## **Technical and Bibliographic Notes/Notes techniques et bibliographiques**

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured covers/

10X	14X	18X	22X	26X	30X
			✓		
12X	16X	20X	24X	28X	32X

The copy filmed here has been reproduced thanks to the generosity of:

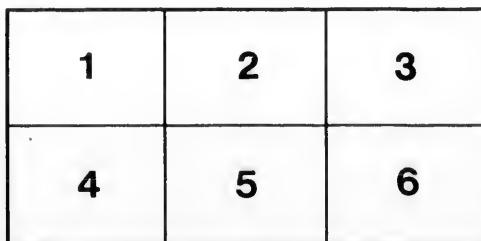

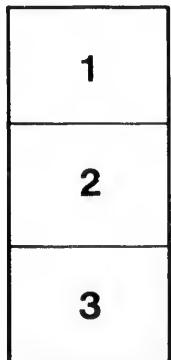

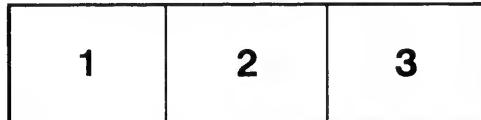

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## P R E F A C E.

---

THOUGH no apology is necessary for an attempt at a systematic enumeration of our plants, the compiler desires briefly to state the motives that led him to undertake the work.

Having been for some time engaged in the preparation of a CANADIAN FLORA, on the plan of De Candolle's "Flore Française," he of course felt anxious to embody in it, not only the result of the researches of our earlier Botanists, like Pursh, Michaux, Hooker, &c., but also the scattered knowledge stored away in the herbariums and note-books of a large number of careful, conscientious investigators, who, by working up the Botany of their own localities, are adding year by year to our knowledge of the subject. Resolved before finally correcting the manuscript for the press, to make an appeal to the Students of Canadian Botany for any additional facts regarding the distribution and variation of species, influence of latitude and altitude, local causes, &c.: the question next arose in what way this could best be done. The plan of a numbered Catalogue was fixed upon, with the hope that while it rendered the transmission of information about the species occurring in any locality easy, it would also prove useful to amateur Botanists, by limiting the number of names among which they would require to search, in determining specimens; and to persons forming herbariums, by aiding them in effecting exchanges.

The author earnestly solicits any information that will assist in securing accuracy in the "Flora". He will gladly examine, name, and return at his own expense, plants sent to him from any part of Canada; and so far as the nature of the work will allow, all assistance received will be carefully acknowledged. In the Catalogue, the nomenclature of Professor Gray has been adopted as that best known. This has been the case even where a somewhat different arrangement would have been employed in a larger work.

Accuracy in a list like this is a more important consideration than the grouping of species and a great deal of pains has been taken to secure it.

The writings of Pursh, Michaux, Hooker, Gray, Torrey, Provencher, Brunet, and others have been consulted; the lists published in the Canadian Journal and Naturalist, Annals of the Botanical Society of Canada, American Journal

of Science, Proceedings of the Boston Natural History Society, Edinburgh New Philosophical Journal, Report of the Canadian Geological Survey, etc, along with those furnished by a large number of correspondents compared; and in nearly every case of doubt, the result checked by the examination of specimens. Valuable assistance has been given in the true unselfish spirit of science by the Rev. Prof. Hincks, D. A. P. Watt, Esq., W. Macoun, Esq., and others. Absolute reliability however is scarcely attainable at once, where there has been so much guessing at truth in some of the local reports, and by the kind permission of the Editors of the Canadian Journal and Canadian Naturalist, an occasional annotated supplemental list may be published in those magazines, and notice given of species rejected on a better acquaintance with their range.

There are two classes of plants to be disposed of in addition to those which may certainly and properly be termed Canadian. A plant is sometimes cited as having been met with in some spot where no subsequent explorer has ever succeeded in finding it. Has this arisen from a mistake on the part of the botanist? Or has the plant been driven from its home, by the march of cultivation, draining, and other changes? Circumstances cannot always determine In many cases we can say positively that the authority is so good as to warrant us in admitting the species. Generally however such plants must be held for the present as doubtful. These, with a few border species growing in such positions as to render their occurrence in Canada almost certain, have been gathered into a separate group on page 27. They should be specially looked for along the United States frontier. Finally, a second separate list contains those occasional stragglers, which are found sparingly escaped from gardens, and maintaining a precarious existence; usually disappearing after two or three years

---

The Pamphlet was originally intended only for gratuitous distribution : but it has been thought better to put a few copies into the hands of the Booksellers, as in some cases this will render it more easily accessible.

# H A N D B O O K

OF

## THE CANADIAN FLORA,

A DESCRIPTION

OF THE

## FLOWERING PLANTS AND FERNS

OF CANADA,

BY

THE REV. J. HUBBERT, M.A., PH.D.

FELLOW OF THE BOTANICAL SOCIETY OF CANADA,  
MEM. ENT. SOC. CAN., MEM. CAN. INST.,  
COR. MEM. ESSEX INSTITUTE,  
PROF. OF NATURAL HIST. IN  
ST. FRANCIS COLLEGE,  
RICHMOND, C. E.,  
ETC., ETC., ETC.

WITH PLATES

ILLUSTRATING THE GENERA OF THE GRASSES AND FERNS.

# FLORA OF CANADA,

*In one Octavo vol., containing about 600 pages.*

The object of this work is to furnish to Amateurs and Students of CANADIAN BOTANY, a Manual of the Science, so far combining the characters of fulness and scientific precision, with freedom from unnecessary technicality, that a person with no previous knowledge of the subject, and provided only with the "HANDBOOK" and a good pocket-lens, may easily become acquainted with the names, properties, and habitats of our native and naturalized Plants.

## CONTENTS.

- I. Introductory sketch of structural and systematic Botany.
- II. List of Authorities referred to in this work, with the residence, profession, &c., of each.
- III. Artificial Analytical Key.
- IV. Scientific arrangement of the Classes, Alliances, and Natural Orders of Plants.
- V. Description of the Classes, Orders, Genera, Species, and important Varieties of Canadian Plants, with their general Geographical range, distribution in Canada, uses, period of Flowering, Synonymy when several well-known names are in use for the same plant, Analytical Tables for facilitating reference to sub-groups, &c. &c:
- VI. Index of Technical Terms.
- VII. Index of Latin and English names.
