests and an industrial people and yet

under the Conservative regime we had depression. We had not then the buoyancy we have now or the prosperity. Hon. gentlemen opposite laugh. I do not object to their having a little pleasure, but I would like to have a little myself. I do not just see where the joke comes in, but they are able to see jokes sometimes where no one else can.

Mr. FOSTER. The joke is right ahead of you.

Mr. PATERSON. And the principal joker seems to have got frightened and gone out —not an unusual sight in this House. Hon. gentlemen opposite make statements, broad statements, which they cannot verify, and which ought not to be made by responsible men. What are they? You have heard the leader of the opposition (Mr. R. L. Borden), on more than one occasion, say that the Liberal party had violated every plank in the platform which they adopted in 1893.

An hon. MEMBER. Hear, hear.

Mr. PATERSON. Hear, hear, an hon. gentleman says. He is of the same belief yet, every one of them? If hon. gentlemen rejoice in their ignorance of the facts of the case I cannot help it, but I propose to read to the House the planks of the platform of the Liberal party adopted in 1893 and in the light of what has transpired I am going to ask this House and the people of this country if the men who dare to say that we have violated and broken every plank in that platform are not men who have told what is not true. Thus, after this, if any man endorses the statement that we have carried out none of the planks that we laid down, he sins with a full knowledge of the facts. Ten resolutions were adopted at that grand Liberal convention, which they termed ten planks. I have taken them off from the official record of that convention of which there is only one copy that I know of. That is in the parliamentary library and the librarian wants it to be handed back to him because it is the only copy and it is in demand. It may be that, not having seen this and having listened to what men like hon. gentlemen opposite have told them, there is an idea among the people, even among friends of the government, that we have proved recreant to the principles laid down at that convention. The first resolution had reference to the tariff. I intend to take that up later because I shall dwell longer upon it, as it is more particularly under discussion now. The second resolution was:

That the Liberal party is prepared to enter into negotiations with a view to obtaining a fair and liberal reciprocity, including a well-considered list of manufactured articles,

With the United States. Was that plank carried out? Certainly it was carried out. A man will write himself down ignorant of the history of his own time if he says it was not carried out. He knows that it was carried out and honestly carried out.

An hon. MEMBER. Explain?

Mr. PATERSON. Explain? Why the hon. gentleman does not need any explanation. He knows that representatives of the Canadian and United States governments sat first in Quebec, and subsequently in Washington and made every honest attempt to secure reciprocity. That they did not secure it does not mean that the plank was not carried out; the plank did not pledge them to secure it, it told them to try for it.

The third plank declared:

That the convention deplores the gross corruption in the management and expenditures of public moneys.

Mr. SPROULE. Was that carried out?

Mr. PATERSON. Yes, it was carried out at that time and that is the reason the resolution was put. It was a protest against the state of things then prevailing, and therefore that resolution was adopted and that resolution should be carried out. Whether hon. gentlemen say it has been or not, it should be carried out, and I claim it has been carried out.

Mr. SCHAFFNER. In the same way as reciprocity, no change.

Mr. PATERSON. Would hon. gentlemen have any objection to replying to me when I have finished?

The fourth resolution read:

We cannot but view with alarm the large increase of the public debt and of the controllable annual expenditure of the Dominion, and the consequent undue taxation of the people under the governments that have been continuously in power since 1878, and we demand the strictest economy in the administration of the government of the country.

What are the facts?

Some hon. MEMBERS. Oh, oh.

Mr. PATERSON. They are evidently not cheering the facts but because I have not recited them yet. When this resolution was adopted great increases were being made to the public debt. The trade and commerce of the country was almost stagnant, public works were not being carried on. The Canadian Pacific railway was being built. While they were not collecting under the system of taxation they had in force enough money to pay the ordinary expenditures of the government, they

had to borrow, absolutely borrow money to meet the ordinary expenditures, without expending a dollar on public works or on capital account, and therefore it was that the public debt went up and up and up, till in their 18 years of power they had increased the public debt to $118,000,000 and odd, with nothing to show for it, for they had not carried on the public works. I mean nothing to amount to anything outside the Canadian Pacific railway. That resolution was adopted, but that resolution, you say, should be enforced by us. Deploring this evil in the late government have we fallen into the same mistake? Have we added to the public debt? Is there any cause for alarm in that respect now? As the Finance Minister points out to you, at the end of this present financial year, after 13 continuous years in power, if you leave out what has been borrowed on the Transcontinental railway, a great national undertaking, we shall have paid all our other expenditures, ordinary and on capital account, running into the tens, yes the hundreds of millions of dollars, without adding a dollar to the public debt of the country. These are the facts. Why do hon. gentlemen opposite not cheer the facts? They are cheering the facts by contrasts. One hundred and eighteen million added to the public debt, and nothing to show for it, scarcely. Tens and tens, running into the hundreds of millions, expended on capital account, beyond the ordinary expenditure of this government, at the end of this financial year, outside the Transcontinental railway, and not a dollar added to the public debt. No cause for alarm now.

Mr. SPROULE. If the hon. gentleman desires to be perfectly fair, when he leaves out the expenditure on the Transcontinental, why does he not leave out the expenditure on the Canadian Pacific railway in making his comparison?

Mr. PATERSON. I alluded to the fact that the Canadian Pacific was being built. But what about all the other expenditures that we have made?

Mr. SPROULE. The increase of the public debt. I wish merely to say this, that the increase of the public debt included money to be spent on the Canadian Pacific railway in the one instance, and does not include the money borrowed to be spent on the Transcontinental in the other. Therefore, the comparison is not fair.

Mr. PATERSON. Oh yes, it is quite fair, the House well understands what the point is. We leave out both those undertakings. Take all that has been done by the Liberal government in digging canals, in bonuses upon iron and bonuses to railways, in all the directions in which we have spent ten and tens of millions, running up to hundreds of millions more than those gentlemen spent on similar works, and we have done all that without adding a dollar to the public debt, while they had to borrow money for such works. Now I think that resolution has been carried out. We deplored, we viewed with alarm, the great increase in the public debt, and so we have endeavoured to keep it down, and we have succeeded admirably.

Resolution No. 5.—That it is the ancient and undoubted right of the House of Commons to inquire into all matters of public expenditure, and into all charges of misconduct in office against ministers of the Crown.

I am glad to hear that that is the principle on which both sides of the House agree, I am sure.

Resolution No. 6.—That in the opinion of this convention the sale of public lands of the Dominion should be to actual settlers only and not to speculators, upon reasonable terms of settlement, and in such areas as can be reasonably occupied and cultivated by the settler.

That plank was adopted—the very reverse of the policy that was being carried out by our Conservative friends when in power, and which we viewed as contrary to the well-being of the country. That plank we carried out, and every fair-minded man must say that it has been carried out in its entirety.

Mr. SPROULE. What about the land sold to the Robbins Irrigation Company?

Mr. PATERSON. Is that denied?

Mr. SPROULE. It is a fact.

Mr. PATERSON. A fact! Why, if any man wants to deny that these lands have been sold for the settler—talk as the hon member for North Toronto (Mr. Foster) did about the Saskatchewan lands that were sold to these people! These lands were sold, but they were not sold in contradiction to that resolution, for they were sold with terms of settlement. Do you mean to tell me that that resolution was not carried out?

Some hon. MEMBERS. Yes, yes, no, no.

Mr. PATERSON. Then all I can say to you is this, that the united voices of 250,000 happily settled homesteaders give a denial to the statement. I take their word in preference to an objection of——

Resolution No. 7.—The repeal of the Franchise Act, and that we should revert to the provincial franchise.

Was that carried out? Is that upon the statute-book now? No. Gentlemen may laugh, and try to be merry as they may, and deny it as bravely as they may, but they cannot say that that plank has not been carried out, because the Franchise Act has been wiped out.

Mr. BURRELL. May I ask the hon. gentleman a question? While we admit that it was carried into effect in 1898, did not the government try to reverse that action and adopt a Dominion franchise?

Mr. PATERSON. No, we did not. If I were to answer the hon. gentleman courteously, I say no, I say no; because my hon. friend alludes to the circumstance that took place in this House where there was a little question about the list in unorganized districts. That don't bear out what he says.

Mr. BURRELL. Not only in unorganized districts, but I think there was a a similar attempt made in British Columbia.

Mr. PATERSON. We wont enter into an argument on that point.

Som hon. MEMBERS. Ha, ha, ha!

Mr. PATERSON. Really, they are the happiest lot of gentlemen in opposition that I have seen in a long time, rejoicing in the good times brought about largely through this government. No, Sir, that plank has been carried out.

Resolution No. 8.—To make the House of Commons a fair exponent of public opinion, and to preserve the historic continuity of counties, it is desirable that the conformation of the electoral division county boundaries should be preserved, so that in no case parts of different counties should be put in one electoral division.

Has that been carried out? Certainly it was carried out. A redistribution measure was brought in, and that resolution was carried out. You know that county boundaries were respected, you know that there was no gerrymander by this government, there was a perfectly fair division of these counties. And yet hon. gentlemen say we have not carried out any of the planks of our platform. There it stands. The counties are before their eyes, their own counties are there, and many of those gentlemen opposite know that the counties they now represent are within county bounds, and are not the same counties represented by their predecessors, when there were parts of two or three different counties thrown together in order to give a majority to one party against the other.

Hon. JOHN HAGGART. What had the government to do with that? Were not the electoral divisions fixed by a committee of this House?

Mr. PATERSON. I believe they were, and my hon. friend I think was on that committee. But that just shows the superiority of our redistribution. When the gerrymander was put through in 1882 by Sir John A. Macdonald's government, was it not done in secret? A committee of their own met in a room, a dark room, and there, in secret, unknown, the men they were attacking, every Liberal that had been prominent in the fight in the House against them, was marked out for political destruction by these men, by virtue of an Act of parliament that they were getting passed with their majority. David Mills, one of the ablest men in this country, was singled out for political slaughter. Alexander Mackenzie—I leave myself out, though there was not a more infamous cut up anywhere in the Dominion than there was in my county;—John Charlton, Thomas Bain, and many others. Men who had been fighting them for the rights and liberties of the people of this country were marked out for political destruction by a committee that met in secret—marked out to be slaughtered by Act of parliament. And this was carried into effect so far as the decision of a majority in this House could carry it into effect. Let me illustrate by my own riding. They took from my riding two Liberal townships, giving majorities totalling three or four hundred, and threw them into South Oxford, where, even without them, there was a Liberal majority of six hundred. Then they took from another riding a Tory township and put it into mine. Thus they sought to put me, politically speaking, to death. And one thing that kind of makes me have a warm side for my Tory friends—or many of them—is that, while their friends in this House did that infamous act, there were men on the Conservative side in that riding who said: 'This is not fair play, and we will not stand it; we will vote for the man you are trying to kill.' And they did. And so some of us got back—some of us did not. And now my hon. friend (Mr. John Haggart), in the innocence of his heart, asks if that is the way that the Redistribution Bill that we passed was prepared. And he was on the committee with some of his colleagues; the work was done in open daylight, with arguments heard, and a unanimous decision was reached as to what was fair and desirable. And now he thinks the opposition ought to have credit for it.

Mr. JOHN HAGGART. As the hon. gentleman (Mr. Paterson) appeals to me, may I ask him to point out the distinction between the Bills that we passed and the ones passed under the government of Sir Oliver Mowat in Ontario?

Mr. PATERSON. The hon. gentleman (Mr. Haggart) wants to lead me on to a subject that is not under discussion.

Some hon. MEMBERS. Oh, oh.

Mr. PATERSON. There they are again. Can you, Mr. Speaker, see the appropriateness of that laugh? We are discussing the legislation of the Dominion parliament. And the hon. gentleman wants me to agree

that the credit for the Redistribution Bill passed under the leadership of the Prime Minister (Sir Wilfrid Laurier) should go not to the government, but to the opposition.

Mr. WALLACE. I would like to ask the hon. member (Mr. Paterson) if he can show anything more shameful in the Act of 1882 than the gerrymander of Central York by the Liberal party of 1903?

Mr. PATERSON. I refer the hon. member (Mr. Wallace) to the hon. member for South Lanark (Mr. Haggart) for an answer. That hon. gentleman says that the Bill was a fair one and that they prepared it.

Mr. JOHN HAGGART. The member for South Lanark was overpowered by superior numbers in the committee.

Mr. PATERSON. Why, the committee were unanimous.

Mr. HUGHES. May I ask a question?

Mr. PATERSON. I would like to answer the hon. member's (Mr. Hughes') question, as he is so courteous, but I think it would be better to wait. The point is that we laid down the rule that county boundaries should not be disturbed; and, though there was the temptation to return upon the heads of hon. members opposite that which they had visited upon us, Sir Wilfrid refused to act upon such an idea, but carried out literally and absolutely this plank of the platform.

Mr. HUGHES. Now, may I ask a question?

Mr. PATERSON. Yes.

Mr. HUGHES. Will the hon. minister give the population of West Northumberland and also the population of Victoria and Haliburton to show how the principle of representation by population is carried out?

Mr. PATERSON. I have not those figures. But I would ask the hon. member was not the rearrangement of the riding he represents fair to him?

Mr. HUGHES. The rearrangement made no difference to me——

Mr. PATERSON. Was it fair?

Mr. HUGHES. The hon. gentleman has asked me a question; I will answer it in my own way. The rearrangement made no difference to me; I would have been returned no matter how the county was gerrymandered, and no matter whether it was made into one or two ridings. But the hon. gentleman opposite could not have done better in order to produce a split in the Conservative party than to gerrymander Victoria and Haliburton as they did in the last revision.

Mr. PATERSON. But will the hon. member say that he was not satisfied with the arrangement at the time?

Mr. HUGHES. The evidence before the committee will show that I fought for two ridings.

Mr. PATERSON. But I am speaking of one riding.

Mr. HUGHES. But there were two in Victoria and Haliburton formerly. I fought for two; I stood in this House alone in favour of two ridings in Victoria and Haliburton.

Mr. PATERSON. I know that the Bill went through with very little discussion, and that it was admitted, even by Conservative newspapers, to be eminently fair. And it carried out the resolution of the convention in favour of maintaining county boundaries. I come to the ninth resolution. The first I have yet to speak about. But here are seven which, it cannot be denied, have been carried out. The ninth resolution has not been carried out. It is a difficult question. I do not know that the views of the Liberal party have changed concerning this resolution that there should be some change in the constitution of our Senate to bring it more into harmony with representative institutions? But the debate and vote yesterday, together with all that has transpired since this resolution was passed, go to show the difficulties with which this question is hedged about. They go to show that though this resolution is desirable in itself, as it was then in the eyes of the Liberal party, and apparently is now in the eyes of many of our Conservative friends, yet it has not been possible to carry it into effect. But there has been an honest desire to do it. Still, here is one resolution that has not been carried out.

Now, I come to the tenth and last resolution. At the convention, so far as I remember, there was no objection on the part of any one to any of the resolutions save this. Let me read it:

> That whereas public attention is at present much directed to the consideration of the admittedly great evils of intemperance, it is desirable that the mind of the people should be clearly ascertained on the question of prohibition by means of a Dominion plebiscite.

I say, objection was taken to that resolution. The late Speaker Anglin voiced that objection and declared that he would not be bound by the resolution. Nevertheless, the resolution prevailed, and so became one of the planks in the platform of the party, making it incumbent upon the Liberal government to give effect to it, notwithstanding that some of the members of the party might not agree. And what was

done? You know that the plank was carried out and that the plebiscite was held in its entirety. So, these planks of our platform have been carried out in as fair and honest a manner as could be desired by the Liberal government elected on the platform of which these were planks.

Now, I have read these resolutions which, in the opinion of hon. members opposite, if I am to judge by their scornful laughter, we have not carried out. But I think that fair-minded people, considering these resolutions and considering the action taken with regard to these matters by the present government, will say hereafter that if any man in this House or out of it declares that this government has been recreant to the resolutions of the Liberal convention, he is to be held as one sinning against the light, and as guilty of that of which no public man should be guilty—stating that which is not true of his opponents.

Now, I come back to the first resolution, and there is where our friends on the opposite side have time and again denied that we have carried out our platform in reference to the tariff. They say that the platform of the Liberal party at that convention was a platform of free trade as it is in England. Nothing harped on more, no statement made oftener than that, no statement more untrue—I was going to say—than that statement. I have that resolution. What is it? Is it a resolution for free trade as they have it in England—free trade and direct taxation, free imports of goods into this country? Was that the policy? No. Here is the sense of it:

That the customs tariff of the Dominion should be based, not as it is now, upon the protective principle, but upon the requirements of the public service; . . . . that the highest interests of Canada demand a removal of this obstacle to our country's progress by the adoption of a sound fiscal policy, which, while not doing injustice to any class, will promote domestic and foreign trade, and hasten the return of prosperity to our people.

Here is the affirming part of it:

That to that end, the tariff should be reduced to the needs of honest, economical and efficient government. That it should be so adjusted as to make free, or bear as lightly as possible, upon the necessaries of life, and should be so arranged as to promote freer trade with the whole world, more particularly with Great Britain and the United States.

Is there anything in that resolution instructing a Liberal government, when it came into power, to depart from the principle of indirect taxation and to adopt the principle of direct taxation? Nothing of the kind. A tariff is spoken of, a customs tariff is to be maintained and the revenues re to be raised by a customs tariff. There is not a word in the resolution that the Liberal party instructed the government, when they came in, to abandon the basis that had hitherto prevailed of raising taxes in the direct manner of customs and excise duties and resorting to direct taxes, whether upon land or in any other way, but they were to continue to raise a great portion of their revenue by a customs tariff. We have continued the customs tariff. That is the way we are raising our revenue now. We are raising our revenue by taxes on the imports into this country. Sir Wilfrid Laurier moved that resolution. I seconded it. Sir Wilfrid, the night before, had addressed the convention. He had spoken at that convention, and when, next day, the convention came down and offered this resolution, Sir Wilfrid in moving it, said:

It will not be necessary for me to say much in reference to this, inasmuch as I am glad to observe that the Committee on Resolutions have followed largely the lines that I advocated in my speech last night.

What were they? Free trade as it is in England, to which these gentlemen say he pledged himself? You have heard it said time and again that he pledged himself that our policy was to be a policy of free trade as it is in England. While he is moving that resolution he speaks about a tariff on imported goods, and here is what he says——

Mr. JOHN HAGGART. Does the hon. gentleman deny that the right hon gentleman stated that the goal of the party in reference to the tariff was free trade as it is in England, and did he not again and again repeat it?

Mr. PATERSON. I do not deny it; I am going to read it.

Mr. JOHN HAGGART. You do not deny it?

Mr. PATERSON. I do not deny it; I am going to read it, but I am going to deny that Sir Wilfrid Laurier pledged himself that the Liberal party would adopt direct taxation and do away with the tariff.

Mr. JOHN HAGGART. Who ever said that?

Mr. PATERSON. You are saying it or you are trying to infer it.

Mr. JOHN HAGGART. Not at all. The majority of taxes are raised in England by a customs tariff.

Some hon. MEMBERS. No, no.

Mr. JOHN HAGGART. I beg your pardon. Tobacco and whisky imported into the country are subject to tariff and excise taxes.

Mr. PATERSON. Some articles are. There is no doubt about that.

Mr. JOHN HAGGART. A large number of articles are subject to a customs tariff.

Mr. PATERSON. Will my hon. friend be content to hear what Sir Wilfrid Laurier did say?

Mr. JOHN HAGGART. Let us have it.

Mr. PATERSON. I will let you have what he says because I want to give you the full judgment. You must not take a sentence or two out of a man's utterance and judge him from that. Sir Wilfrid said this, among other things:

I say, the policy should be a policy of free trade such as they have in England——

Mr. JOHN HAGGART. Hear, hear.

Mr. PATERSON. Now then when hon. gentlemen say that Sir Wilfrid Laurier said that and try to draw from that the inference that he gave the people to understand that he was going to do away with the customs tariff and substitute direct taxation they do not do what is right because why?—

Mr. JOHN HAGGART. No person ever alleges that. No one would be so foolish.

Mr. PATERSON. I see that you are hit pretty hard when you begin to deny what you have been saying outside. If you want to know just what Sir Wilfrid Laurier did say it was this:

I say, the policy should be a policy of free trade such as they have in England, but I am sorry to say that the circumstances of the country cannot admit at present of that policy in its entirety, but I propose to you, from this day forward, that it should be the goal to which we aspire. I propose to you from this day, although we cannot adopt the policy itself, to adopt the principle which regulates it; that is to say, that, though it should be your misfortune for many years to come to have to raise a revenue by customs duties, those duties should be levied only so far as is necessary to carry on the business of the government.

Again he says in describing the difference between the two parties:

Their ideal is protection; our ideal is free trade; their immediate object is protection; our's, a tariff for revenue only.

And again he says, and this is another point that I want to allude to when I come to discuss this resolution more fully:

Nothing is more difficult—that is one of the evils of protection—than to wipe away protection because, under it, interests have been established which every man who has at heart the interest of all classes must take into consideration. It is always easy to increase the tariff because by so doing you increase the private fortunes of certain individuals, but whenever you decrease the tariff, it has always to be done with careful consideration, and I am sure that when the Liberals are in power they will not be indifferent to this primary truth.

This was Sir Wilfrid's position with reference to this matter. These gentlemen have said that he pledged himself that we should have free trade as it is in England, but they do not tell you that his tariff was a tariff for revenue only, they do not tell you that he himself, though he admired the policy that they have in England, said distinctly that it could not be adopted here for many long years to come, but that the principle which would guide us in framing a tariff should not be the principle of protection but that the tariff should be founded on the necessities of the revenue.

And these gentlemen pretend to say they cannot see the distinction, and they tell you betimes that we have taken from the old National Policy, and that it is because of that there is prosperity in the country. Well, all I have to say is that men who talk that way do not understand anything about political science. The ideal, and the immediate object of the Conservative party is protection; protection is the policy of the Tory party and revenue is only an incident of it. But the Liberal party, the Liberal party were instructed to found their tariff on the principle of providing the revenue necessary to carry on public enterprises, and if there should be protection found in it—as there must always be protection where you have customs duties—that protection was an incident of the fiscal policy of the Liberal party and not the principle which was sought. That is the distinction between the two, and it is plain to be seen. And, any man who says that the policy of Sir Wilfrid Laurier or the policy adopted by the Liberal convention was free trade, free imports, is stating what is not true.

Some hon. MEMBERS. Oh.

Mr. PATERSON. I do not suppose any gentleman inside the House would say it and in supposing that it has been said outside the House, I am not transgressing parliamentary rules when I say that it is untrue. Sir Wilfrid Laurier's policy was tariff for revenue, and not free trade as they have it in England, although Sir Wilfrid did state that he admired the fiscal policy of England. That Liberal convention was a very large convention and it was attended by hundreds of representatives from all parts of Canada, except I think British Columbia. It was a convention such as I suppose our Conservative friends will have in the fall, and it is perhaps apropos that I should now point out that when a party convention adopts principles, that party when it attains power is expected to carry out these principles, and if a platform is laid down at the coming Conservative convention, then I will tell our Conservative

friends that they will be expected to carry out that platform just as the Liberals gave effect to theirs. Now, in further proof that the principle laid down by the Liberal party at the convention was a tariff for revenue, I shall quote from the speech made by Mr. Gardiner, then editor of the Hamilton 'Times,' and one of the ablest journalists that Canada ever had. Mr. Gardiner is not in the journalistic line at present; he has accepted a position; he expressed his views in reference to trade matters at that conference. He was an advanced Liberal, and after Sir Wilfrid Laurier had moved that resolution, and I had seconded it, Mr. Gardiner was called upon to speak and these were his words:

Mr. Gardiner said: We of the younger generation—for you see I am but a youth—honour and admire the men who have gone before us. We glory in the achievements of Papineau, Baldwin, Lafontaine, Dorion, Brown, MacKenzie and others whose names are not inscribed upon yonder scroll. There is one name there that attracts my attention, Dorion, one who, when I was a very little boy, about 40 years ago, started out with the advanced wing of the Reform party. He was, if I mistake not, one of those original clear Grits, who about the year 1850 adopted a platform of principles, not so elaborate as the one to be presented for your consideration to-day, but one for which I have great regard, because one of the planks was free trade and direct taxation. For my own part I believe, and fully believe, that that position of the platform of the clear Grit party of 40 years ago is just as good to-day as it was then, and nothing could have been better then.

Now, I do not say that I am disappointed that the resolution does not go as far as I think it ought to go—I am not disappointed—so long as the resolution is in the right direction I am ready to acquiesce in it.

Now, there are, I have no doubt, in the ranks of the Liberal party, many advanced thinkers who, like Mr. Gardiner, believe in direct taxation and the abolition of all import duties; but they recognize that the platform laid down by the Liberal party was a wise one under the conditions and they did not expect to have their own views carried out. If it were possible they think their views should be carried out, but they believed it was not possible, and so they gave their adhesion to the policy of protection for revenue. I shall not argue that question; I do not believe in direct taxation and free imports. I do not think that in the present condition of the country, it would be a wise policy, but I do say, and I think I have given proof, that the policy laid down by the Liberal party was that the revenue should be raised by customs duty. And, if the time should come when, under altered conditions, the Liberal party and its leader may think the policy of indirect taxation should be abolished and direct taxation substituted, then representatives of the party will be summoned together again, and their views shall be taken as to whether a change shall be made or not, but until that time comes the policy of the Liberal party is such as I have stated and this government will stand by the principle which it is expected to carry out. At all events, it was well understood that when the Liberal party should come to power they would be expected to lower the duties which then existed, and I think it is easily capable of demonstration that the Liberal government did that. In the tariff of 1894, the tariff of the Conservative government, there were on the list 481 dutiable items, 297 free items, and some 70 or 80 of these dutiable articles had been placed on the free list. Of these, some four used principally by the farmers, namely, indian corn, wire for fencing, binder twine, and cream separators, would have paid, under the old tariff, about a million dollars—or, to be exact, $976,000. But these four items were put on the free list and consequently that much money was saved to our farmers, yet hon. gentlemen opposite will tell us that we have the same old National Policy that they had. In addition to these 70 or 80 articles put absolutely on the free list, some 150 dutiable items in the old tariff were charged a lower duty in ours. And after that reduction had been made, twelve and a half per cent more was taken off on those brought from Great Britain, and the following year twenty-five per cent was taken off, and two years later thirty-three and a third per cent was taken off. So that on $54,000,000 from Great Britain last year there was, under the preferential tariff, a reduction in the duties of twelve and a half per cent in the one year, twenty-five per cent in the next year, and thirty-three and a third in the following year.

Mr. J. A. CURRIE. How then is it that the average percentage on dutiable goods from Great Britain is greater than on dutiable goods from the United States?

Mr. PATERSON. That cannot be, that cannot affect the case in the slightest degree, because if goods are put on the free list, we are in that way giving as great a benefit to the consumer as is possible. That is better than lowering the duty. The only way by which you can judge the arrangement of the tariff is by combining the total of dutiable and free goods.

Mr. J. A. CURRIE. How is it the same percentage applies on dutiable and free goods?

Mr. PATERSON. That is a conundrum. That is one of these things difficult to answer, because such a state of things does not exist. The hon. gentleman has made a supposititious statement which is not correct. As I was saying, we wanted to make trade freer with the whole world,

but more especially with Great Britain and the United States. I have shown you how in our general tariff we made reductions, and how we made still greater reductions by giving the British preference, first of of 12½ per cent, then of 25 per cent, and then of 33⅓ per cent. Just on that point, I might say, with reference to the tariff on dutiable and free goods, that my hon. friend, with all deference to him, was all wrong, and that is not to be wondered at so much in his case as in the case of the hon. member for North Toronto (Mr. Foster), who spoke actually of the bounties we pay on iron as being taxation and added them to the rate of taxation. But these hon. gentlemen must take the average rate of duty on goods dutiable and free in order to estimate the benefit to the people from this reduction. It is an easy sum worked out by the Customs Department, as you will see by the table on page 3 of the Customs report. You will find that in 1876 the average rate of taxation on all goods, dutiable and free, was 18·28. That is that on every $100 worth of goods there was paid on an average a customs tax of $18.28. Look at that same table and you will find that last year there was only $16.11 charged on every $100 worth of goods, thus making a reduction of $2.17 per $100. But that is not, as hon. gentlemen opposite think, a reduction of $2.17 on the $100, it is a reduction of $2.17 from $12.28, or a reduction in the rate of taxation of 12 per cent. Now, if a farmer sold his wheat one day at a dollar a bushel and the next day was only offered 88 cents, he would think that was a pretty big reduction. If a mechanic got paid for his day's work $2 and the next day found he was only getting $1.73, he would think that a pretty big reduction. Thus the reduction this government has made has been made on the imports dutiable and free.

Let me point out the distinction between the two parties in reply to the cry that we have taken up their policy. I have read you our platform. What is the platform of the Conservative party? Is there any distinction between the two? Mr. Borden, the leader of the oppostion, in the budget debate of 1903, moved:

> That this House, regarding the present tariff as unsatisfactory, is of opinion that this country requires a declared policy of such adequate protection to its labour, agricultural products, manufactures and industries as will at all times secure the Canadian market for Canadians.

There is the principle of protection. The rates of duty are to be so high as to shut out from this country any goods coming from any other which would interfere with the goods to be made in this country, irrespective of the effect on the revenue. But that surely is a different policy from ours. That was a resolution of non-confidence. It was an invitation to the people to turn us out of office because our tariff was not right. There must, therefore, have been a distinction between the two. What was that distinction? The principle of the Conservative party is that protection is the principal thing to be considered and not revenue. Listen to an extract from a speech made by the hon. member for North Toronto (Mr. Foster), as given in the 'Mail and Empire' a few years ago:

> So long as we import into this country $1,500,000 of agricultural implements in less than a year, every one of which might be made by the artisans and labourers of this country, and import that amount from the United States, a market from which our products are shut out by an almost prohibitive tariff; so long as our binder twine is largely made for us in that country: so long as $11,000,000 manufactured iron and steel are brought in from the United States, whilst in Canada the great natural vaults are bursting with iron and coal, and Canadian brawn and intelligence is chafing to unlock them and set these riches and resources loose; so long as our pulp and paper resources are sacrificed in another market, and we import millions of dollars worth of their manufactured products; so long as the lead smelters of the United States grow rich, whilst they put 1½ per cent duty upon lead in ore and 2⅛ per cent upon lead in bullion; so long as these things are unredressed, there is a reason for the existence of the Liberal-Conservative party.

Sir, one and a half million dollars worth of agricultural implements were imported into this country last year. This terrible state of affairs, in the hon. gentleman's mind, by which the people are bringing in one and a half million dollars worth of agricultural implements, is waiting to be redressed when the Conservative party comes into power by their putting on a tariff so high that even if any man be so deluded as to think it is right to buy the goods which he wants, there would be a barrier put in his way that will effectually stop him.

Mr. MACDONALD. Is that their policy in the west?

Mr. PATERSON. Oh yes, this state of things remains unredressed, and it is waiting until the Tories come in to redress it. I suppose when they get together and lay down their policy, to be consistent they would have to adopt a policy of adequate protection. These goods can be made in the country and therefore it will be their policy to put on a duty so high that no one can import them into Canada. I know that in a revenue tariff there is involved as an incident a certain amount of protection. You cannot have it otherwise, unless you put on an excise duty equal to your customs duty—and no one would sug-

gest that—or else give one line of manufacturer a protection under the raising of revenue that would make his article of manufacture so high in price that another manufacturer using his article as his raw material could not carry on his industry because the man before him would have taken the entire benefit of the duty.

Mr. LALOR. How do you reconcile a revenue tariff with a surplus of $12,000,000?

Mr. PATERSON. By making trade freer. We do not have large surpluses if we are paying all the capital expenditure as well as all our normal expenditures of carrying on great public works. Last year when our revenue fell off $12,000,000 we came very close to coming within the requirements of the necessities of the country.

Mr. LALOR. Then you admit that it is not a revenue tariff but a protective tariff?

Mr. PATERSON. Think of a man asking me if this is a revenue tariff! When the Conservatives were in power they raised $17,000,000 and we are going to raise $60,000,000 and they ask me if it is a revenue tariff!

Mr. FOSTER. Well, is it?

Mr. PATERSON. Does it not look like it?

Mr. GEORGE TAYLOR. Taken out of the pockets of the people?

Mr. PATERSON. That is a favourite argument of the hon. member for North Toronto (Mr. Foster) and those who follow him. If we took $60,000,000 into the treasury by customs last year and the Conservatives took only $17,000,000 or $18,000,000, then they say we have wrung it out of the pockets of the people. Not at all. A government is responsible for what? For placing a law on the statute-book that says that for every dollar's worth of goods on the dutiable list brought into this country so many dollars and cents shall be paid into the treasury.

Mr. J. A. CURRIE. Who pays that, the man who sends it in or the man who buys it here?

Mr. PATERSON. You are getting now on a question about which there is a diversity of opinion.

Mr. J. A. CURRIE. What is your opinion?

Mr. PATERSON. I think sometimes it is divided, sometimes the consumer pays the whole, and sometimes the producer has to pay a part of it. What do you think? If you bring goods into this country, you will pay the duty in the first instance out of whomever it may come in the ultimate. We take care it is paid by the man who brings the goods into the country. We collect through customs this year $60,000,000. That will be paid by the people into the treasury to carry on the affairs of this government. Under the previous government the people of the country paid into the treasury only some $17,000,000 or $18,000,000. The paying in of a larger amount now is due to no action on the part of this government. All a government can do is to say what rate of duty shall be levied. Having done that, the duty and power of the government are ended, that is the rate of taxation. Under the Conservative government that rate of taxation was $18.28 on every $100 of imported goods, dutiable and free, on the average. That has been reduced by this government to $16.11, a reduction of $2.17 on every $18.28 or a reduction in the rate of taxation of 12 per cent. Under that reduced taxation you have this extra $60,000,000. How does it come? Through no action of the government.

Mr. J. A. CURRIE. You have given one-half the market to the foreigner.

Mr. PATERSON. Through no action of the government has that $60,000,000 come in. It is paid by the people of this country. No government can compel a man or a lady to go into a store and buy a dollar's worth that the person does not want. The people do it themselves, they assess themselves. If they buy they pay, if they do not buy they do not pay. But, if they do buy, then, as far as the government is concerned, it is taking less from them than the late government did.

Mr. ARMSTRONG. Would not the increase in the value of the goods at the ports of entry over what it was in 1896, account for much of that difference? Has the minister calculated that part of it?

Mr. PATERSON. Why should I do that now? That does not affect my argument at all.

Mr. ARMSTRONG. That increase in the values has been the means of bringing into the treasury a largely increased revenue has it not?

Mr. PATERSON. That does not affect the rate of taxation. If the rate of taxation is $16.11, no matter what the price of the goods may be, that is all the people pay. If they bought more they would have to pay more, but the rate of taxation is not affected. The extra revenue is paid owing to the fact that the people assess themselves, not through any action of the government.

Mr. FOSTER. Clear.

Mr. PATERSON. Well, I could pardon some of the hon. gentlemen opposite for a laugh such as that I hear from my hon. friend from North Toronto (Mr. Foster), but I had supposed that he would be able to see a distinction between the action of the government and the action of the people themselves.

Mr. FOSTER. No, I was amused at the clearness of your argument.

Mr. PATERSON. A merit that is lacking in the hon. gentleman's own argument and, therefore, I suppose, he admires it the more.

Mr. R. L. BORDEN. According to that argument, when the farmers of the old days were said to be 'bled white,' they bled themselves.

Mr. PATERSON. No.

Mr. R. L. BORDEN. Why not?

Mr. PATERSON. There is an example of ignorance of finance that I should not have looked for in the leader of the opposition (Mr. Borden). The government imposed the rates of duty that caused the hard times.

Mr. R. L. BORDEN. Perhaps I may be allowed a question. The minister says that it was in the choice of the people to buy or not, and if they did buy they were burdened by their own action. Why was not that as good an argument then as now?

Mr. PATERSON. It was. But under the management of that government the people were not able to buy—they could not pay.

Mr. R. L. BORDEN. Then, how were they bled?

Mr. PATERSON. By the rate of taxation and the restriction on trade. You have an illustration before you. The hon. member from North Toronto (Mr. Foster) has more than once used the argument that if you are receiving larger revenue it means that the government has, by its own action, taken more money from the pockets of the people. And he has before him these facts: In 1896 there was a revenue of $3,000,000 from the post office, that representing the tax on carrying letters and papers. Last year over $6,000,000 came in from that source. According to the logic of my hon. friend from North Toronto, that extra $3,000,000 has been taken from the pockets of the people by raising the taxation. According to his argument, the letter that was carried in Canada for three cents in 1896 must be carried for six cents now, and the letter that was carried to the old country for five cents must be charged ten cents now.

Mr. J. A. CURRIE. Will the hon. gentleman——

Mr. PATERSON. Oh, keep quiet.

Some hon. MEMBERS. Order.

Mr. J. A. CURRIE. I wish to ask a question.

Some hon. MEMBERS. Order.

Mr. PATERSON. The hon. gentleman (Mr. J. A. Currie) must remember that if he wishes to put a question it is only courteous that he should do it not exactly in the very centre of an argument that a speaker is making. There is a courtesy in the time in which a question is asked.

Mr. J. A. CURRIE. I only wish to ask——

Some hon. MEMBERS. Order.

Mr. PATERSON. I have to go over my whole argument again because of this uncalled for interruption. I say that, according to the argument of the hon. member from North Toronto, the $6,000,000 raised through the post office now as against $3,000,000 in 1896 means that the letter that cost three cents then must cost six cents now, and the letter that cost five cents then must be taxed ten cents now. That is inevitable from his logic. But what is the fact? The three-cent letter is carried for two cents and the five-cent letter for two cents. And, though the rate of the tax has been cut in two, the revenue has doubled.

Mr. FOSTER. Am I outside the centre of the argument now? If so, I would like to ask the hon. gentleman where he can find the argument which he has attributed to me?

Mr. PATERSON. In the hon. member's utterances.

Mr. FOSTER. Can the hon. gentleman cite an utterance of mine bearing that out?

Mr. PATERSON. I can find it in this very debate.

Mr. FOSTER. Then, it would be better for the hon. gentleman to cite it before making an inference from it.

Mr. PATERSON. Does the hon. gentleman deny that he has stated, time and again, that the increased revenue from customs is due——

Mr. FOSTER. The hon. member (Mr. Paterson) was not talking about customs tariff but about postage stamps.

Mr. PATERSON. I was using that as an illustration; the hon. member (Mr. Foster) is not so dull as not to see that.

Mr. FOSTER. He attributed the postage stamp argument to me, and I am not aware

that I ever used it. If he wishes to use the postage stamp argument that is up to his capacity and he can do it.

Mr. PATERSON. I did not attribute the postage stamp argument to the hon. gentleman. I used it to illustrate his statement that if more money comes into the public treasury through the customs duty it must of necessity have been because the government have wrung it from the pockets of the people by increased taxes? Does he deny that?

Mr. FOSTER. I have no objection to the hon. minister using that argument, but I do not wish him to attribute it to myself.

Mr. PATERSON. I have not done it. Now, as we are cross-questioning one another, will he tell me what lesson he draws from the fact that, whereas with rates of three cents and five cents on letters a postal revenue of $3,000,000 was raised in 1896, now, with rates reduced to two cents all round $6,000,000 is raised? Does he draw from that the lesson that it is possible to lower the rate of taxation and yet greatly increase the income?

Mr. FOSTER. If the hon. member wishes to know my idea, I have to clear the ground a bit by asking whether or not he looks upon the postage rate as a tax? I myself do not.

Mr. PATERSON. I would like to know what else it is. You cannot get a letter carried unless you buy a stamp, and that stamp represents a tax.

Mr. R. L. BORDEN. Are the fares on the Intercolonial railway a tax?

Mr. PATERSON. No. They go to defray the expenses of the railway.

Mr. R. L. BORDEN. The same way with the postal revenue.

Mr. PATERSON. But there is a tax represented by the stamp on a letter.

Mr. R. L. BORDEN. Will the hon. gentleman explain why the cost of carrying a letter is a tax, and the cost of carrying a passenger or freight is not a tax?

Mr. PATERSON. Well, in both cases; the man that travels on the Intercolonial pays, and the man that gets a letter carried pays. But here is what the government does. They say, if we carry that letter for you, you have got to pay two cents for it; and we say to the other man, if we are going to carry you on the Intercolonial you have got to pay us so much for it; and if we lower the rate on the Intercolonial it is the same as lowering the rate on the letter.

Mr. R. L. BORDEN. But why is the one a tax and the other is not a tax? I understood the hon. gentleman to say that one was a tax and the other was not a tax.

Mr. FOSTER.

Mr. PATERSON. Mr. Speaker, I do not know, of course, whether it is of set purpose, to break up my argument, that I am interrupted. I can only say this, that I think what has been done is not the most courteous thing in the world, and I do not think it is the most dignified. I am not taking any offence at it. But hon. gentlemen opposite cannot put me out of my argument, whether it be right or wrong, with all the interruptions they may make. But for hon. gentlemen occupying the front benches, men who ask to be entrusted with the affairs of the country, to say that because there are sixty millions of money going into the public treasury by way of customs, when there were only eighteen millions before, and that that is due to the action of the government, when the only action the government can take is to lower the rate of taxation which determines it, the purchase being wholly voluntary on the part of the people that buy the goods, is something that I think—well, at any rate I would not like to build my reputation upon it.

Mr. R. L. BORDEN. I will not interrupt the hon. gentleman again.

Mr. SPEAKER. The rule is that no hon. member has a right to interrupt an hon. member having the floor except on a point of order, or with his permission. If the hon. member having the floor objects to the interruption, that is an end to it, according to the rules of the House.

Mr. J. A. CURRIE. You will please remember, Mr. Speaker, that the hon. gentleman asked me to wait until the end of his argument, and then he would answer me, and that I have done. I wanted to know now if he will answer the question.

Mr. SPEAKER. The hon. gentleman must resume his seat.

Mr. PATERSON. I decline to answer it.

Mr. J. A. CURRIE. I just wanted to know——

Mr. SPEAKER. I will have to name the hon. gentleman if he continues in his present course.

Mr. FOSTER. Ah, this is the first time we have heard anything about naming a member.

Mr. SPEAKER. Hon. gentlemen will acknowledge that I have been very indulgent so far, hoping that hon. gentlemen themselves would observe the rules of debate. Every member in this House has an interest in seeing these rules observed.

Mr. PATERSON. I decline to answer the question, not on my own account, not because my argument may be wrong, but because they are not going to prevent me from making my argument. I take it as a

compliment, because hon. gentlemen do not make this noise and these interruptions unless they feel hurt by the argument. But when I find the leader of the opposition taking part in these interruptions, then it is the dignity of the House that I am concerned for; for they are distinctly lowering it by their continued interruptions.

Mr. R. L. BORDEN. I rise to a point of order. I do not think the hon. gentleman has a right to allude to me in that manner. I asked him three or four questions, I understood with his consent. If he had declined to permit the questions he should have said so. I certainly understood that I had his consent in asking them. I think he ought to withdraw the expression he has used. The mere fact that he was not able to make good his distinction should not cause him to lose his temper.

Some hon. MEMBERS. Withdraw.

Mr. PATERSON. I would be happy to withdraw, I do not want to give the least offence to my hon. friend opposite, if he will promise to be good from this out. Now, Sir, I was pointing out the difference between the two. I was saying that the resolution of the leader of the opposition was a declaration of want of confidence in the government, asking that the government be turned out because it did not adopt what he called adequate protection. I read an extract from a speech of the hon. member for North Toronto in which he pointed out the large agricultural imports into this country, and I was alluding to the claim of hon. gentlemen opposite that we have carried out their National Policy, and that whatever success has attended the administration of affairs by this government, is due to that policy. I pointed that out as a distinct difference between the two parties. Their policy has been the protective principle, that is, to make their tariff wall high enough to shut out goods from coming into the country; whereas we arranged a tariff so as to produce a revenue necessary to carry on the affairs of the government; and while there is protection wherever there are customs duties, if it be only 5 per cent or 10 per cent, that protection exists only as an incident and not as a principle. The principle of protection carried to the extreme for which these hon. gentleman stand, was illustrated by one of their speakers the other night, when he was giving the history of the protection of the woollen industry in England. He went away back to the time of King Edward the III, and he told us what was done in those days to protect the woollen industry. He told us that if a man wanted to ship wool out or to bring woollen goods in, the law was that he was to be fined; and if fining him did not stop him, then they were going to kill him according to law, he was to be put to death. Well, that would be extreme protection, it would be adequate so far as that man was concerned, no doubt about that. What is adequate protection? Why, it is one that will shut out this million and a half dollars' worth of agricultural implements that the hon. member for North Toronto tells us about, that are coming into this country. Therefore, he says there is need for the Conservative party. Now, I was going to point out to you that the object of our tariff plank was to make trade freer with the whole world. That I have shown we have done, by increasing the number of articles on the free list, by reducing the duty of those on the general list, and by the heavy British preferential tariff. But we have done more than that. We were to have the tariff so arranged that trade should be freer, that it should promote domestic and foreign trade. Well, it has been so arranged. Under it the domestic trade has grown to enormous proportions; we cannot tell until our census is taken again how great that proportion is. With reference to our foreign trade, we know it has been so arranged as to make a marvellous change. In 1896 our total imports were $118,000,000, and our exports $121,000,000. In 1908 there were $370,000,000 of imports and $280,000,000 of exports. It was so arranged that the foreign trade of this country has sprung from less than $240,000,000 to in 1908, $650,000,000. Have we carried out the platform in that respect? We were instructed to so arrange the tariff that it would hasten the return of prosperity to our people. Did we do it? Scarce had we accomplished it before prosperity was in sight and it has been going on ever since. The people know that is the case.

Now, then, I want to touch upon another thing. The hon. member for North Toronto the other day asked the question: Have you made trade freer? Where have you made trade freer? That was one of the things laid down in your platform. I answer: We have made it freer for the whole world in the reductions that we made in our general tariff. We have made it, in addition to that, still freer with Great Britain, still freer with New Zealand, still freer with South Africa, still freer with India, still freer with the West Indies, still freer with Guiana, still freer, lately, with France, and we have made provision for freer trade with other countries if they desire it by our preferential tariff. There has been a continual carrying out of the principle which was laid down by the Liberal convention. Every principle laid down by that convention with reference to trade matters has been followed out by this government. I want to just touch

barely on one of the statements that the hon. member for North Toronto made in regard to some advice that he gave to my hon. friend the Minister of Finance. He said that when the revenues are buoyant the Finance Minister should lay aside some of the revenue for lessening the debt. That may have some merit, but let me tell the hon. gentleman he has lost sight of the fact that it was better for the Finance Minister not to do as he says he should do. Why? Because the very expenditures that he has made have secured in a large measure the great prosperity that you have in the country. That is easy to be seen by any one who gives the subject any thought. If you have taken your surplus funds and have made an investment of them that will bring you back ten, fifteen or fifty-fold it is better than laying them aside. He says that out of your abundant revenues you should lay something aside, and he takes it for granted that if these expenditures had not been made we would have had these abundant revenues all the same. But, you would not have had them? The money is coming back as the result of the wise expenditures that have been made by this government. Do not lose sight of that.

Mr. GEO. TAYLOR. Like buying sawdust wharfs.

Mr. PATERSON. No, not by buying sawdust wharfs; no, no. If the hon. gentleman (Mr. G. Taylor) wants to know I will touch upon that for a few minutes. Where have the large expenditures been? The hon. member for North Toronto asked us to state what we have got that stands and is useful to this country, and is either productive or stimulative for the expenditures of these millions of money that he was alluding to at that time. I will tell you some of the things we have; it would take too long to give the whole list.

Mr. GEO. TAYLOR. Commence with the Quebec bridge.

Mr. PATERSON. No, I will tell you where I will commence; I will commence, first, with the statement that we have secured population through the expenditure of many millions by our immigration department. Is there nothing lasting or beneficial in the immigrants that are coming into this country by hundreds of thousands? We spent seven or eight millions, it is true. But what are the returns? Half a million of people coming into the country—we are told, in one year—and bringing with them $80,000,000 or $100,000,000. Is that a wise expenditure? Who says it is not? Second, our Intercolonial railway has been improved. You say there is no net revenue to-day, but is there no benefit to the people who use that road, no convenience, no advantage given by that expenditure? More money to be expended by the local governments through the increased subsidies given. Some millions have gone in that. Is that any benefit? It has gone back to the people, it has gone to the governments of the different provinces to be expended for the benefit of the people, and these people are the people of the Dominion. Has that money been wisely expended? It has gone to the iron and steed industries through bounties. There has been an expenditure of millions in that way. Has there been any resulting benefit from it? I am not going to enter into a discussion of that question. The Finance Minister spoke in reference to it. There may be different views, but I want to tell you that these bounties came to be raised to what they are because we lowered the tariff on iron and steel, and it was made up in that way. We were enabled to reduce the duties on these articles through the bounty and the reduction of these duties meant a reduction in the raw material to the men who make the implements the farmer uses and to the industries in which iron is used, and in that way we have got the benefit. Just in passing let me say, because I am not going to argue or enter into a discussion of this question to-day, that we certainly do not give bonuses just for the fun of the thing.

I might remind you of another statement that the Prime Minister made in speaking of that policy. He said that we were to lower the rate of taxation and we were to do this without doing injustice to any classes. He emphasized that in the speech which he made by saying that when duties have been in force once it is not a very easy matter to reduce them because new industries have sprung up, but when you want to reduce them it ought to be done with great consideration and he was sure that when the Liberal government came into power they would not be indifferent to that primary truth. We found the iron and steel industries in existence and the duties that were upon their products under the tariff of protection was $4 on pig iron and $10 on steel. We reduced the duty on pig iron to $2.50 and the duty on steel to $7. If we had done that without giving them increased bounties we should have done the injustice to them that was pointed out by the Prime Minister when he spoke at that time. That was our reason for doing this and it has been done. Now then if the steel and iron bounties, or any other bounties, are given for the advantage of some individuals alone, and have no national importance, they cannot be justified. That is the test that must be applied. If you give bounties they must rest on the principle of the national importance of in-

dustry. We may differ in our views on this point, but I hold that these industries are of national importance. I hold that they are of such great benefit, so widespread in their ramifications, that the whole country is benefited by these industries being in existence. I was struck when I was at Sault Ste. Marie by a statement which was made by one of the gentlemen who was connected with an institution there. I did not undertake to verify it, it may be an extravagant statement—I cannot say—but it struck me as an extraordinary statement when he told me that that industry located at the Sault employed more shipping tonnage than all the tonnage employed on the inland waters in moving the whole crop of the Northwest down to the ports of exit. I have not verified it, but it gives an idea of what strength there is in this. Perhaps the same cannot be said of the oil industry, but at all events it was an industry which had been kept in existence by all the governments from confederation down, and in order to lessen the duties which were paid by our people on this article of prime necessity in the rural parts of the country especially, the duty was reduced and the oil producer was compensated by a bounty. The lead industry was the same. Cheaper transport for our products through improvements of our harbours: Montreal, Toronto, Fort William, Port Arthur, Port Colborne, St. John, Halifax, Quebec and our lake and open ports generally; (6) enlarged canals and free canals; (7) improvement of the St. Lawrence river route; (8) cheaper transport on ocean steamers through a bonus; (9) cheaper transport through aid to railways by bonus; (10) the Crowsnest Pass railway through a bonus; (11) the Transcontinental railway through local expenditure and guarantee; (12) the South African expenditure (a direct expenditure); (13) the place we occupy to-day in the thoughts of other nations. These are assets; these are all contributing sources to the magnificent prosperity we have in the country now. Why, Sir, the sending of these volunteers to South Africa raised high the fame of Canada. That is an asset and though it may not be direct it has been of vast indirect benefit to the country. Why did we improve the St. Lawrence route, and why did we enlarge the harbour of Montreal? I represent a rural constituency in part, and we are 400 miles from Montreal and several hundred miles further from the mouth of the St. Lawrence, but I am voting to deepen and to light and to buoy the St. Lawrence river and to enlarge the harbour of Montreal. Is it because I like the people of Montreal better than I like my own constituents? Certainly not. Is it that for the pleasure of the thing I vote to spend millions of money, some of which was contributed by my rural constituents, to improve our navigation facilities? No. Why is it then? It is because, as I have often told my people and they agree with me, I want the harbour of Montreal enlarged because I want more ships to come to that port. I want more ships because the more ships the keener the competition for cargo, and the keener the competition the lower the ocean freight rate, and because every cent reduction in the cost of transportation is a cent in the pocket of the producer. Who can tell the amount of permanent benefit that has come to the farmers of this country from the expenditures we have made on the harbour of Montreal and the improvement of the St. Lawrence? That route has been made so safe that ocean liners can come up there through the dark hours of the night as well as in the daylight. Time has been saved, risk has been lessened and freight has been lowered to the consequent profit of the producers of our exports. That is an improvement which is paying good interest on the investment to all the people of Canada. And so with the improvement of the harbours on the lakes: Fort William, Port Arthur, Midland, Victoria Harbour, Goderich and all these. That work is not done for the benefit of the people living in the locality alone; it is done to reduce the cost of transportation and, I say it here that if there is any benefit to be given to the agriculturist by way of lowering the tariff, just and equitable, the agriculturist is entitled to it. But, I hold that more can be done to benefit the agriculturist of Canada by reducing to him the cost of getting his goods in the market than by a reduction of the tariff. A reduction in the tariff is all right so far as you can go, but the farmer is vastly more interested in the wise expenditure of all the money that comes into the public treasury, contributed by all classes as well as by himself, in bettering the facilities for transport and cheapening its cost. If by improving our transportation facilities we can reduce by two or three cents a bushel the cost of landing produce in the consuming market, fancy what a benefit that is to the producer in the west, not only on one year's crop but on the crop of every succeeding year. Take, for example, the $3,360,000, contributed to the treasury by all the people of Canada, which this government gave to the Canadian Pacific Railway Company to build 330 miles of a railway from Lethbridge to Nelson. Our opponents spoke of it as the Crowsnest deal or the Crowsnest steal, and they tried to magnify it into a scandal although I notice that this year they have dropped it. They do not refer to it any longer. There was an expenditure of some millions, concerning which the hon. member for North Toronto (Mr. Foster) asked what had we accomplished by it. What did we accomplish? Sir, we secured the building of that

road. We have had a tract of 330 miles of undeveloped country opened up, in which there are towns, cities and villages and a mining population, producing wealth, adding revenue to the treasury by the taxation they pay. But that is not all there is in that bargain. One of the conditions on which we paid that $3,300,000 was that the Canadian Pacific railway was to give us 50,000 acres of coal land which they had acquired from the British Columbia government. That is our national asset to-day; and the fact that we have fixed $2 as the maximum price of the coal that may be sold there, is of untold benefit to the people who have to buy coal in the Northwest. That alone is an item which would justify the transaction. But what more did we do? It will be remembered that in the bargain made by the old government, the Canadian Pacific railway were not obliged to reduce their rates until their road earned 10 per cent net. Well, Sir, that was a contingency very unlikely to happen, and therefore this government, when they made the bargain with the Canadian Pacific railway to give them $3,300,000 to build that road, stipulated for a reduction in the freight rates on their whole system. By that means, we obtained a reduction which we could not have got otherwise. Among other reductions in freight rates, was a reduction of three cents per 100 pounds on all grain coming out of that country. What did that amount to? Figure it out, and you will find that the farmers, within four years, got back the whole of that $3,300,000, and they are reaping a proportionate and like benefit until this day and will be for all time to come. And yet we are asked in what manner we have promoted the prosperity of this country.

Mr. CAMPBELL. Might I ask a question? How many bushels of wheat are freighted over the Crowsnest Pass road which the hon. minister is speaking of?

Mr. PATERSON. The reduction I speak of applies to the whole system.

Mr. CAMPBELL. Has any wheat ever been freighted over that road?

Mr. PATERSON. No, but there has been wheat freighted over the other portions of the Canadian Pacific railway system.

Mr. CAMPBELL. I thought the hon. gentleman was speaking of the Crowsnest Pass road and of the expenditure on it.

Mr. PATERSON. There has been no wheat freighted over that road.

Mr. CAMPBELL. Then I do not see where the minister's argument comes in.

Mr. PATERSON. That is because you did not rightly grasp the bargain. Under that bargain, grain all over the Northwest territory which comes out on the Canadian Pacific railway system is carried at a reduced rate. If there be 40,000,000 carried on the Canadian Pacific railroad, that is carried at the three cents per 100 pounds reduction. Just think of it. The direct recipients are the men who grow the grain. It might be said that in fairness some of that money ought to have gone into the public treasury, but the farmers are the ones who get it directly. When they come to market their wheat, the buyer knows the ultimate price in the market to which the wheat is going. He has to figure the freight and insurance charges and all the other expenses in order that he may know what margin there will be for him and what price he can afford to pay. And when he knows that he gets a reduction of 3 cents a hundred pounds on the freight, he is able to give the farmer the benefit of that at once, and it goes at once into the farmer's pocket because he gets it in the extra price which the wheat buyer is enabled to pay him. What does that mean to the people in the Northwest? While I do not undervalue their request for a lower tariff, what is that in comparison with the benefit they can derive from the wise expenditure of money out of the public treasury to which all the people in the country contribute? It means millions. Whenever you can lower the insurance or the freight rates by deepening the St. Lawrence, by lighting it, by enlarging the harbours—every time you can take a cent off the cost of the transportation of the produce of this country, that is a benefit to the men who raise the crops. While I give every credit to my hon. colleague the Minister of Agriculture, for the steps he has taken and is still taking, in order to benefit the producers of this country, that is only a minor matter as compared with a wise expenditure of the public money in improving and cheapening the lines of transportation, and in this way giving our farmers money far in excess of what they would get had not these additional facilities been provided out of our public revenue. The great producing class of this country is the farmer, and therefore every reduction in freight is a reduction which goes into their pockets. More than half the total exports of this country are the products of the farm, so that the man who raises those products is the one who gets the benefit of the reduced rates secured to him by the expenditure of public money.

Mr. CAMPBELL. Might I ask another question? Do I understand that owing to this legislation in reference to the Crowsnest Pass railway the freight rates on produce in the northwest were reduced three cents to the farmers?

Mr. PATERSON. Three cents a 100 pounds, yes.

Mr. CAMPBELL. This is the first time I understand that because it is not the case.

Mr. PATERSON. Then the hon. gentleman will be obliged to me for telling him.

Mr. CAMPBELL. For the information as it comes, but not for the fact.

Mr. PATERSON. I think my hon. friend will find it is correct. That was one of the conditions of the bargain made with the Canadian Pacific railway. We gave them $11,000 a mile for the building of 330 miles of railway. That was larger than any bonus given to any other company, the bonus generally being $3,200 a mile, and in some cases $6,400 through very difficult country. That subsidy was given not to build the road alone, but to secure to the people of the west the great boon of having a reduction in freight rates of three cents a hundred pounds for all time to come. In addition to that, lower rates were to be given on goods imported into that country, coal oil, agricultural implements, &c., so that, taking these things into consideration and remembering that the money has been paid back—although of course it went to farmers it was still paid back—and on that one item in four years there has been an immense relief to these people. I give it as an illustration of all the other expenditures. By wise expenditures of that kind you are benefiting the country, you increase your revenue, you have one of the greatest resources of the prosperity of this country. I have spoken at length. I do not apologize for it. I do not mean to say that I have spoken longer than I intended. When I rose I felt, whatever others might feel, that there were some things I wanted to say, things that in my judgment should be said, and I made up my mind I would take up as long as it required me if my physical force enabled my voice to reach your ears. I recognize the fact that in the ordinary session, deducting the time devoted to routine proceedings, there is only between two and three hours of time for each member of this House to occupy the floor. I quite recognize that the large part of the time that might fairly be allotted to me has been consumed by me on this occasion and I therefore will endeavour to keep as quiet as possible during the remainder of this session.

Mr. A. C. BOYCE (West Algoma). I am sure no hon. member of this House begrudged to the Minister of Customs the time during which he has diverted us this afternoon by the somewhat extraordinary utterances to which he has just given voice. We have welcomed it as a very pleasant diversion, one of those rare treats which he accords us about once in every two years. Sometimes they are received with cheers from my hon. friends opposite, sometimes they are not received with such enthusiasm, but just now, as my hon. friend has said, there appears to be some necessity for him or some member of the Liberal pary to go into the flights of eloquence and to paint in roseate hues the imaginary virtues and achievements of the Liberal party. The virtues of the Liberal party are shortly to be tested in the city of Ottawa, and looking at the situation for myself, I should say that the party seems to be in rather a tight place, very hard up for campaign literature. It appears to have devolved upon the Minister of Customs, to furnish the class of campaign literature which has been so prevalent generally in elections of that party. The minister's speech goes back to ancient history. It starts with virtues of which we hear every session in this House. Then it touches upon ancient history and then the minister's vivid imagination furnishes all the rest of his argument. But it is a sad thing that although my hon. friend's imagination be fickle, although it be lofty, although it be refined, he has allowed his memory—I suppose on account of the large expenditure he is at, and the amount of strength he expends in his efforts—to wander from the strict line of truth to which I know otherwise he would rigidly adhere. What does my hon. friend say? He starts off, as he does in every brilliant oration, with this expression: 'Having regard to the prosperity of this country prior to 1896: Did we not have fruitful fields and industrial prosperity prior to 1896?' My hon. friend does not always say that and his followers may some day, when brought face to face with his words on some platform, wish he had not spoken out in this way in this House. But my hon. friend wanted to serve a purpose, and that purpose is disclosed in the next sentence. 'It must be, can only be, that the prosperity which is enjoyed by this country to-day is due to the wise policy of the Liberal party as applied to the condition of affairs to-day.' It suited my hon. friend's argument to make use of that expression. He forgot that he has been in this House a long time, that he has addressed himself to budget speeches year after year when he did not sit on the treasury benches. I shall jog his memory by reading a sentence from the debate of March 29, 1894, when he occupied a seat on your left:

I feel that we are more indebted to Providence in giving us the products of our

natural resources than to their management of the finances of the country.

What position does my hon. friend take now in regard to Providence? Providence is surely at fault now. Under the Conservative government, Providence was doing all the work. Now my hon. friend says, with his right hon. leader, that our prosperity and the wonderful progress this country has made are due to the wise policy of the Liberal party. Then my hon. friend touched upon a very interesting feature of the history of his party, the Liberal convention of 1893 at which he and some other hon. members on that side were present and the official report of which I hold in my hand. And this he did quite without any necessity, because I do not know that the subject has been raised in this debate. He takes upon himself the somewhat onerous task of justifying the planks of that platform and of proving that each one of them has been kept by the party and not broken and disregarded. Well, Sir, there was a Liberal convention in Ottawa in 1893. These hon. gentlemen having been then about fifteen years out of office, and, hungering for the sweets of office, they desired a platform upon which they could come into power. And so they met in solemn council in Ottawa to provide means by which they could satisfy the electorate that they ought to be elected to office. They, apparently, did not meet with many disagreements as among themselves and they parted after expressing by suitable resolution confidence in the right hon. gentleman (Sir Wilfrid Laurier) who now leads this House, and singing 'For he's a jolly good fellow.' I can only say that, especially with regard to carrying out this platform and the promises which he made at that convention and afterwards made in the province of Quebec and in the west, there never was a 'jollier fellow' in the history of Canada. For, as a 'jollier,' the right hon. gentleman is most successful. In the art of 'flim-flamming' the electorate the right hon. gentleman is a past master as a 'jolly fellow.' The Minister of Customs (Mr. Paterson) forgot some things concerning the carrying out of the principles of that convention, especially with regard to free trade. By reading the records of the convention, he tried to show that what the right hon. Prime Minister meant was not free trade as they have it in England—that that never was promised by the Liberal party of Canada. He read a certain portion of the hon. member's (Sir Wilfrid Laurier's) speech declaring that he would apply the principle as nearly as he could to work out the beneficial results which he expected would flow from it. Either the Minister of Customs is losing his memory or he did not see fit, when he was going into ancient history, to tell the House all he knew about the statements made by the present leader of the House on the principle of free trade. He forgot to tell us that all that the right hon. gentleman said on the subject of free trade was not said in the convention hall. The right hon. gentleman had to satisfy parties in the west, and people down by the sea, and manufacturers of Ontario, upon that question. Arguing the matter years after the event the Minister of Customs forgets what the right hon. gentleman (Sir Wilfrid Laurier) himself cannot forget, and what he dare not and cannot deny—his own utterances to the people of Manitoba in the city of Winnipeg in 1895. Let us see what he said and compare that with his attitude as interpreted by the Minister of Customs. The right hon. gentleman has heard these words time and again, but it would be a pity should he forget them:

> I come before you to-night to preach to you this new gospel of free trade. I denounce to you the policy of protection as bondage. Yes, bondage. And I refer to bondage in the same manner in which American slavery was bondage. Sir, our policy is freedom of trade such as exists in England, such as is practised in Great Britain. I propose that we should follow England's example and open our ports to the products of the world. In the city of Montreal, the Liberal party believes in free trade on broad lines such as exists in Great Britain, and upon that platform, exemplified as I have told you, the Liberal party will fight its next battle.

The Minister of Customs (Mr. Paterson) forgot that expression, as he forgot some other matters, one of which is very fresh in our memories. He forgot the very interesting debate upon the Senate which we had yesterday and on which, I believe, the hon. gentleman cast his vote. He will remember the words of Sir Oliver Mowat, chairman of the Liberal convention, and he will remember the speech made by the Right Hon. Sir Richard Cartwright on that occasion in which he said:

> I think, Sir, we all agree——

That is the great Liberal party of Canada agree.

> I think, Sir, we all agree that the constitution of the Senate as it at present exists is a blot upon popular government and upon free institutions.

And there was a plank in the platform to reform the Senate and remove that blot upon popular government and free institutions. But what has the party of the hon. gentlemen opposite done to remove that blot? Time after time discussions have taken place in this House on the subject of reforming or ending the Senate. Has my hon. friend (Mr. Paterson) lifted up his sonorous voice in favour of making good

that plank of the platform of the Liberal party? I do not think so. I certainly have never heard the hon. gentleman speak on that question before. The hon. gentleman dealt also with the question of expenditure. He says that the Liberal party promised at that convention that the extravagance which they said was rampant under the Conservative party then in power should be checked and that there should be economy, wise economy, in the expenditure of the people's money. Well, I think my hon. friend's memory must be equal to the task of remembering some of the instances in which that plank has been violated. I think he remembers several instances in which motions were made in this House, and matters were brought to the attention of the government, in which an unwise expenditure, a very dishonest expenditure was the subject of very severe criticism, sometimes defended by my hon. friend, sometimes allowed to go in tacit silence. But we can refer to one or two instances of unwise expenditures. We have been treated lately to an incident of unwise expenditure—I refer to the Sawdust wharf which has been mentioned this afternoon; and there are others which make up the history of the life of this government, with mentioning which I will not weary the House at this time. But this remains, that whereas, under the Conservative government there was economy of administration, there was an attempt made to keep those who were handling the people's money down to the letter of their duty, and to see that every dollar of money was employed in the proper channel, yet how has that been swept to the winds by this party who promised to see that every dollar of the people's money should be wisely, honestly and economically spent. I will just quote one instance that occurs to me, and that is an instance where an official of this government were not exactly, what one might call, living up to the letter of honesty, I refer to the case which was the subject of a resolution in this House two or three years ago, a case in which an employee of the Immigration Department of the government was convicted of stealing from a person with whom he came in contact as search officer. He was sentenced to a term in jail, he spent the term in jail, and when he was released, largely by the very wise, the paternal act of the Minister of the Interior, he was rewarded by being put back in the position, with his salary raised, and the scope of his duties extended. That is an incident of how the Liberal party has carried out that plank in their platfrom.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

UNION LIFE ASSURANCE COMPANY.

House in Committee on Bill (No. 36) respecting the Union Life Assurance Company.—Mr. McGiverin.

On section 1,—first instalment on shares.

Mr. HENDERSON. What is the meaning of that clause? I do not see the promoter of that Bill in the House; neither do I see the chairman of the Banking and Commerce Committee. It seems to me that we have no one here to vouch for this Bill. Certainly, if we are going to proceed with the Bill the promoter of the Bill at least should be here. This, to my mind, is a very important Bill and one which I thought should not have passed the Banking and Commerce Committee. I know there are others of the same opinion as myself. We were not at all satisfied with it and before we proceed with this Bill I think we should have the promoter of the Bill, or the chairman of the committee, to explain what the various clauses mean and why the company is asking for them. Some very peculiar things came up in the Banking and Commerce Committee in regard to this Bill, and the House is entitled to a great deal more light on the Bill than what we are going to get to-night, in the absence of the two gentlemen who are especially interested in promoting the Bill. I do not know what the government thinks about it; the government is very weak to-night, very lame. We have no one here to take charge of government measures except the hon. Minister of Railways and Canals (Mr. Graham). He is usually in his place. I commend him for it. I wish I could commend some of the others for diligence just in the same way, but I am sorry to say I can not do it. I do not know whether they have gone down to the city to take part in the election that is going on at the present time.

Mr. TALBOT. They have gone to the hockey match.

Mr. HENDERSON. They have gone to the hockey match. Well, if it has come to this that ministers of the Crown, when important measures are before the House, have nothing better to do than attend a hockey match, I think we had better adjourn parliament until the hockey matches are all over.

Mr. GRAHAM. I think I will send for the leader of the opposition.

Mr. HENDERSON. I understand the leader of the opposition is very well oc-

cupied to-night and possibly my hon. friend the Minister of Railways and Canals will find out on the 29th of this month that he is doing mighty good service. The leader of the opposition is a free commoner. He is not bound to be here every night. He has lieutenants to look after the interests of the opposition, but the government is always supposed to be here. Here is a Bill respecting the Canadian Pacific railway and I am glad to see the Minister of Railways and Canals in his place. Here is another respecting the Canadian Pacific railway. The minister is in his place to see to that also, but there is another Bill respecting trust and loan companies.

Mr. LAVERGNE. The Minister of Finance is here.

Mr. HENDERSON. Just arrived in time to escape castigation. I am delighted to see him. The Finance Minister is one of those men against whom we can say very little for non-attendance. I commend the minister for it. You will find him here late and early attending to his duties. I never knew him to go away to a hockey match when important business was on hand and I think the hon. member for Bellechasse (Mr. Talbot) was too fast when he informed us that the ministers of the Crown, except the Minister of Railways and Canals, had all gone off to the hockey match. I hope that before the committee rises the hon. member for Bellechasse will rise in his place and do the Minister of Finance the justice of saying that he made a mistake and that he was not well informed, as he is nearly every time.

Mr. TALBOT. It is quite true that I made a mistake, but I did not think that my hon. friend's swallowing powers were as good as they are.

Mr. HENDERSON. If the hon. member for Bellechasse has anything worth swallowing he can depend upon it I will open my mouth. I am here to listen, I am here to take note of what is going on, I am here to watch legislation and if men are not here who ought to be here to attend to matters of this kind I am obliged to express my opinion of them. This is not the first time that I have prevented a Bill from going through simply because the promoters of the Bill and the chairman of the committee were not present. I feel very much like taking that stand to-night. I am not going to boast of my power because I may not have a sufficient number behind me if the government should choose to divide on the question and call upon their friends to put the measure through with or without consideration, but I believe the good sense of the minister will cause him to reflect and say that the course which I have taken is the proper one to pursue. I remember that on former occasions the Minister of Finance has agreed with me that it is a proper thing to object to a Private Bill going through when the chairman of the committee or the promoter of the Bill is not in his place. I feel like appealing to the Finance Minister to-night to support me and I am inclined to think that if I do he will be gracious enough to do it. He may go wrong sometimes, like the hon. gentleman (Mr. Paterson) who addressed us this afternoon for nearly two and a half hours, when he undertook to show that the ten planks in the platform of the Liberal party, as laid down in 1893, had all been carried out. I do not think the Minister of Finance would get up in his place and support the Minister of Customs in that. I think he would modify his language somewhat, but I think the Minister of Finance would support me in the contention I have raised that we should not proceed with this legislation in the absence of more information, the information that can only be given by the promoter of the Bill or the chairman of the committee that had it in charge. Now, I am going to appeal to the Minister of Finance if I have not taken the proper stand, if this is not the proper mode of procedure. This is a very important Bill, a Bill that passed through the committee, and I say now, and I appeal to the judgment of other members of the committee, that we were not satisfied at all. We had our doubts about the Bill in the Committee of Banking and Commerce and I am rather inclined to think that the Minister of Finance will give me some support in stopping the progress of this Bill until the men come in who have the right to vouch for it and whose duty it is to explain it. I appeal to the House to prevent this bad example being set. I ask the Minister of Finance who is leading the House this evening to assist me in not letting Bills go through in this way.

Mr. A. M. MARTIN. In justice to the chairman of the Banking and Commerce Committee it is only fair to say he is engaged at present at a meeting of the committee on the race track gambling Bill. He has been in that committee since seven o'clock and may be there until nine o'clock.

Mr. GEO. TAYLOR. I just left the committee and I saw him there.

Mr. FIELDING. Although the hon. gentleman in charge of the Bill is known to be a great athelete, I am sure he has no intention of neglecting the progress of the Bill. I do not think there is anything to be gained by pressing the Bill if objection is taken, and there will be no trouble at all in letting it stand over.

Mr. HENDERSON. I think that is proper. Shall we say 'stand.'

Progress reported.

SECOND READINGS.

Bill (No. 96) respecting the Canadian Pacific Railway Company—Mr. German.

Bill (No. 97) respecting the Pacific and Atlantic Railway Company—Mr. Tolmie.

VANCOUVER, VICTORIA AND EASTERN RAILWAY AND NAVIGATION COMPANY.

On the order being called for the second reading of Bill (No. 99) respecting the Vancouver, Victoria and Eastern Railway and Navigation Company.—Mr. Burrell.

Mr. TALBOT. The hon. member in charge of this Bill is not present and perhaps the hon. member for Halton (Mr. Henderson) will intimate that it should stand over as he did in the case of the other Bill.

Mr. HENDERSON. This is only a second reading.

Mr. FIELDING. This is the second reading of the Bill, and the House will have an opportunity of dealing with it later on, so that I hope the rule laid down by my hon. friend (Mr. Henderson) will not be enforced too severely.

Mr. HENDERSON. I do not think it should be invoked on the second reading of the Bill.

Mr. FIELDING. I have heard the hon. gentleman invoke the rule against the second reading. I would not like to think that he has any partisan feeling in the matter; I would not like to think that he objects to a Bill because it is in charge of an hon. member on this side of the House, while he would wish to jolly along a Bill which stands in the name of one of his political friends. That would take away from the character for impartiality which my hon. friend wishes to maintain.

Mr. HENDERSON. I thank the Minister of Finance for his very kind expression. All I had in view was to give my hon. friend time to get his wind. I had no intention of delaying the Bill, but there was an object in just wasting a little time. The Minister of Finance knows how that works.

Motion agreed to, and Bill read the second time.

WAYS AND MEANS—THE BUDGET.

House resumed the adjourned debate on the proposed motion of Mr. Fielding that the Speaker do now leave the chair for the House to go into Committee of the Whole to consider ways and means for raising a supply to be granted to His Majesty.

Mr. A. C. BOYCE (Algoma) (resuming). Mr. Speaker, when you left the chair I was commenting upon the somewhat extraordinary speech which the Minister of Customs treated the House to. I was referring to the contention which the hon. gentleman made with a great deal of vehemence, that the pledges of the Liberal convention of 1893 had all been honourably carried out by the Liberal government. I do not see the Minister of Customs in his place to-night, and probably the remark that some of the ministers had gone to the hockey match applies to him. I am sorry he is not present that I might remind him of the speech he made at that convention. The hon. gentleman spoke there, and the report tells us that he was received with loud and continuous applause and that he had to tell the people to keep quiet because even he could not make himself heard above the din. He spoke especially with reference to the trade policy of the Liberal party in support of the resolution denouncing the principle of protection as radically unsound and unjust to the masses of the people, and declaring that any tariff changes based on that principle must fail to afford any substantial relief from the burdens under which the country laboured. I quote from the words of the Minister of Customs:

> You have laid down and emphasized again the principle held by the Liberal party in this matter of trade and commerce, that in the levying of the taxes of the country, regard should be had only to the necessities of the revenue and that the government should not seek by tariff legislation to favour any particular class in the community. I say this is no new principle. A revenue tariff was in force when our late leader, Alexander Mackenzie, who has gone to his long rest, held the reins of power; and he and his government fell because he would not yield to the cry for a protective tariff. From that day to this the Liberal party have not ceased to proclaim that they believed that it was not right or just that protection, as a principle, should be recognized by the government of the country, and that they believed that the duty of the government was to raise the necessary revenue to discharge the duties devolving upon the government and to leave the people free to work out their own destiny, giving no undue advantage to any one portion of the community over another. And to-day, Sir, you have embodied that principle in the resolution now before us.

So that the hon. gentleman's memory was slightly defective when he tried to make out that the tariff for this country was not a protective tariff. His colleague, the Minister of Finance, will not deny that it is. How does the hon. gentleman, the Minister of Customs, reconcile the language he used in supporting that resolution which formed one of the ten planks of the Liberal platform, with the remarks he made to-day and with the budget we are now de-

bating. In that language he said he was in favour of a tariff for revenue only, whereas to-day he is lauding to the skies what is a moderately protective tariff and a tariff in some respects a great deal too high to suit some hon. gentlemen opposite.

These are anomalies with regard to which the hon. gentleman was very weak, and it seemed to me he was rather gratified when he was interrupted, as the interruption gave him the opportunity to assume the semblance of wrath and some little time to consider how he could best square himself with his former professions.

My hon. friend spoke about another platform—the platform of prohibition. Did his party carry out their promise with regard to that platform? They passed a resolution on the question of prohibition. Did they carry out what they promised in their speeches on that resolution? We know what the Minister of Agriculture (Mr. Fisher) said. He said that if his party were elected, it would carry prohibition if such a measure had a majority in the country. Well, a plebiscite was taken and there was a majority in favour of prohibition, what has my hon. friend to say now? These hon. gentlemen, who were so lavish in their professions, took on themselves the responsibility of saying that the majority in favour of prohibition was not large enough to carry such a measure into effect.

There is one feature of the hon. minister's (Mr. Paterson) speech to which I cannot help but refer as it touches the question of the franchise law. I have no intention of discussing the amendments made by this government during the session of 1908; but if there be any more striking evidence of the desire of this government to secure unfair elections, to gag the majority of the people and prevent the will of the electors from being known and acted on, than the amendments to the Franchise Act put through by this government in 1908, I should like to know where it is to be found. They were simply intended to put a muzzle on the voters in the constituencies of northern Ontario, and they stand to-day as a monument greatly to the discredit of this government. The Franchise Act in 1908 created new regulations for making votes which resulted in a most outrageous state of affairs. That state of affairs I shall not enter into now, because it will form the subject of another discussion, but the people resented that outrageous condition. The opening of the Printing Bureau on Sunday by order of the Secretary of State, the running of special trains at the expense of the government, and a large expense it was, to carry voters' lists and constables, and the mounting of polls out in the bush by constables—all these things testify to one of the greatest outrages ever committed against the electorate. In order to carry out an election in the riding of western Algoma, in order to enable this government to secure a majority in that riding and in the riding of East Algoma, there was a special train run from Ottawa starting on a Sunday. The Printing Bureau was opened by order of the Secretary of State on Sunday in order to print those voters' lists and send them on that special train and give to the government candidates whatever advantages might thus be gained. That was one of the results of the working out of these splendid franchise amendments to which my hon. friend pledges his support. All I can say is that when the true facts of the working out of that Act are made known, my hon. friend and the Prime Minister will realize that what was said when that franchise amendment was before this House in 1908, had a great deal of truth in it, and this amendment did work an outrage on the rights of the people.

We are gratified by the condition of affairs as shown by the speech of my hon. friend on the budget. We know that this is an era in which Canada is enjoying great prosperity, that our resources are being developed, that our coal and oil lands are being developed, and that our timber resources are growing, but no man in his sober senses—certainly not the Minister of Finance—will say that for all these good things we must thank the Liberal party. The Minister of Finance may say that the Liberal party have made the most of what Providence has so abundantly endowed the country with, but he will not go as far as the Minister of Customs did and say that while, under Conservative rule, Providence was responsible entirely for what little prosperity he grudgingly admitted the country then enjoyed, the prosperity of these late years, our great wheat fields, our grand mineral resources, are due to the policy of this government.

We have heard from time to time of the expenditure and it struck me that the Minister of Finance in speaking was rather proud to be able to say that we had reached what he called the hundred million dollar mark. It seemed to strike a peculiar note, rather a jarring note to any person who had heard the minister and his colleagues in days gone by denounce an expenditure of $40,000,000, aye $38,000,000, as not only extravagant but as a crime and a shame. Four million dollars, three million dollars less would be quite enough to carry on the government in this country. I shall not draw a sharp contrast between the condition of affairs when we had an expenditure of $38,000,000 and $40,000,000 and to-day, when we have reached what the Minister of Finance, very proudly calls the $100,000,000 mark, but I can certainly say some things with regard to the method of making expenditures of public money. Contemplating an expenditure of $100,000,000 per

annum one cannot but feel that there are expenditures which may have been greatly misdirected, and that the whole scheme of expenditure for public buildings and public improvements calls for the careful revision by the government in the interest of the public welfare. What is the position now with regard to public buildings? Is there any governmental or departmental arrangement whereby when a post office building is necessary for the public service in any part of Canada, the Postmaster General makes a requisition on the Minister of Public Works and the building is put up? No, Sir, the very last man to be considered when a post office is needed in a constituency is the Postmaster General and the very last consideration which is given to the question of the erection of that building is whether it is required for the public service and for the convenience of the public. We have many instances of that. The Minister of Public Works will not say that when a requisition is made for a post office building or a customs building he consults and acts on the endorsation of the Postmaster General or the Minister of Customs nor does he refer to the post office returns at that point. Otherwise we would not find in the estimates such an outrageous amount as $25,000 for the erection of buildings in places with a postal revenue of $700. But the Minister of Public Works has a peculiar method of getting rid of this enormous expenditure of $100,000,000, a peculiar method of spending the peoples' money. As I understand it is the bounden duty of the minister as a trustee of the people of Canada to spend the money taken from the people of Canada by taxation in the interest of the people of Canada for their purposes and for their services. Does he do that, does he pretend to do that? Instance after instance has been quoted in this House where the hon. gentleman has not done that, I believe that it has been proved to his satisfaction in this House that he has not done it, yet the hon. gentleman makes no comment, he simply persists in that method and in that line of expenditure, flattering himself that in doing that he is winning over the majority of the people of Canada who can be effected in the different ridings by the expenditure of public money. May I ask when the Minister of Public Works took the right to spend government money on private property? When did he become vested with the power, without the consent of the owners or the exercise of the right of eminent domain, to improve another person's private property with the money of this government? My hon. friend possibly knows to what I refer. During the last election he was very busy with his appropriations in the riding of West Algoma for wharfs, &c., doing his best to curry favour by paying out of the peoples' money in order to win the peoples' votes for the government candidate. I do not mind the hon. gentleman adopting that petty and miserable form of bribery in my riding; it suited him and I am sure there was not one vote in that riding which was affected by the expenditures he made in it, but I did resent his action when in fulfilment of a pre-election promise he appropriated $3,000 to alter, repair and generally improve a wharf which the government did not own, in which the government had absolutely no interest, and with respect to which the minister had no correspondence with the owners. This was a direct bid for votes, it was a payment for votes of the peoples' money for a work the profit of which went entirely to the benefit of private individuals. Does my hon. friend deny that? Does he state that the government had any interest in that wharf or in the approaches to it, that the government was ever requested by any one interested in the wharf or the approaches to expend that money upon that private property? No, I tell my hon. friend and he will not deny it that the Liberal candidate during or after the last Dominion election requested the Minister of Public Works to expend $3,000 upon that private property, and, docile in such matters, absolutely careless as to what the conditions are, wilfully ignorant and blinding his eyes to the fact that nobody had requested him to spend money on that private property, having no other reason than that he was asked to do it by the person holding the Liberal patronage in that riding and for the purpose of making, as he thought, a few votes by the expenditure of a few miserable dollars, filched from the chest of the people of Canada. There, Sir, is the grand, broad principle of economic expenditure of the peoples' money.

Mr. PUGSLEY. If I may be allowed for a moment: I have not the slightest idea of the property to which the hon. gentleman (Mr. Boyce) refers. If he would be good enough to name the place, I shall make it my duty to inquire into the circumstances. I may say, it is not the policy or practice of the department to spend money on private property.

Mr. BOYCE. I am glad the hon. minister (Mr. Pugsley) has said that. He says it is not the practice of the department—

Mr. PUGSLEY. Would the hon. gentleman please give a little further information. When was the work done?

Mr. BOYCE. Improvement and repairs. The hon. minister has an item in the estimates for it—$3,000.

Mr. PUGSLEY. Oh, no. I understood my hon. friend to make the statement that the work had been done—

Mr. BOYCE. I did not make that statement.

Mr. PUGSLEY. He said the work had been done by the government upon that wharf and wanted to know what warrant there was for spending the public money on private property. I can say to my hon. friend—and he ought to have known it—that, with regard to this wharf, no moneys have been expended upon it; and, knowing that, I think he ought not to have made the statement he made to the House.

Mr. BOYCE. I am in the judgment of the House: What I stated was that the minister had appropriated $3,000 for the purpose of repairs and additions to that wharf, and that he had made that appropriation simply at the request of the defeated Liberal candidate in the last election.

Mr. PUGSLEY. The hon. gentleman will pardon me again: He says that I have made an appropriation. Any appropriation must be consented to by parliament, and, before a single dollar will be expended upon the property the title must be acquired and vested in the Crown.

Mr. BOYCE. I will take the minister upon that statement. He is responsible for the public works. For what purpose does he put $3,000 in the estimates for a wharf in which, according to the language used in this House by myself, the government had absolutely no interest?

Mr. PUGSLEY. Does my hon. friend not know that before the title to a property can be acquired, parliament must vote the money? Only after that is done are the necessary steps taken to acquire the property. Those steps will be taken, as they always are in such cases, before a single dollar is spent upon the property.

Mr. BOYCE. The hon. minister is getting still deeper in the mire. He is on record in this matter, yet apparently he does not know it. He told us in this House that absolutely no negotiations had been entered into for the purpose of acquiring that wharf and that the government had no interest in it. And I have letters from the owners to the effect that they have not been approached by the minister, and, if they were, had no desire whatever to allow the minister to acquire any interest without their permission.

Mr. PUGSLEY. They will not be approached until parliament votes the money for the purpose.

Mr. BOYCE. For what purpose?

Mr. PUGSLEY. To acquire the property.

Mr. BOYCE. There is no vote for acquiring the property. That is where he has mistaken the proposition.

Mr. PUGSLEY. If the hon. gentleman knows what the minister intends better than the minister himself does, all right.

Mr. BOYCE. What the hon. minister proposes to do is to repair and add to property owned by private individuals without consulting those individuals. That is on record in 'Hansard'.

Mr. PUGSLEY. No such thing.

Mr. BOYCE. I regret that the hon. minister's recollection of what takes place in his department is so meagre. But I shall take occasion before I resume my seat to put before him his exact words in that connection. It is futile for the hon. minister to try to draw a red herring across the scent. That appropriation speaks for itself and his own language speaks for itself. There is an appropriation to prepare and add to a wharf, and there is his statement that that wharf is private property and that the government never had any interest in it. And here is one of the votes of item 148 of the estimates:

Kensington wharf—additions and repairs, $3,000.

Yesterday, my hon. friend was questioned and gave answer as follows:

Mr. BOYCE:

1. Is the Kensington wharf, near Desbarats, West Algoma, the property of the government of Canada? If so, when was it acquired, how much was paid for it, and from whom was it purchased?
2. How much land was conveyed with the wharf to the government?
3. If the wharf was not purchased by the government, is there any contract in writing between the owner thereof and the government with regard to the use of the same?

Mr. PUGSLEY:

1 and 2. No.
3. No.

Mr. PUGSLEY. Is not that entirely correct?

Mr. BOYCE. Yes. There was an earlier question answered by my hon. friend. He stated that there had been no negotiations for the acquisition of that wharf. He stated also that the government engineer had reported, not that it was desirable to purchase the wharf, but that repairs and alterations to the wharf would cost $3,300. And he puts $3,000 in the estimates for repairs and additions to the wharf belonging to private parties who never asked for it, his only reason being, I venture to say, that the person who has the patronage of the riding as defeated Liberal candidate asked to have it put there

for political reasons—to influence votes. And for that reason the minister filched out of the appropriations, $3,000——

Mr. PUGSLEY. Mr. Speaker, I call the hon. gentleman to order. I think your ruling would be that he must take back that expression.

Mr. SPEAKER. I think that the expression 'filched' is unparliamentary.

Mr. BOYCE. I bow to your ruling, Mr. Speaker.

Mr. SPEAKER. I would call attention to this further:

Members may discuss various questions on a motion for the Speaker to leave the Chair, without moving any amendments thereto, a great latitude being always allowed on such occasions; but they may not refer specifically to any vote which has passed or is about to be discussed in committee.

If this has been referred to Committee of Supply, it cannot be referred to on this occasion.

Mr. BOYCE. Then, I will leave the Kensington wharf to the tender mercies of the Minister of Public Works.

Mr. PUGSLEY. I think the hon. member is tired of it himself.

Mr. BOYCE. By no means. These are refreshing instances, and I notice that they arise much more frequently during the hon. gentleman's term of administration. Let me refer to another item which assists in making up the expenditure of this country to the splendid total of a hundred millions. I refer to the dredging on the Nipigon river during 1908. That is such a beautiful transaction. In years gone by, there has been a great deal of comment on the method on which dredging contracts were let, especially dredging contracts on the Great Lakes. I do not know any more startling example of contracts being let for political purposes on the eve of an election, and at rates so wholly disproportionate to the value of the work, without advertising, without notice to the persons who receive the contracts, than the Nipigon dredging. I will only refer to it shortly. Just before the election of 1908, without a contract, my hon. friend the Minister of Public Works set the Great Lakes Dredging Company to work dredging out the Nipigon. I say without contract, because the contract was not signed until some time after they had been set to work. There were no advertisements for tenders for that work. My hon. friend, of course, will not deny that. The work was commenced on the 8th of September, 1908; no contract had been signed then. There was $57,459.45 paid between that and December, 1908. The price per cubic yard, scow measurement, of rock was $3, other materials 45 cents. He says:

Q. Were tenders invited for the work?—A. Yes.

Q. If so, how many tenders were received, who was the successful tenderer, and was the contract awarded to the lowest tenderer?—A. There were no tenders ever invited for this work. There were tenders invited by public advertisement for other work which did not include the Nipigon dredging.

Later on, in answer to a subsequent question, my hon. friend said that after advertisements had been inserted it was noticed that the Nipigon work had been omitted from the advertisement, and he remedied that by sending a private intimation to certain dredging firms.

Mr. PUGSLEY. To all the dredging firms operating on the Great Lakes. That is my recollection of it.

Mr. BOYCE. Quite so. It was intended to include this. These are my hon. friend's words.

It was intended to include the name of Nipigon river in the advertisement calling for tenders for dredging required at Bowmanville, Green Shoals, Jack Fish bay, Leaf, New Castle, Rainy river and Spanish river, which was published in the newspapers between the 3rd and 17th July, 1908 (list of newspapers annexed). But the name was inadvertently omitted, and, as soon as this was discovered, the following letter was sent to—

Giving the names of the firms.

Mr. PUGSLEY. The hon. gentleman says that the notice was sent only to certain firms; hadn't he better give the names?

Mr. BOYCE. If my hon. friend will allow me to finish the sentence, I will satisfy him. He says that notices were sent to such and such persons. The House will remember the answer my hon. friend made just now, that the notice was sent to all the firms. But it is a significant fact that no notice was sent to the Great Lakes Dredging Company, and their name is not included in the list of firms to whom notices were sent. But they got the contract just the same, and they got $58,000 paid during the election year, and they got 45 cents per cubic yard for digging out sand from Nipigon harbour, where the same firm only got nine cents in Port Arthur.

Mr. PUGSLEY. They did not got 45 cents per cubic yard, the hon. gentleman is entirely in error. That is 27 times too much.

Mr. BOYCE. For the same stuff in Port Arthur they got nine cents, the same firm, but without any notification, and on the eve of an election; without a contract, because they did not have a contract, they were set to work in such a hurry. They got 45 cents per cubic yard for sand; for other materials the rate in Port Arthur harbour, 9 cents, the same as the same firm got by public advertisement. That is a sample

among many. That firm has been paid now upon that work $107,650.83. That is a very small percentage of the splendid expenditure of $100,000,000 to which the Finance Minister refers—on the Nipigon river work alone, and most of it was paid, a good percentage of it was paid, just during the months in which there was so much need in that wide and sparsely settled country to convince the electors of the purity of the administration and of the progress of the party represented by the hon. member for Thunder bay and Rainy river (Mr. Conmee.)

Now, Sir, I have heard my hon. friend the Minister of Public Works speak with reference to the necessities of a post office in the town of Steelton. I have heard him say in public that it was a necessity, and that it was very strongly urged. It is an important town. The revenue of the postal department and the requirements of the public service demand that such a building be erected. I say to my hon. friend now that he had better employ the public money in the commencement of a public building in Steelton, the town within the corporate limits of which are situated one of the greatest steel industries in Canada, rather than fritter away the money by repairing and altering, and improving other people's property. I give him that slight hint, and I hope he will take it from me in the spirit in which it is given. I also suggest to him that he immediately take some of the money which he is squandering at the extravagant price of 45 cents per cubic yard in Nipigon harbour, paid to the Great Lakes Dredging Company, and build the rest of the post office at Steelton, and so give to the public there the service they stand sorely in need of, as the minister has been made aware of by petition and by deputation, and has substantially acknowledged the justice of the request. We have other examples of the splendid expenditure of $100,000,000, and some of them have been referred to in this House. There is no better example that occurs to me at the moment than the splendid waterway which in future will be a monument to the great progress, at any rate to the great expenditure, of this government, and that is the Newmarket canal. My hon. friend, I quite believe, concurs in the magnificent utility of that work, a work that must make this government a laughing stock to both Liberals and Conservatives alike.

Now, Sir, I desire to refer for a moment to the expenditure on the Militia Department, and I regret that the Minister of Militia is not in his place. An hon. gentleman suggests that he also has gone to the hockey match. But perhaps not. With regard to the Militia Department I have but little to say. The militia of Canada costs us $6,000,000 a year to maintain. About a million dollars a year, in round figures, is expended for the upkeep of agriculture. A comparison is not very much to the credit of this government. There have been criticisms, Mr. Speaker, about the manner in which the Militia Department has been administered, and those who did venture to put their nose into the department and begin to lift lids and turn things up went and wrote down about it that it was top heavy, that there was too much expense at the top, that it was overpaid, and I think there was some suggestion made that there was need for reform. There is certainly need for some reform all along the line. The Minister of Militia was anxious to mimic the English system in regard to the government of that department, but it did not turn out as satisfactorily as he thought it would and the sooner he drops that system and gets down to some practical one, and one which will conduce to the best interests of the country, the better it will be. I speak feelingly upon this subject. I speak with a view to local considerations because it seems to me that it was a mockery that with this expenditure of $100,000,000 a year by the government and an expenditure of $6,000,000 a year for the militia, when the town of Sault Ste. Marie got into dire straits, when men were rioting, turning over street cars and committing disorders of that sort, it could not have the protection of the militia without being called upon to pay dearly for it. The militia was called out, they sent up these gilded gentlemen with their clanking swords and spurs, they paraded through the town, went through their little drills, came back to Ottawa a day or two afterwards and the department sent in a bill for $8,000. This government is now suing the town of Sault Ste. Marie to recover this sum for services that were absolutely required in defence of life and property and in a time of danger and emergency. It seems to be an extraordinary circumstance that the Militia Department can make regulations by which the already heavy burdens of the town of Sault Ste. Marie are made much more grievous by this claim which is made for policing the town in an emergency like that. It seems to me an extraordinary thing that when Canada is maintaining, at an expense of thousands of dollars a year, this Militia Department, a lot of gilded mummery, as far as I can see, disturbances, such as I refer to, cannot be quelled except at a rate per diem or at the rate which the government claim from the town of Sault Ste. Marie, amounting in all to $8,000. What is the use of our paying for a police system if every time the policeman is sent out to discharge his duty there is an extra amount payable while he is at work over that which he is entitled to receive when he is idle? I earnestly hope that there will be some practical reform in this direction,

and that the whole of the department which, from the little experience I have had of it, seems to be greatly in need of reorganization, will be thoroughly investigated and reorganized. I believe that if these reforms are put into practice a better state of things will result.

The districts of northern Ontario from which I and some of my fellow members have the honour to come as representatives in this House, have developed tremendously during past years. As we know, since 1904, the construction of the Temiskaming and Northern Ontario railway has opened up tremendously rich deposits of gold and silver—more silver than gold up to date. The extension of the line has further developed the tremendous clay belt tributary to its junction with the main line of the Grand Trunk Pacific now under construction, and it will make a capital channel of communication when that road taps the Transcontinental. I should like to have seen the attitude of this government towards that railway a little more generous than it was. It is a railway that has abundantly given returns for its expense. I certainly think that this government, in view of the splendid purpose that it was to serve in the development of the country, might have given to that road the assistance which it was suggested at one time should be given. The Algoma Central railway, another railway which is projected to Hudson bay, will cross the Canadian Pacific railway, the Canadian Northern railway, when it is built across the continent, and the Grand Trunk Pacific and will reach Hudson Bay. The Bruce Mines and Algoma railway is another railway projected to Hudson bay and these two railways, as the Temiskaming and Northern Ontario railway, will run through a country which is rich in mineral and timber. The building and government assistance of these roads are very much to be wished for at an early date. With regard to the Algoma Central railway we have every assurance that within a short time it will be in connection with the main line of the Canadian Pacific railway. This leads me to make the comment that the prosperity of Ontario during the last, say five years, has greatly contributed to the coffers of this Dominion. I never heard hon. gentlemen during the last Ontario election say that the increased revenue of Ontario which flows from the natural resources of the country was due to the wise and economical management of these resources, but on the other hand they declared it to be simply a matter for which Providence was responsible, although they claimed that the growth and development of the resources under the jurisdiction of the Dominion government were due to the economical manner in which they had been administered.

There was a reference in the speech of the Minister of Finance to the steel bounties, and I listened with a great deal of interest to what the hon. gentleman had to say. I know something about the history of these bounties as applied to the town of Sault Ste. Marie. I remember being in the town before the bounties were applied and I know something of the history of these industries. The steel works of Sault Ste. Marie are, I believe, second to none in Canada as far as their capacity and equipment are concerned. I believe their output is not the largest in Canada at the present time, although I am not sure about that. I think it is not as great as that of the Dominion Iron and Steel company, although it is growing almost daily under our present conditions. Some hon. gentlemen object very strongly to the paying of bounties to steel and iron industries. The subject, of course, is one upon which there is a great difference of opinion, and I have heard hon. gentlemen on both sides of the House express opinions against bounty-fed industries. But we have practical results up there from these industries and we have practical results from the stimulus given to iron and steel industries all over Canada. As far as I can see, both from theory and the practical results which I have seen, the granting of bounties on iron and steel has not been a detriment to the progress of Canada, but it has been a stimulus to the great iron and steel industries as, I think, the returns, which I propose to refer to presently, will show.

My hon. friend from Red Deer (Mr. Clark) who I am sorry is not in his seat, denounced bounties upon purely theoretical grounds and he quoted some noted political economists in support of his contention. But political economists differ with regard to the bounty system, and where you find that without any drain on the people of Canada a great industry is started up, and prospering, and increasing almost daily under the encouragement of bounties, that is the best practical answer to the theories of the economists. However, I desire to deal with practical things and I shall not discuss theories with the member for Red Deer further than to quote for his information what Professor Marshall says with regard to bounties:

> Principle of economics:—
> It might even be for the advantage of the community that the government should levy taxes on commodities which obey the law of diminishing return, and spend part of the proceeds on bounties to commodities which obey the law of increasing return.

It is an undoubted fact that the steel and iron industries—I speak especially in

regard to the Sault St. Marie industry has been the parent of minor industries; it has caused the increased importation of machinery which gives a large increase to the revenue; it has brought about general prosperity, increased the population and enabled the people to earn more and to buy more. That beneficial condition during the last two or three years is going to be enhanced greatly in the near future. The Algoma Steel Company which is a subsidiary company of the Lake Superior corporation has recently had invested in it a large amount of English capital and it contemplates great and immediate development. A new merchant mill with a capacity of 600 tons per day or more will be erected as also a new blast furnace, a number of open hearth furnaces and a cokeing plant. Six and a quarter million dollars of capital will be invested in that enterprise and that is no small matter to the country at large. The building of a new cokeing plant means that instead of bringing a train load of coke each day from the United States, the coal will be manufactured into coke at Sault Ste. Marie and the by-products, such as gas and tar, will be extracted and utilized, and employment will be given to 3,000 additional men. That work will now be done by Canadians who will utilize the resources of the country, and in future that money will not be sent to a foreign country to pay for the coke. But more than that, it means cheapened cost of the finished product and with an output of from 800 to 1,000 tons of steel rails per day, 50 cents per ton less in the cost of production means a tremendous advance in the industry. The Sault St. Marie company realizes, as I think the country realizes that the day must come when the fostering care of bounties will be withdrawn, but for the present at all events I sincerely trust the Finance Minister will not reverse the policy of the government in granting bounties to the iron and steel industry. This is a critical time in the history of these industries; there are 5,000 or 6,000 people employed directly and indirectly in the enterprise and it is not an industry that can be created in a day. It has had a somewhat chequered career; it has had to contend with serious difficulties at the outset, and I can assure the Minister of Finance that it is only now that the dark cloud is being dispelled and that the company is getting on a solid basis. For the next two or three years that industry will need the stimulus which the bounties give and it is in the interest of all Canada that they should be continued. Let us see how the steel trade of Canada has grown in recent years. I do not want the Minister of Finance to understand that I am giving his government the credit for the great growth that has resulted from the bounties on iron and steel.

Mr. FIELDING. I would never suspect it.

Mr. BOYCE. Well, I can tell the hon. gentleman that I am frankly prepared to do him justice and to give him and his government the credit that I believe is due them. In that respect I might mention that the making of coke from soft coal is rendered a great deal cheaper by the draw back included in the tariff of 1907. In 1881 the value of the products of iron and steel was $16,943,321; in 1891, it was $29,874,437; in 1901, $34,878,402; and in 1906, $53,125,265. So that there has been a steady substantial growth in the steel products of Canada, and my hon. friend will see that the growth between 1881 and 1891 was much greater in proportion than the growth between 1891 and 1901.

Then with regard to the average production, according to the tables, each iron and steel worker produced in 1881 on an average $1,237 worth; in 1891, $1,365 worth, an increase of $128 per man; in 1901, $1,409 worth, an increase of $34 per man; and in 1906, the average production per man amounted to $1,752. The bounties paid by the government upon steel alone during 1908 amounted to $1,019,201, and on pig iron to $863,819; and on the manufacture of steel to $347,135. The manufacture of pig iron is in itself a very important industry in this country. It gives employment to a very large number of men and keeps going a large number of subsidiary industries. The Lake Superior corporation is now putting in a plant for the manufacture of pig iron which will, when completed, furnish enough pig iron to carry out its own work without having to import pig iron from any other country or concern. We, therefore, look forward to the day when Canada will supply iron and steel for her own manufactures. There is the Dominion Iron and Steel Company in the east, and there are the Soo industries immediately on the great lines of transportation to the west which find a ready market for their products in the great west. Therefore, I hope that durng this period of transition in which these plants are being strengthened, the government will be lenient, paternal and progressive with regard to these bounties upon steel and iron products.

Before I take my seat I must refer to a matter which is possibly the most important that has ever come before the Canadian people. I refer to that paragraph in the speech from the Throne regarding Canadian naval service. When the fathers of confederation met within these walls to lay the charter of this great commonwealth, there were many misgivings expressed as to the outcome of confederation. My hon.

friend the Minister of Finance had very great misgivings. They were so acute that he moved a resolution in Nova Scotia in 1884 asking that that province be taken out of the union and made into an independent province. One hon. gentleman in 1867 spoke with much trepidation about the defenseless condition of the country. He wanted to know how it was going to be protected against foes by land and sea, and he pointed to the large extent of border that lay exposed to an attack from the country to the south of us and the immense coast line on the west, east and north absolutely undefended. Other hon. gentlemen, but to a lesser extent, expressed their apprehensions on this point, but there was an hon. gentleman on the government side in those days. Dr. Tupper, now Sir Charles Tupper, who gave a quiet, calm and dignified reply, to the effect that when this country was confederated it would not lose its status as an important colony of the British realm, it would not be divested of its allegiance to England, but would stand for everything British and imperial, and in time of danger England would protect this country as she had always done and we had nothing whatever to fear. That was England's guarantee at that time. England stood by Canada in the days of her youth when Canada could not protect and provide for herself. We have since had occasion to face difficulties and crises, and on every occasion Canadians have emphasized their desire to stand by the mother country, have burned with indignation when she was insulted, have mourned with her when she mourned, and fought with her when she was attacked.

That has been the sentiment of Canada's sons, that has been the sentiment that dominates Canada. Canada from ocean to ocean from south to north, is exclusively and exceedingly loyal and nothing that Canada can do to cement the ties that bind her to the mother country, will, in my opinion, be left undone if the Canadian people are allowed to have their say. There has recently arisen an alarming condition in respect to war against England. We have not simply idle rumours, we do not bring to this House merely the talk of the man on the street, we are face to face with what we are told by the greatest authorities on that subject in the empire, and the British people have been warned by these authorities, that the day is not far distant—some one suggested twenty years, and Lord Roberts' reply was twenty months—when you will find a directly hostile attempt to question England's supremacy of the seas. Other statesmen have spoken on the same question and given the same warning. I notice that an American magazine recently sent to a writer to Germany to make a personal and critical examination of the conditions in Germany, to ascertain whether the rumours with regard to the preparations there and her intention with regard to British supremacy had any foundation. The report made and published in the magazine was by no means re-assuring to the people of Great Britain. It was shown that Germany was, to the limit of her resources, building vessels of the highest class of efficiency whose only use could be that they should be placed in commission in the German ocean and the North sea to challenge England's supremacy in that sea. I do not wish to refer to the subject matter of the Bill now before the House, but the question is what is Canada going to do in this matter? The Prime Minister proposed a policy of a Canadian naval service which will mean the gradual education of men for the navy, their enlistment and training so that they can take their place on the ships which it is the policy of the right hon. gentleman to build. His reply to the call from the other side is that we shall start now to build a training school and gradually work up so that in fifteen or twenty years we will be in a position to meet the crisis which threatens us in twenty months. The right hon. gentleman's policy further is that Canada shall in the future build war vessels to defend our coasts; but when you contrast the class of vessel which the right hon. gentleman announces this government will construct with the vessels of foreign nations, you are struck by the fact that not only can these vessels not be put into commission in time to meet any such emergency as we are told is threatened, but when it is put in commission, it will not be useful at all as a fighting or defensive factor, because all of the proposed vessels together will not have power enough to meet one vessel of the type which the German empire are building as rapidly as they can. I feel very keenly the necessity of Canada at once doing something to emphasize her position in this matter. The position of the leader of the House is not an answer to the situation, there is no answer to the call for arms, no answer to the threat of danger, no answer to the threatened attack on England's supremacy of the seas in the proposal to establish a Canadian naval service. It is not a question of what the right hon. gentleman proposes to do—fifteen or twenty years from now—to defend the empire and cement the ties that bind us to the mother country; it is not to emphasize our allegiance fifteen years from now that the people of Canada are crying out. What the people of Canada want is to demonstrate here and now that Canada amongst the foremost nations of the earth, Canada in all her pristine strength, with her magnificent resources behind her, with her splendid expenditure of $100,000,000 of which the Finance Minister so proudly speaks, is able to do, must do, and will cheerfully do her

part now and to-day, in carrying out a patriotic policy and in contributing to the defence of the empire according to her resources and according to the need of the British empire.

Where was Canada when these rumours were brought last year? The Australian parliament met the situation by contributing a 'Dreadnought.' The New Zealand parliament met and they cabled over the desire of that people to place at the disposal of the British government a 'Dreadnought' and if one 'Dreadnought' was not enough, they would contribute two. Little New Zealand, plucky little New Zealand, with not one-tenth the population, not one-twelfth, or one-twentieth the strength and the abounding prosperity that Canada enjoys—but while Australia and New Zealand, were cabling, Canada was silent. She had not a proposal to make. What was the Prime Minister doing then, what was he thinking of? He did not initiate any proposal. Any proposal to provide means to meet the emergency had to come from His Majesty's loyal opposition in the form of a motion by the hon. member for North Toronto (Mr. Foster). The right hon. gentleman did nothing, he sat silent, he was carrying out exactly the policy he had laid down in 1907 at the Imperial Conference when he refused point blank to join in the contributions for naval defence.

It is said that history repeats itself. As I have said, it was not because the prime minister was anxious about it that action was taken. His hand was forced. That reminds one of the condition of things a decade ago, when England was face to face with a war with the South African republic, and the right hon. gentleman, then in office, and having the power to send our boys to the front to do their duty as part and parcel of the empire. His answer first was: 'Not a man, not a gun.' He was telegraphed to by Sir Charles Tupper, then the leader of the opposition, and strongly urged to send out a contingent or even two contingents. His hand was forced on that occasion. Popular opinion ran so strongly against his own professions and his own expressed disinclination that he had to give way to the feeling which swept Canada from end to end. And Canadians went and fought, and some of them died—died to the glory of Canada and to the cementing of the British empire. In 1909, there was another resolution, and again he took hold of it and favoured its adoption. But it looks as if he thought that when that resolution was passed it was as good as fifty Dreadnoughts. For nothing more was done; there was silence until the correspondence began to come from the Colonial Office. Not in consequence of anything that Canada has done, but in consequence of the telegrams that went in from Australia and New Zealand offering immediate assistance, the Colonial Secretary got into communication with Canada and invited this country to join in a conference on the best method to provide a contribution by the colonies to imperial defence. Our delegates, the Minister of Militia (Sir Frederick Borden) and the Minister of Marine and Fisheries (Mr. Brodeur) attended that conference. I have read the reports of their doings there, and I must confess to some considerable disappointment at the attitude they assumed. When the representatives of two lesser among the important parts of the empire, Australia and New Zealand, were willing and anxious to afford immediate effective assistance at the cost of millions, the Canadian representatives offered nothing at that time, nor until Mr. McKenna, the First Lord of the Admiralty, brought down a memorandum based upon the views that had been given by the colonial delegates as to what they thought would be proper. In these proposals—and I commend the correspondence to the reading of hon. gentlemen on both sides of the House as being very interesting—you will see that what the admiralty suggested was a fleet unit from the colonies. What reply did they get, what comfort, what assurance, from the ministers who represented Canada? They got practically the question how much could be got in the way of a fleet that would cost £600,000 a year to maintain—not how much they could give but how little they could give and satisfy the suggestions made by the admiralty. The admiralty made a suggestion of a fleet unit, the most important part, the actual fighting force, of which is the Dreadnought. Our friends asked how much it would cost leaving out the Dreadnought, the part that will do the fighting, that will strike terror into our foes and will satisfy the people of the earth that Canada is doing her part and can build Dreadnoughts as Germany can. And now we have the proposition in the Bill to build vessels that will take considerable time, vessels of the Boadicea type, of the Bristol type, and destroyers and torpedoes. I would ask hon. gentlemen opposite if they are going in to the fighting business, going to establish a Canadian naval service, whether they think that the people of Canada will be satisfied with that, if their proposals will be sufficient if—which God forbid—the time of need should come? I say no. These proposals which the right hon. the Prime Minister makes are not satisfactory to the people of Canada either in one way or in the other. They may be satisfactory to the right hon. the Prime Minister because they do so little—they promise a great deal, but they carry into effect so very little. We had a right to expect that, when the Bill

was brought down, the hon. gentleman would face the question as it ought to be faced, in a broad, fearless and practical manner. I reserve a criticism of the details of the Bill until the Bill itself is under discussion, and apply my remarks merely to the inactivity and evident reluctance with which the right hon. Prime Minister deals with this question. He seems to be afraid of the subject; he seems to think, notwithstanding its urgency, notwithstanding its world-wide importance, notwithstanding that the credit and the prestige of Canada is at stake, that this is a question that ought to be allowed to simmer, ought to be delayed. I should like to see the Prime Minister meet this situation in a firm manner, and meet it now and here. He is all-powerful at the present time, and if he thinks it in the interest of Canada that there should be a Canadian navy of the type which his proposals involve let him go on and build it. If he thinks the government are behind him, and the people behind the government, all he can do is to go ahead—provided the people of Canada approve. Before he goes that far it is his positive duty to ask the sanction of the people of Canada to the policy he proposes. With regard to that, he has no mandate.

He had no mandate when there was a crisis in 1889, but the contingents were sent. Is there any disposition on the part of the right hon. gentleman to-day to meet this crisis, and to ask parliament to vote an amount which will be necessary to save the honour of Canada? What are his proposals to that end? His proposals for Canadian aid certainly do not go far enough; in the opinion of some they go a great deal too far, as being an experiment in a Canadian fleet altogether too expensive. But the right hon. gentleman is not always so dilatory in bringing forward great measures, he is not always content to let them wait. It depends upon the political results which are likely to flow from any particular measure he is bringing forward. We all remember when he was introducing his Bill for the construction of the Grand Trunk Pacific railway. That was a measure of great importance and naturally every one was listening to what he had to say. But I say there is no comparison between the importance of the Grand Trunk Pacific railway, great as it is, and the importance of Canada maintaining her prestige before the whole world as the chief factor in the British empire. This is a time when, if rumour be true, my right hon. friend cannot afford to wait in order to provide for an emergency which is likely to arise. I say that if the right hon. gentleman will listen to the statements of those across the sea in whom he has confidence, there is already, within the meaning of the Military Act, an emergency sufficient to require him to act with promptitude, instead of laying plans which cannot become effective for at least fifteen years from now. When my right hon. friend was introducing that Bill for construction of the Grand Trunk Pacific railway, he was afraid of losing time, he was afraid that some one else might get an advantage with regard to the trade of Canada —that trade Canada, not the patriotism of Canada, not the strength of Canada, not the loyalty of Canada, but the trade of Canada. This is what he said in this House:

> To those who urge upon us the policy of to-morrow, and to-morrow, and to-morrow, to those who tell us, wait, wait, wait; to those who advise us to pause, to consider, to reflect, to calculate and to inquire, our answer is: No. This is not a time for deliberation, this is a time for action. The flow of the tide is upon us that leads us to fortune; if we let it pass it may never recur again. If we let it pass, the voyage of our national life, bright as it is to-day, will be bound in shallows. We cannot wait, because time does not wait.

The right hon. gentleman proceeds:

> Such is our duty, it is immediate and imperative. It is not of to-morrow, but of this day, of this hour, and of this minute. Heaven grant that it may not be already too late.

I commend to my right hon. friend his eloquent words upon that Bill, and under these circumstances, I commend them to him with regard to the present situation, with regard to the call upon Canada to do her duty as the principal factor in the British empire. I say it would be a gratifying sound indeed if my right hon. friend would repeat those words in this House, in the present emergency when Britain's supremacy on the seas is menaced by a foreign power. I regret to say that my right hon. friend has always seemed to be reluctant in matters of this kind, and that his present attitude is merely consonant with his past. As far back as 1891, when my right hon. friend, then leader of the opposition, was smarting under defeat upon the question of reciprocity with the United States of America, he spoke in no uncertain sound with regard to the position Canada ought to take before the mother country. It will be remembered that during the election of 1891, the right hon. gentleman, then leader of the opposition, stumped this country in favour of closer relations with the United States, of unrestricted reciprocity, of commercial union, or at any rate a reciprocity treaty, a policy which would bring us much closer to the United States, and which, the general opinion was, would lead to annexation. At that time the Right Hon. Sir John A. Macdonald was leader of the government and in a speech in Massey hall, Toronto, he made a very effectual and conclusive answer to the campaign that my right

hon. friend and his party were making. On that occasion Sir John A. Macdonald concluded his eloquent speech by the memorable words: 'A British subject I was born and a British subject I will die.' My right hon. friend, as leader of the opposition, came into this House, and in the debate on the address delivered himself in the words that I will quote, and I commend them to him in the light of some of his recent utterances:

Sir, I am free to admit, that I, for one, when I made up my mind in favour of this policy, looked up first and last to the interest of Canada, and not to the interest of England. I am a British subject and I never forgot it yet, but while I am a British subject I remember that I am also a Canadian and I sit in the Canadian parliament. Let the British subject who sits in the British parliament look after the interests of England. When this confederation was organized (and no one knows it better than the right honourable gentleman himself) it was organized with a view of forming a nation of this United Canada. The honourable gentleman must have foreseen, since this was to be a nation, that some day or other the interest of this young nation would come in conflict with the interest of the motherland.

The hon. gentleman further proceeds:

It is absurd to suppose that, situated as we are, the interest of Canada will always be identical with the interest of Great Britain. Some day must come when these interests will clash.

Well, Sir, I sincerely hope that the day has not come when, in the opinion of the right hon. gentleman, the interests of Canada clash with the interests of Great Britain upon so great, so vital a question as the protection of the empire. I cannot believe that the right hon. gentleman would yield to the application of any one of these sentences to the present crisis. But why does he not meet the situation, why does he not do something to satisfy the people of Canada that he is at least as ready as New Zealand and Australia, very much weaker parts of the British empire, to help the mother country? I do not wish to suggest that the right hon. gentleman is desirous of serving the exigencies of party politics. I sincerely hope that the right hon. gentleman will free himself from all those bans and stand free and broad and all powerful as representing the free Canada that is behind him on this subject. If he will only speak and speak now and express the same willingness that other less powerful colonies have done to do their part I am sure that he will not lack in that applause from the people of Canada which he loves so much to hear. On the general ground and having regard to the general scheme, I do not like the proposition that the right hon. gentleman makes at this juncture in regard to the creation and organization of a Canadian navy service. I do not like it. I do not think that it will redound to the credit of Canada. I do not think it is an answer to the question that Canada is called upon to answer I think, and I say it with much respect, that the right hon. gentleman is evading that question and I hope he will recover from his indisposition to speak and that he will speak to the issue and speak freely and clearly. This proposition will not raise Canada's reputation in the eyes of the world. It will not give to Britain's foes that greater respect which otherwise they would have had if Canada had taken, or if she would now take, a different stand. It will not strengthen the loyalty of Canada's sons, it will not strengthen the ties which bind us to the motherland, but there is the crying danger that it will serve political expediency and that it will shelve a very difficult question and one which the right hon. gentleman in times past has shown reluctance to face. It will satisfy some wavering followers who do not like to touch questions such as this and who would be better satisfied by a policy of masterly inactivity rather than by a policy of instant activity. It will provide in its working out a great many public works in constituencies where they will be most useful and it will provide for patronage and all the other public evils from which this country has suffered under this administration. These are greater questions even than the question of supply and demand, than the question of revenue and expenditure, than the question of an expenditure which has reached the hundred million dollar mark. This is a question as to what is going to be done, a question of the duty of the moment, a question of whether Canada is going to face that duty, or whether Canada is not going to face it and it is not a question that the people, to whom this government has to answer, will allow the government to drop whenever they have an opportunity of passing upon that subject. In 1908 there was a brilliant spectacle in the old city of Quebec, the tercentenary, marking a very important epoch in our history and one in which we all gladly joined. The Prince of Wales as the heir apparent of the British Throne, was there, it was a brilliant assemblage, it was a magnificent scene and a splendid page of history was written for Canada. But of what avail was all that display of loyalty? Of what avail were all those professions at that time, when after the tumult and shouting die, when the captains and kings have departed and when we are face to face, as it were, with wars and rumours of wars, there is absolutely nothing done or nothing suggested that should be done to meet the emergency which may be imminent, or which, as I fervently hope and pray, may be far off.

Is it not enough that it is threatened, is it not enough that it has been the subject of grave fears and alarm in England? Is it not enough that the people of this country are satisfied that something should be done? I cannot help but refer to a speech that was made in this House very recently by the hon. member for Hochelaga (Mr. Rivet) which contains a very remarkable paragraph upon this very question. The hon. gentleman does not give to the House any information as to his own views upon this subject. He is content with hurling criticisms and snarling at the position of the opposition in regard to it and hoping that the position of the opposition will be as he prognosticates. He says:

I have good reason to fear that the opposition are preparing to raise prejudices in the province of Quebec against this government, and more particularly against its leader, in the coming election, on this very question of naval defence. The Liberal administration and its faithful supporters will be charged with having been traitors to the interests of Canada at large, and particularly with having betrayed the interests of the French Canadians of the province of Quebec. On the other hand, I perceive the argument they will use in some of the other provinces. They will contend that the present government have not gone far enough in their policy of naval defence, and that because the government has not adopted a policy directly opposed to the wishes of the Conservative party in Quebec, it should be driven out of power as unworthy of the confidence of the Canadian electorate.

What does that mean? It means that my hon. friend is constituting himself a prophet and that he is himself raising the ground work for a quarrel that I am constrained to believe he dearly wishes would come along so as to enable him to protect himself and to give argument for the position which possibly he will desire to take later on. I desire to express the hope that the inactivity upon this question of the Prime Minister will not satisfy the Canadian people and will not satisfy the world. I will quote from a poem which has recently been placed in my hands upon the question of a Canadian navy which appears to contain some truth with reference to the situation as it is before the public to-day. I quote this, not because I think this House is fond or hearing poetry, but as an indication of what the Canadian people are feeling and expressing upon this question of instant and immediate assistance being rendered and being effective and ready in case of the emergency with which we have been threatened.

O, for a Man! to stand for us within our Council Hall,
With good red blood in heart and veins—and answer England's call!
To cut the Party questions from This Question all should feel,
And sever Truth from Falsehood with the sweep of polished steel:
Nor prate of 'Finished work at Home,' as though our goal were won!
(Thus should be keep our house, nor leave the wider work undone.)
No Opportunist! but a Man! to give—and Now—To-day!
To meet the danger as it comes, and hold the Ocean Way!
Pour out the millions—Not a Gift—part Payment that we Owe!
Then, build the true Canadian fleet with healthy growth and slow.
Yea! build the linked navies up—in concert—One to be!
To hold that Vital Cord of Life—the Empire of the Sea!

Sir, there is a sentiment in that verse which demonstrates the growing sentiment and perhaps the dominating sentiment of the people of Canada. I gladly place it on record because I feel it contains much with which the people of Canada are strongly in sympathy. I believe, Sir, that Canada will stand firm to the empire. I believe, Sir, the day will never come when the Canadian people will shrink from doing their duty towards the empire. In all her strength and in all her pristine magnificence Canada can do much, and Canadian prestige can do much to stop this war of construction. If Canada as the right hand of England, if Canadians as the sons of England were to come forward and say: We are heart and soul with the motherland in this crisis and a challenge of her supremacy of the sea is a challenge to Canada, what a powerful effect that would have upon the situation. Canada's sons are ready to-day as they always have been ready to answer to the call of the empire, if call there should be, which God forbid, I tell you Sir, that if that crisis ever arises there will be no room for questions of diplomacy, for sunny smiles, for sympathetic words, for motives of political expediency to hold the Canadian people from doing their duty and their full duty and their instant duty to rush to the assistance of the motherland. Only by that magnificent sympathy and only by that great prestige shall the British empire maintain herself and expand and progress with Canada in the front rank; Canada with all her resources, in all her magnificence, in all her wealth; Canada increasing year by year in population and resources, Canada the most important factor in the British empire, in her strength, in her power and in her ability to serve and fight for the empire, demonstrating the truth of the words:

Wider still and wider shall thy bounds be set,
God, who made thee mighty, make thee mightier yet.

Mr. J. G. TURIFF (Assiniboia). Mr. Speaker, at this late stage of the debate, it is not my intention to take up at any length of the time of the House. I shall deal particularly with the question of the adverse balance of trade which our friends on the other side have had so much to say about in the debate. But before entering on that subject let me refer to some of the criticisms which have been offered on the naval policy of the government, not only by the hon. member (Mr. Boyce) but by my hon. friend from Qu'Appelle (Mr. Lake) who I am sorry is not present tonight. That hon. gentleman (Mr. Lake) made the statement that it was proposed to spend the miserable pittance of something like $2,700,000 a year on the navy Had he listened attentively to the speech of the Prime Minister he would have known that it is proposed during the next two or three years to build a unit which if built in England will cost $11,000,000 and if built in Canada 33 per cent more or $15,000,000 and which will cost about $3,000,000 for its upkeep on the English basis, and possibly $5,000,000 a year in Canada. There is an expenditure of $15,000,000 to start with and an additional expenditure of $5,000,000 a year, and yet the hon. gentleman (Mr. Lake) says that the government proposes only spending $2,700,000 on the navy. The hon. gentleman (Mr. Lake) also told us that he was ashamed to acknowledge that he was a Canadian, and he said that we were sponging on the mother country and would likely sponge on her as long as she would allow us. Well Sir, I am sorry to think that any Canadian is ashamed to call himself a Canadian. We on this side of the House are proud to call ourselves Canadians and we stand as one man for the proposal of the right hon. the Prime Minister in connection with the Canadian navy. Every man on this side of the house bar none, is heartily in favour of the proposition made by our right hon. leader. Can the gentlemen on the other side of the House say as much? No. If the member from Qu'Appelle has anything to be ashamed of at all he should be ashamed of belonging to a party that does not know where it stands on this question. The leader of the opposition is the only man on that side of the House who has taken a pretty decent course on this question and he has supported the resolution which was passed last year and is doing his best to stand by it, but his followers will not stay by him. The other day we had the spectacle of the leader of the opposition making one proposition and then his lieutenant getting up and making a proposition diametrically opposite, and then a supporter from Nova Scotia getting up and making a third proposition.

Mr. BOYCE.

My hon. friend from Qu'Appelle (Mr Lake) would have us believe that the party opposite are ready to do ever so much for the empire. Let me remind him that his party were in power prior to 1896, and I defy him to point to anything they ever did on behalf of British connection or any assistance they ever rendered the British government in any British war. Did they ever organize and pay a contingent to go over and fight the battles of the empire? No, it remained for this government to do everything practically that has been done to better the conditions between Canada and England and strengthen the connection between the two. Who was it sent over the first contingent? It was this government. Who was it that relieved the British taxpayer from the expense of keeping up the forts of Halifax and Esquimalt? Hon. gentlemen opposite, when they were in office prior to 1896, had the opportunity of doing the same thing. Did they ever suggest anything of the kind? Never. Who gave a preference to British goods in the Canadian market? It was the Liberal party. Who now comes forward with a proposition to spend millions of dollars on the building of a navy and its maintenance? It is this government. Therefore, it comes with very bad grace from hon. gentlemen opposite to make the criticisms they have made and such as we have had from the hon. gentleman who preceded me (Mr. Boyce). He took up some two hours and a half repeating for the most part the speech he has already made every session during the past four or five years. He criticised in a general way the expenditure of the Finance Minister, but when the expenditure in his own constituency was in question, he came forward with a whine and asked that it be continued and that millions of dollars a year should still be paid out as bounties on iron and steel. I cannot agree with him. I do not propose to discuss what good has been accomplished by the $15,000,000 or $18,000,000 we have paid out in bounties on the production of iron and steel. I listened with great attention to my hon. friend the Minister of Finance when he referred to that question in his budget speech, and I trust that these bounties have had the good effect he says they have had, but taking that for granted, these establishments are now in a very flourishing condition, they are making a great deal of money, their stocks are above par, and their watered stock, which represents nothing at all, is selling at a market value of tens of millions of dollars. In the face of that condition, I trust the Minister of Finance will turn a deaf ear to the hon. member from East Algoma who asked that these bounties be continued. There is this further to be said. If these bounties were being used for the development of Cana-

dian mines and ores, they would not be so objectionable, but for one ton of Canadian ore that is smelted, there are many tons of foreign ore. Practically the whole output comes from foreign ores, so that we are paying millions of dollars for developing mines in foreign countries. The time has come when we ought to cease paying those bounties and let those industries look after themselves, which they are now well able to do.

I wish particularly to make reference to the adverse balance of trade we have heard so much about. The hon. member for North Toronto (Mr. Foster) was not quite honest with the House and the country when he tried to blame the government because we bought so much more goods from the United States than we sold them. But if the policy of the government be wrong, it would be a very easy matter to rectify it by taking all these articles from the free list and putting them on the dutiable list. When the Fielding tariff was introduced in 1897, some 75 or 80 items were taken from the dutiable and put on the free list. If we put these back on the dutiable list, and charge them a heavy duty, we would stop a great deal of the importation from the United States which goes to swell the adverse balance of trade which my hon. friend spoke so much about. Well, I have taken the trouble to pick out the different items of the free list which we buy in the United States, and I invite the hon. member for North Toronto or any hon. member to make a motion to put any one of these items back on the dutiable list. Not one of them would dare to do so because, if he did, his supporters would not back him up; or if they did in this House, the supporters of the party in the country certainly would not. Almost every one of these items is required for the farmer, the fisherman or the manufacturer. They are nearly all for the benefit of the manufacturer and incidentally for the benefit of every consumer in the Dominion. The first item on the list is live animals. That is admited free for the improvement of the stock. Then there is the item of settlers' effects, would any one suggest putting them on the dutiable list? The next item is asphaltum, of which there is none in Canada. Would you suggest making every one who wants to use it pay a tax when it is not produced in Canada? Another item is books. What are those books? They are principally educational books, bibles, prayer books and books for the blind. Would any one suggest putting a tax on these? Another item which amounts to nearly $4,000,000 is corn. That is used altogether by the farmers for feed and was made free for their special benefit. No one would suggest a heavy duty on the importation of corn for the feed of animals. Another item that runs up to $15,000,000 is anthracite coal. That comes in free of duty. That comes into Canada from the United States free of duty. We do not mine anthracite coal in Canada to any extent, the only place I know of where it is mined being near Banff. There only a small amount is mined and it is shipped for only a short distance in that western country. Would any one suggest that we should prevent the importation of anthracite coal? There is scarcely a man in the House who does not use it, our people must have it, and placing a duty on it would not stop the importation but simply cause the people of Canada to pay twice what they are now paying for it.

Mr. BLAIN. Is anthracite coal any cheaper in Canada since the duty was removed?

Mr. TURRIFF. Yes, anthracite coal is cheaper in Canada by just the amount of the duty. If the duty was on it to-day it would be just that much dearer than it is. Another large item is cordage. That is used altogether for binding twine, for the farmers and fishermen. Cotton is another heavy item running up to $7,000,000. Would any one suggest that raw cotton be put on the dutiable list? No one would suggest such a thing. It is for the manufacturers and helping the manufacturer it incidentally helps every one, because there is no one who does not consume cotton to a certain extent. Drugs represent $5,000,000. Those are for the manufacturers altogether. Fertilizers, various articles for the fishermen, such as nets, flax, hemp and jute for the manufacture run into hundreds of thousands of dollars. Then we have green and ripe fruit coming into the country, $3,500,000. While there is fruit grown in Canada this comes in at a time when Canadian fruit is not ripe. In the western country we get carload after carload of that fruit, every little town brings in ripe and green fruits by the carload and to suggest putting on a duty would be absurd. Furs represent $2,000,000. Grasses, fibres and straws for manufactures represent $1,500,000. Rubber not produced in Canada, $2,500,000; hides, $1,500,000; iron, steel, &c., that is manufactured Swedish iron, wrought for horse shoe nails, represents nearly $5,000,000.

Will any hon. gentleman opposite suggest that these articles should be put on the dutiable list? If they cannot suggest that why should they complain all the time that the tariff of my hon. friend the Minister of Finance is not in the interest of this country and that we should not buy such an amount of goods from the United States when here on this list I have named of free goods there is over $85,000,000 and they go to make up practically what is called the adverse balance of trade. Not one hon member opposite would move that any o'

these items should be put on the dutiable list.

Oils come in free to the extent of about $2,000,000. Optical and mathematical instruments, paints and colours, plants and trees, resin, rennet, salt for the fishermen, seed bulbs all come in free and settlers' effects represent $5,761,000. This is not money that these settlers bring in but simply the goods they bring in. Would any one suggest that these items should be put on the dutiable list? I do not think so. We are spending money every year bringing in settlers. We are bringing in hundreds of thousands and naturally they bring in their effects. These go to swell the amount of goods we buy from the United States, but it does not show that the condition is not a good condition, that the tariff is not a good tariff and in the interest of the country. The very fact that gentlemen opposite would not move to change any one of these items, is, I think, proof conclusive that the items are in their proper place on the free list, and when we buy more goods from the United States than we sell to them it is because it pays us to do so and because we cannot get the goods as cheaply or as satisfactorily in any other place.

Raw silk for manufacturers, mill stones, turpentine, wood and manufactured wood come in free to the extent of $6,000,000. That affects us very much in the west. We import a great deal of lumber from the United States and all rough lumber comes in free of duty. No one in that part of the country would think of reimposing the duty on lumber simply because lumber is a necessity for the settlers and the cheaper we can get it into that part of the country the better. So I think the criticism levelled against the tariff is not a fair or reasonable criticism, and, as I said before, I do not believe that even the men who make the criticism think that it is right; it is made only and altogether for political purposes.

My hon. friends from Qu'Appelle (Mr. Lake) and Lisgar (Mr. W. H. Sharpe) dealt to a limited extent with the Hudson bay railway. Their criticism was that the road was not being built fast enough. I may say to my hon. friends that they need not worry at all, that road is going to be built. The Prime Minister has stated that the road was going to be built and I would ask my hon. friends to point to a single instance where the present Prime Minister has stated that the government were going to undertake and carry out a great public work, in which they have not done so. He never makes a promise that he does not carry out. The criticism has been that it is taking too long, that this promise was made in 1908. I am as anxious as any member in this House to see that railway built, and built as early as possible. I believe that

railway will be a success, that the Hudson bay route will be a success, but it is not absolutely certain. I am free to admit that there is a certain amount of experiment about it, and if ever there was a case where a government was justified in taking every possible means, every measure it can, to get full information about a route, to get the road built in the proper place, and to have the terminals at the proper place, it is in connection with this Hudson bay road.

Mr. W. H. SHARPE. Have the government tried to find out anything in connection with this road?

Mr. TURRIFF. Yes, I am pleased to be able to answer my hon. friend that the government have been hard at work for the last year and a half finding out the best possible route to Hudson bay, ascertaining the best place to end the road, whether at Fort Churchill or Fort York. It is a matter of great importance to this country to ascertain where the road should go. They have surveyed both routes, and during the past summer they were engaged in finding out whether the harbour at Fort York would be as good a harbour as that at Fort Churchill. If the harbour at Fort York is a good and satisfactory port it would be shorter and would save millions of dollars.

I do not think there is going to be any delay by taking the proper precautions in the first place. A great deal of money may be saved in this way—the spending of $100,000 in the making of proper surveys may be the means of saving millions upon millions. We do not want to be in the same position as the Canadian Pacific railway is in to-day—for that company is spending $10,000,000 every year to change their route. Why, because, in the first place—and I am not throwing any blame on them now—the survey evidently was made hurriedly and not enough time, care or money was expended upon it. Had this mistake been avoided, millions of dollars would have been saved to-day. So, the government, I say, is amply justified in being careful to get full and absolute information. I do not believe for a moment that the right hon. Prime Minister or the government have any intention of delaying the building of that road. Why, even if the Hudson Bay route should not turn out to be as successful as we all hope it will, the road will pay for itself practically as a colonization road. I think we can all be proud of the fact that until you get away up into the polar regions there is no part of Canada in which you can build a road but it will make a traffic for itself. We have that proven by the Temiskaming and Northern Ontario railway which extends from North Bay northward to connect with the Grand Trunk Pacific. The building of the Grand Trunk Pacific through Ontario and

Quebec will have this result that you will have a new Quebec and a new Ontario that, in the years to come, will rival the older settled portions of these provinces. The same thing applies to the Hudson Bay railway. You talk about sixteen millions of acres of clay land in the province of Ontario—and remember that sixteen million acres is a whole lot of land. Right on the line of the Hudson Bay road towards either Fort Churchill or Fort York, the road will go through a clay belt greater in extent than all the land in cultivation to-day in the provinces of Manitoba, Saskatchewan and Alberta put together, which lands to-day are producing over 200,000,000 bushels of grain. There is a great extent of good land away north of Lake Winnipeg and on to Hudson bay. So, I say, the government is doing well in this matter, and hon. members opposite need not be a bit worried. That road is going to be built, and built as quickly as the government can find the proper place to build it. We shall soon know whether it is to be the great success we all hope it will be. I have no doubt about the matter, and I think that there can be very little doubt in the minds of any, of the ultimate success not only of the road but of the route. The road will afford us a much shorter route to the old country, it will afford us a better market and it will regulate freight rates. And so it will be a benefit not only to the west but to the eastern country as well. I am not going to take up more time. I congratulate the Minister of Finance (Mr. Fielding) on his budget speech, but I think it is even more to the point to congratulate the country on having a Minister of Finance who is able to give such budget statements as the hon. gentleman has been giving us for the last thirteen years. And I say, long may he be spared to Canada to give just such satisfactory budget speeches as he delivered to the House the other day.

On motion of Mr. Wilcox the debate was adjourned.

On motion of Mr. Fielding, House adjourned at 10.50 p.m.

HOUSE OF COMMONS.

WEDNESDAY, January 19, 1910.

The SPEAKER took the Chair at Two o'clock.

IMMIGRATION ACT AMENDMENT.

Hon. FRANK OLIVER (Minister of the Interior) moved for leave to introduce Bill (No. 102) respecting immigration. He said: This Bill, in amendment of the Act which was passed in 1906, is made necessary principally because of changes of condition that have occurred since that time. While the principles of the Act of 1906 are not altered by this Bill, the law is amended in its method of operation to meet the necessity of adopting active exclusion provisions along the international boundary. When the Act of 1906 was introduced, it was framed with a view of dealing with immigrants from overseas. Although it applied to immigrants from across the line, it was especially framed to meet the other conditions. Now, it has become necessary to make similar provision for the exclusion of undesirables along the three thousand miles of frontier between Canada and the United States that we formerly had carried out at the ocean ports. And, as the Act was drawn with a view to applying to the ocean ports, it is necessary that it should be amended in its definitions and operation so as to clearly and definitely provide for the exclusion of undesirables who arrive in Canada by rail or by road. There has also arisen, since the passage of the Act of 1906, the question of Asiatic immigration. And while in that respect the Act does not require much change, still it has been thought advisable to provide for effectively dealing with that class of immigration, not so much by the introduction of a new principle but to provide specific means for the enforcement of the existing principle. This Bill also provides for relieving the situation as it at present exists in which the government has to exercise an arbitrary authority in the exclusion of immigrants. This Bill provides that, under certain circumstances, a board of inquiry shall sit and decide on the merits of the cases brought before it, a record of each case being kept. When the existing law was introduced, it was not expected that there would be such an extensive enforcement of the exclusion provisions, and practically there was no machinery provided—authority was given and under that authority an order issued. This is felt to be an arbitrary method for this country, so it is deemed advisable that machinery should be provided for dealing with these cases, each case to be on record so that its merits may be understood by the public. While that provision is proposed, there is another which I place before the House now as being important. While we provide for a board of inquiry for the consideration of cases of proposed rejection at our ports or at the boundary line, we also make provision that, until an immigrant has been received into Canada—that is to say until he has passed our officers—he is not able to avail him-

self of the protection of the courts. In other words, until a man has actually and legally entered Canada, he is not entitled to claim the protection of the courts of Canada. I state this provision of the Bill clearly and thus early in the proceedings, that its merits—or demerits—may be understood and every opportunity afforded for discussion. If it does not meet with the approval of the House, of course the Bill can be amended in that particular.

Mr. HUGHES. That is, if an immigrant is stopped by one of our immigration officers at the border before entering Canada—

Mr. OLIVER. He would not have the right to appeal to the courts, but once he passes he is entitled to appeal to the courts. We believe that that is a reasonable and proper provision, and necessary for the better enforcement of the Act. So, while we are making provision on the one hand for a method of inquiry into each case, on the other hand we do not admit the immigrant to the protection of the courts until he has passed that inquiry.

Mr. HUGHES. And who will bear the cost of the appeal to the courts? The immigrant himself?

Mr. OLIVER. Provision is made in the ordinary way that if an immigrant appeals to the court he puts up a certain amount for expense, and if the appeal is successful any unexpended balance is returned to him.

Mr. MAGRATH. Is this the same Bill that was introduced last session?

Mr. OLIVER. To all intents and purposes the same. The provision of which I have just spoken was contained in the Bill of last year. In the interval we have taken advantage of the information gathered, and, we think, have made improvements in the wording of the Bill.

Motion agreed to, and Bill read the first time.

NAVIGABLE WATERS PROTECTION ACT AMENDMENT.

Hon. WM. PUGSLEY moved for leave to introduce Bill (No. 103) to amend the Navigable Waters Protection Act. He said: This Bill, if it becomes law, will repeal sections 4 and 5 of chap. 115 of the Revised Statutes of Canada. Let me read these two sections, after which I will state to the House what the changes are which are made by the substitution of the proposed new sections:

4. No bridge, boom, dam or aboiteau shall be constructed so as to interfere with navigation, unless the site thereof has been approved by the Governor in Council, nor unless such bridge, boom, dam or aboiteau is built and maintained in accordance with plans approved by the Governor in Council.

5. Any bridge to which this part applies, which is built upon a site not approved by the Governor in Council, or which is not built in accordance with plans so approved, or which, having been so built, is not maintained in accordance with such plans, may, in so far as the same interferes with navigation, be lawfully removed and destroyed under the authority of the Governor in Council.

It will be seen that section 4 makes provision for bridges, dams, booms, and aboiteau. It is a curious thing that it makes no provision for wharfs or other structures of that nature which might be erected in a navigable water although, by section 2, a work under this chapter is defined to include any bridge, boom, aboiteau, dock, pier, or other structure and the approaches or other works necessary appurtenant thereto. In the drawing of section 4, the work provided for in this section is limited in character to these four classes. Then section 5 curiously is limited to a bridge; it does not even include the other works mentioned in section 4. Another curious feature of these two sections is that they apply only to cases where these works interfere with navigation, and the question naturally arises and has arisen, as to who is to be a judge of what works interfere with navigation. By section 7 it is provided that the local authority, company or person proposing to construct any work in navigable waters, may file his plan and then if the plan is approved of he may proceed with the work.

The change which we propose making in the statutes is to extend the provisions of section 4 so as to include bridge, boom, dam, aboiteau, dock, pier or other structure of any kind. The new section also provides that if such a structure is to be erected in a navigable water the plans must be filed and the usual notice given and the application made to the Minister of Public Works.

Motion agreed to, and Bill read the first time.

RAILWAY ACT AMENDMENT—CONTROL OF CABLE RATES.

Hon. RODOLPHE LEMIEUX moved for leave to introduce Bill (No. 104) to control the rates and facilities of Ocean Cable Companies, and to amend the Railway Act with respect to Telegraphs and Telephones and the jurisdiction of the Board of Railway Commissioners. He said: Briefly this Bill is intended to bring under the control of the Railway Commission the cable companies and also the cable companies operating in

conjunction with the land telegraph lines of Canada. As the subject is rather a complex one I intend to prepare a synopsis of this and the following Bill and send them to the leader of the opposition (Mr. R. L. Borden) and then on the second reading of the two Bills I shall fully explain their purpose. Everybody is aware that the railway companies, the express companies, the telegraph and telephone companies are all placed under the control of the Railway Board and we intend to bring the cable companies also under that control.

Mr. HUGHES. Will it include Marconi wireless?

Mr. LEMIEUX. Yes, I intend to include under this Bill the wireless companies also. When this Act comes into force, the companies will have four months within which to file with the board their tariffs. In case there are difficulties in filing the tariffs that time may be extended but not to a greater time than one year.

Motion agreed to, and Bill read the first time.

TELEGRAPHS ACT AMENDMENT.

Hon. RODOLPHE LEMIEUX moved for leave to introduce Bill (No. 105) to amend the Telegraphs Act. He said: The same explanations as I have given in reference to the preceding Bill apply to this Bill.

Motion agreed to, and Bill read the first time.

QUESTIONS.

ANALYTICAL INDEX TO 'HANSARD.'

Mr. FOSTER:

What has been expended each year on the analytical index to 'Hansard' for preparation and printing, respectively, to whom has the amount for preparation been paid, and what number have been printed each year?

Hon. CHARLES MURPHY:

—	--	Printing.	Copies.	Preparation.	To whom paid.
		$ cts.		$ cts.	
1904-5	English	1,345 16	2,680	750 00	D. McGillicuddy.
	French	528 52	500	750 00	M. Sauvalle.

GRAND TRUNK PACIFIC ARBITRATION.

Mr. LENNOX:

1. Was the agreement re arbitration between His Majesty the King, represented by the Minister of Railways, and the Grand Trunk Pacific Railway Company, of date the 14th of May, 1909, and executed and forwarded by the company, ever submitted to the honourable Minister of Railways? If so, how and when?

2. Did this agreement come before the Transcontinental Railway Commission? If so, what action did the commission take in reference to it, and when?

3. Why was the agreement not accepted by the commission, and to what portions of it did the commission object?

Hon. GEO. P. GRAHAM:

1. There was no agreement, but one was suggested by the Grand Trunk Pacific Railway Company. A copy of the proposed agreement was not submitted to the minister. See sessional papers, pp. 17, 18, 19 parliamentary return 42a.

2. A copy of proposed agreement was submitted by Mr. H. D. Lumsden, May 15, 1909, who was advised that the execution of such an agreement was unnecessary, as the chief engineer of the Grand Trunk Pacific Railway Company and the chief engineer of the commissioners had already signed an agreement appointing a third arbitrator, and providing for the arbitration of the matters in dispute, as provided by the National Transcontinental Railway Act.

3. Answered by number 2.

GRAND TRUNK PACIFIC CLASSIFICATION.

Mr. LENNOX:

Referring to the memorandum re Hodgins, of the Chairman of the Commissioners of the Transcontinental railway, to the Prime Minister, of date the 23rd of April, 1908, in which he says: 'The Grand Trunk Pacific Railway Company make objections when they see fit and these are looked into at once with due care.' 1. Was the Chairman of the Commission, at the time of presenting this memorandum, aware of the existence of the letters of complaint and objection by the Grand Trunk Pacific Railway Company, through their assistant chief engineer, Mr. H. A. Woods, of the 7th October, 1907, October 8, 1907, November 4, 1907, February 4, February 20, 1908, March 24, 1908, and March 30, 1908?

2. At the date of said memorandum, had the matters of complaint referred to in Mr. Woods' letters, or any of them, been carefully and fully looked into or looked or inquired into at all by or on behalf of the commission? If so, when, how, by whom, to what extent, and with what result?

3. If not, what was the meaning of the chairman's statement?

Mr. GRAHAM:

1. Yes.

2 and 3. The objections of Mr. Woods as stated in his letter of October 7, 1907, were investigated by Chief Engineer Lumsden, of the commission, assistant Chief Engineer Woods and Inspecting Engineer Armstrong of the Grand Trunk Pacific Company, and the district and other engineers of District 'B.' October 25, 1907, and resulted in disclosing a difference of opinion between Chief Engineer Lumsden and his staff as to the interpretation of the classification clauses of the specifications, which subsequently resulted in Chief Engineer Lumsden modifying and correcting his interpretation of these clauses of the specifications in January, 1908, all of which is fully set forth in the report of the special committee appointed to investigate the charges of Major Hodgins. Mr. Woods' letters October 8, to March 24, inclusive related to the same matters as were covered by his letter of October 7, and the engineers in District 'B,' advised Chief Engineer Lumsden that the classification in that district was in conformity with his interpretation of the specifications dated January, 1908. Investigation of the classification could not proceed during the winter months, consequently further investigation was deferred by Chief Engineer Lumsden until April 24, 1908, when he wrote Assistant Chief Engineer Woods of the Grand Trunk Pacific Company with respect to arbitration of matters in dispute.

GRAND TRUNK PACIFIC PROGRESS ESTIMATES.

Mr. LENNOX:

1. In district 'A' of the Transcontinental, on contract No. 1, mile 0 to mile 50, from Moncton, the Grand Trunk Pacific Railway contractors, what amount has been claimed, and paid respectively, on progress estimates returned under the headings of solid rock, loose rock and common excavation, since the 31st day of December, 1908?

2. What total amount has been claimed and paid respectively, since said date?

3. The same information is asked as to contract No. 2, mile 50 to 58, from Moncton, J. W. McManus & Company, contractors; contracts numbers 3 and 4, mile 58 to 164, from Moncton, the Grand Trunk Pacific Railway Company, contractors; contract number 5, mile 164 to 195, from Moncton, the Willard Kitchen Company, Ltd., contractors; and contract number 6, mile 195 to 255, from Moncton, Lyons & White, contractors.

Mr. GRAHAM:

There is no record of amounts claimed by the contractors, but the amounts returned by the engineers, under the terms of the respective contracts, and paid by the commissioners, are as shown on the annexed statement.

THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY.

AMOUNTS returned by Engineers and paid on Progress Estimates under the headings of Solid Rock, Loose Rock and Common Excavation, from December 31, 1908 to January 13, 1910; also total amounts so returned and paid during same period.

DISTRICT 'A.'

Contract Number.	Name of Contractor.	Solid Rock.	Loose Rock.	Common Excavation.	Total Amount Paid.
		$ cts.	$ cts.	$ cts.	$ cts.
1	Grand Trunk Pacific Railway	49,963 50	294,851 21	10,176 30	894,732 22
2	J. W. McManus & Co.	26,500 50	12,971 25	1,053 68	153,227 55

GRAND TRUNK PACIFIC—ENGINEER'S COMPLAINTS.

Mr. LENNOX:

Did the commissioners of the Transcontinental Railway take any measures to ascertain whether the complaints of Engineers Huestis, Doucet and Poulin, against the action and proceedings of the arbitrators, Messrs. Schreiber, Kelliher and Lumsden, were well founded before passing the resolution of June 25, 1909, or before sending the commissioners' letter of protest, inclosing the resolution to these arbitrators on that day? If so, what measure and investigation did the commission take and institute?

Mr. GRAHAM:

The reports referred to were confirmatory one of the other, and were further confirmed in part by verbal statements made by Mr. Lumsden and Mr. Schreiber.

INTERCOLONIAL DERAILMENTS.

Mr. TALBOT:

1. How many derailments have taken place over the Intercolonial Railway during the year 1909?
2. At what points of the railway did each of these derailments take place, and at what dates?
3. Was a regular inquiry made in each case?
4. Has a report been made in every case? If so, is the cause or causes mentioned in such report?

Mr. SPEAKER. Stand as a notice of motion.

BEAUHARNOIS CANAL LEASE.

Mr. MONK:

1. Is the lease of the Beauharnois canal from the government to Messrs. McIntyre & Robert still in force?
2. Has the amount of the lease been paid regularly? If not, since when, and does the government intend to exact payment?
3. Are the obligations of the lessees carried out according to the lease?
4. Have the company, the lessee, spent $60,000 for repairing canal banks, bridges, &c.?
5. Has the said company spent $20,000 a year as per lease, besides special work of $60,000 mentioned above, for keeping canal in good condition for navigation?
6. Are all the bridges in good order and kept at the disposal of farmers, according to lease? If not, why not?
7. Is the government aware that some bridges are said to have been out of use for nearly two years?
8. Is it the intention of the government to remedy such a state of things alleged to exist?

Mr. GRAHAM:

1. Yes.
2. Yes.
3. Yes, except as to the operating of bridges over lock No. 3 and lock No. 6.
4. No, not up to the present time.
5. No stipulation in the lease as to the spending by the company of a sum of $20,000 a year. The amount actually expended for staff and repairs for the calendar years 1908 and 1909 is $34,234.54.
6. All have been kept in good working order except those mentioned in answer No. 3.
7. Yes, the bridge over lock No. 3, which has not been in operation since the summer of 1908. The bridge was past repairing and the company did not see fit to go to the expense of providing a new one.
8. Yes, it is the intention of the government to compel the company to live up to the conditions of the lease.

GOVERNMENT ANNUITIES ACT.

Mr. FOSTER:

1. What has been the cost of administration of the Government Annuities Act for the fiscal year 1909-10, under the following heads: (a) Salaries at Ottawa and to whom paid; (b) Lecturers and agents, salary and expenses, respectively, and to whom paid, giving the number of meetings addressed by each lecturer; (c) Interest cost, counting the effective rate of interest paid on the government loans in that year as 4½ per cent?
2. How much has been received to end of year from purchase of annuities, and in what way has the money been invested?

Sir WILFRID LAURIER:

1. (a) From April 1, 1909, to December 31, 1909:

S. T. Bastedo	$2,999 97
E. G. Blackadar	1,199 97
Margaret McKain	533 28
Helen Houston	486 07
M. E. Fleming	374 94
Caroline Blair	374 94

(c) The total amount received on account of the purchase of Canadian government annuities up to and inclusive of the 31st December, 1909, was $371,174.70, which amount includes payments on account of the purchase of both immediate and deferred annuities. From this amount and the interest which the payments have earned at 4 per cent, the sum of $7,103.15 has been paid to immediate annuitants, such payments including a return to the purchaser of a portion of his purchase money. After deducting this sum of $7,103.15, there will be carried to the credit of interest account on the whole fund up to the 31st March, 1910, the sum of $9,563.71. This amount will, however, be increased by the interest on the payments received from 1st January, 1910, to the 31st March. The amount of purchase money increases with interest accumulations, and decreases as annuities are paid. The rate of interest paid on annuities account is 4 per cent compounded. In addition, deferred annuitants will be credited with the difference between the 3 per cent which may be returned to the estates of persons dying before their annuities fall due and the 4 per cent with which their payments had been credited for the purchase of annuities, so that the annuitants who survive to draw their annuities will have at their credit not only the sum which their own payments improved at 4 per cent compound interest will amount to, but an additional amount of about one-quarter per cent from the mortality benefits referred to.

2. The total amount received on account of the purchase of annuities to date, up to and inclusive of the 19th January, is $413,-510.40. Moneys are at present deposited to the order of the Receiver General, and are not treated as a separate fund. The Act so provides.

Sir WILFRID LAURIER.

SALES OF LAND FOR HUDSON BAY RAILWAY.

Mr. FOSTER:

1. How many acres of land have been sold to date on account of Hudson Bay Railway construction?

2. What amount of money has been paid in thereon and how has this been invested?

Hon. FRANK OLIVER:

1. No land has been sold on special account of Hudson Bay railway construction.

2. 4,106,560 acres have been sold as purchased homesteads and pre-emptions up to 31st December, 1909. Payments on purchased homesteads, $278,006.62; payments on pre-emptions, $118,107.86, exclusive of entry fees.

SCRIPS TO SOUTH AFRICAN VETERANS.

Mr. FOSTER:

1. How many South African Veterans' scrips have been issued to date, and covering how many acres of land?

2. How many of these still remain in veterans' hands, and covering how many acres of lands?

Mr. OLIVER:

1. 6,678, covering 2,136,960 acres.

2. Up to 31st December, 1909, (January returns being incomplete), there have been located 2,748 land certificates, covering 879 360 acres. Leaving in the hands of the veterans or their substitutes 3,930 certificates, covering 1,257,600 acres.

PURCHASE OF WAR VESSELS FROM BRITISH ADMIRALTY.

Mr. FOSTER.

1. What orders in council have been passed authorizing the purchase of war vessels from the British admiralty, at what dates, and for what vessels?

2. What vessels have been contracted for or purchased, at what dates and prices?

3. On the authority of what appropriation by parliament have the negotiations, orders and contracts been made?

Sir WILFRID LAURIER:

1. One order in council was passed dated the 22nd November. 1909, authorizing the purchase of a vessel of the 'Apollo' type, for protection of fisheries on the Pacific coast.

2. Negotiations are proceeding for the purchase of such a vessel, subject to the approval of parliament.

3. The vessel purchased as stated in No. 1, was so purchased under the fisheries protection vote in which $250,000 was provided for a new fisheries protection vessel in British Columbia.

REGIMENTS OF GARRISON ARTILLERY.

Mr. BARNARD:

1. How many regiments of garrison artillery are there on the force of the militia, exclusive of the permanent force?
2. How many in the permanent force?
3. How many companies are there in each regiment?
4. What is the strength of each regiment?
5 (a) What are the respective stations of the different regiments, and (b) what fortresses are manned by them?
6. What is the fixed armament of each fortress?
7. What is the movable armament of each fortress?
8. What place was taken by the different companies of the 5th regiment C. A., as compared with companies of other regiments, at the last firing competition of fixed guns?

Mr. OLIVER (for Minister of Militia and Defence):

1. Seven.
2. One.
3 and 4.

	No. of Companies.	Strength
Royal Can. Garrison Artillery	5	690
1st Halifax Regiment.....	4	513
2nd Montreal Regiment....	3 (batteries)	355
3rd New Brunswick Regiment....	3 "	355
4th P.E.I. Regiment..	3	355
5th B. C. Regiment	3	389
6th Nova Scotia and Levis Regiment.....	3	374
7th Nova Scotia Regiment.	4 (batteries)	396

5 (a). 1st Regiment Garrison Artillery Peace Station, 4 companies, Halifax.

5th Regiment Garrison Artillery Peace Station, 3 companies, Esquimalt.

6th Regiment Garrison Artillery Peace Station, 3 companies, Quebec and Levis.

(b). It is not in the interest of the public that an answer should be given to the latter half of this question.

6 and 7. It is not in the interest of the public that this information should be published.

8. Garrison artillery regiments do not compete against each other, but companies of each regiment compete amongst themselves.

5TH REGIMENT CANADIAN ARTILLERY.

Mr. BARNARD:

1. Has any dissatisfaction been expressed to the department or any complaint made by any officer of the 5th Regiment of Canadian Artillery or by the D.O.C. 11th Military District, in connection with the addition to the armouries at Esquimalt of the battery of 12 pr. B.L. guns, recently sent there, or in connection with the proposal that No. 1 or any other company of the 5th Regiment is to train on these guns?
2. If so, what is the nature of the complaint or cause of dissatisfaction, and by whom and when was such complaint made?
3. Will horses be required for the use of the battery? If so, how many?
4. At whose expense are the horses to be supplied, and who is to bear the expense of maintenance of them?
5. Is the present strength of the 5th Regiment Canadian Artillery considered sufficient to man the fortress at Esquimalt and also to operate the above guns?
6. Is it the intention of the government to authorize the enrolment of another company in the said regiment?

Mr. OLIVER:

1. An application has been made by the district officer commanding military district No. 11 in connection with the training of this regiment.

It is not considered desirable to make the change he asks in the scheme of training, and the district officer commanding will be so informed.

2. Answered by No. 1.
3. Yes; 25 horses, on such occasions as it may be necessary to horse the guns.
4. Under the usual conditions and terms of military training.
5. Yes.
6. No.

MAIL PRIVILEGES UNDER POSTAL REGULATIONS.

Mr. C. A. WILSON:

Referring to Rule 119 of the Postal Regulations, which reads as follows:—'Members of either the Senate or House of Commons may, during the recess of parliament, send by mail free of Canada postage, all papers printed by order of either House; and members of the legislature of any one of the provinces of the Dominion may in like manner send by mail, free of Canada postage, all papers printed by order of such legislature,' does it authorize the persons therein mentioned, to send by mail during recess, from their office or private residence, free of Canada postage, all documents therein mentioned?

Hon. R. LEMIEUX:

Yes, in so far as the documents mentioned in the regulations in question are concerned.

LIFE BOAT AT SEAL COVE, N.B.

Mr. DANIEL:

1. What is the present condition of the lifeboat at Seal Cove, New Brunswick?
2. How often has it been inspected since it was placed in service, and by whom?
3. When was it last inspected, what was the nature of the inspection, was it inspected in the water as well as out, and what was the report of the inspector?
4. When was this boat placed in service, how many drills have been held with this boat since its purchase, what are the dates

of such drills and the length of time occupied in each drill, and who composed the crew or crews of each of those drills?

5. What amount of money has been paid to the crew or crews of this boat for drills for each year to December 31, 1909.

Sir WILFRID LAURIER:

1. Good.

2. Six times: Once by Captain Bloomfield Douglas; five times by S. C. Campbell, inspector of life-saving stations.

3. November 27, 1909. Inspected out of water. Boat and gear in good condition.

4.

Mr. DANIEL:

1. Has any report been received by the government or the Department of Marine and Fisheries from the person or persons appointed to investigate the lobster fisheries during the past summer? If so, when will such report be available for the members of this House?

Sir WILFRID LAURIER:

The intention was that the report of the commissioner and the evidence adduced by him would be for the use of the Special Standing Committee on Marine and Fisheries. The report will be ready for the committee when it convenes.

MOTIONS AGREED TO WITHOUT DISCUSSION.

Return showing in the construction of drill halls or armouries, or the leasing of sites for camps of instruction, in how many and what instances municipalities, regiments, or individuals, have contributed to the cost of the same in the way of concessions, sites, or moneys, and the amount in each case since 1904.—Mr. Worthington.

Return showing: 1. All amounts which may be deducted from the allowance due officers commanding corps of the active militia to cover deficiencies in clothing, &c., deposited to the credit of the receiver general of consolidated revenue.

2. The amount of money that has been received from officers commanding corps of active militia during the five years ended 31st March, 1909, in payment for clothing issued to such corps, including deductions from allowances to cover repayment to replace deficiencies.—Mr. Worthington.

Return showing what tenders were called for in all cases by the Department of Militia for the manufacture of tents during the five years ended 31st March, 1909; what public advertisements were published calling for such tenders, and in what places and in what newspapers such advertisements were published; from whom tenders were received, and the amounts thereof.—Mr. Worthington.

Return showing what tenders were called for by the Department of Militia for harness and saddlery during five years ended 31st March, 1909; what public advertisements were published calling for such tenders, and in what places and in what newspapers such advertisements were published; from whom received, and the amounts thereof.—Mr. Worthington.

Copy of all correspondence between the government, or any member thereof, and the Imperial South African Service Association, or any of its officers, in reference to a proposed military reserve to be formed by the members of the Imperial South African Veterans' Association.—Mr. Macdonell.

Copy of all declarations, affidavits and solemn declarations made and sent to the Post Office Department, or to the honourable the Postmaster General, since the first day of September, 1907, up to the fifteenth day of January, 1910, respecting the franking privilege asked for the Arthabaska 'Gazette,' with copies of the lists of pretended subscribers to that newspaper with the said declarations, affidavits and solemn declarations; also a copy of the report of Mr. A. Bolduc, post office inspector, respecting the said Arthabaska 'Gazette.'—Mr. Lavergne.

Copy of all letters, telegrams, petitions and other correspondence in connection with the establishing of a post office to be named Charleston or Kelmont, on the south side of the Assiniboine river, in the parish of St. Charles, province of Manitoba?—Mr. Staples.

Copy of all papers, letters, telegrams, documents and correspondence, occurring during the first six months of 1908, in connection with suggested amendments to the Northwest Irrigation Act.—Mr. Magrath.

Copy of all papers, letters, telegrams, documents and correspondence in connection with the establishment of the experimental farm near Lethbridge, Alta.—Mr. Magrath.

Return showing: 1. The amount of Canada's copper, silver and gold coinage respectively, for each of the last ten years, and the cost and profit of each year's coinage, counting the interest and depreciation of the cost of the Canadian Mint at 6 per cent, and the cost of maintenance and staff for the years during which it has been in operation.

2. The amount of United States silver, and at what cost that has been deported each year, and the estimated amount of United States silver current in Canada from year to year. —Mr. Foster.

Return showing: 1. How much money has been paid by this government from 1896 to the present time to the firm of Sullivan & Langdon, contractors, of Kingston, or to Mr. Sullivan, contractor, Kingston.

2. What public buildings or other public works that have been let by contract to either of the above firms since 1896, the contract price in each case, and the total amount paid to the said contractors in each case.

3. The total cost of each building or public work in which either of the above mentioned firms was interested.—Mr. Edwards.

Return showing how much money has been paid by this government in each year from 1896 to 1909, both years included, to the firms of Elliott Bros., and of R. Carson, of Kingston, Ontario, for supplies furnished to, or services of any kind performed by the government.—Mr. Edwards.

Return showing all tenders called for by the Department of Railways and Canals, or the purchasing agent of the Intercolonial railway at Ottawa, at any time during the year 1909 for wire fencing; a copy of any tenders received for such fencing, with the names of the tenderers, and the prices quoted by the said parties tendering for the different kinds of fencing; the names of the successful tenderers, and the particular kind of fence bought, the gauge of wire, number of strands and distances apart of the brackets in uprights; the price per rod, and where the wire was manufactured.—Mr. Wilcox.

PARTY PATRONAGE.

On the order:

That in the opinion of this House the prevailing system of party patronage constitutes a menace to honest and efficient government, incites to great waste of resources and extravagance of expenditures, tends inevitably to corrupt and lower the tone of public

morals, and should forthwith be eliminated from our federal administration.

Mr. FOSTER. Mr. Speaker, I gave notice that I would move that to-day, but at the request of the Hon. Minister of Finance (Mr. Fielding) I will not move it to-day, but next Wednesday if it be reached.

Mr. SPEAKER. Stands.

MANITOBA FISHERIES COMMISSION.

On the orders of the day being called:

Mr. CAMPBELL. Mr. Speaker, I want to ask a question of the right hon. First Minister (Sir Wilfrid Laurier), but as I would like to say a few words, perhaps I will be pardoned if I rise to a question of privilege instead, my excuse for doing so being the statement of the right hon. First Minister to me the other day that I was somewhat out of date. It is in regard to the report of the fisheries commission. The right hon. gentleman took exception to my calling it a report, and told me when I called it a report that I was out of date. But the right hon. gentleman, in several parts of his speech, called it a report; so that if I was out of date, he must not make fish of one and fowl of another.

Sir WILFRID LAURIER. I am glad that I was in good company.

Mr. CAMPBELL. I am glad to know that the Prime Minister thinks he was in good company. I estimate it at the same value as himself. He was absolutely out of date, and I will prove it from his own words. He said that the report had been signed by two commissioners and sent to a third for approval and signature. He was absolutely out of date when he said so as he will prove if he lays the report before the House. It is signed by the three commissioners who are existent to-day. There were three commissioners appointed in the first place, one of them resigned because he was appointed to a judgeship, and after the resignation a third commissioner was appointed in the place of the commissioner who had resigned to accept a judgeship. The three commissioners came here together, spent a week or ten days, made a report, presented that report, that report has been printed, and all I ask is that the report as printed and signed by the three commissioners be brought before the House. May I not suggest to the First Minister that I have a right to ask for that, and that I have a right to have it brought down. It must be authentic if it is signed by the three existing commissioners. When I ask for this report, I want the First Minister to understand that I am not here in a spirit of joshing at all, but that I am here in deadly earnest. This report refers to people in my county. The Minister of Marine and Fisheries (Mr. Brodeur) last year promised me that he would have those commissioners inquire into matters that are of great interest to some of my constituents. For instance, one man has sent an affidavit to the effect that he worked for the men who had these closed leases granted by this government, and when he wanted to sell his fish to an outside buyer, the government officials forbade him to do so, although the lease holder offered him only $8 per ton while the outside buyer offered $140 per ton. Even at that the lease holder has not paid the man and now owes him $800. This unfortunate position is entirely owing to the interference of the government officials, as otherwise he would have sold to the outside buyer. Will the government protect that man and others who are in the same box? We take the position in the west that Canada is not in a hurry to get rid of her output of fish, she ought not to be in a hurry to deplete her lakes for the benefit of the United States markets. It costs us nothing to keep the fish in those lakes, and I think it is in the interests of the people of Canada, until such time as Canada requires that fish, not to have these lakes depleted. Would the Prime Minister give me the report so that I may see it?

Sir WILFRID LAURIER. When my hon. friend (Mr. Campbell) the other day charged me with not being up to date I must say that I somewhat resented the imputation. Of course I am an eastern man and I cannot expect to be up to the standard of western men, but I try to be, I do my best, and when the hon. member charged me with not being up to date in the new department which it is my misfortune to administer just now owing to the illness of the Minister of Marine and Fisheries, I sent for the papers and looked them over. I found that a commission was appointed consisting of Messrs. Metcalfe, Reid and Professor Prince, the government fishery inspector. They were to investigate the four lakes in Manitoba and the Northwest, Lac du Bonnet, Lake Winnipegosis, Lake Manitoba and Lake Winnipeg. I found a report prepared and ready for publication concerning Lac du Bonnet which was investigated by the three commissioners I have named. I understand that after this report was prepared Mr. Metcalfe was appointed a judge. I have not yet found whether he resigned or not, but it was thought that his new duties were not compatible with the exercise of his functions as a judge and a new commissioner was appointed, Mr. Hogg. Mr. Hogg and the two remaining commissioners have been investigating the three other lakes. The report concerning Lac du Bonnet is printed, but the original of it has not been signed by Judge Metcalfe. It has been sent to him for signature. I have looked into the report and can see no rea-

son why it should not be brought down. The same remark applies to the interim reports on the other lakes. This morning I called on my colleague who, I am glad to say, is better and could talk business, and I suggested to him that I saw no reason why these reports should not be brought down for the satisfaction of my hon. friend and his friends. My colleague saw no reason why the reports should not be brought down and they will be presented to-morrow morning.

Mr. FOSTER. Now you are up to date.

INTERNATIONAL FISHERIES REGULATIONS.

Mr. HENDERSON. I would remind the right hon. leader of the government (Sir Wilfrid Laurier) that on Friday last he promised to give me an answer on Monday as to the report of Professor Prince and Dr. Starr Jordan with regard to the regulations that were being prepared concerning fishing in international waters.

Sir WILFRID LAURIER. I have looked into the matter and I find that the regulations have been made, but there was an agreement that they should be published simultaneously in Washington and Ottawa. We are communicating with Washington now to have them brought down. We are pressing the matter. I sent a new despatch to-day.

UNITED STATES MINIMUM TARIFF.

Mr. FOSTER. I notice in the press that President Taft has issued a proclamation or made known his view with reference to the relation of certain countries to the United States as regards the minimum tariff. Amongst those mentioned as being subject to the minimum tariff is Great Britain. Does the Prime Minister know whether that includes Canada or not? I take it that it does.

Sir WILFRID LAURIER. I take it so, but I would rather my hon. friend would put the question when the Finance Minister is in his seat.

INTEREST ACT AMENDMENT.

House again in committee on Bill (No.73) to amend the Interest Act.—Mr. Miller.

On section 1,

Mr. MILLER. When we were in committee to consider this Bill some objection was made to the wording and its consideration was deferred until some amendment might be considered. I have now to move to add this provision:

Provided, however, that nothing in this section contained shall restrict the rights of any mortgagor to repay any overdue principal or interest, whose rights to pay the same have not been affected by any contract by him entered into.

I think this amendment will get over the difficulties suggested by the Minister of Public Works (Mr. Pugsley).

Mr. FOSTER. I have not been able to look into this. What is the result of the section, when carried?

Mr. MILLER. It provides that overdue principal upon a mortgage may be repaid at any time by the mortgagor upon giving one month's notice of his intention to pay or by paying one month's interest by way of bonus.

Mr. FOSTER. That is, it nullifies any agreement between the borrower and the lender made at the time the mortgage is given as security, and without consulting the wish or will of the lender?

Mr. MILLER. It provides that he cannot demand more interest in case of the money having been tendered or the notice given.

Mr. NORTHRUP. Is provision made in the Bill to meet the case of a mortgagor giving a month's notice but not fulfilling his notice? I have known that case to occur frequently, and it is a hardship to the mortgagee, who, on receiving notice, makes arrangements to reinvest his money, which arrangement he is prevented from carrying out.

Mr. MILLER. It is not necessary, because it is in the hands of the mortgagee to penalize the defaulting mortgagor. He may, if he chooses, take action to enforce the covenant.

Mr. NORTHRUP. But he may not wish to penalize. He may not wish to throw costs on the mortgagor. At the same time he does not like to be disappointed in making the investment he has promised.

Mr. MILLER. He would be in the same position as though he had taken a mortgage for five years and the mortgagor had notified him, before the maturity of the mortgage, that he would repay it, yet fails to do so.

Mr. NORTHRUP. In other words, two wrongs are to make a right.

Mr. MILLER. I do not think that applies.

Mr. CARVELL. I think that if the hon. member (Mr. Northrup) will read the section carefully, he will find that it provides that the mortgagor must pay or tender as well as give the notice. Therefore, it is in the hands of the mortgagee to accept it or not.

Mr. ALEXANDER HAGGART. It appears to me that this is of very doubtful

benefit to the borrower. It can easily be got around by the mortgagor. As the mortgage becomes due he presses for payment of a renewal. If the mortgagor is not ready to pay, he gives a renewal which costs $5 or $10, and then mortgagee and mortgagor are back in the same position as before. I agree with what has been said by the Minister of Justice (Mr. Aylesworth) that this is a class of legislation very frequently brought before the House and often enacted, but of very little use to the parties whom it is expected to benefit. I think that is the experience of all practitioners.

Mr. MILLER. I am sorry that the hon. gentleman (Mr. Alexander Haggart) was not in his place the other evening when the Bill was under discussion. I think that in practice, when a mortgage matures, if it is permitted to continue in arrears, it must be by the consent of the borrower and the lender. The mortgagee will usually permit the money to remain in arrears until the time comes when he may call it in and lend it at an advanced rate of interest. He takes the mortgagor at that much of a disadvantage, and the mortgagor must then pay him the increased rate of interest or go some place else and borrow the money at a higher rate. If the effect of this legislation is to make the parties at the maturity of a mortgage, enter into a renewal agreement, it has the advantage of putting both parties on an equal footing, and each can take his chance whether the rates go up or down.

Mr. ALEXANDER HAGGART. Look at the expense and trouble.

Mr. MILLER. Usually, in practice, there is little or no expense as most of the loan company mortagees, at least in the province of Ontario, are sufficiently willing to retain their investment, to renew the mortgage by agreement without charge. There is sometimes a charge, rarely more than $5 and usually only $2 or $3.

On section 2—application of sections 6 to 10.

Mr. FOSTER. What is the effect of this?

Mr. MILLER. If the hon. member (Mr. Foster) will look at the section, he will find that this is absolutely necessary. Section 11 of the Act says that the provisions of the five sections last preceding shall apply only to moneys so secured by mortgage executed after 1st July, 1880. The legislation I seek to carry to-day is not retroactive, and I am slipping in section 10a immediately before section 11, and still making section 11 apply to the sections to which it was intended to apply, but it would be absurd to make it apply to the new section I am putting in.

Bill, as amended, reported.

Mr. ALEX. HAGGART

CO-OPERATIVE SOCIETIES.

On the order:

Second reading of Bill (No. 26) respecting Co-operative Credit Societies.—Mr. Monk.

Mr. GEO. TAYLOR. The promoter of this Bill, who is laid up ill, has requested me, on account of another Bill that is on the Order Paper and will be moved, to move this.

Sir WILFRID LAURIER. Several hon. members want to speak on this Bill.

Mr. GEO. TAYLOR. If it stands, the similar Bill of my hon. friend from Brantford (Mr. Harris) should stand also.

Sir WILFRID LAURIER. I do not know how it has been arranged. What applies to one should apply to the other.

Mr. SPEAKER. Stand.

RAILWAY ACT—AMENDMENT.

On the order:

Second reading of Bill (No. 53) to amend the Railway Act.—Mr. Meighen.

Mr. MEIGHEN. At the present moment, I would request that this Bill be allowed to stand. If it be in accordance with the rules, I would suggest that other orders be called and this one taken up a little later.

Sir WILFRID LAURIER. All right.

Mr. GRAHAM. If it stands only while one or two of these orders are dealt with, that will not help me out of my difficulty.

Mr. FOSTER. Is the minister in difficulty again?

Mr. MEIGHEN. I simply ask that it stand until such time as we can complete the negotiations that are pending.

Mr. GRAHAM. Better go on with it.

Mr. MEIGHEN. I move the second reading of this Bill.

Mr. GRAHAM. This is where we differ a little. This Bill and one from my hon. friend from Montreal (Mr. Martin) and one from my hon. friend from East Toronto (Mr. Macdonell) are Bills which materially affect the railway companies, and these companies have requested that the Bills be sent before some committee where the companies can be heard. In the case of the other Bills, with the consent of the promoters they were sent to the Railway Committee where they will be dealt with by special sub-committees. My hon. friend from Lincoln (Mr. Lancaster) has two Bills before special committees now. Once these Bills go before the Railway Committee, that committee will appoint a sub-committee to deal with them. Any committee we would select here would probably consist

of members of the Railway Committee. My hon. friend perhaps does not quite understand that there are 180 members on the Railway Committee.

Mr. MEIGHEN. The ground of my objection is this, that the Bill is in the nature of an amendment to a public Act and is in no sense a private Bill, and therefore should not go to the Railway Committee at all, but go before the Committee of the Whole House in the usual way. I am quite aware that other Bills, perhaps of a similar nature, proposed by hon. gentlemen opposite, have gone to the Railway Committee and thence to special committees, and I believe also that one introduced by the hon. member for Lincoln met the same fate.

Mr. GRAHAM. And South Toronto.

Mr. MEIGHEN. I do not think that the Bill of my hon. friend from Lincoln went from this House to the Railway Committee with the consent of the mover. If the principle prevails, that amendments to public Bills should come before the Committee of the Whole House, there is no reason for sending this Bill to the Railway Committee. I am quite aware that this Bill affects railway companies and affects them very materially, but it is a Bill of a public character and there is nothing in it to affect one company more than another. It deals simply with the principle of liability, and I do not see how a subcommittee of the Railway Committee is better fitted to deal with it than the Committee of the Whole House. The principle involved is that of liability, and the Committee of the Whole House is clearly the one to discuss a principle of that sort. If it were a question of incorporating or limiting the powers of a company, the case would be different, but that is not the character of the Bill. If this Bill goes to the Railway Committee and then to a subcommittee, it will be likely to be very successfully steered outside of this session. I am very anxious such should not be the case. If the Minister of Railways will consent to the Bill going to the Committee of the Whole, I shall be willing to oblige him and wait until it is called again, but I do not want to be a party to shunting the Bill as it is likely to be if referred to the Railway Committee.

Mr. GRAHAM. I have no desire to shunt the Bill to one side at all. I have in my make-up a good deal of fairness, and no matter what may be my own opinions, I think that those who are to be affected by legislation should be given an opportunity to express their views before we adopt it. Strictly speaking all these Bills should go to the Committee of the Whole House, and not to the Committee of Railways or a sub-committee of that body at all; but when those deeply interested say they want an opportunity to be heard, I feel I ought to try and meet their views. My hon. friend from South Toronto has a Bill regarding commutation of tickets, and he consented readily to have it go before the Railway Committee where all parties might be heard. My hon. friend from Lincoln (Mr. Lancaster) has one which is largely a legal question, and he arranged with me, before the Bill came up, that it should go to a committee. We had some little difficulty as to the outcome but I said to him, as I say to my hon. friend, that the object was not to detain the measure at all, but rather to expedite it. I do not think that we are in a position to discuss these Bills fairly until we hear the other side.

Mr. MEIGHEN. With regard to the Bills referred to, I heard my hon. friend from Lincoln (Mr. Lancaster) protest vigorously against his Bill being sent to a committee. The position I take this afternoon is endorsed by my hon. friend. It was he who suggested it. As regards the Bill introduced by the hon. member for South Toronto (Mr. Macdonell), it is on a subject of quite a different character. It affects the details of the management of the road regarding which the companies should be heard, but this Bill simply affects the principle of liability of railway companies in the event of loss, which is a matter this House ought to deal with in Committee of the Whole. I do not want the Minister of Railways to take it as an act of discourtesy on my part that I object to the reference to the Railway Committee. I object because I believe that means delay. I do not believe that the railway companies have any right to be heard on a question of general public policy. I move therefore that the House resolve itself into a Committee of the Whole on the said Bill.

Mr. GRAHAM moved in amendment that the Bill be referred to the Standing Committee on Railways, Canals and Telegraph Lines.

Motion agreed to.

CANADA SHIPPING ACT AMENDMENT.

Mr. EDWARDS moved the second reading of Bill (No. 74) to amend the Canada Shipping Act. He said: Mr. Speaker, this is precisely the same Bill that I introduced in the House last session. At that time the Bill was brought down too late to receive the consideration it would other-

wise have received. It is a very simple Bill, its object being merely to place vessel owners of the province of Ontario on a parity with vessel owners of the other provinces with reference to pilotage dues at Montreal. The amendment proposed has been the subject of negotiations between the Ontario government and this government and has also been the subject of very frequent representations on the part of the Dominion Marine Association which represents practically all the vessel owners on the great lakes. Sec. 477 of the Canada Shipping Act discriminates against Ontario vessels in a manner which I do not think is warranted or justifiable. That section reads as follows, speaking of ships exempt from pilotage dues:

(a) Ships belonging to His Majesty;
(b) Ships wholly employed in His Majesty's service, while so employed, the masters of which have been appointed by His Majesty's government, either in the United Kingdom or in Canada;
(c) Ships propelled wholly or in part by steam;
(i) Employed in trading from port to port in the same province, or
(ii) Employed in trading between any one or more of the provinces of Quebec, New Brunswick, Nova Scotia, or Prince Edward Island and any other or others of them, or
(iii) Employed in voyages between any port or ports in the said provinces or any of them and the port of New York, or any port of the United States of America on the Atlantic north of New York, or
(iv.) Employed in voyages between any port in any of the said provinces and any port in Newfoundland, or
(v.) Having a draught when loaded not exceeding 16 feet, and employed exclusively in voyages between any port or ports on Lake Ontario, Lake Erie, Lake Huron, Lake Superior, Lake Michigan, or on any of the waters connecting those lakes and any port or ports on the River St. Lawrence, or between any ports on the River St. Lawrence.

Prior to June, 1908, subsection 5, the last section I have read, granted exemption to vessels with a draught, when loaded, not exceeding 16 feet and employed exclusively in voyages between any port or ports on the Great Lakes and the rivers connecting them and any port or ports on the St. Lawrence or between ports on the St. Lawrence. But this partial exemption was denied by the repeal of that subsection in 1908, while at the same time the vessel owners of Ontario were urging and earnestly asking to be placed on a parity with those of the other provinces. I ask the House to fairly consider this matter. It is one which affects very large interests. There is hardly a county in the province of Ontario which is not affected by it. certainly every county in the province of Ontario bordering on the St. Lawrence or any of the great lakes, is directly affected by this Act as it now stands. Why should a vessel sailing to Montreal from Halifax or Newfoundland or New York be exempt from compulsory payment of pilotage dues and a vessel from any port on any of the great lakes be obliged to pay those dues? It does not seem to me to be fair and I do not think that the Marine Association are asking more than their just rights when they ask that to be changed.

I wish to call attention to by-law 25 of the Montreal Pilotage District. That by-law reads as follows:

Every vessel liable to compulsory payment of pilotage dues and moved into or out of the limits of the harbour of Montreal or from one point to another within the same, shall pay such dues for the services of a branch pilot, except in the case of vessels which are merely shifting their positions at a wharf and attached thereto by their moorings.

The only vessels that come under that by-law of the Montreal Pilotage District are the vessels of Ontario because all those vessels which are exempt from pilotage dues under the sections which I have read are specifically mentioned as not coming under by-law 25 of the Montreal Pilotage District and consequently that by-law only applies to vessels from Ontario and subjects the owners of vessels of Ontario to an additional tax which vessels from the other provinces are not subjected to. This is an injustice on the face of it. Ontario vessels, I repeat, only come under section 477 and therefore Ontario vessels are the only ones which come under the provisions of by-law 25 so they are the only ones subjected to this additional tax. What benefits are received by Ontario vessel owners from this tax? None whatever. Is the liability of the owner lessened? Not in the least. Is the owner's responsibility lessened because he has to pay the tax? Not in the least. Section 474 makes this very clear. That section reads as follows:

Nothing in this part shall exempt any owner or master of any ship from liability for any loss or damage occasioned by his ship to any person or property, on the ground either of such ship being in the charge of a licensed pilot, or of such loss or damage being occasioned by the act or default of a licensed pilot, or on any other ground.

While the Ontario vessel owner is obliged to pay pilotage dues, he may or may not take the pilot on board; if he does, the taking on of that pilot does not relieve him from damages which may be caused by his boat even while he has a pilot on board. Yet he is obliged to pay these dues from which vessel owners from other provinces are exempt!

Now, when I brought this matter up last session the Minister of Marine and Fish

eries said that an order in council had been passed providing that vessels coming through the Lachine rapids should not be obliged to pay these dues on entering Montreal harbour; he admitted that this did not apply to Ontario vessels passing through the Lachine canal. But I wish to say that the exemption to which the Minister of Marine and Fisheries referred only helped the Richelieu and Ontario boats, and one or two others, and only partly helped even them. But if, as the hon. gentleman says, the order in council was passed to meet the serious complaint of the Dominion Marine Association, I would then ask why the repeated protests of that association, representing as they do practically all the vessels on the Great Lakes, should have been continually ignored? To sum the matter up. It seems to me it is proper to ask: Is there at present a distinct discrimination against Ontario vessels? I do not think any gentleman in this House can dispute the fact that there is a distinct discrimination against Ontario vessels. Secondly, if there is such discrimination, is it just and fair; and thirdly, is not that discrimination not only unfair but un-Canadian, to grant not only to vessel owners of the maritime provinces an exemption which is denied to those of Ontario, but to grant it also to Newfoundland vessels and vessels trading from New England states as far south as New York? It seems to me not only unfair to Ontario vessels but distinctly unpatriotic. I think this is something of which Ontario vessel owners have a right to complain. Large sums of money have been expended in improving the Montreal harbour for the St. Lawrence trade. It is not my purpose to criticise those expenditures, I merely wish to call attention to the fact that a portion of that money, as I may justly claim, has been paid by the people of Ontario. I merely ask what has been asked repeatedly by the Dominion Marine Association, having very large interests in the province of Ontario, that they be placed on a parity with the other provinces in this matter.

Sir WILFRID LAURIER. It will strike every one who has listened to the remarks of my hon. friend that if the law has been framed so as to exempt the province of Ontario from the provisions applied to other provinces with regard to pilotage dues, there must have been some reason for it. Looking at the statute, I agree with my hon. friend that one cannot see the reason why Ontario was exempted, and was not included in the section of the law which he has quoted. The law expressly mentions ships trading between one or more of the provinces of Quebec, New Brunswick, Nova Scotia and Prince Edward Island, and mentions no others. As the hon. gentleman has said, Ontario seems to have been purposely left out in mentioning the provinces, and it would strike one that there must be some reason for it. The reason, as I understand, is altogether local. I may be wrong, but it is my apprehension of the facts, that the local conditions rendered it advisable not to apply those provisions to the province of Ontario as they were applied to the other provinces mentioned. I would not, with my imperfect knowledge, presume to contradict the position taken by my hon. friend, nor to express any positive opinion. I think this is a matter deserving of more information than we have at the present time. There is on the face of it, as the hon. gentleman says, an anomaly, and surely there must be some good reason for such an anomaly appearing in the law. Under the circumstances, I think my hon. friend will see that he would sufficiently advance the cause he has at heart by agreeing to the second reading of his Bill, and then sending it to the Committee on Marine, where all parties can be heard, and let the matter be threshed out there.

Mr. EDWARDS. I accept the suggestion of the right hon. gentleman that the Bill be now read a second time and sent to the Committee on Marine. I think the more the matter is looked into the more convinced this House will be that the Bill should go through.

Motion agreed to, and Bill read the second time.

CRIMINAL CODE AMENDMENT.

Mr. GEO. GORDON moved the second reading of Bill (No. 85) to amend the Criminal Code. He said: As I explained on the introduction of this Bill, it is an exact copy of an amendment which was brought in during the last session of this House, and which was sent to the Senate on almost the last day of the session; and owing to want of explanation it was thrown out by that body. It is designed to meet the circumstance that very valuable ore, in some case nearly pure silver, has been carried away from the mines at Cobalt, and sold at what are commonly known as 'blind pigs,' where it passes in exchange for drinks. It is sold to parties who make a business of it. When these parties have accumulated a quantity worth while they take it to Toronto and other cities and sell it. The object of this Bill is primarily to put these receivers out of business. If this is done there will be an end to this business. No injustice will be done to any person by putting these receivers out of business because the mine owners do not sell mineral in small quantities. It has been found necessary both in the Transvaal and in Australia to have legislation enacted such as is sought for in this Bill. If the words in the last

line of the Bill 'prove that he came lawfully by the same' seem too drastic there might be substituted therefor the words 'account satisfactorily for or prove his right to the possession of the same.' If this change is made I submit there should be no danger of the possessor of ore getting into any trouble. It is easy for him to prove where he got the mineral. It was brought up in the Senate that danger might arise to a person, for instance a broker who held ore, but I do not think there is any danger in that regard because any broker who has ore in his possession must necessarily know where he got it from or it would be of no use to him. The ore which he has in his possession is no doubt from a person who is interested in a mine, to show what he may expect to get from that property.

I may say that recently what has taken place has proved very conclusively that unless such legislation is passed there is no knowing where the thefts which are now going on at Cobalt may end. While it would be improper to say anything here about the convictions which have recently been made owing to those thefts it might be proper for me to say, to show how valuable some of this ore is, that it was given in evidence in court in Toronto that one party had obtained in one month two tons of ore, and it was shown that this ore was worth $5 per pound; so that, in one month, that party had received $20,000 worth of silver from the Cobalt region. I therefore trust that this House, in its wisdom, will see the advisability of having this legislation enacted.

Hon. A. B. AYLESWORTH (Minister of Justice). I am not disposed to take exception to the views which the hon. gentleman has just expressed as to the merit of this legislation. It seems absolutely necessary if any check is to be given to the evil which has been described that legislation of this nature should be passed. This House was of that opinion last session and in passing the legislation in question did so simply from the conviction, as I understood the action of the House, that it would be impossible without it to afford any effective redress in cases of this description. The evil seems certainly serious. It is a crime in respect to which there ought to be prosecution and conviction where there is guilt, and it is practically impossible to secure a conviction, no matter how plain a case, according to ordinary ideas, the evidence may show, simply because it is impossible to identify the particular piece of ore, or any quantity of ore, which may be found in the possession of the person accused, as ore which has come from a particular mine. The difficulty about the matter which was felt in the Senate last year was that it was reversing the well understood rules of criminal procedure as to the burden of proof, and that, instead of putting upon the prosecution the whole burden of proving an accused person guilty, this legislation would require the accused person to prove himself innocent.

No doubt that representation of the effect of this legislation is quite true, but the question is whether that is not justifiable in the particular case in hand and in view of the evil which it is desired to repress. It is not an unknown thing in the course of either a civil case or a criminal prosecution that the burden of proof should rest upon the person who is charged with either responsibility for the payment of damages or responsibility upon a criminal charge. There are many instances of it perfectly well known to practitioners in the courts, and apart altogether from instances in which the burden or presumption is at once upon or against the person charged with any particular course of action, it is an every day occurrence in trials that the burden shifts from the one side to the other side according to the special evidence which may from minute to minute or hour to hour in the course of the proceedings be given. That is all that this legislation seeks to do; it puts at the outset the burden upon the person in whose possession the ore is found to account satisfactorily for such possession. That is only another form of stating that the possession of ore, when there is a charge that it is wrongfully in the possession of the person accused, at once puts that person in the position of having a presumption raised against him. In the case of honest possession it will not be a difficult thing to rebut that presumption. Many instances have been suggested where some innocent person might be wrongfully prosecuted if this change in the law were made. It has been said for instance that a mining broker might have samples of quartz or ore in his possession and be unable to state where they came from. That has not occurred to me as any serious difficulty. The presumption which this Act might create if it became law would, in the case of the mining broker, be rebutted the instant it arose by the circumstance of the character of his business and the fact that in the ordinary course of his business he was just the man who might be expected to be in possession of a great quantity of samples of quartz which he might not be able to identify himself or whose source he could not prove to a demonstration. However, if the phraseology of the Bill is changed, as has been suggested, the mining broker who might otherwise be charged and might be in difficulty under the phraseology of this statute, would at once rebut any prima facie presumption

which the statute would appear to raise by the mere circumstance that that was his ordinary and proper line of business.

Legislation of this character, as the hon. gentleman has stated, has been found necessary in mining communities. We have the example of legislation, not only of South Africa, but also of different states of the Australian commonwealth upon this very subject, at least as severe as anything which is proposed in this legislation. But in our own Criminal Code there are plenty of instances where such a presumption is already created by the existing law and where no evil has come from it. Take any one found in possession of naval or military stores bearing the broad arrow or marked otherwise as being public property, at once the burden is put on that person of accounting for it satisfactorily. It is but common sense that it should be so, and in the sections of the Criminal Code dealing with evidence at trials many instances of the same sort of thing are to be found. The presence of cards, dice, counters, tables or other implements of gaming affords prima facie evidence that gaming is carried on in the place where they are found. It is but a statutory statement of the deduction and inference which any man exercising ordinary common sense would make in his own mind on finding such a condition of affairs. The finding in an unlicensed house of an unusually large quantity of intoxicating liquor at once affords the presumption that it is there for an unlawful purpose, that it is kept for sale instead of for private consumption. Things of that sort found in legislative enactment, as I have pointed out, simply state in words and by Act of parliament that which is the ordinary inference that any jury would draw from such circumstances if proved before them in evidence. I think, therefore, that this legislation is meritorious. I regret that it was not adopted last year by the Senate, and I support entirely the motion of my hon. friend for the second reading. When the Bill goes to committee I shall propose that it should not extend to or have application in the Yukon territory, simply for the reason that the conditions of placer mining are quite different from those of quartz mining. In the Yukon at one time, and perhaps still, it was quite the custom to use nuggets of gold, the results of placer mining, as currency. Each man carried his pouch in which he had such gold dust as he had won during the day or week and it passed current by weight and probably does so still. At any rate that is a very different thing. The possession of quartz of greater or less value having possibly a very high percentage of precious metal and in the whole amounting to considerable sums by some person who is not a regular dealer is something which seems to require to be accounted for and we have already upon our Criminal Code a provision of that character with regard to workmen and labourers. Section 988 of the Criminal Code provides that in any prosecution proceeding or trial for stealing ores or minerals, the possession, contrary to the provision of any law in that behalf, of any smelted gold or silver or any gold-bearing quartz or any unsmelted or unmanufactured gold or silver by any operator, workman or labourer actively engaged in or on any mine shall be prima facie evidence that the same has been stolen by him. That has been our law for ten years or more. I do not know that any one has ever found any difficulty from it or been wrongfully prosecuted under it. This legislation is on the same lines and I cannot but think if its effect and the reason for its introduction had been appreciated in the other House, the Bill would not have met with the fate which befell it last year.

Motion agreed to, Bill read the second time, and House went into committee thereon.

On section 1,

1. The Criminal Code, chapter 146 of the Revised Statutes, 1906, is amended by inserting the following section immediately after section 424:—

424a. Every one is guilty of an indictable offence and liable to two years' imprisonment who, having in his possession or on his premises with his knowledge any rock, ore, mineral, stone, quartz or other substance containing gold or silver, or any unsmelted, or untreated, or unmanufactured, or partly smelted, partly treated or partly manufactured gold or silver, is unable to prove that he came lawfully by the same.

Mr. AYLESWORTH. I think it would be better to change the wording. I would suggest the striking out of the words 'is unable to prove that he came lawfully by the same' and substitute 'is unable to account satisfactorily for or prove his right to the possession of the same'. These are the words of the Act of the Transvaal applying to the case of any person found in possession of rough or uncut diamonds, and unable to prove his right to the possession of the same.

Amendment agreed to.

Mr. AYLESWORTH. I move that the following be added as subsection 424b:

This Act shall not extend or apply to the Yukon Territory.

Mr. CONMEE. I think the amendment would be more effective if it were made simply to exclude placer gold from the operation of the Act. If confined to quartz mining, it will apply to the Yukon as well as to any other part of the Dominion

If my information be correct, there are very rich quartz veins in that territory, which, if not operated, will be operated in the near future, and the necessity of the law will be as great there as anywhere else. As to the Bill affecting the broker, I do not think that would be the case, because the object is to bring to book not only the person in whose possession the ore may be found but the person who sells it. The broker may have considerable samples in his office, but no broker that I know of sells ore.

Mr. R. L. BORDEN. I think the wording of this amendment should be modified. This is to be included as section 424b and it might be held to relate to the Criminal Code and to exclude it from application to the Yukon. It should be made to read in some such way as this:

The foregoing section shall not extend or apply to the Yukon Territory.

To provide in the Criminal Code that 'this Act shall not extend or apply to the Yukon territory' might lead to confusion.

Mr. PARDEE. Section 424 of the Criminal Code is cognate legislation with this which is now being put through the House. It is divided into sub-sections (a), (b), (c) and (d), and the last provides 'the two next preceding subsections' (b) and (c) 'shall not extend or apply to the Yukon territory'.

Mr. R. L. BORDEN. That is what I say. But I understand that this provision which we are now discussing is to be embodied in the Criminal Code as section 424b. If it were left in the form proposed, it might have the effect of preventing the Criminal Code from having any application to the Yukon territory. It says: 'This Act'—not 'this section'—'shall not extend or apply to the Yukon territory'. That is, according to this amendment, the Criminal Code, shall not apply to the Yukon territory, which would be unfortunate. The words used should be 'the foregoing section',

Bill reported, read the third time and passed.

SECOND READING.

Bill (No. 39) to amend the Railway Act. —Mr. M. Martin.

WAYS AND MEANS—THE BUDGET.

House resumed adjourned debate on the proposed motion of Mr. Fielding that Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider the Ways and Means for raising the supply to be granted to His Majesty.

Mr. OLIVER J. WILCOX (North Essex). It was not my intention to offer any argument in this debate, but as I have ceased to be the baby member of this House, and as my colleagues on this side, together with some friends whom, I am glad to say, I have on the other, have urged me to speak, I make my first attempt to take part in a debate on the budget. I listened yesterday to the argument of the hon. the Minister of Customs, and from what he said one would come to the conclusion that the Liberal party in this country had accomplished everything they had undertaken by promises to do. But there is one thing I am absolutely sure they did not succeed in doing, notwithstanding they were backed by all the force and power of the government—they did not capture the riding of North Essex in the late bye-election. I was opposed by the Minister of Railways and Canals and by the Secretary of State and two very estimable gentlemen from the sister province of Quebec. I welcomed them and gave them almost control of my meetings. The electorate of the riding of North Essex came out and listened to these hon. gentlemen. Although the people of Essex are a very kind and hospitable people and came out in great numbers to listen to what these gentlemen had to say, the next day they went about their ordinary work and evidently they did not pay much attention to what the hon. gentlemen said, and they had a reason for that. They remembered that these gentlemen, or if not the same gentlemen, those who propounded the policy, came before the electorate of the riding of North Essex in 1881 and in 1892 and addressed the electorate of North Essex with the same eloquence; but the voters had the recollection that these gentlemen, or if not the same gentlemen, had different policies to lay before them in 1881 or 1892. Consequently it is not any wonder that the grand, intelligent electors of the riding of North Essex should go about their business after these hon. gentlemen were there and not pay much attention to what they said?

Another reason for my occupying the proud position of member of parliament for the riding of North Essex is the violation by the Liberals of that plank in their platform of which the Minister of Customs did not speak yesterday, that is the appointing of members of parliament to positions of emolument and public trust. Sir William Mulock declared in this House that any member of parliament who accepted a position of public trust from the hands of the government or any man who was looking for a position was a menace to parlia-

mentary independence, a corrupt agency in parliament, and a parasite upon the administration. It is interesting to inquire what has become of the representatives of the people who were sent to this House to represent the county for which I now have the honour to represent. In 1896 the policy of free trade was preached in every corner and every school house, upon every hustings in that border riding. The representative of the party which to-day holds the reins of power in this country said to the intelligent electorate in my presence: Put the rascals out, these customs house officers because we are going to have free trade with the United States if you return us to power. And with all the force and power in their ability they educated the people in the riding of North Essex, who were anxious to get across to the city of Detroit, into the principles of free trade until the morning after June the 3rd, when William McGregor was returned to this parliament for North Essex. So great a hold did that education take, that for a fact some people of that riding went across the Detroit river and actually refused to pay the duty to the American customs house on account of the promises that had been given . Yet the Minister of Customs, (Hon. William Paterson) rises here as he did yesterday and makes the statement to this House and to this country that they did not preach or advocate free trade in the election of 1896. I took his statement as a joke. I believe the hon. gentlemen opposite took it as a joke and I am sure the people of this country will take it as a joke for there is not a school boy of ten years I believe in the whole of Canada who does not thoroughly understand that it was a plank in the Liberal policy that we should have free trade with the United States if the Liberals were elected.

But I was speaking of what had become of those servants and representatives of the people who had been returned by the electorate of North Essex since 1896, for I am the first man, I am proud to say, upon this side of the House who has had the honour of representing my fellow countrymen in that county in the last twenty-one years. William McGregor, who preached free trade and was elected on that policy in 1896 was, two or three years afterwards, placed by this government in one of the most import- and positions of public trust in the customs house at the port of Windsor. A free trader! Then we have another hon. gentleman who was a representative of the agricultural classes. The government did not, I believe, appoint him to office. I refer now to Mr. Cowan. How we Conservatives and Liberals in the riding of North Essex, believed in the principles which he advocated in the interest of agriculturalists in respect to drainage across railways, a subject on which I hope I will have something to say later on. Sir, what has become of this representative of the people? It was not wrong for one of the great railway corporations of this country to say to Mr. Cowan. We want you in our service, we want you to sacrifice the interests of the grand old farmers you are representing in North Essex. Mr. Cowan took the bait, and he is to-day in the courts fighting against the interests of the farmers. I will not say so much against my friend Mr. Sutherland. He is occupying an important position upon the bench, and I agree that he is a man who will be able to fill the position with dignity, he is a gentleman whom I respect. But let me say this, that his appointment is not a fulfilment of the policy of the government when they were in opposition, that members of parliament should not be appointed to positions of public trust, seeing that they had been sent here to serve the people. It is in the light of these facts that the electors of North Essex and of the city of Windsor have seen fit to pick a farmer like myself out from among the shocks of corn and send him to parliament.

Now, Mr. Speaker, the hon. the Minister of Customs yesterday undertook to make it appear to the members of this House that the Liberal Conservative party had no part in the prosperity that Canada enjoys to-day ; he would make it appear that the great political party which laid the foundation of the government which we enjoy to-day, has done nothing to make this country what it is. Sir, I think that the hon. gentleman made a grossly exaggerated statement. It would be a reasonable question for me to ask him what he actually found within the confines of the Dominion of Canada when he came into office in the year 1896. You might start at the great port of Montreal, and you would find a double line of steel reaching out from that port across the province of Quebec, out along the north shore of Lake Superior to Winnipeg, down across the province of Manitoba to Lethbridge, with rail communication of such a nature in the southern portion of Manitoba that I believe it was not possible for a settler in that province, in the year 1896, to place his foot upon any portion of Canadian soil which was more than 15 or 16 miles from direct rail communication. You found more. You found that great line of railway reaching across the Rocky Mountains, down across the province of British Columbia to the blue waters of the Pacific, through that magnificent stretch of country every foot of which has been opened up by a Conservative administration. That same hon. gentleman who addressed this House yesterday afternoon, was to be found during those years previous to 1896 upon every platform and upon every hustings which it was possible for him to reach, criticising

every act of the administration that brought into existence that magnificent public work which cemented all the provinces of Canada together. Sir, what else could you find? You could start at Vancouver and Victoria, and see there a magnificent line of steamships sailing from those ports to the town of Hong Kong in China. That great line of communication was opened up by a Conservative government in spite of all the Minister of Customs of to-day and his friends could do to harass and impede them and which he said yesterday had done absolutely nothing for this country in which we live and move. What else do you find? Another magnificent line of steamships going out from St. John and Halifax down to the Argentine Republic in South America. What else? You found that the independence of our country had been solved. You found the magnificent waterways which were opened up in 1896. You found the magnificent line of steamboats coming down from the west freighted with the produce of that great country to the port of Montreal, in 1896. When I think of the advantage which our friends opposite had when they came into power, the knowledge, the experience which had been acquired by the the Liberal Conservative party during the years they ruled this country, it seems to me that a man has a good deal of audacity when he rises before this House of Commons any says that this country is what it is to-day as a rusult of the policy of the present government. Let me say, Mr. Speaker, that I am a man who would refrain from attempting to take credit for what other men have done, men who lived and moved with power and force in this country when my hon. friends opposite were babes in arms, politically; men who lived and moved with power and force in this land, and whose noble deeds and acts have made the land in which we live what it is. For example, suppose we take an ordinary farmer in this country, a reasonably prosperous agriculturist. I do not blush myself because I am one of and a representative of that particular class, because I realize that I am a representative of one of the most important classes in this country. Now, suppose we take a farmer who has worked his whole life and who has become physically incapacitated to carry on his farm any longer, and he hands it over to his son. His son takes that home, he paints the cornice of the house, he puts up a post here and there, he runs a fence around it, and then he says to the passer-by: Look at my beautiful home, I have done all this in the last few years. What would his father say? Well, Sir, the position of that son is the position that the Liberal party occupy to-day, men, some of whom were not born when those grand and noble men were at work in the pioneer days of this Dominion, making it the great heritage for generations to come; and yet, according to the Minister of Customs, all that has been accomplished has all been done in the last twelve and three-quarter years.

As I listened attentively to the speech of that hon. gentleman I was inclined to the view that he was trying to believe what he was saying. But his speech was delivered altogether from a partisan standpoint. It was delivered, as it appeared to me, for the express purpose of going out to the constituencies and making something appear that did not exist. I declare here from the place I occupy in this House that I trust, whether it shall be my privilege to represent a constituency in this parliament for a long or short period, I shall never get so wrapped up within the thrall of party politics that I shall put my party above my country, and above truth. If there is a position that I do admire and one that I would be pleased to take it is the position that was declared by the hon. member for North Toronto (Mr. Foster) on the 29th March last when he introduced the motion in the House affecting the naval defence of this country together with the position which the right hon. the leader of the government took upon that question and the position which was taken by the hon. leader of the opposition (Mr. R. L. Borden). This is a great national question, a question of mighty public import, therefore, we shall consider the question upon its merits without having any regard to party politics. This was the position then taken. I admire the position taken by the leader of my party in that regard. It is exactly the position I intend to take myself. I was amazed at the hon. member for Assiniboia (Mr. Turriff), last evening in speaking upon the budget, when he made the statement that they were of one accord on that side of the House on this particular question and that we on this side of the House were not united. Well, Sir, in view of the position which has been taken by the right hon. leader of the government himself I declare that we are more in accord with the policy which has been laid down by the leaders of this party than is the hon. member for Assiniboia himself. I do not believe it is within the range of human possibility that the 146 members who constitute the party on the government side of the House can be of one accord upon any one question unless they are actuated by party politics. It is not human nature to be that way. Upon that question of such mighty public import we, as true patriotic Canadians, will express our opinions according to the dictates of our own conscience regardless of party considerations.

The hon. Minister of Customs (Mr. Paterson) spoke at great length yesterday

afternoon regarding the tariff. In view of what I had read in my past life of the addresses which that hon. gentleman delivered himself previous to 1896, I was amazingly surprised and entertained by the statements which he made. The hon. gentleman spoke of the tariff. He had stood upon the hustings in days gone by and had declaimed about robbers great and robbers small and about the tall chimneys that were being built up by the tariff. Now, it seems to me, that by going over the tariff as it exists to-day it will be found that the average dutv upon dutiable products coming into the country is about 28·75 per cent. The average duty in 1896 was within 89-100th of one per cent the same as it is to-day. So, the tariff which was in existence during the years previous to 1896 is exactly the same in principle as the tariff which we have to-day.

An hon. MEMBER. With a different name.

Mr. WILCOX. Well, yes, with a different name. I know, every hon. gentleman on this side of the House knows and I am absolutely sure that hon. gentlemen on the other side of the House know that it is beyond the contol of any government to legislate prices, that all the government can do is to so frame its fiscal policy that when a time of commercial expansion prevails throughout the whole world Canada shall enjoy its fair share of it, and the fact that the rate of tariff is, practically the same today as it was in 1896 this prima facie evidence that the fiscal policy under which this country has enjoyed so much prosperity is exactly the same as that which was in existence before hon. gentlemen opposite came into power.

There is a remark that I wish to make regarding the tariff upon Indian corn. Two or three hon. gentlemen made reference to that particular item. I am sorry to say that I am not as yet sufficiently acquainted with the House to be able to state their exact names or the constituencies which they represent. Reference was made to the fact that the government had taken the duty off Indian corn and allowed corn to come in for the benefit of the farmers of this country. I represent the riding of North Essex, there is the riding of South Essex, there is the ridings of East and West Kent, and Indian corn is chief product of these ridings. The farmers up there say corn is king. They say it is king because the production of that cereal is their chief industry. So that the action of this government in taking the duty off corn was certainly against the best interests of the people in that particular part of the country which makes almost a specialty of this crop. While the farmers of Essex and Kent produce a large amount of corn they are not able to produce the amount called for by the demands of the country. Thus while they suffer while having to compete with Indian corn from the United States there is one condition in connection with that trade which is scandalous and ridiculous. That is that we in the county of Essex are discriminated against by freight rates which give the American farmer the advantage in eastern Ontario over us in the county of Essex. I have to pay to-day 17 cents a 100 pounds to ship my corn to the grain merchants here in the eastern part of the province while it can be brought from Chicago for about the same price, and I believe the rate from Detroit is 13 cents. An hon. member informs me that the rate from Chicago is 12½ cents. We shipped a cargo the other day at 17 cents a hundred pounds. I desire to bring this to the attention of the government, I am pointing out to them that if such a condition does exist, as it does, if we are to submit to American competition without any protection—and we are producers as well as the manufacturers, we are producing the raw material, we are producing what is more important than the produce of the manufacturer, the food stuffs of the country—it is unfair that we should be discriminated against in freight rates in this manner. Incidentally may I ask why, if it is a good policy to take the duty off Indian corn and allow American corn to come in free, would it not be a magnificent policy to take the duty off corn cultivators so that we could get a cultivator to cultivate our corn? A free cultivator for free corn. The effect of the absence of duty and of this gross discrimination is that the farmer of the western states has the corn market of Canada on more favourable terms than we who make a specialty of corn growing in Essex and Kent.

Speaking of the tariff, the statement of hon. gentlemen that we wish to build a tariff wall as high as Heaven does not necessarily make that assertion true. I know his statement is not in accordance with the facts but I believe that it is unfair that I as a representative farmer in the riding of North Essex, growing hay, and horses, and cattle, must pay a higher duty if I wish to take my products into the United States than the American farmer has to pay to bring his products into Canada. The American farmer can bring his hay into Canada at $2 a ton but I have to pay $4 a ton to get mine into the American market. I believe that is not a proper condition of things. I have pointed out to the government that it can be remedied and I believe by the expression on the face of the Minister of Public works just now that he intends to

remove it. Another instance of the same unfair condition is the duty on eggs on which I have to pay 6 cents a dozen against the American farmer's 3 cents a dozen. While I am a producer I am a consumer as well in some respects, but in so far as I am a producer engaged in the most important industry in this country, I am entitled to protection as well as the manufacturer. The farmers as a representative class in this country have to pay a great deal in taxation. As the tillers of the soil producing the raw material which keeps the wheels of machinery revolving it was said of the farmers that during the financial crisis of a few years ago they, through the application of knowledge and skill and science to the tilling of the soil we are able to bring from mother earth millions of dollars of raw products more than had been produced the year before, and when those products went out upon the markets of the world they brought back into the country in which we live those shining dollars which sent this country on her way in peace and abiding peace and we trust we shall have continued prosperity. This is the class we represent in this House, and when I represent the agricultural class, then, Sir, I am working in the interests of the merchant, the doctor, the lawyer, the labourer and all classes of men, because it is the foundation industry of the country. I am sorry there are not more of my class here, but I believe that the time is not far distant when the farmers of this country will have more to say upon the affairs of this country than they have to-day. We are the people, we are the men who bear the burdens in this country largely. What have we to pay? We start at the foot of the ladder and we pay our township tax, we pay our school tax, we pay our ditch tax to drain our soil, we pay our county tax. Then the provincial government comes along and takes another grab at us. Then the Dominion government comes along and we have to pay some $130,000,000, the greater portion of it, to carry on the expenditures of this country when the hon. gentlemen opposite said they would reduce the expenditure when it was only $41,000,000.

Reference has been made by the hon. member for Peterborough and by another hon. gentleman on the other side of the House to the Board of Railway Commissioners. It is one of the grandest institutions ever established in this country in the interest of the common people. But I do not pretend to say that the government is entitled to the credit of creating that body; I say that to parliament is due that credit. If, as a representative of the people and a member of the Liberal-Conservative party, I rise in my place here and support any good measure, I am just as much entitled to credit for that measure as if I were a member of the government. Suppose that upon the great and important question now before us, the Naval Bill, we decide upon the principle of considering this question without regard to party politics, that has been laid down by the leader of the opposition (Mr. R. L. Borden) and the Prime Minister—and I venture to believe that if we carry out that principle honestly and conscientiously, you will find men on both sides of the House for and against it, should not the whole House get the credit? And let me say, I do concur in the position taken by the leaders of the two political parties in that regard. But that is aside from my present argument. There are some amendments relating to drainage across railways that should be passed in the interest of the community at large. Though, I am, as I have said, a representative of the agricultural class, I am not one of those who would impose a great burden on our railway corporations. I realize that these corporations are necessary and their interests must be protected, and I am ready to stand on the floor of this House or in committee and protect the interests of those corporations so far as justice and reason demand. But there is a provision in the statute which is not necessary for the protection of the railway companies and which works most detrimentally to the interest of the farmers. I might mention several points, but let me speak of one particularly. In Ontario we drain our soil under the provisions of the special Drainage Act of the province, or under the Ditches and Watercourses Act, or by individual effort. The people's way of draining—not the municipal councils' but the people's way—is under the Ditches and Watercourses Act. The provisions work out in this way: Suppose that there are four or five men engaged in agriculture whose land is immediately adjacent to a railway right of way. The railway has built a considerable embankment which has stopped the natural flow of the water and it is absolutely necessary, in order to bring that land into a state fit for cultivation, that there should be an outlet across this right of way. Under form 9—I think it is—of the Ditches and Watercourses Act, we will inform all parties interested, including the railway company, that it is necessary to have a drain constructed. The Act is right and fair. But go a step further. After the award is made under the Ditches and Watercourses Act by a competent engineer appointed by the municipal corporation for that purpose, if any of the private landowners is not pleased

with any provisions of the award, he has a right to appeal to the county judge whose decision is final. But if the railway company is dissatisfied to whom does it make appeal? To the county judge? No, Sir, it will appeal to the Railway Commission of the Dominion. In ordinary cases of this kind the expense of bringing the farmer to the Railway Commission is twice as much as it would cost to do the actual work. I say that the appeal of the railway company should be to the county judge the same as in the case of the farmer, for I do not admit that a corporation should have higher rights or privileges than an ordinary landowner.

Again, the construction of local telephones is a question that is of deep interest to the people in the rural districts—in western Ontario it interests the people more than any other question that I know of to-day. The Dominion Railway Act contains a provision relating to railways which seriously handicaps us from getting our lines across the right of way of a railway, a provision that is quite unnecessary, for the interest of the railway companies can easily be protected without it. I have superintended the construction of at least a hundred miles of rural telephone lines in the county of Essex. When we come to the right of way of a railway, the actual work of making the crossing will cost us about $20. But if we attempt to string our wires across the right of way, notwithstanding that we are the farmers and taxpayers of that community, the men who have made the country by building roads and by other means of development, we are met by some representatives of the railway company from Detriot, New York, Boston, or some other place, who demand to know what right we have to do the work until we have the permission of the Railway Commission. That is the law. In my opinion, it is quite unnecessary to have such a provision in the law. I would not hesitate to say that the law should be kept unchanged if it were fairly in the interests of the railway companies to have it so, but it is not necessary. Under the law, we have to procure four plans—one for ourselves, two for the Railway Commission and one to be served on the railway company at a cost of $20. We have to employ a solicitor to make application to the Board of Railway Commissioners for an order to cross our wires on the company's right of way. In most cases, it costs from $50 to $75 to get through the preliminaries when about $15 or $25 will do the actual work. The Railway Act itself ought to contain a provision empowering companies to string their wires across the right of way of a railway company, according to a standard specification set up by the Board of Railway Commissioners. Let the board make an order setting forth a standard specification and then give the municipalities the right to string wires across the tracks according to that standard, and the officers of the railways will be sure to see that the work is done according to that standard, and we shall be saved from $50 to $100 on every crossing.

I intended making a few remarks respecting taxation, but as that matter has been fully gone into I shall not detain the House further, and before resuming my seat I would like to thank hon. members for the kind attention they have given me on this my first effort to address the House.

Mr. W. S. LOGGIE (Northumberland, N.B.). The hon. gentleman from North Essex (Mr. Wilcox), who has just spoken, told the House he was its baby member. Well, considering some of the statements he made, I think he deserves that cognomen. The first point he attempted to make was that free trade had been preached on every hustings by the Minister of Customs, and that in addition the slogan of the Liberal party was: Put the rascals out. If the hon. gentleman were present yesterday afternoon and heard the Minister of Customs put forward the platform of the Liberal party, he had no right to make the statement he did. It was my privilege and pleasure to have attended the Liberal convention in the year 1893; and if there was one thing which impressed me more than another, if there was one principle enunciated more clearly than another, it was that the policy of the Liberal party was a tariff for revenue purposes and a tariff bearing as lightly as possible on the necessaries of life which are consumed in the workingman's household. The hon. gentleman, in speaking of his own election contest, said that the farmers in his constituency paid no attention to the speeches of the ministerial representatives but kept on husking corn. I am quite sure they did, or the hon. gentleman would not be here. But it seems to me he has husking of the corn on the brain this afternoon, because when attempting to show that we were continuing the protective tariff of the Conservative party, he, in the next breath turned around and told us that we had taken off the duty from Indian corn for the use of the masses. To my mind the one statement contradicted the other. What we thought wrong about the protective policy of our predecessors was that it was protection for the classes. Now, the masses use Indian corn. It is used down by the sea, where it is not grown. Is it fair that on such a commodity used by the people, there should be a tax in the interests of

the farmers of any particular locality? It seems to me that the hon. gentleman is not logical. Let me remind him that he omitted to make the statement that the Conservative party had allowed corn to come in free for distilling purposes, but that the farmers had to pay the duty. It seems to me that his argument is strongly in favour of the policy of the Liberal party, who have changed our tariff policy and put it on a revenue basis rather than on a protective basis.

The hon. gentleman made some references to the giving of positions of trust by this government to those who had been members of parliament, and in that connection he mentioned the name of a gentleman who was a member of parliament many years ago, but who is now solicitor of the Grand Trunk Pacific. I fail to grasp the point which the hon. gentleman made. I fail to grasp the point the hon. gentleman made on that occasion. It seems to me that if the Grand Trunk railway considered Mr. Cowan a suitable employee, they were right to engage him and that it is no fault of the present administration. If Mr Cowan had the ability it was the right of the Grand Trunk to engage his services.

The hon. gentleman asks what the Minister of Finance found when he came into office in 1896. That was a very pertinent question. One thing that the minister found when he came into office was that for the preceding three years there was not sufficient money in the treasury to pay the ordinary running expenses of the country. He found that in the last five years of the Conservative party they had added to the public debt $21,000,000, that they had expended only $16,000,000 chargeable to capital account; the balance, $5,000,000, was borrowed on the money markets of the world to pay ordinary running expenses. That is what the minister found when he came into office in 1896. If you examine the public accounts you will find that for nearly every year under the Conservative regime more money was borrowed than was expended on capital account.

Another statement made by the hon. gentleman was that every foot of the west had been opened by the Conservative party. That statement is so extreme it hardly needs an answer, considering the development in the west during the last twelve and a quarter years. Where was the population of the west twelve and three-quarters years ago? Does he take credit for the population we have now? Yes, forsooth, it has all come because of the policy of the Conservative party up to 1896. He speaks of the magnificent lines of steamers. When did the magnificent lines of steamers come on? Have they not been aided by the present administration? How could such steamers as the Allan line now bring to Montreal come up the St. Lawrence river twelve and three-quarter years ago if there was no money available from the revenues of the country to dredge that channel? We know that the St. Lawrence channel has been dredged and deepened so that steamers of that class can reach the great commercial metropolis of this country, and yet the hon. gentleman has the audacity to tell us that these magnificent lines of steamers are due to the administration of the Conservative party up to 1896. I shall later have an opportunity of analysing the expenditures for such great public works as the dredging of our waterways and show you what a very small percentage was available for that purpose during the regime of the Liberal-Conservative party, when, as I tell you, they were borrowing money for every dollar expended on capital account, and had not even enough to meet the ordinary running expenses. What stockholders would like to have their officials come before them and state that during the preceding three years they had not been able to raise sufficient revenue to pay operating expenses, and had to borrow money to pay their ordinary running expenses? Would an official care to say that if they added a new boiler that would also have to be charged to capital account? That was exactly the position during the last five years of the Conservative regime. The hon. gentleman said that some one had the audacity to say that this country is what it is today because of the work of the Liberal party. I do not know that any one ever said that, but I would judge from the hon. gentleman's speech that his declaration is that the country is what it is because of the administration of the Conservative party. It seems to me that we should not forget that Providence has not very much to do with the extension of prosperity in the country, but that at the helm there has been a very wise captain keeping the ship from touching the rocks—and the time of prosperity is the time perhaps when there is the greatest danger. Some two years ago on the horizon out in the west there was a danger flag. Asiatics were coming into the country and over-flooding this land—that was the cry. But the wise captain at the helm advised caution and patience. The interests of British Columbia would be protected and looked after, but higher and above all that, the honoured leader was loyal to the British flag and he said: Treaty rights must have their due place and their first place, and it seems to me that this is an evidence of wise and practical statesmanship.

The hon. gentleman likened the government to a young farmer who, on succeeding his father in the possession of the farm, goes out and paints the cornice of the house and says: Look at my beautiful home. The insinuation is that the Liberal party have taken possession of the beautiful home of the Conservative party, painted the cornices and are now saying to the country: Look at my beautiful home, whereas, it was the father, the Conservative party, who built the house. Mr. Speaker, when we think of the expenditure in this country during the last twelve and three-quarter years and of the public works, great and small that have been erected, of the great increase in trade, both exports and imports, we wonder whether such a statement is the statement of a man of a sound mind?

Now the hon. gentleman made another statement regarding the Minister of Customs, he said that when he addressed the House yesterday he did not believe himself what he was saying. Well, it is all very well for the hon. gentleman to say that, but it does not make it a fact. I do not know on what ground he based his statement; all I can say is that I deny it. I say that the Minister of Customs was fair, he read all the resolutions adopted by the great Liberal party; the Minister of Customs was frank, he told the whole story. Yet the hon. gentleman has the audacity to say across the floor of this House that the Minister of Customs did not believe the statement he was making. I think that if the minister were here he would be justified in asking the hon. gentleman to recall that statement, and I have no doubt he would agree to do so, providing the minister would be a good boy afterwards.

The hon. gentleman also made reference to the naval question, and I concur in much of what he said regarding that matter. I think we ought to treat that as a great national question, and keep it as far as possible outside of party politics. I want to say here that I think the country is to be congratulated on the unanimity of opinion expressed a year ago when this House unanimously passed a resolution on the naval question. I think I can go further, I think I can say on behalf of hon. gentlemen from the maritime provinces that we all respect the hon. member for Halifax (Mr. Borden) who leads His Majesty's loyal opposition in this House, and it was pleasant to know that that hon. gentleman stands by the resolution unanimously passed in this House. Let me say that I wish he could foster among his followers the same loyalty and fidelity to the British flag. Let us be of one mind and one heart in this great national undertaking. When the Minister of Finance said in his budget speech that this was a growing time for Canada, I think he might have said that it was an epoch making time in the history of Canada. The departure we are now making in building a fleet and controlling it in times of peace, it seems to me is a great national event, and might well be considered as forming an epoch in the history of this rising nation.

The hon. gentleman also referred to an argument of the Minister of Customs yesterday when he spoke about the tariff wall being made as high as Heaven. Well, I suppose that if the tariff wall was made as high as Heaven, then we should have to resort to direct taxation; but I do not think that is the policy of either political party, and it seems to me the remarks of the hon. gentleman were hardly pertinent to the matter under consideration. Another statement he made, and I suppose he made it on the same principle, in the same sense that he says the Minister of Customs made his statement, whether he was saying it from his mind or not, he said that it was unfair to allow the Americans to bring in hay at $2 per ton, while the United States government charged $4 per ton on hay going from Canada into that country.

Now, Mr. Speaker, it seems to me that is an unusual doctrine, it is a doctrine that the Canadian pays the rate exacted by the American tariff, and that the American pays the rate exacted by the Canadian tariff. I have always understood the very reverse to be the fact, that the Canadian pays the rate exacted by his own government, and the American pays the rate exacted by the congress of the United States. But the hon. gentleman reverses that principle. I fail to understand the policy of imposing a customs duty if the hon. gentleman's argument is a logical one. Sir, I know whereof I speak, I say there may be one case out of a hundred where the exports pays the duty. But in all ordinary transactions in trade, the importer and the consumer pay the customs duty. Therefore I think the hon. gentleman's argument does not bear on the subject before the House, except in this sense, that he wants the duty raised to $4 as a further protection to the farmer. I think the hon. gentleman is like every other manufacturer, he wants to have an undue rate of duty placed on commodities at the expense of the general public. He says further that the farmers are entitled to protection as well as the manufacturers. One would suppose that there was no protection afforded to the farmers in this country. The hon. gentleman ought to know that the farmers have a very liberal share of protection. If he had been in the House last year he would remember that the hon. member from Frontenac (Mr.

Edwards) made a plea for an additional duty on hog products, and he was informed that there was at present a duty of two cents per pound on those products. So the farmers who raise hogs are certainly protected. As I had occasion to say once before, perhaps hog and cattle products are the only articles in regard to which the system of protection has been retained by the present administration, because rates of specific duties on these items have not been changed.

Mr. EDWARDS. You say that we have a duty of two cents on bacon coming from other countries?

Mr. LOGGIE. Yes.

Mr. EDWARDS. And that the farmer is protected?

Mr. LOGGIE. Yes.

Mr. EDWARDS. From whom is he protected by the two cents duty?

Mr. LOGGIE. He is protected by getting a better price than he would otherwise get for his bacon.

Mr. EDWARDS. But the American duty is five cents a pound on our bacon going into the United States.

Mr. LOGGIE. That has nothing to do with my argument—nothing whatever to do with it. The point I make is that if there were no duty on a barrel of pork it would be laid down in Montreal for $4 less than it is to-day and go into the consumers' hands at that much less cost to them. The farmer to-day gets practically two cents a pound more for his hog products than he would if the duty were not in existence.

An hon. MEMBER. And the artisan pays

Mr. LOGGIE. And the artisan—and the consumer—of course, pays. It seems to me that that is the logical conclusion. I cannot explain it if the hon. gentleman does not understand that.

On motion of Mr. Loggie debate was adjourned.

At six o'clock, House adjourned.

Mr. LOGGIE.

HOUSE OF COMMONS.

THURSDAY, January 20, 1910.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 106) respecting the Canadian Northern Ontario Railway Company.—Mr. Nesbitt.

Bill (No. 107) to incorporate the Ottawa, Montreal and Eastern Railway Company. —Mr. Gladu.

Bill (No. 108) to incorporate the Rainy River Radial Railway.—Mr. Conmee.

DOMINION ELECTIONS ACT AMENDMENT.

Mr. CONMEE moved for leave to introduce Bill (No. 109) to amend the Dominion Elections Act. He said: This Bill was introduced last year, and I explained it then at some length. It is to give railway employees the right to vote although they may not be in their own particular polling subdivision at the time.

Motion agreed to, and Bill read the first time.

QUESTIONS.

GOVERNMENT TELEGRAPH LINES.

Mr. FOSTER:

1. What is the mileage of government telegraph lines in Canada, separated into divisions, and the cost of each division, (a) in construction, (b) maintenance, and (c) salaries of operators, and the revenue for each division for the last fiscal year?

2. What has been the total construction cost of the Yukon system of telegraph lines, what the revenue for each year of its operation, and the cost in maintenance and salaries, respectively, for each year?

Hon. WM. PUGSLEY:

1

Division.	Construction in 1908-9.	Lines in operation at date, March 31, 1909.			Revenue and Maintenance, 1908-9.

TRENT CANAL WATER POWERS.

Mr. ARTHURS:

Is it the intention of the government to take over and control locks or other improvements built upon navigable streams in Ontario by the provincial government? If so, when?

Hon. GEORGE P. GRAHAM:

The government in February, 1906, took over from the Ontario government a number of dams at the head waters of the Trent canal and several locks and bridges on the line of navigation of the Trent canal with a view of regulating the water in the said canal and also of better controlling navigation through the said canal, which are enumerated below:

Lock and three swing bridges at Lindsay, lock and swing bridge at Young's point, lock at Balsam river, together with all minor work in connection with the maintenance and operation of the same; also dams on Gull river waters, viz.: Balsam lake, Gull

lake, Horseshoe lake, Hawk lake, Paint lake, Hall's lake, Keneese's lake, Redstone lake, Eagle and Moose lake, Haliburton lake, Percy lake.

On Burnt river waters: Kocklong lake, Drag lake, Loon lake, Big Bear lake, Otter lake, Grace lake, Farquhar lake.

On Nogis creek: Swamp lake.

Mississauga creek: Gull lake, Eagle lake.

A few other smaller dams taken over but not actually required by the department for proposed reservoirs system, but now used for flotation of logs. The Dominion government is not required to maintain these dams except for the purpose of log navigation.

With reference to the taking over of any further structures, the government has not considered the matter.

SCUGOG LAKE FLOODS.

Mr. THORNTON:

1. Does the government (federal) own or control the lands, surrounding and adjacent to Scugog lake, province of Ontario, which are flooded at times of high water caused by the government dam at Lindsay?

2. Are these lands claimed by the adjacent owners, or is it possible for them to purchase them, subject to the damage caused by flooding?

3. Or are these lands looked upon as common property, in which every citizen has equal rights?

Mr. GRAHAM:

1. No.

2. The Department of Railways and Canals has no knowledge as to whom these lands are claimed by, or what the conditions of purchase would be.

3. Answered by No. 2.

VICTORIA IMMIGRATION BUILDING.

Mr. BARNARD:

What number of immigrants have used the Victoria immigration building since its completion, and what is the nationality of such immigrants?

Hon. FRANK OLIVER. European immigrants from the United States, 197; from Australia, 9; Japanese, 27; Chinese. 147; Chinese detained in building for customs, 57; building also used for registering Chinese outward bound to the number of 1,382.

STEAMER 'WILLIAM JOLIFFE.'

Mr. BARNARD:

1. When did the steamer 'William Joliffe' enter the service of the Department of Marine and Fisheries?

2. For what length of time is she chartered?

3. What is the rate paid per day, and does the same include wages, fuel, supplies, &c.?

Sir WILFRID LAURIER:

1. First chartered on September 2, 1907.

2. Each year she has been chartered for one month, then from day to day.

3. $150 per diem, all found.

Mr. GRAHAM.

VETERANS OF 1866-7.

Mr. S. SHARPE:

Has the government arrived at a decision in regard to a grant of land to the veterans of 1866-7? If not when may the veterans expect a decision to be reached?

Sir WILFRID LAURIER. The government has not come to any conclusion, but will at an early day.

POST OFFICE, CENTRAL PARK, NEW WESTMINSTER.

Mr. J. D. TAYLOR:

1. What reply, if any, has been made by the Postmaster General to communications from residents of Central Park, with respect to the closing of the post office there?

2. Has the department any information to show that the business of the post office had been decreasing, or that the service was not appreciated by a sufficient number of persons to warrant its continuance?

3. When was the post office established, when was it closed, and upon whose advice did the officials of the Post Office Department move in the matter of closing?

4. How many persons, approximately, were receiving mail matter at the Central Park post office at the time of closing, and what is the average distance they have to proceed to receive mail from the nearest offices now maintained?

5. Had the department received, shortly before the closing, a largely signed petition for free delivery at Central Park? If so, what did this petition present as to the importance of that district as a residential centre?

Hon. RODOLPHE LEMIEUX:

1. The Central Park post office has not been closed. Representations having been made to this department that by changing the location of the post office and establishing a post office at Collingwood East the interests of the majority of the residents would be best served, after official inquiry, which bore out the above representations, these changes were authorized. Inquiries in the matter have been answered in accordance with the facts.

2. As stated in reply to No. 1, the post office has not been closed but removed to a point where it would be a greater convenience. There was no decrease in the revenue of the office.

3. The post office was established on the 1st April, 1896, and was removed to its present location on the 1st August, 1909, after official inquiry which bore out the representations made by the residents.

4. The department has no exact information as to the number of persons served by the post office at its former site. The post office is now about three-quarters of a mile from its former location and about one and three-quarter miles from the Collingwood East post office.

5. A petition praying for free letter carrier delivery in the Central Park district was received at the department on the 2nd January, 1909, but as such services are only established in municipalities having a population of at least 12,000 and a total postal revenue of $20,000, and as these conditions did not prevail at Central Park, the department was unable to comply with the request of the memorialists. The reasons advanced by the memorial for making this requesst were 'the growth of the district of Central Park and neighbourhood and the increase of places of business.'

SENATORS L. M. JONES AND F. T. FROST.

Mr. SCHAFFNER:

1. On what date was L. M. Jones appointed to the Senate?
2. On what date was F. T. Frost appointed to the Senate?

Sir WILFRID LAURIER. Hon. L. M. Jones appointed to the Senate on 21st January, 1901; Hon. F. T. Frost, appointed to the Senate on 12th March, 1903.

RESIGNATION OF MR. HUGH LUMSDEN.

On the order: Government notice of motion for a special committee to investigate charges of Hugh D. Lumsden against a portion of the engineering staff of the National Transcontinental railway.

Sir. WILFRID LAURIER. I intended to move this to-day, but, as the House is to adjourn at six o'clock, it is understood between myself and hon. members on the other side, that we shall take it up on Tuesday, the first order.

CANADIAN NICKEL MINES—EVIDENCE OF MR. ARTHUR WILSON.

Mr. GEO. GORDON (Nipissing). I desire to call the attention of the government to an article that appeared in the Ottawa 'Free Press' yesterday, and I do it for the purpose of asking the Minister of Mines (Mr. Templeman) a question. The article purports to give a summary of the evidence of Mr. Arthur Wilson before the Mines and Minerals Committee of this House yesterday. It speaks of him as, 'Mr. Arthur Wilson, at present of Toronto, but officially engaged in an investigation on behalf of the British government into the nickel resources of Canada.' It proceeds:

He pointed out that there were only two countries in the world which had any appreciable stores of nickel, Canada and New Caledonia. Canada had three-fifths and the French colony the balance. Both deposits were controlled by substantially the same organization, the International Nickel Company of New York, and while nickel could be used for many purposes the price was made so high by the trust that only governments were in a position to buy the mineral.

The Canadian deposits were incalculable, but tens of millions of tons were lying in the earth because it did not suit the purposes of the trust to work them.

The nickel deposits of Canada, as we all know, are in the districts of Nipissing and Algoma. If Mr. Wilson made the statement reported here—and I have no reason to doubt it—I can only say that it is absolutely incorrect. There are millions of tons of nickel in Nipissing and Algoma with which the International Nickel Company has nothing to do, and which are to be had by others. In view of this, I would ask the Minister of Mines if he knows that Mr. Wilson is a duly accredited representative of the British government? Also has the minister taken steps to refute these statements of Mr. Wilson and prevent them from being broadcasted through the country?

Hon. WM. TEMPLEMAN (Minister of Mines). I had not the privilege of hearing the statements of Mr. Wilson before the Mines Committee the other day. I am informed that Mr. Wilson is a mining engineer of prominence from England, who was in Canada investigating our mineral resources—whether for the imperial government or private parties I do not know—and was invited by the Mines Committee to appear before them. His remarks, I believe, have been reported in the Ottawa 'Free Press.' I was informed by the chairman of the Mines Committee that the report was inaccurate. I have not read the Ottawa papers so I cannot give my hon. friend a categorical answer to his inquiry as to the correctness of the report. But as to his last question whether steps have been taken to refute these statements, I can only say that it would be almost impossible for the Department of Mines—and I am sure the same is true of other departments—to refute the many inaccurate statements made in regard to public matters. It was considered advisable that this mining engineer, who, I am informed, is a man of large experience, should give evidence before the committee. Whether he has a correct conception of the mining capability of Canada or not, I am not able to say. I am sure he could not grasp, upon a mere cursory examination, the wealth of mineral of our great Nipissing country.

Mr. CONMEE. I am somewhat surprised at some of the remarks—

Mr. SPEAKER. Of course, no discussion can take place at this stage.

Mr. CONMEE. I merely wish to make an explanation with the permission of the House.

Mr. SPEAKER. Perhaps the House will permit it. The hon. member for Nipissing (Mr. Gordon) might have been called upon to give notice of his question, for questions at this stage must refer to the business before the House or must be upon some urgent matter. I allowed the hon. gentleman to put the question, but if the hon. member for Thunder Bay and Rainy River wishes to make an explanation it must be by general consent. If the order is to be applied, I will have to apply it.

Some hon. MEMBERS. Go ahead.

Mr. CONMEE. I saw the hon. member for Nipissing to-day, and told him that Mr. Wilson had not made any remarks from which any one would be justified in making the report which he has quoted. I am in receipt of telegrams from Mr. Wilson, who appears to be much annoyed that he should be quoted as having stated that he represented the British government or as having made any proposition that the government should take over the lands from the present owners. There are a number of members present who heard Mr. Wilson yesterday. I am sure these hon. gentlemen were well pleased with the remarks he made and the information he was able to give. There was nothing in his language from which the things stated in the report could be inferred, and the reporters have simply made it out of whole cloth. They were not present; had they been present they would not have made such a report. Mr. Wilson was asked the question whether he represented the British government, and he said no; he said that he had formerly made reports for manufacturers of nickel steel in England. He did not at all suggest that the government should take possession of the mines of the country. And, instead of saying that the nickel was all in the hands of the international company, he said there were hundreds and thousands of locations held by others independent of that company. He gave the area as being about seventy-five miles northerly and southerly by about thirty or forty miles east and west. I took occasion last evening to give a correction of the matter from Mr. Wilson to the editor of the 'Free Press.' Hon. members will see the corrections, I assume, in the 'Free Press' this evening.

INTERCOLONIAL RAILWAY—BRANCH LINES.

Mr. GRAHAM moved the third reading of Bill (No. 17) to authorize the government of Canada to acquire, by lease, lines of railway connecting with the government railways.

Hon. H. R. EMMERSON (Westmorland). In view of the fact that I have taken considerable interest in the subject matter of this Bill, and of the further fact that I was compelled to be absent in the city of Toronto when the measure was under consideration for its second reading and in Committee of the Whole, I am sure the House will indulge me in making a few observations which I feel called on to make in connection with the subject. The acquisition by the government of the branch lines of the Intercolonial railway is not solely a maritime province matter; it is of profound importance in the solution of at least one of the transportation problems of this Dominion. I have, it is true, devoted a good deal of time to a careful study of the question but I have done so not because I come from the maritime provinces where these railways are located, but because I felt it my duty as a Canadian to interest myself in this question which is as wide as the Dominion. I assert boldly that the people of Ontario and the other provinces are just as much interested in the question as we who come from the east are. At every session of this parliament, from 1906 to the present time, I have brought the matter to the notice of the House and have endeavoured to enlist the sympathy of the government and of the members of this House for it. I think I may say that I have always presented my views from a non-partisan standpoint and advanced the scheme as a business proposition and a business proposition alone. On the 22nd of March, 1907, ('Hansard' page 5225) I addressed this House as follows:

> I have felt that while the Intercolonial has had to combat many prejudices, and while there have been many influences against it, yet in view of the good it has done to the country, in view of the trade it has promoted, the day would come when the people of Canada, irrespective of section, would join in the desire to have the Intercolonial extended; would wish it to widen out its influence and absorb its feeders, either by leasehold or by some other means.
>
> In the history of Canada, especially of western Canada, we note this striking fact that when you follow along the line of the Grand Trunk railway or the Canadian Pacific railway, wherever there are independent branch lines, feeders to their main trunk lines, one by one they are gathered in so that after a time the main trunk lines absorb all these branch lines and they are all run as one system. I assume that that is a business course, else these great corporations, governed by keen business men, would not have followed such a course. They would not have acquired these lines but they would have left them to run as independent connections of the main trunk line. I have felt that the government of Canada might some day be impelled by the force of public opinion, by the judgment of the people throughout the country, to secure to the Intercolonial railway as against all other companies the branch lines which constitute the feeders to the Intercolonial railway. What are these branch lines but instruments to

gather up the traffic in the adjacent country side and hand it over to the trunk line system—the Intercolonial railway. In so doing these branch lines are favouring and contributing to the advancement of the sections and communities which they are supposed to accommodate; nay, more than that they are contributing materially to the growth and expansion of the traffic of the Intercolonial railway, and therefore I say that I believe the day will come when a demand will go out from the people of Canada in favour of the absorption of these lines. I would, Sir, not be content with that. I would feel that in order to clasp closer together those isolated communities and to draw them closer to the communities of the west it would be desirable that the Intercolonial railway should penetrate farther west, that it should reach the industrial centres of Canada and especially that it should reach the great industrial centre of central Canada—I refer to the city of Toronto. I look forward, Sir, also to this: There are railways starting out from the extreme west reaching forward eagerly and anxiously to an eastern seaport. Many of them are concentrating their efforts upon reaching the great city of Quebec and there reaching a great ocean port, but a port which is closed for many months of the year, and I would anticipate that at some not far distant day these railways, converging at the great city of Quebec, will be reaching still farther east, so that they may find, during the winter months, open water upon which the ships would sail that would take the traffic that our railways would gather up in the west and carry to the east. That day may come, I hope it will come—nay, more, I believe it will come and when it does it will settle all speculation as to the future of the Intercolonial railway. It will for all time settle the question of the value of the Intercolonial railway as an asset of the Dominion of Canada, and it will certainly bear out this fact, which, I have at least claimed as a fact, that the Intercolonial railway is a great nationl asset, that it is of value to the people of Canada both east and west, that it has served its purpose and its mission in the past and that it still has a purpose and a mission to perform, and I am sure that when we reach that stage there will be no sectional differences over the matter, and that we will all see eye to eye with reference to the manifest destiny of the Intercolonial railway.

Now, Mr. Speaker, the government, in the Bill which it has seen fit to present to parliament and which we are now considering, has adopted the principle laid down by me in the remarks I have just read, and I have great pleasure in congratulating the government on that fact. It demonstrates for one thing that my forecast of coming events in 1907 was correct, and that I truly interpreted the trend of public opinion at that time. I saw it was a business proposition which no government, which had in view the welfare of our great national railway, could hesitate to carry out. For having adopted that principle the government are entitled to the consideration of the people of all sections of the Dominion, because it contributes not merely to the advancement of the Intercolonial and the communities located along its line, and the communities which are served by these branch lines, but, every community in Canada. My remarks on the present occasion shall be as brief as possible and I shall only deal with the question from a purely business point of view. The propositions which I laid down in 1906, 1907, 1908 and 1909, are now crystallized into legislation, and it remains only for me to inquire whether the principle I advanced has been fully given effect to and to analyse some of the details of the present Bill. I know Sir, that there have been some very vexatious remarks made with respect to my advocacy of this measure. But I think those who know me will do me the credit of believing that in advocating the absorption of these branch lines I have been entirely disinterested personally. There are those who have been unkind enough to say that my zeal arose from the fact that I or some of my friends were in some way interested in one or more of these branch lines. Now, I trust the House will pardon me for making a personal reference, and I would not have mentioned it were it not that I am aware that such a statement was brought to the notice of the government and of the right hon. the leader of the government. When I learned of this I went to the right hon. the Prime Minister and I asked him if it were true that such representations had been made; he admitted that such representations had been made. Now, Mr. Speaker, I want to say in the most unqualified way that while I have been for years an advocate of the extension and expansion of the Intercolonial, my advocacy has been solely as a citizen of Canada and a representative of the people. I am in no way, directly or indirectly, near or remote, either by myself or by any of my friends or relatives, interested to the extent of one single farthing, nor have I any prospective interest to the extent of one single farthing in any of these branch lines. I feel it incumbent upon me to make that statement in view of the remarks that have been made and circulated behind my back. On the other hand it has been said, very unkindly said, that this Bill has been thrown to me as a meaningless sop; that while on its face it purports to do something it in reality means nothing, that I was in effect a bothersome fellow, that I was a figure sitting at one time on the treasury benches, that I had bored the present Minister of Railways with respect to this matter, and that they had to satisfy me in some way. Well, if these remarks were made they may at least be taken as a compliment to my persistence and zeal in the promotion of this measure which I believe to be greatly in the interests of the

people. I may have been a figure, but I certainly was not an algebraic figure of a minus quantity as were those who made use of these words so far as the province that gave them birth is concerned, and who were driven from one seat to another in that province until finally they were driven out of it altogether. I congratulate the government on accepting the principle which I have continuously advanced, but, I feel that I should analyse this Bill as it is presented to the House having regard to the amendments which have been proposed. I am afraid I shall have to say that there is in the Bill evidence of a timidity which I would not have expected from the government. There is a declaration in the preamble, which means, if it means anything, that the government believe it is expedient that the traffic of the government railways be developed to the fullest capacity of the system's operations, and:

It is deemed that such traffic, development and increase can be facilitated and advanced by the acquisition by the government of lines of railway connecting with the government railways as feeders thereto and in connection therewith.

Now, that appears to be a confession of faith on the part of the government and in my opinion it should be given effect to with all possible speed, having regard to the conditions, and should not be projected into the future as a matter for consideration at a later date. Under this legislation, bearing in mind the recitals of this preamble, should the decision with respect to the acquisition of these lines be delegated to the board of management of the government railways or to anybody else than the government itself? The third section of the Bill says that the Minister of Railways is authorized and empowered upon the recommendation of the Government Railways Management Board. He is only empowered upon the recommendation of the managing board, and subject to the authority of the Governor in Council to lease in whole or in part any line or lines of railway connecting with the government railways if such line or lines are reported by the chief engineer of the Department of Railways and Canals to be in a safe and good condition for operation. It will be observed that the power to acquire these lines is dependant upon four things: 1. Upon the initiative of the Government Railways Board of Management. 2. Upon the report of the chief engineer as to the good and safe condition of these roads for operation. 3. Subject to the approval of the Governor in Council, and 4. Subject to the approval of this parliament. There are four conditions that must be met before any of the advantages that are set forth in the preamble of this Bill can be secured either

to the railway or the people of the country. It seems to me, therefore, Mr. Speaker, that this legislation, while good in the acknowledgment and adoption of the principle, is of the rocking horse variety—all motion but no advance or movement ahead—and as such I think it will be open to the criticism of the people. I am not going to say anything in respect to the managing board or as to whether they can be prevailed upon by any influences to take the initiative, or as to whether the government can put their finger upon the chairman or any member of that board and say: Go and thou goest. I say nothing as to that; but I do say, Sir, that the restriction as to the condition of the road practically makes this Bill inoperative. I will venture to make this remark in the presence of the hon. Minister of Railways and Canals, and I am not disposed to unduly criticise the condition of the Intercolonial railway, that if it were necessary to absorb the Intercolonial as a branch line it would not to-day qualify because any one who has travelled over that road during the past month will see that it is not in good condition and that it would require a considerable amount of money to be expended on its roadbed before it could be put into good condition. Therefore, it seems to me that the government have shown a great deal of timidity, hesitancy, and doubt. I do not know whether it is want of courage—I should hope not—or whether they are so careful and cautious that they do not wish to take a step in this direction and do not wish to secure the advantages which they acknowledge will accrue to the railway and to the country from the adoption of legislation which will bring about the immediate absorption of these lines. If they are thus weak I think this parliament should strengthen their weak hands and confirm their feeble knees in the direction of carrying out what they seem to have acknowledged to be so desirable in the interests of the whole country and of the Intercolonial line.

I do not propose to pay much attention to the Intercolonial, but I do think it is desirable that I should recall to the memory of the members of this House and the country the legislation which brought into being the branch lines connecting with the Intercolonial, which it is proposed at some time by this Bill to have absorbed as feeders and as a portion of the government railway system in Canada. The Intercolonial, as we all know, was constructed with the view of promoting an interchange of traffic and an intercommunication between the peoples of the east and the west. At the time it was first initiated the people of the maritime provinces were aliens to the people of Ontario and Quebec, they knew not each other, there was no traffic between them, they were strangers in a

measure and the people of the maritime provinces were doing their trading and having their interchange and intercourse with the people of the New England states. But the Intercolonial railway was designed as a means of transportation to obviate all this. It was constructed. It went through certain sections of these provinces, but it did not reach all the important points, and in the course of time it became necessary to connect many of the important centres of trade and communities in New Brunswick, Quebec and Nova Scotia with the trunk line. The question was: How could this be done? In the early eighties it was proposed by Sir Charles Tupper, and he had the courage of his convictions in that regard, that the people of the Dominion should aid in the construction of branch lines and feeders connecting with the Intercolonial railway. The ideas which he advanced to the country at that time were put in the form of legislation. In some instances there were constructed by the government itself certain branch lines connecting remote sections of the country with the Intercolonial railway. In other instances subsidies of so much per mile were granted to private corporations for the construction of these railways. I have on former occasions called the attention of the House and country to the immense sums of money which was contributed in the way of subsidies towards the construction of these branch lines. Of course, naturally, the proposition was one that met with general favour throughout the country, and especially in the communities that would be served by the construction of these branch lines. I think that I need only invite hon. members to call up in memory their knowledge of what transpires when a remote section of country has in prospect the securing of a railway that will connect it with the centres of trade. When the announcement went forth throughout the maritime provinces and Quebec that there was a prospect of securing railway connection with the main trunk line there was delight and joy in the hearts of the people although they did not properly understand the situation. I think I will be but uttering the sentiments of every hon. gentleman when I state that no man in these districts had any conception of what it meant to have a railway constructed and to have it operated so that it might continue as a facility in aid of the development of the trade of the community. The people of the country generally believe that because of railways the wilderness and the solitary places shall be glad and that the desert shall rejoice and blossom as the rose. They had all these ideas and they thought that their fortunes were made as communities. But, let us look at facts and conditions. I do not wish to hide them, because if you would properly apply a remedy you must diagnose the conditions. Under this subsidy legislation on the part of the Dominion parliament, and under similar legislation on the part of the provincial legislatures; these railways were constructed by companies that were not strong financially. Men interested in the localities that were to be served came in and became shareholders. They knew not the business they were going at. but they were full of hope, they had energy and zeal, and aspirations in the interests of themselves and their children, and of the communities in which they resided. They went forward with a vew to securing those branch lines. What was the condition of things when the branch lines were completed? The moneys arising from the subsidies were exhausted; they issued bonds, and the bonds with the amounts realized therefrom were exhausted. The road was started. But we all know that a railway is never completed. Railway experts will tell you that when a road is set in motion, then practically your difficulties begin. And so it was with respect to these branch lines, constructed, set in motion, with the funds exhausted, the credit of the companies gone, because they had bonded their road. Then the railway had to be run, and in a very short time betterments were necessary, the changing conditions of railway management and operation required new and additional facilities. These were not forthcoming, because in many instances the conditions made it impossible for the railways to be profitable from a financial standpoint. Why? It is very obvious. Take a branch line connecting with the Intercolonial, or with any other railway; there are in operation at once two freight rates, there is no security as respects the continuance of those roads, and the improvement or continuance of the then present facilities for transportation. Capital was not invited, it was impossible for men to do business on a branch line railway in competition with those in a similar business along the trunk line. Therefore business was paralysed, there was not that development of the country which was hoped for. The result was, in a measure, stagnation, and certainly a depreciation in connection with these branch lines.

Let us look the matter in the face, and those are the conditions that prevail to-day. Yet it is said that the government cannot advise parliament to expend a dollar unless those roads are in such condition that they will not need one dollar of expenditure. I think it has been stated in the House already by those who are authorized to say it, that where any capital expenduture is required, such line would not be taken over unless the company had expended all that was required in placing the road in a condition which would enable the government to take it over under

the provisions of this Act. Well, Mr. Speaker, apart from the difficulty that would attend any of these branch lines of railways in meeting those conditions, I say it would be in the interest of the Intercolonial to undertake the improvement and betterment of these railways. Why? It is known to the minister, it is known to the people who live in the maritime provinces, that along the line of the Intercolonial there are thousands and tens of thousands, I was almost going to say, hundreds of thousands, of tons of steel rails that have been taken up from the track of the Intercolonial, that are laying there rusty, that are of no value to the government or to the Intercolonial. There are tens, and I might almost say, hundreds of tons of steel structures in the shape of bridges which were too old to be continued on the Intercolonial railway, and which had to be removed and replaced by heavier structures. There is rolling stock, cars of every description, that are obsolete so far as the trunk line is concerned, but which could be made available on these branch lines. There is material of every description and kind lying in and about the right of way of the Intercolonial and at its shops, which could be utilized, and utilized to advantage in improving the conditions on those lines, and there would be no capital expenditure. I think it will be conceded by the minister that in the accounts of the Intercolonial this material, these old cars, these old bridges, stand as an asset, a capital asset, in connection with the Intercolonial, and it is represented in the accounts as a part and parcel of the Intercolonial, but it is of no service and no advantage to the Intercolonial. What would be the objection to having that material removed from its havens of rest, and placed where it would be of utility, where it would be of advantage to the people, to the country and to the Intercolonial itself?

I do not feel called upon to prove the advantage of this, but I think it would be as well to ask hon. memebrs to bear in mind what has been said by those who went especially to examine these roads, and to inquire into their condition. I hold in my hand a report of the commissioners who were appointed by the New Brunswick government to examine and report upon the conditions of the branch lines of the railway in that province. I also hold here a report of the commissioners that were appointed by this federal government, to examine into and report upon the conditions which prevailed on the Intercolonial branch lines, as to their traffic possibilities, as to their physical condition, as to the potentialities, and the prospects of the respective roads. Turning first to the report of the commissioners appointed by the New Brunswick government, appointed by my hon. friend who sits at my left (Mr. Pugsley), who was then, if not Prime Minister of New Brunswick, one of the most important members of that government, and holding a position high in the government of the province. He and his colleagues appointed this commission to make these inquiries, and they have reported. I need only refer hon. members to the details of the report, and I will read the closing sentence in the general report signed by Mr. T. M. Burns and Mr. Gillmor Brown. Mr. Burns is a very prominent business man residing on the north shore of New Brunswick. Mr. Gillmor Brown is a civil engineer who has, I may say, practically an international reputation, a man who held a very high position in the state of West Virginia, and had to do with the construction of some of the large bridges that were placed over the Ohio river, a man who holds to-day, I believe, a position in the Department of Public Works, who holds it very worthily, and who, I am sure, will be a credit to the position he holds, to the government under which he serves, and to those who had to do with his appointment. Now these gentlemen made a report, and in closing their report they say:

> Apart from their value to the Intercolonial as feeders, these lines of railway have been of incalculable benefit to the localities which they serve, and to the province at large. What the country would do without them is best illlustrated by the consternation that prevails when one of them closes down for a day or two. Their successful operation is of great benefit to the people of the province, and any money which has been put into them by the government by way of subsidies has been much more than repaid in the increased value of property in the districts which they serve, and in the increased business and prosperity of the country at large, due in great measure to their existence.

Those were the words of the New Brunswick commissioners. Mr. Tiffin and Mr. Storey were appointed by the government of Canada to examine into the question of the traffic and business on these branch lines, and I find that Mr. Tiffin, in his report, referring to the number of lines of railway which they had examined, said:

> In preparing these reports we have as far as possible confined ourselves to the instructions contained in your letter, in giving our views as to the present traffic, traffic facilities, and probable traffic of the various branch lines, and we trust they will prove satisfactory.
>
> We, however, feel that while our instructions do not call for any remarks outside of the line of procedure laid down for us, that we should supplement such reports by conveying to you the unanimous feeling predominating, as gleaned from our interviews with the various merchants and people living along the branch lines, as to the great benefit which would follow absorption.
>
> The want of proper facilities for the conduct of even the existing traffic is detriment-

ally affecting the business interests of the districts interested in these branches, and preventing that development of industries, enhancement of property values, and general betterment that would undoubtedly follow on an improved service.

The present branches are hampered by lack of capital and insufficient equipment, and are not in a financial position to increase their inadequate traffic facilities, and the absorption of these lines into the Intercolonial system would beyond question result in a greatly improved condition of affairs.

These are the words of Mr. Tiffin, who as general traffic manager of the Intercolonial railway and as a member of the Board of Management of Government Railways, is certainly authorized to speak with a knowledge few others possess of the advantages or disadvantages of these branch lines. Further on he said:

It is a well established fact that in nearly every case where branch lines have been absorbed by trunk lines and extended markets have thus been opened up for business along the main line, such a policy has not only proved of great value to the branch lines themselves but has provided additional revenue for the main line, they becoming valuable feeders, increasing the traffic and the earning powers of the trunk line.

There is evidence which cannot be gainsaid and is worthy of our most serious consideration. These branch lines are doing in some measure the work expected of them. Let it be borne in mind that the object of the Intercolonial railway was to reach the markets of the maritime provinces from the manufacturing centres of Ontario and Quebec, and it was desirable, in the interests of the country that every section of the maritime provinces should be reached by the Intercolonial railway if possible. There was a further hope, which I regret has never been realized, that there would be found in Ontario and Quebec markets for the natural products of the maritime provinces, such as coal, stone, gypsum, grindstones, &c. It was hoped that the cost of transportation over the Intercolonial railway would be so low that the builders and manufacturers of Ontario would not be compelled to go to the state of Ohio for their building stone and grindstones. That hope, however, was never realized. The government buildings in this very city are built, in a large measure, of stone imported from Indiana, Ohio and other American states. The coal use in many sections in Ontario and even in Montreal comes in great measure from the states of West Virginia, Pennsylvania and Ohio. I am not complaining of this, but I am only showing the facts which demonstrate that the hopes we entertained, at the time of confederation, as regards traffic from east to west, have not been realized. So far as the traffic from west to east is concerned, that is so far as giving to the manufacturers and commercial men of Ontario and Quebec, the markets of the fishermen on the coasts of Nova Scotia and the coal miners of that province, and the lumbermen of New Brunswick, our expectations have been fully realized. Three-fourths of the traffic over the Intercolonial railway is eastbound, showing that the manufacturers and commercial firms of Ontario and Quebec have benefited by the low rates which have prevailed on the Intercolonial railway.

Mr. PUGSLEY. Hear, hear.

Mr. EMMERSON. One-fourth of the traffic over the Intercolonial railway is from east to west, showing that the maritime provinces have not the same interest in promoting traffic over the Intercolonial railway, nor have they the same interest in the Intercolonial railway as a transportation line. Every one will admit that it is in the interests of the province of Ontario to have those maritime markets. I venture the assertion that there are none better on this continent for the manufacturers and merchants of the west than the market in the maritime provinces. The people of these provinces pay their debts, they have a good country, they have fish in plenty, lumber and coal—in fact everything that makes the home comfortable. If it has been to the advantage of the merchant princes of Toronto and Montreal to have cheap and easy access to those ports, the easier we make our transportation facilities the greater will be the advantage to the business men of the west and central Canada. By permitting the absorption of these branch lines you improve transportation and enable the manufacturer to place his wares at points on these lines with the same facility as now on the main line of the Intercolonial. I go further. We have a managing board that controls the Intercolonial which is part of the government system of railways. But we have the Prince Edward Island railway as well. I say that there should be a connecting link in some form between these two systems of government railways, to enable the consumer to get his goods at the least cost of transportation, and to give greater facilities to producers and manufacturers who supply these people to reach their markets. I believe in the continuance of the Intercolonial as a government system; I believe that the Intercolonial should retain the zone of influence which, in ante-confederation days, it was intended to have. True, many shudder when a proposal is made of expenditure on the Intercolonial. A deficit on the government railway is spoken of as a terrible thing. Men hold up their hands in holy horror at the idea. We are not concerned that the operation of the canals of Canada costs a million and a quarter or a million and a half; we say that that is in

the interest of the trade and transportation of the country. We do not whimper, nor whine, nor cry over it; there is not a word of complaint. But if, perchance, there be a deficit on the Intercolonial, then the cry is raised that you must revolutionize its condition, and the fact of a deficit is held to convict the railway of every sin in the category of administrative error. It is true, the financial statements of the Intercolonial, from confederation down, have not shown a balance on the right side. Still, there has been a profit. The profit is in the pockets of the people if it is not in the coffers of the Dominion. You contribute to the Canadian Pacific, the Grand Trunk, the Canadian Northern and all the other railway corporations of Canada, and the rates of these companies are far beyond those charged on the Intercolonial. The rates on the Intercolonial were established for a certain purpose—to promote trade between the different sections of the then Dominion. But, in the case of the corporations I have named, the surplus is in the pockets of the shareholders. It is said that the Intercolonial has its deficits, and for that reason you should not extend it. If we brought in these branch lines, they say, you would only make the deficit worse. Are those who hold these views aware of the fact that the system of the Canadian Pacific railway east of the St. Lawrence river, tapping as it does the rich and flourishing section known as the eastern townships, and having the traffic of the border cities on the River Ste. Croix between Maine and New Brunswick, and having a practical monopoly of the traffic of the River St. John—is it known, I say, that every year since the Canadian Pacific began operating in the maritime provinces, this system has shown an annual deficit running from $500,000 to $1,000,000? That is not under government operation, but under operation that is always lauded to the skies as the best operation of railways in America by one of the strongest corporations on this or any other continent. The company is obliged to set aside year after year out of the earnings of the railway in other portions of the country $500,000 or $600,000, and in one instance to my knowledge no less than $1,000,000 to make up the deficit on this system. And yet they would not sell it, or release it, or give away control of it under any consideration. And is it known that, in addition to the advantages which they have in traffic, for nearly a quarter of a century the government of Canada has been contributing to the treasury of the Canadian Pacific railway to aid them in the operation of lines east of the St. Lawrence river the sum of $186,000? There is a deficit worthy of the name—a deficit to the people of Canada of $186,000 on the operation of the main line through the state of Maine from Montreal to St. John, and a further deficit to the railway ranging from half a million, two or three years ago, to an amount as high as a million. I speak, not on conjecture, not from rumour; the man in the street did not give me this information; the information comes from those high in authority, those who have the management and control of the Canadian Pacific railway. Yet, forsooth, the Canadian Pacific railway is doing just what is proposed to be done under the provisions of this Bill; it has been absorbing branch lines. Those who advocate the absorption of branch lines by the Intercolonial, contend that the effect would be to improve the traffic and increase the earnings of the road, and that it would develop those sections of the country that are served and traversed by these branch lines. And this contention is well grounded in the experience of other railways. We have an object lesson in the province of New Brunswick. It is well known that the Canadian Pacific runs from the city of St. John to McAdam Junction, thence to Woodstock in the county of Carleton, and up the river St. John through the beautiful county of Victoria. In that county, at the town of Perth, it connects with a railway that had been constructed by the aid of subsidies from the federal and provincial governments. That railway was known as the Tobique Valley railway, and it was built by an isolated company. The company exhausted all its subsidies in the construction of the road, and it also had a bonded indebtedness. But when the road was built and equipped, the company had not the money to run it to full efficiency. But they kept on running it with very little satisfaction to the people and no profit to the company. The Canadian Pacific railway made a proposition to that company to assume the operation of the Tobique Valley railway, undertaking to pay the company forty per cent of the gross earnings, retaining sixty per cent, and agreeing to improve, maintain and operate the road. That contract was executed, and the railway has been in operation for a number of years with what result? The interest on the bonds, which previous to that time had been in default, has been paid regularly, and there has been a sufficient balance to give a dividend on the common stock of the shareholders of the company. Other instances of similar successful operation can be found in every province of this Dominion, but this is a case in point, and such an example is worthy of being followed by the Dominion government.

I have taken a deep interest in this matter and I am glad it has advanced to the point which it reaches even by this Bill, but I would ask the Minister of Railways to think over the necessity of having continued in this Bill the requirement that these roads shall be in a good and safe

condition for operation. I said a moment ago that it might be stated under present conditions certain sections of the Intercolonial railway are not in a good and safe condition. I am sorry to say it, and I am not saying it in any factious spirit, I am simply stating facts. Would you say that because of that condition the Intercolonial railway is to be ignored? By no means. There may be certain lines of railway which in the opinion of the board and the Minister of Railways and the Governor in Council should be acquired and absorbed, but which in the face of this provision in the Bill it would be impossible for the government to take over, and a company might not be in a position to place its road in such a condition that the government could assume it. It may be said that if they had a contract they could go to the bank and get the money, but owing to the circumlocution of the procedure by which these contracts are made, there would be no contract upon which they could bank until the lease had been approved by parliament, and the company would have no contract upon which they could bank. If they endeavoured to place their railway in proper condition, they might be held up by banks and financiers or by those who had other interests to serve. This would cause great delay, and if it is desirable to have these branch lines of railway we cannot have them any too soon. It is not necessary to take over all these lines, but it certainly would be in the interest of the country to take as many of them as possible, that is, those that have any value at all. There is no necessity for adding to the public debt in this matter, it can be done on the basis of a division of earnings, and when such a lease is executed and in operation the shareholders in the branch lines would be in a position that would not mean any loss to them and the government and the people of the country would have the advantage of increased facilities for their transportation.

I do not propose an amendment to the Bill, I accept it as far as it adopts the principle, but I think the government and the minister should take into consideration the features of this Bill which make it inoperative now. The government are hedged about and safeguarded in this matter and cannot get into any trouble in reference to it. They have their own judgment, they have first the proposition of the managing board; they are safeguarded by the report of the chief engineer; they have the minister himself who can exercise his judgment, and then it goes before council and they exercise their judgment. After all this it comes before parliament. In this process, this red tapeism, how many months and how many years have been occupied? The good that it is acknowledged would follow from the execution of this idea is retarded and the development of the country and the improvement of the Intercolonial railway are delayed. It seems to me the government should make such an amendment as would enable them to act. It is no use attempting to place on the shoulders of others the responsibility which the government must finally take if they would courageously say: we will assume this responsibility, it is in the interests of the country, we will do it, we will have reports prepared, we will satisfy ourselves, we will act—that is what the country expects any government to do.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). Mr. Speaker, this Bill was discussed at some length on the second reading and again in committee. I am sure we are all indebted to the hon. member for Westmorland (Mr. Emmerson) for his excellent speech on this question, which is near to his heart. I can say on behalf of the government, and I think on behalf of the members of this House that no one for a moment suspects that he has anything but the purest motives in urging this matter on the attention of the House. He has done it for some years and has been persistent and consistent in doing it, and he is only doing now what he has done in previous years. We do not entertain the least idea that anything but the motive of doing what he thinks is best for the Intercolonial and for the solution of the transportation problem of the country is what animates him. I do not think I will discuss the Intercolonial in all its phases at present, as we will be discussing that in a very short time, when I hope to be able to show a good many favourable sides to the public owned railway of the Dominion of Canada. Any difference of opinion we might have as to the management and condition of the railway we will thresh out on that occasion. I agree with my hon. friend when he says very truly that this public owned utility belongs to the Dominion of Canada. I have endeavoured all over this country, wherever I have gone, particularly in the province of Ontario, to point out to the people that the Intercolonial railway belongs to them as much as to the people of the maritime provinces and that the people of this province have received marked benefit from it. I know that many of my acquaintances who do a large business in the maritime provinces have for years shipped goods to the eastern provinces by the Intercolonial railway. Whatever cheap freight rates there were on these goods these shippers and the consumers of the east have received the benefit. I will not now, I never did and I never will discuss the Intercolonial as belonging to any part of Canada. It belongs to us

all, and that is the reason why I tried to frame my Bill so that it would meet with the approval of all Canada. We discussed it fairly in the House and in the committee. Some objection was taken, it is true, to the principle of taking over branch lines at all, and I must differ from my hon. friend when he mildly intimates that the government lacks courage. I think the government shows considerable courage in taking hold of this question in the way in which it has done. It was said when this Bill was up for its second reading that possibly anything we could do under this Bill we could have done without the Bill. That is true in a measure, but the government and parliament, by adopting this measure, put on the statute book their approval of the principle that, conditions being right, the Intercolonial would do well to take over branch lines. We have adopted that principle. I think parliament has shown some courage in that regard and not timidity. Now, what are the conditions of the Bill? My hon. friend thought we should not leave the decision as to the standard of the road and the recommendation as to taking it over to the board of managers. It is only a question as to whom it should be left to. The Minister of Railways himself is not now and has not been, in so far as I know in years gone by, a practical railway man. He must base the judgment on which he shall make recommendations to council or this House, on the opinion of somebody, and that somebody ought to know his business. Whether we agree that the board of management is a good thing or not we accept its advice on a great many things, in fact, on all things appertaining to the government road at the present time. The members of that board know and ought to know. Their chairman is the chief engineer and deputy minister of the Department of Railways and Canals and that board, or its present chairman, would be the source from which the minister would get his opinion or his recommendation. In the one case he would take it from one man, and in the other he would take it from that man and several others, acting with him and who know the conditions. I submit that the advice of the board of management is the safest and best we can take on a question of this kind, for if the board does not know what would be in the interest of the Intercolonial and in the interest of transportation along its line then nobody does. I take it for granted that expert railway men ought to know and do know as much as those of us who are not experts as to what effect it would have on the government railway. This is not something to get rid of responsibility at all. The government must and the government is prepared to take the responsibility for all it recommends in that connection. It has no desire to take away from its responsibility, but on a great many points it naturally would have to avail itself of the advice of somebody that ought to know and that somebody in this Bill is designated as the Board of Management of the Government Railways.

The question of not taking the lines over until they are in proper condition to operate, received considerable attention. The hon. member for East Hamilton (Mr. Barker) paid it considerable attention from a practical standpoint and as a result we had that amendment moved and it was carried in the committee. It must be understood that the whole country is not unanimous in favour of taking over the branch lines without some such restriction as that. Personally, I am free to say that if the Intercolonial were owned by a company it would have taken over all the branch lines that are worth anything before this. I am also safe in saying, I think, that there are some branch lines that no trunk line will take over at any price. But those that are in good condition at once come into the class which if the traffic present and future warrants, can be negotiated with for a lease to the government. That disposes of those that are in good and safe running condition now. If there be others that future or present traffic would indicate as roads which would be of assistance in the solution of the transportation problem and a benefit to the government railways, I think a scheme could be worked out under this Act, or without this Act, by which they could be taken over when they are put in proper condition. I do not share with my hon. friend his fear with regard to some of the smaller branches. If the conditions were such that the board would say that there was traffic in a certain locality which, with a decent road and a decent service, would pay, I feel satisfied that the money could be raised to put these smaller branches in proper condition to lease. However, that is a matter of opinion. But this Bill was drafted, first, to approve the principle of taking over the branch lines where it was thought proper to do so. A great step forward has been made in that. Secondly, it was provided that there should be no rashness in taking them over, but that a competent board should make a recommendation before they were taken over; and thirdly, provision was made that the bargain could not be finally consummated until parliament approved of it. Under this Act we could not take a line over until it was put in good and proper shape to run. The restrictions, I admit, are quite severe and, in so far as the people of Canada are concerned, they are absolutely safeguarded no matter what government is

in power, because the government will not and cannot under this Act recklessly lease lines that will be of no benefit to the Intercolonial railway. Some hon. gentlemen seemed to fear that branch lines might be leased which would precipitate the government into an enormous capital expenditure and thus add to our public debt to that extent. That matter was discussed pretty thoroughly. That seemed to be the opinion of several hon. gentlemen on both sides of the House, but in order to meet that objection and get the House to approve without any opposition practically the principle of taking over these branch lines after proper consideration and leasing them under proper conditions this amendment was placed in the Act. I believe that the Act is a great step in advance and I think it will be of more benefit than my hon. friend (Mr. Emmerson) now thinks. I believe that under the Act some practical advancement will be made in the taking over of branch lines that will serve as profitable feeders to the Intercolonial railway and assist in the solution of the transportation problem in the eastern part of Canada.

Mr. MACDONALD. On the second reading of the Bill I expressed my views as to the wisdom of the government taking over these branch lines, and whatever opinion I may hold with reference to the present method of managing the Intercolonial railway I shall reserve until the minister makes his statement. I merely desire to say that I do not altogether agree with the minister when he says that the board of management are the best judges as to what should be done in regard to taking over branch lines.

Mr. GRAHAM. That is not what I said.

Mr. MACDONALD. The minister said something along that line.

Mr. GRAHAM. I said as to what lines would be profitable for the Intercolonial railway.

Mr. MACDONALD. That all depends on who may constitute that board from time to time and what may be their motives in arriving at a conclusion. If the motive of the board of management be to extract every possible cent that they can get out of the people who patronize the Intercolonial railway without any regard to the general improvement of the country surrounding, then the board of management are not the best and much less they are not the only judges as to what is the best course to pursue in the taking over of branch lines. But my particular object in rising now is to call the attention of the minister to what I consider a bad piece of drafting in the Bill. By section 3 the Minister of Railways is empowered to make a lease after complying with certain preliminary conditions: 1, the recommendation of the board of management; 2, the authority of the Governor in Council; 3, the report of the engineer that the road is in good and safe condition. He must have these before he can make a lease, and when he has that lease he can proceed to operate the line.

Mr. EMMERSON. He must get the approval of parliament.

Mr. MACDONALD. He would proceed to operate subject to the ratification of the lease as the Act provides.

Mr. EMMERSON. The statement was made that they would not begin to operate under a lease until the approval of parliament was obtained.

Mr. MACDONALD. But there are certain words in section 3 which seem to bring about a ridiculous state of affairs unless they can be excused on the ground of very bad drafting. Now, the effect of the additional stipulation inserted while the Bill was in the committee is, that after the lease has been made and all the preliminary conditions complied with and the ratification of parliament obtained, it would be the duty of the minister to go back to the board of management and to the chief engineer and submit to them the question as to whether all that had been done in legal form. The language used in the Bill is that the lease shall have no force or effect until the managing board and the chief engineer have approved the terms and conditions of such lease.

Mr. EMMERSON. Even though parliament has approved of it?

Mr. MACDONALD. The language is indefinite as to that. It may mean that these gentlemen are to be a still higher court after parliament has decided. It does seem the meaning of the Bill as it now reads is that after you have all the preliminary conditions complied with and after the Governor in Council and parliament have acted, that it must go back to the board of management and the chief engineer for their endorsation. I supported the proposal that the board of management should approve of the lease, although I do not think they are infallible, but at all events that last portion of the section is entirely unnecessary and absurd.

Mr. PUGSLEY. I think that the criticism of my hon. friend (Mr. Macdonall) is not well founded. The section provides that you must first have the report of the chief engineer that the line is in good and safe condition, then that the minister on bringing the matter before the Governor in Council is authorized to enter into a lease,

and the terms of that lease must be approved by the board of management. and that I presume means the rental which should be paid.

Mr. EMMERSON. After the lease is made?

Mr. PUGSLEY. After the lease is drawn up. Then the terms of the lease must be approved by the board of management. The board will report to the Minister of Railways as to the terms on which it is proposed to lease the railway, as to the length of time the lease would run, and as to other conditions of that kind. Upon that being done, then the Minister of Railways would, in the ordinary course, execute a lease from the railway company, and he would provide in that lease that it should not be effective until it was ratified by parliament. Then in the ordinary course the Minister of Railways would submit the lease to parliament with a short Bill, approving of its terms, and upon the Act ratifying the lease being passed, then the lease would go into effect and become operative. Now, I do not see myself any difficulty in working out that section.

Mr. MACDONALD. Does the hon. gentleman not think, as a matter of construction of the statute, that the act which is contemplated in the proviso at the end, is an act which is to take place after the lease has actually been drawn, and provides for the minister appealing to the board again, and also appealing to the chief engineer to report as to the condition of the line? Because his function, as provided in the first part of the Bill, is to report upon the condition of the road. Is not that a subsequent condition imposed by this section upon the minister after this legislation and all the preliminary reports, after the drafting of the lease?

Mr. PUGSLEY. I think there is an unnecessary provision as to the chief engineer approving of the terms and conditions of the lease. But I do not see any objection to that. The chief engineer is the technical officer of the Railway Department, and while it may be unnecessary, I do not see that any evil result would follow that provision. As to approval by the Board of Management, I understand it would mean that the terms would be approved of after the lease was drafted, not after it had become operative.

Mr. MACDONALD. It should have no force or effect.

Mr. PUGSLEY. Until it is ratified by parliament. I would say that the draft lease must be approved of by the Board of Management. If they approve of it, then it is executed, and it is executed subject to the approval of parliament, and when parliament approves of it, then the lease becomes operative. I think my hon. friend is unduly technical. The main question to be considered is whether, as contended for by my hon. friend from Westmorland (Mr. Emmerson), the government ought or ought not to exact the requirement that the chief engineer should report the railway to be in a safe condition and that it can be efficiently operated. It is an important objection, but if the House should concur in thinking that it is desirable to have the certificate of the chief engineer that the road is in a safe condition for operation, then it seems to me the details can be worked out without the slightest difficulty. While upon my feet, I want to say one word with regard to the desirability of requiring that the road should be in a safe condition. My hon. friend, I think, when he was Minister of Railways, was just as much in favour of the government taking over the branch lines of the Intercolonial and the connecting lines as he is to-day. He knows that years ago, when he and I were members of the provincial legislature of New Brunswick, we stood side by side in urging as strongly as we could that action along these lines should be taken; and when my hon. friend became Minister of Railways, I have no doubt that wherever he could legitimately exercise an influence in that direction, he did exercise it.

Mr. EMMERSON. We did take one over.

Mr. PUGSLEY. One was taken over, the Canada Eastern, and it became a part of the Intercolonial system. But this is a matter of great importance, it is one in regard to which the government must move slowly, no matter what government may be in power or who may be Minister of Railways. I think it will be agreed that it is not only not desirable but impossible to move more rapidly in the direction of acquiring the branch lines of the Intercolonial than public opinion moves. There has been, even up to the present time, considerable doubt upon the part of a good many people, a minority I believe, but still a good many people in the country, and certainly some members of this House, as to the wisdom of the course which is proposed to be taken. We have thought it well to adopt the conservative course, we have thought it well to be able to say to this parliament that we do not propose to take action which will impose any addition to the capital indebtedness of the country.

Mr. EMMERSON. That would be an awful thing to do, I suppose.

Mr. PUGSLEY. We have believed, whether rightly or wrongly, that parliament would not be likely to authorize the government to incur a very large indebtedness upon

the capital expenditure by taking over branch roads. Therefore we have asked parliament to approve of what I think is a reasonable measure, and one which we believe will produce the results which are desired, in the way of permitting the Intercolonial to take over all branch lines which will be likely to prove valuable feeders. Now, my hon. friend from Westmorland, in the very admirable speech which he has just addressed to the House, while approving of the course of the government so far as the principle of the Bill is concerned, expressed the fear that there would be either none at all or very few companies who would be able to avail themselves of its provisions. I do not think that my hon. friend is justified in holding those fears. Take the case of any branch railway which the Board of Management thinks it might be desirable to acquire under a long lease and operate as part of the Intercolonial. The Board of Management would reasonably say to the company, if you put that road in condition, if you make the repairs and bring it up to the standard that we lay down, if you make the repairs according to the specifications which we submit to you, those repairs will cost you a certain sum of money, and it would be fair, in addition to the rental which you would be entitled to for your road in its present condition, to allow you a rental which would be a reasonable interest upon the expenditure you would be required to make upon the road in order to satisfy the terms of this section. Now if there is a company which has a road which is worth anything at all, which will bring any advantage to the Intercolonial or to the country which it serves, I say that upon the Board of Management agreeing to take over that road, and recommending its being taken over on a long lease, and upon the Minister of Railways undertaking that upon the road being in a proper condition it will be taken over upon a rental which would represent the interest upon a fair value of the road in its existing condition, a reasonable interest upon the amount which would be required to be expended in order to put it in a proper condition to fulfil the terms of the statute—upon that being done, when it can be taken over upon a long lease say of 99 years, no company would have the slightest difficulty in making the necessary financial arrangements in order to put the road in a condition which would warrant the Minister of Railways in executing the lease. Therefore it is that I believe this statute will be effective, I believe it will result in bringing to a successful completion the policy which my hon. friend from Westmorland and myself, and many others from the province of New Brunswick, have been advocating for years, both in the legislature and on public platforms, and that most beneficial results will follow, not only to the maritime provinces, but to the province of Quebec and to every section which is served by the Intercolonial, as a result of the enactment of this measure.

Mr. R. L. BORDEN. Before the Bill passes I would like to say, in regard to what has just fallen from the Minister of Public Works, that in my opinion a great deal of care should be exercised before the government enters into an arrangement with any railway company for the expenditure by that company of money upon a particular line to put it in a good and safe condition for operation. It seems to me that there would be considerable possibility of the public interest not being served by such an arrangement unless it were accompanied with very secure safeguards as regards the expenditure. I would take the liberty of advising my hon. friend the Minister of Railways and Canals to be rather careful about the conditions of any such arrangements and the safeguards surrounding them. My hon. friend the member for Pictou (Mr. Macdonald) has drawn attention to the drafting of the section, and I am bound to agree with him that perhaps in some respects it might not be regarded as very artistic drafting; but still I think you can fairly gather from the section what it is the minister must bring to parliament when he submits a proposal for the leasing of any lines. In the first place he must bring the recommendation of the government railway managing board. In the next place the report of the chief engineer of railways and canals that the line is in good and safe condition for operation. In the third place, he must bring his lease and procure a certificate from both these authorities that the terms and conditions embodied in it have their approval, having regard to the beneficial results to accrue therefrom to the government railway. If he brings those to parliament, it seems to me that he fulfils all the conditions precedent created by this section, and it will be then for parliament to consider whether it is in the public interest that the lease should be entered into. I think this may fairly be gathered from the section; and although perhaps the meaning might be expressed in more clear and explicit terms, it is not difficult to find that these are the conditions to be observed before the Minister of Railways can call on parliament to ratify any such lease.

Motion agreed to, and Bill read the third time and passed.

WAYS AND MEANS—THE BUDGET.

The House resumed the adjourned debate on the proposed motion of Mr. Fielding: That Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider of the Ways and Means for raising the Supply to be granted to His Majesty.

Mr. W. S. LOGGIE (Northumberland, N. B.) When the House rose yesterday, I was making a few remarks in reply to the criticisms of the hon. member for North Essex (Mr. Wilcox). I have but very little to add regarding his criticisms, but I want to refer for a moment or two to what he said concerning the Railway Commission. The commission he said, was the grandest institution of the country, but then he added:

> However, I do not pretend to say that the government is entitled to the credit of creating that body. To parliament is due that credit.

This seems to me new doctrine. According to it, we are not to give credit to the great Conservative party for the great work it has done. Why not give that credit to parliament? All the Conservative government did was to introduce the measure. It seems to me that if he gives credit to the Conservative government in the one case, he ought to give credit to the Liberal government in the other. Then again, although he extolled the Railway Commission, as the grandest institution in the country, in the next breath he found fault with the work of that commission in the way of discrimination in rates. Surely the hon. gentleman cannot hold the government responsible because the rates are not made by the Railway Commission to suit his particular locality or the transportation in which he is particularly interested. He also blamed the commission for not providing that telephone lines may cross the railway tracks. But he ought to know very well that provision is made for such cases. All that requires to be done is to proceed in the regular way, and it is not a very difficult one, and permission is given with very little delay unless some good reason be shown why it should be refused. There was another argument he made, to which I would not object if the hon. gentleman had not followed the Minister of Customs (Mr. Paterson). He said it is beyond the control of a government to fix prices by legislation. On general principles, that may be true, but as the Minister of Customs pointed out the day before, when the government were legislating regarding the Crowsnest Pass railway, they included in that legislation a provision that the Canadian Pacific railway should reduce its freight rates on all grain carried over its lines. That meant an increase of about three cents per hundred pounds to the price the farmers in the west got for their grain. In such a case therefore it is possible for parliament to govern the prices of commodities by legislation. Another statement which the hon. gentleman made, was that the customs taxation is precisely the same as it was in 1896, and he based that statement on the allegation that the customs rates were practically the same in 1896 as they were in 1909 on dutiable goods. But is that a fair proposition? Would it not be more to the hon. gentleman's credit to have placed the rate on all the imports in the year 1896 and compare that rate with the rate on all the imports through the customs in 1909?

Had he referred to the trade and commerce report he would have found the following figures: In 1896 there was collected on the imports passing through the customs of Canada $19.13 for every $100 worth of goods. In 1909 the amount collected on every $100 worth of goods was $16.58. This is a reduction of $2.55. That is to say, the rate of taxation in 1909 was 13 per cent less than it was in 1896. Apply this to the imports and you will find how much the people of Canada would have saved had they imported in 1896 the same quantity of goods as in 1909. They would have saved $7,344,000. Yet the hon. gentleman had the audacity to tell the public that there is practically no reduction in the rate of duty as compared with that of 1896. The average of the imports for the last thirteen years is $216,000,000. Applying to this saving of $2.55 on every $100 worth of imports and we find that the average saving of the people as compared with what they would have paid in 1896 had the imports been as great then as now, was $5,508,000, or, for the thirteen years, $71,604,000. I have stated the rate of reduction of taxation at 13 per cent. The Minister of Customs (Mr. Paterson), when speaking the other day made it 12 per cent. That hon. gentleman calculated from 1897, while my calculation was made from 1896. The hon. member for North Toronto (Mr. Foster), in his speech the other day, said the Liberal party were taking practically twice a much from the people as their predecessors did. He stated the amount at $618,000,000 for the term of the present government. If he will take 12 per cent of that amount, he will find how much extra taxation would have been taken from the people of Canada had the rate remained the same as it was in 1896. That amount is $74,160,000. The rate of taxation is based on the needs of revenue, and that revenue should be sufficient for ordinary running expenses. More than that, I think that, in a country like this, revenue should be sufficient to pay for small public works without adding to the

net public debt. And let me congratulate the hon. member for North Toronto on the doctrine he expounded to this House two years ago. He told us then that the proper thing to do was to pay for small public works out of current revenue, and, when you had a large expenditure, like that for the Grand Trunk Pacific the money should be borrowed, to be repaid in so many years, thus letting future generations bear a share of the burden. To my mind, that is good doctrine. And that is the doctrine that is actually carried into practice by the present Minister of Finance. But the hon. member for North Toronto comes down with another proposition this year almost diametrically opposed to that a few years ago. He says that this is a time of overflowing treasuries and that it is a time for using some of our surplus to reduce the national debt. He comes down this year with a proposition to curtail our small public works and to apply our surplus to the reduction of the debt. It is the old story with the hon. member for North Toronto. He cried: 'Wolf, wolf', and no wolf came. He takes a new venture at it this year, and it is: 'Wolf, wolf' again. I congratulate the country on its present prosperity. But this is no time, in my opinion, to withhold expenditures for small public works. This is a growing time, a time when Canada's resources are being increasingly developed, her citizens becoming more wealthy, outside capital being invested, trade inwards and outwards increasing, home industries working full time and a brisk demand for consumption of home manufactures. And our fertile lands have yielded an increasing quantity of wheat and other cereals, the staff of life, making our farmers more wealthy by millions of dollars. In view of all this, the present does not seem the time to raise the cry: 'Wolf, wolf'.

Let us see how the debt of the country stands. I find from the blue-books that during the regime of the present government we have added to the debt of the country in round numbers $65,000,000 during twelve and three-quarter years. Of that $65,000,000 we have expended no less than $58,000,000 on the Grand Trunk Pacific, including the Quebec bridge. While doing that we expend, not $7,000,000 on the small public works of this country, but $165,000,000, an average of over $10,000,000 per annum, and yet during the whole time we have added but $7,000,000 to the net debt of the country over and above what is invested in the Grand Trunk Pacific railway. I wish to refer to a remark of the hon. member for North Toronto (Mr. Foster). At page 1536 of 'Hansard' he tells the country that during the regime of the Conservative party they added to the debt of the country $118,000,000. But he drew attention to the fact that included in that $118,000,000 there is $10,000,000 which was expended for the purchase of 7,500,000 acres of land from, I think, the Canadian Pacific railway, and said that this was a live asset, adding that any fair-minded man when he counts $118,000,000 as added to the debt by the Conservative party, would put $10,000,000 as an asset on the other side of the ledger. I concede that to the hon. gentleman, I think that would be fair, and I think any fair critic in criticising the addition to the debt made by the Conservative party would take into account the fact that this asset of $10,000,000 was added.

The hon. gentleman from East Grey (Mr. Sproule) yesterday made an argument that if we deducted the cost of the Grand Trunk Pacific we should also deduct the cost of the Canadian Pacific railway. There is a very pertinent reason why we should not deduct the cost of the Canadian Pacific railway, and yet should deduct the cost of the Grand Trunk Pacific, and I take the hon. member for North Toronto as my authority. The reason is very obvious, because in the one case we own the property, the Grand Trunk Pacific, and we have an asset, as we have the land, but we do not own the Canadian Pacific railway, we have no interest in the Canadian Pacific railway except inasmuch as it operates to bring prosperity to our country. If you allow the $10,000,000 on the one side in the case of the $118,000,000 added to the debt by the Conservative party, you have for the same reason a right to put on the other side of the ledger the expenditure on the Grand Trunk Pacific, because it is admitted that in the near future at any rate, if not to-day, we will have in the Grand Trunk Pacific a live and valuable asset that will bring interest on its cost, and as I said it is practically the same as if we sold the Grand Trunk Pacific, put the money in the bank, and drew the interest. The hon. member for North Toronto, to whom I give credit for his power of imagination, might have gone as far as to put the $58,000,000 on the other side of the ledger against the $65,000,000 that the government have added to the debt during the last twelve and three-quarter years. If he had done so, he would have seen that only $7,000,000 have been added, represented by over $100,000,000 expended on the lesser public works of this country.

Mr. GEORGE TAYLOR. The hon. member makes the broad statement that this government has reduced the rate of taxation thirteen per cent. I would ask him to name any of the necessities of life on which there has been a reduction. Has there been a reduction on tobacco, sugar, tea or coffee, groceries of any kind, flour, butter, cheese, cottons, boots and shoes, agricultural implements or hardware? Has there been a reduction made on any of these

articles by the government? Has there not been an increase?

Mr. LOGGIE. I do not propose going over all the list my hon. friend has mentioned, but I will give him one that occurs to me at the moment—not one perhaps that he invests in but one that the poor fishermen invests in, the man down by the sea and the man back in Ontario where there is no electric light. If he wants to buy his oil, how much less has he to pay for it? How much less is the rate of duty on refined coal oil?

Mr. GEO. TAYLOR. How much does the government tax the people of Canada to make up for that reduction?

Mr. LOGGIE. My hon. friend tries to get out of the corner. There has been a reduction on coal oil of about 50 per cent, and a reduction in the rate on sugar equal to about $300,000, I am told. I know whereof I speak with regard to coal oil.

Mr. GEORGE TAYLOR. Will the hon. member say that coal oil can be got any cheaper to-day than it could in 1896?

Mr. LOGGIE. The hon. gentleman is asking me another question now. He is asking me if the market price of coal oil is higher than it was twelve or fifteen years ago. That is an entirely different proposition. What I have tried to explain to the hon. gentleman is that the rates of duty have been cut about fifty per cent.

Mr. GEO. TAYLOR. Name the article on which they have been cut.

Mr. LOGGIE. On the article of coal oil. My figures are found at page 14 of the Trade and Commerce report and you will find there the rates on all imports that went through the customs house in 1896 as compared in 1909.

Mr. GEO. TAYLOR. Let my hon. friend compare the dutiable goods for both years 1896 and 1909. Never mind the free goods.

Mr. LOGGIE. The hon. member for North Essex (Mr. Wilcox) did that. There is no necessity of repeating what that hon. gentleman did, and I think he did it very well from his standpoint, but if he had wished to be a fair critic he would have taken the average rate of duty on all imports.

Mr. GEO. TAYLOR. No, that is the Grit way of doing it, but it is not fair.

Mr. LOGGIE. Now, there are one or two remarks that I want to make regarding the public debt. I have tried to explain that we have reduced the rate of taxation. But I want to tell the hon. gentleman that we have not only reduced the rate of taxation, but we have reduced the debt rate per capita and I can verify that by the statements in the blue-books.

Mr. GEO. TAYLOR. You are contradicting the Finance Minister now.

Mr. LOGGIE. I beg your pardon; the Finance Minister said the very same thing. The debt per capita in 1897, according to the statement in the public accounts was $50,87; in 1909 it was reduced to $45.33, a reduction of ten per cent. But, that is not the best of it. I want the House to bear in mind what the hon. member for North Toronto (Mr. Foster) said. He wanted to put $10,000,000 on the other side as an investment in land. Take your $58,-000,000 from the increased debt and you have your per capita debt reduced to $35.22, or thirty per cent less than it was in 1897. But the hon. member for North Toronto tells us that it proves nothing. If the hon. gentleman had a debt to pay and had his two hands to pay it with I can assure him that if there were other two hands engaged the debt would be more easily paid. I think it proves a great deal. If we owe only practically what we did twelve and three-quarter years ago and if we have seven and a half millions of people to pay it instead of five millions of people, it seems to me a very material matter as to whether it proves everything or anything. Now, the hon. gentleman tells us that the pertinent thing is that you have taken $11 per head from the people instead of $5 or thereabouts as was taken by the Conservative party in the year 1896. That might be logical from my hon. friend's standpoint, but oh, if he had the other side to tell, if he had the other picture to present, it would then be a story that would be worth hearing. To my mind the pertinent thing is the rate of taxation, not the amount per head, but at what rate you collect, what the man pays. How is it that we collect more per capita in the way of taxation than the Conservative party did? That is not a very hard question to answer and my hon. friend from Leeds knows the situation quite well. When he was in business he kept the goods his customers wanted. I appeal to him, is not that exactly what he did? If his customers wanted two suits of clothes in the year he kept those two suits of clothes. If those two suits of clothes had to be brought into this country, for example, what happened? Twice as much duty was collected. Why?—because the customers of my hon. friend wanted the goods and the pertinent thing is at what rate did he pay the taxes on those goods. When I point out to my hon. friend that he pays taxes at the rate of thirteen per cent less than the rates that were collected in 1896.

Mr. GEO. TAYLOR. On clothing?

Mr. LOGGIE. On the average.

Mr. GEO. TAYLOR. Name the article.

Mr. LOGGIE. I said that I was only using this as an illustration, and I mentioned clothing. But, the principle is the same. The framework of our affairs has been repaired in these days of prosperity. It was in a rather rickety condition in 1896, but since we have had some good material to put into it, material from Nova Scotia and New Brunswick, since we have had the foundation repaired and the building enlarged we have, in the place of a population of 5,000,000 a population of 7,500,000. The story is a bright one, the picture is not that which has been painted by hon. gentlemen like the hon. member for North Toronto, who on this occasion has cried 'wolf,' when the facts indicate an entirely different position of affairs, but it is one of which every Canadian should feel justly proud. I have some other matters to refer to and I therefore beg to move the adjournment of the debate.

Motion agreed to and debate adjourned.

On motion of Mr. Templeman, House adjourned at six o'clock.

HOUSE OF COMMONS.

FRIDAY, January 21, 1910.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 110) respecting the Algoma Central and Hudson Bay Railway Company.—Mr. Tolmie.

Bill (No. 111) respecting the Dominion Millers' Association.—Mr. Harris.

Bill (No. 112) to incorporate the Independent Order of Rechabites.—Mr. Verville.

Bill (No. 113) respecting the Manitoulin and North Shore Railway Company.—Mr. Tolmie.

Bill (No. 114) respecting the Richelieu and Ontario Navigation Company.—Mr. Forget.

Bill (No. 115) to incorporate the St. Lawrence Power Transmission Company, Limited.—Mr. Pardee.

Bill (No. 116) to incorporate the Toronto and Eastern Railway Company.—Mr. Fowke.

GOVERNMENT BUSINESS.

Sir WILFRID LAURIER moved:

That from the second of February next, inclusive, to the end of the session, government orders shall have precedence on Wednesdays, immediately after questions to be put by members.

Motion agreed to.

INQUIRY FOR RETURN.

Mr. URIAH WILSON. I moved on the 18th of November last for a return showing the number of immigration agents in the employ of the government. When may we expect that return?

Mr. OLIVER. I thought it was laid on the table some time ago, but will make inquiries.

Mr. URIAH WILSON. I inquired in Mr. Polkinghorne's office this morning and it was not there yet.

WAYS AND MEANS—THE BUDGET.

House resumed adjourned debate on the proposed motion of Mr. Fielding that Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider the ways and means for raising the supply to be granted to His Majesty.

Mr. LOGGIE. When this House rose yesterday, I had finished making some remarks on the net debt of Canada. I now propose making a few comments on our expenditure, and in that connection, I wish to refer to some criticisms passed by the hon. member for North Toronto (Mr. Foster). That hon. gentleman said—see page 1490 of 'Hansard':

> What have you to show for the $922,000,000 less the $51,000,000 that has been spent in the twelve and three-quarter years. We cannot escape from the conviction that millions of it have been worse spent than wasted.

In connection with this, the hon. gentleman gives a tabulated list of expenditures. And, he uses this language:

> In eight and three-quarter years, $57,000,000 have been expended on public works alone. I say that this expenditure is inordinate. It is indefensible and you cannot point with your finger to the compensatory advantages, to the compensatory product of stimulus or of health to warrant the expenditure of this amount of money.

I pointed out yesterday that we had received this money at a less rate of taxation than that which had prevailed under the previous government. I wish now to refer to some expenditures that, I think, we can all agree, are to the advantage of Canada. And it does seem to me it would have been much more pertinent had the hon. member for North Toronto named the expenditures that, in his opinion, it was improper for this administration to make. Let hon. members bear in mind that, during the year 1909, the amount expended in the public works of this country was no less than

$12,000,000 as compared with a little over $1,000,000 in the year 1896. Of what did these works consist? Well, there is all the dredging that is done throughout the Dominion, the dredging of St. John harbour of the St. Lawrence water-way, of the Northern Ontario sea-ports, if I may so describe them—inland ports but equal to sea-ports so far as transportation is concerned—and the public buildings, including the new wing to the parliament buildings here at Ottawa, a work carried on under our own eyes. And yet the hon. gentleman has the audacity to say, 'What have we to show for this expenditure?' What he ought to have done was to point out the expenditures that, in his opinion, ought not to have been made. By the way, he did say that when expenditures are contemplated the minister is buttoned-holed by the member and that expenditures for post offices are not placed where they ought to be. Speaking of the things that are not done, he says there is no such thing as taking into account the localities which are to be served and in the line of precedent, he illustrated that by the minister coming to parliament and asking $25,000 to build a post office where there was a postal revenue of only $700 or $800. This, he said, was only an illustration of what was going on. I could not help thinking, when the hon. gentleman was speaking, that possibly we could find a precedent for that kind of expenditure. I made inquiries, and I found that in 1887, when the hon. gentleman (Mr. Foster) was Minister of Finance, and, as such, had the keys of the country's chest, a public building was erected at Dalhousie in the adjoining county to my own. The sum of $20,000 was spent on that post office, though the postal revenue of Dalhousie at the time was only $1,012. I admit that this is a little larger than the amount the hon. gentleman named, but I wonder who was consulted on that occasion. I wonder if the hon. member for Restigouche (Mr. James Reid) at that time button-holed the minister and if it was because of that that this $20,000 was spent on this public building. An hon. friend beside me reminds me that of the expenditure in the hon. gentleman's (Mr. Foster's) own county at Sussex. In 1881, when, I think, the hon. member for North Toronto represented King's county, a new public building was erected there at a cost of $23,000, though the revenue of the post office there was only $1,300. Then, in the county adjoining my own, the county of Gloucester, a public building was erected in the town of Bathurst in 1886, the cost being $26,000 and the postal revenues of the place at that time about $1,300. Have we a precedent, then, may I ask the hon. gentleman (Mr. Foster)? Besides, I think he ought not to forget what the Minister of Public Works (Mr. Pugsley) stated when he asked for the appropriation which was criticised. That hon. gentleman said that we ought to have a substantial building, one built of brick, one that could be used for generations so long as the population did not increase to such an extent as to make the building inadequate for the postal service of the place. And there was the case in my own town, the town of Chatham, though to cover its whole history I must go back beyond the time when the hon. member (Mr. Foster) was not a member of this House. On November 4th, 1873, the Conservative government went out of office. But on the 16th of October immediately preceding, they bought an old stone house which was converted into a post office and customs house building, and the cost was over $10,000 additional. It is true that the opposing party came into power and that the government under their control carried out what had been arranged. But, nineteen years afterwards, with the Conservatives again in power, the government abandoned the old building, after an expenditure of $20,000, on the ground that it was not suitable for the purpose for which it had been bought and remodelled. And so they built a new post office and customs house. This gives all the greater weight to the statement of the Minister of Public Works (Mr. Pugsley) that it is important that we should erect for these purposes buildings of a substantial nature, buildings that will meet the requirements of the public service for many years to come. So, I think the hon. gentleman from North Toronto (Mr. Foster) is hardly fair when he throws across the floor the insinuation that the expenditure of public money is handled at haphazard and without precedent. I contend that we have that precedent; whether it is a good one or not, hon. gentlemen may judge for themselves.

Now, I want to say one or two words regarding other expenditure. On the lighthouses and coast service the expenditure last year was $2,700,000, as compared with $445,000 in 1896. Thus we are expending $2,000,000 more on the lighthouse and coast service of this country, and it seems to me this is a work that is very necessary to our commercial prosperity. It is of advantage to exporters and importers, and also to the shipping interests of Canada, to the carriage of merchandise inwards and outwards. This expenditure has enabled us to place Canada in the enviable position she occupies to-day of competing for the ocean trade, I was going to say, of the world; because it is a matter of general knowledge that the New York shipping interests are envious to-day of the possibilities of the shipping trade of Montreal and the St. Lawrence. The expenditure on dredging and lighting our coasts, and

placing better gas buoys in place of the old fashioned buoys in our waterways, I think is all a wise expenditure. The hon. gentleman should not have made the broad remark he did, and it would be much more becoming on his part if he had pointed out the particular expenditure that is not in the interests of this country.

Now, I want to say something about the Intercolonial, because the hon. member for North Toronto is very severe in his criticisms of the management of the Intercolonial. He read a letter purporting to have been written by the late Hon. Israel Tarte, in which he claimed that the management of the road was influenced by the member of the county through which it passes. Now I can tell the hon. gentleman that I have been a member for a number of years of a county through which that road runs, which it intersects, and as far as patronage is concerned by the sitting member, I can only say that there is not a particle of truth in the statement made in that letter purporting to have been signed by the Hon. Mr. Tarte. I think the Intercolonial is managed from a business standpoint, it is run and managed directly in the interests of the people who have made the investment. Of course, due attention is paid to its customers, and to the customs of the road. Any corporation does the same thing, any corporation would be glad to receive a recommendation from a customer, particularly if that customer gave them a large business. When they require a good man they ask the name of a suitable person from the member, and that is about all the patronage there is on the Intercolonial. I think we have got the Intercolonial at present down to a matter of business.

But the hon. gentleman asks, what have we got for the addition to capital account? He tells us that during the Conservative regime, or rather up to 1896, the amount chargeable to capital account was $55,000,000, and that since then we have added $33,000,000 to capital account because of the expenditure on the Intercolonial; and he asks the question, when is this to stop? What have we to represent that expenditure? Now, Sir, I want to point out, and I think it is important that hon. gentlemen should know, that we have some valuable living assets for this additional expenditure. For the increase of sixty per cent to capital account, we have, first, an increased milage of about 318; we have an equipment to-day that is capable of earning $8,527,069.40, as compared with an earning power in 1896 of $2,866,000. In other words, we have an equipment capable of earning, or capable of doing work, if you like to put it that way, three times as much as the equipment was able to do, or did do thirteen years ago. The 318 additional miles of railway is largely represented by the Canada Eastern between Fredericton and Loggieville, and by the Drummond County railway. It seems to me these facts convey a totally different conclusion to the one sought to be conveyed by the hon. member for North Toronto when speaking on the Intercolonial. I think we should bear in mind what the hon. member for Westmorland (Mr. Emmerson) said yesterday about this railway, this great national asset, and the trend of public opinion in favour of maintaining it as a great national asset, to be operated by the government of Canada. I quite concur in what that hon. gentleman said as to the terms and the standard on which this road was constructed, that it was to be operated by the government of the day.

Now, Sir, the hon. gentleman spoke about deficits on the Intercolonial. I find on investigation that during the thirteen years the present government have operated the railway, there was a deficit six years, and there was a surplus seven years. I find that during the preceding thirteen years there was a deficit eight years and a surplus only four years. So the condition regarding deficits is not very different under this government from what it was during the preceding thirteen years.

Another matter the hon. gentleman brought up was the amount charged to capital account during this past year. I find on referring to the blue-books that we have expended as follows:

New rolling stock	$1,353,000
Locomotives, car shops and equipment at Moncton	569,000
New machinery for shops	154,000
Double track from Moncton to Painsec	199,000
Strengthening bridges	131,000
Increasing accommodation at Halifax	499,000
New bridge at Indiantown	79,000

Will the hon. gentleman point out which of these items should not be charged to capital account. Then it has been insinuated that we are not keeping up the plant of the Intercolonial railway out of the revenues of that railway, but are charging it to capital account. It is true that certain items have been charged to capital account and rightly so, but listen to what has been charged to revenue out of the earnings of the railway during the past year. During the past year there have been paid out of revenue the following items:

Renewals of freight cars	100,000
Renewals of locomotives	135,000
Repairs to passenger cars	272,000
Renewals of passenger cars	67,000
Repairs to freight cars	602,000
Renewals of freight cars	100,000

It is only right that the country should understand that a large proportion of the cost of keeping up this railway is paid out of the ordinary revenues of that railway during the year, and only what is looked

upon as an addition to the asset is charged to capital account each year. I say, that to the best of my judgment, we have an asset worth $33,000,000 more than it was thirteen years ago.

I think that some of the remarks of the hon. member for North Toronto (Mr. Foster) were extreme. His remark about the Saskatchewan Valley Land Company buying millions of acres of land from the government at $1 an acre is an unfair statement. There is a phase of truth in it and the worst kind of representation is the one with a phase of truth in it. What does it lack. It lacks the conditions of the dollar an acre, which were settlement conditions. If one farmer buys a lot of land for $1,000 with no condition and another farmer buys the adjoining lot for $1,000 with the condition that $500 must be expended in the erection of a house, is it not a concrete example that the one plot of land costs but $1,000 while the other, to all intents and purposes, is costing $1,500? That land was sold at $1 an acre with settlement conditions which some hon. gentlemen said were onerous, the settlement conditions were carried out and the country is flourishing and prosperous. The railway running between Regina and Prince Albert, I understand, traverses a country that is productive of good crops, and it does seem to me that the hon. gentleman has hardly been fair in his criticism regarding the Saskatchewan Valley Railway Company, when he says that we sold land for $1 an acre. He should have added that we sold it for $1 an acre subject to settlement conditions.

Mr. J. W. EDWARDS (Frontenac). The debate on the budget presented by the Finance Minister has this year followed much the same course as in former years. Very much the same array of figures has been presented by the Finance Minister and very much the same laudation of that hon. gentleman by his followers, the same tribute of bouquets has been laid at his feet at the conclusion of his address. But, Sir, I venture to say that never before in the history of this parliament or of any parliament in the British empire, or any other civilized country, has it taken a gentleman three days to deliver himself of the load which oppressed him, as it has taken the hon. gentleman who has just sat down. In the course of my professional career I have at times had to submit to some very long and weary hours of waiting, but, Sir, I confess that this is the longest accouchement I have ever attended—and I must say that the results are exceedingly disappointing. It has, it is true, passed through all the stages of first, second and third in each succeeding day. I thought that from the very laboured and agonizing effort of the patient we would have had at least a triplet of ideas to have added to the political nursery opposite. But, Sir, after all has been said and we have looked about for the results we find only a heterogeneous mass unworthy of notice except from the standpoint of the curio hunter, because I venture to say when you consider that mass in its entirety you find nothing like it in the heavens above, or in the earth beneath, or in the waters under the earth. The hon. gentleman in his remarks referred to the hon. member from North Essex as deserving the cognomen of the baby member. We on this side of the House, and I venture to say many on the other side of the House, consider the baby member from North Essex as a very robust and promising youngster, and I am only sorry that when the member for North Essex was delivering his maiden speech in the House the Minister of Agriculture was not in his place, for I venture to say that if the minister had been in his place he would have been induced to revise his assertion that the farmers of this country were a slipshod and indifferent class of people. The suggestion of the hon. gentleman who has just taken his seat that the member for North Essex is deserving of the name of the baby member recalls to my mind that there is a time in the life of men, if they live long enough, which is called second childhood, and I did think, during the course of the remarks of the hon. gentleman who has just taken his seat, that he had prematurely reached that second stage which is supposed to be peculiar to men of riper years.

Between the severe pangs which the hon. gentleman (Mr. Loggie) seemed to be suffering during the course of his speech he was able to tell us that the Conservative party had allowed corn in free for distilling purposes. Well, I have before me the tariff of 1894 and the tariff of 1907, and I can tell the House that the statement of the hon. gentleman in that regard is absolutely incorrect, and that the duty on corn for distilling purposes under the Conservative regime was 7½ cents per bushel, and the duty is the same to-day. Further, the Conservatives permitted corn which was to be planted and sown for soiling and ensilage to come in free of duty. The Liberal party did remove the duty from corn, and that was a benefit to farmers in certain parts of the country, but it bore hardly on the people of the county represented by my hon. friend from North Essex. But, when this government took the duty off American corn they neglected a splendid opportunity of conferring a great benefit upon the farmers of Canada in not exacting from the United States a quid pro quo that they would remove the duty from Canadian barley. Then, the hon. gentleman told us that the only article in regard to which the system

of protection had been retained by the present administration was bacon, on which the duty is two cents a pound, the same as it was before. He said that bacon stood all by itself in this connection. Now, I would like to know from the hon. gentleman how he could possibly make such a statement in view of the actual facts. Has this government changed the duty on butter or on cheese? Was the duty on biscuits changed? Yes, the hon. gentleman (Mr. Loggie) might answer that the duty was raised on sweetened biscuits and that is where that great and illustrious statesman, that apostle of freedom of trade, the Minister of Customs, got in his work. The duty on biscuits was raised because the Minister of Customs is directly interested in the manufacture of biscuits. But, let the hon. gentleman (Mr. Loggie) take the Liberal tariff of 1907 and compare it with the Conservative tariff of 1894 and let him look at the two tariffs for the duties on blankets, bicycles, carriages, buggies, farm wagons, cottons, boots and shoes, and then let him see whether he will repeat his statement that bacon was the only article on which no tariff change had been made by the Liberal government. The Conservative Tariff of 1894, is the same on these and many other articles as the Grit tariff to-day. The statement of the hon. gentleman (Mr. Loggie) is simply astounding, and I can only say that the hon. gentleman either made the asertion with the deliberate intention of misleading this country or he spoke from the depths of the most profound ignorance.

Mr. DEPUTY SPEAKER. If the remarks of the hon. member convey that any hon. member of the House deliberately intended to deceive the House then his remarks would not be in order.

Mr. HENDERSON. He qualified that by giving an alternative which I think removed anything which might be offensive.

Mr. DEPUTY SPEAKER. It is the right of the hon. gentleman to himself explain his remarks.

Mr. HENDERSON. I beg your pardon, Mr. Speaker; I am a member of this House.

Mr. DEPUTY SPEAKER. The remarks of the hon. member for Halton (Mr. Henderson) are not in order.

Mr. HENDERSON. Then it must be supposed that I am not a member of the House.

Mr. DEPUTY SPEAKER. When an hon. gentleman is called to order it is his right to explain his remarks himself and not the right of any other hon. gentleman.

Mr. J. HAGGART. Surely any hon. member has a right to express his opinion on the question as to what the rule is.

Mr. DEPUTY SPEAKER. The wording of the rule is that when a question of order is raised the Speaker 'may' allow debate. The first step is that the member called to order has the right to explain his words. Until that step has been taken the other point cannot be decided.

Mr. J. HAGGART. It is a new rule in this House that the Speaker 'may' allow a debate. I have been in the House for a great many years and the privilege has always been allowed members of the House to discuss questions of order with the Speaker and with the House.

Mr. EDWARDS. Would you tell me, Mr. Speaker, what remarks I have to withdraw?

Mr. DEPUTY SPEAKER. I may not have caught the hon. gentleman's words exactly, but he appeared to me to be using language to indicate that an hon. member of this House had used expressions deliberately intending to deceive the House. If that be so the hon. member was out of order.

Mr. EDWARDS. If I said he deliberately intended to deceive the House I certainly said what I did not intend to. The statement I thought I made was that either the hon. gentleman made his assertions with the intention of deliberately deceiving the country—I know he could not deceive this House—or that he spoke from the most profound depths of ignorance; either the one or the other. It seemed to me I was justified in that assertion because he is not a new member of this House, and with the tariffs before him plainly setting out that on dozens of articles the duty is precisely the same today as it was in 1894 under the Conservative government, how could the hon. member possibly make the assertion that the only item which had not been changed was the duty on bacon. Now, the hon. gentleman also referred to the duty on oils. I find that the duty on illuminating oils in 1894 was 25 per cent and in 1907, 20 per cent, so there is a reduction there. There has been a reduction in the duty on coal oil, but I call attention to the fact that this government has done what the Conservative government did not do; in the years 1905, 1906 and the nine months of 1907 this government has paid out no less than $907,757 in bounties to the oil people. They went to the people and said: See what we have done for you. See how we have reduced the duty on coal oil for your benefit. The coal oil man did not like this. Then the government turned

around to the coal oil men and said: Keep quiet, we are experts in this business and we will put our hands in the public chest and take out $907,000 of the people's money to pay you back. That is the position.

The hon. gentleman who has just taken his seat made some reference to the spending of the money of this country for public works. It seems to me that the hon. member for Northumberland is not in a position to express an independent opinion with regard to spending the money of this country on public works. My reason for saying that is that the records show that that hon. gentleman has had his feet in the political pap trough himself and has been drawing very largely for his own benefit from the public funds.

Mr. LOGGIE. I would like to take exception to that statement of the hon. gentleman. It is not a statement of fact. I have never personally had one dollar of public money from the hands of the government.

Some hon. MEMBERS. Take it back.

Mr. EDWARDS. Not quite so soon. If I have misstated anything in reference to the hon. gentleman, I will take it back most willingly, but, if I am not mistaken, I presume the House will bear me out in my statement.

Mr. DEPUTY SPEAKER. I must again point out to the hon. gentleman that when an hon. member of this House denies a statement made with regard to himself, that denial must be accepted.

Mr. EDWARDS. Am I to understand, Mr. Speaker, that if I make a statement of fact and am prepared to prove that statement I must withdraw it because another man says that it is not correct?

Mr. DEPUTY SPEAKER. No, that is not the ruling of the Chair. The ruling of the Chair, as well as the rule of the House, is that when a member of this House makes a statement with regard to the act of another member, and when that other member denies the accuracy of that statement, that denial must be accepted. It may be open to him by other process to proceed, but the rule of the House is that the denial must be accepted.

Mr. SPROULE. Would it not be properly in order for the hon. member after that to go on and give the grounds upon which he made the statement?

Mr. MACDONALD. Not at all.

Mr. SPROULE. I take it that is quite in order.

Mr. EDWARDS. If you will permit me I will——

Mr. EDWARDS.

Some hon. MEMBERS. Order, order.

Mr. EDWARDS. I am speaking to Mr. Speaker at present.

Mr. NESBITT. That does not matter.

Mr. DEPUTY SPEAKER. Order; I have to hear what the hon. gentleman desires to say.

Mr. EDWARDS. If you will permit me I will give the item in the accounts which justify my statement, and then if you say I must accept the hon. gentleman's denial, I will do so.

Mr. DEPUTY SPEAKER. I think, although it may not seem fair to the hon. gentleman, that the rule is explicit, and I have in my own practice endeavoured to enforce it, that when the words or the acts of an hon. member are called in question his denial has to be accepted. There are other means, no doubt, by which the hon. gentleman may proceed, but the rule seems explicit that the plain denial of an hon. gentleman of an act attributed to him must be accepted.

Mr. J. HAGGART. May I be allowed to say a word upon the subject? The hon. gentleman (Mr. Edwards) accepts the denial of the hon. member opposite (Mr. Loggie) who says that what my hon. friend says it not so. Surely my hon. friend (Mr. Edwards) is entitled to make a statement justifying the statement that he makes here. Is it not open to him to say: Here is the reason I assign for making the statement, but if the hon. gentleman denies it I withdraw it?

Mr. DEPUTY SPEAKER. It has not yet reached that stage. The hon. member for Frontenac has not yet accepted the denial of the hon. member for Northumberland.

Mr. EDWARDS. I shall certainly abide by your ruling, Mr. Speaker, and accept the denial of the hon. gentleman, and I will go about the matter in another way. I find that the Auditor General—not the member for Frontenac, but the Auditor General—in his report for 1908, volume 3, page V—199, says that W. S. Loggie, not W. S. Loggie, Limited—that appears of course, in a good many cases in different parts of the accounts, as we all know, and, the hon. gentleman appears very largely in the accounts—but W. S. Loggie received moneys in connection with an expenditure made at Shippegan harbour, New Brunswick, in connection with public works.

Mr. LOGGIE. I wish to say that notwithstanding what is stated in the Auditor General's Report, I have not received personally a dollar of public moneys.

Mr. EDWARDS. Well. Mr. Speaker, I presume that since the hon. gentleman re-

pudiates the Auditor General's Report, we are logically entitled to take all the statements and figures which he gave to this House, and which were based on the Auditor General's Report, cum granum salis. I have no further comment to make on that, but the Auditor General's Report is there. The hon. member for Northumberland says that it is no good, that you cannot depend upon it, although hon. members on the other side of the House have frequently referred to it, and hon. members on this side have regarded it as correct. Here, the figures are plain. The report says that W. S. Loggie got some money from the Department of Public Works of this country, that he benefited to a certain extent, and I can only present that statement of the Auditor General to this House and place it alongside of the statement of the hon. gentleman who has just taken his seat and who says that this book is wrong. I assume that the hon. gentleman had that in mind the other day when he said: It is no time, in my opinion, to withhold expenditures for small public works. I assume that possibly he had in mind either small public works in the past or small prospective public works.

Now, Mr. Speaker, I wish to refer to some statements which were made during this debate by the hon. member for Assiniboine (Mr. Turriff). The hon. member during the course of his remarks on the budget, went considerably into detail. He referred to a great many items which are now on the free list. Throughout his whole argument he endeavoured to make it appear that the very articles he enumerated had been made free by the Grit government. He challenged the hon. member for North Toronto (Mr. Foster) to point to one of these articles which that hon. member would place on the dutiable list. thus implying that they had all been made free by the Liberal party, and had all paid duty previous to that party coming into power, and that it was the intention of the Conservative party to replace these articles on the dutiable list should they come back to office. That statement, Sir, is directly at variance with the facts, as any hon gentleman can convince himself by comparing the tariff of 1894 with that of 1907. The Conservative tariff of 1894 admitted free of duty poultry, horses, cattle and all kinds of animals for the improvement of stock; animal and vegetable fertilizers; corn for ensilage, oil cakes and similar feeds, rennet, sawn lumber not dressed, laths, fence posts, garden seeds, tea, coffee, sugar up to No. 16 Dutch standard, and on refined sugar only 64-100 of a cent per lb. The tariff of 1907 charges 1·08 cts. per lb. up to 88° test and for each additional degree by polariscope test 1½c. The Conservative tariff of 1894 also reduced the duties on agricultural implements, mowers and binders, seed drills, ploughs, harrows and horse rakes from 25 to 20 per cent. One binder twine it reduced the duty from 25 per cent to 12½ per cent, and on rove for making twine it reduced the rate to 10 per cent. The duty on barb wire was reduced by the Conservatives to ¾ of a cent per lb. The Grits took the duty off twine but paid in bounties from 1904 to 1907 over $70,000.

It was most unfair for the hon. member for Assiniboine (Mr. Turriff) to have misrepresented the facts as he did. It was most unfair for him to have made it appear that the articles I have enumerated were paying a duty when the Conservatives were in office and had been placed on the free list by the Liberals. That is not in accord with the facts, and I am very much surprised that a gentleman, such as the hon. member for Assiniboine (Mr. Turriff) should have put himself on record as having made any such misleading statement.

Time and again hon. members opposite have been exclaiming to the house tops about all they have done for the benefit of the farmers. But take the items on the list to-day and those in the tariff of 1894, and see which party is entitled to the gratitude of the agricultural class. What party was it that established our system of experimental and branch experimental farms? That system was originated in 1886 by the Conservative party. Five experimental farms were then established. The Liberals came into power in 1896, and it took them ten years to find out that we ought to have more of these experimental farms. Then in 1906, they established one at Lethbridge and in 1907 one at Lacombe.

A good deal has been said about the reductions in the tariff by the Liberal party since they came into power. Let me give this House a few figures in that connection, and I take all my figures from one of the books authorized by this government. I find that in the year 1906, the average ad valorem rate of duty collected on dutiable imports from the United States amounted to 24·779, and on our total imports to 13·144. I find that the average ad valorem rate of duty collected on dutiable imports to this country from Great Britain in 1906 was 24·601 and on our total imports from that country 18·709. On the same authority I find that the average ad valorem rate on dutiable goods imported from all countries in 1906 was 26·835, and on our total imports from all countries 16·393. Further I find that the average ad valorem rate collected on dutiable imports into Canada from the United States for the forty years from 1867 to 1907, amounted to 23 803, and to 12·843 on our total imports from the United States dutiable and non-dutiable. On goods from Great Britain the average rate for the

40 years on dutiable imports, was 23·195 and on the total imports 17·772; and the average rate on dutiable goods from all countries was 26·349 and on the total imports 17·. Comparing these figures you will find that the average ad valorem rate of duty charged to-day by this government on dutiable goods and on the total goods coming from Great Britain and the United States and all countries, is higher than the average rate during the 40 years on goods, dutiable and non-dutiable from Great Britain, from the United States and from all countries. That seems to me to bear out the statement made by this side of the House that there has been comparatively little change in the tariff, that the tariff of to-day is a protective tariff in principle and in fact, as it was when the Conservatives were in power, that in fact the tariff of this government is the policy of the Conservative party carried out with comparatively few changes.

Some may say that the average ad valorem rate of duty for the 40 years is lower than the average rate charged by this government because of the revenue tariff said to have prevailed during the Mackenzie regime. But as an offset to that, I would refer to the figures of the previous years from 1867 down to the time when the Mackenzie government came into power, and you will find that the average ad valorem rate was lower then than when the Mackenzie goverinment was in power. That was the condition which prevailed up to 1878 when that great statesman, the late Sir John Macdonald, inaugurated the National Policy, believing that our people would be best served by adopting a policy which would protect all classes from undue competition by other countries. That policy was inaugurated in 1878, and that is the policy which, with slight changes, I am glad to say, is being carried out and to which the great prosperity of the country is entirely due. Another matter which is often referred to by hon. gentlemen opposite is preferential trade with Great Britain. I have only one or two figures to give on that subject. In 1896, of the total imports of Canada, 31 per cent came from Great Britain and in 1908 less than 27 per cent. On the other hand, in 1896, Canada received 50 per cent of her total imports from the United States, and in 1908 the proportion had risen to 56 per cent. Of imports free of duty, we took from Great Britain 22 per cent in 1896 and only 17 per cent in 1908, while the proportion from the United States during the same time rose from 64 per cent to 70 per cent. Hon. gentlemen opposite say that there is nothing in the argument of the adverse balance of trade. But they used to declare that Canada's natural market was the United States. For years they went up and down this country preaching the doctrine that Canada should look to the United States, and even went so far, in 1891, that they would have bartered Canada and Canada's honour for Yankee dollars; they would have given this country away to the United States, or would have adopted the policy that must have had that result. Yet the figures prove that this country, with its population of seven million, is a better market for the people of the United States than is the United States with its population of ninety millions for us. In 1908 the United States provided us with a market for $96,900,000 of our goods, but in the same year our smaller population afforded for the people of the United States a market for $214,000,000 worth of their goods. There was thus an adverse balance of trade for Canada of $118,000,000. Hon. gentlemen opposite say that cuts no figure. But will any man in this House say that he would not prefer to have those figures reversed? Will any man say that it would not be better for Canada if we were selling the United States $214,000,000 worth while they were selling us $96,000,000? In 1908, we bought from the United States $1,254,704 worth of horses. And what market did they afford for our horses? They took $900,000 worth. Why was this? As I stated last session and repeat to-day, it is largely because our tariff discriminates against the Canadian farmer, that is, under the tariff arrangements, it is easier for the American farmer to bring stuff into Canada than for the Canadian farmer to get his stuff into the United States. In this same year, 1908, we bought from the United States 1,123,336 dozen of eggs, allowing these eggs to come in here on paying a duty of three cents a dozen. When the Conservatives were in power, the duty was five cents a dozen, the same as the Americans charged us. We lowered our wall, we opened our gates, and the result was that they sent over more than a million dozens of eggs. Then, we went across the ocean to hunt up a market for our surplus eggs, for the United States would receive from us only 32,991 dozen. We find a similar condition in regard to bacon. We imported 7,304,187 pounds of bacon from the United States in 1908, charging a duty of two cents per pound. But the Americans put a duty of five cents per pound on our bacon, and so we sent into the United States only 30,294 pounds. If there is nothing in this, it seems very strange that the figures should all point one way. In this great wheat producing country, we bought from the United States in 1908, 5,803,452 bushels of wheat, which we allowed to come in at a duty of 12 cents per bushel. And we sold to the United States 114,926 on which they

charged us the duty of 25 cents a bushel. I maintain that that is a decidedly unfair policy to the farmers of this country. I entirely agree with the hon. member for North Essex (Mr. Wilcox) who touched on this matter in his very able speech the other day, and I believe the farming community of the constituency he so ably represents will back him up in what he says.

We have in this House a very worthy and able gentleman, who, however, so far as trade matters are concerned, is a rara avis. I refer to the hon. member for Red Deer (Mr. M. Clark) who is a theoretical free trader. That hon. member, so far as his utterances on trade matters are concerned, occupies a position in this House of splendid isolation. I can imagine that when he left his native land to come to Canada—and I am sure that it was a good thing for Canada when he came, and I hope that hundreds more just like him will leave their native shore to take up their home here; this country will be the better for their coming—he must have been impressed with what had been repeatedly set forth by the grit party of Canada, that they would abolish protection—that they would not leave a vestige of it—that they would cut it out root and branch—that they would cut off the head of protection and trample on its body. I can imagine the hon. member for Red Deer, when he looked over the papers and saw utterances of that kind, would naturally ally himself with the Liberal party when he came to this country, assuming that, with the Liberal party in power at Ottawa, protection must have been abolished and free trade established. He started to build his house and found that the bricks he used were protected by a duty. The dressed lumber that went into that house had also a protective duty upon it. The hon. gentleman found that the glass put in his windows had a protective duty, nor was there any grit ready to tell him that the Conservative party when in power had largely reduced the duty on window glass. The putty the hon. gentleman used in fastening in the glass, and even the putty-knife he used in the work were protected under the tariff. Going into his house, the hon. gentleman sat on a protected chair, at a protected table, with dishes upon the table protected by duties kept up by this free trade Grit government. The food that he eats in many instances, with the exception of tea and coffee, which were made free by the Conservatives, is also protected by a duty. He steps outside to reflect upon these things. He fills his protected pipe with protected tobacco and lights it with a protected match—all under the rule of the free trade Grit government of Canada. Finally he looks around, and he spies a piece of binder twine, and in his joy he would decorate that piece of free binder twine with love knots of baby ribbon if it were not for the fact that the ribbon had to pay a duty. But he finds this piece of free binder twine, and he gets hold of a piece of fence wire, and he goes to work to make a fence but he has to use a protected hammer. But he finds these two things, and he lauds the Liberal party, which he calls the free trade party of Canada. He has found a piece of free binder twine and he has found a piece of wire; and he told us a few days ago that he could not find where the Conservatives had done anything in the direction of free trade, or to help the farmer. He has lost sight entirely of all these things I have enumerated, and which were put upon the free list by the Conservative party before the Grits came into power; and he now has the audacity to refuse credit therefor to the Conservative party.

Now there were one or two other things which are free under the present tariff. If the hon. member for Red Deer (Mr. Clark), after building his house, wished, as I am sure he would, being a gentleman of artistic taste, to decorate the walls of his house with pictures, he would find under the tariff of this free trade grit government pictures which cost less than $20 he would have to pay a duty on. But if he has lots of money, and can pay $1,000 for a painting, or a pastel, then he will find that it comes into the country free of duty. Yet there are some persons who claim that this government is tending towards free trade. A few sessions ago my hon. friend from Souris (Mr. Schaffner) proposed a resolution in this House, when the House was in committee, and what was the nature of that resolution? To reduce the duty on agricultural implements from 17½ to 10 per cent. The hon. member for Red Deer says that he appreciates every move in the direction of a reduction of duty. I can understand that, holding the free trade opinions he does he is quite consistent in appreciating every reduction, no matter how small, as agreeing with his views. But I call his attention to the fact that when the hon. member for Souris brought that motion before this House, it was supported by the Conservatives, while every gentleman on the opposite side who claim that they are supporting a government which does all it can for the farmers, opposed it; and my hon. friend from Assinboine (Mr. Turriff) and my hon. friend from Northumberland (Mr. Loggie) who, I think, were in the House at that time, also opposed it.

Now I want to call attention to a few militia matters, and I am sorry that the Minister of Militia, who was in the House a short time ago, is not now in his seat; I want to call attention to the manner in

which some of the money of this country has been squandered by the present administration. Take the case of the cottages for the Royal Military College at Kingston. They were contracted for at $77,739, 16 flat-roofed cottages, for men receiving about $400 a year. They have cost up to November 22, 1909, $90,995, being a cost over contract price of $13,256 or 17 per cent. That is not an isolated instance by any means. How did this come about? A favourite of the government is given a contract to put up a building. The first thing he has to do under his conrtact is to excavate, to make a cellar for the building. He goes to work, and after a while he comes back and says, I have found a little rock there instead of earth, and I want more money. Now the rock under those buildings was a shaly kind of rock that did not require any great effort to get it out. But he went to the Minister of Public Works, and that hon. gentleman hands over $1,777 to this contractor for what the contractor says is rock. The same thing is done in regard to other items in connection with that building. Now, when I asked the Minister of Public Works in reference to this building, what work was let by tender and what work was let without tender, I was informed that there were three items amounting to $6,227 which he said had been let by tender, when it was subsequently shown that the only man who put in a figure on them was the man who was given the original contract. If that is not a misrepresentation of the true state of things, then I cannot understand what misrepresentation means. Then this government went to work and built some stables for the college. For these a contract was let for $6,990, and the cost was $8,573, an excess of $1,583 or 22 per cent. Those stables were built in 1905, and there has not been a horse inside of them from that day to this. Yet we are told to regard this government as one practising economy, and looking carefully after the expenditure of public money, as a government combining all the qualities of sagacity and statesmanship. Then we have the Royal Military College riding establishment. That was to provide a residence for the men who were to look after those horses that have never been in the stable built five years ago. The contract price for that building was $9,490. They advertised for tenders in 1908, the building is not quite complete yet. Now it is a singular thing that after they let a contract for the building which the contractor says is going to cost $9,490, they turn around and tell us that the estimated cost of that building is $15.000. The fact in regard to these buildings is that they did not attempt to complete them at the contract price. The contractor gets all he can grab out of them. I was in the cottages that were built for the soldiers at Kingston, and notwithstanding the fact that the contractor had drawn some $90,000 for putting up these sixteen cottages, there was not a hook nor a shelf in one of these cottages. When the soldiers moved in they had to hang their hats and coats on the floor until they went to work and put up shelves and hooks. I find in the Auditor General's Report for 1909 at page V—81 that in connection with the residence being put up as a riding establishment—and mark you it is a residence for people, not a horse stable, an item of $43 for a concrete manure pit. Of course they have a way of getting out of that through the kind intervention of the hon. member for Northumberland, (Mr. Loggie), who says that you must not believe what appears in the Auditor General's Report. The report also says that in this residence there are tin-lined oat-bins. Are they going to feed the soldiers living in that dwelling on oats. I dare say some of them are Scotchmen and would not object to oatmeal, but feeding them on oats is going too far. There are other items, such as twenty saddle racks to be put up in this residence. Why were these items attached to the riding establishment? Of course they belong to the Royal Military College stables but they did not want the expenditure in connection with that building to run up any higher, especially as the building was constructed five years ago, and so they charged these things to another work entirely.

Then we have the new rifle ranges near Kingston. If you travel east out of Kingston, along what is called the Front road, you pass through property belonging to this government. On the right, on the south side of this road, the rifle ranges formerly were situated near where Sir Richard Cartwright has his residence on the property belonging to this government. For about a mile and a half back of the butts there is government property. But Sir Richard Cartwright wanted a portion of that land for himself. The government leased 75 acres to Lady Cartwright in 1905 for $55.25 and another 100 acres for $42.96. That is a total of 175 acres leased for $102.22, or an average of 58 cents an acre. The Minister of Militia says that land is mostly rocky and stony. The assessment roll of the township of Pittsburg, in which that land is situated, says that there are 95 acres cleared. You would think that Sir Richard Cartwright was getting that land cheap enough at 58 cents an acre, but I am credibly informed that that hon. gentleman has been cutting and selling wood and timber off this land which belongs to this government and which has been practically given to him for a summer residence. Sir Richard Cartwright objected to having the rifle ranges on the same side of the road

as he lived, and consequently they were moved across the road and new ranges built at an expense of $12,000. Here again, notice the wonderful statesmanship and sagacity of this government. Just back of the rifle butts, which were built at the foot of a hill, so that when the targets were lowered to be repainted, they fell into the water, they built an embankment to stop any stray bullets which might go beyond the butts. They built this embankment of earth and built it within 100 yards of the foot of a hill which rises 12 or 15 feet higher than the top of the embankment. And yet we are told that this government is composed of statesmen and men looking after the interests of the people. In order to have the rifle ranges on their present site it was necessary to acquire property, so they bought 34·37 acres from one man, giving him $100 an acre, $3,437. Their agent then went to a couple of maiden ladies who lived alongside and frightened these ladies into selling 55·37 acres of similar land for $1,952, or $35 an acre. That is the statement of these ladies, that the agent went to them and told them if they did not accept the $35 an acre for the land, the government would take their land anyway. That is not an isolated instance. They went right along the line and ruined half a dozen farmers in that township by chopping off 40 or 50 acres from the farms, practically ruining those farms. Take a farm of 75 acres and chop off 35 acres and who wants to buy that reduced farm? It would be impossible to make a living off it. This the government have done, sending agents to these people and offering them $40 an acre, saying: If you do not take that you will not get anything. That is what this government has done and why? Because one of the cabinet ministers wanted a summer residence on property owned by the government on the opposite side of the road. The right hon. leader of the House has in the past expressed some anxiety lest we drift in the direction of militarism. Let us see how far this government has drifted in this direction. From 1868 to 1872 the militia expenditure of this country was $5,759,487. From 1873 to 1877 it was $4,913,879. From 1878 to 1895 it was $20,889,657, which includes the extraordinary expenses connected with the Northwest rebellion in 1885. For the last fourteen years of Conservative rule the average expenditure was $1,337,604.

If you deduct the extraordinary expenditure caused by the Northwest rebellion, the average expenditure for militia and defence during the last fourteen years of Conservative rule was less than $1,000,000 per year. And yet, the leaders of the Liberal party were then howling from one end of the country to the other about the enormous expenditure on Militia and Defence. Let us make a comparison. The total militia expenditure from 1896 to the present, under Liberal rule, has been $48,444,801, or an average of $3,460,344 per annum, and of this the enormous sum of $23,177,120 has been expended by this economical, wise and sagacious government during the past four years, or an average of $5,794,280 per annum. And, we are asked to vote for next year $6,876,700, which no doubt will be swollen to $7,000,000 when we get the supplementary estimates. Compare this huge expenditure under Liberal rule with the expenditure of $947,202 per annum during the last fourteen years of Conservative rule, and which was denounced by the Liberal party then as extravagant, and as drifting to militarism. Why, during the Northwest rebellion the total expenditure on militia by the Conservative government was less than one-half the expenditure the Liberals are making in this time of blessed peace. How is it that so much money is being wasted by the present government in military matters? It is because the policy of the government is directed to keeping up a lot of high officials who are simply living on the country and are absolutely useless and some of whom draw cabinet ministers salaries. I quote from figures published in the Kingston 'Standard', a newspaper which is usually correct in its statements, and those figures, just for Kingston mind you, show, that in the Ordnance Store Corps there are three officers drawing $5,566 per annum and that the rest of the force, non-coms. and men get $7,308 per annum. What an economical and wise government? In the Canadian Army Pay Corps there are four officers drawing $4,103. Take the district staff and there you have six or seven officers drawing $14,887. Take the Canadian Army Service Corps and you have four officers getting $3,719 per annum and the non-commissioned officers and men all told only get $7,295. Take the Permanent Medical Corps and one officer there gets $2,995 per annum, or more than all the non-coms. and men put together, and would you believe it, Mr. Speaker, he is not satisfied with that; he engages in his regular practice, draws his $2,995, takes the uniform off one of the soldiers, puts him in civilian clothes, and uses him as his man of all work around his house and premises, and the country pays for it. What a wise, sagacious and economical government. Take the Royal Canadian Horse Artillery and you find that the officers draw $28,148 per annum, while the non-coms. and men draw $85,525. Out of a total expenditure of $162,000 for militia and defence at Kingstone, over $60,000 went to these officers; and that is only a small piece of it; you have got the same sort of thing, only worse, in Ottawa. Talk about increasing the efficiency of your militia, I tell you, Mr. Speaker, that it is not at the

bottom, it is not among the men who form the rank and file that you want to commence, but you must begin at the top and weed out the men whose only claim on this country is the amount of attention they can attract by the quantity of gold braid and lace they can put on their clothes. But that is not all. We have in Kingston a military college which is regarded as one of the best schools of the kind in the world, and which deserves a well earned reputation because of the men it has turned out. And why is it, Mr. Speaker, that graduates of the Royal Military College must be put to one side and men brought over from England to occupy the positions they should occupy. Is that fair and just to the young men of this country? I say it is not. I am just as much a Britisher as any man in this House, but I am a Canadian and I say that if an Englishman comes over to Canada to take an additional course in our military college alongside of Canadian youth, and if there are offices which require men to fill them, I say that the Canadians should get the preference every time. Such is not the policy of this government just now, and I say it is only another instance that they are moving in the direction of militarism. The idea of this country spending $7,000,000 a year on Militia and Defence! What is it for? I ask in all earnestness for what do we spend this money. Last year when the Minister of Militia asked the House to vote $6,000,000 he said it was because of:

> The necessity of maintaining an armed force for repelling invasion in case any attempt of that kind should unhappily be made.

Repelling invasion from whom I would like to know. Is it from the United States he expects invasion? If so, why did this government deliberately with its eyes wide open permit the United States to put their war vessels on our Great Lakes and absolutely place all central Canada at the mercy of that country. Why, in 1812 the American general spent one whole summer making boats to transfer his soldiers across to the Canadian side. But to-day there are hundreds of American steamers, which, protected by armed cruisers which this government in its assinine policy has permitted on our Great Lakes, can convey thousands and tens of thousands of American soldiers across to this side. Talk about a naval policy; if we are going to defend this country the place for us to start is to put a Canadian fleet equal to the American fleet on the Great Lakes. If, in the event of war—which I do not expect and which nobody expects—in the event of war between this country and the United States, it is an undeniable fact that because of the carelessness and negligence of this sagacious government, all central Canada has been placed absolutely at the mercy of the United States.

I want to refer to one or two statements that were made during the address of the hon. member for Assiniboine. The hon. member referred to a want of unity on this side of the House. He also referred to the naval question. He referred to the speech made by my hon. friend the leader of the opposition (Mr. R. L. Borden), then to the statement made by my hon. friend from Jacques Cartier (Mr. Monk), and then to the statement made by my hon. friend for Digby (Mr. Jameson). It has been the policy of the Liberal leaders and their subsidized Grit press from one end of Canada to the other to do their best to belittle the leader of the opposition in the eyes of the people of this country. I want to tell them that we on this side of the House are proud of our leader. We are proud of him, not only because of his splendid abilites, but because of his uniform courtesy and unwavering loyalty to Canada and the British empire. Not only are the members on this side of the House proud of the leader of the opposition, but every hon. member on the opposite side of the House is proud of him as well. They have a right to be proud of him, and the people of Canada are proud of him. But, forsooth, the hon. member for Jacques Cartier expressed an opinion which somewhat differed from that of the leader of the opposition. I venture to say that there is not a man on either side of this House but what would say that the hon. member for Jacques Cartier, when he expresses an opinion, is expressing an opinion which is conscientious, and I want to ask why he should not differ from me or from any man in this House if he is honestly expressing what he believes to be in the best interests of the country? Our leader is not a leader who is given to taking any member by the throat and throttling him into submission. That is not the kind of leader we have, thank God. Talk about unity in the ranks. I am sick and tired of having that kind of talk hurled across the floor of the House. Unity in the ranks. Why, last session, the hon. member for York, New Brunswick (Mr. Crocket) put the hon. Minister of Public Works (Mr. Pugsley) through a political Turkish bath in this House that he will not soon forget. Then what did we find? After it was done, after the hon. Minister of Public Works had gone through all the processes of a Turkish bath, the massage and everything else, and after he had come out steaming hot, a vote was called. That vote meant the speedy retirement of the hon. gentleman from the position which he adorned. What was the result of the vote? The majority was cut down about one-half, because, notwithstanding the unity across the way, a great many hon. gentlemen opposite could

not swallow it and they skipped out. But their loyalty to the party came in, and they were told to come forward and sign their names to a document declaring that they believed in the integrity, the uprightness and everything else that was good and holy of the Minister of Public Works, and like little whipped school children they walked up and signed their names. Talk about party loyalty! What is the measure of party loyalty as accepted by hon. gentlemen opposite? The measure of their party loyalty is represented by sawdust wharfs, Aylesworth ditches, Saskatchewan land deals, Merwin deals and McAvity steals. How was their loyalty measured in 1891? It was measured by a policy which expressed willingness on the part of the Liberal party to barter this country and this country's honour for Yankee dollars. Still they dare to stand up and throw the taunt of a want of unity and a lack of loyalty to the party on this side of the House. Where has the Conservative party been found on every occasion when loyalty and adhesion to the empire were called for? What was the position of the Liberal party when war broke out in South Africa? It was not until the Conservative party and public sentiment drove them, actually drove them, that they consented to allow our soldiers to go in defence of the empire. This country made money out of that deal. Great Britain sent over $10,000,000 to this government to expend for stuff that was used during the war. Our total cost was less than $2,000,000, and we made over $8,000,000 clear money out of the South African war. looking at it from a purely financial standpoint, and it is proposed now to spend the money that we made in connection with the war, the money that was won with the blood of Canadian heroes on the veldt of South Africa, upon a tin-pot fleet. Yet, hon. gentlemen opposite throw taunts across the floor of this House as to our loyalty and as to the loyalty of the Conservative party. How many positions has the right hon. gentleman who leads the party across the way assumed in connection with this naval proposition? He came before this House last session and agreed to a resolution. He claimed in Toronto the credit for moving that resolution initiating the matter. In some places in the country, I suppose, where they do not regard it as well, blame is put on the hon. member for North Toronto (Mr. Foster). But, at all events, the resolution was put through this House unanimously. Then we find another change. He comes to us and says that not a ship shall go to the assistance of the mother country without the consent and sanction of this parliament, and he calls upon the Grit organs from one end of Canada to the other to pipe that tune, and upon the hon. member for Assiniboine (Mr. Turriff) to dance to it. He dances to it and they all dance to it. Then he goes to the Conservative city of Toronto, the loyal city of Toronto, and he tells the people there: We will send our fleet to the assistance of the motherland if she is severely pressed. He orders the organs to pipe to that tune, he orders the hon. member for Assiniboine to dance to that tune, and the organs pipe the tune and the hon. member for Assiniboine dances to it. Now he comes down with a proposition for a tin-pot navy and, of course, they will dance to that tune. That is the measure of their party loyalty. Loyalty of that kind is a synonymous term with the word servility.

Mr. Speaker, I have probably taken up more of the time of the House than I should have done. But, at least I have not taken up three days like the hon. member for Northumberland. I thank this House for the attention it has given to me during my remarks in connection with the budget.

Mr. C. L. OWEN (Northumberland, Ont.) My hon. friend the member for Frontenac (Mr. Edwards) refers several times in his speech to the hon. member for Northumberland. There are two or three members for Northumberland and I would like him to be more definite and say which one he means.

Mr. EDWARDS. The point raised is certainly one worthy of consideration. I, of course, made no reference to my hon. friend from North Northumberland, Ont. (Mr. Owen) but to the hon. gentleman from Northumberland, New Brunswick, (Mr. Loggie), who preceded me in this debate, and I wish that to be explicitly understood.

Mr. E. W. NESBITT (North Oxford.) If I had any desire to be rude or sin against the amenities of debate, I could easily reply in like manner to the unkind remarks made by the hon. gentleman who has just taken his seat (Mr. Edwards) regarding the speech of my hon. friend from Northumberland (Mr. Loggie). I have no intention, however, of following the hon. gentleman in that line, nor shall I follow him through the course of his long and wearisome remarks, except to make a brief reference to that portion of his speech towards the end in which he became so excited. The hon. gentleman pointed out that in our military system we paid the officers higher than the men. Well, I think that if he would search through all the countries where there is a military system in existence he will find that the officers are usually paid higher than the men. But he should also bear in mind that the militia of Canada is a very small body and that its principal object is to train officers in case there might be

trouble, so that naturally there is a greater proportionate number of officers than there would be in a regular military system. As regards the cottages at Kingston, which have always bothered the hon. gentleman, at least since I have been a member of this House, that expenditure was thoroughly explained in the Committee of the Whole when the estimates were being passed. The explanation was then accepted by the House and I do not see that there was anything in that expenditure for the hon. gentleman to become so excited about.

As regards the Minister of Public Works (Mr. Pugsley) I have only to say that I throw back his challenge to the hon. gentleman, and I tell him it is absolutely untrue that we on this side were driven to support that hon. minister at any time. The only reason why the vote was less when the Minister of Public Works was challenged in this House was because our hon. friends snapped the verdict, and no one knows that better than the hon. gentleman. I do not know a man on this side of the House who was not perfectly willing and anxious to vote on that occasion in support of the hon. minister; and so far as I am concerned, I must say that I have never, either in public or private life, seen anything more disgraceful than the attack made on that minister, for which there was not an iota of proof or basis.

Some hon. MEMBERS. Oh, oh.

Mr. NESBITT. And hon. gentlemen opposite are well aware of it. As regards the rest of the speech by the hon. member for Frontenac (Mr. Edwards) it was simply the same old story told in the same old way, and it would be wasting the time of the House to discuss it.

I wish to congratulate the Minister of Finance and the government on the very excellent budget statement brought down to the House. It is quite true, as the hon. member for North Toronto (Mr. Foster) and other gentlemen opposite claim, that the farmers of the west are responsible to a certain extent for the financial statement and also that to the farmers of other portions of the country credit for the good results is due. And I might add that the manufacturers and their operatives, the merchants, the clerks, and in fact all the workers in this Dominion, have contributed to the great prosperity we enjoy. But that does not take away one particle of the credit due the government and the Minister of Finance. When a large manufacturing industry proves successful, no one doubts that the success is due in a large measure to the operatives employed in that industry, but none the less, no one would dream of taking from the management, on that account, the credit for its good showing. It seems to me that hon. gentlemen opposite, in their speeches on the budget, ought to try to be reasonably reasonable. I have never seen anything gained by misstatements of facts.

I am pleased to know that the Minister of Finance has transferred from capital account to income the expenditure on our arms and public lands and that he has told us he agrees to a large extent with the hon. member for North Toronto (Mr. Foster) in his contention that the bounties should have been charged to income. Personally I think they should, but I think the explanation of the Minister of Finance is quite reasonable, when he says that he simply followed the usual system of bookkeeping and charged the bounties to capital account just as we have been accustomed to charge subsidies to railways to that same account. I notice with a great deal of pleasure the statement of the Minister of Finance that the principal bounties will expire in December, 1910, but while I agree with my hon. friend from Red Deer (Mr. Clark) the bounties themselves are a vicious form of taxation, I am not prepared to admit that they were unnecessary at the time. I am told that they were proposed in the first place by our friends opposite, but in any event. I have not the slightest doubt that when the government decided to pay these bounties they did so after giving the matter the most careful consideration, and I have not the slightest doubt that they were justified by the circumstances. If you look back over the results which have followed, I do not think you can honestly say that these bounties were not justified. There can be no doubt that, in the opinion of the majority of people in this country, it was absolutely necessary to establish steel industries of our own which could compete with those of the rest of the world; and, if those industries are today on a good footing, it is no doubt due to that system of bounties. I cannot agree with the hon. member for Red Deer (Mr. Clark) that in this case the bounties have not been a benefit. In my opinion, they have been a great benefit to this country and abundantly justified by the results. But I am at the same time convinced that there is no longer need for renewing that system. I believe that the steel industry has been sufficiently established to be able now to take care of itself. But before leaving this subject, I would point out that, as the Minister of Customs has shown us, at the time the bounties were given there was a reduction made in the tariff which allowed outside steel to come in cheaper than it otherwise would.

I listened with great attention to the criticisms of the hon. member from North Toronto (Mr. Foster) as I always do; for

I am not one of those so party-bound as not to admire ability on the opposition side, and I must confess that I look upon the hon. member for North Toronto as a great critical speaker, a man of great capabilities. Therefore, I was much surprised that he allowed himself—I suppose from political partisanship—to be led into some extravagant statements, if not mis-statements, such as allow even a new member like myself and one not well posted in political matters to make corrections. Before going on with these corrections, I may say that I noted with pleasure that the Minister of Finance proposed, if he could, to pay the naval expenditure out of income. While I am just as willing as any member of this House to see the naval expenditure undertaken, I think the First Minister (Sir Wilfrid Laurier) and the government have been very wise in the proposition they have brought down. It was a very delicate proposition and required very delicate handling. It is all very well for our friends of the opposition, who have no responsibility, to say what they would do and what they would not do. But if they were absolutely responsible, as is the Prime Minister for everything he says, you would find a very different tone in their utterances. The Finance Minister having stated that he will if he can, pay the naval expenditure out of income, I think it is the duty of every one of us, no matter on which side of the House he may sit, to assist him in every way possible to carry out that intention. The Finance Minister is the one who must give final sanction to all proposals of expenditure before they are made to the House. But the hon. minister—I am very glad to say—is only human after all. And when members on this side or on the other side, press upon the minister expressions that, possibly, could be avoided, it is only human for the Finance Minister, in some instances, to give way. I heard an hon. member on the other side say in a recent speech that it was good politics for members of the opposition to attack the Minister of Finance for his operations during the year, even though expedients had been pressed upon him by those who attacked him, and that it was only baby talk for us to plead the contrary. I hope there are not many members on the other side who hold that if the Finance Minister grants a request of theirs for something to be done, they have a right to throw it up to him at the end of the year as an unnecessary expenditure for which he is responsible. The hon. gentleman who spoke in this way, I am sure, was carried away by the excitement of the debate—for I know him to be a very decent fellow at heart—when he said he thought it creditable in politics to do a trick of that kind.

Now I wish to point out one or two things that, I think, were wrong in the criticisms offered by the hon. member for North Toronto in the early part of this debate. After criticising the budget from the budget standpoint—very lightly, I must confess—he went on to say in his own inimitable fashion, 'This is a business government, now let us see what this business government does.' And he immediately brought up the old story of the Newmarket canal. For some reason, hon. members on the other side of the House always laugh at members on this side when they attack the Newmarket canal expenditure, suggesting that we are ashamed of it. Was there any intimation in our vote, when that question was challenged in the House last session, that we were ashamed or afraid of this expenditure on the Newmarket canal? I tell you, Mr. Speaker, it is either a very bold man or a very egotistical one who will say that any public work in this country will not be necessary. When you consider the progress the country is making, who can tell that any given expenditure of public money is uselessly made? The Newmarket canal is within very easy range of a great growing city, the city of Toronto. I am sure that I have as much reason to prophesy that we should be very well pleased with the expenditure on the Newmarket canal inside of a few years, as hon. gentlemen opposite have to prophesy the contrary. The next item the hon. member (Mr. Foster) attacked was the St. Andrew's rapids. He dwelt on this in very glowing terms, he seemed to fairly smack his lips over this question. I wondered at the time what this St. Andrew's rapids question was. I did not know much about it, so I tried to find out. I have a letter here on the subject, which says:—

> The entire structure is generally referred to as 'St. Andrew's Movable Dam.' It consists essentially of a concrete submerged dam; a steel superstructure of six main spans and a shore span. The top deck of the steel structure is a concrete floor and is to be used as a highway bridge. From the lower portions of the bridge are suspended steel girders or curtain frames on which are suspended in place and so arranged that they can be rolled by means of electrical machinery, curtains, or sets of wooden laths hinged together. These curtains and their appurtenances are for the purpose of regulating the level of the water above the dam for the purpose of navigation.
>
> Between the western end of the dam and bridge and the lockport shore is a lock for the purpose of locking vessels past the dam. The location of these works is at St. Andrew's rapids, about twenty miles north of Winnipeg. Up to the present time navigation has been impracticable, except for small boats, mainly pleasure craft, and then only at certain seasons of the year.
>
> There is no bridge between this point and the outskirts of the city of Winnipeg, about

twenty miles south, and the highway on top of the dam will, no doubt, be a great convenience for that section of the country.

I think that is all I need to read as to the advisability of building that dam. There is no bridge for twenty miles between this dam and the city of Winnipeg. Does any man tell me that, in that growing country, this bridge which is a highway, and a way for both foot passengers and vehicular traffic, is not necessary in the interests of that country? Now, the dam itself is of a kind new in America. I understand that there is one similar in principle in France, but the waste gates or shutters there are raised by hand power, whereas in the case of the St. Andrew's dam the shutters are raised by electricity. Therefore, it is the only one of its exact kind, probably, in the world. Now the hon. member for North Toronto said that this St. Andrew's dam was 35 or 40 feet above the land—so he is reported in the 'Hansard,' but I understood him to say 75 feet. I have the photographs of the dam here, also the blue prints or drawings, and the actual measurement from the top of the dam to the land of the prairie sections is 23 feet. Therefore, the approaches will only have to be built to the height of 23 feet, not 75, or 35, or 40. The hon. gentleman is welcome to see these photographs and blue prints, to find out whether I am stating facts. The St. Andrew's dam was quoted to us as a striking example of the prodigal administration of this government, but I think I have shown very clearly that, on the contrary, it is a proof, if proof were needed, that this government is conducting our public affairs in a business manner and in an economical fashion.

Several hon. members on the opposition side of the House, including the hon. gentleman who has just taken his seat (Mr. Edwards), have quoted figures to show that the duties collected under this government were just as high as the duties collected under the Conservative government. Now, why they should desire to show that, is more than I can understand. I suppose that most hon. members on the opposition side are in favour of a higher tariff, they believe in a protective duty, therefore why they should desire to show that the duty under the Conservative government was no higher than it is now, is more than I have been able to understand. Several hon. members have contended that the duties under the old government are not higher than they are now. Now there is no use discussing so large a question as the tariff by picking out some isolated instances; the only way to discuss it is by taking the tariff as a whole. If, therefore, you take the tariff as a whole, you will find that we are at present collecting a little more than three per cent less duty than the old government were collecting in 1896.

Some hon. gentlemen have argued that it averages about one per cent less. The only way we can arrive at the fact is to take into consideration the free imports, and contrary to what was said by the hon. gentleman from Frontenac (Mr. Edwards), they are very much greater under this government than they were under the former government. But I will not dwell on the question of free imports, as it has been lengthily discussed already.

I will now briefly discuss the question of loans. The hon. member for North Toronto reiterated this year that the cost of obtaining loans under the present administration had been greater than the cost of obtaining loans during the 13 years under the previous administration. Well, Sir, I took the trouble to look up the facts. The hon. member for North Toronto contended that on account of the additional cost of obtaining loans by the present Finance Minister, the credit of Canada had been impaired. Now, I take issue with him on that statement. The actual commission for obtaining loans at present is the same now as it was before, but the method of obtaining loans is different. A Canadian Minister of Finance, whether he be Conservative or Liberal, has nothing whatever to do with the form of obtaining loans, he has to adapt himself to the method prevailing at the time. At present he has to float all loans through underwriters. I am not quarrelling with that custom, because I believe it is a good one. Formerly a loan was taken on the market, and as it was absorbed it was paid over. Now the loan is floated through underwriters, they are responsible, they have to do the advertising, they have to float the loan, in other words, they have to see that the loan is absorbed, and for doing this they charge a certain commission. Our recent loans have been floated at 98½. Now, let me say that the cost during the last 15 years, excepting the few short time loans that have been effected by the present administration, is in favour of the present Minister of Finance, not against him. I may say that I think the Minister of Finance was wise in floating the short time loans. You must remember that shortly after the present government took charge of affairs the Boer war occurred, when the whole resources of Great Britain were strained, so far as her borrowing power was concerned. Immediately following that was the Russia-Japanese war, and we all know how that raised the price of money. So I think the Minister of Finance showed his wisdom very clearly, in floating short time loans in place of long time loans, until money became cheaper in the money markets of the world. Now, the only fair comparison to make between the two periods is to ascertain whether we

are getting loans now at the same ratio as other countries are getting them, which are practically in the same position we are. I will take a country that is growing very fast, a country whose credit is excellent, and that is the independent country of Argentina. It is stated that Argentina shipped to England last year 40 per cent of her foodstuffs. I do not know whether that is true or not, but I see it stated in some of the financial papers that Argentina shipped to Great Britain last year 41 per cent, to be accurate, of her foodstuffs. Now, the figures I am quoting are taken from the London Stock Exchange annual report. In December last her 3½ per cent, with a 1 per cent sinking fund, were selling at 76½, and our 3½ per cent were selling at 101.

Austrian 4 per cent bonds were 1·06. Their 3 per cents were 86 and our 3 per cents were 1·01. Russian 3 per cents were 68, Chili's 4½ per cents were 96. Germany's 3 per cents were 83. New South Wales 3½ per cents were 89. New South Wales you know is part of the Australian confederation. It was stated in this House by an hon. member that the Australian Commonwealth had sold their bonds to better advantage than we did. I looked in all the monetary papers I could get, I looked in the report of the London Stock Exchange but could find no quotation of the Australian Commonwealth. I did find New South Wales and some of the other provinces but none of them compared with us so far as the price of bonds was compared.

Let us look now at the prices at which Canadian loans have been issued. Some of them were:

Year.	Amount.	Per cent.	Price.
1884... ..	$ 5,000,000	3½	$0 91
1885... ..	4,000,000	4	1 01
1888... ..	11,000,000	3	92·95
1897... ..	2,000,000	2½	0 91

The issue of 1897, the first year that the present Finance Minister was in office, was at the lowest rate of interest. Week before last we borrowed $4,000,000 at 3½ per cent and it was sold at 99. The Indian government in the same week issued 3½ per cent bonds at 96½. That is the most recent sale and speaks volumes for this country.

An hon. member in speaking of the tariff accused this government of allowing food stuffs to come in and thus discriminating against the farmer. He quoted some figures of imports among them being:

Articles.	Year.	Value of imports.
Provisions..	1905	$1,000,000
"	1908	4,000,000
Lard..	1904	67,000
"	1908	1,000,000
Eggs..	1905	74,000
"	1908	222,000

Articles.	Year.	Value of Imports.
Butter..	1906	64,000
"	1908	192,000
Green fruit... ..	1905	2,000,000
"	1908	5,000,000

The hon. member endeavoured to prove by these figures that we were differentiating against the farmer, or in other words that we were not protecting the farmer. If you take the trade and commerce or the customs report, you will find such things as canned fruit and vegetables in which there has been a large increase and yet the hon. member said that we are not protecting the farmer. We never pretended that our tariff was a protective tariff, we do not pretend that our tariff is a protective tariff. We say—and nothing in the world, if I were to talk for a week, would make it more emphatic than these figures—that our tariff is a revenue tariff. Whether we are creditable with the fact or not, but it is a fact apparently by these figures that these things have been coming in in larger quantities in the last few years, or in other words since the coming into power of the present premier and this government. If you examine the trade returns you will find that the bulk of the agricultural products that are now coming into Canada at the time this government came into power were supposed to be luxuries. Now, owing to the fact that the people of this country have progressed, they are no longer supposed to be luxuries. Take the item of green fruit. A few years ago strawberries and ripe tomatoes and things of that kind were only brought into the cities and by a very few people. Now nearly all our towns are able to purchase these things, before the Canadian articles come into the home market. You know that owing to the climatic conditions in the United States these early fruits and vegetables come from Virginia and all along the warmer border states and beginning in a short time from this date enormous quantities of these fresh articles will come into the cities and towns of this country. The people who years ago could not afford to buy these things now use them commonly. As to the farmers of this country I venture to say that I speak for ninety per cent, yes, ninety-nine per cent of the farmers when I say that they are not so narrow that they begrudge to other people the privilege of buying these things when they cannot supply them.

The hon. gentleman who preceded me said something about eggs and butter. Do you know that some butter has been imported into this country in the last year or two? Why? Because the price of butter rose last year and it is now sold at an enormous price in most of our cities. It sold at from 32 cents to 35 cents and last year it rose in Montreal to 40 cents a pound. Is it

any wonder then that we imported butter? Butter can be brought in only when the price is very high. Do you mean to say we should protect the farmer more than that? Do you mean to say it is not necessary for the people of the country, the ordinary consumer, to have butter and that we should increase the duty and increase the price of butter and eggs? Why the price of eggs is abnormal, almost prohibitive now without putting on a duty. I do not believe there is a farmer in this country who would ask to be further protected. Take for instance strawberries, which will be coming in in large quantities from the other side shortly and selling at prices which are prohibitive for me but still within the reach of many people. I do not believe the strawberry raisers of this country are asking us to put on a higher duty so as to prohibit the people who can afford to do so, from bringing in strawberries or early potatoes or butter or eggs, in case the prices are abnormal. There is no fear of any of these things coming into Canada unless the prices here are abnormal.

The hon. gentleman who made these remarks at that time dwelt at some length on potatoes. To a small extent, potatoes may be imported from the United States into the Canadian towns along the border, but I venture to say that Canadians ship more agricultural products to Detroit and Buffalo and other large towns than the American farmers send into Canada. My hon. friend told us that he would put up the Canadian tariff as high as the American tariff, but with that I do not agree, for I believe the tariff is quite high enough in nearly all instances.

Mr. BLAIN. What about pork?

Mr. NESBITT. I am a farmer and I will tell the hon. gentleman that the tariff on pork is quite high enough to suit me, and I suppose I am about as greedy as any ordinary farmer. We can raise pork to-day against the American farmer—

Mr. BLAIN. The hon. gentleman differs from the hon. gentleman who represents the other part of this county, who moved to increase the duty on pork.

Mr. NESBITT. I cannot help what my hon. friend from the other part of the riding may do, but giving my opinion as a farmer and not from any party or political point of view, I say that the present duty on pork enables us to compete with the pork producers of the United States, and I do not believe that there is any general demand amongst the farmers of Canada for an increase in the duty. I may state that with the exception of the town I live in, my constituency is agricultural, and before coming to this session I held three meetings in my county and at every one of them I asked if there was a man present who wanted a higher duty on pork, and I got not a single affirmative answer. In my own experience I sold pork last week, and I sold some in November and October, and I got a very high price, a price which I am afraid was more than the ordinary consumer in Canada can afford to pay. So far as the Canadian farmer is concerned, there is no necessity in my opinion to put a higher duty on pork. Of course, the heavy pork used by lumbermen in the woods is imported, but I do not think the farmers should ask the government to penalize that by increasing the duty when there is in my opinion no necessity for it.

Mr. BLAIN. Last session a large deputation, including representatives from my own county, interviewed the government, asking for an increased duty on pork.

Mr. NESBITT. I have no wish to quarrel with these gentlemen, but I certainly am free to give my own opinion on the matter. My hon. friend from Grey (Mr. Miller) tells me that the Canadian agricultural paper is opposed to increasing the duty. Now, Mr. Speaker, let me say a word about this story we casually hear from gentlemen opposite, that we do not give a preference to England. I speak entirely apart from any party motive, and I say that the reason why we do not appear to give a preference to England is that most of the free goods come from the United States, where they are produced, but if you look at the goods which pay duty you will easily discern that we do give a preference to England. Then again, I believe that the English manufacturers could very materially increase their trade with Canada if they took proper means to do so. It is the commercial people of England who are largely at fault if they do not do a more extensive trade with Canada, because I believe that the ordinary manufacturer in this country would prefer to do business with England, if he could do it on an equal basis. But, the United States travellers are in our offices every day; they study our wants and they supply our demands, while the English traveller comes seldom and if he has not the goods we want he leaves us at that and does not try to meet our requirements. If the English manufacturers would study the trade conditions in Canada, I venture to say that in a year from now the balance of trade in manufactured goods would be turned from the United States to England. And, as to this adverse balance of trade against us, I cannot agree that it is to our disadvantage. When we go into business as individuals, we have first to erect our buildings and get in our machinery and be prepared to supply goods before we get a return. I believe that Canada is identically in the position of an individual in that respect. It is just starting up in business, and it is progressing so fast that the only

wonder to me is that the balance of trade against us is not double what it is. When we are prepared to do business, as we will be in the course of a few years, the indications are that our exports will be great, and in the meantime the balance of trade against us, is simply an indication of the enormous energy and progress which this country is making. I for one am not disappointed that the balance of trade is against us, and I believe it will continue so for the next five or ten years, or so long as we are progressing as rapidly as we are.

Now, I believe Sir, that this government is not only doing the best it can for the present—and without fear of contradiction I hold it is doing remarkably well—but, it is looking to the future. The government has had engineers surveying the Welland canal, it has had engineers reporting on the Georgian Bay canal, it has had engineers reporting on the Hudson Bay railway, and all with a view to the future. And, let me say here, that the present Minister of Finance to whom I give all possible credit is one of the most capable men I have ever met in my life. They know very well that as long as the Transcontinental railway is going on it is impossible for us to do more at the present time. But, they are looking ahead just the same as the manager of a large corporation looks ahead and that is all that we expect them to do. Whenever we are in a position to do so, this government, led by the right hon. the Prime Minister, of whom we are so proud, will undertake these other great works. That is all we can do. Now, I desire to say a word with reference to what the hon. member for Frontenac said as to their being proud of the hon. leader of the opposition (Mr. R. L. Borden). I find no fault with that. There is no man in this House, even on his own side, who respects the leader of the opposition more than I do. But, I do not see why the hon. gentleman should get into such a flurry because somebody may have taunted hon. gentlemen opposite with not being proud of the leader of the opposition. As to the taunt thrown back on us by the hon. gentleman, there has been no time since I have been in this House when we followed the Prime Minister no matter what we were asked to do. We have had no reason that I know of since this government came into power to dispute any course that the Prime Minister has asked us to follow. I hope and believe that we never will have as long as the Prime Minister is spared, and I hope that he and also my hon. friend the Minister of Finance, for whom I have the greatest possible respect, will be long spared to guide the affairs of this country of ours.

At six oclock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

MONTREAL, OTTAWA AND GEORGIAN BAY CANAL COMPANY.

House went into committee on Bill (No. 58) respecting the Montreal, Ottawa and Georgian Bay Canal Company—Mr. McGiverin.

On section 5,

Nothing in this Act shall affect or impair the rights of the government of Canada under or by virtue of the provisions of the section submitted by section 5 of chapter 128 of the statutes of 1906 for section 43 of chapter 103 of the statutes of 1894.

Mr. HENDERSON. I see the Minister of Railways (Mr. Graham) in his place, as he always is, and I would like to ask him a question. What would be the effect if the government should decide to take over this whole work before the expiration of the time allowed by this Bill? Will the fact that we are extending the time for such a long period be a hindrance to the government in that case? May not the company say: We have rights to do with this matter for so many years, and we do not think the government should interfere with those rights. I believe that if ever this work is to be constructed it will be by the government and not by a private company.

Mr. GRAHAM. The answer to my hon. friend (Mr. Henderson) will be found in this section. In 1906, to safeguard the government, a clause was inserted that the government, at any time, could take over this project by paying the money that had been expended by this company. That provision is re-enacted by this Bill. So, whatever powers the company may have, the government is protected by this section allowing the government, on behalf of the country, to take over the work at any time.

Bill reported, and read the third time and passed.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 29) respecting the Columbia and Western Railway Company.—Mr. Goodeve.

Bill (No. 36) respecting the Union Life Assurance Company.—Mr. McGiverin.

Bill (No. 59) respecting the St. Maurice Valley Railway Company.—Mr. Mayrand.

Bill (No. 68) respecting the Kettle River Valley Railway Company.—Mr. Burrell.

Bill (No. 78) respecting the Edmonton Dunvegan and British Columbia Railway Company.—Mr. Douglas.

SECOND READING.

Bill (No. 98) respecting the Trust and Loan Company of Canada.—Mr. Doherty.

WAYS AND MEANS—THE BUDGET.

House resumed the adjourned debate on the proposed motion of Mr. Fielding: 'That Mr. Speaker do now leave the Chair for the House to go into Committee of the Whole to consider the Ways and Means for raising the Supply to be granted to His Majesty.'

Mr. GLEN. CAMPBELL (Dauphin). I had hoped that I would not have to rise and address the House to-night, because I have been, with other western members, attending hockey matches the last few days, and my voice is not as good as I would like it to be. I tried to borrow the voice of my hon. friend from Red Deer (Mr. Clark), but although he and I are always on friendly terms, he will not assist me to that extent. There are two or three matters upon which I would like to touch briefly. The first one relates to something that was said by the right hon. the First Minister, I think on the 16th of December, in answer to the hon. member for North Toronto (Mr. Foster). That hon. member asked him if he had made up his mind what seat he would sit for, and he replied in these words:

> The moment the question is put in this way, I have no hesitation in answering it.

I am sorry the First Minister is not in his seat at this moment. Inasmuch as I had brought to his attention some days previously the question of his holding two seats, I feel that his answer I have just quoted was somewhat of a reflection on my courtesy. I do not want the right hon. gentleman, or any other hon. gentleman in this House, to think that I would be discourteous to him as a gentleman, in any way; but I always hold myself ready to fight gentlemen who are opposed to me in all matters political. If it was discourteous in me to put my question on that subject to the First Minister in the words that I used, I will have to reconsider my practice, and guard myself against falling into the error of taking a precedent from the First Minister and using his words, as I did on that occasion. He told us, after speaking at some length upon the question, that he had not been asked to resign, either by one party or the other, in Quebec East or in the city of Ottawa. I used his words some days afterwards, and asked him if he had been asked to resign, and he evidently thought that I was discourteous. He surely knew that in the city of Ottawa there were several gentlemen of his political persuasion who were very anxious that he should resign, because they were fighting among themselves for his position when he vacated it. Their action reminded me of the text:

> They parted my garments among them, and for my vesture did they cast lots.

That is what his friends have been doing in Ottawa, and when the vesture descended on the shoulders of one of those gentlemen in Ottawa a few days ago, the hon. the First Minister had to go out and take it back from him.

I listened with a great deal of pleasure to the speech of my hon. friend from Red Deer on the tariff. You will remember, Sir, that last session when I spoke of my hon. friend in this House, I used toward him some of our western language, and spoke of him as a political maverick. When I was listening to him the other day discoursing on the policy of this government in regard to bonuses, I was really glad, because I felt that the time had come to get a rope and catch him and put a brand on him. I felt sure that the hon. gentleman would be on this side of the House in future. But before he finished his speech I realized that had any of us on this side of the House been so ill-advised as to take him into our arms, and into our fold, and put a brand on him, we would before long have been arrested for stealing. When he wound up his speech I felt perfectly sure that if the Conservative brand was found on him, whoever put it on him would have been up for cattle stealing, or maverick stealing rather, and for the reason that my hon. friend would have been found, where he always is found, sucking the Grit cow.

He was somewhat unfair when he spoke of my hon. friend from North Toronto (Mr. Foster) in such a way as to lead the people in the country to believe that he formed part of a manufacturing firm. The hon. gentleman would have been a great deal fairer had he taken as an object lesson some of the gentlemen on his side of the House, who are the strongest protectionists in the country. Take, for instance, the hon. member for Brantford (Mr. Harris). There is in the agricultural implement business in Canada a great octopus which has the farmers of the west in its grasp, and the hon. member for Brantford is connected more or less closely with that octopus in his business. The building up of that business has been due to this protection which my hon. friend from Red Deer (Mr. Clark) decried, and therefore the hon. gentleman would have been fairer had he cited in his argument the name of that gentleman. Or he might have taken my hon. friend from Kingston (Mr. Harty) one of the best and

dearest old protectionists in this House, and one of the great props of the present government. Or he might even have gone into the very inner circle and given us the name of the minister who spoke so loudly the other day—the Minister of Customs (Mr. Paterson). Why did not my hon. friend take him as an example, for he is one of the best protected manufacturers in Canada. When the Minister of Customs was speaking the other day so loudly of the reductions in the tariff, I thought he must have made a mental reservation in favour of the biscuit business and considered that business as an exception to which the tariff for revenue principle ought not by any means to apply. He might also have spoken of my hon. friend the member for Provencher (Mr. Molloy), who is not a manufacturer, who comes from my own country and is one of the closest friends I have in this House personally, but from whom I differ absolutely in politics. The hon. gentleman might have spoken of him as a protectionist, because he belongs to one of the closest protective associations which flourishes in Canada—a protective association that will allow no one, no matter how well qualified, to practice the profession it protects, unless he has taken a three year's course in a college; and yet up to last year there was not a college in the west where a Canadian could perfect himself to practise that profession. I was going to refer for a moment to my hon. friend from Red Deer (Mr. Clark)—to that part of his speech where he spoke of some little incidents that came within his experience when he first went farming; but my hon. friend from Frontenac (Mr. Edwards) has so well spoken of that experience, that I shall not now touch on it. I listened with considerable pleasure to my hon. friend from Regina (Mr. Martin); but I regretted that a gentleman of his ability should have undertaken the task of whitewashing the immigration policy of this government. But before touching on that point, let me say that I have seen in the newspapers lately the statement that we were going to lose him from this House, that he was going to be given a position of much greater importance locally—the Attorney Generalship of Saskatchewan. I want to congratulate the province of Saskatchewan as well as my hon. friend. Should that report prove true, I am sure that both sides of the House will regret his absence; but in the same newspaper article I saw a reference to the Premier of Saskatchewan to the effect that he was to come here and be a member of the cabinet. Well, should I happen to be in the House when Walter Scott re-enters it, I shall make that a red letter day in this parliament, because I will make the charges to his face which I have made behind his back and which are true. I do not say this because Walter Scott is a Liberal or because I have any personal spite against him. In fact, I do not know him, but I say it advisedly. I have seen the proofs and I believe he is absolutely a Judas, a traitor to the people. But what I wish particularly to refer to is the statement of my hon. friend from Regina (Mr. Martin) made with regard to the Galicians. Let me compare the treatment meted out to these people by the two governments. The Liberals, it is true, brought them out. They brought hundreds of them into my special district, the district of Dauphin. They dumped those people into that country without giving them any proper aid to enable them to select fit lands. They put them into a country where there were stones and sand, stumps and soakage from the mountains; and when they did not have the stones and stumps, they had the brush and the bush, and the Liberal government expected those people to be able to take care of themselves. They did nothing further in their interests. But on the other hand, when the Conservative government of Manitoba found that those people had come into our midst, that government recognized the fact that they had to be taken care of and that the best policy was to make as good citizens out of them as we could and as fast as we could. Our Conservative government in Manitoba went to work and gave grants of public money to the Galicians for the purpose of draining their settlement. They not only gave them the money, but gave them the work, so that these Galicians had the money expended among themselves granted by the government for the purpose of making good roads. Our Conservative government went further. They sent educated men among those people to teach them the English language and other things necessary.

They sent agents among those people to educate them so that they would learn that the school influence was the best influence to show them how to become good citizens. After a year or two of labour in that way the various settlements of Galicians realized that the government were trying to do something for their benefit and finally in almost every school district we have a school among the Ruthenians. We did more than that. We established training schools for the young, smart, bright men of the Galicians, one in Brandon and one in Winnipeg, for the special purpose of training young men to go out and teach schools among their own people and educate them in citizenhood as we want it in Canada. All those efforts have proved fruitful. We have all through Manitoba, in almost every district where there is any considerable settlement of Galicians, Galician councillors elected by their fellow settlers, both Galician and English and taking

a great part in the local government in various districts in Manitoba where they are. They are improving very fast. The Minister of the Interior said a few years ago and reiterated the other night, that they were not desirable settlers. Some years ago in speaking of them he traced their genealogy in the older countries for some hundreds of years and showed why they had been detrimental to Austria where most of them come from. He said that the Germans there were glad to ship them out here, and I suppose because the Germans are glad to ship any class of people out this government, with its brilliant immigration policy, ought to be glad to receive them. He said:

Where those Galicians have settled, some of the other settlers have moved away.

Asked by some hon. member: Why? he said:

Because they are not desirable neighbours.

He went on to say that there those people settled in any locality they depreciated the value of the land for that very reason, and that they were not in any way qualified to raise the morals of the people where they settled. He reiterated that the other day and I want here to take exception to it as I have always done. Those people are neighbours of mine, they live within a mile of me, some of them, they came there eight or ten years ago, and have been good settlers. They are liked by the people in my country and are making good by being appointed to positions of trust by the settlers where they live. The trouble with the immigration policy of the present minister and his predecessor is that proper pains have not been taken to get the right kind of Galicians, and when they did get them, no matter what kind they might be, they did not take care of them in the proper way after bringing them to this country, they left it to the local governments entirely to take care of the people after dumping them by hundreds in what was to them a foreign country. But while I uphold the bringing out of good Galicians into this country I cannot at all agree with the policy of bringing out these Doukhobors. Surely my hon. friend from Mackenzie (Mr. Cash) or my hon. friend from Regina (Mr. Martin) cannot believe in that policy because they must realize that an immigration policy to be at its best must bring out settlers who from the moment they arrive here make for the betterment of the country, not people like those Doukhobors who are aliens in thought, ways and deed to the native Canadians. These people came out here absolutely and intensely ignorant. For instance they started from their homes on several pilgrimages towards the east and what were they looking for, on those pilgrimages? They were looking for the Saviour, and as I saw it stated in the papers in the west the personality they were surely not, in your opinion, the right who brought them out to this country, after whom they were called 'Sifton's pets'. They were surely not, in your opinion, the right kind of immigrants to bring out. They were absolutely ignorant or absolutely immoral. They were a menace to the people living in that country. Had the minister been living on the route of their pilgrimage, had any hon. gentleman in this House been living on that route with his wife, his sister, his cousins or his aunts, or any female relatives, would he think they had a great immigration policy that brought out these poor people to this country who were so absolutely, innocently indecent or indecently innocent as to parade the country with what God put on them when they were born. These are the facts of the case. No man can say it is not true, no man dare say that this is a good state of affairs, that these were a good kind of immigrants, and I see by the papers that this immigration policy of the government is bringing some 4,000 or 6,000 or 8,000 more of these people out.

If they do so I would advise the ministry to put one Doukhobor in each township throughout the length and breadth of Canada and not allow them to locate in villages which in our past experience has resulted in so much trouble and expense to the country. My hon. friend from Red Deer (Mr. Clark) referred to the Saskatchewan Valley Land Company, and I know there are a good many members on the other side of the House who are tired of that subject. I do not wonder at that because I was tired of it half an hour after I heard it. The hon. gentleman (Mr. Clark) stated that the Conservatives had not properly laid the matter before the House, and he proceeded to tell us all about it, but he omitted from his tale two or three very important considerations. The first and most important point is that it was not 250,000 acres of what is generally called Dominion lands that were given to the company by the government at $1 per acre; it was 250,000 acres of land that had been set aside for homesteading. Then, it was not 250,000 acres of land in one block but it was 250,000 acres scattered all over the country and which was to be patented according as the entries and sales were made. I will show you how it worked out, and I will quote the Winnipeg 'Free Press,' an authority which I do not often cite, but which will not be rejected by any Liberal in the House. The policy of the Saskatchewan Valley Land Company was to blanket the homesteads in the district and they ad-

vertised all through the United States inviting people to come to Saskatchewan and get a free grant of 160 acres alongside which the company would sell another quarter section. When a man spent his money examining the lands in the district and went to the land office to make an entry he would be told that James Smith had already applied for the land, and he would go out disappointed, but he would meet the Saskatchewan Valley Land agent outside and this fellow would tell him that he could fix the matter up for him, and if he bought a quarter-section at $5, or $8, or $10 an acre he would give him another quarter-section adjoining. In this way the company used what belonged to the people of Canada to enrich themselves. The best way to judge of the whole transaction is, not to take the views of party heelers and officers of the company, but to take the opinion of the people who actually knew what was done and to consider the financial success of the company. Everybody knows that the company made out of our Canadian lands given them in that way over $2,000,000 and I hold that was a steal from the people because whatever that company could do in the matter of disposing of these lands the government itself could do it if it went about it the right way. In this way we had the scandalous and nefarious Saskatchewan Land Company deal or steal, or whatever the government would like to call it. Another scandalous feature of the immigration policy of the government was the sending to the old country of political heelers as immigration agents. One of the most rabid Liberals in my district, rabid as the worst Liberals are from lack of knowledge, in order to repay him for his election services, was sent to the old country at $100 a month and his expenses, although he never earned $100 a month in his life in a legitimate way, and the result of his labours in the old country was to bring back just two farm hands. Hundreds of dollars were spent to get these two immigrants and no one will deny that that is a ridiculous policy. Now, my hon. friend from Regina (Mr. Martin) spoke very feelingly about the Grand Trunk Pacific, and as to its being a colonization road, and of the hundreds of miles that separated it from existing lines of railroads. Well, there are now 795 miles of the Grand Trunk Pacific built from Winnipeg to Edmonton and for 485 miles it is closer than ten miles to the existing railway tracks. I heard the Minister of Railways state in the Railway Committee last year that it was the general railway policy of the country to have no road closer than eight or ten miles to an existing railroad unless for some geographical reasons, and there is certainly no geographical reason why the Grand Trunk Pacific should be so close to existing railways. There is no excuse because when the building of the road was before this House the minister assured the people that the road was being built for colonization purposes. He said something with reference to prices, but colonization purposes was the cry that was taken before the people of the west. Vote for us and we will build this road to open up the new country and we will be able to control rates, which is a matter of the very greatest importance was the cry of the Liberals.

Let me make a comparison as between the two parties with reference to rates and railway buliding. In Manitoba, some years ago, the Conservative government, under Mr. Roblin, created a railway policy. When that policy was published first every Liberal in Manitoba, without exception, I think, said it was ill-advised, unwise, unthought out, ruinous and outrageous. There was no adjective in the English language that they could possibly use that they did not use against that policy. His policy was to give a guarantee of bonds to the extent of $10,000 a mile for which he got, first, a mortgage on the road, rolling stock, stations, terminals, cars and all the property of the railway company; second, a pledge that wherever settlers went in Manitoba the road would be built as far as it was possible to carry out that undertaking and, third, control of the rates in so far that before the roads built under that policy were running two years the rates were reduced over the whole line of the Canadian Northern railway to Fort William four cents per 100 pounds. That is the bargain he made. The Liberals decried it, but the Liberals found that they had to get some railway policy in order to get the railway companies to build. They adopted a policy, but instead of giving $10,000 a mile they gave $13,000 and they have no control over the rates farther than the Railway Act gives them control. Saskatchewan and Alberta adopted this policy with the result that they increased the price of railway building in Manitoba. In Manitoba now a railway company can hold up the government when they want roads built, because they are in a position to say we can get better terms in Saskatchewan and Alberta where they have increased the price $3,000 a mile. Therefore, the Liberals have raised the cost of railway building to the people. In the west the same policy has been enunciated by Mr. McBride. He has given the Canadian Northern railway a guarantee of $35,000 a mile to build in the mountains. Surely there is no Liberal in this House or out of it who will dare to get up and say that is too much, because they have to tell us that the Grand Trunk Pacific in the same kind of country is costing at least $75,000 a mile, a sum for which this country will have to be responsible.

I desire to refer to another matter, and I do so because I think it is necessary in the interest of good administration and of the proper conduct of the business of this House. When questions relating to expenditures, &c., are up before a committee of this House there should be some method of preventing a minister from getting up and absolutely misleading by his words the members on this side of the House. I have been led to refer to this by the conduct of the hon. Minister of Public Works (Mr. Pugsley) on several occasions. If there is any hon. gentleman in this House who thinks I am wrong, I would be very glad to prove my statements. I just bring it to the attention of the House, and I hope it will go to the proper quarters so that we will not get misleading statements in the future from a gentleman who ought to remember that he is an honourable gentleman and that he is addressing hon. gentlemen on matters that relate to the public business and which are in their care.

Mr. DEPUTY SPEAKER. I do not just know the meaning that the hon. gentleman desires to convey by his remarks, but if his intention is to cast any doubt on the honour of any hon. gentleman in the House it would not be in order.

Mr. CAMPBELL. You surely do not wish me to withdraw the word 'honourable'; is that what you are objecting to?

Mr. DEPUTY SPEAKER. The hon. gentleman, as I understood him, was referring to statements made by a minister which were misleading. I do not think that he said 'deliberately misleading,' but were misleading, and he proceeded to use the word 'honourable,' I thought, in a manner that intimated rather dishonourable. If I am wrong, the hon. gentleman knows his meaning, but I thought it my duty to point out that doubt cast upon the honour of a member of this House would be out of order.

Mr. CAMPBELL. I said practically what you thought I said, but there is one point that you overlook. I said I was willing to prove the veracity of my statement, if any hon. gentleman thought I was wrong. It is a matter of fact, it is not a matter of desire on my part to say anything wrong about any hon. gentleman. I am only stating a matter of fact.

Mr. DEPUTY SPEAKER. If the statement is the hon. gentleman's understanding of a certain condition, there would be no objection, but I always feel it my duty, where any apparent doubt is cast upon the honour of any member of this House, to call in question, as strictly as the rule will allow me, any such statement. The impression was somewhat given to me by the hon. gentleman's remark that some doubt was cast upon the honour of a member of this House. I accept the hon. gentleman's statement as I understand him now to intimate that it was not intended to do that.

Mr. SPROULE. As I understand, he was calling in question the veracity of a statement of fact, and if he were in possession of information that justified him taking that ground, it does seem to me that he should be at liberty to present the evidence which justifies the allegation. If he is in a position to do it, I think it would be quite right to allow him to do it.

Mr. CAMPBELL. I want to state to the House that ever since I have been in this House I have always—and I believe every hon. member must say the same thing—realized that the Deputy Speaker was making every effort to give us all fair play regardless of which side of the House we were on, and I am quite willing to bow at all times to his judgment in matters that appertain to the rules. There is one matter further to which I wish to refer, and I shall be very brief. We have vast expenditures being made on various public works. Well, there is one public work to which I wish to draw the attention of the government, and which I think would be of greater importance than any other they could undertake. I refer to the building of a canal system from Edmonton down the Saskatchewan river to its junction with Cedar lake at a place called Van Horne, then cut across eight miles to Lake Winnipegosis, thence down the Winnipegosis to Meadow Portage, a cut of one and a half miles, ten feet at the highest into Lake Manitoba, and from Lake Manitoba a cut across into the Assinboine river. A canal of that kind with less than fifty miles of actual work and with less than ten wing dams on those various rivers would enable the people of Edmonton to ship their coal and grain right into Winnipeg, the hub of Canada. A work of that kind would be surely far and away ahead of such a work as the Newmarket ditch, which is a ditch built where, I understand, there is no water, and where, if there was water, there are no boats; and where, if there were boats, there would be no freight; and where, if they could get freight, there is no place to take it. But if the government would build the canal I am asking them to undertake, that would be of real benefit to the people of the west and of all Canada and do something in the way of giving us an output for our traffic which would be exceedingly profitable. There is only one other remark I would make and that is with regard to the members from the west. I happen to be a Conservative and there are many who happen to be Liberals, but the interests of our people are the same, and I think the time has come when the men of the west, Liberals and

Tories, ought to get together and unite on any question of policy that will be of benefit to our people; and if they should do this, there are enough of them here to make any government sit up and listen and take notice.

Mr. ROBERT SMITH (Stormont). I do not consider it necessary that I should at this stage of the debate take much time in replying to the remarks of the hon. gentleman who has just taken his seat (Mr. Campbell). I notice that he has thought it necessary to make one more reference to the fact that the right hon. the Prime Minister held for a certain time two seats in this House. That is a subject which seems to have caused a great deal of anxiety to hon. gentlemen opposite and given them the opportunity of ringing the changes on the outrage thus committed on the electorate. But, let me just point out that it was due to the course of action of parties, who were acting on behalf of the Conservative party, that the city of Ottawa was deprived of representation in this House the whole of last session. Hon. gentlemen opposite were within their rights in protesting that seat. The law allows that to be done, but the law was taken advantage of, not for the purpose of exposing corruption or unseating an hon. member, but for the sole purpose of working out some trifling party advantage. Hon. gentlemen opposite were not concerned at all about depriving the city of Ottawa of representation during a whole session, but solely with the view of acquiring some party advantage by keeping a protest, which was not intended to be acted upon, dangling over the head of the leader of the government. The hon. member for Dauphin (Mr. Campbell) made a very strong reference to the premier of the province of Saskatchewan, and I regret very much that he did not carry out his declared intention of waiting until the premier of that province had a seat in this House. The hon. gentleman referred to him as a traitor and a Judas, and I think it would have been more fitting to the credit and dignity of the hon. gentleman had he waited until Mr. Scott were actually present and could reply to any charge in person.

The hon. gentleman found a good deal of fault with my hon. friend from Red Deer (Mr. Clark) in connection with his stand on the question of the tariff. Well, I was anxious to learn what were the views of the hon. member for Dauphin (Mr. Campbell) on that same question. We have had a good deal of discussion on it from hon. gentlemen opposite, but not one of them has announced any policy whatever. It would have been interesting had the hon. member undertaken to tell us whether he was in favour of reducing the present tariff or whether he was in accord with the majority on his side in advocating a general raise in the duties. But we have had no declaration of policy on his part, and in that respect he has followed closely in the footsteps of other hon. gentlemen opposite.

We have heard a great deal about the general extravagance of the government, but no attempt has been made to enter into any analysis of the increased expenditures of which these hon. gentlemen complain. The hon. member for North Toronto (Mr. Foster) started off with what no doubt was intended to be the main criticism of the government's management of our finances. In that criticism he made a general comparison of the expenses in 1896 with those of 1909. He chose a year in which there was very little capital expended by the Conservative administration and he bulked capital and ordinary expenditures together. He ignored the fact that since this government has taken office the construction of the Grand Trunk Pacific has been entered upon, entailing the largest capital expenditure ever made in connection with any government railway. Adding the ordinary and capital expenditure of the two periods he made a comparison, and pointed out that in 1896, under the Conservative regime, some $42,000,000 were expended, whereas in 1909 the expenditure amounted to $133,000,000. But comparisons made in that way without any analysis are very misleading. What is necessary is to investigate these figures in detail. If we confine ourselves, in the first place, to the ordinary expenditure in these two periods, then there was an expenditure in 1896 of $39,000,000 and in 1909 of about $84,000,000, but a very large part of the increase is entirely represented by cross entries. For instance, there is the running of the Intercolonial railway. The annual expense of running that road is part of the ordinary expenditure of the country according to our system of bookkeeping. You will find that the government expenditure on that road caused by adding new branches increased enormously and forms part of the increased expenditure of which those hon. gentlemen complain. On the other hand, these expenditures are represented by an almost corresponding increase in the receipts of the road. Thus, these figures represent merely cross entries. To make a fair comparison of expenditure we must deduct almost $5,000,000 from that item alone. The expenditure of the Post Office Department is another item standing on exactly the same footing. Then, there are the increased subsidies to the provinces—almost $5,000,000 of increased expenditures is represented by that item. If we take all the amounts from the public accounts which are mere cross entries of that kind, we

find that they make a total of about $19,000,000, and this sum must be substracted from the $84,000,000 in order to make a just comparison between the annual ordinary expenditures of the country in 1896 and in 1909. Even after that deduction is made there still remains a very considerable amount of increased expenditure to be accounted for. If hon. gentlemen opposite desired to draw any useful lessons, they would analyse that expenditure and point out to this side of the House the portions of it and the total amount that are unjust and unnecessary. Some items of expenditure have been increased enormously, and have been increased for the benefit of the country. Let me give one example. In the item of lighthouses and river lighting, during the last years of the Conservative regime, the total expenditure was less than half a million dollars, to-day it amounts to about two and a quarter millions. I contend that that is an increase that is entirely justified in the interests of the public. Our system of navigation has entirely changed since 1896. Deep waterways have been established from Port Arthur to the ocean, harbour improvements have been made and lighthouses have been established, all these things helping greatly to cheapen transportation. It is by going into items of that kind in detail that a true idea can be formed of the justification that exists for the increase in the ordinary public expenditure.

Another very extraordinary comparison hon. gentlemen opposite make is as to the capital expenditure in 1909 and in 1896. As I said, they select a year in which the capital expenditure was something between three and four millions of dollars and compare it with a year in which the greatest expenditure is made in the construction of the great National Transcontinental railway. But these hon. gentlemen try to justify the comparison by saying that during their regime they also constructed a great transcontinental railway. I take issue with them on that point. When they were in power and procured the construction of the Canadian Pacific, they did not procure the construction of a railway that belongs to Canada. The expenditure was handed over to a private corporation, and every dollar of money that was paid out of the public treasury, and every asset of the public that was turned over for the construction of that road, became the property of that private corporation. The road now being constructed and for which this government is now making capital expenditure is a road which, when completed, will belong to the people of Canada, a road for which a rental is to be paid beginning a short time after its construction. So, there is no comparison between the expenditure on a transcontinental road made by the Conservative government and the expenditure on the National Transcontinental made by this government. Then it is contended, in comparing the debt incurred by the two governments, that it was made in the same relation, because the Transcontinental road was a part of the expenditure that went to increase the debt during the Conservative regime and the expenditure on the Transcontinental has caused the increase incurred by this government. Again, I say the case is entirely different. The expenditure made by the Conservative government in connection with the Canadian Pacific railway is not all represented in the public accounts. A large portion of the expenditure made by Canada for the construction of the Canadian Pacific railway was not in cash, but in the form of lands and of road already constructed. This constructed road which was handed over to the Canadian Pacific railway company represented an expenditure of $30,000,000, which had been made prior to the accession of the Conservative government to power. These constructed lines are not represented by the increase of the debt made under the Conservative government, nor are the 25,000,000 acres of land—an asset of Canada—which passed from being the property of the people to being the property of a private corporation. If this government had undertaken to build a transcontinental road under a similar bargain, they might have alienated the public lands and secured the construction of the Transcontinental road without the expenditure of a single dollar in cash out of the public treasury of Canada and without adding a single dollar to the debt of this country.

Now, I wish to say a few words in reference to the remarks of the hon. member for West Elgin (Mr. Crothers). That hon. gentleman entered into a somewhat poetic representation of the actions of his party in connection with the government of this country, and took a somewhat poetic license with the facts. He contended that the Liberal party had opposed all the great measures put through by the Conservative party, and which, he claimed, had resulted in the present greatness of the country. He contended, in the first place, that the Liberal party of Canada had opposed confederation, and that Sir John Macdonald and his government and party were the only ones responsible for that great Act and consequently for the greatness of Canada to-day. I think the hon. gentleman's memory is entirely at fault. As a matter of fact, Sir John Macdonald and the Conservative government, up to a very short time before the principle of confederation was adopted, had opposed that principle against the Liberal party of this country, and it was only at the last moment that the Conservatives, joining with the Liberals, formed the coalition government to put through the measure. The hon. mem-

ber said that the Liberals had opposed the Canadian Pacific railway. I deny that; his memory is again at fault. Hon. Alexander Mackenzie, during the time he led the administration of this country, endeavoured to construct the whole of the Canadian Pacific railway by a bargain with a company on the basis of a land grant. He failed to obtain favourable terms of that kind, and his government proceeded to construct that road as a government work, and, at the time Mr. Mackenzie left office, there had been an expenditure in actual construction of that road of no less a sum than $30,000,000. Yet hon. gentlemen opposite are continually proclaiming throughout this country that Alexander Mackenzie and his party had opposed, tooth and nail, the construction of the Canadian Pacific railway. The facts are that the Liberals in opposition opposed the particular terms of the bargain which was made by the Conservative government for the construction of that railway. They opposed for instance, the monopoly clauses, they opposed the clauses that allowed alternate sections of land to be laid aside and accumulate in value through the efforts of the settlers on the other sections. They opposed the exemption from taxation, and made other exceptions to the terms, but it cannot be said that the Liberal party were opposed to the principle of constructing the Canadian Pacific railway, or that they ever intended to put any obstruction towards the accomplishment of that great work.

Now the hon. gentleman also thought it would be desirable that the hon. member for Red Deer (Mr. Clark) should hold some revival meetings for his side of the House; and shortly afterwards he gave us a very glowing account of the virtues and patriotism of the Japanese people. When he was waxing so eloquent concerning the virtues of these people, I thought perhaps it would be a good thing for him to hold a few revival meetings with the hon. members from British Columbia upon his side of the House. One would suppose that if these people possessed all the good qualities so eloquently described by the hon. gentleman his political friends would not have such a tremendous dread of rubbing up against the Japanese.

He also undertook to tell us that an immense amount of corruption had taken place since this government came into power, and he regretted very much that there seemed to be no virtue left outside of the Conservative party. I wondered if the hon. gentleman could not remember a few things that were not exactly virtuous on his own side of the House, in the midst of his own party. When he was going so deeply into Canadian history, he might have gone back for instance to the original bargain for the construction of the Canadian Pacific railway, which led to the great Pacific scandal and the hurling of his party from power. If he had come down to later times, he would remember that it was this very corruption that was mainly responsible for the hurling of his party from power in 1896. Yet the hon. gentleman seemed to imagine that there was no virtue and no honesty outside of the Conservative party.

Now the hon. member for East Algoma (Mr. Boyce) had considerable to say in connection with the action of the Department of Militia and Defence in charging up to the town of Sault Ste. Marie the expenses of sending troops up there to quell disturbances, or to maintain order. He had a strong opinion that the minister ought not to have rendered any bill for that service. Now, Sir, the Militia Act clearly defines what shall be done in such a case, the law is established by this parliament, and one would imagine that hon. gentlemen opposite would consider it to be the duty of any minister to fulfil the law, whatever it is, that he finds on the statute-book. Yet the hon. member for East Algoma makes it a subject of complaint that the Minister of Militia did not violate the law on this occasion, and that the town from which he hails did not have the advantage of that expenditure at the expense of the public treasury of Canada, without any authority of law. That hon. gentleman, and some others who have spoken, have taken a good deal of exception to what they call the fuss and feathers of the Militia Department. They have contrasted the total expenditure of the Militia Department in the latter years of Conservative rule with the total expenditure of to-day. Well, this is the first time I have heard that argument within this House. Upon the hustings this is a favourite theme with Conservative orators. I watched with some interest the submission of the militia estimates during the last session of this parliament, and I was astounded to find that, notwithstanding all the criticism of a general character that had been indulged in by hon. gentlemen opposite on various occasions, they allowed the estimates of the Militia Department to pass through this House practically without a dissenting voice. Now I claim that if these gentlemen, sitting on the other side of the House as guardians of the treasury, as they pretend, and knowing as they pretend to know, that there is absolute extravagance and waste in connection with these militia expenditures, it is surely a part of their duty as critics of the government to raise these objections when the estimates are being passed. If there are unnecessary officers in connection with the department, why is it that these hon. gentlemen, or some one of them, did not rise in their places and protest against the salaries or allowances for these unnecessary

officers? An hon. member in speaking upon this subject to-day, made a contrast between the amount that was expended upon the officers and the amount that is expended upon the men. I had not an opportunity of examining very closely what the expenditures were to which he referred. But I am sure it is well known to every member of this House that the militia we have in Canada to-day is a skeleton militia, but including all the officers necessary for the total quota of men that are supposed to be in these regiments. You take an ordinary regiment upon the establishment we have in this country to-day, and they amount to somewhere in the neighbourhood of 400 men; whereas if that regiment were filled up as it would be in case of war it would mean a thousand men. So it is not a fair comparison to speak of what goes to the officers of that skeleton regiment when the regiment has not its full complement of men. It must necessarily have a full complement of officers, and there is only a small proportion of the men enlisted. I think that is a sufficient answer to the criticism of the hon. gentleman in that respect. But there is this to be said, that we are eternally hearing these criticisms about the unnecessary expense of the staff at Ottawa, and the unnecessary officers in connection with various district staffs, and I for one would like to hear, when these estimates are being passed, some fair discussion so as to ascertain as to whether there is anything at all in the criticism they make. What I do say is that if hon. gentlemen really consider there is unnecessary expenses in this direction, they will not accomplish a reform by merely dealing in generalities as they have been doing.

Now I was somewhat amused with the argument that was made by the hon. member for East Grey (Mr. Sproule) in connection with the woollen duties. If I understood the hon. gentleman aright, he said that the preferential tariff introduced by this government was responsible for having wiped out a very large proportion of the woollen factories in this country, that these woollen factories were still suffering and that there was danger, unless some change were made in the policy of the government, of the remainder being wiped out. The same tariff was also responsible, as I understood him, for the fact that sheep raising had almost been abandoned, or was very much depreciated. A little further on in his speech the hon. gentleman proceeds to tell us that this same preferential tariff was responsible for about doubling the price of woollen goods in Canada. It occurred to me as a strange thing that the woollen factories, under the Conservative regime, could make money when woollen goods were at one-half the price they are to-day, and yet when the price of their product is double under this preferential tariff they should be going to rack and ruin. That is the statement of the hon. mmeber. He quoted the figures. He stated that he was quoting woollen goods of precisely the same quality, and the prices, in general terms, were about double what they were in 1896.

Referring to the hon. gentleman's statement about sheep raising, it seems that while under the Conservative regime this business of sheep raising flourished in 1896 when wool sold at 18½ cents a pound, it is being absolutely destroyed to-day when wool ranges from 24½ to 26 cents a pound. The same remark would apply to the hon. gentleman's reference to cattle raising. That was another industry which was being wiped out by the fault of this government. It would be interesting to compare for the hon. gentleman's benefit the price of beef in 1896 and to-day. I noticed in one of the local papers, that beef was bringing 8½ to 9 cents a pound on the Ottawa market. Probably from 4 cents to 6 cents would be the ruling rate under the beneficial tariff that the hon. gentleman admires so much. Another hon. gentleman from East Peterborough spoke of the laws of Great Britain in reference to the encouragement of the woollen industry and sheep raising. He told us the laws to which he referred were those which laid the foundation of successful woollen manufacturing and successful sheep raising in Great Britain, and he regretted that we had not adopted in this country the system that had been adopted in Britain for the encouragement of this industry. If the hon. gentleman's argument is worth anything we ought now in this country to prohibit the importation of woollen goods by the death penalty as they did in England, because that, according to him, was what laid the foundation of prosperity there. After a time these penalties might be relaxed somewhat. What struck me most was that the hon. gentleman informed us that he found it very difficult to find people serious upon this question of woollen production. All I can say is that if the hon. gentleman had his way there would probably be some long faces in this country to say nothing of the long necks. This is a subject that has been discussed so thoroughly not only during this session but for many sessions past that I feel there can be very little ground that has not already been pretty well threshed. I can only say that I think if hon. gentlemen opposite have really any policy in connection with this tariff they should give us some idea of what it is. So far as I know there has been no intimation from hon. gentlemen opposite as a party in connection with this tariff beyond the rather vague reference to adequate protec-

tion that was made for the purpose of the campaign some time ago. Since that we have had nothing from the hon. gentlemen. They rise in their places one advocating a lower tariff, claiming credit for having reduced the tariff and another claiming that by reason of tariff reduction, the industries of this country have been destroyed. If the hon. gentlemen are to obtain any credit in the country for having fixed ideas upon the subject it occurs to me it is time we had those ideas in the shape of some resolution upon the subject from them.

Motion agreed to, and House went into Committee of Ways and Means.

Mr. FISHER. There are no resolutions to be proposed to the committee in view of the fact that there are no changes in the tariff; but it is the custom to keep the Bill in committee during the session. I will therefore move that the committee rise, report progress and ask leave to sit again.

Mr. HENDERSON. What effect will that have upon the subsequent proceedings? If it is called again next Monday the debate may go on.

Mr. FISHER. It might, but the keeping of the Bill in the committee is pro forma entirely. The Finance Minister always wishes to keep the Bill of Ways and Means open during the session. That has always been the practice.

Mr. BLAIN. When may we expect the return ordered on December 6, showing the number of officials in Ottawa having living apartments supplied by the Crown?

Mr. FISHER. I understand it will be laid on the table early next week.

Motion agreed to, and House adjourned at 9.45 p.m.

HOUSE OF COMMONS.

MONDAY, January 24, 1910.

The SPEAKER took the Chair at Three o'clock.

CHIEF JUSTICE OF MANITOBA.

Mr. ALEXANDER HAGGART. I would like to repeat verbally the question which I put on the Order Paper and which was answered a week ago with reference to the appointment of a successor to Chief Justice Dubuc. The answer given by the Department of Justice was to the effect that they did not know that there was serious inconvenience and loss to the profession, to suitors and to the public in Manitoba. I would ask now, at the expiry of a week, if we can be told when the successor is likely to be appointed and whether that successor will be a Frenchman or an Englishman.

Hon. A. B. AYLESWORTH. Really I am not able to give any other answer to the hon. gentleman (Mr. Alexander Haggart) than was given the other day in reply to a question that was put on the Order Paper by him. I may say that I do not think it probably that the chief justice of the province will be a French speaking man, but the whole subject is under consideration.

INTERCOLONIAL RAILWAY—SAFETY OF TRAVEL.

Mr. C. JAMESON (Digby). Before the orders of the day are called, I wish to bring up a matter of urgent and immediate importance and to ask a question of the Minister of Railways and Canals (Mr. Graham). The question is as to the safety of travel on the Intercolonial railway. During the very able and instructive speech delivered by the hon. member for Westmoreland (Mr. Emmerson) on Thursday last, he stated that——

Mr. SPEAKER. Is the hon. member (Mr. Jameson) going to discuss the matter, and, for that purpose, to move the adjournment of the House?

Mr. JAMESON. No, I bring the matter up before the orders of the day.

Mr. SPEAKER. The hon. member cannot discuss the subject then.

Mr. JAMESON. I am not going to discuss it but merely to ask a question. The hon. member for Westmorland said 'certain sections of the Intercolonial are not in good and safe condition.' The Minister of Railways and Canals, in replying to the hon. member, did not touch on that point and did not contradict the hon. member's statement. Now, having in mind the awful accident which occurred on the Canadian Pacific railway on Friday last by which some thirty-one persons are reported to have been killed and a much larger number seriously injured, and which, it is said, was due to a defect in the physical condition of the road, I would like to ask the minister, to what extent and at what points on the Intercolonial the condition described as unsafe by the hon. member for Westmoreland exists; whether the minister was previously aware of it; why it was permitted to develop; what steps, if any, have been taken or will be taken to over-

come it; and, when the road will be in safe condition for travel?

Hon. GEORGE P. GRAHAM. That question, I think, might better have been asked the hon. member for Westmoreland (Mr. Emmerson). There is liable to be a great difference of opinion between him and myself as to the real accuracy of the statement. I may say that, owing to representations made to me, I had the Superintendent of Maintenance of Way go over the road from Sydney to Montreal, and he reported to me, within the last few days, that every foot of it, so far as he could find out, was in good condition.

ST. PETER'S INDIAN RESERVE.

Mr. BRADBURY. I desire to ask the Minister of the Interior (Mr. Oliver) when I may expect the report showing the instructions given to Chief Justice Howell with regard to the surrender of the St. Peter's Indian reserve?

Hon. FRANK OLIVER. Probably tomorrow.

MONTMAGNY FIRE INSURANCE COMPANY.

House in Committee on Bill (No. 51) respecting the Montmagny Fire Insurance Company, to change its name to 'Manufacturers Fire Insurance Company.'

On section 2,

Mr. MILLER. The Bill as we have it states that the name should be 'The Manufacturers Fire Insurance Company.' In committee it was agreed, and consented to by the promoters of the Bill, that in the House the title should be changed, and that the name should be the Factories Fire Insurance Company. If necessary, I will move that the name be changed to the Factories Fire Insurance Company.

Mr. DEPUTY SPEAKER. I understand the rule is that, while the Bill itself may be amended in committee, the title has to be amended in the House.

Bill reported.

NORTHERN MORTGAGE COMPANY OF CANADA

On the motion that Bill (No. 33) to incorporate the Northern Mortgage Company of Canada—Mr. A. Haggart—be read the third time.

Mr. FIELDING. I would be glad if the hon. gentleman in charge of the Bill would allow the third reading to stand until next meeting. An hon. gentleman in the House has called my attention to some provisions in it. I am not taking any exception but I would like to have the opportunity of consulting with my officers. I have no reason to suppose that the Bill is not correct, but I would like it to stand for the third reading until the next day.

Mr. HENDERSON. As the Minister of Finance is present now and was not present in the committee when this Bill was passed, I would like to hear his opinion about the name which is proposed in this Bill—the Factories Insurance Company. It seems to me that it is of too general a character.

An hon. MEMBER. This not the same Bill.

Mr. FIELDING. It was because I was necessarily absent at that meeting and I am not familiar with the Bill that I am asking the third reading to be delayed, not that I have any objection to the Bill at all —I have no reason to suppose that the Bill is not right—but a question was put to me by an hon. gentleman concerning it, and I would like it to stand for that reason.

Mr. SPEAKER. Stands until the next meeting.

MONTMAGNY FIRE INSURANCE COMPANY.

Mr. LAVERGNE moved:

That Bill (No. 51) respecting the Montmagny Mutual Fire Insurance Company and to change its name to the Manufacturer's Fire Insurance Company be now passed, and that the title be entered on the Order Paper as the Factories Insurance Company.

Mr. HENDERSON. This is the Bill to which I had reference a moment ago where the change in name takes place. I mentioned the fact that the Minister of Finance was not in his place. I take no exception to that, I know that he has many things to attend to, but I am aware that in former years the minister has been very particular about names contained in various Bills in order that no one company will get any possible advantage over another in the matter of its name. We all regret perhaps that the Dominion bank ever secured that name because we believe it gives it a decided advantage over every banking institution in the country. It seems to me that The Factories Insurance Company is too general and it might give the impression all over the country that this is the only company that has to deal with factories. I think it is of too general a character and that the Bill should be amended in some way. I would like to hear the opinion of the Minister of Finance upon it.

Mr. FIELDING. I have not had the matter before me. My hon. friend (Mr. Henderson) is correct in saying that in the committee we have endeavoured to guard

against a confusion or similiarity of names which would lead to one company being mistaken for another. That, after all, is the main purpose. I will not pretend to say that the word 'factories,' is a word that can be patented by any body, but I do not think it would lead to any confusion. I do not think it would be alleged that this is the name of another company or that it is similar to the name of another company. My hon. friend's point is that it might convey the impression that this is the only company that has the right to deal with factories.

Mr. HENDERSON. Yes, that it is too general.

Mr. FIELDING. I am afraid that upon that principle you might shut down upon a great many names. I have not had the opportunity of thinking it over and at present I do not feel like opposing the Bill.

Mr. SPROULE. It seems pretty close to the Manufacturers' Insurance Company, and there might be some objection to it on that ground.

Mr. FIELDING. Do the Manufacturers' Insurance Company object?

Mr. SPROULE. I am not aware that they do.

Mr. FIELDING. Was there any representation on that point?

Mr. HENDERSON. No, I am not aware that there was, but that is not the main point. I think the name is too general. We have always objected to a name of a too general character which would seem to give a particular company an advantage over all other companies doing a like business. It might create a wrong impression in the country. Agents might make use of it. It might be represented that they have a right to deal with factories over that of any other company.

Mr. FOSTER. The company came to this House under the name of the Montmagny Mutual Fire Insurance Company and asked for powers. That is a remarkable localized name. It implies that it belongs to a county, that its capital is chiefly in that county and its management is a small one. You take that up immediately and elevate it to the Factories Insurance Company. You take away all idea of locality and make what is really a local company as wide as the name implies. That gives too much of an advantage. A man would look upon that company as a large company. It is not limited to anything; it is not a county or a provincial company. It is given the broad designation of the factories company. It has two objections, to my mind, the first one being that it gives too much of an advantage to a localized, small company and, of course, if it gives an advantage it is to the disadvantage of all insurers. The other is that it takes a general appellation which shuts out every other company. Suppose another company with three times the capital and three times the influence comes forward and wants to call itself the Factories Company. If all the capital in the Dominion of Canada is behind it it cannot do it. It has to give precedence to a small local company. These are, I think, two strong objections to that kind of a name. I think it ought to be localized in some kind of a way. Taking that general name you prevent any other aggregation of capital from ever asking or taking that general name and in allowing that to be used as a cognomen you limit it to this company or else you violate the rule against one company taking the name of another.

Mr. FIELDING. I do not think any injustice can be done by permitting this company to take the name. It is surely a case of first come first served, and the fact that this is a small company should not deprive it of the right to use the name. As to this being a general appellation, surely if a company should call itself the Farms Building Insurance Company it would simply indicate that they were making a specialty of that class of business, and it would not be reasonable to say that no other company should insure farm buildings. I have only seen the Bill a moment ago, and I have not considered the question, but I do not think there can be any objection to the name.

Mr. FOSTER. We should have some regard to the constitution of the company, its capitalization, its powers and the like of that. Suppose an insignificant company were to ask us to give it a name applicable to the whole country and thereby debarred for ever after any other large company taking the same name, I think the fact that the former company was small and insignificant should have weight with us, in connection with a general name. I do not know whether this is a powerful company or not, but judging by the fact that it takes the name of a county I should think it was limited in its scope.

Mr. TALBOT. I would ask the Speaker to name some other member as seconding the motion for a change of name. That company does a great deal of business in my county and I might be called to account for creating confusion if the name be changed.

Bill reported, read the third time and passed.

SECOND READINGS.

Bill (No. 106) respecting the Canadian Northern Ontario Railway Company—Mr. Nesbitt.

Bill (No. 107) to incorporate the Ottawa, Montreal and Eastern Railway Company —Mr. Gladu.

Bill (No. 108) to incorporate the Rainy River Radial Railway—Mr. Conmee.

NATIONAL TRANSCONTINENTAL RAILWAY.

Mr. LENNOX:

1. What portions indicated by location and mileage, of the eastern division of the Transcontinental Railway were surveyed by the Grand Trunk Pacific Railway Company, taken over by the government, and paid for by the country?

2. What portion of this survey, identified by location and mileage, was rearranged and relocated by Major Hodgins, or any other government engineer?

3. Was a portion of the section let to J. D. McArthur, re-surveyed, or the survey revised by Major Hodgins, or any government engineer, and the location of parts of the line changed after the contract was let to McArthur?

4. Was the road improved by this change of location? If so, how, and was the cost of the work thereby cut down, and to what extent?

Hon. GEO. P. GRAHAM:

1. Surveys extending from Winnipeg to about 700 miles east of that were made by the Grand Trunk Pacific and taken over and paid for by the government.

2. It was all resurveyed and relocated by National Transcontinental railway engineers.

3. Yes. Parts of the line as relocated by Major Hodgins and let to J. D. McArthur, were changed after the contract was let, namely: Miles to 93 'F'—mileage west from Lake Superior Junction, through mileage from Moncton 1,606 to 1,650. Also miles 103 to 122 'F'—mileage west from Lake Superior Junction, through mileage 1,660 to 1,679. Numerous slight changes were also made.

4. Yes. The figures for the two portions mentioned are as follows:

Mile 49 to 93, estimated cost, as let	$ 4,122,358 00
Cost to date, with additions of remainder of ballasting, ties, tanks, etc.	4,249,695 00
Cost over original estimate.	$ 127,337 00
A saving in length was made on this portion amounting to 4969·2 feet capitalized value	49,692 00
And a saving in curvature of 748°18 feet capitalized value	59,854 40
Total saving, capitalized value	$ 109,546 40

Mr. TALBOT.

Mile 103-122, estimated cost	$ 1,460,079 00
Cost to date, including remainder of ballasting, ties, tanks, etc., to complete.	2,025,544 00
Cost over original estimate.	$ 565,465 00
Saving in length was made on this portion of 2,000 feet, capitalized value	$ 20,000 00
The curvature was increased 228°18 capitalized value	18,240 00
Net saving, capitalized value	$ 1,760 00

Mr. LENNOX:

1. Who was Major Hodgins' assistant district engineer in August and September, 1907?

2. Was he transferred to another part of the line in the autumn of 1907? If so, when, to what point, and why?

3. What was his salary at the time of transfer?

4. Is he still in the service of the commission? If so, in what capacity, and at what salary?

5. Who took this engineer's place on the section under the McArthur contract, and did this substituted engineer sign the September estimate? If so, did he certify without going over the work?

Mr. GRAHAM:

1. J. A. Heamen.

2 and 4. No. He resigned in November, 1907.

3. $275 per month when he resigned.

5. A. M. Macgillivray succeeded Heamen but did not sign September estimate.

Mr. LENNOX:

1. What is the length of the long tunnel on the National Transcontinental railway east of Winnipeg river?

2. What proportion of the work has been done on this tunnel, or has it been completed? If so, when was the last work done upon it? If not, when will it probably be completed?

Mr. GRAHAM:

1. 613 feet.

2. Reported completed December, 1908.

Mr. LENNOX:

1. Has the portion of the Transcontinental railway between Winnipeg and Lake Superior Junction been completed in every respect? If not, what remains to be done?

2. Is it open for general passenger and freight traffic, and to what extent has it actually been used?

3. Has this part of the line been ballasted?

4. Has it been taken off the hands of the contractors, have their accounts been adjusted and have they been paid in full? If not, what sums have been held back, and why?

5. Has this portion of the road been taken over by the Grand Trunk Pacific Railway Company and has the cost of construction upon which the rental is to be based been determined between the government and the company? If so, at what sum?

Mr. GRAHAM:

1 and 4. No. The percentage reports to December 31, 1909, show 94·66 per cent completed.

2 and 5. The line has not yet been taken over by the Grand Trunk Pacific Company, but the engineers report trains can run over this section at a speed of from 20 to 25 miles per hour; a passenger train and a train of wheat have passed over the line, and the contractor under date November 23, 1909, has offered to operate two trains a week, and the Grand Trunk Pacific Company was so advised by the commissioners.

3. The percentage report for district 'F,' December 31, 1909, shows 59 per cent of ballasting complete.

Mr. LENNOX:

1. Upon the section of the Transcontinental railway in district 'F,' let to J. D. McArthur, what were the government engineer's estimated quantities of (a) solid rock, (b) loose rock, and (c) common excavation, upon which tender was accepted and contract let?

2. At the time the contract was let, what was the estimated expenditure, based on contract prices, for (a) solid rock, (b) loose rock, and (c) common excavation?

3. How many cubic yards each of (a) solid rock, (b) loose rock, (c) common excavation, and of what value, separately, have been returned and claimed by the contractor or his sub-contractors for work alleged to be done, and what is the estimated quantity and value under each of these headings of work yet to be done, according to latest estimate?

4. What sums have actually been paid under each of these headings?

5. At the time this contratc was let, what was the total estimated expenditure based upon contract prices?

Mr. GRAHAM:

1. (a) S.R.— 3,696,336 cubic yards.
   (b) L.R.— 733,454 cubic yards.
   (c) C.X.—11,233,247 cubic yards.
2. (a) S.R.—$6,283,771 20.
   (b) L.R.— 440,072 20.
   (c) C.X.— 3,369,974 10.
3.

(a) S.R.—6,415,869	cu. yds.—	$10,906,977	30
(b) L.R.—2,056,297	"	1,233,778	20
(c) C.X.—2,215,876	"	664,762	80

Excavation completed except entrance to Winnipeg.

4. The sums actually paid are the abovementioned values less 10 per cent hold-back making net payments as follows:

S.R.—$9,816,279 57
L.R.— 1,110,400 38.
C.X.— 598,286 52.

5. $13,010,398.92 based on estimate quantities as taken from profile of preliminary location and not including rails, ties, steel bridges, &c. Subsequent revised estimates including above $17,534,000.

COST OF DOMINION ELECTION.

Mr. OWEN:

1. What was the total cost of the last Dominion election?

2. What does it cost to maintain the Senate for one year?

Hon. CHAS. MURPHY:

1. $401,957.74.
2. $319,653.02.

REPAIRS TO CAR 37, I.C.R.

Mr. EMMERSON:

1. Is car No. 37 the official car used by Mr. E. Tiffin, general traffic manager of the Intercolonial railway and a member of the Managing Board of Government Railway Board?

2. Has this car been recently repaired or is it now undergoing repairs in the shops of a private car firm or corporation in Halifax, N.S.? If so, was the work done, or is it now being done, by contract after tender or by days' work?

3. Is it true that new and commodious repair shops were constructed at Moncton, and modern machinery installed therein, with a view not only of doing all necessary repair work in connection with the Intercolonial railway, but as well to do all such construction work of cars and locomotives as would be payable out of the current revenues of the railway?

4. Why have the repairs on the car referred to not been made or undertaken in the government railway shops either at Moncton or elsewhere?

5. Have any cars or locomotives been constructed or their construction undertaken in the new shops at Moncton?

6. Have any new cars or locomotives payable out of current revenue account been purchased from or placed under contract with, private car or locomotive corporations or firms during the present fiscal year; and if any such purchases were made or contracts entered into was it done after tenders being asked?

Mr. GRAHAM:

1. Yes.

2. The expense of doing the work in the Moncton shops was carefully estimated and contracts were let at a less price to the Silliker Car Company.

3. Yes, but the shops in question have been overwhelmed with ordinary repairs due to the fact that during the interim of the transfer from the old to the new shops a considerable quantity of work had accumulated. The staff is now gaining rapidly upon it, and in a short time will be down to normal conditions. In the meantime, it was thought best to have car '37' repaired and put in safe shape to run.

4. Answered by No. 3.

5. The full capacity of the shops is taken up at present with repair work, but as the organization improves new work will be started.

6. Yes.

CIVIL SERVICE APPOINTMENTS.

Mr. HUGHES:

1. How many persons who have passed the necessary examination to obtain appointments

in the Civil Service since the present Civil Service Act came into force have as yet been appointed to the government service?

2. Has the government in its employ at the present time any persons who have failed to pass the requisite examination?

3. Is it the policy of the government to keep temporary employees at work in the departments when there are numbers who have passed the necessary examination who are desirous of securing employment?

4. Under whose recommendation do temporary employees secure appointments to the service?

5. Are the moneys voted as salaries to temporary employees paid out of funds for the inside or outside service in all cases?

Mr. MURPHY:

1. Number of persons who have passed the regular examinations for the inside service since the coming into force of the present Civil Service Act.

Interim examinations, March, 1909:

Second division competitive examination:
- Passed.. 5
- Permanently appointed.. 3
- Temporarily appointed.. 2

- Permanently appointed.... 0
- Temporarily appointed.... 0
- Unappointed.. 4

Lower Grade qualifying examination:
- Passed.. 10
- Permanently appointed.... 0
- Temporarily appointed.... 2
- Unappointed.. 8

2. In so far as this question relates to the inside service, No. With respect to the outside service, an answer can be given only on a return to an Order of the House.

3. No.

4. All temporary employees must have certificates of qualification from the Civil Service Commission.

5. With respect to the inside service, the salaries of temporary employees are paid out of the appropriation for 'clerical assistance,' and if there is no such appropriation out of that, for contingencies. With respect to the outside service, the salaries of temporary employees are paid out of the appropriation for the service in which the temporary employees are employed.

CHARGES IN ARMY SERVICE CORPS.

Mr. WORTHINGTON:

1. Is the government aware that information has been laid according to the requirements of the Criminal Code by two citizens of the city of Ottawa, charging the officer commanding the Ottawa company of the army service corps, with a number of indictable offences in connection with the military camp at Quebec during the Tercentenary celebration, and that such charges are now awaiting trial by the Criminal Courts?

2. Do the King's regulations, or the customs of the British service, require that when the character of an officer has been seriously impugned, he is, as a matter of routine, suspended from duty pending the investigation of charges preferred against him?

3. Has the officer concerned been suspended from duty as commanding officer of a militia corps? If not, why not?

Sir FREDERICK BORDEN:

1. Yes.

2. No.

3. No, the case is subjudice.

LIGHTHOUSE KEEPER AT CAROUSEL.

Mr. GIRARD:

1. Has a person named T. Arcand, lighthouse keeper at Carousel, Seven islands, been removed in 1909? If so, what are the reasons for his removal?

2. Who are the persons outside of the Marine Department, who have directly or indirectly asked for his removal?

Sir WILFRID LAURIER:

1. Yes. Unsatisfactory service.

2. No person outside of the department asked for the removal of this keeper.

OTTAWA ARMY SERVICE CORPS AT QUEBEC.

Mr. WORTHINGTON:

1. Is the government aware whether one man, two horses and one double carriage were taken from Ottawa to Quebec for the Tercentenary celebration by the officer commanding the Ottawa company of the army service corps, and hire therefor claimed for by him on the official pay-sheets as company draught horses and light wagon, but which did no company work whatsoever, having been hired, transported and held entirely for the personal use of members of the militia council?

2. If so, by whose authority were such arrangements effected, and by whom were such horses and carriage made use of at Quebec?

Sir FREDERICK BORDEN:

I am advised that the answer to this question is, No, but if the hon. gentleman will allow the question to stand as a notice of motion, I will bring down any papers in connection with it.

Mr. SPEAKER. Stand as a notice of motion for a return.

REPORT OF PRIME MINISTER'S SPEECH AT TORONTO.

Mr. LAKE:

Referring to the Toronto 'Globe' of Thursday, 6th January, 1910, wherein is reported portions of a speech delivered at Toronto the previous day by Sir Wilfrid Laurier, as follows:—'We are under the Suzerainty of the King of England; we bow the knee to him; but the King of England has no more rights over us than are allowed him by our own Canadian parliament.'

1. Is this a correct report of the Prime Minister's words?

2. Is this the view the government holds of our relationship to the Throne?

Sir WILFRID LAURIER:

1. The report of Sir Wilfrid Laurier's speech, which was published in the Toronto 'Globe' of January 6, notwithstanding some slight inaccuracies, is substantially correct, but the citation in the question of the hon. gentleman is not a correct reproduction of that report. It is garbled and omits an important part of the sentence. I am quite sure that the misquotation was unintentional on the part of the hon. gentleman, and he would have averted it if he had consulted the 'Globe' itself, instead of Tory newspapers. The passage cited by my hon. friend, as he can read it in the 'Globe,' is in these words: 'We are under the suzerainty of the King of England. We are his loyal subjects. We bow the knee to him, but the King of England has no more rights over us than are allowed him by our own Canadian parliament.' My hon. friend will notice that in his quotation, the words, 'We are his loyal subjects,' are not to be found. To be more particular, the whole passage is thus reported in the 'Globe': 'The great poet Whittier, in the time of the civil war, wrote: "We bow the heart, if not the knee, to the Queen of England, God bless her."' We say: 'We bow the heart and the knee to the King of England, God bless him.' We are under the suzerainty of the King of England. We are his loyal subjects. We bow the knee to him, but the King of England has no more rights over us than are allowed him by our own Canadian parliament.'

2. This is the view of our relations to the Throne, which is held by all true, loyal British subjects.

Mr. FOSTER. How is the right hon. gentleman going to speak for them all?

Sir WILFRID LAURIER. If they are not, they ought to be.

Mr. FOSTER. That is not what the right hon. gentleman said; he made an assertion of facts.

SCOTSBURN-LOGANVILLE MAIL CONTRACT.

Mr. RHODES:

1. Who has the contract for carrying mails, between Scotsburn station, Pictou county, Nova Scotia, and West Branch River John, Loganville, and other points on the same route?

2. When was the contract awarded, and what is the contract price of the work?

3. Who is the postmaster at West Branch River John above mentioned?

4. When was such postmaster appointed, and what allowance does he receive for the work?

Hon. RODOLPHE LEMIEUX:

1 and 2. Pending an inquiry into the advisability of a rearrangement of services in the district referred to, the department has been paying Mr. Daniel McIntosh $2 per day since the 1st January instant, to operate the service.

3. Daniel Campbell.

4. February 1, 1901—$128 per annum.

SPECIAL POST OFFICE EXAMINATION, MARCH, 1908.

Mr. J. D. TAYLOR:

Referring to special promotion examination of the Post Office Department, March 12, 1908, what in effect was accepted or would have been accepted by the Board of Civil Service Examiners as correct answer to question 4, viz.: 'What correspondence may pass through the Canadian mails free of Canadian postage?'

Mr. LEMIEUX:

All correspondence to and from the Governor General and his secretary.

All duly franked official correspondence from the public departments at Ottawa.

All correspondence to the public departments at Ottawa.

All correspondence to or from the Speakers of either House or the Librarian of Parliament.

Parliamentary library books passing between library and members of either House of parliament.

Parliamentary papers sent during recess by members of either House of parliament or by members of provincial legislatures.

Petitions and addresses to provincial legislatures, or any branch; also votes, proceedings and other papers printed by order of any legislature or branch thereof.

Remittances from postmasters to banks, and acknowledgments from banks to postmasters.

Letters on H.M.S. addressed to imperial departments of state in United Kingdom.

Documents from provincial legislatures relating to agricultural, industrial and sanitary matters, and returns made to provincial governments on prepared forms respecting same matters.

Returns of births, marriages and deaths made by clergymen and others.

Contagious diseases reports and meteorological reports.

Provincial government blank forms for returns.

Customs notices to addressees of dutiable parcels, manifests, way bills passing between collectors of customs and postmasters authorized to collect duty.

Books in raised characters for the blind.

SALES OF LAND IN SURREY, B.C.

Mr. J. D. TAYLOR:

Has the government disposed of the following lands in the municipality of Surrey, B.C., viz.: S. E. quarter-section, Bk. 34, Tp. 2; N. half S. S. E. quarter Bk. 34, Tp. 2; and section 31, Bk. 5, N. R. 1 W., Tp. 38, Westminster district? If so, to whom, on what dates, and on what terms?

Mr. OLIVER:

The N. ½ of the S. E. ¼ of section 34, Tp. 2, W.C.M., was sold at the rate of $5 per acre, on the 31st of July, 1891, to Denis Murphy, Esq.; by him assigned to the British Columbia Timber and Electric Company, and released to the Crown by that company on the 26th of March, 1905.

The S. ½ of the S. E. ¼ of section 34 has not been disposed of.

The description 'N. ½ S. S. E. ¼, Bk. 34, Tp. 2,' is insufficient for the location of the land.

The land described as 'section 31, Bk. 5, N.R. 1 W., Tp. 38,' or, according to the Dominion survey, the S. W. ¼ of section 3, Tp. 38, W.C.M., has not been disposed of.

LEASE OF LAND IN WESTMINSTER DISTRICT.

Mr. J. D. TAYLOR:

1. With respect to 40 acres southerly 10 chains, section 30, Bk. 5, N.R. 1 W., Tp. 38, Westminster district, is this land under lease for timber or other purposes? If so, to whom, upon what terms, and for what period?

2. Has any application been made for pre-emption of homesteading? If so, by whom, and upon what dates?

3. Has any report been made to the department upon application pending? If so, by whom, and to what effect?

Mr. OLIVER:

1. This land is held under timber license by the British Columbia Mills, Timber and Trading Company. It is held under the terms contained in the timber regulations. Yearly licenses are issued subject to renewal as long as timber of the kind specified in the license remains on the berth in sufficient quantities to make it commercially valuable.

2. No application to pre-empt or homestead this land has been made to head office. If an application has been made to the local agent of Dominion lands the department has not yet been advised.

3. No report has been made to the department.

POSTAL PENALTIES.

Mr. J. D. TAYLOR:

Are penalties for violation of the postal law or regulations imposed otherwise than as the result of prosecutions? If so, what is the procedure followed?

Mr. LEMIEUX:

Yes. Under the statute, which provides that the Postmaster General, or any of the officers or persons acting under his orders, may accept any penalty incurred under the terms of the Postal Act or any part thereof, without action, suit, or information brought or commenced for the recovery thereof. See section 9, subsection W.—Cap. 66, R.S.C.

ESQUIMALT FORTIFICATIONS.

Mr. BARNARD:

1. Was it with the concurrence of the Imperial War Office and in furtherance of their policy at the time the fortifications at Esquimalt were taken over, that the upper battery at Rod Hill should be dismantled and the six disappearing guns constituting the armament of the battery, should be removed to the drill hall at Victoria, to be used for training purposes of the 5th Regiment?

2. If so, what was the date of such concurrence, or of the expression of such policy, by whom was such concurrence given or expression made, and was it made or given verbally or in writing?

3. The same questions are asked with reference to the removal of the gun from Duntze Hill to the drill hall?

Sir FREDERICK BORDEN:

1. The removals of the 6-inch B.L. gun from Rod Hill and of the gun from Duntze Hill to the drill hall were undertaken with

the approval of the Militia Council at the urgent representation of the military authorities at Esquimalt that such removal was desirable to facilitate the training of the 5th regiment.

2 and 3. Answered by No. 1.

GOVERNMENT RESIDENT ENGINEERS.

Mr. BARNARD:

How many resident engineers of the Public Works Department are there in each of the different provinces and what is the salary of each engineer?

Hon. WM. PUGSLEY:

Geo. P. Brophy, Ottawa, Ont..	$3,000
R. de B. Corriveau, Ottawa, Ont..	2,350
J. G. Sing, Toronto, Ont..	2,700
H. J. Lamb, London, Ont..	2,600
W. P. Merrick, Fort William, Ont..	2,200
E. B. Temple, Port Arthur, Ont..	2,400
W. C. Brough, Port Burwell, Ont..	2,000
E. G. Millidge, Antigonish, N.S.	2,400
C. E. W. Dodwell, Halifax, N.S..	2,700
Thos. J. Lockie, Halifax, N.S..	2,200
Jas. B. Hegan, Charlottetown, P.E.I.. ..	2,400
E. T. P. Shewen, St. John, N.B.	2,400
J. K. Scammell, St. John, N.B..	1,800
Geoffrey Stead, Chatham, N.B..	2,400
J. L. Michaud, Montreal, Que..	2,400
Thos. Breen, Quebec, Que..	2,400
A. R. Décary, Quebec, Que..	2,500
J. A. Tremblay, Montmagny, Que.... ..	1,900
P. E. Amiot, Father Point, Que..	2,000
J. T. Bertrand, Isle Verte, Que	2,400
F. X. Lefebvre, Three Rivers, Que.. ..	2,300
F. X. T. Berlinguet, Three Rivers, Que.	2,350
J. C. Taché, Chicoutimi, Que..	2,250
A. R. Dufresne, Winnipeg, Man..	2,700
Z. Malhiot, Calgary, Alta..	2,400
Geo. A. Keefer, New Westminster, B.C.	2,700

POSTAL SERVICE, B.C.

Mr. J. D. TAYLOR:

1. What was the date of the discontinuance of postal service at the post office known as Central Park?

2. What was the date of the commencement of postal service at the post office known as East Collingwood?

3. What notice was given to those who had been accustomed to receive mail at Central Park that the office would be removed?

4. Was any request made to the Postal Department, or any official of the department, by any person or persons outside of service, for the discontinuance of the postal service at Central Park?

5. If so, by whom? If not, why did the department take action?

Mr. LEMIEUX:

1. As stated, in answer to a previous inquiry, postal service has not been discontinued at the Central Park post office. The post office, as stated, was removed to its present location on the 1st August, 1909.

2. 1st September, 1909.

3. It is not usual in the case of a change in the location of a post office to give any special notice. The fact becomes generally known without delay.

4 and 5. A largely signed petition was received from patrons of the Central Park post office complaining of the management and asking that the office be removed from the control of the postmaster at that time. The case was referred to the inspector for investigation, who recommended as the result of inquiries, that a change be made in the postmastership.

SEALING ON PACIFIC.

Mr. J. D. TAYLOR:

1. Is there a proposal under consideration by the government for the discontinuance of sealing on the Pacific by Canadian citizens?

2. If so, what is the nature of the proposal, and to what stage have the negotiations advanced?

3. Has any advice been given to the individual seal hunters, or any negotiations in that regard? If so, to whom has this advice been delivered on their behalf?

4. Is there to be any compensation paid, will the individual seal hunters share in the distribution, or will it be confined to the owners of sealing vessels?

5. Has any advice been given to the owners of sealing vessels, of any negotiations in this regard, or has the government any reason to suppose that the owners are aware of negotiations that may be in progress?

Sir WILFRID LAURIER. A proposal for a total cessation of sealing during a number of years has been and is now under consideration. It would not be advisable in the public interest to bring down any information on this subject at the present time.

CARE OF IMMIGRANTS IN MEDICINE HAT.

Mr. MAGRATH:

1. What facilities have the Department of the Interior in the city of Medicine Hat for the proper housing and care of arriving immigrants?

2. Has the department made any requests on the Department of Public Works for the [illegible] of a building for such purposes? If so, when?

Mr. OLIVER:

1. No facilities for the housing of immigrants, but there is an office, with an agent in charge, to receive and direct them. Facilities for housing, to serve for that district, are provided at Irvine, twenty-two miles east of Medicine Hat.

2. No.

EXPERIMENTAL FARM, AGASSIZ, B.C.

Mr. J. D. TAYLOR:

1. What was the contribution of the Dominion government towards the cost of construction of the ditch into which the experimental farm at Agassiz, B. C., drains?

2. What is the total acreage of government owned land draining into the ditch, and what is the total acreage of privately owned land so draining?

3. What was the total cost of the ditch?

4. Have representations been made to the government that it has said to have become necessary to remove an accumulation of sediment in order to make the ditch effective, and that this sediment is said to come in considerable proportion from the experimental farm?

5. If this condition be found to exist, will the government bear an equitable proportion of the cost of the work required?

Hon. SYDNEY FISHER:

1. An order in council dated July 19, 1900, authorized the payment of $754.93, as an amount equivalent to that under which the same circumstances, a subject would be required to pay calculated on the same basis as the ditch commissioner of Agassiz established for the surrounding properties. This sum was paid in full compensation and discharge of all payments, contributions or assessments to be paid by the Crown to entitle the Crown to the use of the work.

2. The area of government land is 295 acres, and the area of privately owned land is 1,144 acres.

3. It is said to have cost about $5,000.

4. No representations have been made as to the deposit of sediment from the experimental farm, though the claim has been made that the ditch is unable to carry away the drainage from the experimental farm and from the other farms as well. This the superintendent of the farm considers to be due to the fact that the ditch has never been cleaned out, and has become obstructed by cattle breaking down the banks and by frost action.

5. As far back as September, 1908, the department declared its willingness to bear its share in the expense of cleaning out the ditch and is still willing to do so.

LAKE NIPISSING FLOODED LANDS.

Mr. GEO. GORDON:

What are the names of the parties who have received moneys for flooded lands around Lake Nipissing since December 31, 1908, and the sum paid to each?

Mr. PUGSLEY:

H. Knink	$ 15 00
H. Quesnel	75 00
J. and H. Tremblay	225 00
O. Lafrance	15 00
J. Noble	52 50
S. R. Connell	75 00
C. Lefebvre	7 50
Jos. Walker	50 00
A. Lefebvre	22 50
J. Steep	70 00
L. M. Deslongchamps	15 00
F. Lajeunesse	4 00
J. Lajeunesse	4 00
M. Landry	15 00
J. Latendresse	$ 22 50
D. St. George	120 00
C. Courchaine	80 00
Total	$ 868 00

Mr. J. D. TAYLOR.

ST. PETER'S INDIAN RESERVE.

Mr. BRADBURY:

1. Has the government, or any one on its behalf, sent an officer or person to St. Peter's Indian reserve, Manitoba, for the purpose of making any investigation into the surrender and sale of said reserve, or the sale of lands recently granted to Indians of said reserve?

2. If so, what is the name and occupation of such person, what were his instructions and what was the result of his investigation?

3. Has any report, written or verbal, been made by such person, and will the minister lay the said report on the table?

4. Has any representation, report or communication been sent to the government suggesting or urging the surrender or sale of said reserve during the last five years? If so, from whom?

5. What are the rules of the said band as to notice of meeting, presiding officer, &c., upon the surrender of a reserve, and does the consent require a vote of a majority of the male members of the band over 21 years of age, or only a majority of those present at the meeting?

Mr. OLIVER:

1. Yes.

2. Mr. A. S. Williams, law clerk of the Department of Indian Affairs, and Mr. S. Swinford, Inspector for the South Lake Winnipeg inspectorate. Their instructions will be laid on the table of the House on motion.

3. No.

4. Yes, by S. J. Jackson, late M.P. for the district.

5. The rule or custom of the St. Peter's band regarding meetings is that sufficient notice be given to permit the members of the band being made aware if the intention to hold a meeting and of its purport. Consent for surrender requires a vote of the majority of the male members 21 years of age present at the meeting. Meetings are presided over by an officer duly authorized by the Superintendent General.

CEMENT MERGER.

Mr. S. SHARPE:

1. Has the government received any complaints concerning the cement merger and the reported illegal combination resulting therefrom to inflate the prices of cement to consumers?

2. Is the government aware that this merger is said to be unlawfully increasing the prices to consumers?

3. If the government is not aware of the illegal operations of the cement combine, does it intend to institute inquiries in respect thereto?

4. Has the government under consideration the advisability of instituting prosecution against those responsible for this alleged combine?

Hon. MACKENZIE KING:

1. One communication has been received in which it is alleged that the effect of the cement merger has been to enhance the price of cement and restrict competition.

2. The government has received no information to this effect.

3 and 4. No representations as to any illegal operations of the cement merger have been made to the government.

GRAND TRUNK PACIFIC CLASSIFICATIONS.

Mr. LENNOX:

1. Have any written objections to classification upon the Transcontinental railway been made since July 28, 1908?

2. Have any objections been made in reference to overbreak or other over-expenditure since October 2, 1908?

3. Will the minister bring down a copy of these objections?

Mr. SPEAKER. Stand as notice of motion for return.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a return showing: (a) the names of the contractors for construction of the National Transcontinental railway and the number, mileage and location of the contract; (b) the estimated expenditure under each contract at the time the contract was let, based upon the engineer's estimate of quantities, at rates of the accepted tender (c) the estimated increase or decrease in expenditure in each case occasioned by change in location, specification, construction, material, grade or other change subsequent to the letting of the contract; (d) the amount returned and claimed on progress estimates under each contract to date; the amount actually paid under each contract, and the estimated amount yet required to complete the work in each case; (e) the engineer's estimated quantity of solid rock, loose rock and common excavation in the section of line covered by each contract, the estimated cost under these headings, based upon the rates of the accepted tender, the actual expenditure under these headings to date, as shown by progress estimates, the amounts actually paid to date under these headings, and the estimated quantities of work yet to be done, and the estimated sums yet to be paid under these headings in respect to each contract.

Also, as to all contracts other than the twenty-one covered by the return brought down on the 26th of April, 1909, No. 46h; a copy of (a) engineer's itemized estimate of quantities as to each contract of each class of work and material, as set out in the schedules and itemized, and total estimated expenditure based upon rates of accepted tender, and (b) a copy of all tenders received; (c) itemized quantities of work and material under the various headings actually done or furnished to date, and itemized, and total expenditure therefor; itemized statement of estimated quantities of work yet to be done and material, &c., yet to be furnished and itemized, and total estimated cost of the same based on contract prices.—Mr. Lennox.

For a copy of all instructions given during his term of office by the Honourable Speaker Blanchet to the then Sergeant-at-Arms or to other officials in connection with the appointment of sessional messengers.—Mr. Monk.

For a return showing what interest or control the Canadian Northern Railway Company has in any of the following railway companies: the Ontario and Rainy River Railway Company, the Port Arthur, Duluth and Western Railway Company, the Manitoba and South Eastern Railway Company, the Minnesota and Manitoba Railway Company, the Minnesota and Ontario Bridge Company, the Saskatchewan North Western Railway Company, the Qu'Appelle, Long Lake and Saskatchewan Railway Company, the Alberta Midland Railway Company, the Edmonton, Yukon and Pacific Railway Company.

2. What subsidies either in land, money, or by way of guarantee of securities have been granted to any of the railway companies, mentioned on account of the main or branch lines or both, of the said companies, either by the Dominion government, or the provincial governments of Ontario, Manitoba, Saskatchewan and Alberta, or any municipality through which their lines run.

3. What portion of these subsidies have been earned to date.

4. How many miles west of Edmonton a line of railway is constructed and in operation by the Canadian Northern Railway Company.

5. What work other than location survey work has been done west of this point up to date, how much and of what nature.

6. What portion, if any, will eventually form part of the proposed line to Vancouver.

7. When the location plan of the route of the Canadian Northern railway between Edmonton and Vancouver, by way of the Yellow Head Pass was approved by the Minister of Railways and the Board of Railway Commissioners.

8. What applications, if any, have been made since to change or in any way alter this location plan.

9. To what extent, if any, the government of Manitoba has exercised its right of control of freight rates under section 8 of schedule B of the Act 1 Edward VII., chapter 53.

10. What effect, if any, this section of said Act has had in reducing freight rates in the province of Manitoba.—Mr. Smith, (Nanaimo.)

For a return showing:

1. How many derailments have taken place over the Intercolonial railway during the year 1909.

2. At what points of the railway each of these derailments took place, and at what dates.

3. The report made in each case, and the cause or causes mentioned in such report.—Mr. Talbot.

BRIDGES OF THE BEAUHARNOIS CANAL.

Mr. F. D. MONK (Jacques Cartier) moved:

For a copy of all correspondence between Celestin Pregent, of Melocheville, province of Quebec, either personally or through his attorney, and the Department of Railways and Canals, concerning certain bridges on the Beauharnois canal.

He said: On this motion I merely wish to remark now that the Beauharnois canal, having passed into the hands of a company headed by Messrs. McIntyre and Robert, it is claimed that they are not fulfilling the obligations that they assumed at the time to keep the canal in proper order for navigation and to maintain bridges. A number of complaints have been made that bridges are condemned and not repaired, and that in other respects the canal is not kept in the same order or in the state of repair in which it was kept when in the hands of the government. That is the reason I move for these papers. I will discuss the matter more fully when we are considering the estimates.

Mr. GRAHAM. It has perhaps escaped the attention of my hon. friend (Mr. Monk) that in the reply given by me to a question the other day, a categorical answer was given to statements similar to those he has now made. Of course, there is no objection to the motion. But when the papers come down I think it will be found that the contract is being carried out. Certainly the department will see to it that it is carried out.

Mr. MONK. I was not in the House at the time referred to, but I assume that the minister stated that the purchasers or lessees of the canal were bound to fulfil the same obligations as the government. I presume that was the answer given.

Mr. GRAHAM. More in detail.

Mr. MONK. The reason I am asking for the correspondence is to bring to the notice of the House cases of individual hardship at Melocheville and elsewhere, in order that the government may more strenuously insist on the carrying out by the company of its said obligations.

Motion agreed to.

PROPOSAL TO SELL INTERCOLONIAL RAILWAY.

Mr. J. B. BLACK (Hants). Mr. Speaker, in moving the resolution on the subject of the Intercolonial which stands in my name, I desire, with the approval of my seconder the hon. member for Annapolis (Mr. Pickup) and with the consent of the House, to add a sentence to the resolution. With this addition, the resolution will read as follows:

That in the opinion of this House it would be in the best interests of the maritime provinces and for the general good of Canada that the Intercolonial railway be operated and controlled by one of the companies operating the Canadian Transcontinental lines, or by such other corporation as may offer the best facilities for the development of the country tributary to the Intercolonial.

I add these words because some of my friends have insinuated that I was moving the resolution in the interest of the Canadian Pacific railway and some others have suggested that I was doing it in the interest of the Canadian Northern. I add these words so that we may give everybody that wants to lease the Intercolonial railway an opportunity to lease it. I am perfectly disinterested in this matter. Fortunately or unfortunately I am not acquainted with a single official of the Canadian Northern or with a single official of the Canadian Pacific railway. I represent a county through which the Intercolonial railway runs. My object in moving this resolution is simply to promote the interests of the maritime provinces, whose interests lie very near to my heart, for I was born in one of those provinces and have lived for forty-seven years in another. Before going further I may say that I am very sorry that I had arranged to introduce this resolution today. Had I known that the House was to adjourn at six o'clock, I would have left the resolution over. But as I had asked other hon. gentlemen who preceded me on the Order Paper to allow me an opportunity, I shall go on with it. As the time afforded for discussion is short, I shall make my remarks as brief as possible. There are gentlemen in this House who will speak against this resolution, I am sure, who, in their hearts, are in favour of it.

Some hon. MEMBERS. Order.

Mr. BLACK. I think I am perfectly in order. I think that on this question some of the maritime members are in the same situation as certain representatives of Newfoundland on the question of confederation. Certain interested parties have drilled it into the minds of the people of Newfoundland that confederation with Canada would ruin that colony, and no politician would feel safe in advocating such a union. This question I now bring before the House is a very delicate question for a member who, in advocating it, has to stand in the face of the opposition of his constituents. I, fortunately, from certain circumstances, am in a position—I will not say of indifference—but I am perfectly prepared to advocate the leasing of this road to some company that will make a better use of it than the present commission or any of the managers of the past have been able to do. I regret exceedingly that some of the maritime newspapers, as soon as this order was put on the order paper, went off at half-cock and criticised it and commented on it adversely

without waiting to know the merits of the case. I will quote the evidence from a paper in the maritime provinces, which said:

The leasing of this road would be a confession that the Liberal party is unequal to the task of satisfactorily administering a great public property in the interests of the tax-payers.

So far as the Intercolonial is concerned, I think the sooner the Liberal party makes that confession the better. I think that, like every other honest confession, it would be good for the soul of the party. There has been no government since confederation that has administered the Intercolonial railway satisfactorily, and there never will be a government that will manage that road in the interest of the country, because it is impossible under the circumstances by which the country is bound. It is impossible that the government can compete with other railways, or that they can adopt modern railway business methods. Now here is another sentence in the same paper:

There are certain Nova Scotia interests which favour the alienation of the Intercolonial.

I suppose that was intended to hit somebody, I do not know who, but it does not hit me at all. But I quite agree with the editorial, that it is in the interest of Nova Scotia to favour the alienation of the Intercolonial, as we will see by and by. Another paper, this time from Moncton, attacked my resolution a litte more vigorously than the paper to which I have referred. It shouts 'Hands off the peoples' railway.' Sir, I have remarked for a great many years that when you couple the name of the people with a corporation or an individual, there is something about the corporation or the individual that wont measure four square all round. I do not care whether you shout the peoples' railway, or the peoples' Jimmy, or the peoples' William, there is always something at the bottom that is not just four square. The people of Moncton, in shouting 'Hands off the peoples' railway,' are very much like those people mentioned in ancient history, who shouted without reason 'Great is Diana of the Ephesians,' because they thought their calling was in danger. I think we can safely assure the people of Moncton, that if the Intercolonial is handed over to a private company, their craft will not be in danger, their city will be even more prosperous than it is now. I would like to get at the bottom of this cry about 'The peoples' railway.' What people is it? Who owns the railway? Does Nova Scotia own it any more than British Columbia? Does it belong any more to the people of New Brunswick than it does to the people of Ontario? Who gets the benefit of it? How much benefit are the people getting from this peoples' railway beyond what they are able to pay for? If any of the people want to travel on the peoples' railway, I think they have to pay about as much as they do on any other railway. If any of the people want to send freight from Montreal to St. John they pay just exactly as much money to the peoples' railway as they pay to the Canadian Pacific railway. If any person from Halifax, say an invalid who wants to go to Montreal to take the waters, purchases a ticket, he will find that he pays exactly the same price for it over the peoples' railway that he does over the Canadian Pacific railway.

Mr. SPROULE. Is the hon. gentleman not aware of the fact that there was a return brought down to this House some years ago showing the cost of carrying wheat over that road per mile and over the Canadian Pacific railway and other roads in this country, and it was shown that it cost about one-fourth as much to carry it over the Intercolonial per mile as it did over the other roads?

Mr. BLACK. I have never read any proof of that assertion. There are many things being said in the House that lack proof.

Mr. SPROULE. It is a matter of a return brought down to this House.

Mr. BLACK. I am not advocating this transfer in the interest of Ontario or of the western wheat growers. Two-thirds of the freight that goes over that road goes east, from which we are getting no advantage whatever. Western drummers come down to Nova Scotia and New Brunswick to solicit orders; their goods come down over the railway, and if there is no reduction in the freight rate, what benefit is it to the people in the maritime provinces? We know that the freight rates and the passenger rates from Montreal to Halifax and St. John are just exactly the same as the rates from Halifax and St. John to Montreal. Furthermore, all the rates are under the control of the Railway Commission. The question of the reduction of rates is a mighty small thing when compared with the want of development of the country through which that railway runs. Forty or fifty years ago a man worked for 75, 80 or 90 cents a day; would that man like to go back to old times and take the small wage he was getting then? This country has gone ahead since the railway was built, we can afford to pay higher wages. The people can afford to pay higher freight rates now than they did before. There is nothing more important to the interests of a country than transportation. Transportation lies at the foundation of the commerce and the manufacturers of a country.

You cannot successfully manufacture, you cannot successfully trade, you cannot prosper without adequate transportation. I want to say that we are not getting adequate transportation, we are not getting that development of our country that we should get. The functions of a modern railway, Mr. Speaker, are not merely to carry passengers and freight, a modern railway does much more than that. If you look into the industrial transportation of the United States, you will find that the railways of that country have to a large extent engaged in industrial enterprises, and have at all times lent their aid and assistance to the establishment of industrial enterprises along their lines, and have been the chief actor in the development of many successful industries in the United States. As I have said, the functions of a modern railway are not merely to carry freight and passengers, but they are to make freight, to add to population, to get passengers, to bring in immigrants, to promote industry in the country. A modern railway engages in manufactures, engages in mining——

Mr. EMMERSON. And rebates.

Mr. BLACK. The hon. gentleman says rebates. He has run a railway, and knows more about it than I do. They engage in shipping, they conduct schools for technical education, they assist in developing the industries of a country. The Intercolonial, I take it for granted, is not doing anything of that kind in the maritime provinces. As a matter of fact not only are our industries, our agriculture, our manufactures, our mines, our immigration not assisted by the Intercolonial railway in the maritime provinces, but our industries are actually injured, our population is depleted by the Intercolonial railway joining with the Canadian Pacific railway in taking loads of our young men every autumn to the west for almost nothing. Any man knows who lives in the maritime provinces that every autumn thousands of the healthiest, the strongest and the ablest young men are carried by the Intercolonial railway to the nearest connection with the Canadian Pacific railway, and from there transported west.

Mr. SPROULE. How would that be remedied by giving the Intercolonial railway over to the Canadian Pacific railway?

Mr. BLACK. Well, wait until I get through. I am making the statement that the Intercolonial railway, the peoples' railway, is helping to carry the people out of the country. You might not remedy it if the Canadian Pacific railway owned it, and I am not advocating particularly that the Canadian Pacific railway do own it, but what I say is that the Canadian Pacific railway is a private owned railway and it is interested in taking the people out while the government owned railway is helping it to depopulate the maritime provinces. Go into any station from Halifax to Amherst or in New Brunswick and you will see posted inducements to young men to go in immigrant trains at reduced rates or at almost nothing. That is the way the Intercolonial railway is assisting the industry of the maritime provinces. There are very remarkable things done for the people by the peoples' railway. I would like to know how much regard there has been in the prompt dismissal of hundreds of employees without a week's notice. This is the peoples' railway. I would like to know if it is in the interests of the people that the commissioners takes the big stick and threaten a newspaper if it criticise the management. That it will get no more patronage and not only threaten, but carries out the threat. That is the way the peoples' railway is managed for the people. God save us from the peoples' railway.

Mr. GRAHAM. It has turned into a prayer service.

Mr. BLACK. I think there are some things in connection with the Intercolonial railway that need the prayers of good men. The policy of the modern railway is to develop the industries of the country. Now, the question will be readily asked: What industries have we now in the maritime provinces that any railway company would be interested in developing? Speaking for Nova Scotia, where the largest part of my life has been spent, I may say that there are no provinces of Canada with greater probabilities or greater possibilities than the little province of Nova Scotia. There are such varieties of undeveloped industries, and there are varieties of industries that are partially developed that a modern railway could assist and, in their own interest would assist in building up. I may say that in the way of minerals we have immense deposits of coal, only part of which are worked at the present time. We have iron and we have salt. Sixteen separate deposits of salt have been discovered in that province. We have building stone of the finest quality, and I remember that while our quarries of beautiful stone in the maritime provinces are left idle, stones for the new wing of the parliament buildings here were brought all the way from Ohio. The people's railway might have assisted in developing a stone quarry at least and thereby added to their freight tonnage. We have coal, we have iron, we have building stone, magnesium, antimony, tin, copper, and gold, all of which a modern railway coming into that country would find it in its interest to assist. Over and above these there is the leather tanning industry, with immense forests of hemlock available for that purpose, and an abundance, particu-

larly in New Brunswick, of wood for pulp and paper manufacturing. We have also the preparation and transportation of fish for the inland provinces. It is a remarkable thing that with the wealth of fish gathered in Nova Scotia and New Brunswick from the sea, Ontario and the other inland provinces depend upon the New England states for their fresh fish. It seems impossible to make any arrangement with the people's railway to transport fish to the inland markets. We have an abundance of wood for furniture making and wood-working establishments. We have an apple and pear culture which can be developed at least one hundred times greater than it is at the present time. Would a modern railway engage in agriculture or fruit growing? I read an interview with Sir Thos. Shaugnessy of the Canadian Pacific railway, a short time ago in which he says:

> We propose to prepare land for this class of small holder, to build his house, fence his holding, break a part of the soil and sow it so that he can come out and find all ready to settle down. This will be within the reach of the English countrymen who has £100 capital to make a start.

What would it mean to Nova Scotia if somebody in a position like Sir Thomas Shaughnessy and his Canadian Pacific railway would take tracts of 10, 20 or 30 acres in the counties of Hants, Kings and Annapolis, plant them in young apple trees, put small houses on them and make them ready for the fruit grower? There are thousands of acres yet unused in these counties for fruit growing that could be advantageously and profitably used if a railway company would undertake this work. Agriculture in all its branches—and we have a magnificent agricultural country down there—should be developed by a private railway. Another great thing—I speak particularly for Nova Scotia—is the summer tourist travel. How much has the Intercolonial railway done in the way of summer tourist travel? How much has it done to bring wealthy tourists into the country? I notice that on their folder time table there is the head of a moose which represents to the world that the maritime provinces are an immense forest where moose range at large and may be shot down by the man who is inclined that way.

All around Nova Scotia are beautiful spots for summer tourists. They come in thousands, but if there were first-class hotels and proper facilities for transportation the wealthy classes would come in hundreds of thousands. In that beautiful spot called Chester, with 365 islands in its basin, wealthy tourists from Baltimore discovered it not long ago, and notwithstanding there were no hotels and the transportation facilities were bad, they came in hundreds and continue to come in increasing numbers. Out of their wealth they have built what they call cottages but which we would almost call mansions. They have spent hundreds of thousands of dollars in hotels, in beautiful residences, in yachts, and more would come were encouragement given them. Nova Scotia is the natural playground for the wealthy man from the eastern states, and were the Intercolonial railway owned by a private company, hotels would be erected and proper steamers would be put on the water route and tourist traffic attracted. We have a line of steamers which are allowed to carry I believe 400 passengers, but I have seen 800 or 900 on board, and I have seen women obliged to sit up all night without a place on which to lay their heads. Then, would it not be in the interest of a private railway company to assist the maritime provinces in developing their mines, in increasng their fisheries, in building proper steamers to carry travel in that direction. We can only tell by what has been done by the Canadian Pacific railway, for instance, which has erected a line of first-class hotels from Quebec to Victoria, British Columbia. Before the Canadian Pacific railway built the Chateau Frontenac in Quebec the tourist traffic was comparatively nothing, and any one who studies the history of that hotel can realize what a well equipped and modern hotel can do to attract travellers. In Quebec, have you anything more attractive for the tourist than we have at Halifax, or at Chester, or at Mahone, or Yarmouth, or Digby.

Mr. ROY. We have.

Mr. BLACK. My hon. friend (Mr. Roy) knows the beauties of Quebec, and they are great, but I know the beauties of Nova Scotia and they are magnificent. Business methods adopted by a modern railway company would develop the maritime provinces, build up our industries and increase the products of our natural resources. My own belief is that if you hand the Intercolonial over to a first-class company with capital, that that company will within a short time be bound to expend at least $5,000,000 in the establishment of industries and the erection of hotels in the maritime provinces. Were the Intercolonial handed over to a strong private company, I believe we would see the maritime provinces blossom like the rose. Can the Intercolonial, as it is situated today, engage in any such enterprise? No. They have to come back to parliament for a vote before anything can be done, and just imagine the countenance of the hon. member for Lanark (Mr. Haggart) if this House were asked to vote an appropriation to build an hotel in Halifax. I would like to hear what the Conservative members from Ontario and the west would have to say were they asked to vote $100,000 to develop the pulp industries of New Brunswick or to

open up the vast mineral deposits in Nova Scotia. The Intercolonial railway simply cannot do these things. The commission cannot do them if they wanted to. See the circumlocution that has been going on for two years and more about the purchasing of the branch lines as feeders. Two years ago (Mr. Emmerson) introduced the question, and to-day it has not got far enough that it has not to come back to parliament again for ratification, when the commission decide what railways they shall buy, if any. Were the Intercolonial handed over to a private company, that company would do all these things without delay. The present Intercolonial Railway Commissioners not only cannot help the industries of the maritime provinces but in their present state of mind they don't want to. They don't know anything about the needs of the maritime provinces, they are not maritime province men. I think one of them has been imported from Vermont by way of Ontario, and what does he know about the growing necessities and needs of Nova Scotia and New Brunswick, or of Quebec? Nothing at all. Are their interests our interests? Is their heart in sympathy with our wants and all we need? Not a bit of it. I say that the present management of the Intercolonial by the commission is the worst we have had for many years, and since the man of brains and the man of ability has gone out and left the commission we will go from bad to worse. I have no hope for it at all. What would Halifax be with a private company owning the Intercolonial, with a line of steamers such as the Canadian Pacific railway are running, say to Liverpool or Glasgow, with a proper line of steamers to take up that splendid opportunity of trade with the West Indies? What have we got down there now? We are subsidizing Norwegian steamers, if I am not mistaken, to run between Halifax and the West Indies, and I think they are doing the same thing at St. John. Do not misunderstand me, I think that the Thompsons of St. John have a large subsidy for running steamers to the West Indies, but they are handing a large part of that work over to Norwegian steamers. Pickford and Black had a large subsidy for running steamers, such as they are, and they never were much, —down to the West Indies. If I am not incorrectly informed, Norwegian steamers are carrying on the service there. Are we assisting the trade and commerce of the maritime provinces by such things as that? I think not.

I wished to reply to some of the arguments and criticisms of the opponents of this scheme, but I do not think it would be fair to the other gentlemen who desire to speak on this subject. I think I have shown that the Intercolonial railway cannot help us in our industries in the maritime provinces and will not. We have vast

industries there that need developing. Somebody may say: Why do not your Nova Scotians and New Brunswickers do it themselves, they go to Trinidad and Mexico and invest money, why do they not invest in their own country? That is the strange part of human nature. It is so in other countries, it is so in England. It was stated by one of the Rothschilds not long ago that for investments outside of England, any quantity of money could be raised, but for investments in England it was almost impossible to raise any. I presume it is a case of:

> Far off fowls ha'e feathers fair,
> An' aye until ye try them.

The great cry on the part of the people's railway is the reduced freights, and the claim that if the company had the road, freights would go up. Every one knows that the freight rates are not left entirely to the railway companies, that they are controlled by the permanent railway commission and that a railroad cannot charge whatever it pleases. For my own part I believe that if this road was handed over to a company the increase in industries and the development of the undeveloped possibilities of the maritime provinces would be such that we could afford to pay higher rates, but I do not believe we would have to pay higher rates.

I beg to move the resolution standing in my name.

Mr. D. H. McALISTER (Kings and Albert, N. B.) I seldom encroach on the time of the House by making a speech, but as this resolution concerns the people whom I represent I think it my duty to say a few words upon it. Public sentiment in the contituency I have the honour to represent, is absolutely opposed to such a course, and I must confess that I am opposed to this resolution. Furthermore I am really surprised that a resolution of this description should ever be introduced in this House by a maritime province member.

Mr. BLACK. I dare say.

Mr. McALISTER. If it had been introduced by a member from the west or from the Yukon district the matter might be explained. I do not believe the government have any mandate to get rid of the Intercolonial railway. They have no right either directly or indirectly through the Department of Railways to lease that road to a private company or syndicate. If this government should take it to be their duty to do so and declare that to be their policy, they should dissolve this House and go before the people to secure their verdict. I am quite sure that if they did so, the members supporting this government from the beautiful little provinces down by the sea would be minus.

Their number would be very different from what it is to-day. If I went before the people of my constituency advocating this resolution, I would not get 1,000 votes from the beautiful united constituency of Kings and Albert.

I would like to read a few newspaper clippings in regard to the Intercolonial railway being handed over to a private syndicate or company. The first is from the Toronto 'Globe' and purports to be the words of Mr. Robert Meighen, president of the Lake of the Woods Milling Company. It reads:

> I would not stand for the control of the Intercolonial railway being given to any corporation. I don't care whether it is the Canadian Pacific railway, of which I am a director, the Grand Trunk, or Mackenzie & Mann, I think it would be wrong. I could give my reasons, but as a railway director perhaps I had better not.

Another business man of Montreal says:

> If it goes into the hands of Mackenzie & Mann or any other company there will be a revolution in the maritime provinces. I spent 25 years there, and I know the feeling such a step would arouse.

The Moncton 'Transcript' quotes from the Toronto 'World', a paper also of some account saying:

> The 'World' takes up the question not only in behalf of the maritime provinces, but from the standpoint of the people generally. Replying to those who have been crying out against the Intercolonial, it says:
>
> We have ust two things to say to these exploiters—and they are exploiters for themselves pure and simple:
>
> First, the Intercolonial is owned by the people of Canada at large, not by the people of the maritime provinces as such; that they've put their good eighty millions of dollars in it, both because they engaged to build it as a part of the pact of confederation, and because they see that it is or can certainly be made a substantial check on the other roads, and, in an emergency, of the supremest importance to Canada as a state and as a part of the British empire

There have been a great many fallacies in regard to the Intercolonial railway, and one of the greatest of these is that the deficits have been due to party political causes. If that be the case, what caused the surplus when the hon. member for Westmorland (Mr. Emmerson) was Minister of Railways and Canals? If the deficit in 1907 was due to party political causes, what caused the expansion of its revenues nearly threefold since 1907? No doubt the management of the Intercolonial railway has been defective in many respects, but it is equally undoubted that it has become considerably improved since this commission has had control. I am sorry to find my hon. friend (Mr. Black) jump on the Intercolonial railway commission before that commission has had the opportunity to submit a report of its administration and before, therefore, he is in a position to know what it is doing. I think he should have waited until its report was submitted before making his criticism. As regards the resignation of Mr. Butler, that is an event which we all must regret. From what I have known of Mr. Butler's control, he has always conducted the affairs of the Intercolonial railway from a perfectly fair and non-political standpoint; but while I agree with my hon. friend (Mr. Black) that the resignation of Mr. Butler will cripple the commission to a certain extent, I cannot go the length which the hon. gentleman did. I think that if Mr. Pottinger had been allowed the same free hand some years ago the Intercolonial railway would have shown in all probability different results.

No doubt that railway has cost the people of Canada some $80,000,000, but in return we have a valuable asset; and the best proof of the value of that asset is the fact that a number of private corporations are doing their best to get hold of it. In my opinion, a good many of the reports we read about that railway are sprung by individuals who are anxious to get control. It would be very unfair to the people of Canada if, after they had met the deficits on the Intercolonial all those years, they should now, when it has a good chance to make a profitable showing, be induced to hand it over to some private individuals. The maritime provinces are to-day on the eve of a great commercial development. Our new Canadian navy, if we should decide to have one, will no doubt be built at St. John and Halifax and will no doubt start a boom in the maritime provinces, and add considerably to the traffic of the Intercolonial railway. In mining and shipbuilding, I look to see a great increase in the near future, and I have no doubt that those shrewd individuals who are trying to get control of the Intercolonial railway are doing so in anticipation of this turn of the tide. But when people talk of what the Intercolonial railway has cost the country, if they will figure out the land grant of the Canadian Pacific at one dollar an acre they will find that that railway has cost the people considerable more than $80,000,000, and yet the people down by the sea have never complained. Then take the enormous sums that have been expended on our canals, and we have suggestions made for millions more of canal expenditure in the near future. So that if the Intercolonial railway has not been a paying proposition so far, neither have our canals. The policy of the government regarding canals is that of free tolls, so that if you add the interest on the ex-

penditure to the annual cost of maintenance and operation you will find that the amount we have spent on our canals is enormous. Yet the people of the maritime provinces do not complain. They realize that the people who use the canals are getting the benefit, and in the same way the people who use the Intercolonial railway are reaping the advantage. We often hear the Canadian Pacific railway held up as a shining light in comparison with the Intercolonial railway. Well, no one doubts that the Canadian Pacific is a well organized and a well managed road, but I am going to give you some figures showing the rates charged on the Canadian Pacific railway and the Intercolonial railway which may perhaps cause some people to reflect. There are ten classifications in tariff rates on the Canadian Pacific railway, and from St. John to Woodstock, N.B., a distance of 137 miles, the ten classifications are per 100 lbs. as follows:

No. 1, 40 cents per 100 lbs.
No. 2, 35 cents per 100 lbs.
No. 3, 30 cents per 100 lbs.
No. 4, 25 cents per 100 lbs.
No. 5, 20 cents per 100 lbs.
No. 6, 18 cents per 100 lbs.
No. 7, 15 cents per 100 lbs.
No. 8, 16 cents per 100 lbs.
No. 9, 16 cents per 100 lbs.
No. 10, 13 cents per 100 lbs.

While for the same distance, St. John to Amherst, N.S., the Intercolonial railway charges as follows:

No. 1, 29 cents per 100 lbs.
No. 2, 26 cents per 100 lbs.
No. 3, 22 cents per 100 lbs.
No. 4, 18 cents per 100 lbs.
No. 5, 15 cents per 100 lbs.
No. 6, 14 cents per 100 lbs.
No. 7, 11 cents per 100 lbs.
No. 8, 12 cents per 100 lbs.
No. 9, 11 cents per 100 lbs.
No. 10, 9 cents per 100 lbs.

Taking another point, St. John to Perth Jct., a distance of 184 miles, the Canadian Pacific charges: .42 .37 .32 .26 .21 .19 .17 .17 .17 .15, while from St. John to Wentworth the same mileage, the Intercolonial charges: .33 .29 .26 .21 .17 .16 .14 .14 .12 .11. Just one more case, St. John to St. Leonards, a distance of 223 miles, the Canadian Pacific charges: .48 .42 .36 .30 .24 .22 .18 .19 .19 .16, while the Intercolonial charges, St. John to Brookfield, N.S., the same mileage: .36 .32 .27 .23 .18 .16 .14 .15 .14 .12.

These figures show that from St. John to Amherst, which is exactly the same distance as from St. John to Woodstock, the people pay 38 per cent higher freight rates on the Canadian Pacific railway than they do on the Intercolonial railway. This is a matter which ought to be seriously considered by the hon. gentleman who presented the resolution we are now discussing. Does he really think that any private company would build these beautiful hotels he speaks of to develop this great province of Nova Scotia? No, Sir, such companies are looking out for themselves, whereas the government is looking out for the development of the whole country. Does he think that if a private company owned the Intercolonial railway it would haul coal as cheaply from the coal mines of Nova Scotia as the Intercolonial railway does?

Mr. BLACK. A great part of that coal is hauled by water.

Mr. McALISTER. My hon. friend knows that the sale or lease of the Intercolonial railway to a private corporation would cause great loss and inconvenience to the large industrial plants in Sydney and other points in Nova Scotia. It seems to me that the object of this resolution is to induce the government to give over $80,000,000 worth of railway to a private corporation without a quid pro quo, and would make the rich richer and the poor poorer. What is wanted in the maritime provinces is population, and those who are advocating the sale of the Intercolonial railway would do much better by urging on this government and the local government of Nova Scotia a more energetic immigration policy as regards that province. What we require is not to get rid of the Intercolonial, but to bring in a larger immigration.

There is one thing I have not spoken of and that is the accommodation we get by the Intercolonial railway. Members from the west do not appreciate this, but if they lived along the Intercolonial they would. I may say that in the little town of Sussex where I live, we have an express train that leaves every day for St. John, stopping at every station, and returning the same day, and that service is just as good as any street car service you can find in any city. I would like to ask the hon. member for Hants (Mr. Black) if he thinks we would continue to enjoy that luxury if the Intercolonial was handed over to a private corporation. I do not think so. If the Intercolonial had been charging the same rates last year in the province of New Brunswick as the Canadian Pacific railway, we would have had to pay $1,874.878 more for freight, and $120,331 more for passenger rates. If we had paid the same rates on the Intercolonial as are charged by the Canadian Pacific railway in New Brunswick last year, we would be $2,000,000 out of pocket. That is a question that needs to be seriously considered. I am surprised at this hon. gentleman advocating the lease or sale of the Intercolonial. I travelled through my constituency last fall during an election

campaign, and in almost every farm yard I saw Massey Harris machines, a Massey Harris reaper, a Massey Harris mower, and what does that mean? It means that the people in the lower provinces are getting the advantage of cheap freight rates on their agricultural machinery that comes from Ontario. Now, I do not think we should denounce a railway that procures us these favours, but we should rather encourage it. To be sure the purchaser of this machinery paid the freight rates, but he gets them cheaper on the Intercolonial than by the Canadian Pacific railway, that is a known fact. Now, the freight trains per train ton per mile last year on the four principal railways of Canada were as follows: Canadian Pacific railway, ·778; Grand Trunk railway, ·672; Canadian Northern, ·873; Intercolonial, ·584. The Intercolonial, therefore, carries freight much cheaper than the other roads, and the people who pay for the freight get that much advantage over people shipping by the other roads. It is the people who use the goods, of course, who ultimately pay the freight, but the people of Canada as a whole get the advantage of the cheap freight rates over the Intercolonial, just as they get the advantage of free tolls over the canals. I am sure there are other gentlemen from the maritime provinces who will oppose this motion of the hon. member for Hants; if they do not I should be ashamed of them. I think the hon. member for Hants would have been better advised if he had supported the motion moved the other day by the hon. member for Westmorland (Mr. Emmerson) in favour of the Intercolonial acquiring the branch lines in close proximity to it. I think that policy would prove an additional source of revenue to the Intercolonial, and it would enable the management to reduce the freight rates on the branch lines. Very few people, I think, realize the fact that goods shipped to western points are not shipped over the Intercolonial, but over the Canadian Pacific railway, and if these branch lines were absorbed by the Intercolonial, there would be much less cause of complaint on the part of local shippers.

Mr. S. W. W. PICKUP (Annapolis). The resolution introduced by the hon. member for Hants (Mr. Black) is one of great interest to the maritime provinces. The question is whether it would be advantageous to the maritime provinces to have the Intercolonial railway continue under the present management, or to hand it over to the control of one of the great railway companies. It is to be remembered that the Intercolonial railway was undertaken for political purposes as well as for the interchange of products and people between the maritime provinces and the western provinces. It has been a great success in all these purposes, though the balance has not always been on the right side. But the districts served had the advantage of cheap rates and excellent service. Towns have sprung up along the line, which have afforded considerable trade, and the road itself has afforded excellent transportation facilities for the manufactured products of Ontario and Quebec, of which the maritime provinces are large consumers. The object for which the road was undertaken has been met, and now the question arises whether it would not be better to develop the natural resources of the maritime provinces by giving the road over to the control of one of the transcontinental railways, whose policy we know to be the acquisition of branch lines, the extension of existing lines and the construction of new lines in any district where they are required for the development of trade and the natural resources of the district.

Some Quebec and Ontario papers have made the statement that the maritime provinces are the dead ends of the Dominion. This is not a fact. I would like to call the attention of the House to the great natural resources of the maritime provinces in agriculture, fisheries, minerals, forests, timber and water-power, all of which need development. The federal government and capitalists have been devoting much attention to developing the natural resources of the great western provinces, building up cities on the plains and on the Pacific coast, improving canals and building railways, so as to bring their products to the markets of the world. This is a commendable project, and the government are doing it well. But our eastern provinces should not be neglected, and if capital and population can be induced to go to the maritime provinces some effort should be made in that direction. The maritime provinces furnish their proportion to the fisheries of Canada, which are almost inexhaustible around our shores. If these fisheries were properly organized, and the best methods were adopted of catching, packing, canning and marketing the fish, they would be great wealth producers. Our forests are timbered with woods of good commercial value, both for manufacturing and building purposes. We have pulp wood in considerable quantities, fair water-powers, coal, iron and gold in abundance. Gypsum and limestone are to be found in all the maritime provinces, and with capital and population, there is no reason why they should not become one of the great industrial centres of Canada.

At one time the maritime provinces owned and controlled the largest amount of shipping, according to population, of any country in the world. In 1874 they built 183,000

tons, and the total number of tons registered in Canada at that time was 1,634,330, nearly as much as Great Britain, which had 1,896,000 tons. The maritime provinces built the largest and best ships, and assisted in doing the carrying trade of the world. There is no reason why this history should not repeat itself, and by the organization of two or three iron and steel ship building plants, ship building in the maritime provinces might be revived. Judging by the past, our people are eminently fitted for the construction and management of shipping, and have been exceedingly successful. Every facility and encouragement should be afforded to the people of the maritime provinces to enable them successfully to carry on their business, and to afford them the necessary transportation facilities. Our manufacturing in the maritime provinces is confined to a few towns that are good distributing centres and have good service and cheap rates. In the great provinces of Ontario and Quebec there are many manufacturing towns. Their people are no more intelligent, have no better business ability, and their natural resources are not greater than are those in the maritime provinces. But they have better transportation facilities. Two or three lines of railway pass through a great many of the towns, and afford excellent facilities for the transportation of their products to market at reasonable rates. But in the maritime provinces our products have to pass over two or three lines of railway before they reach the markets, and from over the branch and trunk lines, and we have to pay from twenty to thirty per cent higher over these branch lines than is charged over the main line. This is unfair to the people of the maritime provinces, who have to contribute to the construction of these roads, and it is unjust that they should be compelled to pay a toll in excess of that charged in other parts of Canada. If these branch lines were consolidated and under the control of one of the Transcontinental railways, they would be operated more cheaply, give a more efficient service, and at the same or less cost than at present.

At the time of confederation, there was an agreement to build a railroad from Truro, in the province of Nova Scotia, to Rivière du Loup, in the province of Quebec, for the general advantage of Canada. It was extended to St. John and Halifax for the purpose of extending the trade of the country, affording facilities for the ports of the provinces of New Brunswick and Nova Scotia. It was further extended to Sydney and Cape Breton by acquiring the eastern extension, and the government concluded that it should be further extended to Lévis and Montreal, and they acquired the Drummond line and also rights over the Grand Trunk railway to Montreal. The province of Nova Scotia built a line between Pictou and Oxford Junction which became part of the Intercolonial railway, as also did the Canada Eastern. It seems that the government, recognizing the importance of taking over branch lines in the interest of the people and also building up the Intercolonial railway, found that it was good business in the interest of both. Last year the government appointed a commission to look into the branch lines of the Intercolonial railway, and I have their report which gives the physical conditions of the roads, and also recommendations showing the advantage those roads will afford to the Intercolonial railway, and their importance in the development of the natural resources of the districts through which they run, if taken over by the Intercolonial railway. Two paragraphs of the report are as follows:

> The want of proper facilities for the conduct of even the existing traffic is detrimentally affecting the business interests of the districts interested in these branches, and preventing that development of industries, enhancement of property values, and general betterment that would undoubtedly follow on an improved service.
>

>
> It is a well established fact that in nearly every case where branch lines have been absorbed by trunk lines, and extended markets have thus been opened up for business along the main line, such a policy has not only proved to be of great value to the branch lines themselves, but has provided additional revenue for the main line, they becoming valuable feeders, increasing the traffic and the earning powers of the trunk lines.

I have failed to find any report of the largest and most important branch line that would be a feeder to the Intercolonial railway. I refer to the Dominion Atlantic railway in the province of Nova Scotia, running through some of the best portions of Canada, including the famous 'Land of Evangeline,' which attracts thousands of tourists. This line runs between Halifax and Yarmouth, through the counties of Hants, Kings, Annapolis, Digby and Yarmouth, a distance of 217 miles, with a branch between Truro, in the county of Colchester, and Windsor, in the county of Hants, a distance of 58½ miles, the Cornwallis Valley road, from Kentville to Kingsport, 14½ miles, and Tor Brook line into the mines, 3½ miles, making in all 292½ miles, including the Windsor Junction branch which is under lease from the Dominion government, and running rights between Windsor Junction and Halifax, 14½ miles, and 4¾ miles of branch lines and spurs. Besides the counties named, this road serves to a less extent, the counties of Lunenburg, Shelburne and Queens, with a population of 260,385 people according to the census of 1901. The road is equipped

and does a large business. For the year ending June 30, 1907, it shows net earnings of $280,586 on total of $778,572. Few roads in Canada can make as good a showing. The Dominion Atlantic railway earned $380,158 in passenger service and $398,414 from freight service in 1907, the highest proportion of passenger traffic of any road in Canada. This road would be valuable to one of the transcontinental railways, as the shortest, most direct and quickest means of communication between the west and Great Britain. By establishing a car ferry, running across the Bay of Fundy, 40 miles to Port Wade, and thence by rail to Halifax, 159 miles, it would afford the quickest route to deliver the passengers, mails and express parcels to Great Britain from the west, besides being valuable in directing passenger and freight traffic from the United States through Digby and Yarmouth. Also, the Halifax and Southwestern between Halifax and Yarmouth is also capable of very great development. New roads should be constructed in Inverness, Guysborough and the eastern part of the province. If these were consolidated and acquired by one of the transcontinental roads, with the condition and agreement that they take over the branch lines existing and construct new lines, no hardship would be involved, as this is in accord with their present policy. They should also find capital to develop the natural resources of the maritime provinces. By building hotels, developing mines, manufacturing and other resources, which is their policy, they would greatly promote their own interest.

Under the supervision of the Railway Commission, I believe it would be in the best interest of the maritime provinces and the districts through which the system runs, to have the Intercolonial railway under the control and management of one of the transcontinental roads.

Mr. D. D. McKENZIE (Cape Breton North). Had I known that so many hon. members wished to express their views upon this subject, I do not know that I should have come to any determination to speak upon it. But it is not often that a subject presents itself in the House that gives an opportunity to a representative from away down in the eastern part where I live an opportunity of dealing with matters of vital importance to his own part of the country. That being the case, I am pleased to take advantage of this opportunity to say something along the lines of the development of the country served by the Intercolonial or some other road that will or may take its place. It is a well-known fact that there is only room for one main line of railway in the province of Nova Scotia, particularly in the eastern part. We differ in this regard from Quebec, Ontario and the wider fields of the west, where almost any number of roads can parallel one another with ample room and plenty of trade for all. In the comparatively narrow peninsula of Nova Scotia, with one main line stretching along that country, there is no room for another line to parallel it. East of Amherst you cannot be more than fifty miles from the sea at any point. That fact shows that the territory is comparatively narrow, and, with the industries we have, it will readily be admitted that we have not more than will satisfactorily feed one great line of railway. That being the case, we are dependent largely on the way the Intercolonial railway, which is now there, conducts itself in the way of the extension of its branches and in its management of the business within the scope of the road as now located. My great trouble, and the trouble of my people, is not so much with the management of the Intercolonial railway as with the extent of it. If we had more Intercolonial railway we should have very little fault to find. But our difficulty is that the Intercolonial railway does not stretch itself along the country rapidly enough. If it is the pronounced policy of the government, if we are to understand from the government and the Minister of Railways that they have gone as far as they intend to go, that they have reached their limit, that they do not propose to make any further extension to reach out into the territories where we have no railways, I would at once fall in line with the resolution of the hon. member for Hants (Mr. Black) and say: Take away this management and give us something else, with the hope that that something else will do better than the Intercolonial railway is doing. I may briefly describe to the government and the Minister of Railways the history of Intercolonial extension so far as Nova Scotia is concerned. It was not the Intercolonial that built from New Glasgow to the Strait of Canso, though the road thus built became a part of the Intercolonial after a few years. The prophecy was then made that the traffic of that part of the road would not pay for grease for the axles, that it would be a dead failure. It was, on the contrary, a great success as a railway enterprise and is a most profitable part of the Intercolonial. It was operated for about ten years before it was extended further. We in the beautiful island of Cape Breton may be excused if we thought it long because for those ten years the road was allowed to stand at the Strait of Canso and we had not a foot of railway on the island of Cape Breton. After ten years the road was extended from the Strait of Canso to the city of Sydney, then the town of Sydney, with a branch to North Sydney, where I myself reside. What is the history of this road in the Island of Cape Breton? I venture to say that there is not another section

of the Intercolonial that has such a magnificent traffic as that of this section.

I can point to one company that last year paid no less than $160,000 in cash for the handling of their freight traffic, without making any mention of the passenger traffic on that road. When I talk about extensions into the island of Cape Breton I have something substantial to talk about. We have had the main extension into the island since 1892. Since then great developments have arisen in the island. We have to-day the greatest industries of the kind, I presume, in the whole of Canada, in the island of Cape Breton. All of them were organized since the days of the extension of the Intercolonial railway. I do not say that the Intercolonial railway is entitled to all the credit, but it was of course a great factor in bringing about the important industries that we have to-day. The hon. member for Hants (Mr. Black) has made reference to Mr. Butler leaving the management of the Intercolonial railway. When Mr. Butler left the government employ he left what is regarded as a very lucrative position. The government could not afford to pay him any more money, but I think that when four times the amount he was receiving from the government is paid to him by one small company in Cape Breton, from which I come, it gives me some strength when I ask that some money be expended in the further development of this great island of Cape Breton. The principal resources that are now being developed are those of coal and iron. The development of iron has given rise to the development of other resources; it has given value to other minerals which before that time had really no value at all. Take, for instance, the matter of limestone. As a rule we do not regard limestone as a very valuable asset, but to-day in Cape Breton it is a most valuable asset and will from time to time become more valuable until perhaps ten or twenty years from to-day we will have to import it or pay a very high price for it within a range of fifty or sixty miles from the steel works, because such large quantities are required as a flux in the production of iron and steel. We have in the county of Victoria, which I have the honour to represent, large deposits of this material. We have large deposits of iron ore and we have large areas of timber which are required in connection with these great industries but none of which can be made readily available without the extension of the Intercolonial railway. I appeal to the government and I appeal to this House with confidence, because I know they will not allow the paltry amount of the few thousand, or the few hundred thousand dollars that may be necessary for the development of the country, to stand in the way, especially when we put forward the successful results of the expenditure to extend the Intercolonial railway into a certain section of the country and when we show that with the proper development of the materials that exist in other sections of the country similar results will follow. It has been brought out in this House that we buy our fish at two prices in Ontario and other western provinces, in Quebec, and even amongst ourselves at certain seasons of the year and that we have to buy fish that has gone around by Boston and other United States cities and come back to us. It is a most extraordinary state of affairs and one which you could hardly make a stranger believe. Notwithstanding, such is the case. What is the difficulty? The difficulty is that we have not facilities for catching the fish in our own country. Take for instance, a part of my own riding of Victoria. We have on the eastern coast of that county about seventy miles of the best fishing grounds that we have in any part of the maritime provinces and, when you compare any fishing grounds in the maritime provinces you are comparing them with the best fishing grounds in the world. But the difficulty is that for thirty-four miles of that distance of seventy miles there is not a single harbour that you can approach with safety in a storm. What is the result? The fisherman will not go out if he finds any prospect that he cannot get back. If he sees a storm coming on and if he has to face the rocks and there is no harbour for which he can steer his craft he will not go out in the morning at all because the safety of himself and his property and the security and support of his family are of greater importance to him than any money he might make upon any certain day and therefore he stays at home. If we had a railway along that coast and if we had a few hundred thousand dollars expended in opening a few of the harbours that are almost finished now we could every day go out and fish because we would know that we had a haven that we could steer for any time a storm might come up. That condition is not only true in my own county but it is also true as respects Guysborough, Inverness and Richmond. When we are talking about stretching out the arms of the Intercolonial railway, we are asking them either to let us take our chances with some other company or let the government look carefully into this thing and no longer stand still but extend its branches into different parts where it is necessary. I pointed out a moment ago that we had only really one great railway in Nova Scotia. If these branches are not built by the Intercolonial railway no company will build them. No company except the Intercolonial railway would build them because the lines would be too short and it would not pay. We have a sample of that in the

small railway that was built from the Strait of Canso to St. Peters. It is too short a line to pay without connection with the larger system. Therefore, we must ask the main system to build branches, whether that main system be owned by the government, or whether some company takes the place of the government. Sometimes, when we from the maritime provinces, representing these large counties and these large interests, prevail upon the Minister of Finance to help the fishermen with a landing or in other matters along the same line we are criticised unfairly by hon. gentlemen of the opposition when we get this money on the ground that we have obtained it not for the development of the country but with some other motive, and that it is squandered and used for election purposes and no other purposes whatever. I think I can say here with the greatest boldness that in the province of Nova Scotia and particularly in that part known as the island of Cape Breton I will challenge any man in this House or out of it to show where one dollar of any money that has been voted for the last thirteen years has been mis-spent or squandered in any section of the country. We have a most vigilant opposition. I have sat in this House for a little while and I have watched its proceedings. Not one of these vigilant and energetic searchers out of trouble has put his finger on one dollar that has been spent improperly in connection with public works in Cape Breton or Nova Scotia.

Mr. DANIEL. I would like to ask the hon. member whether it was absolutely necessary in the interest of good government to have all those fishery commissioners appointed in the hon. gentleman's own constituency just before the last election?

Mr. McKENZIE. I certainly say that in so far as I know they were appointed in the interest of the fishery protection. It shows the extremities to which people are driven in endeavouring to find fault with any expenditure in that province that they have to come down to the paltry question of whether in the whole of the large county of Victoria, with a coast line, including the inland waters, of something over 150 miles, there were too many fishery inspectors or not. With all this coast line, with the streams and creeks which require protection, with the northern part of Cape Breton which is in my riding also extending to the Gulf of St. Lawrence and with the inland waters of the Bras d'Or lakes, there happened to be in that year ten guardians in the whole of those two counties more than there had been for the last ten years. It is mentioned to-day as a great scandal that these ten have been appointed, but I believe that they have rendered valuable service to the country and I think it was found necessary to reappoint them last year notwithstanding the severe criticism in the press and in the House. I have no desire to appoint too many guardians, but if the hon. gentleman ever exercised patronage in any county he represented he will know that ten times as many people will be looking for a position as can be appointed. It is not an easy matter for the member to tell the exact number that will be required, but he can send the applicants to the inspector and if he takes them on well and good. That is what has happened in my county, and if there is anything wrong about it it is a thing that happens in the greater part of Canada where a member is called upon to exercise patronage. It would appear that this is the only criticism of a public expenditure in the last 13 years in the whole province of Nova Scotia and possibly in the maritime provinces at large, that the hon. member has to make.

My purpose in rising Mr. Speaker, was to bring to the attention of the government and the House the disabilities we labour under in the island of Cape Breton and in the county of Guysboro which may be called the non-railway counties. I submit that it is up to the government now to extend the Intercolonial railway into these counties, and if the government does not do so then it should induce some other concern to take hold of the railway on condition that that other concern will engage in that development which the government does not think it advisable to undertake. That is my position in this matter. When we from the maritime provinces seek for the expenditure of public money to develop our country and to assist our fishermen and agriculturists and miners, we do desire to have the sympathy of members of the opposition as I think we should have it. We are proud to assent in public moneys being expended for the development of the far west. The farmers of Manitoba, Saskatchewan and Alberta, have abundance of wheat but it is of little value to them unless they have a railway to take it to the markets and the same is true of the farmers and fishermen of Nova Scotia. The fishermen may have abundance of fish but if he cannot transport it to the market regularly it is of no use to him. We all concede that the farmers of the west should have facilities for transporting their abundance of wheat, and the same is equally applicable to the farmer, fisherman, and the miner in the east who must have transportation facilities if he is to reap the reward of his industry. We have a most excellent market for almost everything the farmer or fisherman can produce on the island of Cape Breton, but we have no system of regular

transportation. The hotel keeper must know that a supply of fish and eggs and other products will be at his disposal regularly every day, and while the man in the northern part of the county of Victoria may have abundance of these things, yet he cannot guarantee a regular supply to the hotel keeper, and the hotel keeper cannot deal with him. He wants a railway by which we can be assured that day after day when we put the products of our fisheries and our farms on board the train they will be delivered at the market on schedule time. It is for the lack of such facilities that our people are suffering. I shall not commit myself one way or the other upon this resolution. I simply say to the government that the position we take in my county is that we are perfectly satisfied with the Intercolonial railway provided we get enough of it and provided it is extended into districts where we have no railroads now. My hon. friend from Hants exclaimed: God save us from the peoples' railway, and if we are not to have railway facilities provided by the government we would almost be inclined to join with him in calling on some higher power to remove that dog-in-the-manger policy, and to seek some means which will assist in the development of the industries of our country.

Mr. F. B. CARVELL (Carleton, N. B.) I have so little time at my disposal that necessarily I shall have to make my remarks brief. I have listened with considerable interest to the hon. member (Mr. McKenzie) and I would much rather he had come out straight and declared whether he was in favour of the resolution or opposed to it than that he should take the middle course as he has done.

An hon. MEMBER. He is foxy.

Mr. CARVELL. He is. However, there is no uncertain sound about the statement of the hon. member for Hants (Mr. Black) because he openly declares he is in favour of placing the Intercolonial in the hands of some company—he does not say which, but from his remarks I should judge he has no choice. We know very well there are only three large corporations in Canada which can take the Intercolonial over, the Canadian Pacific railway, the Grand Trunk railway or the Canadian Northern railway, and if the Intercolonial were disposed of to any company it must be one of these.

Mr. BLACK. Some other company might be born.

Mr. CARVELL. Not in our day.

Mr. BLACK. I think so.

Mr. CARVELL. I have not time to discuss this question along the lines as to whether the correct policy is now being pursued with reference to the Intercolonial railway, and I am sorry indeed that before this discussion came up we have not had one full year or even two years of the results of the present Board of Management. I am not now in a position to judge whether the Board of Management has made good or not. I have been told there is a possibility of a fair surplus in the operations of this year, and if that be true then they have done better than the old management in some past years. I think, however, I am safe in saying that the Intercolonial is not managed along the very best possible lines. I believe there is room for improvement, but after all that is not an argument why this property of the people should be taken away from the people and handed over to some one else. It is rather amusing to me, and I say it advisedly, to hear hon. members, who live on the line of the Intercolonial, grumbling in parliament because they have not proper facilities for transportation. I would like to see my hon. friend from Hants (Mr. Black) and my hon. friend from Victoria (Mr. McKenzie) living on the Canadian Pacific railway at any portion of it where they control the transportation without opposition, or, alongside the Grand Trunk, or alongside the Canadian Northern under similar conditions, and I would like them then to compare what they would be getting with what they are getting from the Intercolonial railway. I have no hesitation in saying that to my mind—and this is a strong statement—the greatest reform that is required along the line of the Intercolonial is to reduce the number of trains by about one-third, which necessarily means a reduction of employees. I can say this because I have no electors on the Intercolonial. I have, I think, one solitary constituent who occupies a position on that line. I have never asked, and never intend to ask to have my people put on the Intercolonial railway, which does not come within sixty miles of my constituency. I have no interest in the Intercolonial railway at all, and I can discuss this question perhaps with as free a mind as any member of this House and yet I live near enough to it to have some practical knowledge of its workings. While the hon. member for Hants (Mr. Black) was speaking to-day I looked up some of the accommodation they are getting along the Intercolonial as compared with what is furnished by the Canadian Pacific railway. From Halifax to Truro, even in this winter season, they have seven trains a day each way, and in the summer, up till last year, they had eight trains a day each way. From Truro to Moncton, which is not through such a very important territory, they have six trains each way. From Moncton to St. John they have six trains all the way, and seven trains from Sussex. At the other end of the line, from Montreal to Levis, they have

three trains a day five days in the week, and four trains on Saturday; from Levis to Rivière du Loup, four trains every day, and five trains on Saturday. From Campbellton to Moncton, four trains a day each way.

Mr. GRAHAM. That is better than the main line of the Grand Trunk railway.

Mr. CARVELL. Better, I believe, than any other portion of the Dominion of Canada possessing the same business and population. I cannot very well compare Nova Scotia because that is all Intercolonial railway, but if you take the Annapolis Valley, which is served by the Dominion Atlantic, I am told they have two through trains each way per day, yet the territory from Yarmouth to Halifax produces more agricultural produce than all the rest of Nova Scotia put together, and has more people per mile than any other part of Nova Scotia. My hon. friend says we must have four or five trains everywhere the Intercolonial railway runs. Then take my side of the province of New Brunswick, with only the Canadian Pacific railway. We produce more agricultural products in Carleton county, and I think we export more, than all the rest of New Brunswick put together. I can certainly say that the four upper counties of New Brunswick export more agricultural produce than all the rest of that province. We have more people, more traffic, more business, than any other portion of New Brunswick, but from the town of Woodstock to St. John we have only two trains a day and one of these is an accommodation. From the town of Woodstock north to Edmundston, 112 miles, through the garden of New Brunswick, we have only one express train a day and a freight that will sometimes carry passengers and sometimes will not. That is the accommodation you get on a company-owned railway. Take the Canadian Pacific railway on the north shore of the province of Quebec. There are three through trains per day from Montreal to Quebec on the north shore of the river and a few local trains in addition. On the southern side of the St. Lawrence, which is certainly no more important and has no greater traffic and no more population, you have three through trains per day on the Intercolonial railway and, I presume, two or three more on the Grand Trunk railway. I mention this to show wherever the Intercolonial railway runs you have about twice the accommodation you have on company-owned roads or you have a kick about it. I may be talking plainly, but it is necessary for somebody from the maritime provinces or from near the Intercolonial railway to talk in this way.

Mr. TURRIFF. If these are the facts of the case why not cut off a number of these trains and make the railway come nearer paying expenses?

Mr. CARVELL. That is what I am talking about. My hon. friend from Kings and Albert (Mr. McAlister) discussed the freight situation so carefully that I think I could not improve on what he said, but let any gentleman in this House or any business man in Canada investigate for himself and see if every word he said in regard to freight rates is not true. Within the last month I had occasion to send a piece of machinery from Ottawa to Woodstock, in connection with a company in which I have an interest. We paid $68 freight on that piece of machinery, or 68 cents a hundred I found that I could have sent that same piece of machinery the same number of miles on the Intercolonial railway for $50, a saving of $18 on that one piece of machinery. I could have sent it to St. John by Canadian Pacific railway, a distance of 45 miles further than to Woodstock, for $56, or a saving of $12. I admit that this is because St. John is a competing point, but St. John is a competing point because of the existence of the Intercolonial railway. If you hand the Intercolonial railway over to the Canadian Pacific railway, then instead of paying $68 as I did you would pay about $75, because they would add on the other 45 miles to St. John. It is well enough for hon. gentlemen on the Intercolonial railway to talk glibly about passing over this great heritage that belongs to the people to a private company. It was, as I said, a pact entered into by the rest of Canada with the people of the maritime provinces in entering confederation. It is a great transportation route without which confederation never could have been brought about, because without the Intercolonial railway the maritime provinces never would have entered into confederation. I ask these gentlemen to be careful to consider the interest of their people before handing over such a means of communication and such a rate controller as this, into the hands of a grasping corporation—because all corporations are alike when it comes to making money, they will all charge every dollar they can, and if you hand this road over to any corporation in Canada you will find that the rates will go up until they are exactly on a par with the rates of the Canadian Pacific railway or the Grand Trunk railway. Hon. gentlemen say that the Railway Commission can control this. Assume that this road gets into the hands of the Canadian Northern. Does not the commission control the rates on the Canadian Pacific railway and the Grand Trunk railway, and have they reduced them any? Would they reduce the rates on the Canadian Northern from Halifax to Montreal any lower than the rates for the same distance on the Canadian Pacific railway or the Grand Trunk railway? It is no use talking nonsense like this, but

I want to ask these hon. gentlemen to face these things as they are. I am willing to admit that it is hard for a government, municipality or any public body to operate a public utility as cheaply as a corporation can, but I repeat that so far as the maritime provinces are concerned, if we want to be true to ourselves, and I have not much use for the man who is not true to himself—we must stand by this railway, which is keeping the freight rates down to some kind of a living rate.

That brings up the next question, one which has been dear to the heart of my hon. friend from Westmorland (Mr. Emmerson) the last three or four years. I took the trouble one day last week to read the speech made by that hon. gentleman on introducing the Intercolonial railway budget in 1907 when he was Minister of Railways. It will well repay every hon. member to read over that speech carefully and see whether it will not lead him to the conclusion that the hon. gentleman deserves more credit from the people of the maritime provinces than he is ever likely to receive for advocating the acquisition of these branch lines by the government. In that I agree with the hon. gentleman. All one has to do is to go to the maritime provinces and see these branch lines run by little local companies without sufficient capital or rolling stock, unable to equip their lines in proper shape, and then let him look at the enormous quantities of second hand engines, cars, steel rails and all these things retired by the Intercolonial railway as no longer good for the main line, but which would be well suited for the branch lines, and he will find that there is sufficient of that discarded material on the Intercolonial railway to equip and fairly operate every branch line in the maritime provinces. When we find an hon. gentleman talking about building hotels, that is a pretty small argument for getting rid of the Intercolonial railway. Does the Dominion Atlantic build hotels? There is no portion of the Dominion which possesses greater possibilities of tourist traffic than does that part of Nova Scotia traversed by the Dominion Atlantic—yet has that company built a hotel? Has the Grand Trunk railway built hotels? Has the Canadian Pacific ever built a hotel in the province of New Brunswick?

Mr. BLACK. Yes, at St. Andrews.

Mr. CARVELL. No, the Canadian Pacific did not build a hotel in St. Andrews, but the hotel there was built by another company and taken over by a company allied to the Canadian Pacific railway, and if you go to St. Andrews how many people do you find in that hotel? You will find a few wealthy magnates; the ordinary man has not money enough to live in it. How many ordinary American tourists go up the Algonquin?

I admit that if the Canadian Northern want to go into Halifax or St. John they ought to get there, and if the Canadian Pacific railway wants to go to Halifax they ought to get there. But I do not forget that this parliament has provided by statute that when the Grand Trunk Pacific reaches Moncton, it will have an absolute right to utilize the Intercolonial railway tracks to St. John and Halifax. Therefore, when we talk of handing the Intercolonial railway over to some private company, we must not forget that there are certain rights which cannot be trampled on. You cannot hand over the Intercolonial railway to a private corporation unless you entirely disregard the rights granted the Grand Trunk Pacific. There is no reason why the Canadian Northern should not get into Halifax or St. Johns without building a mile of railway beyond Levis. I know that if you ask the Canadian Northern or the Grand Trunk railway or the Canadian Pacific railway why they cannot utilize the Intercolonial railway tracks, they will say it is not possible. For my part, I do not believe them. I believe it is possible to have three or four times the traffic over the Intercolonial railway that we have to-day. That might possibly necessitate double tracking the road.

Mr. BLACK. Would you advocate building a road over the Cobiquid mountain?

Mr. CARVELL. No, I said I would never advocate building a railway over a hill if I could get it through a valley. I would double track the Intercolonial railway and I am told there would be no trouble getting around the Cobiquid mountain.

I have looked up the traffic receipts on the Intercolonial railway, and I find they average $5,000 per mile. Take the New York Central, the Pennsylvania, the Reading and the other big railways, and you will find that their traffic receipts average from $30,000 to $50,000 per mile. Does any one say that we have not brains enough to operate four times as many trains on the Intercolonial railway as we do to-day? It is a reflection on our railway people to say that we could not operate increased traffic on this line, but I would give every railway that wants it, running rights over the Intercolonial railway, but I would not give any railway the right to do local traffic along the Intercolonial railway. Subject to that reservation, if the Canadian Northern, the Canadian Pacific railway or any other railway company wants to get into Halifax or St. John, I see no reason why it should not. No one need tell me that we have not the means at our disposal to accommodate these other railways or the

ability to handle the additional traffic. For these various reasons, I am very much opposed to the proposition to hand over the Intercolonial railway to any private company; and as it is now six o'clock, I move the adjournment of the debate.

Motion agreed to.

Mr. FIELDING moved the adjournment of the House.

Mr. EMMERSON. Under the ordinary rules, this will go to the graveyard of embarassing motions and perhaps never be resurrected. I understand, however, that quite a number of members from the maritime provinces and from Quebec as well, desire to say something on this question, and I would like to know whether we could not have some understanding that an opportunity will be given to have it discussed some day in the near future.

Mr. FIELDING. I do not imagine there will be any objection. I know of no reason, but for the present prefer that the ordinary procedure should be followed.

Motion agreed to, and the House adjourned at six p. m.

HOUSE OF COMMONS.

TUESDAY, January 25, 1910.

The SPEAKER took the Chair at Three o'clock.

FIRST READINGS.

Bill (No. 118) to incorporate the Burrard Inlet Tunnel and Bridge Company.—Mr. Cowan.

Bill (No. 119) to incorporate the International Waterways, Canal and Construction Company.—Mr. Conmee.

Bill (No. 120) respecting the Royal Guardians.—Mr. Rivet.

Bill (No. 121) to incorporate the Saskatchewan Central Railway Company.—Mr. W. M. Martin.

INTEREST ACT AMENDMENT.

Mr. STAPLES moved for leave to introduce Bill (No. 122) to amend the Interest Act. He said: The object of this Bill is to make it impossible for a mortgagee, or any person or persons who may have a right to pay off a mortgage, to do so by giving reasonable notice to the mortgagee. It also provides to prevent the mortgagor or mortgagee from tying up the property indefinitely, and therefore to stand in the way of sale.

Motion agreed to, and Bill read the first time.

NATIONAL TRANSCONTINENTAL RAILWAY—CLASSIFICATION OF MATERIAL.

Sir WILFRID LAURIER. The House remembers that under the terms of the Act authorizing the construction of the National Transcontinental railway, it is provided that the portion of the railway from Winnipeg to Moncton is to be constructed by a board of Railway Commissioners under the joint supervision of the chief engineer of the commissioners and the chief engineer of the Grand Trunk Pacific railway. Naturally differences of opinion arose as to the classification of material, between the engineers of the Railway Commissioners and the engineer of the Grand Trunk Pacific. I say naturally, because it would have been extraordinary indeed if in the construction of a road of that magnitude, where there is such a variety of soil, it had not been the subject of some differences of opinion. The Act, however, provided that in case of a difference of opinion, a third person should be appointed as arbitrator. The board of arbitrators therefore was to be composed of the chief engineer of the Transcontinental Railway Commissioners, the chief engineer of the company, and a third arbitrator to be selected by the two, and if they did not agree, by the Chief Justice of the Supreme Court. As there were differences of opinion between the engineers, a third arbitrator was appointed in the person of Mr. Collingwood Schreiber. After the board of arbitration had proceeded for some time, Mr. Lumsden, the chief engineer of the commissioners, resigned, in a letter which is to be found at page 28 of the blue-book which was brought down to the House a few weeks ago. On the 25th of June, Mr. Lumsden addressed the following letter to the commissioners of the Transcontinental railway:

My recent trips over portions of districts 'B' and 'F' in connection with the arbitration on points in dispute regarding the classification and overbreak between the chief engineer of the Grand Trunk Pacific Railway Company and myself (which arbitration might have been proceeded with more than eight months ago but for delay on the part of the Grand Trunk Pacific) have led me to the conclusion that neither the general specifications nor my instruction regarding classification have been adhered to, but on the contrary large amounts of material have been

returned as solid rock, which should have been classified as loose rock or common excavation, and material has been returned as loose rock which was or could have been handled by plowing or scraping, and should have been returned as common excavation. On several residencies there seems to have been no attempt by the engineers to carry out my instructions and measure rock returned, either by showing the same on cross sections, or by measurements of individual pieces, but they simply appear to have guessed at the amount by taking percentage of the total cutting. In some cases where cross sections were prepared showing ledge rock, they proved to be erroneous, resulting in a very much larger amount of the solid rock being returned than actually existed. What is known as overbreak has also been returned in many places where it was caused by excessive use of explosives, and where the material was wasted this should not have been done.

Such being the case, I must decline to certify to any further progress estimates in districts 'B' and 'F,' in view of the general disregard of my instructions, and having lost confidence in the engineering staff, I have concluded to resign my position as chief engineer, and have to-day written to the Hon. Minister of Railways and Canals to that effect, inclosing him a copy of this letter.

(Sgd.) HUGH D. LUMSDEN.

And in another letter, written on the following day, Mr. Lumsden says:

Dears Sirs,—Referring to my letter of yesterday wherein I stated that I have lost confidence in the engineering staff, I beg to state that this does not apply to the whole staff, but applies only to a portion of the staff who were responsible for the measurement, classification, supervision and inspection of considerable portions in district 'B' and east of Rennie Crossing in district 'F' lately gone over by me.

(Sgd.) HUGH D. LUMSDEN.

P.S.—In order to make the matter clear, I may say I assume my resignation as chief engineer also carries with it my resignation as arbitrator in matters of dispute with the Grand Trunk Pacific Railway Company, but as there is a doubt raised by you, I also resign as arbitrator.

(Sgd.) HUGH D. LUMSDEN.

Before proceeding further I may say that the vacancy which was caused by the resignation of Mr. Lumsden was filled by the appointment of Mr. Gordon Grant, who has also been acting since as an arbitrator. The arbitration is now going on, the board as constituted being composed of Mr. Grant, Mr. Kelliher, chief engineer of the Grand Trunk Pacific and Mr. Collingwood Schreiber. The House will notice that in the letter of resignation of Mr. Lumsden he states that he has reason to be dissatisfied with the classification which has been made on the road. He thinks that there is a classification to the prejudice of the

Sir WILFRID LAURIER.

commissioners and of the government. If this be true, and that is the very thing that is now being investigated by the board of arbitration, the over-classification may have arisen from one of three things. It may have arisen from the negligence of the local engineers in charge, it may have arisen from incompetency on the part of those engineers, or it may have arisen from bad faith on the part of those same engineers. But, whatever was the cause of that over classification, whether it was negligence, incompetence or bad faith, the result is the same so far as it is necessary to ascertain the amount of the over-classification.

Mr. FOSTER. As to the local engineers to whom did they owe their appointments?

Sir WILFRID LAURIER. To the chief engineer.

Mr. FOSTER. Absolutely?

Sir WILFRID LAURIER. As I understand the chief engineer was responsible for the appointment of these engineers and they were appointed upon his recommendation. I say this upon the information of my hon. friend the Minister of Railways and Canals (Mr. Graham) who will be able to give further particulars to my hon. friend. I was saying when I was interrupted that at the present time, if there has been over-classification, it is a matter which is now being investigated by the board of arbitration. It matters not whether it was caused by incompetence, negligence or bad faith. The question whether there was or was not over-classification is now under consideration by the board of arbitration and, therefore, although it is obvious that it is the duty of this House to look into this matter, at the present time, so far as my own judgment goes, there is no cause to put an investigation over the investigation that is now going on. There is no occasion to go deeper into the subject to ascertain what is the amount of over-classification. The House will reserve judgment on that point. Later on the House will determine whether it should go further or not, but at this moment we do not think that there is any occasion to put another investigation on top of the investigation that is going on. But, there is one thing in which the House is very deeply interested and as to which we are all of the same opinion. It is the fact that Mr. Lumsden positively alleges something akin to bad faith, if not actual bad faith on the part of his staff of engineers. I call the attention of the House especially to this part of his letter:

In view of the general disregard of my instructions, and having lost confidence in the

engineers staff, I have concluded to resign my position as chief engineer.

That is a very broad, a very general statement. One perhaps might question the judgment of Mr. Lumsden as to whether he was well advised, if he thought there had been bad faith on the part of his engineers, in tendering his resignation. At all events that is the step he took. He qualified his statement to some extent in a letter which he addressed to the commissioners on the following day in these words:

Referring to my letter of yesterday wherein I stated that I have lost confidence in the engineering staff, I beg to state that this does not apply to the whole staff, but applies only to a portion of the staff who, were responsible for the measurement, classification, supervision and inspection of considerable portions in district 'B' and east of Rennie crossing in district 'F' lately gone over by me.

In other words, on the 25th June, Mr. Lumsden had stated that he had not been properly served by the whole of his staff, but on the following day he qualified his statement by applying it only to those engineers who had gone over portions of district 'B' and east of Rennie crossing district 'F'. Such was the position on the 30th December when I received from the chairman of the Transcontinental Railway Commission the following letter:

The Commissioners of the Transcontinental Railway, Ottawa.
Office of the Chairman.
Thursday, 30th December, 1909.

Dear Sir Wilfrid,—A printed copy is before me of the return asked for by the House in regard to our former chief engineer's resignation, forming sessional paper No. 42A.

When his retirement became known, it was the signal for a general attack upon the government as well as the commissioners by a section of the press. Comments and inferences were made most unfair to both, and which a lack of information does not justify.

The matter is one to which we cannot remain indifferent, especially in view of a certain statement regarding his staff contained in Mr. Lumsden's letter, pages 28 and 32. His words conveyed a serious, though vague, imputation on which, however, Mr. Lumsden had not seen fit to enlighten us further. Letters passed between the hon. the Minister of Railways and Canals (pages 48, 49 and 50) and myself on this subject.

In another such instance, the charges made by one of our officers were investigated, with the result that they had to be withdrawn.

So far, we have waited to see whether an inquiry in this case would also take place, inasmuch as Mr. Lumsden held a still more important office.

Now that the House is possessed of these documents bearing on the question, I would beg leave to ask, on behalf of our commission, that an inquiry be ordered which will enable parliament, the general public and ourselves, to know what reasons, or facts, Mr. Lumsden had to justify his resigning on these grounds.

The commissioners are satisfied that they have always been guided by public interest in the performance of their duties. If the full investigation court should bring out any facts of which they were not aware, or dispel misapprehensions that might have been created by adverse criticisms, they will consider it to have served a useful purpose and their trouble well repaid.

Believe me to be,
Dear Sir Wilfrid,
Yours sincerely,
(Sgd.) S. N. PARENT.
Chairman.

I think the position is fairly put in this letter and that the House is entitled to know and probe the circumstances which led Mr. Lumsden to take the position he did in regard to his staff. Therefore, I beg to move the following motion:

Whereas it appears by a return made to this House during the present session, being Sessional Paper 42A, that Mr. Hugh D. Lumsden, late chief engineer of the National Transcontinental Railway, in a letter dated 25th June, 1909, addressed to the commissioners, resigning his position as such chief engineer, uses the following language: 'In view of the general disregard of my instructions, and having lost confidence in the engineering staff, I have concluded to resign my position as chief engineer'; and in a second letter, dated 26th June, 1909, addressed to the commissioners, the said Hugh D. Lumsden writes as follows: 'Referring to my letter of yesterday, wherein I stated that I have lost confidence in the engineering staff. I beg to state that this does not apply to the whole staff, but applies only to a portion of the staff, who were responsible for the measurement, classification, supervision and inspection of considerable portions in District 'B' and east of Rennie Crossing, in District 'F,' lately gone over by me.'

And whereas, while this House deems it not desirable to take any action which might prejudice the position of either of the parties to the arbitration proceedings now in progress between the Grand Trunk Pacific railway company and the said commissioners, yet the said recited allegations of said Hugh D. Lumsden, stated by him as the reasons for his resignation of the said position of chief engineer, are in the opinion of this House of such great public interest and involve such grave charges against a portion of the engineering staff of the Transcontinental railway, as to make it desirable that the same should be investigated by a committee of this House;

Therefore, it is resolved, that a special committee of five members of the House, to be named hereafter, be appointed to investigate the said charges and allegations of the said Hugh D. Lumsden against a portion of the said engineering staff of the said railway; that such committee have power to send for persons,

papers and records, to examine persons on oath or affirmation, and to report from time to time.

Mr. HAUGHTON LENNOX (South Simcoe). Mr. Speaker, I have listened attentively to the statement of the Prime Minister to ascertain if possible the scope of this investigation, and for some days I have been endeavouring to find, from such records as the government have been good enough to furnish us, whether the resolution introduced by the leader of the government would adequately serve the purpose of giving to he public the information they desire in regard to this railway. I venture to say that this is but a very slight step in the direction of affording the public information. The Prime Minister does not propose, if I understand him correctly, that this investigation shall trench in any way upon the investigation which he says is being made by the three engineers appointed under the Act. The Prime Minister has told us that this investigation is proceeding, and while I understand it may be said to be 'pending' I am not aware that it is actually proceeding. If I am wrong in that, I would like to be corrected right now.

Mr. GRAHAM. In one sense it is, and in a strained sense it is not. It is not proceeding, just as parliament is not proceeding between the hour of adjournment and the next day's sitting.

Mr. HUGHES. Have they started yet?

Mr. GRAHAM. Yes, and they have only stopped work because they are not able to proceed during the winter months. They will begin again early in the spring.

Mr. LENNOX. It is just as I anticipated. For two and a half years we have been following this government from season to season; we have been urging them in the spring and in the summer to get to work with the investigation, and in the autumn when these engineers organize and get ready to work they cannot work because it is impossible to proceed during the winter. The statement of the Prime Minister that this investigation is proceeding is absolutely misleading, because while these gentlemen have been brought together into being as a committee of investigation under the Act, not one step will be taken by them to proceed with the investigation until next spring.

Mr. GRAHAM. I am sure my hon. friend does not wish to make a statement which is not based on fact. They have started and have done some work on the arbitration.

Mr. LENNOX. I will be greatly surprised if any return can be brought down by the government showing that they have made any substantial progress in reference to this matter. But, what the country is interested in is, that this inquiry has been tied up since 7th October, 1907, and will be tied up for another six months, and that in the meantime great injury to the public will accrue by reason of this wrong classification—this dishonest classification I am inclined to think, but this wrong classification at all events—being continued to be made and the contractors paid upon progress estimates from time to time. But that is not the only point; the Prime Minister wants us to understand that he is doing something in the public interest. He wants us to understand that, on his motion he had determined that action should be taken which will result in the public knowing how this matter stands. Now the Prime Minister knows perfectly well that if the instruction which he has given to those who represent the government on this proposed committee is carried out, and it will to the letter, there can be absolutely no investigation under this inquiry. What are the facts? Mr. Lumsden says:

> Neither the general specifications nor my instructions regarding classification have been adhered to but on the contrary large amounts of material have been returned as solid rock which should have been classified as loose rock or common excavation.

He also adds that large quantities of overbreak have been allowed which should not have been allowed, and these are the actual items which are referred under the statute to this arbitration of three experts who are said to be now proceeding with the work. And so we will be confronted with this. It is not a material question whether Mr. Lumsden has lost confidence in the engineering staff; we are not going to have a special committee of this House sitting from week to week to investigate that, when the gist of the whole thing is, not that he has lost confidence, but that he finds that his instructions with regard to classification and overbreak have been disregarded. Therefore, the very essence of the thing, the basic point of the whole matter, is to ascertain whether or not that over classification has prevailed. Until you ascertain whether as a fact there has been over-classification and whether or not there have been allowances made with regard to overbreak which should not have been made, there can be no judgment come to by the committee as to whether Mr. Lumsden was justified in writing the letter he did, and whether there was a disregard of his instructions which would justify his losing confidence in a certain number of the engineers upon that work. But, Mr. Speaker, the matter narrows itself down a great deal more than that. The country is not concerned, alone, as whether or not there has been over-classifi-

cation, or too large an allowance upon some other items upon the small section of the road which was investigated by these three engineers at the time to which Mr. Lumsden refers. What the country wants to know, if I understand it, is the methods by which this road has been constructed, the principle upon which it was launched, whether or not, in the original surveys and location, honest methods prevailed, or whether there is need and right to condemn the government, having regard to the enormously increasing cost to which this road is mounting, whether this is to be attributed to ignorance and incompetence on the part of the engineers, to the careless or dishonesty of those in charge of the road, not in an isolated section of 150 miles or so, as referred to in this resolution, but in the 1,800 miles from Moncton to Winnipeg. What the country wants to know is, was the government justified in 1903 in announcing by the Prime Minister and subsequently, in detail figures, by the Minister of Finance, that this road was to cost the country a total of $13,000,000?

An hon. MEMBER. Oh, oh.

Mr. LENNOX. My hon. friend may laugh if he likes—a total cost to the country of $13,000,000, whether that mistake was an honest mistake or not, whether it was made with some knowledge of the facts or the government intended at the time to mislead. My hon. friend the judicial gentleman who has laughed, has filled his function very well in that regard, but I want to tell him that we have the statement of the Prime Minister deliberately made in the House that it would cost $13,000,000 and not one cent more, and it was stated as the heading of the campaign literature on which that hon. gentleman was probably elected, that it would cost $13,000,000, and no more. The members in this House probably did all understand that the Prime Minister to mean that the total expenditure in the construction of the road would be $13,000,000, but that it would cost the country, as money they would pay out and not get back, a total of $13,000,000—yet there is great reason to believe having regard to the subsequent facts and even having regard to the language in which the hon. gentleman employed, that while it was not hoped that it should mislead the house, it was hoped that it would, and it did in fact mislead, and misguide a large section of the electors of this country. The point the people want to know, the point the people ought to know, is whether their money has been squandered or stolen in the construction of this railway or both.

When hon. gentlemen are making election speeches—and no one can make them better than the Finance Minister—I do not wish to tie them down to too narrow a margin, there ought to be some latitude allowed to a gentleman in his position, when he tells the country how much a road will cost, some little margin of 10 per cent or 15 per cent; but when we find that that gentleman told us as a matter of computation and investigation, after having time for inquiry, and after making inquiry, that he came to the conclusion that the total cost would not only not be greater but would actually be less than $13,000,000 and when in 1908 we have the present Minister of Railways and Canals telling the country that upon the same basis of computation and leaving out the Quebec bridge, the eastern division of this railway is actually costing the country $38,000,000 of money which it is never to get back, the public begin to feel that with a Public Accounts Committee stifled and gagged as our Public Accounts Committee is, there should be some method of relief, some method of demonstration to the public, if it can be demonstrated, that the government at the worst have been honestly blundering and have not been criminally negligent of their duties in reggard to the construction of this great public work.

The Finance Minister said on the occasion of the introduction of this Bill on August 12, 1903, speaking of the section from Moncton to Quebec:

> I am advised by competent authorities that, from the general knowledge possessed of that country, that road can be built at a very moderate cost. From Quebec or Levis to near the point where the railway will leave the province of Quebec it can be built at a comparatively low cost.

And that comparatively low cost figured out by the Minister of Finance, and he is not a poet, a Finance Minister must be a business man—figured out as he tells us on actual investigation, was a cost for the section from Moncton to Quebec of $25,000 a mile.

Mr. FIELDING. My hon. friend is conveying the impression that I gave, of my own knowledge or information, estimates of the cost of this road. He knows me well enough to know that I would not presume to give information of that character. I gave the statement upon the authority of an eminent engineer and his name was given to the House.

Mr. LENNOX. My hon. friend is not so good a listener as he is a talker. I shall read what he said again:

I am advised by competent authorities that, from the general knowledge possessed of that country, that road can be built at a very moderate cost. From Quebec or Levis to near the point where the railway will leave the province of Quebec it can be built at a comparatively low cost.

The public want to know what the government meant by that.

Mr. FIELDING. My hon. friend knows what the government meant. It meant the information given by the chief engineer of the Department of Railways and Canals, Mr. Collingwood Schreiber, C.M.G.

Mr. LENNOX. I thought probably some thing of that kind.

Mr. FIELDING. Of course.

Mr. LENNOX. I have something more for my hon. friend. I hope he is not losing his temper. He is an excellent gentleman until he gets excited, and I have respect for him even more in his calmer moments than when he is excited. He was giving us a judicial statement on that occasion, and he will admit that it is hard to square them with the facts of to-day. He told us that founded upon competent information and high authority—not upon isolated consultation but on many authorities—he had ascertained that the road from Lévis to Moncton would cost $25,000 per mile. The section of 1,475 miles from Quebec to Winnipeg would cost a little more, or $28,000 per mile. Taking the two sections together, the cost of the whole road from Moncton to Winnipeg he estimated at $41,300,000. To that, he told us, we must add the interest during construction, which would bring the total cost up to $54,609,675. Then he went again into an elaborate computation and made out that the total interest charge on the country would be a little over a million dollars per year, and the actual cost ot the country all told less than $13,000,000 for the whole undertaking. Contrast those figures with the figures given by the Minister of Railways (Mr. Graham) in the session of 1908. According to his figures, the outlay, not taking the Quebec bridge into account, computed upon the same basis as the $13,000,000 were argued or by the Prime Minister and the Minister of Finance, would be a capitalized interest bearing fund of $38,000,000. And again as the Minister of Railways told us a year and a half ago, the road, instead of costing an average of about $27,000 per mile from Moncton to Winnipeg will actually cost $63,427 a mile.

In view of these facts, and the startling declarations made by Mr. Hodgins—declarations which were not withdrawn, but were stifled and suspended on the promise that he would be brought immediately before a committee of three experts who were then said to be at work, and give his evidence to them—in view also of the fact that a gentleman who, out of all the engineers in Canada, was selected as the one best fitted for the position of chief engineer, and his statement that, after he had been in charge for some years, he found the most glaring disregard of his instructions, and in view still further of the startlingly damaging disclosures made by Mr. Woods, the assistant chief engineer of the Canadian Pacific railway, is it not amazing that the right hon. the Prime Minister should propose to us this gold-brick in the form of the resolution we are now discussing. But the Prime Minister is not responsible. He is simply doing what he has been commanded by the power behind the throne. There was a time when, in my simplicity, I thought that the right hon. gentleman, as Prime Minister, ruled his party and controlled the destinies of Canada, but I have since learned that there is a stronger hand than his—the hand of the chairman of the Transcontinental. That gentleman could afford to ignore even the Minister of Railways and reject a public document affecting the interests of the people and which should have been submited to that minister. Two years ago that same gentleman demanded that the Prime Minister should have an investigation for the purpose of castigating Mr. Hodgins, and the same gentleman again is the moving power in this matter as revealed by the letter of the 30th of December read by the right hon. gentleman this afternoon. It is an amazing condition of things, but perhaps were it not for that communication, the Prime Minister would not have been aware of the existence of this Lumsden letter at all. Mr. Lumsden resigned the 25th June last. His resignation was published in every newspaper in the country. It was considered everywhere a matter of great significance, yet apparently the Prime Minister knew nothing about it. He knew nothing about that resignation until this gentleman behind the throne said to him: You must have an investigation, you must whitewash me once more. And hence we have the preamble in this resolution: 'Whereas it appears, by a return made during the present session, &c.' Is it not fortunate that there is a leader of the opposition, that there is an opposition in this House, as otherwise the Prime Minister would probably not have known of the Lumsden letter at all.

I have been moving for returns and they come down very slowly, but we have obtained some. We have succeeded in obtaining material which in a large degree sub-

stantiates the statements made by Mr. Woods and Mr. Lumsden, corroborated to some extent by Mr. Grant, for Mr. Grant also admits that there has been over-classification to a very considerable degree, and thus refutes the statement made by hon. gentlemen opposite a year ago that there was absolutely nothing of the kind. We have evidence that the discrepancies between the original estimates and the actual returns, as the work was done, are so startling, so utterly inconsistent with any hypothesis of honesty or competency, that a most thorough investigation is required and not such a misleading, narrow, hide-bound investigation as the right hon. gentleman proposes. What is required is an immediate, broad, general and thorough investigation of the business on the eastern division of the Transcontinental, which will show the methods which have been followed in its construction and which have resulted in the enormous expenditure which has startled the country. One would suppose that before letting any work, investigations must have been made by thoroughly competent engineers in order to enable the government to judge whether the tenders were reasonable or not and which is really the lowest tender; and one can realize that unless the estimates of the engineers are unreasonably accurate, one cannot expect a satisfactory result. It is an absolute farce, a leap in the dark, if these estimates upon which the tenders are based and accepted are not reasonably accurate. I am informed, and by competent engineers, too, that, in this matter of classification, the very most that is to be allowed for margin of error is twenty per cent. If you find that the estimates as tendered upon do not work out within a margin of twenty per cent at most, there is immediate need for investigation, for the result must come either from incompetence—or dishonesty—of the engineers who located and estimated upon the line, or from the incompetency—or dishonesty—of the men who are classifying the progress estimates from time to time as they are put in. Therefore, I hope I need not apologize for referring to some figures, for I am only giving to the House information that I should have been glad had the government given it to us long ago. Now, taking district 'F' and the McArthur contract extending for 244 miles east from Winnipeg, we find that the estimate of quantities of the engineers who laid out the work represented a total expenditure of $13,010,398. That was the amount that the government led the country to understand the work would cost, approximately. There was a change in the location effected by Mr. Hodgins, as he testified during the Hodgins investigation, which resulted in an estimated reduced expenditure of $1,010,398.92, leaving the estimated cost of the entire contract in round numbers, $12,000,000. Now, compare that with the returns actually made and with the allowancee on which the work was paid for. In the figures I am about to give, 'S.R.' stands for solid rock, 'L.R.' for Loose rock, and 'C.E.' for common excavation:

COMPARISON OF ESTIMATE AND RETURN.

—	Estimate.	Yards returned.	Rate.	Estimated cost.	Actual cost.	Difference.	Increase.
	c. yds.	c. yds.	$ cts.	$ cts.	$ cts.	$ cts.	p. c.

Cost increased by				2,798,691 70			
	15,663,037	15,663,037		12,892,509 40			

This contract has a feature in common with all the other contracts that have been brought down—solid rock grows, loose rock grows, common earth shrinks. When I was a boy going to school I used to read:

Stones grow; vegetables grow and live; animals grow, live and feel. We are animals; we feel.

The stones handled under these contracts have grown; they have grown enormously. And the memory of the over-classification—aye, and, I believe, the dishonesty—that characterizes this work will live and grow in the knowledge and recollection of the people of Canada. Common excavation shrinks in these cases. It was only worth

thirty cents a cubic yard; it was not worth keeping. And, though it was estimated to cost about $3,500,000, it actually cost only $636,000. But, though we saved on that about two millions and three-quarters, it was like feeding the peas to the pig in the story—we gained on the pig but we lost on the peas. And the whole thing works out disaster and loss to the people of Canada. Here we had 15,000,000 of a total estimated yardage of material to be moved. In the result only about 10,000,000 has to be moved, an error of upwards of 5,000,000 cubic yards in the total by a 'competent' engineer. And the chairman of the commission tells us with pride that they have upon the line practically the same engineers as they had at the time the line was located. It was to cost about $10,000,000 for the whole 15,000,000 cubic yards; but the actual cost is $12,890,000. That is, while we have a decrease in the quantity of about one-third, we have an increase in actual cost of $2,798,791.

Mr. SPROULE. That's the way the money goes?

Mr. LENNOX. Yes, that's the way the money goes. And yet the right hon. Prime Minister, in the interests of the public, as he says, would ask us to have an investigation as to whether Mr. Lumsden was right in losing confidence in his staff—but you must not touch the substance of the question, namely, the cause of that loss of confidence. The figures I have given show that the average rate, according to the classification, was 64 cents a yard, but the average rate as now classified is $1.21 a yard. That is, it was to have cost 64 cents for each cubic yard removed; as a matter of fact it has cost $1.21 per cubic yard. The quantity is five millions less to remove, but it is costing us $2,750,000 more to move it. The whole work, everything of the 103 schedule items which appear in the returns brought down, covering everything, except rails and ties and things of that kind, the total expenditure on the contract was to be, as I said, $12,000,000 for 103 items; the actual expenditure for three items alone is $12,900,000, or in round figures $900,000 more for these three items than it was to be for the 103 items entering into construction of this whole 244 miles of road. Now, the Minister of Finance—I am sorry he has run away—made careful estimates upon competent authority, and he found that this section of the road was to cost on an average $28,000 a mile. What does he think of it? Does he think that an investigation is necessary or not, when I tell him that these three items alone average, for this 244 miles, at the rate of $53,000 a mile. Well, that is the McArthur contract, and there is more of it.

Mr. GEO. TAYLOR. A lot of election fund came out of that.

Mr. LENNOX. There is a way of manipulating figures so that the wrong man gets the contract. If you will just place the items unevenly, estimate some of them extraordinarily high and others extraordinarily low, and particularly if anybody gets behind the scene, or the screen, and ascertains how those figures are running, there is a vast temptation and there is a great chance to have dishonest tenders. Now McArthur's contract, I want to state here, Mr. Speaker, was absolutely not the lowest tender. If there had been a competent or honest estimate at the time, and competent and honest returns and classification as the work progressed. The Pacific Construction Company's tender was the next lowest, and there was only a difference of $18,000, and this seeming difference only between those two tenders. It does not take much manipulation to change those figures. Just take half a dozen items which we have on record now, and they wipe that out. Take these items: 4, 5, 6, 8, 12 and 24. Now I need not go into many particulars, but I want to say that, taking the difference in prices in favour of the Pacific Company on those six items alone, they result in this, that Mr. McArthur was not the lowest tenderer but was actually a higher tenderer than the Pacific Company. Endeavouring to shorten this as much as I can, let me give only a few of the figures. Take these items we have been dealing with. On those items, as the estimates were advertised to the public, the Pacific Company appear to be $221,000 lower than the McArthur figures. Actually worked out upon quantities as returned and allowed, the Pacific Company's figures were really $426,112 lower. So you see upon these two items alone, under the changed conditions of things, more than enough, enormously more than enough, to give the tender to the Pacific Company. There were 2,750,000, in round numbers, more yards of solid rock than was estimated. The Pacific Company was five cents per yard better on the tender than the McArthur Company; that in itself makes $139,000. On loose rock, there was a differnce of 1,250,000 yards; that, at the rate of five cents a yard, makes $64,000. And so on these five items alone there is a difference of only $18,000 to start with, it shows that we would have been $186,000 in round numbers, better off by giving it to the Pacific Company than by giving it to the other company.

Now we come to a very interesting contract, and a very interesting section of the road, and that is from mile 0 to mile 150 west of the Quebec bridge. That contract, so far as I can understand, was let to McDonell & O'Brien, or Hogan & McDonell. I have ascertained through Mr. Ryan, the secretary of the board, that there is no confusion as to the particular work in hand, and so we need not trouble ourselves as to which of the contractors handled it. Mr. Ryan explains to me that, by some subsequent arrangement with M. P. Davis, M. P. Davis and J. T. Davis became contractors for the first 50 miles. I am only concerned to show the extravagant, the wholly incompetent or dishonest estimates in regard to quantities. Now as regards the difference of quantities. We have the estimates showing a little over a million cubic yards, and we have the actual returns allowing for more than 3,500,000 cubic yards. We have the estimated cost, upon the estimates of quantities, at $1,750,000, we have or alleged actual quantity, mark you, on this one item an actual expenditure of $5,512,102. We have a difference here of $3,758,377 a startling difference which ought to arouse the Prime Minister's attention, convince him of the necessity of a further investigation and bring him to a keener sense of his duty. We have an actual difference in this estimate of 214 per cent.

Mr. SPROULE. It is very much like the cost of the Quebec bridge.

Mr. LENNOX. Very much the same. That went down, this goes up. Now, we have loose rock estimated at the very modest quantity of 316,800 yards. It grew into one and three quarter million yards. It was to cost $158,400; it actually cost $868,282 or $709,482 of an increase or 440 per cent. Common excavation shrinks as it almost always does. From 6,000,000 yards it became 2,000,000 yards. At the trifling cost of 21 cents a yard it was to cost $1,323,000 instead of which it cost $500,000. So, we have this result: The total estimated cost upon which the contract was let was $5,297,257. We have these three items amounting to $6,880.08; so that the actual cost of three items of a total of 103 exceed the estimated cost of the whole 103 by $1,583,251. According to the Prime Minister the cost of this road was to be $25,000 a mile from Moncton to Quebec and $28,000 from Quebec to Winnipeg. Actually for these three items alone, the cost is upwards of $45,000 a mile.

Now, did I refer to the question of unbalanced bids?

UNBALANCED BIDS.

McDONALD vs. MULLARKEY.

Comparison on Estimated quantities.

McDonald and O.B. Tender.				O'Brien & Mullarkey Tender.			
Solid Rock	1,169,150 cu. yds	at $1.50	$1,753,725.00	Solid Rock	1,169,150 cu. yds.	at $1.45	$1,695,267.50
Loose Rock	315,800 "	.50	158,400.00	Loose Rock	316,800 "	.45	142,560.00
Com. exc.	6,303,682 "	.21	1,323,773.22	Com. exc.	6,303,682 "	.25	1,575,920.50
McDonald			$3,235,898.22	Mullarkey			$3,413,748.00
							3,235,898.22
				Apparently in favour of McDonald by			$ 177,849.78

Unbalanced bids are worked out in this way. The estimates, for instance, represent that there is only going to be a very small quantity of solid rock, there is only going to be a very small quantity of loose rock and there is going to be an enormous quantity of low priced material, or of common excavation. Tenders are put in on that basis. But, it works out the other way. There is an enormous quantity of high priced material and a very much smaller quantity of low priced material. That is how it worked out in this case. Take the McDonald tender and take the next lowest tender, that of O'Brien and Mullarkey. Solid rock in this case was to be a little more than a million yards. According to McDonald's figures it would cost $1,753,000. By Mullarkey's figures, which were $1.45 a yard instead of $1.50, it would cost $1,695,267. Loose rock was estimated at 316,000 yards. It was estimated on McDonald's figures at $158,400 while at the figures of Mullarkey it would cost $142,560.

Common excavation according to McDonald's tender would have cost 21 cents a yard, an excessively low price. It was estimated that there was an enormous quantity of it—6,313,682 yards—and at the rate of 21 cents a yard it cost $1,323,773. By O'Brien and Mullarkey's figures, which were four cents higher, or 25 cents a yard, it appeared to amount to $1,575,000. The result was that upon being figured out on the basis of the estimated quantities Mullarkey was $177,849 behind.

Mr. JOHN HAGGART. You mean lower?

Mr. LENNOX. Mullarkey appeared to be higher by $177,849.

Mr. R. L. BORDEN. On the estimated relative quantities?

Mr. LENNOX. On the estimated quantities, as put in because of this reason that although he was lower on the smaller quantity he was four cents higher on the larger quantity. If the large quantity had remanied that would have been just. As a matter of fact it was not so at all. On the actual quantities it worked out in this way. Solid rock grew into 3,674,735 yards which at $1.50 a yard amounted to $5,512,102 and at $1.45 a yard, Mullarkey's price, it amounted to $5,328,365. There was a considerable gain there because the quantity had increased and the five cents a yard difference counted all the time. The loose rock had again increased and with the same result, common excavation decreased and of course did not count so much against Mullarkey as did the larger quantity that was estimated before and upon which low priced material he had put in a higher price. The result was that McDonald's price was $6,880,408 while Mullarkey's price, on the actual quantities allowed and paid for was $6,695,347. There was an actual difference and there would have been a gain to the country if Mullarkey had got the contract of $185,000. But that is not all. Mullarkey appeared to be $177,000 on the wrong side of the account as I showed a moment ago. The result was that upon the actual figures it would have worked out at $363,000 less if honest estimates had obtained. Deduct from that the difference in tenders and you would still have in favour of Mullarkey and in favour of the country $110,000. If you take a half dozen other items in connection with this same matter, the particulars of which I need not go into, you will find that wherever Mullarkey was low the quantities increased—and wherever Mullarkey was high the quantities decreased strangely enough. Taking only these items at the head of the list and adding them we have another $175,000 in favour of Mullarkey's tender.

COMPARATIVE STATEMENT BY RESULTS.

At McDonald's Prices.				At Mullarkey's Prices.			
Solid rock..	3,674,735 c. yds.	at $1.50,	$5,512,102.50	Solid rock...	3,674,735 c. yds.	at $1.45,	$5,328,365.75

McDonald	$6,880,408.86
Mullarkey	6,695,347.55
Difference in favour of Mullarkey	$ 185,061.31
Add apparent balance against him of	177,949.78
A turnover of	$ 363,011.09
Deduct difference in tenders	252,946.68
Net amount in favour of Mullarkey	$ 110,064.41

Now I have dealt with the two sections of the road that have been most frequently referred to. We have been told by hon. gentlemen opposite and far more by the Grit press of the country that the country is perfectly safe because the Grand Trunk Pacific railway will look after this. Why, the Grand Trunk Pacific are contractors in this matter. When we formed the scheme of building this road—and it was a scheme—the Grand Trunk Pacific said the most they could undertake to do was to build the prairie section, but they did not stick to that. They wanted to make something beyond that. When the country undertook to build the difficult div-

ision, the division that it is said will never pay, then the Grand Trunk Pacific railway company became contractors themselves for the building of portions of this line, and have you heard of any complaint being made by Mr. Woods of over classification upon the portions of the road that these gentlemen are themselves building? I do not think so, and I venture to say, Mr. Speaker, that you will not hear of any such complaints. But, Mr. Speaker, after an investigation of this matter I declare that the same kind of over-classification and the same growth of solid rock obtains down in New Brunswick, and between New Brunswick and Quebec, where these gentlemen are contractors. The same system prevails, and in some instances in almost the same degree under those contracts that obtains in those divisions to which reference is now made. We are told that we can rely for safety upon the action of the Grand Trunk Pacific; this company with its numerous aliases which becomes increasingly dangerous by reason of these aliases. We have the Grand Trunk Pacific Railway Company in this transaction, and as the Minister of Finance told us, we have the old Grand Trunk at the back of it, and we have the Grand Trunk Pacific Branch Lines Company, and we have the Grand Trunk Pacific Construction Company, and we have the Grand Trunk Pacific Town Site and Development Company, and the Grand Trunk Pacific Telegraph Company, and the Grand Trunk Pacific Express Company, and perhaps the Grand Trunk Pacific Steamship Company. And behind them all, and if there were a thousand more of them, I am not prepared to rest the interests of the people of Canada. And why? Perhaps as far as Mr. Woods is concerned it was all right and I have not referred to the letters of Mr. Woods, nor have I read extracts from the letters of Mr. Lumsden, because hon. gentlemen on this side of the House will deal with these questions; but I call the attention of the Prime Minister to this fact: that a strong fight was put up by the Grand Trunk Pacific; they were fighting for a broad general inquiry and they were hampered and opposed, and by whom? Why, Sir, by the man who should represent the people of Canada, by the chairman of the commission. What should have been his duty? Why should he not have said: We will have this investigation, broad, and generous, and free, and in the interests of the people of Canada. I do not care whether Mr. Woods objected or not, I want to ensure in the interest of the people whom I represent that there shall be no dishonest classification. But no, he fought like a tiger; he fought, I should say, almost like a fiend to prevent the extension of this inquiry, and to confine it within the narrowest possible limits. And the fight went on, and we have the experts resign, and we have the chairman of the commission upon the mere ipse dixit of some local engineers, without one word of investigation, one word of inquiry, without asking for any explanation condemn these three experts. What have we further? We have the master hand; we have one of the great and able men who form the right hon. gentleman's cabinet, we have the master mind of the Minister of Public Works entering the arena. And it was then, and not till then, that the whole situation resolved itself into one of perfect amity and dove like greetings all round. The Grand Trunk Pacific Railway Company, and the old Grand Trunk Company, and the Grand Trunk Pacific Construction Company and the various other companies that represent this one original body, collapsed, and after fighting for a broad investigation, we have in the last pages of the return brought down we have it provided and agreed that the investigation is to be confined to the narrowest limits. Was the chairman of the Grand Trunk Pacific Commission acting in the interests of the public whose interest he had a right to protect, or was he acting in the interest of the contractors when he insisted that the investigation should be so narrowed. Do you think, Mr. Speaker, having regard to the figures I have quoted to you (and you have a mind for figures), do you think we should have this investigation upon the narrow limits the Prime Minister suggests? Let me refer for a moment to the condition of things from Moncton to Quebec, where no complaints have been made, and particularly in New Brunswick, for the purpose of showing you, Mr. Speaker, that the same infamous—I think I am right in using that word—the same dishonest, and the same unfortunate classification that prevails in sections B and F, prevails on this section of the road as well. In other words, from end to end of this line we have this amazing state of things, that the high priced class of materials grow and swell, and the low priced class of materials dwindle and shrink. And the net result is that on this road, in the province of Quebec where, the right hon. gentleman in introducing this measure, described the roses as blooming in the fertile fields, and along the fertile belt in the province of Ontario, everywhere rocks are found where no rocks were expected, and the price of material is doubled and more than doubled, throughout the whole length of the line. I realize, Mr. Speaker, that when it comes to dealing with figures I am not an expert, and that I do not handle them aptly, and my excuse for quoting figures now is that the people should know, and so far as it is in my power, they shall know, what it taking place in regard to the construction of

this railway. We have an hon. gentleman on this side of the House, who, in the interests of the public, is endeavouring to lengthen the day and bring more daylight to the people, but God knows, if there is anything we need in this matter it is not so much the lengthening of the day as a flood of light let in on these transactions so that the people of Canada may know what is happening.

Mr. SPROULE. You want the lime light on it.

Mr. LENNOX. You recollect what I said as to the statement of engineers as to reasonable error, a matter of probably twenty per cent.

On the first section from Moncton, fifty miles, the contract for which was, I think, let to the Grand Trunk Pacific, the total estimated cost was almost a million dollars. It was said that there was absolutely no solid rock and only 130,000 cubic yards of loose rock. That would appear to be pretty nice country. Hear how it worked out. The total quantity excavated was 1,460,000 cubic yards. The rates for the three classes of material were $1.50, 55 cents and 25 cents. The section was estimated to cost $531,000. The estimated average rate for excavating was 26 cents a cubic yard. I got returns down to December, 1908, and I found that 5,000 cubic yards odd of solid rock had been taken out and 4,000 odd remained to be removed, making a total of 10,000 cubic yards of solid rock. Where there was to be 130,000 cubic yards of loose rock, it grew into 850,000 cubic yards, and where there was to be 1,900,000 cubic yards of common excavation it shrank to 600,000 cubic yards. The average cost of that, as I said, was 26 cents a cubic yard. The result is that we saved on common excavation apparently $310,000, we removed three-quarters of the total estimated quantity and we added, notwithstanding that, $100,000 to the total cost.

Mr. J. HAGGART. Is that section finished?

Mr. LENNOX. I am not aware of that. I asked for a return showing how much work had been done and how much remained to be done. They gave the quantity done and the amount remaining to be done and adding the two it gives this total amount. On this section the solid rock rose from nothing to 10,000 cubic yards, the loose rock from 130,000 into 850,000 cubic yards, an increase in the latter case of 556 per cent. Engineers call anything above common excavation classified material. In that contract we had fifty-two per cent of classified material, whereas the estimate of classified material was only seven per cent. We are paying for 1,500,000 cubic yards at 43 cents a cubic yard; we should be paying for the same quantity at 26·09 cents, or we are overpaying $238,000, or at the rate of 60 per cent beyond what we should pay. The increase on the whole contract is $600,000 or more than 70 per cent.

Mr. FOSTER. Who has that contract?

Mr. LENNOX. I think it is the Grand Trunk Pacific, but I am not absolutely sure; I did not mark it. I have some Grand Trunk Pacific contracts. Mark you they are returned as Grand Trunk Pacific, not as Grand Trunk Pacific Construction Company. Yes, this is a Grand Trunk Contract.

Mileage from 50 to 58 was contracted for by T. W. McManus. The total estimated cost was $289,000. It was estimated that there would be no solid rock that there would be 58,000 cubic yards of loose rock costing $29,000, and 529,000 cubic yards of common excavation, costing $111,000. It has increased from 58,000 cubic yards of loose rock to 247,000 cubic yards, and that class is costing instead of $29,000, $123,000. Common excavation was estimated at 529,000 cubic yards and it is now 93,000. The result is that while the estimated cost was $140,000, the actual cost is $273,000 for a less quantity. The average cost at the original estimate would be 24 cents per cubic yard. The rate of the expenditure has actually increased by 166 per cent, or, in other words, we are paying at more than two and a half times the estimated rate of expenditure. It works out in this way:

Material.	Estimate.	Actual Quantity.	Estimated Cost.	Actual Cost.
		c. y.	$	$
Solid rock.	—	85,000	—	128,100
Loose rock	58,000	247,000	29,000	123,800
Common excavation....	529,000	93,000	111,000	19,000

In other words we have it in this way. The estimate allowed for no solid rock, less than ten per cent of loose rock, and more than ninety per cent of the estimate being for common excavation. As it turns out it becomes twenty per cent solid rock, fifty-eight per cent loose rock and twenty-two per cent common excavation. We were to have had classified material amounting to less than ten per cent. As it works out, we have classified material at the higher

price to the extent of more than seventy-eight per cent.

Mr. G. TAYLOR. The whole staff ought to be dismissed.

Mr. LENNOX. Yes, but the chairman of the commission is proud of the fact that we have practically the same engineers on the work now as at the time when the contract was let.

Mr. NORTHRUP. I suppose they are equally proud of him?

Mr. LENNOX. Yes, I suppose they are. Take mile 58 to mile 96. There had been expended on that piece of road up to December 31, 1908, $584,000 and there was then to be expended $639,000, making $1,224,000 against an estimate of $767,000, an increase of $456,723, on a matter of twenty-eight miles. The common rock estimate in that case was 29,000 cubic yards, but it increased to 75,000 cubic yards. The loose rock was estimated at 492,000 cubic yards and was increased to 545,000 cubic yards. Therefore the solid rock was increased by 240 per cent and the loose rock by eleven per cent.

District 'A', mile 96 to 164 from Moncton. The contractors are the Grand Trunk Pacific. Estimated cost $1,898,124. The increase in solid rock on that section was ninety-five per cent. That is only one instance in many to show that we cannot depend on the Grand Trunk Pacific to fight our battles in this matter. The increase there was as great almost as on any section of the road, yet naturally there was no kick over that from the Grand Trunk Pacific. What I claim is that it is the duty of the commissioners—and if they neglect it, it is the duty of the Prime Minister—to see that we have an investigation, no matter whether the Grand Trunk Pacific complain or not. In view of the startling increase in expenditure over the estimate, we should have an investigation by a committee of this House, a thorough and exhaustive investigation into every thing connected with the building of the road, so as to determine the cause of this extraordinary expenditure, which bears on its face every evidence of dishonesty on incompetency.

Take the district 'A', mile 96 to 164 from Moncton. There is an increase of ninety-five per cent in the solid rock under that contract. The result is that on this one item of solid rock out of loose rock we have 68,367 yards at $1, or $63,367 increased expenditure over estimate. We have also an increase of 231,299 cubic yards of solid rock out of common excavation at $1,18, or an increase of $272,983, giving a total increase on this one item alone of $341,300.

Take the contract district 'A', from 164 mile to 195 mile, let to Willard Kitchen & Company. The estimated cost was $1,646,000. The estimated quantity of solid rock was 253,000 cubic yards, but the actual quantity turned out to be, it is said, 525,850 cubic yards, or more than double. The estimated cost of the solid rock was $376,000 but it actually cost $783,000. There was a decrease in the loose rock and also in the common excavation, but the loose rock was all run into solid rock which is very significant. On the whole 21 contracts, there are only two cases where loose rock decreased, but in each case it went into solid rock. What is the significant point behind this? Take the whole list of tenders and none of them came near this figure of thirty-five cents for loose rock. They ranged as high as 55c. It looks as if this firm of Willard Kitchen & Company—and I believe they are pretty well known to some of the right hon. gentleman's political friends—by some unfortunate accident got inside information. At all events the matter is one which demands investigation. It was estimated that the total quantity to be removed would be two and a half million cubic yards, but the actual quantity was 1,155,137, or a difference of 1,293,000 cubic yards. How do you account for that difference when there was so much competent engineering skill at the service of the government, and when the government had mountains of information, as the right hon. gentleman told us? What was the result? They moved only forty-seven per cent of the estimated quantity, but we paid ninety-seven per cent of the total estimated cost. On one and a quarter million yards less material moved, we saved a paltry $28,000, but we jumped our price from an average of forty-one cents to eighty-five cents per cubic yard, thus increasing the cost to the country by $580,000, and we saved on the part not removed one and a quarter million yards at the rate of two and one-quarter cents per yard.

Mr. FOSTER. That is on a thirty-one mile contract?

Mr. LENNOX. Yes. Solid rock increased by 107 per cent; the common excavation, which was said to be one and a quarter million yards, becomes 196,000 cubic yards, or an over-estimate by competent and honest engineers of yards, 1,027,599 cubic yards, or at the rate of 522 per cent.

Mr. FOSTER. That is fairly accurate.

Mr. LENNOX. The net estimate on actual quantity was $1,116,015 and there has been expended $905,000, and there is yet to be expended $1,327,793; or this contract has increased by $1,116,000 or more than double.

Mr. FOSTER. What is the total cost?

Mr. LENNOX. $2,232,793.

Mr. FOSTER. Pretty nearly $75,000 a mile—where is the Minister of Finance?

Mr. LENNOX. He has gone out. Those figures do not agree with him.

Now take the contract of District A from mile 195·58 to mile 256·61. The contractors were Lyons & White. The original estimate of the whole work was $1,385,941.09. The estimated quantity of solid rock was 172,709 cubic yards; the actual quantity 231,958 cubic yards. The quantity of loose rock estimated was 64,765 cubic yards, and the actual quantity was 749,383 cubic yards. The total estimated quantity was 1,913,649 cubic yards, while the actual quantity showed comparatively little shrinkage, being 1,754,531 cubic yards. The actual cost for this quantity was $286,633 over estimate, an increase of 45 per cent. Solid rock has increased more than 34 per cent and loose rock more than 1057 per cent. This is the contract immediately east of the New Brunswick boundary. This brings us to the New Brunswick boundary and that is the section which the Finance Minister emphasized as being extremely moderate—something less than $25,000 a mile. The estimated cost was to be $2,377,000. The common excavation was estimated at 633,900 cubic yards, price $1.45. estimated cost $919,155. The actual quantity was increased to 853,916 cubic yards, and the expenditure for the item was increased from the estimate of $919,155 to $1,238,178.20. The loose rock was increased from an estimated cost of $98,150 to $387,176. The quantity of solid rock was increased by 220,000 cubic yards, raising the price of this item by 319,000 or 34 per cent. And the loose rock is increased from an estimated quantity of 196,300 at an estimated cost of $98,150 to 387,176 in quantity, and $193,588 in cost, or an increase on this item of 97 per cent.

Now, I come to the last contract, with which I shall deal, a contract of M. P. Davis—and I always find M. P. Davis' contracts are somewhat interesting. This is from mile 0 to mile 150 east from the Quebec bridge. This is a big contract, as will be seen when I state that it was estimated to cost over $5,011,346.50. The following are the figures showing the estimates in this contract and the actual results:

——	Est. Quant.	Price.	Est. Cost.	Act. Quant.	Actual Cost.
		$ cts.	$ cts.		$ cts.
Solid rock	918,381	1 45	1,331,652 45	1,556,347	2,256,703 15
Loose rock	395,645	0 65	257,169 25	1,292,799	840,319 35
Com. exc	3,091,210	0 27	834,626 70	929,079	250,851 33
	4,405,236	.....	2,423,448 40	3,778,225	3,347,873 83

So, here we have excavations averaging according to the estimate 55 cents a cubic yard working out at an actual cost of 88½ cents a cubic yard.

Now, Mr. Speaker, I am not in the habit of apologizing for the time I take in this House, but I apologize very sincerely upon this occasion for though I realize that these things take a good deal of investigation—and, as it was, as I believed, in the interest of the country, it was a labour of love—yet it is impossible to present these figures in a way to be very clear without running great risk of wearying members of the House. But, though these figures may be tiresome, yet, the fact that the government has not been giving us much information on these matters must be my apology for claiming the attention of the House at such length. I propose, in conclusion, to ask the Prime Minister (Sir Wilfrid Laurier)—not at the instance of the powerful chairman of the Railway Commission, but at my own humble solicitation—to enlarge the scope of the inquiry he proposes. I feel that I can be lost sight of in my request. The Prime Minister can well disregard the humble source from which the request comes in his desire to discharge a great public duty. The right hon. gentleman must realize that we have now for five years been engaged in the expenditure of public money upon this great work. And, whether rightly or wrongly, whether by mistake or by dishonesty, whether blunderingly or criminally, the expenditure is vastly, enormously—outrageous, I might say—in excess of the estimates presented to the House. The faith upon which the country committed itself to the construction of this work has not been at all justified by the result. And, surely it is not unreasonable that, representing the people, we should ask now that there shall be not this little, piecemeal, narrow investigation, meaning absolutely nothing, but a broad, generous investigation. Should such an investigation justify the ministry—and I shall be glad for the reputation of Canada should that be the result—it will bring to light what the people want to know. Surely it would not be unreasonable now, at the end of five years of

rapid and enormous expenditure, to ask that the government shall take the people into their confidence to this extent, that they shall inquire fully and carefully into the methods which have obtained in the expenditure of this vast amount of the people's money. Having regard to the fact that, in the Public Accounts Committee, even if we were all working to bring in the daylight and elucidate this matter, it would yet be impossible, with the limited time at our disposal, to unravel this matter and also investigate other public questions, surely we have a right to appeal to the Prime Minister to establish a tribunal of members of this House who shall have this investigation specially in charge and shall take up all matters relating to the expenditure of public money on this Transcontinental railway, so that the people may know whether or not there has been honest and efficient administration of the public funds.

Whilst I say that, we must not shut our eyes to the fact that we have not a Public Accounts Committee such as we should have. Surely it is the common knowledge of everybody, and I hope the Prime Minister realizes it as well as anybody else, that in that Public Accounts Committee, as I have said before in this session, we are not facilitated, but on the contrary, every effort of the opposition to drag forth the truth and to let in the light, is baulked and opposed by certain prominent supporters of the right hon. gentleman. In view of these facts, and in view of the fact that even if there has been a fair, honest, and to some extent a mistaken expenditure of public money, and that if this is the fact and this fact is established, it will redound to the credit of Canada and the benefit of the government. I hope the right hon. gentleman will not, in his power and in his might, call in his supporters to vote down the amendment I offer to the House. If these reasons are weighty, and of some effect, then they are intensified, I submit, by the manifest attitude of the chairman of that commission, by his attitude in baulking as far as he can an investigation of matters relative to this railway. This again is a matter which I commend to the right hon. gentleman as an additional reason why we should have a thorough and full investigation. In addition to all this, the peculiar, the significant surrender of the Grand Trunk Pacific, after fighting for a time, suggests that it may be profitable to again and again surrender to the government if a quid pro quo is given them. It is clearly the duty of the government to declare that they will not allow the New Brunswick end of this construction to remain wholly uninvestigated, where the Grand Trunk Pacific are operating as contractors under the government and a sufficient reason in itself why the minister and the First Minister should grant the reasonable request I am making. In the interest of the people of Canada, I demand that the Prime Minister give to this committee full power to investigate the affairs of the eastern division of the Transcontinental. I therefore move:

That all the words after the word 'whereas' in the proposed motion be omitted and the following substituted therefor:—

Hugh D. Lumsden in tendering his resignation as chief engineer of the National Transcontinental Railway has made grave chages touching the expenditure of public moneys in the construction of the said railway, which charges ought, in the public interest, to be thoroughly investigated.

And whereas the cost of the eastern division of the said railway, according to the latest estimates of the government, will be so enormously in excess of the estimates submitted to parliament in 1904 and 1905 as to arouse the most serious alarm and to call for the fullest inquiry.

Therefore be it resolved that a committee of seven members be appointed to investigate the said charges and all other matters connected with or relating to the construction of the eastern division of the said railway and the expenditure of public moneys thereon.

That the said committee shall have power to send for persons, papers and records, to examine witnesses on oath or affirmation and to report from time to time.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). If any further proof were necessary to show the extreme wisdom of this parliament in placing the settlement of disputes as to classification under a tribunal that would not be swayed by political partisanship, the speech of my hon. friend (Mr. Lennox) this afternoon has given that reason. Now I want to compliment my hon. friend on the great study he has given to this case. He has gone into details very minutely that only the hand of an engineer could properly work out, and I congratulate him on collaborating these figures so industriously. But I want to point out just one or two things in which I think he will discover he is in error, though I do not intend to go into the details of classification as he has done. In the first place, I think my hon. friend is altogether wrong when he says that the Board of Arbitration has done no work. The Board of Arbitration has done work and good work. But he must remember this, that under the agreement the third arbitrator was only to be called in when the chief engineers of the company and of the commission respectively could not agree, and since the appointment of the new chief engineer, quite a large number of differences have been settled without the third arbitrator being called in. But the third arbitrator has been called in, I think, in several cases, and a good deal

of work has been done by the Board of Arbitration. Another thing in which my hon. friend I think was in error, was in saying that no exception had ever been taken to any of the Grand Trunk Pacific contracts. I think my hon. friend could not have studied even this 42a closely. I want to call his attention to one item, it is not large, but it proves that exception has been taken to some of the classification on a contract held by the Grand Trunk Pacific. In a letter dated September 14, 1909, to the commissioners, signed by Gordon Grant, engineer, I find this paragraph:

Dear Sir,—With regard to my recent trip of inspection on the Macdonell & O'Brien contract on district 'B,' mile 50 to 150, west of the Quebec bridge, and from Mile 150 to Mile 163 on the Grand Trunk Pacific contract, which contract extends from Mile 150 to Mile 200 west of the Quebec bridge, I may say that the deduction I propose making on the 13 miles of the Grand Trunk Pacific contract for excess overbreak and over-classification will be approximately $15,000.

That is a small amount. The contract was for 13 miles, but it verifies what I thought was the case when I raised the point that exception had been taken to at least one case of over-classification on a contract held by the Grand Trunk Pacific.

Mr. LENNOX. What I said was that I had not heard that Mr. Woods had taken exception, and that I would be surprised if he had done so. I knew perfectly well about the item that my hon. friend is dealing with.

Mr. GRAHAM. That may have been what was in my hon. friend's mind, but that is not the impression that I, or the House, received, or that, I think the unrevised 'Hansard' will show. Now, the whole question comes down to this, after all my friend has said: Are the people of Canada getting value for the money expended on the Transcontinental railway?

Some hon. MEMBERS. No, no.

Mr. GRAHAM. It is a good thing that hon. gentlemen on the left of Mr. Speaker are not the people of Canada, nor the voice of the people of Canada, because this matter of the cost of the Transcontinental railway has been threshed out thoroughly at least on one occasion before the people, and they have said that they want this road constructed, even at the additional cost, and my hon. friends have put it as high as they possibly could. Just let me for a moment put on record the comparative cost of railways in some parts of the world. While I am not doing this as a justification of the cost of the Transcontinental railway, I want to point out that when hon. gentlemen go into hysterics about the proposed cost of this line from Moncton to Winnipeg they certainly have not studied the construction of railways in other lands, or even on this continent, because, while there is some difference, there is not any greater difference than the difference in the conditions existing a few years ago and at the present time would warrant. The cost per mile of building railways is as follows:

	Cost per mile.
South Australia	$ 37,250
New South Wales	64,365
Germany	107,272
France	126,350
Italy	109,560
Russia	83,080
Austria Hungary	87,816
Great Britain	272,291
United States	58,664
Canada as a whole	55,638
Intercolonial Railway	62,885

This road is estimated, if I remember the figures correctly, at $63,500 a mile from Moncton to Winnipeg. Taking into consideration the cost of everything that goes into the construction of the railway, taking into consideration that for a great distance it is very difficult construction, I say that even at the figures given by my hon. friend, the Transcontinental railway will not cost more than the average cost of railways in the Dominion of Canada, present conditions considered.

But, Sir, my hon. friend referred to a statement about $13,000,000. I shall not detain the House to refute that, because he refuted it himself before he got through, saying that he understood it perfectly but that the people at large would not. I have great faith in the judgment of the people at large and I think they will understand it fully as well as my hon. friend. Let me point out one or two things more. What the people want to know is: Are we getting value for our money? My hon. friend says we are not getting value for our money because the road is costing more than the original estimate. In fact, his charges would resolve themselves into perhaps three divisions; first, an attack on the chairman of the Transcontinental Railway Commission, Mr. Parent; second, an attack on the work of the chief engineer, Mr. Lumsden, and thirdly, an attack on the construction of the road implying dishonesty, or collusion, between the contractors, the chief engineer, the commission and the government. So that nobody might escape, I think he covered the ground pretty well in his own mind. I want to go over the history of this situation, not with reference to classification particularly, but rather having in view the resolution before the House which the remarks of my hon. friend did not relate to very much. What is the method adopted by any railway company

or by this commission? They have a chief engineer and they have under him a staff of engineers. The Prime Minister of Canada knows no more about classification than the hon. gentleman who has just sat down, but he knows just as much. These men on the commission, the members of the various departments of the government. the men in business on the other side of the House, the great railway companies, depend absolutely for their estimates on the engineers they engage to give them these estimates. I admit at once that the original estimate made for the Transcontinental' railway has been largely exceeded. I took up some of the time of the House last session in pointing out what to me seemed good reasons why this increase existed and how it was brought about. I shall not detain the House again, but just let me impress this on the hon. gentleman and on the country that the road to be constructed, known as the Transcontinental railway, cannot be compared with the original construction of any other line on this continent. It can be compared with the present state of other lines that have been practically rebuilt, regraded and reballasted, because when the Grand Trunk Pacific starts to haul traffic in a completed state it will be a line that has not been equalled in its original construction by any other line on the continent of America. That means something, and it is fair to compare the Transcontinental railway, when it begins operations, with other lines that have reduced their grades, reduced their curvatures, straightened their tracks and rebuilt their bridges all over the country. But we depend absolutely on the engineers. If they have made an error in their estimate we accept the situation and do the best we can with it, but that does not affect the people. If the people are getting a line of railway that is worth the money they are putting into it they will be satisfied.

Just let me go over the history of the case leading up to the resignation of Mr. Lumsden, because that is the matter really before the House. In the first place, it was anticipated by this parliament—every man on this side of the House anticipated it as every hon. gentleman on the other side, and I think nobody objected to the proposition —that there would be disagreements as to classification. That opinion was universal, and why?—because such disagreements have occurred between contractors and every company that has ever built a mile of railway in this or any other country. It was common sense to believe that these differences would arise. They have arisen not only in connection with the construction of railways, but they arise in connection with the construction of all great public works—yes, and works whether they are being carried out by governments, companies, or private individuals. Well, parliament, in its wisdom, knowing that these differences would arise, devised a means by which they could be settled, and that means was through a board of arbitration. That was the wise way. I might have a very strange view of the question. Possibly I might be a political partisan and it would not do to leave it to me. I might see something in it that would be a very great temptation to me, and I might say the same thing with reference to hon. gentlemen on the other side of the House. Possibly some of them might be as weak in that respect as I. Parliament thought that the safest thing to do on behalf of the whole country, was to take it away from us and give it to a board of arbitration. That was consented to, I believe, by every hon. member on both sides of the House. Let us see what was the basis of the specifications. After a good deal of discussion between Mr. Wood, representing the Grand Trunk Pacific, and Mr. Butler, representing the Transcontinental Commission, than whom there is no abler man on this continent, it was decided that the specifications for this work should be based on the report of the American Railway and Engineering and Maintenance of Way Association. After studying the whole question and after getting the best reports of engineers for years, they devised the specification, and the Transcontinental Commission through Mr. Butler and the Grand Trunk Pacific through Mr. Woods accepted this as the basis of the specification throughout the whole line, not only on the eastern division but on the western division. There was, I believe, one exception made, and that was with reference to the cement and concrete work, and originally the specifications for the cement and concrete work were the specifications of Mr. Butler himself, accepted in toto by the Grand Trunk Pacific. Knowing Mr. Butler as I do, and having had business relations with him for some years, I think that is a sufficient answer to anything that could be said as to the specifications in their entirety for the work to be done on the Grand Trunk Pacific and the National Transcontinental. At the risk of wearying the House I want to put on record some of the provisions made in these specifications. The contracts were under the chief engineer. No matter what my hon. friend (Mr. Lennox) may say, the chief engineer of the Transcontinental Commission had full responsibility for the carrying out of every contract on the eastern division, and no money could be paid without his sanction and no work could be accepted without his certificate. I want to read the interpretation given of the word ' work ' and of the word ' engineer,' so that we can see where we are at, and that we may know what

great authority the chief engineer had. Now, the word 'work' is interpreted in the agreement to mean:

Meaning of word 'Work.'

1. In this agreement the word 'work' or 'works' shall, unless the context requires a different meaning, mean the whole of the work and materials, matters and things required to be done, furnished and performed by the contractor under this contract.

The term 'engineer' or 'chief engineer' is interpreted to mean:

Engineer, Chief Engineer, defined.

2. The words 'engineer' or 'chief engineer' when used in this agreement or in the specifications hereunto annexed, shall mean the chief engineer of the commissioners, for the time being, acting as such either directly or through the assistant chief engineer, district engineer, division engineer, resident engineer or inspector, having immediate charge of a portion of the works limited by the particular duties entrusted to him. All instructions and directions or certificates given or decisions made, by any one acting under the authority of the chief engineer shall be subject to his approval and may be cancelled, altered, modified and changed as he may see fit. In all cases where the contractor or the commissioners are dissatisfied with the decision of the engineer or inspector in immediate charge of the work, an appeal to the chief engineer may be made.

Section 15 of the agreement says:

15. The engineer shall be the sole judge of work and material in respect of both quantity and quality, and his decision on all questions in dispute with regard to work or material shall be final, and no works or extra or additional works or changes shall be deemed to have been executed, nor shall the contractor be entitled to payment for the same, unless the same shall have been executed to the satisfaction of the engineer, as evidenced by his certificate in writing, which certificate shall be a condition precedent to the right of the contractor to be paid therefor.

Mr. J. HAGGART. May I ask whether the specifications were prepared before the quantities were taken out by the engineers on which the tenders were received?

Mr. GRAHAM. These were the original specifications made before any contract was let.

Mr. J. HAGGART. I understand that, but what I want to know is whether the quantities estimated by the engineers of the department were taken out on the classification that was prepared and agreed to by Mr. Butler and the engineers.

Mr. GRAHAM. In every case they were based I think on the specification thus prepared because these were the specifications agred to by both parties.

Mr. J. HAGGART. In every case?

Mr. GRAHAM. I think so, that is my information. Now, section 34 of that same agreement I shall read, and this is a point that will be of interest as I go further on:

34. Cash payments equal to about ninety per cent of the value of the work done, approximately made up from returns of progress measurements and computed at the prices agreed upon, or determined under the provisions of this agreement, will be made to the contractor monthly, on the written certificate of the engineer that the work for, or on account of which, the certificate is granted has been duly executed to his satisfaction, and stating the value of such work computed as mentioned, and upon approval of such certificate by the commissioners; and the said certificate and such approval thereof shall be a condition precedent to the right of the contractor to be paid the said ninety per cent or any part thereof. The remaining ten per cent shall be retained until the final completion of the whole work to the satisfaction of the chief engineer for the time being having control over the work; and within two months after such completion the remaining ten per cent will be paid; and the written certificate of the engineer, certifying to the final completion of the said works to his satisfaction, shall be a condition precedent to the right of the contractor to receive or to be paid the said remaining ten per cent, or any part thereof; provided, however, that if and when it is shown by the contractor to the satisfaction of the commissioners that the application of the said ten per cent or any part thereof will enable or hasten the completion of the work, and that the same will be so applied; and if and when, in the opinion of the commissioners it appears that the deposit made by the contractor as security for the performance of this contract is ample security for the completion of the work, the said ten per cent or any part thereof may be released by the commissioners in such instalments as may from time to time be agreed upon. The commissioners shall be at liberty from time to time to take over as completed any portion of the work certified to by the engineer as having been completed, and the contractor shall, thereupon, be entitled to payment in full for the work so completed in like manner, and subject to the same conditions, as if the said completed portion comprised the whole work to be done. The commissioners shall be entitled from time to time to the use of any portion of the line of railway not theretofore accepted as completed under the terms hereof for the transportation of all steel superstructures or other materials, and no such use of any part of the said railway shall be deemed to be any acceptance or taking possession thereof.

Section 39 is along the same lines and I propose to read it to show the powers held by the chief engineer and the absolute dependence of the public upon his report in every case:

39. The progress measurements and progress certificates shall not in any respect be taken as binding upon the commissioners, or as

final measurements or as fixing final amounts; they are to be subject to the revision of the engineer in making up his final certificate, and they shall not in any respect be taken as an acceptance of the work or release of the contractor from responsibility in respect thereof, but he shall at the conclusion of the works deliver over the same in good order, according to the true intent and meaning of this agreement.

Without going into any further explanation I would like to ask my hon. friend (Mr. Lennox), if he had been the Prime Minister of Canada, if he had been the chairman of the Transcontinental Railway Commission, if he had been the Minister of Railways, what other protection could he have thought of to place in an agreement than is placed in this agreement. Is it not full, ample and secure so far as the people of Canada are concerned. And Sir, if there is any deviation from the terms of that agreement we will be able to find that out. But as to making provisions for the protection of the people of Canada I say that that protection was made as ample for the people of Canada as is made by any company on the face of the earth for its protection against contractors. Differences were anticipated as I pointed out and the parliament of Canada wisely provided that these differences should be decided not by partisans or by members of this House who might have a political interest in them, but by an independent board, one member of it to be the chief engineer of the Transcontinental Commission. Surely the chief engineer of the Transcontinental Commission ought to be able to look after the commissioners' side which is the public side, ought to be able to defend his own work, the work of which he has approved in the months past, and be able to give reasons for the decisions arrived at. On the other hand, the chief engineer of the Grand Trunk Pacific ought to be able to defend the contention of the Grand Trunk Pacific in placing their objections to any part of the work. These two of course would each be prejudiced in favour of his own view, and a third was to be appointed to decide when these two did not agree. As a matter of fact, under the agreement, the third was not to have a voice until the other two disagreed. It was thought that when the Grand Trunk Pacific Company had to pay the interest and bear the burden of the cost of this line, this was ample protection that they would do their utmost to see that the cost was not too great. It was thought that the chief engineer of the Transcontinental Commission would look after the interests of the commission and the people, as was his duty, and if these two agreed on a certain specification I say now in the face of what my hon. friends say that the people of Canada would have no cause to object to the decision they arrived at, because, in all probability, it would be just in every respect and a fair compromise between the two extreme opinions they held. If they could not agree, a third was to be appointed, and to follow the line of my hon. friend who has just spoken, in order that the public may understand as he understands, I propose to read to the House a couple of clauses of the agreement made and now forming part of the statute of 1903 in reference to this matter. Section 4 of the said agreement reads:

4. The said western division is further, for convenient reference, considered as being divided into two sections, one extending from the eastern terminus thereof westerly, to the eastern limit of the Rocky mountains (herein designated as the 'Prairie section,') and the other extending westerly from the said eastern limit of the Rocky mountains to the western terminus of the said division (herein designated as the Mountain section). The said eastern limit of the Rocky mountains shall be established after the location of the line, and after actual surveys have determined the profile thereof upon such location, and shall be fixed and agreed upon by the chief engineer of the company and the chief engineer of the government as the result of such surveys, having regard to the physical features of the country, and to the cost of construction, and endeavouring as fairly as possible to determine where the more easy and less expensive work characteristic of prairie construction comes to an end, and the more difficult and expensive work characteristic of mountain construction begins, and, in case the said engineers shall differ, the question shall be determined by the said engineers and a third arbitrator, to be chosen by them, and, in the event of their inability to agree on a third arbitrator, the chief justice of the Supreme Court of Canada may appoint the said third arbitrator, and the decision of the majority shall be final.

I admit that that refers to the western section, but when I read section 7 of the same agreement hon. gentlemen will see that it refers to the section I have already read and makes the clause referring to arbitration in the western division applicable to the eastern section. Clause 7 of the said agreement reads as follows:

7. In order to insure, for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, it is hereby agreed that the specifications for the construction of the eastern division shall be submitted to, and approved of, by the company before the commencement of the work, and that the said work shall be done according to the said specifications and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and the chief engineer

of the company, and, in the event of differences as to the specifications, or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator, to be chosen in the manner provided in paragraph four of this agreement.

That was the agreement passed upon by parliament; that is the section under which the work was undertaken, that is the agreement under which the contract was made by which the Grand Trunk Pacific undertook to operate the eastern division of the great Transcontinental railway to be constructed by the government. That is the agreement that this parliament made and now hon. gentlemen ask us to depart from that agreement practically and take it from the hands of the body they themselves have named to arbitrate these difficulties and to give it into the hands of a committee composed of several men from this side of the House and several from the other side.

Mr. R. L. BORDEN. On what language does the hon. gentleman rely for that argument?

Mr. GRAHAM. My hon. friend has the amendment, I have not.

Mr. R. L. BORDEN. I mean on what language in the statute does he rely as taking away any rights parliament had before, any rights of investigation.

Mr. GRAHAM. That question is clear, the other was not. It can take away no rights from parliament; parliament is paramount and supreme. But this parliament being paramount and supreme, devised a scheme—and it forms part of the contract—by which these differences should be adjusted. Parliament would not be acting wisely if, in its supreme power, it proceeded at this stage of the contract to undertake the settlement of these differences which they have given to another tribunal.

Mr. R. L. BORDEN. If there had not been any such arbitration agreement the matters in question would have been decided in the Exchequer Court in the ordinary course. Does the hon. gentleman argue that the substitution of an arbitration agreement places parliament in any different position from that which it would have occupied if the original remedy had been left?

Mr. GRAHAM. To a certain extent it does.

Mr. R. L. BORDEN. In what respect?

Mr. GRAHAM. Under the circumstances outlined by my hon. friend parliament would have said: We will leave it to the Exchequer Court. Parliament has said they will not leave it to the Exchequer Court but have devised another means of adjustment and have consented to it. Parliament having consented to the other means ought to adhere to its own arrangement which forms part of an agreement and contract with the Grand Trunk Pacific Company.

Mr. R. L. BORDEN. On what principle does my hon. friend argue that the substitution of one tribunal for another takes away any rights from this parliament in respect of investigation?

Mr. GRAHAM. I have tried to explain to my hon. friend that this parliament is paramount and it can exercise its rights now if it likes. Parliament exercised its right to name an independent tribunal, it exercised its right fully.

Mr. BARKER. Then why has the right hon. gentleman moved his resolution?

Mr. GRAHAM. The right hon. gentleman has moved his resolution to inquire into a charge made by the chief engineer against some of his subordinates, he not having named them or named the crime of which he says they are guilty. But let me follow the hon. gentleman on. If this case were in arbitration or in the Exchequer Court today, being decided, would hon. gentlemen think they should investigate the evidence being taken before the Exchequer Court?

Sir WILFRID LAURIER. Hear, hear.

Mr. GRAHAM. Take it on that ground. This case is now under arbitration.

Mr. R. L. BORDEN. The point the hon. gentleman is now referring to is a question between the Grand Trunk Pacific and the government, but there is another question altogether and that is the question between the government and the people or the government and parliament representing the people. I come back to my starting point.

Mr. GRAHAM. My hon. friend the leader of the opposition has evaded my question. I asked him if, taking his view, this case were before the Exchequer Court for investigation and adjudication, he would think it advisable that a committee of this House should undertake to go through the evidence and form a decision on the very case submitted to another tribunal.

Mr. R. L. BORDEN. With an expenditure so outrageously in excess of the government estimate in 1903-04, I would say at once that parliament ought to do it.

Mr. GRAHAM. I am glad to get that reply because it may come in useful at some other time.

Mr. R. L. BORDEN. My hon. friend is perfectly welcome to it.

Mr. GRAHAM. Let me emphasize this point again. It was not the Prime Min-

ister, or the chairman of the Transcontinental Commission, or the chief engineer, but this parliament which decided that this case should go before a tribunal outside the Exchequer Court and outside of parliament. Parliament passed a statute, they made it part of the contract that this tribunal was to be formed and how it was to be formed, to decide on such questions as those now under discussion. Having exercised its right to take these matters from the Exchequer Court to another tribunal, parliament ought to leave them where it placed them after due thought and consideration.

Mr. MEIGHEN. Would the hon. gentleman explain how the Transcontinental Commissioners can be said to represent the people as against the railway company in a case of over-classification, and illustrate his explanation by an example.

Mr. GRAHAM. I submit that that is a little out of my line of argument, but I shall try to satisfy my hon. friend. In the first place the commission represents this parliament and this parliament represents the Canadian people. This parliament said to the commission selected by it: go on and build this railway; a chief engineer is to be appointed, and if there be any difference or dispute between the Grand Trunk Pacific and the Transcontinental Commission, then a tribunal must be formed to consist of our chief engineer, who is the engineer of the people, and the engineer of the Grand Trunk Pacific, and these two shall select a third; or if they cannot agree, then the Chief Justice of Canada shall select a third on behalf of the people.

Mr. MEIGHEN. Will the hon. minister give us an example to show how the chief engineer of the Transcontinental Commission can represent the people in a dispute with the Grand Trunk Pacific regarding over-classification?

Mr. GRAHAM. I have indicated as clearly as I can how the people are protected, and I think my view will be evident to my hon. friend if he will only study the situation a moment. Let me now go on with the history of the case. On June 29, 1906, a joint conference was held in Ottawa by the commissioners, Mr. H. D. Lumsden, chief engineer, Mr. Morse, Mr. Kelliher, chief engineer, and Mr. H. A. Woods, assistant chief engineer, and Mr. Morse submitted a memorandum as follows:

Memo. from Mr. Morse.

Grand Trunk Pacific to appoint an engineer on each district as it goes to construction.

Whenever a district goes to construction, the Commission to supply the Grand Trunk Pacific at their Montreal office, with the two prints of the map and profiles of final location. Map to show contour lines and all other usual data, profiles to show approximate quantities in each cut and film with classification and all other information usually shown on a final location profile.

Engineer for Commission to supply Grand Trunk Pacific engineer, at their Montreal office, with copies of all cross-section notes, &c., necessary to compute quantities for progress and final estimates.

The relative district engineers to discuss fully any matter pertaining to the economic and efficient construction of the line, its buildings, structures and yards. In the event of an agreement not being arrived at, all matters to be referred, through the relative chief engineers, to the general manager of the Grand Trunk Pacific, and the Commission for decision by them.

The Grand Trunk Pacific chief engineer, or his representative, to have facilities for examining all estimates, vouchers, &c., so he will be able to advise his company and ensure the least delay to the approval of the Grand Trunk Pacific.

'On August 17, 1906, the general manager of the Grand Trunk Pacific, wrote to the chairman in part as follows:

Referring to joint conference between yourself, the Commissioners, chief engineer H. D. Lumsden, chief engineer B. B. Kelliher, assistant chief engineer H. A. Woods, and myself in your Board room on June 29, relative to a joint supervision of the eastern division at which time we left a memorandum giving roughly the manner in which we suggested this should be carried on, and which suggestion was approved of by you and your colleagues, and at which time you were kind enough to say that you would have prepared certain records and data for us, and that the arrangement would be put into effect upon my writing you.

I will say I presume that by now the information referred to in the memorandum I left you is ready to be placed in the hands of our engineering department. We are also ready to take up the work of joint supervision, and I herewith repeat the request presented to you in memorandum, which is made in accordance with section 7 of the agreement of July, 1903, which provides for the joint superintendence, inspection and acceptance of the work on the eastern division of the National Transcontinental railway by the chief engineers of the government and the railway company.

The personnel of our engineering department having connection with this joint supervision will be Mr. B. B. Kelliher, chief engineer; Mr. H. A. Woods, assistant chief engineer; Mr. W. E. Mann, district engineer; Mr. John Armstrong, district engineer.

It is the intention that Mr. Woods will devote almost exclusively to this portion of the line, and Messrs. Mann and Armstrong will at the present be assigned by you to sections 'F' and 'B.'

'On August 27, 1906, the commissioners passed a resolution as follows:

Hon. S. N. Parent in the chair.

Correspondence in regard to the request of the vice-president and general manager of the Grand Trunk Pacific Railway Company for certain information to enable that company to, jointly with the Commissioners, supervise the construction of the eastern division of the National Transcontinental Railway, was submitted, and it was

'Resolved that the information requested be furnished to the Grand Trunk Pacific Railway Company, and that their engineer assigned to the eastern division be given access to the records of the commission's district engineers, so as to enable them to become acquainted with the situation.'

The following was also passed on the 25th day of August, 1906:

Resolved that the chief or acting chief engineer be authorized to consult from time to time with the chief engineer or assistant chief engineer of the Grand Trunk Pacific Railway Company, in compliance with clause No. 7 of the schedule of the National Transcontinental Railway Act.

On October 3, 1907, Mr. Morse, in a letter to the chairman, requested that copies of all cross-section notes governing payments that had been made be sent to him, and that hereafter this information be sent monthly together with a copy of the detailed monthly estimates.

The chief engineer, Mr. Lumsden, on October 9, 1907, wrote the board stating that he had instructed district engineers, where construction is in progress, to make duplicate copies of cross-section notes for use of the Grand Trunk Pacific engineers, and discuss fully with them any matters pertaining to the economic and efficient construction of the line, and to give them every facility to examine the estimates, etc.; and further, that copies of such had been sent to the Grand Trunk Pacific as soon as received.

Now in so far as carrying out the arrangement for joint supervision, in so far as carrying out the instructioins of parliament were concerned, everything was done by the government that could have been done by any incorporated company to protect itself

Now, let me turn to some points in the history of the case. As my hon. friend (Mr. Lennox) pointed out, Hogan & MacDonell got the first contract west of Quebec, 150 miles. This was assigned to Macdonell & O'Brien, who assigned fifty miles to the Davis Company. McArthur got the section from Winnipeg to Superior Junction, approximately 245 miles. The work of construction was begun. I find that Mr. Woods, acting chief engineer of the Grand Trunk Pacific, wrote letters on October 7, October 8 and November 4, 1907, discussing the question of classification and objecting to certain things, some on general principles, and some in more detail. I desire to read a part of one of his letters. This was fully dealt with in the Hodgins investigation, but I wish to call the attention of the House to it again, as it forms part of the present record, and to point out one or two things in connection with it to show that Mr. Woods was altogether in error in the assertion he made. I quote from the letter of October 7, 1907:

As before stated, these over-classifications are not made through error in judgment nor upon the decision of the resident or division engineers, who are fully acquainted with the character of the work, but by arbitrary orders from their superior. To such classification as mentioned above, increasing the cost of the work to such an alarming extent, we most seriously protest and respectfully request that either yourself or the assistant chief engineer visit the work and pass judgment upon the classification as made. Please note that the percentages given above indicate the work done to August 31. We are not advised what the September estimate will be.

Now, the point I wish to refer to in that is that of engineers not being allowed to go on their own initiative or their own knowledge. After I received this return, No. 42a, I sent this message from Brockville to the Secretary of the Transcontinental Commission:

In a letter of H. A. Woods, assistant chief engineer, Grand Trunk Pacific, dated October 7th, 1907, last paragraph, I find these words: As before stated, these over-classifications are not made through error in judgment nor upon the decision of the resident or division engineers but by arbitrary orders from their superiors. If you have any idea as to his meaning, kindly explain.

In reply to that, I received a letter calling my attention to certain evidence given in the Hodgins investigation, pages 398, 399, 400 and 401. You will find there certain statements over the name of one of the divisional engineers. And, in a letter signed by Mr. Lumsden himself as chief engineer (page 402) occurs the following:

An interview was held on the car after our return at which ourselves, engineers and contractors were present, and, from the conversation which took place and the statements of Mr. Doucet, Messrs. Grant, Heustis and Hervey, confirmed by letters from Messrs. Bourgeois, Matthews and Girdwood, it appears Mr. Woods must have been in error when he stated that 'the specification had been entirely ignored and an excessive allowance made, not by reason of an error in the judgment, but, as I understand, by special instructions from the assistant district engineer, or, as stated by him in the latter part of his letter, by arbitrary orders from their superiors.

Thus we see that they got together and, after a full conversation and discussion of this point, Mr. Lumsden came to the conclusion—as, I think, was pointed out in the

evidence in the Hodgins investigation—that, whatever Mr. Woods may have thought at that time, he was absolutely incorrect in his statement that these engineers were influenced by their superiors in making their report.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

SECOND READINGS.

Bill (No. 110) respecting the Algoma Central and Hudson Bay Railway Company.—Mr. Tolmie.

Bill (No. 111) respecting the Dominion Millers' Association.—Mr. Harris.

Bill (No. 112) to incorporate the Independent Order of Rechabites.—Mr. Verville.

Bill (No. 113) respecting the Manitoulin and North Shore Railway Company.—Mr. Tolmie.

Bill (No. 114) respecting the Richelieu and Ontario Navigation Company.—Mr. Forget.

Bill (No. 115) to incorporate the St. Lawrence Power Transmission Company, Limited.—Mr. Pardee.

Bill (No. 116) to incorporate the Toronto and Eastern Railway Company.—Mr. Fowke.

THIRD READING.

Bill (No. 33) to incorporate the Northern Mortgage Company of Canada.—Mr. A. Haggart.

NATIONAL TRANSCONTINENTAL RAILWAY—CLASSIFICATION OF MATERIAL.

House resumed debate on proposed motion of Sir Wilfrid Laurier for the appointment of a special committee, and the amendment of Mr. Lennox thereto.

Mr. GRAHAM. When the hour of six o'clock arrived, I had been dealing with certain phases of the contract made with the Grand Trunk Pacific, the specifications, the precautions taken by the government in every detail for the protection of the people of Canada, including a joint supervision by the company and by the commissioners of the Transcontinental railway on behalf of the government. The hon. member for South Simcoe (Mr. Lennox), in his remarks, left the inference that there might be collusion between the Grand Trunk Pacific Company and the commission to allow the cost to be very high, for the benefit of somebody not named. Well, Sir, if my hon. friend were in my position for two or three weeks, I think he would tell the country that there was absolutely no foundation, near or remote, for any such suggestion or insinuation. My experience with the Grand Trunk Pacific Company, and with all railway companies, is that they are quite prepared to take all they can get, and it is no easy task, I assure my hon. friend, to deal with any railway company on behalf of the people of Canada, and give as little as possible to the railway, and guard at every point possible the interests of the public. Railway compaines engage the best men that they can get, and unlike parliaments, they are not bound by any salary limit, they pay as high a salary as is necessary to get the best men, either at home or abroad, legal or business men. It is with these men that the members of the government and their officials have to do business, it is these men we have to meet day after day, and do what we think is right in the interests of the people and not yield one iota that we think is not fair. Now, I want again to impress the House that there is not the remotest foundation for the insinuation; no such idea ever percolated through the mind of any member of the government or any person, that the Grand Trunk Pacific Company and the government are in collusion, or that the Grand Trunk Pacific Company is willing to allow a dollar to be added to the cost of the construction of this road.

Reference was also made to the fact, and it was perhaps the most lengthy part of my hon. friend's remarks, that when contracts were let, the final working out of these contracts did not always substantiate the contention that they had been awarded to the lowest tenderer. To those who have not had some business experience along those lines, that will appear somewhat strong. However, the method adopted by large companies, the method adopted by the best engineers in the world, I think, now, is to let contracts on what is known as schedule rates. They only approximate the cost, but they put a certain price on every kind of material, so much for earth, so much for loose rock, and so much for solid rock; and although the approximation may seem to a layman very far removed from the reality, the fact remains that the country or the company only pays for the material taken out, and that at the prices named for that material. I discussed the question a good deal with some of my engineers, and other engineers, and they are strongly of the opinion that the fair way to let these contracts, not only on this kind of work, but in all great works, is by schedule rate; for although they may differ from the approximate cost first worked out, as the quantities may vary somewhat, they do not differ much from the rate named in the contract. These contracts were let in the ordinary way, with the approval of the chief engineer who, with his staff, had the

approximate quantities moneyed out, and they were let to the lowest tenderer in every case.

Now, I come to a point in the discussion which my hon. friend touched upon, and I do not want to be misunderstood at all. We came to a point where the Grand Trunk Pacific itself became a contractor. I discussed this question with Mr. Morse, then general manager, not before they became contractors, because, if I remember correctly, that was before I became a member of the government. But, in discussing the question of the work with him one day, I called his attention to the fact that they had become contractors for the construction of this line. His reason to me was that they had become contractors so that in every case they would tender on work and be prepared to take it at what they thought was a fair value. Any contractor who would accept work at a less rate than the Grand Trunk Pacific offered to do it for would afford fair evidence to the Grand Trunk Pacific Railway Company that they were getting the work done at a proper value. That was his reason as placed very strongly before me, and I give it to the House and the country. The fact remains that the Grand Trunk Pacific had become contractors. Now, I want to appeal to business men as to the situation as it then struck me and as it still strikes me. Here we found a company that not only was to be the lessee of the line when constructed and to pay the interest on it, but it was also to be a contracting company, assisting in the building of a line and in addition it was to be the inspector not only of its own work but the inspector of the work of competing contractors. Under these circumstances, a new condition arose altogether. If the Grand Trunk Pacific had not become contractors then I believe there would have been no occasion for the next step that was taken, and was rightly taken as a business step in fairness to all parties. These new conditions having arisen, one can readily understand that the contractors said: We are not only in competition with the Grand Trunk Pacific but we are subjected to the inspection of our competitors as well as that of the government. In order to make it fairer, I and the commissioners too said to the Grand Trunk Pacific: There ought to be some basis arrived at by which you will make the complaints so that no unfairness or injustice may be done to any person. You ought to make your complaints as to classification promptly, you ought to file them so that they can be investigated at once, if necessary, and other contractors besides yourself can settle with their subcontractors without being hindered. If that position were not taken I again appeal to business men if the Grand Trunk Pacific would not have been in the position of being able to hold up every bit of work on the eastern part of the Transcontinental railway. By refusing or neglecting to inspect or pass upon work they could have made it impossible for any other contractor to complete any work that he had undertaken. That would not have been in the interest of the work, that would not have been in the interest of the country and it certainly would have been a great injustice to the men in the Dominion of Canada who invest their money in contracting. So, we did have a conference—nothing secret about the conference. My hon. friend seemed to rather ridicule the idea. It was a straight business proposition, above board and nothing whatever secret about it. We did have a conference, and at that conference, if I remember correctly, were Mr. Hays, possibly his engineer, Mr. Parent, I think Mr. Biggar, their solicitor, and one or two members of the government, including myself. After a good deal of discussion the situation as it existed was pointed out, and I take the full responsibility for pointing it out. I said: We ought to come to some arrangement by which these complaints as to classification, or as to anything else, shall be made promptly and so that in no case can a contractor be held up by the Grand Trunk Pacific as being an interested party, as contractors as well as inspectors. After the discussion on January 10, 1908, this memorandum was drawn up:

Monthly estimates for contractors shall be submitted promptly from time to time by the chief engineer of the commissioners to the company's assistant chief engineer at Montreal for approval. If he has any objection to such estimates he shall promptly file the same with the chief engineer of the commissioners, and any objections from time to time filed shall thereupon be considered, and, if possible, determined by the said engineers, and in case of their failure to agree, may then or at any time before or at the time of the final payment, at the option of either party, be considered and determined by arbitration as provided in the agreement of the 29th July, 1903, but in no case shall the payment of monthly estimates be delayed except with the consent of the commissioners.

In case the chief engineer of the commissioners and the assistant chief engineer of the company disagree as to the final payment, the same shall be withheld until the matter is determined by arbitration, as provided in the said agreement of 29th July, 1903.

This memorandum was initialled by Mr. C. M. Hays, Mr. Lumsden and the Hon. Mr. Parent. After this memorandum was agreed to, the progress estimates were sent to the Grand Trunk Pacific at Montreal, and objections were subsequently filed by Mr. Woods on behalf of the company as to classifications in districts 'B' and 'F', and 'over-break' in the latter district.

After this memorandum was agreed to, progress estimates were sent to Montreal and objections were subsequently filed by Mr. Wood on behalf of the company to classifications in districts 'B' and 'F,' and to the over-break in the latter district. They adopted that memorandum, and I want again to call the attention of the business men of the House to the absolute fairness of the arrangement as to the protection of all parties that it afforded. That did not look, as my hon. friend suggested, as if the government were in collusion with the Grand Trunk Pacific. If such had been the case no such memorandum would have been drawn up, because we would have done just what the Grand Trunk Pacific wanted, or they would have done just what we wanted. But in order that all parties might get fair play this memorandum was drawn up, agreed to and the objections made to the work were afterwards made according to that agreement.

A good deal has been said as to classification. I do not intend to go into the classification in detail, but only to mention it in passing. In January, 1908, questions having arisen as to the methods of work, and after Mr. Lumsden had made a journey over the sections of the railway, he gave his interpretation of the specifications to the various engineers. Had Mr. Lumsden given that interpretation without the concurrence of the Grand Trunk Pacific Company we would have said at once that the Grand Trunk Pacific had a right to object, but I find that the interpretation given by Mr. Lumsden was concurred in by the Grand Trunk Pacific engineer, although in fairness he pointed out later on that the interpretation given by Mr. Lumsden was not adhered to by the engineers, and that largely is the question before the arbitrators now, as both parties were agreed absolutely to the interpretation. With the permission of the House I will read the correspondence in reference to this so that there will be no mistake. On February 14, 1908, the following letter was written to Mr. Lumsden:

RE-CLASSIFICATION.

Dear Sir,—Referring to correspondence and conversation on this subject, I understand that you have recently issued instructions to your district engineers relating to same. Will you be good enough to send me a copy of these instructions, so that my assistants may know just what to expect with regard to classification while going over the work.

From reports received from our district engineers on districts 'B' and 'F' we understand that, in their judgment, the work in places is largely over-classified, particularly in borrowed material, where no ledge exists. Would it not also be possible that resident engineers, in returning estimates, should show in cuttings the amount of material found in ledge, also the amount of material classified as solid rock and boulders and what, I understand, you term 'assembled rock.' If this could be done I think it would be of advantage not only to us, but would give you information in your office, which would be of great use to you in questions arising between this company and the commissioners.

H. A. WOODS,
Assistant Chief Engineer.

On February 17, Mr. Lumsden wrote the following letter:

Ottawa, February 17, 1908.

H. A. Woods, Esq.,
Assistant Chief Engineer, G.T.P. Ry.,
Montreal, Que.

Dear Sir,—In reply to yours of the 14th instant I inclose herewith copy of my interpretation of clauses 34, 35 and 36 of our general specifications, with blue print and explanation of same.

I have instructed my engineers as follows:

You will please at once go over these carefully and say whether the classification in your district conforms to such interpretation. If it does not, steps must at once be taken by you to have your division and resident engineers, who are personally acquainted with the work, take up the matter, and as far as now practicable, have an estimate prepared showing the difference such classification would make with that which has heretofore been used by you. In future all classification must be in conformity with my interpretation. Measurements must be made and full notes kept showing such classification on cross-section where rock or other classified material is met with in large quantities, or by measurements made by an assistant of rock, or loose rock in boulders. In short, actual measurements shall be made of all classified material returned, and not by percentages, except in cases where measurements are impracticable in the judgment of the engineer in charge.

I also stated in another letter that it must be understood that actual measurements (a record of which are kept either by cross-sections or measurements) must be made as a rule of all work, and if at any time you find it necessary to put on an extra man for this purpose, you can do so.

Yours truly,
(Sgd.) HUGH D. LUMSDEN,
Chief Engineer.

Here are the specifications:

THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY.

Chief Engineer's Interpretation of Clauses 34, 35 and 36—General Specifications.

Clause 34—Solid Rock Excavation.

'Solid rock excavation will include all rock 'found in ledges or masses of more than one 'cubic yard, which, in the judgment of the 'engineers, may be best removed by blasting.'

I am of the opinion that rock found in ledges or masses as specified must (firstly) be rock, and (secondly) it must be in ledges, conglomerate form (known as plum pudding

stone), boulders or ledge rock displaced (in pieces each exceeding one cubic yard in size), rock assembled, also shale rock, such as in the judgment of the engineer may be best removed by blasting.

I attach a diagram in explanation of the above, which, in my opinion, is all that is included under clause 34—solid rock.

Clause 35—Loose Rock.

'All large stones and boulders measuring 'more than one cubic foot and less than one 'cubic yard, and all loose rock whether in 'situ or otherwise, that may be removed by 'hand, pick or bar, all cemented gravel, in-'durated clay and other materials that can-'not, in the judgment of the engineer, be 'ploughed with a 10-inch grading plough, 'behind a team of six good horses properly 'handled; and without the necessity of blast-'ing, although blasting may be occasionally 'resorted to, shall be classified as loose rock.'

Under this heading I would include:

(1) All large stones and boulders more than one cubic foot and less than one cubic yard:

(2) All loose rock in situ or otherwise that may be removed by hand, pick or bar.

(3) All cemented gravel, indurated clay and other materials that cannot, in the judgment of the engineer, be ploughed with a 10-inch grading plough behind a team of six good horses properly handled, and without the necessity of blasting, although blasting may be occasionally resorted to.

Clause 36—Common Excavation.

'Common excavation will include all earth, 'free gravel or other material of any charac-'ter whatever not classified as solid or loose 'rock.'

(Sgd.) HUGH D. LUMSDEN,
Chief Engineer.

Ottawa, January 14, 1908.

Now here are the interpretations:

On February 20, 1908, Mr. Woods writes this letter:

February 20, 1908.

Mr. HUGH D. LUMSDEN,
Chief Engineer, Eastern Division,
National Transcontinental Railway,
Ottawa, Ont.

Dear Sir,—I beg to acknowledge receipt of your favour of the 17th instant, file 7787, giving your interpretation of clauses 34, 35 and 36 of our specifications, with blue prints, and explanation of same, also copy of your instructions to your engineers.

We are quite satisfied with your interpretation of the specifications and with your instructions, which are explicit. I do not know the date of those instructions or when they are supposed to have become effective, but, from reports from my assistants at Winnipeg and Quebec, there does not seem to have been any change in classification of work previously reported, the percentage of classified material being steadily increased.

We are satisfied that on some parts of the line the work previously estimated was not classified according to your recent instructions, being overestimated in both loose and solid rock. The attention of your District Engineers has been called to this fact, but apparently without effect. If your instructions were effective when the January estimates were made we certainly will have to object to the classification as rendered on certain parts of the work.

H. A. WOODS,
Assistant Chief Engineer.

The reason I am reading these in detail is to point this fact out: That when it came time for the carrying out of this in its detail and when difficulties arose the interpretation of the specifications had to be agreed upon. The interpretation by Mr. Lumsden as chief engineer was made, sent to a staff of engineers along the line and was approved by the engineer on behalf of the Grand Trunk Pacific. Therefore up to this point we have the Grand Trunk Pacific and the Transcontinental Commission agreeing on a memoranda as to the method by which they should promptly make their complaints as to the classification, and further, a month later we have them agreeing as to the interpretation of the specifications made by Mr. Lumsden, and therefore any difference as to detail which came after ought to be judged along the line of these two documents. On April the 21st and 23rd, 1908, Mr. Woods for the Grand Trunk Pacific made definite complaint. On April the 24th, the very next day, Mr. Lumsden asks for arbitration on these complaints. He feels that he will not agree with the engineer of the Grand Trunk Pacific and he immediately takes steps under the Act and under the contract and asks for a board of arbitration. So that there may be no mistake, allow me to read the letter written by Mr. Lumsden then chief engineer of the Transcontinental:

Ottawa, April 24, 1908.

The Commissioners of the Transcontinental Railway, Ottawa, Ont.

Sirs,—I beg to submit three letters from Mr. H. A. Woods, assistant chief engineer of the Grand Trunk Pacific Railway, the first dated the 21st instant, in which he takes exception to the classification on about 153 miles of district 'F,' and gives a list of 196 points at which the classification is claimed to be excessive; the second letter, dated the 23rd instant, in which he objects to the classification generally in district 'B,' east of the St. Lawrence river, and especially mentions five cuttings at various points and also refers to the classification in borrow pits between miles 15 and 23; the third letter is dated March 24, and in this he makes a general complaint as to the classification in both districts 'B' and 'F,' but gives no definite points at which these objections are raised.

As he has now taken objection in a definite form to our classification in both districts '. and 'F,' and as, in my opinion, these are questions which it was intended should be settled under the agreement made between

you and the Grand Trunk Pacific on January 10 last, in conformity with clauses 7 and 4, chap. 71, 3 Ed. VII, I am writing Mr. Woods to appoint a day at as early a date as possible where we could have a conference either here or in Montreal so as to arrange dates for arbitrating the points in dispute promptly and for the appointment of the third arbitrator.

HUGH D. LUMSDEN,
Chief Engineer.

So far as Mr. Lumsden is concerned, so far as the commission is concerned, the moment the Grand Trunk Pacific placed these complaints in proper form and made them definitely Mr. Lumsden wrote a letter asking that he and the chief engineer of the Grand Trunk Pacific should meet to go over the matter and if necessary appoint a third arbitrator. Apparently, this not having been done, I find that on May the 11th, the Prime Minister wrote this letter:

Ottawa, May 11, 1908.

Hon. S. W. Parent,
Chairman, Transcontinental Railway Commission, Ottawa.

My Dear Parent,—It is very desirable, in my opinion, that the commission should at once, by formal letter, instruct Mr. Lumsden to proceed with the arbitration contemplated by section 7 of the Transcontinental agreement, and arrange for a conference with the chief engineer of the Grand Trunk Pacific. By so doing, the tribunal, which is to determine the correctness of the engineers' classification would be constituted, and all matters of differences would properly be before them and be dealt with and decided upon by them.

WILFRID LAURIER.

On October 8, 1908, for reasons given in this letter Mr. Lumsden suggested that the chief justice appoint a third arbitrator. I am not going now to enter into any discussion as to the reasons why it seemed difficult to get along with the appointment of the arbitrator; I leave that correspondence to speak for itself. But, Mr. Lumsden in all his correspondence takes the ground strongly that he tried time and again without success to have the chief engineer of the Grand Trunk Pacific agree to a third arbitrator and if necessary proceed with the work of settling these difficulties promptly. On October the 8th, Mr. Lumsden writes:

Ottawa, October 8, 1908.

The Commissioners of the Transcontinental Railway, Ottawa, Ont.

Sirs,—On July 22, last, I wrote to Mr. H. A. Woods, assistant chief engineer of the Grand Trunk Pacific Railway stating that I could not agree with him re classification, and suggesting the names of the following as a third arbitrator under clauses 7 and 4 of the agreement in 3rd Ed. VII, chap. 71.

Henry McLeon, C.E., Ottawa, Ont.
Wm. McCarthy, C. E., Winnipeg, Man.
T. E. Hillman, C.E., Hamilton, Ont.

To this I have had no definite reply, though on July 28, August 18 and September 10, I have asked for same by letter or wire, and verbally on October 5.

I am given to understand that Mr. Morse is at present in the west, but suggest if this matter is not settled immediately after his return, application be made to the Chief Justice of the Supreme Court of Canada to appoint the third arbitrator in accordance with clause 4 of the agreement above referred to, so that disputes may be settled promptly and not held over until the contracts are completed.

HUGH D. LUMSDEN.
Chief Engineer.

Hon. gentlemen will agree with me that Mr. Lumsden urged strongly and did his best to see that that board of arbitration should be formed and that the work of settling any difficulties be proceeded with.

On November 16, after it was suggested that the Chief Justice of the Supreme Court should be requested under the Act to appoint the third arbitrator, the chief engineer of the Grand Trunk Pacific, Mr. Kelliher, suggested the name of Mr. Collingwood Schreiber. On March 16, Mr. Schreiber accepted and was appointed to that position. The terms of the submission are all in that correspondence and I shall simply trouble the House by reading the letter appointing Mr. Schreiber so that there may be no mistake to its contents. That letter is as follows:

Ottawa, March 16. 1909.

Collingwood Schreiber, Esq.,
General Consulting Engineer to the Government, Ottawa, Ont.

Dear Sir,—By clause 7 of the agreement between the government of Canada and the Grand Trunk Pacific Railway Company, dated the 29th July, 1903, being schedule to 3 Edward VII, chapter 71, in regard to the construction of the eastern division, it is provided, that the work shall be done according to the specifications approved of by the Grand Trunk Pacific Railway Company, and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and the chief engineer of the railway company, and in the event of differences as to the specifications, or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator to be chosen by them.

Some such differences having arisen as a result of objections filed by the company, we hereby beg to choose you as third arbitrator for the determination of the questions now in dispute, and on which we have failed to agree after visiting the work, and shall be pleased if you are agreeable to accept the office. In the event of your acceptance, a formal sub-

mission will be prepared and handed to you later.

HUGH D. LUMSDEN,
Chief Engineer, Transcontinental Railway.
B. B. KELLIHER,
Chief Engineer, Grand Trunk Pacific Ry.

I hereby accept the above appointment.
COLLINGWOOD SCHREIBER.

March 22, 1909.

We now come to a point in the discussion of this question where difficulties seemed to arise. It had been a rather strenuous undertaking to get this board of arbitrators formed and if my hon. friend who spoke so strongly this afternoon had been a party to getting it formed he never would have made the insinuation he did this afternoon that there was any chance of collusion by the government with the Grand Trunk Pacific in reference to this board.

I may mention here a certain memorandum of agreement to which my hon. friend referred this afternoon as having been sent by the Grand Trunk Pacific to the commissioners for their signatures. It was quite a lengthy document and purported to be an agreement to be signed by the minister or the commission, I forget which, and already signed by the Grand Trunk officials, pointing out how this work of arbitration was to be carried on. The chairman of the commission declined to sign that memorandum of agreement prepared by the Grand Trunk officials, and said that the work would be carried on under the terms of the statute and the agreement. That was not an agreement, it was a piece of paper on which certain things were written by the Grand Trunk Pacific and signed by them and which they asked to have made an agreement by having attached to it the signature of the government or the Transcontinental Commission, which was never done.

The board went west and started to work, just after Mr. Schreiber's appointment. In a short time they returned from the west, certain objections having been made to their work. I had better leave it to Mr. Lumsden himself to state why he returned and resigned rather than explain, because I wish to be absolutely fair to all concerned in the matter. The board started to work and immediately there were protests from the engineers in charge. I want to ask hon. gentlemen one question. I do not know whether the board of arbitration were carrying out their work properly or not, I am not here to judge, but I ask hon. gentlemen to say, if they were in the position of these engineers—and my remark is fully substantiated by my hon. friend's words this afternoon—whose reputation as engineers, whose characters for honesty, and ability were at stake in this work being performed, if these gentlemen had been in the position of these engineers and thought their work was not being fairly arbitrated upon would they not have done just what the engineers did? I am free to say that I would have done the same thing. Were I in charge of a work and did I believe I had performed the work honestly and when it came to be adjudicated upon by a tribunal appointed by parliament I thought they were not doing me justice or giving me a chance to show my side of the case, I would have appealed to some power to change the mode of procedure. That is what the engineers did. The board as then constituted, returned home and Mr. Lumsden resigned. His letter of resignation is as follows:

Ottawa, June 25, 1909.

Hon. George P. Graham,
Minister of Railways and Canals,
Ottawa, Ont.

Sir,—Herewith I beg to inclose copy of a letter written by me to-day to the Commissioners of the Transcontinental and for the reasons therein mentioned, I beg to resign my position as chief engineer of the Transcontinental Railway, and trust that I may be relieved of the duties connected therewith at as early a date as may be convenient.

HUGH D. LUMSDEN,
Chief Engineer.

Then Mr. Lumsden wrote the letter giving his reasons, which was read this afternoon by the Prime Minister, and I shall not detain the House by reading it again. He added to that letter in which he said certain things about his officials, another letter dated June 26, 1909, as follows:

Ottawa, June 26, 1909.

The Commissioners of the Transcontinental Railway, Ottawa, Ont.

Dear Sirs,—Referring to my letter of yesterday wherein I stated that I have lost confidence in the engineering staff, I beg to state that this does not apply to the whole staff, but applies only to a portion of the staff who were responsible for the measurement, classification, supervision and inspection of considerable portions in district 'B' and east of Rennie crossing in district 'F' lately gone over by me.

HUGH D. LUMSDEN.

P.S.—In order to make the matter clear, I may say I assume my resignation as chief engineer also carries with it my resignation as arbitrator in matters of dispute with the Grand Trunk Pacific Railway Company, but as there is a doubt raised by you, I also resign as arbitrator.

HUGH D. LUMSDEN,

In order to have the record complete I shall insert my replies to these two letters. They are as follows:

Ottawa, June 30, 1909.

Hugh D. Lumsden, Esq.,
Chief Engineer, T. C. Ry. Commission,
Ottawa.

Dear Sir,—I have the honour to acknowledge the receipt of your letter of the 25th

instant, inclosing correspondence sent by you to the Transcontinental Railway Commissioners and also proferring your resignation as chief engineer. It will be considered in due course.

GEO. P. GRAHAM.

Ottawa, June 30, 1909.

Hugh D. Lumsden, Esq.,
Chief Engineer, T. C. Ry. Commission,
Ottawa.

Dear Sir,—I beg to acknowledge yours of the 26th instant, inclosing a letter of explanation sent by you to the commissioners in reference to the reasons given for your resignation.

GEO. P. GRAHAM.

I find that on July 14, 1909, there is this minute in the records of the Board of Transcontinental Railway Commissioners.

On July 14, 1909, I find this minute in the minutes of the Board of Railway Commission:

The chief engineer reported verbally that it would be impossible to give an estimate of the amount of money involved in the disputes as to classification owing to the fact that where cross-section notes of the engineers disagree with the present appearance of the work, re-measurements will be necessary, and that the engineers who classified the work were not examined or requested to produce their books showing the monthly classification of the work as it progressed and that he is still of the opinion that the resident engineers who see the work from day to day, are in the best position to make the classification, if they are capable and honest; as far as their knowledge is concerned they are the best men, and everything being equal they are the best men to judge the work, seeing it done day by day.

I come now to the objections raised by the engineers. I have referred to their objections before and do not propose to go into them at any length because they are all in the correspondence brought down to the House; but several of the divisional engineers did make certain complaints and placed them before the commissioners. They did so, I think, on the same day that Mr. Lumsden resigned, but before his resignation was submitted to the board, if I remember correctly. The summing up of their objections is to be found in these paragraphs:

(*a*) That they were based in whole or in part on the said draft agreement of May 14th, 1909, which had been rejected, and which had no existence in fact;

(*b*) That the examination of the work was of a hasty, insufficient and superficial character;

(*c*) That the engineers on the line who classified the work were not afforded a sufficient hearing and an opportunity of presenting evidence;

(*d*) That the contractors were not afforded an opportunity of showing cause; and further to say that the commissioners insist, in the public interest, that the proceedings of the arbitration tribunal shall be exhaustive, final and conclusive; shall cover all the objections filed on behalf of the Grand Trunk Pacific Railway Company, and that the report of the arbitrators, when made, shall be supported by substantial evidence, including details of quantities, &c., which will safeguard the position of the commissioners in any litigation which may arise with the contractors as a result of any action which may follow the report of the board of arbitration.

Sir, whatever differences there may be among us, if the board of arbitration finally bring in a report according to clause (d) of these objections, that will cover everything that could be covered by any board of arbitration or by any tribunal. The question was put to me before recess how it could be possible that the commissioners could in any way represent the people and I was asked to give an illustration. It is possible that a case might arise, if the engineers in charge were not given full opportunity to make their side of the case clear and give reasons for their classifications, if the fullest evidence were not taken and placed on record a case might arise in which the contractor could collect from the government and the government could not get the interest from the Grand Trunk Pacific. The Grand Trunk Pacific and the government have a contract which provides for an adjustment of any differences between them by a board of arbitration and under which the government would collect interest on the amounts established by the board as the cost of construction. But if the evidence were not sufficiently complete to substantiate the findings of the board, a condition might easily arise under which the contractor could collect a greater amount from the government than the government could compel the Grand Trunk Pacific to pay interest on; and that is where the commissioners would stand for the interests of the people in making the Grand Trunk Pacific pay interest on the amount the government might be compelled to pay under the contract. My hon. friend from North Ontario (Mr. Sharpe) saw the point at a glance the other day because he put a question on the order paper to this effect: Does the government intend to hold the contractors responsible for any reduction in classification and if so are the contractors to be represented on the board of arbitration? The hon. member for North Ontario with his legal acumen, saw exactly the situation. He saw that it might be possible for the contractors to collect from the government an amount greater than the amount on which the government could collect interest from the Grand Trunk Pacific, so that in order to protect the people it is absolutely necessary that every finding of the board of arbitration shall be sub-

stantiated by evidence that could be taken in the Exchequer Court in support of the government's contentions.

Mr. J. HAGGART. Is the defence of the engineers published in their evidence?

Mr. GRAHAM. There are two or three letters in sessional paper 42a.

Mr. J. HAGGART. Did they give evidence before the arbitrators?

Mr. GRAHAM. No, what they complained of is that they were not allowed to give any evidence before the board, and they protested that they should be allowed to give evidence to show why they made their classifications.

Mr. J. HAGGART. Have they not done that at any time since?

Mr. GRAHAM. Not that I am aware of. I do not know just all the details, but some adjustment work has been done. The chief engineers have come to an agreement concerning some of their differences. In one division in one contract, they have practically settled all the differences between them—that is after the new board was constituted and Mr. Grant became chief engineer.

As regards Mr. Lumsden's resignation, I would not criticise a man of his intelligence, ability and integrity. Mr. Lumsden has been known in this country a great number of years, and I have the utmost respect for him, but I think his friends will not find it amiss if I make this comment. Had I been chief engineer, and had my instructions not been carried out, I would never have resigned but would have seen that the other men, who did not carry out my instructions, were forced to resign. After all, whatever deviations from duty occurred, if any there were, they all come back to this, that the chief engineer was responsible, not only for the instructions he gave, but also for the carrying out of his instructions. Had I been chief engineer, no combination of circumstances would have driven me from my post, but I would have stayed and insisted on the dismissal of any engineer who disobeyed my instructions. About the time of the resignation, I was absent from the country, and during my absence another chief engineer was appointed; but on my return from the old country, I wrote this letter, which it may not be necessary to quote, but which I think it is just as well to put on record.

Office of the Minister of Railways and Canals,
Ottawa, August 31, 1909.

Hon. S. N. Parent, K.C.,
Chairman,
Transcontinental Railway Commission,
Ottawa.

Dear Mr. Parent,—As I was leaving for Europe some time ago the resignation of the chief engineer of the commission, Mr. Lumsden, was received, and I left it with my colleagues for consideration. I find on my return that in his letter of resignation Mr. Lumsden intimated that he had lost confidence in certain of his staff.

I have no doubt that his intimation is unnecessary, but wish to emphasize the government's attitude in this matter. Should it be found that any member of the staff has been dishonest or wilfully negligent in the performance of his duty, he should be summarily dealt with.

What you desire and what we all desire is justice to all parties and the fullest protection of the public interest. Any employee who has forgotten this, or has failed to act on this principle cannot be retained for a moment.

GEO. P. GRAHAM.

On September 2, 1909, I received this letter:

Ottawa, September 2, 1909.

The Honourable
Geo. P. Graham, P.C.,
Minister of Railways and Canals.

Dear Mr. Graham,—The views expressed in your letter of the 31st ultimo coincide exactly with our own, and I need hardly say that we are prepared at all times to act along these lines in the matter of our staff and any other within our control which might affect public interest.

Should any reasonable proof be brought that employees in our service had been guilty of serious negligence or wrong-doing, you can rest assured that Commissioners would deal prompt justice, as we have done already in several cases.

It is not a vain word to say that our engineers in the field can bear comparison with those on any other railroad. Most of them have been connected with the National Transcontinental railway since its earliest stage, when comprehensive surveys had to be carried on from one end of the year to the other, through a rough and distant region, amid great hardships. They are men of good professional standing and experience, appointed by, or with the approval of Mr. Lumsden, and there is nothing before us to show that a single one of those retained proved deficient or dishonest, otherwise it would have been his duty to call to account the men in whom he had lost confidence, or at least to report them with the facts to the board. As no such step was taken by him, it must be inferred that the real point at issue lay elsewhere.

From a consideration of these facts and of what took place before he resigned, I should incline to understand the intimation you refer to as meaning that Mr. Lumsden had lost confidence in his ability to direct his men and exercise the authority incumbent on his position, rather than in any one's integrity or faithfulness. The lack of further explanation, under the circumstances, should not be enough to condemn engineers who had apparently up to that moment, been found worthy by him of the trust placed in them.

Still, we did not wish to leave room for the least doubt. When Mr. Grant assumed his new office, it was therefore thought proper to have him make at once a direct and careful

inquiry into the situation to see whether there could have been anything wrong.

As you are now aware, Mr. Lumsden came to resign after our board had taken strong exception to the manner in which the arbitrators had conducted their proceedings. The ground covered by them was sections in districts 'F' and 'B,' which were taken in an advanced state, if not partly completed.

Having been on the work several times while it was in progress, as inspecting engineer, there is no doubt that Mr. Grant was better acquainted with its character and aspect than his predecessor. There is nothing, however, in Mr. Grant's opinion, to show that the imputation cast by Mr. Lumsden is justified. His report on district 'F,' of which I inclose a copy, brings this fact out beyond doubt. He is now making a similar inspection in district 'B,' and I shall be pleased to let you know the result of it as soon as put before our board in writing. A thorough investigation has not, in the first case, revealed any actions on the part of the engineers to show that they had not acted in good faith, to the best of their ability and judgment. If some figures need revision, it is the duty of the chief engineer to correct them, but it does not follow that there has been any deliberate and calculated disregard of his instructions.

For the safeguard of public interest as well as our own protection, every care has been taken so far, and will be in the future, to have the closest supervision exercised over all employees from head down. The appointment of a general inspecting engineer and later of residency inspectors is proof that our constant aim has been to render this control as effective as it could possibly be made.

A letter from chief engineer Grant to his colleague, Mr. Kelliher, of the Grand Trunk Pacific, in regard to disputed classification, written on his return from the first part of his trip, may further help you to understand clearly the position, as it has a direct bearing on this matter. A copy of it is therefore attached, together with copy of some recent correspondence between Mr. Hays and myself relating to the same subject.

S. N. PARENT,
Chairman.

Mr. J. HAGGART. Before the hon. minister pases from that, may I be allowed to ask a question? Has he a letter from any engineer or any evidence of an engineer in which he differs from the interpretation of the subsection of the specification given by Mr. Lumsden?

Mr. GRAHAM. No, I have no knowledge of such a letter.

Mr. J. HAGGART. Or any evidence?

Mr. GRAHAM. No, so far as my knowledge goes, there is none. The Grand Trunk Pacific accepted the interpretation. The difference that exists between them now is as to the carrying out of the interpretation on which they both agreed.

Now, Mr. Speaker, on my return, I found that Mr. Gordon Grant had been appointed chief engineer. I wish to place on record a letter written by Mr. Grant, and referred to, I think, in some of the correspondence. He was appointed on July 21st, and he showed business ability by, that day, getting right down to work and taking hold of his job with enthusiasm and judgment, that, I think, will be productive of good—yes, has already been productive of good. So far as I am aware, since he was appointed chief engineer no objection has been raised to the classification of any of the divisions under his supervision. Here is his letter written on the very day on which he was appointed:

Ottawa, July 21, 1909.

H. A. Woods, Esq.,
Assistant Chief Engineer,
Grand Trunk Pacific Railway Company.

Dear Sir,—My predecessor in office of chief engineer of the eastern division of the National Transcontinental railway before resigning stopped the payment of the estimates of the contractors in districts 'F' and 'B' owing to his having differed with the engineers in those districts on the matter of classification. It therefore becomes necessary for me to immediately visit the work in dispute in these districts, to see for myself the classification which has been allowed.

The work under the McArthur contract in district 'F' being of such pressing urgency, I propose visiting that district at once and I to-day informed the commissioners of my intentions in this respect. They then directed me to advise you of my intended trip, and as their agreement with your company dated January 10, 1908, is still in force, that I request you to accompany me, so that pursuant to that agreement we may go into this matter on the ground and if possible, adjust these disputes to our mutual satisfaction, and arrive at an understanding as to any difference that may have to be arbitrated so that such arbitration, if any, may be proceeded with without delay.

I need not point out to you the absolute necessity of straightening up matters in district 'F' so as to insure the completion of this necessary link between your western division and your Fort William branch, so that your company may be in a position to participate in the transportation of this season's crop.

As stated before, I intend to start at once to district 'F' and will therefore be glad if you will telegraph me a reply on receipt of this letter.

GORDON GRANT,
Chief Engineer.

This shows that on the very day on which Mr. Grant was appointed, he wrote to the chief engineer of the Grand Trunk Pacific asking that gentleman to accompany him over the line where these matters were in dispute, and, according to the Act, see if they could arrive at a mutual understanding, and, if not, appoint a third arbitrator. I may say, in passing, that Mr. Woods, of the Grand Trunk Pacific, did not accompany Mr. Grant, so Mr. Grant, as chief engineer of the Transcontinental, himself

went over the line to inspect the classification of these sections in dispute.

Mr. J. A. CURRIE. Why did not Mr. Woods accompany Mr. Grant?

Mr. GRAHAM. The explanation given me, as I recollect it, is that Mr. Woods was in the far west, at Prince Rupert, I think, and said he did not get the letter in time to accompany Mr. Grant.

Mr. J. A. CURRIE. Was not Mr. Grant aware of that fact when he wrote so peremptory a letter?

Mr. GRAHAM. I do not know that. I would tell my hon. friend (Mr. J. A. Currie) if I could, but I cannot. I should imagine that Mr. Grant was aware of it, but, if Mr. Woods were in Prince Rupert, there might be some other engineer, Mr. Kelliher, or somebody else, possibly, who might have accompanied Mr. Grant. I am not prepared to give an opinion on the matter.

Mr. MIDDLEBRO. Was it not because the matter was under adjudication of the arbitrator, and so Mr. Woods took the position that there was no occasion for this inspection?

Mr. GRAHAM. I do not know. I merely state that Mr. Woods did not accompany Mr. Grant and that Mr. Grant went over the line alone. But the terms of the agreement are that, in case of a dispute arising, if possible, a settlement shall be arranged by the chief engineers, and only such things are referred to arbitration as the chief engineers fail to agree upon. If the chief engineers agree, then, even if the third arbitrator were on the ground, there is no need for him to give advice in the matter. But, if the chief engineers come to a section where they cannot agree, the third arbitrator steps in and makes a decision for them. Now, there was a reduction, I think, of $370,000 altogether on the McArthur contract, and it is only fair to say that all this was not made by Mr. Grant. There was an amount made before Mr. Grant became chief engineer of this division, and it reduced the amount of the reduction made to $202,402. I think it is not unfair to say that it may be, when the final adjudication comes, that Mr. Grant made too great a reduction, possibly; or it might transpire he had not made reduction enough. But this is the amount, in order that the commission might be on the safe side.

Mr. FOSTER. That action is final, is it not?

Mr. MIDDLEBRO. Let me call the minister's attention to a letter written by Mr. Woods to Mr. Grant, dated July 22, 1909, in which he says:

Mr. GRAHAM.

The arbitrators have been over the line, and while their report has not been made, or at least has not been seen by the writer, I do not consider it advisable that I should visit the work and personally agree with you on the points which may have been taken under consideration by the board of arbitrators, and might, to a certain extent, impair such report when made.

Mr. GRAHAM. Then I will retract what I said that Mr. Wood was at Prince Rupert, he was in Montreal and did not go. However, I think I am quite clear that that position was shortly afterwards abandoned by the company. Now I want to read the letter signed by Mr. Gordon Grant which explains these reductions:

Ottawa, September 20, 1909.

The Commissioners of the Transcontinental Railway, Ottawa, Ont.

With reference to my letter of the 14th instant re my recent inspection of district 'F,' and in which I stated that I was deducting $370,000 from the progress estimates now due Mr. McArthur. Since writing that letter I have revised my figures, and the amount to be deducted now is $359,488.96, and my construction accountant has since informed me that Mr. Lumsden had previously deducted $140,086.80 from McArthur's March estimate, and $17,000 from the April estimate, but for what reason I do not know, though I presume it was for overbreak, but he has left no record or memorandum showing from what residency, sub-contractor or cutting he wished the above amount deducted.

Consequently, as I am satisfied that, for the present purposes, and until the arbitration has taken place, the above mentioned amount is sufficient to hold back. I have signed McArthur's estimates to date, after deducting the $359,488.96, less the amount previously deducted by Mr. Lumsden, viz., $157,086.80, which will amount to a deduction on my part of $202,402.16.

I may say here that there is another deduction made on the Grand Trunk Pacific of $15,000. Now Mr. Grant and Mr. Schreiber went to Winnipeg to meet Mr. Kelliher, on September 30, 1909. I may explain, as my hon. friend from North Grey (Mr. Middlebro) intimates in his contention, that the Grand Trunk Pacific contended that there was no need to appoint a new board of arbitrators, that the resignation of Mr. Lumsden did not necessitate a new appointment of a board of arbitrators, but that the appointment of Mr. Grant as chief engineer of the Grand Trunk Pacific merely filled the vacancy, and consequently any work done by the board of arbitrators stood as the work of the board, and the mere change of the personnel did not make any change in the situation. Well, as against that, as against the contention of Mr. Chamberlain, who also took that ground, and there is no doubt Mr. Woods was acting under the instruction of Mr.

Chamberlain in not going to the west, I wish to put on record the opinion of Mr. Newcombe, the deputy minister:

Ottawa, September 28, 1909.

The Deputy Minister of Justice, Canada,

I am of opinion, upon perusal of the annexed correspondence and of sections 7 and 4 of the agreement, that, Mr. Lumsden having resigned, it is necessary, or at least advisable, for Mr. Grant, his successor and Mr. Kelliher to join in a new appointment of Mr. Schreiber as third arbitrator.

E. L. NEWCOMBE,
Deputy Minister.

Consequently the position of the commissioners, the position of the government, and the position of Mr. Grant, was upheld by the deputy minister of justice, and on his advice they were acting in saying that it was wise, if not absolutely necessary, that Mr. Schreiber be reappointed chairman by the new board as constituted including Mr. Grant, the new chief engineer. They went to the west to meet Mr. Kelliher to join in a new work of arbitration, or to proceed with the work. Now it will be said, and fairly said, that there was a great deal of dispute as to the methods to be adopted by this new board of arbitrators when they got to the west. The board of commissioners contended, and I think wisely, acting on the advice of the deputy minster of justice, first, that Mr. Schreiber had to be appointed anew, or, as the lawyers would say, de novo. They contended also that the work of arbitrations so far done ought to be recommended, or that the work ought to be started and done all over again under conditions that would meet the objection, namely, that all the evidence ought to be placed on record, and every fact stated, so that the finding of the arbitrators would be a finding upheld by the Exchequer Court in case of a suit between the contractors and the Transcontinental Railway Commission.

Mr. J. HAGGART. Did the Minister of Justice agree to that?

Mr. GRAHAM. The Minister of Justice was in London at the time, and the deputy acting for him gave his opinion.

Mr. J. HAGGART. Not in that direction.

Mr. GRAHAM. It was merely as to the methods to be adopted, as to the mode of procedure which was to be taken on the arbitration. Mr. Kelliher refused altogether at first to sign the appointment of Mr. Schreiber anew. But after discussion, these disagreements as to the scope of the arbitration, as to whether it should be confined to the agreement made by the Grand Trunk Pacific with the commission, the other agreement made by the Grand Trunk Pacific and the commission as to the filing of complaints promptly, as to the interpretation of classification agreed upon between them, they did not agree, and Mr. Kelliher, I understand, refused to sign the appointment of Mr. Schreiber. No one can claim that the refusal was the fault of the commission, because that appointment was in the identical language of the appointment signed before by Mr. Kelliher. But it was upon that point, and I am not going to argue as to the right of the Grand Trunk Pacific to take it. They contended it was not necessary to reappoint him, and refused to sign his reappointment. They returned again without doing anything; and as my hon. friend said this afternoon, it seemed as if it was impossible to have anything done. But I submit in all fairness that it was not the fault of the government or of the commission that these arbitrators did not proceed, it was the fault of neither that it did not proceed months before it did, because, in all Mr. Lumsden's correspondence he complained that he could not get an arbitrator appointed. But in so many circumstances and so many details, it is not a matter of great surprise that strong opinions might be formed. But after the return of these commissioners from the west, it seemed there was only one way to proceed to get a third arbitrator appointed. Now the question was raised: Should Mr. Schreiber be reappointed to the position? I took the position strongly, and my colleagues upheld me, that Mr. Schreiber was an able and intelligent man, of uprightness and integrity, and the government having appointed Mr. Schreiber, they were satisfied to have him reappointed anew as the third arbitrator in these proceedings.

But, Sir, as I have pointed out nothing was done and that without any fault either of the government, or of the commission, or of the new chief engineer of the commission. When the arbitrators returned from the west I think one or two conferences were held between the Grand Trunk Pacific railway and the commission to see if they could not arrive at some conclusion to proceed with this arbitration. It seemed impossible to arrive at such a conclusion, and the commission, acting under the statute, applied to the Chief Justice on November 11, 1909, to appoint a third arbitrator. This will be tedious for the House to listen to but it will have to bear with me while I read it as it forms part of the record which would be incomplete without it:

Memorandum of agreement made the seventeenth day of November, A.D. 1909, between The Commissioners of the Transcontinental Railway, hereinafter called the commission-

ers, of the first part, and The Grand Trunk Pacific Railway Company, hereinafter called 'the company,' of the second part.

Whereas by paragraph 7 of the agreement bearing date the 29th day of July, 1903, and entered into on behalf of His Majesty the King and the company, respectively, a copy of which agreement forms the schedule to chapter 71 of the Statutes of Canada, 1903, it is provided as follows:—

7. In order to insure for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, it is hereby agreed that the specifications for the construction of the eastern division shall be submitted to and approved of by the company before the commencement of the work, and that the said work shall be done according to the specifications, and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and chief engineer of the company, and in the event of differences as to the specifications, or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator, to be chosen in the manner provided in paragraph 4 of this agreement.

And whereas a memorandum was on the 10th of January, 1908, initialed by S. N. Parent and H. D. Lumsden, on behalf of the commissioners and Charles M. Hays, on behalf of the company, as follows:—

Monthly estimates for contractors shall be submitted promptly from time to time by the chief engineer of the commissioners to the company's assistant chief engineer at Montreal for approval. If he has any objection to such estimates, he shall promptly file the same with the chief engineer of the commissioners and any objections from time to time filed shall thereupon be considered, and, if possible, determined by the said engineers, and in case of their failure to agree, may then or any time before or at the time of the final payment, at the option of either party, be considered and determined by arbitration as provided in the agreement of the 29th July, 1903, but in no case shall the payment of monthly estimates be delayed, except with the consent of the commissioners.

In case the chief engineer of the commissioners and the assistant chief engineer of the company disagree as to the final payment, the same shall be withheld until the matter is determined by arbitration, as provided in the said agreement of 29th July, 1903.

And whereas, on the sixteenth of March A.D., 1909, the chief engineer of the commissioners and the chief engineer of the company, in consequence of certain differences having risen between them as a result of objections filed by the company, did appoint Collingwood Schreiber as third arbitrator for the determination of the said differences, by letter, in the words and figures following:—

Ottawa, March 16, 1909.

Collingwood Schreiber, Esq.,
General Consulting Engineer to the
Government, Ottawa, Ont.

Dear Sir,—By clause 7 of the agreement between the government of Canada and the Grand Trunk Pacific Railway Company, dated the 29th July, 1903, being schedule to 3 Edward VII., chapter 71, in regard to the construction of the eastern division, it is provided that the work shall be done according to the specifications approved of by the Grand Trunk Pacific Railway Company, and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and the chief engineer of the railway company, and in the event of differences as to the specifications, or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator to be chosen by them.

Some such differences having arisen as a result of objections filed by the company, we hereby beg to choose you a third arbitrator for the determination of the questions now in dispute, and on which we have failed to agree after visiting the work, and shall be pleased if you are agreeable to accept the office. In the event of your acceptance, a formal submission will be prepared and handed to you later.

HUGH D. LUMSDEN,
Chief Engineer, Transcontinental Railway.

B. B. KELLIHER,
Chief Engineer, Grand Trunk Pacific Railway.

And whereas, the said Collingwood Schreiber did accept the said appointment by memorandum upon the said letter as follows:—

I hereby accept the above appointment.
22nd March, 1909.

COLLINGWOOD SCHREIBER.

And whereas, after entering upon the work of such arbitration, but before the said arbitrators had made any report thereon, the said Hugh D. Lumsden had resigned the position of chief engineer of the Transcontinental Railway, and one Gordon Grant has since been appointed in his place as such chief engineer;

And whereas the said Gordon Grant, as such chief engineer, and B. B. Kelliher, chief engineer of the company, have by memorandum bearing even date herewith, a copy of which is attached hereto, appointed the said Collingwood Schreiber as third arbitrator for the purpose of dealing with de novo and determining, irrespective of any investigation heretofore made by the said Hugh D. Lumsden, B. B. Kelliher and Collingwood Schreiber, the said matters in difference between the said chief engineers as a result of or arising by reason of such objections filed on behalf of the company;

Now this agreement witnesseth that it is agreed that the said Gordon Grant, B. B. Kelliher and Collingwood Schreiber, as such arbitrators, shall proceed to deal with and determine all questions and differences between the commissioners and the company arising or as a result of objections filed on behalf of the company with the commissioners previous to the 10th day of January, A.D 1908, and also all questions and differences arising out of or as a result of objections filed on behalf of the company with the commissioners up to the date hereof under and pursuant to the terms of the said memorandum of the tenth of January, 1908, it being under-

stood that questions and differences not covered by or arising out of such objections shall not be dealt with by the said arbitrators.

It is understood that the said third abitrator is to be called upon to act in the adjustment of such questions and differences only when the said Gordon Grant and the said B. B. Kelliher, the two respective chief engineers, fail to agree.

Each party shall have the right to produce evidence before the said arbitrators as to the matters in dispute.

Except as herein expressly agreed, neither the making of this agreement nor anything herein contained or done in pursuance hereof shall be deemed to operate as a waiver of or in any respect alter, limit, abridge or modify any of the rights of His Majesty the King, or of the company, under the said agreement of the 29th July, 1903, or under any term or provision thereof.

In witness whereof the said parties hereto have executed these presents on the day and year first above mentioned.

THE GRAND TRUNK PACIFIC RAILWAY COMPANY,
By Chas. M. Hays,
President.
HENRY P. PHILIPS,
Secretary.

THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY,
S. N. PARENT,
Chairman.
P. E. RYAN,
Secretary.

Just before proceeding farther I want to revert for a moment to what took place when the arbitrators returned. The arbitrators returned from the west under the circumstances that I indicated a few moments ago. They reported to the commissioners, and in consequence the chairman of the board of commissioners decided to appeal to the Chief Justice to have a third arbitrator appointed. The case came up and it was postponed for a week. In the meantime the Grand Trunk Pacific, on consideration, decided that it was but carrying out the spirit of the arrangement, also the spirit of the contract and absolutely the letter of the contract, and an agreement between the Grand Trunk Pacific and the commissioners that the board of arbitration should be formed and proceed as quickly as possible was made. They came to an arrangement by which they agreed to appoint a third arbitrator and he was appointed by the document as read by me a few moments ago. In addition to that document I want to place one or two others on the file. I have one sent by the chief engineer and Mr. Kelliher, in addition to those in the return brought down by the House:

THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY.
Ottawa,

Collingwood Schreiber, Esq.,
General Consulting Engineer to the Government, Ottawa, Ont.

Dear Sir,—By clause 7 of the agreement between the government of Canada and the Grand Trunk Pacific Railway Company, dated the 29th of July, 1903, being schedule to 3 Edward VII, chapter 71, in regard to the construction of the eastern division, it is provided that the work shall be done according to the specifications approved of by the Grand Trunk Pacific Railway Company, and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and the chief engineer of the railway company and in the event of differences as to the specifications or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator to be chosen by them.

Some such differences having arisen as a result of objections filed by the company, we hereby beg to choose you as third arbitrator for the determination of the questions now in dispute, and on which we have failed to agree after visiting the work and shall be pleased if you are agreeable to accept the office. In the event of your acceptance, a formal submission will be prepared and handed to you later.

The annexed correspondence marked 'A,' 'B,' 'C,' 'D,' 'E,' and 'F,' and blue print marked 'G' are to be made a part of the record in the matter for your determination.

Yours truly,
(Sgd.) GORDON GRANT,
Chief Engineer, Transcontinental Railway.
(Sgd.) B. B. KELLIHER,
Chief Engineer, Grand Trunk Pacific Railway.

I hereby accept the above appointment.
(Sgd.) COLLINGWOOD SCHREIBER.

Then there is this telegram:

Montreal, November 5, 1909.

B. B. Kelliher,
Grand Trunk Pacific Railway,
Winnipeg, Man.

Are you not satisfied with Lumsden's interpretation of the specifications concurred in by Woods in February last year. If not, please explain why.

W. H. BIGGAR.

That was written by the chief solicitor of the Grand Trunk because the commission rightly insisted that the Grand Trunk Pacific Company, after having accepted the interpretation of Mr. Lumsden's interpretations and having the work conducted under them, could not well say: We will not abide by the classification we have adopted ourselves and ask for an arbitration on some other lines altogether. Mr. Biggar sent that telegram to Mr. Kelliher,

chief engineer of the Grand Trunk Pacific, and Mr. Kelliher replied:

Winnipeg, November 5, 1909.

W. H. Biggar,
Montreal.

In the absence of correspondence cannot say what items your telegram refers to. If to diagrams January tenth, nought eight, have no objections to Lumsden's interpretation, but both he and I very much object to the erroneous application of his interpretation to the work in the field.

B. B. KELLIHER.

That proves conclusively what I said earlier in my remarks that the Grand Trunk Pacific had fully concurred in the interpretation by Mr. Lumsden, they had concurred in it away back in 1908, and that concurrence is reaffirmed by Mr. Kelliher in his message, and all there was to arbitrate between them so far as their dispute was concerned was as to whether the interpretation made by the Grand Trunk Pacific and the Transcontinental Commissioners had been lived up to on the work. I referred a moment ago to the reasons why it was necessary that the greatest and strictest care be taken in the work of these arbitrators so that their finding might be based on evidence which would be sufficient to protect the government against contractors being able to collect from them an amount greater than the amount they could compel the Grand Trunk Pacific to pay interest on under their lease. What is the situation? I have pointed out as rapidly and as clearly as I could the different steps that have been taken along the line in reference to this work. I submit that the government and the commission has done its best to get these difficulties settled, because it was in the interest of all parties before the sub-contractors were settled with and the final acceptance of the work by the Grand Trunk Pacific should be accomplished—I don't mean the taking over of the road for leasing purposes, but the acceptance of it by their engineers as completed work—that such adjustment should take place. The point has been raised somewhere by somebody at some time, that the government might be responsible to the sub-contractors, or rather to the contractors themselves for the payment to the sub-contractors. That is far from being the case. The commission has no contract with any persons but the chief contractors, or the contractors in the first instance, and any arrangement these contractors may have with the sub-contractors, or with the secondary sub-contractors is no concern of the commission so far as the settlement goes. If the contractors themselves have settled in full with the sub-contractors and an amount is deducted from the chief contractors, they have to bear the loss and look out for any reimbursement they can get from the sub-contractors. Personally, I am inclined to think, notwithstanding anything that has been said, that the chief contractors have likely looked out all along the line and have probably protected themselves largely from any such thing as the sub-contractors being over-paid. But if they have not, that is their concern not ours. The commission deals only with the chief contractors and not with the sub-contractors. But, Sir, is the country protected? As my hon. friend from Lanark (Mr. Haggart) will understand perhaps better than any one in the House—no doubt better than I do, because he has had such great experience—in all these contracts a certain amount of deposit is required when the contracts are let, and in addition to that under the terms of the agreement which I read this afternoon, ten per cent of the amount actually expended is deducted monthly and held back from the contractors and repaid to them after two months if it be found that the money can be used properly in a more rapid prosecution of the work. In addition to that, all the plant belonging to these companies forms part of the security for the completion of the work on the ground. I want to call the attention of the House and the country to the fact that notwithstanding all that has been said, there is a large amount of money in the hands of the government to-day to protect the government against any over-classification that may be found along the line of the Transcontinental railway. In this, as in other parts of the contract, the government has been very careful to guard its position. I have tried to get these figures into such form that they will be applicable to the situation and be a conclusive argument on that point, and as such I present them to the House.

THE COMMISSIONERS OF THE TRANSCONTINENTAL RAILWAY.

STATEMENT OF AMOUNT OF 10 p. c. WITHHELD ON CONTRACTORS' PROGRESS ESTIMATES TO DECEMBER 31, 1909; ALSO AMOUNT OF SECURITY DEPOSIT.

		Grand total	3,071,823 69	1,843,919 00	4,915,742 69

* Deposit receipt. † Deposit returned.

It will be seen from this statement that a grand total of $4,915,742.69 remains in the hands of the government as security. That is the amount now held by the government as against anything that can be found wrong with the classification. But, as I pointed out, there also stands as security to the government the very large plants which these men owned, which would approximate, at a guess my hon. friend would say, at least half of that amount, which would leave nearly $7,000,000 in cash and plant value in the hands of the government as security for any finding the arbitrators can make as to wrong classification.

I have gone over this question fully. I have arrived at the conclusions, I think fairly, first, that the government have taken every precaution to protect the people; secondly, that they have let this work exactly on the same conditions and under the same restrictions that any company would have let the same work; thirdly, that they have done their best to have any differences that arise arbitrated upon under the Act and under the agreement passed by this House and by the tribunal selected by this House after due deliberation for the settlement of differences, and above it all and backing it all they have provided for and have in their hands now, an amount of security approximately, and I think more than approximately, enough to cover any things that might be found wrong under the classification by any board of arbitration that could be selected. That being the case, what is the whole difficulty? My hon.

friend's chief difficulty was that the work has cost more really than the estimates made by the engineers, that the quantities have not worked out as estimated by the engineers when letting their contracts. I have endeavoured to answer all these suggestions and all these complaints but I come back to the original proposition that what the people of Canada want to know is: Are they getting a railway that will be worth the money they are putting into it in connection with the transportation problem of this country?

Mr. SPROULE. No matter how much stealing there may be.

Mr. GRAHAM. My hon. friend interjects: No matter how much stealing there may be. This government has not protected, and does not protect, and does not want to protect any man who is guilty of stealing one dollar from the public treasury of this country. This parliament, including my hon. friend with his wisdom, for which I always have great respect, decided that they would refer the differences on which payment of cash hung—because after all it comes back to the question of classification; if there has been stealing, it is on account of over-classification; if there has been too much money paid it has been on account of over-classification—to a special tribunal. My hon. friend assisted, every member in this House assisted in naming a tribunal, not of partisans in this House, but of expert engineers who would decide for the country, independent of party, what was the right thing to do between the Transcontinental Commissioners, the Grand Trunk Pacific Company, and the contractors, on the question of classification.

Mr. SPROULE. If that was their main aim and desire, I would ask how it went on so long since the first charges were made by Major Hodgins, and why the government have striven so strenuously ever since to prevent that inquiry that would bring out these allegations of fact or otherwise.

Mr. GRAHAM. I am sorry I spent half an hour explaining that, and I have convinced myself at least that the government was not causing delay. I thought I had produced documents which were sufficient evidence that the government had been endeavouring to refer this matter to arbitration for months and months and were not able to get the desired result until they appealed to the Chief Justice for the appointment of the third arbitrator and then the Grand Trunk Pacific agreed to the appointment of a third man who was appointed and the commission has the work in hand.

As I said, the whole thing comes back to the question of over-classification, and parliament, I want to repeat, in its wisdom, without any objection, decided, and wisely, that any cases, whether of classification or differences of opinion as to work of this kind which should come up, should be referred to three expert engineers, who are better judges than any Committee of this House or even the Exchequer Court, and it is no disrespect to say that concerning the Exchequer Court, because if this had been left to the decision of the Exchequer Court the judge would probably have referred it to the Board of Engineers to decide, and on their report he would have acted. That has been done time and time again, as my hon. friend knows.

As I said, the people want to know about the cost of this railway, and eventually they shall know all about it, the details, everything will be examined, investigated and sifted by the tribunals appointed for that purpose. As I said to Mr. Parent returning from Europe: If it be found that any engineer or employee of the Transcontinental railway has been guilty of wrong conduct I will be the first to ask that he be dismissed and dismissed summarily, but I never ask that to be done with a man until he has had a proper opportunity to show whether or not he is deserving of that treatment.

As I said, what the people want to know is about the value of this work. I may, I think, without offence, recall to my hon. friend from South Simcoe the fact that all the horrible details that could be conceived by the most fertile imagination as to the cost or presumed cost of this railway were placed before the people of Canada in 1908. Every exaggeration that could be imagined as to what would be the ultimate cost was preached from every platform in this province and, I think, in every province of the Dominion. What was the verdict of the people? The verdict of the people was: We want the road, and we want the party who are friends of the road to finish it in the interests of the people. Hon. gentlemen opposite, while pretending to be in favour of this road, give it what my countrymen would call the Irishman's affection, they give it a kick first and then expect to be considered its friend. This road has been projected by the Prime Minister of the Dominion of Canada, and his name will be connected with it, and I say, notwithstanding all that has been urged against the project, that when history becomes to be written, the name of Sir Wilfrid Laurier and the Grand Trunk Pacific will be upon its pages to the credit of both, and that this road will work a wonderful development in the transportation problem of this Dominion, which is now the great question before the people. It has its difficulties, it has its troubles, no one knows the difficulties surrounding a work of this kind under government man-

agement better than I do myself. I do not ask for sympathy from any man living on account of the difficulties, I do the best I can, I grapple with them, honestly and fairly. If I make mistakes, they are not made wilfully, they are made with honesty of purpose, and I challenge any hon. gentleman to point to a single act of mine in connection with this road that will not bear the utmost scrutiny from the public standpoint.

This work has been undertaken by the Liberal party, it is a work for the national benefit, it is something not contemplated by any party before, because hon. gentlemen opposite when constructing one of the same kind spent nearly as much and did not own a foot of railway when it was completed.

Mr. FOSTER. Does this government own any of it?

Mr. GRAHAM. I think my hon. friend can answer that himself. This government will own 1,804 miles under lease to the Grand Trunk Pacific for fifty years. I am willing to leave this case to the country. Parliament itself has named the tribunal and provided for its formation. The government and the commission are willing to leave the decision to the tribunal appointed by this parliament. If, after they have concluded their labours, it be found that parliament or the country are not satisfied with their findings, parliament is supreme to do whatever it chooses; but I submit as a business man to business men, I submit to men of legal learning and experience, that it would not be wise, it would not be expedient, it would not be carrying out the terms of our contract with the Grand Trunk Pacific, if we proposed now to go into an investigation of a matter which is already before a tribunal selected for that purpose by us.

Mr. FOSTER. Might I put a question? Will the hon. minister be good enough to explain just what this committee, which is to be appointed under this resolution, is to investigate? We have heard what it is not to investigate. Would the hon. gentleman give us an idea now as to what it is going to investigate? If he would, he will certainly enlighten me and other members.

Mr. GRAHAM. It is rather wearisome, but I shall read again the resolution for the benefit of my hon. friend.

Mr. FOSTER. I would ask the hon. minister to dispense. What I want from him is an explanation of that resolution. Any man can read it, but we do not all grasp what it means.

Mr. GRAHAM. My hon. friend from Lanark (Mr. Haggart), with his usual precision, puts the hon. member for North Toronto (Mr. Foster) right. He says the last paragraph explains it. I will read that.

Mr. FOSTER. I have read that and understand it.

Mr. GRAHAM. I do not see that I can use any plainer language:

> Therefore, it is resolved, that a special committee of five members of the House, to be named hereafter, be appointed to investigate the said charges and allegations of the said Hugh D. Lumsden against a portion of the said engineering staff of the said railway; that such committee have power to send for persons, papers and records, to examine persons on oath or affirmation, and to report from time to time.

Mr. Lumsden has made certain charges and they are to be investigated.

Mr. FOSTER. What are the charges?

Mr. GRAHAM. My hon. friend will find them in Mr. Lumsden's letter read by myself and by the Prime Minister.

Mr. FOSTER. Would my hon. friend tell us what they are in his own language?

Mr. GRAHAM. I would not like to detain the House longer recapitulating what is so plain. I submit that the charges made by Mr. Lumsden should be investigated by a committee, and that the Board of Engineers, as regards the classifications, should be allowed to complete its work, as provided by the agreement embodied in the statute. In my opinion, the people have confidence in the government, they have confidence that the building of the Grand Trunk Pacific is for the benefit of Canada, that it is being constructed as economically as possible, and that their interests are safe in the hands of the Liberal party. The government, on its part, is prosecuting this undertaking to its ultimate conclusion so that the people may have the benefit, outlined by the Prime Minister, when he first introduced the resolution, and that is the solving of the transportation problem from east to west and from west to east. I submit therefore that the amendment to the resolution should not be carried, but that the motion of the Prime Minister should pass.

Mr. S. BARKER (East Hamilton). I rather congratulate my hon. friend from North Toronto (Mr. Foster) on the question he put a moment ago to the Minister of Railways because he drew from that hon. gentleman, in the last five minutes of his long speech, the only words he addressed to the subject matter of the resolution. For two hours we had the hon. minister addressing us upon every matter connected with the Transcontinental except the subject brought before the House by the Prime Minister. He discussed the contract, the specifications, the amended specifications, the arbitration, the correspondence of the arbitrators—everything which has no rela-

tion whatever to the resolution, and it was only during the last five minutes that he said anything about the resolution itself. With all respect to the Minister of Railways (Mr. Graham) and without any desire to be in the least degree offensive, I would like to say that, in order to take up as little as possible of the time of the House unnecessarily. I shall not at all refer to the nineteen-twentieths of the speech he has just delivered.

The subject before us is a very simple one. It has nothing whatever to do with the arbitration. If the Grand Trunk railway had accepted every certificate, if they had agreed to every expenditure, if they made not the least objection to any expenditure by the commissioners, that would have nothing whatever to do with our objection to the narrow scope of the reference proposed by the Prime Minister. My hon. friend the Minister of Railways has told us over and over again that the people of this country want this railway and mean to pay for it. I do not suppose that any one says the contrary. We want the railway and we intend to pay for it, and no doubt we shall be made to pay for it. But is that any reason why we should be swindled? Is that any reason why the country should be robbed? Is that any reason why there should be malversation, misconduct, incompetence or criminal negligence? Are we to be silent and make no inquiries when we are told time and again that there has been conduct in the management and construction of this railway amounting to fraud. Are we to be content with a long speech from the Minister of Railways about arbitration and specifications and not one word in reprobation—if the charges be true—of what Mr. Lumsden has alleged in his letter of June last. Surely whatever questions or disputes there may be between the Grand Trunk Pacific Company and the commissioners of the government, no one will pretend for a moment that the existence of such disputes can justify or exercise any neglect to investigate the misconduct charged by Mr. Lumsden. My whole object in rising is to add something to what has been said by the Prime Minister and my hon. friend from South Simcoe (Mr. Lennox) as to the gravity of this matter. The Prime Minister, in his resolution, says that the charges are grave and demand investigation. We agree with him, but we say that the charges are so serious that they demand investigation beyond the scope indicated in the resolution. That is the whole question. There is no other question between the two sides of this House. We are all agreed that there should be an investigation; but whether that investigation shall be confined to a few staff officers and a few engineers and to certain portions of certain districts, or whether it shall go to the bottom and find out whether such wrong doings as are complained of exist anywhere and who are responsible, is the question at issue. We on this side say that the investigation should not be confined to the question whether a few subordinate engineers have done wrong. The question is, has any wrong been done and who is responsible?

I listened with a good deal of attention to the Minister of Railways and Canals. I hoped he would, somehow or other, get to the question, but I failed to see that he has shown himself able to appreciate the position he occupied as Minister of Railways towards these commissioners. The hon. gentleman set out, at the very beginning, with a glorification of the position—there were contracts entered into between these contractors and the government; we had the commission there with its chief engineer, and the chief engineer had great and important duties to perform. We all know these things, but these are not matters in the question. It comes down to this—that since Mr. Hodgins made his charges there have been like complaints of improper conduct, yet no adequate investigation has been made on the part of the government. The hon. minister complimented my hon. friend from South Simcoe (Mr. Lennox) on the work he had done in going carefully through these contracts and the moneys that had been paid on them and on the ability he displayed in criticising the acts of those in authority. Sir, we know that if the Minister of Railways had been doing his duty, every figure that the hon. member for South Simcoe worked out today would have been in his department month by month since the time these contracts were entered into. There is not a railway company in the world that, entering into such contracts as these based on surveys and rough estimates—more or less precise—and finding as they would soon have found, that the outlay was more than they had anticipated, but would have checked these payments by the specifications and estimates laid before the contractor in order to learn the explanation of this enormous and unexpected increase. Where do we find the first attempt on the part of the minister, with his great staff of skilful and able officers, to check these estimates month by month as they came in. If that had been done, as it would have been done in any business office, the minister would have known that things were going wrong and would not have had to wait for two or three years and until millions had been squandered before he made an attempt at investigation.

I wish to point out as briefly as I can

a few things which will indicate how negligent the Railway Department has been, how little alive to what is going on, and how little careful to forestall any improper practices. To appreciate the gravity of this question, you have only to go over some of the figures back to the year 1907-8. It was in 1908 that Mr. Hodgins made his charges, almost identical even in wording with the later charges of Mr. Lumsden, and almost identical with the complaints made by Mr. Woods, of the Grand Trunk Pacific. The words are almost copied from each other—they refer to the same specifications—and you find, if you read the letter of Mr. Lumsden of June 25th last, that he declares to be going on at that time just what Mr. Hodgins said was going on in March, 1908.

Now, let us see how much has been expended on the construction of the two sections 'B' and 'F,' which are the two indicated by Mr. Hodgins, frequently referred to by Mr. Woods and more recently referred to by Mr. Lumsden. In the report of the Transcontinental Commissioners for 1908, page 41, you find that the commission expended for the year ending March 31, 1908, on section 'B,' $8,467,124. Then there is the 'contract reserve,' and I give this figure now because of the boastful language of the minister when he was speaking of the amount they had in hand. This reserve is shown by the Transcontinental Commission to be only $299,569. This leaves the cash paid out for one year on section 'B,' $8,167,554. In the same year, as stated at page 46, the amount paid out on district 'F' was $8,155,864. That is, on these two districts, which have been subject to such charges as compelled the Prime Minister to ask for a committee, they spent in one year—the year which was the period of Mr. Hodgins charges—$16,323,419. In the next year up to March 31, 1909, they expended on sections 'B' and 'F,' $17,920,992. For these two years there was spent on districts 'B' and 'F' the enormous sum of $34,244,411. Now, we are within two months of the completion of another year, on March 31. If you add another year at the same rate as these others, you find that in the years 1908, 1909 and 1910. we shall have spent about $51,000,000 on these two sections. That is, in these three years, taking no account of what was spent before 1908, or of what will be spent in the year that is soon to open, they have expended fully as much as the Minister of Finance said would build the whole railway from Moncton to Winnipeg.

I take those figures as showing in a manner that cannot be disputed, in clear and concise way, the enormous amount that is being expended beyond anybody's anticipation. Here we find that, in three years only of the five or six years it is going to take to build that road, we have spent on districts 'B' and 'F' where these charges apply, more than we were assured by the Finance Minister would build the whole eastern section of 1,800 miles. Now when you look at that, and when you consider that Mr. Hodgins made the specific charge in 1908, that the Grand Trunk Pacific engineer confirms that charge in letter after letter, and on that on June 25 of last year, Mr. Lumsden, the chief engineer, repeats the charge specifically, and rather than submit to the degradation and shame of assisting in such misconduct as he refers to that he throws up a valuable appointment and goes out of the service—surely you cannot imagine any stronger reason for an inquiry. There cannot be the slightest dispute on that point, it seems to me. I do not care to go into all these details. What the hon. member for North Simcoe has worked out so elaborately ought to be in the office of the minister; he ought to have had that information month by month since the work began. The engineers in his department could do that, and should have done it. They should have the records at hand, and ought to be able to confirm or dispute every word the hon. gentleman recited here.

Now where are we on this question? Are we to submit, because we are building a railway, to robbery? because it is robbery, and nothing short of robbery. When we take that letter of Mr. Lumsden where he says his orders have been disobeyed; where he charges specific improper acts, and that these have been going on, and that in consequence he has lost all confidence in the engineers on a certain portion of the railway, can we doubt that it is our duty to insist on a thorough and complete inquiry?

But the Prime Minister says: Oh, we will inquire into the conduct of these few men, these few officials, who are charged specifically by Mr. Lumsden. He assumes, apparently, that Mr. Lumsden having recently gone over 'B' and 'F' and seeing these things, and in his indignation, having resigned, that he forsooth acquits all others on the whole railway. What an absurdity. If a commission were investigating this matter, and they got up to a certain mile post and discovered such things as are here charged, would they stop and say: We assume the mischief didn't go beyond that mile post, or would they say: We will go on and see what has occurred beyond. Surely a business man would. Surely if this was the case of a great corporation, and they had found peculation and robbery, and shameful misconduct among their staff, they would not think of dismissing only two or three caught, as you may say, in the act,

no, they would order an investigation all along the line, they would investigate every portion of their business and see how far the dry rot had gone. That is what business men do, but that is not the way a Liberal government acts. The hon. gentleman says: A particular set of men are charged, the charges are grave and serious, and therefore we will appoint a commission to look into the case against those men, and go no further. Why, if Mr. Lumsden had only gone to 'B' and examined 'B', and then made his report, and indignantly resigned, the hon. gentleman with equal justice might say: We won't examine 'F' because he only mentions 'B'. Yet 'F' is just as bad as 'B'. Why should not 'A' be examined and 'C'? Why is it confined to the two places visited recently by Mr. Lumsden in connection with arbitration where he found such wrongdoing going on that he threw up his situation in disgust. Having found robberies going on in June, is it to be assumed that everything is right elsewhere? Surely not. Surely that would be a very bad certificate to give to any man that had not been specifically charged. Here is one section in Quebec and another near Winnipeg, both corrupt, if the statement is true. We will look into these and let all the others go; we will whitewash these and let them go scot free. I think that is a course that will not appeal to the common sense of business men; I hope that every business man in this House has better sense than to believe that is all we ought to do. Why should we confine it? Surely the men along the other districts who will feel that their characters have been besmirched by what has been discovered on 'B' and 'F' and will desire, if they are honest men, as I trust they are, that the inquiry should extend to their districts. Honest men will welcome an inquiry of that kind; the board of commissioners should welcome it. I should hope they would be glad to be given an opportunity to show that while this charge has been made against 'B' and 'F' they are willing to have the whole railway, the whole work of construction, inquired into, and that they would scorn to take advantage of any technicality to prevent an inquiry of that kind. I should expect also that the Minister of Railways would welcome a thorough inquiry. Surely the Minister of Railways should desire that everything connected with that line from end to end shall be examined most thoroughly and completely.

There is another feature. The minister has said that he is surprised that Mr. Lumsden did not dismiss these officers. He asks why did not Mr. Lumsden stay there and face the situation? Why did he not dismiss these men? Will the minister say that he had power to dismiss them? I noticed the minister using different language two or three times on that subject. One time he said he ought to have dismissed them; another moment, recommend them to be dismissed. I noticed the First Minister using similar language, when he was speaking about employing. First, he said they are employed by the chief engineer; a moment afterwards he said they were employed on his recommendation. That is all the difference in the world. I think, Sir, that when Mr. Lumsden goes into the box upon his oath, as I hope he will, he will tell why he resigned. I expect to hear Mr. Lumsden, who, I believe is an honourable gentleman, give his reasons for not taking the course that the minister hinted he ought to have taken. I think Mr. Lumsden is as capable of judging what is incumbent upon a gentleman as regards his own character as any man in this House. I think he will find that Mr. Lumsden will tell why it was that he did not dismiss the men, why it was that he did not recommend their dismissal, but that in disgust he threw up his commission and went out. We would be glad to hear Mr. Lumsden's explanation as against what the minister hinted he ought to have done. If Mr. Lumsden did not do what the minister hinted he should have done I firmly believe, from what I know of him, that he had sufficient reason for the course he took, and I am bound to say, if Mr. Lumsden took that course deliberately because he felt that it was useless for him to attempt to dismiss men or recommend their dismissal, this inquiry ought to go up higher than the chief engineer. I do not think it will be satisfactory to this country to have this inquiry going on at all, unless it is possible for the committee to inquire from top to bottom who is responsible, who is guilty of criminal negligence or incompetency.

Mr. E. M. MACDONALD (Pictou). Mr. Speaker, in all candour I think the House will agree after the statement of hon. members on the other side who addressed the House on this subject to-day that they never expected, never hoped and knew that they had no right to expect or to hope that the resolution which they have proposed would be adopted. The hon. member for Hamilton (Mr. Barker) has said that Mr. Lumsden went up, inspected sections 'B' and 'F,' got mad with some body and apparently mad with himself, went off in a pet and came home and resigned. Because Mr. Lumsden stated in his letter to the commission that he had lost confidence in some of the engineering staff, whom he had himself appointed, because they disobeyed his instructions, not on the whole line of the

Transcontinental, not on the whole line of the eastern division, not on the whole of sections 'B' and 'F,' but simply on a small portion of these sections, because he was in a pet according to the hon. member for Hamilton, as against some of his own engineers, therefore, hon. gentlemen opposite say that we must appoint a roving commission and investigate this whole Transcontinental railway from one end of it to the other. That is the logic and argument of hon. gentlemen on the other side of the House. I think we ought to understand what may be called the fair ground for parliamentary investigation. I think it is not stating it improperly to say that if a prima facie case is shown parliament should investigate any wrong-doing or any abuse where such an investigation would result in any advantage or have any purpose. But parliament should not lend itself to purposeless or resultless investigation, or where matters are sub judice, or where an investigation is proposed without ground or warrant and solely for political purposes. I submit that that statement of the duty of parliament is absolutely correct, will be found to be based upon precedent, and is manifestly adaptable to the present occasion. This matter is now sub judice in the hands of the very tribunal to which parliament said it should go five years ago and to which my hon. friends sitting on the other side of the House—and I have read the debate upon this subject and they certainly discussed the Transcontinental Railway Bill at length enough—agreed. The hon. gentlemen who are to-day raising this issue agreed to the passage of this section 7 without any question whatever. That tribunal was created after all the deliberation and all the discussion that took place as to which was the best way to settle technical questions which might arise as to the correctness or incorrectness of engineering views and as to classification. That tribunal has been appointed, it is now dealing with the matter and although the question is sub judice my hon. friends ask this House—I say it not without the most absolute confidence—solely for political purposes to take the matter out of the hands of that tribunal which has been created for that purpose and to engage in a purposeless investigation. That is the situation as it exists to-day. What is the occasion for this debate? Mr. Lumsden, who was the chief engineer of the Transcontinental Railway company, in resigning his position, said that certain engineers, whom he himself had appointed, had disobeyed his instructions and acted in bad faith. My right hon. friend the leader of the House (Sir Wilfrid Laurier) asks this House to investigate that statement and to ascertain whether it is a fact or not. That is how it has come here. If all this great necessity for an investigation with regard to the operation and construction of the Transcontinental railway existed that these hon. gentlemen have conjured up with solemn faces and deep intonations and which according to their story has existed for the past two years. We have been sitting for nearly two months and these gentlemen have sat inert and have not attempted before to save this country from the terrible catastrophe that they would like us to believe is threatening. This government come with this motion in the proper way, according to the rules of parliament and ask parliament to investigate a statement of the chief engineer to ascertain whether it was bad faith, whether there had been a breach of instructions to which these gentlemen, employing that large amplitude of adjectives which they always bring forward whenever they smell a scandal, propose an amendment. What do they say? They say:

> H. D. Lumsden, in tendering his resignation as chief engineer of the N. T. Ry., has made grave charges—

Grave charges, say they.

> —touching the expenditure of public moneys' in the construction of the said railway, which charges ought, in the public interest, to be thoroughly investigated.

Is there anything in that language or in that paragraph which involves a single thing in any degree greater or wider than the words stated in the government resolution? Not a single thing. We have a lot of superlatives there put in for effect in order that our Conservative friends may furnish material to their newspapers throughout the country, all those adjectives are supplied for that purpose, but when you come down to analyse it, when you come to the final analysis as the hon. member for North Toronto (Mr. Foster) says, you will find that this section of the resolution amounts to nothing more than the plain Anglo-Saxon which is adopted by the resolution in respect to the statement made by Mr. Lumsden.

Mr. FOSTER. May be the hon. member will tell us what it does mean?

Mr. E. M. MACDONALD. My imagination is hardly vivid enough to cope with my hon. friend's or to enable me to say what is meant by this motion.

Mr. FOSTER. It is the Prime Minister's declaration that I am asking the hon. gentleman to cope with.

Mr. E. M. MACDONALD. My hon. friend is not obtuse. Whatever else he may be charged with, nobody has yet charged him with being obtuse and I do not intend to assume that he is guilty of any lack of

qualification that his friends have never suspected of, and even his enemies have never found him guilty of.

Mr. FOSTER. You never can be guilty of that which nature does not endow you with.

Mr. E. M. MACDONALD. We are told that we must fear the Greeks even though they bring gifts and my hon. friend (Mr. Foster) is so lamb-like of late that I am disposed to regard him as a gentleman whom we need to watch. Now, the statement in the first part of this amendment is nothing but a reiteration in superlatives of the statement contained in the first part of the resolution of the Prime Minister, and that being so we may remove it from the controversy. But as to the second part there is a new element introduced. It says:

The cost of the eastern division of the said railway according to the latest estimates of the government will be so enormously in excess of the estimates submitted to parliament in 1904-5 as to arouse the most serious alarm.

That is a splendid phrase.

Mr. FOSTER. It is almost like the 1903 Liberal platform.

Mr. GRAHAM. It won't be nearly so successful.

Mr. E. M. MACDONALD. My hon. friends opposite are getting in training to lay down their platform next June, and I suppose that some of those glittering phrases are being prepared by the lesser members of the opposition. My hon. friend (Mr. Lennox) goes on to propose in his motion that parliament should investigate 'said charges'. What charges?

To investigate the statement made by Mr. Lumsden in his letters and all other matters connected with or related to the construction of the eastern division of the said railway and the expenditure of public moneys thereon.

Just fancy imposing on this House the task of investigating every thing connected with the railway since its inception; every dollar that has been spent on it, not in connection with its construction or the classification or the payments to contractors, but every dollar expended on the railway from 1903 to the present. Is there any connection between that and the utterances made by Mr. Lumsden in his letters as to the engineers on sections 'B' and 'F'? Not at all, the two things are irrelevant one to the other. Let us see what Mr. Lumsden has said. His statement is that he was dissatisfied with the failure to carry out his instructions on the part of certain gentlemen who were connected with sections 'B' and 'F'—not the whole staff, for he took good care to correct any misapprehension on that point by writing the very day after he wrote that first letter that his statement did not refer to the whole staff on the system or to the whole staff on sections 'B' and 'F,' but only to a certain number of these gentlemen. Now, I find according to the estimate in the annual report of the commission for 1909, that the total mileage under construction is something like 1,800, and, giving the widest possible range to any complaint made by Mr. Lumsden it would only apply to about 500 miles. He acquits the engineering staff on the other 1,300 miles from any possible criticism; he stands by what they have done, he recommended the appointment of every one of them and he limits his criticism to the engineers working on less than one-third of the whole line. The government now propose to investigate his statements made with reference to these gentlemen. As to all other engineers Mr. Lumsden gives them a certificate of character.

Mr. MEIGHEN. Will the hon. gentleman read the certificate of character which Mr. Lumsden gives to the other engineers?

Mr. E. M. MACDONALD. I have read the statement of Mr. Lumsden that his complaint only applies to certain engineers who were responsible for the measurement, classification, supervision and inspection of considerable portions in district 'B,' and east of Rennie crossing in district 'F.'

Mr. MEIGHEN. Is that a certificate of character for the others.

Mr. E. M. MACDONALD. If Mr. Lumsden had any complaint to make about the others he would have made it, but he expressly limited his complaint to the men on these sections he has described. Now, in order to consider whether the House should adopt the second portion of the resolution of my hon. friend (Mr. Lennox) for that is the only point in controversy, let us look for a moment at a few general principles. My hon. friend from Hamilton (Mr. Barker) has not complained much about the government. In fact I notice that hon. gentlemen opposite who usually discuss the government with the most reckless disregard of facts are very careful to confine their complaints in this matter to the fact that the Minister of Railways did not have some one in his office to check off the statements that the commission sent over, but surely that is not a very grave thing. Under the statute the commissioners are responsible, and the Minister of Railways is simply the mouth piece in the House for the commission.

Mr. BARKER. So he thinks.

Mr. E. M. MACDONALD. So the statute says and the statute confirms his judgment in that regard. But, my hon. friends oppo-

site know very well that if there has been any error in regard to the question of cost the man solely responsible for that is Mr. Lumsden. My hon. friend from Hamilton is too old a railway man not to know that the Minister of Railways or the commission is no more responsible for an engineer who in the northern wilds classifies common excavation as solid rock than would Sir Thomas Shaughnessy be for a wrong classification made by an engineer in the far west. And yet every Conservative newspaper in the country will be talking about the government and its malversation in connection with the management of the construction of this railway and of the millions of dollars of the peoples money that have been thrown away. A government or a company finds the money with which a railway is built. The contractor builds it. the engineer inspects it and determines the amount of money the contractor receives. The government or the company pays that money when the engineer certifies it. If stone develops where the estimate indicated clay, are the government or the directors of the company to be blamed? If the engineer when he comes to decide what is to be paid to the contractor for an excavation, has allowed for loose rock or solid rock instead of common excavation, would you talk about the government or the directors of the company being turned out because the engineer has made a mistake? A company or a government is absolutely helpless if the engineers are dishonest in regard to their classification, all they can do is to dismiss the engineers. The hon. member for South Lanark (Mr. Haggart) knows that the man who settles what a contractor is to receive is the engineer, not the directors of the company or the government or the commission.

Mr. J. HAGGART. The member for South Lanark does not know that. He always has heard, and especially from the other side of the House, of ministerial responsibility, that the party who is responsible to this House is the minister.

Mr. E. M. MACDONALD. That is true. The minister is responsible for the acts of his immediate officials, upon whom he must depend, but my hon. friend has been a minister, and he would have thought it very hard if he had been constructing a railway as a government work and an engineer on the north shore of Lake Superior had classified wrongly for a contractor, if his opponents had asked that he be condemned because of that.

Mr. J. HAGGART. He has been in that position several times. Some of the engineers and contractors stole money and the opposition held the minister responsible.

Mr. E. M. MACDONALD. And you disclaimed responsibility, certainly.

Mr. J. HAGGART. Not at all. I did not disclaim the responsibility. I made the excuse that the minister could hardly be responsible for the act. But the principle laid down is that the minister is responsible for everything done in his department and he must show the reason why.

Mr. E. M. MACDONALD. Perhaps my hon. friend will tell me whether or not he was right in his contention?

Mr. J. HAGGART. I knew the principle was a right one.

Mr. E. M. MACDONALD. But did you think you were right yourself?

Mr. J. HAGGART. I thought I should not be held responsible and it is the same in England. If the hon. gentleman will allow me a moment, if there is stealing in a department, say from the Navy Department, the minister who represents the government in the House is responsible. The excuse may be made that if the superintendence was as direct as the minister could possibly exercise, the party should be punished and the minister excused. Of the responsibility there is no doubt.

Mr. E. M. MACDONALD. I am at a loss to understand where my hon. friend stood as a minister, whether he assumed a certain position or whether he stood where he is now in opposition, taking any kind of position if it will hurt the government. If Mr. Lumsden had communicated to the commissioners the names of the men whom he said ought to be dismissed and had recommended their dismissal, and if the minister or commissioners, on investigation, had found the statement was correct, and did not dismiss them, then the minister or the commissioners, as the case might be, should be condemned, but as Mr. Lumsden has not indicated the names of the men in whom he has lost confidence, who the men were who disobeyed his instructions, the Prime Minister is proceeding by this inquiry to find out who these men are, and to deal with them when they are found out. My hon. friend will agree with me that even on his stand of strict ministerial responsibility the government are not and cannot be held responsible until they know the men who have done wrong, if there has been wrong.

The hon. member for Hamilton (Mr. Baker) himself discussed this question of responsibility in the House two years ago, in the debate on the report of the Hodgins Committee. He discussed these letters of Mr. Woods in the following language:

The hon. member also comments upon the fact that in putting in before the committee the various letters that have been referred

to to-day. I have said that those letters did not charge or prove fraud against the commissioners; I say so still. There is nothing in those letters that indicate any fraudulent conduct on the part of the commissioners That has never been pretended.

My hon. friend did not pretend then, he cannot pretend now, that these statements in regard to excessive classification in any way, if true, would reflect on the commission or the minister, and the result is that we get down to this question as to whether or not there have been mistakes in classification, whether or not Mr. Lumsden was correct in his statement that there was disobedience of instructions and failure to record what he had told these men should be done. These are proper subjects for the committee. The question as to whether there was proper classification is a matter entirely for the tribunal constituted by parliament in 1903. I need not read to the House again section 7 of the agreement, in which that matter was especially provided for. There is another section of the agreement, section 47, which expressly provides for another and final arbitration in the event of there being any further difference in regard to matters affecting the construction. So clear and definite was parliament in making this agreement in 1903, that they have declared in those two sections that all matters of difference in regard to construction shall be dealt with by arbitration boards.

I was surprised to hear my hon. friend the leader of the opposition (Mr. R. L. Borden) say to-day that if this matter was before the Exchequer Court, he would still have thought they should move for a committee. The statement of the member for East Hamilton in 1908 that this complaint in regard to classification did not reflect upon the commissioners and only dealt with questions as to whether the engineers did right or not, shows conclusively that it was a matter to be determined by a technical board, and if this had come before an Exchequer Court judge it is against every precedent here or in England for parliament to intervene and take out of the hands of a tribunal of the country and to itself determine a question that had been committed to a tribunal. My hon. friend will search in vain for such a precedent. The issue is surely one for engineers to determine. My hon. friend the Minister of Railways, in his admirable speech, pointed out section 15, which provides that the chief engineer shall be the sole judge of the work as regards quantity and quality. He is the man who has to certify for every dollar of money paid to any contractor. Neither the Transcontinental commission nor the government had anything to do with certifying to these payments. If there be anything wrong, if there be any unduly increased cost, Mr. Lumsden was the man responsible because he certified for every dollar of money paid anybody, and the other engineers had nothing to do but act under his direction. Where could you find a tribunal so well qualified to deal with the classification as that created by the agreement? The engineers who compose that tribunal are the best judges one could select. Does my hon. friend from South Simcoe (Mr. Lennox) or my hon. friend from Hamilton (Mr. Barker) think that any committee of this House, composed of men without any engineering training, would be able to form any better judgment on a question of classification than men specially trained to that work? Just imagine my hon. friend from South Simcoe (Mr. Lennox), with all his judicial knowledge, taken out into the wilds of Lake Superior and asked to decide whether or not certain material was loose rock or only common excavation. Yet that hon. gentleman would like to have himself and other members of this House, equally inexperienced, constituted a tribunal to determine whether or not the classifications arrived at were right, and actually would have us believe that a tribunal of that kind would be more competent than one composed of engineers of eminence such as Messrs. Schreiber, Grant and Kelliher. Yet that is the proposition embodied in the amendment of my hon. friend. Of course, we could subpoena the engineers who made the classification and who had seen the work done, and we could hear their testimony and weigh the balance of evidence pro and con. If there was more evidence on behalf of the Transcontinental engineers than on behalf of the Grand Trunk Pacific, and the evidence of these gentlemen was not shaken in any way by cross examination—my hon. friends from Simcoe and Hamilton, if they were going to be absolutely judicial, would be bound to find in favour of the Transcontinental engineers. But what a practical tribunal that would be, and how much light would they not throw on the question? How convincing their judgment would be in contradistinction to that of a tribunal composed of men who have practical experience and who know all about classifying, who have had daily reports ever since the inception of the work and who have been over the road and have studied every aspect of the question. I think no one, who is not blinded by party, will fail to recognize that the latter tribunal is by far the more competent of the two. And the Minister of Railways has shown us how well the government are protected against any payments being made to the contractors which ought not to be made. Of course, our hon. friends opposite, despite their experience of two years ago, will continue to ring the changes on the cry of scandal, and will argue that the object of the government is to prevent investigation. But what

the government is doing is sending the question to the only tribunal whose verdict will be worth something as compared with that of a committee of this House. In the one case you have a body of men who can decide from practical knowledge and experience as well as from the evidence, and in the other you would simply have a committee which could only give a decision based on the evidence without having the competence or practical experience to estimate, as engineers would, the value of that evidence.

I pointed out some time ago that Mr. Lumsden had only complained with regard to two divisions. But even with regard to section 'F,' I have a letter in my hand which shows how all these imaginary charges disappear on investigation. There is a letter written by Mr. Woods, chief engineer of the Grand Trunk Pacific, on the 21st of January:

January 21, 1910.

Gordon Grant, Esq.,
Chief Engineer, N.T.R.,
Ottawa, Ont.

Dear Sir,—Referring to my letters of July 27 and October 12 last, re classification on O'Brien, Fowler and MacDougall contract, district 'F' to which our district engineer, Mr. Heman made objections, and particularly to my letter of October 12, wherein I specified many instances in which we objected to returns as made, I am pleased to say that since that time a further examination of the work has been made by your district and inspecting engineers, together with our district engineer, and an agreement made as to classification and other matters, satisfactory to both parties.

I am to-day in receipt of a letter from Mr. Heaman in which he states that he has written a letter to district engineer Poulin, approving the classification and other matters on the above work, as agreed by your inspecting engineer and himself, providing Mr. Balcom's assurances are carried out.

This being the case, please consider my letters referred to above, as being withdrawn.

Yours very truly,
(Sgd.) H. A. WOODS,
Assistant Chief Engineer.

So that once these engineers, who thoroughly understand these matters, come to deal with them, they have no difficulty in reaching an adjustment; and I say that when you come to the genesis of this question, when you come to analyse the arguments of my hon. friend from Simcoe (Mr. Lennox) and Hamilton (Mr. Barker), you find that because certain engineers on districts 'B' and 'F' may have made wrong classifications, the suggestion is made that they did so deliberately. That, Sir, is an unfair assumption. These men, who went into this engineering work, are not all Liberals. A great many of them are Conservatives. They belong to a profession just as honourable as that of the law and they realize that their great asset is their honourable name and the reputation that, in dealing with questions commited to their care, they will deal with them honestly. So that every presumption we can make that is at all reasonable would go against the theory that these engineers would deliberately make wrong classifications. To lay themselves open to such an imputation would be to destroy their prospects in their profession for all time. Instead of assuming that, because there were disputes and differences between engineers representing different interests in that northern country, there was wrong-doing on the part of either or both of them, it would have been only fair and reasonable to assume that these men, or some of them, might have come to wrong conclusions, but that, whether they did or not they acted honestly in regard to the matter and believed they were doing what was right. All this shows that the whole question is one that can only be dealt with by the tribunal which parliament constituted especially to deal with it. I was surprised when the hon. member for South Simcoe (Mr. Lennox) who had spent a great deal of time on this question, and had made an argument which might be dignified with the statement that he had made the best of a bad case, talked about this old story of the government having spoken about this railway being built at a cost to the country of $13,000,000. My hon. friend had delved in the figures a great deal, but had he made this further calculation, he would have seen that the conclusion was one that nobody would believe, for it would mean that the country was to get this road at a cost of $866 per mile. To say to me or to any man that any minister of the Crown said that it was possible to build a road through that country at a cost of $866 a mile shows that the proposition was merely a ludicrous one and one that will not appeal to anybody. I do not think that anybody believed it, the hon. member himself was candid enough to say that he did not believe it. But I thought that, in referring to it, the hon. gentleman used an argument not at all necessary in what was otherwise, as I have said, about the best argument that could be made for a bad case. Nor did I take it kindly that the hon. gentleman spoke of 'stifling the Hodgins charges.' He and I sat on that committee together, and he knows that we dealt with the question when it came before us fairly and honestly. The charges made by Mr. Hodgins were all abandoned, and the differences of opinion as to quantities were found to turn on the same question as in this case—the question whether there had been proper classification or not. And the position taken in that first case is the one to be taken now that the proper tribunal ought to deal with the sub-

ject. That was done with the Hodgins charges, and I feel sure that the hon. gentleman (Mr. Lennox) believes in his heart that, had we attempted to determine that question of classification, we would have realized that we were a poor body to engage in such a duty in comparison with the tribunal appointed by the government for that purpose.

I shall not speak at greater length. I do not think hon. members opposite are very serious about this matter. They realize that the question involved is the determination of the proper amount to be paid to the contractors, and that that question is in the hands of the proper tribunal. Parliament can deal with it when that tribunal makes its report. And, if contractors have received any money that they should not have received as the result of the determination of the engineers, there are ample funds in the hands of the government to guarantee the country against loss on this account. Every interest demands the consummation of this great enterprise in the way desired by the men on this side who have stood for it from its inception—as many men who vote Conservative stand for it to-day. There is a great revolution in public opinion on this subject since 1904. Many of those who opposed the Grand Trunk Pacific at that time are now standing for it as strongly as those who originally agitated it. The mistake hon. gentlemen opposite make is in fancying that they are going to gather strength by appealing to the Bourbons of their party, the men who never learn and never forget. They will do better by appealing to the patriotism of all Canada, whose people look upon this as a worthy enterprise to be undertaken by this country at the beginning of the twentieth century. If they would forget their carping criticism and realize that this enterprise is going along proper lines, it would be better for themselves and better for Canada.

Mr. MIDDLEBRO moved the adjournment of the debate.

Mr. FIELDING. It is rather early. I think we might go on until midnight.

Mr. MIDDLEBRO. A great number of those on this side were up until one o'clock this morning, and would appreciate it greatly if the adjournment were allowed.

Mr. FIELDING. I had a discussion with the Whip at an early stage and I thought that, while we could not conclude to-night, we might sit for a considerable time longer. I think we might, therefore, sit until midnight. Of course, if hon. members opposite will not address the House we cannot compel them to do so.

Mr. E. M. MACDONALD. I shortened my remarks, thinking that we would go on.

Mr. MIDDLEBRO. As hon. members on this side were up so late last night——

Mr. FIELDING. This habit of sitting up late the night before is much to be regretted. But I have no objection to the motion.

Motion agreed to, and debate adjourned.

Mr. FIELDING moved the adjournment of the House.

Mr. SPROULE. Will this debate go on to-morrow?

Mr. FIELDING. No, it is private members' day.

Motion agreed to, and House adjourned at 11 p.m.

HOUSE OF COMMONS.

WEDNESDAY, January 26, 1910.

The SPEAKER took the Chair at Two o'clock.

OFFICIAL REPORT OF DEBATES.

Mr. GERVAIS presented the second report of the Committee on Debates as follows:

Your committee recommend that Mr. E. L. Desaulniers be appointed to fill the vacancy on the staff of translators of the official report of the debates caused by the death of R. Laferrière and that the said E. L. Desaulniers be paid the minimum salary of the first division, subdivision 'B.'

H. GERVAIS,
Chairman.

HOURS OF LABOUR ON PUBLIC WORKS.

Hon. MACKENZIE KING (Minister of Labour) presented the second report of the committee to whom was referred Bill (No. 21) respecting the hours of labour on public works as follows:

Your committee recommend that leave be granted to them to employ the services of a specialist to assist the committee in its researches into legislation respecting hours of labour existing in other countries.

Mr. KING moved that the report be concurred in.

Mr. FOSTER. I think the report had better be read again; I could not get it.

Sir WILFRID LAURIER. Explain.

Mr. KING. The suggestion is that the committee have power to obtain a specialist to assist it in its researches into the

legislation existing in other countries respecting hours of labour on public works. There is a great deal of legislation of a nature somewhat similar to that proposed in the eight hour Bill enacted in other countries and this is to enable the committee to retain some person to go through that legislation and report upon it.

Mr. SPROULE. What kind of a specialist would he be who would do that kind of work?

Mr. KING. The intention of the committee was to retain some gentleman associated with one of the universities. Professor Skelton of Queen's university is the person desired by the committee as he has given a good deal of attention to this subject.

Mr. FOSTER. It seems to me that this is rather unusual, and we have not heard anything so far to show us that it is necessary. What in the world do you want done? You want some man to go to work and look into this legislation as it exists in other countries as to hours of labour and make a precis of it. Why in the world do you need a high class specialist to do that? If, after you find out what other countries have done as to hours of labour and the trend of legislation, the committee wants somebody to advise it as to the results of such legislation then I could see where a specialist would come in. But we do not know that there is any disease, we do not know that at present any medicine is needed, we do not know anything about it, and all this specialist is supposed to do is to make a precis of the legislation in other countries on the subject of hours of labour. I think it is not necessary to have a specialist. It seems to me that any level headed clerk can do that sort of business and do it as well as any specialist can. The specialist's work comes in after you have a collation of what exists and when you want evidence as to the results of that. Then, a specialist, who has made a study of the question, has travelled and has the experience, would be a very great benefit to the committee. I would not be opposed to having the very best we can get in that respect but it does not seem to me that the time has arrived for a specialist.

Mr. KING. The committee has already gone over the preliminary ground mentioned by my hon. friend and it is precisely with the view of having the results of that legislation collated for the committee that the employment of this specialist is suggested.

Mr. BLAIN. I agree with my hon. friend from North Toronto (Mr. Foster). It seems to me that when we have a large labour bureau that is costing this country a great deal of money, and as my hon. friend the Minister of Labour himself has been devoting his time for some years to the condition of legislation in other countries with the view of perfecting the labour legislation of this country, the minister and the bureau should be in possession at this moment, without any extra expense to the country, of all the legislation that it would be possible for any expert, I do not care, who the gentleman may be, to procure and would also be able to give the results. It rather suggests that somebody wants a situation. I do not know who it may be, I have nobody in my mind at all, but I do not think it is in the interests of Canada that we should be farming out from time to time certain work that should be and is performed in the department at a very large cost to this country. I am quite willing that money should be reasonably expended in order that we may have the best information possible in the interests of the country but it seems to me that the effect of this report is to give to some outside person to do, what the department should do itself.

Sir WILFRID LAURIER. It is certainly a departure from the practice in the past, and no doubt the reasons may be quite sufficient, but in the meantime I would ask my hon. friend to withdraw the motion so that the House may have an opportunity to look into it.

Motion withdrawn.

FIRST READINGS.

Bill (No. 123) respecting the Central Canada Manufacturers Mutual Fire Insurance Company.—Mr. D. A. Gordon.

Bill (No. 124) respecting the Eastern Canada Manufacturers Mutual Fire Insurance Company.—Mr. D. A. Gordon.

QUESTIONS.

BASS RIVER AND LITTLE DYKE LIGHTS.

Mr. STANFIELD:

What supplies, and cost of same, were furnished the pole lights at Bass river, Masstown and Little Dyke, Colchester county, for the years 1907, 1908 and 1909 respectively?

Sir WILFRID LAURIER:

The supplies furnished the three lights indicated included oil, lamp accessories, paint, cleaning material, &c. The agent of the Department of Marine and Fisheries at Halifax, advises that the cost of such supplies furnished were as per following table:

	1907	1908	1909
Bass River	$34 09	$50 36	$47 29
Masstown	19 07	20 97	16 82
Little Dyke	18 74	20 99	28 83

The light at Bass river is a tower light, not a pole light.

GRENFELL WHEAT ELEVATOR.

Mr. W. M. MARTIN:

1. Has the subject of the accident at an elevator at Grenfell last fall, by which an operator fell into a bin and lost his life, been brought to the attention of the government? If so, to what department were the representations made, and by whom?

2. What was the substance of these representations, and what action did the government take?

Sir WILFRID LAURIER:

1. Yes. Representations were made to the Department of Trade and Commerce by the Hon. Walter Scott, premier of Saskatchewan, and Charles C. Castle, warehouse commissioner, Winnipeg.

2. The department was requested to examine the existing statutes to ascertain whether any legislation was required to empower the warehouse commissioner to act in the matter; and further that the Dominion government enact the necessary legislation to require licensed elevators to take out accident insurance covering their employees. It was also stated that there was some doubt as to provincial or federal jurisdiction in the matter. The subject was referred to the Department of Justice, which department replied that the Minister of Justice was of opinion that such legislation should be left to the provincial legislators to enact.

PENDER ISLAND CANAL.

Mr. BARNARD:

1. What was the cost of the Pender Island Canal?

2. What was the depth of the canal when completed?

3. What is the present depth at low water?

4. What is the length of the canal?

5. What was the tonnage passing through the canal during the past year?

6. What saving of distance is effected by vessels using the canal in lieu of passing around South Pender island?

Hon. WM. PUGSLEY:

1. $10,000.

2 and 3. Depth of channel when completed and present depth, 10 feet at low tide.

4. 1,000 feet.

5. No records are kept of the tonnage passing through the channel; the resident engineer reports that it was used by the mail boat in a tri-weekly delivery of mails, from Sidney to the islands, and also by small boats trading between Browning harbour and Sidney.

6. From Sidney to Browning harbour, five miles; from Bedwell bay to Browning harbour, seven miles.

LABOURERS ON LACHINE CANAL.

Mr. VERVILLE:

1. What are the names of the labourers who are employed and who will be paid out of the $3,100 mentioned in the answer of January 17, 1910?

2. On what kind of work will they be employed from now until the end of the fiscal year?

3. Who is the chief electrician on the Lachine canal, and what are his duties?

4. What are the duties of T. Evers, employed on the Lachine canal, and what is the form of expenses allowed to him?

Hon. GEO. GRAHAM:

1. The names of the labourers employed at the present time for urgent and necessary work, are as follows: (Conditions may arise that necessitate, in the interest of the department, the employing of a few more labourers on the roads):

Damase Gratton, road foreman western division; W. Bergevin; Ald. Filion; J. Forest; J. B. Sauriol; W. O'Leary.

J. P. Evers, foreman eastern division; E. Riley; J. Donaldson; J. McNamara; P. Murphy; J. Murphy; W. Gauthier; Geo. Yon; A. Larivèe; J. B. Tremblay.

Maintenance of government yards, M. Fitzpatrick; F. Riley; J. Harding.

2. Labourers will be employed along the entire line of the canal where required during the balance of fiscal year, repairing roads, removal of snow on and off bridges, opening ditches, cleaning sidewalks, spreading ashes, maintenance of government yards, shops and stores and other necessary works in connection with government reserve lands.

3. There are two electrical power houses on the Lachine canal, Mr. Julien Brunet, is chief electrician of the eastern division power house, Mill street, Montreal, and Mr. James Innes is chief electrician of the western division power house at Cote St. Paul, both Julien Brunet and James Innes have charge individually of their respective division and power house.

4. T. Evers is employed as clerk or secretary in the office of the superintendent and also as telephone electrician in charge of the repairs of the telephone instruments of the Lachine private telephone system. T. Evers has a monthly allowance of $15 for conveyance in connection with this work, the same as is allowed to electricians Brunet and Innes.

'WHIG' PUBLISHING COMPANY.

Mr. EDWARDS:

1. Has the 'Whig' Publishing Company been paid any money for printing and advertising by or for any departments of this government other than Militia and Defence and Marine and Fisheries since 1896?

2. If so, what amount have been paid to the said 'Whig' Publishing Company in each year from 1896 to the present time?

Sir WILFRID LAURIER:

This should be the subject of a return.

Mr. SPEAKER. Stands as notice of motion for a return.

REPORT OF SWINE COMMISSION.

Mr. ARMSTRONG:

1. Has the Swine Commission made its report? If not, why not?
2. When did the commission return, what countries did they visit and make investigations in?
3. Why did the commission not investigate conditions in Canada before going abroad?

Hon. SYDNEY FISHER:

1. The commission has made its report, which is now in type and has been once proof read by the secretary.
2. The commission returned at the end of August after having made investigations in Great Britain, Ireland, Denmark, and to a slight extent in Holland.
3. The commission, being composed of men actually engaged in the rearing and marketing of swine, were, from their own experience, sufficiently acquainted with conditions in Canada to enable them to examine intelligently conditions in other countries, having in view the lessons that would be useful to Canadian swine raisers.

CENSUS OF 1911.

Mr. ARMSTRONG:

1. When does the government commence taking the census?
2. Will the work be carried on in a similar way to that adopted in 1900? If not, what is the nature of the improvement suggested?
3. What is the estimated cost of taking the census and the time required to complete same?

Mr. FISHER:

1. In June, 1911.
2. Yes.
3. Estimates not made yet.

QUARANTINE BOAT, HALIFAX.

Mr. CROSBY:

1. Has the government made any arrangements or let a contract for the construction of a boat for the quarantine service at Halifax?
2. If so, were tenders asked for, and how, from whom were tenders received, what are the names and amount of each tender, what is the amount of the tender accepted, and when will the boat be delivered at Halifax, ready for service?

Mr. FISHER:

1. Yes.
2. Tenders were asked for by public advertisement and were received from—

Collingwood Shipbuilding Company, Collingwood, Ontario	$35,000
Toronto Ship Yards, Toronto, Ont.	39,850
Philip & Son, Ltd., Dartmouth, Eng.	22,600
Edward Norman, Toronto, Ont., (for Crabtree & Co., Ltd., Yarmouth, Eng.)	28,310
John Reid & Co., Montreal, P. Q., (representing British Builders)	28,500
Halifax Graving Dock Co., Ltd., Halifax, N. S.	37,362
Laurie & Lamb, Montreal, P. Q., (representing British Builders)	27,215
Polson Iron Works, Ltd., Toronto, Ont.	36,450
La Cie Pontbriand, Sorel, P. Q.	37,750
The New Burrell-Johnson Iron Co., Ltd., Yarmouth, N.S.	32,750
Mordey, Carney, Cardiff, Wales, (per Ed. Nonan, Toronto, Ont.)	27,143
P. J. Powers Co., Ltd., Ottawa, Ont.	38,500

The amount of the tender accepted is $22,600 The delivery of the boat is to be made by July, 1910.

HALIFAX HARBOUR MASTER.

Mr. CROSBY:

1. Has the Minister of Marine and Fisheries received any official notice from Halifax of the death of the harbour master at that port?
2. If so, has any appointment been made to fill the vacancy?
3. Has the minister received any letter or recommendation from any person or persons or mercantile board or board of trade? If so, what is the nature of the recommendation or requests?

Sir WILFRID LAURIER:

1. The Department of Marine and Fisheries was advised of the death of the harbour master at Halifax, on the 19th December last.
2. No appointment has been made. Captain Neil Hall, port warden of Halifax, is acting as harbour master temporarily.
3. The council of the Halifax Board of Trade recommended to the department that a man of thorough nautical experience should be appointed.

QUESTION OF PRIVILEGE—MR. LAKE.

Mr. R. S. LAKE (Qu'Appelle). Before the notices of motion are called I desire to rise to a question of privilege. It has reference to an answer given on Monday by the Prime Minister to a question standing in my name. This is the first opportunity I have had of speaking to this question of privilege. The Prime Minister's answer was given at a moment when I was absent from the House. During the course of it he took occasion to say that the citation made by me of a report appearing in the 'Globe', of a speech the right hon. gentleman had made at Toronto, was not a correct reproduction of the 'Globe' report. He said further it was garbled and omitted an important part of a sentence, though he added that he was quite sure that the misquotation was unintentional on my part.

Let me say that the question as it ap-

peared in the orders of the day was not a correct reproduction of the question as I handed it in to the Clerk of the House. The Prime Minister is well aware that questions are not always printed exactly as they are handed in, and I should have thought it more consistent with his dignity that before casting such a reflection on an hon. member of this House, as that implied in his answer, he would either have refrained from dealing with the matter until the member was present and had had an opportunity of explaining any possible discrepancy, or would at least have looked at the question in its original form in the member's handwriting.

Had he done so he would have found that I had made two quotations of two separate and complete sentences exactly as they appeared in the 'Globe' and that I had made the necessary quotation marks to show that they were separate quotations.

The Prime Minister in his reply made a full statement of the 'Globe' report, which he says is substantially correct. According to that very statement it would appear that the Prime Minister has made a misstatement of fact in his answer and founded his whole argument upon it. He states that an important part of a sentence is omitted. That is not the case. No part of any sentence, whether important or unimportant was omitted. A whole sentence was omitted deliberately, because I had no fault to find with it and had no question to ask in respect of it. It stated in effect that the people of Canada are the loyal subjects of His Majesty. Surely the Prime Minister does not seriously suggest that it was necessary for me to ask whether the government held the same views as himself in that respect. I take it for granted and I would consider it a reflection to ask such a question.

The other two sentences which I quoted and which the Prime Minister now endorses and implies to be the views of his government in regard to our relations to the Throne contain views which I believe to be unconstitutional and contrary to the facts. It was in respect of these two statements, and of them alone, that I asked my question as I believed it to be of the highest importance that the country should understand the attitude of the government regarding them.

I have nothing further to say at present other that to express my astonishment and regret that the Prime Minister in an apparently carefully prepared statement should have made an incorrect statement of fact and founded upon it an argument that would reflect upon a member of this House.

Sir WILFRID LAURIER. May I also be permitted as a question of privilege to answer my hon. friend just one word. If he has read my answer, and evidently he has, he knows that I acquitted him of any intention of misquoting. He now says that he put his question correctly and the only blame he puts on me is that I did not look at the question as he handed it to the clerk. I assumed that the clerk had put it on the notice paper correctly. The notice paper was before the House for three or four days and nobody took objection to it, not even my hon. friend (Mr. Lake). Therefore I took the question as it was printed in the Order Paper and I do not think any one will find fault with me for doing that. I have only to say that I think my hon. friend is hardly fair. I told him in the House that I knew he was incapable of making a garbled statement. What more could he expect from me?

Mr. LAKE. May I say that I have been very busy and had not seen the printed question. Had I been present in the House I would undoubtedly, as I have done on many occasions, corrected the question in putting it to the government.

Sir WILFRID LAURIER. If the question was put in my hon. friend's absence he should not blame me, let him blame some of his friends who put this question for him.

PARTY PATRONAGE.

Hon. GEO. E. FOSTER (North Toronto) moved:

That in the opinion of this House the prevailing system of party patronage constitutes a menace to honest and efficient government, incites to great waste of resources and extravagance of expenditures, tends inevitably to corrupt and lower the tone of public morals, and should forthwith be eliminated from our federal administration.

He said: I do not make any apology for introducing this resolution even though it may be said to be an academic one. I have not very much love for simply academic resolutions which have no practical relation to legislation or to our system of public life; but I do not think it would be an unmixed evil if in this parliament we were to devote a little more attention to the theory and give a little more time to the discussion of the principles involved in the administration of our public affairs. But the question I am bringing to the attention of the House is not a purely academic one, because it is intimately and practically connected with the government of the country that it has every day and every hour an influence, not only upon special lines of governmental administration, but upon the public life of the country. Fortunately during the last few years, this question has been attracting the attention of the more thoughtful people of Canada. We have seen and heard a great deal of discussion on the results that flow

from the adoption of a principle different from the one advocated in this resolution. This question has excited a great deal more attention in the country of late years than it did formerly. I do not wish to elaborate that statement but simply to give a few examples which prove it. I do not know that I could do better than give three examples, as specimens of others that might be cited in very large numbers. So far as my remarks this afternoon may go, I shall endeavour to confine myself strictly to principles, although the temptation is great to bring to the support of those principles the many examples which illustrate them. However, I shall leave that to be done by each individual member, if not openly and publicly in the House, at least in his own mind; and from his own observations, I am sure every hon. member can furnish examples illustrative of some of the facts I intend to present. The first statement I shall read will be the motion moved by my hon. friend the leader of the opposition (Mr. Borden) and on which a vote was taken in this House:

That in making appointments to public offices, and particularly to those of a representative nature, party services should not alone be considered, but selections should be made with regard to capacity and personal character.

Yeas, 43 (Cons.)
Nays, 70 (Libs.)

You will notice that this deals with but a fraction of the patronage system, and that it is a very reasonable and moderate presentation of theory as opposed to the present practice. I shall next read an opinion broadly distributed throughout this country. How much support it has in the party opposite, I am not going to say, but it is a statement of what is demanded from the present government:

THE LIBERAL DOCTRINE.

The rank and file of the Liberal party will acclaim a plain statement of the need for a closer loyalty of the department to this accepted principle of party government—all patronage should go to the friends of the party. Every departure from this is an act of disloyalty to the followers and supporters of the party.

No cabinet minister nor any supporter of the Liberal party can assault this position and be loyal to his party.

Every new appointment, every power of patronage, belongs by right of system and precedent to the members of the Liberal party.

To appease a political foe by gifts of patronage is a sign of cowardice, or even worse.

In the initial appointment or in the awarding of a government contract, it is expected that the party in power shall be loyal to its friends. Without such loyalty the party becomes disorganized.—Ottawa Free Press, Lib.

This is taken from the Ottawa 'Free Press.' This may be an extreme statement of the view of the writer of this article, and an extreme statement of the view taken by the party as a whole; but I read it because it shows very precisely the ultimate and extreme position that can be taken by the adherents and supporters of the party patronage system.

Then I take, as an example of the utterances of church conferences, the following:

That the sordid system of patronage unfortunately obtaining in this country is not only folly from the party point of view, with which as such this conference has nothing to do, but that it is contrary to public policy and an offence against the people inasmuch as it proceeds on the assumption that the party in power is justified in administering the affairs of the country to the advantage of that section of the electors who have assisted in returning it, whereas, according to any true view such party should regard itself as a trustee for the whole people.

That was a resolution unanimously adopted by the Methodist conference. As a fourth extract, I beg to leave to read the statement of a newspaper, which, according to the view one takes, may be independent or may be a strictly party paper, for, as one reads its pages, it is sometimes the one and some times the other. Probably on the whole the independent view is the one which obtains. I refer to the Montreal 'Witness.' In an article on the report of Mr. Justice Cassels dealing with the evils that flow from the patronage system, it has the following:

The saving of a million or so of the people's money in each of the departments would be the very least part of the public gain by a change which would eliminate these corrupt dealings. Far more important is the fearful demoralization of public servants that inevitably develops under it, and which those who seek dealings with the departments tell us, with what truth we do not know, is found throughout the service.

But even the demoralization of the public servants is not the worst. Worse far is the example set and the lesson taught to the whole nation, and the general contempt for government which the common knowledge of these things breeds. Judge Cassels did not advise an investigation similar to his own into the other departments. It was not his business to do so, and he had not any evidence on which to base such advice. But when, in advising an independent purchasing agency, he says: 'Are there no other departments of government which could be dealt with in the same manner?' he comes as near as he may to such a suggestion. Surely it is time for a clean sweep. That ministers are capable of making this sweep themselves is fully proved by the history of the department that has been the subject of the inquiry. That the system of judical inquiry should be made general, and probably in some shape permanent, is the natural deduction from all the conditions, and this last is practically advised.

These four statements show in brief the position which is taken by the large divi-

sions of those who express public opinion in this country. So I say that the question is attracting renewed and constantly increasing interest. It is no longer an academic question in this country, I hope it is eminently a practical question, and I hope the question will not get out of the sphere of discussion until this country, in the beginning of the twentieth century, of its twentieth century, shall purge its public life clean and clear from the patronage system and the evils that come therefrom.

This patronage system which has existed since confederation, and under all governments, and exists to-day, is the lineal and distinct descendant of the old kingly monopolies of the sixteenth and seventeenth centuries. What the king did in farming out great monopolies, and taking revenues for himself, and gains therefrom, dividing them amongst favourites, who thereafter became beneficiaries, is being done under the patronage system. Now substitute for the king of the sixteenth and seventeenth centuries the Prime Minister of the twentieth century; substitute for the immediate favourites to whom the king made these grants of monopolies, the ministers of the cabinet selected by the Prime Minister, and you will have the first two of the many links in a chain that binds the whole system together. The premier and his selected councillors make up the ministry, that is the first; after that comes the caucus and its elected components; after that comes the local candidate in his district, with his circle of party supporters; and lower down in the scale comes the district committee with their control of the petty patronage which has to be dispensed within the purview of their own jurisdiction. That makes a complete chain, extending from the representative of the king, under the old idea, and down to the base of the system. This is a wonderfully concentrated and correlated system. There is not a section of this country from one end to the other which is not under its influence, and which to-day is not throbbing and pulsating with the stimulus—whether it be good or bad, I am not saying just now, though I shall later—with the stimulus derived from the party patronage system. The old kingly monopolies and what was knit thereto, were powerful and strong; this is an infinitely more powerful one because of the wider distribution of the roots that it sends down in all directions and everywhere, and because of its numberless ramifications.

But it is more powerful from another consideration. The kingly monopoly was raised up before the people in lurid light, but had for its backing no such powerful association as the people behind it. But the patronage system, on the lines that I have tried to explain just now, becomes infinitely more powerful and dangerous, because it hides its enormities by the fiction that it is the adjunct of party government exercised by the people and for the people, and is one of the instrumentalities of a governmnt so organized and so conducted. That is what gives it its power and tends to its continuance, and that is one of the shields that must be stripped from it before eventually the people throw it off their shoulders. Hitherto we have looked upon the patronage evil in bits and shreds; we have seen a manifestation of it here and talked about, we have discovered a manifestation of it elsewhere and have discussed it; I think we would gain a new view perhaps if we attempted to put it in one great mass before our view, and the view of this House and the country. Let me try for a moment to do that. The soldier, as you will acknowledge, Mr. Speaker, though he is a picturesque object with his uniform, and his erect stature, and his military facings, is not impressive, that is, he is not so impressive as when all the soldiers of the army are gathered into regiments and battalions, and the mighty sweep and force of the united host is presented to the view. So with reference to this patronage. Take a feature of it in the city of St. John and elaborate it, Heaven knows it is bad enough; take a bit of it in Vancouver and elaborate it, and you will see some of it; but you have not yet got what we may only get when we hold the whole beastly system up to the inspection and reprobation of this country.

Let us look at the Civil Service of the country. I cannot say by the book, but I suppose there are probably between 8,000 and 10,000 members of the Civil Service, inside and outside. This Civil Service is constantly enlarging, its numbers are constantly growing. Every day, almost, some vacancy occurs, and every day, almost, some appointment to fill a vacancy is made. And so in new appointments, and in appointments to fill vacancies, you have a large and constantly increasing draft from the outside into the inside of the service. But that does not show the extent of it. Every civil servant has his family, has his relatives, has his friends outside his relatives; and whatever interest he may have in the patronage system, whatever it does or promises for him, it creates an interest which is distributed more or less over his family, his relatives and his friends, and binds them with him in the objects and for the purposes that he looks upon as being advantageous and useful, either actual or possible to himself.

Now, with reference to the Civil Service, until September, 1908, this was absolutely true, that no man entered it, no man got preferment in it, no man felt safe within it, unless he either got the entrance by virtue

of party influence, or looked after his preferment and his permanent position by keeping on good terms with the party influence as represented by the nearest access of that influence to himself. Since September, 1908, a measurable advance has been made, and a portion of the Civil Service has, to a certain extent, been cut loose and put into a more or less independent position in that respect. It still remains true that the vast mass of the Civil Service is in the position that I have just mentioned.

But the Civil Service is but a small portion of the entire service of the country. Outside of it you have great numbers of public employees. Take, for instance, the Intercolonial railway. The yearly pay-roll of that railway is about $500,000, and the number of persons employed and paid is now close up to 10,000 persons. When you take 10,000 persons with their families, their relatives, their connections and friends, you see what an element you have in the consideration of this question of the influence of party patronage. Then, there is the post office. You have scattered throughout this country 12,000 keepers of post offices of high and low degree—taking the degree to mean the salary and functions that they enjoy and perform. There is also a brigade of some 600 mail clerks, though railway mail clerks do form a portion of the service. Then you come to the Customs and Inland Revenue Departments, and you find a widespread and heavily manned organization outside of those who form the regular Civil Service of these two departments. Take also the Department of Interior, with its immigration branch, its lands branch, its Indians branch, and you have a widely distributed force, large in numbers and great in influence, which is affected by and interested in this matter which I am discussing to-day. The Department of Marine and Fisheries is a widely extended one outside of its permanent Civil Service employees. There is an army of 800 employees at one place alone, Sorel. The department's dredging fleet is manned by 500 to 600 employees. Its steamers have an employment roll of 500 persons. And the fisheries inspectors, the marine agents, the lighthouse keepers, the buoy keepers, and all the dispensers and adherents of this immense service constitute an army the exact size of which I do not know, but which is very large, and, as I have said, widely extended. Then you come to the Department of Agriculture. Any one who compares the condition of this department ten or fifteen years ago with its condition to-day and sums up the result must see how this service has ramified in various directions in all parts of the country. To-day it has a very large number of employees, some permanent and some so called temporary. I do not know the number, nor can I give you a statement of the salaries paid. I am simply making the point now that these employees are numerous, and, of course, must be costly. The Department of Public Works, outside the ranks of its regular civil servants of inside and outside employees, has under its charge a large number of men. And even outside the men it employs and pays out of the public treasury, it is a vast dispensary of patronage. In the course of the year some $10,000,000 or $12,000,000 of public money is paid out by this department on the basis of tender and contract, or otherwise, and every one of these expenditures has to be supervised. There are foremen, there are inspectors, there are a multitude of persons engaged in one way or another; and, patronage having full force as it has in that department, shows up greatly and in wide extension. Without going further into detail, I may state in brief that all these together make up a multitude which no man on the spur of the moment can exactly number. I think it will be found that there are not much less than 30,000 employees of one kind or another in all these lines that I have enumerated. Add to these the regular service and you have a vast army of employees. And with reference to all of them, with the simple exception of the Civil Service at Ottawa, it is absolutely true that no man enters into that employment unless he utters the party shibboleth, and no man remains in that employment unless he either keeps a mighty quiet tongue—if he happened to go to work before the existing government took office, whatever that government may be—and no man gets along unless he continues to utter the party shibboleth and keep in touch and well within the good will of the party.

But even that is not all of it. We have in this country a number of commissions. And, of late years, commissions have enjoyed a growing era, so to speak. We heard yesterday how stones grow. Without going into the question as to how the growth takes place in such hard formations as that, there is not the least doubt that there is a vast growth in commissions—commissions permanent and commissions temporary, commissions stationary and commissions travelling, commissions made up of several and commissions made up of one; but commissions there are in plenty and constantly increasing. For example, you have the Transcontinental Railway Commission, made up, in the first place, of five—or is it six?—king pins. These are the main men. But when we look beyond these king pins and the salaries they get, we have only begun to size up this commission. See the

clerks they have; see the engineers they have; see the supervisors they have; see the inspectors they have. And follow it up: within the last four or five years of its existence, this commission has dispensed about $58,000,000 of the people's money. And all this organization is permeated from top to bottom with the idea of party patronage. On the basis of that idea they were created. The men who formed the commission took products of party patronage as their raw material. And, the commission being constituted of the dust of party patronage, well ribbed and fitted up, everything which emanates from that commission is of the same nature. Every clerk of high or low degree, every supervisor, every engineer,—every man who has anything to do in the mighty series of transactions carried on by the commission qualifies for his work upon the basis of party patronage. Every man must speak the party shibboleth, must do his duty to the party—as many of them know to their great cost—and they must all keep in touch and in hearty sympathy with the party. There is another commission—the Railway Commission. It is a commission of a different order, but the same principle holds good. By virtue of the party patronage principle the members of that commission were first appointed, and by virtue of that they hold their positions. Aside from whatever excellencies they may have—I am not discussing that question—they could not get there unless they had earned their spurs by services to the party, or unless the party believed that they would get an equivalent compensation by their appointment. And so with an army, small in this respect, of employees under them; all is based and carried out upon the same principle of party patronage.

Well, the matter does not end there. We have a judiciary in this country. We have benches and courts of law from the highest tribunal at Ottawa down to the county and district courts in the various provinces. Is it too much to say that within the lifetime of any party no single man gets a seat upon the bench who does not get it because he belongs to the party which has the appointment and because he has thus earned his spurs? That does not mean to say at all in no case do they ever have all the qualifications that a good judge ought to have, but it is undeniably true that many of them enter through the gate of party exigency rather than by reason of merit, experience and the degree in which they are versed in the law. Take a lawyer who goes up to a certain stage in his profession, not a very advanced one, jerk him out into political life, throw him about in political life for fifteen or twenty years, perhaps holding cabinet positions and otherwise, and all that time out of his office, away from the administration of the law and from the prosecution of the deep and grave studies of the law; do you in that way fit him to sit upon the bench? No one would argue that for an instant. It must be a disadvantage. But if you look over the list, if you scan the roster, you will find that very many who sit upon the bench to-day have come up through that school which nobody will for a moment assert is the best school through which they should come. To-day the judiciary is appointed on the line of party patronage and the inevitable tendency is some time, somewhere, to make mighty poor appointments because the exigencies of party demand that such and such a one be rewarded. If a man would stand up and controvert that opinion I will put up to him the other part of the question: Does it help to make a better judge that he should enter upon his duties through the party door? Nobody will attempt to assert the affirmative of that proposition.

Well, that does not end it. We have a Senate. As a boy at school and a student at the university and after I left the university—my experience compares with that of others who have gone through the same course—what a high and reverential ideal we had imbibed and possessed in our student days of the Senates of the olden times. The Senate! What was the ideal?—men of irreproachable life, men of wonderfully great experience, men of age, because of the idea that wisdom and experience and age naturally go together. Our ideas of the senates of the old world and our ideas of what ought to be the senates of the new world were projected upon a high and lofty plane. Alas, as we grew up, came out into the life of this practical world of ours and some day found ourselves up against a real senate in the eighteenth, nineteenth and twentieth century, our ideals, I am afraid, received a very great setback.

Sir WILFRID LAURIER. Hear, hear.

Mr. FOSTER. To-day I am afraid that even the Prime Minister has absolutely abandoned all that he worshipped in his younger days. To-day my hon. friend stands in the position of having confessed to this House, after having deplored the evil, that he has sought to find a remedy, but that it is not within his resources to find a remedy and that therefore no remedy is forthcoming.

Sir WILFRID LAURIER. Shall we hear the confession of my hon. friend now?

Mr. FOSTER. Well, I to-day am not in the mood for making confessions. What I desire to do to-day is to make a plea for what I consider would be a better state of

things and my concluding plea would be that the Prime Minister, the powerful minister of a victorious party and of a powerful party, will join hands with the men on this side of the House and see if a better ideal cannot be reached. Our senate of the olden day did embody some of those ideals that I have spoken of. Sometimes we know that distance lends enchantment to the view, and one whom we see through the glass of history sometimes bulks larger than a man, may be equally strong, that we do not see through the glass of history but come face to face and eye to eye with. All the same, making that allowance. I think that our older senate did have more of the elements of the ideal senate than the senate of to-day. It is true, is it not, Mr. Speaker, that every appointment to the Senate is a creature of the Prime Minister? I mean the word 'creature' in its proper sense—the creation of the Prime Minister—and the matter would not be so deplorably bad if the Prime Minister, when he creates a senator, would sometimes use fresh material. The trouble with him is that he takes old and powdered and decayed material and makes his creations sometimes out of that. Is it too much to say that the Senate, as it is at present projected by the Prime Minister, is, to a very large extent, used as a hospital for the incapables and incurables of the party in power, fortunately, or unfortunately, I am not sure which—for the time being I shall say fortunately—relieved by some men of great power and of large representative interests. But am I quite right in saying that it is a fortunate thing? The other element so far predominates that may be it is unfortunate that there are examples such as I have alluded to which may be pointed to to make it possible to keep longer in this country a senate based upon the power of appointing as it has been exercised in the last ten or fifteen years. If there were no redeeming representatives in it to-day we might get into a better position and have a higher standard to place ourselves upon all the sooner. But I do say and I do not think that anyone in this House will contradict me that there is absolutely no doubt that the Senate is not what it ought to be and that it is not, is due to the system of patronage or party appointment that is in vogue.

That, I think, is a statement that we can all subscribe to. To-day, every man who goes into the Senate has to kiss the shoe of the Prime Minister—that much he has to do, what else he has to do deponent in this case saith not.

And now I come to the House of Commons, and for the moment address myself to my own colleagues, not with any desire of passing judgment on the House of Commons; each man here shall be his own judge. The only thing I venture to do is to ask the members of this House to do as I myself do, to ask themselves certain questions, to ponder over the answer and then conclude, each in his own mind, whether things might not be better than they are. How far is the representation in this House based upon the calm unbiased judgment of the electorate of the country, uninfluenced except by the unpurchasable views of the electors, uninfluenced except, in addition to that, by the relative wisdom and weight of the party policies and the party platforms? Or, how far has it been due to the spoils of office past, present and prospective? Now, that is a question that any man can ask himself, and I am not at all afraid to leave that question with every member of this House, and I am not afraid to venture the assertion that he can find an answer to that in no other way than one that is condemnatory of the patronage system and the patronage evil. How far that has been the case each member can answer for himself. How far each member is here solely for his country's good, to sacrifice, to labour that his views of citizenship and policy and good government shall prevail; how far he is here looking to prospective office and emolument it is not for me to judge—every man can go before his own conscience in that respect. It is a little significant, however, that in the last 10 or 12 years 100 appointments of various kinds have been made, either of members of parliament or of defeated candidates, which though on the same principle as has been carried out under all governments from confederation until to-day, is in degree very much larger and greater to-day. That statement I think no one will deny. Certain it is that the spoils play their part in tempting the legislator. He may prove superior to it, he often does; I wish I could say that he always does, and always will. I hold, and I think I have said it before, that the majority of the legislators of the country have done their duty in legislative halls, basing that view on an historical glance at the records they have left in the legislation of the country. To my mind they have done their duty well, remarkably well for a new and young country. But I again ask the assent of every man in the House to this general proposition: That they would have done their duty far better if there had been none of the virus and poison of the spoils and of the patronage system at work neutralizing their best efforts in many respects, and preventing them from doing their best work.

I do not want to be extreme in this, but that last proposition is one that I think can not be denied.

Now, we will go to another part of the organism of our country: the press. Its

members do not have seats on the floor of the House, but they have elevated seats just above us, and they overlook us, and down upon us. No man has a higher idea of the purpose and profession and work of the press than I have. In one respect I think it is true to say that the press is the eye, and the ear, and the voice of the nation. As the eye of this nation it should be eagle strong to descry in the distance any approaching danger, to penetrate the gloom of any present error, and to catch the vision of the future good and mirror it so that the people of this country may look upon it and come to love it. As the ear of this country it should be sentient to the lowest plaint of every wrong whether it is individual, or social, or national. It should be sensitive to the faintest whispers of hope and desire from every quarter; it should be sensitive to every cry for quick relief from existing abuses. As the voice of the nation it should be strong and unceasing to translate, from its elevated point of view, what it sees and what it hears, and to convey it to the nation; to sound the bugle call to arms, to denounce every evil thing, and to summon high hope and inspiration to the aid of the forces of right in the country. I am not going to say whether the press does this or does it not, but I am going to say that that is an ideal which the press cherishes, and it is not absolved from following that ideal by any remarks such as that made by the Prime Minister just now, that the press would have a mighty hard job catching up to it. Mr. Speaker, the man that has done anything worth a groat in his life has done it because he has been trying to catch up to his ideals. The man who has no ideals does nothing worthy of his country. The man who does well in ordinary lines of life is the man who has high ideals and who is everlastingly trying to embody them in his life's work. I would be very sorry, by a turn of the lip or by the utterance of one single light word to dim the ideal of any young man in this country coming up to the light of the 20th century; I would rather help him to pitch it higher and encourage him to embody it to the full. Now, Sir, it is for the press of the country to answer this question, not for me—to what extent does party patronage dim the vision of the press, dull its hearing, stifle its voice, or worse yet, bring its voice into the defence of what is bad and sometimes into the advocacy of what is bad. Does that ever happen—it is not for me to answer, it is for the press to answer for itself.

I believe that the great newspaper fraternity in this country has its high ideals, that it is striving, as far as possible, to reach them, and that it is gaining ground every day in the essential principle of a high and lofty and well-toned press, striking abuses because they are abuses and inciting to what is good and right because it is good and right. Certainly a press which is shackled is not freedom's friend, and no party does any good to the press of this country which ties it or influences it by patronage of any kind. In so far as patronage creeps into the work of the press, it vitiates that work and takes away from the people a guiding friend and a valuable adviser.

Then we have a country. Theoretically its domain, its franchises, are a sacred entail to the six and half or seven millions of people who inhabit this Dominion, and what is far more important, to the generations which will succeed them until far off time, how far none of us know, but that it shall be far distant all of us hope. These resources are to be husbanded for them and for their descendants to these latest generations. The revenues and taxes of a country which theoretically are properly to be expended with a sole regard for their good and that of their countless recurring generations, should be so gathered and so expended by sworn and high-minded trustees. And so they are by sworn trustees. Every man who enters a government takes an oath that he will, as a trustee for the people of Canada, so administer their affairs, and every man who takes up office under that government takes an oath or enters into an obligation binding him first of all to the service of his country, and last of all, it should be, to the service of his party or to the service of an individual. The government of a country in its ideal sense is to be based on the principles of aptness and fitness, of economy, of scrupulous integrity, and it is to be carried on with clearness of vision and with nobleness of motive. Under the best possible system this ideal is hard to realize. The cynical man says: Out with you, you are entirely impossible and inconsistent with the ways of a world which will never conform to your ideals. There, again, I take issue and plead for the ideal, and to my mind the statesman never gets so old that he ought not to renew his ideals from time to time and nerve himself to the better embodiment and the truer carrying out of those ideals. Does our patronage system help to make it easier to govern a country on these principles and to carry out those ideals? There is a constant temptation, there is a constant pressure, there is a constant relaxation of fibre, moral and mental. There is the inevitable giving way in part, in sections sometimes, with lamentable effects, and there is the consequent lowering tone of public life and of public administration in the country. Does this massed, constant, persistent degrading force tend to honesty of government, the purity of administration, the elevation of public

life in this young nation of ours, in this the most important era of its existence, in this its formative period? That is a question we may well ask and strive to answer.

Let me ask attention to another thought. To this vast and complicated mechanism there is added the money power. Some say that money is the root of all evil. Well, it is the root of a mighty lot of good, too, and comfort and the like of that, but I suppose the inordinate love of money may be the root of a great deal of evil. Into the mass of that complicated administrative system you inject the power of money. We spent last year $112,000,000. Of that, may be $30,000,000 went without the impulse and stimulus or the virus of the patronage system, went to pay the interest on our debt—and thank Heaven not much can creep into that—and for other statutory purposes that do not come within influence of the vicious evils of patronage. But it is safe to say that $80,000,000 of that were spent under the patronage system; $80,000,000 or $90,000,000 or $100,000,000 will be spent this year and as much or more next year. Mass it together and it is a tremendous expenditure. We are wise if we put such guards about that expenditure, even to the cutting off of our vices of government to the very root, as will direct that money properly and make its force felt upon the objective point without too much electricity being drawn off in the passage. That amount was expended. How are these expenditures managed? I ask the Prime Minister himself, who has arrived at the years of experience and has had a long career, who has met a vast number of men and has observed things in a vast variety of circumstances in this country, I ask him the one question: In the expenditure of that $80,000,000 do business methods control? That is a simple question. I do not think it answers that question to say that a government never can do what a man can do in his own business. That is true, but a government must carry out in the execution of its business every proper economy that an honest, straight and intelligent business man will carry out in his. There may be diversity in the employment of the money, but the principles of the conduct of business are immutably the same all the way through.

Do we have business principles applied to the expenditure of this $80,000,000, or do we not? I do not want to belabour that argument, what is the use of beating a corpse. We acknowledge it. Why then do we not change it? Take the whole system from the time that the tender is asked for until the work is completed, and everywhere it is hampered, it is checked, it is made extravagant, it is made costly, it is made often corrupt by the effect of the patronage which meets it at every turn and calls for its toll out of every part of the transaction, from the contractor down through all the multitudinous supervisors and foreman and supply givers. The patronage system is there and it performs its one function, which is to make all works more costly, which is often to cause the erection of unnecessary works at exaggerated cost, and which is always to vitiate in some form or another.

I do not need to carry out that argument any further. The Cassels' commission and the commission which preceded it show how the thing works. Our public accounts have shown it and so have our discussions in this House and so have the observations of every member of this House. I do not think there is a member of this House who, in unrestrained conversation, going over the matter, will not make this admission. So that when you add to this immense personal mechanism the money element, you have a thing of very great force which plagues the legislators and plunders the country. Does it not plague the legislator? The most anxious hours my right hon. friend has had, the majority of the anxieties he has had, have not arisen from great questions of state or public policy, but from the miserable attempt to serve both party and country at the same time and make the two if possible jibe together. It comes from the more paltry and miserable demands arising out of all these petty questions of patronage which come up every hour of the day. Am I right or wrong? Almost 99-100ths of the work of the cabinet council and ministers is work made for them, difficulties raised for them, knots to be untied which have been tied for them, by this patronage system in one or other of its details. I have been there and I know it and I am talking to men who are there now and who know it, and those men will not gainsay the statement I have made. They may take some exception as to the relative proportions, but as to the facts in the great mass they cannot take any exception.

I wish it did not go further than this, but it does. It beclouds the great issues. We have great questions to solve. Not only has the legislator his part to do—which he cannot do well because he has so much of this other business—but this country has its part to do, which it is precluded from doing well because paltry questions of patronage arise and cloud the issues and prevent the elector giving his mind to the great questions and deciding on them. If we could eliminate these questions of patronage, great good would be accomplished. Take the last election in Great Britain not yet ended. It is warmly contested, it is marked by fervour of declamation even by physical force, but in that election there has not been from top to bottom any thought or fight for a single office. The

question who is to be game warden or dock loader or lock-keeper has not intruded itself in one single instance. The electors have fought the contest out as intelligently as they could, but at least they have fought it out on a question of tariff and free trade, the budget and the lords, home rule, socialism, the navy and other questions of that kind. What would have been the state of things over there if, added to all that, they had all the petty patronage involved in the expenditure of hundreds of millions of pounds to fight out in the general elections? These things are mixed and mingled with our elections and they becloud and vitiate the results. The machinery by which the government is selected is to that degree vitiated and to that extent the administration is weakened. It is weakened by the fact that its attention is monopolized by these matters of patronage and the like to the detriment of important business. Here is where the vital weakness comes in and every government is an illustration of it. Inefficiency, extravagance and corruption creep in everywhere and in every instance the system is at the root of the evil. It is not always what is right, but what is expedient that is looked to, and the measure of expediency in the main is how shall it affect our party. The first thing should be what are the interests of the country, and then how can our party be put in line with the interests of the country. What is the position to-day. The question is: How much can we do for the country provided we first make the party solid? Not what is proper, but what is available, not what is economical, but what is as economical as it can be made, and at the same time always leave a little dripping for the men who put us where we are.

What defence is there for a system of this kind and why should it continue to exist? I have asked thousands of people and the only answer I ever got was this, that you could not keep the party organized and you could not keep the party joined together unless you had that cement. Well, let me state this, and I believe it to be true, that in ninety-nine cases out of a hundred, the death of a political party takes place because of the party patronage and the corruption and entanglements that spring from it. Few are the instances where a great policy defeats a party. Numberless are the instances where weakness gradually increasing comes to sap and undermine the power of a party and the government and forces it to give place to another. The cement of patronage is not necessary to keep a party together. I have instanced the case of Great Britain. An old member of the British cabinet said to me that in his long experience in public life he had never yet been asked for an office. What a heaven it would be for

legislators in Canada—I have several of them in my eye now—if they could get into public life and remain in public life and never be pestered with such an adornment as the patronage system tacked on to their political career. In Great Britain to-day you have not the patronage system, but did you ever see a country in which the party organization was more virile, better cemented, more sturdily capable of standing on its own feet than is the case in Great Britain? What is happening in Great Britain to-day? The first elections came on and one side had an enormous advantage. Then came the time for other constituencies to vote. And the people of those constituencies said: Yes, the Liberals are in for another term; but it does not make a bit of difference to us whether we are marching up to defeat or whether we are going on to victory; we are fighting an issue and we fight it to the end. And they fought it, and gained, and gained under an averse majority of the earlier part of the contest, under the knowledge that they could not form a government. That is a splendid tribute to an electorate which fights issues and is not fighting for plunder. In Canada everybody knows that we could not stand that for a single moment. We could not allow a system which put on the elections in certain parts of the country and got their majority, and, through that majority, influence the great mass of the electors yet to be polled. We would say it was unfair, that it was impracticable because of the influence that the ins, when they wield the patronage system, exert upon the public fortunes of the country. So, I say, it is not necessary to have a patronage system in order to keep the party together. The atmosphere would be infinitely purer, the tone of public life would be infinitely better, if we had this thing purged entirely from the life of the country. We should then have better issues and fight them out on stronger grounds, and, I believe, come to better conclusions and make more progress.

The next question, and the last, is: Can it be removed? The easiest thing in the world. I have been surprised to find how easy it is, in theory. There are some considerations which make it easy. If my right hon. friend the Prime Minister (Sir Wilfrid Laurier) would rise in his place to-day and say that he believes in the principles of the views I have stated and in the general application of the principles I have enunciated; if he would declare that it would be better if these principles prevailed in the administration of the country, and that he proposed, so far as his government was concerned, to apply these principles—if he should say that, who would oppose him? Would the ministers of the gospel and all the church

forces send deputations here to-morrow in feverish anxiety to say to him: 'For heaven's sake, don't abolish the patronage system; the cause of christianity could not flourish if the patronage system were abolished.' Would they do that, Mr. Prime Minister? No; but, from every church court in this country there would come up a cry of thankfulness and praise; there is no doubt about that. The bankers, the business men, the solid yeomanry of the country, would they send up deputations to-morrow and declare: 'We cannot get along nearly so well; we cannot exist; please do not do that, Prime Minister.' Not one of them. Then, who would do it? Out of seven millions of people in Canada, how many share in the rake-offs? You have one Merwin; and you have 6,999,999 who have to contribute to Merwin's rake-off. Bunch together all the men who get something out of the patronage system and you have only a little bit of a measly, mean section of the country. On the other side, you have nineteen-twentieths at least of the people who never wish for and never participate in any drippings or droppings of this kind. The amazing thing is, that when the disparity is so great the infinitesimally small number should still impose itself upon the mass. If to-morrow, the first minister would take his resolution and carry it into effect, I could pledge him that this side of the House would give him support, and we could make the state of things in Canada immeasurably superior to that which now exists.

Now, I have said all I had to say. I have talked of general principles; I have abstained from citing examples——

Mr. LOGGIE. How about Merwin?

Mr. FOSTER. If the hon. member wants to know about Merwin——

Mr TALBOT. We know all about that now.

Mr. FOSTER. I think you do. We talked a moment about ideals; suppose we state something of what would be a fair ideal for a country and consider whether or not it is worth striving for, in this Canada's twentieth century, on the part of a country which has such a future before it and such immense resources on which to base its anticipations of that future: An ideal state of things when members will be elected on broad issues and personal merits; when the Senate vacancies will be filled on a basis of fitness and representative interest; when prospective judges will not have to earn their seats by party services; when civil servants will rely upon their merit and industry and character for their entrance into the service, for promotion in it and for permanency; when the public money will be spent by the government absolutely as trustees for the people on the basis of trusteeship and that alone; when the country will be clad in that dignity of public life, that soundness of public morals, that wise conduct of public resources which make for national character, national progress and national permanency. Such an ideal is surely well worth an honest and sturdy attempt at realization. To embody in our administration the principle I have tried to advocate would I believe tend greatly to that end.

Mr. HUGH GUTHRIE (South Wellington). Mr. Speaker, I have listened with the very greatest attention to the remarks which the hon. member from North Toronto (Mr. Foster) has seen fit to address to you, in support of the resolution which he has submitted. The language which the hon. member has seen fit to use in framing his resolution has something of an old-time flavour and the remarks which he has seen fit to address to you in support of that resolution have something of the old-time ring. In this House this question, in one form or another, has become a sort of a hardy annual, or perhaps I should say a sort of hardy perennial, which the hon. member for North Toronto, by his eloquence, by his vivid imagination, can cause to blossom forth, either in the bleakest midwinter or in the mildest mid-summer, according to whether the session in the particular year be held early or late. Now, my hon. friend is always most pointed and most expressive in the language which he uses, whether that language be used in debate in this House, or be employed in framing a resolution, and in this respect the present resolution, I think, is no exception to the hon. member's usual custom. It comes before us as an ear-marked resolution, if I may use the expression; and I think the officer of this House who is charged with the preparation of the order paper, might safely have omitted all reference to the name of that hon. gentleman in connection with this resolution, for the very nature of the language used would indicate its parentage beyond peradventure. When we find such extravagant language in a resolution as is to be found in this one, such language as 'a menace to honest government,' 'great waste and extravagance,' 'inevitable corruption,' &c., &c., the authorship of such language is placed beyond doubt, beyond even reasonable conjecture. Now, Mr. Speaker, having regard to the semi-judicial manner in which my hon. friend has seen fit to discuss the resolution though drawn in somewhat extravagant language, in the first place, if I may offer my own opinion, I would say that in form the resolution is somewhat objectionable; perhaps I might also add, coming as it does from my hon. friend from North Toronto, that it is per-

haps a little lacking in good taste. While not desiring to occupy the House at any length upon a discussion of the mere question of form, I cannot refrain from pointing out, before discussing the substance of the resolution, that in form it is nothing short of a direct motion of censure upon the administration, notwithstanding how high and noble, how unpartisan may have been my hon. friend's motives in bringing the general question up for discussion in this House. In thus speaking, of course, I am giving only my own opinion of the matter. I do not know what view the government may take of the motion; but as a humble supporter of the government, I think it my duty to point out that the motion as now framed, the language employed in framing it, constitute a direct censure of the government, upon the business methods of the government employed in its various departments, charging as it does, alleging as it does, that the present patronage system constitutes a menace to honesty that the present system incites to great waste and extravagance, tends inevitably to corrupt and lower the tone of public morals. This motion premises, takes for granted, the existence of this deplorable condition of affairs in the public service of this country. I think the hon. member, by the language he has used, has invited the defeat of his own motion. No self respecting government could accept such a motion, notwithstanding my hon. friend's disclaimer of partisan motives in bringing it forward. I think two or three years ago, in this House, I had occasion to class myself as one of the admirers of my hon. friend who sits on your left hand in this House, Mr. Speaker, one of his few admirers it may be, and I have not yet quite lost admiration for him, notwithstanding that at times I have been somewhat wearied by his extravagant and reckless expressions, notwithstanding that at times I have been somewhat bewildered as to his attitude upon various matters which he brings up for discussion in this House. At the present moment I am in real doubt as to that hon. member's sincerity upon this very question. One is inclined sometimes to look beneath the finished and polished diction, to look under the surface, to search for an ulterior motive; and in the present instance I am in real doubt as to whether the hon. member's motives in bringing forward this resolution are in reality the betterment or improvement of the public service, or whether he was not actuated by the fact that such a resolution as this would give him an opportunity to launch one of those embittered, one of those partisan attacks upon the administration so well suited to my hon. friend's training, practice and temperament. If his motive was really the improvement of the public service, then I think I can safely inform him that he has gone a very bad way about it in placing on the order paper a motion couched in language which may be said to be highly insinuating, if not offensive, a motion which invites its own defeat. If, on the other hand, his object was merely to obtain an opportunity for the delivery of a mortal thrust, a solar plexus blow at the administration, then I think I can inform my hon. friend that he has equally failed in that object. His thrust has fallen far short, his blow has been misdirected, I think probably he has used, in delivering his blow, one of those weapons so well described a few days ago by my hon. friend from Red Deer (Mr. Clark), as a weapon with a very blunt point and a very sharp handle. In the discussion of this question, I do not think the government need have any misgiving as to where the wound or injury will be found. Now, I do not desire to occupy the House any longer in pointing out what to my mind, is the utter impossibility of any government accepting this resolution without admitting its own incapacity, its own inability, its own unworthiness. I think I can assure my hon. friend that the government and every member of this House are at all times open to suggestions for the betterment or improvement of the public service, I think I could go further and assure him that any suggestion which he has seen fit to make during the course of his remarks of a practical nature for the improvement of the public service, will receive the most careful consideration of the government and of every member of the House.

Now, Mr. Speaker, I propose briefly to justify the present or prevailing system for the transaction of public business in this country, and to justify to a very large extent, at all events, the present method and mode of appointments to public office. I say that the present or prevailing system, while it is certainly not perfect or infallible, while I would not suggest that it is a system which is not open to abuse, not open to irregularity, I say it is the best system which has existed in this country under any government, either before or since confederation. I desire to make plain the fact that in addressing myself to the present system—this motion is directed against the prevailing or present system, not against any past system—it is the present system that I propose to justify so far as I am able to do so, not as a perfect system, but as the best system which has yet been devised.

My hon. friend from North Toronto and myself have certain common grounds of agreement with regard to this question, and we have many grounds of disagreement, but there is one ground upon which, I think, we will both agree, and that is

since confederation, at all events up to the year 1896, when there was a change in the administration, there did exist in this country a patronage system, better known as the spoils system, a system founded on the principle that to the victors belong the spoils. Perhaps beyond the year 1896 my hon. friend and I cannot agree. He certainly has spoken to-day under the impression that that system has been continued in full force, vigour and effect to the present time. I take issue with him in that respect. But we are at one in our ideas with regard to the existence of that system from the time of confederation down until the year 1896, and I do not know any hon. member sitting in this House at the present time who would be better able to give to the House a clear idea of what that system really was, how baneful and iniquitous it was and how disastrous it was in its operation as regards the welfare of this country, than the hon. member for North Toronto, who has just addressed the House. That system, which was introduced at confederation, or perhaps before confederation, was, as I have said, purely and simply the spoils system as it had existed in the United States, a system based on the principle that all government favour, all government office, must go to the political friend and political supporter, a system which, in so far as one's political friends were concerned, was an inclusive system and in so far as the public and political opponents were concerned, an exclusive system. I do not know that in its inception away back in the year 1867 it did have such a baneful effect as it had in later years. That was only during the formative period, one might say. At confederation, I think I am correct in saying, we started out perhaps with the idea that we would not have a political patronage system at all, but in two or three years the government, under the leadership of Sir John Macdonald, abandoned these early ideals and adopted a patronage system applicable both to government contracts and supplies of goods to the government and to appointments to public office. That system was certainly continued by the Mackenzie administration. They went out of power in 1878, but if I remember correctly, or if my information is correct, during the last years of the Mackenzie administration a number of appointments were made, some before the government retired and some shortly after it had retired which were promptly annulled, promptly set aside, when the Conservative administration took power. There was a great outcry in the country, there was a good deal of indignation at what was regarded as the rather high handed procedure of the late Sir John Macdonald, and I suppose that in order to appease public sentiment the government of that day appointed a Civil Service Commission to inquire into the whole system and formulate some rules, some policy which should in future be adopted with regard to the appointments of officials, with the view, I submit, of endeavouring to do away with the so-called party patronage system. Well that commission met. That commission made a report in the year 1882 in favour of the appointment of a Board of Civil Service Commissioners for the purpose of taking the appointment of public officials out of the hands of the government, or, at all events, of taking it away from party influence. That commission reported in favour of a system of competitive examination. It made several other useful suggestions and among other things it framed a Civil Service Act. Now, the Conservative government was in power from 1878 to 1896. I hope I am well within the mark when I say that they entirely disregarded the suggestions or recommendations which their own commission had made in their report in the year 1882. I judge from the finding of the Civil Service Commission which was appointed in 1892 that while a Civil Service Act was passed in 1882 the amendments which were enacted from year to year were so enacted with the object of doing away with any restrictions which were in the original Act of 1882 as recommended by the commission which Sir John Macdonald's government had appointed. The commission of 1892 found as follows:

> This Act, although not going so far in its provisions as was recommended by the commission, has been amended from year to year, with one exception from the time of its being placed on the statute-book until the year 1899, and so far as the commissioners have been able to observe, the amendments in general have trended in the direction of the relaxation of the provisions of the original Act, and the consequent prevention of its intention from being carried out.

So that after appointing their commission, after receiving its report containing its recommendations, they deliberately set about year after year, until the year 1889, to relax all the restrictions which their own commission had seen fit to impose. Following that came another commission in the year 1892. That commission was granted full powers of inquiry—just as full, complete and ample powers of inquiry as were granted to the commission appointed by the present government in the year 1907. That commission of 1892 took a great deal of evidence, made a very prolonged investigation and subsequently made a report, and in that report they made a number of excellent suggestions, such as a permanent civil service, removing the Civil Service from political influences, taking from it political appointments, competitive examination, a Board of Civil Service Commissioners, and the like. The year 1892 passed and the Con-

servative administration did nothing, 1893 passed and nothing was done, 1894, 1895, and half of 1896 passed and nothing was done, not a single action taken—only a few unimportant amendments proposed by the present Senator Costigan which, I believe, never went into effect and were never passed by the House.

Now, the hon. member for North Toronto was a prominent member of the Conservative administration during a large portion of the time to which I have alluded. I am unable to find in the public records, I am unable to find in any records to which I have had access, that on any occasion my hon. friend from North Toronto, sitting as minister presiding over the departments over which at various times he did preside, at any time took any steps or any action to consolidate or put into legislation those ideals which he has expressed in the House to-day with regard to the question of political appointment to the public service. But political appointment is only one branch of the spoils system as introduced at confederation and as pursued, managed and brought to perfection during the eighteen years of Conservative rule between 1878 and 1896. Perhaps it was one of the least of the features of the spoils system as it then existed. The spoils system under the Conservatives had as its cardinal principle that where public money was to be spent it must be spent among political supporters. There existed in every department of the Conservative administration what was known as a patronage list, kept under lock and key, and upon it was the name of each government supporter, each true Conservative, with whom the government desired to deal in order that when public money was expended it should reach the pocket of the government supporters to the exclusion of others. In addition to that, they had their middlemen and their commissions and their paid agents. They had all these things during these eighteen years of Conservative rule, all these things which have been so elaborately condemned to-day by the hon. gentleman (Mr. Foster). Now, was the hon. gentleman (Mr. Foster) a party to that? Did he go through the whole course of this patronage system from the time he became minister in 1885 until the resignation of the Conservative government in 1896? I say he did. I say he knew of that unjust and iniquitous system being in full operation in the very department over which he presided, and it was a more iniquitous and a more unfair system than has ever existed in Canada since. The tender system in these Conservative days was a perfect farce; it was the semblance of a tender system without the substance. I believe I can prove from documents which I have before me that while the hon. gentleman (Mr. Foster) was Minister of Marine he knew, he ought to have known anyway, what was going on in his own department. I believe I can show that notwithstanding warnings to my hon. friend from the Auditor General, from his own deputy minister, from his own purchasing agents, he persisted in the course of party patronage which gave all the public money spent in his department to his own political friends and supporters. It is a curious thing to listen at this late date to the hon. gentleman (Mr. Foster) delivering a very able speech from the ideal standpoint as to what this administration should do and as to the form of business administration which Canada should enjoy. I ask my hon. friend the question: Has he any wonder that I, publicly calling myself one of his political admirers, should be somewhat bewildered at the devious course he has seen fit to take during his long experience in public life? I propose to place before the House in concrete form some evidence to support my contention as to the mode of tendering which was in vogue under the Conservative administration. I have only a few of the records, which I take from a return brought down to the House two years ago, and there are only a few because as is well known the records of the Marine and Fisheries Department prior to 1887 were destroyed in the western block fire. The records are, therefore, not nearly as complete as I would like, but such as they are, I propose to read a few of them. Here is a letter dated the 23rd of April, 1891—that was after my hon. friend (Mr. Foster) ceased to be minister and when Sir Charles H. Tupper was minister, addressed to Mr. J. U. Gregory, purchasing agent of the Marine and Fisheries Department at Quebec, and signed by the deputy minister of the department:

'I have to request you to invite tenders from a number of friends of the government in the trade for the provisions required during the coming season. Ask them their prices of provisions for the season, and send their tenders here, mentioning all the different articles you require in the different branches of provisions.

(Signed) WM. SMITH.

I read the following dated 24th of April, 1891, addressed to J. H. Harding, Esq., agent of the Marine and Fisheries Department, St. John, New Brunswick, and signed by Wm. Smith, deputy minister:

'Referring to the matter of provisions required the coming season, I have to request you to invite tenders from a number of friends of the government in this trade, and ask them for prices for provisions and send their tenders here, mentioning all the different articles you require in the different branches of provisions.

(Signed) WM. SMITH.

Then on the 4th of May of the same year, 1891, the following letter appears addressed

to the Deputy Minister of Marine and Fisheries, Ottawa, from Mr. Gregory, the agent at Quebec:

Sir,—In conformity with your instructions of the 23rd ult., I have the honour to report that I called upon all the friends of the government in the trade to send in tenders for the provisions required during the coming season, and to better carry out your orders, I consulted the Hon. Thomas McGreevy and Mr. Chateauvert that I might not commit any error in calling upon the tradesmen in question.'

I merely read that to show how hidebound was the system. The agent of the Marine and Fisheries Department was not allowed to use his own discretion as to those who he imagined were Conservative supporters, but to protect himself he called upon two of the sitting members from the province of Quebec to verify his list. The next letter is dated Quebec, the 30th of May, 1891, and it is also from Mr. Gregory, addressed to the Deputy Minister of Marine and Fisheries:

'Sir,—Referring to your letter of the 27th inst., I have the honour to request that you will please return me the tenders I sent you that I may arrange them in the tabulated form you require. Regarding there being but two grocers, that is due to the fact that there being so few of them friends of the administration. The same can also be said of dry goods merchants. Besides Lucas and Dion, I called upon A. Grenier and A. Carvey. Both refused to tender, giving for reasons that they sold at cheap rates and would not make any reduction in their prices nor fix any rates. I will try to get one of them to do so if possible.'

What a farce. Does any one suppose these two men, both no doubt leading Conservatives in the city, did not know who were asked to tender? Why, it was a wide open door for any kind of collusion and dishonesty that any one had any desire to perpetrate on the government. The next letter is of date March 21, 1894, which brings it down near to the date of the general election, and it is addressed to J. U. Gregory, Quebec, and is from the Department of Marine and Fisheries:

'In reply to your letter of the 27th inst., relating to supplies for steamers, I have to inform you that so far as you have gone your action in inviting tenders for heavier staple supplies is approved. You should, however, consult with Mr. Hearn, M.P., as to who should be asked to tender and also inquire of him who he recommends for light supplies that may be ordered from time to time and that are not of sufficient importance to invite tenders for.'

I point out that there is a distinction in these letters, one formula was prescribed for the heavier purchases and the other for the light purchases, and there is good reason for this. The light purchases may be termed emergency purchases; nobody knows when they will be required, or the quantities in which they will be required, but for the heavy staple purchases which recur annually the system adopted by the old Conservative administration was: We will not trust the agent to do that, but we ourselves will prepare the list of the persons from whom tenders will be asked. And the list is a very circumscribed one, the number is very limited, as I propose to show. In the case of grocery supplies in Quebec I think only two Conservatives were asked to tender for the annual supplies. That was the system of tender which was adopted not only in this department but, I am satisfied, in every other department of the Conservative administration which was a purchaser of goods in any quantity or to any extent. Was my hon. friend a party to it? Did he know about it? Did he administer that pernicious system? I have some public records which I shall lay before the House, in that respect, not all the records I would like to lay before the House, because, as I intimated, the great fire in the western block wiped the slate clear prior to 1887. The first document I submit in order to show the connection of my hon. friend with this iniquitous, this atrocious patronage system which the Conservatives operated in this country for eighteen years, is an extract from the evidence of Mr. Gregory, to be found in volume 8, page 3275, of the evidence taken by Mr. Justice Cassels when conducting his commission of inquiry. It is there stated:

I will produce you letters from the different ministers thanking me for the aid I gave them in carrying on the business, from the very first minister of the Marine and Fisheries Department, a Conservative; from the next minister, a Liberal; Mr. Albert Smith, Mr. McClennan, Mr. Pope, and even one from Foster—to the best of my knowledge, the celebrated Foster.

That is the evidence of Mr. Gregory taken from the official report. I have stated and I desire to state it again that my hon. friend while he did preside over the Department of Marine and Fisheries, was warned by the Auditor General that the system of purchasing supplies in that department was not a proper one. He was warned by his deputy minister that it was an improper system, and by Mr. Gregory, his purchasing agent. I refer to the report of the Auditor General for 1886, and to a communication dated August 31, of that year, as follows:

Sir,—I was recently at Quebec and visited the office of your agent there. I find that the supplies purchased by Mr. Gregory are not obtained under contract, and the prices paid are apparently higher than those which are paid for the same kind of goods purchased for the marine hospital under contract. The difference probably arises from tenders be-

ing called for in the latter case and not in the former.

I beg to request that Mr. Gregory be instructed to call for tenders for all the principal supplies required by him.

That letter must have come in some way or other to the attention of my hon. friend while he was minister in control of the Department of Marine and Fisheries. Did he regard it? Did he carry out the suggestion? I may say not, as later documents will show.

I shall refer again to the report of the Cassels' Commission at volume 5, page 1394: This language, which I now quote, is the language of Mr. Watson, who was the counsel before the commission, and I do not submit it as evidence, but the documents to which he alludes I do submit. Mr. Watson says:

And the correspondence prior to that in the department, your lordship will recollect as a matter of history, was all destroyed in the fire that took place, so that there is really nothing beyond 1887 that is of record. I find they are all of this nature, and just as an illustration I run over a few of these to show your lordship the character of it.

On May 13, 1887, a letter was directed to the Hon. G. E. Foster, the Minister of Marine and Fisheries Department, saying:

My Dear Mr. Foster,—I beg to recommend that the firm of Powers & Co., machinists, Halifax, should be put on the list.

It did not say what list, just should be put on the list.

——and receive a share of the work to be done on all kinds of sheet metal work for steamships, lighthouses, etc.

Yours faithfully

(Signed) T. E. KENNY.

I believe at that time he was the sitting member for Halifax. The note on the foot says:

'Put this on the list.'

(Signed) G. E. FOSTER.

Another note—

Done, and letter written to Mr. Kenny.

That letter was written in 1887, a long time ago, my hon. friends may say, but I am only citing it to show that the system was a complete one, a hard and fast system. Conservatives only could supply goods, but in the first place they must be put on a preferred list at the recommendation of a leading Conservative. When they were placed on that list they were entitled to receive tender papers, to go through the form at least of tendering, and in the end to secure, no doubt, a large share of government money.

There is another letter from Charlottetown, P.E.I., on January 6, 1887, directed again to my hon. friend from North Toronto (Mr. Foster). This letter says:

I have to acknowledge your kind note of the 15th ult., and beg to say Mr. Lord has not carried out your instuctions, nor for some reason best known to himself will he do so without a peremptory order. As you will see by reference to the December invoices for supplies to the department here which, I have reason to believe, are very large. I regret to take up one moment of your valuable time, knowing it is occupied with much more momentous matters looking towards Washington, but to the party interests here it is of some little importance.

I am, sir,

Yours respectfully,

W. E. DAWSON.

The note on that letter addressed to my hon. friend is:

Ask Mr. Lord if he has followed out the minister's instructions as to patronage, and why Mr. Dawson has not yet received any order.

This shows that according to the minister's view of the system which then existed, the order should go to Mr. Lord, although the amount spoken of was a large amount, or the order to be given was a large order.

I turn now to a letter written by Mr. Gregory in 1887. I am not very positive at what time my hon. friend was transferred from the Department of Marine and Fisheries to some other department, but I think he was there when this letter was written. It is a letter from Mr. Gregory to the deputy minister, as follows:

October 13, 1887.

Sir,—Referring to your letter of the 11th inst., calling my attention and asking explanation about prices of hay, etc., I have to call your attention to my letter of the 15th February, 1887, and several others on the same subject, supplies. It has long been my humble opinion, and I have no reason yet to change it, that all supplies, of whatsoever nature or kind, should be thrown freely open to public competition and given to the party whose tender would prove most advantageous at fixed prices for one or more years. As the matter has heretofore stood I am ordered to purchase from certain parties who owe this fact entirely to powerful influence; prices, it is true, are fixed for most articles, but it has become the opinion of traders that none but certain friends can get the patronage, whatever political party is in power, Liberal or Conservative. The result is very little competition.

This letter was signed by Mr. Gregory and was evidently laid before the deputy minister. The deputy minister also made a similar recommendation to the hon. member for North Toronto (Mr. Foster), who was in charge of that department at that date and who disregarded that, as he had disregarded the intimation from the Auditor General.

On January 31, 1887, a telegram was sent addressed to Wm. Smith, Deputy Minister of Marine and Fisheries.

I wish that as usual, paint, powder, oils, drugs, common stationery for lighthouses, groceries, hardware and dry goods be purchased in Quebec, also provisions at once.

(Sgd.) HECTOR L. LANGEVIN.

On the 5th of February, 1887, a somewhat guarded letter was written by Mr. Foster, to the deputy minister at St. John. He says:

In the matter of Sir Hector's telegram, saying to continue purchase of material for lighthouses as usual in Quebec, keeping the amount purchased small. It is not necessary now to lay in a heavy stock. Stationery must be got at the stationery office. Not necessary to buy paints and oils for lighthouses at present.

This was followed by a telegram from Rothesay, dated February 10, 1887, addressed to Mr. W. Smith:

Continue usual patronage, Baudet and Chinic, Quebec, with conditions as per letter sent concerning Sir Hector's request. Inform Caron.

(Sgd.) G. E. FOSTER.

These letters show that the whole system was one recognized by every branch of the government. We have here recommendations by the then Minister of Public Works, Sir Hector Langevin. We have also a former minister, Sir Adolphe Caron, associated with the system. I think, therefore, I may fairly say that the system, in all its heinousness and iniquity, was recognized as the basic principle for the transaction of general business by the Conservative administration of those days. I submit another note dated 21st April, 1887, a memo marked 'pressing for the minister':

Please inform me what plan you decide upon Gregory, purchasing supplies as he does not like to purchase now without authority. The best plan in the public interest is to advertise openly for tenders and let all get a chance to state prices for the principal articles.

(Sgd.) WILLIAM SMITH.

The next is a memo for the Minister of Marine and Fisheries relating to the purchase of supplies at Quebec:

Mr. McGreevy has handed in the accompanying list of names, whom he recommends should receive patronage at Quebec in the purchase of supplies. With reference to the first list marked for tenders he recommends that tenders should be asked from the different parties mentioned therein when any articles are required.

With reference to the second list he recommends that these persons should be employed if their services are required or that supplies should be purchased from them without tender, as it would be difficult to make contracts for these articles mentioned in the second list.

(Sgd.) WILLIAM SMITH.

April 22, 1887.

This is marked 'minister approves' and signed W. S. 20th April, 1887.

That approval was given to Mr. McGreevy's list after the Auditor General's letter had been sent the minister and after the agent at Quebec and the deputy minister had reported against the system. Mr. Thomas McGreevy simply sent to the department a list of Conservative supporters and said: Here is the list of those who are to be asked to tender for the larger contracts, and here is a list of those from whom you are to buy the smaller amounts; and the minister marked on that list 'approved' and that minister is my hon. friend the member for North Toronto (Mr. Foster).

Mr. THOBURN. Might I put a question on behalf of the new members of this House? Are we to take it for granted that the reading of these letters, written by men who are dead and gone years ago, justifies the deplorable patronage system of the present day?

Mr. GUTHRIE. I trust my hon. friend from Lanark (Mr. Thoburn) will remain and listen to the balance of my remarks because I think he will very fairly get from them justification for any system which exists to-day.

Mr. CROCKET. Can the hon. gentleman cite any case from the records showing that the Conservative government was buying thousands of dollars of hardware from dentists or letting contracts for masonry work and carpentering to managers of railways?

Mr. GUTHRIE. I do not know that I can find any cases precisely similar to the ones mentioned by my hon. friend, but I have some that come so near them that I think he will admit the principle is the same. The system was by no means discontinued when the hon. member for North Toronto (Mr. Foster) went into another department—I think the Department of Finance. In the Department of Marine and Fisheries he was succeeded by Sir Charles Hibbert Tupper, and there can be no doubt that while the iniquitous system flourished to the fullest extent, under the administration of my hon. friend from North Toronto (Mr. Foster), it still continued to flourish to the same extent under his successor. Let me quote another instance from page 1295 of Vol. V of the reports of the Cassels Commission. There I find a letter dated 17th March, 1892, saying:

Sir Adolphe Caron recommends the name of Mr. Samuel J. Shaw, hardware merchant,

Quebec, to be placed on the patronage list of the department.

This is signed by C. H. Tupper, who was then Minister of Marine and Fisheries, and underneath his signature are the words 'inform agent', signed by the deputy minister.

On the 8th of March, 1892, there is a letter to Mr. Gregory:

I have to instruct you to place the name of Mr. S. J. Shaw, hardware merchant of Quebec, on the list of those entitled to receive the patronage of the department.

That is signed Wm. Smith, deputy minister. Here is a letter written in May, 1892:

Mr. H. F. McDougall, M.P., recommends that the North Sydney 'Herald' receive such advertisements of the department as concern Cape Breton Island, Antigonish and Guysborough.

(Sgd.) C. H. TUPPER.

The note to that is:

Mr. Alexander keep this in mind.

(Sgd.) WM. SMITH,
Deputy Minister.

I find another letter dated 26th January, 1895, coming to the close of the Conservative regime, addressed to the Hon. John Costigan, then the minister of that department:

My Dear Colleague,—I beg to recommend Mr. Octave Plant, tinsmith, 160 St. Johns street, Quebec, as worthy of getting a portion of the patronage of the Marine Department at Quebec. He has always been an ardent supporter of the party.

There is a note at the end of the letter saying: 'That shall be done.'

I submit another document taken from the file, included in the returns to the House, marked, 'provision for steamers.' I submit this to show that right until the eve of the general elections of 1896, this system continued in full force. A few weeks before that general election I find the following memorandum marked 'provisions for steamers:

Last year tenders were initiated by letter for fresh and salt meat, fresh and salt fish, flour, barley, rice, apples and vegetables. Smaller articles than groceries were obtained without tender at the lowest possible prices. This plan worked well.

Mr. Turcotte, M.P., has recommended Napoleon Moffet at Quebec for supplying groceries. Mr. Moffet can have an opportunity of tendering for provisions and staple or heavy articles.

As to small supplies, Mr. Gregory can order a share from Mr. Moffet, if approved.

(Sgd.) WM. SMITH.

In the margin there is the following note:

Carry this out again. Explain to Mr. Turcotte.

(Sgd.) C. H. T.

And in the margin beneath there is still another note:

Yes, but ask Mr. Gregory to consult Mr. Hearne, M.P., as well.

(Sgd.) C. H. T

This last letter regarding Sir Hibbert Tupper's administration, is the one I referred to a moment ago, dated 20th, 1896, when he was Solicitor General:

Liberal-Conservative Committee Rooms,
Pictou, April 28, 1896.

My Dear Sir Hibbert,—The central committee would direct your attention to the rumour that the steamship 'Stanley' may go again this year to Charlottetown to be fitted out, and would ask you to use your influence to hold her at Pictou and have her fitted out here this year.

Yours sincerely,
(Sgd.) J. A. GORDON,
Secretary.

Then there is beneath that letter this note:

Please prevent this. In my day this work was done at Pictou. It should not go to a Grit county now.

(Sgd.) C. H. T.

That is the principle upon which the business of the administration was carried on. And what did it lead to? I have here such a cumbrous file of documents relating to this matter that I cannot hope to place all before the House. Perhaps if I quote a few that will be sufficient. For instance, I submit a letter dated 6th April, 1896—almost at the time of the change of government. This is addressed to Hon. John Costigan, now senator, who at that time presided over the department.

My Dear Costigan,—I troubled you last year about a small contract for paints in favour of J. P. Dodds & Co. They received a small share of your department's patronage. It is but natural that they look for an increase of business with you as they lead the trade here. As I told you last year, Mr. Taylor, who is actually in possession of the whole concern, is one of us in the most intimate sense of the words good, donator, sterling and honest. He will never deceive your department. I am invited every week, I may say, to send recommendations to you for friends. The present is, as you know, the sole exception to my uniform answer of refusal, because I attach a great importance to it.

Yours truly,
ARTHUR GAUVREAU.

Further on in the documents you find that contracts for paints and oils were awarded and went to J. P. Dodds & Company, just as requested by Mr. Gauvreau. I find a striking instance of the employment of the middle-man and a man who, I think, was not in the trade. I refer to this because of the question asked me by my hon. friend from York, New Brunswick,

(Mr. Crocket). It is a long story, but there are parts which, at all events, I can lay before the House to some advantage. It is in connection with a man, probably well known to my hon. friend, Mr. J. H. Hamilton. Mr. Hamilton lived, I think, at St. John. He was at one time in the dry goods business, but quit the firm of which he had been a member and subsequently became a middle-man as between the government and another firm. Positive instructions were given time and again, by a very prominent man in New Brunswick—none other than Mr. J. Douglas Hazen—to send orders through Mr. Hamilton. I will talk about this Hamilton transaction just for a few moments. The first document I submit is the following:

Ottawa, March 8, 1892.

Hon. C. H. Tupper,
Minister of Marine and Fisheries,

In case your department at St. John find it necessary to purchase any dry goods there, I beg to recommend that a fair share be given to Messrs. Welsh, Hunter & Hamilton, who are staunch and loyal friends of yours.

Yours faithfully,
J. DOUGLAS HAZEN.

The next document is as follows:

March 18, 1892.

J. H. Harding, Esq.,
Agent of Marine, St. John, N.B.

Sir,—I have to inform you that Mr. J. D. Hazen, M.P., has recommended that a fair share of the patronage of the department in the purchase of dry goods required by your agency be given to Messrs. Welsh, Hunter & Hamilton. of St. John, N.B.

I am sir, your obedient servant,
WILLIAM SMITH.

Mr. CROCKET. Does the hon. member say that this firm were not in the trade?

Mr. GUTHRIE. If the hon. gentleman (Mr. Crocket) will allow me, he will see what I am coming to. I say he was not in the trade when he got the order.

Mr. CROCKET. That firm was in the trade.

Mr. GUTHRIE. The hon. member will see from the letters I shall quote that what I say is accurate. The next letter is one from Mr. J. Douglas Hazen addressed to Hon. C. H. Tupper, and dated January 3, 1893:

Yours of 31st ulto., with memo concerning the purchase of dry goods in St. John duly received. It says that Mr. Harding has been directed to purchase supplies in St. John for the North Shore of N.B. when required instead of buying them in Newcastle and some of them might be purchased from Welsh, Hunter & Hamilton, before any tenders are invited. Is it asking too much to request you to instruct your officer in St. John to purchase all of those supplies from Welsh, Hunter & Hamilton; provided they will supply them at reasonable prices. I am satisfied they will do so. I would suggest in the future that you decide upon what is a fair price to pay for cottons, flannels, towelling and duck required at the lighthouses—

That becomes important in view of further correspondence.

—and divides the purchases at the price you determine upon between Macaulay Brothers & Company, and Welsh, Hunter and Hamilton, This arrangement will be very satisfactory, and I am satisfied the interests of the department will not suffer.

Yours faithfully,
J. D. HAZEN.

The next letter is dated February 14th, 1893, and is addressed to the Minister of Marine and Fisheries:

You wrote me on the 20th instant that, acting upon my recommendation, you had instructed your agent at St. John to purchase drygoods, supplies, to as great an extent as possible from Welsh, Hunter and Hamilton at St. John. Since then a change has taken place in the firm, and I now request that you wire direct your agent to purchase from Geo. H. McKay, giving the order to James H. Hamilton, who is now associated with him.

Yours faithfully,
J. D. HAZEN.

The following letter dated 17th February, 1893, from William Smith to J. H. Harding also appears:

You are now instructed to purchase the supplies from Mr. Geo. H. McKay, giving the order to James H. Hamilton, who is associated with Mr. McKay.

Now, how did this employment of Mr. Hamilton work out? I am not going to read all the intervening letters between 1893 and 1895; there are many of them but they are all pretty much to the same effect. But in 1895, Mr. P. Harty, inspector of the Marine and Fisheries Department made an inspection, and in his report he said:

While on this inspection tour I obtained samples of grey cotton, cotton ticking, grey flannel and linen towelling purchased for the season's supplies, which samples are hereto attached. The prices charged are excessive and the quality of goods obtained are not of the best kind. The goods were supplied by Mr. J. H. Hamilton, St. John, I believe he is not in the business but procures the goods from wholesale houses, I presume, in the city.

And in the same report very unfavourable comment is made concerning another firm, Messrs. J. A. Estey & Company, who had been placed upon the patronage list also at the request of Mr. J. Douglas Hazen for the supply of soaps to the department. And, notwithstanding the adverse report of their own inspectors in May, 1895, in subsequent years further orders were as regularly sent as before to Mr. Hamilton and to Messrs. Estey & Company at the

request of Mr. Hazen. I have here about a hundred letters relating to these matters, but it is not necessary to place more of them on the records of the House. But here is a letter with regard to the meat supply in New Brunswick. I read this because there seems to have been a real kick by some Conservatives in regard to the supply of meat. First there is a letter addressed by Hon. Charles Hibbert Tupper to J. Douglas Hazen, dated 28th December, 1892, stating that at his request, Mr. McGonnigle had been placed on the patronage list. Then there is a long letter addressed to Mr. Costigan, dated May 14th, 1892, which I will read. The letter is addressed to the Hon. John Costigan, acting Minister of Marine, Ottawa, and is dated May 12th, 1893:

I wish to say that I have been engaged in the fresh meat and grocery business for over twenty years, I have had the honour of meeting you on two occasions, though perhaps you cannot recall me now. I have supported the Liberal-Conservative party since 1878, from conviction. Immediately after that election, Sir Leonard Tilley instructed the Department of Public Works and the Fisheries to give me a proportional share of the supplies required for government vessels.

Later on I was recommended by C. E. Everett and Hon. Geo. E. Foster. I have got very little in the past, in proportion to what others got, through the efforts of the wire pulling here, and there are none among them more deserving than myself from a party standpoint. I wish to inform your honour that the Marine Department has asked the friends of the party in the meat business to tender for the supplies. Messrs. Dean & O'Neal, two very selfish gentlemen, cut the price down, so that there is nothing in it, and there they have recourse to furnishing an inferior article. I was side-tracked last year on one-half cent per pound, and I have put in a tender this year for 8 cents for beef, which is a very moderate price. I have not heard whether my tender was lowest or not. If those men go below that, they will resort to boodling, as they have done in the past, by cutting the better portions of the beef off and sending the inferior. I did not anticipate anything like that when I tendered, though it was done to my own knowledge.

My main object in troubling you with this communication is to inform you how the matter of supply is regarded by those who tender, including myself, that is that the meat supply should be equally divided amongst us, by the department here. It would be better for all concerned to give more general satisfaction. I cherish the hope that your honour will favourably consider that view.

I am your obedient servant,
(Signed) TIMOTHY DONOVAN.

So the matter went on in St. John in regard to the meat supply. But Mr. Donovan was a hard man evidently to satisfy.

Mr. GUTHRIE.

On June 9, 1903, another letter is addressed to the Hon. Mr. Costigan:

I beg leave to acknowledge the receipt of your kind favour of May 29th in reply to mine with reference to supplying the steamer 'Lansdowne' with fresh meat and provisions. At the time I wrote you the tenders for the supply were not received, but have been since, and the tender of Thomas Dean, for six and a half cents per pound for beef has been accepted. Mr. Dean's acquisition to the party is of very recent date. He and all belonging to him were Liberals. He has a brother-in-law in King's county who votes for Mr. Foster, and by that means he was asked to tender for the supply. The first year his figure was 10 cents per lb. and he said he could not do it less. Mr. Godsoe and myself got it that year, our figures were 9 cents. He dropped six and a half cents per pound and yet no change in the price of beef. The others and myself are put out at that price, for beef fit to be furnished to that vessel rates here from 7 cents to 8¼ cents. About half the beef that Mr. Dean furnished on her first trip was returned by the captain. I saw it, and it was the class of meat that would be furnished to the almshouse or to the Kingston penitentiary under contract.

Mr. HUGHES. He is a Liberal.

Mr. GUTHRIE. Not according to Mr. Hazen, he was put on at Mr. Hazen's request. Further, he says:

This spring I furnished a small portion of supplies to the 'Curlew' while she was being repaired, but when she was going away Mr. Dean got the supply of it. I have spoken to the city members, Messrs. Hazen and McLeod. Mr. Hazen asked me what would be done in the matter, and I said to divide the supply equally between us at 8 cents. Mr. Hazen said that would be his view and would write you with a view to having it done.

I have the honour to be,
Your obedient servant,
(Sgd.) TIMOTHY DONOVAN.

That letter is addressed to the Hon. John Costigan, at that time Minister of Marine and Fisheries in the Conservative administration. I do not know the politics of any of these men, I assume they were at that time pretty straight.

Mr. DANIEL. I may say to the hon. gentleman that several of the names he has mentioned as seeking patronage at that time from the Conservative government are now obtaining the same patronage from the Liberal party, and are Liberals.

Mr. GUTHRIE. If they are, they are obtaining it by fairer means. Then Mr. Dean must have been asked to explain, and his explanation is as follows:

St. John, June 24, 1893.

Sir,—Yours of the 22nd to hand regarding meat supplied by me on June 3. My man sent some beef through mistake that did not belong to me. When I found the mistake I

had it corrected. About meat, on the 15th the carcass of beef weighed 600 lbs., so you see it could not be so thin as represented. There are many of my friends who like a larger margin on their goods than I do, and I think in all probability through them the complaints are raised. About the cut meat the day I sent it was a day when fresh quarters of beef are not to be had. Some of our lukewarm Conservatives who modestly sold themselves for a part of the steamers supplies feel quite sore.

Yours very truly,
(Sgd.) T. DEAN.

Then comes a further letter to Mr. Donovan, after a great many letters seem to have passed between Mr .Costigan and Mr. Hazen. Here is a letter addressed to Mr. Hazen, I do not know how it got on the files. It is dated St. John, West End, March 2, 1896, and is signed by Timothy Donovan:

Dear Friend,—I received a note from the agent of the minister of marine here stating that the department had agreed to allow 7 cents per lb. for all kinds of fresh meat furnished to government steamers. I wish to say that is a starvation price, no good meat can be furnished at that price.

Later on:

I asked that the department allow 9 cents for all meats which is a fair price, $1.50 per barrel for potatoes, and 60 cents a bushel for all other vegetables, price paid last year, and to divide the trips equally among the friends by giving to each one what the boat would want for the trip. That will give satisfaction all round. If you will please suggest to the minister the advisability of carrying out the above you will please all the friends here, and I will bless you with the only blessing I can give, the full power of my larynx and energetic hustling at the polls.

Faithfully yours,
(Sgd.) TIMOTHY DONOVAN

And so the letters go, fifty or a hundred more, which I do not need to read to the House. My only object is to show to what extent the evil of patronage had permeated the whole business system of the late Conservative administration, and how that evil patronage system existed under the very eye, and management, and control of my hon. friend from North Toronto, and he never raised his voice in protest. Now, Sir, it is well known that when the change of government took place in 1896, there were conditions existing in Canada which called for treatment at the hands of the in-coming administration. I do not say that the government may not be open to some criticism for having neglected, during a number of years, the question of patronage, and the mode in which goods were supplied to the government. They carried out the old Conservative system far too long, in my estimation. But this may be offered, I take it, by way of excuse, by way of palliation, that the system was inherited by them, they did not make it, they did not inaugurate it, it was there, operated by the Conservatives. They had before them the report of the Civil Service Commission of 1892 saying that, so far as the commissioners were able to find, the business was being fairly well conducted, the officials were performing their duties; and two departments in particular, the Marine and Fisheries Department and the Militia Department, which subsequently came in for some vigorous treatment, were specially mentioned by the commissioners in 1892 as being well conducted. The government, having a great many very important measures to deal with, might well overlook the question of patronage, for a few years, at all events. The government had, in the first place, to look after the condition of the country—trade stagnant and declining, markets cut off and new markets to be sought, tariffs to be revised, the gold excitement in the west to be provided for, the South African war, the construction of the Transcontinental railway, the establishment of the two new provinces—these were works of great magnitude which the government had to undertake, and for some years no doubt the government did allow the old Conservative system to remain in the various departments in connection with the transaction of public business. There is this also to be said, that the government, by its own motion, unasked by any one, undertook to remedy the defect, and after having found a remedy, has been the first government, so far as I have been able to find, in Canada that ever applied a remedy with any idea of effecting a cure.

In the spring of 1907 the government certainly became aware there were irregularities, that there was wrong-doing in connection with some of the departments. Whether that knowledge was gained by the government on account of disclosures in the Public Accounts Committee or not I cannot say, but certainly it is that in the month of May, 1907, the government, of its own motion, appointed a commission of investigation, not only into the circumstances of the Civil Service, but also to look into the methods adopted by the various departments. The powers given to the commissioners were of the widest, just as full and wide as were the powers given to the commission of 1892, but there is this difference between the two commissions. The commission of 1892 deliberately refused to examine into the business transactions of the various departments, stating in the first page of their report that they refused to do so, while the commission of 1907 deliberately set about such an examination, and I think it is well that they did set about it. During the following year the commission reported that certain abuses existed. I need not go over them; they

are all familiar to the hon. members of this House. That commission made certain specific recommendations, many of which recommendations have since been carried into effect. Some of the recommendations it made I may refer to briefly. In the first place, it made suggestions as to the mode of dealing with estimates by committees of the House of Commons, proposing that the English system be adopted. I believe that that question is one which in all probability will come up at a very early date. It is a question which should come up because I am satisfied that a better system could be adopted with regard to estimates and the expenditure of money, not in the departments, but in this House and in the committees of this House. A second recommendation was that stringent measures should be taken to suppress those abuses which they found existed in one or two of the departments and to punish the offenders. The government has taken action in that regard. It introduced an amendment to the Criminal Code to meet the views of the commissioners, amendments similar to those to be found in the English Act called 'An Act for the prevention of corruption' passed in 1906 by the imperial House. The next recommendation of the commissioners was for the removal of the Civil Service from political influences. The first step ever taken in this country in this regard was taken by this government within the last year or eighteen months. The commission recommended the appointment of a Civil Service Board. That has been established, the inside service has been placed under that board and I for one look forward to the day, and at no distant time, when, I believe, that Act will be made applicable to the major portion of the outside service. That commission further recommended the abolition of the patronage lists in the various departments.

Mr. CROCKET. Has that been carried out?

Mr. GUTHRIE. Yes. I am going to say that in so far as it is possible to carry out the recommendation in that respect it has been carried out and there is no patronage list, either under the name of a patronage list or under any other name, existing today in any department of the present government.

Mr. CROCKET. I would like to hear a minister say that.

Mr. GUTHRIE. Perhaps you will hear that too. All the recommendations of a practical kind that could be carried out have been carried out by the government. We have now just such a service, just such a business administration as this commission suggested. But, further than that, we had the report of Mr. Justice Cassels. His recommendations were largely a reiteration of the suggestions of the previous commission with one addition. Mr. Justice Cassels suggested that in addition to the other recommendations the government should establish a purchasing board which should purchase all the supplies of the different departments of the government. That board has not been constituted. That recommendation has not been carried out. It may be in the future, but another system has been instituted, and one which I think is giving entire satisfaction, or has, at all events, given entire satisfaction up to the present time. That is the appointment of responsible persons to act as purchasing agents in each of the great purchasing or spending departments. Whether a board of three, or four, or five individuals with authority to make all the purchases would be better than one, two or three individual purchasing agents for the various departments is a matter upon which there may be two opinions. Personally I prefer the form adopted by the government and to-day in the Department of Railways and Canals you will find that every five cents worth of goods purchased in that department, the largest spending department in the administration, is purchased through a single man, Mr. Lavoie, the purchasing agent. What is the principle adopted? Let me say, in the first place, that about a year ago positive instructions were given for the abolition of the patronage list. I can only take the word of Mr. Lavoie, who appears to be a most upright and intelligent man and he assures me, and other officials assure me on their honour, that no such thing exists in that department to-day, and that no favour is shown to Liberal or Conservative with respect to any purchase that may be made. That is the principle upon which purchases are made and the only purchases which are not made in that way in the great department of Railways and Canals are what might be termed emergency purchases, because you cannot devise a system which can provide, in the case of a broken lock or a broken pane of glass, that you shall go out and get competitive prices.

Mr. DANIEL. How about advertising in the newspapers?

Mr. GUTHRIE. I am coming to that, too, and I think I will be able to satisfy my hon. friend upon that. But, in so far as the supplies required in that department are concerned, the money expended for supplies is all expended under a system of public tender. There was a recommendation which I am going to place before the House which has been fully carried out, except in one particular, a recommendation by Mr. Butler, who until recently was a very able officer of the present government. He stated on the 27th Novem-

ber, 1908, about eighteen months ago, in a letter addressed to Mr. Pottinger, the general manager of the Intercolonial railway:

Ottawa, Ont., November 27, 1908.

Sir,—The question of purchasing supplies for the works under your control has been receiving the careful attention of the honourable the minister, and he has decided that the so-called patronage list, which, so far as this department is concerned, has hitherto embraced a large list of responsible firms that have been recommended to the government, should be revised to the end that the officers in charge shall have in their possession a full list of reputable manufacturers, wholesale merchants and representatives of foreign houses, from whom quotations may be secured on any supplies required for the public service.

You will be good enough to make up a list of firms from the list you now have, and that of any other firms of good standing, irrespective of politics, who will hereafter be asked for bids on any material that may be needed for each kind or class of supplies you have been in the habit of buying, to cover all the requirements of the several departments.

All large contracts will, as heretofore, be dealt with by public tender and advertisement, either through certain newspapers, by poster, or by circular letter, as may be found most suitable, having regard to the cost of the work and expense of advertising.

This is a portion that I ask the House to note:

In dealing with large quantities of supplies such as are involved in the store tenders of the Intercolonial and Prince Edward Island railways, I am inclined to think it is desirable that tenders should be called for by public advertisement in such newspapers as will likely reach the parties interested, or in the Official Gazette, so as to get the greatest competition possible.

If you have a limited patronage list in existence, anywhere in your service, it is to be done away with, and supplies of a suitable quality are to be secured at the best prices possible, irrespective of any political consideration.

I am, yours faithfully,
(Sgd.) M. J. BUTLER.
Deputy Minister and Chief Engineer.

Mr. CROCKET. What is the date of that?

Mr. GUTHRIE. November 27, 1908. That is the system that has been utilized since these instructions were issued by the Deputy Minister of the Department of Railways and Canals. I have a few samples of the manner of proceeding. One of the largest purchases by the department is certainly in the matter of hardware. How is that gone about? In the first place, the hardware requisition is not made out in Ottawa, but it comes from Moncton, stating what hardware will be required——

Mr. CROSBY. The hon. gentleman has made great assertions here, and I would ask him can he give us some case where the government or the country has suffered on account of the patronage system under the Conservatives. He has shown that the patronage system existed, but I want him to show me a case which will show that the government suffered by paying a high price for any article.

Mr. GUTHRIE. Does the hon. member mean in recent years.

Mr. CROSBY. I don't mean recent years. I know about that myself.

Mr. GUTHRIE. Then I would refer the hon. member to the debates of the session of 1891, and the proceedings before the Public Accounts Committee.

Mr. CROSBY. If the hon. gentleman has the evidence before him I would ask him to name one single instance.

Mr. GUTHRIE. I could, for example, mention the Langevin Block and the Curran Bridge.

Mr. CROSBY. That was tender and contract and not patronage.

Mr. GUTHRIE. I have only a short while more to speak before six o'clock, and I cannot go into every instance of this kind that happened under the Conservative government. I have mentioned one or two cases to the hon. member and I have referred him to the documents where he can get further information if he wants to. In calling for tenders for hardware the requisition comes from Moncton, where the list is made, it is revised there, it is again revised in Ottawa by the deputy minister, and it then goes to the purchasing agent, who has a general knowledge of the requirements of the department, and of the prices of the various articles. The call for tenders is not published in the newspapers. It has been thought by the various officers of the department that a better system than newspaper publication is to ask for tenders, send the specifications to every reputable dealer whose name appears in the directories, and that includes practically every man in the trade from western Ontario to the sea. I believe dealers living west of Ontario are not notified because probably freight rates would prohibit them from competing. The order for hardware is a very large one and there are a great many people in Canada engaged in manufacturing and wholesaling and retailing the different articles required. The hardware specification was directed last year to about 360 prominent firms. I have a list here which I have not time to read, but it can be analysed by any one who wishes to. I notice that there are on the list about 60 firms in the city of Montreal, nine or ten in Halifax, 20 or 25 in St. John.

Mr. DANIEL. Please read these for St. John?

Mr. GUTHRIE. The St. John list includes: J. & D. R. Burpee, T, McAvity & Sons, The James Robertson Co., Robertson, Foster, & Smith, Estey & Co., James Pender & Co., the Josiah Fowler Co., the Barrie Supply Co., the Maritime Art Glass Co., Campbell Brothers, the Portland Rolling Mills Co., Linton & Sinclair Co., the Imperial Oil Co., the Canadian Oil Co., Ltd., Gandy & Allison, the Maritime Nail Co., the Canadian Fairbanks Co., the McClary Manufacturing Co., D. Campbell & Co. Scattered through the list there are one or two more but the names are not collected under the heads of cities, and so I cannot give them.

Mr. DANIEL. Then I may inform the hon. gentleman that the largest hardware firm in the city of St. John is not mentioned.

Mr. GUTHRIE. Perhaps it is mentioned in some other part of the list.

Mr. DANIEL. Mr. W. H. Thorne & Co.

Mr. GUTHRIE. I think I have come across the name of W. H. Thorne & Co., whether in the hardware schedule or in some of the others. But at all events when you take about 360 representative hardware firms from western Ontario to Halifax you have about covered the whole ground, and every one of these firms is sent a printed specification and a form of tender and notification is given them that they are entitled to tender for the whole or any part of the list.

Mr. FOSTER. Is the paper which the hon. gentleman has in his hands a return brought down to parliament?

Mr. GUTHRIE. No. It is the result of an inquiry of mine to the purchasing agent asking for the names of the firms who were asked to tender for the goods last year.

Mr. FOSTER. The hon. gentleman will have no objection to place it on the table of the House?

Mr. GUTHRIE. Not the slightest.

Mr. CROCKET. Did I understand the hon. gentleman to say this list was furnished to the purchasing agent or to Mr. Pottinger from Ottawa?

Mr. GUTHRIE. As I understand it the purchasing agent at Ottawa goes to the directories and compiles a list of all the leading firms in these particular trades, irrespective entirely of politics or the dictation of any individual.

Mr. CROCKET. I thought I heard the hon. gentleman say that the list which was formerly in vogue at Ottawa had been passed down to Mr. Pottinger with instructions to add to it.

Mr. GUTHRIE. No. I think my hon. friend has reference to the letter of Mr. Butler to Mr. Pottinger saying that if he had such a list he was to add to it the names of all reputable firms. I submit that this list brings into full force and effect all the advantageous points in connection with the tender system. It may be argued that the tenders should be advertised in the public press and Mr. Butler has suggested in his letter to Mr. Pottinger that they might as an alternative be published in the 'Canada Gazette,' but the people do not look for such advertisements in the 'Canada Gazette,' at the present time, and I do not think that course would be of much use. But if it became known throughout Canada that such advertisements would appear in the 'Canada Gazette,' then I suppose prominent business men and contractors might search its columns. Now, I take the next item, the item of lumber.

Mr. CROCKET. Does the hon. gentleman know if any tenders have been called for under the new system he has referred to?

Mr. GUTHRIE. After the abolition of the patronage list I understand that specifications were forwarded to all the names on this list. I am informed by Mr. Lavoie, and I believe what he says, that in every case the lowest tender was accepted irrespective altogether of the political leanings of the tenderer.

Mr. DANIEL. I do not think there is a Conservative amongst the whole lot of the names the hon. gentleman read from the city of St. John.

Mr. GUTHRIE. I am assured by a friend from the province of New Brunswick that this is a thoroughly representative list of the hardware and oil men of the city, and so in regard to Montreal, and so in regard to Toronto. I know more about Toronto than I do about St. John, and I know that on this Toronto list there appear the names of Rice, Lewis & Co., Samuel Benjamin & Co., Howland & Sons, and others, many of whom are Conservatives.

Mr. FOSTER. Would the hon. member read the names on that list from Halifax?

Mr. GUTHRIE. The names from Halifax are: A. N. Bell & Co., Austin Brothers, Wm. Robertson & Son, Cragg Brothers & Co., Kelly's Ltd., J. E. Albro, W. B. Arthur. These are all that are grouped together in the list but there may be others here and there. At all events I will lay the list on the table and my hon. friend can see.

Mr. CROSBY. Is that the new list you are reading from?

Mr. GUTHRIE. This is the last list upon which tenders were asked as I understand.

Mr. CROSBY. Will you read the list before that?

Mr. GUTHRIE. I have not got it.

Mr. CROSBY. I wish you would read it.

Mr. GUTHRIE. Well, if I have not got it I cannot read it, and I have had enough papers to bring here without thinking of bringing every paper which the hon gentleman might think of asking for. At any rate, the hon. gentleman (Mr. Crosby) should not suggest wrong-doing; if he has anything to say let him say it.

Mr. CROSBY. I would ask the hon. gentleman (Mr. Guthrie)—

Mr. GUTHRIE. I must appeal for order. I want to get through and I have been delayed.

Mr. CROSBY. If my hon. friend cannot answer the question he may go on.

Some hon. MEMBERS. Order.

Mr. GUTHRIE. I now take up the question of lumber. This is also a very large item in connection with the Department of Railways and Canals. The advertisements for lumber supplies are given in the following way: Half sheet posters calling for tenders accompanied by specifications are conspicuously posted at every station on the Intercolonial railway between Montreal and Halifax, and at every station in Prince Edward Island. In the province of Quebec, whole sheet posters printed in English and French, are posted and also the specifications.

Mr. CROCKET. Is that done in the case of hardware?

Mr. GUTHRIE. I think not. That specification and notice is likewise mailed to over 200 prominent lumber dealers throughout eastern Canada. The list of lumber dealers who were asked to tender in regard to the last purchases of lumber embraced something over 200 names. I am not familiar with the names or political leanings of the firms who were asked to tender, but I shall lay the list on the table. This list, I believe, has been prepared likewise directly on the instructions of Mr. Lavoie without any dictation from anybody, without any patronage list and without the slightest reference to the political leanings of the parties to whom invitations to tender have been sent. When these tenders are received they are kept sealed in accordance with the order in council passed a year ago last December. They are opened in the presence of the minister and one other chief official, or, in the absence of the minister, in the presence of two chief officials of the department in accordance with order in council. In every instance the lowest tender has been accepted, irrespective of what the politics of the tenderer might be. But there is this to be said, that the quality and quantity must be up to standard in every instance. This lumber, as received, is all inspected before it goes into stock. That inspector's report goes to Mr. Lavoie, the purchasing agent, and it is checked over with his list. The result is that the purchasing agent in Ottawa can tell you precisely the condition of stores as regards hardware, lumber, ties, or any other commodity in which the railway deals at his office in Ottawa up to two or three days before the time when he is asked for the information. In the case of lumber, the inspector is Mr. Wm. Powell, a brother of Mr. H. M. Powell, formerly a Conservative member of this House. He has seen this list, but I do not know whether or not he has taken any exception to it. That is the mode in which every dollar's worth of lumber used by the department was purchased last year.

In regard to the purchase of ties, the purchasing agent is in sole control of the situation. He receives his requisition as in the former case, he goes over his requisitions carefully, draws his advertisements and specification and the advertisement for ties is posted in every railway station on the Intercolonial railway, just as in the case of lumber. I do not think it appears in any newspaper. Again, it is sent to a large number of individual lumbermen and contractors, accompanied of course by the specification. When the ties are received, they are all inspected as to quality and quantity before they are accepted. In each instance the lowest tender is accepted, and perhaps as one evidence of the way the system is working out, I may say that, out of a large number of tenders received and accepted last year, 41,000 ties were supplied by tender by Mr. F. W. Sumner, at Moncton, the Conservative candidate at the last general election, he being the lowest tenderer. I merely state that to show that the system now in force is to ask all parties to tender if they desire.

A somewhat different course is pursued with regard to the purchase of machinery. That is rendered necessary on account of the quality of goods required. Some machinery can only be purchased from single firms, some is covered by patent and can only be made by certain firms; but any ordinary machinery is purchased by direct appeal to the manufacturer. No middleman is employed. Manufacturers' agents are consulted, of course, that is done in regard to every trade, but the appeal or invitation to tender is sent direct to the firm. The specification accompanies the invitation, and I have here a list of machinery manufacturers who were asked to tender for the machinery purchased last year. That list embraces from 75 to 100 names.

covering practically the continent of America, not being confined to the Dominion of Canada.

Tenders for bar iron and steel are treated a little differently again, the specification being made out according to requisition received in Moncton and the leading firms in the production of bar iron all being asked to tender. There are nine on the list, I do not know their political leanings. These nine firms were all asked for prices on bar iron and the lowest tender was accepted. So with the tenders for paints and colours, brushes and brooms and rubber goods, all of which I shall lay on the table.

My hon. friend from New Brunswick asked whether some professional man in Moncton was supplying hardware to the government. I think he has reference to supplies of the Canadian Gutta Percha Company.

Mr. CROCKET. I refer to Dr. Murray.

Mr. GUTHRIE. Supplied by Dr. Murray. Last year the purchases ran something like $12,000. If the hon. member will turn up the Auditor General's Report, he will find in the items included in the list of purchases that the purchases from Dr. Murray consisted of the manufacture of rubber and gutta percha and the largest amount of them were hose. It happens that Dr. Murray is the agent for the Canadian Gutta Percha Company for the province of New Brunswick. The tender was received direct from Dr. Murray. His was the lowest tender received and he obtained the order. He advertises himself and states he is the agent of the Canadian Gutta Percha Company for New Brunswick, and I believe that in all its parts that is a thoroughly Conservative company. That is the explanation I have received in regard to these purchases, and I may tell my hon. friend, although he is a member of the legal profession, that if he wishes to tender for hardware or oil and is the lowest tenderer he will undoubtedly receive the order, just as Mr. Murray did.

Mr. CROCKET. You can count me out.

Mr. GUTHRIE. I submit also the list of those who were asked to tender for cement, including, I think, all the cement firms in Canada. So for fencing, including, I fancy, all the manufacturers in Canada, so for tinware, so for passenger coach wheels, so for axles, fire brick, oak lumber, hard pine lumber and electric wiring. The supply of coal, I think, is about the only other large order for goods which the Department of Railways and Canals give. That supply is dealt with on a different principle. I do not know that it is altogether a correct one but it is a fair one. Coal mining is one of the native industries of the maritime provinces, and it is the desire of the government to give all a fair share of the patronage. Instead of calling for tenders the government arbitrarily fixes the price of coal at so much per ton and divides its orders among the different companies, and those companies which will not contract at that fixed price do not receive the order. As a rule, however, the orders are distributed among all the collieries in the maritime provinces. But leaving out coal and taking all the other large purchases of that department, they are all controlled by a single man. If there be any wrong-doing or abuse or irregularity, you can put your finger on the responsible party, Mr. Lavoie, the purchasing agent.

Mr. CROCKET. I thought the hon. gentleman said the government fixed the price. Does he mean the government or the Intercolonial Railway Commission?

Mr. GUTHRIE. I fancy the department fixes it.

Mr. CROCKET. What is the price?

Mr. GUTHRIE. I do not know the prices down there, but with the exception of coal everything is bought on a system of fair and open competiton. There is no patronage list, no spoils system. The virus condemned by my hon. friend from North Toronto has not entered into that department at all events. I would ask hon. gentlemen opposite if they can suggest any improved system. Any improvement which they can offer will be warmly welcomed, I am sure, by the government, and my hon. friend who presides over the Department of Railways and Canals (Mr. Graham).

Mr. CROCKET. Does that system apply to any other department?

Mr. GUTHRIE. Yes. It is argued that a purchasing board can do better than a purchasing agent. In England they have a purchasing board. The system is a good one, but it is the most expensive in any part of the world. It may be fairly argued that an individual, trained in a department, knowing its requirements, year by year becoming more familiar with the amounts required and the prices—it may be fairly argued that such an individual can do better in the interests of the department, can judge better what is required, and what prices should be paid, than any three or four gentlemen constituting a board. I think that is the view the government takes because the various departments are having each its own purchasing agent. Under the British system there is tremendous waste. There is an annual sale of the government surplus goods—goods purchased far in excess of the requirements. And I am not now talking of war or naval supplies,

which are always purchased in excess of requirements, but of general supplies. The British government has each year a large supply of excess stores which will not keep and has to auction these off, and goods which cost $2 or $3 a pound have been actually sold at three pence a pound. That is a statement which has been made to me by an English official. It may be that a better system can be devised than the one we are following. If so let us have it. Let me turn to the Marine and Fisheries Department, which came so much under fire. In that department there is no patronage list whatever. That list was abolished, as Mr. Justice Cassels mentions in his report, about October, 1908. Furthermore, the instructions of the minister are that no patronage list shall be permitted to exist; that all goods shall be bought in the open market. The department advertises in the newspapers, except in the case of small supplies which cannot be bought by tender. These small supplies, which are called emergency supplies, are purchased by the agent in the open market, at what he considers a fair price; and if he be an honest man, he will get the lowest price. You have to trust some one. All the lighthouse supplies, fog signal service and ship supplies are now purchased after advertising for tenders in the newspapers, and the contracts given to the lowest tenderers.

Mr. LALOR. Is that advertising done in the same way?

Mr. GUTHRIE. I intend touching upon that if I can get time. If anything goes wrong in the present system, who is responsible? Mr. Doutre, the purchasing agent, says that he is, and I certainly think he would be. A more intelligent, capable officer it would be hard to find. He has been a long time in the department, he knows offhand the market prices of the goods he has to deal with and he cannot be fooled, though of course he might be particeps criminis, but nothing short of actual dishonesty can cause loss to the department as at present managed.

The Department of Justice controls all the supplies for the various penitentiaries of Canada. The patronage list in that department, if it ever existed, has been abolished, and it has its purchasing agent. This is the first year that system has been put in force, and we do not know what the result will be, but the department has done away with the political pull and is making its purchases in the open market. The same can be said of the Department of the Interior. That is not a large purchasing department, but the Indian branch of it does make considerable purchases. Every dollar's worth purchased by that branch, except in the case of the very distant reserves, is purchased after advertising in the newspaper for tenders. The goods purchased are principally agricultural implements, provisions, clothing and cattle. In the case of some of the reserves, which are very distant there are but two companies which can tender—Revillon Bros., and the Hudson Bay Company, and one or the other gets the contract. But in the case of the nearer reserves there are public advertisements and there is no patronage list, and the lowest tenderer gets the order. If hon. members opposite can suggest a better system, let them do so. I was greatly disappointed when I found that the hon. member for North Toronto (Mr. Foster) after condemning the system as vigorously as he did, after showing what evil results might follow, suggested no improvement, no way out of the difficulty. The right hon. the Prime Minister asked him what he would do but he made no suggestion. I think that the government may well be congratulated on the advance they have made in the past two or three years and the alacrity and courage they have shown in acting on the recommendations of the two commissions. Other commissions were issued from time to time—one in 1880, one, a commission of ministers of the Crown, in 1889 or 1890, and another in 1892. All these commissions made their recommendations and suggestions; and, no doubt, had these been carried out at the time it would have done immeasurable good. But every one of them was neglected, the abuses were allowed to continue until they culminated in the revelations in the Public Accounts Committee of this House in 1891. This government has been, at all events courageous it may be at the price of political support and in the face of political friends. It has adopted a new system, as I have shown; and the patronage system as it existed until two years ago exist no longer in the various departments of this government. We all know that difficulties exist—and how to remedy them I do not know—in the outside service in regard to political appointments. How can these be remedied? I trust that the Civil Service Act will be extended in the near future to the outside service. But even then, as the hon. member for North Toronto (Mr. Foster) has pointed out, there will still be some 15,000 to 20,000 people to whom it will not apply—the day labourer, the casual employee, and all these men may well be classed as belonging to a patronage system. But how are you going to overcome that? I do not know the remedy, and the hon. member for North Toronto has not suggested it. But what the House should do under present circumstances is not to condemn the course adopted by the government as this motion proposes; not to say that the present system 'constitutes a menace to honest

and efficient government', as the resolution says; not to say that the present system 'incites too great waste of the resources and extravagance of expenditures', as the resolution says; or that it 'tends inevitably to corrupt and lower the tone of public morals', as the resolution says. Every step the government has taken has been taken in the direction of improving the service, of stopping the waste where there was waste, and of raising, not lowering, public morals. And I trust that in their future efforts—and their efforts will continue no doubt—they will have the support from my hon. friend from North Toronto and other hon. members on that side of the House which they are entitled to expect. We have not a perfect system—no one says we have. There are a great many points yet to be covered. There is, for instance, the question of newspaper advertising. And let me tell you that it is not correct to say that the advertisements of this government appear only in the Liberal press. For instance, take the advertisements for contracts on the Intercolonial. How does the government proceed? At Moncton, there was a twelve-engine house to be built. Advertisements were posted, at every station, of course, but advertisements also were put in nine or ten newspapers, and at the very top of the list, and receiving the highest price is the Halifax 'Herald'. That cannot be classed as a government supporter. I have seen government advertisements again and again in other Conservative newspapers. At the same time I admit that the rule is very largely to give the printing patronage to the newspapers supporting the government. I do not know how long that will continue, but there is more justification for this than for buying goods at fictitious prices or under fictitious tenders from your friends, which was the system up to 1896. It is but natural to dislike giving favours to a press that, day after day, misrepresents your public accounts and makes charges against your government, many of them unfounded. It is human nature—you do not like to pamper such a press. There may be some sort of justification for having a patronage list so far as this matter is concerned. So long as publicity can be sufficiently obtained through the Liberal newspapers, I would say let the advertising be given to the Liberal newspapers. But when publicity cannot be gained in this way, then resort to the Conservative newspapers or to the 'Canada Gazette' which ever you like. But the resolution submitted by the hon. member for North Toronto condemns the present government and the prevailing system, and I submit this should not be done. Instead of condemning we should commend the government for what they have been able to do; instead of denouncing the system we should congratulate the government for having made advance, distinct and I trust permanent advance, in improving the whole business administration of the various departments. And, with that view, I conclude my remarks by apologizing for the great length of time I have occupied, and by moving, seconded by Mr. Tolmie:

That all the words after the word 'that' in the said resolution be struck out, and the following substituted in place thereof:—This House approves the rapid advance made by the government toward the elimination of the system of party patronage which has been in operation under every administration since confederation, and views with satisfaction the policy now in force of making all important purchases by public competition and tender.

Mr. MARTIN BURRELL (Yale-Cariboo). Mr. Speaker, this being Wednesday, a day on which, under the rules, the House adjourns at six o'clock, we have only about five minutes to consider this question further. I am not aware whether the object of the hon. member for South Wellington (Mr. Guthrie) in the course of his interminable remarks on the history of the government purchases prior to 1896 and going back to 1878, was to kill time or to kill the discussion. But it is clearly impossible to discuss the matter now, and I suppose that, following the usual order, this will go to the bottom of the paper and so we shall not hear of it again this session. This makes it impossible for a member on this side to reply. It is so obvious that the party patronage system has permeated the body politic that any man has only to look about him to be aware of that fact. Yet, directly we approach the question from this side of the House and try to put it in such a way that men of all parties can deal with it, there is a hyper-sensitiveness at once shown that a personal attack is made on hon. gentlemen opposite, and they immediately shield themselves behind the walls of party. I conceive that it is our business to help a discussion of this kind if we can by lifting the whole discussion to a higher level than before. It is a most singular thing for the hon. member for South Wellington to quote documents—interminable documents—to the effect that the spoils system existed prior to 1896, but that it was abolished by the present government when it came into power in that year. The hon. gentleman states that in 1892 the Royal Commission on the Civil Service recommended certain things which the Conservative party deliberately refused to adopt. This is a strange argument in view of the fact that the trend of our criticism is directed to this government in connec-

tion with this very matter of the Civil Service when party patronage had eaten the heart out of the departments for thirteen or fourteen years. I have only to refer to the report of the commission for 1908 and to quote two short statements from that report to reply to what the hon. member (Mr. Guthrie) has stated. These commissioners, appointed by the present government said:

The public service, the commissioners believe, not only at Ottawa, but elsewhere throughout the dominion has fallen back during the last fifteen years.

And then, at page 26, there is the following:

It has been pointed out in the most simple way that this practice had been followed by everybody and it could not be altered. Your commissioners, however, consider that, while the practice was always bad, yet through the great development of the country the extent was not so great as to become serious until of recent years.

The hon. gentleman who has just taken his seat said that the whole thing was a farce. Well, if it was a farce when it went on from 1878 to 1896, how much greater has the farce been even according to the words of their own commissioners, from 1896 down to the present time. If the Conservatives chastised the people with whips, the hon. gentlemen opposite since they have been in authority, have chastised the people with scorpions. I would recommend to the right hon. gentleman who sometimes leads this party the words of a friend of his in the old country, and I think they may very well be applied to his career since 1896. John Morley said, ' He who begins life by stifling convictions is in a fair way for ending it without any convictions to stifle.' It being now six o'clock, I beg to move the adjournment of the debate.

Motion agreed to.

At six o'clock, the House adjourned.

HOUSE OF COMMONS.

THURSDAY, January 27, 1910.

The SPEAKER took the Chair at Three o'clock.

LAND TITLES AMENDMENT.

Hon. FRANK OLIVER moved for leave to introduce Bill (No. 125) to amend the Land Titles Act.

Mr. SPROULE. Explain.

Mr. OLIVER. The Bill is to make necessary provision for the registration of titles in what is now the Northwest Territories. At present registration must be made within the territories. In a few instances property within the territories is in such condition as to require registration, but it is not thought advisable to establish a registry office in the territories until the business to be transacted is much larger than it is at present. It is therefore proposed that for the present registration of titles of properties within the territories should take place at Ottawa, and this Bill is to provide for that.

Motion agreed to, and Bill read the first time.

FRANCO-CANADIAN TRADE TREATY.

Hon. W. S. FIELDING moved for leave to introduce Bill (No. 126) to correct a clerical error in the French Convention Act 1908. He said: In schedule C to the Act for the convention reference is made to wines containing more than 23 per cent and not more than 26 per cent of proof spirit. It is printed correctly in the French version but the English version reads: 'Containing more than 23 per cent, and not more than 23 per cent'. The error is obvious. The figure '23' in the last case should be '26'. This is to correct the error.

Motion agreed to, and Bill read the first time.

QUESTIONS.

MEANING OF RECESS OF PARLIAMENT.

Mr. C. A. WILSON:

Do the words during the recess of parliament in section 119 of the postal regulations, mean the period of time which elapses between the adjournment of one session and the opening of the following session, and also all periods of time during which the Senate and House of Commons are adiourned during the session?

Hon. RODOLPHE LEMIEUX:

The period of time referred to in the regulations as ' the recess of parliament ' means only the time elapsing between the prorogation of the House and the opening of the next session of parliament.

DAMAGES, CHAMBLY CANAL.

Mr. BLONDIN:

1. Was Dr. Arsene Godin, of St. Johns, Que., ever paid an indemnity by this government in connection with certain damages to his land on Ste. Therese Island, county of

St. Johns, Que., caused by waters of the Richelieu river and the Chambly canal?

2. If he was, what amount was paid, through whom was said amount paid, was any interest added, and to what amount and through whom were said amounts so paid?

Hon. G. P. GRAHAM:

1. Yes.

2. (a) Dr. Godin was paid $2,000. (b) Dr. Godin was paid through the Department of Justice. (c) No interest was added.

DREDGING IN FRASER RIVER.

Mr. J. D. TAYLOR:

1. What depth of channel is the present objective of the dredging operations being carried on by the dredge 'Fruhling' at the mouth of the Fraser river?

2. What is the estimate of the quantity of material requested to be removed to secure that depth?

3. By what date will that depth of water be available, according to the estimate of the department?

4. Have representations been received from New Westminster or elsewhere, respecting the urgency for more rapid carrying on of these dredging operations? If so, is the department making preparations to meet this urgency?

Hon. WM. PUGSLEY:

1. Twenty feet at low tide, or thirty-one feet at ordinary high tide.

2. 500,000 cubic yards.

3. The resident engineer reports that the work, if carried on without any interruption, would be done in ninety days; but, allowing for delay from bad weather, repairs and practical suspension during fishing season, it will probably not be completed before six months.

4. (a) Yes. (b) The work is being carried on as rapidly as possible.

DREDGING AT GASPEREAUX.

Mr. CROCKET.

1. What was the total amount of the payments made through the Public Works Department to the Maritime Dredge and Construction Company, for dredging at Gaspereaux River, N.B., in the fiscal year ending March 31, last?

2. What to date during the present fiscal year?

Mr. PUGSLEY:

1. $29,470.

2. $4,499.60, for work done during fiscal year 1908-9. No dredging was done by the company at Gaspereaux during the present fiscal year, as by reason of the alleged difficult and exposed location where the work was being performed, they declined to return to it last spring at their tender price of the previous year. They also gave as a further reason for declining to accept an extension of their contract, and as evidence of the unusual difficulties attending this work that one of their tugs had been wrecked, resulting in large financial loss.

Later on in the season one of the departmental dredges was sent to Gaspereaux to continue the dredging.

Mr. CROCKET. Would the minister be kind enough to lay the papers on the table of the House.

Mr. PUGSLEY. The answer will go in 'Hansard.' If the hon. gentleman will move in the ordinary way the motion will be responded to.

Mr. CROCKET. Surely the minister does not require that I should make the ordinary motion?

PUBLIC WORKS PAYMENTS TO A. AND R. LOGGIE.

Mr. CROCKET:

1. What was the total amount of the payments made through the Public Works Department to the firm of A. & R. Loggie in the fiscal year ending March 31, last?

2. What to date during the present fiscal year?

Mr. PUGSLEY:

1. $44,056.44.

2. $16,366.48.

EMPLOYMENT OF R. J. WATSON.

Mr. BURRELL:

1. Is Mr. R. J. Watson, ex-M.P., still in the employ of the government.

2 If so, what salary does he receive, and what was the date of his appointment?

3. If not in the government employ, when were his services dispensed with?

4. Did he make any reports? If so, what was done with them?

Hon. FRANK OLIVER:

1. Yes.

2. $2,500 per annum. 15th February, 1909.

3. Answered by No. 1.

4. Yes, a considerable number. They were dealt with in the ordinary way. If the recommendations were approved action was taken on them.

MR. ALLARD AND GOVERNMENT CONTRACTS.

Mr. CROTHERS:

1. Was Albert Allard, of the firm of Provost & Allard, Ottawa, on the 22nd day of January, 1910, directly or indirectly, alone or with any other person, by himself or by the interposition of any trustee or third party, holding or enjoying, undertaking or executing any contract or agreement, expressed or implied, with or for the government of Canada, on behalf of the Crown, or with or for any officers of the government of Canada, for which any public money of Canada was to be paid?

2. If so, have all such relations with the government or with any of its officers ceased since, and when?

Sir WILFRID LAURIER. The government is not aware that Mr. Allard is interested in any contract, directly or indirectly.

COMBINES INVESTIGATION ACT.

Mr. KING moved that the House do tomorrow go into Committee of the Whole to consider the following proposed resolution:

Resolved, that it is expedient, in connection with Bill (No. 101) now before this House respecting the investigation of combines, monopolies, trusts and mergers, which may enhance prices or restrict competition to the detriment of consumers, to provide for the appointment of Boards of Investigation for the purpose of inquiring into alleged combines causing enhanced prices or restricted competition, for the appointment of counsel to conduct investigations before such boards, and for the payment of the members of such boards and of counsel, and of witnesses appearing before the boards, and of all expenses of boards, including transportation expenses incurred by the members thereof, or by persons under order of such boards, in making investigations under the Act, and salaries of employees and agents and the payment of clerical and other assistance.

He said: His Excellency, having been appraised of the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

PUBLIC WORKS EMPLOYEES AND ELECTION CAMPAIGN.

On the orders of the day being called:

Mr. G. TAYLOR. I beg to inquire from the Minister of Public Works if it is a fact, as I have heard it is, that a number of employees of the Public Works Department are away from their duties and attending to electioneering in the present campaign in the city of Ottawa. If that be the case, will the services of these gentlemen be dispensed with?

Mr. PUGSLEY. My attention has not been called to this alleged fact.

NECESSITY OF MOTION FOR PAPERS.

Mr. CROCKET. I would ask you, Mr. Speaker, if, as a member of the House, I am not entitled to demand that papers which are referred to by a minister in an explanation to this House be laid on the table without further order? The Minister of Public Works a few moments ago, gave an answer to a question in which he stated that certain representations had been made which accounted for the discontinuance of the dredging at Gaspereaux. I assume he is referring to correspondence, and if that answer referred to correspondence I submit that the House is entitled to have it laid on the table of the House without a notice of motion.

Mr. PUGSLEY. It will be found that I stated in the answer that the Maritime Dredging Company declined to accept an extension of the contract for dredging at Gaspereaux during last year. They gave as a reason the unusual difficulty and exposed character of the work and also the fact that one of their tugs had been wrecked, involving heavy financial loss. I did not state in the answer that there was any correspondence on file to that effect.

Mr. CROCKET. Do I understand it is verbal?

Mr. PUGSLEY. I am not sure that there is any correspondence. I know there were verbal communications. I verbally requested the president of the company to go on with the work, and I know he declined. If the hon. gentleman will move for a return I shall be very glad to have the records examined and see if there is any correspondence.

Mr. BLAIN. Surely the minister will not call on the hon. gentleman to move for a motion of this kind. The government complain that the time of the House is taken up with too many motions. If the minister will state there is no correspondence, that will settle it; or if he says he will have the records searched and if he finds correspondence in the department he will lay it on the table without further motion.

Mr. SPEAKER. If the hon. member for York (Mr. Crocket) insists I shall look into the matter.

Mr. CROCKET. I submit I am entitled to have the correspondence laid on the table without a motion.

QUESTION OF PRIVILEGE—MR. CONMEE.

Mr. CONMEE. Mr. Speaker, I rise to a question of privilege. Some few days ago an article appeared in the 'Free Press' of this city in regard to evidence or a statement that was taken before the Committee on Mines and Minerals. Some discussion took place the day following in this House, the matter was brought to the attention of the House by the hon. member for Nipissing (Mr. Gordon) and the minister and myself made some remarks. I find in an issue of the 'Citizen' of this city what I consider a very gross piece of misrepresentation, which I wish to call to the attention of the House. First I desire to call attention to what was complained of. The article published in the 'Free Press', which I shall not quote in extenso, makes reference to statements made before the Mines Committee, and goes on to say:

That it is the duty of the Canadian government to step in and take over those nickel deposits for the benefit of the Dominion and the empire was the proposition which was

placed before the Mines and Minerals Committee of the House of Commons this morning by Mr. Arthur Wilson, at present of Toronto, but officially engaged in an investigation on behalf of the British government into the nickel deposits in Canada.

Continuing further, the article contains this paragraph:

He advocated that the government should take over the nickel deposits as a matter of imperial urgency, which would give Great Britain an enormous advantage over all other countries in the construction of warships, and would insure for all time that the material which is a feature in the construction of modern battleships would be retained for the empire.

I may say, as was explained by myself on that occasion in my remarks, which will be found in 'Hansard,' that Mr. Wilson was very much annoyed at having been misrepresented as this article does misrepresent him. I stated on that occasion that I had gone with Mr. Wilson to the editor of the 'Free Press,' and that I gave him a correction of that statement. Let me read the correction which was published:

I was much surprised at the report contained in your issue of this day with reference to Mr. Wilson's remarks before the Committee on Mines and Minerals this morning. Nothing he said could have warranted any one in stating that he was officially employed in an investigation on behalf of the British government into the nickel resources of Canada, nor had he advocated that the government should take over the nickel deposits as a matter of imperial urgency. He merely attended before the committee at their invitation to give evidence as to the present condition of the nickel industry and suggested that it would be in the interests of the country generally if the larger deposits of nickel ore at Sudbury could be worked on a larger scale, and that not only should the matte be refined in Canada but that the government be recommended to foster the production of nickel steel in the country.

Sir, notwithstanding the fact that that correction was published, there appeared the following day in the same paper an editorial to the effect that its statement was correct. The paper insisted on this, notwithstanding the remarks made both by myself and my hon. friend from Nipissing (Mr. Gordon).

Then in the Ottawa 'Citizen' of a couple of days ago, appeared this article, which is the one I rose more particularly to complain of. It is headed the 'Nickel Monopoly,' and goes on to discuss what it alledges to be Mr. Arthur Wilson's statement. I shall not read the article through, but only that portion which it is necessary I should read in view of the remarks I propose to make:

A discussion subsequently took place in the House of Commons regarding the purport of Mr. Wilson's remarks, and Mr. Gordon, M.P., and Mr. Conmee, M.P., undertook to describe the report as inaccurate, and furthermore denied that there was any such thing as a monopoly of the nickel production in Canada.

Let me call attention to the fact that what was complained of in the article and corrected in the letter written to the newspaper and signed by myself was not the question at all of a monopoly, but the question of the misrepresentation of a witness who appeared before this committee. I take it for granted that it is not only the duty of the committee—and I feel that responsibility as being chairman of that committee—to protect those who come before it and give expert evidence or information, but it is also the duty of this House to protect its members and those from whom it may obtain information on such important questions. Then this article goes on to say:

Mr. Conmee expressed something akin to pained surprise that any one should allege such a thing and conveyed the impression that Mr. Wilson had repudiated the reports of his evidence which appeared in the press both Liberal and Conservative.

As to that statement, Mr. Wilson came with me to the newspaper office. I introduced him to the editor, and Mr. Wilson explained where the misrepresentation occurred and the editor replied that it was not his regular reporter who had attended to that matter. If it had been, he explained, the mistake would not have been made. Yet the editor returned to the same misrepresentation the following day. The article in the 'Citizen' continues:

Mr. Templeman, the Minister of Mines, reinforced the other two gentlemen by stating that the chairman of the committee had assured him that the reports of Mr. Wilson's evidence which appeared in the press were inaccurate. In what detail the report of Mr. Wilson's evidence may have been inaccurate, it is difficult to determine; but whether or not he stated that a monopoly of the nickel industry is enjoyed by the International Nickel Company of the United States, the same is true, the chairman of the Mines and Minerals Committee, Mr. Gordon and Mr. Conmee to the contrary notwithstanding. The two latter gentlemen in making the statements that they did on the floor of the House were simply engaged in the congenial occupation of gold bricking parliament with an engaging air of candour. They pointed out that, so far from the nickel resources of Canada being monopolized by the American company, there was a large area of nickel mineral claims which were not owned by the Americans. This is true, but it by no means disproves the monopoly charge. On the contrary, it is the strongest evidence against it, seeing that this territory is lying idle and its development paralysed.

I wish to call the attention of the House to the extravagant language used by this writer. He represents that the witness did make statements which that witness

has not only denied, but has taken every reasonable means of contradicting, feeling that he was injured by the misrepresentation. He says also that two hon. members of this House are engaged in the work of gold-bricking the House in regard to what was placed before the Mines Committee. The press is an important medium of information for the public; no one is stronger in his belief in the press than I am; but I do protest against the gross injustice of a writer, who knows nothing about the subject—for this article is proof that this writer is absolutely ignorant of the conditions that exist in connection with this mineral—and who has no personal knowledge of what took place before the committee, seeking by these extraordinary statements of his to misrepresent members of this House. There ought to be some decency in conducting discussions in the press. Members of this House have some responsibility, and, in carrying on their duties they ought not to be wantonly and grossly misrepresented at the mere will of some one who happens to write for a newspaper. I do not think it is to the credit of the newspaper itself. I will not go further in the matter. I think these gentlemen have committed an offence which deserves some punishment; nevertheless I shall not do more than call the attention of the House to the wrong that has been done. I shall not take up the time of the House in discussing fully all this writer's opinions and the policy which he advocates for the country as elaborated in his article. But let me say that what it was stated that there was a monopoly of the nickel deposits of Canada in the hands of a particular company. That was denied both by the hon. member for Nipissing (Mr. Geo. Gordon) and myself. There was also the statement that Mr. Wilson had represented himself, wrongly, fraudulently, before the committee as a representative of the British government; yet the very contrary was the case, for when Mr. Wilson was asked by a member of the committee if he did represent the British government his answer was, 'No'. Yet this misrepresentation is persisted in notwithstanding what has taken place. Now, it may be in the mind of some hon. members that efforts have not been made to develop the nickel resources of Sudbury. But great efforts have been made——

Mr. SPEAKER. I think the hon. member (Mr. Conmee) ought to confine himself to the question of privilege.

Mr. CONMEE. I am doing so. If the House wishes me to read the whole of this article, though it is a long one, I am prepared——

Mr. SPEAKER. It would be an abuse to do so at this time.

Mr. CONMEE. All right, then, we will read——

Mr. SPEAKER. I have indicated——

Mr. CONMEE. Oh, you do not require more of it read.

Mr. SPEAKER. The hon. member (Mr. Conmee) has had full privileges accorded him——

Mr. CONMEE. This article refers to the aims of the provincial government, and I thought it not necessary to take up the time of the House in reading it. But if I cannot go on without reading the whole——

Mr. SPEAKER. The hon. member (Mr. Conmee) must confine himself to the question of privilege.

Mr. CONMEE. I am doing so.

Mr. SPEAKER. That is a question.

Mr. CONMEE. I would like to understand the ruling of the Chair. I have here a newspaper article to which I am calling attention as a matter of privilege. Have I not the right to read that article?

Mr. SPEAKER. I have allowed the hon. member full latitude on the point, and I think he should not abuse the privilege He has been given every opportunity to explain, and, having done so, that is an end of the matter.

Mr. CONMEE. I do not quite understand your ruling, Mr. Speaker. I do not want to disobey the Chair. Am I at liberty to read the whole of this article or not?

Mr. SPEAKER. I do not know what the article contains. But the hon. member (Mr. Conmee) rose to the question of privilege, and he has been heard on that question of privilege. I think he should confine himself strictly to explaining the position, and, having done that, I think he ought not to go beyond it.

Mr. CONMEE. I deny that I have gone beyond it. I think I am within my rights in reading any portion of this that I please.

Mr. SPEAKER. It must be on a question of privilege, and I reserve to myself the right to call the hon. member to order. Of course, if he does not take the friendly advice offered from the Chair, I cannot compel him to do so.

Mr. CONMEE. I shall have to bow to the ruling of the Chair, although I fail to see on what it is based.

NATIONAL TRANSCONTINENTAL RAILWAY—CLASSIFICATION OF MATERIAL.

House resumed adjourned debate on the motion of Sir Wilfrid Laurier for the ap-

pointment of a special committee to investigate certain allegations of Mr. Hugh D. Lumsden against a portion of the engineering staff of the National Transcontinental railway.

Mr. W. S. MIDDLEBRO (North Grey). Mr. Speaker, I had not the advantage of being in this chamber when the right hon. the Prime Minister (Sir Wilfrid Laurier) introduced his resolution to appoint a committee to investigate the circumstances surrounding the resignation of Mr. Hugh D. Lumsden as chief engineer in charge of the construction of the Transcontinental railway. But, after a careful perusual of the motion and of the speech delivered by the Prime Minister on that occasion, I shall take the opportunity to make a few remarks, first, upon what should be the object in introducing a motion of this kind; and, second, what I think is the apparent object of introducing that motion.

In 1903, this government conceived the idea of building a second transcontinental railway, or rather some person else conceived that idea, and, as we afterwards proved, the government took to itself that idea and claimed it as its own. However that may be, the record of this House shows that, while we were in favour of the idea of constructing a great national transcontinental railway, we objected—and we still object—to the manner in which the government carried that idea into execution. And, because we did not approve of the principle of carrying that road to successful completion, it carried with it, I think, a corresponding duty on the part of the members on this side to see to it that the road was constructed in the most economical manner.

Now, without going into the figures, let me say in a cursory manner that there is no doubt—it has not been disputed—that this railway has cost a very much larger sum than was estimated. We were told that the government had most reliable information upon the subject, and that the construction of the road would cost in the neighbourhood of $51,000,000. And to-day, as we all know, according to the latest revised figures of the Minister of Railways and Canals, produced in this House in December last, it is costing over $114,000,000.

Now, I would say, in the first place, need we go further than that? That change casts a very serious reflection upon, makes a prima facie case against, the government of the day, that there has been recklessness and mismanagement, or at least, carelessness, in the construction of the National Transcontinental railway. From 1903 down to 1907, while there were occasional grumblings, so far as I know there was no distinct eruption in connection with the construction of that road. But in 1907, Mr Hodgins, who was then in charge of district 'B', came out boldly and said, in effect: 'I have been endeavouring, in my own way, to keep down the estimates, to cut down the classification in respect of the division over which I have charge. But the commission is not satisfied with that, the commission, he said, have been urging me to be more liberal in my classification.' That is the charge he made. That charge was investigated, to a certain extent. A committee of this House was appointed, a majority of whom were supporters of the government; and, while it it true that to a certain extent Major Hodgins withdrew his charges, it is equally true that the reason why that committee did not proceed was that the matters to be investigated were matters that came exclusively within the jurisdiction of the tribunal of arbitration appointed under the Act of 1902. Matters went on until 1907. The man in charge of the railway, the chief engineer, is the man upon whom this country must depend for honesty in the construction of that railway, because there is no man who has greater powers, or should have greater powers, he certainly has greater responsibilities than the commissioners themselves. The commission is composed of men who know nothing whatever about railway construction. So far as I know, not a single gentleman on that commission to-day has ever built a mile of railway, or any portion of a railway, or has ever, in his lifetime, had control of any railway or any portion of a railway. So I say that as regards the position of the chief engineer of the Transcontinental railway, I thoroughly agree with the hon. the Minister of Railways that he is the most important person that we have under our control in the construction of that railway, because he is the man that can return common excavation into loose rock, loose rock into solid rock, or solid rock into common excavation. That is the man who can turn $25 into $50, who can turn $50 into $150, who can turn $25 into $150. Therefore, I say he acts in the position of guardian of the treasury of this country.

Now what do we find? We find that in 1907 the chief engineer, being unable to agree with the most liberal classification being made by his sub-chiefs, resigns his position because he cannot countenance what he claims to be an unjust, unwarranted and dishonourable manner of classifying, especially on sections 'B' and 'F' of the Transcontinental. Now I say this fact, coupled with the fact that this road has cost $12,000,000 more than double what was originally estimated, these two facts alone, I submit, make out a prima facie case against this government, that the road has not been constructed in an eco-

nomical manner, and that therefore we are called upon to investigate. Now, having in view these circumstances, what is the duty of the government upon this occasion? I say it is the absolute duty of the government to place such an instrument in the hands of a committee of this House of Commons that we will be able to go thoroughly into the cause of that gentleman's resignation. A committee of the House should be given full power to say to Mr. Lumsden: You have resigned because you say that certain of your engineers have forfeited your confidence by reason of their over-classification; that means that you have resigned because certain of your engineers were changing 25 dollars into 50, and 50 into 150. You say that in consequence thereof you have lost confidence in them. We ask you to say why you have lost confidence in those men, we ask you to prove your allegations. Until we do get a committee that will enable us to ascertain whether these charges are true, we have not done our duty to the country. If the government do not give us that power, I maintain that they are afraid to give it, they are afraid to let the country know what is taking place under the regime of that commission. I maintain that the government are in a worse position if they grant a commission which does not give that authority, than if they granted no commission at all, because they might consistently take the attitude they took on the Hodgins inquiry and say: We did not grant this commission because these matters were under the exclusive jurisdiction and control of another tribunal which we appointed in 1903. But when they appoint a tribunal and do not give it the powers which they should give it, then we are justified in saying that if they take this position, they do it for the purpose of deceiving the public.

What have they offered us by this motion? Mr. Lumsden says in effect: I, Hugh Lumsden, having lost confidence in the engineers in district 'B' and 'F' hereby resign my position. The government says: We will investigate that. Now that, boiled down, is what the government have offered us. But how does the Prime Minister look at it—I take his own words. The Prime Minister says: This is altogether a question of classification, that is the reason that Mr. Lumsden resigned. You can investigate that, but you cannot investigate whether that mistake, or improper classification, arises from carelessness, negligence or bad faith. Why, Sir, those are the very things which caused Mr. Lumsden to resign, he would not have resigned, as he says himself, unless he had lost confidence in his sub-engineers. and the reason he lost confidence in them was because they had been guilty of over-classification, and that can only arise by reason of carelessness, incapacity or bad faith. The Prime Minister himself says that if this investigation led to that conclusion, namely, that Mr. Lumsden was resigning for either of these reasons, incapacity, bad faith or dishonesty on the part of his sub-engineers, then you cannot go one step further in that investigation. If that is so, then I say that the whole investigation proposed by this government is an absolute farce.

Now, let us see what the Minister of Railways had to say. The hon. member for North Toronto (Mr. Foster) has a very unhappy method, a very unhappy manner, a very unhappy custom, I might say, of interjecting questions which go to the whole root of the matter. The hon. member for North Toronto asked the Minister of Railways what, in his opinion, in his own language, we could investigate under this motion, and the Minister of Railways was absolutely dumbfounded, and could not say what was to be investigated. I will read what the minister said:

Mr. FOSTER. I would ask the hon minister to dispense.

Because he wanted him to say in his own words what there was to investigate. The minister could not say, but he started to read the resolution. So Mr. Foster said:

I would ask the hon. minister to dispense. What I want from him is an explanation of that resolution. Any man can read it, but we do not all grasp what it means.

Mr. GRAHAM. My hon. friend from Lanark (Mr. Haggart), with his usual precision, puts the hon. member for North Toronto (Mr. Foster) right. He says the last paragraph explains it. I will read that.

Mr. FOSTER. I have read that and understand it.

Mr. GRAHAM. I do not see that I can use any plainer language.

Then the hon. minister goes on to read that portion of the motion:

Mr. FOSTER. What are the charges?

Mr. GRAHAM. My hon. friend will find that in Mr. Lumsden's letter, read by myself and by the Prime Minister.

Mr. FOSTER. Would my hon. friend tell us what they are, in his own language?

Mr. GRAHAM. I would not like to detain the House longer recapitulating what is so plain.

So the Minister of Railways himself cannot explain what there is to investigate, under his leader's motion. Then we take the hon. member for Pictou (Mr. Macdonald), and what does he say? The hon. member for Pictou says, at the bottom of page 2488 of 'Hansard' of the 25th January:

And the result is we get down to this question as to whether or not there have been mistakes in classification—

Now, a mistake in classification is an improper classification and if it is an im-

proper classification it is not a proper classification. I think that goes without saying. That means that the mistake that he was referring to was not a proper classification. Then he says:

—whether or not Mr. Lumsden was correct in his statement that there was disobedience of instructions and failure to record what he had told these men should be done.

Well, failure to follow instructions leads to overcharge in classification, and overcharge in classification means improper classification. So far as the hon. gentleman has simply said that the matter to be investigated is whether or not there has been a proper classification. Now he says:

These are proper subjects for the committee.

He says that whether or not there has been over-classification is a proper subject for the committee. But then he says:

The question as to whether there was proper classification is a matter entirely for the tribunal constitued by parliament in 1903.

So that he says in one case that the question of classification is a proper one for this committee and in the next case he says that the question of classification is a matter entirely and exclusively within the jurisdiction of the arbitrators appointed under the Act of 1903. It is impossible to reconcile these two statements. It shows that there is nothing whatever to investigate under the resolution proposed in this House. I will put a concrete instance. We will say that we have a committee appointed and we will say that we have on that committee the hon. member for Pictou (Mr. Macdonald) and the hon. member for Carleton, N. B. (Mr. Carvell) who have done such herculean service in the Hodgins inquiry and who succeeded so well in burking that inquiry.

Mr. MACDONALD. I rise to a point of order. The hon. gentleman has no right to charge me, or any other member of this House, with burking an inquiry as a member of a committee.

Mr. MIDDLEBRO. What I do say is that it was largely through the efforts of the hon. member for Pictou—

Mr. MACDONALD. I would like to have your ruling, Mr. Speaker.

Mr. SPEAKER. I suppose the hon. member can explain what he meant.

Mr. MACDONALD. I take the point that no hon. member has the right to make that charge with reference to a member of this House.

Mr. SPEAKER. I must hear his explanation of what he meant by these words, before I can give a ruling.

Mr. MIDDLEBRO.

Mr. MIDDLEBRO. I did say, and if it is not what I did say, I certainly meant to say, that it was largely through the exertions of the hon. member for Pictou and the hon. member for Carleton, N. B., that the whole matter to be investigated by the Hodgins committee was referred to the arbitrators appointed under the Act of 1903, and from that day to this, although it was referred back in 1907, the arbitrators have not given one single decision in reference to it.

Mr. MACDONALD. I desire to know whether the hon. member for North Grey persists in the statement that I burked the inquiry as a member of the committee.

Mr. SPEAKER. I think the word 'burked' is not parliamentary.

Mr. MIDDLEBRO. I thought it was in order for an hon. member to explain what he meant and I did explain what I meant.

Mr. SPEAKER. That means that the hon. gentleman does not persist in the use of the word 'burked'?

Mr. MIDDLEBRO. No.

Mr. MACDONALD. As an hon. member of this House I have a perfect right to rise to a point of order. I object to being charged untruthfully—

Some hon. MEMEBERS. Oh, oh.

Mr. FOSTER. Order.

Mr. MACDONALD. I object to being charged by the hon. member, about a matter of which he knows nothing at all himself, with burking, as a member of a committee, anything which was referred to me as a member of that committee and I want to know whether the hon. gentleman is in order in persisting in the statement that I have referred to.

Mr. SPEAKER. I understand the hon. gentleman to have withdrawn the words.

Mr. MACDONALD. Well let him withdraw them.

Mr. SPEAKER. He wanted to explain.

Mr. MIDDLEBRO. As I understand the meaning of the word 'burked' it is to prevent, and I have endeavoured to show that the hon. member for Pictou was the chief instrument in preventing that Hodgins inquiry.

Mr. SPEAKER. I think that the expression 'burked the inquiry' is unparliamentary.

Mr. MIDDLEBRO. If the word 'burked' is unparliamentary, I will withdraw it, but I am seeking to prove what I mean by the word 'burked.'

Mr. MACDONALD. For myself I want to have it distinctly understood as to whether hon. members can make statements of this kind, comply nominally with your ruling and then persist in not complying with it. Are we to have parliamentary rules or are we not? I want to say to the hon. gentleman that he is talking about a subject that he knows nothing at all about.

Mr. SPEAKER. I have given my ruling.

Mr. R. L. BORDEN. The hon. member has withdrawn the word.

Mr. MIDDLEBRO. I was proceeding to give a concrete instance of what would probably happen if we had the hon. member for Carleton and the hon. member for Pictou as two of the members of this committee. We will proceed now to show what exactly would occur. We have a committee of five, three of whom are government supporters, stalwart henchmen of the government. The chairman is put in the chair. My hon. friend from South Simcoe (Mr. Lennox), we will say, calls Mr. Lumsden and puts him in the box:

Q. Mr. Lumsden, you were, until June 25, 1909, chief engineer of the Railway Commission?—A. Yes sir.

Q. You resigned your position on June 25, 1909?—A. Yes sir.

Q. Why did you resign your position?—A. The letter I wrote to the Chairman of the Transcontinental Railway Commission shows that.

Q. What was that?—A. I resigned because I had lost confidence in the engineers on sections 'B' and 'F' of the railway.

Q. Why did you lose confidence in these engineers?—A. I resigned because they had classified contrary to my instructions.

Q. What were these instructions?—A. I have them here in my pocket.

I propose now to prove that by reason of over-classification against these instructions this country has lost, say, $500,000.

The hon. member for Pictou rises and says: This resolution does not authorize this committee to try the question of whether there was over-classification, it is a matter, according to my speech on this motion, which comes exclusively within the jurisdiction of the arbitrators appointed under the Act of 1903 and in proof of that I cite the speech of my own leader, the right hon. Sir Wilfrid Laurier, in which he says that whether that over-classification arose from bad faith, incompetence, or carelessness, this committee cannot determine such a question. There we stop. That is the very foundation upon which this inquiry proceeds and yet we are blocked from going into the case. What can we ask the man? We can say to him: Tell us some other reason why you resigned. Was it because your engineers smoked bad tobacco, or was it because he was not wearing a proper kind of clothing, or was it because of any other habits he had? There would be no objection on the part of my hon. friends because this is quite within the purview of this resolution, but when you go into evidence to substantiate your charges and which relates to the taking of a dollar out of the public treasury, these gentlemen are justified—and I make the statement advisedly—under this resolution in saying not one tittle or iota of evidence are you entitled to give here. Then it goes back to the very same tribunal which my hon. friend from Pictou helped to send it back to in 1907, or 1908, because he said that tribunal had the exclusive jurisdiction in the matter. In order to be precise I will read the hon. gentleman's own words on that occasion:

Mr. E. M. MACDONALD:—Now the fact is before us that Mr. Lumsden and Mr. Woods have gone over that section 'F' of this line. They have looked at various divisions there and at this very moment they are performing the function which was contemplated would be performed by section 7 of the agreement and endeavouring to agree upon what the proper classification is, and in the event of their being unable to agree as to that then the third arbitrator would be called in. In other words these gentlemen are now discharging the duty assigned to them and are going to arrive at some conclusion upon the differences which I understand my friends to be arguing this committee should engage in.

The absurdity of the position suggested by my hon. friends will be recognized when we consider that at this very moment the two gentlemen who are appointed by statute are performing their statutory functions and they are bound to come to some conclusion on the matter. Upon that conclusion the accounts will be adjusted. At the same time, if the view of my hon. friends were concurred in we would be taking up our time in dealing with a purely academic question. I do not understand my hon. friends to urge that there is anything improper in the position of the commissioners in dealing with the engineers, so it is purely a question of a difference of opinion between these engineers as to what the classification will be.

Mr. E. M. MACDONALD. Hear, hear.

Mr. MIDDLEBRO. The hon. gentleman ays, hear, hear, but if he follows the reasoning of his leader he will be found to acknowledge that the moment the question of classification comes up in this committee, it will be sent to these three arbitrators. Well, if that be the position taken by the government it simply means that there is not a single thing concerning the expenditure on this railroad which can be inquired into by that committee or any other tribunal appointed by this House. The very minute you touch the kernel of the matter which should be inquired into, the supporters of the government will say: these matters are solely within the jurisdiction of this arbitration tribunal and you have no right whatever to interfere with

them. Therefore, we can come to no other conclusion, but that this committee is now being appointed, not for the purpose of investigating, but for the purpose of whitewashing. We will go before this committee and we will present our evidence, but our evidence will be rejected and the next morning the 'Globe' newspaper will come out with great big headlines stating that after the most thorough, searching, and impartial investigation that has ever taken place Mr. Lumsden's charges have utterly fallen to the ground, that the skirts of the government are absolutely clean, and the opposition had to withdraw every charge. That is what the government want to do, and that is the reason they put this resolution on the order paper. But if I am wrong I now ask the right hon. gentleman to set me right. The Prime Minister knows that the gravamen of the charges made by Mr. Lumsden is over-classification which simply means taking money out of the treasury of this country illegally and unlawfully. I ask the right hon. gentleman in his place now, will he allow us to ask these questions and to prove these charges when the matter comes up before this committee. The right hon. gentleman is silent; he does not answer. I can quite appreciate his silence. I ask the hon. member for Pictou (Mr. Macdonald) will he declare in the committee that we have the right to investigate the question of whether or not, there has been over-classification and money taken out of the treasury? Let the hon. member (Mr. Macdonald) tell us that before we go to the committee. The hon. member is also silent. I ask the hon. member for Carleton (Mr. Carvell) who no doubt will be in the committee, what will he say if we offer to prove these charges? Will he allow us to do so or will he tell us it is a matter to be sent to the arbitrators who have not yet sent in their report. That is a fair question to put to these gentlemen. The hon. gentleman is also silent.

Mr. LALOR. They are dumb.

Mr. MIDDLEBRO. They won't answer. Since it is quite evident that we will not have an opportunity of getting these matters before the committee let me now say a word or two on the merits of the case. In 1903 the right hon. the Prime Minister proposed the building of the National Transcontinental railway and he told us he had mountains of information upon which to base an estimate of the cost. I have a right to suppose that he sent out a staff of engineers who went along the route of this railroad and got the levels, and took the estimates of quantities that were to be removed, making borings in the different hills to find whether there were solid rock, loose rock, or common excavation. That was their duty and I presume they did it. I make this statement here—not as an engineer, but on what has been told me by experienced engineers—that an engineer can ascertain more correctly before a cut has been made than he can afterwards, what amount of material is in that cut. That is especially so in the case of a partial cut, say where the railway is going round a hill and only a portion of the hill is taken off, because he has the actual geographical formation of the hill to be removed in his eye, whereas afterwards he has not. In the case of a straight cut I will admit that he could measure that afterwards as correctly as before, but I say that the experience of engineers proves that in a location such as I have referred to, they can estimate more accurately before the actual cut has been made than afterwards. Now, that being the case, can any one conceive why there should be a difference of from 100 per cent to 150 per cent between the estimate and the actual cost in this road. The geographical position of the country is the same as it was when the estimate was taken, the geological formation is the same, and practically the only thing that has caused a difference in the price is, the classification of solid rock, loose rock, common excavation, and the over-break. It is because the juxtaposition of these four that the extra additional cost of the railway has come. It is very easy for a man to change common excavation into loose rock, an engineer's certificate will do that. It is very easy for him to change loose rock into solid rock, if the engineers are in any way in collusion with the contractor and if they will do it, and it is a very hard matter to detect when they have done it. But, in going along and boring down into a hill to find what was the character of the soil, how much was common excavation, how much loose rock and how much solid rock, was it possible for them to have made a mistake to the extent of from 100 per cent to 150 per cent. The best engineers say that it is not possible, nay, they would not be very much surprised if there was a difference of more than twenty per cent in the calculations of an engineer made in that way; but they say that when you get beyond a difference of twenty per cent there is a prima facie presumption that there is something wrong. Now, in this case the difference is not only twenty per cent between the cost and the estimate, but the cost has risen from $51,000,000 estimated—to which you may add twenty per cent as the outside difference that may arise and that will give you $62,000,000 estimated cost. Then the estimated cost has risen from $62,000,000 (including an allowance of twenty per cent) to $114,000,000, and there you have an increase of 100 per

cent and $12,000,000 additional to spare. Is there any common sense in that? Does not that very circumstance cast upon the government a prima facie case of negligence, mismanagement, or dishonesty? I think I am justified in saying it does.

I desire to say a few words in reference to Mr. Hodgins. As we all know Mr. Hodgins was district engineer in charge of district 'F', the district lying immediately east of Winnipeg. Mr. Hodgins, so far as we know, enjoyed an enviable reputation until the time he severed his connection with the Transcontinental Railway Commission. He was selected for that position because of his exceptional qualifications as an engineer, because of his great experience in other portions of the world in railway engineering, and, so far as we know, no suspicion had been cast upon him on any occasion. Why was Mr. Hodgins dismissed? I make the claim that Mr. Hodgins was dismissed because he was keeping the classification down too low to suit the contractors and to suit the commission. I prove that in this way. In 1907 complaints were coming in from the contractors to the commission that the classification which Mr. Hodgins was making on his section 'F' was altogether too low as compared with the classification that was being made in the province of Quebec. This commission sent out their inspecting enginer, Mr. Gordon Grant, to investigate whether or not Major Hodgins was giving estimates that were too low for the contractors. Perhaps that was not putting it fairly; to investigate the question whether Major Hodgins was not giving as liberal classifications as he should. What did Mr. Grant say? After examining the work he came back and reported to the commission, under date July 23, 1907, under the head of 'classification on district 'F' as follows:

> Classification on this work, where the vast majority of it is solid rock, is not a serious matter, and where material has been moved that could be classified—and the greater part of it was moved last winter when it was frozen, such as the opening of cuts, the stripping of rocks, &c., I found, from questioning the resident engineers and from looking over the progress estimates, that the classification given the contractors has been very low, and in many cases absurdly low, and for that reason alone there are probably 1,000 men less on the work to-day than there would have been if the work had been fairly and justly classified. Classification is left entirely to the resident engineers, and they are all to timid to give the contractor what he is entitled to in that line.

Mr. Gordon Grant reported to the commission that Mr. Hodgins was classifying too low, yes absurdly low that his resident engineers were afraid to give the contractors what they were entitled to. What was the result? Two months afterwards Mr. Hodgins was made to walk the plank. It is not the inference that he walked the plank because he was keeping the classification down too low to suit the contractors? Now, what is the truth? Fortunately we have, I think, Mr. Hodgins being justified by after events. The hon. member from South Simcoe (Mr. Lennox) went very carefully and concisely into the amount of over-classification on the different divisions of the Transcontinental railway. So far as I know the calculations he made are absolutely correct and they have not been denied by the Minister of Railways. I am, therefore, assuming that what he gave us in the House on Tuesday is absolutely correct and is justified by the returns brought down by the Minister of Railways and Canals. According to these returnes we find that there has been an over-classification on the same district 'F' of $2,798,791—and Mr. Hodgins was removed from that section before that because he was keeping down the classification. Mr. Poulin, his successor, was appointed. Do we find then that his estimates were too low? Do we find any contractors making complaint that his classification is kept down too low? Not a bit of it, not a word of complaint. What do we find? But we find Mr. Lumsden, the chief engineer, of the commission, finding fault with the classification there and we find that the reason Mr. Lumsden resigned was because there was over-classification in that district. We even find Mr. Gordon Grant himself, after he is appointed chief engineer, after he goes over that road, coming back and cutting off $360,000 voluntarily. Is that not proof that Major Hodgins was justified in the charge he made? Is it not proof that the commission wanted Major Hodgins to give more liberal classification? Their inspecting engineer came back and reported that Major Hodgins was not liberal enough. Major Hodgins is discharged and an engineer put in who allows over-classification of $2,789,000, and Mr. Grant himself comes back, and, of his own volition, not as an arbitrator, but simply as engineer for the commission, lops off $360,000. Yet we hear it said that Major Hodgins did not do his duty when he came to the conclusion that they were trying to make him over-estimate the classification. What could an honest man do but to resign. The Minister of Railways yesterday put on record a great number of letters in reference to this subject, many of them not very germane to the discussion. I, therefore, propose to quote from some of the letters to be found in this return from Mr. Woods, assistant engineer of the Grand Trunk Pacific, in which Mr. Woods makes complaint as to over-classification in differ-

ent portions of the contract. The first letter appears on the first page of the return. It is a letter from Mr. Woods, dated October 7, 1907, shortly after Mr. Hodgins had been removed from his position. So far as I know, certainly so far as this return shows, there were no complaints by the Grand Trunk Pacific against Mr. Hodgins while he was in charge as to over-classification. This return shows that in October, 1907, shortly after a successor was appointed, there were serious objections to the classification on that section from the Grand Trunk Pacific. He says:

With the latter portion we had detailed percentages for each cut and were greatly surprised at the allowances made for solid and loose rock. In nearly every case, where the cuttings were not entirely all ledge, the estimate given for solid rock is double, or more than double, what it should be. In fact, the specifications had been entirely ignored and an excessive allowance made, not by reason of any error in judgment, but, as I understand, by special instructions from the assistant district engineer.

Let me give you some illustrations:—

Take the cutting from stations 5818 to 5826. Estimated 71 per cent solid rock and 29 per cent loose rock. Slopes taken out 1½ to 1. Very little ledge in this cut. Some large boulders but a very large percentage is common excavation.

Station 5842 to 5860. Classified 94 per cent solid rock, 6 per cent loose rock. Slopes taken out 1½ to 1. Solid rock over-classified at least 100 per cent.

Mr. CARVELL. What distinction does the hon. gentelman draw between the slopes of solid rock and common excavation?

Mr. MIDDLEBRO. In common excavation you will naturally remove more material, because you will require to have a greater slope from the perpendicular.

Mr. CARVELL. What is the percentage?

Mr. MIDDLEBRO. Not being an engineer, I cannot say; but if one and a half to one is a proper slope for common excavation, it is too much for rock.

Mr. CARVELL. What is the proper slope for rock?

Mr. MIDDLEBRO. As I have told my hon. friend I am not an engineer, but I have sufficent common sense to know that if one and a half to one is a proper slope for common excavation, that slope is not required for rock. Notwithstanding, Mr. Woods says that in this particular excavation solid rock is over-classified at least 100 per cent, yet the return of the slope is given as one and a half per cent to one. That means that you have allowed the contractor to go back from the slant twice as far as you should, and back of that legitimate slope, he has taken rock at $1.50 per yard. That is properly over-break. He takes that at $1.50 a yard and uses that in the next grading and calls it filling and gets paid for it as such. Although they are cutting solid rock, they are returning it as one and a half to one slope and getting $1.50 per yard for it. The next letter I shall read is on page 5. It is dated 20th February, 1908, from Mr. Woods to Mr. Lumsden:

I do not know the date of those instructions or when they are supposed to have become effective, but from reports of my assistants at Winnipeg and at Quebec, there does not seem to have been any change in classification of work previously reported, the percentage of classified material being steadily increased. We are satisfied that on some parts of the line the work previously estimated was not classified according to your recent instructions, being overestimated in both loose and solid rock. The attention of your district engineers has been called to this fact, but apparently without effect. If your instructions were effective when the January estimates were made, we certainly will have to object to the classifications as rendered on certain parts of the work.

On March 24, 1908, Mr. Woods again writes Mr. Lumsden as follows. He is referring to sections 'B' and 'F,' the two sections concerning which Mr. Lumsden sent in his resignation because of the insubordination of the engineers:

In examining these estimates I find no apparent change in classification since your instructions to district engineers of January 28, 1908. On the contrary the percentages of classified material seem to be constantly increasing and are even higher than when we made our objections in September last.

I am quite aware that during the winter season it is natural that classified material should run higher than at other times, as little earth work is opened, but I had hoped to see a reduction in classified material so reported prior to January last.

I have before me a detailed sheet showing classification as made on district 'B,' and am surprised to find material classified as solid rock which, if I am correctly informed, under your instructions could only be classified as loose rock. I also find very large quantities returned both as loose and solid rock in borrowed embankment. On the work east of the Quebec bridge a large amount was done with teams, side borrowed material, and yet the entire contract for the 150 miles only shows 24 per cent of the work done as common excavation. It appears also that the item 'assembleed rock,' No. 5 in your instructions, is made to cover most material where explosives are used in handling.

In excavations for foundations, where hard material is found, under this item it is classified as solid rock, giving the contractor three times the usual price for that material. Our district engineers are not satisfied with the classification as made. On district 'F' the objection lies in the first and second divisions.

It is imposible at this time to go over the work with a view of examining classification, but, from reports from my assistants, I cer-

tainly must object to the classification as rendered being considered final, and request that as soon as the season will permit, you accompany me over at least a part of the line, that I may have your views in regard to this most important matter of classification.

H. A. WOODS,
Assistant Chief Engineer.

Then on April 2, 1908, Mr. Woods again wrote to Mr. Lumsden:

There are a few exceptions to be taken to these estimates so far as I am advised, except to the classified material, which is constantly increasing, and a very large amount of overbreak in solid rock cutting also increasing and representing in all a very large amount.

The next letter I shall quote is dated June 19, 1908. This is rather an important letter from Mr. Woods to Mr. Lumsden:

Dear Sir,—I have before me estimate of rock excavation, district 'F,' for the month ending April 30, 1908. You will recall these statements as being made showing the overbreak on each division from month to month.

It is a little surprising to find that the total overbreak on this district to April 30, is over 500,000 cubic yards. From the column furnished showing how some of this might have been used where rock borrow otherwise would have been required, and earth borrow, and deducting the same, I still find about 451,000 cubic yards of overbreak.

I have nothing to show how this overbreak is estimated. Articles 37 and 38 would indicate that a large amount of this overbreak might have been estimated as loose rock rather than solid. Can you say if this has been done? None of my reports indicate such to be the case. I think you will readily agree with me that if these cuttings are being measured month to month by actual quantities taken out, and no allowance deducted, little effort will be made by the contractors to keep overbreak within reasonable limit and in the end we shall undoubtedly be paying $1,000,000 additional for the work on this section probably not contemplated in your approximate estimates.

H. A. WOODS,
Assistant Chief Engineer.

There you have the engineer of the Grand Trunk Pacific, a very experienced engineer, saying: If you go on in the way you have been going, with respect to this very question of overbreak—that is taking out more material than you should on this contract alone, the government will lose one million dollars. In order not to weary the House, I desire to put on record without reading them, the following letters.

Sir WILFRID LAURIER. That is not the practice in this House. We allow it sometimes in informal proceedings, but on important questions we should have everything read.

Mr. MIDDLEBRO. The next letter I shall read then will be found on page 24, and is dated June 23, 1909. It is as follows:

Dear Sir,—I beg to acknowledge receipt of your favour of the 19th instant, together with the copies of settlement sheets of contractors' progress estimate returns for the month of May, as follows:—

District 'A.'—Grand Trunk Pacific.
J. W. McManus & Co.
Lyons & White.
Willard Kitchen & Co.
District 'B.'—Grand Trunk Pacific.
M. P. & J. T. Davis (east).
M. P. & J. T. Davis (west).
Macdonell & O'Brien.
E. F. & G. E. Fauquier.
District 'D.'—Grand Trunk Pacific.
District 'F.'—J. D. McArthur.

Upon comparing these estimates with those received since January last, I find that upon percentage of classified material in districts 'B' and 'F' remain practically in the same proportions as in former estimates received since January last. As I cannot believe that this classification, as rendered, as in accordance with the specifications, or with your letter of instructions to your district engineers of January 30, I must again object to the classification. Our recent visit to certain portions of the line on district 'F' confirms my views relative to classification on both these districts.

H. A. WOODS,
Assistant Chief Engineer.

The next is dated July 8, 1908, and will be found on page 35. It is from Mr. Woods to Mr. Lumsden, and the portions I shall read are as follows:

Dear Sir,—Referring to our recent visit to the work on district 'B' east of the St. Lawrence river, our examination of classification as rendered at points visited, and our conversation regarding same, I hope to repeat in writing what I stated to you verbally: that we still vigorously protest to the classification as returned to date. For example:

The first cut we visited, station 7135 to 7142. Gravel cut with little or no ledge. Classification returned 7,900 yards solid rock, 12,100 yards loose rock.

Then he goes on to say:

These are loose rock cuttings containing many large boulders. My judgment is that the solid rock returned is double what it should be, 25 per cent being a liberal allowance.

And again:

The gravel cut on stations 7175 to 7182 is returned as 8,000 yards loose rock and 12,000 yards common excavation. This is purely gravel cut. There may have been a few small stones, which, if found in sufficient quantities, might be termed loose rock, but certainly not more than 10 per cent at the outside. Classified as 40 per cent loose rock at present.

Then, towards the bottom of the page:

For another example further west, take the cut station 5940 to 5950. Estimated 44 per cent solid rock, 56 per cent loose rock. While there is a small amount of ledge in the bottom of the cut I should say 25 per cent solid

would be ample, unless actual measurements of ledge and boulders have been taken.

And on the following page:

Station 3239 to 3247. Classified 45 per cent solid rock, 55 per cent loose rock. While the quantities in this cut are not large, it is, in my judgment, classified out of all reason. I can see no solid in it and nothing to exceed 20 per cent of loose rock.

Now, the last letter to which I will refer is dated July 28, 1909, and is printed at page 43. This is a letter from Mr. Woods to Mr. Lumsden:

In a recent letter from district engineer Mann, he writes that:—The classification is undoubtedly going from bad to worse, even on the parts of the work you saw when out with Mr. Lumsden.

Then, later on:

Another point to which Mr. Mann makes objection is the returning of dry masonry as third-class. He gave instances at stations 2618 and 2628-60 stating that these culverts are dry, and have been plastered on the outside and inside with mortar and returned as third-class. One of these culverts was under construction when he saw it, and others had settled so that the plastering had fallen away showing the entire lack of any mortar in the interior. He further states that some of these culverts were returned dry in former estimates and were later transferred to third-class.

That will give the House some idea of the complaints that were being made by the Grand Trunk Pacific and whether or not Mr. Lumsden was justified in the position he took when he resigned his office because he could not submit to the classification made by his subordinates. Let me give an instance. I cannot give the exact monetary sums involved—my hon. friend from South Simcoe (Mr. Lennox) did that. But it is just such cases as this to which I shall refer that account for the increase in the cost of this road from $51,000,000 to $114,000,000. Take the example mentioned in the first letter written by Mr. Woods to Mr. Lumsden, dated October 7th, 1907:

Stations 6030 to 6046. Estimated 40 per cent solid rock, 10 per cent loose rock. This is the large sand-cut west of O'Brien's camp. Of the 95,000 yards moved to August 31 in this cut, at least 80,000 yards were pure sand.

Imagine estimating a sand cut at 40 per cent solid rock, and 10 per cent loose rock. Let us figure that out. The estimate as passed by the engineers of this commission on the item to which I have just referred was as follows:

38 yds. solid rock at $1.50..	$57,000
9,500 yds. loose rock at 50c..	4,750
47,500 yds. common excavation at 25c.	11,925
Total..	$73,675

Yet Mr. Woods estimates:

80,000 yds. of sand at 25c..	$20,000
15,000 yds. loose rock at 50c..	7,500
Total..	$27,500

This amount, Mr. Woods says, would be ample. But instead of paying for the work in that cut on that basis, the engineers of the commission have declared that the contractors are entitled to $73,-675.

Now, let me come to this tribunal of arbitration about which so much has been said. In 1903, it is true, provision was made for the appointment of a tribunal of arbitrators. But they were only to act in case of disagreement between the engineer of the company and the engineer of the commission. Well, after Mr. Hodgins had made his charges, after Mr. Woods had repeatedly and yet again sent letters to this commission objecting to the over-classification, the commission finally decided that they would have an arbitration. And whom did they appoint? They appointed, of course, their own engineer, Mr. Lumsden. The Grand Trunk Pacific appointed their engineer, Mr. Kelliher. And these gentlemen looked around to find a third man. The government, in its wisdom, having confidence in the ability and integrity of Mr. Collingwood Schreiber, suggested that that gentleman be appointed third arbitrator, and the Grand Trunk Pacific acceded to that suggestion. So that two out of three arbitrators were nominees of this government. And this government should have had confidence in at least that number of the arbitrators. The arbitrators, as a body, were considered by this government and by the railway company as the most competent men in the Dominion to decide this question. They went to districts 'B' and 'F' the districts in question. Using their knowledge as engineers—the best that could be obtained in this country—they went over the work. The sub-engineers watched the proceedings. I do not know whether they should be there or not. But I do know that these arbitrators were then taken on the ground, and that they had this matter, as the hon. member for Pictou (Mr. E. M. Macdonald) says sub-judice; they were considering these matters as a court. After going over these two sections they came back again. In the ordinary course of events, if public decency were the guiding principle, everybody would naturally wait until the commission made a report, and especially would this be true of the government of the day, since they had appointed two of these gentlemen practically themselves. But what happened? The district sub-engineers, Messrs. Doucet, Poulin and Huestes, who were subordinates of Mr. Lumsden in district 'B', rushed home and framed a

report and submitted it to the Transcontinental Commissioners. Why? From what they had observed of the action of these three arbitrators, the men who were best qualified to know what had taken place, the best qualified to know whether there had been over classification, from what they had observed they came to the conclusion that that Board of Arbitrators appointed practically by this government, was going to come home and say: 'There has been over classification'; and with a consciousness of what they were going to do, they came home and undermined the authority of the arbitrators, and the most shameful part of the whole transaction is what the commission submitted to it. What did they do? These three commissioners came home, and one of them wrote a report reflecting upon the action of the arbitrators; then every man of them wrote a report of that kind and submitted it to the commission. Now I propose to read from these reports. The first is that of Mr. Doucet, dated on the 22nd of June. After reciting a lot of things which he said the arbitrators did, and which in his judgment was not proper to do, he said, on page 23:

On Thursday a start was made at 5 o'clock in the morning, reaching the 150th mile at 9 o'clock. The first cut inspected consisted of classified material in which 1,000 yards of solid rock in masses had been returned by our engineers. Mr. Schreiber turned to me and asked me to point out where the 1,000 yards of solid rock were. I answered him that the cutting was classified material, and that the boulders of which it was composed were in the embankments. I was asked to point out where 1,000 yards of boulders averaging one cubic yard each could possibly be; to which I said that as the material was classified, it did not matter whether the boulders were a yard each so long as the mass consisted of boulders large and small cemented together. Mr. Kelliher, the chief engineer of the Grand Trunk Pacific, then spoke up and said that if I read the specifications I would see that boulders to be estimated as solid rock must measure one yard each. I at once saw that the arbitrators had made up their minds to throw out everything which our chief engineer had returned as solid rock except ledge rock and boulders, each of which measured one cubic yard.

I just read that portion of the report to show that Mr. Doucet knew that the arbitrators were going to report against him, knew they were going to come home and say that there had been over classification. Now, I will read from the report of Mr. Huestes on page 26:

At about the 132nd mile cut station 6576-92, resident engineer Girdwood was questioned as to how he got his 1.174 cubic yards of solid rock, and he replied in boulder measurements, and led the arbitrators to believe that each individual boulder measured one cubic yard, which I knew he did not mean, and which afterwards Mr. Bourgeois informed me was not the case, as the cut in question was a mass of boulders cemented together, and Girdwood had taken measurements of all boulders for a certain time to arrive at a means of estimating the percentage of solid rock in the cutting, based on our interpretation of 'assembled rock' as the material was cemented together.

The rest of the report shows that they were not at all satisfied with the classification being made by the arbitrators, because it was going to exceed what they thought it should exceed. Now, I will quote from the report of Mr. Poulin, on page 21:

I do not know of what nature the reports of said inspectors may be; but as district engineer in charge, I must protest against the manner in which such inspection was made as being altogether inadequate and too superficial to form a correct idea of what the material was like at the time the work was done. . . . . The only question asked me by Mr. Schreiber about the work was, how I would return a certain portion of one cut. On my answering 'assembled rock' he answered, 'you are wrong, the chief engineer meant there should be at least 80 per cent of large masses of rock.' I said nothing, but wondered how he knew so well the meaning of that which the chief engineer had apparently in his mind, but did not say in the interpretation given to us.

Now, the point I desire to make is that these understrappers were criticising the proposed decision of the board, the arbitrators consisting of the most expert engineers in the whole country, two of them appointed, as I said, practically by the government itself. It would have been decent to allow the arbitrators to come back and make a report, and to ascertain, first, whether or not that report was going to justify the sub-engineers. But they did not do that. They came back, and to my mind, concerted a conspiracy, because I find that one of the reports of these sub-engineers is made on the 22nd of June, another is made on the 23rd of June, and the third one is made on the 23rd of June, and all these reports are sent into the commission, and each one of these reports is an attempt to undermine the authority of the chief engineer and the probable result of that Board of Arbitration. What were the duties of the commission in that case? It was the duty of the commissioners to say: We have ordered a board of the best and most experienced engineers in this country to go and see whether or not there had been over classification in these two districts 'B' and 'F'; what business have you to come in here and attempt to influence our judgment until we receive the report of these arbitrators? Did they do that? I am sorry to say that the most unwarranted and humiliating spectacle is presented to us of the commis-

sion, not only apparently being only too willing and in too great a hurry to receive these reports, but of receiving each one of them at the same meeting of the commission, and considering the reports of these understrappers at 11 o'clock on the 25th of June last, without consulting the chief engineer, without consulting the Board of Arbitrators, and without first submitting to the chief engineer the reports of his subordinates. Does not that look as if the commission did not want over-classification to be found out in districts 'B' and 'F'? Is not that just what they wanted in 1907 when they sent Mr. Grant to inspect district 'B' under Mr. Hodgins, and he came back and said Mr. Hodgins' classification is absurdly low, he has not given the contractors enough, and so Mr. Hodgins is displaced two months afterwards. These understrappers come back here, the commissioners first get their reports in hand and turn round and send these reports to their own chief engineer and say: Mr. Lumsden, what do you think of that? Under the circumstances what could any self-respecting man do but say: If that is the kind of treatment that is accorded me I will resign my position as chief engineer. The records show what took place. At 11 o'clock in the morning on the same day the meeting took place. The same afternoon, and without notice to Lumsden, they sent to the chief engineer, Mr. Lumsden, the report of these three sub-engineers which favours the contractors as to said classification. On the same day, as soon as Mr. Lumsden got this impertinent communication, he did as any self-respecting man would do, resigned his position. Now, what I want to show is this: I will quote the words of the Minister of Railways in this House on Tuesday last. The Minister of Railways said: If there is one man we ought to stand by, it is our own chief engineer. These are his words on page 2435:

> Surely the chief engineer of the Transcontinental Commission ought to be able to look after the commissioners side, which is the public side, ought to be able to defend his own work, the work of which he has approved in the months past, and be able to give reasons for the decisions arrived at.

I thow these words back to the Minister of Railways and ask him: Why didn't you do as you say ought to have been done, give your chief engineer the right to defend his actions, instead of allowing the commission to undermine him by his own understrappers, without giving him the slightest opportunity to define his attitude?

But for the life of me I cannot conceive the action taken by this commission. This commission seems to think that it is their bounden duty to do what?—to fight the Grand Trunk Pacific when the Grand Trunk Pacific say there is over-classification, when they should, if the contractors are not doing the honest thing, be right in line with the Grand Trunk Pacific, because every dollar that the Grand Trunk Pacific successfully objects to means a saving to us of 50 cents interest as I hope to be able to show in a moment. But, they seem to think that they are fighting for the interests of this country when they are fighting for over-classification. Yet, they are opposing the Grand Trunk Pacific when the Grand Trunk Pacific are trying to lessen the cost. The facts, as they seem to take them, are diametrically reversed because if they are going to serve the public interest they will fight with the Grand Trunk Pacific and try to keep down the cost to the country. When they were going to call the arbitrators in what was their attitude? Mr. Lumsden had resigned his position as chief engineer. No self-respecting man would go on and act as arbitrator, and he says: I resign my position as arbitrator as well. The consequence is that this body to which the hon. member for Carleton and the hon. member for Pictou were going to leave all questions before the Hodgins inquiry, has been suddenly and rudely dissolved by the action of the government's own commission. Now, what happens? Still, the Grand Trunk Pacific are objecting, in these many letters that I have produced, to over-classification. They object first to the appointing of a new arbitrator; they say that the old arbitration board has not been dissolved because Mr. Lumsden has resigned. All you have to do is to appoint a new engineer and then the three engineers will decide the matter before them. The biggest bungle and tangle that it is possible to conceive is displayed by the correspondence which has taken place between the commission and the Grand Trunk Pacific in reference to the appointment of a third arbitrator and in reference to getting down to the specific matter that is to be considered by the arbitration board. There, we have what?—the commission fighting tooth and nail and for what?—to limit the matters to be arbitrated to those mentioned in the letters from the Grand Trunk Pacific. In other words, they are trying to say to the Grand Trunk Pacific that this arbitration board cannot consider one single question except those questions mentioned in your letters; that is the over-classification to which you have objected in those letters. The Grand Trunk Pacific say: We do not want to be bound to that; we want a full, complete and thorough investigation into the classification over the whole system. In reply the commission say: You cannot have that. Why should they not have it? Is it not in the interest of the public to know if any money has been misspent

not only on sections 'B' and 'F' of the Transcontinental railway, but on the whole railway that is being built by this commission? This commission conceived it to be their duty, and they think they are serving the public thereby, to limit the inquiry and have no investigation into other portions of the road, when, as a matter of fact, if they took a diametrically opposite course, they would be best serving the interests of the country.

How is this country interested in the matter? Under the contract with the Grand Trunk Pacific, as hon. members of this House know, we are to furnish the money to build the railway. We pay the interest on the money during the time it is being constructed. We will take eight years as the time that it will take to construct that railway, and I think I am fair at putting it at eight years. We do not, of course, borrow the whole cost of that railway at the beginning of the eight years, and to be fair we will cut that in two and make it four years. I will say that we pay four per cent for our money, because, while we are not paying that rate of interest, I contend, and the statement of my hon. friend from Montreal, St. Antoine (Mr. Ames) bears out that contention, that when you consider compound interest, brokerage, commissions and underwriting, our money will cost us four per cent. What does that mean? The estimated cost of the railway, as brought down by the hon. the Minister of Railways and Canals (Mr. Graham) in December last, is a trifle less than $115,000,000. One hundred and fifteen million at four per cent for four years amounts to $18,400.000. We will pay that on the cost of construction providing that $115,000,000 will cover the expenditure. What after that? One hundred and fifteen million dollars plus $18,500,000 is what it is going to cost us. But we must add to that seven years more interest at four per cent which amounts to $37,352,000 because we get no rental for this road for the first seven years. Adding these two together it makes the total amount that we pay in interest $56,752,000, practically $57,000,000 and $57,000,000 is just exactly half of $114,000,000 which is almost the estimated cost of the road. It means that we are paying half of the estimated cost of the railway. It means that every dollar of over-classification costs this country 50 cents. It means that every million dollars that we pay for that road costs us $500,000 in interest. So, in that way it will be appreciated what we are paying. When Mr. Woods stated in that letter that I have quoted that the over-break alone would be $1,000,000 on one section alone, we see that this country will have to pay $500,000 in excess of what it would otherwise pay. When Mr. Hodgins was trying to keep down the expenditure of section 'F' every dollar that he saved in classification meant fifty cents to this country. When Mr. Grant, of his own volition, went over sections 'B' and 'F' and cut down $647,000 of the estimates, without one single kick from a contractor, he saved this country $323,000. But, in addition to that we have this interest, and it is the country's interest and it is our duty to keep it in view, that we should not only for our own sake but for the sake of the Grand Trunk Pacific keep down the cost of the railway. Why? The greater the excessive cost of that railway the greater will be the freight rates, because their freight rates will depend on the amount of interest they pay and the amount of interest or rental they pay will be three per cent upon the total cost of construction. So, we are interested in that way in keeping down the cost of that road.

The hon. Minister of Railways and Canals said that when it was brought to his attention that the Grand Trunk Pacific purposed to undertake some of the contracts with this commission for the building of a portion of the railway, at first sight he was not quite certain whether it would be proper for him to allow them to do so. I think his first thought was probably the best. What has happened? Here is the Grand Trunk Pacific under contract with this government to lease the railway after it is constructed at a certain rental. Here is the very same company building a portion of the railway. The engineer of the company is the engineer who will oversee their contract. He is the engineer who will say, of his own company, whether or not their contract has been over-classified, whether or not they are getting too much money. It is the same thing as if I were to say to myself that I should be the sole arbitrator as to whether I was getting too much money for the work that I was doing. That is the position they are in. What has been the effect? I am only going to cite two instances. The Grand Trunk Pacific have, I think, five or six contracts with this commission. The first contract is for 50 miles west from Moncton. The estimate of solid rock under that contract as officially given to this government was no solid rock whatever, and the amount certified was 10,000 yards.

We find that the estimate of loose rock was 130,000 yards and the amount certified 850,000 yards so that these two items alone make a difference of $375,000 on the first of the Grand Trunk Pacific contracts. Where is the man, where is the check, where is the engineer who is to say that the Grand

Trunk Pacific is getting too much for that contract? Surely the Grand Trunk Pacific is not going to make any objection; and yet the history of the whole construction of this railroad is that unless objection is made by the Grand Trunk Pacific practically no objection is to be made with reference to any portion of the railroad whatever. All the material above common material is called classified material, and the engineers appointed by the government estimated that the classified material on that section was only 7 per cent whereas it turns out now to be 52 per cent. Here is an increase of $238,000 on that item alone, and on the whole contract an increase of $600,000 for this one section. We say that is because the Grand Trunk Pacific there is occupying a dual position, and its engineer has certified in favour of itself what itself is entitled to. Now, we come to district 'A,' mileage 96 to 164 from Moncton, and the increase in the solid rock there over the estimates, loose rock amounts to $63,367, and the increase of solid rock out of common excavation—and this is a remarkable thing—amounted to $272,983, a total increase of $341,000 on that section. On these two sections therefore there is a total increase of practically $1,000,000. And where is the check on the Grand Trunk Pacific; where is the check on this increase of $1,000,000 on these two contracts alone? We know that the whole history of the construction of the line is that no check can be applied except by the Grand Trunk Pacific themselves. I would like to ask the right hon. the Prime Minister this question: Suppose that no objection whatever is made by the Grand Trunk Pacific engineers and there is consequently no dispute to be referred to the arbitration tribunal at all, are we to infer that there has been no mismanagement, no dishonesty and no over classification in the construction of this railway? The right hon. gentleman has told us that those things go to the arbitrators which are in dispute between the Grand Trunk Pacific and the government, and even on his own words we are surely entitled to an investigation into the cost of this road in matters where no dispute has arisen, and in reference to which the country may have suffered. It seems to me, Sir, that if the right hon. the Prime Minister expects this to be an effective inquiry, if he expects it to attain the object which he professes to have in view, he has got to give the committee the right to investigate the cause of Mr. Lumsden's resignation. Mr. Lumsden said in so many words that the reason he resigned was because the engineers in districts 'B' and 'F' had over-classed material. In other words they had converted earth at 25 cents a yard into loose rock at 50 cents a yard, and loose rock into solid rock at $1.50 per yard, and in that way money was improperly taken out of the treasury of the country. Surely if we are going to ascertain whether or not Mr. Lumsden was justified in losing confidence in the engineers, we cannot possibly attain the desired end unless we are permitted to prove what he alleged and go into this whole question of classification.

Mr. F. B. CARVELL (Carleton, N.B.) As I was a member of the committee which investigated certain questions in connection with the Grand Trunk Pacific two years ago and as I have been referred to by my hon. friend from Grey (Mr. Middlebro), I trust I may be pardoned if I take a few minutes to discuss what to me is a very important question. I compliment the leader of the opposition on the good sense shown by him in marshalling his forces on this occasion and leaving it to a man like the hon. gentleman (Mr. Middlebro) to resurrect the Hodgins' charges which have been buried for two years and upon which the people of this country have already passed judgment. The hon. member for Simcoe (Mr. Lennox) and the hon. member for Hamilton (Mr. Barker) who know what took place with reference to the Hodgins charges had the good judgment not to discuss them in the manner they have been discussed this afternoon. I am sorry that the action of my hon. friend (Mr. Middlebro) has rendered it necessary to refer to these Hodgins charges at all, because it must be a painful matter to Major Hodgins and his friends, and to the hon. gentlemen opposite as well, to have these things rehashed. The facts of the Hodgins case are simple. Major Hodgins was a district engineer employed by the commission. He did not get along with the engineers under him, he had lots of trouble and the commission sent an officer to investigate the matter and report, and as a result of the investigation Major Hodgins was discharged. Major Hodgins made the statement that he estimated the cost at $12,000,000 and that he had seen in one of the Toronto newspapers that contractor McArthur had stated that the cost would be about $16,000,000 and therefore he concluded that the increase of $4,000,000 above his estimate was due to the excessive classification which was known as the Quebec classification. He also stated in substance that he had been taken down to Quebec to be taught how the classification was made there, and the inference was that he had been asked and had refused to adopt the Quebec classification in district 'F,' and because he had refused he was dismissed from his position as district engineer. Well, the evidence showed that Major Hodgins went to Quebec in company with 15 or 20 other engineers and the commissioners of the Grand Trunk Pacific, that they examined a certain cut in the vicinity of

La Tuque and the report of the engineers had shown that that cut contained about 87 per cent of solid rock whereas in his judgment 40 per cent of solid rock would be the outside figure to allow. And, because of what he saw in this cut he considered that unfair and dishonest classification had taken place and that he would not apply it to district 'F.' This matter was investigated for about a month and Major Hodgins was assisted by able counsel whose services were paid by the government. Every chance in the world was given Major Hodgins and the Conservative party to prove the charges, and after a month's inquiry, without any pressure or promise or anything else, Major Hodgins voluntarily stated that he found he was entirely wrong, because the cut to which he referred as having been classified as 87 per cent and upon which he would have allowed 40 per cent solid rock, was actually classified as only 29 per cent solid rock in one month and 30 per cent in another, and the very month in which he was at the La Tuque cutting it was classified at 29 per cent, while he himself had allowed 40 per cent. When Major Hodgins was brought face to face with this statement of facts, there was nothing for an honourable man to do but to say what he did, that he was wrong, that he had been misled by somebody, he withdrew his charges and that was the end of the whole transaction. My hon. friend tries to resurrect these charges and to show that after Major Hodgins failed to prove that there was anything wrong in Quebec and consequently that he had been asked to do anything wrong in his district, we should have gone into the question of classification. I do not propose to discuss that because it was threshed out at the time and if the hon. member for North Grey (Mr. Middlebro) had been here he would have exercised the same good judgment displayed by the hon. member for Simcoe (Mr. Lennox) and the hon. member for Hamilton (Mr. Barker) and refrained from discussing that question at all. My hon. friend says that after Mr. Poulin was made district engineer in 'F' the over-classification amounted to $2,798,000. Why, the hon. gentleman does not know what he is talking about. The amount he cites is a certain conclusion arrived at by the hon. member for Simcoe (Mr. Lennox) and I shall refer to it in a while. But the hon. member for Simcoe does not claim that it is an over-classification, he says it is a difference between the estimate of the engineers who surveyed the work in the first place and the actual result of construction. He does not say it is an over-classification, he says it is an increase in cost. My hon. friend from North Grey who knows nothing about it, comes here and says that since Mr. Poulin was put in charge of the work the over-classification has amounted to over $2,000,000 and he contradicts the hon. member for Simcoe himself. I am sorry the hon. member for Simcoe is not here; I believe that hon. gentleman tried to give a fair statement of the case as he viewed it. I cannot agree with his conclusions but, so far as his figures are concerned, he took them from the returns furnished. He has been very industrious, he has asked time and again for returns, and I understand he has gathered information, he has codified that information and while I think in some cases he has been unfair, he has given us the result of his investigations, and has something to back it up. The hon. member for North Grey comes here this afternoon and I would not like to say through malice, I would not be entitled to say it, but I think I have the right to say through sheer inability to understand the purport of these figures, makes the broad statement that after Mr. Poulin, a Frenchman, took charge, the over-classification amounted to more than $2,000,000.

The hon. member for Simcoe in compiling his statements took the amounts and quantities in district 'F' from the estimate of Major Hodgins and you will all remember that Major Hodgins stated before the committee of inquiry that as a result of his investigations and re-surveys of his district he was able to reduce the estimated cost from about $13,000,000 to about $12,000,000 or in other words that he was able by a re-survey to reduce the cost of district 'F' by $1,500,000. The hon. member for Simcoe takes that $12,000,000 as being the true estimated cost of district 'F' and builds up a case from that, the result being his statement that it cost $2,798,000 more than it was estimated by the engineers it would cost. He fails to say that it was proved beyond any shadow of a doubt that Major Hodgins, in arriving at these estimates, not only did not save $1,500,000, but had left out $1,500,000 which should have been put in, and if he had put in what he should have put in and what he left out, the cost would have been brought up to exactly the estimated cost of the other engineers. I shall not take up time in reading long documents to prove all this, I shall leave it to the decision of the hon. member for Hamilton (Mr. Barker) who was a member of the committee and knows all about it. It will be found in vol. 7 of the debates of 1908 in a number of places in the report of the discussion which then took place. I shall give one illustration that Major Hodgins left out of his calculations entirely. It is known by some members of this House, probably not by the hon. member for North Grey (Mr. Middlebro), because he admits he is not an engineer, it is known by the hon. member for Hamilton that these speci-

fications require that all rock excavations shall go one foot below grade. That foot is to be filled in again with other material in order to give a better surface on which to lay the rails. Major Hodgins in his estimate of the cost of this work did not take into consideration that fact at all, and the result was that that one item alone would increase the cost of that work by $500,000. That was proved at that investigation, Major Hodgins was present, he never attempted to deny it, because they had his cross-sections and profiles there to show it.

There were other items in this estimate left out which brought the total up to about $13,500,000. When Mr. McArthur, the contractor, was speaking to the newspapers in Toronto about the total work costing $16,000,000, he was not talking about the grading alone, but about the finished road. His contract did not include rails, sleepers, laying track, station houses, and many other things, and he said that when the road was completed it would cost $16,000,000, but he did not say that his portion of the work would cost $16,000,000, and that is where the whole trouble arose. If I am right—and my hon. friend from Hamilton knows I am right—

Mr. BARKER. I understand the hon. gentleman is now arguing that the hon. member for Simcoe made an error in contrasting the work that has been paid for with the original estimate. The hon. member for Simcoe (Mr. Lennox) has taken the estimate upon which the tenders were made and the contracts entered into, not Mr. Hodgins' figures at all. He took the estimates that were in the government offices, and which the hon. gentleman can see as to the quantities in every mile and section of that district F and against that he is taking the quantities for which the government have already paid. He was contrasting it in that way.

Mr. CARVELL. I always like my hon. friend from Hamilton to make a statement because he wants to be fair, but he fails to realize that Major Hodgins was the very engineer who made the estimate and when my hon. friend from Simcoe (Mr. Lennox) was contrasting the estimates of the engineer he was contrasting the estimates of Major Hodgins with the results.

Mr. BARKER. No, he took the figures that the government accepted the tenders upon, which were settled in the head office of the commissioners. I do not care who made them, it could be half a dozen men.

Mr. CARVELL. I am willing to be asked a question, but I want to say that those figures were made by Major Hodgins.

Mr. CARVELL.

Mr. BARKER. Not all of them.

Mr. CARVELL. He was the district engineer and in the archives of the office, hon. gentlemen will see every one of these figures signed by Mr. Hodgins. My hon. friend knows that, he is not an idiot and he knows a good deal about railway matters. I tell him he knows it and he knows that Mr. Hodgins prepared the estimates. My hon. friend yesterday referred to the fact that when Mr. Hodgins came to review the estimate he reduced it from $13,000,000 to $12,000,000.

Mr. BARKER. That is where the hon. gentleman, perhaps untentionally, is misleading the House. The figures he refers to—

Mr. CARVELL. I object.

Mr. BARKER. You have called on me.

Mr. CARVELL. Does my hon. friend want to ask a question?

Mr. BARKER. I say to the hon. member that he is missing what I endeavoured to say. The hon. member says that Major Hodgins claimed that by certain work of his he has reduced the quantities. That did not enter at all into the argument yesterday. The argument of the hon. member for Simcoe was this, that contracts had been entered into by the government on certain quantities, and he showed that the quantities the government had been paying on grossly exceeded the actual quantities as regard solid rock and loose rock, and were less on the cheap common excavation.

Mr. CARVELL. My hon. friend has had his say, and I hope he is satisfied, but I come back to the proposition that Mr. Hodgins was the engineer responsible for district 'F,' and it was on his figures the estimates were based. If you will turn to the speech of the hon. member for Simcoe (Mr. Lennox) you will find the figures on page 2412. The hon. member for Simcoe gave us only $10,093,873 as the estimated cost, which he says has been increased by $2,798,600. To come back to what I was trying to impress on the House, hon. members opposite have tried to make out that this increase was due to Mr. Poulin, but Mr. Poulin went there after the grading work was practically all graded. We have the admission from the hon. member for Simcoe that when Mr. Poulin went there the grading was practically all done.

Mr. FOSTER. I understand that the hon. member for Simcoe took these figures from a return brought down by the government itself, that he took no other figures, and that he embodied no information in that table except what the government put before him in the return brought down.

Mr. CARVELL. I understand that the hon. member for Simcoe based his figures entirely on returns furnished him by the department, but his estimate is based not only on the amounts taken out up to the present, but on what the department estimates will be taken out and paid for in the future.

Mr. FOSTER. All given by the government.

Mr. CARVELL. Yes. My hon. friend from North Grey made the astonishing statement this afternoon that the engineer of the department estimated his work would only cost about $58,000,000 and that, taking what has been done already and what is estimated in the future, it is going to cost $115,000,000, or an increase of over 100 per cent. My hon. friend from North Grey may have honestly believed that, but if he did, that is only another evidence that the leader of the opposition never should have allowed him to talk on this important question, because the estimate of $58,000,000 was an estimate made by members of this House, in discussing the proposition in 1903, before the road had been surveyed at all.

Mr. J. HAGGART. It was made by the Finance Minister.

Mr. CARVELL. It was made before the engineers had gone over the road with their levels, and it was simply based on common knowledge. Taking the fact that certain roads in other sections of the country had cost $25,000 per mile, and certain other roads elsewhere had cost $35,000 per mile, the Finance Minister arrived at an estimate for this road of $58,000,000. But my hon. friend from North Grey attempted to show that that was the first estimate of the engineers, and that, on account of the dishonesty of the engineers, the total cost is going to amount to $115,000,000, or an increase of 100 per cent over the estimate. Let me give the hon. member for North Toronto (Mr. Foster) the result of the figures furnished by the hon. member for North Simcoe. That hon. gentleman was dealing with the construction of practically the whole of district 'F'—of the work from Moncton to Quebec and 150 miles west. I have taken his figures and carefully worked them out, and I find on that portion, or about one-half the work, he only claims that the cost has been increased $7,590,000 above the estimate of the engineers after the work was laid out and surveyed. That would be only an increase of $15,000,000 on the total work, and that, I submit, in a work of such magnitude, is a very satisfactory showing and very creditable to the engineers. Let me discuss the question of the increase in the several contracts set forth by the hon. member for Simcoe (Mr. Lennox). In the first place, Mr. Lumsden, in his letter of resignation, complains that certain engineers on districts 'B' and 'F' had not carried out his instructions regarding classifications. That brings us to the consideration of what were the instructions of Mr. Lumsden, and I propose to read them. There was in the first place a general specification for all the work, including every item, prepared by the chief engineer, Mr. Lumsden himself, and placed in the hands of every engineer and contractor, and it was on these specifications that tenders were called for and contracts entered into.

Mr. J. HAGGART. Prepared by Mr. Lumsden?

Mr. CARVELL. I do not know who did the clerical work, but Mr. Lumsden was the chief engineer, it was he who signed it and who is responsible.

Mr J. HAGGART. As a matter of fact, the Minister of Railways stated how the specifications were prepared, and said that Mr. Lumsden had nothing to do with them.

Mr. CARVELL. Mr. Lumsden signed them and adopted them and made them his own, and has to stand by them. Now, I want to read these specifications. I am going to take up the question of solid rock only, and I confine my reading of the specifications to that:

> Solid rock excavation will include all rock found in ledges or masses of more than one cubic yard which, in the judgment of the engineer, may be best removed by blasting.

I think it would do many of our hon. friends on the other side a vast amount of good if they would read that, and read it carefully. This presupposes two conditions of affairs to exist. First, it presupposes that there would be rock found in ledges. Every member of this House, and every intelligent member of the reading public of Canada, knows that if you come to ledge rock there is no question that that rock is solid rock. It is the other branch of the specifications over which the difficulty arises—rock in masses; if the rock were all ledge rock, there could not be any question about it. But as it provides also for rock, 'found in masses of more than one cubic yard,' it presupposes that some substance must be classified as solid rock which is not ledge rock. Were this not the case, of course, the specification would have been confined to ledge rock itself. Now, the question arises: What is meant by the term 'rock in masses?' This work commenced early in 1906, I think. Of course, it would not be very long before differences of opinion would arise between the engineers as to what was meant by 'rock in masses of more than one cubic yard.' The Grand Trunk Pacific, who want to keep the price down to the lowest figure, because they will

have to pay interest on the cost of it for the next forty-three years, contended that it meant practically nothing but boulders which would measure one cubic yard. If it was not a boulder, they contended, it was not solid rock. Other engineers on the work said that it did not mean that at all. And Mr. Lumsden applied to the district engineers, the district engineers to their divisional engineers, and, in some cases, to resident engineers. The contractors applied to their solicitors, and some of the ablest legal minds in Canada were brought to bear on the interpretation of these words. I will not quote any of these opinions, it is enough to say that such legal authorities as Blake, Lash & Cassels, Alexander Lacoste and others were consulted and gave opinions. Eminent engineers also were asked to interpret the words. A variety of interpretations was given, but, with one or two exceptions, every one of these authorities, both technical and legal, held that the specification did include something beyond rock in ledge or in boulders measuring over one cubic yard. Therefore, after a great deal of discussion, Mr. Lumsden, some time, I think, in December, 1907, issued to his engineers, further instructions as to his interpretation of this clause. He then went so far as to say that rock in masses meant rock joined together in such manner that, in the opinion of the engineer, they could be best removed by blasting, so long as the individual pieces of rock in these masses exceeded one cubic foot in size.

Mr. FOSTER. That was in 1908?

Mr. CARVELL. I may be wrong, but I think it was in 1907.

Mr. FOSTER. The minister's date is 1908.

Mr. CARVELL. I was wrong; it was on January 6, 1908. I made a mistake of a month. On January 6, 1908, the deputy minister of justice gave his decision as to this interpretation of the clause:

Mr. FOSTER. Were there two separate constructions?

Mr. CARVELL. I was wrong; it was on January 6, 1908. I made a mistake of a month. On January 6, 1908, the deputy minister of justice gave his decision as to this interpretation of the clause:

> I see no reason to differ from the classification stated by the chief engineer in his letter to the commissioners of the 16th ultimo, except as to the statement that 'rock assembled (the individual pieces of such assembled rock exceeding one cubic foot in size). . . . Such as in the judgment of the engineer may be the best removed by blasting,' is to be classified as solid rock excavation under clause 34. I do not understand upon what principle the chief engineer limits the size to pieces exceeding one cubic foot. The specification speaks of rock found in ledges or masses of more than one cubic yard which in the judgment of the engineer may be best removed by blasting.

That is signed by Mr. Newcombe. When Mr. Lumsden received this from Mr. Newcombe he issued his final instructions to his engineers on which the work has been classified from that day to the present, and will be classified from this time forward, because it has been agreed within the last two months by the engineers of the Grand Trunk Pacific and of the National Transcontinental that Mr. Lumsden's interpretation of section 34 of the 10th January, 1908, and that upon that interpretation the classification shall be made. Hon. members will find it recorded at page 430 of the proceedings in the Hodgins charges. Mr. Lumsden issued a blue-print of which I have a copy here. If hon. members have not seen it, it is here for their inspection. A copy of that blue-print is also to be found at page 430 of the Hodgins case to which I have already referred. In that blue-print Mr. Lumsden gives six illustrations of what he would classify as solid rock, including both rock in ledges and rock in masses of more than one cubic yard.

Mr. JOHN HAGGART. As the hon. member (Mr. Carvell) seems acquainted with the details, would he please tell us what is the difference between the opinion Mr. Lumsden held prior to the opinion given by the Minister of Justice and the instructions that he issued to his engineers?

Mr. CARVELL. I shall need to go back a little. In the first place, while I have no specific statement of Mr. Lumsden's definition of the term, I assume from the correspondence that Mr. Lumsden interpreted rock in masses above one cubic yard to mean a boulder above one cubic yard. But, just before writing to Mr. Newcombe, he did arrive at the conclusion that assembled rock of one cubic yard or upwards no portion of which was less than one cubic foot in size and which in the opinion of the engineer could best be removed by blasting, was solid rock. After receiving Mr. Newcombe's opinion he changed it to rock assembled in masses, no matter what size the individual pieces might be so long as the total was above a cubic yard, which, in the opinion of the engineer could best be removed by blasting. The first illustration was something which neither my hon. friend from North Toronto nor myself classify as solid rock, because it means a rock in the ledge, it is simply a straight ledge of rock. You cut through it, and you measure up the quantities.

Mr. FOSTER. It might be rock in the mass.

Mr. CARVELL. No, rock in the ledge.

Mr. FOSTER. Mr. Lumsden said it may be in masses.

Mr. CARVELL. Mr. Lumsden says in the illustration that it is rock in ledges. The next is rock in boulders over one cubic yard, and here he gives an illustration of two big boulders, which I think both the hon. member for North Toronto and myself could distinguish as solid rock, because we know solid rock when we see it. As long as it is above a cubic yard it becomes solid rock. The next is not so easy to understand. No. 3 is conglomerate or plum pudding stone. He gives no specific definition of what that means, but he gives an illustration. It means a number of rocks of different sizes, probably not above a cubic yard, cemented together by some solid substance, making it so solid that in the opinion of the engineer it is a conglomerate rock. The fourth is smaller, because he says it is detached ledge rock in masses over one cubic yard. This, to my mind, is not very different from the boulder. The fifth illustration is the one over which the difficulty has arisen; that is rock in masses of over one cubic yard, assembled rock, which in the judgment of the engineer can be best taken out by blasting. Now, I want my hon. friend to pay special attention to the comments made upon this illustration by Mr. Lumsden.

No. 1 is a mere matter of measurement by the engineer. No. 2 is a mere matter of measurement by rock measures. No. 3 is a mere matter of measurement by the engineers. No. 4 is a mere matter of measurement by rock measures. No. 5 and 6, to form a judgment as to whether or not it is best removed by blasting, the chief engineer must view the work in progress or leave it to be decided by the engineer in charge, whose duty it is to frequently visit this work during its operation and be governed thereby and act accordingly.

Remember, he admits himself, in 1908, that to settle this question, either the chief engineer must view that work himself, or leave it to be decided by the engineer in charge whose duty it is frequently to visit the work during its operation, and be governed thereby, and act accordingly. Now, Sir, I want to state here, and I am not doing it for the purpose of finding fault with Mr. Lumsden, I am going to say that up to the month of June, 1909, Mr. Lumsden never travelled over 25 miles of the whole 800 miles of railway under construction. I say I am finding no fault with him, he was an old man, probably his physical infirmities prevented him from doing so, and under his instructions given to his engineers in January, 1908, if he had not been able to do that himself, if he had not the physical ability to carry out that side of the instructions, then I say there is no other logical conclusion but that he should have left it to the engineers in charge of the work, and there were engineers in charge of every mile of the work, an engineer in charge of every ten miles, then a divisional engineer and a district engineer. There is no man on this earth who has any right to classify this work, or who has the ability to classify this work, except the engineer in charge of the work. I have taken up more time on this point than I intended, because I think it is the basis of the whole controversy. This blue print is the one sent out to his engineers by Mr. Lumsden. That blue print was received by every engineer on that work, down to the resident engineers. The work went on, and we have it in the evidence in the Hodgins case, of Mr. Armstrong, who was the district engineer of the Grand Trunk Pacific over district 'F' that if he had known the contents of Mr. Lumsden's letter to his engineers, which I have referred to, then he would not have recommended that there was any over-classification in district 'F' at all, up to the day when he left the work, which I think was in March or April, 1908. My hon. friend from Grey (Mr. Middlebro) read letters written by Mr. Woods away back in 1907. Why, Mr. Woods did not know what was the interpretation of this clause of Mr. Lumsden when he was writing those letters. The hon. member for Simcoe (Mr. Lennox) did not refer to these letters in that sense, because he knew that Mr. Woods did not know what this interpretation was when he received these letters. The hon. member for Hamilton (Mr. Barker) knew it, and every member who followed this investigation with any degree of intelligence knew it, and it is left to the hon. member for North Grey to come here and read this letter of Mr. Woods, and then say that because Mr. Woods put up these kicks there must be something wrong with the engineer when, as a matter of fact, Mr. Wood did not know what instructions were given by Mr. Lumsden when he wrote those letters.

Mr. MEIGHEN. No instructions had been given then.

Mr. CARVELL. Certainly not, but after the instructions had been given.

Mr. MEIGHEN. They did not apply to this at all.

Mr. CARVELL. The engineers say they did apply to this. The engineers were on the work, and they say it applied to this, and that they classified this work according to those instructions. I would like to ask my hon. friend if he ever visited a portion of a railway under construction, I mean a portion of the work that is classi-

fied in the material as loose rock or solid rock. If he has, then he will see that Mr. Lumsden was absolutely right in giving the instructions he did as to the classification of figure 5.

Mr. MEIGHEN. I may say to the hon. gentleman that I have lived within 200 or 300 yards of such a work. However, I am not criticising Mr. Lumsden's instructions.

Mr. CARVELL. Now I would recommend any hon. member of this House to visit any portion of this work while it is under construction. I may say that after I went home in 1908, from this Hodgins inquiry, I had the curiosity to visit some of the work, I visited something like 75 miles of the work, travelled over it; I visited hundreds of sections and examined them myself, and I make the statement that there is no man, not even an engineer, who can go to a finished cut of classified material and honestly come to a conclusion as to how that cut should be classified. I will admit that if you have only got a matter of ledge rock, you may take your cross sections and measure them up. But if you have got conglomerate material, or assembled rock, then I say there is no man, not even Mr. Lumsden nor the chief engineer of the Grand Trunk Pacific, who is able to tell exactly how that work should be classified. Let me give an illustration. I think my hon. friend from North Grey says there may be a cone of rock rising up in the centre of the work. That rock is taken out and thrown over a dump and no man can tell of what material it was composed. There is another thing I want to point out. After this work is completed, if there is any earth on top of the rock at all, that has all to be smoothed back to a slope of one and a half to one, as my hon. friend has stated, which means that it slopes back to a foot and a half here it rises perpendicularly one foot. And when that is all sloped down to the rock, no man on earth, unless he be a practical engineer, would come to the conclusion that there is half as much classified material in that work as there actually was. I admit that probably the engineer realized this difficulty, I will admit that he would make allowances, and he would come much nearer to the proper classification of that cut than a layman would. But even the practical engineer cannot tell except it be solid rock. To carry that a little further, we have rock such as is found in figures 3 or 5. That is the conglomerate rock or assembled rock. That material has been, according to the judgment of the engineer, removed by blasting.

Mr. FOSTER. I have to infringe again if my hon. friend will allow me. When he reads out these numbers what is he reading from? I go by the minister's statement on Tuesday and the documents he presented with reference to the chief engineer's interpretations. His instructions with his interpretations bear the date of January 14, 1908. They were interpretations given by Mr. Lumsden on January 14, 1908, accepted by Mr. Woods on February 20, 1908, and embodied in the agreement of all a little later. There are some differences between this and what my hon. friend is reading.

Mr. CARVELL. I do not think there is very much difference between my hon. friend and myself. He is a little mixed up in his dates, but evidently he is referring to the same subject that I am.

Mr. FOSTER. I am taking the dates given by the minister.

Mr. CARVELL. Then the minister was mixed up in his dates, but he is referring to the same subject as I am. I have sent over to my hon. friend (Mr. Foster) a blue print and if he will do me the honour of looking at it he will find that it is an exact copy of the illustration found on page 430 of the Hodgins charges and he will also find that it is actually signed 'Hugh D. Lumsden.' Of course, he understands that it is a blue print from a tracing.

Mr. FOSTER. That is what Mr. Lumsden refers to, I suppose, when he says:

I attach a diagram in explanation of the above which, in my opinion, is all that is included in 34 solid rock.

Mr. CARVELL. I think so.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. CARVELL. Mr. Speaker, when the House rose at six o'clock I was endeavouring to point out some of the difficulties of classification in railway construction from a practical standpoint. I had read the instructions given to Mr. Lumsden by his engineers on the 10th of January, 1908, as to his interpretation of the specifications in regard to solid rock. I now refer to clause 35 of the original specification, and here is what Mr. Lumsden says about it:

All large stones and boulders measuring more than one cubic foot and less than one cubic yard, and all loose rock whether in situ or otherwise, that may be removed by hand, pick or bar, all cemented gravel, indurated clay and other materials that cannot in the judgment of the engineer, be ploughed with a ten-inch grading plough, behind a team of six good horses properly handled; and without the necessity of blasting, although blasting may be occasionally resorted to, shall be classified as loose rock.

Under the heading I would include:—

1. All large stones and boulders more than

one cubic foot and less than one cubic yard not covered under clause 34.

2. All loose rock in situ or otherwise that may be removed by hand, pick or bar, and not covered under clause 34.

3. All cemented gravel, indurated clay, and other materials that cannot, in the judgment of the engineer, be ploughed with a ten-inch grading plough behind a team of six good horses properly handled: and without the necessity of blasting, although blasting may be occasionally resorted to.

That was an interpretation of this clause that might be given by any person, and, let us apply the test. Take material which the engineer may say cannot be classified as solid rock, and then the first question that arises is: Can it be ploughed with a team of six horses and a ten-inch plough? Well, in almost every case that must of necessity lie purely in the judgment of the engineer who is classifying the work, because, of course, you could not by any possibility get a team of six horses and plough on to some of this work. The next question is: Can it be removed by hand, pick or bar? There is no trouble in telling whether it can be removed by hand, because a man can get down and try it. But, can it be removed by a pick? Well, a railway navvy will take a pick and if he takes time enough he can remove a solid ledge of rock, or he can with a crow-bar, if he takes time enough drill a hole three feet deep in solid rock. But, I submit that no engineer ever intended that if it were reasonably a physical impossibility to remove this material by pick or bar, it must necessarily be classified as loose rock. We must apply common sense to the thing. The question is whether a man engaged in railway construction could fairly and reasonably remove this material by means of a pick or bar, or whether in the judgment of the engineers you could with a team of six horses and a ten-inch plough, plough it. If it cannot be ploughed in such a way, then it should not be classified as loose rock, and if it can, then it should be so classified. I merely mention this to point out the large degree of judgment which must be exercised by the engineer whose duty it is to classify the work. I am also endeavouring to show the next to impossibility of you or I, Mr. Speaker, or even an experienced engineer classifying that work on an examination made a year afterwards, when the weathering has caused the face to become smooth and to look different from what it was in its original state. Under the specifications anything other than solid rock and loose rock would be called common excavation. Let me for a moment refer to the argument advanced by the hon. member for Simcoe (Mr. Lennox) who has given the question a good deal of consideration, and to whom the country and the House owe a debt of gratitude for the labour he has expended in preparing his case. I wish to discuss the points raised by the hon. gentleman in a fair manner and to give him credit where credit is due. In one connection the hon. gentleman was manifestly unfair, although perhaps unwittingly. He gave us instances of work which was estimated by the engineers to cost so much, but which had cost more than the estimate, and he said that this increase had arisen on only three items of the contract. Well, there are 104 items in the contract altogether, and while he did not say so, yet the inference was that the discrepancy between the estimate and the cost would proportionately increase in the case of the other 101 items. Well, my hon. friend from Lanark (Mr. Haggart), who is somewhat of a railway man, knows that in such a contract as this, the three items of solid rock, loose rock, and common excavation will represent 90 per cent of the total cost of the undertaking, and in some cases more than that. Therefore, when the hon. gentleman (Mr. Lennox), considering the three items, wants us to believe that there will be an alarmingly greater increase when the remaining items are taken into account, I am sorry to think that he did not treat the House with that fairness to which we are entitled and which indeed the hon. gentleman usually exhibits. Then, another thing, the hon. gentleman did not touch at all upon the price of the quantities to be removed. The prices range practically from 25 cents a yard for common excavation to 50 or 60 cents for loose rock, and $1.50 for solid rock, but the hon. gentleman omitted to mention what is called train-haul. Under the contract the contractor agrees to remove all cuts down to the grade and to place the material in the nearest hollow on either side or wherever he is instructed to do by the engineer. The contractor has to haul that material 500 feet without extra cost, but when he hauls it beyond 500 feet he gets, I think, one cent per 100 feet per yard. After all that is done, after the amount of earth taken out of the cut is used in the embankment or fill adjoining it, if there is nothing left at the fill-up, they have to resort to some other method. That is called train-haul. They get from 45 cents to 50 cents a yard for train-haul, and as a rule it must be common excavation unless the engineer authorizes the contractor to take something else. There you see, you have millions of common excavation which actually figure up at 45 cents to 50 cents a yard instead of 25 cents a yard, and any gentleman who assumes to discuss quantities and prices of this contract ought to know it. I am bound to say the hon. gentleman must have known it, and it probably has escaped his attention.

Mr. BLAIN. Is there not a special price for that kind of work?

Mr. CARVELL. Certainly, that is what I am telling the House, but it is common excavation and it is included in the quantities of earth removed and is a special price. That price is about 45 cents or 50 cents a yard, and that price rules as long as the distance to be carried is not more than, I think, five miles. If, for any reason, they have to go more than five miles for material, they get a certain amount per mile after that, I think one cent a yard per mile for the train haul. This increases the cost of common excavation in many cases by 100 per cent, and it accounts for the increased cost to some extent, but yet my hon. friend took good care not to say anything about it.

Mr. J. HAGGART. How much of that kind of work is there?

Mr. CARVELL. I know one place in district 'A,' for instance, where there is 300,000 yards of train haul; another place where there would be 250,000 yards. I think in New Brunswick I could pick out in district 'A' probably 1,000,000 yards of train haul and these are things which we must understand if we are to discuss this matter intelligently.

Mr. BLAIN. Does not my hon. friend think that an engineer giving the original estimates would take that into consideration before he gave the estimate?

Mr. CARVELL. I am not a judge of the engineer, and I do not think the hon. member for Peel (Mr. Blain) or any other hon. member will say that any engineer can go over the ground in making preliminary surveys or even locating surveys and figure exactly to a yard what he will have to do to build a railway 1,800 miles in length.

I will take up district 'F' and take the different sections in the order in which they were discussed by the hon. member for Simcoe (Mr. Lennox). He stated that there would be an increase in the cost when the work was completed of about $2,700,000 over the estimate made by the engineer before the work was commenced. Let us look at this like reasonable business men. The engineer goes over 200 miles of proposed railroad. He looks at the contour of the country, at the hills and hollows, he examines the rivers, he makes up his mind as to whether there will be much rock, and he says: I come to the conclusion that out of 1,000,000 yards of excavation there will be 1,000 yards of solid rock and 200,000 yards of loose rock, and the balance common excavation. I want to know how any man can tell to a thousand yards or a hundred thousand yards or a quarter of a million yards what different classes of material there will be in a million yards of excavation. He cannot dig pits, they do not do that in modern engineering. He may drive steel bars down and come to the conclusion that after so many feet of common excavation he will have solid rock. I want to be reasonable and I want the members to be reasonable; I am sorry my hon. friend from Simcoe (Mr. Lennox) is not here, in order to ask him to be reasonable and to tell me what no man on earth, no matter what his ability may be, can tell whether he is going to find this cemented material of which Mr. Lumsden speaks, this conglomerate or plum-pudding material of which he also speaks, or material which can or cannot be ploughed by a team of six horses when it is found twenty or thirty feet underground.

Mr. BARKER. Does the hon. member mean to argue to this House and to the country that any capable engineer has the slightest difficulty in estimating whether 100,000 or 500,000 yards of material is sand, or solid rock?

Mr. CARVELL. There never was a railway constructed on earth, let alone in Canada, but that very thing happened, and it is the most common error known to engineers. I shall give an illustration under my own observation. About a year ago, in company with the chief engineer, I visited a large portion of the work in New Brunswick. We came to a cutting in which there are probably 150,000 yards of material. The engineers returned this in their estimate as solid rock. The sub-contractor, a man from Sydney, Nova Scotia, took the work believing he had this 150,000 or 200,000 yards of solid rock, and it turns out there are not 25,000 yards of solid rock in the whole cut, yet the engineers told him it would be solid rock. There is a concrete illustration. If the hon. member for Rainy River (Mr. Conmee), a practical railway contractor, were here he would bear out every word I say, and the remark is true in many cases. Engineers say they believe from looking at the ground it is going to be sand, and it turns out to be very solid rock. I tell my hon. friends they should go on some of these enormous works and see for themselves, and they will conclude that what I say is true.

Now, we will go to district 'F'. There we have an estimate based on the quantities and the estimated classification of Mr. Hodgins, of $12,000,000. I said before dinner that Major Hodgins left out a number of items in his classification, one of which, the excavating of a foot below grade in all rock cuttings, amounted to half a million dollars. I find in referring to the debates, that it would amount to $495,000, about 300,000 yards of solid rock which he

had not estimated at all. I also looked up Mr. Poulin's evidence at page 485 of the investigation. Mr. Poulin there submitted a statement to which I have already referred, and he states there that Mr. Hodgins had not estimated work in the contract and in the grading which amounted to $1,500,000, and therefore, instead of this work being estimated to cost $12,000,000 as the hon. member for Simcoe (Mr. Lennox) stated the other day, it should have been estimated by Mr. Hodgins himself, if he had included these things which were left out, at $1,350,000. According to the statement given by my friend from South Simcoe (Mr. Lennox) it did cost only $12,892,000, or less than it should have cost according to the proper estimate made by Mr. Hodgins himself. I wish to tell my hon. friend another thing concerning this district. This is a matter of which there is no public record, but I will make the statement, and it is the easiest thing in the world for my hon. friends to verify it by asking for a return which will be readily brought down. My hon. friend from South Simcoe (Mr. Lennox) complains that in this contract, as in many others, for some unexplained reason—and there was always the insinuation that there was something crooked at the bottom of it—common excavation had constantly dwindled and solid rock had increased. In district 'F' half a million yards of common excavation disappears and appears as solid rock, and this was done designedly and with the consent of the engineers and of the Grand Trunk Pacific and every body else. It had to be done.

Mr. BARKER. Give the particulars.

Mr. CARVELL. I will.

Mr. BARKER. Give them now.

Mr. CARVELL. It was in filling across lakes. The experience of railway contractors and engineers is that, in many places, where you fill up a body of water with common earth—if it were even sand it would not be so bad—it will not stand; it is only mud and will melt away. We have illustrations of that in many places. There is one on the Canadian Pacific railway between here and Montreal, and there is one as my hon. friend from South Lanark (Mr. John Haggart) knows in New Brunswick, between St. John and Rothesay. They have been filling up that New Brunswick hole for 40 years and it is going down all the time. In order to meet these conditions they have taken solid rock out of the cuts and have put it in these embankments and made solid rock embankments.

Mr. BARKER. You would not get solid rock where there was none.

Mr. CARVELL. It is called rock-borrow, and that is the subject I am going to talk about.

Mr. JOHN HAGGART. What was the estimated quantity on that particular section, and how much was it increased by the difficulties the hon. gentleman mentioned?

Mr. CARVELL. I do not know. But I can tell the hon. member that the solid rock has been increased from the actual requirements of the case, according to the estimates, by half a million cubic yards. The engineers estimated to use half a million yards of common excavation for the fills and they have had to get rock, not from the ordinary cuts, but from outside the cuts. They broadened them out and took half a million yards of solid rock, borrowed it and made the fills.

Mr. BARKER. Give the mile-post where that occurred.

Mr. CARVELL. I cannot. I think I treated the House fairly——

Mr. BARKER. The hon. member cannot give it.

Mr. CARVELL. I told the House that I got the facts from the engineers, but that they could be verified by a return.

Mr. BARKER. The hon. member ought to have given the mile-post.

Mr. CARVELL. I am willing that the hon. member for Hamilton (Mr. Barker) or any other member should make any criticism of my remarks after I have finished, but I hope the hon. gentleman will not lecture me while I have the floor.

Mr. BARKER. I want the facts while the hon. member is stating them.

Mr. CARVELL. I would like to show some more rock-borrow. And I can give the hon. member the mileage—I can give him the whole thing. That is, I can give him the stations, and he is railway man enough to know what that means. I have here a return to this House, file No. 12,603, brought down some time before Christmas. This refers to the Kitchen contract, district 'A'.

Mr. BARKER. I thought the hon. gentleman was dealing with Mr. Hodgins.

Mr. CARVELL. I was. But my hon. friend (Mr. Barker) wants facts, and I am going to give him facts. Take from stations 500 to 1,070 in District A. That is better than giving the mileage, because it gives every one hundred feet. They required a borrow which ordinarily would be a train haul of 392,000 cubic yards. The engineer reported that it was impossible to find a borrow of common excavation on the Kitchen contract. The proposition was made to borrow rock near the site of these fills or embankments, outside the ordinary line. Now, it was stated by the hon. mem-

ber for North Grey (Mr. Middlebro) that earth embankments have what is called a slope of 1½ to 1—that is, for every foot you go perpendicularly your embankment goes out 1½ feet. If the perpendicular distance from the shoulder of the embankment to the bottom is 50 feet, it will be 75 feet from that point to the outside of the embankment. It is known to engineers that rock embankments will not spread out nearly so far. I think they figure out at 1¼ to 1. or, in some cases, much less than that.

Mr. BARKER. Very often perpendicular.

Mr. CARVELL. Not when broken up.

Mr. BARKER. You can see it often on the Canadian Pacific railway.

Mr. CARVELL. I want to tell the hon. member he does not know how roads are constructed to-day. He is about twenty-five years behind the times. They go to a rock cut ten to forty feet deep—I have seen one rock cut on the Grand Trunk Pacific eighty feet. They tunnel into the hill—they call it 'coyuting'—perhaps forty feet. Then they sink a shaft and then spread out from that. After all is ready they put in five or ten tons of explosives, and break up ten or fifteen thousand cubic yards of material at one blast—break it up so small that it is taken out with the steam shovel, hauled and dumped over the embankment. That will not go perpendicular; you have only to tell how it is done to show that the hon. member (Mr. Barker) does not know what he is talking about.

Now, let us go back to section 'A.' They had to have 392,000 yards of train haul, and the engineers reported they could not get this material on the work. As a rock embankment would not be so wide at the bottom as the other, it would not require so many yards to make it. Then, it is known to all engineers that a yard of common excavation, when placed in an embankment, will not occupy more than a yard of actual space, and it will shrink a little for it will pack closer than when it was in its native position in the earth. Besides that, all measurements of railway construction are made, as you may say, in situ. That is, when they pay the contractor for rock-borrow they pay for the number of yards, as the material is in the ledge from which it is taken. But when it is broken up and hauled out and put in the embankment, a yard of rock will make from 1 6-10 to 1 9-10 yards. So, you have more yards in the embankment itself, and you have a smaller number of yards to pay for in situ—you will reduce the number of yards both ways. Then they figure out the cost by train haul. Suppose they had to go fifteen miles. That, in the Kitchen contract, was forty-five cents a yard. So they figured out that the embankment built out of common earth would cost the country the same amount of money as an embankment built of rock borrow at $1.10¼. The engineer made a proposition to the Kitchen Company, to give them a special contract to make these embankments at that figure, and they accepted it and did the work. Thus, 400,000 cubic yards of solid rock—

Mr. GRAHAM. Not figured in the specification?

Mr. CARVELL. No, it had appeared in the specification as about 500,000 or 600,000 yards of common excavation. There you have an illustration of how common excavation dwindled by 600,000 yards, and solid rock excavation increased by 400,000 yards, yet without costing the country a cent.

Mr. BARKER. If the hon. member would give the mile post we could see if that applied in the other case.

Mr. CARVELL. I have told the hon. member the station.

Mr. BARKER. The hon. member is giving what occurred in New Brunswick. Give the mile post where you say a similar thing occurred on section 'F.'

Mr. CARVELL. I do not propose to answer my hon. friend (Mr. Barker) on that point. As my hon. friend from Pictou (Mr. E. M. Macdonald) suggests, there is nothing the matter in New Brunswick. I am showing that they had to borrow rock in New Brunswick, and it can be shown also that they had to borrow rock in district 'F.' And it was done with the consent of everybody, it has not cost the country a dollar more, and you have a great deal better work. More than this, I can show places on the Grand Trunk Pacific where the original estimate was for steel viaducts, but the Grand Trunk Pacific Commission thought it would be better to make solid embankments. Of course, that costs more. In the estimates, these fills did not appear because the places were to be crossed by steel. But the commissioners made up their mind that it would be better to have permanent works. I can show one place on district 'A' where it has taken 250,000 yards of material to fill up one of these places which, under the original estimate, would have been crossed with steel. That adds to the quantities. More than that, in one of these cases it is being filled with rock because they cannot get the earth. I think that is section 'A.' I hope now I have given enough illustrations to show how these quantities are changed from the original estimates down to the actual quantities afterwards completed. My hon. friend from Simcoe referred to all these, and I will refer to them. He took the first

section west of Moncton. It is a matter of common knowledge that practically all these Grand Trunk Pacific contracts have been handed over to sub-contractors; the Grand Trunk Pacific taking a very small percentage, simply enough to pay them for doing some financing, and the balance goes to the contractors. They are not ordinary sub-contractors, because a sub-contractor in an ordinary contract probably allows 15 per cent to the main contractor; whereas on these contracts, less than 5 per cent goes to the Grand Trunk Pacific. Now, if any hon. gentleman has the idea that the Grand Trunk Pacific are not watching this matter very carefully all over the line of railway, he is very much mistaken. I can state that there is a feeling on the part of engineers all over this line, and I have met most of them, that the Grand Trunk Pacific are acting in a really unfriendly spirit, and are finding fault with everything that is going on. They are not objecting down in New Brunswick, as they are probably in every other part of their work. There are very few objections in New Brunswick. In one of these contracts, No. 2, there has not been a solitary protest. On the Kitchen works, which my hon. friend referred to as costing much more than they should, there have been very few protests. But that is not a Grand Trunk Pacific contract. My hon. friend says that in the first estimate of No. 2 contract there was no solid rock at all. It turns out now that there is something like 10,000 or 20,000 yards of solid rock on that whole contract. Now, I want to know if you are going to condemn an engineer as being a dishonest scoundrel because, in a work 50 miles long, he says he did not think there was any solid rock, and did not get within 20,000 yards of what turned out to be the fact. You have only to read the specifications to know that any man might make a mistake like that. It is only an error in judgment, and the marvel to me is that these engineers get as near to the facts as they do in their first estimates.

He takes up next No. 3, that is from Chipman to the Intercolonial. There, he says, they have also an increase of 231,289 cubic yards of solid rock which should be called excavation, giving a total increase in this one item alone of $341,000. I want to tell my hon. friend that there is a place on that contract where soft work has been cut out and a solid embankment put in the place of it, and that accounts for 200,000 yards of this work, and it has been done with the consent of the Grand Trunk Pacific's engineer and the commissioners' engineer. Yet my hon. friends say that because of these apparent discrepancies in the figures, somebody has been guilty of fraud, and somebody should be brought to the bar of this House, and somebody should be disgraced for the rest of his natural life, as an engineer who had sold himself out to the contractor. I want to know if that is the standard by which my hon. friends would want one of their friends, or sons, or brothers, or their friends' sons or brothers to be judged? I wont use any harsher term. I think I have shown some reasons why these discrepancies appear between the estimate and the actual results, and if they will make a thorough investigation they will come to the conclusion that there is very little real fault to find.

Next, we have the contract from 164 to 195, that is the Kitchen contract. On that contract, no doubt, the cost has very much increased over the original estimate. I am bound to say, however, that on that contract the engineers made a mistake as to the amount of solid rock to be found. But I have accounted to you for 400,000 yards of solid rock, which has been borrowed entirely elsewhere and put in there, and as I said before, it does not cost the country one dollar more than it would if the work had been completed according to the specifications, and if they had got a rock embankment instead of an earth embankment. Then he goes on to the lines in white. That is hardly worth discussing because the increase is so very slight. Now I am not going to discuss the case in the province of Quebec, because I have no personal knowledge of it. No doubt there has been an increase in quantity, no doubt the matter will be investigated, and if there is anything wrong it will be cut out. But I am only talking of things of which I know, or of which I have evidence before me in the returns from which I can discuss the question intelligently.

Then that brings us back to the object of all this discussion. My hon. friend from Simcoe says that there has been dishonest classification on the part of the engineers, he says that the quantities of solid rock and loose rock have materially increased, and the quantities of excavation have decreased. I have pointed out some of the reasons why solid rock was increased, and I have given you actual illustrations. But, there is another matter to which I want to refer as showing why solid rock has increased. Any hon. member who knows anything about railway construction knows that when you go into a cut, say 20 or 30 or 40 feet deep, of solid rock, you dont take this out by pick and bar, or by a little stick of dynamite, it would cost you $10 a yard to do it; but you take it out by putting in monstrous charges of explosives of dynamite, or nitro glycerine, or things of that kind. Is it possible for any man actually to gauge the width of that explosion when he is taking down 10,000 or 15,000 yards at a time? If that overlaps the actual width of the cutting according to

the prism, as it is called, then the balance is called an overbreak, and on the Canadian Pacific railway they admit there ought to be at most 15 to 25 per cent allowed for overbreak. That adds to the cost. When engineers are estimating quantities they estimate actual quantities according to the prism as laid down on the plan; and when you add to that ten per cent or twenty-five per cent, which of necessity must happen in the way of overbreak you have that much added to your original estimate. In all these cases more rock is broken than they expected. Then that becomes a question for negotiation. Is it fair to allow the contractor for this extra amount, or not? That is a matter to be decided mutually.

Mr. JOHN HAGGART. The hon. gentleman says that the estimate is formed on the prism quantity.

Mr. CARVELL. I do.

Mr. JOHN HAGGART. How is it that the prism quantities are less than the actual quantities? The actual quantities generally taken out are a great deal less than the prism quantities.

Mr. CARVELL. They are a great deal more than the prism quantities. My hon. friend has got it reversed.

Mr. JOHN HAGGART. The quantities that were estimated by the engineers are less than the amounts taken out.

Mr. CARVELL. My hon. friend is at liberty to say that, I say it is the other way.

Mr. JOHN HAGGART. No, I went carefully into it, and I find that the amounts estimated by the engineers are the actual quantities paid for.

Mr. MIDDLEBRO. With the hon. gentleman's permission—according to the figures brought down by the hon. member for Simcoe yesterday, which figures were not disputed by the Minister of Railways, because they were compiled from information brought down by the minister himself, these figures show that in one case, while the estimate of the amount to be excavated was 15.000,000 yards, there was actually taken out, according to his certificate, only 10,000,000.

Mr. CARVELL. I do not propose to discuss this matter with my hon. friends, they will have all the chance they want to tell their side of the case.

Mr. JOHN HAGGART. But we want the facts.

Mr. CARVELL. I think I know as much about the facts in this case as my hon. friend does and perhaps before I am through he will think I do. There is this question of overbreak. The hon. member for North Grey made the statement this afternoon that after Mr. Grant was appointed district engineer he went over the work and, of his own volition, deducted something like $350,000 from the work on districts 'B' and 'F.' I can tell my hon. friend, and perhaps he does not know this, but he could get it by asking for a return, that of that portion of the $350,000 belonging to district 'F' $100,000 of it is a question of overbreak and not a question of classification at all. So, therefore, you have reduced the actual amount in dispute as to classification within districts 'F' and 'B' down almost to a minimum. The total amount in dispute between the Grand Trunk Pacific engineers and the commission engineers is less than $1,000,000 on $50,000,000 worth of work; or less than two per cent of the whole work in question is in dispute between these engineers. When you consider the difficulties of classifying material, as I have pointed out here to-night, under Mr. Lumsden's instructions, ought any engineer to be branded as a scoundrel because there happens to be a difference of two per cent between the estimates by himself or his predecessor and the actual results of the excavation? I think you have only to state the proposition to see the unfairness of it and it is a remarkable thing that the engineers were able to estimate these quantities and costs as accurately as they have done. I stated in the early part of my remarks, and I wish to repeat it here, in order to have it emphasized, that according to the figures of the hon. member for South Simcoe (Mr. Lennox), there is only an increase of $7,500,000 over the estimates, which are only estimates made by the engineers at the beginning of this work.

Mr. J. HAGGART. I would like that authoritatively. I suppose the hon. gentleman gets it from the minister?

Mr. CARVELL. Authoritatively? Why, I figured it out from the figures given by the hon. member for Simcoe on Tuesday, and the hon. gentleman (Mr. Haggart) or any hon. gentleman can figure it out for himself and see. I have taken the figures as he gave them and that is the result.

Mr. J. HAGGART. I thought they were figures given to you.

Mr. CARVELL. No. Now, the question we have to decide is whether or not a committee shall be appointed to go over these big piles of work, go into all these different cuts, apply our technical knowledge to them and see whether these cuts have been properly classified by these engineers or not when there is only a difference of less than two per cent of work that is under discussion at all. Let us see how it works

out. We will say that the hon. member for South Simcoe and four other hon. gentlemen are appointed. They go down into one of these cuts, and if it happens to be all ledge rock there is no trouble because they know ledge rock when they see it. But, suppose it happens to be cemented material of conglomerate, or plum-pudding as they call it, it is taken out, the sides are all smoothed down, it has had the action of the elements for a year or two, the sides are all run together and look as smooth as if it were all common earth. You cannot go into the dump and dig that up. What are you going to do? You are going to get a force of workmen, you are going to get some dynamite, bore a tunnel into the side of that cut for 15 or 20 feet in order to make up your mind whether it is cemented material or not. I want to know whether the hon. member for South Simcoe and the hon. member for Hamilton would consider themselves proper judges of whether it is cemented material or not. I would like to know whether this material is going to be ploughed with a team and six horses when they cannot get their team and six horses in there. You have only to enunciate the proposition to show its absolute ridiculousness. If you do not do that there is another modus operandi. We can bring before us engineers and say: Now, Mr. Jones, have you properly and honestly classified that? He says: I certainly have. The hon. member for South Simcoe says: I do not believe you; I want to have my friend appointed and, by the way, he is very liable to be a good Conservative. He is sent down on the work and he bores into a cut and comes back and says: I will admit that there is a question about this; it is not like rock, not ledge rock, not boulders of more than one cubic yard, but it is a substance which the engineer says is cemented material, it is material which in his judgment can be best removed by blasting. I think he is wrong. I do not think you can get a team and six horses and a ten-inch plough into that cut at all and therefore it will be called loose rock. They want us to appoint a committee to investigate 800 miles of railway under these circumstances and come to a finding. If they think I am going to vote for a thing like that, all I can say is that I will not insult my intelligence by voting for such a proposition.

Some hon. MEMBERS. Hear, hear.

Mr. CARVELL. Hon. gentlemen say 'hear, hear.' I stand by my statement. I think every hon. gentleman in this House, if he will let his reason sway him, will stand by the same statement because of the absolute nonsense of a proposition like this. Then, they say we want to do more than that. We want to investigate everything that has taken place in the conduct of this work. We want to investigate whether this or that engineer exercised proper judgment in locating the line, whether he should have located it half a mile east or a quarter of a mile west. Let me give an illustration. Hon. gentlemen bring up Major Hodgins here as the acme of perfection in all engineering matters. I will show you what it will amount to. There is a place—I cannot give the name, but I can get it for hon. gentlemen if they desire it—where an engineer located on the work on Major Hodgins' district, when he was district engineer, a five per cent curve in order to get around the edge of the lake. Major Hodgins said: That should only have been a four per cent curve, and because you have located a five per cent curve you are wrong, your judgment is no good. He fired him. That man has gone forth a dismissed engineer and to this day is looking for a position because he is sent off, his reputation is injured, and has no means of redress. Worse than all that, on the advice of this same Major Hodgins, $40,000 was expended on the line which he projected, or caused to be projected, and they had to go back and abandon that $40,000 worth of work and adopt the line projected by the very engineer who was fired because he exercised his common sense and judgment in laying out this line. These are some of the things that my hon. friends want to have investigated, and they want to have a hundred and one things like this investigated all over the country. You have only to enunciate the proposition in order to see the absolute nonsense of it.

Now, Sir, I submit that these are very grave charges which have been made by Mr. Lumsden. Mr. Lumsden has said in effect, that these engineers were dishonest. Perhaps I am putting it too strongly. Well I will modify it. He says his engineers failed to carry out his instructions of the 10th January, 1908. I have pointed out to the House what these instructions were. If an engineer takes a certain view of the classification of a certain cut under the instructions of Mr. Lumsden, and if Mr. Lumsden says to him, I cannot go there myself, you are on the work, you are the only man that can do it, I want to know, Sir, whether we have the right to bring that man up and allow a prejudiced engineer to investigate him and say that because you have exercised your judgment in one way and our engineers would exercise their judgment in another way, that man is a scoundrel and is entitled to the castigation given to him by Mr. Lumsden. Therefore, I am driven to the conclusion that the only logical thing we can do is to have a committee appointed as suggested by the Prime Minister. We can bring Mr. Lumsden before the committee and ask him as business men whom he means when he speaks of those who did not carry out the

instructions which he gave them. Then, it will be up to Mr. Lumsden to say who these men are. Then, let us bring before this committee a commission of expert engineers and let this commission say whether or not, in their opinion, the engineers who have been so severely reprimanded or castigated by Mr. Lumsden are guilty or not. If they are, dismiss them. If the committee find that they have been wilfully guilty of a crime, prosecute them.

Mr. J. HAGGART. Can we not make an inquiry like that ourselves?

Mr. CARVELL. How are you going to make the inquiry? I pointed out the impossibility of it from a business standpoint. We would make laughing stocks of ourselves all over the country if we were to attempt to carry out the proposition of hon. gentlemen opposite.

Some hon. MEMBERS. Hear, hear.

Mr. CARVELL. I am glad to hear my hon. friends opposite applaud that; I am glad they are coming round to a reasonable view of the case and that they will vote against their own motion.

Mr. MEIGHEN. I understood the hon. member to say that before this committee suggested by the Prime Minister, you can call a committee of competent engineers to give evidence as to whether or not the Transcontinental engineers did not carry out Mr. Lumsden's instructions.

Mr. CARVELL. I did not say that at all.

Mr. MEIGHEN. Then who would give the information?

Mr. CARVELL. The commission appointed by parliament to settle these matters; the arbitrators.

Mr. MEIGHEN. Who would give the evidence?

Mr. CARVELL. Why the arbitrators of course; they are the only men who can give the evidence.

Mr. MEIGHEN. All right.

Mr. CARVELL. They are the men created by parliament to have the right to give the evidence, and I can say more than that, there is one man on that commission who has visited every cut and every fill on the Grand Trunk Pacific from Moncton to Winnipeg, and I say that that man has information which it would take the best engineer in Canada ten years to obtain if he spent the whole of his time doing it, and even then he could not do it because Mr. Grant has seen this work in the actual course of excavation; and visited it month after month as inspecting engineer, and he knows and has first hand knowledge which the most expert engineer on earth could not get now. Therefore, no committee of engineers that could be sent out is in as good a position to judge fairly between Mr. Lumsden and these engineers whom he has charged with incompetency or worse, as is the commission which is created by parliament, and for that reason I submit that the amendment should be voted down and the resolution moved by the right hon. the Prime Minister adopted by the House.

Mr. ARTHUR MEIGHEN (Portage-La-Prairie). It may be truly said of the hon. member (Mr. Carvell) as it has been said is all that has reference to either the motion, that the very last part of his address is all that has reference to either the motion or to the amendment, and therefore the hon. gentleman will understand why I shall first reply to his closing remarks. The hon. gentleman gave as a reason why he was going to support the motion that, before the committee proposed by the First Minister, a committee of engineers could be called who would give evidence as to whether or not there had been bad faith on the part of the sub-engineers in not following the instructions of the chief engineer of the Transcontinental, but only a moment before that he said that no matter what any engineer said as to whether or not these sub-engineers followed the instructions, that would be no evidence of bad faith because they might in perfect good faith have given a different classification from that given by the chief engineer.

Mr. CARVELL. I must correct my hon. friend. I did not say: if they did not follow the instructions; I said: if they did not interpret the instructions as Mr. Lumsden would interpret them.

Mr. MEIGHEN. The hon. gentleman (Mr. Carvell) stated that no matter how great the divergence in the classification, that would be no evidence of bad faith on the part of the under engineers. Then, if that would be no evidence, and if that is the only evidence these arbitrators could give, there absolutely could be no evidence offered to the committee as to the bad faith of any of these men in the matter of over classification. Consequently if the resolution moved by the right hon. the First Minister is adopted, under the argument adduced by the hon. gentleman (Mr. Carvell) there cannot possibly be brought in a finding of bad faith. The hon. gentleman (Mr. Carvell) has given a speech and he has got through with it, and I have been at a loss to find one word or one sentence in that speech which argued any more against the amendment than it argued against the resolution, because whatever he may have said against investigation applied equally as well against the alleged investigation suggested by the First Minister in his motion as against the investigation asked for by the amendment. For fear I

should do any injustice to the hon. member by not paying the attention to his speech which it merits, I shall briefly refer to a few points which he adduced. Let me premise by saying that I do not for one minute expect that I can add as much to the knowledge of this House from the point of view of the skilled engineer as has been furnished by the hon. member (Mr. Carvell). I do not conceive that it is my duty to take part in this debate for the purpose of adding anything to the text-books on the subject of engineering; I conceive rather that my duty is to show why the amendment moved by the hon. member for North Simcoe (Mr. Lennox) should prevail against the resolution of the First Minister. Probably 75 per cent of the speech of the hon. member for Carleton was directed towards trying to show that it was impossible for engineers to make correct estimates by the yard of what would be solid rock, what loose rock, and what common excavation. I do not contend and nobody will contend that it is possible for absolute estimates so to be made. But, it is stated on the authority of engineers, and no engineering authority has been adduced to the contrary, that a margin of 20 per cent was ample to allow any engineer who could pretend to make a careful or competent survey.

Now, the point advanced by the hon. member for North Simcoe was that in district 'F' which is the principal district in dispute there had been a mistake, not of 20 per cent, but a very gross mistake which was sufficient to raise a prima facie case against the honesty or the competency of the estimate, or the honesty of the calculations at the time the excavations were made. The facts are that in district 'F' some 3,500,000 cubic yards were estimated by the engineers as solid rock, some 700,000 yards as loose rock, and 11,200,000 yards as common excavation. But, instead of this, the Minister of Railways has told the House that the actual figures are 6,500,000 cubic yards of solid rock, 2,100,000 cubic yards of loose rock, and about 3,000,000 yards of common excavation. There is a difference between the estimate and the result, not of 20 per cent, but of almost 100 per cent in the first case, and about 200 per cent in the second case, and less than one-third of the total estimated amount of common excavation. And, the hon. member for Carleton comes before the House and he gives it as his opinion as an engineering expert that it is a marvel to him how the engineers made so close an estimate as that. The only palliation he has to offer is that in district 'F,' somewhere he knows not where, he has heard that some 500,000 cubic yards of rock were used for the purpose of filling in lakes. Well, he can allow his 500,000 cubic yards wherever he wants to, and there will be almost 8,000,000 yards of excavation left which he has failed to explain away. Now, Mr. Speaker, we can take for the purposes of this inquiry whichever horn of the dilemma the hon. gentleman (Mr. Carvell) wants to sit upon. He can argue that it is a first-class estimate, and then I will ask him of what use are any such estimates at all for the purposes of constructing a railway; of what use was it for the government to go to such great expense to be able to inform this country for the purposes of an election, that there were 11,000,000 cubic yards of common excavation in district 'F' when as a matter of fact there were only 3,000,000 yards. Of what use was it to go to the trouble of ascertaining that there were 3,500,000 cubic yards of solid rock when as a matter of fact there were 6,500,000 cubic yards of solid rock. And, of what use was it to inform the House and the country on the authority of competent engineers—as the Minister of Finance said—that there were 700,000 cubic yards of loose rock when as a matter of fact there were 2,100,000. Let me say to the member for Carleton and to the House, that if it is not possible to estimate within closer limits than that, if that is a marvellously correct estimate, then, the presentation of these estimates at all can only have been intended to deceive the House and the country and they should never have been made. If 20 per cent is the utmost that may be allowed for a divergence between the estimate and the actuality, surely a divergence of 200 per cent cannot be explained on any hypothesis consistent with honesty. The hon. member (Mr. Carvell) pointed out that there was considerable more excavation required on account of the overbreak, and which he said would not be estimated by the engineers in the first place. I do not think the hon. member is correct in that, although on points of engineering of course I bow to his opinion as an exceedingly high one, judging from the assurance with which he gave it to the House. But at the same time, Sir, at page 12, of the report brought down by the First Minister, there will be found words of the assistant chief engineer of the Grand Trunk Pacific, Mr. Woods, which are utterly inconsistent with the supposition that overbreak was not allowed for in the original estimates. Mr. Woods says, under date of June 19, 1908:

> I have nothing to show how this overbreak is estimated. Articles 37 and 38 would indicate that a large amount of this overbreak might have been estimated as loose rock rather than solid. Can you say if this has been done? None of my reports indicate such to be the case. I think you will readily agree with me that if these cuttings are being measured month to month by actual quantities taken out, and no allowance deducted, little effort will be made by the contractors

to keep overbreak within reasonable limit and in the end we shall undoubtedly be paying $1,000,000 additional for the work on this section probably not contemplated in your approximate estimates.

How can any man say that that statement is consistent with the statement of the hon. member for Carleton, New Brunswick (Mr. Carvell) that overbreak would not be allowed in the first instance? An examination of district 'F' clearly proves, and the figures in rough were given by the hon. member for North Grey (Mr. Middlebro), that there was a total estimate of 15,056,063 cubic yards, and the total excavation actually taken out to the date of return was 10,068,032, or a deduction of almost 5,000,000 cubic yards. But in the return there was embodied the statement that 94·66 per cent of the work only was done. Allowing for the balance of 5·33 per cent, there will altogether be only in district 'F' 11,222,433 cubic yards or about 4,400,000 cubic yards less actually taken out in the ultimate than was originally estimated by the engineers. Notwithstanding that the cost has far exceeded the estimate and will in the ultimate, to use the word of the hon. member for Simcoe (Mr. Lennox), outrageously exceed the estimate. Surely an hon. member cannot expect sensible men to think engineers will give an estimate of loose rock or solid rock simply by taking a view of the country and not making any borings? Surely if the engineers did such a thing, the members of the government would not give the reports to the House as reliable. Surely the men who made the estimate would not reduce it to a single yard of rock, if they were going on the assumption that if they could come within 200 per cent of the correct figure they would consider, in the words of the hon. member (Mr. Carvell), that they were doing marvellously well.

The hon. member for Carleton, with a wise discretion which I have observed in many cases, got away from section 'F' with remarkable speed. He got down to a district near Moncton, and tried to show that there were there some lakes and that borrowed rock had to be used to fill, so that it did not cost the country any more. I must confess I did not understand his argument that this borrowed rock did not cost the country any more, but assuming him to be correct he must produce to the House the actual basis for the ultimate result that has ensued, that it is costing the country more.

Mr. CARVELL. I shall be pleased to send over a return in which the hon. member will find it all figured out.

Mr. MEIGHEN. That will be very kind. I will be able to make reference to it as soon as I go home, and I hope it will contain more pertaining to the resolution than the hon. member's speech.

Mr. CARVELL. You will find it all on that page.

Mr. MEIGHEN. On this district near Moncton it was brought out by the member for South Simcoe (Mr. Lennox)—and it has not been denied except by the remark of the member for Carleton, New Brunswick, that the member for Simcoe, like the member for Hamilton (Mr. Barker), and the member for North Grey did not know what he was talking about—that in the eastern 50 miles there had been an error not of 20 per cent, but of 556 per cent, in the estimate of loose rock. Will the hon. member say that this is explained by the fact that some little rock was dumped into a lake? An estimate of 135,000 yards of loose rock grows into 850,000 yards, an increase of 556 per cent. The solid rock is not quite so marvellous, it was estimated at nothing and grew to 10,000 yards. But the excavation estimated at 1,900,000 was reduced to a paltry 600,000 and the hon. member for Carleton (Mr. Carvell) still assures the House that he considers these estimates marvellously accurate.

Then we come to the next section, 50 to 58. The hon. member for Simcoe (Mr. Lennox) shows that in that very section there was an increase in the cost of 166 per cent, and if, as the hon. member for Carleton, New Brunswick, argued, there was nothing added to the cost by means of the borrowed rock, what accounts for the increase of nearly three times in that section. In the next section, 58 and 96, the hon. member for Simcoe shows by a return that the percentage of solid rock had increased not 20 per cent but 240 per cent, and that also, to use the words of the hon. member for Carleton, New Brunswick, is a marvellously accurate estimate.

Take section 96 to 164, the increase of solid rock there, if the other is marvellously accurate, will be still more so for it is 95 per cent. Surely the member for Carleton does not pretend to be able to convince this House that estimates are worth one dollar to the country, are not a positive detriment to the country as tending to deceive, if they cannot come infinitely nearer the mark than has been the case in almost any division of this whole Transcontinental line.

The hon. member for Carleton gave some figures of $15,000,000 in the total cost. I confess I could not understand his argument where he stated that the increase would be only $15,000,000. The figures are in 'Hansard' and are to be found in the returns. The Minister of Finance (Mr. Fielding) assured this House that the cost would be $54,000,000 and he stated that his authority was not, as the member for

Carleton (Mr. Carvell) represented this afternoon, his own. I would like these two gentlemen to get together and reconcile their differences, because while the Minister of Finance assures the House he would not give the House an estimate based on his own authority, the member for Carleton, N.B., says that these estimates are not given on competent authority, but by members of the House. The Minister of Finance assured us that the cost would be $54,000,000 and in that the minister estimated the interest during construction because without that it would be only some $44,000,000. The figures brought down last December show an estimated cost of $114.-000,000, a rise from $27,000 per mile to over $63,000 a mile on the average. I do not know what the hon. member for Carleton, N.B., meant by referring to an increase of $15,000,000. Before he got through he also said: What is the use of appointing a committee to look into this matter of classification when the total amount at variance between the two contending parties at the present time is only two per cent? If the hon. member for Carleton, N.B., had been able to prove to the House that the total amount at variance was not two per cent but 1-100 of one per cent he would only have added to the strength of the argument that we require a committee to go into the rest of the over-classification. Why is there only two per cent now in dispute? It is because of the ingenuity of this Transcontinental Commission, assisted, as we were informed yesterday, by the Minister of Railways and Canals himself, by a document dated January 10, 1908, persisted in with a wonderful loyalty throughout two years and nearly three, with a marvellous tenacity, because by the ingenuity of that resolution they were able to shut out the whole burden of the complaint of the Grand Trunk Pacific from the purview of the arbitration board. It is more to revise and extend the scope of the investigation than for what is within the jurisdiction of the arbitrators that we require a committee for the purpose of investigation. I shall come to that point later on.

The hon. member for Carleton (Mr. Carvell), in that part of his speech before six o'clock, laid great stress on the fact that it was absolutely impossible, once an excavation was taken out and the road laid down, to make an investigation and determine as to over-classification. He said it was a mere farce. Let us assume that the hon. member's knowledge of engineering leads him to a correct conclusion on that point. Then, what is the use of the arbitration board now sitting? What is the use of putting the country to the expense of that board appointed last November to investigate work done prior to January, 1908? The hon. member's argument is that the whole principle of the arbitrations propounded by this agreement of which the government is the father, is a farce.

Now, I wish to refer for a few minutes to the resolution, and I confess that I cannot make the point stronger or clearer than it was made by the hon. member for North Grey (Mr. Middlebro). Still I submit, in my own humble way, that this resolution of the First Minister (Sir Wilfrid Laurier) means absolutely nothing;—plainly and on its face it can result in nothing. As the hon. member for South Simcoe (Mr. Lennox) said, it is a gold brick, it is made for the purpose of being announced from the house-tops as showing the Prime Minister's desire for pure politics. The hon. member for Carleton (Mr. Carvell) avoided the point that nothing could result from this investigation. If the committee is appointed in pursuance of the resolution, the hon. member for Carleton and possibly the hon. member for Pictou (Mr. Macdonald) will be members of that committee. For I have learned this, if nothing else, since I came to this House, that the cold and frigid logic—or perhaps I should say the narrow scrutinizing method—of these hon. members confining the limits of investigations in this House appeals with great force to this government for the hon. member for Carleton in particular appears to have a perpetual retainer from the government for committees of this description. Should that hon. member be appointed as one of this committee, I cannot conceive that he will remain the man he has always been unless he contends before the committee that nothing can be investigated except according to the strict language of the resolution as interpreted and explained by the mover. Then it must be pointed out in the first place that the First Minister (Sir Wilfrid Laurier) is careful to include and quote only such language of Mr. Lumsden as meets his purpose, that he leaves out Mr. Lumsden's charges that there was over-classification in districts 'B' and 'F.' The only thing quoted is to the effect that there was a disregard of the instructions of Mr. Lumsden and that Mr. Lumsden had lost confidence in his staff. Consequently, all that will come within the purview of this committee is whether or not Mr. Lumsden had lost confidence in his staff and whether or not they disregarded his instructions. Investigating that narrowest of all points before the committee, the committee would be hemmed in by the fact that, as soon as they used the matter of over-classification to prove that these men had disregarded instructions they would be stopped by the hon. member for Carleton and the hon. member for Pictou on the ground that this over-classification, whether it results from bad faith or incompetence, is not within the purview of

the committee. If bad faith, if insubordination—if you call it such—on the part of these district engineers is not to be proven by over-classification, you cannot prove it at all, and it does not matter whether it existed or not. So, the only element by which insubordination could be proved is shut out from the domain of the committee altogether. If there ever was a resolution cunningly devised to forbid investigation, this is the one. The hands of Judge Cassels when he went to investigate the affairs of the Department of Marine were not anything like so securely tied as those of the committee will be when started on its narrow course. The resolution of the First Minister is not the whole truth; it is 'the seeming truth that cunning times put on' to entrap the people. But the people cannot be deceived, because the facts have been clearly pointed out three times in this House, and no attempt made to meet the points raised.

Now, let me approach that point from another side. If any committee should be appointed by this House that would in any way duplicate the work of the arbitration board, there would be no work for that committee to do. This committee, as I want to argue later on, has infinitely greater work before it, if it is given power to do that work, than any arbitration board, because there is so much excluded from the jurisdiction of the board as to justify the appointment of the committee anyway. If they could not investigate any of these two per cent difficulties which the hon. member for Carleton has spoken as between the Grand Trunk Pacific and the Transcontinental Commission, they could not investigate the point of bad faith, because that point is inextricably involved in these two per cent difficulties.

The question before the House is whether or not we, having for our clients. not the Transcontinental or the government, but the people of the country, are justified in inquiring into all the facts regarding this expenditure of public money. My remarks will be almost exclusively along the line that we should have such an investigation. And in this we are supported by the powerful authority of the Grand Trunk Pacific railway itself. What we ask for is little if anything more than what the Grand Trunk Pacific Railway Company have been asking for for over two years—as evidenced by the very return brought down by the government—and what the government, through its commission, has been steadfastly refusing. I am relieved of the necessity, in order to form a basis for my argument, of placing on 'Hansard' the letters of Mr. Woods in which he argues against the classification as made by the district engineers of the Transcontinental. The Minister of Railways (Mr. Graham) thought he did justice to himself and the people by putting on record certain letters consistent with his own position, without putting on record those that were against his position. But these other documents have been placed on record by the hon. member for North Grey. Before I proceed further, I wish to correct the Minister of Railways —I regret to see he is not in his place, but perhaps his absence and his inattention to this debate is the measure of the importance that he attaches to the resolution of the First Minister—in regard to one statement he made yesterday. The hon. gentleman said that since the appointment of Mr. Grant as chief engineer of the Transcontinental Commission, there had not been any new objections to the classification. If the minister—or those behind him who are present—will take a look at the return brought down, pages 35, 36 and 69, they will see that that statement of the minister is incorrect. Let me read from page 69. In a letter to Mr. Woods by Mr. Gordon Grant, dated October 21, 1909—several months after Mr. Grant was appointed—in reply to a letter written by Mr. Woods to Mr. Grant, of October 5, 1901, an acknowledgment of the criticisms of Mr. Woods is made.

I must comment here on the fact that throughout this return there is a marked absence of copies of the letters, in the first place, written by Mr. Lumsden to Mr. Woods. There are only the letters written by Mr. Woods to Mr. Lumsden, and they are more or less unintelligble without the replies of Mr. Lumsden. Not only is there a marked absence of those letters, but there is an absence even of the letter from Woods to Lumsden of October 5, 1909. At all events, in the reply, the purpose of Mr. Woods' letter is clearly shown, because Mr. Lumsden writes as follows:

> I beg to acknowledge receipt of your letter of the 5th instant in which you file objections to the classification as returned on contracts 4 and 5 in district 'A.'

And so on. These objections cover the work done one or two years ago, notwithstanding that they were the same as the objections found by his engineers. This is pointed out by Mr. Lumsden. Further on, Mr. Gordon Grant acknowledges the receipt of objections to the following classifications as having been received, which objections are not referred to prior to the appointment of Mr. Grant, and which consequently, I take it, were made after Mr. Grant's appointment:

> In district 'A' 24, Grand Trunk Pacific Company: in district 'A' 25, district 'B' 15, Macdonell & O'Brien, districts 'C' and 'B' 14, Grand Trunk Pacific; district 'F,' O'Brien & Macdonell.

All these objections were made after the resignation of Mr. Lumsden, although it

was stated by the Minister of Railways none were made. It is worth while to refer to the objections made after Mr. Lumsden's resignation by Mr. Woods, as shown on page 35 of the return, where Mr. Woods says:

> Referring to our recent visit to the work on district 'B' east of the St. Lawrence river, our examination of classification as rendered at points visited, and our conversation regarding the same, I hope to repeat in writing what I stated to you verbally, that we still vigorously protest to the classification as returned to date. For example:—

And he proceeds to give examples covering several inches of the page of the return. Further on he says:

> I take it that the above are fair samples of classification on this residency, if not on the entire division.

Emphasizing the point that the instances mentioned by himself are typical only. He says:

> In the aggregate you can readily see the effect upon the cost of construction.

Now, Sir, the importance of the great divergence between the estimate and the result, is illustrated by the latter part of the letter which I read a few moments ago, found on page 5 of the return, in which Mr. Woods charges that if the overbreak on this district 'F' is allowed to go on in the haphazard, unchecked style in which it had been going on, the loss on that connection alone would be $1,000,000 from overbreak. Now surely if, on one section of the road from Winnipeg to Moncton the loss in overbreak is estimated by Mr. Woods, through the error, through the dishonesty, of the officials of the Transcontinental, to be nearly $1,000,000, what would be the loss, not on overbreak alone, but on classification also on the whole district from Moncton to Winnipeg? Surely the importance of it was worth the while of the commission, in the first place, to grant an investigation from Winnipeg to Moncton, and if they did not do it, then it is for this House to take the matter in hand.

I now come to a point which I think will be of interest to members of this House, because it bears most directly on the necessity for a thorough investigation, I refer to the arbitration that was to take place last summer by Mr. Lumsden, Mr. Kelliher and Mr. Schreiber, the last being the third arbitrator called in. In the first place, I say that if ever there has been anything in the whole conduct of the construction of this road that reflects upon the Transcontinental Commission, and through it on the members of the government of the day—because the government countenanced and tacitly approved of all the Transcontinental Commission did—if I say, there is anything that establishes the discredit of that commission it is the arbitration farce that proceeded in the matter of over-classification and overbreak during the months of May and June, 1909. Now what are the facts? Throughout the whole of 1908 and part of 1907, the Grand Trunk Pacific Company and the Transcontinental Commission had been unable to agree in the matter of classification. Objections had been filed early in 1907, they continued throughout all of 1908. The summer was the only time, admittedly, when arbitration proceedings could be intelligently gone on with. But the harvest was past, the summer was ended, and nothing was done. The Minister of Railways has been pleased to account for the delay by ascribing it entirely to the officials of the Grand Trunk Pacific, and quoting Mr. Lumsden as his authority. But I can equally well quote Mr. Kelliher, and Mr. Woods, and Mr. Chamberlain as authorities for stating that the delay was caused just as much by the Transcontinental Commission as by the Grand Trunk Pacific. In the month of May, when the Prime Minister wrote the letter which was quoted by the Minister of Railways, in which he asked for an investigation, and when he stated that, as a result of that letter, proceedings were at once taken for an investigation, I say that he stated what was incorrect, and what this return proves to be incorrect. It is a remarkable fact that in the month of May, the Hodgins investigation was taking place, it is a remarkable fact that throughout this month and the previous month, the press and members of the government were contending that there was no over-classification. At any rate, on the 11th of May, the first minister writes to the Transcontinental Commission and suggests that an inquiry be instituted, and suggests the appointment of an arbitration board. Notwithstanding the fact that the letter was written at that time, and that it was answered by the chairman of the commission with the assertion that proceedings had already been instituted, there is no record to show that until the 22nd of July, or over two months after, the first step had been taken towards pushing these arbitration proceedings. Mr. Lumsden's letter written in October, says that on the 22nd of July last he wrote a letter to Mr. Kelliher asking that an arbitration be started. So the letter of the Prime Minister, whether it was intended to be peremptory or not, at all events had no peremptory effect, because they stood still until the 22nd of July. Then one dilatory step was taken and then another, until the winter came on; and then the letters of Mr. Lumsden and Mr. Kelliher show that to attempt an arbitration in the winter months was an absolute farce, that no arbi-

tration and no investigation could take place when snow was on the ground. I commend these words to the Minister of Railways, who assured this House yesterday that since the 18th of November, and during the winter of 1909 when snow was on the ground, arbitration has actually proceeded. These words in the House, and the statement made by the minister's own engineer on previous occasions mean that the present arbitration also is an absolute farce.

Well, after a while, and after much correspondence, an arbitration board is constituted in the winter months. They can do nothing until May. In the letter appointing Mr. Schreiber as third arbitrator, in the very last sentence of that letter, it is stated that if he accepts, a formal submission to the arbitration board will be drawn up for execution. Mr. Schreiber accepted, his acceptance appears appended to that letter. And notwithstanding the fact that the engineer, with the authority of the Transcontinental Commission, signed that letter and assured Mr. Schreiber and all interested in the arbitration, that a formal submission would be drawn up for execution, no such formal submission was ever executed by the commission, or by any one representing it. A formal submission was drawn up by the Grand Trunk Pacific, a very fair, a very comprehensive, a very useful document, but the Transcontinental Commission knew too much about the game to sign that and they further knew too much about the game to give the actual reasons why they refused to execute it. I stated in reference to the submission that it was a very fair and reasonable one. I want to read that submission, I want to read the agreement that the Grand Trunk Pacific laid before the Transcontinental Railway Commission for execution and to ask the members of this House whether it was not a fair and reasonable agreement and whether it was too comprehensive as it was at a much later time stated to be by the Transcontinental Railway Commission. At page 17 of the return that agreement appears. The usual recitals appear in the first place setting forth the fact that an Act of parliament calls for the arbitration of all differences, and the fact that differences have arisen. Then, it goes on to say:

Therefore this agreement witnesseth that the following question in regard to the specifications and the work in respect of which the said engineers have differed shall be submitted for determination to the said engineers and the said Collingwood Schreiber, Esquire, as third arbitrator, namely:—

(a) The interpretation of the specifications as applied to the actual work, each party under this heading to be at liberty to ask for the construction or interpretation of any particular clause of the specifications not already approved by the engineers and such construction or interpretation when given to be conclusive as to all work already done, and to be thereafter binding in regard to all future work to be done.

Is that unreasonable? Is there anything to fear by an honest Transcontinental Railway Commission or by honest engineers in asking that certain clauses which may contain an ambiguity, or which may be difficult of interpretation, shall be settled as to their interpretation, once and for all? Nothing unfair to my mind.

(b) Classification of material handled by contractors in the formation of the roadbed, or incident to other work forming part of any of the contracts on the eastern division.

Surely it will be in the interest at least of the people of this country, if it is not in the interest of the commission, that that matter shall be investigated. Classification of material handled by contractors. The technical point is raised and is persisted in with a steadfastness, a perpetuity, if I may use the word, that would never be expected of the most technical lawyer in a court of law, that unless you put in your objection at a specified time and put in your objection to a certain mile there is nothing to dispute over as to that and consequently nothing to investigate. As Mr. Kelliher and Mr. Lumsden went over the road, if Mr. Kelliher found something that was over-classified, could not he object then and would not that be a question in dispute? Would not a question in dispute be raised the moment Mr. Kelliher said: There is over-classification and Mr. Kelliher having stated that and that point in dispute having arisen, was it not in the interest of the people of the country that that point in dispute be settled there and not be relegated to obscurity and refused settlement for all time? Surely it was. Would it not have been absolutely fair to have investigated a dispute raised by Mr. Kelliher on the ground? He is looking over the work. He goes over a mile and he says: There is over-classification amounting to 100, or 200, or 500 per cent and I want you to investigate that. If Mr. Lumsden did not agree with him let Mr. Collingwood Schreiber decide it. That is what the Grand Trunk Pacific asked for and that is what the commission refused. The attitude of the commission on that point is consistent only with the proposition that they wanted to confine the limits of the overbreak and over-classification, they wanted to confine the dollars that the country had lost in the construction of this road by these frauds—and these incompetencies of various people in order that Liberal politicians might go through the country and say, as did the hon. member for Carleton: Why, there is only two per cent; there is only $1,000,000 out of $50,000,000. That could

have been the only result. They could not have had the interests of the people at heart. They could not have cared one single straw for the treasury of this country, or they would not have allowed the Grand Trunk Pacific to have raised objections and refused to have allowed these to be fairly and amicably settled by the tribunal appointed to discharge this duty under an Act of parliament. This agreement goes on:

(c) Payment to contractors for handling material in cutting in excess of the theoretic section to be excavated, whether caused by slides, excessive use of explosives or otherwise, and commonly termed overbreak.

They wanted that investigated, but the commission refused to investigate that unless it also was bound within the narrow and frigid letters which happily Mr. Woods happened to write on a previous occasion and since the 10th January. The commission not only absolutely refused to investigate anything except such as was within each specific mile post embodied in Mr. Woods' letters, but they refused to investigate anything embodied in Mr. Woods' letters prior to the 10th January, 1908. Later, the Transcontinental railway secretary of the commission addressed to Mr. Schreiber, as appears in the return under date of about the 20th January, 1909, a letter which shows clearly that the commission had absolutely made up their minds that no objection, however specific, raised by Mr. Woods, prior to the 10th January, 1908, would be allowed to be investigated. They shut the door first to all objections raised on the ground, they shut the door to Mr. Woods' objections wherein he says the whole division is wrong, they shut the door lastly, and they locked it, and said that no matter how specific your objections, if they were made before the 10th January, 1908, they are shut within a dark closet and you cannot investigate them now. Then they go on. Here is a general clause and could anything be fairer?

(d) All other matters not included in the foregoing but which may properly form the subject to arbitration under clause 7.

How could anything be fairer? Everything that could properly form the subject of arbitration under clause 7 of the Act passed by this parliament in 1903 should be investigated. Let me ask any member of the government who may be present—and if there are none present who know anything about it, then let me ask any hon. member of this House who is interested in the people's behalf—what right had the commission, what jurisdiction had the Minister of Railways and Canals to limit the powers of investigation granted by the House of Commons in an Act passed in 1903?

Mr. FOSTER. Mr. Speaker, it strikes me as a very singular thing, not to say a very discourteous thing, that in the discussion of two resolutions of this kind, the only man who really knows anything about it, absents himself from this House. Questions are raised and debated; three or four have been raised by my hon. friend who is now speaking in which it would be very pertinent to have from the Minister of Railways and Canals why such and such a thing did not appear in the return and other things of that kind. The Minister of Railways, with either contempt or an utter disregard of his duties in a debate of this kind, leaves the House. Mr. Speaker, I make my protest against having such treatment accorded to such an important question as this.

Mr. FISHER. Mr. Speaker, my hon. friend the Minister of Railways and Canals (Mr. Graham) was in his seat until a few minutes ago, but he was called out of the House. I have no doubt that he will return shortly, but it is unreasonable that any minister should be required to stay in the House constantly through a prolonged debate of this kind.

Mr. FOSTER. Either the Minister of Railways, or the Prime Minister, or some minister who knows something about this debate, ought to be here, and I think it would be a good thing to take a recess until one of the responsible ministers comes back. I move that the House do now rise.

Mr. FISHER. In reference to that motion, I have only to say that I cannot accept it at all as a reasonable censure on the government, or as a reasonable censure on the minister. It is true that when a prolonged debate occurs, as in this case, the ministers have to leave the House occasionally. It is true that at this present moment the minister in charge of this particular question is not in the House, but at the same time there are ministers here. We have frequently seen what is practically the same thing on the other side of the House. Members on the front bench of the opposition make a motion, then leave the House, pay no more attention to it afterwards in any shape or form, and even leave the House during the speeches which are being made by members on that side. A rule of this kind should certainly work both ways. It should work on one side just as much as it does on the other. When a debate is prolonged to a very considerable extent, one cannot expect that any one individual or any number of individuals shall remain in the House during the whole time of the debate. I regret very much indeed that members frequently leave the House, and that applies to all members. That is perhaps one of the reasons why our sessions are so prolonged. But it comes with ill grace from any member of the opposition to take exception to that condition which they so largely bring

about, or to cast a reflection upon the Minister of Railways who is one of the hardest working ministers of the Crown, and who attends as constantly and continuously to his arduous duties as any member of any government ever did. I feel under these circumstances that the strictures made by the hon. member (Mr. Foster) are entirely uncalled for.

Mr. FOSTER. As the purpose for which I moved my motion has been accomplished and as we now have the inexpressible pleasure of having the Minister of Railways with us, I beg leave to withdraw my motion.

Hon. GEO. P. GRAHAM (Minister of Railways). My hon. friend (Mr. Foster) is usually courteous to me, but if I am rightly informed he has to-night gone to the limit of being almost unparliamentarily discourteous. For a moment I was called out by a gentleman from Winnipeg (who by the way does not happen to be a political friend of mine, either) to discuss a matter of public business with him. That gentleman has been here for two days waiting to get an interview. My desire is to treat gentlemen who come to see me from a distance with courtesy and to facilitate business, and I left the chamber for two or three moments. Now, I have seen the hon. member for North Toronto leave the chamber five minutes after he delivered an address and never return while a reply was being made to him. I did not intend any discourtesy to anybody; I am not built that way, I am not afraid of any criticism that can be offered; on the contrary I am glad to hear criticism.

Mr. FOSTER. I am quite willing to accept the hon. gentleman's apology for leaving the House.

Mr. GRAHAM. I did not apologize by any means.

Mr. FOSTER. I take exception to the argument made by the Minister of Agriculture and which was implied in the statement of the Minister of Railways. There is every difference in the world between a responsible minister and a member of the opposition, and there is in this case a still greater exaggeration of that difference because it happens that the only man on the ministerial benches who knows anything about this question and is able to answer details is the Minister of Railways himself. I was perfectly justified in making the strictures I did. I was not discourteous personally to the Minister of Railways; I was speaking of his office and not personally of himself.

Mr. MEIGHEN. I was referring, before this very convenient recess took place, to the celebrated memorandum of the 10th of January, 1908, which the Minister of Railways assured us yesterday he was the father of,—I am very glad, indeed, to see that the Minister of Public Works appears on the scene in this debate as in much the same manner he flitted over the scene in the Transcontinental Commission correspondence, just at the close of the incident. That memorandum of the 10th of January purports to be made in pursuance of clause 7 of the agreement, ratified by the Act of parliament of 1903, and it reads:

> Monthly estimates for contractors shall be submitted promptly from time to time by the chief engineer of the commissioners to the company's assistant chief engineer at Montreal for approval. If he has any objection to such estimates he shall promptly file the same with the chief engineer of the commissioners, and any objections from time to time filed shall thereupon be considered, and, if possible, determined by the said engineers, and in case of their failure to agree, may then or at any time before or at the time of the final payment, at the option of either party, be considered and determined by arbitration as provided in the agreement of the 29th July, 1903, but in no case shall the payment of monthly estimates be delayed except with the consent of the commissioners.

Now, that agreement purports to be in pursuance of the Act of parliament of 1903—I am sorry to say the Minister of Railways avows himself the father of it—but that agreement distinctly limits the operation of that Act of parliament, confines the powers of arbitrations, restricts within very narrow limits the possibilities of arbitration, and confines within bounds so as to render almost useless the only protection that the people of this country had under the Act of 1903. I want to know by what authority the Minister of Railways or the Transcontinental Commission limited the powers of arbitration granted by the Act of parliament within the narrow confines of the memorandum of the 10th of January? What right had the Minister of Railways and what right had the Transcontinental Commission to say that matters that might have been arbitrated under the statute cannot hereafter be arbitrated. I say that the ingenuity and purpose of that agreement is only too plain, and I say that it has worked disastrously for the people of this country. However, the winter months passed and the arbitration board proceeded to its work on the 21st May, 1909, and finished their work on division 'F' on the 5th day of June of that year. During that time Mr. Collingwood Schreiber, in whom the Minister of Finance professed such unlimited confidence, Mr. Lumsden, who was the choice of all engineers of the world as the chief engineer of the Trancontinental, and Mr. Kelliher, selected by the Grand Trunk as their chief engineer, devoted their time to an

investigation of the classification and overbreak on district 'F'. I submit, Mr. Speaker, that if the argument of the hon. member for Carleton, N.B., is right: that after the work was done no classification could be made that could compare with the work of the engineers on the spot at the time of excavation, then, surely Mr. Lumsden, and Mr. Kelliher, and Mr. Collingwood Schreiber would not have addressed themselves to a task, which, if the hon. member for Carleton, N.B., (Mr. Carvell) is correct, they must have known was a farce from beginning to end. Surely, they were in a position to make the classification or else they would not have come back, and while not presenting a formal report, practically reported through the mouth of Mr. Lumsden that they found against the honesty or the competency of the classification that had been made. The very words of Mr. Lumsden, and the tacit concurrence in them of Mr. Collingwood Schreiber and Mr. Kelliher, give denial to the argument of the hon. member (Mr. Carvell) that it is impossible to properly classify such work, unless the engineers were there when the actual excavations were made. They finished with district 'F' over which Mr. Poulin presided, on the 5th of June, and on the 6th of June they proceeded to district 'B' and finished there on the 22nd of that month. These three men, the most competent engineers in the country, the choice of the government, considered that they competently did discharge their duties, and they must be conceived to have acted honestly. Now then, I say that the facts in connection with that arbitration which appear from the record as brought down by the government, facts that are undeniable on the very face of that return, clearly show that no sooner did that board which was the creation of the Transcontinental Commission, with the ratification of the government; no sooner did these men finish their work than the Transcontinental Railway Commission started to wreck it. No sooner was the work of their own arbitration board completed, and no sooner had they got an inkling of what their finding was, than they set deliberately to work to wreck the report, and if possible obviate the possibility of a report at all.

On what do I base that? It is a remarkable coincidence, and I notice that this has already been brought to the attention of the Minister of Railways or he would pay more attention to it, he knows it as well as I do, he absolutely knows that it is impossible on reasonable grounds to believe that the letters of Messrs. Poulin, Doucet and Huestes were written otherwie than at the instigation or with the concurrence of the Transcontinental Commission, in the light of the return brought down. The Minister of Railways asked this House, whether, if we had been engineers in the case of Messrs. Poulin and Doucet we would not have acted exactly as they did. I tell the minister no, and I say further that no engineer could possibly have done so, acting as a reasonable man, if he conceived he was being wronged by an arbitration board. What does Poulin do? Notwithstanding the fact that the work of arbitrating on the over-classification on section 'F', his own section, was finished on June 5, he sits silent under it and says not a word until June 22, about two and a half weeks afterwards. How does the minister explain that, that a man so grossly wronged as Poulin said he was, by his own superior officer, would not protest or open his mouth until the 22nd day of June, some 16 days after the whole work was done. It is a remarkable fact also, and I do not need to draw this to the minister's attention, because he knows it, that Poulin says nothing from his head office in Winnipeg, nothing from the ground, but he waits until he gets down here, within the sanctum or within the influence of the Transcontinental Commission, and there makes known his complaint, because his letter is dated not from Winnipeg, but from Ottawa on the 22nd of June, 1909. Not only that but section 'B' was finished on June 22, the very day that Mr. Poulin made his complaint. Mr. Doucet immediately, on the 23rd of June, the very day after Mr. Poulin makes his complaint, also writes to the chairman of the Transcontinental Commission and complains as well. The same day that occurs Mr. Huestes writes a memorandum and makes his complaint. Let me say to the minister that neither he nor any other man can justify these district engineers in making their first complaint to the Transcontinental Railway Commission instead of through the medium of their own superior officer, Mr. Lumsden, except on the hypothesis that the whole thing was instigated by the Transcontinental Railway Commission itself. Furthermore it is a remarkable fact that Mr. J. D. McArthur, the contractor on a large part if not all of district 'F', about the same time and also two weeks after they got through with his work, by a wonderful coincidence writes to the chairman of the Transcontinental Railway Commission and he protests also against the work of the Arbitration Board. On the 22nd or 23rd of June, at the very time these engineers are making their protests, another remarkable coincidence occurs, and Messrs. Macdonell and O'Brien also write a letter to the chairman of the Transcontinental Commission, making complaint exactly along the line of Mr. McArthur's. It is also difficult to explain and it would be interesting to know the cause of a clause in Mr. McArthur's letter wherein he states that he is informed an examination of the district engineers

was made by the arbitration board, and as a matter of fact notwithstanding that subsequently the commission upset the whole findings of the arbitration board on the presumption that the engineers were not examined notwithstanding the fact that Mr. McArthur says they were. We have all those facts coinciding. We have Mr. Doucet's letter written from Ottawa on the 22nd of June, Mr. Huestes' memorandum written on the 23rd, and Mr. Poulin's on the 23rd, all along the same line, and we have Mr. McArthur's letter on the 19th and Mr. Macdonell's on the 23rd. How do you explain the fact that all those men came to write on the very same line to the chairman of the Transcontinental Railway Commission, all to the same man, just at about the same time, and for the same obvious effect? Surely that is not a coincidence. What do they do? What does this Railway Commission, in which the Minister of Railways places such confidence do? A most remarkable thing, and for that act no other is responsible than the government of this country and the Minister of Railways in particular, because that act was made known at once to the Minister of Railways by a letter from the secretary of the Transcontinental Railway Commission and there is no protest against it and the Minister of Railways subsequently concurs in the action of the Transcontinental Railway Commission wherein they disallow and utterly condemn the work of the first arbitration board.

The commission did the following with the tacit concurrence of the Minister of Railways: On June 25, at 11 o'clock in the morning, the commission held a meeting, and they read the letters written to them by Messrs. Doucet, Huestes and Poulin. They also read the letters written by Messrs. McArthur and Macdonell & O'Brien, and in the light of those letters, taking those letters as correct, even although those letters assumed that Mr. Collingwood Schreiber, in whom the government have absolute confidence, Mr. Lumsden, the man whom they appointed themselves, and Mr. Kelliher, acted like perfect school boys, the Transcontinental Railway Commission, with the concurrence of this Minister of Railways took those letters without question and immediately stamped the whole proceedings as illegal. Sir, if it is unfair and wrong, as the Minister of Railways contended yesterday, for any one to find these district engineers guilty without a hearing—and nobody asked that they should be found guiltv without a hearing—was it not far more wrong, was it not an outrage, for the Transcontinental Commission on June 25, to pronounce on the authority of engineers, without the other parties being heard, that Messrs. Lumsden and Kelliher and Schreiber had been so absolutely derelict in their duty, had so absolutely forgotten the fidelity they owed to the people of this country, as to upset without a hearing the finding these three engineers on the authority of understrappers.

The Minister of Railways yesterday pronounced as an outrage in a hypothetical case that he ascribed to the mover of the amendment, an act which he himself condoned on the 25th of June, 1909, an act which on that day was certainly outdone by the Transcontinental Railway Commission that absolutely overtopped anything that would be done were we to find these men guilty without a hearing; and the Minister of Railways, by his tacit concurrence in that act is responsible for that outrage on the 25th of June last. There is no reasonable deduction from this correspondence other than that a deliberate conspiracy was entered into on that day to annihilate the report of that arbitration board simply because it resulted in finding a large amount of over-classification which would have brought discredit on this government and on this country, and if there is any bad faith to examine, if there is reason for an investigation with the object of finding bad faith, this government and the right hon. the First Minister who moved for this committee, would far better act in the service of the people if they investigated bad faith on the part of their own commission instead of (as they only pretend to do) on the part of certain unmentioned understrappers on the engineering force.

The Transcontinental Railway Commission, at 11 o'clock in the morning on the 25th of June, pronounced the following remarkable words on the authority of letters written to them, which should never have been written to them, in reference to the conduct of Messrs. Schreiber, Kelliher and Lumsden:

> Whereas, it is inconceivable that proceedings of such great importance, and possibly involving a very large sum of money, and which may result in much expensive and troublesome litigation between the contractors and the commissioners, should have been conducted in such a hasty and superficial manner, without a sufficient hearing being granted to the engineers on the work.

If Mr. Collingwood Schreiber was guilty of inconceivable conduct, if he was guilty of conducting a great public duty in a hasty and superficial manner, why does the government, and why does the Minister of Railways, assent to his appointment again on the same arbitration board? Surely, if he was guilty of such conduct as that, if he was so absolutely forgetful of the duty he owed to the people of this country and to the government, he is not a fit man to conduct proceedings of such importance. But they go further and ar-

gue—and here is a most remarkable thing —that Mr. Schreiber, Mr. Lumsden and Mr. Kelliher, in the course of that investigation, proceeded along lines of this awful memorandum of submission which I read to the House some time ago, and which called for no more and no less than arbitration on matters that were properly the subject of arbitration under clause 7 of the Act passed by this parliament. Because they did such a heinous thing, because they so absolutely forgot their duty to the country as to follow the provisions of this Act of parliament instead of doing as directed by the Transcontinental Railway Commission, their whole finding is illegal and void. Did anybody ever hear of such an argument? Can the Transcontinental Railway Commission or the government of Canada produce a reputable lawyer who will say that, because they proceeded under the authority of a form of submission which provided only that such matters should be submitted to them as provided by Act of parliament, therefore the whole proceeding must be upset for illegality? The Transcontinental Commission had no authority whatever for that statement. Furthermore, there is nothing to show that the arbitrators had proceeded under that authority. But even if they had, Mr. Collingwood Schreiber was justified in doing so by the very document to which the Transcontinental Commission is a party. In the document appointing him and which he signed, it is clearly stated that a form of submission would be presented to him. It was never presented to him, unless it was the form of submission under which, they charge, they acted; they never presented any other. And when they refused the form of submission which was sent, they did not apprise him of the fact. They wrote, if not to their own engineer, then to Mr. Kelliher, that they did not see any necessity for it. If the Commission wanted to be above board in the matter, why did they not say that it would be illegal to proceed along that line and state specifically their objections to that form of submission, instead of saying in an offhand way: 'We do not think any submission is necessary?'

On June 25, at eleven o'clock in the morning, these gentlemen, or three of them, held a meeting to pass a resolution, which is reported at page 30, protesting against the proceedings of the arbitrator as being 'improper and illegal,' in that they were based in all or in part on the draft agreement of May 14, 1909, which had been rejected, and which had no existence in fact—and for that they had the authority only of a district engineer under Mr. Lumsden, and against it they gave Mr. Lumsden, Mr. Kelliher and Mr. Collingwood Schreiber no hearing at all. The report goes on:—

> That the engineers on the line who classified the work were not afforded a sufficient hearing or an opportunity of presenting evidence.

What right had they to say that the engineers must be heard by the arbitration board? Did the Act of 1903 say that arbitrations should be upset by the Transcontinental Railway Commission unless these engineers, who were charged with being guilty of wrong-doing, were on the spot to argue the matter out? I do not think so. But, further, Mr. McArthur's letter was by that time in the hands of the Commission in which it was stated that the engineers were heard before the arbi tration board.

Again, I ask the Minister of Railways and Canals—though I know he will not listen—and I ask the Secretary of State (Hon. Mr. Murphy), did the Act of parliament state that contractors must be heard before the proceedings could be legal? The Minister of Railways and Canals said the findings would be of no use unless they were heard, because the government wanted such evidence as would be taken by the Exchequer Court. The minister is not a lawyer, and I do not pose as a very great lawyer myself. Still, it does not require a great lawyer to know that even if they had been heard the evidence would not be binding upon them before the Exchequer Court. Evidence against a third party would not be taken by a court in a subsequent case. So the hon. minister's argument falls to the ground, though I confess that it had the best face of any that could be given in support of clause (D) of the resolution of this Transcontinental Commission of June 25th last. They say that the contractors were not heard. That was a significant statement. But there is the significant fact that, on the 19th of June, when the conspiracy referred to was being hatched, Mr. McArthur wrote a letter saying he was not heard before the arbitration board, and he protested against it. Yet, on the second arbitration board being formed, and Mr. McArthur notified, he immediately writes to the commission that he has nothing to do with the arbitration and does not want to be heard. Is it not most remarkable that the commissioners should upset the findings of an arbitration on the ground that the contractors were not heard, when in the first place, there was no legal authority for their being heard, and, in the second place, they did not want to be heard? After the commission makes the finding condemning Mr. Lumsden, Mr. Kelliher and Mr. Schreiber as being superficial, as being derelict in their duty—as well paraphrased by the hon. member for Carleton—as not knowing what they were talking about

—Mr. Lumsden resigns. The Minister of Railways said there was no justification for his resigning. There will be plenty of opportunity for the Minister of Railways to answer, but surely he will never contend before any sane audience that an engineer, the head official under a commission, could possibly retain his office after being censured in such language by his superiors, by the very board that had appointed him—being called, almost in plain words, a school boy and told that he was derelict in his trust. Under such conditions no self-respecting man could retain his job. The minister said that he did not know whether the letter was written before the meeting or after it, but if he had read the return he would have seen that it was pointed out under the authority of the chairman that Mr. Lumsden resigned after the meeting held at eleven o'clock in the morning. What is the authority for the hon. member for Pictou and the Minister of Railways and Canals saying that Mr. Lumsden resigned in a huff because his men disobeyed his instructions? He could do nothing but resign, and the Minister of Railways knows it. And, what is more, the Transcontinental Commission knew that he could do nothing but resign, and that is why they passed the resolution on the 25th of June. They intended that he should resign, and that there should be no doubt about it,—and not only that he should resign as engineer, but they made sure also that he should resign as arbitrator as well. Read his second letter of June 26th:

Ottawa, June 26, 1909.

The Commissioners of the Transcontinental Railway,

Ottawa, Ont.

Dear Sirs,—

How he must have emphasized the adjective.

Referring to my letter of yesterday wherein I stated that I have lost confidence in the engineering staff, I would like to state that this does not apply to the whole staff, but applies only to a portion of the staff who were responsible for the measurement, classification, supervision and inspection of considerable portions in district 'B' and east of Rennie Crossing in district 'F' lately gone over by me.

HUGH D. LUMSDEN.

And here is a most significant postscript.

P.S.—In order to make the matter clear, I may say I assume my resignation as chief engineer also carries with it my resignation as arbitrator in matters of dispute with the Grand Trunk Pacific Railway Company, but as there is a doubt raised by you, I also resign as arbitrator.

HUGH D. LUMSDEN.

So, to be absolutely certain that the work of wreck was complete, that they had utterly annihilated the work of this arbitration board which was so disastrous to them, they come to Lumsden after he has resigned on the 25th of June, and say there is a doubt whether he was not still arbitrator and he had better remove that doubt. And so, he resigns as arbitrator too. Surely they must be given credit at least for the greatest possible efficiency in carrying out their evident determination of having Mr. Lumsden out of the road and the arbitration proceedings made null and void.

Mr. FOSTER. Was that expression of doubt verbal?

Mr. MEIGHEN. There is a distinction between this intimation on the part of Mr. Lumsden, and other intimations of Mr. Lumsden, that seem to favour the contention of the board. Mr. Lumsden says over his own signature that the doubt as to this was raised by the members of the Transcontinental Commission, whereas all these statements of the board launched out before the public to the effect that engineers on the ground are the only persons who can make a competent estimate, were made only on the authority of the Transcontinental Commission, as a memo. by the secretary.

Now we go on. The work of wreckage, they contend, is complete. The Grand Trunk Pacific Railway Company take another view; they say that notwithstanding the fact that Mr. Lumsden resigned, his successor is ex-officio arbitrator, and notwithstanding the fact that he resigned as arbitrator, there is nothing to hinder Mr. Schreiber making his report. There may be some doubt about that. There is no doubt in my opinion that the work of the arbitration board up to that point was absolutely valid; at all events, the Grand Trunk Pacific claimed that it was valid, notwithstanding the resignation of Mr. Lumsden. At all events, if the Grand Trunk Pacific were content to call it valid, there was no reason why the commission should not call it valid, too. But they chose not to do so. They say: No, we want things done de novo, and we will try a new man, we want some different result. Then what occurs? They go ahead and appoint a new arbitration board, and after a long time they start again, notwithstanding the protest of the Grand Trunk Pacific. But in the meantime there is a remarkable coincidence. On the 25th of June, Mr. Lumsden writes his letter of resignation, he says in that letter that there has been over-classification carried on to a very large amount. He says that owing to this, and owing to the disregard of his instructions, he has lost confidence in the staff. That letter was written to the Minister of Railways or to the commission; at all events, the commission transmitted it to the minister on the 25th of June. The Minister of Railways was in the city on the 26th day

of June, and until the 30th of June, 1909, because on the 30th of June there is a nice letter put on file by the minister, and I must compliment him on the graceful language he uses. He writes to Mr. Lumsden, who has been in the plainest way fired by the commission, or has been put in a position where his self-respect demanded his resignation. The minister writes thus on the 30th of June:

Dear Sir,—I have the honour to acknowledge the receipt of your letter of the 25th instant, inclosing correspondence sent by you to the Transcontinental Railway Commissioners, and also proffering your resignation as chief engineer. It will be considered in due course.

That must have been news to Mr. Lumsden; at all events, it shows that the Minister of Railways was in the city from the 25th day of June to the 30th. Later on he evidently went across the water, because on the 31st of August he writes a letter to the Transcontinental Railway Commission. And I want to say that I cannot understand this correspondence on any other hypothesis than that it was born of a laudable ambition on the part of the Minister of Railways to make the correspondence look as nice as possible, to give it a high moral tone, notwithstanding the awful facts that had transpired. I cannot see anything in it but a nice piece of stage-play. Here is the letter, and I invite the attention of the House to the matter, because the spectacle of the Minister of Railways breaking the bread of official fidelity to the Transcontinental Commission, is a most inspiring one. The letter is found on page 48:

Dear Mr. Parent,—As I was leaving for Europe some time ago the resignation of the chief engineer of the commission, Mr. Lumsden, was received, and I left it with my colleagues for consideration. I find on my return—

Remember, the Minister of Railways did not find this until he got back. During the five days he was in Ottawa it did not come to his notice.

—I find on my return that in his letter of resignation Mr. Lumsden intimated that he had lost confidence in certain of his staff. I have no doubt that this intimation is unnecessary, but wish to emphasize the government's attitude in this matter. Should it be found that any member of the staff has been dishonest or wilfully negligent in the performance of his duty he should be summarily dealt with.

Now, that must have been news to the Transcontinental Commission.

What you desire and what we all desire is justice to all parties and the fullest protection of the public interest. Any employee who has forgotten this, or has failed to act on this principle, cannot be retained for a moment.

Now surely the Minister of Railways will concede that if there was any occasion for writing a letter like that to the Transcontinental Commission, he must have had grave doubts as to the fidelity with which that commission was discharging its duties. So it looks to me as a piece of stage play, put on in order to make the correspondence look wholesome. Then the chairman of the Transcontinental Commission, not to be lacking in his share of the pantomine, comes forward and writes thus to the Minister of Railways, he actually expresses the startling fact that the minister's views that dishonest officials must be fired, exactly coincides with his own; and the Minister of Railways, with sober face, read that correspondence to the House as emphasizing the high moral tone which the government of this country adopts in connection with the Transcontinental Railway. It does seem strange that notwithstanding the fact that the minister was here for five days, and that he discussed the matter with his colleagues, as appears by his letter, he never noticed Mr. Lumsden's statement that he had lost confidence in his staff until two months afterwards, and he never thought there was any occasion, during the whole of two months, to preach the doctrine of honesty to the chairman of the Transcontinental Commission. The chairman of the Transcontinental Commission actually goes on to say:

Should any reasonable proof be brought that employees in our service have been guilty of serious negligence or wrong-doing, you can rest assured that the commissioners would deal prompt justice, as we have done already in several cases.

But the whole correspondence up to that point, and subsequently, shows that there was no object so dear to the chairman of that commission as to see that all the avenues of proof should be closed, so far as he could close them. Now for two years the Grand Trunk Pacific Railway Company were paraded in this country, during the election campaign of 1904, as the guardian of the people's rights in the matter of the construction of this road. The electors were told that the company was in such a position that they had actually to fight the battles of the people in order to preserve their own rights. Then the railway company, during two years, urges and struggles with the chairman of the commission that a proper and complete investigation be made of all matters complained of. Throughout those two years we have the spectacle of the chairman and the commission resisting, with every weapon in their power, the attempt of the Grand Trunk Pacific to preserve their own rights, and through them in some degree the people's rights. If the powers had been granted to that arbitration board, or to the second arbitration board which is now in existence, the powers which the Grand Trunk Pacific so ably con-

tended should be granted, then there would not be so much reason for the amendment of the hon. member for South Simcoe as there is. It is because the request made throughout those years by that company that the investigation should be thorough, was denied by the commission, that there is all the more need for an investigation now. What supports the position I take that the railway company, throughout these years, struggled for a complete investigation? Turn to page 52 of the return. Mr. Chamberlin, vice-president and general manager of the company writes as follows to the chairman of the commission under date of September 15, 1909:

Dear Sir,—Referring to conversation had with you to-day relative to Arbitration Committee.

We are ready to have the commission go on with their examination, and consent to their re-examining matters complained of and looked into by the former commission consisting of Mr. Collingwood Schreiber, third arbitrator, Mr. Hugh D. Lumsden, government engineer and Mr. B. B. Kelliher as chief engineer of the Grand Trunk Pacific.

I presume this committee will start their examination from Winnipeg and work east to Moncton.

That is a presumption that unfortunately Mr. Parent could not agree with.

Mr. Kelliher is now in Winnipeg, and will be ready to start any day which will suit the convenience of Mr. Schreiber and Mr. Grant. Will you kindly advise me as early as possible when Mr. Grant and Mr. Schreiber will be ready to start, so that we may arrange the affairs of our engineering department accordingly.

We trust that this examination will be very thorough and will be continued over the entire line, taking up and settling all matters under question.

That is a simple trust and one would think an honest and useful trust, but the commission, having the interests of this country at heart, could not coincide in it. Right on the next page, in a letter dated the 18th September, Mr. Chamberlin says:

I am quite willing as you propose and as mentioned in my former letter, that the arbitrators should go over all questions in dispute from the beginning, letting the two engineers discuss all differences on the ground as they go along and where they cannot agree call in Mr. Schreiber.

And that also is a willingness, in which the chairman of the Railway Commission, as guardian of the people's rights, refused to coincide. Then, on page 55, Mr. Chamberlin still urgently presses the same point. In a letter dated Winnipeg, 8th October, 1909, and addressed to Mr. Parent, he says:

You seem to misunderstand position Grand Trunk Pacific railway. My agreement with you which is outlined in your letter fifteenth was that all differences were to be discussed on the ground in accordance with article seven of the agreement between the Grand Trunk Pacific railway and your government, and we are ready at any time to proceed on that basis. Mr. Grant declined to discuss and settle differences as above suggested, therefore delay rests entirely with your commission.

Mr. Grant refused to proceed on the lines laid down by the parliament of Canada under clause 7 of the agreement of 1903, and he persisted in proceeding within the narrow, small and almost useless limits of the agreement of the 10th January, 1910, of which the Minister of Railways boasts that he himself is the father. On page 58, Mr. Chamberlin still continues the same struggle—the struggle that we are continuing now.

Have wired Kelliher——

He says under date of October 5:

To sign letter appointing third arbitrator and to proceed at once with arbitration, as per our letters. Trust you instruct Mr. Grant to make examination thorough, and to take all the time necessary to settle all differences between Winnipeg and Moncton.

If the commission had agreed to make a thorough investigation and discuss the difference between Winnipeg and Moncton the matter would have gone ahead, but they did not agree, they have not agreed yet, and consequently the amendment is absolutely imperative if the public interests are to be protected. At page 59 Mr. Ryan, secretary of the commission, writes instructions to Mr. Grant that if Mr. Kelliher refuses to go on within the narrow limits of the subsidiary agreement then they must stop altogether. He says:

Kelliher's attitude again delaying arbitration. Persistence in this will perhaps indefinitely delay it. If he adheres to refusal to sign joint letter, your instructions are to return to Ottawa. Show this telegram to Killiher, and advise result.

Then Mr. Chamberlin says on October 6:

We now find engineer Grant refused to take up anything but a few specific cases and not make arbitration cover all matters in dispute as you agreed when I saw you in Ottawa, and by your letter later, therefore Mr. Kelliher rightly refused to go on with arbitration. When Mr. Grant is prepared to take up all matters in dispute, Mr. Kelliher will be ready to meet him.

But Mr. Grant was not so prepared, because the commission refused to let him be so prepared. Then at page 60 Mr. Parent writes to Mr. Chamberlin on October 7, as follows:

For reasons which have been explained it is in the public interest——

Mr. Parent is very fond of that expression:

—that these differences should be promptly adjusted, and I hope, therefore, that you will

instruct Mr. Kelliher to prevent further delay by consenting to sign the joint letter, and proceed at the earliest possible date in the matter.

At page 61 Mr. Gordon Grant admits the whole point in a letter dated October 11, to the chairman of the commission. Mr. Grant says:

Mr. Kelliher also insisted in spite of the advice of the Deputy Minister of Justice to the contrary that I had no say in the appointment of a third arbitrator, that Mr. Lumsden's previous choice of Mr. Schreiber still held, and that another joint letter was not necessary. This, of course, was all in accordance with his instructions dated September 18. Not only was this the attitude assumed by Mr. Kelliher, but he also informed me that, before we went out, I would have to sign a formal agreement or submission similar to the one previously prepared by the authorities of the Grand Trunk Pacific.

So that if Mr. Grant had been willing to sign the general agreement which I read to the House the first arbitration authorized by the government and by parliament in 1903 would have been ready to go on, but Mr. Grant refused and the commission backed him up in refusing to allow the law laid down by this House in 1903 and which at that time was considered ample for the protection of the people's interest to be carried out; consequently the arbitration was delayed in 1908 and 1909. I might go on but surely the Minister of Railways will admit that the point is established. On October 21 the point is again raised by Mr. Kelliher and the letters all through that period establish the same contention. The matter is still in dispute. The deadlock still ensues, the deadlock which the Minister of Railways was able to remove, but the deadlock which was only removed when the serene presence of the hon. Minister of Public Works (Mr. Pugsley) appeared on the scene about the 18th November last. It is a strange thing, it is a matter certainly that this return does not explain, but it is a remarkable fact that just as soon as the Minister of Public Works, carrying peace and blessing in his train, appears upon the scene in the middle of November last the Grand Trunk Pacific Railway Company, with a complacency childlike in the extreme, without any explanation, without any introductory letters, without any reason being given, without anything to explain it, quietly submit in toto to the contention of the Transcontinental Railway Commission, evidently under the spell of the Minister of Public Works. Now, Sir, an agreement appears on page 74 of the return under which the whole thing is submitted to arbitration and absolutely within the limits urged by Mr. Gordon Grant throughout this controversy. What explanation can be offered for this docility? What explanation can be offered for the rapidity with which the Grand Trunk Pacific, the guardian of the people's rights, the only guardian of them, threw down the bulwarks behind which they had been doing battle all along and without qualification coincided with the contention of Mr. Grant and of the Transcontinental Railway Commission? Under that submission this board of arbitration now can only arbitrate as to matters specially mentioned in letters prior to 10th January, 1908, and subsequent letters wherein specific points are mentioned such as are in conformity with the limited agreement of the 10th January. The whole contention disappears. All the clouds of difficulty are removed in a moment, the sun shines serene and the whole operation of this arbitration board is limited, as the hon. member for Carleton correctly says to the two per cent difference contended for all along by Mr. Grant and the commission. That is the whole history of the affair. There is quite a little stage play which it may be interesting to glance at. After Mr. Grant had written repeatedly to the Transcontinental Commission explaining Mr. Kelliher's attitude at Winnipeg and after Mr. Chamberlin had written to the Transcontinental Commission a letter in which he stated very innocently that the commission had called Mr. Lumsden back to Ottawa away from his duty as arbitrator, a letter appears on the file in which the secretary of the commission asked Mr. Grant to again report on this Kelliher matter. I have been unable to find what reason in the world there could be for that other report, and I should be glad if any gentleman on the other side can explain. But here is where the stage play comes in. In the course of that report Mr. Grant very correctly says that he has covered the whole matter in former reports so far as Kelliher's conduct is concerned, but he says that Mr. Chamberlin's letter saying that the commission called Mr. Lumsden back to Ottawa is incorrect. Now, what suggested to Mr. Gordon Grant to report on that point in Mr. Chamberlin's letter? Was not the whole purpose of that correspondence to, if possible, remove from the public mind the evidence of the conspiracy that Mr. Lumsden was called back. On page 67 of the return will be found the letter of the secretary of the Transcontinental Railway Commission and Mr. Grant's reply. The secretary very innocently asked Mr. Grant for a report, and inclosed Mr. Chamberlin's letter, and Mr. Grant replied:

With reference to Mr. Chamberlin's statement that Mr. Lumsden was called back to Ottawa by the commission, I understand from you that you did not call Mr. Lumsden back

to Ottawa, and in the records of my office I find a letter addressed by Mr. Lumsden to Mr. Schreiber, dated June 22, 1909, in which he says:—

Now, June 22nd is the date of the completion of the investigation in district 'B,' district 'F' having been gone over before; and as soon as the inspection was completed in district 'B' Mr. Lumsden evidently wrote this letter to Mr. Schreiber:

As it is important that I should be in Ottawa on the 24th instant and the work of inspection of the Macdonell and O'Brien contract in connection with matters in dispute between the chief engineer of the Grand Trunk Pacific railway and myself having been completed, I am unable to proceed further with the work at the present time.

Mr. Lumsden states in that letter, that it is important he should be in Ottawa on the 24th of the month, and I cannot see anything which would make that important, except that the commission wanted him there. Now, Mr. Grant's explanation of that paragraph in Mr. Lumsden's letter is:—

I understand from my secretary who was also Mr. Lumsden's secretary, that the first time he wrote this letter to Mr. Schreiber, Mr. Lumsden stated that it was important that he should be in England early next month, that is, he, in his second letter, changed 'England' to 'Ottawa.'

There is a most peculiar thing there. Mr. Lumsden wrote saying he had to be in England early in July and Mr. Grant says on the authority of the secretary that he afterwards changed the word 'England' to 'Ottawa,' meaning that he had to be in Ottawa early next month.

Mr. FOSTER. He said he only changed one word.

Mr. MEIGHEN. Yes, that would mean that he had to be in Ottawa early in July, but as a matter of fact, if he makes any sense out of it at all, he changes the original letter saying he had to be in England early in July, say that he had to be in Ottawa within two days.

Why did he so suddenly change his intention to go across the Atlantic, into an intention to go immediately to Ottawa, unless there was some urgent call. Mr. Grant's letter, while it is fairly well designed to wipe away this peculiar fact, appears only too clearly to show that Mr. Lumsden was called back by the Commission and it supports the position taken by Mr. Chamberlin, that Mr. Lumsden was called off the work of arbitration by peremptory orders from Ottawa.

During the course of his speech, I asked the Minister of Railways a question. I then had in mind the point that even under the original agreement the people were not adequately protected in the matter of over-classification. I may be wrong, but my opinion is that the matter of over-classification and the consequent increased cost was not in the contemplation of this House when that original agreement was entered into, because I think the wording of clause 7 of the original agreement would not necessarily or obviously lead to the conclusion that the matter of cost by over-classification or by any other cause was in contemplation of parliament as a matter to be referred to arbitration. Assuming that the arbitration is empowered under the original agreement to cover the question of over-classification—and we must assume it because all parties have assumed that that shall be within the purview of the arbitration board—then it turns out that the people have practically no protection at all. Even if the arbitration has the tho rough and complete scope that the Grand Trunk Pacific Railway Company contended it should have, and that we contend it should have, even so the people have not adequate protection under that agreement. I asked the Minister of Railways how he could explain where the engineer of the Transcontinental Commission would represent the people in the matter of over-classification, and as the Minister of Railways did not answer at the time, I was in doubt whether to complement him or his sincerity in acknowledging that he could not understand the point or on the skill with which he avoided it. Later on in the evening, he did attempt to answer it, and with I should think about three per cent of success. In so far as the legal liability of the government to charge the 3 per cent interest on the cost of construction was concerned, his explanation had something in it. But what about the 100 per cent principle cost of construction? How in connection with that could that engineer possibly represent the people? Why, Sir, no dispute could arise unless the Grand Trunk Pacific chief engineer takes the position that there is over-classification, and that consequently the cost is too great. It is inconceivable that the Grand Trunk Pacific would take the position that there is under-classification, and the cost estimated at too little. Before any dispute can arise, then the Grand Trunk Pacific must take the position that the cost is too great through over-classification, and then the representative of the Commission must say: 'No, the cost is not too great and I shall not let you reduce it.' Now, in arguing out that position, how can he be said to represent the people of Canada, when he urges that the cost should be as great as it is? How in the world can he represent the people of the country in urging for the increased cost? It may be that he is establishing the right of the people to interest on that increased cost, but the Minister of Railways cannot have studied the position,

seeing that as to the 100 per cent, the principal cost of the construction which the people of Canada had to put up, the engineer of the Transcontinental Commission was acting directly antagonistic to the interests of the people. Therefore, all along there was no protection in the matter of over-classification, except such as might be afforded by the engineer of the Grand Trunk Pacific, and I say that under the circumstances, in matters of over-classification that did not constitute a sufficient protection for the people of Canada. The Grand Trunk Pacific Railway Company pays the 3 per cent interest, it is true, but it is a well known principle of railway management nowadays that the freight rates are fixed to meet such charges, and that the interest in the end comes out of the people. I do not want to say it is a matter of no concern to the Grand Trunk Pacific to see that the cost is kept down, but it is a matter of comparatively little relative concern to them compared with the concern it is to the people of this country. Consequently I say that even should the arbitration have the thorough powers it was intended to have, it did not constitute in the matter of over-classification a sufficient protection for the people of Canada. The interest of the parties who are only relatively slightly interested was not a sufficient interest to be placed as a bulwark for the protection of the interests of the people, who, to an extent 40 times as great were interested in the cost of the construction.

That being the case, and I think it must be taken as clearly established, surely when we are in that position, surely when we have little enough protection at the best, it is the duty of this House to see that that protection is exercised in the most liberal possible degree. Surely the action of the Transcontinental Commission should have been not antagonistic to the limits of the arbitration, they should have taken a position all along in favour of the widest possible scope for that arbitration board. But when they refuse to take that position, it is the duty of the House to take it for them and to investigate the matter which they refused to investigate. The Transcontinental Commission all through these proceedings should rightly have been looked to by the people of this country as ranging themselves in all matters of dispute in favour of the people as against the contractors, but they have ranged themselves on the opposite side and in every dispute that has occurred have stood up alongside the contractor and fought his battles and the people's interests have been left to take care of themselves. We do not represent the Transcontinental Commission or the government, we represent the people of Canada. They are our clients alone, and unless the light is let into them through the instrumentality of the resolution of the hon. member for South Simcoe it is never going to be let in, absolutely no light can be let in by the resolution of the first minister and no member on either side can show how there is any possibility of the slightest pretense of investigation under it. As this parliament is constituted, the House of Commons should have the interests of the people and no other at heart, the people are their clients and they should have no other clients. It is our duty to see that they know the facts, and they knowing the facts we can rely on their intelligence.

Hon. JOHN HAGGART (South Lanark). At this late hour I shall try to be as brief as I possibly can in discussing this question. What are we discussing? A resolution of the right hon. gentleman the leader of the government purporting to make inquiries into certain charges made by one Hugh D. Lumsden, engineer in chief of the Transcontinental railway, in which he uses certain words which I had better read. He says:

> That neither the general specifications nor my instructions regarding classification have been adhered to, but on the contrary large amounts of material have been returned as solid rock, which should only have been classified as loose rock or common excavation, and material has been returned as loose rock which was, or could have been handled by ploughing or scraping.

He goes over a lot of charges in which he accuses his subordinates of not carrying out his instructions. Why does not the right hon. gentleman leave that to the committee to inquire as to whether the allegations of the chief engineer are true or not? He carefully avoids it. Look at his resolution. What is it? It says:

> And whereas, while this House deems it not desirable to take any action which might prejudice the position of either of the parties to the arbitration proceedings now in progress between the Grand Trunk Pacific Railway company and the said commissioners, yet the said recited allegations of said Hugh D. Lumsden, stated by him as the reasons for his resignation of the said position of chief engineer, are in the opinion of this House of such great public interest.

In the opinion of this House it is of great public interest whether a subordinate carried out his instructions. The gravamen of the charge is that the country is being robbed by over-classification on certain of the work, and that is the charge made by Mr. Lumsden in his letter to the commissioners, yet this House is debarred from inquiring into it. Why? Because an arbitration board was provided under the Act and the question is, as the hon. gentlemen who have spoken from the other side of the House say, sub judice; as we had given powers to this arbitration, or

at least delegated them, we should not inquire into the classification or the question whether there has been over-classification or not. These questions are not to be considered at all. What a farce appointing a committee of this House for the purpose of inquiring whether some subordinates of the chief engineer had performed their duty or not. That is all that the right hon. gentleman is willing to submit to the House for its consideration. A greater farce never was heard of in this House. He could not get past the fact that his chief engineer, the party selected by him to superintend the construction of the Transcontinental railway, was obliged to state that there was over-classification, or, in other words, robbery of the country.

Let us first look at the manner in which an estimate as to the probable cost of a railway is prepared. The hon. gentlemen stated that a specification had been prepared for this work by his deputy minister and by the engineer in charge of the Grand Trunk Pacific. I think they put their heads together and consulted some United States works as to what the proper specification should be. I have not the slightest doubt in the world that the specifications provided by them are proper specifications. I am perfectly content, too, that the interpretation in the first instance put on them by Mr. Lumsden, that even his amended interpretation after the opinion of the Minister of Justice had been obtained, was perfectly in accordance with what is correct. If these instructions were carried out, we would have honest construction of the Grand Trunk Pacific. An estimate of the cost of the construction of the road is made by engineers. Engineers are employed to locate the road. When the road is located, they say that there may be mistakes in reference to the quantities along the line of road. They examine it most carefully, test pits are sunk at every part of the road, and the variation ought not to be more than the amount the Minister of Railways said, 20 per cent. It never is 20 per cent with true engineers. They ought to know within 20 per cent anyway every piece of rock, every piece of loose rock, and every piece of earth upon the road. That is demanded by the Minister of Railways. Under these estimates of quantity the department lets contracts, and strange to say in this case the same parties who located the road, as I drew from the Minister of Railways, are the engineers who are on the construction. They furnish information to the country stating what the quantities are and from time to time as the work progresses and the measurements come in, the quantities are found to be in some cases three times in excess of what they estimated. Not a word from the Minister of Railways, not a word from the Railway Commissioners who have charge of the construction of this road, saying: How is it, gentlemen, you estimated certain quantities in reference to this particular construction at one time and now by your return you find there in some cases three times the amount? Not an explanation asked, no reason given. I drew the attention of the Minister of Railways a couple of years ago, and a year ago, to the fact that it was notorious that the quantities on this road greatly exceeded the estimates made of them. I asked whether this was by reason of the interpretation put upon the contract by the Minister of Justice. If it were so, I could not understand the position of the chief engineer. These contracts were let on specifications prepared by him. They were changed by the Minister of Justice putting a certain interpretation upon them. But why were not the specifications altered for the new contracts so as to carry out in these what was intended in the first place? I do not see this matter referred to in the correspondence. The simple fact is that the parties who had charge of the work for the government returned quantities largely in excess—as to cost—of the quantities estimated by themselves to be in the work. And no complaint was made by the government or by the commissioners; no report was made by the engineer, nor does any evidence appear as having been given before any commission with a view to exculpating those who were thus proven to be in error.

The Minister of Railways and Canals (Mr. Graham), and the hon. member for Pictou (Mr. Macdonald), in their remarks, found it necessary, in order to defend the government, to say: We have done all we possibly could, but powers were delegated to the Railway Commission and board of arbitrators and not to the Minister of Railways. I was careful, when the commission was appointed, to state that the responsibility of the minister to this parliament should not cease, that whatever commissioners or arbitrators were appointed, we would not divest ourselves of authority for this purpose. We may have delegated our authority to a certain extent for our own convenience, but the ministerial responsibility must always continue. The member for Pictou asked us: What has the Minister of Railways or the head of the government to do with the question whether classification is right or wrong?—the matter is referred to the arbitrators to decide the matter according to the law, and by that we are all bound. But the doctrine I laid down is that this House goes to the minister direct. The minister can exculpate himself by justifying the action of his subordinates and showing that the calculations have been correctly made.

The hon. member for Carleton (Mr. Carvell) dealt with the tender question of the arbitration between the Grand Trunk Paci-

fic and the government in reference to this work. I may be wrong, but in my judgment the arbitrators had nothing to do with deciding any question arising between the contractors and the government. The only questions that the arbitrators can decide, and the only ones intended to be referred to them under the Act, are disputes between the Grand Trunk Pacific Company and the government in reference to the construction of the road. The power of decision of matters between the government and the arbitrators is entirely with the government. I might read the statute on this subject, but instead I will read from the report brought down a section embodied in the contract which the government have let:

> The engineer shall be the sole judge of work and material in respect of both quantity and quality, and his decisions on questions in dispute with regard to work and material, shall be final.

No arbitration is referred to there.

> No extra additional work or changes shall be deemed to have been executed, nor shall the contractor be entitled to demand payment for the same, unless the same shall have been executed to the satisfaction of the engineer.

Thus, the Railway Department has entire control over any dispute between the contractor and the government, and the only questions the arbitrators have to deal with are questions arising between the Grand Trunk Pacific and the government in reference to the construction of this road.

Now, why are we asking this inquiry? It is one of the most important that has come before the House. We were promised the construction of this road for $53,000,000. The Minister of Finance states that, in giving this estimate, he did not speak on his own authority but on that of the engineers. But the minister is responsible to this House and he has no right to hide himself behind the officers of the government. If an officer of the government makes a misstatement to him, it is his duty to correct that officer, to suspend him, or, if necessary, to dismiss him. The statement was prepared by Mr. Schreiber, prepared on certain quantities, furnished to his department by the location engineer. I have looked carefully over the returns, and I find the total prism quantities are less than the amount found by actual construction of the road. I think that in the case of every contract let on the Transcontinental Railway, the locatees of the road made the quantities a little in excess of what has been found. What, then, is the difficulty? It is on the question of classification. If you have a million yards of earth to take out, and, instead of classifying it as earth, you classify 700,000 yards as loose rock at 50 cents, instead of at 25 cents for loose earth, or solid rock at $1.50, the difference is very serious. But where the government is responsible, and what we want to inquire into is as to these changes of classification. We want to inquire whether there has been falsification of the classification or not. That is the only real question. The question before the country is not whether the country has received good work. Why go to the trouble of surveying, and locating a line, taking out the quantities, preparing specifications and letting contracts if we are not allowed to inquire afterwards whether the expenditure has been in accordance with the contracts, and not only whether the country has got good work or not. The question of honour, of proper management of the public works is far above every consideration of money value. Honour should never be linked with dishonour. We ought to have in our public men honour and reputation. No country can exist unless it has the means of knowing that the money entrusted to the care of the government is spent in the interest and to the honour of the country. What we want to investigate is charges that have been rife from one end of the country to the other. It is the duty of the Prime Minister and the Minister of Railways to assist the opposition in finding out whether there has been a proper and honest spirit, an economical spirit in the expenditure of public moneys, and whether contracts have been carried out properly or not.

That is his duty; we ought to be assisted in that. Do not burk the inquiry. We do not want an inquiry to investigate even the charges made by Mr. Lumsden, we want an inquiry as to whether there has been over-classification or not. But the Prime Minister says we are simply to inquire whether the charge made by Mr. Lumsden against his subordinates is correct, whether they carried out his instructions. You would think that the inquiry should give us the right to look into the question of classification. But no, the right hon. gentleman does not intend anything of that kind, we are to be completely debarred from going into the question of over-classification. Now, I think the House will agree with me that an inquiry should be made into these charges, which are rung from one end of the country to the other. They are self-apparent upon the papers brought down. Is there not a prima facie case when you see 600,000 yards of solid rock in a contract increased to 1,200,000; when you see loose rock multiplied in quantity three or four times; and when, to make up the quantity taken from the prism, they have to reduce earth excavation reduced to the standard of rock? Then the hon. member for North Grey (Mr. Middlebro) made a statement which, if true, bears evidence of fraud committed upon the government. He says that on some portions of the line where there

have been excavations returned as solid rock, the slope upon that excavation is one and a half to one. That very fact shows that there was earth present, they are passing through earth. If that statement is correct, it is evidence sufficient to convict the engineers of having returned clay instead of rock. I shall have another opportunity of discussing these questions. The hour is late now, and I know the House is anxious to have a vote. But for the honour of the House, for the honour of the country, let us not be debarred from making an inquiry into the charges which are specifically made in this House. Mr. Lumsden has made charges of fraud, of overclassification on the part of his engineers, who refused to follow his instructions, which sometimes amounted to two-fold or three-fold actual quantities. Do not prevent the opposition from exercising the right of making this inquiry, in order to justify themselves before the country. If we are refused it will be worse for the government. I state here in the papers brought down the evidence is so conclusive that fraud has been practised upon the government, that the government should hasten to inquire into the matter. The Minister of Railways himself stated that the location of this road was under the charge of a certain class of engineers. They reported the amount of loose rock, the amount of solid rock, and the amount of clay excavated that would require to be taken out; and these same engineers, be it remembered, are now engaged in the construction of that railway. There has not been a proper tab kept upon the excavation, there has not been proper reports made from month to month to the department. The department ought to have known that the payments were largely in excess of the estimates. But no inquiries were made, the chief engineer is not even consulted, even those gentlemen who made the estimate are not asked to explain the difference, and the poor country has been left entirely at their mercy.

Mr. T. W. CROTHERS (West Elgin): There are one or two matters in connection with this question which seem to me of considerable importance, and which I have not heard discussed during this debate. Even at this late hour I take the risk of wearying the House for a few minutes to bring these matters to its attention. I read the observations made by the Prime Minister in introducing this motion; I had the advantage of hearing the somewhat lengthy and heated address delivered by the Minister of Railways; I listened to the hon. member for Pictou (Mr. Macdonald), and to the hon. member for Carleton (Mr. Carvell), and I have endeavoured to find some logical, consistent and bona fide position for gentlemen on the other side of the House to take on this question, and I must confess my inability to reach the conclusion that this motion is presented to the House with any sincere desire to preserve the interest of the people. Gentlemen who have spoken on the other side have given us quite lengthy addresses, all of which are equally applicable to the motion proposed by the Prime Minister and to that which has been proposed by way of amendment. Hon. gentlemen have put up a very plausible argument, I must confess; they tell us that this parliament, in pasing the Transcontinental Railway Act in 1903, provided that a board of arbitrators should be constituted composed of the chief engineer of the Grand Trunk Pacific Company, the chief engineer of the Board of Transcontinental Railway Commissioners, and, in the event of their being unable to agree, they should choose a third arbitrator. They call your attention to section 7 which provides for that board in these words:

It is hereby agreed that the specifications for the construction of the eastern division shall be submitted to and approved of by the company before the commencement of the work, and that the said work shall be done according to said specifications, and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and the chief engineer of the company, and in the event of differences as to the specifications, or in case the said engineers shall differ as to the work, the question in dispute shall be determined by the said engineers and a third arbitrator to be chosen in the manner provided in paragraph 4 of this agreement.

So in that section of the agreement this parliament has provided a board of arbitrators to determine questions of a certain character that may arise. Gentlemen opposite have told us time and time again that the people are safeguarded by that board of arbitrators; that board, we are told, is composed of an independent, high minded body of experts. Now, Sir, I have just noticed, during the last few minutes, a communication from the commissioners to the members of this board, which is really astounding, and alarming, and startling, if you stop for a moment to look at it. It is contained on pages 28, 29, 30 and 31 of this return. In it the commissioners undertake to criticise, discipline and intimidate this board of arbitrators. One would scarcely believe it possible. Let us see, at the bottom of page 30, what this communication says. It comes from Mr. Parent, chairman of the commission, and P. E. Ryan, secretary.

Resolved, that the secretary be, and is hereby directed to write to the three arbitrators, transmitting a copy of the letters of District Engineer Doucet and notes of Assistant District Engineer Huestes, each dated 23rd June instant; a copy of the letter of Messrs. Macdonell and O'Brien, dated 24th instant; a

copy of the letter of Mr. J. D. McArthur, dated 19th instant, and a copy of report of District Engineer Poulin, dated 22nd instant, all relating to the proceedings of the arbitration tribunal——

Here you find these commissioners forwarding to the arbitrators letters signed by these subordinate engineers and by two or three contractors. What do these commissioners then say?

—and to say that the commissioners object to and protest against the proceedings of the arbitrators as being improper and illegal, for the following reasons, viz.:—

(a) That they were based in whole or in part on the said draft agreement of May 14, 1909, which had been rejected, and which had no existence in fact;

(b) That the examination of the work was of a hasty, insufficient and superficial character.

Fancy a person interested in litigation before a court having the audacity to write a letter of that kind to the court to criticise the conduct of the court. Here they say that the examination made by these arbitrators, this independent tribunal, provided by this parliament for the protection of the people of Canada was hasty, insufficient and superficial, and they undertake to discipline and intimidate it. But, that is not all.

(c) That the engineers on the line who classified the work were not afforded a sufficient hearing and an opportunity of presenting evidence.

Further:

(d) That the contractors were not afforded an opportunity of showing cause; and further to say that the commissioners insist, in the public interest, that the proceedings of the arbitration tribunal shall be exhaustive, final and conclusive; shall cover all the objections filed on behalf of the Grand Trunk Pacific Railway Company, and that the report of the arbitrators, when made, shall be supported by substantial evidence, including details of quantities.

There is the communication sent from the commissioners to this board of arbitration, alleged by gentleman after gentleman on the other side of the House to be composed of competent experts, virtuous arbitrators, independent men, and yet intimidated by this board of commissioners. Did anything of the kind ever occur in a civilized community before? I read this because the importance of it warrants it. We find these commissioners appointed by this government, criticising, disciplining and intimidating an independent board, constituted for the purpose of safeguarding the interests of the people.

Mr. SPROULE. And by a statute.

Mr. CROTHERS. And by a statute. That communication was brought to the knowledge of the Minister of Railways and Canals by a letter sent to him by the secretary of the commissioners, dated the 26th June. What step did the Minister of Railways and his colleagues take in regard to this? Did they point out to these commissioners that they had drifted outside of their jurisdiction, that they had no legal right and that it was simply an outrage for them to attempt to intimidate an independent board of arbitrators appointed for the protection of the people of the country? Not one word, not one line do we find coming from the Prime Minister to say to these commissioners: You must not interfere with this board, this board has been appointed by the parliament of Canada to safeguard the interests of the people; it must be held to be an independent board and you must not attempt to dictate to it. Did the right hon. gentleman send a single word of that character to this commission? Not a word. Did the Minister of Railways send a single word of that character, reprimanding or rebuking the commissioners for having taken that stand, for having attempted to pervert the judgment of this board of arbitrators, said to be independent, in the interests of the people? Not a single word. Is there any reason why a high minded gentleman like Mr. Lumsden should not resign his position when the government permitted the members of the commission to send him such an insulting letter as that? Could any gentleman having a grain of self-respect submit to any such position as that? You will notice that these commissioners are not writing the arbitrators—they would not be justified in doing that even—in the interest of the people, but they are writing them to influence them in the interests of the contractors. They say that the contractors ' were not afforded an opportunity of showing cause ', that ' the examination of the work was of a hasty, insufficient and superficial character,' and that ' the engineers on the line who classified the work were not afforded a sufficient hearing and an opportunity of presenting evidence.' That is what we get from the commissioners. One of the primary reasons for this is that the commissioners were appointed for political purposes and had no special qualifications for the office. A great deal of this difficulty has arisen from the fact that these commissioners knew nothing of the construction of railways. They were men who had been appointed by reason of political services rendered to the government and there was added to that commission a few weeks ago a very estimable gentleman, a member of this House, but I never heard that he ever had had any experience as an expert engineer or that he knew anything about the construction of railways. Do the railway companies who are striving to get large dividends for their shareholders ap-

point political friends to positions of trust as managers of their companies? No, you will find that the managers of the large railway corporations are men who have come up from the bottom, who know every step in the process of construction and operation of railways. These are the men who are placed in these high positions to manage these great railway corporations and they are men who know something about it. But here we have a commission appointed who know nothing about the positions that they are called upon to fill, but who are appointed by reason of political services rendered to the government which is in accord with most of the appointments made by this government. I submit that it would have been a more proper position for the government to have taken to have said to Mr. Lumsden: We will not accept your resignation, we will dismiss the commissioners who had the audacity to perpetrate this outrage upon the people in attempting to intimidate you in the position which you occupy. But, instead of doing that what do we find the government doing to-day? We have the government saying to this House and to the people of Canada that they have lost confidence in their chief engineer, not that they have lost confidence in the commissioners, not that they have lost confidence in any of the subordinate engineers, but that they have lost confidence in Mr. Lumsden because that is what this motion means, if it means anything. It was said here by the hon. member for Pictou (Mr. Macdonald) that Mr. Lumsden had made a statement and that the government were going to appoint a committee to ascertain whether Mr. Lumsden was telling the truth or not. At page 2483 of 'Hansard' it will be found that the hon. member for Pictou, in a speech which he made in this House yesterday, used the following words with reference to a statement made by Mr. Lumsden:

> My right hon. friend the leader of the House asks this House to investigate that statement and to ascertain whether it is a fact or not.

That is the position they take. Here was the chief engineer of the largest project that this country has ever undertaken, appointed by this government, making a statement in reference to several of his subordinates. His statement alone should have secured the dismissal of these men instanter. Instead of that we have the government saying: We do not believe Mr. Lumsden; we are going to appoint a committee to ascertain whether the statement he has made is true or not. Is not that the position? They accept his resignation. I have here a copy of this motion proposed by the Prime Minister, and in it he cites portions of two letters written by Mr. Lumsden, in which letters Mr. Lumsden states, speaking of his engineering staff generally, he says:

> In view of the general disregard of my instructions and having lost confidence in the engineering staff I have concluded to resign my position as chief engineer.

Is it possible to conceive that Mr Lumsden sent in that resignation without having been misused not only by the commissioners but by this government. We would like a committee to ascertain what Mr. Lumsden said to the government in regard to the manner in which he had been treated by the commissioners, whether he called the attention of the government to this intimidation practised upon him by the commissioners and if so what answer he got from the government. Did the government tell him: We are going to stand by the commissioners, to stand by the engineers, to stand by the contractors even if you go down. I cannot conceive of his resigning without his having some intimation of that sort from the government. In the second letter he says:

> I beg to state that this does not apply to the whole staff but applies only to the portion of the staff who were responsible for the measurement, classification, supervision and inspection of considerable portions in district 'B' and east of Rennie crossing in district 'F,' lately gone over by me.

What Mr. Lumsden says is that he has lost confidence in these engineers in respect to their measurement, classification, supervision, and inspection. Now, the Prime Minister proposes a committee to ascertain whether that statement is a fact or not. We are told that the board of arbitrators is the only tribunal properly qualified by expert knowledge to determine questions of measurement, classification and inspection, and yet the Prime Minister proposes to appoint a committee of three partisans to determine whether the statement made by Mr. Lumsden be true or not. I would like any man to explain to us how a committee of five are to investigate and ascertain whether Mr. Lumsden was justified in making that statement or not, without making an inquiry into the measurement, classification, inspection, and supervision. I submit to you Mr. Speaker, that it would be utterly impossible for any committee to make any inquiry with a view to ascertaining whether Mr. Lumsden was justified in saying that these men had made over-classification, without having inquired respecting that classification. That is as plain as two and two are four. And yet we are told by hon. gentlemen opposite that this committee will not be permitted to ask any questions respecting the supervision, classification, or inspection. Then, how is the committee to ascertain whether this

classification and inspection was properly or improperly done. Of course it would be utterly impossible. It seems therefore as clear as the noon day sun that the proposition to appoint this committee is not made with a sincere desire in the interests of this country but is suggested for the purpose of making nice reading campaign literature for distribution among the people. Mr. Lumsden was a qualified man, a man of knowledge and experience and capacity and integrity, or he was not. Hon. gentlemen opposite now say in substance: We doubt whether he was or not, because we are going to appoint a committee to ascertain, as the hon. member for Pictou says, whether the statement he made was true or not. Now, if the position taken by the government in that regard be sound, that itself is a very good reason why we should investigate the whole matter, because Mr. Lumsden has been in office for years and if the government had no confidence in him and are not able to accept his word on a statement of that kind, then how are they to expect the members of this House and the people of Canada to accept without question what he has been doing for the last 4 or 5 years? And if he be a man of capacity, experience, and integrity, then his word should have been accepted at once by the government, and his subordinates who were accused of misconduct should have been dismissed at once—one or the other. Therefore I say that all the arguments hon. gentlemen on the other side have presented against the adoption of this amendment are equally applicable against the motion presented by the First Minister. A great many things arouse suspicion about the Transcontinental Railway. It has been iterated and reiterated that the people of this country were deceived by the government—I do not say intentionally—but certain it is that they were deceived and grossly deceived with reference to the cost of this great work. They were told by the Prime Minister and by the Minister of Finance that the whole road from Winnipeg to Moncton could be constructed for about $50,000,000. The government were then urged to take more time to become familiar with the project, and to get more information with regard to the character of the country through which the railway would run, but the Prime Minister told us that the archives contained material enough to make any member of this House as familiar with that country as he might be with his own home in the city of Ottawa. He told us he had mountains of information, and that there was no necessity whatever for getting further information with regard to the matter. The Minister of Finance yesterday gave the name of a gentleman upon whom he relied as authority for the statement that it would cost only $51,000,000.

I submit to you, Mr. Speaker, and to the House that one of two things must exist with reference to the estimates that were made before this country embarked on this project, and also with reference to the estimates that have been made on the different parts of the road that have been let to contractors—either the engineers who gave that information were incompetent or they lent their hand to deceiving the people of this country. There is only one alternative. Would any one attempt to make you believe, Mr. Speaker, that it was impossible for a competent engineer to get within one-third of the cost of the road, and yet it is admitted now that this road will cost three times as much as we estimated. What do we find with reference to these estimates as detailed to the House yesterday by the hon. member for East Simcoe (Mr. Lennox). We find that in contract after contract, he took up, the alleged measurement exceeded from 75 to 520 per cent more solid rock than the engineers estimated, and that in every case the amount of solid rock grew enormously while the amount of sand and clay diminished enormously. I submit, Mr. Speaker, that in this respect, and I submit it guardedly, one of two things must be admitted: Either the engineer was incompetent or he was dishonest. One could very easily understand that an engineer may make a mistake and over estimate one mile and under estimate the next, but every one knows that if there are such variations they would be found on both sides if the estimate were made by an honest and competent man. But here we have hundreds of miles and in every instance the alleged under estimate of from 200 per cent to 500 per cent varied on the one side only. Go out to the plain, honest people of this country whether Liberals or Conservatives and tell them that, and I submit there is not a sensible man amongst them who will accept it without very strong suspicion. He will likely say if he is a Liberal: I had confidence in the government when they made that statement to me four or five years ago, I have confidence in the government yet, there must be something wrong with the commission appointed to manage the construction of the railroad or there must be something wrong with the engineers who were appointed to carry out the instructions. I have not lost confidence in the government, I believe they were honest at the time they made that statement to us; you cannot blame them much. But they will say further: The cost of the railway is so enormously beyond what they told us; the fact of these commissioners

not being experts, the fact of their being appointed for political purposes the fact that they know nothing about the construction of railways, the fact that they have attempted to intimidate the independent and righteous board of arbitrators that we supposed was standing between us and the contractors, all these things have established in our minds a well grounded suspicion that things are not right, and unless our leader, unless this government which we have been following for many years will give us an impartial, and a fair, and an open, and full investigation of this matter from the top to the bottom we will lose confidnce in the whole outfit. Why, the very first thing I see in this return is a letter dated 7th October, 1907, written by the assistant chief engineer of the Grand Trunk Pacific, from which I quote:

Let me give you some illustrations.

Take the cutting from station 5818 to 5826, estimated 71 per cent solid rock and 29 per cent loose rock; slopes taken out 1½ to 1.

Showing that this is not solid rock because if it were there would be no such slopes, for even if the solid rock stood up perpendicular it would be safe. But where there is sand and earth they have to slope back 1½ to 1. And the engineer of the Grand Trunk Pacific says:

Very little ledge in this cut. Some large boulders, but a very large percentage is common excavation.

Then again he says:

Station 5842 to station 5850. Classified 94 per cent solid rock, 6 per cent loose rock. Slopes taken out 1½ to 1. Solid rock over classified at least 100 per cent.

Then again he says:

Station 5866 to 5875. Estimated 80 per cent solid rock, 20 per cent loose rock. No rock in place in this cut.

No rock whatever although this classification gave 80 per cent solid rock and 20 per cent loose rock.

Mr. FOSTER. Is that an engineer who says that?

Mr. CROTHERS. Yes, it is an engineer who says that. That letter was written October 7, 1907, and these same engineers are operating on the road to-day; notwithstanding the finding they thus made, they are still in the employ of the government and still giving estimates on the construction of that road. Is it any wonder that the members of this House and the people of this country are demanding an impartial investigation of this whole matter from the beginning to the end.

Station 5882 to 5901. Estimated 78 per cent solid rock, 22 per cent loose rock. A large amount of this cut wasted with slip scrapers and ploughing being done with two horses. There are hundreds of yards of earth here without a stone, large or small.

Station 6030 to 6046. Estimated 40 per cent solid rock, 10 per cent loose rock. This is the large sand cut west of O'Brien's camp. Of the 95,000 yards moved to August 31 in this cut at least 80,000 yards were pure sand.

And yet these engineers are on the work to-day and hon. gentlemen opposite say: 'We boast that we have the same engineers now that we started with, we have kept them all along.' The government got notice of this in October, 1907, that is two years ago last October, and they are there still.

Station 6071 to 6078. Estimated 99 per cent solid rock, 1 per cent loose rock. Very little solid rock in place. Slopes taken out 1½ to 1.

I would have made it 100 per cent. The slope of 1½ to 1 indicates sand. They did put in 1 per cent for loose rock and 99 per cent for solid rock. Yet these engineers are on the work still and the Commissioners are still in the employ of the government, notwithstanding these Commissioners have kept these men at work all this time, notwithstanding that these Commissioners have been intimidating, criticising and stultifying the righteous and independent board of arbitrators appointed by this House for the protection of the people,—they are all there yet, they will stay with us until the end, all of a piece, from the right hon. the Prime Minister down, they all must be kept in order that they may finish their work.

I have another half-page of that letter making similar objections which I might read. But let me give one or two words that are very significant:

As before stated, these over-classifications are not made through error in judgment nor upon the decision of the resident or division engineers, who are fully acquainted with the character of the work, but by arbitrary orders from their superior.

Who were these superiors? This letter was written to Mr. Lumsden, the chief engineer, and it certainly is not referring to him. Who are the superiors? That statement is made by Mr. Woods, the assistant engineer of the Grand Trunk Pacific two years ago last October. They are still with the Commission and yet the right hon. gentleman proposes a resolution here to appoint three partisans—I do not suppose there will be more than two from this side—to ascertain whether this is so or not, whether Mr. Lumsden was telling the truth or not. How can one of us go out on the streets to-morrow and meet a fellow citizen without a blush of shame on his cheek? If this proposition contained in this amendment be defeated this evening, what will it be saying to the people of this country? It will be saying: 'We refuse to investigate charges of this kind, saying that your moneys are being sacrificed by the million,

but we refuse to investigate.' What are we to say? The Minister of Railways was asked two or three times, several others have been asked what this committee suggested by the Prime Minister is to inquire into. The hon. member for Carleton, N.B. (Mr. Carvell) suggested two or three questions that might be asked of Mr. Lumsden if he were in the box before that committee. One would be: 'Did you find these men honest?' He might answer: 'Yes, or no.' He might be asked: 'What are the names of the men?' He might answer that.' He might be asked: 'In what respect did you find them dishonest?' Then we would hear: 'Hold, you must not answer that question, I object.' They told us so in so many words, this committee would have no right to investigate anything of that kind, they have said: 'This has been relegated to a board of arbitrators.' It has been relegated to a board of arbitrators under the intimidation of the political partisans who constitute that Commission, who are labouring in the interests of the contractor as shown by this letter. What are they to inquire into? We have been told by hon. gentlemen on the other side, in speaking against the amendment, that it is only expert engineers who should inquire into such matters; but you have the statement of the chief engineer of the Commission, in the person of Mr. Lumsden, and the Prime Minister actually proposes to this House and to the country, that he will set aside the statement of that celebrated and distinguished expert and leave it to three of his partisans behind him. I submit that I do not think there is a single hon. gentleman in this House who, if he were left to his head and his heart and his patriotism, would not say that there has been a sufficient case made out to warrant this House in appointing a commission or committee or some independent tribunal, to investigate this matter from the top to the bottom.

Nobody, I say, has been able to tell us what this committee is to investigate, and how they are to carry on their work. I submit that the very recital of the motion proposed by the right hon. Prime Minister shows that this committee could not do this work without inquiring into the matters of classification, supervision and inspection. So that if what has been said by hon. gentlemen on the other side in opposition to our proposal to have the whole matter investigated be well taken, it is just as well taken as against the motion proposed by the Prime Minister. I was very much surprised to find in the remarks of the Prime Minister a statement to the effect that he himself doubted Mr. Lumsden. I have never heard that there was a word to be said against Mr. Lumsden. He seems to have had the confidence of this government at the time he was appointed and for many years thereafter. There is no suggestion that I have ever heard that he was a man unworthy of confidence. And yet we have the Prime Minister arising in his place in this House and suggesting that this statement made over his own signature is not to be accepted; the Prime Minster prefers that that statement should be inquired into by the honest, intelligent, independent non-partisan three gentlemen sitting beside him. Did any one ever see such a spectacle?—a man of Mr. Lumsden's ability and experience and standing in the community set aside, his word questioned and the hon. member for Pictou saying: We want to know whether the statement he made is true or not. And we are to have the matter investigated by three gentlemen sitting behind the Prime Minister, all of whom are looking for promotion, which they can get only through the assistance of the Prime Minister himself. I shall not take up more time of the House, but I cannot emphasize too strongly the point I started out with. I want to call the attention of the House, and particulary of the people of this country, to the fact that the tribunal provided by the statute of this parliament in 1903, and section 7 of the agreement to stand as a safeguard between greedy grafters and dishonest contractors and the people, this government has permitted the commissioners to discipline and criticise and intimidate, not in the interest of the people, but in the interest of the contractors who are trying to bleed the people.

Mr. PIERRE EDOUARD BLONDIN (Champlain) (Translation): I regret, Mr. Speaker, that I should be a party to prolong this debate to any extent, and, to use a phrase I have heard many a time at the opening of lengthy addresses, that I should take up the valuable time of the House; but, I would deem it on my part a breach of duty to give a silent vote on such a question.

Viewing the matter in the most unselfish spirit and apart from all sectional or party considerations of any kind, I am satisfied, and thoroughly so, that a general inquiry is desirable, not an inquiry narrowed down to a single district, or dealing merely with quantities, classification, supervision and inspection; but an inquiry concerned with the methods followed in connection with the building of the National Transcontinental, east section, from one end of the line to the other, and I contend that public opinion demands it.

On the above grounds, I ask for an investigation of a general, fair, public, and thorough character, untrammelled by legal technicalities or political bias, as laid down in the amendment moved by my hon. friend from Simcoe (Mr. Lennox); and not a summary, curtailed investigation, held behind

closed doors, hide-bound and out-of-date, such as is looked for in the resolution submitted by the right hon. Prime Minister.

Considering the grievious nature of the charge made by Mr. Lumsden, considering the high standing of that gentleman, his unassailable reputation, his ability and prestige which no hon. member is justified in questioning; considering the alarming and inexplicable discrepancy between the estimated cost of the Transcontinental—a mere trifle it was to be, these hon. gentlemen assured us at the outset—and the monstrous amount it actually comes to and will grow to in the end, I say, Mr. Speaker, that a general inquiry is in order; and all that these hon. gentlemen on the other side have said, satisfies one as to the slackness of their principles of political morality and fairness much more than it impairs the force of my statement.

After listening to their expressions of opinion, I wonder, Mr. Speaker, through what perversion of the most elementary principles of logic—not to say honesty—these hon. gentlemen feel an inclination, and apparently rejoice in directing from the bitter shafts of malice and suspicion against the honest and faithful servant who has been courageous enough to fulfil his duty, though the loser by it, in the sole interest of the country; and how is it that their goodly disposition goes wholly to those whom a prima facia case exists, and who should be the object of suspicion. However, my short stay in this House has taught me that this government has tender mercies for their prevaricating political friends, much more so than for honest judges; and whenever, as the result of an inquiry, graft and extortion have been brought to light, the guilty parties have always found in this House ministers willing to discredit and even disgrace tribunals in order to better absolve and clear those whom these tribunals had convicted.

By the way, let me say to these gentlemen on the other side who are so fond of scrutinizing old-time scandals under Conservative governments, that whatever scandals have been unearthed at the time. Conservative governments have never endeavoured to prevent investigation in regard to them. And to the credit of those who then administered public affairs, these verses of an old poet might be appropriately recalled:

Et, quand nos vieux héros avaient du mauvais [sang,
Ils eussent, pour le perdre, ouvert leur pro- [pre flanc.

Now, what other object could there be to this resolution introduced by the right hon. gentleman, if not that of once more throwing into disrepute the man who has brought forward the charges, by questioning the truth of his statements? I say, Mr. Speaker, that we are not justified in questioning the truth of Mr. Lumsden's statements, any more than we are justified in questioning the truth of statements made by a minister occupying a seat on the Treasury benches. I say that, as a matter of mere common sense, we are not justified in questioning the truth of Mr. Lumsden's statements. I say that his charges should be considered true; and, if they are true as regards one district, if graft and over-classification have taken place in one district, we are justified in believing that abuses of a similar kind have been resorted to in other districts; and consequently, a general inquiry should be instituted at once, in order to put a stop to such leakage in the Treasury, to this scourge which is ruining the country.

Will the government contend that they have in hand all the necessary information as regards other districts, and that an investigation would not reveal anything of interest? If their contention be such, I may be allowed to say that they are in error, and here is a proof amongst a thousand. Last year, on the 12th of May, I put the following question to the hon. Minister of Railways and Canals; it will be found on page 6603 of Hansard:

What is the total amount of damages inflicted yearly up to date by floods to the works of the National Transcontinental railway below La Tuque, and between the latter place and Ludger Noel's creek?

The answer, in no way candid, was as follows:

No damage whatever.

Well, Mr. Speaker, I have personally gone over the grounds and seen for myself, I have questioned people on the spot, and I state that the hon. minister has been shamefully deceived, and, as a result, has himself deceived the House; damages for a very large amount have been inflicted.

Now, Mr. Speaker, here is a condition of things which a general investigation would bring to light. But is not the government rather anxious to prevent any light being shed on the subject? I am inclined to believe it, and if such be the case, it is in order to congratulate it on its wisdom, its fears as to the result of an inquiry which would enlighten public opinion are indeed very well grounded.

Apart from the charges which come in from all sides, apart from those mountains of information—to make use of a term of which the right hon. gentleman is fond—an inquiry would enable me to show up, for the enlightenment of public opinion—which is becoming anxious and suspicious, and rightly so—what justification there was to selecting a swamp, absolutely a swamp, as a yard for the Transcontinental, in pre-

ference to the magnificent site of La Tuque, which was in every way from the first designated as the most suitable location for that purpose.

The hon. chairman of the Transcontinental Commission, in the course of a journey to La Tuque, had not conceded his admiration for this last spot and he could not explain to himself how another might be chosen.

The chief engineer of the Quebec section, Mr. Doucet, had also been inclined, at first, to prefer this last spot, and the hand of the one or of the other of these gentlemen had drawn the circuit plan on a map of La Tuque.

Why have they suddenly changed their opinion, against the laws of common sense, of economy and of civil engineering? That is another point which might be made clear by the means of a general inquiry.

But, Mr. Speaker, I understand that, owing to the nature of this discussion, I am precluded from entering into the details of those questions. I venture to think however, that those few facts, added to the facts already mentioned by the hon. members who spoke before me, will, at least, show the country, if not the government, that an inquiry must be had and that the conclusions of the amendment proposed by my hon. friend the member for Simcoe, should be adopted.

Mr. R. L. BORDEN (Halifax). The subject has been so thoroughly debated that I do not intend to detain the House for more than a minute or two. It does seem rather remarkable that six months after the letter of Mr. Lumsden announcing his resignation and the causes for it had been written, it should have occurred to the commission and the government for the first time that an investigation was necessary. The tenor of Mr. Parent's leter, which was read by the Prime Minister in introducing his motion, indicates that the nature of the charges made by Mr. Lumsden absolutely necessitated some investigation. But it also seemed to indicate that the necessity for an investigation first occurred to the minds of the members of this commission, and to the mind of the Prime Minister, about the 30th of December, 1909. Well, that seems a somewhat curious circumstance, but it is absolutely consistent with the course which the government has since taken, because the motion which the Prime Minister has introduced might more properly be styled a motion for the purpose of preventing any investigation into the charges that have been made.

The whole case that has been presented to the House by the hon. member for North Simcoe (Mr. Lennox) with a great deal of ability, and by other members who have followed him with similar ability, that case up to the present time remains absolutely unanswered by any hon. gentleman on the government side of the House. Does the Prime Minister realize, does the Minister of Railways and Canals realize for a moment the position in which they are placed before this country? Here were estimates made by men whom they still retain in their employ, estimates made according to the manner of engineers, by going upon the ground, surveying it, making borings, sinking drills, by ascertaining in every way that is known to them, just what the nature of that ground was. Now, there is no question about that. Does the Prime Minister deny that? Does the Minister of Railways deny that? There is no question about it, no question has been raised in the House about that up to the present time. What is the result? When the returns are made by the same engineers, or some of them, who made these original estimates, what is the result when the work actually done comes to be placed before the government, or before this commission, and paid for out of the public treasury, with the approval of the National Transcontinental Railway Commission? The result shows that the estimates thus made by these men, or under the direction of those for whom they are responsible, were so absolutely absurd and misleading as to justify the dismissal of every one of those men. What more, Mr. Speaker? The position further is that charges of the gravest possible character have been made against some of those men by no less a person that Mr. H. A. Woods, the assistant chief engineer of the Grand Trunk Pacific Railway Company. This letter has been read in part, I do not know that it has been placed upon the 'Hansard' in full; and although the hour is late, I propose to place every word of it upon the 'Hansard' in order that the people may see what has been before the government of this country for more than two years. It is dated Montreal, October 7, 1907.

Classification of Material, District B.

Mr. Hugh D. Lumsden,
Chief Engineer, Eastern Division, National Transcontinental Railway,
Ottawa, Ont.

Dear Sir,—At the request of District Engineer Armstrong, he was furnished recently with a statement of classification for the heavier work on the above mentioned section which were, when given in detail so different from his expectation that he requested the writer to visit the work.

During the past week we passed over portions of the work from the Batiscan river west for 15 or 20 miles, and later, from miles 115 to 132.

With reference to the former portion, the classification was given in distances of from 3 to 5 miles, and as we did not have total quantities of graduation, could not judge with reference to any particular cutting, although

percentages for entire distances seemed excessively heavy in both loose and solid rock.

With the latter portion we have detailed percentages for each cut and were greatly surprised at the allowances made for solid and loose rock. In nearly every case where the cuttings were not entirely all ledge, the estimate given for solid rock is double or more than double what it should be. In fact, the specifications had been entirely ignored and an excessive allowance made, not by reason of any error in judgment but, as I understand, by special instructions fron the assistant district engineer.

For two years they had under their eyes the statement of a reputable man, placed upon the work to guard the interests of the Grand Trunk Railway, with their assent, and who tells them that, by the direction of their own officer, that their specifications had been absolutely ignored and departed from. The Minister of Railways has met our arguments by saying that the specifications were good, by deigning no other answer whatever, because he could give no answer to the statements put forward by the hon. member for South Simcoe. Why, if the government had no answer ready, if they required time to investigate the truth of what the member for South Simcoe put forward upon his reputation as a member of parliament, they should have adjourned this debate until they were ready to give some answer one way or the other. We have heard something from geologists as to the way in which, in the by-gone history of the earth, through enormous pressure, or through the action of fire, sediment or other material was converted into rock of various kinds, but there is nothing in geological history which will account for the extraordinary speed with which pure sand and gravel have been converted into solid rock in this district. Does any man in this House, does the Prime Minister of Canada, venture to stand upon his feet and say that any adequate explanation has been given up to the present time of those statements which, if they are at all justified by the facts, indicate that the whole operation connected with the building of this National Transcontinental railway reek with corruption and mismanagement? One would think that the government would have instantly ordered a searching investigation as soon as that letter was made public. Let me tell hon. gentlemen in this House who were not here in 1907 that the whole of that letter was then produced, read and commented upon in this House, and an investigation demanded. The answer of the government was that there would be an immediate investigation to be carried out by experts under the provisions of the Act in 1903. Up to the present time no such investigation has taken place. I would like to read the rest of the letter, because it is important that it should be placed upon the records of this House. The letter of Mr. Woods proceeds as follows:

Let me give you some illustrations:

Take the cutting from stations 5818 to 5826, estimated 71 per cent solid rock and 29 per cent loose rock. Slopes taken out 1½ to 1. Very little ledge in this cut. Some large boulders but a very large percentage is common excavation.

Station 5842 to 5860. Classified 94 per cent solid rock, 6 per cent loose rock. Slopes taken out 1½ to 1. Solid rock over-classified at least 100 per cent.

Station 5866 to 5875. Estimated 80 per cent solid rock, 20 per cent loose rock. No rock in place in this cut. Many large boulders but a large amount of earth.

Station 5882 to 5901. Estimated 78 per cent solid rock, 22 per cent loose rock. A large amount of this cut wasted with slip scrapers, and ploughing being done with two horses. There are hundreds of yards of earth here without a stone large or small.

Station 6030 to 6046. Estimated 40 per cent solid rock, 10 per cent loose rock. This is the large sand cut west of O'Brien's camp. Of the 95,000 yards moved to August 31 in this cut, at least 80,000 yards were pure sand.

Station 6071 to 6078. Estimated 99 per cent solid rock, 1 per cent loose rock. Very little solid rock in place. Slopes taken out 1½ to 1.

West of the St. Maurice river.

Station 6391 to 6394. Estimated 46 per cent solid rock, 33 per cent loose rock. Sand cut with few boulders and possibly 1,500 yards ledge in bottom of cut not yet taken out.

Station 6493 to 6504. Estimated 20 per cent solid rock, 49 per cent loose rock. No evidence of any ledge and very large boulders. Nearly all sand.

Stations 6506 to 6512. Estimated 16 per cent solid rock, 44 per cent loose rock. This is purely a sand cut, with very few boulders. Upper slope nearly 100 feet high, material wasted into river. Certainly not 10 per cent of this should be classified.

Station 6522 to 6548. Estimated 26 per cent solid rock, 49 per cent loose rock. This is borrowed material from the side. Very little solid rock shown except what was used for blind drains but some large boulders not placed in embankment.

On account of heavy rains we were not able to go west of station 6600, but we understand that classification is made about as noted above.

In every case where cuttings are not entirely in ledge we find the material overclassified very largely. Mr. Armstrong has been able to visit this work at different times, perhaps quite as often as the assistant district engineer. His estimates and my own are not very different as to the amount of classified material and until he received detailed quantities he had no intimation that such heavy classification had been given. In many cases, particularly in sand and gravel cuts, he had supposed that no classification would be given, except perhaps for a few boulders as loose rock.

I am informed also that on the work east of St. Lawrence river heavy classification is being made in borrowed material where

ploughing is done with one team and material moved in slip scrappers.

As before stated, these over-classifications are not made through error in judgment nor upon the decision of the resident or division engineers, who are fully acquainted with the character of the work, but by arbitrary orders from their superior. To such classification as mentioned above, increasing the cost of the work to such an alarming extent we most seriously protest and respectfully request that either yourself or the assistant chief engineer visit the work and pass judgment upon the classification as made. Please note that the percentages given indicate the work done to August 31. We are not advised what the September estimate will be.

(Sgd.) H. A. WOODS.

Mr. Speaker, this return brought down from beginning to end fairly reeks with statements of that kind over signatures of reputable men, and although that was going on for nearly two years and a half the men who sit upon the treasury benches of Canada have been content to let that letter pass without any investigation. Sir, that is putting it altogether too mildly. Two years ago, when that letter was first brought to the attention of parliament and of the government, the Prime Minister of Canada and the men who sit on the treasury benches beside him, and the followers who support them in this House, had the audacity to vote down any investigation by parliament into these charges which are as serious as can be expressed in the English language in regard to this work. I think it will remain to the everlasting discredit of this government that these charges made in October, 1907, have been permitted to go until this 27th day of January, 1910, without an attempt on the part of this government to give them any investigation worthy of the name. All these men were retained in the employment of the government, and the only man dismissed is the man who dared to call attention to this state of affairs.

There is a great deal of force in the statement of my hon. friend from Elgin (Mr. Crothers) although I am inclined, if possible, to put it in stronger terms than he did, that the moment that extraordinary resolution of this board, passed on the 25th day of June, 1909, was brought to the attention of this government, the government would have done no more than its duty next day, on the 26th day of June, if it had dismissed every one of these commissioners. A more extraordinary performance by men supposed to be acting in the public interest I never heard of, and I do not think any hon. member of this House ever heard of, than to undertake, while this tribunal was dealing with this matter, to interfere, not on behalf of the public but on behalf of the contractors, to call the action of these arbitrators in question, and to do that apparently without giving them any right to be heard. If they were going to be tried, surely they had the right to be heard. That the engineers on the line classifying the work were not afforded a sufficient hearing and an opportunity of presenting evidence was one of the grounds of indictment against these arbitrators, and yet these arbitrators were tried, condemned and almost executed by these commissioners without apparently consulting them at all, or giving them an opportunity to place their statement against the statement of the district engineers as to the character of the work these arbitrators had done.

I would like to take up just one or two little matters in connection with the defence that was attempted by my hon. friend the Minister of Railways and Canals. That hon. gentleman has told us, in answer to the well-grounded argument of my hon. friend from South Simcoe (Mr. Lennox) as to the estimates, that railways in South Australia cost $37,250 per mile, in New South Wales, $64,765, and in Germany, $102,272, &c. I would like to ask the Minister of Railways and Canals whether or not that information was in the possession of the government in 1903 or 1904. Would my hon. friend deign to answer that question?

Mr. GRAHAM. My hon. friend knows that I was not a member of the government then, so I cannot tell.

Mr. R. L. BORDEN. All right, my hon. friend pleads ignorance.

Mr. GRAHAM. Does my hon. friend think that is fair?

Mr. R. L. BORDEN. My hon. friend pleads ignorance of what was in the knowledge of the government at that time,

Mr. GRAHAM. That is all right.

Mr. R. L. BORDEN. Well, we shall go to headquarters. Would the Prime Minister tell us whether or not that information was included in the mountains of information which were possessed by the government in 1903 and 1904?

Sir WILFRID LAURIER. Let my hon. friend make his speech.

Mr. R. L. BORDEN. I am very glad, indeed, to have the permission of the Prime Minister to make my speech. I intended to have done that even if he had not given me that gracious permission. I would have thought it might be a fair question and that it might be fairly answered, having regard to the argument which has been made, whether this was included in the Prime Minister's mountains of information. Did, or did not the government, when they

came down to the House in 1903 and 1904 and told us that this road could be built for $25,000 or $28,000 a mile, know what the Minister of Railways and Canals has just told us? Had they taken the trouble to obtain and collate this information, or did they plunge into this enterprise absolutely regardless of its cost. Did they not even take the trouble to ask one of their officers to look up this information in one of the returns to be found in the library? I am not going to accuse them of that. Surely they took that precaution. The Prime Minister will not deny that he took that precaution. He does not seem to be anxious to answer questions; so, I shall not put any more to him, but I am going to assume that he did know that. I am not going to assume ignorance on his part, because my hon. friend the Minister of Railways and Canals is rather disposed to resent any imputation of ignorance. I will assume knowledge on the part of the government that these figures, which are matters of common knowledge, I suppose, to the experts of the Department of Railways and Canals, were fully before the government when they made this statement. And yet, notwithstanding that, they came down to the parliament of Canada and told us that the road could be built for $25,000 to $28,000 a mile. I would leave it to my right hon. friend himself as to what would be a fair inference for the House and the country to draw from those two circumstances which I have just brought to his attention, and I think if he was as keen to draw an inference as he sometimes is, there would not be very much doubt as to what his answer would be.

Some attempt has been made to contend that any investigation into this matter is prevented by the Act of 1903 and the so-called arbitration proceedings which are or should have been going on under it. I would suggest to the Prime Minister that if that is a good argument, and it has been made by some of his supporters, it would lead those supporters to vote against his own motion, because if it cuts one way it cuts the other way or else this investigation which the Prime Minister has moved for is intended to be an absolute farce. Either it is intended that no evidence shall be called which could by any possibility be regarded as relevant or else the argument which these gentlemen have made is not worthy of the name. As a matter of fact, there is nothing in the argument at all. The fact that proceedings were taken, whether in the Court of Exchequer or before arbitrators, would not make it necessary or even desirable that this House should inquire; the House would exercise its judgment in that case if there was a dispute either before arbitrators or before the Exchequer Court. It would not necessarily interfere because there were such proceedings, and the mere fact that there were no such proceedings, that there was no difference between the Grand Trunk Pacific and the government, would not make it necessary or desirable that the House should stay its hand; the two things are altogether apart. The question of a dispute between the Grand Trunk Pacific and the government, or a dispute between a contractor and the government has absolutely nothing whatever to do with the question whether the House shall investigate the administrative proceedings of the National Transcontinental Railway Commission, which after all, is only a sub-department of this government. That depends altogether upon whether facts and circumstances are brought before the House to make it evident that that road is costing altogether too much, that some misappropriation of public moneys is taking place there, or some corruption or improper dealing is suggested or may have taken place. The House is absolutely free to go on and deal with such matters and circumstances, and the circumstances that there are arbitration proceedings or a suit in the Exchequer Court by the Grand Trunk Pacific or a contractor, has absolutely nothing to do with this case. Yet the matters I have mentioned are the only matters that have been urged upon the government up to the present time.

What do we ask? That a real, thorough investigation shall take place. It has been said that it could not be done this session. Well, we can do as much as we are able this session and we can go on next session or perhaps some arrangement might be found by which that investigation could go on between the close of this session and the commencement of the next. I think some means could be easily devised. But whether that is done or not, we can easily go on this session, make some beginning and devote the attention of parliament to ascertaining whether or not the outrageous charges which have been made against the National Transcontinental railway and the government of this country, who are responsible for the acts of that commission, are founded on fact or are pure scandalous libels without the slightest foundation whatever.

The question between the Grand Trunk Pacific and the government is one thing, the question between the government of this country and the people of this country is another thing. This is a matter which the people of this country have a right to expect parliament to investigate. It is not open to investigation upon the proposals of the Prime Minister, as interpreted by him in his motion and by his followers in support of it. I say that under the circumstances I shall support, and I think every fair-minded man in this House ought to support, the thorough investi-

gation of these charges. They are not made by any member of the opposition, no member of the opposition has the requisite knowledge to have made these charges. He might very well have founded charges upon these statements of reputable men, but it has not been necessary because the charges are there in black and white upon the pages of the return brought down by this government. The charges are there and they will not down, they must be investigated at some time or other. The government of this country might as well take the matter up first as last and I would say to hon. gentlemen on the other side: How can you reasonably now, in the interests of the people of this country, vote against that investigation? Can you say that the public interest of this country can possibly be prejudiced by any such investigation. How can it be prejudiced? Can you say that the public interest of this country may not be benefited by such an investigation? If you say that, you must decide in advance, without any knowledge and without any evidence whatever, that statements made by reputable men over their own signatures have absolutely no value whatever in your eyes. If you deny investigation, you also deny that Mr. H. A. Woods, the engineer of the Grand Trunk Pacific, is a man whose word you may accept on a matter where his professional reputation is at stake, you must say that every word by that man under these conditions is to be regarded as a false and malicious libel. You cannot take that stand surely, and yet, unless you take that stand, you cannot very well vote against the most thorough and searching investigation of this matter from beginning to end. So I say, there should be that thorough and searching investigation and without it the people of this country, the fair-minded, honest and thinking people of this country, whether Conservatives or Liberals, will not be satisfied and will hold the government responsible to the bitter end for adopting any other course.

Sir WILFRID LAURIER—Mr. Speaker, I think my hon. friend from Elgin (Mr. Crothers) is in his seat. I call at once his attention to an observation he made with regard to the speech with which I introduced this motion, to the effect that I had attacked the character of Mr. Lumsden. My hon. friend would be much embarrassed to point out to me and to the House what language I had made use of, which he could criticise as having been in any manner derogatory to the character of Mr. Lumsden. I am not conscious that I said a word which by implication, still less directly, could be construed as having been making any charge at all against the character of Mr. Lumsden. The only thing I said with reference to the action of Mr. Lumsden is simply in those words:

> One perhaps might question the judgment of Mr. Lumsden as to whether he was well advised, if he thought there had been bad faith on the part of his engineers, in tendering his resignation.

If my hon. friend has anything to say different from what I say now, I think he owes it to himself to point it out at some time. But, Sir, I appeal to the House that in offering this resolution, I did not say a word—I would not have been justified in saying a word—against Mr. Lumsden. I know nothing against him, I do not know him personally, I met him once or twice, but I do not know that I have ever conversed with him. But I take his action as it is. On June 25 last, Mr. Lumsden took on himself to resign and he was within his rights in doing so, but it seems to me, as I said, his judgment was very deficient. The reason he gave for resigning was that he had reason to believe the engineers to whom he had entrusted the work were not acting fairly towards him, not acting on his instructions, and that some of them had been guilty of a thing which was reprehensible.

I pass now to another matter, I pass to the very dramatic manner in which the hon. the leader of the opposition introduced his speech. He commenced by reciting the letter of Mr. Woods, of the date of October 7, 1907, in which grave charges are made against the engineer entrusted with the work of the construction of the eastern section of the Transcontinental Railway. My hon. friend would be perfectly right to recite this, if he had thought this matter had not been investigated. He would have been perfectly right to have spoken as he did, if indeed, his charges were true. But my hon. friend ought to know that he was labouring under a strange misconception when he spoke as he did. In the first place, my hon. friend was very unfair and very unjust to the Minister of Railways. He said in so many words, that the Minister of Railways, having this letter in his hand, had ignored every syllable of it. True it is, that in the admirable speech which the Minister of Railways delivered a few days ago, not less than one page of 'Hansard' is devoted to a discussion of this very letter of October 7, 1907, but, Sir, is it to be supposed that such a letter as that was written to the commissioners without Mr. Lumsden himself,—a man of honour as he is said to be, a man of honour as he is represented to be on the present occasion by members on the other side of the House, a man of honour so far as I know him to be also—I have nothing to say against him—is it to be supposed that Mr. Lumsden, the man in charge of the contruction work, would have allowed such a

grave charge to be brought against his officers, without himself taking the precaution to know whether or not such a charge was justified. When he saw in that letter, a statement to the effect:—

As before stated, these over-classifications are not made through error in judgment nor upon the decision of the resident or division engineer, who are fully acquainted with the character of the work, but by arbitrary orders from their superior.

Is it to be supposed that Mr. Lumsden would have allowed such a charge to go unchallenged, in view of the character which has been given him by gentlemen on the other side, a character, which I will not dispute? No, Sir. What we have reason to suppose, was that Mr. Lumsden would look into it, that he would find whether or not, the charges against his officers were true or not true. And if Mr. Lumsden was satisfied that the charge made by Mr. Woods was not true, what have my hon. friends opposite to say? My hon. friends say, that to this date there has been no investigation. Why should there be investigation, if Mr. Lumsden was satisfied that the charge was not true? I am informed that Mr. Lumsden looked into the matter, and October 29, 1907, he wrote as follows, to the Commissioners:—

Sirs,—In regard to the statement made by Mr. H. A. Woods, assistant chief engineer of the Grand Trunk Pacific railway, in a letter to me dated the 7th of October, that 'the specifications had been entirely ignored and an excessive allowance made not by reason, of an error in judgment, but, as I understand, by special instructions from the assistant district engineer.' Mr. Woods must evidently have been in error as to this, as Messrs. Grant, Huestes and Harvey, assistant engineers, all positively deny having given any such instructions, and this is confirmed by Messrs. Burgeois, division engineer and Mathews and Girdwood, resident engineers, on the works specially referred to by Mr. Woods.

Now, Sir, that is why the matter was not investigated. Mr. Lumsden, the chief engineer, was satisfied that there was not a shadow of foundation for the assertion that had been made, and therefore there was no necessity on that account to investigate. My hon. friend afterwards directed his censure to the action that was taken by the commissioners in protesting the arbitrators. Well, it is perhaps a matter of judgment whether the commissioners acted wisely or not, but I think there was good reason for their action. First of all why does this arbitration take place? This arbitration takes place to determine what the cost of the road is upon which interest has to be finally paid by the Grand Trunk Pacific. I think it was the hon. gentleman from Lanark (Mr. Haggart) who said that the Grand Trunk Pacific had nothing to do at all between the government and its contractors, and that is true. But it is very important to the government that the exact amount of the cost of the road should be determined and that it should be done at the time so that the interest will be paid upon it afterwards. If it turns out for instance that all the contracts are terminated and paid for, and that afterwards on an arbitration between the Grand Trunk Pacific and the government it should be found that there have been over-classifications and over-payments, the country would lose the amount. That is the reason why the arbitration should go on promptly and that is the reason also why the contractors and the engineers should be heard on that arbitration, because after all if the classification established by the engineer is later on found to be excessive the government would lose, whereas if the arbitration proceeds immediately before and the contractor is finally disposed of and while we still have a deposit in our hands to refund what has been paid in excess, the country would lose nothing. I therefore think the commissioners were well advised when they said to the arbitrators that they should hear the engineers and that they should hear the contractors. If they found in the course of their investigation reason to suppose that there had been over-classification, I think it was perfectly right that they should say: You should not conclude this matter until you hear all the parties interested. Surely nothing could be fairer than that.

But, these remarks are only preliminary —I come to the position taken by gentlemen on the other side of the House, which is, that there should be an investigation extending over the whole work. And why? I will take the reason given by my hon. friend from Simcoe (Mr. Lennox), and by the way I regret that the hon. gentleman is not in his seat because he appealed to me with some warmth to give him this investigation, and he did so in these words:

The Prime Minister can well disregard the humble source from which the request comes in his desire to discharge a great public duty.

I would like to say to my hon. friend (Mr. Lennox), were he in his seat, that I do not consider the source whence the request came as an humble source by any means. On the contrary, I have nothing but respect for my hon. friend from Simcoe. I do not always agree with him, indeed it is very seldom it is my privilege to agree with him, but I bear testimony as every one has been happy to do, to his intense industry and to the labour he has brought to bear upon this question, even though on this particular occasion as well

as upon others I cannot agree with his conclusion. He went on to say:

> And, whether rightly or wrongly, whether by mistake or by dishonesty, whether blunderingly or criminally, the expenditure is vastly, enormously—outrageous, I might say—in excess of the estimates presented to the House.

And he concludes:

> And whereas the cost of the eastern division of the said railway, according to the latest estimates of the government, will be so enormously in excess of the estimates submitted to parliament in 1904 and 1905 as to arouse the most serious alarm and to call for the fullest inquiry.

The inquiry is therefore asked because the cost of the road is largely in excess of the estimates which were presented to the House. The hon. gentleman (Mr. Lennox) says there is such an excessive cost over the estimate that it must be the result either of a blunder or of a criminality. May I not suggest to the hon. gentleman and to the House that there might be a third alternative. May I not suggest that if the cost has been far larger than was anticipated by the estimates of 1903-4 it may have arisen from the physical difficulties which were encountered in the construction of the road. Is it not at least as natural to suppose that the increased cost has arisen from that fact as from either of the others. But gentlemen opposite are the same as they always are, they are always ready to suspect criminality. They will not give us credit for honest intentions or honest acts; they are ready to protest on all occasions, that if anything does not go as they wish it to go there has been criminality. But, Sir, I think it is just and natural to suppose that if the cost has exceeded the estimates that fact has arisen from honest causes which are to be found upon the ground itself. It is extraordinary, Sir, how these gentlemen opposite forget their own history; they forget what they themselves said in 1903 and 1904. When we proposed this scheme to build the National Transcontinental railway in 1903 we were told by hon. gentlemen opposite that our estimate was altogether too low, that it was impossible to build the road for $53,000,000, and my hon. friend from Lanark told us that the road would cost $125,000,000 at least.

Some hon. MEMBERS. Hear, hear.

Sir WILFRID LAURIER. Very good, let us say if you like that we were wrong and that he was right, and if we were wrong and if hon. gentlemen opposite were right, it follows that the increased cost of the road has not arisen from any criminality but simply because of the circumstances which the hon. member for Lanark knew of better than did we. Credit was given to my hon. friend from Lanark that he was a good prophet on that occasion; the road has cost more than we expected. But while they say that my hon. friend knew that the road cost more than we said it would, still they will persist that if the road costs as much as it does it must be because of criminality. They will have to choose as to whether it was through criminality or through some other cause. For my part, I prefer to believe that the road has been costly because the character of it is difficult.

Now, I pass to another consideration, the only important consideration brought to the attention of the House by my hon. friend the leader of the opposition (Mr. R. L. Borden). He asks us: Why do not you grant this investigation?—you say you can't grant it at this time because the matter is under investigation. That is the very reason we do not grant it. I do not dispute that parliament can do anything it pleases in this as in all other matters. Parliament can take a case from the courts, bring it here and try it. But would he advise that we should do so in this case? The reason, the peremptory reason, why the investigation is not advisable at this moment is, not because there should never be an investigation, but because under the present circumstances, it would be unwise for parliament to have an investigation where an investigation is already going on.

Mr. R. L. BORDEN. Is the right hon. gentleman (Sir Wilfrid Laurier) going to withdraw his motion, then?

Sir WILFRID LAURIER. If my hon. friend (Mr. R. L. Borden) thinks that a clever remark, he is very much mistaken. The point that my motion proposes to have investigated is not at all what is in dispute before the commissioners at the present time.

Mr. FOSTER. Tell us what it is then. Tell us just now.

Sir WILFRID LAURIER. My hon. friend does not know that?

Mr. FOSTER. No, and no one on the other side has told us.

Sir WILFRID LAURIER. I will tell him in a moment,—it will not be difficult.

Mr. FOSTER. Now we come.

Sir WILFRID LAURIER. My. hon. friend is not as bright as he is usually. I gave him credit for greater keenness of intellect than he displays at this moment.

Mr. FOSTER. Never mind the jollying; give us the information.

Sir WILFRID LAURIER. Mr. Lumsden in his letter says:

In view of the general disregard of my instructions, and having lost confidence in the engineering staff, I have concluded to resign my position as chief engineer.

There Mr. Lumsden makes a direct charge against his engineers. However, on the following day he qualifies it. In another letter which he addresses to the commissioners, he says:—

Referring to my letter of yesterday wherein I stated that I have lost confidence in the engineering staff, I beg to state that this does not apply to the whole staff, but applies only to a portion of the staff who were responsible for the measurement, classification, supervision and inspection of considerable portions in district 'B' and east of Rennie crossing in district 'F' lately gone over by me.

Thus he says that he has reason to suspect the honesty of the engineers who were in charge of a considerable portion of the road in district 'B' and east of Rennie crossing in district 'F.' There are many districts on this railway—some 1,800 miles of road were to be constructed. And, the districts 'B' and 'F' cover about 400 miles. Mr. Lumsden confines his charge to the engineers in charge of district 'F' and district 'B.' I think that Mr. Lumsden did not do himself justice as I said a moment ago. Certainly, he did not do his staff justice when he did not designate more clearly the engineers against whom he made his charge. I think he would have acted more wisely if either he had not spoken at all or had not made direct charges. But he says that it is engineers in district 'F' and district 'B' that he has reason to suspect. Therefore I think we have every reason to inquire who are these engineers and what are the reasons that he has made this charge against them. That is the subject to be investigated. That is not hard to understand and appreciate. Does my hon. friend believe that dishonesty is a proper subject of investigation? If not, he can vote against the motion. But we on this side believe that it is not fair to the House or to the government, or to the Commission—it is not fair to Mr. Lumsden himself—that this matter should be left where it is. We believe that it is a proper subject of investigation. And I say more, this investigation will not in any way interfere with the investigation which is now going on by the arbitrators appointed by the government and the Grand Trunk Pacific Railway Company. It is altogether outside the scope of their investigation.

Mr. R. L. BORDEN. If I may be allowed to ask a question: The matter is much more in particular in Mr. Lumsden's letter than the right hon. gentleman has just expressed. It is alleged the particular character of the wrong-doing by these engineers. Does the Prime Minister understand that the particular character of the wrongdoing—over-classification and so on—should be investigated, or does he propose that it should not be investigated?

Sir WILFRID LAURIER. The letter of Mr. Lumsden charges that there has been over-classification. I stated, in introducing this motion, that this over-classification might be the result of incompetence, of blundering, or of criminality. So far as the result to the country is concerned—which is the matter now being investigated by the commission—it matters not what is the cause; the point is to ascertain whether there has or has not been over-classification. It is the opinion of Mr. Lumsden that there has been over-classification. But that is an opinion, it is not a fact or a judgment. It is to be observed that Mr. Lumsden never was on the road, that he never saw a single inch of it, so far as my memory goes——

Mr. FOSTER. Oh, the Prime Minister is away off.

Sir WILFRID LAURIER. My hon friend is altogether off himself. Mr. Lumsden never was on the road before last spring, when he went with the commissioners. When he made the charge of over-classification he had never made a personal inspection of the road, but had taken the judgment of his engineers. I do not know that he did himself justice. But that was his way of doing his work, and he had full trust in his engineers. Mr. Lumsden now gives his opinion that there was over-classification. Perhaps he was right; perhaps he was wrong. That is to be investigated by the commission. In this you have the answer of my hon. friend. The leader of the opposition, very dramatically——

Mr. R. L. BORDEN. The Prime Minister has forgotten to answer my question.

Sir WILFRID LAURIER. I do not think so. My hon. friend asked me what there is to investigate? There is the charge made by Mr. Lumsden that he has been deceived by the engineers of certain districts. As to how it should be investigated, of course that will depend upon the answers given by Mr. Lumsden himself. I do not know what reasons he may have, and the only way to ascertain what reasons he has for coming to the conclusion he does is to investigate. It is premature to say what course the investigation shall take. The leader of the opposition began his speech very dramatically by asking: 'Can you say that the public interest will be prejudiced by this investigation?' Certainly, I do say so. An investigation here on the back of the investigation now going on would certainly prejudice the public in-

terest. I do not say at this moment that the door is to be closed against investigation—nothing of the kind. Parliament can exercise supreme power. I think the hon. gentleman put the case better when he said that parliament in its wisdom would determine whether there was to be an investigation. I agree with that. But I say that parliament in its wisdom will not feel called upon to investigate the matter, but will investigate the facts covered by this motion and will reserve its judgment for a future occasion.

Hon. GEO. E. FOSTER (North Toronto). Mr. Speaker, I do not propose to take a very long time in making a very short reply to my right hon. friend (Sir Wilfrid Laurier) and to note two or three things of a more general nature. My right hon. friend undertook to discipline the hon. member for West Elgin for the statement made by him inferring that the Prime Minister had lost confidence in Mr. Lumsden——

Sir WILFRID LAURIER. That's not what he said.

Mr. FOSTER. —or had said something which reflected upon the judgment of Mr. Lumsden.

Sir WILFRID LAURIER. Upon the character.

Mr. FOSTER. Or upon the character of Mr. Lumsden; and he has read the statement which he did make in his speech. The statement which he made involves an inference which, while I will not say it goes so far as to touch the moral character of Mr. Lumsden, certainly goes so far as to touch the stand he took, and his judgment, because the Prime Minister as the head of the government says that he questions his judgment. Well, if he questions his judgment, he has gone a long way to losing confidence in Mr. Lumsden, and he has taken the opportunity of letting the world as well as this House know that he no longer has confidence in Mr. Lumsden's judgment.

Well, let that go. He then took up the letter of Mr. Woods, and the statement of the leader of the opposition, a very strong statement, which consisted in putting the letter of Mr. Woods on record. Nothing could be stronger than Mr. Woods' letter. Now, who is Mr. Woods? Is Mr. Woods a nonentity? Is he a scrub engineer? Is he a man of no standing in his profession? How often have we heard the greatness and the grandeur of the Grand Trunk Pacific railway described to us, and Mr. Woods is a trusted servant, a picked engineer, a trusted employee in engineering matters of that great Grand Trunk Pacific Company, which knows how to employ the best, and, which so far as I know, always does employ the best. That is what Mr. Woods is. When he speaks, he speaks with authority, the authority of a man who is trained in his profession, and he places at the bottom of that the observation and experience of a man who has gone over every foot of the ground he is talking about. Now, is no credence to be given, is no weight to be attached to the judgment, to the statement, to the repeated statements of Mr. Woods in that respect? In 1907 Mr. Woods wrote that letter. In 1909, two years afterwards, he is writing exactly similar letters and along the same line, and from 1907 to the present time Mr. Woods has never ceased writing letters, and no letter of his can be quoted in which he does not reiterate the same broad, strong and specific statements with reference to over-classification, giving the mile, giving the section, and giving the quailty of the over-classification. I think that is something that cannot be explained away.

But that is not all. Mr. Woods has the backing of his district engineers. Amongst them is Mr. Armstrong, who called the attention of Mr. Woods to what was going on, and who gave him the basis of the information upon which Mr. Woods acted, and upon which, after he had acted, he wrote these repeated letters. More than that, in this stand of Mr. Woods on behalf of his company first, which is a stand, so far as it goes, on behalf of the people of this country, in the second place—because every dollar that Mr. Woods and the Grand Trunk Pacific get taken off on the cost of that road is a dollar taken off from what the people of this country have to contribute, that is what it means. Alongside Mr. Woods stands his district engineer and his sub-engineers. Alongside of Mr. Woods stands Mr. Kelliher, and alongside of Mr. Woods stands Mr. Chamberlin, who is the vice-president of the road; alongside Mr. Woods, in his charges, there is ranged up the whole line of the Grand Trunk Pacific engineering staff, and, there is not one of them but backs him, not one of them but will substantiate his statements. Now that means something.

The Prime Minister asks: If it were true, would Mr. Lumsden have done nothing? And he demolishes the leader of the opposition in saying that an investigation has been held. What was the investigation? Mr. Lumsden writes a letter, or he has a personal conference with the engineers on that part of the road which was the subject of Mr. Woods' letters. The letter was read here to-night, and what did the letter say? Mr. Lumsden says that he questioned them upon it, and they denied it was so. That is the investigation. What a lovely kind of an investigation that is, Merwin likes an investigation like that, Lodge likes an investigation like that, Pearson delights in that kind of an investigation,

the saw-dust wharf heroes love that kind of an investigation. Just ask whether it is so or not, and when they deny it, give it all up, and three years afterwards when you are taunted with it say: But there was an investigation; we asked the chap if it was true and he said it was not. But what an example that would be for our judges. Why, all you have to do when any one does something criminal is to call the chap up and say: Did you do that? He denies it, the judge immediately throws off his robes, his work is done; and when you ask him what was the result of the trial, he says: I could do nothing further, the chap denies it.

Now I put another question to the Prime Minister and the government. The government cannot get out of their responsibility in this matter. When the commission bullyrags an independent tribunal, the arbitrators appointed, it is the government that is bullyragging them. But we do not need to labour that. The Prime Minister takes the whole glory of doing it. When an independent tribunal of judges is appointed to decide upon great issues between two opposing forces, between the government of this country and the Grand Trunk Pacific Railway, when that independent and scientific tribunal is arranged for and constituted, the government commences to say: You are hasty, you have no judgment, you have acted like school children, dont do it again. And so they intimidate them for carrying on all work that they have to do afterwards. I put it to the Prime Minister if, two years and some months ago, a statement like that from a reputable engineer whom the Prime Minister dares not impugn, either as to his character or his ability, if two years ago that statement came to the notice of the government, if two years ago their engineer did not take proper action upon it, and they waited for two years and some months, and yet no proper action has been taken upon it, whose fault is it? It is the government's fault? You were erecting a building with another man's money, you appointed the foreman, the man came and told you that the foreman was not doing his duty, that the workmen were stealing, that they were putting in material below the specifications, and charging high prices for it. You got that information, you did not compel your foreman to investigate it. The first thing a business man would have done would be to bring up his foreman and say: Here, this is what is said of you, is the statement true?—Well, I do not know.—Have you investigated it?—No.—Well, do something. The foreman goes down and asks the men that are putting in bad lumber and charging high prices, is it true that you are doing that? They say, no. Your foreman comes back to you. Have you investigated this?—Yes—How far?—I asked the men whether they were putting in bad stuff and charging high prices, and they said, no.—Quite satisfactory, quite satisfactory. After two long years of spending the other man's money, under the same foreman, under the same contractors and under the same workmen. That is the astoundingly adequate idea that the Prime Minister has of his duties as leader of a government. Why, when you translate it into ordinary business, does not every man see what it means? I charge the Prime Minister to-night with full knowledge of this thing two years ago, and I charge him, the trustee for the people, with having spent since then more than $58,000,000 of the peoples' money, and during all that 24 months he has never seen fit to investigate allegations like that, involving such outrageous, such tremendously costly violations of the spirit and of the letter of the contract.

The Prime Minister then takes the full responsibility of the bullyragging that the commissioners have given the tribunal. He stands at the back of his creatures. Who were they? Take Mr. Woods, take Mr. Chamberlin, take the engineers of the Grand Trunk Pacific, men of experience, knowing their business, and put them against the three men who call themselves the commissioners. Who are the men, who, acting for the government, undertake to whip and lash these independent, scientific members of the tribunal?—a box-maker, a grain dealer and a promoter. These are the high and mighty, the scientific, who, standing for the government, whip men like Mr. Schreiber, Mr. Kelliher and Mr. Lumsden, who know more than these men one hundred times over. The government, instead of dismissing these box-makers, grain dealers and promoters, who transgress so abominably against the interest of the people, comes and apologizes for them. Well, you may say that to a certain extent, they were his creatars. Mr. Parent, Mr. Young and Mr. Reid did yeoman's work—and some of it was not very well thought of, if I have read the history of the last few years correctly—to put him and his party in. Why should not they, as having created him, keep the whip hand of him? But the Prime Minister says, in trying to refute the argument of my hon. friend from South Simcoe, that the cost has been greatly in excess and that is the reason my hon. friend asks for a fuller investigation. I will repay to the Prime Minister and send him back without charge a little of the taffy that he was good enough to give me, and I will say that I think he is too bright to have ever conceived such an idea as that that was the reason given by my hon. friend from South Simcoe for desiring a fuller investigation. It was not, Mr. Speaker, that the

cost was greatly over the estimate, but that the reason of this increased cost was because sand was transformed into loose rock and loose rock was made into solid granite by processes unknown, but to such an extent that millions of dollars were put into the pockets of contractors more than were supposed to go there when the contracts were let upon the information of the government's engineers appointed by themselves. I put it to the Prime Minister, who knows it well enough. It is impossible for mysteries like this to exist in open day; this is not an age of miracles by any manner of means. Once before we had an example of something like this in the devious course of this government's history. I remember that there was a section of country in the Northwest which, at a certain time in a certain month and in a certain year, was arid sands and desert, worth little, sold for a dollar an acre, fifty cents in scrip, and I remember that in less than three years that whole section of country was a garden of Eden selling at from $8 to $15 per acre. That was another example of those mysterious processes of nature which, through the alliance which existed between them and the right hon. gentleman, worked these wonders. The same mysterious alliance, the same occult influences have been kept at work on sundry nights and days along the line of the Grand Trunk Pacific, which was no more a wilderness than the streets of Ottawa, and which suddenly and wonderfully, but most effectively, turned nature into an object of ridicule, smiled defiance and scorn at the slow work of Providence for millions of years, turned loose sand, all at once, in a jiffy, into cemented rock and turned cemented rock into solid rock by some strange twentieth century processes. That is why my hon. friend from South Simcoe asked for an investigation.

Now, it has been put here a hundred times in this debate but my hon. friends on the other side of the House do not seem to get it in their minds and I will put it to my right hon. friend again. I will ask the right hon. gentleman one question: Why did the government go to the expense of hundreds of thousands of dollars, nay, millions of dollars, in order to have engineers travel the route, have engineers make borings, have engineers dig test pits, have engineers take advantage of every device that was known to their science? They did this in order to do what?—to locate the line and to measure up the kind of soil and rock which were within the limits of that road bed and put the result in the shape of cubic yards. Was that all done for fun? It was all done for one purpose and one purpose only and that was that the government might be able to give an enlightened and reasonable contract for the excavation of the roadbed and not allow the people's money to go for what it should not. Your engineers, the same that you have got now—minus the best one because that one you have taken care to get rid of, whom your commission followed as a sleuth hound follows a scent and whom they treated in such a way that no man of honour could hold that position for a single moment—made these surveys, they took out these quantities, they handed them to the government and upon these the government gave us the cost of the road. I do not need to go over it all again. Suddenly sand grew into rock, rock grew from loose to solid and the expenditures therefore grew and it is because that could only take place through gross incompetence or gross dishonesty, because one or the other is the necesary reason for it, and because of the waste of the people's money thereby that my hon. friend from South Simcoe asks for a full investigation. Oh, says the Prime Minister, it may not be dishonesty or incompetence; it may be that there are physical reasons. What were the enginers for and what did the engineers do? The engineers were for the purpose of finding just what the physical configuration and physical properties of the road and you could not let a single mile of contract until these men scoured every foot of it, found that out and reported. It was not until they had found out the physical properties and qualities of the whole line that they could give you the amount to be taken out and make that the basis for giving contracts and asking for tenders. The right hon. gentleman, in his quick grasping at a reason to get himself out of that dilemma, never thought that the physical difficulties were the very things that the engineers first had to overcome and find out before a single measurement could be made and before a single contract could be let. After all that was done, then the extra cost arose because there was a displacement of quantities—sand, found out by these engineers of yours and reported by those engineers of yours and upon which you founded the terms of the contract, sand which when the excavations were made and the quantities taken out did not happen to be there. Somebody or something had come down and taken the loose rock and put solid rock in its place. That is the charge; that is the charge that Mr. Lumsden makes; that is the charge that Mr. Wood makes; that is the charge that the Grand Trunk Pacific gives all through the series of complaints. But of all the arguments one of the flimsiest was the attempt of the Prime Minister in this House of Commons in the 20th century, to fortify this gross displacement of quantities and this consequent transfer of millions of money from the peoples pockets to the contractors pockets, to buttress up his position by saying: Oh, it did'nt cost any

too much because some of you people on the other side of the House prophesied that it would cost a great deal more. That needs only to be mentioned for any one to be ashamed of having attempted an argument like that on a serious question. My right hon. friend is asked why he does not grant an investigation and he sees and he knows the weakness of his position and so he is not like Winston Churchill, he has not banged, bolted. and barred the door entirely; he says the door is not banged yet and that parliament has it in its power. Parliament has it in its power to-night, but will parliament give an investigation? Sir, we know, and the country is learning to know, that parliament of to-day means Sir Wilfrid Laurier. He does not give it now, and Mr. Parent will have lost his power and his cunning if he allows him to give it at any time. He holds out the hope to us—not to us for it is no hope to us—but he puts the glittering lure before the people: Oh, some time or other when I get good and ready there may be an investigation of these things. but at present: No, no, it would interfere. Yes, it would interfere. Why does it interfere? Because he says there are two investigations on. Which two does he refer to, if I have got my notes correctly I have pencilled here ' which one of the investigations is it.'

Sir WILFRID LAURIER. Your note is not right; I said there would be two.

Mr. FOSTER. What are they? One is that which the Prime Minister provides for in his resolution, and I suppose the other is the tribunal.

Sir WILFRID LAURIER. There is the arbitration and there would be the investigation asked for by my hon. friend from Simcoe.

Mr. FOSTER. I did not understand that the right hon. gentleman was going to grant the investigation asked for by my hon. friend (Mr. Lennox). If he does, I will sit down at once.

Sir WILFRID LAURIER. That is too thin.

Mr. FOSTER. If there are to be two, the only two we have in sight is the one proposed by the Prime Minister, and the inquiry by the three arbitrators. And it seems to me there is a clear and distinct difference between the two subjects. I have read section 7 very carefully, and what it provides for is in short this: A road is being built which the Grand Trunk Pacific is to take over; the road is being built, not by the Grand Trunk Pacific, but by the government, and specifications are agreed upon between the two as to what should be the character of the road; if a disagreement arises between the government and the Grand Trunk Pacific authorities as to whether any section of the road comes up to or falls below these specifications, the three arbitrators are to arbitrate under section 7. That is one thing. But there is another branch of the subject equally strong and equally imperative, and it is that this government is building a railway in various sections by its own engineers and by contractors who are absolutely subject to these engineers. These contractors put in progress estimates month by month, which on certification by the engineer are paid by the government from time to time, and there is no cause, no right, no power in the Grand Trunk Pacific to interfere between this government and its contractors. The contractors are building the railroad for the government, the payments are made by the government, and they are certified to by the government employees. And, the very moment it comes out that there have been displacements in the classification greatly increasing the cost over and above what should have been paid according to the estimates, that very moment it is the duty of the government and of the Minister of Railways to settle that point then and there before the contractors get their pay. The Grand Trunk Pacific had nothing to do with that; that is a matter between the government and its employees and its contractors. But here we have the odd spectacle of a government professing to be strenuous in getting the people's money into the right channels, living for two long years under accusations and documentary evidence that their contractors have been getting more than they ought to, and yet they don't seem to have taken the first step to get these matters straightened out between themselves and their contractors. That is the singular thing about it. Now, it seems to me that that must be done from month to month and from year to year as between the government and its contractors, whatever may be done by arbitrators between the government and the Grand Trunk Pacific looking to the road coming up to the specifications which have been agreed to by both. I asked the right hon. gentleman, as I asked the Minister of Railways, as I asked the member for Carleton, and I do not know that I slighted the member for Pictou; every man on that side who has spoken, tried to get from these gentlemen, not what this proposed committee is not to examine but what it is to investigate. My first question elicited the illuminating answer given in the last paragraph of the resolution of the Prime Minister. My repeated question elicited no answer that went beyond that, and when I came back to the metropolis and put the question to my right hon. friend as I have done just now I got no

more information that I got at first. The member for Carleton was very explicit. His answer was: 'That this committee would investigate the matter in this way;' they would say to Mr. Lumsden: 'Have you lost confidence in your staff,' and Mr. Lumsden would say: 'Yes.' The next question would be: 'Mr. Lumsden, have you lost confidence in all your staff,' and Mr. Lumsden would say: 'No.' The next question would be: 'Mr. Lumsden, would you give us the names of those in whom you have lost confidence,' and Mr. Lumsden would give the names. Then the question which would follow, would naturally be: 'Now, Mr. Lumsden, how was it that you lost confidence in these gentlemen,' and Mr. Lumsden would begin to say: 'Because there was displacement of materials in the classification, over-payments, loose rock substituted for sand, solid rock substituted for loose rock and for sand, and these engineers, contrary to my instruction, passed that and therefore I have lost confidence in them.' Well, he would not get out ten words of that sentence before he would be objected to. And why do I say that? I say it, because the Prime Minister has said so; and every speaker on that side of the House has said so. They have said that the whole matter of classification is now before the arbitrators, that it must remain there and that it cannot be investigated elsewhere. Now, I ask my right hon. friend: How far is he going to get with his investigation? Why have this debate? Why have this committee appointed to waste its time? My right hon. friend could get all the information he professes to wish from this committee by simply asking Mr. Lumsden:

Mr. Lumsden, you told me in your letter you have lost faith in some of your staff. Will you please tell the names of those persons? Mr. Lumsden will give the names in two minutes. Why have you lost faith? Why, Mr. Premier, I have lost faith in them for the reason I gave in my letter—and the Premier has those reasons. I have no greater fault to find with the First Minister than this, that when rumours came to his ears that the members of the opposition proposed to probe the reasons for Mr. Lumsden's resignation, and when he felt that there was looming up in parliament a motion and a demand for an investigation, true to his instinct which has led him on other occasions to do the same thing, he thought he would be cute enough if he possibly could to forestall it with this kind of a resolution. The fault I have to find with the Prime Minister is not that he tried to forestall it, but that he has not been honest with the country in his attempt at forestalling it. Mr. Lumsden gave the Prime Minister his reasons in a letter and the Prime Minister selected from that letter two sentences which excluded the reasons entirely. If the Prime Minister wished to deal honestly and fairly with the people of this country, why did not he put in his resolution the identical reasons that Mr. Lumsden gave him for his resignation? What were those reasons? I will read what they are so it may go on 'Hansard' with this part of the discussion. He says that certain things

Have led me to the conclusion that neither the general specifications nor my instructions regarding classification have been adhered to.

That is strong, but it is not so strong as what follows. What follows is this:

But on the contrary large amounts of material have been returned as solid rock, which should only have been classified as loose rock or common excavation, and material has been returned as loose rock which was or could have been handled by ploughing or scraping, and should have been returned as common excavation.

There is the statement the engineer gives as to the reasons for his lost of confidence. Would it not have been fair to the people of this country, would it not have been more in accordance with the honest treatment both of Mr. Lumsden and the people of this country, if those reasons of Mr. Lumsden had been quoted as well as the two excerpts from the letter put in by the minister to the exclusion of everything else. Further:

On several residencies there seems to have been no attempt by the engineers to carry out my instructions and measure rock returned, either by showing the same on cross sections, or by measurements of individual pieces, but they simply appear to have guessed at the amount by taking percentages of the total cutting. In some cases where cross sections were prepared showing ledge rock, they prove to be erroneous, resulting in a very much larger amount of the solid rock being returned than actually existed. What is known as overbreak has also been returned in many places where it was caused by excessive use of explosives, and where the material was wasted this should not have been done.

You could not get an engineer to be more explicit with all the faults in the catalogue that can be urged against a resident or supervising engineer or a set of them than the statements made by Mr. Lumsden in that letter. Do the people of the country know anything of these reasons insofar as the motion of my hon. friend is concerned? He purports to give Mr. Lumsden's reasons, he absolutely conceals Mr. Lumsden's reasons, and yet he and his followers and his newspapers will be distributing all over this country the startling and wonderful statement that this government is so honest, so desirous to protect the people, that before a motion is made the Prime Minister comes down and orders a full, free and impartial

investigation. I say that is about the gravest charge that can be made against the Prime Minister; he is not attempting to deal fairly and straightly with the people of the country. He has concealed Mr. Lumsden's reasons and so far as he is concerned in his resolution he has not given Mr. Lumsden's reasons. He avoided giving them. There is not a man on that side, from the Prime Minister down, who has read to the full the reasons given by Mr. Lumsden for his resignation.

Sir WILFRID LAURIER. I read the letter.

Mr. FOSTER. Yes, my right hon. friend did. I was wrong in that, but he studiously kept the real reasons from going into his resolution. When my right hon. friend, through his committee, gets the fact that Mr. Lumsden reiterates that he has lost confidence, gets the names of the persons in whom he has lost confidence, how much farther is this investigation going to go? I would like my right hon. friend to answer that, how much farther is he to go? We are all in the dark, nobody knows and before we vote for his motion we would like to know. Having been successful in getting these two facts established, how much farther would he go? That is an answer my right hon. friend ought to give, he ought to enlighten the House. My hon. friend will not enlighten the House?

Sir WILRID LAURIER. It is no use trying to enlighten my hon. friend when he will not be enlightened. I have given the reasons twice or three times.

Mr. FOSTER. If he will cite me any portion of his speech in which he has given me an answer to this question of mine, a fair question, I will acknowledge he has done it. The fair question I put is, the Premier has stated that such a question will be asked, No. 1——

Sir WILFRID LAURIER. I did not say that.

Mr. FOSTER. But such information will be got, first as to whether he has lost confidence; then another bit of information will be got, as to the persons in whom he has lost confidence. Now will he please tell the House and the country what will be the next piece of information that the committee will be empowered to get?

Sir WILFRID LAURIER. I did not state statement No. 1 or No. 2. I did not pretend to catechise the committee or to instruct it, it is the House that does that.

Mr. FOSTER. Then my hon. friend proposes a committee to do a thing, but he does not propose to instruct the committee as to what it is to do? Does he expect the House of Commons to do a thing like that? He knows we could not support it, even if it were reasonable, if he does not tell what it is. He does, however, have implicit confidence in his own side of the House, that they will support it with or without reasons.

Sir WILFRID LAURIER. And you will oppose it, with or without reasons.

Mr. FOSTER. I have puzzled my ingenuity to find out what the next question would be. I have imagined it would be this: You have lost confidence in certain men, why did you lose confidence in them? Then we come back to the reasons in that letter. But my right hon. friend says he will not be allowed before this committee to prosecute his reasons and give them to the committee, because wrongful classification is the reason why he lost confidence as he says and all matters of classification are already before another tribunal and will not be allowed to be taken up by this tribunal. Then where are we to get? It is a blind, it is an attempt to throw dust into the eyes of this country. It throws no dust into the eyes of the members of the House of Commons on either side, they are all clear-sighted as to just what this means. They know, but the country that looks to the Prime Minister as the first commoner in the land, as its leader, is treated in that way, dust is thrown into its eyes and that, I think, is not fair.

My right hon. friend had a little jerk-up on me. He said I made a very great mistake when I stated he had said that Mr. Lumsden had not been over a portion of that line himself. The statement my right hon. friend made was that Mr. Lumsden had never been over a foot of the line in his life. In his own mind the Prime Minister may have made a reservation 'until a certain day,' but he did not make that reservation in his first statement, as 'Hansard' will show and it was upon that first statement, not conditioned in any way, that I told the Prime Minister he was mistaken and so he was as far as that statement was concerned. Mr. Lumsden did go over many miles, but not perhaps at the date my hon. friend contemplated.

Sir WILFRID LAURIER. What I said, was that he had not gone over the line to revise the classification of the line; he took the classification from his engineers. I know he went over some of the line.

Mr. FOSTER. The point I wish to bring out is that Mr. Lumsden, the chosen engineer of standing, of character, of ability, makes his charges on the 25th day of June, 1909, and Mr. Lumsden's charges on the 25th day of June, 1909, are an exact fac simile of the charges made by Mr. Woods in October, 1907, two years ago. With singular unanimity, every man, who has

the interest of the country at heart, every man who has at heart the interest of the Grand Trunk Pacific, which is to a certain extent the interest of the country in keeping down expenditures, every man is a unit, and altogether consistent and persistent in his statement, that this sort of thing is going on. Mr. Lumsden, the government's engineer, states it as his last message to this government, when he resigns. He makes that charge. Not two years ago, nor at any time since, nor now, will this government and the Prime Minister, as its leader, allow the people to see what has become of their money in the face of these great allegations of fraud, misconduct and incompetence.

Now, Sir, I say that the people of this country have that right. We ought to get out of the idea that this is not the people's money that we are dispensing, it is the people's money. Who stands for the people, if we cannot get such an investigation as that? The government's motion does not stand for the people, the government's commission is throwing itself with all its length and all its strength against the people's getting a chance to look into these expenditures from month to month and year to year. They have not only thrown their length against getting at once all the information they can, but they seek to narrow instead of widening the investigation. The government have introduced this motion against the interests of the people. The Grand Trunk Pacific stands for its own interests and not primarily for the interests of the people. There is nobody to-day looking after the interests of the people. The government's motion is looking after the interests of the contractors and of the sub-engineers who disobeyed orders. The Grand Trunk Pacific is looking after it own interest, and when we come and ask the Prime Minister for a chance to let the people see the truth, he refuses. It is better for the Prime Minister himself, if anything is wrong, it will redound to the strength of the government and of the Prime Minister, to let the people know it. The people ought to know it. If there is a suspicion of wrong there ought to be an investigation full and free in order that that suspicion may be removed from the administration.

House divided on amendment (Mr. Lennox).

Amendment negatived.

Motion (Sir Wilfrid Laurier) agreed to on the same division reversed.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. R. L. BORDEN. What business will be taken up to-morrow?

Sir WILRID LAURIER. We will take up the Bill to prevent the introduction of insects, pests and diseases destructive to vegitation; also the Bill to amend the Seed Control Act, both in charge of Mr. Fisher. After that, we will go into Supply, taking up the estimates of Public Works.

Motion agreed to, and House adjourned at 3.09 a.m. Friday.

HOUSE OF COMMONS.

FRIDAY, January 28, 1910.

The SPEAKER took the Chair at Three o'clock.

PRIVATE BILLS.

FIRST READING.

Bill (No. 127) respecting the Grand Trunk Pacific Branch Lines Company.—Mr. Turriff.

Mr. FOSTER.

PRODUCTION OP PAPERS—THE SPEAKER'S RULING.

Mr. SPEAKER. I promised the hon. member for York (Mr. Crocket) yesterday, that I would look into the question raised by him in reference to an answer to a question, on the order paper, of the hon. the Minister of Public Works. The answer referred to stated that a certain company declined to tender for certain work and that the said company gave as a reason for declining that they found certain difficulties attending upon the work. The hon. member for York asked the hon. minister to lay the papers referred to on the table. As a matter of fact, the answer of the hon. minister did not refer to any papers, and the hon. minister himself stated to the House that he was not sure there was any correspondence on the subject. The hon. member for York asked if he was not entitled to demand that the correspondence, if any, be laid upon the table without an order of the House.

The rule of parliament in respect to the production of papers is that no documents can be laid before the House unless in pursuance of some parliamentary authority. The proper parliamentary authority is, of course, an order of the House, which must be moved for under the rules of the House as to notice. There is, however, a rule of debate, which the hon. member for York probably had in his mind, to the effect that when a minister of the Crown quotes a public document in the House and founds upon it an argument or assertion, the document quoted from should be produced. This rule does not apply to the case in question, as I do not find that the hon. minister quoted from any public document; in fact, he stated that he was not sure there was any correspondence on the subject. I am of opinion, therefore, that the hon. member for York is not entitled to the production of any correspondence or papers, if any, without following the rule of the House as to papers, on motion after notice.

CURRENCY ACT AMENDMENT.

Hon. SYDNEY FISHER—for Hon. W. S. Fielding—moved that the House go into committee on Tuesday next to consider the following proposed resolution:

Resolved, that it is expedient to provide for a revision and amendment of the Currency Act, chapter 25, of the Revised Statutes.

Further resolved, that the standard for gold coins of the currency of Canada be such that of one thousand parts by weight, nine hundred shall be of fine gold and one hundred of alloy; and the standard for silver coin shall be such that of one thousand parts by weight nine hundred and twenty-five shall be of fine silver and seventy-five of alloy; that the

standard weight for gold coin of the denomination of ten dollars in the currency of Canada be two hundred and fifty-eight grains, and the standard weight for a silver coin of the denomination of fifty cents be one hundred and eighty grains, and for other gold coins and silver coins proportionate weights respectively; that the Minister of Finance be authorized to issue out of the consolidated revenue fund such sums as may be necessary for the purchase of bullion in order to provide supplies of coins for the public service; and that the cost, charges and expenses incident to carrying out the provisions of any Act founded upon these resolutions be paid out of the consolidated revenue fund.

Motion agreed to.

MILITIA PENSION ACT AMENDMENT.

Sir FREDERICK BORDEN moved that the House go into committee on Tuesday next to consider the following proposed resolution:

Resolved, that it is expedient to amend the Militia Pension Act, chapter 42 of the Revised Statutes, 1906, as follows:—

By inserting the following section immediately after section 6 thereof:—

6A. Time served in the Royal Northwest Mounted Police may also be included in the term of service of an officer for the purposes of this Act.

2. In such case the yearly deduction of five per cent upon average pay under this Act from any pension shall be reduced by the average yearly deduction from the officer's salary or pay as a police officer made under and for the purposes of Part II. of the Royal Northwest Mounted Police Act, or made under and for the purposes of the Civil Service Superannuation Act, or under Part I. of the Civil Service Superannuation and Retirement Act.

6B. The following times may also be included in the term of service of an officer for the purposes of this Act:

(a) Time served with the military forces in South Africa in any one or more of the years 1899, 1900, 1901 and 1902, and the time during which the officer was invalided but remained on full pay on account of wounds, injuries or disease suffered or contracted on such service;

(b) Time served by an officer of the Canadian militia with the South African Constabulary;

(c) Time served with the third (special service) battalion of the Royal Canadian regiment of infantry at Halifax;

(d) Time served with the Yukon field force in any one or more of the years 1898, 1899 and 1900; and

(2) Time served in the employment of the government of Canada in connection with the militia stores prior to the organization of the Ordnance Stores Corps.

Motion agreed to.

ROYAL MILITARY COLLEGE ACT AMENDMENT.

Sir FREDERICK BORDEN moved that the House do on Tuesday next go into Committee of the Whole to consider the following proposed resolution:

Resolved, that it is expedient to amend the Royal Military College Act, chapter 43 of the Revised Statutes, 1906, by repealing section 7 and substituting therefor the following:—

7. The salaries, pay and allowances of the commandant and of the superior and subordinate staffs of the college shall be as fixed from time to time by the Governor in Council.

Motion agreed to.

SALE OF BABY FARM.

Sir FREDERICK BORDEN moved that the House do on Tuesday next go into Committee of the Whole to consider the following proposed resolution:

Resolved, that it is expedient to authorize the Governor in Council: (a) to sell and dispose of the Baby Farm, situate in the township of York, in the county of York, and province of Ontario, the acquisition of which was ratified by chapter 51 of the statutes of 1908. The purchase money received from the construction of barracks and buildings thereon for the housing of the militia and other military purposes in or in the vicinity of, the city of Toronto. (b)) to sell and dispose of that parcel of land in the municipality of Assiniboia, in the province of Manitoba, and now used and known as the Winnipeg Rifle Range. The purchase moneys received from the purchaser of the said range to be appropriated and used for the purchase of land for a rifle range in, or in the vicinity of, the city of Winnipeg, in the province of Manitoba.

Motion agreed to.

INQUIRIES FOR RETURNS.

On the orders of the day being called.

Mr. FOSTER. I would ask the attention of the Minister of Railways to a return ordered on December 1, as to passes on the Intercolonial railway. That motion includes another for the production of the papers in reference to the purchase of ties on the Windsor branch. If the former papers could be brought down the later papers might remain for the present. I wish to ask the Prime Minister about a return passed on November 24, for papers with reference to the secretariat of the imperial conference. I would like to have them as soon as possible. I would like also to have the return to an order passed on December 1 for a return of the United States war vessels, or what we call war vessels, on the Great Lakes. A return was brought down last year answering a series of questions as to the Transcontinental Railway Commission's appointments. That return did not give the post office address or the location from which the appointees were appointed, and without that it does not answer my purpose.

Mr. GRAHAM. A similar return was asked this year and we are trying to complete what was brought down last year, making an addition to it. If I remember correctly, the commissioners said last year that it was impossible to give those particulars.

Mr. FOSTER. I think they can give them if they wish.

TRADE RELATIONS WITH GERMANY.

Mr. ARMSTRONG. I wish to draw the attention of the government to an article which appears in the New York 'Herald' of yesterday. The title of which is 'Dominion government refuses to accept German concession for the removal of the surtax.' I wish to ask the government whether it is true that they have received a communication from the German government in regard to the removal of the surtax and whether they have decided to take any action in the matter. The article goes on to say that Italy and Belgium, both of whom will be hurt by the Franco-Canadian treaty which goes into effect January 1, are pressing the government for as favourable concessions as France secures and are prepared to retaliate if they are not accorded. I would ask the government whether Italy and Belgium have also pressed on the government the necessity for better trade relations and whether they have been refused in the same manner as, according to this article, Germany has been. This is an important article, we have the privilege of having a member in the press gallery who represents this paper and whose presence, I am sure, we all appreciate and if the Prime Minister will be good enough to answer those two questions I would appreciate it.

Sir WILFRID LAURIER. There has been no official negotiation of that character going on. There may have been some informal negotiations.

MR. ALLARD AND GOVERNMENT CONTRACTS.

Mr. CROTHERS. I desire to call the attention of the Prime Minister to a question of mine which he answered yesterday. I asked whether Mr. Allard had been connected with the government contracts directly or indirectly on January 22. The Prime Minister gave an answer in the present tense, that the government is not aware that Mr. Allard is interested in any contract directly or indirectly. Of course he might have been interested last Saturday and not yesterday. I would like my right hon. friend to answer the question as it is worded, if he is prepared to do so. I would like to have the answer a little more definite if possible. Was he interested on January 22 and has the Prime Minister sufficient information to enable him to say unequivocally that he had not on that day any such interest.

Sir WILFRID LAURIER. I have no information whatever. It is quite possible, I do not know, that Mr. Allard or any body else may have had contracts with different branches of the government, but it would take some time for the government to find out. If my hon. friend (Mr. Crothers) will tell me he has reason to believe that Mr. Allard has a contract with a particular department I would have investigations made immediately, so as to satisfy what I suppose is a very legitimate curiosity.

Mr. CROTHERS. I have some information, but it is not sufficiently definite in my mind for me to state it as a fact to the right hon. gentleman. If I get in a position to do so, I will give my right hon. friend the information and we will get the answer unequivocally.

Sir WILFRID LAURIER. When my hon. friend has it sufficiently definite in his own mind, if he will let me know I will try and give a definite answer.

INQUIRY FOR RETURNS.

Mr. BRADBURY. I have asked several times for the instructions to Chief Justice Howell with reference to the surrender of the St. Peter's reserve. A return was brought down yesterday and I presume the Minister of the Interior thought that included the instructions to Mr. Judge Howell. It does not and I would like to know if the minister has those instructions.

Mr. OLIVER. The hon. gentleman asked for the instructions to Mr. Howell some time ago, and why they were not included in a return asked for from the Interior Department. The instructions were not issued from the Interior Department, but from the Governor in Council. However, the instructions were placed on the table by myself yesterday, and I stated to the House that they were the instructions and were in response to the hon. gentleman's inquiry.

Mr. BRADBURY. Am I to understand that these are the only instructions which Chief Justice Howell received?

Mr. OLIVER. The instructions laid upon the table yesterday are the only instructions that the chief justice received.

Mr. BRADBURY. I desire to call the attention of the minister to the fact that about two weeks ago an order of the House was

issued for a return showing some accounts of George Tracy in relation to St. Peter's Indian reserve. That has not been brought down. I understand that it is a small return and will take only about a day to copy.

Mr. OLIVER. That will be laid upon the table on Monday.

INTERCOLONIAL AND PRINCE EDWARD ISLAND RAILWAY EMPLOYEES' BENEFIT FUND.

On the order:

Third reading of Bill (No. 19) to amend the Intercolonial and Prince Edward Island Railways employees' provident fund Act.—Mr. Graham.

Mr. GRAHAM. Since the introduction of this Bill I had a conference with the men interested, who are still in the employ of the railway, and who, as representatives of the association, meet to discuss its affairs periodically. They had several amendments to suggest; and, after discussing all these propositions for some days, it was decided that those propositions, together with the provisions of this Bill, should be referred to competent authorities to see what would be the result to the fund before further action should be taken. I agreed to that. Under these circumstances, I move that the order for the third reading of this Bill be discharged, and the Bill withdrawn.

Mr. R. L. BORDEN. Is it proposed to withdraw the Bill altogether, and, when the decision of the competent authority to which it has been referred is received, to introduce it again? Generally speaking, how will the matter stand after the withdrawal?

Mr. GRAHAM. If I get the information and it will warrant me in introducing the Bill suggested, it might be possible to do it this session. The difficulty arises from the many intricacies that were developed as we discussed the matter.

Mr. R. L. BORDEN. It is quite uncertain at present what will be done?

Mr. GRAHAM. Yes.

Motion agreed to and Bill withdrawn.

SEED CONTROL ACT AMENDMENT.

Mr. FISHER moved the second reading of Bill (No. 55) to amend the Seed Control Act.

Mr. R. L. BORDEN. Has there been an explanation of this Bill?

Mr. FISHER. Yes, I explained the Bill on its introduction. But, should an explanation be desired now, I may say that, in the course of the operation of the Seed Control Act, some slight difficulties—very few, I am happy to say—have arisen, and this Bill is intended to obviate those difficulties. In addition, the Bill adopts a new principle in seed control. Hitherto we have dealt only with the purity of seeds; now we propose to deal with the vitality of seeds. The clauses relating to purity have helped to protect the farmers against the purchase of weed seeds or of seeds of a different variety from that which they desire to purchase. Now it is proposed to protect the farmers from having seed palmed off on them the percentage of whose vitality is not up to a fair standard. This has not been embodied in the Act heretofore, but we have found in some instances that the loss of the farmers in consequence of this inferior quality of the seed has been very considerable, and we wish to take the necessary means to protect them. The first clause of the Bill simply authorizes the making of regulations for this purpose, and the last clause provides that labels on packages of seeds must state the percentage capable of germination. The third section brings under the operation of the Act alfalfa, now a very important farm crop, to be dealt with as grass and clover seeds have been dealt with heretofore. The Bill also adds wild radish to the list of prohibited seeds and introduces some explanatory names of seeds mentioned in the seventh section of the Act.

Motion agreed to, and Bill read the second time, and House went into Committee thereon.

On section 1,

1. Subsection 1 of section 2 of the Seed Control Act, chapter 128, of the Revised Statutes, 1906, is amended by adding the following paragraph immediately after paragraph (a) thereof:—

(aa) regulations determining the percentage standards of vitality for good seed of the various kinds of cereals, grasses, clovers, forage plants, field root and garden vegetable crops; and,

Mr. FISHER. I have just explained that section 2 of the Act as it stands authorizes the making of regulations determining the maximum proportion of the seed of weeds named in the Act that may be tolerated in other seeds, and also such regulations as are necessary to secure the due enforcement of the Act. Under this proposed section, we shall also make regulations to provide standards of vitality.

Mr. ARMSTRONG. Would the minister be good enough to give us some idea of what success is being met with in carrying out the Act.

Mr. FISHER. I am not sure that that is a subject I should take up on this section, but, as I wish to give all the information possible, I will say in general terms that it has been very successful in improving the

quality of seeds supplied to our farmers. In the first place, it has attracted the attention of farmers to the quality of the seed, and, in the second place, has required seed merchants and sellers throughout the country to live up to the law. And, with their desire to do so—which I may say is general—they have the knowledge that if they do not do so they are called to account. This is not always by prosecution necessarily, although a number of prosecutions have been entered. We try wherever possible, where apparently the dereliction of duty has not been intentional, to admonish rather than punish. But where the lack of proper supervision is apparently due, either to gross carelessness or deliberate intention, we do not hesitate to put the Act into force. I am glad to say that even in respect of those who have violated the Act, the course we have adopted, and the existence of the Act itself, have tended greatly to raise the quality of the seeds supplied to our farmers. I am also glad to say that the farmers who buy seeds, knowing of the existence of this Act and of the machinery which is provided to enable them to get good seeds, are firstly, paying more attention to the quality and character of their seeds, and secondly, are taking the trouble to send samples to the laboratory here, where they are tested, and where information is given to the farmers of the character of the seeds which they are purchasing.

Mr. ARMSTRONG. The reason I ask the question is that I understand there are quite a number of farmers who take advantage of the privilege of sending their seeds here to be tested, but nothing like the extent that the minister would perhaps lead us to believe. Do the farmers generally know that this Act is in existence, and do they take the trouble to purchase pure seeds from the local dealer, or are they allowed, as the old Act, if I remember rightly, gave them the privilege, to dispose of their seed to the retail man, and the retail man, instead of buying from the wholesaler, is buying from the farmers? Then, would the minister be good enough to tell us about how many inspectors he has looking after the Seeds Mark Act, and about how many prosecutions there are per annum?

Mr. FISHER. There are seven inspectors whose special business it is, in that period of the year when seeds are bought and sold, to look after this business, and they take samples amongst those who are selling seeds. The Act empowers them to go in and buy a sample and make a test of it for themselves, without the intervention of the purchaser or the farmer. At the same time, the farmer can also send samples to be tested. The seed men themselves frequently send samples; nearly half the seeds that are tested here come from the seed sellers. They desire that the seeds they are selling should be up to the standard of the Act, showing, as I have already said, their desire to do what is right. The machinery of the department in the seed laboratory is a great assistance to them; without it, each of them would have to have a testing machinery of his own, which would be almost impossible for them to get. We have a staff of experts here who have been trained in that work for a long time, and who are able to do it. Some of the large seed houses do this for themselves, but the smaller ones and the retailers do not. In this way we are fully aware of the improvement that has been made, and that improvement is far greater than the number of prosecutions undertaken, whether successful or not, would indicate.

Mr. ARMSTRONG. I have been conversing with some of the western men, and I find, as the minister may be well aware, that hundreds and thousands of acres of grain are burned every year, for instance, in the province of Manitoba, by the weed inspector. Of course the land has a good deal to do with that, the land has been permeated to a certain extent with these seeds. Does the minister mean to say that farmers in general throughout the northwest, as well as eastern provinces, are conversant to any extent with the clauses in the Seeds Marks Act? I cannot help but think that they are not in touch with the operation of the Act to a large extent, or they are paying very little attention to it.

Mr. FISHER. The power to burn up foul seeds in the field is taken under a provincial law and not under this Act. I regret that the fields of the west, as well as the fields of the eastern part of Canada, are very foul. It is very regrettable, and one of the chief objects of the Seeds Commissioners branch is to try and assist the farmers to improve that condition of things. But it is a slow process, it can only be carried out with the co-operation of the owners of the land themselves. All we can do in that regard is to urge upon them the necessity of improvement, and to suggest methods by which they can effect an improvement, and save the vast loss which is entailed upon them year by year by neglecting to clean their land. As to the knowledge of the farmers of this Act, I think it is pretty widespread. My hon. friend will remember that two years ago, about the time this Act was passed, we sent through the northwest a special train carrying samples of seeds and grains, and a staff of expert officers. They held about 200 meetings in the three prairie provinces, mostly in Manitoba and Sask-

atchewan. They were very largely advertised, and commented upon, and discussed, even by those who were not able to attend the meetings. It was a very graphic and effective way of calling the attention of the public to this evil, and to methods of remedy. Since that time we have had, with the co-operation of the seed growers, local associations, or branches established, and a very large number of meetings have been held, dealing almost entirely with the question of the purity of the seeds. In addition to that, the various institute meetings in the several provinces, this question has been frequently discussed, and the farmers have taken a great interest in it. I may say that the grain farmers, especially of the west, have been thoroughly aroused to the necessity of action. I grant that a great many of the farmers of Canada, perhaps the larger number, do not carry out the advice that is given to them. It is perhaps too much to expect at present, although we think that they will do more. Farmers are like the rest of us, they probably do not do quite as well as they know how. There are hundreds and thousands of farmers in Canada who have been made acquainted with the information supplied by the department on this subject, they are advised to do certain things to clean their land, and yet many of them, for lack of time or energy, fail to act upon our advice. We can only hope that as time goes on our farmers will more generally take advantage of the machinery provided in the Act, and I think we are gradually overcoming the apathy which has existed.

Mr. ARMSTRONG. I cannot help feeling that altogether a more aggressive policy ought to be adopted in the eastern provinces in carrying out the policy of the government in this regard. When you take into consideration there are 23,000,000 acres under crop, if you could increase the production by a bushel or two per acre per annum, see the millions of dollars it would bring back to the farmers. If merely a few copies of this Act, or the instructions go out to a small number of farmers it is not likely that the aggressive policy is being pursued that should be carried on. I think it would be well if the minister could devise some means whereby he could undertake a more aggressive policy upon this subject.

Mr. HERRON. When this movement began the government sent a car through our part of the country to show the advantages of the use of pure seed. But, unfortunately, that policy of the government, has not as far as I know been continued, and nothing further has been done in that direction. I do not think there is one man in a thousand among merchants or farmers, or the men who handle seed grain, in our part of the country, who knows anything about the Pure Seed Act. It is a very important question. Our western country is subject to foul seeds of every kind. They grow very luxuriantly and very rapidly. They seem to take the place of almost any useful crop. That is one of the evils that we will have to contend with in that country, and I think the government should continue the propaganda and the policy of distributing more information in that direction.

Mr. FISHER. Do I understand my hon. friend to say that we are doing nothing in the neighbourhood in which he lives?

Mr. HERRON. I do not believe that one man in a thousand knows anything in particular about your pure seed Bill. I do not think that very much has been done in the last two or three years in the direction of educating the farmers.

Mr. FISHER. Well, we have regularly, for several years, conducted field crop competitions in the hon. gentleman's own constituency, and there were thirteen seed fairs held last year in Alberta for the special purpose of explaining to the farmers the advantages of good seed and of getting them to buy good seed. I think I am within the mark when I say that from 40,000 to 50,000 copies of our special seed bulletins and the Seed Act have been distributed each year by my department. I think that my hon. friend a little underrates the intelligence and knowledge of his own people. He will find that a good many of his farmers know about this, about these seed fairs, about the field crop competitions and about the work of the seed growers associations which are working locally, as our department is working for the whole country. We are aiding and co-operating with these associations, stimulating and helping them on. I sympathize with the feelings of the hon. gentleman when he says that enough is not being done, but at the same time, I have learned by long experience that you have to exercise some patience before seeing plainly the results of work of this kind which is done in agriculture. You do not get the results all at once. The spread of information, the improvement of methods, and all that is very slow and it is especially a case where, in our western country, a great many of the men who own and work the land were not brought up as farmers. It is a great deal harder to teach these people than it is to teach young men who have grown up with and been accustomed to agricultural work from their childhood,

and especially people who have come from abroad and who are not familiar with our conditions. I am just as eager as any one to do all that can be done profitably and advantageously, and I must confess to my hon. friend that nearly every year I am asking for a little more money to expend in this way. But I would like to have a thorough scheme of organization and of work to ensure that the money spent will give a good return. I do not want to ask parliament for money to spend uselessly for the purpose of making a show of spending money and of being able to say that so much money has been spent. I have never done that in connection with any of the work of my department, and I do not like to do it now. If any suggestion is made, and occasionally I get valuable suggestions from members of the House, farmers, and leading men of the country, I am only too happy to take it up and see whether it will work into practical organization or operation for the benefit of the farmers. I think we have done that about as much as we could. We are doing a a great deal of work at the present time in connection with the improvement of seed. My seed commissioner gives his whole time to it and we have the further satisfaction of knowing that other countries, notably the United States, are looking to us and to this very Seed Control Act for models upon which to base their legislation and work.

Mr. HERRON. The minister stated that several seed fairs have been held.

Mr. FISHER. Thirteen in the province of Alberta.

Mr. HERRON. Were they in my constituency?

Mr. FISHER. No; I said thirteen in the province of Alberta, but I also said that there were field crop competitions held in the hon. gentleman's own county. That is another thing.

Mr. HERRON. Where would they be in my own constituency?

Mr. FISHER. The Fishburn Agricultural Society has been co-operating with the department and carrying on that work.

Mr. HERRON. I am very glad to hear it, but I would like to say a further word in reference to this seed train that passed through our country a few years ago exhibiting pure seed. I think that it gave a splendid education to the farmers and did a great deal of good to the country. I am sorry that something of the kind could not be undertaken again. I believe that is one of the best ways of educating the farmers that I have ever seen, and from that day to the present I have not seen anything that has impressed me as being of such value in that direction. It may have been costly, but I think it was of great value to the country.

Mr. FISHER. I quite agree with my hon. friend that such a work as that seed train did is very effective. In waking up the people to a certain line of work we find, first, that we have to do something that is very striking, something that will attract public attention, something that will awaken and arouse them, and then we have to take it up more in detail by instructive and helpful co-operation with the people individually. The results of that are not as conspicuous and a great deal of the work is being done silently without its attracting the interest or observation of the people at large. But it is just as necessary to go through that second stage or phase of the work as it is to do the more conspicuous or the more brilliant work at the commencement. I can assure my hon. friend that while we have not been doing anything quite so brilliant as that train, we have been doing just as effective work in the present stage of the education of the people. I am not afraid of the expense, and if it is necessary to arouse the people again to do something of that kind, I would not hesitate because it costs money, and I am sure, judging from experience, that parliament will be good enough to grant me the necessary funds. I am glad the suggestion has been made as to whether we should not repeat the experiment.

Mr. FOSTER. Did the hon. gentleman have any co-operation between the government and the provincial authorities or between the government and the railway companies, or did he simply engage in this enterprise alone? In the United States the railways would seem to be very generous in the contribution of car facilities, and of course it is to their advantage because every good bushel of grain, instead of a bad bushel, brings them more trade. It is just as much the duty of the up to date provincial agricultural authorities as it is ours that such work should be done, and co-operation would make the work more effective and more economical.

Mr. FISHER. The provincial authorities were invited to co-operate, and the provinces of Alberta and Saskatchewan did. The railways supplied the rolling stock and hauled the train free.

Mr. CROTHERS. I sympathize with all reasonable efforts to prevent the spreading of foul seeds, but I think this Act provides for a penalty on the man who sells foul seed whether he has knowledge that the seed is foul or not. That may prove to be rather harsh. For instance, a farmer might not know there was foul seed in the clover

seed he sells and it would be going very far to impose a penalty on him.

Mr. FISHER. If I require to show every time a prosecution is entered that the person selling impure seed knew he was doing so, I would practically have to give up all attempt to enforce the Act. If persons offer for sale seed as pure, it should be pure, and we must trust to them taking the necessary precautions.

Mr. CROTHERS. I do not think a penalty should be imposed unless the man had knowledge he was selling impure seed.

Mr. FISHER. I take direct issue with my hon. friend there.

Mr. CROTHERS. Surely guilty knowledge must be the essence of an offence of that sort.

Mr. FISHER. If a man engaged in business sells me seed as pure, it is his business to know. In subsection 2 of section 9 if the man can prove he bought the seed in good faith from a wholesale merchant, the onus is thrown on the wholesale merchant.

Mr. CROTHERS. But suppose the man grew the seed?

Mr. FISHER. Then he would have to take the consequences.

Mr. CROTHERS. I think that would be harsh treatment.

Mr. SEXSMITH. There has been a good deal done by the provincial and Dominion governments to prevent the distribution of wild seeds through the sale of seed grain and grass and clover seeds, but there is another mode of distributing these wild seeds to which I would direct attention. The milling companies grind their screenings, but they do not grind them fine enough in some cases, and the most dangerous weeds in the section of the country I live in, as well as in other parts of Ontario, have been introduced through the importation of ground feed. We have no knowledge in the world when we buy that feed that we are going to pollute our farms, but nevertheless that has been the result. While the distribution of wild seeds is met in the Bill in some aspects, something should be done to take precautions in the direction I have mentioned.

Mr. FISHER. That is a pretty difficult problem to deal with. The provinces of Saskatchewan, Alberta and Manitoba have provincial statutes which cover that point, and which if they are enforced would seem to be calculated to meet the difficulty pretty successfully. I do not think the province of Ontario has any such law, or, if so, it is entirely obsolete. The situation is a little different in the different provinces, and their laws have practically to be different. I am advised that it would be extremely difficult, if not impossible, for us to draw a general law applicable to the whole Dominion which would cover the ground as well as the provincial laws. In each of the provinces of Manitoba, Saskatchewan and Alberta there is a provincial law on the subject. This question has been considered pretty carefully by us, but there is nothing in this Act which deals with that.

Mr. SEXSMITH. I am well aware that noxious seeds exported from the west have been distributed through the province of Ontario, especially in the vicinity where I live. I am glad to learn that the western provinces have laws to prevent this; but during the last five years I myself have received the seeds of foul plants that have never existed in our part of the country before, through the buying of western feed, many of the farmers in Ontario have come to the conclusion that it would be better to buy no western feed at all than to take the chances of polluting their farms with these noxious plants.

Mr. FISHER. I sympathize with my hon. friend on that point. I believe the tailings of screenings that come from the elevators at Fort William and Port Arthur are the principal media for the distribution of these foul weeds. These tailings or screenings are bought by the millers of Ontario, mixed with other grains, ground, and sold as feed, but they are not ground sufficiently fine to destroy all the weed seeds. It is a problem worthy of consideration whether something ought not to be done to restrain the distribution of these screenings. It is a matter which is under my consideration and which will have to be discussed in dealing with the terminal elevator question.

Mr. SEXSMITH. I do not see that there could be any objection to amending the Act to prevent the milling companies disposing of these screenings unless they are ground so fine that the seeds will not germinate, and to prevent them mixing them with other grains and selling the mixture as pure feed.

Mr. FISHER. The farmers frequently prefer feed that is not ground too fine; and to grind these western tailings so fine as to kill some of the smallest seeds would be a pretty difficult process. I have had some investigation made into that question, but perhaps not sufficient to make me very positive.

Mr. SEXSMITH. Perhaps it would be wise for the minister to make further investigation, and to compel the people grinding these screenings to sell them separately and not to mix them with other grains.

Mr. SPROULE. My experience is that the farmers are discarding the mills run with wind-power or horse-power because they do not grind fine enough, and are sending their grain to the large mills to get it ground finer. They believe that the finer the grain is ground, up to a certain standard, the better feed it is. My information in regard to this Seed Act is that while it provides for a certain standard of purity, and while the seedsmen generally comply with it and label their seeds No. 1, the complaint is that you find, some months or a year after you have bought the seed, that you have introduced a lot of noxious weeds into your farm. For instance, you cannot buy turnip seed without getting with it a great deal of wild mustard, and the same thing is true of much of the clover seed that is sold. It is difficult to say what remedy could be applied to prevent this, but I know that there are a large number of complaints of that character.

Mr. FISHER. If the farmers would purchase their seeds a little early and send a sample to be tested at the laboratory here they would get a reply in two or three weeks or perhaps less, and would know whether the seeds were what they had bought or not. It is hardly possible to tell the difference between mustard and turnip seed by the eye, but by testing them here they can easily be distinguished.

Mr. SPROULE. The trouble is the seed is usually brought in just before seeding time.

Mr. FISHER. The farmer has the other remedy of buying only seed marked No. 1, which, from our experience with a large number of samples, almost invariably fulfils the condition of No. 1.

Mr. SPROULE. What are you to do when you find they are not No. 1?

Mr. FISHER. We have found very few samples of No. 1 that did not fulfil the conditions. I think the trouble is the farmers will not insist on buying No. 1.

Mr. SPROULE. From my experience and knowledge I am satisfied that in many cases they do not fulfil the conditions. On my own farm I have sowed seeds marked No. 1 that contained a great number of weeds.

Mr. FISHER. I am sorry my hon. friend did not report that to the department. We have occasionally had reports sent, and we have traced them up. Even after the seeds are sown the purchaser is liable to a penalty.

Mr. SPROULE. You have difficulty in the enforcement of the Act when you have to go into court.

Mr. FISHER. Keep a sample of the seed and send it to be tested.

Mr. SPROULE. Most farmers do not do that. When they sow No. 1 they do not retain a sample. I think that the common law should give damages in such a case, but owing to the difficulty of proving that the weeds came from the seed no farmer would go to the trouble of undertaking a prosecution. The Act is not as valuable in its working out to the farmers as they anticipated, because of these difficulties.

Mr. FISHER. If a farmer will not take the trouble to protect himself, we cannot protect him. The farmer can test the seed before he sows it.

Mr. SPROULE. He cannot get it from the seedsman until a day or two before he wishes to use it.

Mr. FISHER. As a rule he can get it earlier.

Mr. SPROULE. My office is right at a seed store, and I have seen the seed brought in hundreds of times after seeding was partly or principally over, even telegraph orders being sent to supply the demand.

Mr. FISHER. Having failed to protect himself in that way, the farmer has the further protection of reserving a small package of seed, sufficient to make a test. When he has this proof, not only can he prosecute, but if he will let us know we will prosecute for him. We have had very few failures of prosecutions under this Act, and in many instances, without absolutely prosecuting, we have been able to change the whole current of the seed business in a locality by pointing out the truth in regard to the quality of these seeds. It is a physical inability, though, to protect people who will not protect themselves.

Mr. STAPLES. How many inspectors are there under this Act and what salaries do they receive?

Mr. FISHER. I think seven altogether, and they are moving around the country. Some of them work in particular regions most of the time, and are backwards and forwards, but most of them are not located in any particular place.

Mr. STAPLES. How many of them are in the west?

Mr. FISHER. Mr. Murray, of the Experimental Farm, Brandon; Mr. Eddy, Mr. Reid and Mr. Mackillican.

Mr. STAPLES. Are they on the road all the time?

Mr. FISHER. Just during the busy season. Mr. Murray gets his salary as manager of the Experimental Farm, and does

not get additional pay for seed inspection work. They are in a certain division of the Civil Service, subdivision 'A' of the second division. I could not give, offhand, the exact salary of each, but the salaries of that subdivision run from $1,600 to $2,100.

Mr. STAPLES. How many prosecutions have there been during last year throughout the Dominion?

Mr. FISHER. Thirty-seven.

Mr. SEXSMITH. I appreciate the efforts of the minister (Mr. Fisher) to deal with this very important question. But there is a difficulty still existing that, it seems to me, is hard to get over. A farmer goes into a seed store and the merchant shows him perhaps half a dozen samples of seeds at different prices. And I have known instances where farmers are inclined to buy—like many other people—a cheap article. Taking that seed home and sowing it, of course, may be said to be the farmer's own business. But the difficulty is that he is sowing weed seeds, and his neighbour, no matter how cautious he may be with regard to the seed that goes into his own land, has to share in the difficulty that follows. The foul seed is apt to spread all over the locality. I do not think that any dealer should be allowed to put on the market a low grade of seed, even at a low price; such seed should not be put on the market at all. There should be a standard, and no seed should be allowed to be sold below that standard.

Mr. FISHER. We have a standard below which no seed may be sold with a mark to indicate that it is No. 1. We have no definition of lower standards.

Mr. STAPLES. How do you make the grade?

Mr. FISHER. No. 1 seed is described in the Act, and nothing below the standard there fixed can be sold as No. 1.

Mr. STAPLES. How do you make the test?

Mr. FISHER. It has to be made in the laboratory. Of course, you cannot make it in a store. But if a man sells as No. 1 seed which is below the standard here fixed, he is liable to a prosecution for a misdemeanour under the Act.

Mr. SPROULE. Is not that standard test made by actual count?—not more than so many weed seeds to be found in one hundred. With reference to the viability, that would be matter of growth, of course.

Mr. FISHER. Section 7 fixes the standard, and provides that the seed must be free from the seeds of the weed named in the preceding section.

Mr. SPROULE. And that, as I understand, is determined by actual count. But I understood the minister to say that it was determined in the chemical laboratory.

Mr. FISHER. In the seed laboratory. We have nothing to do with the chemical laboratory.

Mr. SPROULE. The minister does not seem to be in good temper.

Mr. FISHER. I was explaining an answer to a question, and the very fact that the hon. member (Mr. Sproule) speaks of a 'chemical laboratory' shows that he misunderstood and I wish to set him right.

Mr. SPROULE. My hon. friend (Mr. Staples) asked the question how it was determined, and when the minister said it was in a laboratory, he asked how it was done. I said I understood that it was by actual count of the seed.

Mr. FISHER. I did not understand the question to be put in that way.

Mr. SPROULE. I drew attention to the fact that the Act provided a standard, as I understood, of the number of noxious weed seeds permitted, this to be determined by actual count. As to the viability, of course, a certain percentage must germinate, and that must be tested in the laboratory. Thus, there must be two methods of reaching a standard of the seed that must be sold as No. 1. I thought the hon. member (Mr. Staples) was not getting the information he asked for.

Mr. FISHER. If the hon. member wishes to answer the question instead of me, I suppose that is all right. The clause defines the character of the seed to be sold as No. 1. Whether the seed sold is of this character can only be determined in a seed laboratory. The large firms dealing in seeds have their own laboratories, and can determine whether the seeds they are selling are up to the mark or not. The consumer or small dealer who has bought from the wholesaler can, if he wishes, send samples to the seed laboratory of the department and these will be tested and a report furnished as rapidly as possible. Now, with regard to the point raised by the hon. member for East Peterborough (Mr. Sexsmith), in section 6 of the Act there is a list of what we call noxious weeds. We are adding one to the list by the present Bill. No seeds can be sold in Canada which contain seeds of any of these noxious weeds, unless the package is marked with the full name and address of the seller, and the common name of this kind or kinds of noxious weed seeds contained. Thus, if the farmer buys No. 1 seed, he knows it cannot contain any of these noxious weeds, or the merchant who

sells it is liable to prosecution and punishment. If the merchant chooses to sell seed which contains these noxious weed seeds, he must give his name and the name of the weed seed contained in the package. I do not think that any farmer with common sense would buy that kind of seed. We, therefore, have provided practically against the selling of seeds in Canada with any of these noxious weeds intermixed. From time to time we add to the list of prohibited noxious weed seeds, as we are doing to-day. These seeds are the particularly noxious ones. Of course, there are other injurious seeds, but not so bad as those included in the list. Then, section 7 of the Bill defines what No. 1 seed is to be. We are not attempting—I hope we shall come to that by and by—to define No. 2 and No. 3 seed, or, perhaps 'rejected,' and let the farmers know what they are buying. However, we have not yet determined a safe definition of second or third class seed that we would like to put before the purchasing public. At present we think it safer —in fact the only safe way—for the farmer to buy No. 1 seed. I suppose the difference varies in different parts of the country. I am told that, the difference in price of a bushel of clover seed between No. 1 and other seed that does not come up to that standard, is not more than $1. We do not guarantee that these seeds shall not be found in seed that is sold as No. 1. But I can say that, roughly speaking, we make a test of something over 1,000 samples a year of the seeds which are marked No. 1, and not one half of one per cent has failed to come up to the standard. We get samples everywhere during the summer season, it is the duty of our inspectors to go about and buy samples and send them in to be tested, and especially do we aim at testing these No. 1 seeds, because they are the seeds that we want the farmers to buy. I think I am correct in saying that the No. 1 seed as marketed by the people of this country according to the laboratory test, is up to the standard.

Mr. A. H. CLARKE. I would like to inquire whether it is the intention of this Bill to increase the standard so as to provide for a less percentage of weeds than formerly existed. I have had some complaint from farmers in my riding that the standard is not sufficiently high to warrant them in getting pure seed. I recollect that when the Bill was brought in, there was a good deal of opposition to it, even by farmers, who complained that it was impossible to get a less percentage of weeds than the Bill provided for, and some considered it as a great hardship to the seed merchants to have so low a percentage, they said it was impossible, with the machinery available, for seedsmen to produce seed of the proper standard. I have had complaints from different sources that the standard is not sufficient to ensure the farmers getting good seed. Is it possible to get a less percentage of weed seed?

Mr. FISHER. If my hon. friend will look at the Act, not the Bill, section 2 says:

> The Governor in Council may make regulations to determine the maximum proportion of seeds of the weeds named in this Act that may be tolerated in any other seeds without affecting their character as being free from the seeds of the said weeds within the meaning of this Act.

That is the toleration clause. It is a little difficult to ensure absolute purity. In grains like oats and wheat we permit one in a pound. That means, roughly speaking, that there may be possibly one to the 1,500. The limit of toleration in grass seed and clover; is one in 1,500 by count. So if there is more than that, if there is one in 1,200 or 1,400, that seed would be regarded as impure, according to the Act. If there was only 1 in 1,600 or 1,700, that seed would be allowed to pass. I think the test is already pretty severe. Toleration is allowed chiefly for the purpose of permitting the accidental presence of these noxious weed seeds.

Mr. A. H. CLARKE. Even that proportion would be dangerous in the dissemination of bad weeds.

Mr. FISHER. We could require one in 2,000 instead of 1,500. Our object is to make the law just as strict as the trade can possibly bear.

Mr. SEXSMITH. I agree that the standard now is fairly high in regard to No. 1 seed. But there is No. 2 and No. 3. Does the minister think it would be impracticable to place a standard below which no seed should be sold? I think there should be some standard.

Mr. FISHER. I would refer my hon. friend to section 8 of the Act:

> No person shall sell, or offer, expose or have in his possession for sale, for the purpose of seeding in Canada, any seeds of timothy, alsike or red clover or any mixture containing the said seeds, if the seeds of the weeds named in this Act are present in greater proportion than 5 to 1,000 of the seed sold.

That is a statute, we cannot change it by regulation. The seeds named in this section are those I refer to in clauses 6 and 7, the noxious weeds. I do not think the trade could supply the farmers of Canada to-day if that clause was made more severe. We must improve the quality of seeds produced, so that the seedsmen may be able to buy seeds of that kind and quality.

Mr. SEXSMITH. I am pleased to learn that there is no practical standard below No. 1. But, would the minister not think it wise to go a little farther and prohibit any of those dangerous seeds, such as are named in No. 1 quality from being included in No. 2, and thus create a better standard?

Mr. FISHER. We have no standard in No. 2 at all. We have fixed the standard at No. 1, and we have practically told the farmers that they ought to buy No. 1. As far as the Act is concerned there is no No. 2 or No. 3. No. 1 is called the government standard.

Mr. SPROULE. But you provide them with authority to sell another class of seed.

Mr. FISHER. I am just informed that some of the seedsmen are selling a certain lower grade as government standard. If they are I will have to look after them and try and prevent it. I do not know just what the trick is or how I will prevent it, but I do not wish to have the standard below No. 1 ticketed with the name of the government. I shall have to look after these people, and if it is necessary I would like to amend the Act for the purpose of preventing them from doing that.

Mr. WRIGHT. When this seed Bill was before the House two or three years ago, I drew the attention of the minister to the fact that the largest seed firms in Canada did not number their seeds at all. I have been in this business, not of late, but for many years, I have sold thousands of dollars worth of grass and clover seed; I have bought an equal amount from the big wholesale houses, but I have never bought a bushel of seed that was numbered. It was designated by a certain name. Grass and clover seed bore the names of certain animals, etc. These made it perfectly clear what the grade was, but it was never sold as No. 1. I do not know if there has been any change or not. If there has not been any change these men may continue to sell their seed under the names under which they sold it in the past and it would not be brought under the scope of the original Bill or the Bill before the House. I would like to know just how the minister deals with cases of that kind.

Mr. FISHER. Since this Act came into force there has been much more temptation on the part of dealers to mark their seeds as No. 1. If my hon. friend will look at clause 7 of the Act he will see that that designation is not required, but that the clause includes No. 1 or any other designation which represents seed of first quality. For instance, if a man were to call seed 'prime' or 'extra' we would apply section 7 to it as well and haul him up if the seed did not come up to the standard. Before this Act came into force and there was no standard at all for seeds, seedsmen offered their seeds under any name they chose, and there was nothing illegal about it. But since the Act has come into force, there is this standard, and we deal with the seed according to the names they apply. If they affix a name which may be included in that class, we deal with it accordingly.

Mr. WRIGHT. Is there any clause in the Bill that compels a wholesale seedsman to designate his seed, 1, 2 or 3?

Mr. FISHER. No.

Mr. WRIGHT. He can call it 'wolf', 'fox', 'lynx', or any other name he likes, sell the seed under such name and not come under this section of the Act?

Mr. FISHER. He will come under the Act if he sells seed under a name that would come under the designation of clause 7.

Mr. WRIGHT. Suppose he calls it 'wolf' or 'fox' or 'lynx'?

Mr. FISHER. No, but successful farmers would not buy it under that name.

Mr. WRIGHT. Well. they do buy it. I have bought and sold hundreds of thousands of bushels under names of that kind.

Mr. SEXSMITH. The farmers buy No. 1 as they are reasonably protected, and I think they get a fair quality of seed, or as good as they could reasonably expect. But, without a No. 2 or a No. 3 grade, if we so designate it by numbers, we could not supply the trade. A great many farmers are compelled to buy No. 2 or No. 3 because we cannot supply the trade with No. 1. I think it would not be going too far to ask the minister to have these very dangerous seeds extended to the other grades as well and prohibit the sale of them altogether. What are the names of the seeds which are prohibited in No. 1?

Mr. FISHER. They are named in clause 6. They are prohibited in all seeds, and in clause 7 are those prohibited ones which are prohibited in No. 1. In regard to a second grade, when we were discussing the arrangement of this Bill, we examined into that, but we did not wish to encourage the sale of any seeds except No. 1. We did not wish therefore to fix a standard which would be pretty dangerous and very low. If we were making a standard of No. 2 slightly below No. 1, the relief that farmers and seedsmen must have would be very slight. If we made the difference very considerable, there would be a great temptation for many people to say: Well, No. 2 cannot be very bad, because there are a lot of numbers below No. 1, and I will buy it because it is cheaper. My hon. friend may

contend that the trade could not supply the whole demand for No. 1. If that is largely true, it may be found to be a good sound argument in favour of creating a No. 2 grade, and I will look into that with the greatest care. If I find the facts such as will justify it and my officers can make a satisfactory description of a second grade, I would be rather disposed to introduce it into this Bill.

Mr. BEST. I think that the farmers should sow the best class of seed they can get, but the great difficulty we find is that when we buy No. 1 seed and it turns out to be of an inferior quality we cannot get back at the man who sells it. Last spring a dealer in our town sold what was supposed to be first-class seed to a farmer, but which proved to be not nearly up to the standard. The dealer was fined $2. He had bought it from a wholesale dealer in Toronto, but nothing further came of the matter and it was dropped. We find that this is the greatest trouble we have. Farmers are trying to use the very best seeds they can get, but we are often deceived in the seed we buy, and it is not worth while to go after the seller for all the fine that is imposed.

Mr. FISHER. Did the farmer buy it for No. 1?

Mr. BEST. Yes, he bought it for No. 1 seed.

Mr. FISHER. And the man was liable to a fine?

Mr. BEST. He was fined $2.

Mr. FISHER. That brings up the question whether the fines are sufficiently severe. We publish the names of those who are fined, and that has a more deterrent effect than the actual amount of the penalty.

Mr. FOSTER. That would have more effect on the wholesalers than on the small retailers.

Mr. FISHER. Yes. If the fines are not sufficient to deter, I have no hesitation in saying we will have to increase them.

Mr. SEXSMITH. I believe that the more dangerous seeds should be prohibited altogether. The sow-thistle is one of the most obnoxious weeds we have, and I regret to say that it is spreading through the province of Ontario.

Mr. SPROULE. It is a very common thing to sell two or three grades of seed, and while the good farmer will take nothing but the best grade, others are not so careful. Now, clause 6 provides that the package must have the full name and address of the seller with the name and kind of seeds and the common names of the weed contained in the seeds. I do not think that law is complied with, because if it were nobody would buy the weeds if he knew they were in the seed.

Mr. FISHER. The very fact that the name of these weeds is on the package is an open warning to the farmers not to buy, and they don't buy.

Mr. SPROULE. But I do not think it is put on the package.

Mr. FISHER. Then it is sold in contravention of the law. If a man has a quantity of seeds which contain these weeds, he can sell them legally by putting the names of the weeds on the package, but if he does, of course nobody will buy them.

Mr. SPROULE. It is a common practice to offer for sale different grades of seed, and people buy them.

Mr. SEXSMITH. I repeat that the sale of wild mustard and sow-thistle seed by the dealer or the farmer or any one else should be absolutely prohibited.

Mr. FISHER. Wild mustard is prohibited in clause 6 of the Bill.

Mr. SEXSMITH. That is a good thing.

Mr. SPROULE. How is it that every year you get wild mustard in your sugar beet and turnip seed?

Mr. FISHER. Because, unfortunately, the Act is violated.

Mr. SEXSMITH. If a farmer goes to a store and wants half a bushel of seed, and it is taken out of a bin and put in a bag, there is nothing to indicate that it contains weeds.

Mr. FISHER. The seller would have to put the name of the weed on the package in which he sells, as on the bin.

Mr. STAPLES. Now that the different sections of the Bill have been carried, I want to have a little talk with the Minister of Agriculture about the destruction of noxious weeds throughout this Dominion. This Bill prohibits the sale of seeds that contain noxious seeds, which is in the right direction; but, unfortunately, with all the care that may be taken under this Bill, they will still be sold. The country, generally speaking, is becoming very much polluted with noxious weeds, and there is no question which is giving the farmers of this country more anxiety at the present time. The government of Manitoba has been exercising the greatest care on this subject; it has placed on the statute-book the most drastic law it could think out; but I believe that the Dominion government, which has a greater revenue at its command, a revenue gathered especially from the agriculturists of this country, could well afford to spend some of that

money in enforcing a law that would start at the very root of this unfortunate condition of affairs. It takes an enormous amount of money to enforce a law of this kind. Those who have their farms polluted with these noxious weeds suffer great loss, perhaps through their own fault, or through not knowing at first how injurious certain seeds would be. For instance, in the section of the country which I have the honour to represent, and in which the sow thistle prevails, the farmers did not realize for a number of years that it was as injurious as it has turned out to be. If the Minister of Agriculture is alive to the interests of the farmers, he should follow up this legislation with a law for the eradication of noxious weeds throughout this country. To my mind, this is one of the biggest questions the farmers of the west have to deal with. I do not know whether the minister has such intentions or not. If he has not, I would like to do my utmost to start him thinking along that line. The government of Manitoba has expended enormous sums of money in the attempt to destroy noxious weeds in that province; but a little province like that, without a stick of timber or a foot of land to derive a revenue from, cannot do much compared with this government, and I think it should use some of the money which it collects from the farmers of Manitoba, Saskatchewan and Alberta as well as those of the other provinces, and give it back to them in the way of administering a law that would eradicate these weeds from the farms of the country.

Mr FISHER The subject which my hon. friend has brought up is one of the vastest importance and has a very wide bearing. The destruction of weeds on the land has been dealt with by the various provincial legislatures, including that of his own province of Manitoba.

Mr. STAPLES. I know that; I have the law before me; but it takes an enormous amount of money to enforce that law.

Mr. FISHER. But it is not enforced, unfortunately.

Mr. STAPLES. I will venture to say that there is not another government in this Dominion making the efforts the government of Manitoba is to enforce the law.

Mr. FISHER. I am glad to hear it, but that is only a reflection on the other governments. This is a matter almost entirely of municipal control. I doubt very much if we could enforce a law in regard to it.

Mr. STAPLES. That is the unfortunate part of it. When a municipality appoints an officer to deal with the law, and that officer goes on to his neighbour's farm and orders him to cut down a field of grain and destroy it, that is where the trouble begins. If we had a general law, enforced by the officers of this government, it would have a better effect, and would not probably cause ill feeling among neighbours.

Mr. FISHER. It does not require a Dominion law for that. The government of Manitoba could amend that feature of its law and provide efficient inspectors as well as the Dominion government could. As a matter of fact, that question has been dealt with by municipal regulation, which is a purely provincial matter, and which the Dominion government cannot interefere with. I am very dubious whether we could frame an Act which would enable us to enter upon a man's land and deal with noxious weeds on that land; and we certainly could not frame an Act which would cover the public highways, as the provincial and municipal authorities could. Any Act we framed would be very much restricted, even if it were not declared ultra vires of this parliament. I am not going to give a legal opinion on that point, but I can well understand the practical difficulties the Dominion government would have in enforcing such a law; and when we find that most of the provinces of the Dominion have such laws, which, according to my hon. friend, are not enforced, and which apparently are not enforced because they are not right——

Mr. STAPLES. It takes too much money to enforce them. Why should not this government lend some aid in that respect?

Mr. FISHER. I am perfectly willing to lend any aid within my power; but in this case, as in many others, where the provincial authorities are derelict in their duty, people appeal to us to do what the provincial authorities should do. The proper course is to keep their own provincial authorities up to the mark. My hon. friend had better deal with the authorities of the province he comes from.

Mr. THORNTON. I would like to ask what means are taken under this law to ascertain what seeds will germinate?

Mr. FISHER. We have a germinating test. The seeds are put into a germinating plant or machine which shows at once or very shortly what seeds will germinate.

Mr. THORNTON. How are the dealers or farmers to know what seeds will germinate?

Mr. FISHER. They can make the test themselves if they choose, or they can send samples here and have them tested.

Mr. BEST. I appreciate very much what the department has been doing in the last

three years. We must admit that the farmers are improving greatly and still we can acknowledge that weeds are increasing. That is natural and I am afraid it will continue. We have new seeds and probably worse seeds coming all the time and I think the government should try to help the farmers to eradicate the weeds and keep them out. My hon. friend here seems to think the law should be very stringent. I claim it should not and I ask my hon. friend from Manitoba how it worked in the west when the law said that you could go out and mow down a farmer's field of grain if it contained many weeds. That is beneficial to the farmer with the clean farm, but we must also look after the poor man. They had to amend the law which allowed the elevator men to retain the screenings.

Mr. STAPLES. Where was the law amended?

Mr. BEST. The principal of the agricultural college in Manitoba was sent out by the premier to ascertain if the farmers were content to take chances and get the screenings. He found that the great majority of the farmers were and they got the screenings back, I think it was an injustice to the farmers to have to leave their screenings at the elevators or mills for no doubt the elevator men kept a great amount of the screenings. While we are helping ourselves in some ways we may be injuring the country in others. I believe the government are doing all they can at the present time and I think they should try and increase the help they give to the farmers as the country increases. Let us give credit where credit is due. Ten or twenty or thirty years ago, we had not the seed tests we have to-day and I admit we did not need such tests, but, we have as much need now for the improved tests as for any other aid to agriculture. I, as a farmer, would ask the government to try to do everything possible to eradicate the weeds and keep the farms clear of them. They should encourage the farmers to sow nothing but No. 1, or the best seed. The farmers in too many cases do not properly clean the seeds which they raise, many seeds are resowed from improper cleaning. If the farmers are educated to sow the best and none but the best we will improve very much.

Mr. FISHER. I assure my hon. friend I appreciate his views. We are watching very closely any opportunity to increase the stringency of these laws without unduly or unnecessarily interfering with the private business of the people. Before this Act was passed, there was nothing to prevent the refuse seeds of other countries being dumped on Canada and sold here. Since this Act has been in force the provisions of the Act apply to seeds imported into Canada and any one selling seeds not coming up to the requirements of this Act, is mulcted and punished. The result is that the quality of the seeds imported into Canada from other countries has vastly improved, and we are, I think, safe in that way from the introduction of seeds from abroad which sometimes were brought into the country. It is well known that some of the worst and most noxious weeds we have in Canada were imported from abroad in seeds. That kind of thing can hardly occur under the operations of this Act and we are watching all the time where we can improve our legislation and its administration so as to take advantage of every opportunity of increasing the safeguards.

Mr. KIDD. Is it not a fact that in many cases retail merchants would keep a good tested sample in the store, but would sell another grade to the farmer?

Mr. FISHER. The inspectors inspect the seeds being sold, and any farmer can at once send a sample of the seed he has bought to the department and get it tested, without cost.

Mr. KIDD. As a rule the farmers do not take much pains in getting the seed tested. I do not see anything in the Act that will protect the farmers or prevent the merchants from selling that inferior seed.

Mr. FISHER. If the merchant sells seed that does not come up to the quality established by the Act he is liable to a penalty.

Mr. KIDD. For some time I have been watching the seed sold in our section and I do not think there is any improvement. I do not know where the leak is, but the Act does not seem to have the effect people anticipated.

Mr. FISHER. Our inspectors have taken samples of all kinds of seeds in every part of the country, and the result of testing those samples has been to show very marked improvements in the quality of the seeds offered; but of course if farmers will not take the trouble to give us an opportunity to protect them, we cannot protect them against their will.

Mr. THOS. CHISHOLM. I think there is a very important omission in the Act. Farmers are not botanists. Very often, even with the aid of books sent out from the department, they can scarcely recognize and name the weeds which they see growing. I would like to know how many retail merchants or farmers are able to take a handful of grain and name the seeds mixed with it. I suggested on a former occasion that any person who retailed seed under this Act should be compelled to have in his place of business, one of those

cards of small bottles containing the different weed seeds, so that when a farmer buys seed he can compare it with the sample and know what he is really buying. This question of weeds in the west is very important. I think the yield has been reduced nearly one quarter in some cases, owing to noxious weeds. That matter should be looked into very carefully and every attempt made to check the increase of weeds.

Mr. FISHER. The samples of seeds of the different weeds are available not only for seed merchants, but for anybody else. I understand that. But I do not know that we could very well say that everybody who sells seeds should be compelled to have such a cabinet. We supply them at a mere nominal figure. But a man may sell seeds this year and not next year. The farmer has a protection that is far better; he need not trust to his eyesight or his knowledge of seeds; he can send a sample to the seed laboratory here, and it will be tested and a report sent to him immediately, so that he will know absolutely, by the official record, the character of the seed he is buying.

Mr. T. CHISHOLM. It may be that a farmer has to go twenty miles to town to buy seed, and buys it, perhaps, to sow next day. How can he wait to send a sample to the department? I think that it would be a very small license fee—if you put it that way—to ask of a man who is selling seeds under such peculiar circumstances, and where there is a very great list, to have one of these cabinets in his place of business. It might keep out those who would go into the business in an irregular way. It would be a great educational influence, so that it would not be long until every farmer would be able to recognize these seeds by sight.

Mr. ARMSTRONG. How many farmers have sent samples of seed to the laboratory for test within the past year?

Mr. FISHER. Last year, there were about 13,000 samples tested. Of these, probably 5,000 came from seed merchants or sellers, and the other 8,000 from farmers.

Bill reported, and read the third time, and passed.

SUPPLY—TECHNICAL EDUCATION.

Mr. FISHER moved that the House go into Committee of Supply.

Mr. SPROULE. I understood that the leader of the opposition (Mr. R. L. Borden) has been waiting for an opportunity to say a few words on a subject of importance. He is not in his place at the moment, but will be here at once and ready to go on.

Mr. GUTHRIE. I do not wish to interfere with any arrangement that has been made, but I would like, at this time, to call the attention of the government to order 35 in Public Bills and Orders. This is the partially-discussed motion on technical education. As hon. members will recall, the debate was adjourned at the instance of the government, for the purpose as I understood at the time of gaining further information as to the constitutional right of this parliament to deal with the question and, I believe, of consulting the various provinces. I would like to inquire of the government, and particularly of the Minister of Labour (Mr. King), whether any conclusion has been reached in the matter, and, if so, whether it will be necessary or possible to have a day fixed for a further discussion of the question.

Mr. KING. The hon. member for South Wellington (Mr. Guthrie) is right in saying that the debate was adjourned with a view to giving the government an opportunity to look further into the question and, in particular, to communicate with the several provinces to see how any action on the part of the Dominion on the subject of technical education would be viewed by them. I have here a copy of the communication which was sent by the government to the premiers of the several provinces, and of the replies which have been received. Perhaps I could not answer the question asked by the hon. member in a more satisfactory way than by reading these communications. I may say, first of all, that the government is of opinion that it is very much in the national interest that a commission on technical education should be appointed. In the resolution moved by the hon. member for South Wellington, it is declared to be advisable 'that a commission of inquiry be forthwith appointed to investigate the needs of Canada in respect to technical education, and to report on ways and means by which these needs may be best met.' If the government has any exception to take to that resolution, it would be that the resolution does not go far enough considering the importance of the subject. Any commission appointed should in the view of the government have an opportunity of visiting other countries especially Great Britain, France, Germany and the United States and of ascertaining the systems and methods of technical instruction obtaining in those countries with a view of giving to Canada the benefit of the experience of these other nations. The government having come to this decision, the following communication was sent by myself to the premiers of the several provinces, with a view to ascertaining whether action of that

nature on the part of the government would be favourably viewed by them, and in particular—since the question is one that has been raised at different times in this House—whether any exception would be taken on the ground of jurisdiction to the action of the Dominion government in appointing a commission for the purpose.

Ottawa, Dec. 13, 1909.

Dear Sir,—The Dominion government is considering the advisability of appointing a royal commission to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education, and into the system and methods of technical instruction obtaining in other countries——

Mr. R. L. BORDEN. May I interrupt for a moment? Are we to have a discussion of the whole subject?

Mr. SPEAKER. No discussion of the subject can take place now, because the matter is covered by an item on the order paper. I understood the hon. member for South Wellington merely asked the privilege of putting a question to the government as to whether progress had been made.

Mr. R. L. BORDEN. No objection.

Mr. SPEAKER. No debate can take place.

Mr. KING. It is not my intention to discuss the matter; but I thought the question put by the hon. member (Mr. Guthrie) could be best answered by giving the House the communication sent by the government to the several provinces in regard to this matter and the replies which have been received from the premiers of the several provinces. I think the House will consider the subject of sufficient interest to have the answer given as fully as that.

Mr. R. L. BORDEN. That is quite proper. But it seems to me that all this ought to take place on the discussion of the motion itself; and the government can facilitate that at any time by forwarding the order on which the discussion should properly take place and the announcement properly be made.

Mr. KING. I am not anxious to press the answer, but I should think that the subject having occupied the attention it has in the press, the public would be interested in getting, at as early a day as possible, as full information as can be given of what the government has been doing. I am prepared to give the answer at present if that is the wish of the House. If not, I shall be glad——

Mr. R. L. BORDEN. I am anxious to get any possible information in regard to the matter. But that information might very naturally provoke discussion, possibly even criticism. Then we shall be in this situation—either there is to be no discussion of it and no criticism, or we shall engage at the present time in a discussion which, seems to me, would be very much out of order.

Mr. GUTHRIE. I asked the question, because the question was asked me by members of the Manufacturers' Association who met here yesterday; and I have had other communications from persons desiring to know whether the motion is ever to go on again, whether the government has ever decided. My question is: Has the government come to a conclusion on the question of jurisdiction, which they intimated was the cause of adjourning the motion?—and I understand my hon. friend is answering the question.

Mr. SPROULE. The answers are all ready before the government.

Mr. GUTHRIE. I never knew of them.

Mr. R. L. BORDEN. I have no objection to the hon. gentleman going on and giving the information to the House, provided he will undertake that the motion shall be forwarded so that there will be an opportunity, at an early day, of discussing the information which he now affords to the House. But I do decidedly object to his communicating to the House matters which might legitimately be the subject of discussion, without any understanding that we shall have an opportunity of discussing them. It is obviously not the time now to discuss them, it would be against the rules of the House. The course which is proposed would have a very unfortunate result. The communication would be made to the House, and no opportunity would be afforded to discuss it. If the government will say that an early day will be appointed for a further discussion of this motion, I have not the slightest objection to my hon. friend going on and making his communication to the House.

Mr. GUTHRIE. I think I have as good a right as my hon. friend in this matter. I desire an answer to my question, and I understood that the proper time to ask it was on going into Supply. I also would like to have some day appointed for a further discussion of the matter. The motion happened to be called up on the 19th, unexpectedly. I was prepared to go ahead with it, but the Minister of Labour was out of the House that afternoon. It is unlikely it will be called up again unless a special day is fixed. But I simply ask the question whether the government has given that consideration that they promised, and what is the result. I think as a matter of right, I am entitled to an answer.

Mr. R. L. BORDEN. My hon. friend has a certain right to ask a question, and I have also a certain right, I suppose, to make my views understood; and I propose, with all respect and deference to my hon. friend, to make them understood. I say I have no objection at all to the communication being made to the House, provided the government will give us an early opportunity of renewing the debate, so that this communication may properly be the subject of discussion.

Mr. GUTHRIE. I want an answer to my question, without any conditions.

Mr. R. L. BORDEN. I do not know that my hon. friend possesses any special right above the rest of us. I have raised a legitimate objection, and I propose to persevere in it.

Mr. FISHER. The government do propose to give an early opportunity, as early as we can, consistently with other pressing business before the House, of discussing this motion and carrying the discussion to a conclusion. I appreciate that the motion before the House dealing with this particular subject can only be brought up, on going into Supply, by the courtesy of the House.

Mr. R. L. BORDEN. The assurance of the minister is absolutely satisfactory.

Mr. SPEAKER. I understand there is to be no debate. It is under Rule 30, and I would not like this case to serve as a precedent.

Mr. R. L. BORDEN. I suppose my hon. friend from South Wellington (Mr. Guthrie) will be obliged to me for obtaining this assurance for him from the government.

Mr. KING. Considering the importance of the subject, I think the government will be glad to afford an opportunity for a full discussion, as full as the importance of the subject deserves.

Mr. SPEAKER. I understand that, with the consent of the House, the Minister of Labour will be allowed to answer the question on the understanding that there shall be no debate.

Mr. SPROULE. The member for South Wellington asks if there will be an opportunity of discussing, and the Minister of Agriculture says there will.

Mr. KING. He gave the assurance that was asked for by the leader of the opposition, and the leader of the opposition said that if that assurance were given, he would be pleased to have the communication which I hold in my hand, read to the House, and it is now my purpose to read this communication.

Mr. SPROULE. Is not the hon. member then out of order in discussing an order that is not on the paper, and is not before the House?

Mr. SPEAKER. The moment objection is taken, there can be no debate. But I understand the House is willing to waive the objection, on the understanding that there should be no debate. If objection is taken, I should have to sustain it.

Mr. KING. The communications answer the question of the hon. gentleman. The letter sent by the government to the premiers of the several provinces was as follows:

Ottawa, Dec. 13, 1909.

Dear Sir,—The Dominion government is considering the advisability of appointing a Royal Commssion to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education, and into the system and methods of technical instruction obtaining in other countries, particularly in Great Britain, France, Germany and the United States. It is intended that the commission shall be solely for the purpose of gathering information——

Mr. BOYCE. What is the hon. gentleman reading from?

Mr. KING. I am sorry the hon. gentleman did not hear my statement. I am reading a copy of a letter sent by myself as a member of the government to the premiers of the several provinces, informing them of the intention of the Dominion government, should they acquiesce in the same, to appoint a Royal Commission to inquire into industrial training and technical education.

Mr. BOYCE. Does the minister propose to read all that correspondence to the House, in answer to the question of the hon. member for South Wellington (Mr. Guthrie)?

Mr. KING. That is what I propose.

Mr. BOYCE. Then I strongly object to that course, and I invite the application of the rule.

Mr. GUTHRIE. The consent of the House has already been given.

Mr. SPEAKER. Rule 30 says:

All items standing on the orders of the day (except government orders) should be taken up according to the precedence assigned to each on the order paper.

This question being now on the order paper, I cannot allow it unless with the unanimous consent of the House.

Mr. GUTHRIE. I may be wrong in my understanding of the rule, but as I understand the procedure, on going into Supply I am entitled to ask a question of the government, whether it be concerning a matter which stands on the order paper or in re-

gard to any other question. I am not entitled to discuss the question standing on the order paper, but I am entitled to receive an answer to my question, and that is all I ask.

Mr. BOYCE. But the minister himself is causing discussion.

Mr. GUTHRIE. I submit that the minister is not causing a discussion. The minister is answering a question.

Mr. BOYCE. That is the injustice of the whole thing. My hon. friend asks a question, the result of which produces a speech from the minister, which immediately raises a discussion, which discussion is out of order; therefore, I take objection to the minister making a speech in answer to my hon. friend.

Mr. GUTHRIE. I was asking for no speech from the minister at all.

Mr. SPROULE. The Minister of Agriculture answered the question of the hon. member for Wellington.

Mr. SPEAKER. Except by unanimous consent it cannot be discussed. Bourinot says that no member can debate a motion that is on the notice paper. The question is on the notice paper and it cannot be discussed now unless by unanimous consent.

Mr. GUTHRIE. Has it been objected to? I understood it was consented to.

Mr. SPEAKER. I understand that objection is taken by the hon. member for Sault Ste. Marie.

MANITOBA FISHERIES COMMISSION.

Mr. G. H. BRADBURY (Selkirk). Mr. Speaker, I desire for a few moments to call the attention of the House to a report which was laid on the table a few days ago of the fishery commission which was appointed to investigate the fisheries in Manitoba. I regret very much that the hon. Minister of Marine and Fisheries (Mr. Brodeur) is not in his place. I regret to have to discuss this matter in his absence, but the question is of such importance that I feel justified in asking the House to bear with me for a few moments while I review this report. During the holidays there was an interview published in one of the Montreal papers, given, I presume, by one of the officials. If it had not been for that interview, I do not think I would have asked the House to have listened to any remarks of mine just at the present time, but, in justice to myself, however, I feel that I must ask the House to listen to what I have to say in regard to this report. An interview was published in the Montreal 'Star' of December 22, 1909, as follows:

Mr. GUTHRIE.

Ottawa, December 22.—The commission appointed some months ago to inquire into the question of Manitoba fisheries and to investigate allegations as to undue advantages being possessed by the Fish Trust, has completed an interim report. The appointment to the bench of one of the commissioners, Mr. Metcalfe, somewhat disorganized the inquiry, which is by no means completed, but it will be resumed next summer.

It is learned that the evidence so far taken, and which is embodied in the interim report is not of a character justifying some of the allegations made. The commission, however, is not in a position to make any recommendations till the inquiry is completed.

I desire to call the attention of the House to the fact that every allegation, every charge that was made on the floor of this House last year by myself has been borne out by the report brought in by the commission, which I hold in my hand. More than that, the commission not only has corroborated everything I said here, but it has brought in recommendations far more drastic than anything I suggested. This is a question that has agitated the people of Manitoba during the last twelve or fourteen years. I was perhaps more conversant with this matter than many others, and I have repeatedly petitioned and had personal interviews with the Fishery Department, both with its minister and officials, but up to the time that this commission was appointed I have failed to secure any redress of or any consideration for the grievances and complaints of the fishermen and residents of Manitoba. I want to say in justice to the hon. Minister of Marine and Fisheries that this is a matter in which he has taken considerable interest. I believe, Sir, that he has done what was possible to secure a fair and honest report, and I want to do justice to that hon. gentleman in this regard. The report was laid on the table by the right hon. the Prime Minister (Sir Wilfrid Laurier) a few days ago, and I intend placing it on 'Hansard' that the people of the west may know exactly what has taken place. This report is not in printed form and cannot be circulated in any other way.

Interim Report.

To the honourable
The Minister of Marine and Fisheries,
Ottawa.

Sir,—We, the commissioners appointed by order in council to investigate the waters of Manitoba and the west, have completed our first investigation of the waters of the province of Manitoba and have the honour to present an interim report, consisting of two parts:

1st. Certain important conclusions, based on the evidence received at the series of sittings held during the past summer.

2nd. Recommendations, with a view to such changes in the regulations governing the Manitoba Fisheries as appear necessary from the facts brought before the commission in the evidence.

Conclusions of the Commission.

1. We have reached the conclusion that all the lakes of Manitoba have been over-fished, and that some of the more valuable species such as the whitefish and the yellow pickerel have decreased very seriously in size and in abundance, and that the sturgeon—the most valuable fish found in these water—is on the point of extinction and can only be preserved by stringent measures.

I want to call the attention of the House to the fact that during my remarks last session I pointed out the very facts that have been so strongly supported in this report. The Minister of Marine, through the promptings of one of the officials who sat at his side, denied that there was any fear of the depletion of the waters of Lake Winnipeg. I took the opportunity of asking the minister at that time to hold a searching investigation into these matters. The investigation was held and has justified what I said on that occasion. The report goes on to say:

2. The evidence shows that the fishery laws have not been generally observed, both in regard to quantity of net used, size of mesh, &c., although the close seasons have in our opinion been observed by the majority.

3. We have abundant evidence that the Manitoba fisheries have been unduly controlled by foreign fish operators, who have dictated the prices of fish and have secured the major portion of the profits.

That is also a matter that I have pressed upon the Fishery Department during the last ten or twelve years. I have proven beyond a doubt that the fisheries in Manitoba were controlled absolutely by the American Fish Trust, or the Booth Fish Packing Company of Chicago. But in face of the evidence that I have submitted from time to time to the Fishery Department I have failed to receive any redress for the fishermen through any regulations which would have prevented these men from ruining our great fisheries. The consequence is that to-day we find this great fishery, once the greatest whitefish fishery on this continent, in a depleted condition, depleted to the detriment of our own settlers, while American citizens have made fortunes out of these fisheries. The investigation which has been made corroborates everything that I have stated year after year and which I stated to this House last year. The report goes on to say:

The people of Manitoba have benefited little from these great lake fisheries. Moreover inferior grades of fish have been sold in the Canadian market, while the better grades, including the larger size of fish, have been exported to the United States markets.

That is another point that I have emphasized time after time. The best fish that were taken out of Lake Winnipeg and our other lakes were exported to the American markets and the Canadians had to be satisfied with the culls. We had to pay a very much increased price even for the cull fish on account of the quantity that was exported to the American market out of our own country. It goes on to say:

It cannot be denied that the main market has been hitherto in the United States and the home market has been limited. With the wonderful development of Canada and the rapid growth of new towns in the west, the demand for fish is rapidly increasing. It is imperative that every effort should be made to restore these fisheries to their former plenitude, in order to provide a great staple food for the future population of the Dominion.

What a reflection this report is upon the foresight and wisdom of the Marine and Fisheries Department. The idea that this once great fishery has been allowed to be depleted, and now the commissioners come and recommend that this country must spend tens of thousands of dollars in an effort to replenish this lake after allowing the Americans to take the fish from it and send them to the American market. The report goes on:

We are convinced that a minimum size limit for the more important food fishes is absolutely necessary. We therefore recommend that certain sizes of fish should be specified in the regulations, below which no fish can be legally captured. We also recommend that the legal mesh of various nets should be increased.

It is essential, in our opinion, that fish, whether caught in Manitoba waters or elsewhere, should not be possessed, bought, sold or handled during the close season, provided by the regulations; but dealers having legally-caught fish in storage might, in our view, be allowed to hold them in storage under authority of a written permit issued by the inspector of fisheries.

We have found that the existing regulations regarding the possession and the sale of fish in close season have been openly and universally violated.

This, Mr. Speaker, is another matter that has been called to the attention of the Fisheries Department year after year by myself and others, and we have always failed to gain support or sympathy from that department. It has seemed impossible to get the Fisheries Department to take hold of this question in a business way and to protect the fisheries in the interest of the Canadian consumer and the Canadian fisherman, while on the other hand everything possible seems to have been done in the interest of the great American trust, who, one would imagine, had control of the Fishery Department here at Ottawa.

At six o'clock, the House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 62) respecting the Esquimalt and Nanaimo Railway Company—Mr. R. Smith.

Bill (No. 63) respecting the Manitoba and Northwestern Railway Company of Canada—Mr. Cash.

Bill (No. 93) respecting the Vancouver and Coast-Kootenay Railway Company—Mr. R. Smith.

CALGARY AND EDMONTON RAILWAY.

House in committee on Bill (No. 89) respecting the Calgary and Edmonton Railway Company—Mr. Douglas.

Mr. GRAHAM. This Act was apparently passed in 1890, and the time has been extended several times, and there does not seem to be in this Bill any section repealing the former extension sections. It might be as well, therefore, to let the Bill stand for the third reading, when it can be referred back in order that such a section may be inserted.

Bill reported.

BURRARD INLET TUNNEL AND BRIDGE COMPANY.

Mr. COWAN moved the second reading of Bill (No. 118), to incorporate the Burrard Inlet Tunnel and Bridge Company.

Mr. PUGSLEY. As I shall not likely be in attendance on the Railway Committee when this Bill comes up for consideration, I would like to point out the fact that there is no provision for the plans of the proposed tunnel or bridge being submitted to the Minister of Public Works, or to the Governor in Council for approval.

Mr. SPROULE. I think the Railway Act provides that.

Mr. PUGSLEY. No, this Bill provides that the plans shall be submitted to the Board of Railway Commissioners. My own view is that as the Department of Public Works is especially charged with the duty of attending to the interests of navigation, no power should be given to erect a bridge over a navigable water unless it is provided that plans shall be submitted to and approved of by the Minister of Public Works. I think that is a proper provision and mention it now so that possibly some gentleman who is a member of the committee might bring the matter before the committee when the Bill is under consideration.

Motion agreed to, and Bill read the second time.

INTERNATIONAL WATERWAYS CANAL AND CONSTRUCTION COMPANY.

On the order for the second reading of Bill (No. 119) to incorporate the International Waterways Canal and Construction Company.—Mr. Conmee.

Mr. PUGSLEY. I feel it my duty to call the attention of the House to the fact that I have received a communication from the city of Edmonton urging that this Bill should not be allowed to pass in any form, which I think would mean its present form, which would give to the company any exclusive right or any right of control over the river Saskatchwan. The Bill is very broad in its terms. It gives power not only to build a canal from Lake Superior, or from the Pigeon river to Rainy river, but it seeks to give control of the waters of the Rainy lake and the Rainy river and then to make a connection between the Lake of the Woods and the Winnipeg river, so connecting with Lake Winnipeg. Then it seems to give control, and I think it does by its terms give control over the waters of Cedar lake and Cross lake, which are parts of the Saskatchewan river, and also over the Saskatchewan river, the Assiniboine river and I think possibly Lake Manitoba and Lake Winnipeg with power to exact tolls on goods transported over these waterways. I think my hon. friend will, on consideration, see that while it might be quite proper and perhaps desirable in the public interest that a company should be given power to build canals which should connect these waterways, it would not be proper to give to a private company any control of any kind or description over these great navigable waters in the western part of the province of Ontario and in the provinces of Manitoba, Saskatchewan and Alberta. I therefore feel it my duty to oppose the second reading of the Bill.

Mr. CONMEE. I think the minister is entirely mistaken as to the purport of the Bill. I see nothing in the Bill that asks for any control more than the usual powers granted to canal companies and I think if there is anybody responsible for the Bill it is the minister himself. This is a Bill to create a navigable waterway from Lake Superior by way of Rainy river, Rainy lake, Lake of the Woods, to Lake Winnipeg, and into the Saskatchewan river. This Bill was introduced two years ago. At that time an appropriation was made and it was believed by those interested and the public generally that the government would build

a lock on the Rainy river, at a point known as the Long Sault Rapids. I am sure that the minister's intentions were good but the lock has not been constructed. Owing to the international complications that has not been carried out and it was suggested that the only way to get over the difficulty was to incorporate a company that would have similar powers in both Canada and the United States. That step was taken for the purpose, in part, of overcoming that particular difficulty. The Bill gives no special powers, no control over——

Mr. PUGSLEY. Look at section 8, subsection (c).

Mr. CONMEE. That is merely part of the power of the company to 'construct, excavate, erect and make all channels, locks,' and so on. What control is there in that?

Mr. PUGSLEY. And it closes 'and in and along the Saskatchewan river.'

Mr. CONMEE. Yes, or along any other river. But it does not give one iota of control. Look, for instance, at section 12:

Before the company breaks ground or commences the construction of any of the canals or other works incidental or necessary to the carrying out of the company's undertaking, authorized by this Act, the plans, locations, dimensions and all necessary particulars of such canals and other works, so authorized, shall be submitted to and receive the approval of the Governor in Council.

If that is not enough control, let us name some other body or provide other control. Again, if the minister will look at section 14, he will see that it provides as follows:

Nothing in this Act shall be held to give the company a prior or exclusive right to any water privilege not developed or in course of development by the company; all water privileges upon any stream affected by this Act, and not developed or in course of development by the company, shall remain in the same position in every respect as if this Act had not been passed.

If the minister can suggest some better safeguard, or any preferable safeguard, to be embodied in the Bill, well and good. The promoters, I assume, will have no objection. As having charge of the Bill, I am only too anxious to have any one suggest improvements. I have tried in every way I can to put in such provisions as will protect the public interest, and make the measure one that I can defend in my constituency, for my constituency is the one particularly affected, though it may affect others also. But, surely it is not giving control of waters to say that the company shall have power to make a channel deep enough to navigate. Every one else is free to navigate, and the company can fix tolls only as authorized by the Governor in Council, or the Minister of Public Works. I submit that the Bill ought to have its second reading, and, if there are any dangers in it, if the minister or any one else will be kind enough to draft a clause that will put them at rest, it will be gladly adopted.

Mr. SPROULE. The hon. member for Thunder Bay and Rainy River (Mr. Conmee) says he does not see anything unusual in the Bill. I guess not, for we have been in the hbait of giving him everything he asked for. But it happens that there is a change in the policy of the government in regard to waterways and water-power. The hon. member had a Bill in this House last year to give control over one of these rivers to the Ontario and Michigan Power Company, which, in the judgment of this House, could not be granted, and therefore he was obliged to relinquish it for the time being.

Mr. CONMEE. The hon. gentleman (Mr. Sproule) is mistaken. The Bill was granted.

Mr. SPROULE. But the hon. member did not get all the rights and powers he desired.

Mr. CONMEE. So far as the waters affected by this Bill are concerned, he did.

Mr. SPROULE. It seems to me that, in view of the change of policy of the provinces and the Dominion in regard to water-powers and water highways to keep them as much as possible under the control of the government, and not give them over to the control of private individuals, we should be doing something not in the best interests of the Dominion, or of the provinces, if we granted the powers proposed in this Bill. I agree with the Minister of Public Works that such a Bill should not pass this House. The hon. member (Mr. Conmee) says that any safeguards necessary can be added. But the object of the incorporators is to get the right to build and then they will take chances of afterwards being able to secure the privileges under the plea that the charter gives the right to build these dams and therefore they are entitled to avail themselves of the powers of their charter. A corporation is given certain corporate rights, and I think it is generally held that they must be allowed to avail themselves of the powers given in their charter and go on with the undertaking. Thus it may have the effect of forcing the hand of a province or of a municipality where otherwise they would refrain from giving the power asked for by the company. Hence, I think this Bill is wrong, radically wrong. Then, as I understand it, this is an international affair. Why should a private

corporation control an international stream or any portion of it? The two countries might do it by agreement, but to give the power to a private corporation, I think, is radically wrong. This is a portion of the country that we know very little about; we do not know what is to be taken possession of up there. We have a commission appointed to look after these things—water-powers, streams, timber and other natural resources, and we should refrain from tying their hands more than has already been done until they have developed a policy that will be suitable and that will be assented to by the provincial and federal governments.

Mr. McCARTHY. I understood the Minister of Public Works (Mr. Pugsley) to say that this Bill would affect the province of Alberta. I have read the Bill, and I would be glad if he would point out in what way it affects that province.

Mr. PUGSLEY. Section 8, subsection (c) gives power to improve the Saskatchewan river, and, under another section, I should think gives certain rights where the river is being improved. With the permission of the House, I would like to make a few further remarks, particularly in consequence of what my hon. friend (Mr. Conmee), who promotes this Bill, has stated.

Mr. McCARTHY. Would the minister be kind enough to point out first how this will affect Alberta?

Mr. PUGSLEY. I would refer the hon. member to section 8:

8. The company may,—

(a) lay out, excavate, construct, erect, maintain and operate a canal and connecting channels from some point on Thunder bay, in Lake Superior, or from a point at or near the Pigeon river, by the most feasible route to Rainy lake, thence by way of Rainy river to the Lake of the Woods, thence from a point on the western boundary of the Lake of the Woods by the most feasible route to the Red river and Lake Winnipeg; or from the Lake of the Woods by way of the Winnipeg river and thence by the said Winnipeg river to Lake Winnipeg; thence by way of Cross lake, Grand rapids, Cedar lake to the Saskatchewan river, and also to Lakes Winnipegosis and Manitoba;

(b) dredge, deepen and widen the Assiniboine river——

Mr. CONMEE. That is struck out.

Mr. PUGSLEY (reading):

—and make all other necessary improvements upon the said river to the city of Brandon;

(c) construct, excavate, erect and make all channels, locks, dams, diversions and watercourses necessary for the efficient operation of a ship canal, maintain and operate all works necessary to create and maintain a navigable waterway by the said points from Lake Superior to Lakes Winnipegosis and Manitoba, and in and along the Saskatchewan river.

That gives power to divert any part of the Saskatchewan river, to straighten it, to make works which are regarded as necessary for the improvement of the navigation of the Saskatchewan river. Now, if it were proposed to vest in a private company that control, which I think ought only to be in the Dominion government——

Mr. CONMEE. So it is. What about the approval of the plan?

Mr. PUGSLEY. That is another matter. If parliament were to sanction this by incorporating the company, I take it that it would be the duty of the Governor in Council, upon proper plans being presented, to approve of those plans, because it would not be proper for the Governor in Council to refuse to recognize what parliament had done. Now, my hon. friend, the promoter of the Bill, has mentioned the case of a lock at the Long Sault Rapids upon the Rainy river. I quite agree with my hon. friend that that is a work which is very desirable, and if the Bill were limited to that work, or if, when it comes before the committee, it were understood that it would be limited to that work, I would be very happy indeed to support the Bill, and I will tell you why, Mr. Speaker. The year before last, and I think also in previous years, parliament passed an appropriation for the erection of a lock at the Long Sault rapids in the Rainy river. That work is very essential for the navigation of that very important inland waterway. My department had plans prepared and made application to the International Waterways Commission for approval of those plans. The commission, for some reason or other, felt they could not deal with it, and suggested that application should be made to the United States government. Application was made to the United States government for permission to this government to build the necessary lock in the Rainy river, but the United States government, or those who professed to speak for them, were of the opinion that it would not be a desirable thing to do, and it was something which they could not do, that is, to authorize a foreign government to construct a work which would be partly upon United States territory; and the permission was not granted. Those who were advising as to the work thought the better way would be to get incorporation from the Canadian parliament and also from the state of Minnesota. Now, I can say to my hon. friend that if the object of this Bill is to promote that work, to enable a company to be incorporated by the parliaments of both countries. I should be very happy to give the Bill all the assistance I can. But, I would point out to my hon. friend that this Bill is much wider in its scope, and I am sure that if it were passed and went into operation, it would greatly hamper the

work of improving these waterways, particularly the Saskatchewan river, which the government has now in contemplation. Parliament is being asked this very session for an appropriation for the purpose of improving the Saskatchewan river by building wing dams, and there is an appropriation for the building of one or more dredges. We have had a preliminary survey made of the bed of the river, and it is the intention of the government to proceed with reasonable diligence in making the necessary improvements on that most important waterway. I think it would be a great mistake to give to a private company any control whatever over the navigable waters of the Saskatchewan river, as by this Bill such control is sought to be given. Upon the assurance of my hon. friend that his sole desire is to develop or to build a lock at the Long Sault rapids in the Rainy river, I would withdraw my objection to the second reading, with the understanding that my hon. friend will consent to the curtailing of the powers sought by this Bill when it comes before the committee. I would be very sorry indeed to do anything which would prevent the building of a lock at the Long Sault rapids.

Mr. BOYCE. In reading the very modest powers asked for in section 8 of this Bill, it occurs to me to ask my hon. friend from Thunder Bay and Rainy River (Mr. Conmee) whether there is not something left out. On the other hand, I think a great deal is put in that ought not to have been put in. I think that, for several reasons beyond those stated by the Minister of Public Works, the Bill ought not to be read the second time. Last session we had a great deal of discussion over another Bill introduced by the hon. member for Thunder Bay and Rainy River, a Bill involving a great deal that is involved in this Bill; that was a Bill to incorporate the Ontario and Michigan Power Company. It occurs to me, in view of what has taken place since that Bill was introduced, and the effort that is being made now by the hon. member to utilize the powers given under that Bill at the present moment, after he met with refusal at the hands of the people in endeavouring to thrust that Bill upon them, that this Bill calls for some consideration.

Mr. PUGSLEY. I would call my hon. friend to order. I do not think it is proper, upon the discussion of the merits of this Bill, to discuss some other Bill.

Mr. BOYCE. I submit I am in order. I propose to contrast this Bill with, and to link it with, a Bill that was passed this session, and to show that that which the hon. member was not able to do under the powers of the Ontario and Michigan Power Company, he proposes to ask parliament to enable him to do under this Bill to incorporate the International Waterways Canal and Construction Company. That is as far as I intend to go. Well, under the Act of the Ontario and Michigan Power Company, my hon. friend took power, under section 7 of that Act:

> To acquire, develop, improve, maintain and operate water-powers, use, supply and sell water-power for any purpose, by any means of application, generate, by means of water-power or otherwise, electricity, heat, light and any other form of energy, and transmit the same by any means to, and subject to the provisions hereinafter contained, supply and sell the same for use in any manner, at any place, in Canada and the United States, and subject to the provisions of the Electricity and Fluid Exportation Act.

That is subsection (a) of section 7 of chapter 115 of last session. That company is to supply that power from the Pigeon river, in the district of Thunder Bay, amongst other streams, to supply electricity, water-power and so on, from, amongst others, the Pigeon river, which flows into Thunder Bay. Here is the same river under section 8, here are the same powers asked for in another Bill, because by section 8 of this Bill (subsection h) the promoters of this Bill ask for power to:

> Use, sell, lease or otherwise dispose of water brought by or for the said canals, channels or other works, if at any time such water may be utilized for purposes other than those of navigation, and subject to the provisions of this Act, produce, lease or supply, or otherwise dispose of hydraulic, electric and other kinds of power or energy created or made available or obtained by or from any canal, lock, channel or other work hereby authorized.

In the Ontario and Michigan Power Company Act the powers are circumscribed by two things, the Governor in Council, and, with regard to the towns of Port Arthur and Fort William, the consent, by by-law, of those towns. Now, my hon. friend, the promoter of this Bill, endeavoured to obtain the consent of the town of Port Arthur under the Ontario and Michigan Power Company's enactment, to a Bill providing for the use of their power, and I think there was a rather spirited campaign, and the result was that the town of Port Arthur did not accept the proposals which were contained in the By-law, and the By-law was defeated. Under the Act which is now proposed, and having regard to that portion I have read, and to other portions of the Bill, for instance section 13, it seems it is quite possible for my hon. friend to get into a similar position as he would have been had that By-law passed, because no consent of the municipalities, so far as I can see, is required under the present Bill. Therefore, I submit that my

hon. friend is asking altogether too much in this Bill, and that he is trespassing, with regard at any rate to these portions of water-ways lying between Thunder bay and the Lake of the Woods, upon provincial jurisdiction, that the Bill is open to objection in that respect, and that the second reading ought not to be proceeded with.

Mr. CONMEE. Mr. Speaker——

Mr. SPEAKER. Under rule 21 the hon. gentleman is entitled to reply as the mover of the second reading of the Bill, but I wish to ask if any other hon. member desires to speak on this motion before he closes the debate.

Mr. MIDDLEBRO. I observe, by the Michigan and Ontario Power Bill passed last session, that a number of restrictions were placed in the Bill that do not appear to be contained in this Bill. This Bill, in a rather silent manner, gives the same power to develop electricity which the Michigan and Ontario Power Bill did when first introduced into the House last session. For instance, while ample power is given in this Bill to generate electrical power, there is no provision for making the sale or exportation of power subject to the restrictions contained in the Act of the Michigan and Ontario Power Company. There are five or six sections omitted from this Bill which were inserted in the other Bill. Take, for instance, section 13 of the Michigan and Ontario Power Bill:

> Except as in this Act otherwise expressly provided the provisions of the Electricity Inspection Act, 1907, and of the Electricity and Fluid Exportation Act shall apply to the company and its undertaking.

One of the most strenuous objections to the Act of last session was that the Bill gave the company power to export electricity unrestrictedly against the prevailing policy of the Ontario government in reference to the generation of electrical energy. I think we should have the same clauses inserted in this Bill; otherwise the promoters will be getting exactly the same privileges as were embodied in the Bill of last session. I think that there should also be a clause inserted providing that they shall not enter a municipality without the consent of the municipality. There was such a clause in the Bill passed last session. Before that company can enter a municipality they must obtain its consent. I notice in the interpretation clause that the word 'land' is made to include 'land covered by water'; so that the word 'land' covers everything on the face of the earth. It says that this company may expropriate land covered by water. They will have absolute powers of expropriation, not only as far as land itself is concerned, but as far as land covered by water is concerned, and I would submit that it would prevent the Minister of Public Works from interfering if this company desired to place docks or dams across navigable rivers. The power is so large that they can place a dock or a dam across any navigable river if they wish to do so by virtue of the section that says that land includes land covered by water. I do not think it was intended to give any such large power as that. I have only had a few minutes in which to look at this Bill, and I think that hon. members ought to have a sufficient opportunity to look more carefully into it, and to see exactly what powers the Bill gives. It appears to me that this Bill is intended to give to these promoters what the Bill of last year did not give them.

Mr. CONMEE. I think the hon. member is not justified in making that insinuation.

Mr. MIDDLEBRO. I have already pointed out a number of things which this Bill does give the promoters which we did not give last year and which we expressly struck out. I notice that Pigeon river was mentioned in the Bill of last year and that it is also mentioned in this Bill. Hon. gentlemen will remember the big fight that we had last year was over this power that the company asked with respect to the development of electrical energy on the Pigeon river and now this company comes back and asks for power to develop electrical energy on the very same river without the restrictive clauses that were inserted in the Bill of last year.

Mr. CONMEE. The hon. gentleman is entirely without justification in making the insinuation that the Bill is intended to give any such powers as those which he describes. How does he know? Who has told him?

Mr. MIDDLEBRO. You can only judge by the intention from the Bill itself.

Mr. CONMEE. If the Bill gave the powers which the hon. member imagines it does, perhaps he might think them large powers. Take, for instance, the power to expropriate land covered by water. How can a canal be built unless they can get land covered by water? Is there any other way to get a canal except to utilize land covered by water?

Mr. MIDDLEBRO. There is no water at all in the Newmarket canal.

Mr. CONMEE. Well, I am not joking about the matter. This is a matter of very great importance. When the hon. member for Sault Ste. Marie (Mr. Boyce) contends that this Bill is intended to give the powers that were given last year in the other Bill he is entirely mistaken.

Mr. BOYCE. I did not say that.

Mr. CONMEE. You left that impression upon my mind.

Mr. BOYCE. What I said was that the Bill was not circumscribed by the same restrictions that we imposed by the Bill of last year, but that at the same time it gave much the same powers, or rather larger powers without the restrictions.

Mr. CONMEE. My hon. friend is entirely mistaken. One was a Bill for the development and distribution of electrical power pure and simple; this is a Bill for the building of a canal.

Mr. BOYCE. You do not ask that power in this Bill?

Mr. CONMEE. Not at all. If you look at section 13 you will see that if in the execution of a work the company create any electrical or hydraulic power in excess of what they may require for their own use, they may supply such portion of it as they can without prejudice to navigation.

Mr. BOYCE. What does subsection 8 mean?

Mr. CONMEE. Subsection 8 is a part of the Bill. It merely provides that they may do it.

Mr. BOYCE. Do what?

Mr. CONMEE. But if they do it the control lies in section 13. Section 13 goes on to say:

In the event of the company at any time creating hydraulic or electrical power,

That section brings them under the control of the Board of Railway Commissioners for Canada, and it does not provide for the sale and distribution of electrical power at all. It does not give the company power to sell or distribute it to any municipality or over a transmission line or do any of the things which my hon. friend imagines the Bill enables them to do in order to bolster up some other theory. There is no other purpose behind this Bill than the purpose of building a canal.

Mr. MIDDLEBRO. What do the words 'supply electrical power' mean?

Mr. CONMEE. Where does the hon. gentleman find that?

Mr. MIDDLEBRO. In subsection 8 of clause (a).

Mr. CONMEE. That clause provides that the company will have electric power to operate its locks.

Mr. MIDDLEBRO. It says it may supply electrical power.

Mr. CONMEE. Exactly. All canals when built create water-power or hydraulic pressure and the gates and locks of modern canals are operated by electricity.

Mr. MIDDLEBRO. There is no power on this earth that can prevent a man generating electrical power for himself, it is only when he wants to sell it to other people that he requires an enabling legislation.

Mr. CONMEE. I am glad my hon. friend holds that view, and that being so, he need not alarm himself about the wording of subsection 8.

Mr. MIDDLEBRO. The hon. gentleman will not misunderstand me. I mean that the hon. gentleman may go to his backyard and generate electricity to his heart's content for his own use, but when you talk about supplying electricity it means that you are going to supply it to some one else.

Mr. CONMEE. That is quite correct. This Bill gives the company power to utilize hydraulic or electrical pressure for its own use——

Mr. MIDDLEBRO. I doubt that construction.

Mr. CONMEE. Wait till I am finished. I will do my best to enlighten the hon. gentleman, and if he is not enlightened it will not be my fault. The Bill provides further that having built the locks and got the hydraulic head, if there is more water than is needed for navigation the company may utilize that for power in the immediate vicinity of the works, but not transmit it.

Mr. MIDDLEBRO. Sell it?

Mr. CONMEE. Yes, for industrial purposes if any one wants it in the immediate vicinity. Would the hon. gentleman think it a proper thing to tie the investors up and to say that if they have more power than they need for their own purposes they cannot supply it to any one else? That is not utilizing our natural resources.

Mr. BOYCE. Is there anything in the Act which would prevent the selling of electricity or power to Port Arthur or Fort William or any other municipality——

Mr. CONMEE. There is no power in this Act to transmit.

Mr. BOYCE. Let me finish my question. Is there anything to prevent the selling of this power in Port Arthur or Fort William without the consent of the municipality by by-law?

Mr. CONMEE. There is no provision for a transmission line and no power to distribute electricity in the Bill. The Bill would not permit the company to sell electric power to any municipality or in any municipality without the consent of the municipalipy, because the general law would cover that.

Mr. MIDDLEBRO. Where is that restriction?

Mr. CONMEE. Section 13 confines the use of the power to the vicinity of the works. The hon. member (Mr. Boyce) says there are a great many things in this Act that ought not to be put in, I agree with him, and I believe further that there are lots of things in all legislation that are not necessary.

Mr. PUGSLEY. I call the hon. gentleman's attention to section 1, paragraph (a) which defines canals and it includes rivers and lakes.

Mr. CONMEE. I would ask the Minister of Public Works how else he could build a canal in that country without including rivers and lakes and channels. My hon. friend says that if this Bill is confined to the building of a single lock on the Rainy river at the Soo he will support it, but the hon. gentleman should know that if the company is confined to one single lock and cannot use the water stretches, and cannot through lakes and channels make connections, they could not make the enterprise pay. If their hands are to be tied, of course they will have to drop their Bill. This canal contemplates a waterway from Lake Superior to the Saskatchewan river, and the Minister of Public Works tells us that the government intend to improve the Saskatchewan. Then, the Bill has done some good in that it has drawn out that declaration from the minister, and so far as the Saskatchewan river is concerned I presume the promoters would have no objection to drop that part of the Bill. These conditions in the Bill are put in by lawyers and not by me; I did not draft the Bill. I am merely the promoter of it in the House.

Mr. STAPLES. I do not wish to interrupt the hon. gentleman's eloquence, but I call attention to the fact that the hour for private Bills has expired.

Mr. CONMEE. I merely wanted to point out that at present more than one thousand miles of this route is navigable.

Mr. SPEAKER. The hon. gentleman can conclude his remarks when the Bill is again called.

Mr. CONMEE. Very well.

SUPPLY—MANITOBA FISHERIES COMMISSION.

The hour for private Bills having expired, the House resumed debate on the motion that Mr. Speaker do leave the chair for the House to go into Committee of Supply.

Mr. BRADBURY. When the House rose at six o'clock, Mr. Speaker, I was referring to the report brought down by the Fisheries Commission, signed by Prof. Prince, Mr. D. F. Reed and Mr. Hugg. I do not intend to read this report to the House to-night, because I dealt with the matter to some extent last session. However, I wish again to emphasize the recommendations and the findings of this report so that the House may be seized to some extent of the situation so far as our Manitoba fisheries are concerned. At one time Lake Winnipeg was probably the greatest whitefish lake on this continent, and when you realize that to-day it is almost depleted you will understand what has taken place during the last fifteen years, notwithstanding the innumerable protests, private and public, made to the government against the operation of the American fish trust in these waters. For the information of the House, I may say that the Booth Fish Packing Company of Chicago, the great octopus that has fastened its tentacles on every lake and on every sheet of fish-producing water in Canada, has done more to destroy these great fisheries of Manitoba than all other influences combined. And, Mr. Speaker, the Booth Company has been able to accomplish this through the agency and influence of some of our Canadian citizens. The law was such that Americans could not obtain licenses in these waters, but they used Canadians for their purpose and they formed what was then called the Dominion Fish Company, which was presided over by Capt. Wm. Robinson, of Selkirk, and in this way licenses were obtained to fish these waters in defiance of the laws of Canada. That the department was made aware time after time that the Dominion Fish Company was really the Booth Fish Packing Company of Chicago can be demonstrated from the files of the department. But the representations made to the minister time after time by representative men, and in petitions from the settlers along the lake who were being deprived of their fishing rights, were all of no avail. It seemed impossible to obtain from the department any redress for the people. After a long and tedious fight for years, the Fishery Department at last realized that there was something wrong, and instituted an inquiry, and we have here to-night the result of that inquiry before us.

One of the reasons why I am troubling the House at the present time is that this is not the first report of a royal commission that has been filed in the Fisheries Department. In 1884 or 1885, at the request of the settlers of Lake Winnipeg, assisted by myself, the then Minister of Marine and Fisheries, Sir Charles Hibbert Tupper, granted a commission. We complained at that time that the Americans were controlling our waters, violating the law by setting out double the quantity of nets allowed, polluting the waters with dead fish and depleting the waters. That commission reported, but there were influences at work sufficiently strong to stay the hand

of the department, and the report has never been acted upon, although it proved every contention made at the time in three or four hundred sheets of foolscap. Up to the present time that report remains a dead letter, I presume locked up in the archives of the Fishery Department. It is for fear that a similar result may happen to the report of this commission that I have brought this matter before the House to-night, that the House may realize that the American fish trust has friends at court sufficiently strong, even in the face of a report as drastic as this one is, perhaps to influence the government against carrying into effect the recommendations of their commissioners. I trust, however, that no influences will be allowed to interfere with the minister or the government in seeing that the spirit of this report is carried into effect. I cannot say that I agree with one or two of the recommendations, which I consider to be rather drastic at the present time. The report recommends that Lake Winnipeg be closed from 1911, and yet Captain Robertson, of Winnipeg, who was president of the Dominion Fish Company, which was part of the Booth Fish Packing Company of Chicago, is to-day getting ready a fleet of 26 sailboats and two tugs to fish in that lake next summer. If some measure is not taken to make that impossible, it will mean almost the total destruction of the fisheries of Lake Winnipeg next summer. The companies realize that public opinion has been aroused on this question and is demanding that the government take action to protect this great fishery. They realize that next summer will be the last opportunity they will have, perhaps for some years to come, and if some power does not intervene, the damage that will be done will be almost irreparable. I trust therefore that the government will take steps to see that such restrictions are put on the fishing operations on Lake Winnipeg for next summer as will make it impossible for any combination virtually to destroy that great fishery. Now, Mr. Speaker, I do not wish to inflict this report upon the House, but with your permission, I will hand it to 'Hansard'—it is only two or three pages.

Mr. SPEAKER. I think the custom is for an hon. member to read anything he wishes to place in 'Hansard.'

Mr. BRADBURY. If you insist on my reading it——

Mr. SPEAKER. Not for the pleasure of having it read, but the custom is that nothing is to go in 'Hansard' that is not uttered in the House. The hon. member will have to read it if he wishes it to go in 'Hansard.'

Mr. BRADBURY. Well, Mr. Speaker, I believe it is absolutely necessary that a part of this report should go on 'Hansard.' At six o'clock I was quoting from the report:

> The system of fishery inspection, supervision and licensing carried out by the department requires, we are convinced, to be radically changed if effective enforcement of the law is to be secured. The local officers we have found to be inefficient, poorly paid, without proper means of transportation and not properly instructed in their duties. They habitually fail to report breaches of the law in their own localities. Even when such officers do report to the district inspector, it frequently occurs that no instructions relating to the case are given, owing to law methods in the carrying on of the inspector's work. Serious delays occur in this connection and very frequently the evidence that the law has been broken is not available when the instructions come to hand. We found that the chief inspector at a critical season of the year was engaged upon hatchery business, and was thus compelled to neglect the proper duties of his office. If it is absolutely necessary that the officer named should be absent frequently from his office, a deputy should be in charge.
>
> The patrol of Lake Winnipeg by the inspector cannot be effective as at present carried out, his boat the 'Lady of the Lake,' being most unsuitable for such work.

During the discussion last year I drew the attention of the House to the fact that this government had purchased for the fishery inspector for patrol purposes a large steamer called the 'Lady of the Lake,' which cost the country some $8,000, and, according to returns brought down, about $7,000 a year to run it. It is the height of absurdity to have a boat of this kind on Lake Winnipeg. It is utterly useless for the purpose it was bought for, as I then pointed out, and as the commission now affirms:

> Its large size gives early warning of its approach to all persons engaged in illegal operations. A small swift tug or launch should be provided on Lake Winnipeg, and indeed on each of the more important lakes of the province.
>
> 10. We found it very difficult to get reliable statistics as to the catches of fish on the various lakes, and recommend that sworn returns should be required as to the quantities of all fish taken out of the water——

I might draw the attention of the House to the fact that this was one of my contentions last year, that as the reports were made up it was impossible for any one to arrive at a fair idea of the quantities of the different kind of fish taken out of these waters.

> —such returns to be furnished by each licensee to the inspector twice a year, on the 31st March and 30th of September, and that failure to furnish the said returns shall deprive the licensee so failing of the right to a new license until his default shall be remedied. We further recommend that the inspectors be required to analyse and summarize the said

returns, so as to indicate clearly the quantities of each kind of fish taken from each of the principal bodies of water in the province.

I shall not read any more of the report. I wished to place that part of the report on record so that the country may understand some of the features I have been discussing here. But I wish to emphasize as clearly as I can, the fact that the danger is that the department is apparently not strong enough to carry out even the recommendations of this commission. I find that in the days gone by when we have endeavoured to get grievances such as these rectified there have been influences at work which have made it almost impossible to do anything and I trust the government will take this matter up earnestly and see that the spirit of this report is carried out.

I wish to refer to the report on Lac du Bonnet. I drew attention to the fact that this is an important sturgeon breeding ground and urged the necessity of closing it against all commercial fishing. This report, like the other, verified everything I said then and contains a recommendation along the same line. It has been recommended that the export of sturgeon from Manitoba waters should be prohibited and this is a phase of the question which I wish to emphasize. If we are to protect the sturgeon of Lake Manitoba, Lake Winnipeg and Lac du Bonnet, the only way to protect it is to prohibit the export. According to this report and my recommendation the settlers around the lake should be allowed to fish for sturgeon. It is a great food fish. We have along this lake 600 or 700 settlers. In the lower part of the lake we have a French settlement at St. George and they draw their food supplies largely from this lake. If the lake is allowed to be fished for commercial purposes, one year would, I think, thoroughly deplete this lake of sturgeon. This report has verified that fact, and I wish to emphasize, as I stated before, the necessity of the government prohibiting the export of sturgeon from Manitoba. I desire to call the attention of the government to the absolute necessity of taking action this summer in protecting Lake Winnipeg and Lac du Bonnet. If this report is allowed to stand over until the fishing season starts, until the great companies have secured their licenses, there will be a repetition of what has been done in former years by the large commercial companies. Last year I think some 2,500,000 pounds of whitefish were taken out of Lake Winnipeg, I believe that if the quantity this year is limited to that amount no great harm could occur to the lake this summer, until the commission completes its work. This is an interim report, I understand the commission is ordered back to Lake Winnipeg to complete its task. If that limitation is not imposed, then, with the introduction of this great plant I spoke of, together with the plants now on the lake, this amount can be trebled and 8,000,000 or 9,000,000 pounds can be taken out. That would be a serious matter for the lake and the settlers, and I trust that action will be taken along these lines to make it impossible for these great companies to destroy our great lake fisheries.

One of the modes of operation of the American companies has been to take advantage of the American customs regulations. All fish caught in American nets have been permitted to go into the United States free of duty, while fish taken in nets owned by Canadians have been met with a duty of a quarter of a cent a pound at the boundary line. You can realize what that means, it gives the absolute control of the American market into the hands of the Booth Fish Packing Company of Chicago. The manner in which they did this was well known to the Fisheries Department, because it has been brought to their attention time after time. The Booth Company organized a Canadian branch and called it the Dominion Fish Company. They put Captain Robinson, a Canadian, at its head. This company obtained a license from the Dominion government to fish, and signed a declaration when they got their license that they were the actual owners of the plant and gear fishing in these waters according to our law. Then, when the fish reached the American markets, the Americans took the oath that these fish were caught in American nets. The consequence was that our law was violated and the American law was violated, but the Americans got their fish in free, while the Canadians were met by a duty of one-quarter of a cent per pound. That is one of the modes of operation of the American combination, and it is one upon which the government should take some action. I trust that the Fisheries Department will see to it that the spirit of this report is put into operation at the earliest possible opportunity, and that the interests of our settlers will be protected and winter fishing under wise and fair regulations provided for.

Mr. SPROULE. It seems to me that the evil antedates the action of the fishermen. The evil starts first in the Fishery Department in giving licenses to a number of individuals away in advance of settlement to control certain important and valuable fishing grounds and fishing waters for a mere trifle. We have had it brought to the attention of this House more than once. Take the case of Mr. McNee and others associated with him, and Mr. Markey, of Montreal. They have got license after license from the govern-

ment extending over a number of years and covering operations on Lake Winnipeg, Great Slave lake, Great Bear lake and Lesser Slave lake, Hudson bay and various other small lakes and rivers throughout that country for a mere trifle, and turned around and sold their leases to others who are trying to get control of them to the disadvantage of the settler when he came there and of the country as well. These parties are usually associated with Americans. And, after catching the fish in Canada, they evade the customs at the boundaries and take the fish into the United States free. A Canadian, wishing to export fish, must pay the duty, and so he is unable to compete. Two years ago—and I believe the same thing goes on to-day—the Buffalo Fish Company was carrying on operations of this kind on Georgian bay. The law of the United States, I understand, provides that fish caught by Americans are admitted to the United States free of duty. So they come here and get a license, and are able to take the oath that the fish have been caught by Americans, and so they get the advantage of the American market, while the Canadian is shut out. As might be expected, the result is that these operations are all carried on by Americans who hire Canadians to do the work for them. If you go into the Marine and Fisheries Department you will find that license after license has been issued, some as low as $8 a year, and from that up to $100 a year, through which these people control these valuable fisheries to the detriment of our own people. And the licenses are renewable.

Now, is that right or is it wrong? If the government wishes to manage the department in a wise and business-like way, would they carry out this policy? No. Who are the people who get the benefit of this system? The speculators and the operators. And so we have these licenses covering these privileges in the Peace River district, in Slave lake, in the Hudson bay, in the Nelson river and in all that northern country—all held by men who never worked as fishermen, but who are the managers of the concerns and who manage them so as to make large sums of money out of them. And all the money that is made outside of that of the exploiter, goes into the hands of the Americans. Do not the government agree with me that the principle is wrong and that, until settlement or other interests make it necessary, these fisheries should be reserved? I think it is time the government looked into these questions. I cannot imagine for a moment that they do not understand the facts. They cannot be ignorant of the way this system is carried on and of the evils that must result. But, because some of their political friends, who are always—I was going to say on the graft, but perhaps I should rather say with speculative aim in view, improper speculative aim in view—they are allowed to carry on these nefarious operations. It is time that this should be stopped, and, unless the government put a stop to it soon, they will be obliged to do generally what they are doing now in many cases, providing breeding establishments, at a cost of hundreds of thousands of dollars to stock the depleted waters of our country—depleted not by our own citizens, but by those living outside the country altogether. This matter has been brought to my attention over and over again by the fishermen of the Georgian bay. But it has seemed to be impossible to control the government. Sometimes, it is said, that the banks own the government If we consider the Marine and Fisheries Department, I should be inclined to say that this class of fishermen seem to control it, and citizens of this country have no power to bring about right management.

Mr. PUGSLEY. May I ask a question? To which government does he refer when speaking of fishing in the lakes of Ontario?

Mr. SPROULE. The federal government.

Mr. PUGSLEY. Is not the hon. member aware of the fact that no person is allowed to fish in the waters of Ontario without the license of the provincial government also?

Mr. SPROULE. The Ontario government impose a license for purposes of revenue, but it is the Dominion government that regulates the size of the mesh of nets and other matters in relation to fisheries. Besides, this government has control of Manitoba, Alberta, Saskatchewan and all the country to the north, with their great and valuable lakes. And they are giving these practically interminable licenses just as in the past. From what I know, I am inclined to believe that the provincial government is desirous of conserving these valuable rights for the people of the province, but they are unable to do so because of the conflict of jurisdiction between the federal and provincial governments upon this question of fishery rights. Several times I have called the attention of the government in this matter, and have asked if they could not hurry up their arrangements so as to reach some definite conclusion, that it might be known to which authority these rights actually belong. The federal authority has control and is exercising these rights—not in Ontario, for, since the decision of the Privy Council on the subject, the government of Ontario has exercised control. But it is being carried on in other parts of the Dominion by the department here and those who have these rights from the department, enjoy the benefit of the fisheries.

Mr. FISHER. I cannot pretend to have the knowledge of the Fisheries Department to enable me to supply the information sought by my hon. friend from Manitoba (Mr. Bradbury). But his remarks will be brought to the attention of the Minister of Marine and Fisheries. As to what my hon. friend from East Grey (Mr. Sproule) has to say, he mentioned one or two of what he called glaring instances in which the rights of the people had been sacrificed and the privileges given. He spoke of a lease given to Mr. McNee, and another given to Mr. Markey. I suppose the hon. gentleman is aware that these leases were cancelled long ago, and the privileges taken away, because onerous conditions which had been attached to the leases, were not fulfilled by the holders. My hon. friend will find, I think, that in the Marine and Fisheries Department, in this respect as in others, a great change and reorganization has taken place, and most of what he has been talking about has not been done for several years past.

Mr. SPROULE. If the minister will excuse me, I was on the Public Accounts Committee the year before last, when we discussed the matter, and it was admitted by the party who was brought before the committee, that he had the license.

Mr. FISHER. I admit that such licenses were issued at one time, but few licenses are now being issued in the way he has described. Old licenses issued years ago were perhaps described fairly by the hon. member. But the two he mentioned in particular were cancelled, because, as I have said. onerous conditions were not fulfilled—the conditions were so onerous that the parties were not able to fulfil them. That showed that the government which issued those licenses was safeguarding the public interests sufficiently to require the licensees to do certain things which they were not able to do, and consequently the licenses were cancelled. This has been the case with other licenses. The present Minister of Marine and Fisheries, in the reorganization of his department, which he has carried on in such a splendid manner, and which he is continuing to improve, so far as his health permits, has also dealt with the issuing of these fishery licenses.

Mr. SINCLAIR. It did not appear quite clear to me what my hon. friend is asking for. He seems to point out a grievance, but the main grievance he pointed out, if I understand him, was something over which this parliament and government have no control. He informs us that fishermen fishing in Lake Winnipeg and in some of those inland waters, are allowed to send their fish into the United States market without paying any duty, providing the fish are caught in American nets and American bottoms. Now this is not a matter which this government can control, although it may seem a hardship to Canadian fishermen.

Mr. BRADBURY. The law of this country is very distinct, that no man is permitted to fish in Canada except he is a British subject, and except he is the actual owner of his boats and gear. Now, if he is the actual owner, how can an American own the nets? As soon as the department becomes aware that these fish are going into that country free of duty, on account of the American owning the nets, then it is the duty of the department to cancel the licenses.

Mr. SINCLAIR. It may be their duty. The business, as pointed out by the hon. member for Selkirk (Mr. Bradbury), appears to be fraudulent, because these fishermen are representing themselves to be Canadian fishermen catching fish in Canadian waters, and then in the United States, he says, they produce evidence that the fish are caught in American nets. If that is the case, of course there is fraudulent fishing carried on, and that would be good reason for cancelling the licenses. I have no doubt that if a case of that kind is brought to the attention of the minister, the license will be immediately cancelled.

Mr. BRADBURY. I have brought cases before them from time to time.

Mr. SINCLAIR. No one proposes to stop granting licenses altogether. I assume from the fact that the hon. member for Grey (Mr. Sproule) supports the Ontario government that grants the licenses, he is not opposed to granting licenses.

Mr. SPROULE. I take the ground that there is no justification, from settlement or any other cause, to grant licenses to fish, whether it be to fish on the Great Slave lake or in Lesser Slave lake, or in Hudson bay.

Mr. SINCLAIR. I understand my hon. friend was also criticising the method of granting licenses in the Georgian bay as well as in the great lakes to the north.

Mr. SPROULE. I said fishing had been carried on there to the detriment of the people, and I spoke of the evils that have resulted. I also spoke of the far distant country where there was no settlement, and where it would be a wrong thing to do.

Mr. SINCLAIR. If my hon. friend will examine the law and the regulations in the department, he will find that the licenses

granted in this northern country must be operated or they are subject to cancellation at any time. It is a condition on which licenses are granted, and if there are cases in which the licenses are not being operated, then they are subject to cancellation. It is easy to work up complaints in a matter of this kind, but hon. members ought to be in a position to propose a remedy. If they are serious about this matter, if they have any complaint for which they can find a remedy, then I would like to hear what the remedy is. I listened carefully to the hon. member for Selkirk, but it did not appear to me clear that he had anything to propose to the department that would remedy these complaints.

Mr. BRADBURY. I want to inform the hon. gentleman that I was simply emphasizing the report of the commission appointed by the government to investigate this matter. I approve of the commission. The commission brought in very drastic recommendations, and I was asking that the government should carry out those recommendations in the spirit of the report. I also pointed out that there was another commission appointed under the old government in 1884-5, and the report of that commission is lying in the department to-day; it was never carried out, it was burked by the influence of this American fish trust.

Motion agreed to, and House went into Committee of Supply.

Harbours and rivers, Prince Edward Island —Belfast pier—renewals and repairs on pier head and general repairs to approach—revote of $1,800 lapsed, $2,000.

Hon. WM. PUGSLEY (Minister of Public Works). This is to reconstruct portions of the face of the pier at Halliday's wharf, and to make some other general repairs. The total estimated cost of these repairs is $3,000. Some work was done and there was an appropriation last year of $3,000, of which amount there has been spent $1,200.

Belle River harbour — repairs to and strengthening works on either side of entrance, $3,000.

Mr. PUGSLEY. This is asked for by the resident engineer to strengthen the works on either side of the harbour entrance.

Mr. JAMESON. Where is this?

Mr. PUGSLEY. It is in Queens county, Prince Edward Island.

Brudenell—wharf on north side of river—revote of $2,000 lapsed, $5,400.

Mr. PUGSLEY. This is to make provision for the construction of a wharf at Brudenell. The total estimated cost is $5,400, of which $2,000 is a revote.

Mr. SPROULE. Was there any vote for this last year? I do not see any amount in the revote column.

Mr. PUGSLEY. The reason it does not appear in the revote column is that the amount was voted in a previous year; it lapsed and it was not voted last year. We put this in to show the committee that there is a revote.

Cove Head—repairs to and strengthening shear dam, $1,250.

Mr. PUGSLEY. This is reported by the resident engineer to be necessary to prevent damage to the existing work.

Mr. JAMESON. Where is this?

Mr. PUGSLEY. It is in Queens county.

China Point—pier—renewals and repairs, $1,000.

Mr. PUGSLEY. This is to make necessary repairs.

Haggerty's wharf—repairs to existing work and enlargement of pier head, $2,500.

Mr. PUGSLEY. This vote is asked for by the Department of Marine and Fisheries, and the work is also reported as being necessary by the resident engineer.

Mr. SPROULE. Is this item sufficient to finish this work?

Mr. PUGSLEY. No; this will cost $4,000. We are asking for $2,500.

Harbours, rivers and bridges, generally—repairs and improvements, $10,000.

Mr. PUGSLEY. This is a general vote for all the different wharfs and bridges that are not specially provided for.

Lennox island and Port Hill — wharfs on Lennox Island Indian reserve and on main land opposite, near Port Hill; the Indian Department to contribute $2,500, $5,300.

Mr. PUGSLEY. This is to pay our portion of the construction of wharfs on the Indian reserve.

Mr. ARMSTRONG. Is it customary for the Department of Public Works to construct wharfs and roads and make repairs on Indian reserve.

Mr. PUGSLEY. No, we do not build roads, but we do contribute very frequently, and I think as a general rule, towards the construction of wharfs where they are used by the public as well. Of course, if a wharf were regarded as one which would be absolutely private to the Indians, I presume that our department would not contribute, but ordinarily we do contribute towards these wharfs.

Mr. ARMSTRONG. My object in making the inquiry is that in my riding we have two large reserves and the people on either side of them are seriously in need of roads being opened up through them. If it were customary for the Department of Public Works to spend money on Indian reserves for roads and bridges it might be able to assist in this matter to which I have just called the attention of the minister.

Mr. PUGSLEY. The federal government does not build roads as a general thing, while it does build wharfs, as they are an aid to navigation.

Miminegash harbour—repairs, $2,500.

Mr. PUGSLEY. This is to repair and strengthen the works on either side of the channel entrance, also to extend the brush work and repair the approach.

Mr. SPROULE. How are the expenditures on these works going to be made?

Mr. PUGSLEY. By day's work.

Mr. SPROULE. I mean with reference to these votes generally.

Mr. PUGSLEY. If it is new work, even although it may be small, as a general rule, we ask for tenders, but if it is repair work, as a general rule, we do it by the day because it is impossible to tell what will be the extent of the repairs to an old wharf. You cannot tell until you begin to tear it away to see what the under timber is like, what the extent of the repairs will be, and it would be difficult, if not impossible, to let a contract for such work.

Naufrage pond — protecting entrance to channel with bridge across piers and roadways of approach, $4,000.

Mr. PUGSLEY. We require the $4,000 to complete it. There was an appropriation last year of $14,500 and it is probable that up to the 31st March next, there will be an expenditure of $11,000, leaving $3,500 which constitutes a revote; so that we are only asking $500 additional. The work is under contract.

Mr. SPROULE. Will this complete the work?

Mr. PUGSLEY. Yes.

New London—repairs to breakwater, &c., $1,500.

Mr. PUGSLEY. This is to provide for repairs to the protection work on either side of the harbour entrance. These works are generally damaged by the fall and winter storms and the resident engineer reports that the work is needed.

Port Selkirk pier—repairs, $1,000.

Mr. PUGSLEY. This is to provide for the repairing and covering of the floor stringers of this pier, &c.

Red Point wharf—general repairs—revote of $1,500 lapsed, $1,000.

Mr. PUGSLEY. One thousand dollars will be necessary for this work.

Mr. SPROULE. How much is in that vote? There is a revote of $1,500 and there is only $1,000 now voted, what do you mean by that?

Mr. PUGSLEY. The session before last we had a vote of $1,500, none of which was used and we are now asking for $1,000.

Mr. SPROULE. Then it cannot be a revote of $1,500.

Mr. PUGSLEY. No, that is perhaps rather erroneous but all that means is that the total amount has lapsed. The object is to show the committee that it was once voted and not used.

Rustico breakwater—protection block at outer end, $6,000.

Mr. PUGSLEY. This is to provide for the extension of the present block at the outer end of the breakwater on the northern side of the entrance to the harbour.

Mr. DANIEL. What are these blocks made of ?

Mr. PUGSLEY. Timber, plank covering, cross-ties and ballast, bolts, close piling, &c.

Mr. DANIEL. Are the stones cemented together or will they be loose?

Mr. PUGSLEY. Loose.

Mr. DANIEL. Has this breakwater been broken away by storms to any extent?

Mr. PUGSLEY. No, I think not. The extension is necessary to prevent the forming of a channel which would otherwise be formed. It is to change the direction of the current so as to preserve the navigable channel.

Mr. SPROULE. Will this finish the work?

Mr. PUGSLEY. Yes.

Mr. SPROULE. Will it be done by tender and contract?

Mr. PUGSLEY. Yes.

Souris—rip-rap protection on seaward side of Knight's Point breakwater and renewals and repairs—revote of $5,800 lapsed, $7,500.

Mr. DANIEL. Will this finish the work?

Mr. PUGSLEY. So it is estimated.

Mr. JAMESON. The hon. member for Kings (Mr. Fraser) has something to say with regard to some of these items and more particularly, I think, with the item under consideration. The hon. gentleman is unavoidably absent at the present moment, and I would ask the minister before

the items for Prince Edward Island are passed to allow one item to stand so that my hon. friend may have an opportunity for discussion.

Mr. PUGSLEY. I hope my hon. friend will not press to have the item stand, but I will undertake that if the hon. member for Kings desires to speak on any item for Prince Edward Island, he can do so when any item for Quebec or Ontario is called, or, upon the dredging vote, or any convenient opportunity.

Mr. SPROULE. Or the supplementaries?

Mr. PUGSLEY. Yes.

Mr. JAMESON. That understanding is perfectly satisfactory.

Summerside harbour—for completion, &c., of breakwater extending from Indian Head to outer end of Lighthouse Spit, $10,000.

Mr. PUGSLEY. This is to complete the work which is under contract.

Mr. DANIEL. What is the total amount of the contract?

Mr. PUGSLEY. $133,942.

Mr. JAMESON. How long is this breakwater?

Mr. PUGSLEY. 3,240 feet.

Mr. JAMESON. Is it merely a breakwater?

Mr. PUGSLEY. It is to afford protection to vessels lying at the wharf in the harbour during westerly and southerly gales.

Tignish—extension of harbour channel protection piers inwardly, $25,000.

Mr. PUGSLEY. The estimated cost including superintendence is $25,000, and we are asking for the full amount.

Mr. DANIEL. Is this contract work?

Mr. PUGSLEY. Yes.

Harbours and rivers, New Brunswick—Bayside wharf on Johnston Cove, $1,500.

Mr. PUGSLEY. This is for a new wharf on the St. Croix river which will accommodate quite a number of farmers.

Mr. CROCKET. What is the total cost?

Mr. PUGSLEY. $1,500. It is expected this will cover the whole expenditure.

Mr. DANIEL. A portion of the cost of this wharf is not paid by the provincial government?

Mr. PUGSLEY. No.

Buctouche—channel through beach, inclusive of breastwork and breakwater repairs, $3,500.

Mr. CROCKET. What was the expenditure on this last year?

Mr. PUGSLEY. To the 31st September, $2,169.

Mr. CROCKET. When did the work begin?

Mr. PUGSLEY. May, 1905.

Mr. CROCKET. What is the total expenditure to date?

Mr. PUGSLEY. The total expenditure on harbour improvements at Buctouche has been $39,123, but I cannot say over what period that extends.

Mr. CROCKET. What is the object of this work?

Mr. PUGSLEY. The object of the cut through the beach was to effect a saving of ten or twelve miles in the sailing distance of the Buctouche fishing boats on their way to the fishing grounds, and the same distance is saved in the towing of logs. It also forms an entrance into a convenient harbour of refuge.

Mr. CROCKET. What is the length of the channel?

Mr. PUGSLEY. The length of one of the breakwaters is 2,800 feet.

Mr. CROCKET. What is the width of the channel?

Mr. PUGSLEY. Its width is fifty feet. I cannot give my hon. friend its length.

Mr. CROCKET. Will this appropriation complete the channel?

Mr. PUGSLEY. It is expected that this will complete it. I should correct the statement which I made. The $39,123.75 which I mentioned was the total expenditure on Buctouche harbour works up to the 31st March, 1909. The total cost of this work to that date was $16,933.66.

Mr. DANIEL. Is there to be any dredging in connection with it?

Mr. PUGSLEY. Yes, 1,000 cubic yards.

Mr. DANIEL. Who does the dredging?

Mr. PUGSLEY. It is hand-dredging, done by a mud digger, operated by a steam winch.

Mr. DANIEL. What is the depth of water?

Mr. PUGSLEY. Three feet at low water, and I am told about thirteen feet at high water.

Mr. CROCKET. My information is that the money that has been expended on this so-called public work is an absolute waste.

Mr. PUGSLEY. For what reason?

Mr. CROCKET. I will state it. The minister has stated that this work was begun in 1904, and that the object of it was to cut a channel so as to make a short cut for vessels going into Buctouche harbour. This expenditure has been going on year

after year since that time. There was expended in 1904 $2,438.93, in 1905 $1,895.17, in 1906 $5,960, in 1907 $1,998.92, in 1908 $3,500, in 1909, $3,773.75, a total of $19,556,-27, and the amount asked for this year is $3,500. My information is that the work of one year is washed away in the following year and has to be completely renewed, and this has been going on during the past six or seven years. When we look into the accounts for this work, we find that Mr. J. D. Irving, who was a witness in an investigation before the Public Accounts Committee the other day, has figured very largely in the money that has been appropriated for carrying on this work. I find that he has got out of it in these years $5,049, and that his brother, Mr. R. A. Irving has got out of it $1,538, or a total of $6,587, out of an expenditure of $19,556.27, a large proportion of which sum was for the rent of an engine and a scow.

Mr. PUGSLEY. How much for the rent of the engine and scow?

Mr. CROCKET. Mr. Irving, for a little bit of a scow, which he told us had cost him $150, and which he has owned for several years, has got from this government $514 as rent; he has been receiving $2 a day for it while this work has been going on during all these years. For an engine which he valued at $500 he has received $8 a day, or a total of $1,778.

Mr. PUGSLEY. Does not that $8 a day include the fuel and the hauling of fresh water for the engine and the wages of a man?

Mr. CROCKET. I understand that the claim is that it includes fuel and the wages of an engineer; but my information is that the man who runs the engine figures in the pay-roll. I do not say that absolutely, but that is the information I have. It seems to me that $19,556 expended in that way year after year is making a perfect farce of the expenditure of public money. If the work served any good purpose, there might not be quite so much ground of complaint; but I have it from reliable residents of that county that the work done two or three years ago was washed away and had to be done the following year and so on from year to year. It consists in getting a lot of brush and stone, for which Mr. J. D. Irving is paid $2.50 per cubic yard for large stone and $1 for small stone. Then his brother, who is a lawyer, has been supplying large quantities of stone also.

Mr. PUGSLEY. His brother does a very large general business outside of being a lawyer. He owns a mill, I think.

Mr. CROCKET. I think J. D. Irving owns the mill. It is a most extraordinary thing to find barristers of the Supreme Court of New Brunswick supplying stone for public works, particularly at such prices. I do not think my hon. friend knows many reputable members of the legal profession in the province of New Brunswick who go into that kind of business. If you go into these accounts, you find that this money is being circulated largely among the Liberal managers of Kent county. The belief down there is that these appropriations year after year are made not so much in the public interest as to circulate the money among political friends of the government. Perhaps the minister can state exactly what condition this work is in. It has been of no service up to the present time; not a single boat has used the channel since it was started seven years ago. If the minister can assure us that this $3,500 will be the end of this expenditure, perhaps we will not have very such more to say. I do protest, however, against money being expended in such a perfectly useless work as this and expended in that wasteful manner. It seems to me that a work going on regularly year after year, consisting largely of what is spoken of as dredging done with a shovel—

Mr. PUGSLEY. It is not an ordinary hand shovel. It is a mud digger of the kind used on the north shore for digging mussel mud and is operated by a steam winch.

Mr. CROCKET. Who owns the mud digger?

Mr. PUGSLEY. I do not know.

Mr. CROCKET. Is it the property of the government or is rent paid for it?

Mr. PUGSLEY. It was not used very long, and I understood there was some work done with scrapers. My information is that this work will be effective for the purpose for which it is intended. The member for the county of Kent (Mr. LeBlanc) in whose judgment I have a very great deal of confidence, has represented to me that the work is of very great importance, and that when completed it will be effective for the purpose. One difficulty has been that instead of taking the whole amount required at once, so as to complete the work in a short period it has been carried on from year to year. I shall look into the allegations of my hon. friend and see exactly the condition in which the work is, but my information has been that the work will be effective and that this $3,500 will complete it.

With regard to the moneys that have been paid to the Messrs. Irving my hon. friend should not take too seriously the suggestions or insinuations made by political opponents. There is a general disposition among many people who are opposed to the government to create an impression that moneys are being wasted by being

paid over to political friends. I suppose that will be the case with all governments, Liberal or Conservative. My information is that the Messrs. Irving are thoroughly reliable people. It is not a crime that they happen to be Liberals, they are just as good men as if they were Tories, and the mere fact that they are Liberals ought not to imply that they have been paid more for the stone, or the engine, or the scow than their services were worth. It was proved before the committee that the engine was used for only a short period each year and that the charge of $8 a day was a reasonable charge and included, in addition to the hire of the engine, the fuel, the labour and expenditure of hauling fresh water a considerable distance for use in the engine and also labour of the men, so that the charge of $8 a day was reasonable. With regard to the scow, it was proved to be a large scow, well adapted for the purpose. It was used by the government for only a short period each year and during the past season, instead of renting it to the government, Mr. Irving was asked to rent it to a private contractor and it has been used during the past year at Cape Bald in the county of Westmorland, where he receives from a private contractor more than he was getting from the government. Therefore I do not take too seriously the suggestions of my hon. friend because I realize that when he makes them he is not speaking from his own knowledge but from statements made to him by others.

Mr. CROCKET. I am not condemning Mr. Irving because he is a Liberal. I would not condemn any man because he is a Liberal or a Conservative. I am condemning the department. My opinion and the opinions of those who have stated their opinions is not based upon the party affiliation of the Irvings at all. So far as I am concerned, it is based on the bald facts that appear by the Auditor General's Report and the value that Mr. Irving himself before the committee stated as the value of the scow and of the engine. My hon. friend states it was only used for a few days of each year. In 1909 alone, he was paid for seventy-three days, or $584——

Mr. PUGSLEY. That is only a little over two months.

Mr. CROCKET. —an amount considerably in excess of the whole value of the engine. For the scow he was paid for 95 days at $2 a day, and the scow was worth $150. I do not, however, speak so much of that as of the perfect uselessness of this work. I ask the minister if he does not himself think it very strange that a small work of this character, the cutting of a short channel through a mud flat to make a short cut into Buctouche Harbour has been in progress year after year from 1904, with no more evidence of its being completed to-day than at the time the work was begun.

Mr. PUGSLEY. My hon. friend is aware that this is tidal water, and it is not so easy to make and complete and make perfect against storms a channel which is in tidal water, you have to protect it thoroughly with brush and stone.

Mr. CROCKET. And the reason is that the work which is done one year is as regularly washed away and must be renewed the next year.

Mr. PUGSLEY. I think my hon. friend is wrong. My information is right to the contrary.

Mr. CROCKET. The minister has no statement to make as to the necessity of this work. He has not shown that any boat or vessel has used this channel. It is not in a position to be used, notwithstanding the work has been going on for seven years, and all that time it has been carried on under this system of day labour and the purchase of stone from political friends in the neighbourhood.

Mr. PUGSLEY. What is the objection to the purchase of stone?

Mr. CROCKET. It has been purchased at $2.50 a yard.

Mr. PUGSLEY. These are very large stones.

Mr. CROCKET. I know one of the contractors at Richibucto told me that some stone was bought from him at 5 cents a cubic yard. The minister should look into this matter and be able, before asking another appropriation, at least to state just what position the work is in, whether it is ever to be completed or if it is going to continue from year to year as in the past.

Mr. PUGSLEY. Before the Committee of Public Accounts, Mr. Irving swore positively that out of the supply of stone during the past year, after paying for quarrying and hauling the stone a considerable distance, his total profits were $36.

Mr. SPROULE. Did he quarry the stones?

Mr. PUGSLEY. Yes, and it is very desirable in work of this character, exposed to the action of the sea and storms and heavy winds, that the stone should be as large as possible. These stones for which $2.50 is charged, as my hon. friend says—I have not a memorandum of the charge before me —were very large stones, and for those of smaller size the charge was $1. There is evidence that out of the total year's supply, after paying expenses, of quarrying and

hauling the stone this considerable distance, the profits were only $36, which, I think, no one would call unreasonable.

Mr. CROCKET. Mr. Irving's statement applies to the first year, but I think he has gone on supplying stone since that time. Who was the conductor appointed for this work?

Mr. PUGSLEY. There was a foreman, sometimes called a conductor.

Mr. CROCKET. Has the minister his name?

Mr. PUGSLEY. Yes, Mr. A. Cormier.

Mr. DANIEL. Is the mud-digger there worked by hand or by this engine?

Mr. PUGSLEY. The mud-digger in use was worked by an engine. My information is that it was not used very much. I think the work has been done with scrapers at low tide. Still as to that I may be wrong.

Campbellton—deep water wharf, $5,000.

Mr. PUGSLEY. That is for completing the work.

Mr. CROCKET. Is the work under contract?

Mr. PUGSLEY. Yes.

Mr. CROCKET. Does this amount complete the work?

Mr. PUGSLEY. It is expected to complete the work.

Mr. CROCKET. What wharfage will this give?

Mr. PUGSLEY. It is 304 feet long by 35 feet wide. This is connected with the easterly end of the present wharf by a span of 15 feet.

Mr. CROCKET. Is that the extension?

Mr. PUGSLEY. Yes.

Mr. CROCKET. What will that make the total length of the deep water wharf?

Mr. PUGSLEY. The Shives wharf would be 250 feet in length. And, as well as I can make out, this would be added, making a total of 554 feet.

Mr. CROCKET. What depth of water have they there?

Mr. PUGSLEY. I think it is eighteen or twenty feet. Some dredging has been done.

Mr. CROCKET. Is that independent of the present contract?

Mr. PUGSLEY. Yes.

Mr. DANIEL. How much has been paid up to date?

Mr. PUGSLEY. To 30th of September last, the amount paid was $30,745.80.

Mr. CROCKET. What is the total amount of the contract?

Mr. PUGSLEY. It is $35,475.

Mr. DANIEL. The minister must be mistaken as to the amount paid, for in the last Auditor General's Report it appears that over $18,000 was paid.

Mr. PUGSLEY. Yes, that is in the previous year.

Mr. CROCKET. Who is the contractor?

Mr. PUGSLEY. Mr. William Glover.

Mr. CROCKET. Of Campbellton?

Mr. PUGSLEY. Yes.

Cape Bald—breakwater pier, $18,500.

Mr. PUGSLEY. This is to build a breakwater and wharf at Cape Bald in the county of Westmorland, and is to make provision for the completion of the contract.

Mr. CROCKET. What is the total cost?

Mr. PUGSLEY. The amount of the contract is $32,890, to which there is to be added superintendence, contingencies, &c., $3,110, and also the cost of making a road $2,729.36. The total estimated cost is $38,729.36. This is being built of concrete. It is in a place where the work will be much exposed to storms and where it is very desirable to have a work of a permanent character.

Mr. DANIEL. Was this a new contract in the year ending March 31, 1909?

Mr. PUGSLEY. Tenders were called for in the fall of 1908 and the contract was let in the spring of 1909.

Mr. CROCKET. How many tenders were received?

Mr. PUGSLEY. Four, and the contract was, as usual, given to the lowest.

Mr. CROCKET. To whom?

Mr. PUGSLEY. Mr. E. A. Wallberg.

Mr. CROCKET. Did the minister or the department have representations as to the necessity of the work?

Mr. PUGSLEY. Yes.

Mr. CROCKET. From whom?

Mr. PUGSLEY. Among others, from the hon. member for Westmorland (Mr. Emmerson). I think there were also representations from the farmers and fishermen. This is an important place in the county of Westmorland, and is situated between Shediac and Cape Tormentine. It is quite distant from the railway, and the people who raise large quantities of farm produce,

have had no means of shipping, and so were at a great disadvantage. It will be a great advantage to them to be afforded the means which this wharf will give them of shipping the produce either to Cape Tormentine or to Shediac.

Mr. CROCKET. Was there no wharf there before?

Mr. PUGSLEY. None.

Mr. CROCKET. Why did the department decide to make it of concrete?

Mr. PUGSLEY. First, because it is in an exposed place. Concrete is rapidly becoming a favourite material for the construction of wharfs as well as buildings. Besides, this is in a locality where, as was represented to us, I believe, the teredo was likely to do considerable damage to a wooden wharf. Taking all these things together, we thought it would be better to build a concrete wharf.

Mr. CROCKET. Has the department built other concrete wharfs in New Brunswick?

Mr. PUGSLEY. I do not know as to New Brunswick. We have built them on the Ottawa river. There is one at Arnprior. We have just completed one also at Lakefield, a very fine wharf. It was not found to be much more expensive than timber.

Mr. CROCKET. Was this contract let in bulk sum?

Mr. PUGSLEY. It was a bulk sum contract.

Mr. CROCKET. Who were the other tenderers?

Mr. PUGSLEY. I cannot give the names. Four tenders were received, ranging from $32,890 to $62,000. The lowest was accepted.

Mr. CROCKET. Does the government acquire the title to the land?

Mr. PUGSLEY. We acquired the title on the 6th of October, 1908, for the sum of $310. It consists of six and a half acres.

Mr. CROCKET. The minister spoke about the right of way to the wharf costing $3,000.

Mr. PUGSLEY. That would be for building the approach. This $310 would include the right of way and the site for the breakwater. The roadway was done by day labour, and is completed. That expenditure was made in 1908-9.

Mr. CROCKET. Most of it in October, I suppose?

Mr. PUGSLEY. No, it ran over eight months. We got through with it on the 30th of November.

Cape Tormentine—breakwater, $5,000.

Mr. PUGSLEY. This is to rebuild the facing and replace the stone. It is asked for by the resident engineer. It was built many years ago, and requires annual repairs.

Mr. DANIEL. I see on V—182 that the department bought an old flat car from the Intercolonial railway for $150. What was that for?

Mr. PUGSLEY. In 1908-9 the sum of $9,226 was expended in driving 74 creosoted piles along the pier head. Ballasting and covering the pier head was completed for about 2,200 square feet. A flat car was purchased from the Intercolonial on which to erect a derrick. This was used in handling and placing 823 cubic yards of large stone, to raise the slope alongside the face of the pier head.

Mr. DANIEL. I would call attention to the fact that the stone that was obtained for this breakwater was paid at the rate of $3.50 per cubic yard, whereas that used at Buctouche was paid for at the rate of $2.50. The money is being paid to Mr. H. C. Reid. I do not know if he is a lawyer.

Mr. PUGSLEY. I think Mr. Reid is proprietor of the Stone Quarries at or near Sackville.

Mr. DANIEL. Is this work being done by contract, or by day labour?

Mr. PUGSLEY. By day labour.

Mr. CROCKET. It did not occur to the department to rent that car from the Intercolonial.

Mr. PUGSLEY. We got it at a very reasonable price.

Chance harbour—to raise inclined low tide landing pier up to high water level, $2,800.

Mr. PUGSLEY. The present pier is 176 feet long, 25 feet wide and 18 feet high at the outer end, but it is covered at high tide, and this is to raise it up. It means the general elevation of the whole breakwater about 8 feet.

Mr. CROCKET. Will this cover the whole expense?

Mr. PUGSLEY. This will cover the whole cost.

Cummings Cove, Deer island—wharf, $15,000.

Mr. PUGSLEY. This is to make provision towards the construction of a wharf at Cummings Cove. It is for the building of a trestle approach 23 feet wide and 290 feet in length, consisting of pile work. The total estimated cost will be $19,400, outside of superintendence.

Mr. DANIEL. Was there anything spent on this last year?

Mr. PUGSLEY. No, we called for tenders but the tenders submitted were considerably higher than the engineer's estimate, we declined to award the contract and propose to call for new tenders.

Dalhousie harbour—breakwater, $10,000.

Mr. PUGSLEY. This is to build a breakwater at Dalhousie to protect the basin. There was a sort of breakwater there which had been built up with mill refuse and edgings, and that sort of thing, and it had been used as a roadway. The central part of that has been washed away and this has exposed the inner harbour, sometimes called the Ferry Harbour, to the storms. It will be very inconvenient, if not somewhat dangerous, for vessels unless this breakwater is built. It will be very useful, as it will give protection to the harbour.

Mr. DANIEL. This is called the Ferry wharf?

Mr. PUGSLEY. No, not this breakwater. This leads from a point out to the island, and it is to be a new work.

Mr. CROCKET. Is this to replace the old breakwater the minister spoke of as being composed of mill refuse?

Mr. PUGSLEY. This will replace it.

Mr. CROCKET. By whom is that property owned?

Mr. PUGSLEY. It will belong to the public. The title will be in the Crown. It was under the control of the Minister of Marine and Fisheries. But, of course, that will be looked into carefully to see that the title is in the Crown. The Department of Marine, I believe, own the island. They have taken it under expropriation. I think this would be the foreshore extending out from the shore of the river to the island, but, of course, we will look into that carefully before expending the money.

Mr. CROCKET. When did the Department of Marine and Fisheries acquire the island?

Mr. PUGSLEY. Perhaps about a year ago.

Mr. CROCKET. And the intention of this work is to connect that island with the mainland?

Mr. PUGSLEY. Yes, it will extend from the shore to Douglas island.

Mr. CROCKET. That extends from the property of the Dalhousie Lumber Company to Moffatt's Island, which has been purchased by the government?

Mr. PUGSLEY. No, I think the property of the Dalhousie Lumber Company would be rather to the westward of this breakwater. I do not think they own from the point at which this breakwater will proceed. Douglas Island was expropriated by the Department of Marine and Fisheries.

Mr. CROCKET. Does the minister know how much the island cost the Marine Department?

Mr. PUGSLEY. I do not, but I understand the amount was not large.

Mr. CROCKET. The reason I ask the minister about this is that there is an impression that a large amount of the work that has been done by the Department of Public Works at Dalhousie has been for the benefit of the Dalhousie Lumber Company.

Mr. PUGSLEY. Who entertains that impression?

Mr. CROCKET. That is the general impression prevalent at Dalhousie.

Mr. PUGSLEY. That surprises me greatly.

Mr. CROCKET. Most of the dredging which was done at Dalhousie last year was done along the wharf frontage of the Dalhousie Lumber Company. I was informed that the Minister of Public Works is a stock holder of the Dalhousie Lumber Company. Perhaps the minister will deny that?

Mr. PUGSLEY. Why does the hon. gentleman think that the minister would deny it?

Mr. CROCKET. Does the minister deny it?

Mr. PUGSLEY. He does not.

Mr. CROCKET. There is no question about the fact that A. and R. Loggie have been paid thousands of dollars for dredging for the benefit of the Dalhousie Lumber Company. I was at Dalhousie last summer myself and saw the Loggie dredge at work dredging out and making more valuable the property of the Dalhousie Lumber Company, and that work is being paid for, although it is entirely for the benefit of the Dalhousie Lumber Company, out of the public treasury. It is a matter that members of this House have a right to protest against. There is no doubt that much of this same thing has been going on all over the country. Item after item, involving thousands of dollars, is being asked and appropriated by this parliament year after year for the building up of private property. That is a fact in reference to the work at Dalhousie. It is true that the minister has spoken of the basin at Dalhousie that lies beyond the lines of the company's property but the major part of the dredging which was done last year was done right at the wharf of the Dalhousie Lumber Company. Perhaps when

the dredging items come up we can get some further information in reference to this matter, and discuss it more fully. I do not think that this House should be asked year after year to appropriate large sums for the benefit of private corporations. There are hundreds of places throughout this country where public money is being spent in this way while hundreds of other communities are crying out in vain for appropriations which are urgently required in the public interest.

Mr. PUGSLEY. I think it would be much more convenient if the hon. gentleman would discuss the item before the committee. When the dredging vote comes up he will be able to discuss this matter.

Mr. CROCKET. I mention that in connection with the information the minister has already communicated to the committee that the appropriation which is now being asked is for the purpose of removing that old breakwater, as he terms it. In fact it is nothing more than a bridge which was for the convenience of the Moffat firm, from whom the Dalhousie Lumber Company acquired their property, and the work now proposed includes the replacement of the roadway of which he speaks. I have understood that it is a work in the interest of the Dalhousie Lumber Company, whose propery lies right at that point. That is the reason why I have said what I have in reference to the dredging, because when we have this vote in reference to the dredging and another large expenditure for this so called breakwater which is lying at the same point, it appears to add colour at least to the belief that public money is being appropriated in the interest of a lumber company of which the minister is a stockholder.

Mr. PUGSLEY. My hon. friend is entirely in error in so far as this work is concerned. This work is to protect what is known as the Ferry harbour. There is a public wharf, the ferry runs there, there is a large traffic and this is for the erection of a public breakwater. In so far as it being a benefit to the Dalhousie Lumber Company is concerned I am not aware that it will be of special benefit to them, although, by reason of their owning one or two of the large mills at Dalhousie carrying on a very large lumber business, the largest lumber business there, and in view of the shipping constantly resorting to the port for the purpose of carrying away the lumber which they manufacture, I suppose, to a certain extent, they will derive a benefit from it. The Dalhousie Lumber Company will get the same benefit as any other firm carrying on business in the town. So far as I am aware this is not to be built on the property of the Dalhousie Lumber Company at all and the object of it is to protect and improve the basin which is a public harbour. The hon. gentleman has asked me if I am a stockholder in the Dalhousie Lumber Company. It is true that some six or seven years ago I took some stock in that company. I paid my money for the stock the same as other people did and I can assure the hon. gentleman there was no watered stock in connection with that company; every man paid his hard cash. That company is engaged in large lumbering operations upon the Restigouche river and its vicinity cutting some 25,000,000 feet per year. I happen to be one of the stockholders.

Mr. CROCKET. Will this involve the purchase of any property from the Dalhousie Lumber Company, or any rights?

Mr. PUGSLEY. None whatever so far as I am aware.

Mr. SPROULE. We have been here nineteen hours out of the twenty-four and I think it is time to adjourn.

Mr. PUGSLEY. That is not a bad suggestion.

Some resolutions reported.

Mr. FISHER moved the adjournment of the House.

Mr. SPROULE. Monday will be private members day?

Mr. FISHER. Yes.

Motion agreed to, and the House adjourned at 11 p.m.

HOUSE OF COMMONS.

MONDAY, January 31, 1910.

The SPEAKER took the Chair at Three o'clock.

FIRST READING.

Bill (No. 117) for the relief of George Robert Buttonshaw.

CO-OPERATIVE CREDIT SOCIETIES.

Mr. MONK. Before the orders of the day are called, I would like to draw the attention of the right hon. the Prime Minister to Bill (No. 26) on Public Bills and Orders respecting Co-operative Credit Societies. My right hon. friend will remember that this co-operative measure was introduced two or three times into this House, and on the last occasion, two years ago, it was referred to a select committee, which after a long investigation, made a unanimous report in its favour and the Bill was afterwards adopted unanimously by the House. It then went to the Senate and

was defeated there by one vote at the end of that session.

Bill (No. 26) is exactly to the same import. I would remind my hon. friend that the Bill which was adopted by this House was taken up by the government after the report of the select committee and was put through by the Minister of Labour. I am afraid that the Bill I refer to, which is among Public Bills and Orders, as well as one a little further down the list of a more comprehensive character having reference to co-operation, introduced by the hon. member for Brantford (Mr. Harris) may not be called this session, which would be a great hardship to those interested. Could not the right hon. gentleman give us an opportunity to have these Bills put through and sent again to the Senate?

Sir WILFRID LAURIER. If we agree to this, I am afraid we shall have to agree to other motions of a similar character. At all events, I do not say nay to my hon. friend's request. We can go on with the order of the day and see this evening how far we have advanced.

THE NORTH POLE—TERRITORIAL RIGHTS.

Mr. SAM. HUGHES. I desire to call the attention of the right hon. the Prime Minister to the following despatch which appeared in the 'Citizen' and other newspapers on Saturday morning last:

('Citizen,' Saturday, 29th January, 1910.)

New York, Jan. 28.—The question of who has territorial possession of the North Pole has been revived again by Capt. J. Bernier of Canada, who is here to attend the annual dinner of the Arctic club of America to-morrow night. Captain Bernier, will ask Sir Wilfrid Laurier, the Prime Minister of Canada, to request Britain, the United States, Russia, Sweden and Norway and Denmark, all maritime nations bordering on the Arctic sea —to designate official representatives to accompany him on his forthcoming Polar expedition which is to leave Quebec on July 15th next. The principal object of the expedition, he said, will be for a division of the Polar sea in order that Canada and the other six nations may have their fishery rights properly defined. Captain Bernier will visit both Croker Land, discovered by Peary in 1906, and Bradley Land, which Dr. Cook reported that he sighted, and, after raising the British flag, will proclaim them formally annexed to the Dominion of Canada. Great Britain, he said, formerly ceded to the Dominion all islands in the Arctic sea lying within its lateral boundaries.

I desire to ask the government whether they have received any such request from Captain Bernier; and if so, is it the intention of the government to remind Captain Bernier that Canada is not yet a nation but part of the British Dominions and intends remaining so, and the expression that Canada is another nation or that Britain is another nation separate from Canada is not applicable to actual conditions.

Sir WILFRID LAURIER. I have seen the despatch mentioned by my hon. friend. I do not know of any such intention on the part of Capt. Bernier as that attributed to him. I do not think that he has any intention of going into international complications. But, if Capt. Bernier spoke as he is reported to have spoken, all I can say is that I think he had better keep to his own deck.

Mr. FOSTER. That seems to imply that there is a project on to send Capt. Bernier to the North Pole under sanction of the Dominion government. Is that so?

Sir WILFRID LAURIER. No. Capt. Bernier will go north again this summer to patrol the waters of the north and assert Canadian jurisdiction.

Mr. FOSTER. I think somebody ought to take charge of this gentleman. He seems to be running loose.

PRIVILEGE—ACTION OF THE CROWN IN CAPITAL AND IN OTHER CASES.

Hon. A. B. AYLESWORTH. I desire to say a word, as a matter of privilege, with reference to something that fell from my lips in connection with the discussion which took place on the 17th of January, on the motion for papers relating to the capital case of Walter Blythe. In discussing the practice upon the consideration of questions of clemency in capital cases, I made the remark that, in capital cases, His Majesty's instructions to the Governor General are not to act except upon the advice of his Privy Council, but, in other cases, he does not take that advice. It has been pointed out to me that the inference which might be drawn from my language—and which, I am sorry to say, was drawn by the hon. member for East Grey (Mr. Sproule)—was that, in cases other than capital cases, His Excellency acted upon his own responsibility. That, of course, is not the case. I was discussing capital cases only, and intending only to point out that, in capital cases, the responsibility for the action of His Excellency was upon the whole government; in cases other than capital cases, the responsibility is not upon the whole government, but no more is it upon His Excellency individually; in such cases, His Excellency acts upon the advice of some minister, not necessarily the Minister of Justice, but ordinarily in practice always the Minister of Justice, upon whom the responsibility rests.

Mr. SPROULE. I am glad the minister (Mr. Aylesworth) makes the explanation,

because it seems to me it was different from the general impression and understanding, certainly different from the understanding I had, and I think it worth while to have a definite statement of it.

POST OFFICE AT CAMBORNE.

Mr. GOODEVE. Referring to an answer given by the First Minister (Sir Wilfrid Laurier) on behalf of the Postmaster General (Mr. Lemieux) with regard to the post office at Camborne, B.C., I see that a petition has been sent in to the government asking that the post office at Camborne should be removed from the hotel. The Prime Minister, speaking on behalf of the Postmaster General, said that if the post office was in the hotel, the matter would be taken into consideration. I have a diagram of the hotel, showing the post office situated in the office of the hotel, between the bar-room and the card-room, which is very strongly objected to by the citizens. I will hand this over to the Postmaster General, and I trust he will take steps to have this remedied.

Mr. LEMIEUX. I will take it up with the Deputy Postmaster General at once.

THE WATERWAYS TREATY.

Mr. R. L. BORDEN. I desire to ask the Prime Minister (Sir Wilfrid Laurier) if he has anything to announce respecting the present position of the Waterways treaty, and, if not, whether he expects to be able to make an announcement at an early day?

Sir WILFRID LAURIER. As I told the hon. member (Mr. R. L. Borden) the other day, we have some subsidiary negotiations as to the interpretation of an article of the contemplated treaty. As soon as these come to an end, we shall make an announcement to the House.

INQUIRY FOR RETURN.

Mr. ARMSTRONG. I desire to ask the government when I may expect a return to a motion adopted on the 24th of November last in reference to printing?

Mr. MURPHY. I will have that attended to at once.

PURCHASE OF WAR VESSELS.

Mr. FOSTER. I desire to call the attention of the Prime Minister to a request I made of him some time ago for information as to what had passed between the government and the British authorities with reference to the negotiations for the purchase of war vessels. The Prime Minister promised that the papers should be brought down. We ought to have these papers, before the debate on the Bill, which, we understand, is to be gone on with. There is also in the memorandum which has been brought down of the proceedings of the defence conference an article which implies that correspondence is taking place with reference to the flag question. The Prime Minister will know to what that refers. I think it would be well also if he should make a definite statement upon that subject. If there are papers to be laid on the table, they may be brought down or at least the Prime Minister might make a definite statement when the second reading of the Bill comes on.

Sir WILFRID LAURIER. I do not think there are any papers, but I will inquire.

PRIVATE BILLS.

THE MERCHANTS AND GENERAL INSURANCE COMPANY.

House in Committee on Bill (No. 82) to incorporate the Merchants and General Insurance Company.

On section 10,

Mr. SPROULE. It seems to me that the value of the property which the company may hold is very small, only $5,000, and in the province of Quebec, $10,000.

Mr. MONK. That seems to have been their idea; I have no special instructions, but they are satisfied with the figure. The amount of $10,000 is fixed as the annual value, that is, the rental; that would represent a considerable piece of property in Montreal. Deducting insurance and taxes, a property worth an annual value of $10,000 would represent at least $100,000. I suppose the annual value would be fixed upon the value as computed by the assessors. The assessors in the city of Montreal do not give a very high actual value, and a property might easily be worth over $150,000 in reality, while its annual value, as fixed by the assessors, would not amount to $10,000. It seems to be a fair amount for an insurance company that is beginning in the city of Montreal.

Bill reported.

SECOND READINGS.

Bill (No. 120) respecting the Royal Guardians.—Mr. Rivet.

Bill (No. 121) to incorporate the Saskatchewan Central Railway Company.—Mr. W. M. Martin.

Bill (No. 123) respecting the Central Canada Manufacturers Mutual Fire Insurance Company.—Mr. D. A. Gordon.

Bill (No. 124) respecting the Eastern Canada Manufacturers Mutual Fire Insurance Company.—Mr. D. A. Gordon.

QUESTIONS.

NATIONAL TRANSCONTINENTAL RAILWAY EXCAVATION.

Mr. LENNOX:

1. Upon the section of the Transcontinental railway from mile 1,534·04 to 1,558·17, from Moncton, district 'F,' let to O'Brien, Fowler & McDougall, what were the government engineer's estimated quantities of (a) solid rock, (b) loose rock, and (c) common excavation, upon which the tender was accepted and contract let?

2. At the time the contract was let what was the estimated expenditure, based on contract prices, for (a) solid rock, (b) loose rock, and (c) common excavation?

3. How many cubic yards each of (a) solid rock, (b) loose rock, and (c) common excavation and of what value, separately have been returned and claimed by the contractor or his sub-contractors for work alleged to be done and what is the estimated quantity and value under each of these headings of work yet to be done according to latest estimates?

4. What sums have actually been paid under each of these headings?

5. At the time this contract was let, what was the total estimated expenditure, based upon contract prices?

6. The same information is asked in respect of mileage 1,407·65 to 1,534·04, districts 'E' and 'F,' let to the same contractors?

Hon. GEO. P. GRAHAM:

Section from mile 1,534.04 to 1,558.17 from Moncton, district 'F.'

1. (a) Solid rock, 493,400 cubic yards; (b) Loose rock, 71,900 cubic yards; (c) Common excavation, 374,000 cubic yards.

2. (a) Solid rock, $715,430; (b) Loose rock, $39,545; (c) Common excavation, $93,500.

3 and 4. Quantities returned to November 30, 1909. (a) Solid rock, 344,334 cubic yards; (b) Loose rock, 330,805 cubic yards; (c) Common excavation, 128,611 cubic yards.

The sums actually paid under each of these headings to November 30, 1909, are: (a) Solid rock, $499,283.86; (b) Loose rock, $181,942.75; (c) Common excavation, $32,152.75.

The estimates upon which the contract was let were approximate only. In a number of lakes, muskegs, &c., where no soundings had been taken it was found as the work progressed that the bottom of many of these was of such a nature as to require much larger quantities of filling, than was estimated in order to get a solid bottom. These fills had to be made of material nearest to the work, which was almost entirely loose and solid rock. This accounts to a great extent for the large returns of loose rock. It was more advantageous to use such material, as it stands at a steeper slope and does not require rip-rapping. The latest estimate of quantity and value under each of these headings is the estimates upon which contract was let. It is impossible to give the quantity and value under each heading yet to be done without making a new estimate which has not been done.

5. $1,158,258.25.

Section from mile 1,407.65 to 1,534.04 from Moncton, district 'F.'

6. (1) (a) Solid rock, 2,602,000 cubic yards; (b) Loose rock, 89,000 cubic yards; (c) Common excavation, 1,489,000 cubic yards.

(2) (a) Solid rock, $3,850,960; (b) Loose rock, $75,650; (c) Common excavation, $431,810.

3 and 4. Amount and value returned on progress estimates, December 31, 1909, are as follows:

(a) Loose rock, 658,182 cubic yards, $974,109.35; (b) Solid rock, 242,178 cubic yards, $205,851.30; (c) Common excavation, 228,703 cubic yards, $66,323.87.

The estimates upon which the contract was let were approximate only. In a number of lakes, muskegs, &c., where no soundings had been taken it was found as the work progressed that the bottom of many of these was of such a nature as to require much larger quantities of filling than was estimated, in order to get a solid bottom. These fills had to be made of material nearest to the work, which was almost entirely loose and solid rock. This accounts to a great extent for the large returns of loose rock. It was more advantageous to use such material, as it stands at a steeper slope and does not require rip-rapping. The latest estimate of quantity and value under each of these headings is the estimate upon which contract was let. It is impossible to give the quantity and value under each heading yet to be done without making a new estimate which has not been done.

5. $5,967,208.75.

EMPLOYEES' PASSES, INTERCOLONIAL RAILWAY.

Mr. DANIEL:

1. How many employees' passes were issued on the Intercolonial railway in each of the months of September, October and November, in each of the years 1907, 1908 and 1909?

Mr. GRAHAM:

No record has been kept of the passes issued in the year 1907, but the following are the number of employees' passes issued during the months of September, October and November, 1908 and 1909:

	September.	October.	November.
1908	1,467	1,024	812
1909	1,296	983	793

COST OF BEHRING SEA ARBITRATION.

Mr. J. D. TAYLOR:

1. What was the cost to the British and Canadian governments of the Behring Sea Sealing Arbitration?

2. How much of this cost was paid by the British government and how much was paid by the Canadian government, respectively?
3. What was the result of the arbitration?

Sir WILFRID LAURIER:

1. $212,032.83.
2. $140,665.79, and $71,367.04.
3. (a) The denial of the claim of the United States government to extra territorial jurisdiction in Behring sea beyond the ordinary three-mile limit, and the 'findings of facts' which formed the basis of a convention for the settlement of the claims in respect of Canadian sealing vessels seized and otherwise interfered with by the United States authorities.

(b) The Paris Award Regulations, controlling the seal fishery on the North American side of the North Pacific ocean as affecting Canadian and United States sealers.

POSITIONS IN CANADIAN NAVY.

Mr. FOSTER:

1. How many applications for positions in the proposed Canadian navy have been received?
2. How many have been received from officers or ex-officers of the Royal navy?
3. How many have been received from officers of the Royal Navy reserve?
4. How many from Canadians?

Sir WILFRID LAURIER:

1. Total number of applications, 234.
2. Number from officers Royal Navy, 59; number from ex-officers, Royal Navy, 6.
3. From officers, Royal Navy Reserve, 37.
4. From Canadians, 115.

LANDS LEASED TO SIR RICHARD CARTWRIGHT.

Mr. EDWARDS:

1. What are the terms of the lease of government lands occupied by the Hon. Sir Richard Cartwright in regard to the timber thereon?
2. Has the government at any time received from the lessee of said lands any money obtained from the sale of wood or timber cut on these lands? If so, when and how much?

Hon. WM. PUGSLEY:

1. It is a condition of the lease that the timber on the property shall not be cut down except for the purpose of thinning and improving the same.
2. No.

CONTRACTS TO EASTERN DREDGING COMPANY.

Mr. CROCKET:

1. Have any contracts for dredging in New Brunswick been let by the government to the Eastern Dredging Company, Limited, during the present fiscal year? If so, for what dredging and at what places?
2. Have any payments been made through the Public Works Department to the Eastern Dredging Company, Limited? If so, what is the total amount of such payments?

Mr. PUGSLEY:

1. No.
2. No.

PAYMENTS TO T. C. NORRIS.

Mr. MEIGHEN:

What was the total sum paid by the government to T. C. Norris, of Manitoba, in each of the years 1908 and 1909, and for what services?

Hon. FRANK OLIVER:

(As far as the Department of the Interior is concerned.)

Fiscal year.
1907-8.. .. .. $2,457 84
Services as auctioneer at school lands sale.
1908-9.. .. .. Nil.

NEW DEPUTY MINISTER OF RAILWAYS AND CANALS.

Mr. HUGHES:

1. Who has been appointed to the Deputy Minister of the Department of Railways and Canals?
2. What duties is he to perform?
3. Is he also appointed Chairman of Board of Management of the Intercolonial railway?
4. What are the qualifications of the new deputy minister?
5. What have been his services during the last ten or twelve years?

Mr. GRAHAM:

1. Archibald W. Campbell, C.E.
2. The duties incumbent upon a Deputy Minister of Railways and Canals.
3. He will act as chairman of the Board of Railway Management.
4. He is a civil engineer and has an excellent reputation as an executive head.
5. He has been Deputy Minister of the Department of Public Works in the Ontario government, and head of what is known as the 'good roads movement.'

MARITIME PROVINCES REPRESENTATION.

Mr. G. W. KYTE (Richmond, N.S.) moved:

That in the opinion of this House the maritime provinces of Canada should have preserved to them the representation in the House of Commons that they now enjoy. That in the redistribution of the constituencies to be made after the next decennial census the number of representatives to be returned from the said provinces should not in any case be reduced. And that an humble petition be presented to His Majesty praying that the British North America Act be amended in accordance with the purport of this resolution.

He said: Mr. Speaker, the subject introduced in this resolution has come before parliament on several occasions and under varying circumstances during recent years.

We are now approaching the time when another decennial census will be taken, on which will be based a new redistribution Act. A resolution was moved here a few years ago by Mr. Hughes, the then member for Kings, Prince Edward Island, in which he asked to have restored to the maritime provinces the representation which they had at confederation. The resolution which I have the honour of moving this afternoon, varies somewhat from that resolution. We are not appealing to the House upon this resolution for the purpose of reversing a decision given by the Privy Council a few years ago upon an appeal from the judgment of the Supreme Court of Canada. Upon a strictly technical interpretation of certain clauses of that Act it was determined that, as a matter of law, the maritime provinces were subject to have their representation reduced after each decennial census if the population has not increased in proportion to the increase in the province of Quebec. As a matter of law we are deprived of any further consideration of this question, but I appeal to the House of Commons of Canada as the high court of equity and the keeper of the King's conscience. On every consideration of equity and moral right I submit that the maritime provinces are entitled to special consideration in respect to the representation they are hereafter to enjoy in the House of Commons. Before I proceed to discuss the question, let me point out that in Great Britain the representation of the constituencies further removed from the seat of government is based upon a different principle from that which is applied to constituencies located nearer the capital. The county of Kent, which is near the city of London, has a representative for each 30,000 electors, while the more remote constituencies of Northumberland and Cumberland have a representative for each 10,000 and 9,000 electors, respectively. In England and Wales there is a member for each 10,000 electors, in Scotland a member for each 8,800, and in Ireland a member for each 7,000 electors. I point this out to show that in Great Britain, to which we look for precedent in constitutional matters, the various constituencies have their representation based upon a principle, different from that which in Canada is applied to the maritime provinces. It is well known that conditions which prevailed at the time of confederation and which it was supposed would continue, have not been realized with respect to the different parts of Canada. It was expected then that in the course of the decades to come population would largely increase, not only in the older provinces which first formed the Dominion, but in the new provinces in the west which sooner or later would become part of the confederacy. Acting upon the presumption that the maritime provinces would increase in population quite as rapidly as the others, it was not considered necessary that precaution should be taken to preserve to these eastern provinces their representation undiminished. In 1873, when British Columbia entered confederation, although her then population did not entitle her to so large a proportion, she was given six members, which was to be the minimum representation of the province, and it was also stipulated that the representation should be increased in accordance with the provisions of the British North America Act. It is quite plain to every one who looks into the matter with any care that had the representatives of the maritime provinces who took part in the pre-confederation conferences insisted that the representation with which they entered the confederacy should be the minimum, there would have been no hesitation in accepting that proposal, but no one ever dreamed then that such a precaution was necessary. I am not making any special appeal on behalf of the maritime provinces because we have lost population, or because of any decadence in our industrial growth, the causes of which have brought about a reduction of the representation of the maritime provinces is not due to any defect inherent in ourselves, it has to be looked for outside. The population of the maritime provinces has kept on increasing decade after decade, but the records of the immigration department tell the story of our diminished representation in the House. During the last nine years immigrants to the number of 49,521 came to the maritime provinces; to Quebec, 187,382; to Ontario, 227,756; to Manitoba, 255,921; to Alberta and Saskatchewan, 359,578. Thus, the maritime provinces have not kept pace with Quebec and Ontario and the western provinces, not on account of any depopulation, but rather on account of the enormous immigration which has flocked into the other provinces in excess of that which has come to us. I need scarcely remind the House that for the last 30 years the energies of the immigration department of Canada under all governments, Liberal and Conservative, have been exerted to bringing immigrants, not to the maritime provinces, but to the fertile plains of the northwest. True, no special effort has been made to prevent immigrants coming to the maritime provinces, but we must recognize that immigrants are attracted to the northwest because there they can get fertile farms for the asking. The maritime provinces are not peculiarly adapted for agriculture, we do not possess these fertile fields that have attracted to the prairie provinces so

many immigrants from European countries. Our resources are largely to be found in our lumber wealth, our fisheries and our mines. The European immigrant coming to the western provinces to engage in farming needs little capital to start in his new life; a comparatively few dollars will give him a homestead location, and all he has to do is to turn up the ground, plant the seed and start in business. But, the man who comes to Nova Scotia or New Brunswick to develop our natural resources must have capital, and so for the vast number of immigrants with little capital the western provinces provide the greater attraction. Therefore, were it not for the enormous increase by immigration in the population of the other provinces, the maritime provinces would be able to hold their own in population and retain their representation as when we cast our lot with the Dominion.

I have before me a statement of the estimated population of the Dominion of Canada issued by the Census Department at the end of last year. According to these figures, the population of the province of Quebec, which was 1,648,289 in 1901, is estimated to be 2,088,461 at the present time. The population of the maritime provinces, which was 893,553 in 1901, is estimated to be now 1,037,112, or an increase during the last nine years of 143,151. Having regard to this very substantial increase in the population of the maritime provinces, one would naturally be inclined to the opinion that we would hold our own in respect to representation. But when we come to apply the rule which determines the representation which the provinces of Canada shall have in parliament after the next census is taken and taking the province of Quebec, which is the pivotal province, and dividing its estimated population of 2,008,461 by 65, the number of representatives, which that province is entitled to in this House, we find that the unit of population after the next census will be 32,130 in place of 25,000, which was the unit at the last census. The figures which I have quoted are the estimates of population at the end of the past year, and if the increase of population will continue for another year and a half, at which time the census will be taken, we may fairly assume that a much larger disparity will exist as between the population of the maritime provinces and that of the province of Quebec. Having ascertained the unit of population to entitle a constituency to return a member to parliament at the present time as 32,130, and dividing that unit into the population of the maritime provinces, we find that instead of thirty-five representatives, to which they are entitled at the present time, they will be entitled to only 32 representatives after the next census is taken. This disparity as regards population has been going on for a good many years. At the time the late hon. member for Kings, P.E.I. (Mr. Hughes) moved his resolution three years ago, certain hon. gentlemen who took part in the debate hoped that the conditions would be changed somewhat before the next census was taken, and held that there was evidence that the proportionate representation of the maritime provinces, if not restored, would at all events not suffer hereafter any further diminution. As I have pointed out, the fact is that although the population of the maritime provinces has increased by 143,151 during the last nine years, we stand to lose three more representatives after the next Redistribution Bill has passed this House.

There is another test by which the representation of the maritime provinces is determined, and that is the section which provides that if the population of a particular province has not decreased more than one-twentieth as compared with the whole population of Canada, that province shall not suffer any decrease in its representation. It was argued before the Privy Council, in the case which was referred to in respect to our representation, that Canada meant and included the four older provinces of Canada. There would seem to be strong ground for that contention; and had it been accepted by the Privy Council, the maritime provinces would not be in the position they are in to-day in respect of their representation. If the population of the older provinces of Canada were taken as the basis upon which the estimated decrease was to be calculated, there is no doubt that we would retain our representation as we had it in the past; but when we take into account the fact that the population of the provinces of British Columbia, Alberta, Saskatchewan and Manitoba is included with the population of the older provinces of Canada, it would be more than we could hope for that the maritime provinces, with their small proportion of immigrants, would be able to hold their own in that calculation. When I come to discuss the question of immigration, I am naturally reminded that the money which goes to bring immigrants into this Dominion is not the money of the respective provinces which are receiving the benefit of that immigration; it is the money of the whole Dominion of Canada, which is contributed proportionately by the people of the maritime provinces. Then, it will not be denied for a single moment that from the causes which I have indicated, the maritime provinces have not received their fair share of immigration, notwithstanding the fact that some $9,000,000 has been paid by this government during the last nine years for the purpose of bringing into the country the immigration which has come into Canada during that period.

There is another question that ought to

have some bearing on the consideration of this matter, apart from its legal aspect, but from the point of view of the equitable rights of the maritime provinces; that is, in respect of the increased territory which has been awarded to the different provinces. Hon. members of this House are quite familiar with the fact that a few years ago the province of Quebec, which was designated by the framers of the Confederation Act as the 'pivotal province,' upon which the representation of all the other provinces should be determined, received a very large increase of area, equal to about 118,000 square miles. It is contended that this is not an increase of the area of the province of Quebec, but that the resolution of the House which determined that this additional territory should be given to the province of Quebec was only intended to identify or further locate the boundaries of that province. At the time of confederation, the northern boundary of the province of Quebec was regarded as the height of land lying between the watershed of the St. Lawrence and that of Hudson bay. That being the case, we may assume that the representatives of the maritime provinces, who attended that conference, assumed that the province of Quebec was the province as it was indicated by those boundaries, and did not include any additional territory. In awarding the province of Quebec additional territory, the question is raised as to how far that affected the maritime provinces with respect to the representation which we are hereafter to enjoy. It may be argued that there is no population in that additional territory, and that therefore it does not affect the unit of representation for the province of Quebec. At any moment valuable gold mines might be discovered, which would cause a rush into that territory and thereby materially increase the population of the province of Quebec. That province would then be placed in this position, that those people would be unrepresented in parliament, or the British North America Act would have to be amended for the purpose of giving them representation. The population of that new territory would be too remote from the settled constituencies of the province of Quebec as they exist at present, and we might have a demand from the province of Quebec for an amendment to the British North America Act in order to give to that additional population its due representation in parliament.

The province of Ontario has added very largely to its territory since 1867. By the decision of the boundary case in 1884, the Privy Council awarded Ontario additional territory now designated as New Ontario. At present the provinces of Manitoba and Ontario are knocking at the door of the House of Commons for additional territory. The territory in question was purchased and paid for by the people of the whole of Canada. It is not territory for which the province of Ontario or Manitoba made any sacrifice, but was territory purchased by the government of Canada, in which every province and every individual in the Dominion has an equal interest and share. The provinces of Alberta and Saskatchewan, which have lately been established, extend as far north as the territorial rights of Canada extend and the same is true of British Columbia. Were it possible for the maritime provinces to increase their territory, or improve their position in respect of natural resources, we would not be coming to the House of Commons asking compensation as a set-off to the new territory which other provinces have been given. We get no benefit from the investment made by the government of Canada in those lands which are to be awarded the other provinces. We receive no benefit from the money expended year by year by the immigration department for the purpose of inducing immigrants to come to this country; and all we ask, as a compensating condition, is that hereafter, under no circumstances shall the number of representatives from the maritime provinces be decreased in this parliament. The resolution which I have the honour of introducing does not in the slightest degree affect the representation of the rest of Canada. We are only asking that the number of representatives which we send to parliament shall not, under any circumstances be decreased. In that respect we are only asking what was granted British Columbia. If the representation in this parliament of British Columbia is to be permanent, and not subject to any decrease that same condition should be made to apply to the other provinces. I submit that the proposition involved in my resolution is not unreasonable in view of all the circumstances and in view of all the considerations upon which the Act of confederation was based.

The principle of fixing a minimum in the representation of any state or territory, has been followed in the case of every other commonwealth organized as a confederation. In Australia, when the Commonwealth Act was passed, it was provided that the House of representatives should consist of 77 members, of whom 20 were given one province, 23 another, and 9, 7 and 5 to the smaller provinces, and it was specially provided that not one of the original states forming the commonwealth should ever have less than five members in the house of representatives. The constitution of the United States also provides for a minimum representation. It seems to me that these precedents are so reasonable that hon. members should not

regard the proposition I am advancing as one open in any degree to objection.

I yield to no one in my admiration and appreciation of the great men who met together in 1864 for the purpose of considering the conditions under which a union of the provinces of Canada might be brought about. We who are living in a period somewhat remote from that important epoch are perhaps sometimes inclined to think that the men of that day were possessed of transcendent ability, that they were more far seeing, that they possessed the faculty of looking into the future and providing for future conditions to a degree far exceeding that possessed by the men who are occupying similar positions at the present time. Well, I do not think I am detracting in any respect from the merits of those great men when I say that the public men of the day, who are discharging their duties in our federal parliament and provincial legislatures, are quite as far seeing as those who preceded them forty years ago.

In the view of subsequent events, we would not be justified in assuming that the framers of the Act of Confederation saw in advance all the conditions and circumstances likely to arise in respect of the various provinces of the Dominion for all time to come. It would be preposterous to say that these men intended to impose upon this country a piece of legislation which never could, under any circumstances, be amended in order to meet conditions bound to arise in a country of our rapid growth. As an instance, to show how men, familiar with the subjects they are attempting to discuss and settle, may be mistaken, let me quote the statement of the late Archibishop Taché regarding the possibilites of the Northwest as a wheat raising country. That venerable archbishop wrote a pamphlet in 1869 in which he asserted that the country now described as Alberta and Saskatchewan would never produce wheat, yet during last year the plains and valleys in these two provinces produced no less than 130,000,000 bushels. No doubt the venerable archbishop made that statement in all sincerity and honesty. It was made about two years after the Confederation Act was passed, and based on the information then at hand. Consequently we may very well assume that the framers of the British North America Act, who were representing the older provinces of Canada, could not have anticipated the enormous influx of population which would flow into those western provinces during all those years.

What are the objections heard against the very moderate and modest demand which the maritime provinces are now making? The answer given in some places is that the British North America Act has provided a system by which the representation of all the provinces shall be determined and that we must adhere to it. In other words, to use the language of that unsympathetic and exacting creditor immortalized in the 'Merchant of Venice,' 'it is so written in the bond.' I submit that written constitutions, if they are to be durable, if they are not to bear harshly and unfairly on certain elements of the population and certain parts of the country, must be subject to amendment from time to time. In fact I think I am well within the mark when I say that every essential feature and condition of the British North America Act has been amended from time to time since 1867, except that one provision which fixes the representation of the maritime provinces. In 1869 a resolution was passed by the House of Commons to the effect that it is the undoubted privilege of parliament to fix and determine the amount of all expenses chargeable on the public funds of the Dominion, but that the House was of the opinion that no further grant or provision beyond those made by the Union Act and the Act respecting Nova Scotia, should in the future be made out of the revenues of Canada for the support of the government or legislature of any province.

In addition to the fact that the amount of subsidy payable by this government to the different provinces was determined by the Act, we have years afterwards the resolution I have just read setting a limit to the amount of subsidy to be paid those provinces. It is within the knowledge of hon. members, that, a few years ago, the provincial premiers met in conference and passed a resolution by which they requested that a further appropriation be made to the respective provinces out of the federal treasury. That resolution was received favourably by the federal government and by this House, and, as a consequence, these provinces are enjoying a larger subsidy than they heretofore enjoyed. I might also remind the House that the question was not entirely unanimous, because the premier of British Columbia withdrew from that conference, refusing to accept the proportion that was allotted to the province of British Columbia. When these resolutions were presented to the imperial parliament for legislative enactment, it was sought to insert into that Bill a provision that there should be no further increase from the federal treasury to the provinces of Canada, but that the amount fixed by the Act then passing should be final and conclusive. That amendment was not inserted in the Act, showing that the imperial authorities did not regard it wise that any specific act of legislation should be held to fetter and trench upon the future development and future conditions that might thereafter arise with regard to this great Dominion.

Another objection that has been made to

the acceptance of this resolution is one which I find stated in the columns of the Toronto 'Globe' of Wednesday last. The late Hon. George Brown was the great exponent of representation by population, and during the whole of his public life he endeavoured to work out that principle in its application to the provinces of Canada. He was the proprietor and director of the Toronto 'Globe' for many years, and that paper which was established by him and which is taken to represent his views so far as the application of his views could be made to the conditions of the present time, made this objection, and this objection only, to the acceptance of this resolution:

The most serious objection to the change is the resultant tendency to make the House unwieldy. There is neither wisdom nor despatch in an overgrown deliberate body. With large membership it is necessary that the preponderance take no part in the work. Even with the present representation at Ottawa, if every member took an active part, progress would be virtually impossible. Every increase must increase the element of silent idlers, and that is not desirable. The relative strength of the contingent from the maritime provinces would be no less under the change required by the present law than under the change sought. In either case it would be in proportion of population.

Now, Sir, it does seem to me that the merits of this resolution must be fairly apparent when the Toronto 'Globe' can find no stronger objection to the acceptance of that resolution than the tendency it would have to make the House of Commons unwieldly. Even should all the representatives from Prince Edward Island lose their seats in this House at the next re-distribution, it would leave only four vacant seats for the accommodation of the increasing number of members who will come to this House from the west after the next re-distribution. At the very worst I cannot conceive that more than ten members would be taken from Nova Scotia during the next twenty or thirty years, and perhaps the same number from the province of New Brunswick. And, while such a large decrease as that would affect very seriously the interests of those provinces in this House, there would be no corresponding advantage as respects the unwieldly character of the House of Commons, when we take into account the increased number of members that must necessarily come to parliament from the new provinces in the near future. The objections of the Toronto 'Globe' suggests a picture of the members who are hereafter to be elected from the now unformed constituencies in the great west, sitting upon the door-step of the House of Commons, patiently, yet hopefully awaiting the inevitable reduction of representatives from the maritime provinces, provided for in the British North America Act, by which representatives from those provinces are deprived of their seats whereupon they may joyfully enter and take possession of them. It comes to this, so far as the objection of the Toronto 'Globe' is concerned, 'in the time to come the number of representatives from the larger provinces will necessarily increase, and, in order to provide room for them, some provinces must be deprived of their representation—and why not the maritime provinces as well as any other. I sympathize with hon. members in their desire to adhere strictly, so far as strict adherence is possible to the conditions of the British North America Act. I am not one who would lightly change the conditions under which all the provinces entered confederation. Nor am I one who would wantonly amend the British North America Act for some trifling consideration. But in matters of serious moment, matters that affect so vitally the interests of the maritime provinces, in view of the amendments that have heretofore been made, in view of the principle followed in other countries similarly circumstanced, I feel strongly that the members from the maritime provinces are not asking too much when they ask that a minimum be fixed beyond which their representation would not be reduced. With respect to the constitution of the United States, that constitution was drawn up by men I suppose equal in talent, foresight and statesmanship to those who drew up the British North America Act. But the people of the United States do not regard the American constitution as a piece of sacred legislation that is not to be amended or changed under varying conditions as they arise in that great country. No less than seventeen constitutional amendments have been made to the American constitution to meet the changing conditions in the United States, and whenever it is necessary to have further amendments, there seems to be no hesitation on the part of the people of that progressive nation to make the amendments to suit the circumstances of the day.

The province of Quebec having been selected as the pivotal point on which the representation of the other provinces is determined, some hon. gentlemen are inclined to say that it was so selected to assure to the province of Quebec its proportionate influence and standing in the confederation of Canada. I beg to suggest that no such consideration entered into the minds of the gentlemen who were interested in selecting Quebec as the pivotal province. The reason why Quebec was selected is given in the speech of Sir John A. Macdonald in the confederation debates, wherein he stated that Quebec was accepted as the pivot on which the whole would turn on account of the comparatively permanent character of its population, and from its having neither the

largest nor the least number of inhabitants. It was not selected in order that the rights or customs of the province of Quebec should be preserved to the people; it was not selected on account of any fear that their influence would become less as this Dominion grew and became more populous; it was selected simply and solely because it was represented to be not the highest or lowest in point of population, and its population was less likely to vary than that of any other. That was another respect in which the framers of confederation did not anticipate the facts as they have occurred.

The province of Quebec has benefited largely by the inflow of population from European countries. It is situated upon the great waterway of this Dominion. The immigrants coming to western Canada first view the beautiful hills and the fertile plains of the province of Quebec, lying along the River St. Lawrence; they come to the great city of Montreal, which is the entrepot of the whole Dominion of Canada. The city of Montreal is destined to become a great city; and I am pleased to know that some of our hon. friends from the province of Quebec are sanguine enough to look forward to the day when the city of Montreal will have a population of a million. When the city of Montreal has a population of a million, I wonder what will become of the representation of the maritime provinces. It is not too hopeful, or too sanguine, a view to take of the development and increase of the province of Quebec, and of the great city of Montreal, to say that hon. gentlemen who predict a population of a million for Montreal within the next thirty or forty years are not reckless in their prophecy. But when the city of Montreal has a population of a million, then I ask you, Mr. Speaker, what will be the position of the maritime provinces as a factor in the public affairs of this dominion, as represented in this House of Commons. The city of Montreal, regarded as the national port of this country, has been the subject of large grants of money on the part of the national government, millions of dollars have been expended for the purpose of making Montreal the great centre of transportation for this country. It is money well spent, and I am sure no member from the maritime provinces begrudges the city of Montreal and the people of Quebec the money which has been expended to make its harbour safe and to deepen and to improve its channel. But every dollar that has been spent by the Dominion of Canada for the purpose of improving the city of Montreal makes possible a large increase in its population, and therefore a large increase of population in the province of Quebec is due to a considerable extent to the generous disposition with which the maritime provinces have received every proposal to spend money in the province of Quebec and in the river St. Lawrence, at the same time that it is calculated to redound to their disadvantage on account of the increased population which it will bring about, and the corresponding decrease in the representation of the maritime provinces. I beg leave to move, Mr. Speaker, the motion of which I have given notice.

Mr. J. G. TURRIFF (Assiniboia). My hon. friend from Richmond, N.S. (Mr. Kyte) has built up a very elaborate argument on what seems to me a very flimsy foundation. Not being learned in the law, I do not propose to follow along those lines. But there are some facts in connection with this matter that I think it might be well to lay before the House. The entire principle underlying the argument of my hon. friend is a wrong one. He has argued as if some injustice was being done, or had been done, to the people of the maritime provinces. He says that the British North America Act has been amended on many occasions, and that it ought to be amended again to meet his views. Why, Mr. Speaker, if any injustice was being done to the people of the lower provinces, every man in this House would be ready to call for an amendment of the British North America Act to remedy the injustice. But my hon. friend, during the whole of his speech, has not indicated one single injustice that has been done, or is being done, to the people of the lower provinces. They will continue to be represented in this House just exactly in the same proportion, according to their population, as they were at the time they entered confederation. Nothing that could be said at the present time could make us believe that the fathers of confederation, who had this matter in hand, that men like the Hon. George Brown and others who had fought their whole lives for the principle of representation by population, would have agreed to any such proposition. They must have foreseen that in the future one province might increase in population faster than another, and they never would have consented that one province should be represented in the federal parliament on one basis, and another province on another basis. No one can gather from the debates of that period that any such intention was in their minds. Why, the whole basic principle of confederation was the fact that in the House of Commons every province was to be on an absolutely equal footing. If you want any further proof of that, you can consider what was done in the organization of the second chamber. It was provided that the smaller provinces, smaller territorially and in population, as they would not have an

equal number of members in the parliament of Canada, should be protected, if any protection was necessary, by giving them a predominance in the upper chamber. But the whole groundwork of confederation was the fact that there should be absolute equality of representation in proportion to population in the different provinces of the Dominion. Now it is almost half a century since that took place. At the time of confederation, when the provinces of Ontario, Quebec, Nova Scotia and New Brunswick united, does my hon. friend think for a moment that a resolution like this would have met with favour, that special consideration would be given to the lower provinces, that they should be allowed representation in this House on one basis, and the great province of Ontario, that came in at the same time, under exactly the same conditions and that has lost more representation in the past than the lower provinces have lost, should be allowed representation on another basis? Does my hon. friend think for a minute that the province of Ontario would sit quiet and allow herself to be unrepresented according to population? I do not think so for a moment. Just as certain if we adopted the suggestion of my hon. friend, then next year you would have the province of Ontario coming forward and rightly saying: We came in under the same terms, under the same conditions, as the lower provinces, and we are entitled to the same consideration.

Mr. JAMESON. Do I understand the hon. gentleman to say that the province of Ontario has lost any of its representation?

Mr. TURRIFF. Certainly.

Mr. JAMESON. Its original representation was 82.

Mr. TURRIFF. But ten years ago it was 92, and since then it has been losing some of its representation, because the province of Quebec has increased in population faster than the province of Ontario. The same thing is happening in the lower provinces. My hon. friend stated that the increase of population in the province of Quebec was largely owing to immigration, and he quoted figures, some 50,000 odd coming to the lower provinces, and 180,000 into the province of Quebec. That is just about an even proportion according to their population. Now, if the lower provinces are treated as my hon. friend proposes, Ontario would come in and ask to be treated in the same way, and in that case, what would be the position of the rest of Canada? Where would Quebec be, where would the west be? Mr. Speaker, I was born in the province of Quebec, and lived there for the first 23 years of my life. I am proud of the province of Quebec, which is inhabited chiefly by French Canadians, among whom I lived for so many years. I learned to admire and respect them, and the longer I live the more I admire and respect the French Canadians of the province of Quebec. The province of Quebec is justly jealous of her position in confederation. Would it be fair, would it be reasonable to ask the province of Quebec to allow her representation to be cut down? Because if you give an increased representation to the other provinces, and keep Quebec, the pivotal province, at its original representation, it is cutting down her representation, proportionately.

Mr. DANIEL. If the original area of Quebec at the time of confederation was, say, 150,000 square miles, and Quebec was made the pivotal province and the unit of representation was sixty-five divided into its population, would the hon. member consider it just and right that if the area of Quebec was nearly doubled after confederation no allowance should be made for that increase of area and consequent increase in population, in fixing the unit for the representation of the other provinces?

Mr. TURRIFF. I am glad the hon. member has asked that question. That is the one point on which I think there is a peg to hang a hat on. I claim that if the province of Quebec in the future should have its territory largely increased—as in all probability it will, and I hope it will—and there should be a large influx of population into that newly added portion of the province of Quebec, in justice to the other parts of the Dominion the population in that new part that may be added to Quebec should not be a factor in governing the number of representatives from the other parts of the country, and I would be one of the first to object to and oppose any such concession or advantage being given to the province of Quebec or any other province. We have a great confederation, extending from the Atlantic to the Pacific, nine provinces, and we have been working along on good lines, on autonomous lines, simply because every province has been exactly on the same basis. But to suggest that any one province should have an advantage over any other province, would be to sow the seeds of discord at the very outset.

It seems to me that a proposition of this kind comes with less good grace from a member from the province of Nova Scotia than from a member from any other province, because I think Nova Scotia has already more than its share of influence in this parliament. There is one ground on which I think the lower provinces have rather an advantage, and I am pleased to grant them that advantage and hope they will always continue to have it, that is that during the years that have elapsed since confederation, certainly to-day, the repre-

sentatives from the lower provinces have averaged up better and more able than the representation of the whole Dominion, and to that extent they have an advantage and long may they continue to have it, long may they continue to send the same class of able men they have in the House to-day, so that in the future we will be able to acknowledge that they are the most able men in the House. One of them at all events is the most nervy man, to bring forward a proposition of this kind, to put Nova Scotia and the other maritime provinces up on a pinnacle, all the other provinces to take a back seat. But it is not only in that respect that they have an advantage. Compare the position of Nova Scotia and Prince Edward Island, we will say, with the position of Manitoba and Saskatchewan at this moment. Manitoba and Saskatchewan have one quarter more population than Nova Scotia and Prince Edward Island conbined, but Nova Scotia has two members in the government, while Manitoba and Saskatchewan have not a single representative in the government. Does any one mean to say that if for the past five years, Nova Scotia had not a member in the government, the members from that province would have sat still and allowed that state of things to exist? That is exactly the position we have been in in the west, and I am beginning to think that the Liberal members from the west have been too modest and moderate in not having insisted on the rights to which they are entitled. The provinces of Manitoba and Saskatchewan are certainly each entitled to a member in the government, they have not any such representation, and we have been content to take it easy and leave it to the government in their own good time, when they should be able to do it nicely, to give us the representation that is certainly our due. But, on account of that, apparently because we have been easy-going, because we have been moderate, my hon. friend from Richmond (Mr. Kyte) now comes forward with a proposition to put the west and the province of Quebec as well, although I am not looking after the province of Quebec, for all time to come, in a degraded and an inferior position. Is there anything fair and reasonable in that? I do not think there is. I do not think for a moment that the proposition brought forward by my hon. friend ought to meet with support in this House.

My hon. friend (Mr. Kyte) spoke about the subsidies. The subsidies were given on a basis that was fair to all, each province got an increase, there was no proposition made at that time to give one province an increase and not any of the others. Had it been attempted to do that I do not think the attempt would have met with any success; this parliament would not have agreed to the proposition made by the different premiers of the various provinces. I hope my hon. friend will not press this matter because if it is pressed and if it meets with the support of the members of this House, you would be sowing the seeds of discord, you would be starting in for the dismemberment of the Dominion of Canada. I know quite well that so far as the west is concerned, speaking as a member from the province of Saskatchewan, representing here 45,000 people, the best people from Ontario, Quebec, the lower provinces, Great Britain and the United States, they would not stand for one moment for accepting a position in confederation that would be inferior to the position held by any other province in the Dominion of Canada. So far as as I am personally concerned, if such a resolution as that was to find acceptance in this House and were followed up in the only logical way it could be followed up, by a Bill to give effect to it, that Bill would not have had its second reading for five minutes, until my resignation would be in your hands, because I would refuse to sit in this House as a member representing people on any other terms than on the terms of fair and just equality from one end of the Dominion to the other.

Mr. MACKENZIE. Would the hon. gentleman please explain how it would militate against the standing of the people of the west that the present representation of the maritime provinces should be made permanent?

Mr. TURRIFF. It would mean at present that four men in the lower provinces would have as much to say in this House as five men in the west. It might mean in the time to come that one man in the lower provinces, would have as much to say in this House as two men in the west. Is there anything fair or reasonable in that? My hon. friend must see that according to the present arrangement the lower provinces will always have absolutely their just fair share of representation, their just proportion.

Can the hon. gentleman ask that these provinces should have any more than their just proportion? No. The hon. gentleman (Mr. Kyte) does not himself believe that what he asks is right because if he has any ground for his demand at all it is that these provinces should have the same representation on which they entered confederation. If they are not entitled to that they are not entitled to any change. I hope this resolution will not pass because I do not believe it is in the interests of the whole Dominion. I trust the conditions will continue as they are from the Atlantic to the Pacific; I trust that our people will remain as they are: happy, and prosperous, and contented, working for the

advantage of the Dominion generally. If this spirit should actuate the Canadian people there will be none who will be found to complain that they have been unjustly treated in the matter of representation in this House.

Mr. A. B WARBURTON (Queens, P.E.I.). Mr. Speaker, coming as I do from the province of Prince Edward Island which, I contend, has a grievance in this matter, and which can present strong claims to have that grievance redressed, I wish to place my views before the House. I agree with the hon. gentleman (Mr. Turriff) that our just demand is that the representation of all the proivnces of the Dominion should be the same as that which they had when they entered confederation, but I cannot agree with him in much else. I do not believe with him, that our western friends take the same view as he does. Since I have come to this House and become acquainted with gentlemen from the other provinces of the Dominion, both Liberal and Conservative, I have learned to know their feelings and to respect them, and I doubt very much if the representatives of the great province of Ontario would stand up here and declare that the principle which is working out so harshly to the maritime provinces should continue for ever. I do not believe that my fellow countrymen of French extraction in the province of Quebec, when I appeal to their chivalry and sense of fair play, would desire to see the representation of the maritime provinces dwindle until we have practically lost a voice in the councils of the nation. The hon. gentleman (Mr. Turriff) represents a district in one of the great western provinces which some day, perhaps soon, will hold the balance of power in this country. He knows the west better than I do, but, when I remember that in that great west men from the maritime provinces are in the forefront of progress and development, I must doubt that the people of the west take the extreme view he has taken. We have sent the best of our blood to the Northwest, and throughout the length and breadth of that prosperous land the sons of the maritime provinces are to be found in the front rank of the population We are glad that our people have gone to the Northwest to continue to live under the British flag rather than that they should bend their energies to the development of a foreign nation. But, Sir, I refuse to believe that these children of Nova Scotia, New Brunswick and Prince Edward Island will lend countenance to an effort to crush down the old provinces of their birth. Let me remind the House that the maritime provinces were the cradle of confederation. In the early sixties Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland thought it would be in their interest to have a union of their own, and in the spring of 1864 they met in Charlottetown with a view to bring that union about. It so happened that then, and for many years before, there was a practical deadlock in the political affairs of Ontario and Quebec which rendered it practically impossible to carry on government. Ontario fought for representation by population, and I do not blame her, because while she had a larger population than Quebec, the parliamentary representation of the two provinces was equal. However, when the Charlottetown conference was in progress it occurred to the statesmen of Upper and Lower Canada that they should sink their party differences and endeavour to find a solution for the troubles that confronted them by inducing the maritime provinces to enlarge the scope of the conference so as to include Ontario and Quebec, and with that object in view Sir John Macdonald and Hon. George Brown, and others, came to Charlottetown. This is probably the only instance in the history of Canada in which the leaders of both political parties agreed to sink their political differences absolutely in order to achieve a great end. The conference ended at Charlottetown to meet in Quebec in October of the same year, 1864, and at the Quebec conference the question of union was fully threshed out. It is to be regretted we have not fuller reports of the proceedings of that conference which were largely secret, but the result was that four of the provinces agreed to enter confederation. This question of representation in the Dominion parliament was fully discussed then. According to the census of 1861, Prince Edward Island was only entitled to five members, and the Hon. George Brown proposed a resolution which gave to Ontario 82 members, to Quebec 65, to Nova Scotia 19, to New Brunswick 15, to Newfoundland 7, and to Prince Edward Island 5 members. Ontario, Quebec, Nova Scotia and New Brunswick agreed to this proposition, but Prince Edward Island declined. I do not wish to take up any considerable time in discussing this matter, Mr. Speaker, because during the earlier part of this session I dealt with it at some length. In that very conference it was provided in advance that there should be a violation of this very rule of representation by population; there was a loop-hole provided for that purpose. At page 40 of Pope's 'Confederation Documents,' you will find in a report of that conference that this provision was made:

> The Northwest Territory, British Columbia and Vancouver, shall be admitted into the union on such terms and conditions as the parliament of the federated provinces shall deem equitable and as shall receive the assent of Her Majesty.

Nevertheless, there was one colony about which the conference had some

doubt, and in order to make sure of that colony coming in they made an exception in its favour, as follows:

And in the case of the province of British Columbia or Vancouver, on such terms as shall be agreed to by the legislature of such province.

The new provinces were to come in on such terms as should be arranged by this parliament, but the province of British Columbia was to come in on such terms as should be agreed to by itself. At that time Prince Edward Island voted against that resolution, because it did not give it sufficient representation. Quoting from the same Confederation Documents, I wish to give a few of the remarks made by different members of that conference on this very question. Mr., afterwards Sir John A. Macdonald, in the discussions of the conference, referring to this question, at page 57, said:

The rate of increase of population in Canada must be greater in future than in the maritime provinces.

Showing that the condition which has now arisen was foreseen. The Hon. George Brown, who fought all his life on behalf of the principle of representation by population, in the same discussion, at page 67, made use of the following words:

After the census of 1871 we shall adopt the same rule. The practical result will be that while Lower Canada (Quebec) certainly will not be less and the lower provinces may increase in population, they cannot decrease in the number of representatives.

There were further expressions of opinion from other members of that conference. Mr. Brown's motion for a general government to protect the diversified interests of the provinces carried, Prince Edward Island alone voting against it. In this discussion, Mr. Haviland, one of the Prince Edward Island delegates, afterwards a senator of Canada and a lieutenant governor of the province, and a strong Conservative, said:

Prince Edward Island would rather be out of the confederation than consent to this motion. We should have no status. Only five members out of 194 would give the island no position.

As Mr. Haviland was all his life an earnest advocate of confederation, he must have had very strong reasons for taking this position. Mr. Palmer, afterwards chief justice of Prince Edward Island, said:

I take exception to the principle adopted by this resolution. Representation by population is not applicable when a certain number of provinces are throwing their resources into one confederation, and giving up their own self-government and individuality. When a colony surrenders that right, she should have something commensurate in the confederation. . . . Not even two or three more members would induce me to give my assent to the scheme.

I may say that Mr. Palmer was not a strong advocate of confederation, though he afterwards supported it. The Hon. Edward Whalen, one of the most able and brilliant men we ever had in the province, and a red-hot federationist, said:

I thought that Prince Edward Island had not been fairly treated as to representation in the Legislative Council, but I gave way on that occasion. I do not think, however, I could say that I was satisfied with the representation of five in the Federal House of Commons. We are in an isolated position. Our resources are large, and our people would not be content to give up their present benefits for the representation of five members. It may be said that the confederation will go on without Prince Edward Island, and that we shall eventually be forced in. Better, however, that, than that we should willingly go into confederation with that representation.

Mr. Whalen was supposed to be invincible in his constituency; but when it became known that he was prepared to support confederation on these terms rather than not go into confederation at all, he was beaten out of his boots in the next election; and it has always been said in Prince Edward Island that as a result of that defeat he died of a broken heart. Col. Gray, another delegate from Prince Edward Island, said:

I am instructed by my co-delegates to say that the provision of five members is unsatisfactory.

The Hon. J. C. Pope, afterwards Minister of Marine in this House, said:

I cannot ask it as a matter of right, but one of expediency, as one without which it is impossible for us to carry the measure in Prince Edward Island. I therefore ask for six members.

Hon. Mr. Haviland said:

I fully agree with Mr. Pope. It would be an insuperable difficulty to us if we had not six members.

So much for what took place in the Quebec conference But shortly after the return of the delegates from that conference, the matter came up in the local legislature. The Hon. Mr. Pope, who was leader of the government at the time and who was very strongly in favour of confederation, if he could get terms suitable and right for Prince Edward Island, introduced a series of resolutions. The first had reference to financial matters, but the second took up the question of representation. He said:

That if the relative circumstances of Canada and this island rendered a union prac-

ticable, the evident injustice of the term agreed to by the Quebec convention would prevent there being ratified by the legislature of this island. Without alluding to all, it was proper to notice some of the objectionable features of the report. Without admitting the principle of representation according to population under all circumstances to be sound, it is, in the opinion of this House, particularly objectionable as applied to this island in connection with Canada, taking into consideration that the number of our inhabitants is and must continue comparatively small, owing to the fact that we have no Crown lands, mines, minerals or other resources sufficient to induce immigrants to settle here, and that we never can expect to become to any extent a manufacturing people, in consequence of our navigation being closed for nearly half the year, and all trade and communication with other countries stopped. Under this principle, the city of Montreal alone would, at the present time, have a representation greater than the whole province of Prince Edward Island, and under the provinces of the convention which regulates the mode of re-adjusting the relative representation of the various provinces, at each decennial census, looking at the rapid increase of the population of upper and lower Canada heretofore—particularly the former—and the certainty of a still greater increase there in the future over that of the population of this island, it follows as a certain and inevitable consequence, if a federation of the provinces were consummated upon the basis of the said convention, that the number of our representatives would in the course of a comparatively short number of years be diminished to a still smaller number than that allotted to us at the outset.

This shows that at that time gentlemen representing Canada and gentlemen representing Prince Edward Island foresaw what was going to happen and were preparing to guard against it. Further on he said:

I have said, Sir, that I entertained objections to the details of the scheme. Among these objections I may mention the principle of representation by population. A very simple calculation will show that the adoption of this as a standard would entitle the city of London to send to the British House of Commons no less than seventy representatives, and the city of Montreal in the confederate parliament would have a representation greater than that of this whole island. Its statistics warrant the belief that in a few years the population will be so increased by the influx of the tide of immigration that the island would lose in the halls of legislation even the small voice which she might raise at her entrance into the union.

Other hon. gentlemen spoke on the same occasion. The Hon. George W. Howlan, who was aferwards senator and became Lieutenant Governor of the province, also discussed the matter. He was likewise an ardent supporter of confederation and on the question of representation, he said:

Mr. WARBURTON.
